Western militarized states, their nationals and private mercenaries now form willing coalitions as readily as they organize death squads; Western feminists recalibrate their alignments with their states as they set out to rescue Muslim women or to protect themselves from their narcissistically construed forms of precariousnesses; and Muslim women and men supplicants to the West speak in the name of feminism and liberal democracy to indict Islam, along with their families and communities, providing vital alibis for torture and collective punishment. All the while, Muslim men around the world arc demonized as misogynist homophobes even as they are incarcerated, deported, raped, tortured and targeted for assassination; Muslim women and queers are raped, killed, bombed and compelled to surrender unconditionally to Western gender regimes if they are to survive. As for the Muslims killed in the hundreds of thousands by bombs, drones and militias, they **do not even appear** as **human** in the register of the war, featuring **only as collateral damage** - if at all.

Islamophobia has thus **become the lingua franca** that **enables trans/national allegiances** to be remade, international **accords** to be signed, **aid negotiations** to be consolidated, intelligence, security and border control agreements to be implemented, and **assassination squads** to be **deployed across the planet**. Such is the moment that **marks the (re)birth** of the **West** as the **singular model for futurity** after the age of independence.

What avenues, then, for contestation? How to strengthen the forces committed to ending the violence that characterizes the contemporary geopolitical moment? What possibilities for the politics of radical transformation? For justice?

Queer Necropolitics makes a particularly timely and critically engaged intervention. Mapping out how deployments of sexuality, gender, race and desire inform the self-constituting practices of unlikely imperialist subjects — queer, feminist, left, and yes, even critical theorists and philosophers - as they simultaneously advance the reach of the Western empire, the authors of this book highlight how these practices also mark out entire 'queerly racialized populations' for occupation, subjugation or elimination (Puar 2007). **Examining the particularities** of the instances where '**queer vitalities** become **cannibalistic** on the **disposing and abandonment** of others', the authors help to **disrupt a critical axis** on which **pivot** the imperial **heteronormative**, **homonormative** and **transnormative politics** of violence and pleasure (Introduction: p. 2).

What comes into view when **homonationalism is named homoracism**? When feminism is defined as imperialist? When human rights arc conceived of as recolonization? When queer and trans politics are identified as parasitic? The power of whiteness comes into **sharp focus**, the **everydayness of the institution** of **white supremacy** is **exposed** in all its **stark (in)visibilities**. The authors of Queer Necropolitics provide the **conceptual** and **analytical tools vital** to the **politics of resistance** against the **deathly trajectories of power** that mark these times.

Jin Haritaworn, Adi Kuntsman and Silvia Posocco point to the 'worrying tendency to dismiss queer and trans of colour critiques in particular as identitarian, pre-theoretical and inferior' (Introduction: p. 4). They are absolutely right to draw attention to such dismissal, for the displacing of radical critical race theory - with all its complexities - in the name of identity politics has become a habitual practice of the Western theoretico-political tradition, including its feminisms, left activisms and LBGTQ, movements. Refusing to acknowledge the violence of the imperial practices that incarcerate subjugated populations in their suffocatingly codified identities or to recognize the forms of violence they themselves enact as they further the universalization of their own identities in the name of humanism, these intransigent theorists and activists secure their access to white superiority by such dismissal.

Trapped between **humanism** and its **rigidly enforced politics of identities**. **Where to turn?**

It should not be forgotten that the chief architects of this 'war on terror' are the settler colonial societies established by Euro-America, namely, US, Canada, Israel, Australia, along with those seasoned imperialists, the British, the French and the Germans. The massive public support among their nationals for killing 'terrorists' wherever they are to be found, for racial profiling wherever the state deems it necessary and for ripping off Muslim women's veils whenever possible extends Islamophobia into homes, schools, workplaces, cinemas, shopping malls, social service agencies and, yes, in hearts and minds. The **public valorization** of the **statesmen** and **stateswomen**, the generals and soldiers, the corporations and journalists who **plan**, **execute** and **legitimize** the **new wars of the 21st century** chillingly echo the public celebration of **'Indian hunters'**, pioneering heroes of an earlier age of US empire and nation-building, as well as of the **white lynch mobs** who 'hunted' black men and boys in the name of defending the virtue of white women. Indeed, the continuities in such racial violence cannot but be recognized even by the perpetrators themselves, whether by design or otherwise. US and other allied soldiers regularly refer to Afghanistan and Iraq as 'Injun country' and to the black and brown bodies of Muslims as 'Injuns'; mercenaries working for the US state in Somalia define local Somali men as 'savages';1 'Project Lawrence' is launched to develop 'cultural proficiencies' among elite US forces working in secret military operations;2 and the codename 'Geronimo' is assigned to the mission to kill Bin Laden.

As Western nation-states **fortify** their various forms of **security - military**, **national** and **psychic - neoliberalism morphs** into its **audaciously murderous phase**, overtly so now; global capitalism acquires a **robust new energy** in the **privatization** of the state's **machinery of death**; new technologies of **surveillance** and **communication** are invented and enthusiastically consumed. The West is **resurgent** again and ... all this **whiteness**. .. '(a)ll this **whiteness that bums'** (Fanon 2008: 86, emphasis added).

It is wise to remember that sovereignty is not abstract. It has a particular name, a face, an address, a geographical coordinate. Its face is white, it remains housed in white bodies, it is located in Westernity. Queer Necropolitics does the very important work of teaching its readers how to **recognize the deadly workings of power**. We would do well to learn from this book's passionately principled outrage at the order of things.

AT: Lesbian/gay studies are racist

Queer theory is different- it's fluid and open ended

- This is also like a B- perm card

Saffin 8 BODIES THAT (DON'T) MATTER: SYSTEMS OF GENDER REGULATION AND INSTITUTIONS OF VIOLENCE AGAINST TRANSGENDER PERSONS: A QUEER/CRITICAL RACE FEMINIST CRITIQUE By LORI A. SAFFIN DOCTOR OF PHILOSOPHY WASHINGTON STATE UNIVERSITY Program of American Studies AUGUST 2008

However, Queer Theory (or queerness) does not lie outside of racist or classist agendas because it also organizes around singular categories that reproduce dominant structures. Nevertheless, what I find evocative about Queer Theory is its potential toward a politics that resists liberalism (and liberal pluralism). By allowing sexuality to be fluid and gender to be open-ended, "queer" insists upon a politicized and activist-oriented category of identity that acknowledges experiential differences as well as cultural and historical specificity. Queer Theory demands a politic that is not simply individual, or good for one privileged group, but sees how race, class, gender, and sexuality operate together to sustain structural and systemic oppression.12 Queer Theory and queerness do not seek integration within the existing social systems because current structures are built upon and rely on the oppression of Others. Therefore, Queer Theory makes use of contradiction, ambiguity, multivocality, and the explosion and opening of categories to destabilize normative and hierarchical binary systems of power.

Cap

Perm do both – a queer marxist-feminist perspective solves better.

Sears 5 Queer Anti-Capitalism: What's Left of Lesbian and Gay Liberation? Sears, AlanView Profile. Science & Society69.1 (Jan 2005): 92-112. Education Faculty, University of New Brunswick

A queer marxist-feminist perspective provides us with ways of envisioning a queer anti-capitalism. Many people who engage in same-sex sexual practices have won neither full citizenship nor a place within the currently existing queer public spaces. The brutalizing experiences of many queer youth (or youth perceived as queer) in high schools is an important reminder of how far we have to go to achieve full human rights (see Frank, 1994; Smith, 1998). A new queer radical agenda will have to be built around the needs, desires and organizing capacities of the young, the poor, people of color, women, transgendered people, working-class people, people living with AIDS and/or disabilities, the elderly and those who cannot or will not come out. One of the important organizing bases for this agenda will be the emerging movement of queer trade unionists, though (like the unions themselves) it will need to go much farther to organize the unorganized (people in non-union workplaces, contingent workers, people who are not employed) and the excluded (on the basis of nationality, racialization, disability or gender). A queer anti-capitalism takes us back to the best of the liberationist politics that emerged after Stonewall: the militancy, the breadth of vision and the transformative commitments. An engaged queer marxist feminism provides valuable tools for negotiating the complex issues that led to the impasse of gay libertarianism and lesbian feminism, specifically through grounding the analysis of sexuality in a rich understanding of processes of social reproduction. It is possible to combine a joyous struggle for sexual freedom with a serious and nuanced examination of the power relations that shape our experiences of gender and sexuality

Analyzing queer struggles through historical materialism naturalizes heteropatriarchy by posing capital as the only social threat, and makes the heteronormative subject the goal of liberal and radical practices.

Ferguson 03 [Roderick A. Ferguson, professor of African American and Gender and Women's Studies in the African American Studies Department at the University of Illinois, Chicago, "Aberrations in Black: Toward a Queer of Color Critique," 2003, http://researchmethodswillse.voices.wooster.edu/files/2012/01/Ferguson.pdf]//JIH

As such, she and others like her were the targets of both liberal and revorutionary regulations. Those regulations derived their motives from the fact that both bourgeois and revolutionary practices were conceived through heteropatriarchy. 'We may imagine Marx asking, "How could she-the prostitute-be entrusted with the revolutionary transformation of society?'; Likewise, we could imagine the bourgeoisie declaring, "Never could whores rationally administer a liberal society." Historical materialism and bourgeois ideology shared the tendency to read modern civilization as the racialized scene of heteronormative disruption. Marx fell into that ideology as he conflated the dominant representation of the prostitute with the social upheavals wrought by capital. Put differentl¡ he equated the hegemonic discourse about the prostiture, a discourse that cast her as the symbol of immorality vice, and corruption, with the reality of a burgeoning capitarist economy. Taking the prostitute to be the obvious and transparent sign of capital, at what point could Marx approach the prostitute and her alleged pathologies as discursive questions, rather than as the real and objective outcomes of capitalist social relations? At what point might he then consider the prostitrrì. others like her to be porenrial sites from which to critique capital? "rrd Naturalizing heteropatriarchy by posing capital as the social threat to heteropatriarchal relations meant that both liberal reform and proletarian revolution sought ro recover heteropatriarchal integrity from the ravages of industrialization. Basing the fundamental conditions of history upon heterosexual reproduction and designating capital as the disruption of heterosexual normativity

did more than designate the subject of modern society as heteronormative. It made the heteronormative subject the goal of liberal and radical practices. under such a definition of histor¡ political economy became an arena where heteronormative legitimation was the prize. universalizing heteropatriarchy and constructing a racialized other that required heteropatriarchal regulation was not the peculiar distinction of, or affinity between, Marx and his bourgeois contemporaries. on the contrary the racialized investment in heteropatriarchy bequeathed itserf to liberal and revolutionary projects, to bourgeois and revolutionary nationalisms alike. Queer of color analysis must disidentify with historical materialism so as not to extend this legacy.

The alt can't solve - body politics are sidelined in Marxist analysis to be replaced by problems deemed more political.

Warner 93 [Michael Warner, literary critic, social theorist, and Seymour H. Knox Professor of English Literature and American Studies at Yale University, "Fear of a Queer Planet: Queer Politics and Social Theory," 1993, http://ir.nmu.org.ua/bitstream/handle/123456789/142949/93ac0a0904ab819b5542a4e68d2efb70.pdf?sequence=1]//JIH

If Rubin's essay has helped to place the thinking of sexuality on the contemporary political agenda, this would appear to be a task for which Western Marxism has been and remains underprepared. A case in point would be the 1989 "Marxism Today" conference held at the University of Massachusetts at Amherst: of its fifty-eight assorted panels, many containing the word "gender" or its various cognates in their titles, one session alone was devoted explicitly to questions of sexuality. Given the U.S. government's brutally grudging response to the AIDS crisis and its renewed attacks on the reproductive freedoms of women, such scanty attention seems significant in reflecting what counts as political among the varied knowledges and practices comprising "Marxism Today." My intention here is hardly to criticize the conference (as if it simply could have proceeded otherwise), for its reluctance seems continuous with what might be described (with a few important but relatively isolated exceptions like Alexandra Kollontai)5 as Western Marxism's tradition of unthinking sex. When Marxist theorists have concerned themselves directly with sexual issues, they've tended to relate the story (impossible to repeat after Foucault) of how a natural or potentially liberatory sexuality has been set upon, repressed, commodified, or otherwise constrained by the institutions of capitalism: as if sexuality were not always already institutional, existing only in its historically sedimented forms and discourses.6 In addressing, for example, the question "What has sexuality to do with class struggle?" Reimut Reiche seemed to answer not much in describing his "personal" interests in "sexual theory" as paling before genuinely "political problems": as if the relationship between the two could in fact be figured simply as a distinction between the public and the private.7 Recognizing these shortcomings, other theorists have proposed instead to analyze the material conditions of "desire": as if this conception of desire — in tending in practice almost inevitably toward the monolithic, the unmodified, and the hetero — could seemingly unnameable sexuality.8 Why has thinking sex proven to be so difficult for Western Marxism? Why, if never simply or entirely an absence, does sexuality form an aporia, a blockage within the tradition's production-centered paradigm?

The perm solves best – the revolution will only be successful in conjunction with [insert advocacy statement/buzzword]

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

'Capital', writes Virginia Finzi Ghisi, 'has made use up till now of the erotic nature of labour in order to force man into this, having preventively withdrawn from him any other sexual adventure (relations with the woman-wife-mother in the family circle are no adventure, but only an

extended substitution) ... Heterosexuality becomes the condition for capitalist production, as a modality of loss of the body, a habituation to seeing this elsewhere, and generalised.' [15]

The struggle for communism today must find expression, among other things, in the negation of the heterosexual Norm that is based on the repression of Eros and is essential for maintaining the rule of capital over the species. The 'perversions', and homosexuality in particular, are a rebellion against the subjugation of sexuality by the established order, against the almost total enslavement of eroticism (repressed or repressively desublimated) to the 'performance principle', to production and reproduction (of labour-power).

The increase in the means of production has already virtually abolished poverty, which is perpetuated today only by capitalism. And if the sublimation of the 'perverse' tendencies of Eros into labour is thus no longer economically necessary, it is even less necessary to channel all libidinal energies into reproduction, given that our planet is already suffering from over-population. Clearly, repressive legislation on the number of children, abortion, and the wars and famines decreed by capital, will not resolve the problem of population increase. Such things can only serve to contain it within limits that are functional to the preservation and expansion of the capitalist mode of production. They serve to increase the war industry and to maintain the Third World in conditions of poverty and backwardness that are favourable to the establishment of capitalist economic and political control. The problem of over-population can be genuinely resolved by the spread of homosexuality, the (re)conquest of autoerotic pleasure, and the communist revolution. What will positively resolve the demographic tragedy is not the restriction of Eros, but its liberation.

The harnessing of Eros to procreation, in fact, has never been really necessary, since free sexuality, in conditions that are more or less favourable, naturally reproduces the species without needing to be subject to any type of constraint. On the other hand, if the struggle for the liberation of homosexuality is decisively opposed to the heterosexual Norm, one of its objectives is the realisation of new gay relations between women and men, relations that are totally different from the traditional couple, and are aimed, among other things, at a new form of gay procreation and paedophilic coexistence with children.

In a relatively distant future, the consequent trans-sexual freedom may well contribute to determining alterations in the biological and anatomical structure of the human being that will transform us, for example, into a gynandry reproducing by parthenogenesis, or else a new two-way type of procreation (or three-way, or ten-way ?). Nor do we know what the situation is on the billions of other planets in the galaxy, many of which, at least, must be far more advanced than ourselves.

If we can thus understand how the repression and sublimation of Eros, and the heterosexual Norm, are absolutely no longer necessary for the goals of civilisation and the achievement of communism, being in fact indispensable only for the perpetuation of capitalism and its barbarism, then it is not hard to discover in the expression of homoerotic desire a fertile potential for revolutionary subversion. And it is to this potential that is linked the 'promise of happiness' that Marcuse recognises as a peculiar character of the 'perversions'.

The revolution will be homophobic – the leftist revolutionaries see LGBT populations as part of the bourgeois

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

5. The 'Protectors' of the Left The left "" above all the Italian Communist Party, but also all the self-proclaimed revolutionary organisations "" were slow to adopt even an attitude of 'protection' towards gays. For a long time they simply repressed homosexuality directly, negating it by exalting the tough, virile figure of the productive (and evidently reproductive) worker. They ridiculed homosexuals, defining them as an expression of the corruption and decadence of bourgeois society, thus making their own contribution to confirming gays in an attitude that is in some respects counter-revolutionary. They put forward an image of revolution that is grotesquely bigoted and repressive (based on sacrifice and on the infernal proletarian family) and a caricature of virility (based on productive-reproductive labour and on brute militarised violence), and they held up the model of those countries defined as socialist, who liquidate homosexuals in concentration camps or 're-education centres', such as Cuba or China. It is scarcely surprising, then, that gay people saw only the system itself as their 'salvation'.

When the homosexual liberation movement started in Italy, the left did their best to induce it to silence and discourage it. We can all cite an endless series of insults, provocations and even physical attacks from militants of the left. Those of us who belonged for a while to such groups know very well the sum of humiliations and frustrations involved in being a gay activist in the heterosexual left.

The left thus did all it could to extinguish our movement. They stubbornly characterised it as 'petty-bourgeois' at the very time that we were starting to come out in a revolutionary way. As far back as 1971, Joe Fallisi could write that the left was concerned above all to 'modernise reformist politics and impose (in the heaven of the Spectacle) new ideological images of the "challenger", the "tough guy", the "extra-parliamentarist", the "new partisan".' And if the reformist politics of the left are phallocentric and heterosexual, their ideological counterpart was the 'tough guy with a big cock and muscles of steel', who sets even the fascist bullies to flight. [16] It is no accident that the extra-parliamentary groups of yesterday are today seated in Parliament.

The aff is the K – the heterosexual Norm is the same as the oppressive capitalist system – a homosexual revolution is the only revolution that will be successful

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

The solution to this problem lies in the victory of the revolution, in the creation of communism, in the ending of all war, and the definitive withdrawal of all armies. Today, the revolution is being prepared, among other things, by the conflict between the gay movement and the Norm, and by the encounter between homosexuals and deserters from the army of normality. The heterosexual males 'in crisis' must understand that we do not want war : we are forced to struggle because we have always been persecuted, because the policemen of the heterosexual law have repressed us,

because we look forward to the universal liberation of the gay desire, which can only be realised when your heterosexual identity is broken down. We are not struggling against you, but only against your 'normality'. We have no intention of castrating you. We want on the contrary to free you from your castration complex. Your arse has not really been amputated, it has only been accused [imputato], along with your entire body.

To come over to our side means, literally, to be fucked in the arse, and to discover that this is one of the most beautiful of pleasures. It means to marry your pleasure to mine without castrating chains, without matrimony. It means enjoyment without the Norm, without laws. It is only your inhibitions that prevent you from seeing that only by coming over to our side can we achieve our revolution. And communism can only be ours, i.e. belonging to us all, those of us able to love. Why do you want to be left out ?

It is capital that still so insistently opposes you to us. What you have to fear is not being fucked in the arse, but rather remaining what you at present still are, heterosexual males as the Norm wants you to be, even in crisis, as if it was not high time to oppose yourselves forever to crisis, to castration, to guilt. As if it was not time to gayly reject the discontent that the present society has imposed on us, and to stop the totalitarian machine of capital in its tracks by realising new and totalising relations. And given that we are bodies, this means erotic relations among us all.

You fear us on account of the taboo you have internalised, and which you still uphold. But this taboo is the mark of the system in you. And we don't want to be led into the catastrophe that is threatening, nor do we want the struggle for liberation, which has only one genuine enemy, capital, to be crippled by your resistances, dogmas and ditherings, by your susceptibility to images and your submission to the Father-system. Your terror of homosexuality is the capitalist terror, it is the paternal terror, the terror of the father that you have not overcome.

There have been wars in which the oppressors, sullied by atrocities, have degenerated to such a point that the only way for the oppressed to conquer has been to eliminate them to a man. In a case of this kind, it is impossible to expect many deserters. We find this in the Biblical wars : God commanded that none of the inhabitants of Jericho should survive the fall of the city. But we don't want to sound the trumpets of Jericho, rather the Internationale. What we propose is an erotic understanding. We don't want any more destruction, that is precisely why we still have to struggle. Revolutionary wars are never anything like the destruction of Jericho.

In 1917 the Bolsheviks and all other revolutionaries proclaimed war on war and preached defeatism in all armies. The Russian revolutionary soldiers fraternised with the German 'victors', they danced together, embraced one another on the occupied Russian soil and shared their rations. Today, with gay clarity, we must wage the true war against capital and no one else. Eros to you and to us, captivating sisters and attractive brothers of the universal incest that is announced and impending !

Queer theory serves to help re-imagine capitalism to allow for anti-capitalist politics to occur.

Gibson-Graham 99 Queer(y)ing capitalism in and out of the classroom Gibson-Graham, J K. Journal of Geography in Higher Education23.1 (Mar 1999): 80-85. Katherine Gibson is professor and head of the Department of Human Geography at the Research School of Pacific and Asian Studies, The Australian National University. Julie Graham is professor of economic geography and associate department head for geography in the Department of Geosciences, University of Massachusetts.

Of course, destabilising images of capitalist dominance is a big project, and I could not do it by myself. Nor could I do it without queer theory, that incredibly dynamic matrix of contemporary theory whose practitioners are not only theorising

about queers but who are also making social theory 'queer'. This latter project can be seen to involve not (or not merely) constituting a minority population based on same-sex desire, set in opposition to a heterosexual norm, but calling into question the very idea of norms and normality, calling attention to the violence entailed by normalising impulses, including the impulse to theorise a social site as subsumed to a hegemonic order [7]. What if we were to 'queer' capitalist hegemony and break apart some of its consolidating associations? We could start by reimagining the body of capitalism, that hard and masculine body that penetrates non-capitalism but is not itself susceptible to penetration (this image conveys some of the heterosexism that structures contemporary social theory). One key `coming together' (a Christmas effect that participates in consolidating a capitalist monolith) is the familiar association of capitalism with commodification and `the market'. This association, in which all three terms ultimately signify 'capitalism', constitutes the body of capitalism as dominant and expansive (at least in the space of commodity transactions). But how might we re-envision that body as more open and permeable, as having orifices through which non-capitalism might enter? We might argue, as many have done, that many different relations of production-including slavery and independent commodity production and collective or communal relations-are compatible with production for a market. What violence do we do to these when we normalise all commodity production as capitalist commodity production? Surely the market is a mobile and membranous orifice into which can be inserted all kinds of non-capitalist commodities, whose queer presences challenge the pre-eminence of capitalism and the discourses of its hegemony. Queering our pedagogy means making differences visible and calling normative impulses and forms of social closure into question. This is something that geographic researchers are increasingly doing with respect to a wide range of social and cultural sites and processes, not excluding the 'economic', where differences among industries, enterprises, economic subjects, cities and regions, national and world economies are often highlighted and explored. The fact that one sameness-their capitalist nature-- tends to unify all these forms of difference offers a challenge to us as teachers. Can we, with our students, generate different representations of the economic world, ones in which non-capitalist class relations and forms of economy are prevalent and widespread? [8] If we can, what might be the impact of these representations? Might they not help to make anticapitalist activism seem less quixotic and more realistic? Might they contribute to a non-capitalist politics of economic invention?

Queerness is an ideal starting point for fighting capitalism

Gibson-Graham 1996 *The End of Capitalism (as we knew it)* Gibson-Graham, J K. 1996 Katherine Gibson is professor and head of the Department of Human Geography at the Research School of Pacific and Asian Studies, The Australian National University. Julie Graham is professor of economic geography and associate department head for geography in the Department of Geosciences, University of Massachusetts.

By speaking a language of the diverse economy, we can begin to unravel the dense knots of meaning that sustain the hegemonic identity of "the capitalist economy." Working against the condensations and displacements that structure the discourse of capitalocentrism, we have produced an unruly economic landscape of particular, nonequivalent meanings. Our objective has been to dis-order the capitalist economic landscape, to queer it and thereby dislocate capitalocentrism's hegemony. In the space thus produced, we see opportunities for new economic becomings—sites where ethical decisions can be made, power can be negotiated, and transformations forged. A counterhegemonic politics involves dis-identification with the subject positions offered by a hegemonic discourse and identification with alternative and politically enabling positions. In the economic realm today we are confronted with no one set of possible alternative identities. Certainly the historic identity of the communist worker no longer presents itself as an imagined counter-identity. Instead, as we have shown, the terrain is littered with half-hearted and defensive "economic" identities that are largely acknowledged as social identities— houseworker, giver of gifts, volunteer, cooperator, petty trader, home producer, artisan, member of a kin network, indigenous hunter, migrant, public servant, community worker, peasant, social entrepreneur. This ragtag group has no shared sense of economic right from which it might launch an articulated attack on a neoliberal global capitalist order.48 Rather, the discourses that occupy roles as Constructing a Language.

The political will fail – moving within the state causes a sense of pacification where the left believes they have done good while still upholding the existing inequalities

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

I believe that homosexuals are revolutionary today in as much as we have overcome politics. The revolution for which we are fighting is among other things the negation of all male supremacist political rackets (based among other things on sublimated homosexuality), since it is the negation and overcoming of capital and its politics, which find their way into all groups of the left, sustaining them and making them counter-revolutionary.

My arsehole doesn't want to be political, it is not for sale to any racket of the left in exchange for a bit of putrid opportunist political 'protection'. While the arseholes of the 'comrades' in the groups will be revolutionary only when they have managed to enjoy them with others, and when they have stopped covering their behinds with the ideology of tolerance for the queers. As long as they hide behind the shield of politics, the heterosexual 'comrades' will not know what is hidden within their own thighs.

As always, it is only rather belatedly, in the wake of the 'enlightened' bourgeoisie, that the left-wing groups have begun to play the game of capitalist tolerance. From declared hangmen, and a thousand times more repugnant than the hustlers and fascists, given all their (ideological) declarations of revolution, the activists of these groups have transformed themselves into 'open' debaters with homosexuals. They fantasise about becoming well-meaning and tolerant protectors of the 'deviant', in this way gratifying their own virile image, already far too much on the decline, at a time when even the ultra-left have suddenly to improvise 'feminist' representatives for 'their' women. Moreover, the fantasy of protectors helps them to exorcise the problem of the repression of their own homoerotic desire. Under it all, the activists of the left always hope to become good policemen. They do not know that real policemen get in there more than they do, and that when this happens, they make love precisely with us gays. When will there be a free homosexual outlet for the activists of the ultra-left ?

The perm solves best – the revolution will only be successful in conjunction with [insert advocacy statement/buzzword]

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

'Capital', writes Virginia Finzi Ghisi, 'has made use up till now of the erotic nature of labour in order to force man into this, having preventively withdrawn from him any other sexual adventure

(relations with the woman-wife-mother in the family circle are no adventure, but only an extended substitution) ... Heterosexuality becomes the condition for capitalist production, as a modality of loss of the body, a habituation to seeing this elsewhere, and generalised.' [15]

The struggle for communism today must find expression, among other things, in the negation of the heterosexual Norm that is based on the repression of Eros and is essential for maintaining the rule of capital over the species. The 'perversions', and homosexuality in particular, are a rebellion against the subjugation of sexuality by the established order, against the almost total enslavement of eroticism (repressed or repressively desublimated) to the 'performance principle', to production and reproduction (of labour-power).

The increase in the means of production has already virtually abolished poverty, which is perpetuated today only by capitalism. And if the sublimation of the 'perverse' tendencies of Eros into labour is thus no longer economically necessary, it is even less necessary to channel all libidinal energies into reproduction, given that our planet is already suffering from over-population. Clearly, repressive legislation on the number of children, abortion, and the wars and famines decreed by capital, will not resolve the problem of population increase. Such things can only serve to contain it within limits that are functional to the preservation and expansion of the capitalist mode of production. They serve to increase the war industry and to maintain the Third World in conditions of poverty and backwardness that are favourable to the establishment of capitalist economic and political control. The problem of over-population can be genuinely resolved by the spread of homosexuality, the (re)conquest of autoerotic pleasure, and the communist revolution. What will positively resolve the demographic tragedy is not the restriction of Eros, but its liberation.

The harnessing of Eros to procreation, in fact, has never been really necessary, since free sexuality, in conditions that are more or less favourable, naturally reproduces the species without needing to be subject to any type of constraint. On the other hand, if the struggle for the liberation of homosexuality is decisively opposed to the heterosexual Norm, one of its objectives is the realisation of new gay relations between women and men, relations that are totally different from the traditional couple, and are aimed, among other things, at a new form of gay procreation and paedophilic coexistence with children.

In a relatively distant future, the consequent trans-sexual freedom may well contribute to determining alterations in the biological and anatomical structure of the human being that will transform us, for example, into a gynandry reproducing by parthenogenesis, or else a new two-way type of procreation (or three-way, or ten-way ?). Nor do we know what the situation is on the billions of other planets in the galaxy, many of which, at least, must be far more advanced than ourselves.

If we can thus understand how the repression and sublimation of Eros, and the heterosexual Norm, are absolutely no longer necessary for the goals of civilisation and the achievement of communism, being in fact indispensable only for the perpetuation of capitalism and its barbarism, then it is not hard to discover in the expression of homoerotic desire a fertile potential for revolutionary subversion. And it is to this potential that is linked the 'promise of happiness' that Marcuse recognises as a peculiar character of the 'perversions'.

The revolution will be homophobic – the leftist revolutionaries see LGBT populations as part of the bourgeois

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

5. The 'Protectors' of the Left The left "" above all the Italian Communist Party, but also all the self-proclaimed revolutionary organisations "" were slow to adopt even an attitude of 'protection' towards gays. For a long time they simply repressed homosexuality directly, negating it by exalting the tough, virile figure of the productive (and evidently reproductive) worker. They ridiculed homosexuals, defining them as an expression of the corruption and decadence of bourgeois society, thus making their own contribution to confirming gays in an attitude that is in some respects counter-revolutionary. They put forward an image of revolution that is grotesquely bigoted and repressive (based on sacrifice and on the infernal proletarian family) and a caricature of virility (based on productive-reproductive labour and on brute militarised violence), and they held up the model of those countries defined as socialist, who liquidate homosexuals in concentration camps or 're-education centres', such as Cuba or China. It is scarcely surprising, then, that gay people saw only the system itself as their 'salvation'.

When the homosexual liberation movement started in Italy, the left did their best to induce it to silence and discourage it. We can all cite an endless series of insults, provocations and even physical attacks from militants of the left. Those of us who belonged for a while to such groups know very well the sum of humiliations and frustrations involved in being a gay activist in the heterosexual left.

The left thus did all it could to extinguish our movement. They stubbornly characterised it as 'petty-bourgeois' at the very time that we were starting to come out in a revolutionary way. As far back as 1971, Joe Fallisi could write that the left was concerned above all to 'modernise reformist politics and impose (in the heaven of the Spectacle) new ideological images of the "challenger", the "tough guy", the "extra-parliamentarist", the "new partisan".' And if the reformist politics of the left are phallocentric and heterosexual, their ideological counterpart was the 'tough guy with a

big cock and muscles of steel', who sets even the fascist bullies to flight. [16] It is no accident that the extra-parliamentary groups of yesterday are today seated in Parliament.

The aff is the K – the heterosexual Norm is the same as the oppressive capitalist system – a homosexual revolution is the only revolution that will be successful

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

The solution to this problem lies in the victory of the revolution, in the creation of communism, in the ending of all war, and the definitive withdrawal of all armies. Today, the revolution is being prepared, among other things, by the conflict between the gay movement and the Norm, and by the encounter between homosexuals and deserters from the army of normality. The heterosexual males 'in crisis' must understand that we do not want war : we are forced to struggle because we have always been persecuted, because the policemen of the heterosexual law have repressed us, because we look forward to the universal liberation of the gay desire, which can only be realised when your heterosexual identity is broken down. We are not struggling against you, but only against your 'normality'. We have no intention of castrating you. We want on the contrary to free you from your castration complex. Your arse has not really been amputated, it has only been accused [imputato], along with your entire body.

To come over to our side means, literally, to be fucked in the arse, and to discover that this is one of the most beautiful of pleasures. It means to marry your pleasure to mine without castrating chains, without matrimony. It means enjoyment without the Norm, without laws. It is only your inhibitions that prevent you from seeing that only by coming over to our side can we achieve our revolution. And communism can only be ours, i.e. belonging to us all, those of us able to love. Why do you want to be left out ?

It is capital that still so insistently opposes you to us. What you have to fear is not being fucked in the arse, but rather remaining what you at present still are, heterosexual males as the Norm wants you to be, even in crisis, as if it was not high time to oppose yourselves forever to crisis, to castration, to guilt. As if it was not time to gayly reject the discontent that the present society has imposed on us, and to stop the totalitarian machine of capital in its tracks by realising new and totalising relations. And given that we are bodies, this means erotic relations among us all.

You fear us on account of the taboo you have internalised, and which you still uphold. But this taboo is the mark of the system in you. And we don't want to be led into the catastrophe that is threatening, nor do we want the struggle for liberation, which has only one genuine enemy, capital, to be crippled by your resistances, dogmas and ditherings, by your susceptibility to

images and your submission to the Father-system. Your terror of homosexuality is the capitalist terror, it is the paternal terror, the terror of the father that you have not overcome.

There have been wars in which the oppressors, sullied by atrocities, have degenerated to such a point that the only way for the oppressed to conquer has been to eliminate them to a man. In a case of this kind, it is impossible to expect many deserters. We find this in the Biblical wars : God commanded that none of the inhabitants of Jericho should survive the fall of the city. But we don't want to sound the trumpets of Jericho, rather the Internationale. What we propose is an erotic understanding. We don't want any more destruction, that is precisely why we still have to struggle. Revolutionary wars are never anything like the destruction of Jericho.

In 1917 the Bolsheviks and all other revolutionaries proclaimed war on war and preached defeatism in all armies. The Russian revolutionary soldiers fraternised with the German 'victors', they danced together, embraced one another on the occupied Russian soil and shared their rations. Today, with gay clarity, we must wage the true war against capital and no one else. Eros to you and to us, captivating sisters and attractive brothers of the universal incest that is announced and impending !

Disease Reps

Political approaches towards addressing AIDS are the only way to bring about actual change

Boone and Batsell 01 [Catherine Boone, professor of Government @ the U of Texas, and Jake Batsell, professor of journalism @ the U of North Texas, "Politics and AIDS in Africa: Research Agendas in Political Science and International Relations," Africa Today, http://muse.jhu.edu.proxy1.cl.msu.edu:2047/journals/africa_today/v048/48.2boone.pdf]//JIH

In both cases, we see evidence of a capacity to supply "good governance" that political science does not define or measure very well. Research aimed at better understanding where state strength and effectiveness comes from in these cases could be useful. It could contribute to broader and more general understandings of what it takes to generate state capacity in Africa and it could also help identify new political resources that could be mobilized in efforts to provide public goods, including positive responses to HIV-AIDS. Political scientists can make a direct contribution by analyzing the factors that contribute to constructive public policy responses to AIDS. It is clear that there is simply no substitute for state action in this domain: governments must be at the center of AIDS-prevention and treatment efforts. Experiences from the past fifteen years show that where governments fail to act, the disease spreads faster, the eventual costs of dealing with it are higher, and the negative effects on development are more far-reaching and intractable. Conversely, governments that do respond forcefully to the issue of AIDS have registered successes in bringing HIV infection rates down, such as in Uganda and Senegal. As Peter Mameli wrote in his 1998 dissertation examining variations in state response to the AIDS pandemic, "it is essential that researchers begin to analyze which background conditions, administrative techniques and organizational forms have worked most effectively at the national and international levels of political response as we continue to address this health crisis" (Mameli 1998: 24). Nearly two decades into a pandemic that poses one of the gravest threats to public health and development that sub-Saharan Africa has ever faced, political science can no longer afford to ignore the political implications of AIDS in Africa. A rich array of research agendas linking AIDS and politics is worthy of systematic attention, including the explanation of

variations in state responses to the pandemic; the relationship between African governments and NGOs; the challenges AIDS creates for neoliberalism; AIDS in the context of North-South tensions; and international security issues. Equally important are issues that we have not addressed here; including the human rights concerns in connection with HIV testing, drug experiments, workplace rights, and access to therapies. Also included are the role of intensified exploitation of Africa's mining and forest resources and the spread (and perhaps management) of AIDS and other infectious diseases (Hardin 2000), gender politics issues (including new legal struggles over inheritance laws and norms), and issues about citizenship and popular conceptions of state responsibility and state power that are revealed in public assessments of governments' response, or lack thereof, to AIDS. These topics deserve attention from political science because they are real-world problems of critical importance. Researchers can make contributions by generating data, helping to frame and theorize issues, sorting out the conditions under which "best practices" are most likely to emerge, and getting a better handle on the institutional and macropolitical factors that shape governmental and societal responses. Such research also offers prospects for considerable theoretical innovation in political science. AIDS politics is largely unploughed territory.

Fem

Permutation solves – a queer feminism is necessary in order to transcend gender boundaries and constructions.

Rudy 2000 [Kathy Rudy, professor of women's studies at Duke University "Queer theory and feminism," Women's Studies: An inter-disciplinary journal, 29:2,195-216, 2000, http://dx.doi.org/10.1080/00497878.2000.9979308]//JIH

From a certain angle, these strategies might appear contradictory (why focus on "women" or women's sphere if that's the very category we're trying to free ourselves from?). My point here is that we need to live with this contradiction for some while, that we need to focus both on women and beyond them in order to prevent a new queer world from becoming another cover for the discrimination and disregard of women. Queer theory can provide us with interesting visions of a non-gendered, politically progressive world, but only if we recognize the need for feminist analysis as well. To my thinking, feminists today need to attend both to new queer analyses and to feminist methodologies if we hope to pursue a world that strives to be truly beyond gender discrimination rather than one that simply hides it. Queer discourse on academic and popular levels can help us avoid configuring gender as an ontological necessity and see it instead as something we construct and perform. Moving beyond the male/female binary will free us from unnecessary gender discrimination currently present in many aspects of social life. We also need feminism, however, to help us consciously focus on and recover "women's work" as a central concern in the new queer discourse. As feminists striving to live beyond gender, we need to actively remember the important relational and emotional work that has been done throughout the ages by the people called "women." Seeing "women's work" as engaging, important work throughout history will reshape the landscape of our own lives today. I suggest that what we need is a "feminist version of queer theory," which would see itself not as a set of instantaneous, deconstructive moves but rather as a collection of staggered events and uneven developments that pursue two conflicting goals simultaneously. In this feminist version of queer theory, we must strive to pay as much attention to the role of (what we used to call) women, as we do to overcoming or rising above such categorization. By understanding a feminist queer agenda not as one move but as a process, we can then see that both types of work help us reshape the world. Queer theorists and feminists agree on the idea that the secret of rebuilding the world lies at the level of interpretation. Rather than struggling over whether an event or text is either queer

or feminist, we need to recognize that both interpretations are necessary and ought to exist side-by-side. In building a new feminist queer theory in this dialectical fashion, the struggle to recover women and to move beyond them emerges as an agenda that can offer a better world for people of all sexual and gender identifications. This version of queer theory understands finally that without feminism, queer theory will simply be another fight among boys.

Engaging in an analysis of queerness is necessary in order to transcend the confining identity categories of many feminist movements and break away from traditional conceptions of identity.

Jagose 96 [Annamarie Jagose, PhD., scholar in feminist studies, lesbian/gay studies and queer theory,"Queer Theory," University of Melbourne Press, 1996, http://www.australianhumanitiesreview.org/archive/Issue-Dec-1996/jagose.html]//JIH

In the sense that Butler outlines the queer project--that is, to the extent that she argues there can't be one--queer may be thought of as activating an identity politics so attuned to the constraining effects of naming, of delineating a foundational category which precedes and underwrites political intervention, that it may better be understood as promoting a non-identity--or even anti-identity--politics. If a potentially infinite coalition of sexual identities, practices, discourses and sites might be identified as queer, what it betokens is not so much liberal pluralism as a negotiation of the very concept of identity itself. For queer is, in part, a response to perceived limitations in the liberationist and identity-conscious politics of the gay and lesbian feminist movements. The rhetoric of both has been structured predominantly around self-recognition, community and shared identity; inevitably, if inadvertently, both movements have also resulted in exclusions, delegitimation, and a false sense of universality. The discursive proliferation of queer has been enabled in part by the knowledge that identities are fictitious--that is, produced by and productive of material effects but nevertheless arbitrary, contingent and ideologically motivated.

Unlike those identity categories labelled lesbian or gay, queer has developed out of the theorising of often unexamined constraints in traditional identity politics. Consequently, queer has been produced largely outside the registers of recognition, truthfulness and self-identity.

Queer, then, is an identity category that has no interest in consolidating or even stabilising itself. It maintains its critique of identity-focused movements by understanding that even the formation of its own coalitional and negotiated constituencies may well result in exclusionary and reifying effects far in excess of those intended.

Acknowledging the inevitable violence of identity politics and having no stake in its own hegemony, queer is less an identity than a critique of identity. But it is in no position to imagine itself outside that circuit of problems energised by identity politics. Instead of defending itself against those criticisms that its operations inevitably attract, queer allows such criticisms to shape its--for now unimaginable--future directions. 'The term', writes Butler, 'will be revised, dispelled, rendered obsolete to the extent that it yields to the demands which resist the term precisely because of the exclusions by which it is mobilized'. The mobilisation of queer--no less than the critique of it--foregrounds the conditions of political representation: its intentions and effects, its resistance to and recovery by the existing networks of power.

The feminist critique of LGBT issues is flawed and discriminatory – the alt just perpetuates homophobia

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

Many feminists criticise us queens because we often tend in our dress and behaviour to copy the stereotyped 'feminine' fetish that women have to fight. But if a woman dressed like a starlet or cover girl is normal for the system today, a man dressed in a similar way is quite abnormal, as far as 'normal' people are concerned, and so our transvestism has a clear revolutionary character. There is no harm in us queens having our bit of fantasy : we demand the freedom to dress as we like, to choose a definite style one day and an ambiguous one the day after, to wear both feather : and ties, leopard-skin and rompers, the leather queen's chains, black leather and whip, the greasy rags of the street porter or a tulle maternity dress. We enjoy the bizarre, digging into (pre)history, the dustbins and uniforms of yesterday, today and tomorrow, the trumpery, costumes and symbols that best express the mood of the moment. As Antonio Donato puts it, we want to communicate by our clothing, too, the 'schizophrenia' that underlies social life, hidden behind the censorious screen of the unrecognised transvestism of everyday. From our vantage point, in fact, it is 'normal' people who are the true transvestites. Just as the absolute heterosexuality that is so proudly flaunted masks the polymorphous but sadly inhibited disposition of their desire, so their standard outfits hide and debase the marvellous human being that lies suppressed within. Our transvestism is condemned because it shows up for all to see the funereal reality of the general transvestism, which has to remain silent, and is simply taken for granted.

Far from being particularly odd, the transvestite exposes how tragically ridiculous the great majority of people are in their monstrous uniforms of man and 'woman'. You need only take a ride on the underground. If the transvestite seems ridiculous to the 'normal' person who encounters him, far more ridiculous and sad, for the transvestite, is the nudity of the person who laughs, so properly dressed, in his face.

For a man, to dress as a 'woman' does not necessarily mean projecting the 'woman-object'; above all, because he is not a woman, and the male fetishism imposed by capital decrees that he should be dressed quite differently, reified in a quite different guise, dressed as a man or at least in unisex. Besides, a frock can be very comfortable, fresh and light when it's hot, and warm and cosy when it's cold. We can't just assume that women who normally go around dressed as men, swathed tightly in jeans, feel more comfortable than a queen dressed up as a witch, with full-bodied cloak and wide-brimmed hat.

But a man can also get pleasure from wearing a very uncomfortable 'feminine' garb. It can be exciting, and quite trippy, for a gay man to wear high heels, elaborate make-up, suspender belt and satin panties. Once again, those feminists who attack us gays, and in particular transvestites, for dressing as the 'woman-object', are putting down gay humour, the transsexual aesthetic, the craziness of crazy queens. Their new morality is in fact the very old anti-gay morality, simply given a new gloss by modern categories stuffed with an ideological feminism, ideological because it provides a cover for the anti-homosexual taboo, for the fear of homosexuality, for the intention to reform the Norm without eliminating it.

Heterosexual feminists fail to hit the mark when they discuss homosexuality. And we queens, moreover, have no intention of being put down by women any more than by men. In the course of our lives, many of the educastrated educastrators we have encountered have been women, and there are certainly far more women still opposed to homosexuality today than there are gay men who are male supremacist and enslaved by the dominant ideology. Many women have abused us and still do so, they have ridiculed us and still do so, they have oppressed us and still do so. These women cannot but be opposed to us, and we cannot but 'oppose' them, if we intend, from the gay standpoint, to wage a struggle for universal liberation (a struggle, therefore, which involves them as well, fighting against their prejudices, with a view to dissolving all anti-gay resistances). I have already shown how the contradiction between men and women and the contradiction between heterosexuality and homosexuality are intertwined. And so if feminists cannot but oppose the persistence of male supremacy among us queens, we cannot but challenge fundamentally the heterosexual 'normality' with which the women's movement is still pervaded, despite the new fashion or ideology of 'homosexuality' that has become widespread in it.

Permutation card – fem (don't know the advocacy statement so don't know how to explain the perm really)

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

When there are women who criticise us gays if we dress as 'women', we should not ignore the pulpit from which this preaching comes. I have never been attacked by a lesbian for my make-up, my floral gowns or my silver heels. It is true, of course, that, if for centuries women have been forced by male power to dress up in an oppressive manner, the great creators of fashion, the couturiers, hair-stylists, etc. have almost always been gay men. But the homosexual fantasy has simply been exploited by the system "" it still is [2] "" in order to oppress women and adorn them in the way that men want to see them. For centuries, the system has exploited the work of homosexuals to subjugate women, just as it has made abundant use of women to oppress gays (any gay man need only recall his mother). For this reason, if it is very important for women today to reject certain ways of dress, i.e. being dressed and undressed by men, it is equally important that gays should recapture and reinvent for themselves the aesthetic that they were obliged for centuries to project onto women.

If Marlene Dietrich in her glitter is an emblem of the oppression of women, she is at the same time a gay symbol, she is gay, and her image, her voice, her sequins form part of a homosexual culture, a desire that we queens recognise in ourselves. It is true that for a woman today to present herself like a Vogue cover girl is in general anti-feminist and reactionary. But for a gay man to dress as he pleases, boldly expressing a fantasy which capital has relegated to the reified pages of Vogue, has a certain revolutionary cutting edge, even today. We are fed up with dressing as men. We ask our sisters in the women's movement, then, don't burn the clothes that you cast off. They might be useful to someone, and we have in fact always longed for them. In due course, moreover, we shall invite you all to our great coming-out ball.

There can be no doubt that queens, 'effeminate' homosexuals and transvestites are among those men closest to trans-sexuality (even if frequently, because of oppression, they live their transsexual desire in alienated forms, infected by false guilt). Queens and transvestites are those males who, even though male, understand better what it means to be a woman in this society, where the men most disparaged are not the brutes, phallocrats or violent individualists, but rather those who most resemble women.

It is precisely the harsh condemnation of 'effeminacy' that sometimes leads gay men to behave in a way that is functional to the system, to become their own jailors. They then balance their 'abnormal' adoration for the male, the tough guy, the hoodlum, with a 'normal' and neurotic anti-woman attitude, which is counterrevolutionary and male supremacist. But the homosexual struggle is abolishing this historical figure of the queen enslaved by the system (the 'queer men' whom Larry Mitchell distinguishes from 'faggots'), and creating new homosexuals, whom the liberation of homoeroticism and trans-sexual desire brings ever closer to women, new homosexuals who are the true comrades of women. To the point that they can see no other way of life except among other homosexuals and among women, given the increasingly detestable character of heterosexual males. Whenever we gays see 'normal' males discussing one another, or rather tearing one another to pieces, whenever we see them attack one another in a profusion of thrusting insertions, then we truly do think they have understood nothing, if they are still unaware of the homoerotic desire that pushes them towards one another and yet confuses them because it is repressed. And if the gay struggle elevates the acidic and put-down queen (acidic even when she's not on acid), transforming her into a folle, a gay comrade who is ever more trans-sexual, it also negates the heterosexual man, since it tends towards the liberation of the queen that is in him too.

The feminist critique of LGBT issues is flawed and discriminatory – the alt just perpetuates homophobia

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

Foucault

Perm do both – the 1ac is consistent with Foucault's strategy for queer resistance.

Spargo 99 [Tamsin Spargo, Reader in Cultural History and teaches creative writing in the Liverpool Screen School, "Foucault and Queer Theory," 1999]//JIH

A crucial feature of Foucault's analysis is his emphasis on the production of 'reverse discourse': 'There is no question that the appearance in nineteenth-century psychiatry, jurisprudence, and literature of a whole series of discourses on the species and subspecies of homosexuality, inversion, pederasty, and "psychic hermaphrodism" made possible a strong advance of social controls into this area of "perversity"; but it also made possible the formation of a "reverse" discourse: homosexuality began to speak in its own behalf, to demand that its legitimacy or "naturality" be acknowledged, often in the same vocabulary, using the same categories by which it was medically disqualified.'6 It is possible to see in this model of reverse discourse the germ of identity politics. Those who are produced as deviant subjects, 'homosexuals', may find a common cause, a common dissenting voice that turns confession to profession.The discourse of sexology, for example, produced the identity category of the 'invert' as an aberration from the norm, but it might also enable that individual to question his or her social and political position. It provided a vocabulary and knowledge which could be strategically used by its subjects. As recent work has revealed, there were a number of explicit attempts to redeploy the knowledge and rhetoric of inversion and of homosexuality to appeal for decriminalisation in the late 19th century.

But Foucault's analysis of the 'perpetual spirals of power and pleasure' that were produced in the discourses of sexuality cannot be easily reduced to a binary opposition of discourse versus reverse discourse.7 The 'sexual mosaic' of modern society is a dynamic network in which the optimisation of power is achieved with and through the multiplication of pleasures, not through their prohibition or restriction.8 It is difficult to view power except in traditional terms as a negative force acting upon individuals or groups, but Foucault's subtler analysis of its status as a relation that simultaneously polices and produces, demands that we think beyond a conventional political logic of domination and resistance. Power relations cannot be simply overturned or inverted.

The queer political body is inevitably fetishized and participates in the sustenance of racial structures – suffocates all possibilities for racial liberation.

Agathangelou 13 [Anna M. Agathangelou, Associate Professor at Department of Political Science, "Neoliberal Geopolitical Order and Value," International Feminist Journal of Politics, 15:4, 453-476, December 17 2013, http://dx.doi.org/10.1080/14616742.2013.841560]//JIH

This essay tracks a range of often neglected politics, texts, policies, legal practices, spaces and theories to reveal an emergent political body: the reconstructed sexual queer, whose recognizable humanity (i.e., imminent living-capacity) is constituted into a recognizable sexual orientation and gender identity, part of an emerging form of a sovereign body politic, which presupposes immanent (a Deleuzian outside) slave incapacity for suture (Dayan 2011). Concomitantly, this suffering fetishized 'queer' political body participates in the redaction and subsequent sustenance of racialized structures with its recognizable sexual orientation and gender identity, whereby white bodies become signifiers of 'legitimate', radical alterity in the form of queerness and blacks are presumed imminently incapacious, never registering in the 'legitimate' global political economy of sex and sexuality (Agathangelou 2004) as well as law. I offer a peripatetic presentation of the Human Rights Watch reports on Iraq (2011) and Hillary Clinton's speech to the UN to articulate their political positions, yoking them without collapsing them into comparison. In so doing, I suggest that the three moves outlined above constitute not only the 'straightjacketing' of sexuality, but also racial terror – where 'gay rights' becomes a discourse and a practice of (perceived) racial economic superiority and (actual) racial subordination. Querying the genealogy of sex, neoliberalism and capitalism from the vantage point of black terror (i.e., lynchings, convict leasing to political disenfranchisement, chain gangs; see Morrison 1987; Dayan 2011) accords us an orientation from which to understand such 'terror [that] allow[s] to demonise others . . . to do unspeakable things to them' all in the name of 'order' (Dayan 2011: 32–3) as well as the visions of radical justice emanating from antislavery and anti-colonial struggles. In the following sections, I theorize the ways in which slavery becomes collapsed as sexuality into the neoliberal imperium within which blacks and black life serve as the literal raw materials to guarantee long-term growth (Davis 2003: 94). I also point to insurgent social life as a struggle for 'total freedom' (Goddard 2006). In so doing, I work with two political (ethico-juridical) archives tracing their force on bodies directly. First, I reengage with Hillary Clinton's UN speech to trace how the queer is constituted as value in a speculative economy (i.e., the 'rational' basis for passing laws that integrate them as capacious civil subjects) that reconfigures capital and globality by distinguishing between different forms of governance and violence, placing the queer on the inside of the civil society and relegating the hovering black outside the 'bounds of the civil' (Dayan 2011: 22) consequently changing the world itself and 'all levels of social existence' (Quijano 2000: 547). Second, I use the Human Rights Reports in Iraq to trace how sexual and racial technologies are deployed, exposing how the suturing of a queer speculative economy 'here' and 'there' depends fundamentally on 'value' as an abstraction device and a risk threshold that distinguishes between queers, racialized gays as well as the structurally impossible and ontologically dead (i.e., blacks; see Agathangelou 2009). Central to my analysis is the concept that queer economies could not and do not escape being entangled with capital's foundational terror. In fact, analysing these reports, I show the ways the neoliberal imperium biopolitically constitutes and manages queer life while ignoring the wailing, the sounds of living death emitting from the chains and the screams from the slave ships of the Atlantic crossing and from places such as Attica, Abu Ghraib and US prison states (Morrison 1987: 2010–11 cited in Childs 2009; Dayan 2011). I end with some thoughts on the possibility that queer projects and the Black Struggle can contravene, noting how differentiations between bodies, sexualities, and races in world politics emerge as strategies that foreclose and suffocates a range

of possibilities, globally constituted imaginaries and freedoms all in the name of overcoming limits, such as death, stagnation and the loss of material value.

Cap

The affirmative's focus on decentering identity traits and individual queer liberation promotes the goals of global capitalism and destroys hope for political action.

Kirsch 06 [Max Kirsch, PhD Florida Atlantic University, "Queer Theory, Late Capitalism and Internalized Homophobia," Journal of Homosexuality, Harrington Park Press, Vol. 52, No. ½, 2006, pp. 19-45]//JIH

Jameson has proposed that the concept of alienation in late capitalism has been replaced with fragmentation (1991, p.14). Fragmentation highlights the it also becomes more abstract:

What we must now ask ourselves is whether it is precisely this semi-autonomy of the cultural sphere that has been destroyed by the logic of late capitalism. Yet to argue that culture is today no longer endowed with the relative autonomy is once enjoyed as one level among others in earlier moments of capitalism (let alone in precapitalist societies) is not necessarily to imply its disappearance or extinction. Quite the contrary; we must go on to affirm that the autonomous sphere of culture throughout the social realm, to the point at which everything in our social life–from economic value and state power to practices and to the very structure of the psyche itself–can be said to have become 'cultural' in some original and yet untheorized sense. This proposition is, however, substantially quite consistent with the previous diagnosis of a society of the image or simulacrum and a transformation of the "real" into so many pseudoevents. (Jameson, 1991, p. 48)

The fragmentation of social life repeats itself in the proposal that sexuality and gender are separate and autonomous from bureaucratic state organization. If, as in Jameson's terms, differences can be equated, then this should not pose a problem for the mobilization of resistance to inequality. However, as postmodernist and poststructuralist writers assume a position that this equation is impossible and undesirable, then the dominant modes of power will prevail without analysis or opposition. The danger, of course, is that while we concentrate on decentering identity, we succeed in promoting the very goals of global capitalism that work against the formation of communities or provide the means to destroy those that already exist, and with them, any hope for political action.

For those who are not included in traditional sources of community building–in particular, kinship based groupings–the building of an "affectional community . . . must be as much a part of our political movement as are campaigns for civil rights" (Weeks, 1985, p. 176). This building of communities requires identification. If we cannot recognize traits that form the bases of our relationships with others, how then can communities be built? The preoccupation of Lyotard and Foucault, as examples, with the overwhelming power of "master narratives," posits a conclusion that emphasizes individual resistance and that ironically, ends up reinforcing the "narrative" itself.

Capitalism is the root cause of your impacts, and your impacts are inevitable until capitalism is destroyed.

Khader 13 Will the Real Robert Neville Please, Come Out? Vampirism, the Ethics of Queer Monstrosity, and Capitalism in Richard Matheson's I Am Legend? Journal of Homosexuality Jamil Khader PhD* Volume 60, Issue 4, 2013

Despite its multiculturalist politics of recognition, no matter how progressive it was for its time, Matheson's I Am Legend is as interpellated as Lawrence's (2007) film within capitalist ideology, in that they both translate "antagonism into difference" (Žižek,

2006, p. 362), substituting sexual difference for the importance of class struggle. Transvaluing the antagonism (class struggle) underpinning capitalist relations of production into the politics of identity and difference obscures the problematic relationship between capitalism and queer subjectivity. Indeed, the text establishes neoliberal capitalism as an absent presence, by reproducing the ultimate capitalist fantasy of commodity fetishism, while at the same time eliding the extent to which capitalism commodifies and exploits queer sexuality. In other words, neoliberal capitalism is invested with the power to assert itself as the end of history, to the extent that it has subtracted itself from public discourse to become a completely invisible signifier around which everything revolves but that refuses to be named. As D'Emilio (1993) memorably states in his article on capitalism and gay identity, "In the most profound sense, capitalism is the problem" (p. 474). The absent presence of capitalism as the transcendent signifier especially, for sexual minorities, constitutes the ultimate site for their doing and undoing. For D'Emilio (1993), sexual minorities inhabit an ambivalent position within the neoliberal capitalist system, since it facilitates both their emergence as consumers and producers, allowing, thus, their integration into the labor market as well as their exploitation to benefit corporate interests, and the homophobic backlash against them. 5 He attributes this ambivalence to the contradictory position that the nuclear family occupies in the capitalist system: Capitalism, he argues, has not only subverted the material basis of heteronormative families, allowing family members to live outside of the family structure, but has also enshrined these families for their reproductive value as the only functional model of intimate and personal relationships. He thus states, "in divesting the family of its economic independence and fostering separation of sexuality from procreation, capitalism has created conditions that allow some men and women to organize personal life around their erotic/emotional attraction to their own sex" (pp. 473–474). Moreover, capitalism has provided the conditions for commodifying sexuality and erotic desire as a matter of choice outside the parameters of procreative sexual economy. As long as such erotic choices are coopted and contained as a "form of play, positive and self-enhancing," in D'Emilio's (1993) words (p. 474), sexual identity can be evacuated from its excessive threats and history of struggle, only to circulate as a fetish of erotic pleasure. To this extent, sexual identity becomes then the grounds for collective organization that, nonetheless, substitutes consumption for production. Not all forms of queer transgression, that is, are necessarily subversive, until the proliferation of the semiotics of queer identity is understood in relation to the larger social inequalities (Taylor, 2009, p. 201). While capitalism continues to undermine the fabric of social relations, moreover, queer communities have been paradoxically blamed for the social ills and instabilities of the capitalist system. As such, capitalism as the name of the social totality is left untouched and invisible. Similarly, Matheson's (1954) text naturalizes and normalizes capitalism and its social relations, by disavowing the need for recognizing class struggle in "its terrifying dimension" (Žižek, 1986, p. 5). As a work of fantasy, that is, Matheson's novella tries to deny the specific conflicts that embody the capitalist conditions of its production: What the power of the hegemonic capitalist ideology will not have disclosed, in short, is the presence of capitalism itself. Throughout the text, therefore, Neville takes for granted the free commodities he consumes, be it the lathe from Sears, the gasoline, and the water bottles, allowing him to push a shopping cart, what he calls "the metal wagon," "up and own the silent dust-thick aisles" (Matheson, 1954, p. 26), clinging as much as he can to the norms of his bourgeois suburban life as if nothing happened around him. Indeed, Neville lives the pure fantasy of commodity fetishism that does not only offer him the opportunity to fulfill his fantasy of living in a world of abundant free commodities and surplus enjoyment (which for the last man on earth can indeed be considered infinite—he would have to live many more lives to be able to exhaust all these resources), but also to kill the undead owners of the store in which he was shopping, and, thus, foreclose the question of labor altogether. 6 Moreover, Neville's death operates as a nostalgic affirmation of neoliberal capitalism. After all, it is only when he can no longer maintain his sovereignty over his private property that the vampires could intrude upon it; in its absent presence, neoliberal capitalism could at least guarantee his safety inside of his private property. This critique of capitalism in Matheson can also be supplemented by an attention to the ways in which Matheson (1954) represents revolutionary societies and forms of enjoyment, and more specifically, the Soviet Union with its spies, collaborators, and purges. Since this new vampire society is specifically structured by the same violent forms of enjoyment embodied in revolutionary movements, I contend that Matheson's alleged subversion of the us-them binary of Cold War politics constitutes, in fact, both a thinly disguised liberal critique of Stalinist terror and a nostalgic affirmation of neoliberal capitalism. Moreover, it is worth pointing out, Matheson's representation of revolutionary society blends and obscures in an Arendtian fashion, as Žižek (1986) would say, the distinction between fascism and Stalinism in their differential relations to class struggle. (For a very useful and clear discussion of Žižek's political views, see Dean [2006, pp. 45–94].) While fascists neutralize class struggle and displace it on a racialized other such as the case of the Jews in Nazi Germany, as Žižek contends, Stalinism abolishes the class struggle and reenacts the capitalist fantasy of unbridled production and consumption without adhering nonetheless to the constraints of the capitalist form (private property). For Matheson (1954), recognizing the monstrosity of one's own nonnormative desire facilitates the relational understanding of the dialectical relationship between the self and the other, in a way that reinscribes them both within a democratic site of multicultural exchange and tolerance. Nonetheless, the belief in the legitimacy of sexual rights is

maintained without rethinking its ramifications in relation to the ability of the capitalist system to coopt and contain any threat that may be embedded in queer sexuality. Identity politics, therefore, cannot effectively serve as the basis for a genuine politics of gay liberation. **Only acknowledging class struggle**, **as the fundamental gap that constitutes the totality of the social field, can render the absence and invisibility of capitalism present**, by clearing a space for a radical reconfiguration of the ethical relationship to the other, and recharting alternative forms of solidarity, beyond identity politics, that can struggle with other oppressed constituencies in order to dismantle and reimagine the neoliberal capitalist system itself.

Historical Marxism provides a better frame for analyzing queerness than queer theory itself

Drucker 11 [Peter, International Institute of Research and Education; 2011; http://booksandjournals.brillonline.com/content/journals/10.1163/156920611x606412**; The Fracturing of LGBT Identities under Neoliberal Capitalism; 06/29/15; jac]**

Sexuality, once a largely unexplored continent for historical materialism, has long since ceased to be so. In the 1970s and early '80s lesbian/gay historians, using Marxist and feminist analytical tools among others, began to chart the 1. Some initial thoughts for this article originated as a talk at the IIRE Lesbian/Gay/Bisexual Strategy Seminar in Amsterdam in August 2000; many thanks to the 2000, 2002 and 2009 IIRE Seminar participants for their comments and ideas. Criticisms and observations by Nina Trige Anderson, Pascale Berthault, Terry Conway and Jamie Gough, and especially comments, suggestions and written exchanges with Alan Sears, were particularly helpful. Thanks as well to David Fernbach and to the editorial committee of Science & Society for comments on earlier versions, to Christopher Beck for his support and stimulating comments and questions, and to Historical Materialism board-members, especially Paul Reynolds, for their comments and suggestions. This article is dedicated to Torvald Patterson (1964–2005), in-your-face revolutionary queer, in loving memory. 4 P. Drucker / Historical Materialism 19.4 (2011) 3–32 emergence of contemporary lesbian/gay identities.2 Although historical materialist categories have been supplemented and then to a large extent supplanted in the field by Foucauldian approaches since the 1980s and queer theory since the 1990s, elements contributed by the first, Marxist-influenced generation of historians and theorists still survive to some extent within a broad range of social-constructionist perspectives. Most historians and theorists – if not necessarily most lesbian and gay laypeople – agree that modern lesbian/gay identities are unique, clearly distinguishable from any of the same-sex sexualities that existed before the last century or so and from many that still exist in various parts of the world. Whether they cite Marx, Foucault, or both, historians' analysis of lesbian/gay identity has linked its emergence to the development of modern, industrialised, urbanised societies. Some historians3 have linked its emergence, in a more-or-less explicitly Marxist way, to the development of capitalism. This connection has continued to be made by writers working within a Marxist framework.4 Recently, Kevin Floyd has detected more broadly a 'greater openness [in queer thought] to the kind of direct engagement with Marxism that emphasizes its explanatory power'.5 Yet some theorists have seemed uneasy in recent years about the questions that were initially not asked in these accounts. Once this specific form of lesbian/gay identity has been explored and its emergence mapped, the question arises: is this the end of the story? Especially as more writings have charted the spread of LGBT communities in Asia and Africa, some have wondered whether all other forms of same-sex sexuality are surrendering to what Dennis Altman has critiqued as the triumphant 'global gay', a monolithic figure riding the wave of capitalist globalisation.6 In much the same way that homo sapiens was once naively viewed as the culmination of biological evolution, and liberal democracy (according to Francis Fukuyama) as the culmination of human history, one might have sometimes imagined that all roads of LGBT history 2. For example, Fernbach 1981; D'Emilio 1983a and 1983b. A word on terminology: the term 'lesbian/gay' in this article refers to a historically specific phenomenon, defined in Section I below. 'LGBT' (lesbian, gay, bisexual and transgender) is used as a broader term for people with same-sex sexualities or identities. Although the word 'queer' is sometimes used by others to refer generally to LGBT people, I try to reserve the word in this article to those who self-identify as queer, who are often rebelling, not only against the heterosexual norm, but also against the dominant forms of lesbian/gay identity. I sometimes use 'gay', 'lesbian/gay' or 'LGB' particularly to refer to more 'respectable' people who emphatically do not identify as queer. 3. See, for example, D'Emilio 1983a. 4. See, for example, Hennessy 2000; Sears 2005. 5. Floyd 2009, p. 2. 6. Altman 2003. P. Drucker / Historical Materialism 19.4 (2011) 3–32 5 led to Castro Street in San Francisco. A few queer theorists have tried to undermine any such monolithic vision of gay identity, rejecting the onedimensional focus on gender-orientation that underlies it.7 But, despite their abstract championing of 'difference', they have rarely engaged concretely with the historiography that sometimes seems to suggest that LGBT history is a one-way street. In Paul Reynolds's words, they have 'centred on the social production of categories discursively rather than determinantly through essential causality and power of the social relations of production'.8 This article argues that there are socioeconomic forces that have been leading LGBT people to question lesbian/gay identity as it took shape by the 1970s. A historically-based, social constructionist, Marxist approach9 can examine historically different sexual identities under capitalism, without privileging any particular form of identity; can chart

not only the emergence of lesbian/gay identities, but also shifts in sexual identities in recent decades, exploring connections between shifting identities and successive phases of capitalist development. One useful tool is the Marxist theory of capitalist long waves, and specifically Marxist analyses of the mode of capitalist accumulation that was on the upswing until the early 1970s and turned sharply downward with the recessions of 1974–5 and 1979–82.10 A historical-materialist analysis of this kind may provide a more solid theoretical basis for addressing a central political concern of recent queer theory – the defence of nonconformist or less privileged LGBT people against 'homonormativity'11 – than queer theory itself offers, while helping to lay the foundation for a queer anticapitalism. It is by now nothing new to link the rise of what might be called classic lesbian/gay identity to the rise of a 'free' labour-force under capitalism. This has taken centuries, and historians have generally looked at it as a long process. But the breakthrough of gay identity as we know it on a mass-scale is in fact very recent, more a matter of decades than of centuries. On closer examination, 7. For example, Seidman 1997, p. 195. 8. Reynolds 2003. 9. This article uses the term 'social constructionism' simply as the opposite of 'essentialism' (a view of sexual identities as biologically determined or otherwise transhistorical), not to refer to a specific school of thought contrary to Marxism. Although Marxists such as Klara Zetkin and Alexandra Kollontai wrote insightfully about sexuality within a purely Marxist framework, more recent Marxist treatments of the subject have almost always engaged critically with other approaches, such as psychoanalysis, feminism, Foucauldianism, post-colonialism and queer theory. I believe that a rigorous Marxist approach to sexuality is not only compatible with an engagement with other social-constructionist approaches, but in fact requires it. 10. Mandel 1978 and 1995. 11. Lisa Duggan has defined 'homonormativity' as a set of norms that 'does not contest dominant heteronormative assumptions and institutions but upholds and sustains them' (Duggan 2002, p. 179). 6 P. Drucker / Historical Materialism 19.4 (2011) 3–32 the consolidation and spread of gay identity, especially among the mass of working-class people, took place to a large extent during what some Marxist economists refer to as the expansive long wave of 1945–73. Gay identity on a mass-scale, emerging gradually after a period of repression from the 1930s to the 1950s,12 was dependent on the growing prosperity of the working and middle-classes, catalysed by profound cultural changes from the 1940s to the 1970s (from the upheavals of the Second World-War13 to the mass-radicalisation of the New Left years) that prosperity helped make possible. This means that gay identity was shaped in many ways by the mode of capitalist accumulation that some economists call 'Fordism': specifically by mass-consumer societies and welfare-states.14 The decline of Fordism has also had implications for LGBT identities, communities and politics. The decades of slower economic growth that began with the 1974–5 recession had a differentiated impact on LGBT people and their communities. On the one hand, commercial gay scenes and sexual identities compatible with these scenes advanced and were consolidated in many parts of the world, particularly among middle-class layers. On the other hand, commercial scenes have not been equally determinant for the lifestyles or identities of all LGBT people. In the dependent world, many poor people simply have a hard time taking part in commercial gay scenes. In developed capitalist countries, while commercial scenes are more accessible to even lowerincome LGBTs, growing economic inequality has meant increasingly divergent realities in LGBT people's lives. Alienation has mounted among some LGBT people from the overconsumption increasingly characteristic of many aspects of the commercial gay scene, which inevitably marginalises many LGBT people. Alternative scenes of various sorts (not always necessarily less commercial) have proliferated.

Resistance purely rooted in queer studies cannot effectively confront neoliberalism

Drucker 11 [Peter, International Institute of Research and Education; 2011; http://booksandjournals.brillonline.com/content/journals/10.1163/156920611x606412**; The Fracturing of LGBT Identities under Neoliberal Capitalism; 06/29/15; jac]**

There is of course no one-to-one correspondence between economic and social developments and shifts in sexual, cultural and political identities. In LGBT communities, as in the world at large, there is a whole set of institutions that produce (among other things) lesbian/gay ideology and identity, mediate the underlying class and social dynamics, and represent 'the imaginary 12. See, for example, Chauncey 1994, pp. 334–46. 13. Bérubé 1983. 14. The concept of Fordism has been largely associated with the French 'régulation' school, the current of Marxist economics relied on by, for example, Floyd (Floyd 2009). Many of the basic elements of what regulationists call the Fordist mode of accumulation are also to be found in Mandelian long-wave theory or the 'social structure of accumulation'-approach. These different schools differ with each other particularly about the causes of the rise and decline of different modes of accumulation. While important, these debates are not directly relevant to this article. P. Drucker / Historical Materialism 19.4 (2011) 3–32 7 relationship of individuals to their

real conditions of existence'.15 To analyse how all these institutions – from newspapers and magazines to porn-video producers to (divisions of) publishing houses to websites and chat-rooms to lesbian/gay-studies departments to small-business associations to sports clubs and beyond – functioned ideologically under Fordism, and tended to function differently with the rise of neoliberalism, would go beyond this article's scope. Nevertheless, no aspect of capitalist culture, including sexual culture, exists in complete isolation from the mode of production as a whole; fundamental shifts in capitalism are detectable, however indirectly, at the level of gender and sexuality as at other levels of the systemic totality.16 This basic understanding can give us the audacity, even in the absence of fully worked-out mediations, to point out some trends that correspond to changing class-dynamics in LGBT communities. A large proportion of the institutions that define LGBT communities and produce their self-images tend to reproduce and defend a unifying lesbian/gay identity in apparent continuity with the identity that took shape by the 1970s. But even a schematic analysis can show that classic lesbian/gay subcultures and identities were put under pressure or into question in various ways by the decline of Fordism. Ultimately, as the class and social reality of LGBT communities became more fragmented and conflict-ridden, so did their ideological and even sexual expressions. In the end, the 'mode of production of material life condition[ed] [their] social, political and intellectual life process in general'; their 'social being . . . determine[d] their consciousness'.17 The changes have included development of a queer identity seen at least in part as in opposition to existing lesbian/gay identities, a growing visibility of transgender identities, and the proliferation of a variety of other identities linked to specific sexual practices or rôles. Despite these identities' extraordinary diversity, their rootedness in characteristics of contemporary capitalism can be detected in a number of more-or-less common features. Whether or not they are explicitly defined as queer, they respond to the increasingly repressive character of the neoliberal order through their stubborn affirmation of sexual practices that are still – or are increasingly – stigmatised. They also reflect the growing inequality and polarisation of neoliberal capitalism by making sexual power-differentials explicit, and above all through gender-nonconformity. To understand these features better, this article looks briefly, first, at the material basis of the emergence of lesbian/gay identity by the 1970s, and second at the material basis of factors that have been fracturing it. It then 15. Althusser 1971, p. 162. 16. Floyd 2009. 17. Marx 1968, p. 182. 8 P. Drucker / Historical Materialism 19.4 (2011) 3–32 examines the ways in which economic changes have been ideologically mediated in new expressions of gender and sexual identity, particularly among transgendered and other queers. The last section discusses the political implications of these changes and the challenges facing twenty-first-century LGBT communities.

LGBT identity and culture emerged and were formed under the development of modern capitalism

Drucker 11 [Peter, International Institute of Research and Education; 2011; http://booksandjournals.brillonline.com/content/journals/10.1163/156920611x606412**; The Fracturing of LGBT Identities under Neoliberal Capitalism; 06/29/15; jac]**

I. Classic gay identity Classic lesbian/gay identity, as opposed to the many other forms of same-sex identity that have existed in human history, is (or was) an identity reserved for people whose primary sexual and emotional ties are with their own sex; who generally do not conclude heterosexual marriages or form heterosexual families (unlike, say, latter-day gay icon Oscar Wilde); who do not radically change their gender-identity in adopting a lesbian/gay sexuality (unlike transgendered people in a great variety of cultures); and in which both partners in relationships consider themselves part of the same lesbian/gay community (a bizarre notion to millions of men around the world who fuck men or boys without considering themselves gay, and to millions of women at the less explicit end of the 'lesbian continuum').18 This kind of gay identity emerged in developed capitalist countries in the late-nineteenth and early-twentieth centuries mainly among middle-class layers (middle-class consumption was particularly crucial to capitalaccumulation in the expansive long wave that lasted from the mid-1890s to the mid-1910s). In this same period, declining birth-rates and advancements in birth-control made procreation less crucial as a focus of at least middle-class sexuality, and sexual desire and object-choice more crucial. The growing importance of consumption and desire helped foster a shift in the construction of gender under capitalism, from

conceptions of ‘manhood’ and ‘womanhood’ focused on the innate character required for production and reproduction, to conceptions of masculinity and femininity that were (in Judith Butler’s term) more ‘performative’,19 defined to a greater extent by patterns of consumption, dress and everyday behaviour.20 In this same period, middle-class men and women (particularly women with education and professions) increasingly had 18. Rich 1983; Wekker 1999. Fernbach (Fernbach 1981, pp. 71–5) gave an early and clear account of the uniqueness of lesbian/gay identity among historically existing forms of same-sex sexuality. Greenberg 1988 provides the most comprehensive survey available of the range of same-sex sexualities. 19. Butler 1999. 20. Floyd 2009, pp. 57–66. P. Drucker / Historical Materialism 19.4 (2011) 3–32 9 the economic and social resources to live independently of their families and to defy convention. As John D’Emilio explained in a seminal article, capitalist development in this way created the conditions for the rise of gay identity.21 The result was the reification of sexual desire based on gendered object-choice, the rapid spread among the middle-classes of medical and later specifically psychoanalytical visions of sexuality,22 and ‘the invention of heterosexuality’ as well as homosexuality as sexological and social categories.23 Working-class and poor people even in developed countries, by contrast, tended well into the twentieth century to focus on conceptions of manhood and womanhood rather than reified conceptions of sexuality.24 Working-class men in the US in particular continued to form relationships between transgendered people (‘fairies’) on the one hand and non-transgendered, often married men on the other,25 or to engage in sex with other men for money or social benefit without taking on any distinctive sexual identity. In the same period in Germany, a homosexuality defined as masculine was notably championed by the middle-class ‘Community of the Special’, while Magnus Hirschfeld’s studies of same-sex relations among largely working-class men led him to uphold a transgender ‘third sex’-model.26 After 1945, however, working-class living standards in capitalist countries went up rapidly under the Fordist order, in which increases in labourproductivity were matched to a large extent by increasing real wages that sustained increasing effective demand, and various forms of social insurance cushioned the blows that hit working people during dips in the business-cycle. As a result, for the first time masses of working-class people – living off what D’Emilio, following Marx, calls ‘free’ labour – as well as students and others were also able to live independently of their families, and give sexual objectchoice a greater rôle in their lives and identities. Working-class family-structures and gender-rôles also changed. For the first time since the mid- to late-nineteenth century – when the family-wage had become a cherished ideal, and sometimes a reality, for broad working-class layers – the Second World-War made waged work at least temporarily normal for even respectable working-class and middle-class women. This made a dent in the pronounced gender-polarisation that had been characteristic of both working-class heterosexuality and homosexuality in the first decades of the 21. D’Emilio 1983a. 22. Floyd 2009, pp. 43–5, following Foucault 1978, pp. 118–23. 23. Katz 1995. 24. Foucault 1978, p. 121. 25. Chauncey 1994. 26. Drucker 1997, p. 37. 10 P. Drucker / Historical Materialism 19.4 (2011) 3–32 twentieth century. In fact, as evidence from both the US and the Netherlands shows, emerging lesbian/gay communities and organisations in the postwar period tended increasingly to squelch effeminacy among gay men and masculinity among lesbians.27 At the same time, higher funding for education and expansion of a social safety-net (in developed countries at least) decreased people’s economic dependence on parents to support them as students or young people, on spouses to help pay the rent, and on children to save them from poverty in old age. Full employment meant more job-opportunities for some people who had previously been marginalised. The combination of increased economic possibilities and a reconfiguration of gender-rôles helped many more people in the 1950s and 1960s shape a sexually hedonistic culture extending beyond the largely middle-class limits of the earlier nonconformist milieu of the 1910s and 1920s. Within this broad hedonistic culture it became possible for a growing minority to form same-sex relationships and networks. While ‘Fordist mass consumption was, above all, an attempt to secure a broad and sustained accumulation of capital’, the diversification of consumer-marketing that it entailed created space for an ‘underground circulation of homoerotic images’ in ‘an increasingly less underground gay male [and lesbian] network’.28 What remained to prevent people from

living openly lesbian/gay lives were the constraints of the law, police, employers, landlords, and social pressure of many sorts. The lesbian/gay movements of the 1960s and ’70s rebelled against these constraints, inspired by a wave of other social rebellions: black, youth, anti-war, feminist and (at least in some European countries) working-class.29 Supplementing the attempts of early lesbian/gay groups to discipline their members’ gender-norms, the second wave of feminism was key in drastically reining in the butch-femme patterns that were still largely hegemonic in 1950s lesbian subcultures (or at least in turning them into ‘a subterranean game’).30 The first lesbian/gay legal victories in the 1970s made mass, open lesbian/ gay/bisexual (LGB) communities possible in the developed countries for the first time in history. Among the preconditions for these communities were the general increase in people’s living standards and economic security, which made autonomous lesbian/gay lives possible; the fact that the millions of people who came out around the 1970s had a certain relative social homogeneity, thanks in part to generational bonds of the baby-boom and in part to the narrowing of economic divides in the 1950s and ’60s, so that there 27. Warmerdam and Koenders 1987, pp. 125, 153, 169; Floyd 2009, pp. 167–8. 28. Floyd 2009, p. 174. 29. D’Emilio 1983b. 30. Califia 2003, p. 3. P. Drucker / Historical Materialism 19.4 (2011) 3–32 11 were fewer barriers to a common sense of identity; and a relatively favourable political/cultural climate. The homogeneity of 1970s lesbian/gay communities was of course relative. Class and sexual differences always existed. The relative ease with which women and men coexisted in the early years of gay liberation lasted only until women became too fed-up with the treatment they often received at the hands of gay men. Although gender-norms relaxed to a certain extent in the 1960s and ’70s, this led to a true devaluation of masculinity and femininity only in the context of a radical-feminist critique, which was never hegemonic;31 even in the New Left, gender-relaxing countercultural influences coexisted with Third-Worldist macho posturing.32 Racism was always a reality. Differences that existed in the 1970s became far greater in the 1980s and 1990s, however, for reasons that go deeper than an inevitable sorting-out.

Capitalism fractures LGBT society, hinders the development of individual identities and renders LGBT resistance impossilbe

II. Gays in the post-Fordist economy The depressive long wave that began by 1974–5 was met by the late 1970s with a neoliberal offensive. This offensive included (to be very schematic): a shift to ‘Toyotist’ production-techniques and to ‘lean production’ generally; economic globalisation, liberalisation and deregulation, taking advantage of new technologies that ‘accelerated the speed and dispersed the space of production’;33 privatisation of many public enterprises and social services; an increase in the wealth and power of capital at labour’s expense; an increase in inequality among countries (through the debt-crisis and structural-adjustment policies) and within countries (through regressive tax and welfare-‘reforms’ and attacks on unions), and luxury-consumption that increasingly replaced mass-consumption as a motor of economic growth. This offensive among other things fragmented the world’s working classes. Big differences (re) surfaced between better and worse-paid workers, permanent and temporary workers, white and black, native-born and immigrant, employed and unemployed.34 The less pronounced differences in income and job-security in 31. See Floyd 2009, pp. 177–8. 32. Floyd 2009, pp. 168–9. 33. Hennessy 2000, p. 6. 34. One study of wage-trends shows that among manufacturing workers in the US, ‘inequality soared in the 1970s and 1980s, reaching levels far higher than those existing during the Depression. The recovery after 1994 brought inequality down again, but only to just below that of the worst years of the 1930s’ (Galbraith and Cantú 2001, p. 83). Mike Davis noted ‘extreme income/skill polarization’ in the growing US healthcare, business-service, banking and real-estate sectors, resulting in a ‘split-level economy’ and ‘reshaping the traditional income pyramid into a 12 P. Drucker / Historical Materialism 19.4 (2011) 3–32 national working classes in the 1960s, which were the backdrop to the rise of lesbian/gay identity, became a thing of the past. One factor complicating the neoliberal offensive was the difficulty of rolling back some of the achievements of black, women’s and lesbian/gay movements. The contradictions of these emancipatory movements in a time of workingclass weakness and growing inequality were played out in many of the ideological debates of the 1980s and ’90s. Women’s equality and racial equality became steadily more established as political commonplaces (in rhetoric if not in reality) at the same time that

redistributive and counter-cyclical economic policies, far less controversial 40 years ago, were dismissed as outmoded and counterproductive (until the 2008 crisis prompted massive redistribution of wealth to the world's biggest banks and various forms of stimulus). What has the effect of all this been on LGBT people, communities and movements? The end of the Fordist expansive long wave was not bad news for everyone by any means, and not for all LGB people specifically. Particularly among some middle-class and upper-working-class social layers that prospered in the 1980s and '90s, especially but not only in developed capitalist countries, commercial gay scenes continued to grow, continuing to underlie lesbian/gay identity.35 Market-friendly lesbian/gay identities prospered in commercialised spaces, in the construction of two-income households among better-off gays and to a lesser extent lesbians, and in the tolerant public space fostered by gay-rights victories. Many relatively better-paid lesbian/gay people who benefited from both economic success and gay-rights reforms have some cause to be contented with the progress they have made: 'inside a cozy brownstone, curled up next to a health-insured domestic partner in front of a Melissa Etheridge video on MTV, flipping through Out magazine and sipping an Absolut and tonic, capitalism can feel pretty good'.36 While all social relations under capitalism are reified – distorted so that relations between people are perceived as relations with or even between things – the shift under neoliberalism to economic growth founded increasingly on middle-class overconsumption raised the reification of human relations among neoliberalism's beneficiaries to new heights. This applied notably to sexual and emotional relations among middleclass gay men and lesbians. new income hourglass' (Davis 1986, pp. 214–18). Figures from the US Federal Reserve show that income-inequality increased further at the end of the 1990s (Andrews 2003). 35. Altman 1982, pp. 79–97. 36. Gluckman and Reed 1997, p. xv. P. Drucker / Historical Materialism 19.4 (2011) 3–32 13 The 1970s, '80s and '90s and the first decade of the new millennium were also years in which open LGBT communities and identities became more prominent in much of the dependent world, first in Latin America and later in many Asian and African countries. Given that dependent countries as a whole have suffered especially with the decline of the old forms of capitalaccumulation, communities and identities there have taken on very contrasting forms.37 The period of slower growth and neoliberal reaction in the global North was a time of recurrent and devastating crisis in many parts of the South even before the generalised crisis of 2008 (notably in Latin America after 1982, in Mexico again after 1994, in much of Southeast Asia after 1997, in Brazil for several years after 1998, and in much of Africa with scarcely a breathing-space). But this did not prevent the growth of middle-classes in the South with incomes far above their countries' averages and linked to global consumer-capitalism – including gay consumer-capitalism. Commercialised, Western-oriented lesbian/gay identities seem in this context to have a complex and contradictory relationship with other same-sex sexualities that co-exist with them in the dependent world. In many ways 'gay' and 'lesbian' are still largely middle or upper-class, US or Eurocentric concepts, even if in other ways they provide a reference-point in struggles for sexual emancipation.38 In both developed and dependent capitalist countries, the ideological and cultural sway of gay identities in LGBT communities has spread beyond the more privileged social layers in which people's lives fit these identities most comfortably. LGBT media in dependent countries rely to some extent on lesbian/gay media in the capitalist metropoles for their material and imagery.39 In the developed capitalist countries, despite the proliferation of websites and zines defining identities and subcultures for minorities within the minorities, the most widely circulated books, periodicals and videos tend to be those most closely linked to the new, predominantly middle-class, gay mainstream. Even those who are economically least well-equipped for the commercial gay scene are often dependent on it as a market for potential (short or long-term) partners; more fundamentally, even celibate or monogamous people who are at least temporarily not in the market for a partner still tend to define themselves in the culturally hegemonic categories of lesbian, gay, bisexual or straight. Even poor transgendered and queer people whose lives are most remote from the images of the gay mainstream sometimes incorporate aspects of gay mainstream-culture into their aspirations and fantasies, constructing 37. Drucker 2009, pp. 826–8. 38. Altman 2000; Oetomo 1996, pp. 265–8. 39. Drucker 2000a, pp. 26–7. 14 P. Drucker / Historical Materialism 19.4 (2011) 3–32 their identities in part from images that may be borrowed and adapted from very different social realities. This hegemony of lesbian/gay identity over much of the LGBT world, and the physical coexistence of LGBT people of different classes in lesbian/gay spaces, provides arguments to those who downplay the importance of class in 'mixed-class' LGBT communities.40 It is true that the class-segregation that characterised early-twentieth-century LGBT scenes eased in the Fordist period. But cultural commonalities and cross-class relationships do not make lesbian/gay identity and spaces class-neutral, any more than the existence of sexual relationships between masters and slaves meant that slavery was not a significant factor in them. ' "Undifferentiated" accounts of gay life tend to narrate relatively well-

resourced and privileged experience as gay experience, and normatively promote this as a script for how gay life should be conceived and lived.'41 Lesbian/gay spaces are not islands, but heavily influenced by the structures of class in the surrounding societies: research on young LGBT people's schooling in Britain, for example, identifies 'social class as a major axis of power which positions LGBT people unequally and unjustly'.42 Moreover, as the next section shows, the fracturing of LGBT scenes in recent decades also has a class-dimension. Both in the centres and at the margins of the world-capitalist system, three aspects of the lesbian/gay identity that stabilised by the early 1980s fit well with the emerging neoliberal order: the community's self-definition as a stable minority, its increasing tendency towards gender-conformity, and marginalisation of its own sexual minorities. Lesbians' and gay men's self-definition as a minority group, which built on the reification of sexual desire that progressively consolidated the categories of gay and straight over the course of the twentieth century, at the same time expressed a profound social fact about lesbian/gay life as it took shape specifically under neoliberalism. To the extent that lesbians and gays were increasingly defined as people who inhabited a certain economic space (went to certain bars, bathhouses and discos, patronised certain businesses, and, in the US at least, even lived to some extent in certain neighbourhoods), they were more ghettoised than before, more clearly demarcated from a majority defined as straight. The fact that a fair proportion of those in the bars and bathhouses were always people with at least one foot in the straight world, sometimes even married people with children, was always an open secret, but one which few people announced with fanfare; they were generally seen as 40. For example, Seidman 2011. 41. Heaphy 2011. 42. McDermott 2011, p. 64. P. Drucker / Historical Materialism 19.4 (2011) 3–32 15 people who were still half 'in the closet', tended to be discreet in order to avoid unpleasantness, and were in any event generally marginal to the developing lesbian/gay culture. The fact that people continued to come out and join the community at all ages – or, for that matter, sometimes form heterosexual relationships at later ages and as a result often decrease their participation in the community – was also none too visible. The tendency of many early theorists of lesbian/gay liberation to question the categories of heterosexuality and homosexuality, emphasise the fluidity of sexual identity and speculate about universal bisexuality tended to fade away with time as the community's material reality became more sharp-edged. The lesbian/gay-rights movement accordingly ran less risk of seeming sexually subversive of the broader sexual order of gendered capitalism. The decline of butch/femme rôle-playing among lesbians and of camp culture among gay men also contributed to a hardening of the genderboundaries that remain central to capitalist societies. The drag queens who, rebelling against the postwar tightening of gender-discipline, had played a leading rôle in the 1969 Stonewall rebellion found that as social tolerance of lesbians and gays in general began to increase in the 1970s, social tolerance for gender-nonconformity in many lesbian/gay spaces decreased once more. In the earlier, smaller community of the immediate post-Stonewall years, nongender-conforming gay men and lesbians, less able or less inclined to hide, had been a higher proportion of the visible lesbian/gay milieu; as lesbian/gay communities expanded, the influx of more 'normal-seeming' lesbians and gay men diluted the prominence of transgendered people. In addition, the less polarised gender-rôles in the broader culture, which had initially facilitated the emergence of lesbian/gay identities, now increasingly restricted the room available for more gender-polarised lesbian/gay identities. Although the temporary relaxation of gender-norms in the 1960s had created some space for playful gender-bending, full-fledged drag often seemed anomalous and even embarrassing in the context of the androgynous imagery that was in vogue in the early 1970s. LGB communities thus increasingly defined themselves in ways that placed transgendered people – whose communities predated the new lesbian/gay identity by millennia – and other visible nonconformists on the margins, if not completely out of bounds. Kevin Floyd's identification of 'an ongoing, radical uncertainty about whether gay male sexual practice necessarily feminizes any of the men involved'43 does not do justice to the ways in which the relation between gender and sexuality is configured differently at different times and 43. Floyd 2009, p. 64. 16 P. Drucker / Historical Materialism 19.4 (2011) 3–32 locations within a global-capitalist totality that is neither static nor uniform, but rather strongly differentiated by period, class, gender, and the processes of combined and uneven development. We have seen, for example, that transgendered sexuality was more common in the working class than in the middle-class in developed countries in the early-twentieth century, as it still tends to be in some parts of the dependent world. The late 1970s, at the cusp of the transition from Fordism to neoliberalism, was the time in developed countries when space for transgendered sexualities (and thus Floyd's 'radical uncertainty') was at its historical nadir. While gay-male sexuality was masculinised and lesbianism feminised, the increased centrality of consumption to LGB identity resulted in a series of shifts in its sexual contours, some already apparent by the late 1970s and early '80s, others emerging only in the '90s or later. Obviously these shifts did not reflect an instantaneous, spontaneous sea-change in all LGBT people's felt desires or sexual practices. Individual desire and psychology are more resilient than that and are shaped over the course of lifetimes, not totally transmuted by the social developments of a decade or two. In some cases the winds of erotic fashion undoubtedly have shallower causes than profound socioeconomic change, and it would be a mistake to read too much into them. But

when sexual identities and imagery took on more unequal and gender-polarised forms at just the time when the surrounding societies were undergoing a sharp, long-term rise in inequality, it would be implausible to dismiss the correlation as pure coincidence. In any event, as the decline of Fordism put welfare-state programmes under pressure, a renewed emphasis on the centrality of the family to social reproduction helped put a brake on the relaxation of gender-norms that had characterised the 1960s. This conservative turn in the broader society was accompanied by a shift among gay men from the largely androgynous imagery and occasional gender-bending of the early 1970s to the more masculine 'clone'-culture that took hold by the early '80s. Feminine forms of selfpresentation that lesbian feminists once frowned on had also become more common and acceptable among 'lipstick-lesbians' by the 1990s – a 'celebration of femininity' that Gayle Rubin, for example, thought could 'reinforce traditional gender roles and values of appropriate female behavior'.44 A higher degree of gender-conformity among LGB people facilitated their incorporation into a neoliberal social and sexual order. This conformity was congenial for the growing number of gay men and lesbians who pursued professional, business or political careers in a number of 44. Rubin 1982, p. 214. P. Drucker / Historical Materialism 19.4 (2011) 3–32 17 capitalist societies, without necessarily renouncing or hiding their sexuality but preferably without 'flaunting' it. Even the lesbian/gay middle-class layers that live off gay businesses and nonprofits – far from all of whom were among the real economic winners of recent decades, but who tended to be spoken for by those among them who were – preferred in general to keep LGB communityexpressions culturally inoffensive. Another layer of middle-class or middleclass-identified lesbian/gay people, who were making their careers inside mainstream businesses and institutions, sometimes cringed at manifestations of a lesbian/gay community that marked them off too much from other people of their class. Many of these people would like to be able to pursue their careers in straight companies and institutions while being open about their same-sex relationships – fewer people are willing to contract heterosexual marriages these days and to keep their homosexual lives completely hidden and marginal – and for the rest deny or minimise differences between them and middle-class straights. This professional layer has provided the solid social base for the most moderate currents of LGB movements, which have often seen same-sex marriage as the culminating moment in the process of gay emancipation. And, in fact, same-sex marriage and adoption can be the culmination of some LGBT people's integration into the productive and reproductive order of gendered capitalism. Paradoxically, while neoliberalism has in many ways undermined the direct and obvious domination of wives and daughters by husbands and fathers under the original Fordist gender-régime,45 neoliberal cutbacks in social services, by privatising the provision of basic needs, have been restoring the centrality of the family-unit to the social reproduction of labour – in classed ways. While legal same-sex marriage or partnership can in this context secure new benefits for middle-class and privileged working-class lesbians and gays, for those most dependent on the welfare-state in countries such as Britain and the Netherlands legal recognition of their partnerships can lead to cuts in benefits.46 As the number of children being raised in households headed by same-sex couples has risen, same-sex marriage and adoption can serve to legitimise and regulate the growing rôle that lesbian and gay couples are playing in social production, consumption and reproduction. Yet the rise of same-sex-coupleheaded nuclear families redefines and even reinforces rather than overcomes the gay-straight divide, since the ways in which lesbians and gay men form 45. Brenner 2003, pp. 78–9. 46. Browne 2011. 18 P. Drucker / Historical Materialism 19.4 (2011) 3–32 families (through sperm-donorship, adoption, the break-up of straight families or other trajectories) necessarily remain distinctive. In the twenty-first century, an ideological factor has also played a crucial rôle in integrating lesbian/gay people into the neoliberal order: the instrumentalisation of lesbian/gay rights in the service of imperialist and Islamophobic ideologies, which Jasbir Puar has defined as 'homonationalism'.47 Particularly but not only in countries such as the Netherlands48 and Denmark, where both same-sex partnership-rights and anti-immigrant racism are strongly developed, this homonationalism has been key to consolidating and taming lesbian/gay identity. III. Social and sexual roots of alternative identities The apparent uniformity of lesbian/gay culture in the mid-1970s in fact helped disguise social and economic fractures opening up among LGB people. As a result, the relatively homogeneous lesbian/gay identities that had taken shape in North America and Western Europe by the 1970s were challenged and fragmented over the following decades, though to different degrees in different countries. There has been, in particular, a proliferation of alternative sexual or gender-identities, more-or-less outside of the mainstream commercial scene. Some, though far from all, of these alternative identities represent challenges to the basic parameters of the gay/straight divide that emerged and was consolidated through much of the twentieth century. Contrary to much right-wing anti-gay rhetoric, the prosperous couples focused on by glossy lesbian/gay magazines were never typical of LGBTs in general. Data gathered by the US National Opinion Research Center's General Social Survey in the 1990s suggested that lesbian and bisexual women were still far less likely than other women to have professional or technical jobs and more likely to have service or craft/operative jobs, while gay and bisexual men were more likely than other men to have professional/technical, clerical/sales or service-jobs but less likely to have managerial jobs.49 The heteronormative constraints of many economic sectors – the pressures to abide by a heterosexual norm of behaviour – seems to drive many 'low-wage service workers . . . to accept a lower wage than they would be paid elsewhere in exchange for the relative comfort of working in a queer environment'.50 47. Puar 2007, pp. xxiv, 38–9. 48. Mepschen, Duyvendak and Tonkens 2010. 49. Badgett 1997, p. 81. 50. Sears 2005, p. 106. P. Drucker / Historical Materialism 19.4 (2011) 3–32 19 Whatever the causes (less ability or willingness to meet gendered jobexpectations, migration to more competitive job-markets, discrimination), the net result (contrary to unfounded claims made not only by anti-gay ideologues but also by some gay publications) was that, at least in the US, both gay men and lesbians were under-represented in the higher-income brackets (with family-incomes of $50,000 or more), while gay men in particular were over-represented in the lower-income brackets (with familyincomes of $30,000 or less).51 A more recent study showed that men in samesex couples were still earning significantly less on average than their straight counterparts in 2005 ($43,117 compared to $49,777); while women in samesex couples earn more on

average than straight married women, their income is, of course, less than men's.52 Transgendered people are even worse off: a 2006 study found that in San Francisco 60% of them earned less than $15,300 a year, only 25% had fulltime jobs, and nearly 9% had no source of income.53 The expansion of LGBT communities centred on gay commercial scenes did not improve the situation of lower-income LGBTs. On the contrary, Jeffrey Escoffier has noted that 'the gay market, like markets in general, tends to segment the lesbian and gay community by income, by class, by race and by gender'.54 This is especially true of same-sex couples, particularly same-sex couples raising children together, since two women living together are in a sense doubling the economic disadvantages they both experience as women. LGBTs are, moreover, more likely to be cut off from broader family-support networks, and as the social safety-net has frayed, inequalities resulting from wage-differentials have affected them with particular intensity.55 Across the capitalist world, the welfare-state has been shredded, unions have been weakened, and inequality has grown. In this context, polarisation within LGBT communities has been particularly great. Lower-income LGBs, transgendered people, street-youth and LGBT people of colour have been under assault in various ways in recent decades, as attacks on poor people and minorities have multiplied, racism has intensified even more in the US, and new forms of antagonism to black and immigrant communities (especially of Muslim origin) have grown up in European countries. Young LGBTs and sexworkers in particular have been victims of intensified forms of coercive 51. Badgett and King 1997, pp. 68–9. 52. Romero, Baumle, Badgett and Gates 2007, p. 2, cited in Wolf 2009, p. 241. 53. Transgender Law Center and San Francisco Bay Guardian 2006, cited in Wolf 2009, p. 147. 54. Escoffier 1997, p. 131. 55. Jacobs 1997. 20 P. Drucker / Historical Materialism 19.4 (2011) 3–32 policing.56 Social polarisation within LGBT communities has coincided with greater prominence for forms of sexual identity and practice that focus explicitly on gender and power-differences and rôle-playing. One of the first notable mutations in LGBT identity with the rise of neoliberalism was the rôle that SM and leather played in the more masculine culture that took hold among gay men by the early 1980s. While one gaymale leather-bar opened in New York as early as 1955 and many more followed by the early 1970s, only from 1976 on did leather-culture become a subject of attention and debate in the broader lesbian/gay community.57 Soon SM came 'to be linked with male homosexuality in the eighties as firmly as effeminacy and an attack on gender roles was in the sixties and early seventies',58 while SM clubs such as New York's Mineshaft became 'an arena for the masculinization of the gay male'.59 Paradoxically at this stage, while divisions between 'tops' and 'bottoms' that would earlier have been widely rejected on liberationist grounds became acceptable and sometimes blatant, virtually all the men in the scene were masculinised in the process. It was as if SM, while celebrating 'difference and power', served, in Dennis Altman's term, as a ritual of 'catharsis', of both acting out and exorcising the growing violence and inequality of the broader society.60 As Gayle Rubin put it, 'class, race, and gender neither determine nor correspond to the roles adopted for S/M play'.61 By the early 1980s, forms of sexuality that diverged from the perceived feminist norm also affected the previously hegemonic lesbian-feminist culture. Lesbian-feminist culture in a sense already struck a divergent note in the 1970s. The sense has persisted that lesbians in general play less of a rôle in commercial scenes and persevere more in trying to sustain alternative scenes. While of course some lesbians, like some gay men, are middle-class or rich, the fact that women trying to survive independently of men have lower incomes on average and are thus more likely to be working-class or poor has contributed to this sense. But while lesbian feminists had put working-class and poor women under great pressure in the 1970s to abandon butch-femme relationships that had been common among them for decades, some lesbians began in the 1980s to 56. Sears 2005, p. 103. 57. Rubin 1982, p. 219; Califia 1982, pp. 280, 244–8. 58. Altman 1982, p. 191. 59. Ira Tattleman, 'Staging Masculinity at the Mineshaft', cited in Moore 2004, p. 20. 60. Altman 1982, p. 195. 61. Rubin 1982, p. 222. P. Drucker / Historical Materialism 19.4 (2011) 3–32 21 defend butch-femme vigorously.62 At about the same time some lesbians took a visible part in SM culture, particularly in San Francisco. This dovetailed with a general upheaval in the lesbian world through conflict between currents that defined themselves as 'anti-pornography' and others that defined themselves as 'pro-sex'.63 The most explosive issue in the 'sex-wars' was, briefly, the issue of intergenerational sex, which was the subject of a major confrontation during the organisation of the first US national lesbian/gay-rights march in 1979. Going beyond understandable and legitimate concerns about coercion and abuse of authority, some currents perceived power-differences between adults and youths as precluding the possibility of consent to sex.64 However, the very explosiveness of the issue quickly placed it beyond the pale of discussion. In hindsight, the 'clone' and SM subcultures, lipstick-lesbianism and sex-wars of the 1980s were only an initial phase in a longer-term fracturing of LGBT identity. The consolidation of Reaganism and Thatcherism by the mid-1980s coincided for LGBT people with the onslaught of the AIDS epidemic, a trauma experienced as a sharp generational break. While some men who survived the epidemic followed a gay variant of the trajectory of the middle-class baby-boom generation, many younger people who came of age in the era of AIDS and neoliberalism found the road to a safer middle-class existence strewn with obstacles. Beginning in the mid-1980s a queer social milieu emerged, made up to a large extent of young people on the bottom of the unequal social hourglass that had resulted from economic restructuring.65 One aspect of the underlying social reality is that the lower young queers' incomes were and the more meagre their job-prospects, the less on average they identified with

or wanted to join the lesbian/gay community that had grown up since the 1960s and ’70s. ‘Economic changes . . . meant more part-time and contract work, especially for young people, which left many unable to see a place for themselves in the by then established gay middle class.’66 Above all initially in English-speaking developed-capitalist countries – the developed countries where social polarisation is greatest – young queers resisted disco-culture, a bar-centred ghetto, and the kind of segregation that fit 62. Nestle 1989; Hollibaugh and Moraga 1983, pp. 397–404. 63. Vance (ed.) 1989; Linden, Pagano, Russell and Star (eds.) 1982; Califia 1982, pp. 250–9. 64. The state enforces a related point of view, as shown in hundreds of prosecutions of LGBT people each year under age-of-consent laws, the repeated prosecutions of the Canadian gay paper Body Politic for discussing the issue in print, and US Senator Jesse Helms’s successful move to block UN recognition of any LGBT group that condones ‘paedophilia’. 65. Drucker 1993, p. 29. 66. Patterson 2000. 22 P. Drucker / Historical Materialism 19.4 (2011) 3–32 with ethnic-style minority-group politics. Self-identified queers refused ‘to be comfortable on the social periphery – in the ghettos’.67 English-speaking queer scenes have been echoed in some ways by queers in squatters’ milieus in continental Western Europe. This generation had also grown up in far more diverse and changeable family-structures, which made the notion of modelling lesbian/gay households on traditional straight ones all the more implausible for them. In some milieus of young rebels, gender and sexual categories have become more fluid than would be usual in mainstream straight, gay male or lesbian scenes. Economic marginalisation and cultural alienation were closely interlinked in the emergence of a queer milieu, making it hard in many cases to say to what extent poverty was a cause of alienation, to what extent the choice of a queer lifestyle contributed to more-or-less voluntary poverty, and to what extent some queers were middle-class gays – particularly students and academics – dressing and talking like down-and-outs, in some cases perhaps only for a period of a few years of ‘float[ing] in and out of deviance or propriety’.68 In other cases queerness may be defined so much by dress, style or performance that it becomes as much a matter of consumer-choice and an expression of reification as the middle-class gay identities it rejects.69 Nevertheless, the overall correlation between lower incomes and queer selfidentification seems clear. **If economic pressures made integration into the dominant lesbian/gay culture a dubious proposition for many young and disadvantaged queers in developed countries, the barriers have been all the greater for poor and working-class LGBTs in Asia, Africa and Latin America.** Dependent capitalist countries have been the site over the last forty years of social constructions of sexuality that are neither completely different from the predominant lesbian/ gay identities in imperialist countries in the 1970s nor merely expressions of a single ‘modern’, globalised identity.70 Sexualities that were indigenous to the dependent world’s precapitalist or early-capitalist social formations (such as the traditional transgender identities of Southeast Asia and Latin America) have persisted, while coexisting with lesbian/gay identities. The result of this intersection of dependent development, sexuality and culture was that poor and working-class LGBT people in the dependent world were less likely than middle-class LGBs to have identities (let alone incomes) that facilitated their integration into a Westernised, commercialised 67. Seidman 1997, p. 193; Drucker 1993, p. 29. 68. Califia 2003, p. xiv. 69. Hennessy 2000, pp. 140–1. 70. Drucker 1996. P. Drucker / Historical Materialism 19.4 (2011) 3–32 23 gay scene.71 They were more likely to be transgendered people, more likely to be subject to violence, and more likely to be dependent on family and/or community-structures for their survival. The economic marginalisation that they experience tended to make post-Fordist lesbian/gay identity at least as problematic and alien for them as for young self-identified queers in North America or Britain. Marginalisation of millions of LGBT people worldwide because they are poor, young or black has impelled many of them towards developing or adopting identities that have broken to some extent with the dominant patterns of post-Fordist gay identity. As we have seen, the dominant trend since the 1980s, based particularly on the reality of more prosperous LGB people’s lives, was for the lesbian/gay community to define itself as a stable and distinct minority, tend increasingly towards gender-conformity, and marginalise its own sexual minorities. By contrast, the nonconformist sexual and genderidentities that have grown up among more marginalised layers have tended to be non-homonormative: to identify with broader communities of oppressed or rebellious people, to fail to conform to dominant gender-norms, and/or to emphasise power-differentials that dominant lesbian/gay imagery tends to elide. While these counter-identities have shown little sign of coalescing into any overarching alternative identity – on the contrary, different counteridentities can and do clash with each other72 – they do share a number of features that correspond to structural similarities in their bearers’ positions under neoliberal capitalism. Non-homonormative identities defined by marginalisation on the basis of age, class, region and/or ethnicity have overlapped with the growth or persistence of subcultures that have been marginal in the commercial scene because they constitute (sometimes extensive) niche markets at best and illicit ones at worse. The relationship between alternative identities and marginalised sexual practices is elusive, but there does appear to be a correlation. There are, of course, many LGBTs who limit their sexual rebellion to the safety of a particular brand of bar. But the more attached people are to their sexual identities, the more reluctant many of them become to give them up at work or in public. Not coincidentally, the more visible transgendered people are, the less likely they are in most societies to get one of the well-paid, permanent, full-time jobs that

have become scarcer and more coveted commodities in post-Fordist economies. Moreover, some people are virtually or entirely incapable of hiding 71. Oetomo 1996, pp. 265–8. 72. See, for example, Drucker 1993, p. 29. 24 P. Drucker / Historical Materialism 19.4 (2011) 3–32 aspects of their identities, particularly effeminacy in men or butchness in women, that are often rightly or wrongly associated with sexualities that are neither hetero- nor homonormative. Voluntary or involuntary, tell-tale signs of sexual deviance often lead to management's excluding people from professional or service-jobs or to fellow workers' hostility that impels people to avoid or flee certain workplaces. Paradoxically, in the absence of general guarantees for workers' job-security or free expression at work, antidiscrimination laws that protect LGB people in general may be of less than no use to the sexually marginalised, as Ruthann Robson has noted: 'If a company employs four lesbians, a new manager can fearlessly fire the one who has her nose pierced or who is most outspoken or who walks the dykiest.'73 These factors help explain the correlation that exists between subaltern social positions and various alternative sexual scenes and identities that do not fit into standard post-Fordist lesbian/gay moulds. This is not a straightforward correlation between non-homonormative identities and working-class affiliation. On the contrary, working-class lesbians and gays and lesbians and gays of colour (sometimes, of course, the same people) have sometimes reacted against self-defined queer or other sexually dissident groups when such groups demanded visibility of them that would make their lives more difficult in particular workplaces or communities.74 The correlation has been rather with particular sectors of the working class – on average younger, less skilled, less organised and lower-paid – that have expanded since the 1970s. Part of the younger queer generation has taken up, and to some extent recast, claims for some of the stigmatised sexual practices that were made during the sex-wars of the early 1980s. In doing so they have rebelled against homonormative 'confining straightjackets that inserted some queers as the tolerated "others" within the existing social relations of gender and sexuality and marginalized others'.75 ' "Queer" [thus] potentially includes "deviants" and "perverts" who may traverse or confuse the homo/hetero division'.76 By contrast with the earlier period, SM has been less in the forefront – SM seems less politically laden now than it was in the sex-wars of the early 1980s – and gender-bending and transgender all the more. SM seems to have become less central to LGBT culture as it has increasingly, in diluted form, come to permeate the broader sexual culture, as seen in the spread of piercing, tattooing, and leather-fashion and accessories. Among LGBTs, the queer generation has 73. Robson 1992, p. 87, cited in Robson 1997, p. 175, n. 13. 74. Drucker 1993, p. 29. 75. Sears 2005, p. 100. 76. Hennessy 2000, p. 113. P. Drucker / Historical Materialism 19.4 (2011) 3–32 25 tended more to play with issues of inequality and power-difference in other ways that expose their artificiality and facilitate their subversion. The contradictions of gender and power have been particularly visible in transgender and gender-bending subcultures since the 1990s. As Dennis Altman points out, drag has always to a certain extent subverted mainstream gender-rôles through 'veneration of the strong woman who defies social expectations to assert herself';77 and Judith Butler has argued that drag subverts gender by exposing it as a 'performatively enacted signification'.78 Forms of gender-bending have shifted over the decades, however. In the 1980s, Amber Hollibaugh proclaimed that her vision of butch/femme was not a reaffirmation of existing gender-categories but a new system of 'gay gender'. More recently, younger transgendered people seem more likely to take on gender-identities that are difficult to subsume (if at all) under existing feminine or masculine rôles. 'Today lesbian butch/femme is acquiring more flexibility than it had in the '70s when I came out', says Patrick Califia, thanks in part to a crosspollination of butch/femme with SM which creates space for 'butch bottoms' and 'femme tops'.79 These more flexible and ambiguous forms of transgender can be associated simultaneously with the myriad forms of transgender that have existed for millennia around the planet, and with queer milieus that have only emerged since the late 1980s in rebellion against the lesbian/gay mainstream. They are thus, in a sense, very old and very new. New forms of transgender contrast with the forms of transexuality, which themselves arose only in the 1950s and '60s, as defined by a wing of the medical establishment. The medical experts not only tend to prescribe sexreassignment surgery as the standard cure for intense gender-nonconformity but also tend to urge transexuals to adapt (perhaps somewhat less rigidly than in the past) to the norms of their 'new gender'.80 Queer-identified transgendered people do not necessarily reject hormone-treatments or surgery, but they can be selective in what they do or do not choose for themselves. Califia links this new trend among transgendered people to SM people's attitude towards 'body-modification': 'A new sort of transgendered person has emerged, one who approaches sex reassignment with the same mindset that they would obtaining a piercing or a tattoo'.81 Often these transpeople do not see themselves as transitioning from male to female or vice versa, but rather as transgendered as opposed to male or female. 77. Altman 1982, p. 154. 78. Butler 1999, p. 44. 79. Califia 2000, pp. 186–9. 80. Califia 2003, pp. 52–85. 81. Califia 2003, p. 224. 26 P. Drucker / Historical Materialism 19.4 (2011) 3–32 More traditional poor and working-class transpeople for their part can often struggle for years to save the money for their operations, including in dependent countries, or simply change each others' genitals without resorting to official medicine. The thousands of transgender hijras in South Asia, increasingly visible and militant among the poorest people of their region and notably at the 2004 World Social Forum in Mumbai, do not often seem to share European and North American queers' interest in transcending or blurring gender-categories. For that matter, even many intersex people (born with genitals that do not identify them as unambiguously male or female) 'are perfectly comfortable adopting either a male or female gender identity'.82 Just the same, many LGBTs in dependent countries have been trying in their own ways to resist pressures to claim them for a homogeneous, middleclass-dominated lesbian/gay community, purge them of 'old-fashioned' aspects of their identities, or make them come out in ways that would tear them away from their families and communities without providing them with equivalent support-systems. Chilean writer Pedro Lemebel, for example, has expressed his identification with Santiago's downtrodden locas [transvestites] and his rejection of the gay-male model he encountered in New York.83 To a greater or lesser extent, different forms of transgender are radically subversive of the lesbian/gay identity that emerged under Fordism, in a way that the would-be all-encompassing acronym LGBT fails to successfully subsume in a single social subject. Transexuals who identify as straight (albeit 'born in the wrong body') often question what they have in common with lesbians, gays or bisexuals. South Asian hijras, identifying with neither gender, cannot be legitimately classified as either gay or straight. Nor can transgendered queers who insist that they have moved beyond male and female. In capitalism both North and South in this time of crisis, then, lesbian/gay identity has been undergoing simultaneous construction and fracturing.84 A very diverse and diffuse set of alternative sexual identities has been diverging more and more from the post-Fordist, gender-

conformist, consumerist lesbian/ gay mainstream, and in some cases challenge the very social and conceptual basis of straight or lesbian/gay self-definition.

Class struggles and LGBT struggles are not mutually exclusive-queer conceptions of sexuality solve for a free society

Drucker 11 [Peter, International Institute of Research and Education; 2011; http://booksandjournals.brillonline.com/content/journals/10.1163/156920611x606412**; The Fracturing of LGBT Identities under Neoliberal Capitalism; 06/29/15; jac]**

IV. Implications for liberation Recognising the deep roots of the fracturing of same-sex identities necessarily puts in question any universalism that ignores class, gender, sexual, cultural, 82. Herndon 2006, p. 1, cited in Wolf 2009, p. 230. 83. Mansilla 1996, p. 23, cited in Palaversich 2002, p. 104. 84. Drucker 2000a. P. Drucker / Historical Materialism 19.4 (2011) 3–32 27 racial/ethnic and other differences within LGBT communities. These communities and identities are being fractured in large part by fundamental changes in the productive and reproductive order of gendered capitalism. Young queers, working-class and poor LGBTs, transgendered people and other marginalised groups have increasingly found themselves in objectively different situations from people in the consolidating gay mainstream. It is thus no surprise that they have tended to some extent to define distinct identities. The forms taken by alternative, non-homonormative sexual identities do not necessarily win them easy acceptance among feminists or socialists. The lesbian/gay identity that emerged by the 1970s had much to commend it from the broad-Left's point of view (once the Left had largely overcome its initial homophobia). By contrast, transgendered and other queers can raise the hackles of many on the Left, since their sexuality strikes many as at variance with the mores to be expected and hoped for in an egalitarian, peaceful, rational future. One may doubt, however, whether any sexuality existing under capitalism can serve as a model for sexualities to be forecast or desired under socialism. Nor is it useful to privilege any particular existing form of sexuality in present-day struggles for sexual liberation. Socialists' aim should not be to replace the traditional 'hierarchical system of sexual value'85 with a new hierarchy of our own. As Amber Hollibaugh pointed out many years ago, sexual history has first of all to be 'able to talk realistically about what people are sexually'.86 And in radical struggles over sexuality, as in radical struggles over production, the basic imperative is to welcome and stimulate self-organisation and resistance by people subjected to exploitation, exclusion, marginalisation or oppression, in the forms that oppressed people's own experience proves to be most effective. This is not to say that Marxists should simply adopt a liberal attitude of unthinking approval of sexual diversity in general, in a spirit of 'anything goes'. Our central concern must be to advance the sexual liberation of the working class and its allies, who today include straights, LGBs and – particularly among its most oppressed layers – transgendered and other queers. Resisting the retreat from class in LGBT activism and queer studies, Marxists should combat heterosexism and bourgeois hegemony among straights, homonormativity and bourgeois hegemony among LGBs, and blanket hostility to straights and non-queer-identified gays where it exists among 85. Rubin 1989, p. 279. 86. Hollibaugh and Moraga 1983, p. 396. 28 P. Drucker / Historical Materialism 19.4 (2011) 3–32 self-identified queers. This will require seeking new tactics and forms of organising within LGBT movements. The post-Stonewall lesbian/gay movement waged an effective fight against discrimination and won many victories on the basis of an identity widely shared by those engaged in same-sex erotic or emotional relationships. But this classic lesbian/gay identity has not been the only basis in history for movements for sexual emancipation. In the German homophile-struggle from 1897 to 1933, for example, Magnus Hirschfeld's Scientific-Humanitarian Committee, the wing of the movement closer to the social-democratic Left, tended to put forward polarised 'third sex'-theories.87 This is what one might predict on the basis of the evidence that egalitarian gay identities were at first primarily a middle-class phenomenon, while transgender and gender-polarised patterns persisted longer in the working class and among the poor.88 Today in the dependent world as well, transgender identities seem to be more common among the less prosperous and less Westernised.89 Rather than privileging same-sex sexualities more common among the less oppressed, however superficially egalitarian, the Left should be particularly supportive of those same-sex sexualities more common among the most oppressed, however polarised. Another important consideration is the challenge that alternative, nonhomonormative sexualities can sometimes pose to the reification of sexual desire that the categories of lesbian, gay, bisexual and straight embody. Marxists question the fantasy of consumers under neoliberalism that obtaining the 'right' commodities will define them as unique individuals and secure their

happiness; we should not uncritically accept an ideology that defines individuals and their happiness on the basis of a quest for a partner of the 'right' gender.90 How will LGBT communities and movements be structured in a time of increasingly divergent identities? Self-defined queer activist-groups, which emerged initially in the US and Britain in the early 1990s, have also appeared in recent years in a number of countries in continental Europe. They pose a 87. See Fernbach 1998, p. 51; Drucker 1997, p. 37. 88. Chauncey 1994. 89. Oetomo 1996, pp. 265–8. 90. Kevin Floyd argues that 'the reifying of sexual desire needs to be understood as a condition of possibility for a complex, variable history of sexually nonnormative discourses, practices, sites, subjectivities, imaginaries, collective formations, and collective aspirations' (Floyd 2009, pp. 74–5). Having earlier recalled Lukács's later criticism of the conflation of objectification and reification in his History and Class Consciousness, Floyd here reproduces it upside down, celebrating both as Lukács had rejected both. Objectification, the alternate adoption of subject and objectpositions in an interplay between different human individuals, is inherent to sexuality; reification, the petrifaction of specific rôles and sexual identities, is not. P. Drucker / Historical Materialism 19.4 (2011) 3–32 29 radical challenge to mainstream lesbian/gay organisations, although they have yet to show much of an orientation towards large-scale mobilisation, to take root among the racially and nationally oppressed, or to prove their adaptability to the dependent world.91 In countries where civil rights and same-sex marriage have been won, the process of seeking new horizons and finding appropriate forms of organising seems likely to be a prolonged one – especially since the LGBT social and political landscape seems likely to remain more fragmented and conflict-ridden than it was in the immediate post-Stonewall period. While lesbian/gay identity has lost the central place it occupied in the LGBT world of the 1970s and '80s, it is still far from marginalised; on the contrary, the new homonormativity shows no signs of succumbing to queer assaults in the foreseeable future. In the dependent world particularly, the diversity of LGBT communities has resulted in an alliance-model of organising as an alternative or a supplement to the model of a single, broad, unified organisation. The broadest possible unity across different identities remains desirable in basic fights against violence, criminalisation and discrimination as well as more ambitious struggles for equality, for example in parenting. On other issues, LGBT rights can be best defended by working and demanding space within broader movements, such as trade-unions, the women's movement and the globaljustice movement.92 At the same time, an alliance-model has in some cases facilitated the process of negotiating unity among constituencies – such as transgendered people on the one hand and lesbian/gay people on the other93 – who are unlikely to feel fully included in any one unitary structure. It can constitute a united front between those whose identities fit the basic parameters of the gay-straight divide and those whose identities do not, fostering the development of a truly queer conception of sexuality that, in Gloria Wekker's words, is 'multiple, malleable, dynamic, and possessing male and female elements'.94 In a more visionary perspective, developing an inclusive, queer conception of sexuality can be seen as a way to move towards that 'truly free civilization' that Herbert Marcuse described a half-century ago in Eros and Civilization, in which 'all laws are self-given by the individuals', the values of 'play and display' triumph over those of 'productiveness and performance', the entire human 91. For discussions from an anticapitalist perspective of the potential and limits of queer radicalism, see Drucker 1993 and Drucker 2010. 92. On sexual politics in the global-justice movement, see Drucker 2009. 93. Califia 2003, p. 256. 94. Wekker 1999, p. 132. 30 P. Drucker / Historical Materialism 19.4 (2011) 3–32 personality is eroticised, and the 'instinctual substance' of 'the perversions . . . may well express itself in other forms'.95

Disease Reps K

Their construction of AIDS as an apocalyptic threat via policy discourse only reinforces the hegemonic authority of security – They act only out of fear of contamination and lead to xenophobia.

Taylor 98 [Tonya Nicole Taylor, Professor of Anthropology at the University of Pennsylvania, "Blaming the Infected African Other: An Epidemic of Discrimination," http://www.africa.upenn.edu/Workshop/tonya98.html]//JIH

Blaming the infected African other is a dangerous epidemic of discrimination and racial prejudice. What is central in this discussion of 'blaming the African other' is not the veracity of the statements but how they are sustained through the inappropriate use of western cultural constructs to define and interpret epidemiology cross culturally. The authority of epidemiology to define risk is a politics of knowledge that is produced, reproduced, contested, and sustained through the discursive hegemonic authority of biomedicine and science as the truth. According to Glick Schiller an "understanding of the hegemonic processes have given us new insights into the historical, structural, and authoritative location of symbolic construction" (1992: 248). However, an examination of the micro-politics behind the maintenance of such stereotypes, illuminates how also discourses of stigmatization and otherness govern the construction, negotiation, contestation, and maintenance of boundaries between the self and the HIV infected other through fear of contamination by the

dangerous African outsider. These stigmatizing discourses and counter-discourses are ideological terrains used to insulate the perceived uninfected other from the afflicted. Stereotypes and generalizations about particular populations perceived to be at risk have provided a misleading backdrop for policy formation because they underestimate the diversity of sexual culture within seemingly homogenous sub-groups. Although the social and political consequences of culturally constructing risk of HIV/AIDS are innumerable, there are three primary consequences: (1) wide spread misunderstanding of who is at risk and who is not; (2) the continued spread of the diseases by those infected who are define themselves outside of those populations at risks; (3) and the perpetuation of the stigmatization of people living with HIV or AIDS.

The representations of HIV/AIDS are controlled by international institutions and perpetuate biopolitical forms of surveillance upon bodies.

Vieira 07 [Marco Antonio Vieira, Senior Lecturer in International Relations and Postgraduate Research Director at University of Birmingham, Department of Political Science and International StudiesBraz. political sci. rev. (Online) vol.2 no.se Rio de Janeiro, Dec. 2007, http://socialsciences.scielo.org/scielo.php?pid=S1981-38212007000200005&script=sci_arttext&tlng=en]//JIH

It is beyond the scope of this study to engage in a comprehensive historical sociology of the HASN. However, the argument here is that the social construction of the HIV/AIDS Securitisation Norm would not be comprehensible without the previous acknowledgment of the historical (social, material and interest-based) conditions that led to its creation. At the ontological level, this means that the HIV/AIDS actors constituted their social world in the same way that the social world they created defined the possibilities of their future interaction (Wendt 1987). This dimension also corresponds to an externalist (Stritzel 2005) understanding of securitisation that is generally neglected by the Copenhagen School. Contrary to its view of the securitisation process, the argument put forward here claims that the semantic articulation of security should be analytically integrated with the larger process of securitisation that involves social/political phenomena other than solely the speech-act. Stephan Elbe's (2005) exploration of the biopolitical dimension of the securitisation of HIV/AIDS sheds some light on the contextuality problem in most of the securitisation literature. Foucault designates biopower as the power that " brought life and its mechanism into the realm of explicit calculations and made knowledge-power an agent for the transformation of human life" (Foucault quoted in Elbe 2005, 405). In demonstrating the biopolitical dimension of HIV/AIDS, Elbe uses the example of UNAIDS, " as an institutional apparatus for the detailed statistical, monitoring and surveillance of world population in relation to HIV/AIDS" (p. 405). Borrowing from Foucault's reflections on the concept, he further argues that

The unfolding of the securitization of AIDS follows a net-like deployment of biopower, as it is being simultaneously driven by a plethora of actors […] The net of the securitization of AIDS has been widely cast, corroborating Foucault's view that biopower is never solely the property of one agent; it is always plural, decentralized and capillary in nature. " Power" , he reminded his readers, " is everywhere; not because it embraces everything, but because it comes from everywhere" . (p. 407/408)

What is interesting in Elbe's transposition of biopower to illuminate the securitisation of HIV/AIDS is that it allows for a holistic understanding of the securitisation process. Rather than being solely the activity of isolated securitising actors performing speech-acts, the securitisation process is seen through these lenses in the form of a chain of events and actors, or something that historically mutates and evolves into something else. In line with Elbe's biopolitical stance on the securitisation of HIV/AIDS, I argue that the historical and social construction of the disease eventually led to the creation of a hegemonic grammar that portrays

the epidemic in terms of a special type of problem, which demands special institutions and policies.

In this sense, the securitisation of HIV/AIDS can be understood as a constitutive element of a larger hegemonic world order that encompasses long-term political, ethical, economic and ideological spheres of activity on a global scale. This is what Gramsci called a historic bloc (Gramsci 1971). According to Robert W. Cox, in the historic bloc " there is an informal structure of influence reflecting the different levels of real political and economic power which underlies the formal procedures for decisions" (Cox 1993, 63). For him, " international institutions perform an ideological role. They help define policy guidelines for states and to legitimate certain institutions and practices at the national level. They reflect orientations favourable to the dominant social and economic forces" (p. 63). I do not use here the concept of historic bloc in precisely the same sense Gramsci (and also Cox, concerning international relations) gave to it. International relations are more diffused and complicated than the big power-centred concept of world order those authors conceived. However, Gramsci's interpretation of history as a successive movement of powerful hegemonic forms of collective subjectivity is fully applicable to what was called here the first dimension of the HASN. This means that the proposed securitisation of the epidemic is the result of social and political processes that are organically integrated into the current dominant historic bloc.

Solvency

Queer theory fails in practice

Saffin 8 BODIES THAT (DON'T) MATTER: SYSTEMS OF GENDER REGULATION AND INSTITUTIONS OF VIOLENCE AGAINST TRANSGENDER PERSONS: A QUEER/CRITICAL RACE FEMINIST CRITIQUE By LORI A. SAFFIN DOCTOR OF PHILOSOPHY WASHINGTON STATE UNIVERSITY Program of American Studies AUGUST 2008

Despite the productive and effective strategies offered by Queer Theorizing, I am hesitant to firmly adhere only to this body of knowledge. Many academics and activists alike have challenged the political efficacy of queer theory, pointing out that the pluralizing of identity, though important, continues to denigrate the importance of race, class, and gender, as sexuality becomes the signifying element of identification. Likewise, I have concerns about the open ended politics proclaimed under Queer Theory. As John D'Emilio illustrates in 12 his account of American gay and lesbian politics, "identity" and "difference" have simultaneously served as the crux as well as the crisis for most gay and lesbian organizing.13 So, if "queer" is fluid, boundariless, oppositional, and multiplicitous, how do "we" organize around "difference" or ground in politics? What are these politics, and who sets the agenda? Queer Theory seeks ^definition in order to combat the inherent divisiveness created within identity politics and disrupt rigidly constructed binaries. However, materiality, material reality, and the lived experiences of individuals/communities residing in the margins and overlaps of structural racism, classism, sexism, and heterosexism seem overlooked. Therefore, Queer Theory, perhaps, purports alternative and liberatory strategies in theory, but encounters many difficulties when attempting coalitional politics and everyday activism

State Good

Queer theory is too suspicious of the state to succeed

Rhetoric? Kinda powerful. Warrants? Somewhat Lacking.

Edgar 8 ENGAGING WITH THE STATE: CITIZENSHIP, INJUSTICE, AND THE PROBLEM WITH QUEER Edgar, Gemma. is a research fellow at The Australia Institute Gay and Lesbian Issues and Psychology Review4.3 (2008): 176-187. http://search.proquest.com.proxy.lib.umich.edu/docview//21403791/7D43C20E17E146FCPQ/1?accountid=14667

When I began my fieldwork I was especially interested to explore how queer theory had, or could, be used to address the injustices experienced by the young people of Twenty10. However, after meeting and interviewing some of Twenty10's young people and staff, I began reassessing the utility of queer theory as a tool for addressing the coalescence of injustices the young people faced: **Queer theory,** it is my position, **is too suspicious of the** state's normalising capacities for it to provide a practical plan of activism for an organisation like Twenty10, which relies upon the financial support of both the Federal and NSW State Governments. This support allows Twenty10 to supply diverse and strategic services for LGBT young people. In other words, Twenty10 relies upon the state in order to do its work. This form of activism, in which an organisation engages closely with the state, is rejected by many proponents of queer theory, who build on Foucault's govern mentality thesis to instead push for a style of activism that is "at odds with the normal, the legitimate, the dominant" (Halperin, 1995, p. 62). This form of activism has been useful in many contexts, for example in the early days of ACT UP (Halperin, 1995, pp. 15-16). But, it is my position, it may not be so useful when addressing the injustices experienced by LGBT young people who require the support of the state. Rather than advocating for the use of queer theory, then, I have turned to citizenship discourses as a more effective tool for addressing the concerns of these young people. Citizenship, while demanding some forms of 'normalisation' for those included within its sphere, is, on balance, better equipped to respond to the injustices experienced by the young people at Twenty10. This is because citizens are able to make demands upon the state for help. This paper is hence an argument for the value of citizenship discourses and engaging with the state when addressing the concerns of young LGBTI people experiencing economic disadvantage.

The State allows for inclusive citizenship, protection from neoliberal exploitation, and provision of basic necessities.

Edgar 8 ENGAGING WITH THE STATE: CITIZENSHIP, INJUSTICE, AND THE PROBLEM WITH QUEER Edgar, Gemma. is a research fellow at The Australia Institute Gay and Lesbian Issues and Psychology Review4.3 (2008): 176-187. http://search.proquest.com.proxy.lib.umich.edu/docview//21403791/7D43C20E17E146FCPQ/1?accountid=14667

Marshall's analysis of social rights has been particularly influential for modern citizenship theorists, because he questioned the legitimacy of democracy without equity. He did this by describing the resources required by individuals to access their civil and political rights. He argued that to achieve participatory equality, the state must provide a welfare scheme, an accessible education system, and universal health care. These policy tools were about equipping the individual so that they could **"share to the full in the social heritage and to live the life of a civilized being according to the standards prevailing in the society"** and hence to participate fully as a citizen (Marshall, 1965, pp. 78-79). Therefore, central to Marshall's thesis is the role played by the state in addressing injustice. For Marshall, the state is a structure able to prevent the isolation and disadvantage of its citizens by upholding political and civil rights, and the provision of social services. This is a relatively thick conception of citizenship because it assumes that those more economically advantaged members of the community will support those less well off, and that this redistribution will occur through the mechanism of the state. As Bryan S. Turner (1993) has noted, the worth of Marshall's concept of citizenship was the protection it sought to provide for the economically disadvantaged. For Turner: Citizenship, once inscribed in the institutions of the welfare state, is a buffer against the vagaries of the marketplace and the inequalities of the class system, because citizenship is a method of redistribution of resources to those who are unable to provide for their own needs as a consequence of some contingent feature of their life circumstances (p. xi). It is my position that citizenship is even thicker than as explained by Marshall. It is not just about the progression to full civil, political and social rights. Citizenship is also about being acknowledged, recognised and included, by both the state and the community (Phelan, 2001). Within this paper then, I define citizenship as including the rights mapped by Marshall, and hence, I give the state a crucial role in ensuring participatory equality. But I also use the term more thickly, to suggest, as former Prime Minister John Howard has said, that being a citizen is about being part of the "national family" (Howard 2007) and about "belonging" (Nolan & Rubenstein forthcoming; Weeks 1995, 1998). It is perhaps, then, not difficult to understand why LGBTI

movements have sought full enfranchisement through citizenship claims. It is not just that they have desired the rights mapped by Marshall: They have also have demanded the creation of a "differencefriendly world" (Fraser, 2003, p. 8), and a place in Howard's "national family" (2007).8

Queer rejection of the state re-entrenches neoliberalism, and prevents actually beneficial policies from benefiting those who need them.

Edgar 8 ENGAGING WITH THE STATE: CITIZENSHIP, INJUSTICE, AND THE PROBLEM WITH QUEER Edgar, Gemma. is a research fellow at The Australia Institute Gay and Lesbian Issues and Psychology Review4.3 (2008): 176-187. http://search.proquest.com.proxy.lib.umich.edu/docview//21403791/7D43C20E17E146FCPQ/1?accountid=14667

Queer theorists are not the only ones who are suspicious of giving the state a large role, indeed this position is probably more often associated with neo-liberalism. Michael Warner has suggested that it is no coincidence that the success of queer theory, as an activist strategy and as an academic discipline, **should coalesce with that of neo-liberalism.** He has argued that queer's "potential for transformation seems mostly specific to a cultural context" (1995, p. 361) and that context is born post 1991, in an Anglo-American space, in a period in which neoliberalism has all but triumphed in policy making arenas. In fact, when we consider queer perceptions of the state through the use of Foucault's governmentality thesis, it becomes clear that queer and neoliberalism have more in common than a joint appearance towards the end of the twentieth century. Queer's move away from making claims upon the state parallels that of neoliberal discourses, which also argue for a society free from the intrusive hand of government (Self, 2000, p. 99-101). Neoliberalism argues that citizens should be 'self-reliant' and hence not be dependent upon welfare. Similarly, those relying upon a Foucauldian view of the state argue that there are "dangers ... in looking to the state as provider, equalizer, protector, or liberator" (Brown. 1995, p. 196, 195) because "the rise of welfare states have been accompanied by more insidious methods of surveillance in information-gathering technologies" (Gorham, 1995, p. 36).11 My concern with queer activism is this similarity with neoliberalism. Through rejecting the dominant role played by the state, and in arguing against the worth of LGBTI citizens making demands upon the state, just like neoliberalism, queer supports a form of activism that is unable to rectify socio-economic injustice. Or perhaps more accurately, it is suspicious of the mechanism that would best do so. A movement away from the state, and a focus instead upon culture, may well destabilise the foundations of heteronormativity as the hetero/homo binary is thrown into question, **but what use is it to those who rely on the state to house them**? How is it useful for these individuals, such as the young people of TwentylO, for theorists to undermine the value of the welfare state, especially when it has been so undermined through neoliberal reforms? How, in this thinking, are injustices of redistribution to be addressed? Marshall was rightly criticised for presenting the developments of rights as a linear, teleological progression (Turner 1991: 122). He was criticised because welfare clearly is reversible and should not be taken for granted; supporting it should be a goal for all those who seek to redress economic disadvantage. The queer suspicion of the state and therefore of its welfare programmes, makes it difficult to accept the argument that queer activism is useful for those experiencing economic disadvantage. Gorham embodies the governmental concern about the normalising capacities of welfare.

State succeeds empirically to help the LGBT community and confront heteronormativity.

Edgar 8 ENGAGING WITH THE STATE: CITIZENSHIP, INJUSTICE, AND THE PROBLEM WITH QUEER Edgar, Gemma. is a research fellow at The Australia Institute Gay and Lesbian Issues and Psychology Review4.3 (2008): 176-187. http://search.proquest.com.proxy.lib.umich.edu/docview//21403791/7D43C20E17E146FCPQ/1?accountid=14667

Reconstituting Citizenship and the State

One response to the worry that LGBTI individuals and other minorities will be subsumed by heteronormativity is that the inclusion of LGBTI and other non-mainstream individuals into the body politic also **reconstitutes citizenship**. It is my position that the work performed by Twenty10 evidences the ability of citizenship claims to both challenge heteronormativity and redress redistributive injustice. Twenty10 engages with the state through the receipt of both Federal and NSW State Government funding. In a Marshellian vein it takes advantage of the redistributive capacity of the state in order to provide programmes that redress both the socio-economic and identity based disadvantages experienced by its young people. Financial support from government has allowed Twenty10 to provide significant services to its young people, including: medium term supported accommodation; counselling; case management; social and support groups; family support services; and community-based early intervention. That is, a politics of citizenship, of engaging with the state, has allowed Twenty10 to attempt to address injustices of both redistribution and recognition. One example of this work is Twenty10's provision of six medium-term, LGBTI specific units. As medium-term housing, these units offer the young people who live in them a safe and secure place to live for 3-18 months. I interviewed one young person who was living in one of these apartments. She described what it was like as: I guess it just feels more familiar and safe you know ... I've been to like different youth centres that aren't queer and like here I just feel like I can make myself at home and like feel safe ... And it's just nice to have queer people all around you like you know people that you identify with (God Pie).13 God Pie's comments highlight the value of LGBTI specific accommodation for queer young people, which is that 'mainstream' services are not always safe places for LGBTI people. LGBTI specific accommodation is one way to create safer places for LGBTI individuals experiencing homelessness. These units, however, would be extremely difficult for Twenty10 to provide if it did not have the financial support of the state. In this example, we can see how relying upon a mechanism to redistribute economic resources is a valuable way to address redistributive injustice experienced by LGBTI young people. More, however, is occurring in this example than just a response to redistributive injustice. By funding Twenty10, the Government recognises the citizenship of LGBTI young people. Receiving government funding is a symbol of community inclusion, as well as being a redress to redistributive injustice. If you are concerned about community embrace, acknowledgment and ultimately, belonging, then it matters that the welfare of young LGBTI people is supported by the government, because it means that they are being acknowledged. Another example of how engaging with the state has allowed Twenty10 to address the injustices experienced by their young people is their community-based early intervention programme called Ready or Not. Ready or Not is funded through the Federal Government's Reconnect programme. This funds Twenty10 staff to travel throughout NSW to conduct training sessions with key community members, such as police, teachers and health, youth and welfare workers. This training is intended to resource communities so that queer young people are less likely to become isolated. The idea is that if key community members know how to work with and support queer young people, then these young people are less likely to turn up on the doorstep of Twenty10 needing help. Ready or Not is one way Twenty10 attempts to create community change, and it is able to provide it only because of the financial support of the state. One staff member explained the impact of it as: ... the Ready Or Not training ... we certainly get our message across and we do talk about, we talk about how homophobia hurts, so we talk about things like, increased rates of suicidality and a whole range of things, so we don't just gloss it over so it's in a nice little tidy package, so people find it palatable. But at the same time I think the way that we do it, in that professional way has more of an impact, people can actually take it and I kind of think that by the way that we are doing, I think if we were running around with banners here and there, that maybe that would make people a little bit more defensive about hearing our message. Ready or Not again highlights the advantages of Twenty10's relationship with the state. In this example, Twenty10 addresses injustices of both recognition and redistribution because by challenging heteronormativity and homophobia (recognition), they are also attempting to address the causes of LGBTI youth homelessness (redistribution). What is occurring is not to do with LGBTI individuals conforming to the demands of the state. Rather, the 'mainstream' community is being challenged by Twenty10 staff to itself change. Rather than the demand that young LGBTI people must become 'like' the majority, the majority itself is what is being disrupted. Ready or Not fits squarely with the argument that engaging with the 'mainstream' in order to make it more accepting, and relying upon the state to do so, can reconstitute citizenship and is hence an effective way to address both recognition and redistributive based injustice. Twenty10 is, I would posit, only able to provide LGBTI specific housing and the Ready or Not programme because it presents a face that is not "at odds with the normal, the legitimate, the dominant" (Halperin, 1995, p. 62). That is, Twenty10 appears to be the good gay citizen that the governmental thesis warns us of, in that it works in the 'mainstream' community and relies upon the state to support it. However, Twenty10 **still confronts heteronormative notions** of citizenship through challenging youth and community workers to recognise the needs of LGBTI young people. Further, Twenty10 uses state funds to assist young LGBTI people experiencing homelessness. It also provides further services, including: counseling, case management, social and support groups and family support services. All of these examples highlight how a reliance upon the state can help to address the injustices of redistribution and recognition experienced by LGBTI young people. As queer theorists warn us, there are costs to this and the constraints of the purchaser-provider contracts required by government evidence this. But the idea of citizenship as always being heteronormative and exclusionary is difficult to

maintain when citizenship tools are able to provide a response to the injustices experienced by the young people at Twenty10. Twenty10 would not be able to do this work if it engaged in the style of politics suggested by queer, that is, if it was suspicious of the state. As Altman writes, "queer theories are relatively unhelpful in constructing this sort of politics because of their lack of emphasis on political institutions as distinct from discourse" (2001, p. 158). It is Twenty10's emphasis on political institutions, its demand to fully belong, that has allowed it to do the work it does.

Racial Surveillance SDI

Politics Links

Politics Link – Informant Reform Unpopular

Restricting informant intelligence collection is unpopular.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Due to the popularity and longstanding use of informants, it is unrealistic to think that the FBI will stop using immigration law as a way to leverage cooperation. In the past, informants have aided national security by providing useful intelligence, and so they are highly valued as a source of intelligence. Hence, no matter how narrow in scope the proposed changes are, changes to the S-6 visa would greatly benefit the FBI, informants, and Muslim and Middle Eastern communities. Better intelligence may mean the difference between wasting government resources on empty threats and preventing the loss of life in future terrorist attacks.

Surveillance Authority not passing now- needs Congressional support

Edwards 2015

(Julia, Reuters, "Heightened Islamic State threat requires surveillance action: U.S. official", May 27th, http://www.reuters.com/article/2015/05/27/us-usa-security-whitehouse-idUSKBN0OC2UQ20150527)//PG

The threat of Islamic State to the national security of the United States has heightened in the last two weeks, making it critical for Congress to renew surveillance authority, a senior U.S. administration official said on Wednesday. The law authorizing the U.S. government to conduct domestic surveillance searches through a court approval process is due to expire if Congress does not pass an extension by Sunday. The Senate so far has been unable to pass legislation despite overwhelming support in the House of Representatives for a bill that amends the current program with much more limited powers to collect information. Senate Majority Leader Mitch McConnell has called for the Senate to meet at 4 p.m. EDT on Sunday, but it is not clear whether there will be enough support to pass any legislation before the law's expiration. Another U.S. administration official said it will take time for the government to instruct phone companies to shut down or reboot data storage capabilities. The federal government will begin instructing phone companies on how to stop collecting data by 4 p.m. EDT on Sunday and the instructions would be irreversible by 8 p.m. EDT. If a lapse occurs, it is expected to take 24 hours after the passage of new surveillance powers by Congress for the program to resume, the official said.

Obama will not change NSA policies

Burnett ’14 (Bob,Berkeley writer, activist, and Quaker. Before starting a second career as a journalist, he was a technologist and one of the founding executives at Cisco Systems,”Why Hasn't Obama Reined in NSA?,”1/10,The Huffington Post,http://www.huffingtonpost.com/bob-burnett/obama-nsa_b_4574910.html,LS)

After the 2008 election, Barack Obama supporters had high expectations for his national-security policy. We thought he'd end U.S. involvement in Iraq and Afghanistan, and open talks with Iran. We expected he would close down Guantanamo and end the National Security Agency's (NSA) domestic surveillance program that collects Americans' phone and email data. He's accomplished some of these objectives but he hasn't reined in the NSA. Why not? Writing in The New Yorker, Ryan Lizza observed that before becoming president, Obama was inconsistent on national security policy and the NSA. "In 2003, as a Senate candidate, he called the Patriot Act 'shoddy and dangerous.' And at the 2004 Democratic Convention... he took aim at the 'library records' provision of the law." Nonetheless, in in 2006 Obama voted for a renewal of the Patriot Act. As a presidential candidate, Obama's attitude appeared to shift. In 2007 Obama criticized Bush, "This administration acts like violating civil liberties is the way to enhance civil liberties. It is not. There are no shortcuts to protecting America." In an August 2007, campaign speech Obama criticized, "unchecked presidential power" and vowed a change in national security policy: "that means no more illegal wiretapping of American citizens, no more national-security letters to spy on citizens who are not suspected of a crime... [and] no more ignoring the law when it is inconvenient." Nonetheless, Obama's presidential record has been disappointing. Lizza noted: It is evident from the Snowden leaks that Obama inherited [from George Bush] a regime of dragnet surveillance that often operated outside the law and raised serious constitutional questions. Instead of shutting down or scaling back the programs, Obama has worked to bring them into narrow compliance with rules--set forth by a court that operates in secret--that often contradict the views on surveillance that he strongly expressed when he was a senator and a Presidential candidate. A recent New York Times editorial noted: ■ The N.S.A. broke federal privacy laws, or exceeded its authority, thousands of times per year, according to the agency's own internal auditor. ■ The agency broke into the communications links of major data centers around the world, allowing it to spy on hundreds of millions of user accounts and infuriating the Internet companies that own the centers. ■ The N.S.A. systematically undermined the basic encryption systems of the Internet, making it impossible to know if sensitive banking or medical data is truly private, damaging businesses that depended on this trust. There are three explanations for the president's weak NSA policy. 1. Obama decided not to expend political capital changing it. Given the economic problems he inherited from George Bush, plus the difficulty of working with a divided Congress, Obama may have decided it was not worth the effort to rein in the NSA. That's been true of national security in general. Obama had increased defense spending, expanded the national-security state, and maintained the hundreds of US military bases that dot the globe. Obama tried to shut down Guantanamo but was thwarted by Congress. 2. Since becoming President, Obama has been in a national security bubble. Writing in the New York Times, Peter Baker reported that "the evening before he was sworn into office, Barack Obama [was informed] of a major terrorist plot to attack his inauguration." (This turned out to be a false alarm.) In December of 2009, the President was shaken by the failed attack of Umar Farouk Abdulmutallab who tried to detonate an underwear bomb as his plane landed in Detroit. Over the past five years, the intelligence community has alerted Obama to dozens of potential attacks. That's affected him. This past June Obama defended NSA surveillance, saying, "We know of at least 50 threats that have been averted because of this information." (Pro Publica reports that the NSA has provided specifics on only four of these cases and there is little support for the president's contention that NSA surveillance actually "averted" these threats.) 3. The National Security State is too powerful to change. The president may have decided that it was impossible to make major changes to NSA, and the gargantuan national-security state, so he opted to "bring them into

narrow compliance with rules." Obama inherited a pit bull and decided to handle it with extreme care. Both the New York Times and Ryan Lizza reported that James Clapper, the director of National Intelligence who oversees NSA, lied to Congress, in March, when he denied that NSA was collecting data on millions of Americans. It wasn't the first time the national-security state deceived us. Their litany of falsehoods and screw-ups stretches from Pearl Harbor through the Vietnam War to the 9/11 attacks and the decision to invade Iraq. We may never know why President Obama has continued the Bush-era domestic surveillance programs. Whatever his reasoning, it's time for him to rein in the NSA.

To Change the surveillance program, Obama is going to have to use his political Capital

Page '13 (Susan, current Washington Bureau Chief for USA Today, She has won several awards for her work, including the Merriman Smith Memorial Award, the Aldo Beckman Memorial Award, the Gerald R. Ford Prize for Distinguished Reporting on the Presidency (twice) and the Sigma Delta Chi Distinguished Service Award for Washington Correspondence, president of the White House Correspondents Association in 2000, "Ex-NSA chief calls for Obama to reject recommendations",12/30,USA TODAY, http://www.usatoday.com/story/news/politics/2013/12/30/gen-michael-hayden-urges-obama-reject-nsa-commission-recommendations/4249983/,LS)

WASHINGTON — Retired general Michael Hayden, former director of the National Security Agency and the Central Intelligence Agency, called on President Obama Monday to show "some political courage" and reject many of the recommendations of the commission he appointed to rein in NSA surveillance operations. "President Obama now has the burden of simply doing the right thing," Hayden told USA TODAY's Capital Download. "And I think some of the right things with regard to the commission's recommendations are not the popular things. They may not poll real well right now. They'll poll damn well after the next attack, all right?" Obama, who received the report from the five-member advisory committee just before he left to vacation in Hawaii, has promised to make "a pretty definitive statement" in January about its 46 recommendations. He appointed the panel in the wake of a firestorm over disclosures by former NSA contractor Edward Snowden about surveillance of all Americans' telephone calls and spying on German Chancellor Angela Merkel and other friendly foreign leaders. The commission, led by former acting CIA director Michael Morell, said the recommendations were designed to increase transparency, accountability and oversight at the NSA. Hayden, who headed the super-secret agency from 1999 to 2005, oversaw the launch of some of the controversial programs after the Sept. 11 attacks on New York and Washington in 2001. He defended them as effective and properly overseen by congressional intelligence committees and a special court. "Right now, since there have been no abuses and almost all the court decisions on this program have held that it's constitutional, I really don't know what problem we're trying to solve by changing how we do this," he said, saying the debate was sparked after "somebody stirred up the crowd." That's a reference to Snowden, who was granted asylum in Russia. Snowden's revelations have fueled objections by civil liberties advocates that the NSA goes too far in collecting information about Americans not suspected of any wrongdoing. This month, a federal judge in Washington called the program "almost Orwellian," although a few days later, another federal judge in New York said it was legal. Hayden's blunt warnings about the risks he sees in accepting the commission's recommendations underscore the difficult balancing act Obama faces between ensuring the nation's security and respecting citizens' privacy. No decision he makes is likely to avoid criticism. "Here I think it's going to require some political courage," said Hayden, 68, a retired Air Force general whose service in the nation's top intelligence posts gives him particular standing. "Frankly, the president is going to have to use some of his personal and political capital to keep doing these things." In the interview with USA TODAY's weekly video newsmaker series, Hayden: •Said the vast data on Americans' phone records are "far safer and privacy is far more secured with NSA holding the data than some third party." The commission recommended that the phone companies or a third party take over responsibility for storing the data. •Protested that requiring the NSA to seek individual court orders when it wants to search the data would reverse changes put in place after the 9/11 attacks. •Ridiculed a proposal to increase protections for personal data about non-citizens abroad. "The Fourth Amendment to our Constitution is not an international treaty," he said. For those who aren't covered by its protections, he said, "if your communications contain information that make Americans more safe and more free, game on." •Said the idea of requiring the president and his advisers, not the intelligence community, to approve any spying operation on foreign leaders would be "a little cumbersome" but not a significant change from the way things effectively work already. "If you don't think the national command authority had a broad understanding of what we're doing, I've got a bridge I want to interest you in," he said. •Endorsed the recommendation to split leadership of the NSA from the Cyber Command, the military's cyber-warfare unit. The two positions were combined in 2009. Obama has rejected the proposal. "That might be an OK idea, not because Keith Alexander, the general who now holds both positions ... has too much power but because Keith has too much work. I just can't understand how one man can do both jobs." Hayden opposed the idea of granting Snowden amnesty, in part to learn more about what he did and how he did it and to prevent him from leaking additional information. "It's kind of like negotiating with terrorists," he said. "All that does is tell the next Edward Snowden out there, if you're going to do this, make sure you steal enough."

Obama will not spend his political capital on reforming surveillance

SHEAR '15 (MICHAEL D., White House correspondent for The New York Times. He joined The Times in September 2010 as a lead writer on The Caucus blog. Previously, Mr. Shear wrote for the Washington Post as a metro reporter covering Virginia politics, the 2008 presidential election and, most recently, as White House correspondent.Mr. Shear received a B.A. degree from Claremont McKenna College and a M.A. degree in public policy from the John F. Kennedy School at Harvard University., "In Pushing for Revised Surveillance Program, Obama Strikes His Own Balance", 6/3, The New York times, http://www.nytimes.com/2015/06/04/us/winning-surveillance-limits-obama-makes-program-own.html?_r=0, LS)

WASHINGTON — For more than six years, President Obama has directed his national security team to chase terrorists around the globe by scooping up vast amounts of telephone records with a program that was conceived and put in place by his predecessor after the Sept. 11, 2001, attacks. Now, after successfully badgering Congress into reauthorizing the program, with new safeguards the president says will protect privacy, Mr. Obama has left little question that he owns it. The new surveillance program created by the USA Freedom Act will end more than a decade of bulk collection of telephone records by the National Security Agency. But it will make records already held by telephone companies available for broad searches by government officials with a court order. "The reforms that have now been enacted are exactly the reforms the president called for over a year and a half ago," said Lisa Monaco, the president's top counterterrorism adviser. She called the bill the product of a "robust public debate" and said the White House was "gratified that the Senate finally passed it." The president is trying to balance national security and civil liberties to put into practice the kind of equilibrium he has talked about since he was in the Senate, when he expressed support for surveillance programs but also vowed to rein in what he called government overreach. Mr. Obama entered the Oval Office with what he called "a healthy skepticism" about the system of surveillance at his command. But Ms. Monaco said that, in part because of his often grim daily intelligence briefing, the president was also "very, very focused on the threats" to Americans. "He weighs the balance every day," she said. The compromise on collections of telephone records may end up being too restrictive for the president's counterterrorism professionals, as some Republicans predict. Or, as others vehemently insisted in congressional debate during the past week, it may leave in place too much surveillance that can intrude on the lives of innocent Americans. Either way, Mr. Obama's signature on the law late Tuesday night ensures that he will deliver to the next president a method of hunting for terrorist threats despite widespread privacy concerns that emerged after Edward J. Snowden, a former N.S.A. contractor, revealed the existence of the telephone program. "He owned it in 2009," said Michael V. Hayden, a former N.S.A. director under President George W. Bush, who oversaw the surveillance programs for years. "He just didn't want anyone to know he owned it." Jameel Jaffer, the deputy legal director of the American Civil Liberties Union, called the USA Freedom Act "a step forward in some respects," but "a very small step forward." He said his organization would continue to demand that the president and Congress scale back other government surveillance programs. "Obama has been presented with this choice: Are you going to defend these programs or are you going to change them?" Mr. Jaffer said. "Thus far, we haven't seen a lot of evidence that the president is willing to spend political capital changing those programs." In the case of the telephone program, Mr. Obama's preferred compromise was originally the brainchild of his N.S.A. officials, who embraced it as a way to satisfy the public's privacy concerns without losing the agency's ability to conduct surveillance more broadly. In the lead-up to last week's congressional showdown, Mr. Obama and his national security team insisted that broad surveillance powers were vital to tracking terrorist threats, while admitting that the new approach to data collection would not harm that effort. White House officials said Mr. Obama was comfortable that history would show that he struck the right balance.

Advantage CP – S-6 Visa Reform CP

S-6 Visa Reform CP – Solvency

Reforming the S-6 visa solves.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

While the FBI appears to recruit most terrorism informants through informal means, an existing visa program already formally offers immigration benefits to informants in exchange for their cooperation with terrorism investigations. As part of the Violent Crime Control and Law Enforcement Act of 1994, 32Link to the text of the note Congress specifically designed the S-6 visa to attract and reward immigrants who were willing to cooperate by giving terrorism intelligence. 33Link to the text of the note However, given the small number of S-6 visas issued, the program likely fails to meet the FBI's intelligence recruitment needs. The fifty allotted S-6 visas per year 34Link to the text of the note do not match up with the number of informants (fifteen thousand) used by the FBI. 35Link to the text of the note In order to qualify for the S-6 visa, an informant must also meet the eligibility requirements of the Department of Justice's Rewards for Justice Program, a separate program designed to elicit and monetarily reward terrorism intelligence. 36Link to the text of the note Lastly, access to the S-6 visa is further restricted by the requirement that the informant be subject to danger if he or she is returned to his or her home country. 37Link to the text of the note Since the FBI has long used immigration law as an incentive to compel terrorism informants to act, it has little motivation to use a rewards program that presents additional barriers. The stringent eligibility requirements to obtain an S-6 visa explain its ongoing underuse. 38Link to the text of the note [242] This Comment proposes the S-6 visa requirements should be modified in a way that encourages trust and cooperation from informants by allowing informants to enforce their bargains with the FBI**. A legislative overhaul that emphasizes pre-existing ties to terrorist organizations, increases the number of available visas, and lowers the barriers to the S-6 visa's use would produce more reliable and actionable intelligence, and provide greater protection for the informants' civil liberties and free speech**. Congressional oversight of the FBI's use of S-6 visas would also provide a valuable check on the FBI's largely unlimited control over terrorism informants.

S-6 Visa Reform CP – 2nc Solvency

CP solves.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

As it currently exists, the S-6 visa may be a way of controlling the FBI-informant relationship in cases involving promised immigration benefits. The S-6 visa rewards terrorism informants with permanent residency status. However, as discussed infra, in order for the S-6 visa to effectively

restrain the FBI and produce useful intelligence, the S-6 visa needs to be modified. The examples discussed supra in Part II illustrate how the overbroad and indiscriminate use of informants, particularly those recruited with immigration threats or rewards, harms the acquisition of useful information, fails to identify and protect against legitimate threats, chills speech, and encourages ethnic and religious profiling. Immigration law offers less protection to informants than promises of leniency in criminal matters, thus increasing the potential for informants to produce faulty intelligence. Part III, supra, demonstrates that limitations on FBI dealings with informants are practically nonexistent. This Part proposes a revision to the S-6 visa that would help diminish the harmful effects discussed in Part II by increasing transparency and providing [268] more procedure for FBI informant recruitment via immigration law. Specifically, providing immigrant informants with better bargaining power and ways to vindicate their agreements through the S-6 visa would alleviate some of the aforementioned harms. Although there have been few reports of the FBI abandoning immigration promises in counterterrorism investigations, 223Link to the text of the note the FBI has repeatedly broken alleged immigration and monetary 224Link to the text of the note promises made to informants in exchange for participation in drug investigations, 225Link to the text of the note human trafficking investigations, 226Link to the text of the note and pre-9/11 terrorism prosecutions. 227Link to the text of the note Providing a more straightforward and transparent way for the FBI to offer immigration benefits to informants would help decrease informants' potential vulnerability and limit the FBI's power. With modifications, the S-6 visa could help resolve these problems.

S-6 Visa Reform CP – 2nc Solvency

S-6 Visa Reform solves terrorism informant cooperation sufficiently.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Ethnic and religious profiling, combined with the indiscriminate surveillance carried out by informants, can entrap individuals who do not pose a threat. Entrapment wastes government resources and undermines public confidence in the justice system and law enforcement. Although the FBI's problematic surveillance of Muslim and Middle Eastern communities stems from the use of all types of informants and not merely those recruited with immigration promises, a modification to the use of immigration law in rewarding or coercing terrorism informants would provide a step toward producing more useful intelligence and reducing the risk of harm to innocent individuals.

S-6 Visa Reform CP – 1nc Solvency

The CP solves but doesn't curtail domestic surveillance.

This CP could be done by the Court or Congress.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Greater use of the S-6 visa would ensure judicial review of government practices by forcing the FBI to be more careful about following procedures in recruiting and dealing with informants. Changes to the S-6 visa program that provides material witness visas to informants with intelligence about terrorist activities could formalize the use of immigration rewards for terrorism intelligence in ways that would benefit the FBI and potential informants, and could help reduce the unnecessary and harmful surveillance of Muslim and Middle Eastern communities. In order for the S-6 visa to become a useful tool for the FBI without compromising civil liberties, the S-6 visa must be more readily available, easier to grant, and carefully tailored. The low numbers of S-6 visas used by law enforcement agencies may indicate several potential problems with the program. It may seem paradoxical to suggest that the available number of S-6 visas is too low when congressional reports reveal no S-6 visas were issued between 1994 and 2006. 255Link to the text of the note However, these low numbers likely reveal more about the drawbacks of the S-6 visa program than they do about the value of immigration incentives as an intelligence tool. In particular, the inconveniences the S-6 visa application process imposes are barriers to efficient and productive use of the S-6 visa program. If FBI informants number in the thousands, as reports suggest, 256Link to the text of the note and the FBI continues to make terrorism prevention a priority, then it seems Congress has failed to offer an appropriate number of S-6 visas for counterterrorism investigations. Whether or not the current number of informants in use is necessary for effective terrorism prevention is outside the scope of this Comment. Nevertheless, the current allotment of fifty S-6 visas per year seems low when compared to the premium the FBI places on terrorism investigation and prevention and the estimated fifteen thousand informants in use. 257Link to the text of the note Although not all of these informants work on terrorism-related investigations, it [272] is reasonable to assume that since terrorism prevention tops the list of FBI priorities, 258Link to the text of the note there are more than fifty of them that do. If Congress truly intends the S-6 visa to become a viable instrument in fighting the war on terror, it must give the FBI the appropriate tools?and number of tools?to work with. In determining a useful and appropriate number of S-6 visas to allot, under this proposal Congress would also be forced to determine the number of terrorism informants in use and whether the FBI plans to reward these individuals with S-6 visas for themselves and their families. Furthermore, **were a court to find that the FBI cannot bypass the S-6 visa process, and modify the eligibility requirements, the number of S-6 visas would likely rise. In sum, increasing** 259Link to the text of the note **the statutory allotment of S-6 visas could ensure that there are enough S-6 visas available** to cover the increased number of terrorism informants employed by the FBI. S-6 visa eligibility requirements also lack the proper tailoring to allow the FBI to make use of them while still guarding against overbroad informant recruitment and use which leads to religious and ethnic profiling. Changing the eligibility standards could better protect informants and produce more reliable intelligence for the FBI. For example, one potential change would do away with requiring informants to also be eligible for the State Department's Rewards for Justice Program established by the Act to Combat International Terrorism. 260Link to the text of the note As previously mentioned, the Act gives the Secretary of State sole discretion to monetarily reward individuals who provide information leading to the arrest or conviction of anyone committing or conspiring to commit international terrorism against the United States. 261Link to the text of the note Those who frustrate acts of terrorism or dismantle terrorist organizations are also covered by the Act. 262Link to the text of the note In short, the Rewards for Justice Program eligibility requirements are quite high. Many informants may have useful terrorism intelligence that may not necessarily lead to an arrest or conviction. Furthermore, both the Attorney General and the Secretary of State approve awards on a discretionary basis not subject to judicial review. 263Link to the text of the note Abolishing the requirement that an informant be eligible for a monetary reward under the Rewards for Justice Program would make S-6 visas available to more terrorism informants. While **this would not [273] necessarily curtail the FBI's ethnic and religious profiling**, making the visa available to

more informants may encourage the FBI to actually use it, thereby creating a more legitimate and transparent path to immigration rewards than that afforded by current government practices. Similarly, the S-6 visa requirement that informants be in danger of retaliation for providing critical and reliable intelligence 264Link to the text of the note will likely not be met when immigration benefits are the impetuses for cooperation. Because informants recruited for counterterrorism investigations often have no connection to foreign terrorist organizations, 265Link to the text of the note and are tasked with preventing "lone wolf" terrorists, they would likely not face threats from legitimate terrorist organizations if deported to their country of origin. Abolishing the "danger of retaliation" requirement would make the S-6 visa available to more informants and give them more incentive to cooperate with the FBI. It would also give the FBI greater assurance that informants' cooperation is not based on empty promises. In all, removing this requirement, along with the requirement that informants be eligible for the Rewards for Justice Program, would remove some of the barriers to receiving an S-6 visa. To limit the religious and ethnic profiling created through the widespread use of informants, the S-6 visa should also require that informants possess critical and reliable intelligence prior to agreeing to inform. Critical and reliable information is based on preexisting ties to terrorists or terrorist organizations rather than on ethnicity or religion. In the cases at issue in this Comment, the FBI typically recruits informants without a specific surveillance target in mind. In some cases, "FBI handlers have tasked [informants] with infiltrating mosques without a specific target or "predicate' - the term of art for the reason why someone is investigated. They were, [informants] say, directed to surveil law-abiding Americans with no indication of criminal intent." 266Link to the text of the note Informants receiving such directions from the FBI would not meet the "critical and reliable information" requirement. Hence, requiring informants to have potentially useful information that is not based purely on ethnicity or religion, but rather on preexisting ties to terrorists or terrorist organizations, would lessen the indiscriminate surveillance practices of the FBI without implementing the higher standards imposed by the Rewards for Justice Program. Finally, individuals who agree to provide information in exchange for an S-6 visa should not be forced to waive their right to a deportation hearing. Currently, informants must knowingly waive their rights to any deportation hearings and appeals should deportation proceedings occur. They must also waive their rights to contest their detention pending deportation until lawful [274] permanent resident status is obtained. 267Link to the text of the note Strikingly, informants relinquish all access to judicial review if their applications are mishandled or forgotten and they subsequently face deportation. In the past, informants have alleged that the FBI has mismanaged and reneged on promises, including immigration promises. 268Link to the text of the note Allowing judicial review of the S-6 visa process would help lift the veil of secrecy under which the FBI operates. Furthermore, through redaction or other methods that preserve informants' identities, judicial review could be carried out without threatening national security. 269Link to the text of the note Another benefit of this requirement would be increased transparency in the way the FBI recruits informants. Wider use of the S-6 visa, as well as greater judicial review, would allow the government to ascertain the number of individuals enlisted by the FBI as counterterrorism informants. **This may further help curb informant mishandling, a problem that plagues the agency**. Because informants would still be required to provide critical and reliable intelligence, the FBI would be required to articulate clear predicates for recruiting individuals, such as a close relationship between an individual and a known member of a foreign terrorist organization. This, in turn, would provide due process and could vindicate informants' rights. The proposed changes to the S-6 visa program would not only force the FBI to adjust its recruitment and use of counterterrorism informants, but would also help the FBI obtain more reliable and valuable intelligence while rebuilding relationships with Muslim and Middle Eastern communities. Despite the FBI's limited resources

and financial limitations, the FBI and Congress should focus on finding the most accurate and efficient methods of acquiring intelligence. 270Link to the text of the note Although the FBI's budget has not suffered greatly in the financial crisis, 271Link to the text of the note the agency does have a finite amount of resources to work with. Sending unwilling informants into mosques in search of vulnerable and receptive attendees with no ties to terrorist organizations and with no independent plans to commit terrorist acts is not efficient. Requiring the FBI to only use a modified version of the S-6 visa would channel the FBI's pursuit of existing leads. In turn, the FBI's presence in mosques would decrease, which would assuage community fears. Lastly, requiring the FBI to seek informants [275] who possess reliable terrorist intelligence has the potential to reduce the possibility of informant entrapment, which would help repair the FBI's relationship with Muslim and Middle Eastern communities.

S-6 Visa Reform CP – 2nc Solvency

CP is sufficient to solve – or if it doesn't, neither does the aff.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Changing the S-6 visa program and focusing on the FBI's use of immigration incentives to recruit informants may seem too narrow to appreciably influence national security and community relations. However, the point of this Comment is a narrow one: to showcase one problematic aspect in the way the FBI handles human intelligence. The recommendations here would not fully solve the problems of privacy violations, ethnic and religious profiling, and informant misuse. The use of immigration law and status to leverage informants is not the only way that the FBI recruits informants, and the S-6 visa program would likely remain relatively small even if expanded. However, as previously explained, the proposed changes to the S-6 visa would generate a more transparent system and more fruitful intelligence, and would help ensure the FBI operates within the scope of its power. Individuals pressured to provide intelligence information would have a legitimate chance to receive an S-6 visa, and the FBI would have a greater incentive to stop its overtly coercive recruitment tactics such as deportation threats. Due to the popularity and longstanding use of informants, it is unrealistic to think that the FBI will stop using immigration law as a way to leverage cooperation. In the past, informants have aided national security by providing useful intelligence, and so they are highly valued as a source of intelligence. Hence, no matter how narrow in scope the proposed changes are, changes to the S-6 visa would greatly benefit the FBI, informants, and Muslim and Middle Eastern communities. Better intelligence may mean the difference between wasting government resources on empty threats and preventing the loss of life in future terrorist attacks. While narrow, the proposed changes to the S-6 visa provide a promising way for expending law enforcement resources where needed, preventing manipulative informant recruitment tactics, and adding transparency to informant dealings with the FBI. Congress has the power to increase the allotment of S-6 visas and to explicitly restrict the FBI from promising immigration benefits outside of this program. The FBI should be forced to use the S-6 visa program when using immigration status as an incentive. The proposed changes would allow the FBI to use the S-6 visa as an incentive, while inhibiting its use of unnecessarily forceful tactics that lead to faulty intelligence, entrapment, and religious and ethnic profiling.

S-6 Visa Reform CP – 2nc Solvency

CP solves.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Offering S-6 visas to immigrant informants with established connections to terrorist organizations in exchange for their cooperation would be a legitimate way for the FBI to reward these informants. Further, informants would be able to rely on the FBI's promise and seek review should the [276] agreement go awry. Gaining informants' trust and lessening the coercive aspect of recruitment would lead to more trustworthy intelligence, and thereby enhance national security. A larger but less committed group of informants - characterized by the current underused S-6 visa program - does the country little good. Likewise, the indiscriminate and widespread surveillance of Muslims and Middle Easterners damages American communities and reifies assumptions and stereotypes about terrorists' identities and backgrounds. These assumptions may also blind law enforcement to real threats taking place in non-Muslim or non-Middle Eastern communities. Expanding and modifying the use of S-6 visas would turn a small, poorly designed program into a helpful law enforcement tool that better procures reliable intelligence. Furthermore, providing more oversight for FBI informant use and restricting practices that contribute to ethnic and religious profiling would improve Muslim and Middle Eastern communities' confidence in and cooperation with the government. This, in turn, would encourage communities to effectively work with law enforcement and report suspicious activities. Information offered from within a community is more likely to be accurate, 272Link to the text of the note leading to more counterterrorism prosecutions that enhance national security and less waste of law enforcement resources on bogus threats. 273Link to the text of the note In the end, only Congress can reform the S-6 visa program to better effectuate the law's aim of rewarding informants and procuring credible intelligence on real threats. Reform would allow the FBI to more efficiently channel its resources, and would afford informants a fairer agreement?changes that would better serve the security interests of the United States.

Solvency Answers

Uniqueness – Surveillance Increasing

Surveillance has hidden itself – it has become panspectric instead of panoptical

Kullenberg '09 (Kullenberg, Christopher, PhD, University Gothenburg, His dissertation concerns the statistical social sciences, their epistemic problems and their role in modern societies, and contains a case-study of the SOM-institute, a Gothenburg research center that has been very successful in providing large surveys, "The social impact of IT: Surveillance and resistance in present-day conflicts." How can activists and engineers work together pg. 37-40. http://fiff.de/publikationen/fiff-kommunikation/fk-2009/fiff-ko-1-2009/fiko_1_2009_kullenberg.pdf DA: 7/8/15 CB)

Since the 9/11 attacks the world has been challenged with intrusive legislation upon civil liberties and increased use of surveillance technologies. As this development is proceeding rapidly, both from a legal point of view and the technological side, it takes more than parliamentary politics to pursue a democratic and open discussion about these matters. This is where the civil society, or rather the civil societies, need to collaborate. Thus, I will propose that engineers, software-programmers and people in the private sector of Information Technology could co-operate with activists, human-rights organizations and citizen-journalists in a very productive manner. I will also give tangible examples on how such activities have been pursued in Sweden during a controversy on the role of signals intelligence. Surveillance and war. Issues that keep arising in the backwaters of the "wars" on terrorists, drugs, and trafficking are often complex and require technical and legal expertise, not only to be understood, but more importantly, to be taken seriously in the public debate by the media. In order to avoid laws are passed without a proper debate or that technologies are implemented as merely technical solutions, I will propose that criticism could have a positive task in building a collaborative informational infrastructure, an effective media strategy, and other innovations. Let me give an example from Sweden. During 2008, a law was passed which allowed the government to pursue extensive signals intelligence on the Internet. It was termed the FRA-law in the press, since the authority responsible for signals intelligence is called Forsvarets Radioanstalt [1], which is the equivalent to the NSA in the United States, or the BND in Germany. The FRA was previously only allowed to search and intercept radio traffic, but this new law would allow the authority to intercept all internet traffic, by monitoring so-called "co-operation points" at the Internet Service Providers. By copying all the information passing through the cables, the FRA will be able to extract traffic-data from, the multitude of data, both domestic and international. Consequently, a mode of operation which was developed in the context of the post-war arms race will be transferred to the Internet as this law is effectuated during 2009. However, the Internet is largely used by private and corporate communication, rather than military information, a fact that raises questions concerning privacy, integrity and the rights to private communication. I will argue that if it were not for the active formation of a public, this law would have been passed without resistance or criticism. In order to understand how this works, the notion of a "public" is borrowed from the philosopher John Dewey, who explicitly stresses the importance of communication: "But participation in activities and sharing in results are additive concerns. They demand communication as a prerequisite. /…/ Communication of the results of social inquiry is the same thing as the formation of public opinion." [2] Crucial to the formation of a participatory public issue, and to allow it to build political pressure, is there free flow of information in the sense that it operates without restrictions, something which is very different compared to traditional theories of mass-communication. This is where the Internet has a very interesting potential since its architecture, at least ideally, promotes participation, sharing and communication, which is precisely what Dewey is asking for. However, it seems that this free flow cannot be guaranteed by the internet alone, since the same abilities can be used for intrusive surveillance. Panspectric Surveillance. How are we then to conceive of contemporary technologies of surveillance? One way is to ask how technologies are used throughout society, by analyzing their performances and abilities in socio-technical assemblages. Digital technologies, besides sharing certain properties in hardware such as microprocessors, electricity-based operations and abilities to process instructions and algorithms, usually share many networked, or social effects. The internet as an assemblage of computers, routers, switches and all kinds of IP-based technologies, such as mobile devices and satellites, shapes emergent forms of effectuation. For example file-sharing, voice-transmission, e-mails etc. are all dependent on interconnectivity. Also, they operate on the potentiality of decentralization and read-write capacities, and on the ability to transfer the analogue world to a digital realm, which we see in the digitalization of images, sounds, and even in the keystrokes of keyboard. There is however a critical paradox built into our mundane technologies. We may use digital cameras on our mundane

technologies. We may use digital cameras on our holiday trips and post the images on a blog, but we may also use the same capacities for an IP-based surveillance camera. The present any technologies are this at the same time what may liberate sounds, texts, images and videos from their "material imprisonment" and geographical spatiality, while they simultaneously make possible for what is called panspectric surveillance [3] The concept of panspectrocism comes from philosopher Manuel DeLanda, who situates the origin of these technologies in war. It is worthwhile to quote from his work War in the Age of Intelligent Machines (1991) in length: "There are many differences between the Panopticon and the Panspectron /…/ Instead of positiong some human bodies around a central sensor, a multiplicity of sensors is deployed around all bodies: its antenna farms, spy satellites and cable-traffic intercepts feed into its computers all the information that can be gathered. Thus is then processed through a series of "filters" or key-word watch lists. The Panspectron does not merely select certain bodies and certain (visual) data about them. Rather, it compiles information about all at the same time, using computers to select the segments of data relevant to its surveillance tasks [4]." DeLanada thus argues that the technologies we face in contemporary debates on Internet surveillance, originate in post-war setting which culminated during the cold war. Signals intelligence which culminated during the cold war. Signals intelligence was born in a combination of radio interception, transferring analogue signals to digital information, and computers which calculated patterns, attached meta-data, and filtered out only the relevant pieces of information in a multiplicity of signals. The birth of the panspectric technological framework, at least an abstract sense, this came from warfare. However, it was developed and refined during times when consumer technologies were not yet digital, and usually not even made for two-way communication (TV. Press, radio). What we see today is a complete change of orders. Signals intelligence performed by governments, such as the NSA, the FRA or the BND have entered a territory populated by ordinary citizens, rather than tanks, spy satellites and nuclear weapons. Contemporary panspectric surveillance depends on the interconnectedness of sensors and computational methods such as data mining, sociograms and databases. Sensors include RFID-chips, digital CCTV-cameras, credit cards, mobile phones, internet surveillance etc., and they all have the ability to record an ever increasing part of our everyday lives. This is where we get close to the etymology of the words pan-, which means everything, and spectrum which is the entire range of detectable traces. The radical digitalisation of our societal functions and everyday lives, reconfigures and prolongs the range of surveillance. However, to make sense of this enormous abundance of data, methods of reducing complexity and finding relevant traces are needed. This is where the other pole of panspectrocism emerges; the need for supercomputers and advanced software and statistics. The FRA has bought one of the fastest supercomputers in the world, and it is plugged directly into the central fibre-cables of the Swedish Internet Service Providers. They will consequently receive a copy of all traffic-data, and then process it in several steps in order to find patterns. The problem is, however, that traffic-data (which contains information about with whom, at what time, how frequently etc. we communicate) can say a great deal about you and your life. If we make social network analyses of the meta-data you give off during a normal day, the surveyor can probably find out who most of your friends are, and where you are most likely to be located. With more and more data, the surveyor is able to tell your religion, sexuality, political affiliation and consumer behaviour. Citizen Journalism, Pirate Parties and Activists We can make a tripartite division of activities that may challenge the increasing use of legal and technological means of mass surveillance; citizen journalism, pirate parties and activism. They may sometimes resonate in the same direction, towards a clear goal, but their basic properties and relations are essentially heterogeneous. Issues, such as the FRA-law, can only stir up reactions and become "issues proper" if, following Dewey, there is communication between actors allowing them to react to what is imposed on them. It has been said that the case of the FRA-law was the first time in Swedish history that traditional newspapers lagged the blogosphere, and for the centre-conservative government the force of citizen journalism came as quite a surprise. The blogosphere displayed a few interesting abilities by cooperating and sharing knowledge. One important aspect of raising issues, needed to be accounted for in this case, is speed. Paul Virilio argues in his book Speed and Politics, that: "If speed thus appears as the essential fall out of styles of conflicts and cataclysms, the current arms race is in fact only the arming of the race toward the end of the world as a distance, in other words as a field of action." [5] Speed turns distance into action, and citizen journalism has a higher velocity than the traditional media, being dependent on printing presses, paid and professional journalists, or hierarchical organisations. During the passing of the FRA-law, the only ones being able to read legal documents, do proper research, and have a constructive discussion, were bloggers. In this case (and I do not want to generalise this observation to be valid for „the media" in general) we may say that the allocation of resources was much more efficient than that of large media corporations. The critical task for the blogosphere in making a successful

attempt at stopping this law is knowledge production. Surveillance technologies and intrusive legislations are complex matters which are often secretive in character. Signals intelligence is maybe an extreme case, since details about methods and search criteria is necessarily kept away from the public. The first step in the case of the FRA was ontopolitical, in the sense that there was (and still is) a struggle to define whether signals intelligence is mass-surveillance, which would be a disaster for integrity, or simply a means to target very few „enemies of society" (terrorists). Bloggers analysed legal documents and government white papers, as a kind of swarm intelligence, and could argue convincingly that they entailed many legal exceptions for the FRA in registering political opinions, sexual orientation or religious background. The counter-argument from advocates of the law did not convince the bloggers, and the traditional media started covering the issue extensively. During the summer of 2008, there were articles in the newspaper almost every day for months, and many bloggers wrote extensively in both arenas

AT: Solvency – Circumvention – Racist Practices

No solvency – executive agencies circumvent – too much discretion makes abuses of power inevitable.

- Can't just end the FBI or DHS surveillance – racial, ethnic, and religious surveillance is widespread across government agencies

- Laws exist to stop racial, ethnic, and religious targeting – empirically ignored by surveillance agencies DESPITE absolute bans

- No enforcement – there is no way to check governmental abuses.

Unegbu, Howard University JD candidate, 2013

[Cindy, 57 How. L.J. 433, "NOTE AND COMMENT: National Security Surveillance on the Basis of Race, Ethnicity, and Religion: A Constitutional Misstep" Lexis, accessed 7-6-15, TAP]

The authority to spy and monitor domestic individuals has been granted to various agencies within the government, such as the FBI and the DHS. 104Link to the text of the note This power, granted through the establishment of the NCTC and the DIOG, has led to various improper surveillance practices, such as using race, ethnicity, or religion as a basis for monitoring an individual when there is no suspicion of criminal or terrorist activity. 105Link to the text of the note The government has used race and ethnicity as a basis for selecting individuals to monitor and for conducting threat analysis in the past. 106Link to the text of the note Furthermore, with the additional surveillance power that has been given to the government, **the use of race and ethnicity as a basis for surveillance is disconcerting.** Past Department of Justice national security guidance has **explicitly disallowed** the consideration of race or ethnicity, except to the extent permitted by the Constitution [450] and laws of the nation. 107Link to the text of the note Although a constitutional analysis of the government's surveillance efforts will be conducted later in this Comment, it is important to note that the Justice Department's past guidance stated that "**in absolutely no event** … may Federal officials assert a national security or border integrity rationale as a mere pretext for invidious discrimination." 108Link to the text of the note This 2003 guidance explains what efforts regarding race or ethnicity are allowed and not allowed as a means to protect national security; however, **the DIOG has permitted measures that are contrary to the standards** outlined in the 2003 Department of Justice Guidance. 109Link to the text of the note

AT: Solvency – Circumvention – Loopholes Inevitable

No solvency – total ban key – loopholes for circumvention are inevitable.
- If the aff only deals with one of race, ethnicity, or religion, law enforcement will just one of the others as the basis for its enforcement policies.

Unegbu, Howard University JD candidate, 2013

[Cindy, 57 How. L.J. 433, "NOTE AND COMMENT: National Security Surveillance on the Basis of Race, Ethnicity, and Religion: A Constitutional Misstep" Lexis, accessed 7-6-15, TAP]

Although the DIOG prohibits the FBI from considering race or ethnicity as the sole factor in determining whether an individual or group will be subject to intense monitoring, 110Link to the text of the note ethnicity may be considered in evaluating whether an individual is a possible associate of a criminal or terrorist group that is known to be comprised of members of the same ethnic grouping as that individual. 111Link to the text of the note Furthermore, the DIOG permits the FBI to identify areas of concentrated ethnic communities if the locations will reasonably aid in threat analysis. 112Link to the text of the note The locations of "ethnic-oriented" businesses and facilities may be gathered if their locations will reasonably contribute to an awareness of threats, vulnerabilities, and intelligence collection opportunities. 113Link to the text of the note Just as **race or ethnicity is often closely correlated to religious affiliation**, the FBI has been granted the authority, although accompanied with many restrictions, to utilize religion as a basis for examination. 114Link to the text of the note

AT: Solvency – Circumvention – Discretion

The government has too much discretion to conduct surveillance – circumvention is inevitable.

Unegbu, Howard University JD candidate, 2013

[Cindy, 57 How. L.J. 433, "NOTE AND COMMENT: National Security Surveillance on the Basis of Race, Ethnicity, and Religion: A Constitutional Misstep" Lexis, accessed 7-6-15, TAP]

Furthermore, the government has received criticism in the past for misusing its surveillance authority. 128Link to the text of the note In March of 2007, the Director of the FBI, Robert Mueller III, acknowledged that the bureau had improperly used the Patriot Act to obtain surveillance information. 129Link to the text of the note An investigation into the government's surveillance practices found that national security letters, which allow the bureau to obtain records from telephone companies, internet service providers, banks, credit companies, and other businesses without a judge's approval, were improperly, and sometimes illegally, used. 130Link to the text of the note Additionally, incorrect recordkeeping was exposed, in which the actual number of national security letters utilized were frequently understated when reported to Congress. 131Link to the text of the note Several legislatures have expressed concern about the misuse of government surveillance. 132Link to the text of the note It is apparent that this concern is not misguided since the Justice Department's Office of the Inspector General noted, in a 2007 audit report, that many FBI failures had occurred as a result of its surveillance procedures. 133Link to the text of the note These failures include a lack of internal controls 134Link to the text of the note and the absence of required information in national security letter approval memoranda. 135Link to the text of the note

AT: Solvency – Circumvention – Congress Won't Enforce

Congress can't enforce the plan – institutional barriers and secrecy.

Unegbu, Howard University JD candidate, 2013

[Cindy, 57 How. L.J. 433, "NOTE AND COMMENT: National Security Surveillance on the Basis of Race, Ethnicity, and Religion: A Constitutional Misstep" Lexis, accessed 7-6-15, TAP]

Although the NCTC itself was enacted under the authority of the executive branch, the additional surveillance authority given to the government through the NCTC guidelines was not vetted through congressional channels, which are supposed to be representatives of the people. In fact, many argue that the configuration of the guidelines result in surveillance procedures that will be very difficult for [462] other government authority, like Congress, to monitor and ensure that the civil liberties of domestic individuals remain intact. 183Link to the text of the note

AT: Solvency – Circumvention – FBI – Informants

FBI will circumvent – this evidence is specific to the informant program.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Despite the FBI's long history of problematic relationships with informants, 39Link to the text of the note both Congress and the Department of Justice - the FBI's parent agency - provide very little oversight of FBI informants. The lack of transparency, control, and accountability give the FBI almost unlimited power over how it recruits, handles, and rewards informants. 40Link to the text of the note In particular, because of the greater secrecy afforded to national security investigations, the use of terrorism informants presents unique problems not present in traditional, nonterrorism use of informants.

AT: Solvency – Circumvention – Courts Won't Enforce

Courts won't enforce the plan.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Second, law enforcement dealings with terrorism informants receive greater deference from courts and other limiting actors because terrorism is considered a national security matter instead of simply a domestic law enforcement matter. 53Link to the text of the note The executive branch has greater control over national security and foreign intelligence matters than over domestic law enforcement, an area traditionally reserved to the states. 54Link to the text of the note Thus, the post-9/11 characterization of terrorism as a national security matter results in courts affording more leeway to terrorism investigations than domestic criminal investigations. 55Link to the text of the note In other words, the federal government is afforded more secrecy in matters of national

security. 56Link to the text of the note Hence, because the government can invoke national security concerns to keep information about the informant and handler privileged, there is less regulation governing the recruitment and handling of terrorism informants than traditional criminal informants. 57Link to the text of the note

AT: Solvency – Circumvention – FBI – Informants

FBI will not comply.

Stabile, University of California Berkeley School of Law JD, 2014

[Emily, 102 Calif. L. Rev. 235, "COMMENT: Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa" Lexis, accessed 7-12-15, TAP]

Evidence shows that in many cases, FBI agents fail to follow the Guidelines when recruiting and handling informants. A 2005 study conducted by the Department of Justice Office of the Inspector General found that the FBI did not provide enough support to agents to properly follow the pre-2006 Attorney General Guidelines Regarding the Use of Confidential Informants. 167Link to the text of the note In fact, noncompliance with the guidelines was a problem in 87 percent of the cases the Inspector General reviewed. In particular, agents failed to properly review the suitability of potential informants, properly document informants' illegal activities, and notify informants of their limitations. 168Link to the text of the note Given the high levels of noncompliance and agents' nearly unlimited discretion in extending immigration rewards, agent abuse is likely also high.

Racial Surveillance Adv Answers

AT: Solvency – Public Education Fails

Targeted surveillance is inevitable. The Black body is a victim of government surveillance.

Cyril '15 Cyril, Malkia A.- Malkia Amala Cyril is founder and executive director of the Center for Media Justice (CMJ) and co-founder of the Media Action Grassroots Network, a national network of 175 organizations working to ensure media access, rights, and representation for marginalized communities. April 15 2015 "Black America's State of Surveillance" http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance. July 7, 2015

Today, media reporting on government surveillance is laser-focused on the revelations by Edward Snowden that millions of Americans were being spied on by the NSA. Yet my mother's visit from the FBI reminds me that, from the slave pass system to laws that deputized white civilians as enforcers of Jim Crow, black people and other people of color have lived for centuries with surveillance practices aimed at maintaining a racial hierarchy. It's time for journalists to tell a new story that does not start the clock when privileged classes learn they are targets of surveillance. We need to understand that data has historically been overused to repress dissidence, monitor perceived criminality, and perpetually maintain an impoverished underclass. In an era of big data, the Internet has increased the speed and secrecy of data collection. Thanks to new surveillance technologies, law enforcement agencies are now able to collect massive amounts of indiscriminate data. Yet legal protections and policies have not caught up to this technological advance. Concerned advocates see mass surveillance as the problem and protecting privacy as the goal. Targeted surveillance is an obvious answer—it may be discriminatory, but it helps protect the privacy perceived as an earned privilege of the inherently innocent. The trouble is, targeted surveillance frequently includes the indiscriminate collection of the private data of people targeted by race but not involved in any crime. For targeted communities, there is little to no expectation of privacy from government or corporate surveillance. Instead, we are watched, either as criminals or as consumers. We do not expect policies to protect us. Instead, we've birthed a complex and coded culture—from jazz to spoken dialects—in order to navigate a world in which spying, from AT&T and Walmart to public benefits programs and beat cops on the block, is as much a part of our built environment as the streets covered in our blood.

Even if more surveillance policy is passed, it is unlikely to be effective

<Glenn **Greenwald** Journalist, constitutional lawyer, author of four New York Times bestselling books on politics and law. Including *No Place to Hide:* a book about government surveillance. November 19th **2014** https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/ "Congress is Irrelevant in Mass surveillance- Here's what matters Instead" Accessed 7-8-2015 PAM>

The entire system in D.C. is designed at its core to prevent real reform. This Congress is not going to enact anything resembling fundamental limits on the NSA's powers of mass surveillance. Even if it somehow did, this White House would never sign it. **Even if all that** miraculously **happened**, the fact **that** the U.S. intelligence community and National Security State operates with no limits and no oversight **means they'd**

easily co-opt the entire reform process. That's what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA "oversight" court—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and "Dutch" Ruppersberger, while the court quickly became a rubber stamp with subservient judges who operate in total secrecy.

Prison Industrial Complex Link

State and local police arrest minorities utilizing information provided by unwarranted racialized federal surveillance –DEA agent admits- The legal system doesn't solve because its hidden from the rest of the government.

Shiffman and Cooke '13 (August 5th 2013, John Shiffman is an enterprise correspondent based in Washington. He is co-author of Priceless, a NYT bestseller published in nine languages, and author of the forthcoming Operation Shakespeare, Kristina Cooke is an investigative reporter based in San Francisco. Before joining Reuters, she worked at CNN International and The Economist's "World In" journal She studied International Relations and History at the London School of Economics, Reuters, "Exclusive: U.S. directs agents to cover up program used to investigate Americans" http://www.reuters.com/article/2013/08/05/us-dea-sod-idUSBRE97409R20130805 DA: 7/8/15 CB)

A secretive U.S. Drug Enforcement Administration unit is funneling information from intelligence intercepts, wiretaps, informants and a massive database of telephone records to authorities across the nation to help them launch criminal investigations of Americans. Although these cases rarely involve national security issues, documents reviewed by Reuters show that law enforcement agents have been directed to conceal how such investigations truly begin - not only from defense lawyers but also sometimes from prosecutors and judges. The undated documents show that federal agents are trained to "recreate" the investigative trail to effectively cover up where the information originated, a practice that some experts say violates a defendant's Constitutional right to a fair trial. If defendants don't know how an investigation began, they cannot know to ask to review potential sources of exculpatory evidence - information that could reveal entrapment, mistakes or biased witnesses. "I have never heard of anything like this at all," said Nancy Gertner, a Harvard Law School professor who served as a federal judge from 1994 to 2011. Gertner and other legal experts said the program sounds more troubling than recent disclosures that the National Security Agency has been collecting domestic phone records. The NSA effort is geared toward stopping terrorists; the DEA program targets common criminals, primarily drug dealers. "It is one thing to create special rules for national security," Gertner said. "Ordinary crime is entirely different. It sounds like they are phonying up investigations." THE SPECIAL OPERATIONS DIVISION The unit of the DEA that distributes the information is called the Special Operations Division, or SOD. Two dozen partner agencies comprise the unit, including the FBI, CIA, NSA, Internal Revenue Service and the Department of Homeland Security. It was created in 1994 to combat Latin American drug cartels and has grown from several dozen employees to several hundred. Today, much of the SOD's work is classified, and officials asked that its precise location in Virginia not be revealed. The documents reviewed by Reuters are marked "Law Enforcement Sensitive," a government categorization that is meant to keep them confidential. "Remember that the utilization of SOD cannot be revealed or discussed in any investigative function," a document presented to agents reads. The document specifically directs agents to omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use "normal investigative techniques to recreate the information provided by SOD." A spokesman with the Department of Justice, which oversees the DEA, declined to comment. But two senior DEA officials defended the program, and said trying to "recreate" an investigative trail is not only legal but a technique that is used almost daily. A former federal agent in the northeastern United States who received such tips from SOD described the process. "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert the state police to find an excuse to stop that vehicle, and then have a drug dog search it," the agent said. "PARALLEL CONSTRUCTION" After an arrest was made, agents then pretended that their investigation began with the traffic stop, not with the SOD tip, the former agent said. The training document reviewed

by Reuters refers to this process as "parallel construction." The two senior DEA officials, who spoke on behalf of the agency but only on condition of anonymity, said the process is kept secret to protect sources and investigative methods. "Parallel construction is a law enforcement technique we use every day," one official said. "It's decades old, a bedrock concept." A dozen current or former federal agents interviewed by Reuters confirmed they had used parallel construction during their careers. Most defended the practice; some said they understood why those outside law enforcement might be concerned. RELATED COVERAGE › How DEA program differs from recent NSA revelations "It's just like laundering money - you work it backwards to make it clean," said Finn Selander, a DEA agent from 1991 to 2008 and now a member of a group called Law Enforcement Against Prohibition, which advocates legalizing and regulating narcotics. Some defense lawyers and former prosecutors said that using "parallel construction" may be legal to establish probable cause for an arrest. But they said employing the practice as a means of disguising how an investigation began may violate pretrial discovery rules by burying evidence that could prove useful to criminal defendants. A QUESTION OF CONSTITUTIONALITY "That's outrageous," said Tampa attorney James Felman, a vice chairman of the criminal justice section of the American Bar Association. "It strikes me as indefensible." Lawrence Lustberg, a New Jersey defense lawyer, said any systematic government effort to conceal the circumstances under which cases begin "would not only be alarming but pretty blatantly unconstitutional." Lustberg and others said the government's use of the SOD program skirts established court procedures by which judges privately examine sensitive information, such as an informant's identity or classified evidence, to determine whether the information is relevant to the defense. "You can't game the system," said former federal prosecutor Henry E. Hockeimer Jr. "You can't create this subterfuge. These are drug crimes, not national security cases. If you don't draw the line here, where do you draw it?" Some lawyers say there can be legitimate reasons for not revealing sources. Robert Spelke, a former prosecutor who spent seven years as a senior DEA lawyer, said some sources are classified. But he also said there are few reasons why unclassified evidence should be concealed at trial. "It's a balancing act, and they've doing it this way for years," Spelke said. "Do I think it's a good way to do it? No, because now that I'm a defense lawyer, I see how difficult it is to challenge." CONCEALING A TIP One current federal prosecutor learned how agents were using SOD tips after a drug agent misled him, the prosecutor told Reuters. In a Florida drug case he was handling, the prosecutor said, a DEA agent told him the investigation of a U.S. citizen began with a tip from an informant. When the prosecutor pressed for more information, he said, a DEA supervisor intervened and revealed that the tip had actually come through the SOD and from an NSA intercept. "I was pissed," the prosecutor said. "Lying about where the information came from is a bad start if you're trying to comply with the law because it can lead to all kinds of problems with discovery and candor to the court." The prosecutor never filed charges in the case because he lost confidence in the investigation, he said. A senior DEA official said he was not aware of the case but said the agent should not have misled the prosecutor. How often such misdirection occurs is unknown, even to the government; the DEA official said the agency does not track what happens with tips after the SOD sends them to agents in the field. The SOD's role providing information to agents isn't itself a secret. It is briefly mentioned by the DEA in budget documents, albeit without any reference to how that information is used or represented when cases go to court. The DEA has long publicly touted the SOD's role in multi-jurisdictional and international investigations, connecting agents in separate cities who may be unwittingly investigating the same target and making sure undercover agents don't accidentally try to arrest each other. SOD'S BIG SUCCESSES The unit also played a major role in a 2008 DEA sting in Thailand against Russian arms dealer Viktor Bout; he was sentenced in 2011 to 25 years in prison on charges of conspiring to sell weapons to the Colombian rebel group FARC. The SOD also recently coordinated Project Synergy, a crackdown against manufacturers, wholesalers and retailers of synthetic designer drugs that spanned 35 states and resulted in 227 arrests. Since its inception, the SOD's mandate has expanded to include narco-terrorism, organized crime and gangs. A DEA spokesman declined to comment on the unit's annual budget. A recent LinkedIn posting on the personal page of a senior SOD official estimated it to be $125 million. Today, the SOD offers at least three services to federal, state and local law enforcement agents: coordinating international investigations such as the Bout case; distributing tips from overseas NSA intercepts, informants, foreign law enforcement partners and domestic wiretaps; and circulating tips from a massive database known as DICE. The DICE database contains about 1 billion records, the senior DEA officials said. The majority of the records consist of phone log and Internet data gathered legally by the DEA through subpoenas, arrests and search warrants nationwide. Records are kept for about a year and then purged, the DEA officials said. About 10,000 federal, state and local law enforcement agents have access to the DICE database, records show. They can query it to try to link otherwise disparate clues. Recently, one of the DEA officials said, DICE linked a man who tried to smuggle $100,000 over the U.S. southwest border to a major drug case on the East Coast. "We use it to connect the dots," the official said. "AN AMAZING TOOL" Wiretap tips forwarded by the SOD usually come from foreign governments, U.S. intelligence agencies or

court-authorized domestic phone recordings. Because warrantless eavesdropping on Americans is illegal, tips from intelligence agencies are generally not forwarded to the SOD until a caller's citizenship can be verified, according to one senior law enforcement official and one former U.S. military intelligence analyst. "They do a pretty good job of screening, but it can be a struggle to know for sure whether the person on a wiretap is American," the senior law enforcement official said. Tips from domestic wiretaps typically occur when agents use information gleaned from a court-ordered wiretap in one case to start a second investigation. As a practical matter, law enforcement agents said they usually don't worry that SOD's involvement will be exposed in court. That's because most drug-trafficking defendants plead guilty before trial and therefore never request to see the evidence against them. If cases did go to trial, current and former agents said, charges were sometimes dropped to avoid the risk of exposing SOD involvement. Current and former federal agents said SOD tips aren't always helpful - one estimated their accuracy at 60 percent. But current and former agents said tips have enabled them to catch drug smugglers who might have gotten away. "It was an amazing tool," said one recently retired federal agent. "Our big fear was that it wouldn't stay secret." DEA officials said that the SOD process has been reviewed internally. They declined to provide Reuters with a copy of their most recent review.

The mass arrests of the black body by state and local police is justified by the racialized surveillance of federal agencies.

Prison Culture '13 (June 12 2013, Site dedicated to exposing racism of the military-industrial complex, "On (Some) Black People and the Surveillance State…", http://www.usprisonculture.com/blog/2013/06/12/on-some-black-people-and-the-surveillance-state/ DA: 7/6/15 CB)

Some black folks in my life have no patience for some white people's new found interest/discovery of Cointelpro and particularly of their (now incessant) invocation of the FBI's surveillance of Martin Luther King Jr. The interest seems to them instrumental and transactional. It's as if folks who have had little concern about black people's daily experiences of state violence are now demanding our support in safeguarding their rights. There has been no prior relationship or trust-building so some black folks are feeling used and exploited. It brings to mind the lyric: "Will you still love me, tomorrow?" This sentiment is understandable. As the revelations about NSA surveillance roil the political world, media outlets & others are suddenly very interested in Americans' views on matters of privacy, civil liberties, and individual rights. A poll was released a few days ago. It apparently found that "blacks were more likely than whites and hispanics to consider the patriot act a necessary tool [that helps the government find terrorists] (58% to 42% and 40% respectively). On my Twitter timeline, several people mused about why this would be the case. After all, black people are the disproportionate targets of government surveillance at all levels (city, county, state, and federal). We've always been under the gaze of the state and we know that our rights are routinely violable. Moreover, we are used to these abuses being ignored by the majority of our fellow citizens. Shouldn't black people then be the most opposed to violations of civil liberties and to laws that encroach on those liberties? Civil liberties and individual rights have different meanings for different groups of people. They also have different priorities depending on social contexts. A review of black history suggests that considerations of civil liberties are always embedded within concepts of equality and social justice. In other words by design or necessity, black people have focused on our collective rights over our individual liberties. This makes sense in a society where we don't just assume individual black guilt and suspicion. We are all guilty and we are all suspicious (even if we may want to deny this reality). In that context, individual liberties and rights take a back seat to a collective struggle for emancipation and freedom. Additionally, as a people, we have always known that it is impossible for us to exercise our individual rights within a context of more generalized social, economic, and political oppression. Individual rights are necessarily rooted within a larger social context. Civil liberty concerns take a back seat to putting food on the table and to survival more generally. To guarantee our individual rights as black people, we know that we must address broader social concerns. We don't have the luxury to ignore this fact. For others not to understand this reality is to foreclose on any opportunities to recruit more black people to the cause of dismantling the surveillance state. Returning to the poll: what might account for a majority of (polled) black people's seeming 'support' of using the Patriot act to find 'terrorists?' Are they indirectly expressing their support for President Obama's foreign policy through their response? It's possible. Are some black people answering yes & perhaps hoping that concentrating on 'terrorists' might shift the focus away from the government's targeting of African-Americans? Maybe. It isn't crazy to think that if the government develops a new public enemy #1,

it might lower its black people as threat matrix just a little bit. This is of course wishful thinking but it's a plausible explanation. My personal hypothesis is that black people living in the U.S. are Americans and that we have, like millions of other Americans, bought into some of the law & order rhetoric espoused by the government. In this context, it should be unsurprising that some black people would express support for the Patriot act. Many other Americans do too. picimage2 Black people are disproportionately incarcerated in the U.S. Prisoners have no presumption of 'privacy'; that idea is an abstraction. Blacks are disproportionately subjected to bodily searches and seizures through practices like stop and frisk. Stop and frisk is a neon 'no tresspassing sign' for young black people in particular. Unfortunately too many of us have become acclimated to the daily assaults on our persons and the trampling of our individual rights. Can you blame us? If you are a black woman, then you may have the direct experience of the state policing your body in various ways. Many of us resist policies intended to do this but some of us don't (for a number of good and bad reasons). The examples that I have cited suggest that for most of us (black people) government surveillance and being perceived as threats are a daily fact of life; not an academic/analytical exercise. Many black people living in public housing, for example, can attest to the fact that they aren't seen as having any privacy rights when law enforcement routinely kicks down their doors supposedly looking for narcotics. The vast majority of the country accepts these "law and order" practices as the price of "freedom" and "safety." The outcry against mass incarceration and stop & frisk is still overwhelmingly confined to people of color and other marginalized communities like LGBTQ individuals. Yet even in those communities, many have become inured to the routine violations of rights and liberties. In order to have an elusive sense of "safety," we are told by politicians and law enforcement that these practices are necessary and that they are in fact "color-blind." We mostly swallow their propaganda. It doesn't matter that incarceration and intense policing & surveillance are actually decimating black communities. Black people know that the state and its gatekeepers exert their control over all aspects of our lives. So when we mention that the NSA surveillance regime isn't new to us, the appropriate response is not to mock, ridicule, belittle and berate. No. The response that conveys solidarity and a desire to partner is to say: "Yes that's true and while I may have been personally concerned about these issues, I am sorry that more of my peers haven't been outraged for years. How can we work together to dismantle the surveillance state that harms us all?" Check your privilege, please.

AT: Racial Surveillance Adv – Surveillance Not Key

The plan doesn't solve racial profiling – surveillance isn't key.

Surveillance Not So Bad

Non-Unique – the war on terror exists solely in political theater. In reality US security Policies are humane and effective.

Adams, Nordhaus, and Shellenberger '11 (Nick Adams is the director of national security and counterterrorism policy at the Breakthrough Institute, Ted Nordhaus is the co-founder of the Breakthrough Institute, Michael Shellenberger is the co-founder of the Breakthrough Institute, The Atlantic, "Who Killed the War on Terror?" http://www.theatlantic.com/national/archive/2011/08/who-killed-the-war-on-terror/244273/ DA: 7/7/15 CB)

The death of Osama bin Laden at the hands of Navy Seals last May marked a turning point in the fight against al Qaeda. But one thing it did not mark was an end to the War on Terror. That's because the War on Terror was already dead, abandoned by the very agencies responsible for implementing it after 9/11. 9-11 Ten Years Later There are, of course, still terrorists plotting to kill Americans, and the U.S. continues to take aggressive measures to stop them. But it would be a mistake to confuse all counterterrorism strategies with the War on Terror. The War on Terror was based on the notion that Islamic terrorism represented a unified, ideologically coherent, and operationally centralized threat, demanding a singular and predominately military response. This notion was rejected by U.S. security officials long before the killing of Bin Laden. Indeed, it was abandoned well before the election of President Obama. By the latter years of the Bush administration, the exceptional tactics that defined the War on Terror -- preventative detentions, pain-based interrogation, ethnic and religious profiling, and widely expanded domestic surveillance powers -- were either abandoned or dramatically scaled back based on overwhelming evidence that they were ineffective. Meanwhile, the actual wars initiated in the name of the War

on Terror, in Afghanistan and Iraq, rapidly evolved into counter-insurgency and then counterterrorism campaigns as military leaders recognized that the U.S. was unable to replace theocrats and autocrats with stable, western-style democracies. The War on Terror lives on today only as political theater. Policymakers, from President Obama to Members of Congress, continue to fear the accusation of being "soft on terror," and hence continue to describe contemporary counterterrorism efforts in martial terms. Congress continues to legislate War on Terror approaches that the security establishment, for the most part, hasn't asked for and, in some cases, has even explicitly rejected. But while the political class remains stuck in the past, the security establishment has moved on. Virtually all of the progress that U.S. authorities have made in dismantling al Qaeda and countering terrorism has been accomplished in spite of, not because of the War on Terror. As we consider the future of U.S. counterterrorism after Bin Laden, we would do well to consider what we have learned from the evolving security response to the 9/11 attacks, and how those lessons might keep us safer in a world where the War on Terror may be over but the threat of terrorism still remains. In many ways, the War on Terror ended because the American security state relearned forgotten lessons. Over the past four centuries, modernizing nation-states have become increasingly effective at securing their citizens' safety and allegiance through ever more refined and subtle means. Where sovereignty was once invested in a single monarch -- think Louis XIV's famous quip, L'État, c'est moi ("The state, it is me") -- gradually the state became all of us. Populations who were "subjects" beholden to state authority became "citizens" willing and empowered to defend it. By granting increasing freedoms and privileges to their citizens, extending the bonds of trust and mutualism, and organizing public education campaigns around the notions of etiquette, civic duty, and love of country, modernizing states inspired their citizens to identify with the state and internalize its security interests. This shift represented a dramatic evolution in the way states achieved security. Earlier brutal intimidation tactics -- publicly torturing and executing deviants in what social historian Michel Foucault dubbed "festivals of pain" -- gradually gave way to softer means of control like "panoptic" powers, which create the impression that one is always being observed, mostly by fellow citizens. The conventional reading of this shift has imagined that state's relinquished coercive security powers in response to citizens' rising demands for new political and economic freedoms, but this is at best only half the story. The evolution of our expanding freedoms has been inseparable from the development of state security practices that are both more effective and more humane. Today, profiling, suspecting, and punishing wide swaths of society have faded from practice because states found it more effective to maintain the good will and allegiance of increasingly empowered citizens. States developed better tools to discern innocence and guilt on an individual basis rather than punishing whole villages. And as states learned more about individual psychology, they found they could get better information out of detained enemies by "befriending" them than brutalizing them. Since World War II, states have also found that they can more effectively accomplish their international objectives using highly targeted military power, as opposed to large occupying forces. During WWII, all sides, including the U.S., deliberately bombed civilians -- think London, Dresden, Tokyo, Hiroshima. Contrast such blanket, deliberate bombardments to the surgical bombings in Libya and the use of drones in Pakistan. Whatever Orwellian anxieties the new technologies of state security may incite, it is difficult to say - when touring the torture chambers of Venice or considering the pogroms of Eastern Europe, for example -- that the move to the use of softer and more sophisticated security powers does not represent a form of human progress. The turn back towards "the dark side," as former Vice President Dick Cheney described it after 9/11, required a deep forgetting and misunderstanding of the previous centuries' evolutions in state security powers.

Status Quo solves oppressive Security Policies and Terrorism-modern policies are humane and effective

Adams, Nordhaus, and Shellenberger '11 (Nick Adams is the director of national security and counterterrorism policy at the Breakthrough Institute, Ted Nordhaus is the co-founder of the Breakthrough Institute, Michael Shellenberger is the co-founder of the Breakthrough Institute, The Atlantic, "Who Killed the War on Terror?" http://www.theatlantic.com/national/archive/2011/08/who-killed-the-war-on-terror/244273/ DA: 7/7/15 CB)

Where sovereignty was once invested in a single monarch -- think Louis XIV's famous quip, L'État, c'est moi ("The state, it is me") -- gradually the state became all of us. Populations who were "subjects" beholden to state authority became "citizens" willing and empowered to defend it. By granting increasing freedoms and privileges to their citizens, extending the bonds of trust and mutualism, and organizing public education campaigns around the notions of etiquette, civic duty, and love of country, modernizing states inspired their citizens to identify with the state and internalize its security interests. This shift

represented a dramatic evolution in the way states achieved security. Earlier brutal intimidation tactics -- publicly torturing and executing deviants in what social historian Michel Foucault dubbed "festivals of pain" -- gradually gave way to softer means of control like "panoptic" powers, which create the impression that one is always being observed, mostly by fellow citizens. The conventional reading of this shift has imagined that state's relinquished coercive security powers in response to citizens' rising demands for new political and economic freedoms, but this is at best only half the story. The evolution of our expanding freedoms has been inseparable from the development of state security practices that are both more effective and more humane. Today, profiling, suspecting, and punishing wide swaths of society have faded from practice because states found it more effective to maintain the good will and allegiance of increasingly empowered citizens. States developed better tools to discern innocence and guilt on an individual basis rather than punishing whole villages. And as states learned more about individual psychology, they found they could get better information out of detained enemies by "befriending" them than brutalizing them. Since World War II, states have also found that they can more effectively accomplish their international objectives using highly targeted military power, as opposed to large occupying forces. During WWII, all sides, including the U.S., deliberately bombed civilians -- think London, Dresden, Tokyo, Hiroshima. Contrast such blanket, deliberate bombardments to the surgical bombings in Libya and the use of drones in Pakistan. Whatever Orwellian anxieties the new technologies of state security may incite, it is difficult to say - when touring the torture chambers of Venice or considering the pogroms of Eastern Europe, for example -- that the move to the use of softer and more sophisticated security powers does not represent a form of human progress. The turn back towards "the dark side," as former Vice President Dick Cheney described it after 9/11, required a deep forgetting and misunderstanding of the previous centuries' evolutions in state security powers. 2. As American security authorities abandoned the War on Terror, they moved in almost every instance towards more discerning and sophisticated practices. Where the War on Terror made blanket assumptions about the nature of the terrorist threat, objectives, and organization, security authorities today increasingly recognize the threat as disparate, decentralized, and motivated more by local grievances than the apocalyptic desire for a Caliphate. Initially, the wars in Afghanistan and Iraq were very much "wars" as described and theorized by Carl von Clausewitz - featuring attacks on military targets with the goal of forcing capitulation. But the invasions of Iraq and Afghanistan did little to end terrorism and, in Iraq, dramatically increased it. The U.S. military quickly shifted to a more discerning counterinsurgency strategy, and today it is moving to even more focused counterterrorist operations. The shift in the U.S.'s non-military security and counterterrorism tactics has been no less stark. One after another, the sweeping measures put in place after 9/11 have been discarded for more discerning policies. The Defense Department recognized the folly of the preventative detentions that filled the cell blocks of Guantanamo Bay Prison. Within months of sweeping up fighting-aged men in Afghanistan, military officials found that they had not only scooped up hundreds of innocents, but also that they had no means (i.e. evidence) with which to prosecute the guilty. They quickly transitioned back to pre-War on Terror battlefield detention protocols and gave trial authority over to local Afghan courts. The FBI also unilaterally abandoned its War on Terror "Interview Project" within months of 9/11. FBI agents repeatedly complained to their superiors that the intimidating interviews targeting immigrants from Muslim-majority countries were generating few leads and undermining their ability to win the trust of potential collaborators. Finally recognizing that they were losing far more than they were gaining, FBI officials shut down the profiling program and refocused efforts toward fostering cooperative relationships with informants in Muslim communities. The Transportation Security Agency has walked back from

its own profiling policies as two would-be bombers - one Jamaican-British, the other Nigerian - were able to avoid heightened screening targeting Arabs and South Asians. Other programs, too, have been scaled back at the request of security officials. FBI Director Robert Mueller and U.S. Deputy Attorney General James Comey both threatened resignation as they held the line against counterproductive policies pursued by the Bush administration. And multiple NSA data-mining programs have been abandoned as independent reports, most notably from the National Academies of Sciences, concluded that they simply push terrorist activity further underground. Perhaps most famously, the signature tactic of the War on Terror -- pain-based interrogation -- was rejected by the FBI, CIA, and military leaders and interrogators during the Bush years because it plainly did not work. "When they are in pain, people will say anything to get the pain to stop," FBI interrogator Ali Soufan explains. "Most of the time they will lie, make up anything, to make you stop hurting them. That means the information you're getting is useless." Torture defenders have repeatedly claimed that classified intelligence documents would vindicate the use of physically coercive interrogation techniques. But time and again, declassified documents have proven the opposite. Khalid Sheik Mohammed (KSM), the mastermind of the 9/11 attacks, was waterboarded 183 times without providing any useful intelligence to his interrogators. It was only many months later, after a skilled CIA interrogator won his admiration and respect, that KSM offered the CIA a series of blackboard lectures on Al Qaeda's modus operandi. Another detainee subject to enhanced interrogation erroneously fingered thirty separate men as Osama bin Laden's personal bodyguard, then provided the "intelligence" that Saddam Hussein was planning to give weapons of mass destruction to Al Qaeda. That information, of course, turned out to be false. In these and many other cases, authorities quickly abandoned the extreme measures some had imagined were necessary. To date, there is no credible evidence that any of the controversial and unprecedented policies adopted after 9/11 helped to foil a single terrorist plot or capture a single terrorist. 3. Immediately after 9/11, policymakers and security authorities concluded that the U.S. was faced with an unprecedented and exceptionally dangerous new enemy. But with the benefit of hindsight, it turns out that al Qaeda was not so exceptional after all. It adopted timeless strategies that terrorist groups -- from the New Left Baader Meinhoff group in Germany to the Irish Republican Army in Northern Ireland -- have utilized throughout history. And the strategies that have proven effective in destroying al Qaeda are the very same that have proven effective in past counterterrorism efforts. Dick Cheney, former CIA director Michael Hayden, and others have insisted that the killing of Bin Laden vindicates their War on Terror. But the facts of the Bin Laden investigation suggest otherwise. Indeed, tracking down Bin Laden was arguably possible only once the security establishment abandoned War on Terror tactics and focused on long-proven, largely uncontroversial, and more discerning approaches -- relying on, tips, informants, and focused surveillance, not torture, illegal wiretapping, or a military occupation. And when military force played a decisive role in the raid on Bin Laden's compound and the drone-strike on his key operational lieutenant a week later, its use was highly targeted -- clearly different than the blunt War on Terror approaches initially used in Iraq and Afghanistan.

Counterplan: The United States Federal Government should declassify its files regarding anti-terrorism for rigorous evaluation.

Rigorous Evaluation is the only way to prevent horrific national security policies. The aff's method fails to modernize policies and creates a new war on terror.

Adams, Nordhaus, and Shellenberger '11 (Nick Adams is the director of national security and counterterrorism policy at the Breakthrough Institute, Ted Nordhaus is the co-founder of the Breakthrough Institute, Michael Shellenberger is the co-founder of the Breakthrough Institute, The Atlantic, "Who Killed the War on Terror?" http://www.theatlantic.com/national/archive/2011/08/who-killed-the-war-on-terror/244273/ DA: 7/7/15 CB)

The death of Osama bin Laden at the hands of Navy Seals last May marked a turning point in the fight against al Qaeda. But one thing it did not mark was an end to the War on Terror. That's because the War on Terror was already dead, abandoned by the very agencies responsible for implementing it after 9/11. 9-11 Ten Years Later There are, of course, still terrorists plotting to kill Americans, and the U.S. continues to take aggressive measures to stop them. But it would be a mistake to confuse all counterterrorism strategies with the War on Terror. The War on Terror was based on the notion that Islamic terrorism represented a unified, ideologically coherent, and operationally centralized threat, demanding a singular and predominately military response. This notion was rejected by U.S. security officials long before the killing of Bin Laden. Indeed, it was abandoned well before the election of President Obama. By the latter years of the Bush administration, the exceptional tactics that defined the War on Terror -- preventative detentions, pain-based interrogation, ethnic and religious profiling, and widely expanded domestic surveillance powers -- were either abandoned or dramatically scaled back based on overwhelming evidence that they were ineffective. Meanwhile, the actual wars initiated in the name of the War on Terror, in Afghanistan and Iraq, rapidly evolved into counter-insurgency and then counterterrorism campaigns as military leaders recognized that the U.S. was unable to replace theocrats and autocrats with stable, western-style democracies. The War on Terror lives on today only as political theater. Policymakers, from President Obama to Members of Congress, continue to fear the accusation of being "soft on terror," and hence continue to describe contemporary counterterrorism efforts in martial terms. Congress continues to legislate War on Terror approaches that the security establishment, for the most part, hasn't asked for and, in some cases, has even explicitly rejected. But while the political class remains stuck in the past, the security establishment has moved on. Virtually all of the progress that U.S. authorities have made in dismantling al Qaeda and countering terrorism has been accomplished in spite of, not because of the War on Terror. As we consider the future of U.S. counterterrorism after Bin Laden, we would do well to consider what we have learned from the evolving security response to the 9/11 attacks, and how those lessons might keep us safer in a world where the War on Terror may be over but the threat of terrorism still remains. In many ways, the War on Terror ended because the American security state relearned forgotten lessons. Over the past four centuries, modernizing nation-states have become increasingly effective at securing their citizens' safety and allegiance through ever more refined and subtle means. Where sovereignty was once invested in a single monarch -- think Louis XIV's famous quip, L'État, c'est moi ("The state, it is me") -- gradually the state became all of us. Populations who were "subjects" beholden to state authority became "citizens" willing and empowered to defend it. By granting increasing freedoms and privileges to their citizens, extending the bonds of trust and mutualism, and organizing public education campaigns around the notions of etiquette, civic duty, and love of country, modernizing states inspired their citizens to identify with the state and internalize its security interests. This shift

represented a dramatic evolution in the way states achieved security. Earlier brutal intimidation tactics -- publicly torturing and executing deviants in what social historian Michel Foucault dubbed "festivals of pain" -- gradually gave way to softer means of control like "panoptic" powers, which create the impression that one is always being observed, mostly by fellow citizens. The conventional reading of this shift has imagined that state's relinquished coercive security powers in response to citizens' rising demands for new political and economic freedoms, but this is at best only half the story. The evolution of our expanding freedoms has been inseparable from the development of state security practices that are both more effective and more humane. Torture defenders have repeatedly claimed that classified intelligence documents would vindicate the use of physically coercive interrogation techniques. But time and again, declassified documents have proven the opposite. Khalid Sheik Mohammed (KSM), the mastermind of the 9/11 attacks, was waterboarded 183 times without providing any useful intelligence to his interrogators. It was only many months later, after a skilled CIA interrogator won his admiration and respect, that KSM offered the CIA a series of blackboard lectures on Al Qaeda's modus operandi. Another detainee subject to enhanced interrogation erroneously fingered thirty separate men as Osama bin Laden's personal bodyguard, then provided the "intelligence" that Saddam Hussein was planning to give weapons of mass destruction to Al Qaeda. That information, of course, turned out to be false. In these and many other cases, authorities quickly abandoned the extreme measures some had imagined were necessary. To date, there is no credible evidence that any of the controversial and unprecedented policies adopted after 9/11 helped to foil a single terrorist plot or capture a single terrorist. 3. Immediately after 9/11, policymakers and security authorities concluded that the U.S. was faced with an unprecedented and exceptionally dangerous new enemy. But with the benefit of hindsight, it turns out that al Qaeda was not so exceptional after all. It adopted timeless strategies that terrorist groups -- from the New Left Baader Meinhoff group in Germany to the Irish Republican Army in Northern Ireland -- have utilized throughout history. And the strategies that have proven effective in destroying al Qaeda are the very same that have proven effective in past counterterrorism efforts. Dick Cheney, former CIA director Michael Hayden, and others have insisted that the killing of Bin Laden vindicates their War on Terror. But the facts of the Bin Laden investigation suggest otherwise. Indeed, tracking down Bin Laden was arguably possible only once the security establishment abandoned War on Terror tactics and focused on long-proven, largely uncontroversial, and more discerning approaches -- relying on, tips, informants, and focused surveillance, not torture, illegal wiretapping, or a military occupation. And when military force played a decisive role in the raid on Bin Laden's compound and the drone-strike on his key operational lieutenant a week later, its use was highly targeted -- clearly different than the blunt War on Terror approaches initially used in Iraq and Afghanistan. But with Bin Laden in a watery grave and the tenth anniversary of 9/11 fast approaching, we must do more than simply take stock of what has worked and what has failed in our efforts to thwart terrorism over the last decade. The worst mistakes and abuses of the War on Terror were possible, in no small part, because national security is still practiced more as a craft than a science. Lacking rigorous evaluations of its practices, the national security establishment was particularly vulnerable to the panic, grandiosity, and overreach that colored policymaking in the wake of 9/11. To avoid making those sorts of mistakes again, it is essential that we reimagine national security as an object of scientific inquiry. Over the last four centuries, virtually every other aspect of statecraft -

from the economy to social policy to even domestic law enforcement - has been opened up to engagement with and evaluation by civil society. The practice of national security is long overdue for a similar transformation. Maintaining the nation's security of course will continue to require some degree of secrecy. But there is little reason to think that appropriate secrecy is inconsistent with a fact-based culture of robust and multiplicative inquiry. Indeed, to whatever partial extent that culture already exists within the national security establishment, it has led the move away from many of the counterproductive security measures established after 9/11. Yet, in the ten years that Congress has been debating issues like coercive interrogation, ethnic profiling, and military tribunals, the House and Senate Intelligence committees, which have all the proper security clearances to evaluate such questions, have never established any formal process to consistently evaluate and improve the effectiveness of U.S. counterterrorism measures. Establishing proper oversight and evaluation of the efficacy of our security practices will not come easily, for the security craft guards its claims to privileged knowledge jealously. But as long as the practice of security remains hidden behind a veil of classified documents and accepted wisdoms handed down from generation to generation of security agents, our national security apparatus will never become fully modern. In a world in which efforts to attack Americans are ongoing, developing a formal capacity for critical evaluation is as urgent as ever. Such capacity will not guarantee that we will avoid all future security failures, or the cruder and less effective responses they tend to provoke. But it will give the security establishment the tools it needs to improve its practices and resist impractical, unproven, and downright dangerous policies. Lacking those tools, the next high profile attack could well inspire another forgetting of history, another War on Terror, and another danger-filled decade spent relearning old lessons about how to keep our people safe.

Terror Adv Answers

Uniqueness – Terror Low

US airstrikes have been combating ISIS positions.

Fox News 7/5

Fox News, 7-5-2015, "16 airstrikes destroy key sites in ISIS Syrian stronghold of Raqqa," http://www.foxnews.com/world/2015/07/05/16-us-airstrikes-destroy-key-sites-in-isis-syrian-stronghold-raqqa/

U.S.-led coalition forces conducted 16 airstrikes Saturday and early Sunday against key ISIS buildings and transit routes in the terror group's stronghold of Raqqa, Syria, a U.S. Army official said. At least 16 airstrikes were reported late Saturday and early Sunday, triggering successive explosions that shook the city and created panic among residents, activists said. The U.S.-led coalition often targets ISIS-held towns and cities in Syria, but the overnight strikes on Raqqa were rare in their intensity. "The significant airstrikes tonight were executed to deny Daesh the ability to move military capabilities throughout Syria and into Iraq," Lt. Col. Thomas Gilleran said in a statement, using the Arabic acronym for the Islamic State group. Gilleran, the spokesperson for the Combined Joint Task Force's Operation Inherent Resolve, also called it one of the "largest deliberate engagements" executed in Syria to-date. **"It will have debilitating effects on [ISIS's] ability to move from Raqqa**," he said. Raqqa is the de facto capital of the so-called Islamic caliphate declared a year ago by the Islamic State group in territories it controls in Iraq and Syria. An ISIS-affiliated militant website confirmed the strikes on the center of the city, saying 10 people were killed and dozens wounded. It also published purported photos of dead victims, including two of young boys suggesting they were civilians.

US airstrikes are having an impact on Al-Quada's leadership

Browning and Ghobari 6/16

Noah Browning and Mohammed Ghobari, 6-16-2015, Noah Browning and Mohammed Ghobari are reuters reporters in the Middle East. "Al-Qaeda deputy leader killed in US bombing in Yemen," Irish Times, http://www.irishtimes.com/news/world/middle-east/al-qaeda-deputy-leader-killed-in-us-bombing-in-yemen-1.2251496

The deputy leader of al-Qaeda, Nasser al-Wuhayshi, has been killed in a US bombing in Yemen, the group said on Tuesday, removing the director of a string of attacks against the West and a man once seen as a successor to leader Ayman al-Zawahri. A close associate of Osama bin Laden in the years leading up to the September 11th, 2001 attacks on US targets, Wuhayshi, a Yemeni in his late 30s, was named by Zawahri as al-Qaeda's effective number two in 2013. With a $10 million price on his head offered by US authorities, Wuhayshi was also leader of al-Qaeda in the Arabian Peninsula (Aqap), and his death potentially weakens the group, widely seen as the militant network's strongest branch. He led the group as it plotted foiled bomb attacks against international airliners and claimed responsibility for the deadly shooting at the French satirical newspaper Charlie Hebdo, calling it punishment for insulting the Prophet Mohammed. Senior Aqap member Khaled Batarfi said in a video statement posted online that Wuhayshi "passed away in an American strike which targeted him along with two of his mujahideen brothers, may God rest their souls". The group had met and appointed its former military chief Qassim al-Raymi, also a Yemeni, as his replacement, he said. **"It's a significant blow. He could have moved up to the top spot** [in al-Qaeda]qap is widely considered the most capable terrorist group in the world," said Mr Reardon, a veteran of the Federal Bureau of Investigation, referring to its focus on attacks on the West. The group has also orchestrated spectacular attacks inside Yemen in recent years, targeting government ministries, military camps and soldiers, in which hundreds of people were killed. Al-Qaeda did not specify how or when Wuhayshi was killed. Some residents of the southeastern Yemeni city of Mukalla reported a suspected drone strike on Friday. But eyewitnesses said that last Tuesday, townspeople were gathering on the city's seaside corniche after evening prayers when an explosion killed three men, spreading their limbs across a street as panicked residents fled. In an unusual move, al-Qaeda gunmen cordoned off the area and gathered the

bodies, residents said, leading them to believe a militant leader was among the dead. **Wuhayshi is the sixth major Aqap leader killed in suspected US bombings this year,** despite political turmoil in Yemen that led to the closing of the US embassy and the evacuation of its military and intelligence personnel.

AT: Solvency – Policy Not Key

Governmental policy can't help fight counterterrorism- only small community changes can cause effective change

Al-Marayati 14 (Salam Al-Marayati Salam Al-Marayati is executive director of the Muslim Public Affairs Council, an American institution which informs and shapes public opinion and policy by serving as a trusted resource to decision makers in government, media and policy institutions, 1/7/14, Las Angeles Times, 5 better ways to enlist U.S. Muslims in the fight against terrorism, http://articles.latimes.com/2014/jan/07/news/la-ol-terrorism-radicalization-almarayati-blowback-20130107, 7/8/15, HDA)

As someone who has been involved in counter-terrorism for more than 20 years, I was intrigued with former Democratic Rep. Jane Harman's Op-Ed article Monday on effective strategies to combat radicalization. I appreciate Harman's suggestion that we build bridges with Muslim communities, but prominent counter-terrorism thinkers like Harman come across as out of touch with those communities when they suggest that we in the U.S. need to be more effective in arguing how Muslims need to convert to the right side. This is pretentious and full of pitfalls. **What I was hoping to read from Harman was how the U.S. government can offer a healthy role for American Muslim communities in these efforts. American Muslim leaders cannot be an extension of law enforcement. In fact, our communities have proved effective in pushing back against Al Qaeda rhetoric and shunting radicals out of mosques**. Unfortunately, this creates another problem: lone wolves like alleged Boston Marathon bomber Tamerlan Tsarnaev. There are five issues. First, the U.S. government is not the most authentic voice in preaching nonviolence to potential terrorists. In fact, the very people targeted by American efforts view the U.S. as a terrorism sponsor itself, given numerous civilian deaths in drone attacks and other military ventures. Instead, the government must seek out Muslim leaders who oppose U.S. policies but demand that change take place through nonviolence. This voice is muffled by violent extremists gaining ground in war-torn countries such as Iraq, Syria and Afghanistan, or when Muslim political groups are designated as terrorist organizations, as in Egypt. The voices in Muslim communities calling for change through nonviolence exist; they could even occupy space in forums and hearings in Washington. Second, we need to ask ourselves an important question: Can we prevent or at least minimize radicalization by outcasts like Tsarnaev or even Adam Gadahn, the Orange County teenager who was kicked out of a mosque and became a spokesman for Al Qaeda? If so, an effective counter-radicalization strategy would involve prevention and intervention, not just expulsion or calling the police. Prevention could involve replacing violent ideology with good theology. Intervention might call for religious and peer counseling. But for this kind of counter-radicalization to work, our mosques and gatherings need to be safe harbors free of sting operations or surveillance by the government. We need to foster open and healthy conversations about extremism. Third, while engagement by law enforcement on issues important to the Muslim community is commendable, it also leads to a stigmatization of us as having only a security-based relationship with government. A police chief

might be found at many Muslim celebrations and social events -- Harman cites the work of L.A. County Sheriff Lee Baca. But why not a congressman or a senator? Why haven't we had a summit with the president on using interfaith relations as a way to prevent extremism from arising from any group? This lack of a meaningful political relationship at the national level hurts the partnership we have been developing with law enforcement over the last 20 years. Fourth, **the respective work of law enforcement and our community needs to be strictly divided. Police ought to take the lead on criminal investigations, and Muslims should be responsible for developing counter-narratives to radicalization**. Mosque and Muslim community leaders need to learn how to discuss radicalization with young people, but we must do it independently, without interference from law enforcement. Finally, young men who are sold on extremism often display signs of psychosis. They are typically depressed and have become disillusioned with the world or even their own religion. We need to connect these young men to good mental healthcare. Bottom line**, our community is only further marginalized when U.S. policymakers view Muslim moderates as only those who support American policies in the Muslim world, even if it means unwavering support for war against Muslim countries and communities. In reality, Al Qaeda's nightmare is the image of a well-integrated American Muslim community in the U.S. -- socially, economically and politically.**

Muslim communities unwilling to let FBI back in after past injustices

Pavlich 15 (Katie Pavlich is an American conservative journalist, primarily known for her work at the online news magazine Townhall.com as well as for authoring the book Fast and Furious: Barack Obama's Bloodiest Scandal and Its Shameless Cover-Up, 2/23/15, The Hill, "Why the WH didn't invite the FBI to its extremism summit" http://thehill.com/opinion/katie-pavlich/233569-katie-pavlich-why-the-wh-didnt-invite-fbi-to-extremism-summit, 7/8/15, HDA)

The much-anticipated White House summit on combating generic extremism is over, and outside of a handful of feel-good statements and speeches, little was accomplished. A number of activists from various organizations were present for discussion, but one person was noticeably absent from the summit: FBI Director James Comey. The FBI is one of first lines of defense in combating extremism — Islamic terror in particular — and keeping Americans at home and abroad safe. FBI input about root causes of terrorism at the White House summit would have been beneficial not only to its mission, but to ultimately defeating the enemy we face. "It's our top priority — protecting the U.S. from terrorist attacks," the FBI website states. "Working closely with a range of partners, we use our growing suite of investigative and intelligence capabilities to neutralize terrorist cells and operatives here in the U.S., to help dismantle extremist networks worldwide, and to cut off financing and other forms of support provided by terrorist sympathizers." Comey wasn't at the White House last week because he wasn't invited. The reason why can be found by taking a look at the summit guest list, which included **a variety of groups whose members have urged Muslims in America to shut the FBI out of their communities and to be non-cooperative with terrorism investigations**. **The Council on American–Islamic Relations is once of those groups, and has a long history of telling its supporters in Muslim communities in the U.S. to avoid working with the FBI on counterterrorism and intelligence-gathering operations.** In 2011**, CAIR published a poster** on its website **showing slammed doors in the face of an FBI agent walking through a predominantly Muslim neighborhood. "Build a wall of resistance," the poster read. "Don't talk to the FBI**." After public backlash, CAIR eventually took the poster down, citing a

"misinterpretation" — but would not apologize. In 2008, CAIR was named as an unindicted co-conspirator in the 2008 Holy Land Foundation trial; it has direct connections to Hamas. Over the years, many of the group's members have been arrested and indicted on terrorism-related charges. As reported by Breitbart News this week, members of the Islamic Society of Boston's radical Cambridge mosque, where the Boston bombing brothers went to worship, attended the summit. The ISB has a history of telling its members and Muslim communities in Boston not to work with the FBI. Breitbart also pointed out that 12 members of the ISB are either on the run for involvement in terrorist activity or died fighting with Islamic terrorist groups. While the State Department and the White House claim they want to get to the "root" of extremism, their actions speak otherwise. We cannot get to the root of any problem without identifying it for what it is: Islamic terrorism. Further, we cannot combat Islamic extremism without the FBI, and we certainly can't solve the problem by working with groups that are part of the problem. It's a shame the White House was willing to listen to the words and ideas of radical Islamic activists who don't have the best interests of the country in mind while shutting out the FBI from the discussion. Despite administration denials and generic extremism rhetoric, the radical Islamic threat we face right at home is real, and the FBI has been issuing concerns about it for months as agents grapple with the new threats. "The FBI remains concerned the recent calls by ISIL [the Islamic State in Iraq and the Levant] and its supporters on violent extremist Web forums and the recent events in Europe could continue to motivate homegrown extremists to conduct attacks in the homeland," Deputy Assistant Director of the FBI Counterterrorism Division Michael Steinbach testified in front of the House Homeland Security Committee recently. "Online supporters of ISIL have used various social media platforms to call for retaliation against the U.S. in the homeland. In one case, an Ohio-based man was arrested in January after he obtained a weapon and stated his intent to conduct an attack on the U.S. Capitol in Washington, D.C. Using a Twitter account, the individual posted statements, videos and other content indicating support for ISIL, and he planned his attack based on this voiced support." "The FBI, in partnership with the Department of Homeland Security, is utilizing all investigative techniques and methods to combat the threat these individuals may pose to the United States," he continued. "In conjunction with our domestic and foreign partners, we are rigorously collecting and analyzing intelligence information as it pertains to the ongoing threat posed by ISIL, AQAP [al Qaeda in the Arabian Peninsula], and other foreign terrorist organizations." **Here's the frightening reality: Many of the groups invited to the White House summit on combating extremism have either been raided by the FBI or are subjects of FBI investigations into terrorism, which is exactly why the FBI wasn't invited to the table for discussion.**

No solvency - Past counterterrorist operation have estranged Muslim communities- won't work along with the FBI

German 14 (Michael German is a fellow with the Brennan Center for Justice's Liberty and National Security Program, which seeks to ensure that our government respects human rights and fundamental freedoms in conducting the fight against terrorism. His work focuses on law enforcement and intelligence oversight and reform. Prior to joining the Brennan Center, Mr. German served as the policy counsel for national security and privacy for the American Civil Liberties Union Washington Legislative Office, 10/9/14, Brennan Center for Justice, "Stigmatizing Boston's Muslim Community is No Way to Build Trust", https://www.brennancenter.org/analysis/stigmatizing-boston-muslim-community-no-way-build-trust, 7/8/14, HDA)

The Justice Department announced last week that it is partnering with the White House, Department of Homeland Security, and the National Counterterrorism Center to launch a new pilot program to "counter violent extremism (CVE)" in Boston, Minneapolis and Los Angeles. The program, which aims to bring community and religious leaders together with law enforcement to "develop comprehensive local strategies and share information on best practices" may sound nice, but no one should be surprised that civil rights groups and American Muslim communities were less than enthusiastic about this news. CVE meetings are not new. **Previous FBI outreach efforts to Muslim communities have been less about curbing violence than thinly veiled attempts to recruit informants and gather intelligence**. Some Justice Department-sponsored community outreach events, like a workshop in Seattle focused on improving police relations with the Muslim community, was seen as offensive. Other unannounced FBI "community outreach" visits to people's homes have bordered on harassment. DHS launched a "new" outreach effort in 2011 which generated similar frustrations. Last April, National Security Advisor Lisa Monaco announced to community groups at Harvard's Kennedy School that DHS would be sending an "envoy" to Boston to conduct training to community groups so they could recognize extremist behaviors that need to be reported to police. There is no doubt that many dedicated federal employees at these agencies are deeply committed to building relationships and addressing community concerns about crime and policing issues that affect them. But **the unmistakable implication behind "CVE" programs is that certain communities are suspect and particularly vulnerable to becoming terrorists**. There were no DHS or Justice Department CVE programs, for example, directed to white, Christian communities after former Ku Klux Klansman Fraizer Glenn Miller murdered people at a Jewish community center last April, even though West Point's Combatting Terrorism Center reported that far right extremists attack and kill more Americans than any other terror groups. **The overarching problem with CVE programs is their reliance on simplistic theories of terrorist radicalization that have long been discredited by empirical studies. The overwhelming consensus from these studies is that there is no profile for terrorists, no discernible pattern or pathway that individuals follow to becoming terrorists, and no reliable indicators that can be used to predict who will become a violent**. Yet these CVE programs pretend there are, based on flawed theories promulgated by the FBI and others. The FBI's theory of terrorist radicalization claims that the commonplace activities of many American Muslims, including wearing traditional religious attire, frequent attendance at mosques, participating in a pro-Muslim social group or political cause, or even growing facial hair, are "indicators" in a four-step process toward becoming a terrorist. A 2008 FBI counterterrorism textbook teaches agents they can "quantitatively gauge" whether a Muslim is militant by asking a series of questions about his or her political and religious beliefs. It is no wonder that civil rights groups are concerned about CVE programs that falsely identify religious practices and political opinions as terrorism indicators. Monaco told the Harvard Kennedy School audience that community members could help prevent violence by identifying even more subtle warning signs of radicalization, which included "sudden personality changes in their children," "clashes over ideological differences," or "watching violent material." Many parents of teenagers would recognize their children in some or all of these attributes, and become unnecessarily alarmed about entirely normal adolescent behavior. After the Kennedy School speech, the Brennan Center for Justice and several national and local civil rights and advocacy groups wrote a letter to DHS requesting a meeting to discuss the program and review the materials supporting it. There was no response, raising further concerns that these "new" CVE programs will rely on the same old discredited theories. All communities want to protect themselves from crime and violence. CVE programs that rely on

false theories of terrorist radicalization will only spread fear, distrust and dissension within communities, and lead to unwarranted law enforcement reporting. Instead of wasting resources chasing false leads, police should focus their resources where they have evidence of criminal activity**. If the Justice Department and DHS want to educate and empower communities they need to ground their counterterrorism programs in sound empirical research, and tailor their community outreach programs to address community needs. Stigmatizing Boston's minority communities as potential terrorists, however, is no way to build trust.**

There is zero trust between Muslim communities and the FBI- even with new programs past injustice have made counter terror efforts impossible

Glionna 14 (John M. Glionna is a national reporter for the Los Angeles Times, based in Las Vegas. He covers a large swath of the American West, writing about everything from people to politics. He has also served as the Seoul bureau chief on the newspaper's foreign desk, where he covered the 2011 Japanese earthquake and tsunami and the subsequent death of North Korean strongman Kim Jong Il. He has also written extensively about California. He teaches a journalism course at the University of Nevada, Las Vegas, 11/3/14, Las Angeles Times, U.S. Muslim leaders say FBI pressuring people to become informants, http://www.latimes.com/nation/la-na-muslims-fbi-20141103-story.html, 7/8/15, HDA)

Muslim leaders nationwide say the FBI is pressuring some Islamic community members and religious leaders to spy on fellow Muslims as part of a government effort to combat extremist recruiting in the U.S. The campaign has intensified in recent weeks, with mosques in California, Texas, Minnesota, Ohio, Florida and other states reporting unannounced visits by FBI agents, according to the Council on American-Islamic Relations, or CAIR, the nation's largest Muslim civil rights and advocacy organization. In a nationwide alert**, the group urged mosque and community leaders to seek the advice of an attorney if they are approached by the FBI for questioning. They worried that the civil rights of numerous imams were being violated as the religious leaders were asked to meet with FBI agents**, who then pressed them to inform on members of their congregations. "It's happening all over the country," said Ibrahim Hooper, a Washington-based spokesman for CAIR. "The agents are approaching these community leaders at mosques with basic questions that quickly turn into something different: pressure to become informants." **Leaders at several mosques in California and Minnesota contacted for comment said they were afraid to speak out for fear of becoming a government target**. The FBI would not comment on the CAIR alert, but spokesman Paul Bresso said in an email that the agency respected the rights of all citizens and "we value our partnerships with the Arab, Muslim and Sikh communities as they are partners in our efforts to stem crime, violence and civil rights violations." One agent said such visits were standard procedure. "It's not unusual for us to go out and talk to, I don't want to call them at-risk folks, but people dealing with issues," said the agent, who declined to give his name because he was not authorized to talk about the matter. Jennifer Wicks, an attorney who heads the civil rights department for CAIR, said she knew of no crimes committed by FBI agents. "No one has been detained in any way or taken from one setting to another," she said. She said the interrogation tactics depended on the agent and the situation. "These visits aren't based on people being suspected of doing anything wrong. It's because this is a Muslim community. That's

why people are being targeted," Wicks said. "However, the FBI's over-broad and coercive use of informants in mosques, reports of outreach meetings being used for intelligence gathering and other acts of abuse demonstrate that community leaders should engage legal professionals to ensure the protection of their rights and those of their congregations," Wicks said in a statement on the CAIR website. Activists said the visits were tantamount to religious profiling. "For us, the issue is one of civil rights," Hooper said. "Too often these interactions are done in private and people feel coerced. Because ISIS is a hot topic, they're going to mosques. It's all based on the round-up-the-usual-suspects style of law enforcement." Federal officials are calling for new ways to fight what they see as the nation's latest national security threat: people indoctrinated by extremists returning to plan terrorist acts here. The Justice Department recently unveiled a pilot program in Los Angeles, Boston and Minneapolis that enlists social and mental health workers, religious leaders and police to thwart Islamist group recruiters. Orlando, Fla., attorney Hassan Shibly said he had represented 33 clients this year who claimed they had been pressured by the FBI to release information on their religious beliefs and practices. He said the number of cases had risen dramatically in the last few weeks. "In Orlando, they pressured one citizen who happened to be Muslim to spy on mosques, Islamic restaurants and hookah lounges or they would throw him in jail," he said. "In another case, they approached an imam with pictures of a woman they claimed would testify of an affair unless he helped them. These are law-abiding Muslims, not criminals." He has taken those and other cases to court, alleging the FBI was using illegal tactics to gain information. Shibly said Muslims were targets because many didn't know their legal rights. "The FBI thinks it can get away with bending the law," he said. "Many Muslims come from Third World countries where such practices are common fare for the secret police. But in the U.S. you don't expect such blackmail, with threats of deportation or worse." In several cases, Shibly said, imams were asked about their opinions on political affairs and other matters. Agents return and tell the imams that informants have contradicted their previous statements. "They are laying the groundwork for a charge of giving false information to a law enforcement officer. That's the trick to get them to cooperate," he said. In Florida, tips from the Muslim community led to the arrest of Sami Osmakac, later convicted of planning a terrorist attack at a Tampa-area nightclub. Osmakac was found guilty in June of attempted possession of a weapon of mass destruction.

No Solvency - Islamic communities feel target by any counter terror operation- means that they won't want to participate in the aff

Bender 15 (Bryan Bender is the defense editor for POLITICO Pro. He was previously a D.C.-based reporter for the Boston Globe and Jane's Defence Weekly, where he covered U.S. military operations in the Middle East, Asia, Latin America, and the Balkans. He also writes about terrorism, the international arms trade, and government secrecy. He is author You Are Not Forgotten, the story of an Iraq War veteran's search for a missing World War II fighter pilot in the South Pacific. He is currently a board member of the Military Reporters and Editors Association, 2/18/15, The Boston Globe, Islamic leader says US officials unfairly target Muslims, https://www.bostonglobe.com/news/nation/2015/02/18/islamic-leader-boston-says-justice-department-effort-identify-homegrown-terrorists-unfairly-targeting-muslim-community/uqzG0M3czJeuVH8HhSDtRN/story.html, 7/8/15, HDA)

A top leader of Boston's Muslim community on Wednesday strenuously objected to a new Justice Department strategy to prevent disaffected youth from taking up terrorism, complaining that the effort is "exclusively targeting the American Muslim community." In a strongly worded protest to a report that US Attorney Carmen Ortiz delivered to a White House summit on Wednesday, Yusufi Vali said he could not support the framework because the programs "are founded on the premise that your faith determines your propensity towards violence**." The comments** by Vali, executive director of the Islamic Society of Boston Cultural Center, **demonstrate the difficulty the Obama administration faces in taking preemptive action to prevent troubled youths from becoming violent extremists, while not trampling on individual rights or singling out particular communities for scrutiny**. Last fall, Boston was chosen along with Los Angeles and Minneapolis to spearhead a Justice Department effort known as "Countering Violent Extremism." Vali has been one of the local participants, and the Boston experience was the subject of a 28-page report released at the White House summit. "It clearly appears that the CVE initiative is exclusively targeting the American-Muslim community, in spite of the best efforts of the local US attorney to redefine it expansively," Vali wrote, using the acronym for the administration effort. Ortiz did not respond to requests to comment directly on Vali's charge, and some other members of the local Muslim community said the emerging outreach effort seemed to be working. President Obama, in remarks to the attendees on Wednesday, insisted that the effort would not single out Muslims for their religion. "Nobody should be profiled or put under a cloud of suspicion simply because of their faith," he said, pledging that outreach to the Muslim community would not be a "cloak for surveillance." The FBI is increasingly worried that a number of young Americans are being indoctrinated, largely through social media, to commit violence in the name of political or religious ideology. Some youths have reportedly taken up arms with the Islamic State in Iraq and Syria and other terrorist groups. Counterterrorism officials fear they could also be planning attacks inside the United States. Religious, political and law enforcement leaders from across the United States and the world attended the White House Summit on Countering Violent Extremism. Religious, political and law enforcement leaders from across the United States and the world attended the White House Summit on Countering Violent Extremism. All three US cities selected to test new outreach and education efforts have recent experience with homegrown terrorism: the 2013 Boston Marathon bombings allegedly carried out by two immigrant brothers influenced by Al Qaeda propaganda; the 2013 killings of three by an Egyptian limousine driver at Israel's El Al terminal at LAX airport; and reports that a number of youths of Somali descent in Minnesota have traveled to Somalia in recent years to fight with Al-Shabab, an Al Qaeda splinter group. The three-day Washington summit, which began Tuesday, is bringing together international leaders, local officials, civil society groups, and faith-based organizations to discuss new ways to confront the problem both domestically and internationally. A central contribution on Wednesday was the release of the report about Boston's efforts, which was drafted by Ortiz with the help of several dozen local law enforcement officials, school administrators, educators, mental health experts, and academics from the Boston region. Ortiz, speaking to what was called the White House Summit on Countering Violent Extremism, said the approach was to help all communities, "regardless of their ethnicities." "Whether it is dealing with vulnerable youth, whether it's dealing with distrust in the government, whether it's dealing with vulnerabilities to social media," Ortiz said, the intent is "to try to identify those individuals who are on the path to violent extremism." To do that, Ortiz's report outlined seven "focus areas" — including

expanding what it called "limited intervention programs" in schools and religious organizations; combating the extremist ideology being spread on the Internet with countermessages; and providing "specialized support and services" to individuals convicted of hate crimes before and after they are released from prison. Participants in the Boston effort expressed confidence Wednesday the strategies can build on proven antiviolence efforts by law enforcement and community leaders — such as in confronting gangs in schools. "Both street gangs and violent extremists lure the most vulnerable in with promises of a better life with a purpose and a place to belong," said Jodie Elgee, director of the Counseling and Intervention Center for the Boston public schools. But Vali said he believes **Muslims are being unfairly targeted by the initiative.** "**The data show that violent extremism is an extremely rare phenomena," he wrote in his dissent to the report. "The everyday reality of nearly all American-Muslims is like that of any other American: We simply do not meet or experience individuals interested in violent ideologies." Indeed, at the White House presentation officials cited FBI statistics that show less than 6 percent of domestic terrorist attacks are perpetrated by Muslims. "**For the government to offer us services based on concerns of violent extremism in our community – as implied by this framework – seems to reinforce the same stereotype that society holds of American-Muslims: that they or Islam are inherently violent," Vali added in his dissent. "**This is unacceptable to our Boston-Muslim community**." Vali, asked in an interview if he will continue to participate in the effort, said "I am not sure what the next steps are." But his views are almost certain to fuel the debate over how the threat of violent extremism should be defined: as a primarily Muslim problem or a wider phenomenon. Michael German, a former FBI agent who is now fellow at the Brennan Center for Justice at New York University School of Law, said numerous studies have shown that the majority of politically motivated attacks inside the United States are not connected to Islam but right-wing antigovernment or white supremacist groups. "We know unfortunately that terrorism comes in many guises," he said in an interview. Focusing almost exclusively on Muslims, he added, "reinforces the false perception that extremist violence is primarily a Muslim problem when the facts show that is not true." Vali stressed that he does not blame Ortiz for what he considers a one-sided approach. "I think she has done a phenomenal job of engaging the community," he said, pointing fingers at "the federal government and the White House." Other members of the Muslim community in Boston involved in the effort said they thought the approach being pursued by the Justice Department is fair. Saida M. Abdi, director of community relations at the Refugee Trauma and Resilience Center at Boston Children's Hospital, told the summit the approach is "both sensitive and inclusive." "**Islam is not to blame for the threat of violent extremism luring our youth but it can be and will be a solution for helping them become spiritually educated and morally strong to resist the impulse of violence**," said Nabeel Khudairi, of the Islamic Council of New England.

Nuclear Terror Won't Happen

Nuclear terrorism is not an existential threat- framing it as one creates flawed analysis and bad policy

Mueller 15 (John Mueller, a political scientist at Ohio State University and a senior fellow at the Cato Institute. He is the editor of the webbook, Terrorism Since 9/11: The American Cases, and, with Mark Stewart, the author of the forthcoming Chasing Ghosts: The Costly Quest to Counter Terrorists in the United States. February 24, 2015, "Terrorism Poses No Existential Threat to America. We Must Stop Pretending Otherwise" http://www.cato.org/publications/commentary/terrorism-poses-no-existential-threat-america-we-must-stop-pretending 7/8/15 ZEC)

One of the most unchallenged, zany assertions during the war on terror has been that terrorists present an existential threat to the United States, the modern state and civilization itself. This is important because the overwrought expression, if accepted as valid, could close off evaluation of security efforts. For example, no defense of civil liberties is likely to be terribly effective if people believe the threat from terrorism to be existential. At long last, President Barack Obama and other top officials are beginning to back away from this absurd position. This much overdue development may not last, however. Extravagant alarmism about the pathological but self-destructive Islamic State (Isis) in areas of Syria and Iraq may cause us to backslide. The notion that international terrorism presents an existential threat was spawned by the traumatized in the immediate aftermath of 9/11. Rudy Giuliani, mayor of New York at the time, recalls that all "security experts" expected "dozens and dozens and multiyears of attacks like this" and, in her book The Dark Side, Jane Mayer observed that "the only certainty shared by virtually the entire American intelligence community" was that "a second wave of even more devastating terrorist attacks on America was imminent". Duly terrified, US intelligence services were soon imaginatively calculating the number of trained al-Qaida operatives in the United States to be between 2,000 and 5,000. "President Obama and other top officials are backing away from this absurd assertion. But others are resisting reality." Also compelling was the extrapolation that, because the 9/11 terrorists were successful with box-cutters, they might well be able to turn out nuclear weapons. Soon it was being authoritatively proclaimed that atomic terrorists could "destroy civilization as we know it" and that it was likely that a nuclear terrorist attack on the United States would transpire by 2014. No atomic terrorists have yet appeared (al-Qaida's entire budget in 2001 for research on all weapons of mass destruction totaled less than $4,000), and intelligence has been far better at counting al-Qaida operatives in the country than at finding them. But the notion that terrorism presents an existential threat has played on. By 2008, Homeland Security Secretary Michael Chertoff declared it to be a "significant existential" one - carefully differentiating it, apparently, from all those insignificant existential threats Americans have faced in the past. The bizarre formulation survived into the Obama years. In October 2009, Bruce Riedel, an advisor to the new administration, publicly maintained the al-Qaida threat to the country to be existential. In 2014, however, things began to change. In a speech at Harvard in October, Vice President Joseph Biden offered the thought that "we face no existential threat — none — to our way of life or our ultimate security." After a decent interval of three months, President Barack Obama reiterated this point at a press conference, and then expanded in aninterview a few weeks later, adding that the US should not "provide a victory to these terrorist networks by over-inflating their importance and suggesting in some fashion that they are an existential threat to the United States or the world order." Later, his national security advisor,

Susan Rice, echoed the point in a formal speech. It is astounding that these utterances — "blindingly obvious" as security specialist Bruce Schneier puts it — appear to mark the first time any officials in the United States have had the notion and the courage to say so in public.

Nuclear terrorism is exaggerated and the threat is small

Iqbal 15 (Air Commodore Khalid Iqbal, a consultant to IPRI on Policy and Strategic Response. He is a former assistant chief of air staff, Pakistan Air Force. November 13, 2014, "Nuclear Terrorism: Myth and Reality" http://www.criterion-quarterly.com/nuclear-terrorism-myth-and-reality/#_ftn1 7/8/15 ZEC)

Despite a number of claims, there is no credible evidence that any terrorist group has yet succeeded in obtaining a nuclear bomb or the materials needed to make one. The nuclear intent and capability of terrorist groups such as Al Qaeda has been "fundamentally exaggerated." Almost all of the stolen HEU and plutonium that has been seized over the years had not been missed before it was seized. The likelihood that a terrorist group will come up with an atomic bomb seems to be vanishingly small;" and Policymakers are guilty of an "atomic obsession" that has led to "substantively counterproductive" policies premised on "worst case fantasies". Anxieties about terrorists obtaining nuclear weapons are essentially baseless: a host of practical and organizational difficulties make their likelihood of success almost vanishingly small"[xxxi]. John Mueller, a scholar of international relations at the Ohio State University, is a prominent nuclear skeptic. He makes three claims: (1) the nuclear intent and capability of terrorist groups such as Al Qaeda has been "fundamentally exaggerated;" (2) "the likelihood a terrorist group will come up with an atomic bomb seems to be vanishingly small;" and (3) policymakers are guilty of an "atomic obsession" that has led to "substantively counterproductive" policies premised on "worst case fantasies."[xxxii] In his book, "Atomic Obsession: Nuclear Alarmism from Hiroshima to Al-Qaeda" he argues that, "anxieties about terrorists obtaining nuclear weapons are essentially baseless".[xxxiii] Decades after Cheney's forecast, how many nuclear weapons from the former Soviet arsenal have proliferated to rogue states or terrorists? Not the 250 Cheney predicted. Not 25. Miracle of miracles, not a single nuclear weapon has been discovered outside the control of Russia's nuclear custodians[xxxiv].

Nuclear terrorism highly unlikely and improbable

Weiss 15 (Leonard Weiss, a visiting scholar at the Center for International Security and Cooperation at Stanford University, USA, and a member of the National Advisory Board of the Center for Arms Control and Non-Proliferation in Washington, DC. For more than two decades, he was staff director of the US Senate Committee on Governmental Affairs and its Subcommittee on Energy and Nuclear Proliferation, during which time he wrote major legislation on nuclear nonproliferation and led investigations of nuclear programs of other countries. He is a former professor of applied mathematics and engineering at Brown University and the University of Maryland. March/April 2015, "On fear and nuclear terrorism" from edition of "Bulletin of the Atomic Scientists", 7/8/2015 ZEC)

There is clearly some risk of nuclear terrorism via theft of weapons, but the risk is low, and a successful theft of a nuclear weapon would likely require a team of insiders working within an otherwise highly secure environment. There is also some risk that a nuclear-armed country might use a terrorist group to launch a nuclear attack on an adversary. This possibility is also of low probability, because the sponsor country would almost inevitably risk nuclear annihilation itself.

Finally, a terrorist group might try to design and build its own weapon, possibly with the help of disaffected persons from a weapon state who might provide them with nuclear know-how and/or materials. Given all the steps needed to achieve a weapon that is workable with high probability-without being discovered and without suffering an accident-this scenario is also fraught with risk for the terrorists. As a result, terrorists are much more likely to try to achieve their aims using conventional weapons, which are cheaper, safer, and technically more reliable. Thus, while no one can discount completely the acquisition by a terrorist group of a nuclear explosive weapon, such an event appears to be of very low probability over the next decade at least, and can be made still lower using techniques or policies that do not require constitutionally problematic steps by the federal government or an optional war whose death rate could match or exceed what the terrorists are capable of. There is a tendency on the part of security policy advocates to hype security threats to obtain support for their desired policy outcomes. They are free to do so in a democratic society, and most come by their advocacy through genuine conviction that a real security threat is receiving insufficient attention. But there is now enough evidence of how such advocacy has been distorted for the purpose of overcoming political opposition to policies stemming from ideology that careful public exposure and examination of data on claimed threats should be part of any such debate. Until this happens, the most appropriate attitude toward claimed threats of nuclear terrorism, especially when accompanied by advocacy of policies intruding on individual freedom, should be one of skepticism.

Impact Turns to Terror

Excessive fear of nuclear terrorism creates wars

Weiss 15 (Leonard Weiss, a visiting scholar at the Center for International Security and Cooperation at Stanford University, USA, and a member of the National Advisory Board of the Center for Arms Control and Non-Proliferation in Washington, DC. For more than two decades, he was staff director of the US Senate Committee on Governmental Affairs and its Subcommittee on Energy and Nuclear Proliferation, during which time he wrote major legislation on nuclear nonproliferation and led investigations of nuclear programs of other countries. He is a former professor of applied mathematics and engineering at Brown University and the University of Maryland. March/April 2015, "On fear and nuclear terrorism" from edition of "Bulletin of the Atomic Scientists", 7/8/2015 ZEC)

For nearly two decades, predictions of nuclear catastrophe at the hands of terrorists have become an accepted part of the national security debate, overshadowing to some extent the concerns about proliferation of national nuclear programs. It appears that a belief in the effectiveness of deterrence has assuaged the fears of many people about nuclear war waged by countries (whether justified or not), while at the same time the belief that terrorists cannot be deterred has raised nuclear terrorism fears more than ever. These fears have been fanned in published predictions of nuclear terror attacks (within a given 10- year period) by prominent persons in nuclear security circles, or by informal polls, such as the one issued nine years ago by Sen. Richard Lugar when he chaired the Senate Foreign Relations Committee. The poll asked persons working in nuclear policy areas what they thought the risk was of a nuclear terrorist attack over a 10-year period, with guesses suggesting a high threat but based on no hard data that was provided or referenced. Much has been written about the horrific consequences of a successful nuclear terrorist attack**.**

Less has been written about the horrific consequences of excessive fear of nuclear terrorism. Here is a partial listing of negative policy initiatives that have flowed from overblown fears of terror by atomic weaponry. **The war in Iraq**. On October 7, 2002, President George W. Bush gave a national address in which he said: The evidence indicates that Iraq is reconstituting its nuclear weapons program. Saddam Hussein has held numerous meetings with Iraqi nuclear scientists, a group he calls his "nuclear mujahideen"-his nuclear holy warriors ...If the Iraqi regime is able to produce, buy, or steal an amount of highly enriched uranium a little larger than a single softball, it could have a nuclear weapon in less than a year. And if we allow that to happen, a terrible line would be crossed. Saddam Hussein would be in a position to blackmail anyone who opposes his aggression. He would be in a position to dominate the Middle East. He would be in a position to threaten America. And Saddam Hussein would be in a position to pass nuclear technology to terrorists. (White House, 2002) Insiders in the George W. Bush administration have revealed that when the administration was seeking internal support for the decision to attack Saddam's Iraq, there were disagreements over how the decision should be framed. Saddam had been tagged as a supporter of terrorism, and he had begun a nuclear program that was halted as a result of the Desert Shield campaign in 1991 but whose status of dismantlement required more verification following 9/11, a task being carried out by the International Atomic Energy Agency (IAEA). In a 2003 Vanity Fair telephone interview conducted by Sam Tannenhaus with Paul Wolfowitz, transcribed by the Defense Department, in which the reasons for going to war again with Iraq were raised, Wolfowitz states: ÒThe truth is that for reasons that have a lot to do with the US government bureaucracy, we settled on the one issue that everyone could agree on, which was weapons of mass destruction as the core reason.Ó He then elaborates, saying that among ÒfundamentalconcernsÓ the ÒoverridingÓ one was the connection between weapons of mass destruction and support for terrorism (Defense Department, 2009). Recall also Condoleezza RiceÕs comment of not waiting for a Òmushroom cloudÓ as a threat warning. So the IAEA investigation was shoved aside, President Bush made his speech, and the war was launched, ostensibly to prevent Saddam from manufacturing nuclear weapons that he might turn over to terrorists. The war has resulted in the deaths of hundreds of thousands of civilians, exceeding the number who died at Hiroshima or Nagasaki, and has spawned the rise of offshoots of Al Qaeda like the Islamic State, whose brutality matches or exceeds that of the original. All this has occurred even thoughÑas revealed by the failure to find weapons of mass destruction following the warÑSaddamÕs nuclear program had been completely shut down in the wake of the 1991 Persian Gulf War.

The hyper focus on terrorism's potential impact led to the creation of the surveillance state and is the main driver behind surveillance

Weiss 15 (Leonard Weiss, a visiting scholar at the Center for International Security and Cooperation at Stanford University, USA, and a member of the National Advisory Board of the Center for Arms Control and Non-Proliferation in Washington, DC. For more than two decades, he was staff director of the US Senate Committee on Governmental Affairs and its Subcommittee on Energy and Nuclear Proliferation, during which time he wrote major legislation on nuclear nonproliferation and led investigations of nuclear programs of other countries. Bush administration have revealed that when the administration was seeking internal support for the decision to attack Saddam's Iraq, there were disagreements over how the decision should be framed. Saddam had been tagged as a supporter of terrorism, and he had begun a nuclear program that was halted as a result of the Desert Shield campaign in 1991 but whose status of dismantlement required more verification following 9/11, a task being carried out by the International Atomic Energy Agency (IAEA). In a 2003 Vanity Fair telephone interview conducted by Sam Tannenhaus with Paul Wolfowitz, transcribed by the Defense Department, in which the reasons for going to war again with Iraq were raised, Wolfowitz states: ÒThe truth is that for reasons that have a lot to do with the US government bureaucracy, we settled on the one issue that everyone could agree on, which was weapons of mass destruction as the core reason.Ó He then elaborates, saying that among ÒfundamentalconcernsÓ the ÒoverridingÓ one was the connection between weapons of mass destruction and support for terrorism (Defense Department, 2009). Recall also Condoleezza RiceÕs comment of not waiting for a Òmushroom cloudÓ as a threat warning. So the IAEA investigation was shoved aside, President Bush made his speech, and the war was launched, ostensibly to prevent Saddam from manufacturing nuclear weapons that he might turn over to terrorists. The war has resulted in the deaths of hundreds of thousands of civilians, exceeding the number who died at Hiroshima or Nagasaki, and has spawned the rise of offshoots of Al Qaeda like the Islamic State, whose brutality matches or exceeds that of the original. All this has occurred even thoughÑas revealed by the failure to find weapons of mass destruction following the warÑSaddamÕs nuclear program had been completely shut down in the wake of the 1991 Persian Gulf War. **The rise of the national surveillance state.** Lowering the risk of terrorism, particularly the nuclear kind, is the quintessential reason that the mandarins of the national security state have given for employing the most invasive national surveillance system in history. ÒFinding the needle in the haystackÓ is how some describe the effort to discern terrorist plots from telephone metadata and intercepted communications. But the haystack keeps expanding, and large elements of the American population appear willing to allow significant encroachments on the constitutional protections provided by the Fourth Amendment. The fear of terrorism has produced this change in the American psyche even though there is no evidence that the collection of such data has resulted in the discovery of terrorist plots beyond those found by traditional police and intelligence methods. It is doubtful that we shall soon (if ever) see a return to the status quo ante regarding constitutional protections. This reduction in the freedom of Americans from the prying eyes of the state is a major consequence of the hyping of terrorism, especially nuclear terrorism. This is exemplified by the blithe conclusion in the previously referenced paper by Friedman and Lewis (2014), in which readers are advised to Òbe more proactive in supporting our governmentÕs actions to ameliorate potential risks.Ó The National Security Agency should love this**.**

The overhype of terrorism serves as an obstacle in the way of nuclear disarmament

Weiss 15 (Leonard Weiss, a visiting scholar at the Center for International Security and Cooperation at Stanford University, USA, and a member of the National Advisory Board of the Center for Arms Control and Non-Proliferation in Washington, DC. For more than two decades, he was staff director of the US Senate Committee on Governmental Affairs and its Subcommittee

on Energy and Nuclear Proliferation, during which time he wrote major legislation on nuclear nonproliferation and led investigations of nuclear programs of other countries. He is a former professor of applied mathematics and engineering at Brown University and the University of Maryland. March/April 2015, “On fear and nuclear terrorism” from edition of “Bulletin of the Atomic Scientists”, 7/8/2015 ZEC)

For nearly two decades, predictions of nuclear catastrophe at the hands of terrorists have become an accepted part of the national security debate, overshadowing to some extent the concerns about proliferation of national nuclear programs. It appears that a belief in the effectiveness of deterrence has assuaged the fears of many people about nuclear war waged by countries (whether justified or not), while at the same time the belief that terrorists cannot be deterred has raised nuclear terrorism fears more than ever. These fears have been fanned in published predictions of nuclear terror attacks (within a given 10- year period) by prominent persons in nuclear security circles, or by informal polls, such as the one issued nine years ago by Sen. Richard Lugar when he chaired the Senate Foreign Relations Committee. The poll asked persons working in nuclear policy areas what they thought the risk was of a nuclear terrorist attack over a 10-year period, with guesses suggesting a high threat but based on no hard data that was provided or referenced. Much has been written about the horrific consequences of a successful nuclear terrorist attack**. Less has been written about the horrific consequences of excessive fear of nuclear terrorism.** Here is a partial listing of negative policy initiatives that have flowed from overblown fears of terror by atomic weaponry. The war in Iraq. On October 7, 2002, President George W. Bush gave a national address in which he said: The evidence indicates that Iraq is reconstituting its nuclear weapons program. Saddam Hussein has held numerous meetings with Iraqi nuclear scientists, a group he calls his “nuclear mujahideen”-his nuclear holy warriors ...If the Iraqi regime is able to produce, buy, or steal an amount of highly enriched uranium a little larger than a single softball, it could have a nuclear weapon in less than a year. And if we allow that to happen, a terrible line would be crossed. Saddam Hussein would be in a position to blackmail anyone who opposes his aggression. He would be in a position to dominate the Middle East. He would be in a position to threaten America. And Saddam Hussein would be in a position to pass nuclear technology to terrorists. (White House, 2002) Insiders in the George W. Bush administration have revealed that when the administration was seeking internal support for the decision to attack Saddam’s Iraq, there were disagreements over how the decision should be framed. Saddam had been tagged as a supporter of terrorism, and he had begun a nuclear program that was halted as a result of the Desert Shield campaign in 1991 but whose status of dismantlement required more verification following 9/11, a task being carried out by the International Atomic Energy Agency (IAEA). In a 2003 Vanity Fair telephone interview conducted by Sam Tannenhaus with Paul Wolfowitz, transcribed by the Defense Department, in which the reasons for going to war again with Iraq were raised, Wolfowitz states: ÒThe truth is that for reasons that have a lot to do with the US government bureaucracy, we settled on the one issue that everyone could agree on, which was weapons of mass destruction as the core reason.Ó He then elaborates, saying that among Òfundamental concernsÓ the ÒoverridingÓ one was the connection between weapons of mass destruction and support for terrorism (Defense Department, 2009). Recall also Condoleezza RiceÕs comment of not waiting for a Òmushroom cloudÓ as a threat warning. So the IAEA investigation was shoved aside, President Bush made his speech, and the war was launched, ostensibly to prevent Saddam from manufacturing nuclear weapons that he might turn over to terrorists. The war has resulted in the deaths of hundreds of thousands of civilians, exceeding the number who died at Hiroshima or Nagasaki, and has spawned the rise of offshoots of Al Qaeda like the Islamic State, whose brutality matches or exceeds that of the original. All this has occurred even thoughÑas revealed by the failure to find weapons of mass destruction following the warÑSaddamÕs nuclear program had been completely shut down in the wake of the 1991 Persian Gulf War. The rise of the national surveillance state. Lowering the risk of terrorism, particularly the nuclear kind, is the quintessential reason that the mandarins of the national security state have given for employing the most invasive national surveillance system in history. ÒFinding the needle in the haystackÓ is how some describe the effort to discern terrorist plots from telephone metadata and intercepted communications. But the haystack keeps expanding, and large elements of the American population appear willing to allow significant encroachments on the constitutional protections provided by the Fourth Amendment. The fear of terrorism has produced this change in the American psyche even though there is no evidence that the collection of such data has resulted in the discovery of terrorist plots beyond those found by traditional police and intelligence methods. It is doubtful that we shall soon (if ever) see a return to the status quo ante regarding constitutional protections. This reduction in the freedom of Americans from the prying eyes of the state is a major consequence of the hyping of terrorism, especially nuclear terrorism. This is exemplified by the blithe conclusion in the previously referenced paper by Friedman and Lewis (2014), in which readers are advised to Òbe more proactive in supporting our governmentÕs actions to ameliorate potential risks.Ó The National Security Agency should love this. **Another obstacle on the path to nuclear disarmament.** One might expect that fear of nuclear terrorism would have the effect of making production of nuclear weapons by states more difficult politically. In fact, the opposite is the case. Since nuclear deterrence is deemed inoperable when it comes to terrorists, using nukes to threaten their enablers or suppliers becomes a logical alternative policy choice. In that case, a weapon stateÕs obligation under Article VI of the Nuclear Non-Proliferation Treaty to move toward disarmament is trumped by what is deemed a more immediate national security need to prevent nuclear terrorism. Distortion of national politics and government spending. When nuclear safety became subject to government regulation, a question frequently

raised during public and private debates about regulation was formulated as: ÒHow safe is safe enough?Ó Although the risk of nuclear terrorism is very low, there is no public debate on the issue of Òacceptable risk.Ó No politician will publicly allow that we are or will ever be ÒsafeenoughÓ from a nuclear terrorist attack. Indeed, reputations have been made and enhanced in the public and private spheres by loud proclamations that we are not safe enough and that more needs to be done if we are to avoid catastrophe. There is no surer way for the national labs or the intelligence agencies to receive more money from the Treasury than by hyping the terrorist threat, particularly if the word ÒnuclearÓ can be attached to it, and by claiming that oneÕs work is directly applicable to mitigating the threat. And there is no surer way for politicians to give themselves immunity from a charge of supporting wasteful spending than by citing their votes as protecting the country from terrorism, nuclear or otherwise.

Traditional Investigation Solves

When terrorists are captured it is because of traditional investigation not mass surveillance

Schneier 15 (Bruce. Bruce Schneier is a renowned security and cryptology technologist, a fellow at the Berkman Center for Internet and Society at Harvard Law School, a program fellow at the New America Foundation's Open Technology Institute, a board member of the Electronic Frontier Foundation, an Advisory Board Member of the Electronic Privacy Information Center, and the Chief Technology Officer at Resilient Systems, Inc. He has testified before Congress and is the author of *Data and Goliath*. 3-24-2015. "Why Mass Surveillance Can't, Won't And Never Has Stopped A Terrorist". The Daily Digg. http://digg.com/2015/why-mass-surveillance-cant-wont-and-never-has-stopped-a-terrorist. Accessed 7-9-2015. KC)

Adversaries vary in the sophistication of their ability to avoid surveillance. Most criminals and terrorists — and political dissidents, sad to say — are pretty unsavvy and make lots of mistakes. But that's no justification for data mining; targeted surveillance could potentially identify them just as well. The question is whether mass surveillance performs sufficiently better than targeted surveillance to justify its extremely high costs. Several analyses of all the NSA's efforts indicate that it does not. The three problems listed above cannot be fixed. Data mining is simply the wrong tool for this job, which means that all the mass surveillance required to feed it cannot be justified. When he was NSA director, General Keith Alexander argued that ubiquitous surveillance would have enabled the NSA to prevent 9/11. That seems unlikely. He wasn't able to prevent the Boston Marathon bombings in 2013, even though one of the bombers was on the terrorist watch list and both had sloppy social media trails — and this was after a dozen post-9/11 years of honing techniques. The NSA collected data on the Tsarnaevs before the bombing, but hadn't realized that it was more important than the data they collected on millions of other people. This point was made in the 9/11 Commission Report. That report described a failure to "connect the dots," which proponents of mass surveillance claim requires collection of more data. But what the report actually said was that the intelligence community had all the information about the plot without mass surveillance, and that the failures were the result of inadequate analysis. Mass surveillance didn't catch underwear bomber Umar Farouk Abdulmutallab in 2006, even though his father had repeatedly warned the U.S. government that he was dangerous. And the liquid bombers (they're the reason governments prohibit passengers from bringing large bottles of liquids, creams, and gels on airplanes in their carry-on luggage) were captured in 2006 in their London apartment not due to mass surveillance but through traditional investigative police work. Whenever we learn about an NSA success, it invariably comes from targeted surveillance rather than from mass surveillance. One analysis showed that the FBI identifies potential terrorist plots from reports of suspicious activity, reports of plots, and investigations of other, unrelated, crimes. This is a critical point. Ubiquitous surveillance and data mining are not suitable tools for finding dedicated criminals or terrorists. We taxpayers are wasting billions on mass-surveillance programs, and not getting the security we've been promised. More importantly, the money

we're wasting on these ineffective surveillance programs is not being spent on investigation, intelligence, and emergency response: tactics that have been proven to work. The NSA's surveillance efforts have actually made us less secure.

Terrorism Alt Cause

Alt cause – Lack of information sharing causes terrorism

Bergen et al 14 (Peter, David Sterman, Emily Schneider, and Baily Cahall. Peter Bergen is the director of the National Security Program at the New America Foundation, where David Sterman and Emily Schneider are research assistants and Bailey Cahall is a research associate. 1-2014. "Do NSA's Bulk Surveillance Programs Stop Terrorists?" New America Foundation – National Security Program. https://www.newamerica.org/downloads/IS_NSA_surveillance.pdf. Accessed 7-9-2015. KC)

However, the Mihdhar case does not provide a good justification for the bulk collection of metadata. The government missed multiple opportunities to catch Mihdhar, and the primary failure was one of informationsharing inside the U.S. intelligence community rather than the lack of an additional data point. Furthermore, the information regarding the supposedly fateful phone call could likely have been obtained without the bulk collection of metadata. The missed opportunities in the Mihdhar case are well documented.55 The CIA failed to "watch list" Mihdhar and another suspected al-Qaeda terrorist, Nawaf al-Hazmi, whom the agency had been tracking since they attended an al-Qaeda summit in Malaysia on January 5, 2000. The failure to watch-list the two with the State Department meant that they were able to enter the United States under their real names with ease. Ten days after the meeting in Malaysia, on January 15, 2000, Hazmi and Mihdhar flew into Los Angeles.56 The CIA also did not alert the FBI about the identities of the suspected terrorists so that the bureau could look for them once they were inside the United States. An investigation by the CIA inspector general – published in unclassified form in 2007 – found that this was not the oversight of a couple of agency employees, but rather that a large number of CIA officers and analysts had dropped the ball: "Some fifty to sixty" agency employees read cables about the two al-Qaeda suspects without taking any action.57 Some of those officers knew that one of the alQaeda suspects had a visa for the United States, and by March 2001 some knew that the other suspect had flown to Los Angeles.58 The soon-to-be hijackers would not have been difficult to find in California if their names had been known to law enforcement. Under their real names they rented an apartment, obtained driver's licenses, opened bank accounts, purchased a car, and took flight lessons at a local school. Mihdhar even listed his name in the local phone directory.59 It was only on August 24, 2001, as a result of questions raised by a CIA officer on assignment at the FBI, that the two al-Qaeda suspects were watch-listed and their names communicated to the bureau. Even then the FBI sent out only a "Routine" notice requesting an investigation of Mihdhar.60 A month later, Hamzi and Mihdhar were two of the "muscle" hijackers on American Airlines Flight 77 that plunged into the Pentagon, killing 189 people. The CIA inspector general's report concluded that "informing the FBI and good operational follow-through by CIA and FBI might have resulted in surveillance of both alMihdhar and al-Hazmi. Surveillance, in turn, would have had the potential to yield information on flight training, financing, and links to others who were complicit in the 9/11 attacks."61 These multiple missed opportunities challenge the administration's claims that the NSA's bulk surveillance program could have prevented the 9/11 attacks. The key problem was one of information-sharing, not lack of information. If information-sharing had been functioning, Mihdhar would likely have been caught regardless of the collection of telephone metadata, and if information sharing was not functioning, it is unclear why collecting more information would have changed the result. Even if Mihdhar's phone calls from San Diego to Yemen is considered a moment for preventing the 9/11 attacks, it is likely that more targeted surveillance of that phone number rather than bulk collection of metadata would have been sufficient. Communications to and from the house in Yemen were already being intercepted by the NSA as a result of investigations into the 1998 U.S. embassy bombings in Africa and the USS Cole bombing in 2000. 62 According to U.S. officials quoted by Josh Meyer, a leading national security reporter at the Los Angeles Times, the information from the calls could have been shared through a FISA warrant under the authorities the NSA had even before 9/11.63 The United States government could and should have been alerted to Mihdhar's phone calls even without the expanded authority to collect the telephone metadata of all Americans under Section

215. Indeed, Richard Clarke, the national coordinator for security, infrastructure protection, and counterterrorism from 1998 to 2001, has explained that the Justice Department "could have asked the FISA Court for a warrant to all phone companies to show all calls from the U.S. which went to the Yemen number. As far as I know, they did not do so. They could have."64 Clarke played down the need for bulk collection in such a scenario, continuing, "My understanding is that they did not need the current All Calls Data Base FISA warrant to get the information they needed. Since they had one end of the calls (the Yemen number), all they had to do was ask for any call connecting to it."65 (Clarke was one of the five members of the White House review group that President Obama established in August 2013 to review the U.S. government's surveillance activities and which issued its report on December 18, 2013). The overall problem for U.S. counterterrorism officials is not that they need the information from the bulk collection of phone data, but that they don't sufficiently understand or widely share the information they already possess that is derived from conventional law enforcement and intelligence techniques. This was true of the two 9/11 hijackers living in San Diego and it is also the unfortunate pattern we have seen in several other significant terrorism cases: Chicago resident David Coleman Headley was central to the planning of the 2008 terrorist attacks in Mumbai that killed 166 people. Yet, following the 9/11 attacks, U.S. authorities received plausible tips regarding Headley's associations with militant groups at least five times from his family members, friends, and acquaintances.66 These multiple tips were never followed up in an effective fashion. Maj. Nidal Hasan, a U.S. Army psychiatrist, killed 13 people at Fort Hood, Texas, in 2009. Before the attack, U.S. intelligence agencies had intercepted multiple emails between Maj. Hasan and Anwar al-Awlaki, a U.S.- born cleric living in Yemen who was notorious for his ties to militants. The emails included a discussion of the permissibility in Islam of killing U.S. soldiers. Counterterrorism investigators didn't follow up on these emails, believing that they were somehow consistent with Maj. Hasan's job as a military psychiatrist.67 Carlos Bledsoe, a convert to Islam, fatally shot a soldier at a Little Rock, Ark., military recruiting office in 2009, several months after returning from a stay in Yemen. As a result of that trip, Bledsoe was under investigation by the FBI. Yet, he was still able to buy the weapons for his deadly attack when he was back in the United States.68 Nigerian Umar Farouq Abdulmutallab attempted to blow up Northwest Flight 253 over Detroit on Christmas Day 2009 with an "underwear bomb." Fortunately, the bomb failed to explode. Yet, a few weeks before the botched attack, Abdulmutallab's father contacted the U.S. Embassy in Nigeria with concerns that his son had become radicalized and might be planning something.69 This information wasn't further investigated. Abdulmutallab had been recruited by al-Qaeda's branch in Yemen for the mission. The White House review of New America Foundation Page 15 the bomb plot concluded that there was sufficient information known to the U.S. government to determine that Abdulmutallab was likely working for al-Qaeda in Yemen and that the group was looking to expand its attacks beyond Yemen.70 Yet, Abdulmutallab was allowed to board a plane bound for the United States without any question. All of the missed opportunities in these serious terrorism cases argue not for the gathering of ever-more vast troves of information, but simply for a better understanding of the information the government has already collected that was derived from conventional law enforcement and intelligence methods.

Turn – Mass Surveillance = Harder To Find Terrorists

Turn – Additional surveillance data makes it harder to find terrorists

Schneier 15 (Bruce. Bruce Schneier is a renowned security and cryptology technologist, a fellow at the Berkman Center for Internet and Society at Harvard Law School, a program fellow at the New America Foundation's Open Technology Institute, a board member of the Electronic Frontier Foundation, an Advisory Board Member of the Electronic Privacy Information Center, and the Chief Technology Officer at Resilient Systems, Inc. He has testified before Congress and is the author of *Data and Goliath*. 3-24-2015. "Why Mass Surveillance Can't, Won't And Never Has Stopped A Terrorist". The Daily Digg. http://digg.com/2015/why-mass-surveillance-cant-wont-and-never-has-stopped-a-terrorist. Accessed 7-9-2015. KC)

Terrorist plots are different, mostly because whereas fraud is common, terrorist attacks are very rare. This means that even highly accurate terrorism prediction systems will be so flooded with false alarms that they will be useless. The reason lies in the mathematics of detection. All detection systems have errors, and system designers can tune them to minimize either false positives or false negatives. In a terrorist-detection system, a false positive occurs when the system mistakenly identifies something harmless as a threat. A false negative occurs when the system misses an actual attack. Depending on how you "tune" your detection system, you can increase the number of false positives to assure you are less likely to miss an attack, or you can reduce the number of false positives at the expense of missing attacks. Because terrorist attacks are so rare, false positives completely overwhelm the system, no matter how well you tune. And I mean completely: millions of people will be falsely accused for every real terrorist plot the system finds, if it ever finds any. We might be able to deal with all of the innocents being flagged by the system if the cost of false positives were minor. Think about the full-body scanners at airports. Those alert all the time when scanning people. But a TSA officer can easily check for a false alarm with a simple pat-down. This doesn't work for a more general data-based terrorism-detection system. Each alert requires a lengthy investigation to determine whether it's real or not. That takes time and money, and prevents intelligence officers from doing other productive work. Or, more pithily, **when you're watching everything, you're not seeing anything.** The US intelligence community also likens finding a terrorist plot to looking for a needle in a haystack. And, as former NSA director General Keith Alexander said, "you need the haystack to find the needle." That statement perfectly illustrates the problem with mass surveillance and bulk collection. When you're looking for the needle, the last thing you want to do is pile lots more hay on it. More specifically, there is no scientific rationale for believing that adding irrelevant data about innocent people makes it easier to find a terrorist attack, and lots of evidence that it does not. You might be adding slightly more signal, but you're also adding much more noise. And despite the NSA's "collect it all" mentality, its own documents bear this out. The military intelligence community even talks about the problem of "drinking from a fire hose": **having so much irrelevant data that it's impossible to find the important bits.** We saw this problem with the NSA's eavesdropping program: the false positives overwhelmed the system. In the years after 9/11, the NSA passed to the FBI thousands of tips per month; every one of them turned out to be a false alarm. The cost was enormous, and ended up frustrating the FBI agents who were obligated to investigate all the tips. We also saw this with the Suspicious Activity Reports —or SAR — database: tens of thousands of reports, and no actual results. And all the telephone metadata the NSA collected led to just one success: the conviction of a taxi driver who sent $8,500 to a Somali group that posed no direct threat to the US — and that was probably trumped up so the NSA would have better talking points in front of Congress. The second problem with using data-mining techniques to try to uncover terrorist plots is that each attack is unique. Who would have guessed that two pressure-cooker bombs would be delivered to the Boston Marathon finish line in backpacks by a Boston college kid and his older brother? Each rare individual who carries out a terrorist attack will have a disproportionate impact on the criteria used to decide who's a likely terrorist, leading to ineffective detection strategies. The third problem is that the people the NSA is trying to find are wily, and they're trying to avoid detection. In the world of personalized marketing, the typical surveillance subject isn't trying to hide his activities. That is not true in a police or national security context. An adversarial relationship makes the problem much harder, and means that most commercial big data analysis tools just don't work. A commercial tool can simply ignore people trying to hide and assume benign behavior on the part of everyone else. Government data-mining techniques can't do that, because those are the very people they're looking for. Adversaries vary in the sophistication of their ability to avoid surveillance. Most criminals and terrorists — and political dissidents, sad to say — are pretty unsavvy and make lots of mistakes. But that's no justification for data mining; targeted surveillance could potentially identify them just as well. The question is whether mass surveillance performs sufficiently better than targeted surveillance to justify its extremely high costs. Several analyses of all the NSA's efforts indicate that it does not. The three problems listed above cannot be fixed. Data mining is simply the wrong tool for this job, which means that all the mass surveillance required to feed it cannot be justified. When he was NSA director, General Keith Alexander argued that ubiquitous surveillance would have enabled the NSA to prevent 9/11. That seems unlikely. He wasn't able to prevent the Boston Marathon bombings in 2013, even though one of the bombers was on the terrorist watch list and both had sloppy social media trails — and this was after a dozen post-9/11 years of honing techniques. The NSA collected data on the Tsarnaevs before the bombing, but hadn't realized that it was more important than the data they collected on millions of other people. This point was made in the 9/11 Commission Report. That report described a failure to "connect the dots," which proponents of mass surveillance claim requires collection of more data. But what the report actually said was that the

intelligence community had all the information about the plot without mass surveillance, and that the failures were the result of inadequate analysis. Mass surveillance didn't catch underwear bomber Umar Farouk Abdulmutallab in 2006, even though his father had repeatedly warned the U.S. government that he was dangerous. And the liquid bombers (they're the reason governments prohibit passengers from bringing large bottles of liquids, creams, and gels on airplanes in their carry-on luggage) were captured in 2006 in their London apartment not due to mass surveillance but through traditional investigative police work. Whenever we learn about an NSA success, it invariably comes from targeted surveillance rather than from mass surveillance. One analysis showed that the FBI identifies potential terrorist plots from reports of suspicious activity, reports of plots, and investigations of other, unrelated, crimes. This is a critical point. Ubiquitous surveillance and data mining are not suitable tools for finding dedicated criminals or terrorists. We taxpayers are wasting billions on mass-surveillance programs, and not getting the security we've been promised. More importantly, the money we're wasting on these ineffective surveillance programs is not being spent on investigation, intelligence, and emergency response: tactics that have been proven to work. **The NSA's surveillance efforts have actually made us less secure.**

Turn – Anti-Terrorism Increase Terrorism

Turn – aggressive anti-terrorist policies increase terrorism

Democracy Now 15 (Democracy Now is an independent news source. In this article they are quoting Noam Chomsky, a professor emeritus at MIT where he has taught for over fifty years, and working in areas including linguistics, cognitive science, and social justice. 3-3-2015. "Chomsky on Snowden & Why NSA Surveillance Doesn't Stop Terror While the U.S. Drone War Creates It". Democracy Now. http://www.democracynow.org/2015/3/3/chomsky_on_snowden_why_nsa_surveillance. Accessed 7-9-2015. KC)

NOAM CHOMSKY: If they want to—first of all, it's—we can raise this question, but it's academic, because they are not preventing terrorism. You'll recall, when the Snowden revelations came out, the immediate reaction from the government, the highest level—Keith Alexander, others—was that these NSA programs had stopped, I think they said, 54 or so acts of terror. Gradually, when the press started asking questions, it was whittled down to about 12. Finally, it came down to one. And that act of terror was a man who had sent, I think, $8,500 to Somalia. That's the yield of this massive program. And it is not intended to stop terrorism. It's intended to control the population. That's quite different. You have to be very cautious in accepting claims by power systems. They have no reason to tell you the truth. And you have to look and ask, "Well, what is the truth?" And this system is not a system for protecting terrorism. Actually, you can say the same about the drone assassination program. That's a global assassination program, far and away the worst act of terror in the world. It's also a terror-generating program. And they know it, from high places. You can find quotation after quotation where they know it. Take this one case that I mentioned before, this child who was murdered in a drone strike after having watched his family burn to death by drone strikes. AMY GOODMAN: In Yemen. NOAM CHOMSKY: What's the effect of this on people? Well, it's to create terror. The close analyses have shown that that's exactly what happens. There's a very important book by Akbar Ahmed, who's an important anthropologist, who is a Pakistani, who studies tribal systems and worked in the North-West territories and so on, and it's called The Thistle and the Drone. And he goes through, in some detail, the effect on tribal societies of simply murdering—from their point of view, just murdering people at random. The drone attacks, remember, are aimed at people who are suspected of maybe someday wanting to harm us. I mean, suppose, say, that Iran was killing people in the United States and Israel who they thought would—might someday want to harm them. They could find plenty of people. Would we consider that legitimate? It's again, we have the right to carry out mass murder of suspects who we think might harm us someday. How does the world look at this? How do the people look at this in this village where this child was who said that they're terrorized by constant drone strikes all over North-West Pakistan? That's true. Now it's over most of the world. The U.S. war—so-called war against terror has been a smashing success. There was a small

group up in the tribal areas of mostly Pakistan and Afghanistan, al-Qaeda, and we have succeeded in spreading it over the whole world. Now they're all everywhere—you know, West Africa, Southeast Asia—simply generating more and more terror. And I think it's—you know, it's not that the U.S. is trying to generate terror. It's simply that it doesn't care.

Terrorism's Inevitable

We can't fight Terrorism – killing terrorists just perpetuates the problem – State Department admits

Benen '15 (Feb 18th 2015, Steve Benen, is a producer for MSNBC's "The Rachel Maddow Show" and an MSNBC contributor. Before joining MSNBC, Benen was a contributing writer to the Washington Monthly, headlining the "Political Animal" blog. His background includes writing for a variety of publications, including Talking Points Memo, The American Prospect, the Huffington Post, the New York Daily News, and Salon.com. He is also the former publisher of The Carpetbagger Report. 2009, The Atlantic named Benen one of the top 50 most influential political commentators in the United States. Benen got his Master's degree at the George Washington University, MSNBC, "'We cannot kill our way out of this war" http://www.msnbc.com/rachel-maddow-show/we-cannot-kill-our-way-out-war DA: 7/9/15 CB)

If you generally avoid conservative media, you may not realize that the right has thrown a fit over its latest Villain of the Week. It's not President Obama, former Secretary of State Hillary Clinton, or Attorney General Eric Holder. Rather, it's U.S. State Department spokesperson Marie Harf. On Monday's edition of "Hardball" here on msnbc, Harf talked with host Chris Matthews about ISIS and explained that the United States can't "kill our way out" of the problem. "We're killing a lot of them, and we're going to keep killing more of them. So are the Egyptians. So are the Jordanians. They're in this fight with us. But we cannot win this war by killing them. We cannot kill our way out of this war. We need, in the longer term – medium and longer term – to go after the root causes that leads people to join these groups. […] "You're right, there is no easy solution in the long term to preventing and combatting violent extremism, but if we can help countries work at the root causes of this – what makes these 17-year-old kids pick up an AK-47 instead of trying to start a business? Maybe we can try to chip away at this problem, while at the same time going after the threat, taking on ISIL in Iraq, in Syria, and helping our partners around the world." The right went from zero to apoplexy in record time. Conservative blogs could hardly contain their outrage, while Fox News spent yesterday playing snippets of Harf's interview, over and over again, as some kind of attempt at mockery. Fox's Kimberly Guilfoyle said Harf believes "we should open up car wash that's in Iraq and Syria and provide jobs to the evil doers, and then these problems will all go away." Fox's Bill O'Reilly called Harf's comments "nonsense." Fox's Brit Hume added, "What [Harf] said was manifestly silly." Fox's Eric Bolling called the State Department official's comments "incomprehensible." I guess we were due for a manufactured controversy rooted in nothing, and the right pretending to be upset with President Obama's Prayer Breakfast remarks didn't have legs, so we're stuck with Marie Harf leading far-right personalities to reach for the fainting couch. In fairness, Harf was clearly inviting trouble when she told a national audience, "We can't kill our way out of this mess." Wait, did I say that was Harf? Actually, that's what Mitt Romney said during a 2012 presidential debate. But clearly Harf was out of line when she said combating poverty "is an answer to terror," right? Well, actually it was George W. Bush who said that. Look, from time to time, the right needs a new toy to play with. It doesn't have to make sense, but if conservatives aren't outraged by a perceived foe saying something they deem offensive, the right gets visibly uncomfortable. It's entirely possible Harf became the Villain of the Week because some Republicans are just bored. But for grown-ups, condemning Marie Harf's comments is pointless. She articulated a vision plenty of officials, in both parties, have presented many times – a forceful confrontation with terrorists in the short term, coupled with a more comprehensive approach that prevents terrorism in the longer term. Why is this controversial? It's not. Just as important, those whining the loudest probably know it's not. If you want to see the whole Harf interview, instead of the parts Fox found amusing, the clip is below. She was also on msnbc this morning, clarifying the comments that, to my mind, didn't need clarification.

Terrorism's inevitable – Iran supports them – Empirics

Flurry '03 (November 2003, Gerald Flurry, Editor in Chief for the Trumpet, The trumpet, "Why We Cannot Win the War Against Terrorism" https://www.thetrumpet.com/article/833.31733.57.0/world/terrorism/why-we-cannot-win-the-war-against-terrorism?preview DA: 7/9/15 CB)

History teaches us some powerful lessons—if we are willing to learn. For example, history teaches us that we cannot win our war against terrorism. We can learn some essential lessons about our future through history. History is a wonderful teacher. So we'll start there. Then we can move on to a far greater teacher of why we can't conquer terrorism unless massive changes are made—if it isn't already too late! The Root of Terrorism The Iraq campaign is the latest round in America's global war on terrorism. But where did all of this world terrorism begin? Iraq is a dangerous part of the equation, but it is not the head of the terrorist snake. We must go back in history to see terrorism's roots. It's not enough to destroy the branches. We must pull the terrorist tree up by the roots. It's the only way to win this war. When Shah Mohammed Reza Pahlavi led Iran, he was a strong ally of America. But our liberal press and politicians thought he was too undemocratic, so they helped to drive him from power. As he was falling, America gave him little or no support. Then, in 1979, Ayatollah Ruhollah Khomeini overthrew the shah. Khomeini established Iran as the world's number-one state sponsor of terrorism. When Khomeini died 10 years later, he was succeeded by Hashemi Rafsanjani, who intensified Iran's international network of terrorism. It was only then that some observers began to see what a terrible mistake liberals had made in assisting the shah's downfall. Back in 1994, then-Secretary of State Warren Christopher called Iran "the world's most significant state sponsor of terrorism." How pathetic to make such a statement and do nothing about it! Just how much of a superpower is America? America has known for years who "the world's most significant state sponsor of terrorism" is. But it lacks the will to deal with Iran—to hold Iran accountable for its terrorist acts of war! In the 1990s, state-sponsored terrorism became deeply entrenched in Iran, and America's leaders did almost nothing to combat it. More than any other nation (apart from Iran), America is responsible for the overthrow of the shah and the ushering in of Ayatollah Khomeini. Our weakness could prove to be the biggest foreign-policy disaster of the 20th century! How did it all happen? We must understand how this relates to the present situation in Iraq. History shows how Islamic extremism can dramatically change the politics within a country, and it gives us an indication of the kind of power Iran could be very close to achieving. Let's look at Egypt, where Islamic extremism—which spawns terrorism—is gaining power at a frightening pace. THERE, ONE ASSASSINATION TURNED THE COURSE OF THE ENTIRE MIDDLE EAST! Radical Changes in Egypt A few years before the fall of the shah of Iran, Anwar al-Sadat was the warrior leader of Egypt and the Middle East. For example, he was the key leader of the Arab world in the Yom Kippur War against the Jews. But, then the world was shocked—especially the Arab world. About the time Iran's shah fell, Mr. Sadat was becoming an astounding Middle East peacemaker. He enraged the Arab radicals by speaking at the Jewish Knesset (their congress, or parliament). One man was literally swinging the Middle East toward peace with the West. But Mr. Sadat was working against the tide of radical Islam. It is interesting that the late Herbert W. Armstrong visited with two Egyptian presidents: Sadat and Hosni Mubarak. He gave both men a strong warning that we were not going to have peace until Allah, or God, gave it to us! In 1981, Mike Wallace of the television program 60 Minutes interviewed Ayatollah Khomeini (who had come to power only two years before). He told the ayatollah that Sadat had called him a "lunatic." Almost immediately afterward, in just days, President Sadat was assassinated! That is the kind of power the leader of radical Islam has! America and the world allowed this evil power to change history. Now terrorism is rampant around the world! America didn't have the will to stop such state-sponsored madness. When the Sadat assassination occurred, Mr. Armstrong said it was a turning point in Middle East history! And that was almost an understatement. But virtually nobody in the media saw—or they refused to see—what A WORLD-CHANGING EVENT that was! Iran's terrorist network was working frighteningly well. Mr. Sadat was in the process of changing the Middle East for the good of the world. He took a stand against many of his own people and the Arab world to make peace with Israel. He proved to be a truly great man by putting the interests of the world and Egypt above his personal safety. IF THE LEADERS OF THE U.S. AND BRITAIN HAD SHOWN HIS COURAGE, THEY WOULD HAVE DEALT WITH IRAN THEN. Because of U.S. weakness, the Middle East began to look to the king of terror for leadership. It all happened because of American, British and Israeli weakness. Islamic radicals are very effective in assassinating top leaders. They probably also assassinated the speaker of Egypt's parliament, Rifaat al-Mahgoub (the country's second-ranking official at the time), in 1990. Gunmen on motorcycles sprayed his chauffeured sedan with automatic rifle fire. Radicals likely were behind the killing of Algeria's President Mohammed

Boudiaf in 1992. These are just a few examples of how Islamic extremism can influence Mideast politics. President Mubarak, a moderate, could be assassinated just as Anwar el-Sadat was. This could implement another gigantic change in Egyptian politics, similar to what happened in Iran's 1979 revolution. Daniel 11:42 implies that Egypt will be allied with the king of the south, or Iran. (Request our free booklet The King of the South.) This prophecy indicates that there would be a radical change in Egyptian politics! It is happening before our eyes in this end time, and it is mainly because Iran's "push" toward radicalism. But that pushy foreign policy is going to lead to its downfall, in a way that most people cannot imagine! Iran's Global Ambitions A Stratfor intelligence brief dated August 22 explained that back in May, following what was seen as a decisive allied military victory in Iraq, the surrounding countries, including Saudi Arabia, Syria and Iran, saw the U.S. as the "ascendant power in the region" and recognized the need to accommodate U.S. demands. However, as events on the ground have changed since then, with stability in Iraq deteriorating, these nations now see things differently. The U.S. is no longer seen as being the ascendant force—it is seen as weak and needing help. This change will have the most impact on Iran, which has control over the Shiites in Iraq. As they see the U.S. becoming desperate, the Iranians will no longer feel the need to appease the U.S. (see article on p. 7). Stratfor stated, "[I]f the Iranians start to believe that the situation in the region is out of control from the U.S. point of view, then either their price for keeping the lid on the Shiites will become astronomical or, more likely, they will decide not to bet on what they see as the losing horse. [I believe that Iran is more aggressive in this scenario than he does.] "The situation in the region is, in our view, reaching the crisis stage for the United States. Things are going very wrong for the Bush administration. The threat of AN ISLAMIST RISING FROM THE MEDITERRANEAN TO THE PERSIAN GULF NO LONGER IS AN INTERESTING THEORETICAL CONCEPT. [This influence and control would even extend beyond the Mediterranean, into North Africa.] Except for Jordan, it is becoming a reality. Under the circumstances, Jordan's stability and security should not be assumed in the next year or so. If Iran—or native Iraqi leaders—send the Shiites into the streets, then all of Iraq will be in chaos, and a perfect storm will have formed. "Our perception of the U.S. strategy has been that the basic assumption was that the United States has the time to let the guerrillas burn themselves out or that it has enough time to craft an effective strategy. We do not think that basic assumption is valid any longer. The collapse of the cease-fire between the Israelis and Palestinians creates a regional force that can be contained only by decisive U.S. action in Iraq" (Aug. 22; emphasis mine throughout). But decisive action in Iraq, without dealing with Iran, will not stop the terrorism. The real power behind the Palestinians is Iran. No other nation would dare finance and blatantly encourage such terrorism in Israel. Iran has even been caught publicly sending enormous amounts of weapons to the Palestinians. Just a couple of years ago, Israel captured a boatload of arms going to the Palestinian terrorists. Virtually the whole world knows what Iran is doing, and Israel's terrorist problem keeps rapidly getting worse. Israel is losing its war with the terrorists, and so will the U.S. and Britain. Such terrorism will tear any free society apart. Israel is a classic example. The only way to win such a war is to deal with the main source of the terrorism, or cut off the head of the terrorist snake. But neither the U.S. nor Israel has the will to tackle Iran—even though it is the key part of the "axis of evil" in the Middle East. President Bush labeled Iran, Iraq and North Korea the "axis of evil." Iraq's government has been toppled. However, we can't win this war unless we also remove Iran's leadership. But American and British leaders are overwhelmingly liberal. And the press is dangerously pacifist. Our peoples lack the will to win this war against terrorism.

Terrorism is Inevitable – It's a permanent international phenomenon with too many motivations – nations don't even have a unified definition to fight.

Mesadieu '13 (April 1st 2013, Jeff Mesadieu, Master of Arts in Liberal Studies (MALS), Social/Public Policy, Georgetown University, "IS TERRORISM INEVITABLE?: THE IMMORTALITY OF TERRORISM" pg 1-3 https://repository.library.georgetown.edu/bitstream/handle/10822/558372/Mesadieu_georgetown_0076M_12091.pdf?sequence=1&isAllowed=y DA:7/9/15 CB)

Terrorism, known as the systematic use of terror, primarily as a means of coercion, is a phenomenon that is merely described, rather than defined. In the efforts of the international community attempting to universalize a definition of terrorism to combat it more effectively, it is difficult to imagine the likelihood of reaching an internationally agreed-upon concept of terrorism in its entirety. Laws vary from country to country and the punishments that ensue vary as well. The diversity in motivations when it comes to terrorists' attacks widens the field, which however, can often be viewed as foreshadowing elements of how these terrorist groups will meet their demise. Nevertheless, there are four motivational factors generally associated with terrorism, which are described to be political, ideological, religious and financial - with the possibility of even a combination of two or more. In our own

democratic system, the agencies that work directly on terrorism in the intelligence community have developed their own definitions of the term. For example, the Federal Bureau of Investigation defines terrorism as "the unlawful use of force or violence against persons or property to intimidate or coerce a Government, the civilian population, or any segment thereof, in furtherance of political or social objectives."1 The Department of Defense defines terrorism as "the calculated use of unlawful violence or threat of unlawful violence to inculcate fear; intended to coerce or to intimidate governments or societies in the pursuit of goals that are generally political, religious, or ideological objectives."2 It is advantageous to have several agencies develop their own definition of terrorism because the topic can be addressed in multiple ways simultaneously. The principal question in this matter concerns the immortality of Terrorism. It is well documented that terrorism is a permanent threat transnationally3 and that the global community must cooperate to combat such an issue effectively, since it is a threat to all nations. Therefore, the principal question that will be examined is: Will a working, universalized definition of terrorism help to curtail terrorist attacks or will it make little to no difference? I propose that a working, universalized definition of terrorism will simultaneously bolster the defenses of all nations threatened by terrorism, which will significantly slow the rate at which it occurs. Thus, resulting in the dismantling of terrorist groups to blot out any future plans. In order to address a problem, one must first identify the issue, then define the overarching complexity of the issue - which brings forth understanding of the issue - in order to develop resolutions to combat the problem on all fronts. Although there is the possibility that a universalized working definition may still be subject to the perception of a nation, its applicability will increase the effectiveness in combatting terrorism transnationally; even in how it is perceived relative to the nation.

Terrorism's Inevitable – Motivations and independent thought means there will always be "Terrorists" –Empirics

*** Gender Paraphrased

Mesadieu '13 (April 1st 2013, Jeff Mesadieu, Master of Arts in Liberal Studies (MALS), Social/Public Policy, Georgetown University, "IS TERRORISM INEVITABLE?: THE IMMORTALITY OF TERRORISM" pg 28 https://repository.library.georgetown.edu/bitstream/handle/10822/558372/Mesadieu_georgetown_0076M_12091.pdf?sequence=1&isAllowed=y DA:7/9/15 CB)

All in all, terrorism is collectively a complex issue, with no signs of slowing down, as ideologies are formed daily and religion becomes even more distorted by a variety of internal and external factors. As humans, we choose to hear, accept, and apply what is heard or completely reject what is told. Interestingly enough, the vast majority of people fall into the grey area, where factors looming from everywhere influence one's decision to accept what others have already or propelling an individual down a path that opposes the majority. The challenging thing is sometimes, people are born into situations that leave no "wiggle-room" to express one's individual thoughts (i.e. Slavery). Nevertheless, everyone is driven by either good or evil, and even that is particularly relative to every individual. For example, a person may argue that one ~~man~~ [Person]'s freedom fighter is another ~~man~~[person]'s terrorist, yet freedom is an end while terror is a means to an end. Therefore, the same individual can employ terror (since these things are tactics) while attaining freedom (a relative term as well) in the end, which is a desired outcome for virtually every terrorist group.

Terrorism's Inevitable – Recruitment impossible to fight and surveillance can't prevent all threats – technology.

Mesadieu '13 (April 1st 2013, Jeff Mesadieu, Master of Arts in Liberal Studies (MALS), Social/Public Policy, Georgetown University, "IS TERRORISM INEVITABLE?: THE IMMORTALITY OF TERRORISM" pg 29-33

https://repository.library.georgetown.edu/bitstream/handle/10822/558372/Mesadieu_georgetown_0076M_12091.pdf?sequence=1&isAllowed=y DA:7/9/15 CB)

The definitive issue at the heart of this paper is the inevitability of terrorism - as it is a means to justify an ends regarding political change, ideological transformation, religious establishment, or simply financial gain to remain relatively influential in daily governmental processes of the host nation-state. As to whether a working, universalized definition of terrorism will have the potential to stop terrorist attacks or at least dramatically slow the rate at which it occurs, my hypothesis argues that this will very well be the case while helping to bolster the defenses of all nations highly threatened by terrorism. Furthermore, a working definition (receiving information about a subject, having understanding of it and its applicability) will - at the very minimum - significantly slow the rate at which it occurs and thus, result in the dismantling of many more terrorist groups and the blotting out any future plans. This is not to say that the solution to best contain terrorism is by merely creating a framework through intelligence and analysis in which a group or an act is assessed by "pre-set qualifiers" (which could run the risk of premature categorization), but rather by understanding a phenomenon from its very core in an effort to combat it on all fronts. Furthermore, as the world becomes more globalized and interconnected, these terrorists groups become more cunning in recruitment, since it is now much easier for people to be informed (due to information that is readily available and accessible on many platforms such cellular phones, laptops, tablets, etc.) or influenced. 25 Interestingly enough, transparency of the individual is becoming even more commonplace in the world with the ever-expansion of social media,1 in light of events of the recent past. Transparency is a desirable trait of a government because citizens value a sense of connection to political leaders that genuinely consider the interests of the people. A true government, relatively speaking, is obliged to reflect such a characteristic by duty to some degree.2 Nevertheless, when it comes to transparency, there are always concerns regarding the contents of information that is dispersed to the public, the amount that is released, the broad spectrum of varying audiences that will receive it, and so forth. One of the primary purposes for transparency is to create, establish and sustain a direct relationship between citizens and governments. This, in itself, demands much fostering and commitment. President Obama has made it a point to create an administration that is committed to open government in an effort to give people more of an opportunity to participate in 1 26 governmental processes.3 For instance, the Open Government Initiative actually lists transparency at the forefront of its cause, along with participation and collaboration. Peter R. Orszag, the Director of the Open Government Initiative, describes the initiative's three key prongs explicitly: The three principles of transparency, participation, and collaboration form the cornerstone of an open government. Transparency promotes accountability by providing the public with information about what the Government is doing. Participation allows members of the public to contribute ideas and expertise so that their government can make policies with the benefit of information that is widely dispersed in society. Collaboration improves the effectiveness of Government by encouraging partnerships and cooperation within the Federal Government, across levels of government, and between the Government and private institutions.4 However, considering the relativity of transparency in itself, it also creates a platform for terrorists to thrive in their advances soundly by utilizing information and communications technology (ICT's) to assist in supporting their cause, especially in regards to dissemination tactics and the recruitment process.5 Furthermore, considering the "shadowy," yet, attentive makeup of a terrorist group, the beckoning question here is how great of a risk is transparency in accordance to our national security? Naturally, that 3 27 which is made readily accessible and transparent to the people by the government has surely gone through a series of screenings, but truly - how safe is it to ever give the public full disclosure about a subject or event (which could give terrorists momentum by learning the inner-workings of a specific government)? The answer has proven to be elusive - nevertheless, the 'greatest good' must be served, which unfortunately, is also relative. Thus, the output of readily accessible information and its regulation (its management, security, and so forth), in all likelihood, are key determinants to a terrorist group's planning and formulation of future terror plots. In an multi-faceted approach to combatting terrorism and generally national security issues, the United States' international community - comprised of 17 members6 - uniquely define terrorism in a way that seemingly reflects the agency, their goals and responsibilities concerning threats to the homeland. It is beneficial to have numerous agencies and organizations develop their own definition of terrorism because this long standing issue can be assessed from varying vantage points simultaneously. However, considering the valiant efforts from the collection of great minds in the IC, miscalculations in intelligence gathering and analysis can occur, resulting in devastating repercussions.7 Therefore, it is of great importance that as intelligence is gathered, 6 Intelligence.gov. http://www.intelligence.gov/about-the-intelligence-community/ (accessed March 11th, 2013). The U.S. Intelligence Community (IC) is a coalition of 17 agencies and organizations within the executive branch that work both independently and collaboratively to gather the intelligence necessary to conduct foreign relations and national security activities. Our primary mission is to collect and convey the essential information the President and members of the policymaking, law enforcement, and military communities require to execute their appointed duties. 7 "As the comparison suggests, quantifying signals and noise tells part of the warning story, but not the most important part. In both cases [the Cuban Missile Crisis and 9/11] the crucial warning problem was not

the precise number of signals; whether there were three or 30 or even 300 signals made little difference in the end. Instead, the crucial problem had to do with organizational deficiencies that ensured 28 collected, analyzed and presented to other agencies working on terrorism (or any threat to the homeland for that matter), thoughts must be shared and ideas compared in order to produce more accurate results. Richard Kerr, Thomas Wolfe and others, mentions some of the challenges associated with gathering intelligence: The Intelligence Community's uneven performance on Iraq from 2002–4 raised significant questions concerning the condition of intelligence collection, analysis, and policy support. The discussion of shortcomings and failures that follows is not meant to imply that all surprises can be prevented by even good intelligence. There are too many targets and too many ways of attacking them for even the best intelligence agencies to discover all threats in time to prevent them from happening. Nonetheless, improving performance requires an acknowledgement of past mistakes and a willingness to change.8 Nevertheless, as it seems, some of the commonalities that we find in assessing terrorism as a whole stem from the use of fear tactics and the desire for change, ideally motivated by political, ideological, religious, or financial goals; however, settling on the intricacies of terrorism such as the making of a terrorist, how targets or sites are chosen and so forth, has been a "slippery" task. To further engage this topic, several agencies within the United States, will be highlighted as their definition of terrorism is examined.

Alternatives to stop Terrorism other than NSA
United States should stop imperial conquests for Arab oil- terroristic responses Washingtons Blog 2015

(Washingtonsblog, 1-10-2015, "How to Beat Terrorism: Stop Making the Same 7 Mistakes," Washington's Blog, http://www.washingtonsblog.com/2015/01/paris-terror-attack-isis-result-911-cover.html)//PG

III. Stop Imperial Conquests for Arab Oil The U.S. has undertaken regime change against Arab leaders we don't like for six decades. We overthrew the leader of Syria in 1949, Iran in 1953, Iraq twice, Afghanistan twice, Turkey, Libya … and other oil-rich countries. Neoconservatives planned regime change throughout the Middle East and North Africa yet again in 1991. Top American politicians admit that the Iraq war was about oil, not stopping terrorism (documents from Britain show the same thing). Much of the war on terror is really a fight for natural gas. Or to force the last few hold-outs into dollars and private central banking. And the U.S. military described terror attacks on the U.S. as a "small price to pay for being a superpower": A senior officer on the Joint Staff told State Department counter-terrorism director Sheehan he had heard terrorist strikes characterized more than once by colleagues as a "small price to pay for being a superpower". Security experts – including both conservatives and liberals – agree that waging war in the Middle East weakens national security and increases terrorism. See this, this, this, this, this, this, this and this. For example, James K. Feldman – former professor of decision analysis and economics at the Air Force Institute of Technology and the School of Advanced Airpower Studies – and other experts say that foreign occupation is the main cause of terrorism. University of Chicago professor Robert A. Pape – who specializes in international security affairs – agrees. We've fought the longest and most expensive wars in American history … but we're less secure than before, and there are more terror attacks than ever. Remember, Al Qaeda wasn't even in Iraq until the U.S. invaded that country. If we want to stop terrorism, we have to stop overthrowing Arab leaders and invading Arab countries to grab their oil.

Stop drone attacks- radicalizing Yemen citizens and creating a safe haven for terrorist group
Mothana 2012

(Ibrahim Mothana- activist and cofounder of Watan Party, 6-13-2012, "How Drones Help Al Qaeda," New York Times, http://www.nytimes.com/2012/06/14/opinion/how-drones-help-al-qaeda.html?_r=1)//PG

"DEAR OBAMA, when a U.S. drone missile kills a child in Yemen, the father will go to war with you, guaranteed. Nothing to do with Al Qaeda," a Yemeni lawyer warned on Twitter last month. President Obama should keep this message in mind before ordering more drone strikes like Wednesday's, which local officials say killed 27 people, or the May 15 strike that killed at least eight Yemeni civilians. Drone strikes are causing more and more Yemenis to hate America and join radical militants; they are not driven by ideology but rather by a sense of revenge and despair. Robert Grenier, the former head of the C.I.A.'s counterterrorism center, has warned that the American drone program in Yemen risks turning the country into a safe haven for Al Qaeda like the tribal areas of Pakistan — "the Arabian equivalent of Waziristan." Continue reading the main story RELATED COVERAGE Times Topic: Al Qaeda in the Arabian Peninsula Anti-Americanism is far less prevalent in Yemen than in Pakistan. But rather than winning the hearts and minds of Yemeni civilians, America is alienating them by killing their relatives and friends. Indeed, the drone program is leading to the Talibanization of vast tribal areas and the radicalization of people who could otherwise be America's allies in the fight against terrorism in Yemen. The first known drone strike in Yemen to be authorized by Mr. Obama, in late 2009, left 14 women and 21 children dead in the southern town of al-Majala, according to a parliamentary report. Only one of the dozens killed was identified as having strong Qaeda connections. Misleading intelligence has also led to disastrous strikes with major political and economic consequences. An American drone strike in May 2010 killed Jabir al-Shabwani, a prominent sheik and the deputy governor of Marib Province. The strike had dire repercussions for Yemen's economy. The slain sheik's tribe attacked the country's main pipeline in revenge. With 70 percent of the country's budget dependent on oil exports, Yemen lost over $1 billion. This strike also erased years of progress and trust-building with tribes who considered it a betrayal given their role in fighting Al Qaeda in their areas. Yemeni tribes are generally quite pragmatic and are by no means a default option for radical religious groups seeking a safe haven. However, the increasing civilian toll of drone strikes is turning the apathy of tribal factions into anger. The strikes have created an opportunity for terrorist groups like Al Qaeda in the Arabian Peninsula and Ansar al-Sharia to recruit fighters from tribes who have suffered casualties, especially in Yemen's south, where mounting grievances since the 1994 civil war have driven a strong secessionist movement.

Drone Attacks are making A.Q.A.P stronger in Yemen

Mothana 2012

(Ibrahim Mothana- activist and cofounder of Watan Party, 6-13-2012, "How Drones Help Al Qaeda," New York Times, http://www.nytimes.com/2012/06/14/opinion/how-drones-help-al-qaeda.html?_r=1)//PG

Unlike Al Qaeda in Iraq, A.Q.A.P. has worked on gaining the support of local communities by compromising on some of their strict religious laws and offering basic services, electricity and gas to villagers in the areas they control. Furthermore, Iran has seized this chance to gain more influence among the disgruntled population in Yemen's south. And the situation is quite likely to get worse now that Washington has broadened its rules of engagement to allow so-called signature strikes, when surveillance data suggest a terrorist leader may be nearby but the identities of all others targeted is not known. Such loose rules risk redefining "militants" as any military-age males seen in a strike zone. Certainly, there may be short-term military gains from killing militant leaders in these strikes, but they are minuscule compared with the long-term damage the drone program is causing. A new generation of leaders is spontaneously emerging in furious retaliation to attacks on their territories and tribes. This is why A.Q.A.P. is much stronger in Yemen today than it was a few years ago. In 2009, A.Q.A.P. had only a few hundred members and controlled no territory; today it has, along with Ansar al-Sharia, at least 1,000 members and controls substantial amounts of territory. Yemenis are the ones who suffer the most from the presence of Al Qaeda, and getting rid of this plague is a priority for the majority of Yemen's population. But there is no shortcut in dealing with it. Overlooking the real drivers of extremism and focusing solely on tackling their security symptoms with brutal force will make the situation worse. Only a long-term approach based on building relations with local communities, dealing with the economic and social drivers of extremism, and cooperating with tribes and Yemen's army will

eradicate the threat of Islamic radicalism. Unfortunately, liberal voices in the United States are largely ignoring, if not condoning, civilian deaths and extrajudicial killings in Yemen — including the assassination of three American citizens in September 2011, including a 16-year-old. During George W. Bush's presidency, the rage would have been tremendous. But today there is little outcry, even though what is happening is in many ways an escalation of Mr. Bush's policies. Defenders of human rights must speak out. America's counterterrorism policy here is not only making Yemen less safe by strengthening support for A.Q.A.P., but it could also ultimately endanger the United States and the entire world.

A.Q.A.P- Al Qaeda in the Arabian Peninsula

Ending Relations with Saudi Arabia decreases terrorism- US support is top motivator for terrorists

Washingtons Blog 2015

(Washingtonsblog, 1-10-2015, "How to Beat Terrorism: Stop Making the Same 7 Mistakes," Washington's Blog, http://www.washingtonsblog.com/2015/01/paris-terror-attack-isis-result-911-cover.html)//PG

II. Stop Supporting the Dictators Who Fund Terrorists. Saudi Arabia is the world's largest sponsor of radical Islamic terrorists. The Saudis have backed ISIS and many other brutal terrorist groups. According to sworn declarations from a 9/11 Commissioner and the Co-Chair of the Congressional Inquiry Into 9/11, the Saudi government backed the 9/11 hijackers (see section VII for details). Saudi Arabia is the hotbed of the most radical Muslim terrorists in the world: the Salafis (both ISIS and Al Qaeda are Salafis). And the Saudis – with U.S. support – back the radical "madrassas" in which Islamic radicalism was spread. And yet the U.S. has been supporting the Saudis militarily, with NSA intelligence and in every other way possible for 70 years. In addition, top American terrorism experts say that U.S. support for brutal and tyrannical countries in the Middle east – like Saudi Arabia – is one of the top motivators for Arab terrorists. So if we stop supporting the House of Saud and other Arab tyrannies, we'll get a two-fold reduction in terror: (1) We'll undermine the main terrorism supporters And … (2) We'll take away one of the main motivations driving terrorists: our support for the most repressive, brutal Arab tyrannies

NSA surveillance doesn't stop terrorism- not prioritizing all the data- Boston Bombing proves

Washingtons Blog 2013

(Washingtonsblog, 11-1-2013, "NSA Whistleblower: Government Failed to Stop Boston Bombing Because It Was Overwhelmed with Data from Mass Surveillance On Americans," Washington's Blog, http://www.washingtonsblog.com/2013/11/nsa-whistleblower-government-failed-to-stop-boston-bombing-because-it-was-overwhelmed-with-data-from-mass-surveillance-on-americans.html)//PG

We've extensively documented that mass surveillance does NOT help prevent terror attacks. Top experts have said that treating everyone like a potential terrorist WEAKENS our ability to protect America. The former head of the NSA's global intelligence gathering operations – William Binney – says that the current spying program not only violates Americans' privacy, but sucks up so much data that it INTERFERES with the government's ability to catch bad guys. Binney told Washington's Blog: The zone of suspects was for us limited to two degrees (hops). Beyond that increases the problem exponentially. So, three hops is going

much too far. (Explanation of degrees and hops). In the following brief excerpt from an interview by PBS NewsHour, Binney explains that over-the-top spying actually interfered with the government's ability to stop the Boston bombing: Judy Woodruff: You know the government says that it is only doing this to keep us safe. This is the only way we can have that information at our fingertips when we then have a reason to believe that someone would do this country or its people harm. Binney: That in my mind has been nonsense from the beginning. Because we had zero problem tracking all of these terrorists all along. We had no difficulty doing that. And I left those principles in place at the NSA when I retired there. One was to use the 2 degree principle for zones of suspicion. That is, if a terrorist called someone in the U.S., that was the first degree from the terrorist. And the second degree was who that terrorist called inside the United States. So far, all of the testimony I've been listening to by people down in D.C. about this program – and they refer to different cases they've been talking about, in terms of terrorists – everyone one fit into that zone of suspicion. None of them were outside it. The rest of it means they're collecting more data, making the haystack so much bigger so that's making it more difficult to find the needles. That's why they're missing people, like the bombers in Boston. Similarly, Israeli-American terrorism expert Barry Rubins points out: What is most important to understand about the revelations of massive message interception by the U.S. government is this: In counterterrorist terms, it is a farce. Basically the NSA, as one of my readers suggested, is the digital equivalent of the TSA strip-searching an 80 year-old Minnesota grandmothers rather than profiling and focusing on the likely terrorists. There is a fallacy behind the current intelligence strategy of the United States, the collection of massive amounts of phone calls, emails, and even credit card expenditures, up to 3 billion phone calls a day alone, not to mention the government spying on the mass media. It is this: The more quantity of intelligence, the better it is for preventing terrorism. In the real, practical world this is—though it might seem counterintuitive—untrue. *** And isn't it absurd that the United States can't finish a simple border fence to keep out potential terrorists, can't stop a would-be terrorist in the U.S. army who gives a power point presentation on why he is about to shoot people (Major Nadal Hassan), can't follow up on Russian intelligence warnings about Chechen terrorist contacts (the Boston bombing), or a dozen similar incidents must now collect every telephone call in the country? *** It is not the quantity of material that counts but the need to locate and correctly understand the most vital material. *** If one looks at the great intelligence failures of the past, these two points quickly become obvious. Take for example the Japanese surprise attack on Pearl Harbor on December 7, 1941. U.S. naval intelligence had broken Japanese codes. They had the information needed to conclude the attack would take place. Yet a focus on the key to the problem was not achieved. The important messages were not read and interpreted; the strategic mindset of the leadership was not in place. *** So what needs to be in place, again, is to focus on the highest priority material, to analyze correctly what is available, to have leaders accept it, and to act. *** If, however, the material is almost limitless, that actually weakens a focus on the most needed intelligence regarding the most likely terrorist threats. Imagine, for example, going through billions of telephone calls even with high-speed computers rather than, say, following up a tip from Russian intelligence on a young Chechen man in Boston who is in contact with terrorists or, for instance, the communications between a Yemeni al-Qaida leader and a U.S. army major who is assigned as a psychiatrist to Fort Hood.

Drone Strikes are not precise- kills innocent civilians which angers citizens

Ackerman 2014

(Spencer Ackerman-national security editor for Guardian US, 11-24-2014, "41 men targeted but 1,147 people killed: US drone strikes – the facts on the ground," Guardian, http://www.theguardian.com/us-news/2014/nov/24/-sp-us-drone-strikes-kill-1147)//PG

The drones came for Ayman Zawahiri on 13 January 2006, hovering over a village in Pakistan called Damadola. Ten months later, they came again for the man who would become al-Qaida's leader, this time in Bajaur. Eight years later, Zawahiri is still alive. Seventy-six children and 29 adults, according to reports after the two strikes, are not. However many Americans know who Zawahiri is, far fewer are familiar with Qari Hussain. Hussain was a deputy commander of the Pakistani Taliban, a militant group aligned with al-Qaida that trained the would-be Times Square bomber, Faisal Shahzad, before his

unsuccessful 2010 attack. The drones first came for Hussain years before, on 29 January 2008. Then they came on 23 June 2009, 15 January 2010, 2 October 2010 and 7 October 2010. Finally, on 15 October 2010, Hellfire missiles fired from a Predator or Reaper drone killed Hussain, the Pakistani Taliban later confirmed. For the death of a man whom practically no American can name, the US killed 128 people, 13 of them children, none of whom it meant to harm. A new analysis of the data available to the public about drone strikes, conducted by the human-rights group Reprieve, indicates that even when operators target specific individuals – the most focused effort of what Barack Obama calls "targeted killing" – they kill vastly more people than their targets, often needing to strike multiple times. Attempts to kill 41 men resulted in the deaths of an estimated 1,147 people, as of 24 November. Reprieve, sifting through reports compiled by the Bureau of Investigative Journalism, examined cases in which specific people were targeted by drones multiple times. Their data, shared with the Guardian, raises questions about the accuracy of US intelligence guiding strikes that US officials describe using words like "clinical" and "precise." The analysis is a partial estimate of the damage wrought by Obama's favored weapon of war, a tool he and his administration describe as far more precise than more familiar instruments of land or air power. "Drone strikes have been sold to the American public on the claim that they're 'precise'. But they are only as precise as the intelligence that feeds them. There is nothing precise about intelligence that results in the deaths of 28 unknown people, including women and children, for every 'bad guy' the US goes after," said Reprieve's Jennifer Gibson, who spearheaded the group's study. Some 24 men specifically targeted in Pakistan resulted in the death of 874 people. All were reported in the press as "killed" on multiple occasions, meaning that numerous strikes were aimed at each of them. The vast majority of those strikes were unsuccessful. An estimated 142 children were killed in the course of pursuing those 24 men, only six of whom died in the course of drone strikes that killed their intended targets. In Yemen, 17 named men were targeted multiple times. Strikes on them killed 273 people, at least seven of them children. At least four of the targets are still alive. Available data for the 41 men targeted for drone strikes across both countries indicate that each of them was reported killed multiple times. Seven of them are believed to still be alive. The status of another, Haji Omar, is unknown. Abu Ubaidah al-Masri, whom drones targeted three times, later died from natural causes, believed to be hepatitis. The data cohort is only a fraction of those killed by US drones overall. Reprieve did not focus on named targets struck only once. Neither Reprieve nor the Guardian examined the subset of drone strikes that do not target specific people: the so-called "signature strikes" that attack people based on a pattern of behavior considered suspicious, rather than intelligence tying their targets to terrorist activity. An analytically conservative Council on Foreign Relations tally assesses that 500 drone strikes outside of Iraq and Afghanistan have killed 3,674 people. As well, the data is agnostic on the validity of the named targets struck on multiple occasions being marked for death in the first place. Like all weapons, drones will inevitably miss their targets given enough chances. But the secrecy surrounding them obscures how often misses occur and the reasons for them. Even for the 33 named targets whom the drones eventually killed – successes, by the logic of the drone strikes – another 947 people died in the process.

Food Answers

AT: Resource Wars – 1nc Takeout

Lack of resources doesn't trigger wars.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

RISING ENERGY prices and mounting concerns about environmental depletion have animated fears that the world may be headed for a spate of "resource wars"-hot conflicts triggered by a struggle to grab valuable resources. Such fears come in many stripes, but the threat industry has sounded the alarm bells especially loudly in three areas. First is the rise of China, which is poorly endowed with many of the resources it needs-such as oil, gas, timber and most minerals-and has already "gone out" to the world with the goal of securing what it wants. Violent conflicts may follow as the country shunts others aside. A second potential path down the road to resource wars starts with all the money now flowing into poorly governed but resource-rich countries. Money can fund civil wars and other hostilities, even leaking into the hands of terrorists. And third is global climate change, which could multiply stresses on natural resources and trigger water wars, catalyze the spread of disease or bring about mass migrations.¶ Most of this is bunk, and nearly all of it has focused on the wrong lessons for policy. Classic resource wars are good material for Hollywood screenwriters. They rarely occur in the real world. To be sure, resource money can magnify and prolong some conflicts, but the root causes of those hostilities usually lie elsewhere. Fixing them requires focusing on the underlying institutions that govern how resources are used and largely determine whether stress explodes into violence. When conflicts do arise, the weak link isn't a dearth in resources but a dearth in governance.

AT: Resource Wars – General

Resources are fungible – no economic incentive to start a war.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

The sweep of history points against classic resource wars. Whereas colonialism created long, oppressive and often war-prone supply chains for resources such as oil and rubber, most resources today are fungible commodities. That means it is almost always cheaper and more reliable to buy them in markets.

AT: Resource Wars – China

No resource wars with China – doesn't make economic sense.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

Feeding the dragon Resource wars are largely back in vogue within the US threat industry because of China's spectacular rise. Brazil, India, Malaysia and many others that used to sit on the periphery of the world economy are also arcing upward. This growth is fueling a surge in world demand for raw materials. Inevitably, these countries have looked overseas for what they need, which has animated fears of a coming clash with China and other growing powers over access to natural resources. ¶Within the next three years, China will be the world's largest consumer of energy. Yet, it's not just oil wells that are working harder to fuel China, so too are chainsaws. Chinese net imports of timber nearly doubled from 2000 to 2005. The country also uses about one-third of the world's steel (around 360 million tons), or three times its 2000 consumption. ¶ Even in coal resources, in which China is famously well-endowed, China became a net importer in 2007. Across the board, the combination of low efficiency, rapid growth and an emphasis on heavy industry - typical in the early stages of industrial growth - have combined to make the country a voracious consumer and polluter of natural resources. America, England and nearly every other industrialized country went through a similar pattern, though with a human population that was much smaller than today's resource-hungry developing world. ¶Among the needed resources, oil has been most visible. Indeed, Chinese state-owned oil companies are dotting Africa, Central Asia and the Persian Gulf with projects aimed to export oil back home. The overseas arm of India's state oil company has followed a similar strategy - unable to compete head-to-head with the major Western companies, it focuses instead on areas where human-rights abuses and bad governance keep the major oil companies at bay and where India's foreign policy can open doors. To a lesser extent, Malaysia engages in the same behavior. The American threat industry rarely sounds the alarm over Indian and Malaysian efforts, though, in part because those firms have less capital to splash around and mainly because their stories just don't compare with fear of the rising dragon. ¶These efforts to lock up resources by going out fit well with the standard narrative for resource wars - a zero-sum struggle for vital supplies. But will a struggle over resources actually lead to war and conflict? ¶To be sure, the struggle over resources has yielded a wide array of commercial conflicts as companies duel for contracts and ownership. State-owned China National Offshore Oil Corporation's (CNOOC) failed bid to acquire US-based Unocal - and with it Unocal's valuable oil and gas supplies in Asia - is a recent example. But that is hardly unique to resources - similar conflicts with tinges of national security arise in the control over ports, aircraft engines, databases laden with private information and a growing array of advanced technologies for which civilian and military functions are hard to distinguish. These disputes win and lose some friendships and contracts, but they do not unleash violence. ¶Most importantly, China's going-out strategy is unlikely to spur resource wars because it simply does not work, a lesson the Chinese are learning. Oil is a fungible commodity, and when it is sourced

far from China it is better to sell (and buy) the oil on the world market. The best estimates suggest that only about one-tenth of the oil produced overseas by Chinese investments (so-called "equity oil") actually makes it back to the country. So, thus far, the largest beneficiaries of China's strategy are the rest of the world's oil consumers - first and foremost the United States - who gain because China subsidizes production.

AT: Resource Wars – Resources Don't Determine

Money from resources doesn't drive war – other structural factors trigger.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

But resource-related conflicts are multi-causal. In no case would simply cutting the resources avoid or halt conflict, even if the presence of natural resources can shift the odds. Certainly, oil revenues have advanced Iran's nuclear program, which is a potential source of hot conflict and could make future conflicts a lot more dangerous. But a steep decline in oil probably wouldn't strangle the program on its own. Indeed, while Iran still struggles to make a bomb, resource-poor North Korea has already arrived at that goal by starving itself and getting help from friends. Venezuela's checkbook allows Chavez to be a bigger thorn in the sides of those he dislikes, but there are other thorns that poke without oil money. ¶ As we see, what matters is not just money but how it is used. While al-Qaeda conjures images of an oil-funded network - because it hails from the resource-rich Middle East and its seed capital has oily origins - other lethal terror networks, such as Sri Lanka's Tamil Tigers and Ireland's Republican Army, arose with funding from diasporas rather than oil or other natural resources. Unlike modern state armies that require huge infusions of capital, terror networks are usually organized to make the most of scant funds. ¶ During the run-up in oil and gas prices, analysts have often claimed that these revenues will go to fund terror networks; yet it is sobering to remember that al-Qaeda came out in the late 1990s, when oil earnings were at their lowest in recent history. Most of the tiny sums of money needed for the September 11 attacks came from that period. Al-Qaeda's daring attacks against the US embassies in Kenya and Tanzania occurred when oil-rich patrons were fretting about the inability to make ends meet at home because revenues were so low. Ideology and organization trump money as driving forces for terrorism. ¶ Most thinking about resource-lubed conflict has concentrated on the ways that windfalls from resources cause violence by empowering belligerent states or sub-state actors. But the chains of cause and effect are more varied. For states with weak governance and resources that are easy to grab, resources tend to make weak states even weaker and raise the odds of hot conflict. This was true for Angola's diamonds and Nigeria's oil, which in both cases have helped finance civil war. For states with stable authoritarian governments - such as Kuwait, Saudi Arabia, most of the rest in the western Gulf, and perhaps also Russia and Venezuela - the problem may be the opposite. A sharp decline in resource revenues can create dangerous vacuums where expectations are high and paltry distributions discredit the established authorities. ¶ On balance, the windfall in oil revenues over recent years is probably breeding more

conflict than would a crash in prices. However, while a few conflicts partly trace themselves to resources, it is the other pernicious effects of resource windfalls, such as the undermining of democratic transitions and the failure of most resource-reliant societies to organize their economies around investment and productivity, that matter much, much more. At best, resources have indirect and mixed effects on conflict.

AT: Resource Wars – Warming

Warming doesn't trigger war – proximate causes do.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

While there are many reasons to fear global warming, the risk that such dangers could cause violent conflict ranks extremely low on the list because it is highly unlikely to materialize. Despite decades of warnings about water wars, what is striking is that water wars don't happen - usually because countries that share water resources have a lot more at stake and armed conflict rarely fixes the problem. Some analysts have pointed to conflicts over resources, including water and valuable land, as a cause in the Rwandan genocide, for example. Recently, the UN secretary-general suggested that climate change was already exacerbating the conflicts in Sudan. ¶But none of these supposed causal chains stay linked under close scrutiny - the conflicts over resources are usually symptomatic of deeper failures in governance and other primal forces for conflicts, such as ethnic tensions, income inequalities and other unsettled grievances. Climate is just one of many factors that contribute to tension. The same is true for scenarios of climate refugees, where the moniker "climate" conveniently obscures the deeper causal forces.

Threats are overblown.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

Finally, serious thinking about climate change must recognize that the "hard" security threats that are supposedly lurking are mostly a ruse. They are good for the threat industry - which needs danger for survival - and they are good for the greens who find it easier to build a coalition for policy when hawks are supportive. Building a policy on this house of cards is no way to muster support for a problem that requires several decades of sustained effort. One of the greatest hurdles in the climate debate - one that is just now being cleared, but will reappear if policy advocates seize on false dangers - has been to contain the entrepreneurial skeptics who have sown public doubt about the integrity of the science on causes and effects of climate change. ¶The false logic

now runs in both directions. Not only will climate change multiply threats by putting stress on societies, but a flood of articles warns of new territorial conflicts as warming opens the formerly ice-bound Arctic for exploration. Russia recently planted a flag on the seabed at the North Pole. In fact, the underlying causes of this exploration rush are ambiguous property rights and advances in undersea drilling that are unrelated to climate change. A similar pattern unfolded in the 1950s in Antarctica, which led to a standoff of territorial claims and no real harm to the region, no production of usable minerals and no resource wars.

AT: Resource Wars – Nations Fund Wars

These wars are inevitable.

Victor, Stanford law school professor, 2007

[David, CFR senior fellow on the task force on energy security, "What Resource Wars?" http://www.atimes.com/atimes/Global_Economy/IK14Dj04.html, accessed 9-28-12, TAP]

These problems will just get worse unless the United States and other big consumers temper their demand. The goal should not be "independence" from international markets but a sustainable path of consumption. When the left-leaning wings in American politics and the industry-centered National Petroleum Council both issue this same warning about energy supplies - as they have over the last year - then there is an urgent need for the United States to change course. Yet Congress and the administration have done little to alter the fundamental policy incentives for efficiency. At this writing, the House and Senate are attempting to reconcile two versions of energy bills, neither of which, strikingly, will cause much fundamental change to the situation. ¶ Cutting the flow of revenues to resource-rich governments and societies can be a good policy goal, but success will require American policymakers to pursue strategies that they will find politically toxic at home. One is to get serious about taxation. The only durable way to rigorously cut the flow of resources is to keep prices high (and thus encourage efficiency as well as changes in behavior that reduce dependence on oil) while channeling the revenues into the US government treasury rather than overseas. ¶ In short, that means a tax on imported oil and a complementary tax on all fuels sold in the United States so that a fuel import tax doesn't simply hand a windfall to domestic producers. And if the United States (and other resource consumers) made a serious effort to contain financial windfalls to natural-resources exporters, it would need - at the same time - to confront a more politically poisonous task: propping up regimes or easing the transition to new systems of governance in places where vacuums are worse than incumbents. ¶ Given all the practical troubles for the midwives of regime change, serious policy in this area would need to deal with many voids.

Judicial Independence Answers

AT: JI – Not key to Democracy

Authoritarian regimes can have Judicial Independence

Alexander, 10 (Seth Alexander, Graduate Student in Political Science at the University of California, Irvine, 4/18/10 "Judicial Empowerment in Authoritarian Regimes" pg26-28, http://www.democracy.uci.edu/files/docs/conferences/grad/Alexander_Judicial%20Empowerment%20in%20Authoritarian%20Regimes.pdf, accessed digitally 7/13/15, SAM)

This study tested existing theories of judicial empowerment in authoritarian regimes against a data set of 71 countries between 1996 and 2007. The results of this analysis found little support for existing theories. Instead it found strong support for a new theory of judicial empowerment based on regime type. This finding suggests judicial empowerment is a factor of a regime's interests, center of power, time-horizon, and need for legitimacy. Single party regimes and monarchies have the highest levels of empowerment because of their large power bases, interests in stability and longevity, long time horizons, and needs for legitimacy. Conversely, Alexander 26 military regimes have low levels of judicial empowerment because of their short time horizons, small power bases, conflicting interests, and reduced need for legitimacy to maintain control. Likewise, personalist regimes have low levels of empowerment due to a power base of one, an interest in wealth accumulation, reduced need for legitimacy, and shorter time horizons. This theory provides a new understanding of the reasons for judicial empowerment focusing only on the characteristics of regimes. These finding are important because they shed new light on the process of judicial empowerment in authoritarian regimes. This matters in a fundamental sense because it suggests, contrary to conventional wisdom, **independent courts can exist in authoritarian regimes.** More specifically these findings suggest a need for scholars to disaggregate authoritarian regimes and take the unique characteristics of each regime type into consideration when dealing with judicial empowerment. These results also suggest judicial empowerment is contingent on the development of other institutions. This has broad consequences for the study of other institutions in authoritarian regimes. The study is not without limits. The database only covers ten years and thus excludes most of modern history. Its possible the relationships found here will be different when a larger time period is considered. In particular, existing theories, which find little support here, may prove significant when more observations are added. Additionally, the dependent variable is an imperfect proxy for judicial empowerment. Future scholars should seek out better ways to measure concepts like independence and compliance more directly. On a related note, this study fails to explore questions about the importance of concepts like formal independence and compliance in the authoritarian regime setting. There has been little research into whether one matters more than the other for authoritarian regimes. Future Alexander 27 work needs to focus on this understudied area. Whether formal independence is enough to garner regimes increases in legitimacy or whether regimes must comply with court rulings in order to gain a benefit are questions not yet answered. Research into this understudied area could yield important insights for the fields of public law, democratization, and political economy.

AT: JI – Independence Not Key

Multiple issues with judge credibility

BIIS, 10 (Brandeis Institute for International Judges, 2010, "Challenges to Judicial Independence", pg 2-4, https://www.brandeis.edu/ethics/pdfs/internationaljustice/biij/Challenges_BIIJ2010.pdf, Accessed digitally 7/13/15, SAM)

As in past Institutes, BIIJ 2010 participants had the opportunity to re!ect on ethical issues confronting judges who serve on international courts and tribunals. Discussions about judicial ethics in the international sphere are a hallmark of the BIIJ; earlier institutes have focused on topics as wide-ranging as "the international judiciary as a new moral authority," "the shaping of the judicial persona," and "the development of ethics guidelines for international courts and tribunals."1 In 2010, participants addressed the recurring topic of judicial independence,

with particular emphasis on its critical relation to the rule of law.2 More speci"cally, they discussed the challenges of working under the gaze of a public that holds judges to the highest standards of behavior and practice and criticizes any deviation – real or perceived – from the ideal. #e "rst topic participants grappled with was the election and reelection of judges in the international context.3 #e manner in which international judges reach their posts has often been criticized, and a recently published monograph on the topic does little to reassure the public that the process is transparent or politically neutral.4 Given the importance of public con"dence in international courts and tribunals – to encourage compliance with their judgments as well as to ensure their "nancial and moral support – it is crucial that the members of their benches be seen as independent beyond a doubt. Current practices surrounding the election and reelection of international judges may serve, however, to cast public doubt upon their independence. Participants had many comments to o$er about the election and reelection procedures in their respective courts and tribunals. Elections that take place within the UN system were particularly criticized, both for the lack of transparency in how judicial candidates are nominated, and for "horse trading" at election time. #is term refers to the promises and counterpromises made among states to support one another's candidates for high-pro"le posts, including judicial positions at the ICJ, ITLOS, ICTY, and ICTR. It was noted that the quali"cations of a candidate are just one of the factors that come into play. When the ICC was established, the Assembly of States Parties valiantly tried to keep its judicial elections from following the model of the UN courts, but it was not successful. "It simply turned out to be impossible," reported a participant who attended the Rome Conference, "to achieve a prohibition on these kinds of agreements among states."5 One participant also remarked on the inappropriate "judicial campaigning" that, he said, inevitably accompanies elections at the UN: "Judges depend on the General Assembly for their election and reelection and it is standard practice for them to visit various diplomatic delegations to lobby for their votes." Several judges pointed to institutional practices that seek to emphasize the merits of judicial candidates, thereby mitigating the in!uence of national interests in election procedures. Some members of the WTO now put forward several candidates for a position on the Appellate Body, allowing the organization to select the one they consider the most quali"ed. #e protocol of the ACHPR also allows states to put forward multiple candidates for the coveted spots on 2 BRANDEIS INSTITUTE FOR INTERNATIONAL JUDGES – 2010 • CHALLENGES TO JUDICIAL INDEPENDENCE its 11-member bench. But only one can be their own national – any additional nominees must be nationals of another African state. If inappropriate in!uence sometimes intrudes into the election of judges, this occurs to an even greater extent, it was agreed, when they stand for reelection. One participant noted that at his court, judges have four-year initial terms with the possibility of reelection: "Even the most honest and honorable of my colleagues feel pressure to tone down their decisions; even hardworking, ethical people feel that they need to be careful when elections are coming." Another participant observed, "At my court, judges are no doubt aware that taking a controversial position in an unpopular decision could have an e$ect on their reelection." However, he was not convinced that they would act on this knowledge: "I am con"dent that the judges' sense of professionalism would prevail." It was pointed out, however, that reelection is one of the ways to achieve continuity, which is particularly important in courts with a temporary jurisdiction. At the ICTY and ICTR, where terms are short and the work intense, it may be bene"cial for the institutions to have reelected judges on the bench for this reason. "Otherwise, there would be a sacri"ce in judicial experience and e%ciency." As part of the ad hoc tribunals' "completion strategy," ICTY and ICTR judges recently had their terms extended, by a Security Council resolution,6 until the completion of the trials to which they are assigned. #is obviates the need for any future elections, which would further slow down the tribunals' work, while also contributing to the stability of the institutions and the accumulation of judicial expertise. #e international judges serving on the ECCC bene"t from a similarly open-ended situation – they have no "xed term at all, but rather were appointed by the UN to serve on the bench "for the duration of the proceedings."7 #e judges of the STL, in contrast, were appointed for an initial term of three years in 2009 and may be reappointed "for a further period to be determined by the Secretary-General in consultation with the [Lebanese] Government."8 However, for permanent courts with longer judicial terms – ICJ and ITLOS judges, for instance, sit for nine years – a prohibition on reelection would not have the same potential e$ect on institutional performance. In arguing for term limits, a participant also observed that "it is not only good judges who get reelected." Many international judges try for second terms, and since they have an advantage in the election process, they may prevail over other candidates. One participant pointed out another possible negative impact of having judges serve for years and years on the same bench: if judges make judging a "lifetime career," he suggested, "it may not be helpful to the international system or the development of international law." Notably, the ICC chose to avoid the suspicions and problems that accompany reelection by instituting nine-year non-renewable terms,9 a seemingly wise decision for a closely observed court that deals with sensitive matters and is engaged in the development of a still emerging "eld, international criminal law. In fact, all BIIJ participants essentially agreed that instituting a single and relatively long term for judgeships in international courts and tribunals would do much to remove the threats to judicial independence as well as other drawbacks of reelection.10 Even judges who had bene"ted from reelection expressed this point of view. "I am on record," said a judge who has served consecutive terms, "as preferring single, non-renewable terms for judges at international tribunals." Said another judge in the same situation, "#e reelection of judges is not a desirable practice to be used in international courts, including my own." One participant even suggested that BIIJ participants make a collective and public statement recommending that international judicial reelections be abolished. But such a prohibition would still leave some problems unresolved. If an unquali"ed individual is sitting on the bench, a single term can still be too long, declared one participant. "When the initial election is not a good one, you have to wait for years before changing the judge!" Single terms may also increase the number of former international 3 BRANDEIS INSTITUTE FOR INTERNATIONAL JUDGES – 2010 • CHALLENGES TO JUDICIAL INDEPENDENCE judges looking for a professional niche where they can apply their expertise. Some may take on the role of counsel or agents before international courts, including the one in which they recently served. #is tendency necessitates the establishment of "coolingo$ periods," during which time former judges may not be involved in proceedings before their old court. #is phenomenon may lead to a certain "recirculation" of legal experts in international justice circles, which could ultimately sti!e the development of international law, as mentioned above. It could also, however, produce the opposite e$ect by leading to a richer and fuller development of international law by those with great experience and expertise. #e issue of post-judicial professional life may be most acute at the ECHR. Not only has it recently instituted a single, non-renewable judicial term,11 but its judges are becoming younger and younger; some are even elected to the court while in their thirties. Furthermore, most ECHR judges are drawn from national legal professions, not from the ranks of international lawyers. #is means that they will naturally look to return home after leaving the ECHR, and will seek to work for the state in some capacity. #is creates a new dilemma in terms of judicial independence: will judges nearing the end of their terms at the ECHR issue judgments more favorable to their states, as insurance for a future position at home? Clearly, threats to independence do not necessarily disappear with the prohibition of judicial reelection. One participant suggested that international judges should be nominated for single terms toward the ends of their careers to minimize such risks. Participants then turned their attention from judicial elections and reelections to other matters that may create public doubt about the independence of international judges. "Judges do not come to the bench as virgins of public life," declared one participant. #ey may have a%liations with political organizations and NGOs, a long list of publications if they are scholars, and an easily accessible record of non-judicial activities, speeches, and commercial interests. All of these may be raised as possible reasons that international judges are unable to perform their work with independence and impartiality. #e question of when interest in or connection to a case by a judge necessitates recusal was immediately raised. One criminal court has had high-pro"le cases where its judges were on the record expressing opinions about the behavior of accused persons. One participant asked whether it would be preferable for a body outside the court to determine recusal in such situations, instead of judicial colleagues. Are fellow judges not likely to support the judge in question, or alternatively to join against him, he wondered? And does an internal decision not create a perception of bias in the public eye? A di$erent issue related to bias was brought up with reference to the ECCC. Normally a judge should not sit on a case with which he has a personal connection. But it was virtually impossible to "nd Cambodian judges who had not been touched by the Khmer Rouge events under investigation by the court. #e recusal provisions in the ECCC rules were debated and ultimately made more !exible so as not to systematically preclude the participation of local judges in the trials. Participants also discussed when experience on one international court should prevent participation in a related matter before another. For example, should a criminal judge who has deliberated on questions of genocide refrain from sitting on an

interstate dispute resolution body that is looking at the crimes from a di$erent standpoint? One judge o$ered this opinion: "I don't see much of a problem if it is only a legal question of genocide. I think this is a situation that domestic judges deal with every day, sitting on cases that deal with the same legal issues." Another judge added this comment: "Disqualifying someone just because they have expressed certain views on crimes against humanity or war crimes is not a good enough reason." Human rights institutions may also see situations where their judges have dealt with an issue before the court while previously serving in their capacity as judges in their home country. While some believed that this would not necessarily pose a legal problem, others felt that this might well create a perception of bias. 4 BRANDEIS INSTITUTE FOR INTERNATIONAL JUDGES – 2010 • CHALLENGES TO JUDICIAL INDEPENDENCE How judges interact with the media, and when these interactions overstep an appropriate boundary, also came up as a topic of discussion. How should a judge deal with requests for interviews, or answer questions that the press may have about the judge himself or his institution? "One the one hand," said a participant, "a judge should not seem aloof from society, but on the other hand, he should avoid seeking the limelight." He recounted an incident in which a fellow judge gave a lengthy interview to a newspaper where he made critical comments about the political situation of the country hosting the court. "Our president felt obliged to disavow the interview and publicly reprimand the judge," he continued, a response justi"ed by the court's code of ethics. Another participant reported that he had recently been asked by the media in his home country to speak about his court and explain its function to the local population. "I think this is useful and important for the public; we need to explain what our courts do and do not do, but not to speak on speci"c cases. My inclination is that this is a good exercise of discretion from the viewpoint of educating the public." Another participant went on to suggest that speaking to the press about cases, once a judgment has been delivered, should not be out of the question. "I would cautiously encourage it because I think the court should enlighten and educate, and this is better done by a judge than a press secretary. #at is, if he is capable of going out and facing a microphone and camera." Participants noted a number of other questions about judicial ethics, and its perception, that cannot be answered by referring to their courts' rules or codes of conduct.12 In what situations can a judge carry out arbitrations, particularly of a commercial nature? What kinds of secondary employment are compatible with a part-time judicial position? How much can and should an international judge speak in public about legal issues of contemporary importance? Since such questions do not generally involve potentially serious violations of judicial ethics, they are often left up to the discretion of individual judges, with advice from the court president or colleagues when requested. It was suggested that international courts might do well to look for guidance in detailed codes of judicial conduct, like the Code of Conduct for United States Judges.13 However, some courts have resisted the elaboration of such codes, believing that broad notions of appropriate judicial conduct su%ce.14 It is clear that trust in the international justice system relies to an important degree on public con"dence in those who serve as its judges. It is thus up to judges themselves, one judge exhorted, "to exercise continuous discretion in order to preserve a sense of judicial independence and impartiality." He went on to add an important point, undoubtedly already acknowledged by those in attendance at the BIIJ: "In becoming a judge, you must sacri"ce some of the private space that others take for granted." Having judges who accept these limitations without question is another foundational element for the international rule of law.

J/I won't happen

U.S. no longer looked to for a judicial model

Liptak 08 (Adam Liptak is the Supreme Court correspondent of The New York Times. Mr. Liptak, a lawyer, joined The Times's news staff in 2002 and began covering the Supreme Court in the fall of 2008. He has written a column, "Sidebar," on developments in the law, since 2007. 9/17/08, The New York Times, U.S. Court Is Now Guiding Fewer Nations, http://www.nytimes.com/2008/09/18/us/18legal.html?pagewanted=all, 7/9/15, HDA)

Judges around the world have long looked to the decisions of the United States Supreme Court for guidance, citing and often following them in hundreds of their own rulings since the Second World War. But now **American legal influence is waning**. Even as a debate continues in the court over whether its decisions should ever cite foreign law, a diminishing number of foreign courts seem to pay attention to the writings of American justices. "One of our great exports used to be constitutional law," said Anne-Marie Slaughter, the dean of the Woodrow Wilson School of Public and International Affairs at Princeton. "We are losing one of the greatest bully pulpits we have ever had." From 1990 through 2002, for instance, the Canadian Supreme Court cited decisions of the United States Supreme Court about a dozen times a year, an analysis by The New York Times found. In the six years since, the annual citation rate has fallen by half, to about six. Australian state supreme courts cited American decisions 208 times in 1995, according to a recent study by Russell Smyth, an Australian economist. By 2005, the number had fallen to 72. The story is similar around the globe, legal experts say, particularly in cases involving human rights. These days, foreign courts in developed democracies often cite the rulings of the European Court of Human Rights in cases concerning equality, liberty and prohibitions against cruel treatment, said Harold Hongju Koh, the dean of the Yale Law School. In those areas, Dean Koh said, "they tend not to look to the rulings of the U.S. Supreme Court." **The rise of new and sophisticated constitutional courts elsewhere is one reason for the Supreme Court's fading influence, legal experts said.** The new courts are, moreover, generally more liberal than the Rehnquist and Roberts courts and for that reason more inclined to cite one another. **Another reason is the diminished reputation of the United States in some parts of the world, which experts here**

and abroad said is in part a consequence of the Bush administration's unpopularity around the world. Foreign courts are less apt to justify their decisions with citations to cases from a nation unpopular with their domestic audience. "It's not surprising, given our foreign policy in the last decade or so, that American influence should be declining," said Thomas Ginsburg, who teaches comparative and international law at the University of Chicago. Aversion to Foreign Law The adamant opposition of some Supreme Court justices to the citation of foreign law in their own opinions also plays a role, some foreign judges say. "Most justices of the United States Supreme Court do not cite foreign case law in their judgments," Aharon Barak, then the chief justice of the Supreme Court of Israel, wrote in the Harvard Law Review in 2002. "They fail to make use of an important source of inspiration, one that enriches legal thinking, makes law more creative, and strengthens the democratic ties and foundations of different legal systems." Partly as a consequence, Chief Justice Barak wrote, the United States Supreme Court "is losing the central role it once had among courts in modern democracies." **Justice Michael Kirby of the High Court of Australia said that his court no longer confined itself to considering English, Canadian and American law. "Now we will take information from the Supreme Court of India, or the Court of Appeal of New Zealand, or the Constitutional Court of South Africa**," he said in an interview published in 2001 in The Green Bag, a legal journal. **"America" he added, "is in danger of becoming something of a legal backwater." The signature innovations of the American legal system — a written Constitution, a Bill of Rights protecting individual freedoms and an independent judiciary with the power to strike down legislation — have been consciously emulated in much of the world.** And American constitutional law has been cited and discussed in countless decisions of courts in Australia, Canada, Germany, India, Israel, Japan, New Zealand, South Africa and elsewhere. In a 1996 decision striking down a law that made it a crime to possess pornography, for instance, the Constitutional Court of South Africa conducted a broad survey of American First Amendment jurisprudence, citing some 40 decisions of the United States Supreme Court. That same year, the High Court of Australia followed a 1989 decision of the Supreme Court in a separation-of-powers case, ruling that a judge was permitted to prepare a report for a government minister about threats to aboriginal areas because the assignment did not undermine the integrity of the judicial branch. Sending American ideas about the rule of law abroad has long been a source of pride. "The United States Supreme Court is the oldest constitutional court in the world — the most respected, the most legitimate," said Charles Fried, a law professor at Harvard who served as solicitor general in the Reagan administration. But there is an intense and growing debate about whether that influence should be a one-way street. Justice Sandra Day O'Connor, in a speech before her retirement from the Supreme Court, advocated taking as well as giving. "I suspect that with time we will rely increasingly on international and foreign law in resolving what now appear to be domestic issues," Justice O'Connor said. "Doing so may not only enrich our own country's decisions; it will create that all-important good impression. When U.S. courts are seen to be cognizant of other judicial systems, our ability to act as a rule-of-law model for other nations will be enhanced." **But many judges and legal scholars in this country say that consideration of foreign legal precedents in American judicial decisions is illegitimate, and that there can be no transnational dialogue about the meaning of the United States Constitution**. The Constitution should be interpreted according to its original meaning, said John O. McGinnis, a law professor at Northwestern, and recent rulings, whether foreign or domestic, cannot aid in that enterprise. Moreover, Professor McGinnis said, decisions applying foreign law to foreign circumstances are not instructive here. "It may be good in their nation," he said. "There is no reason to believe necessarily that it's good in our nation." In any event, said Eric Posner, a law

professor at the University of Chicago, many Americans are deeply suspicious of foreign law. “We are used to encouraging other countries to adopt American constitutional norms,” he wrote in an essay last month, “but we have never accepted the idea that we should adopt theirs.” “It’s American exceptionalism,” Professor Posner added in an interview. “The view going back 200 years is that we’ve figured it out and people should follow our lead.”

AT: JI – China – No Modeling

China won’t model U.S. courts

China Daily Mail 15 (China Daily Mail is a collection of interesting stories about China, as well as a chance for writers to promote their own sites. Some of our most prominent stories that have been picked up by major media publications around the world include, 2/27/15, China Daily Mail, China’s Xi Jinping comes up with a new political doctrine, the ‘Four Comprehensives’ – a strategic blueprint for China’s future, http://chinadailymail.com/2015/02/27/chinas-xi-jinping-comes-up-with-a-new-political-doctrine-the-four-comprehensives-a-strategic-blueprint-for-chinas-future/, 7/9/15, HDA)

China's top court has urged officials from the ruling Communist Party to shun Western-style judicial independence and reject "erroneous Western thought", state media said on Thursday, as controls over the media, dissent and the Internet are tightened. The comments by China's Supreme Court, Beijing's latest attack on Western ideology, are also another sign of President Xi Jinping's conservative political agenda. The party has signaled that it will not embark on political reform, despite hopes that Xi, the son of a former liberal-minded vice premier, might relax tight central controls. A meeting of the Supreme Court's party committee on Wednesday said China would draw boundaries with the West's notion of "judicial independence" and "separation of powers", the state-run China News Service said. "Resolutely resist the influence of the West's erroneous thought and mistaken viewpoints," it said on its website, citing the meeting. China's top judge, Zhou Qiang, "stressed the need to unswervingly take the road of socialism with Chinese characteristics", it said, reiterating Beijing's stance that it is the best way to govern the world's most populous nation. The party has long railed against Western values, including concepts like multi-party democracy and universal human rights. The tenor has become more shrill under Xi, who has urged more "ideological guidance" at universities as well as the study of Marxism. The Minister of Education said last month China must keep educational materials that promote "Western values" out of its classrooms. Last year, the party pledged to speed up legislation to fight corruption and make it tougher for officials to exert control over the judiciary, even as it stressed full control over the courts. Xi has espoused old school Maoism as he seeks to court powerful conservative elements in the party. Like many officials before him, Xi is steeped in the party's long-held belief that loosening control too quickly, or even at all, could lead to chaos and the break-up of the country.

AT: JI – Not Possible

Judicial independence is a myth- executive and legislative branches always have influence over decisions

McNollgast 06 (McNollgast earned undergraduate degrees from Caltech, UC Irvine, and UC Santa Cruz, and ph.d.s from Caltech and Harvard. McNollgast has held professorial appointments at Caltech, Duke, Stanford, Texas, UC San Diego, USC, and Washington University, St. Louis, as well as Senior Fellow appointments at Brookings and Hoover, 2006, Chancellors Chair of Political Science, Conditions for Judicial Independence, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=5975&context=faculty_scholarship, 7/10/15, HDA

What does it mean for a judiciary to be "independent"? What are the conditions required for judicial independence to exist? Many scholars have addressed these questions, but there remains much disagreement as to the answers.2 For some, judicial independence requires little more than life tenure for judges,3 while for others, judicial independence * Chancellor's Associates Chair of Political Science, University of California, San Diego and Professor of Law, University of San Diego; Morris M. Doyle Professor of Public Policy, Department of Economics, Stanford University; and Senior Fellow, Hoover Institution, and Ward C. Krebs Family Professor of Political Science, Stanford University. expect one chamber of the legislature or the executive branch to protect judicial independence by vetoing (or threatening to veto) legislative actions that would overturn Supreme Court decisions. On the flip side, we expect unified control of government to weaken judicial independence, as the legislature and executive can coordinate on governmental changes that may undermine the judiciary's independence. These are just two of the many predictions that we generate about the "waxing" and "waning" of judicial independence, and in order to explore these predictions and several others, we draw upon positive political theory to model formally the game that is played among our three branches of government. The foundation of our model stems from Alexander Hamilton's observation in The Federalist No. 78 that courts, by themselves, cannot implement their own orders or opinions. Indeed, for judicial orders and opinions to have force, courts (most notably, the Supreme Court) must get the executive and perhaps even the legislative branch behind them. **Although it is difficult for Congress and the president to overturn a court decision with which they disagree,8 it is much more difficult to get them to implement a policy that they oppose. However, for judicial orders and opinions to have an effect the Supreme Court must obtain compliance from those to whom the orders and opinions are directed: lower courts, executive agencies, commissions, state and local governments and their agencies, corporations, and individuals**. These actors are the agents of judicial impact, who, of course, have their own ideas about what they should and should not be doing, and who will spend their resources optimally between compliance and dodging oversight. **Thus, in the principal-agent relationship that characterizes the judiciary and its many agents, the judiciary has neither the capacity to enforce its will nor the ability to oversee compliance with its instructions. In this way, the limits on judicial independence are the direct result of the relative impoverishment of judicial power and of the legislature and executive's ability to take advantage of the judiciary's relative weakness.** For example, the judiciary does not have a General Accounting Office (GAO) and its nearly 50,000 oversight agents, as the legislature does. Nor does it have a far-flung fire-alarm network from which it can cull reliable signals about compliance and non-compliance and from which it can distinguish shirking from bad luck.9 As an illustration of the

many enforcement difficulties that the judiciary faces, note how overseeing compliance with school desegregation decrees, especially in the face of hostile school boards, is a lifetime ambition for the Court, one which necessarily precludes addressing other matters and one for which compliance notoriously fades into the shadows once the spotlight no longer shines on the issue. The purpose of this article is to explore the ideas central to Hamilton's argument in The Federalist No. 78. **To do this we model the Supreme Court's choice of doctrine within a policymaking game, where doctrine defines the rules by which policy is to be chosen, but does not itself define the policy choices.**' 0 **The core of the model involves a game wherein the Court sets doctrine and monitors compliance with its doctrine. We then examine the tradeoffs that arise as a result of scarcity and uncertainty in attaining compliance from the Court's agents**. Our key conclusions are threefold. First, **the Court, due to imperfect information and limited resources for hearing appeals, cannot induce perfect adherence to its doctrine by its agents. Indeed, we show how doctrine results from the Court's attempts to maximize compliance from its various agents. Doctrine on this account is not what the Court believes is the best policy to pursue for its own sake, but rather is an instrument used to gain compliance**. In areas where potential case numbers are huge relative to the Court's ability to review cases, the Court must set a lax standard-as in Brown's ambiguous message to school districts to desegregate with "all deliberate speed." In areas where the cases are relatively few and the Court highly values the outcome, such as abortion, the Court can set a tight standard. 9. A fire-alarm network differs from a police-patrol network in that fire alarms are a decentralized way to acquire information about one's agents and their behavior whereas police patrols involve active oversight and monitoring of agents. A fire-alarm network allows principals to respond only to violations of procedure or policy that generate complaints, rather than having to observe all actors comply with the appropriate process. See Mathew D. McCubbins & Thomas Schwartz, Congressional Oversight Overlooked: Police Patrols versus Fire Alarms, 28 AM. J. POL. SCt. 165 (1984). 10. For example the Supreme Court created the Chevron Doctrine which directs courts to take a two-stage process during review of agency decisions. First, determine if there is Congressional intent and if so it governs the decision at hand, regardless of the agency's decision. If the court finds that legislative intent cannot be determined, then it is to defer to the agency's decision as long as it is reasonable. See McNollgast, Politics and the Courts: A Positive Theory of Judicial Doctrine and the Rule of Law, 68 S. CAL. L. Second, stare decisis emerges in this model from strategic interaction by the Supreme Court in its supervisory role of the lower courts, not from any norm or preference on the part of judges to follow precedent. In our model, a lower court that must decide whether to comply with the Court's doctrine will either choose its ideal point or the closest point in the set of acceptable decisions. Non-complying lower courts risk review by the Court and, if found to be non-complying, having their decision overturned and moved to the Court's ideal point. This threat induces many lower courts to comply. Of course, per our first point, the Court must adjust its doctrine to fit the circumstances of compliance: the greater the potential number of non-complying courts and the lower the value of the issue area to the Court, the laxer the doctrine and the wider the range of acceptable decisions. Our approach implies that stare decisis emerges as an equilibrium outcome in a game between the Court and its agents. Third, **political actors can take advantage of this situation by exacerbating the Supreme Court's scarcity; that is, they can influence judicial doctrine by expanding the number and reach of executive agencies, commissions, lower courts and so on**. By forcing the Court to face more cases or by restricting its ability to review cases, legislators and the executive indirectly affect doctrine by forcing the Court to widen or narrow the range of acceptable decisions. In this way, elected officials use structure and process to influence judicial policy in

much the same way that they use administrative structure and process to influence agency policymaking." For example, our previous work demonstrated how a unified set of political branches opposing a Supreme Court could force it to alter its doctrine in their favor by expanding the lower judiciary and forcing the Court to face many more potentially non-complying lower courts." Lower court expansion exacerbates the Court's compliance problem, forcing them to expand the range of acceptable decisions in the direction favored by legislators and the executive. Indirectly they affect the agenda for the judiciary's choice of doctrine, causing the Court to shift its focus in policymaking, leaving some areas unattended, while forcing the Court to use its scarce resources to affect doctrine in other areas. Our main result is that the more closely aligned and coordinated are the political branches, the more likely they are to agree on policy outcomes, which enables them to reduce the number of issues on which the Court can exercise meaningful independent discretion. This Article proceeds as follows. In Part II, we discuss various theories of judicial decisionmaking and present our model. In Part III we discuss the implications of our model. In Part IV, we derive the key comparative statics of our model. In Parts V & VI, we conclude with a discussion of how our model sheds light on the waxing and waning of judicial independence in the United States, and we also discuss the application of our model to the comparative context.

AT: JI – US – Fails

Judicial independence leads to unchecked judicial behavior

Ragsdale '15 (Bruce Ragsdale, served as director of the Federal Judicial History Office at the Federal Judicial Center and as associate historian of the U.S. House of Representatives, "Judicial Independence and the Federal Courts", fjc.gov, http://www.fjc.gov/public/pdf.nsf/lookup/JudicialIndependence.pdf/$file/JudicialIndependence.pdf, Published in 2006, Accessed on July 13 2015, CMT)

A prominent Anti-Federalist critic of the Constitution acknowledged the importance of judicial independence as secured by service during good behavior, but "Brutus" also recognized that the judicial independence envisioned by the Constitution was unprecedented. Judges would be removable only by impeachment and conviction of "high crimes and misdemeanors" rather than by a vote of the legislature, as was the case in most other governments with judicial tenure during good behavior. "Brutus" warned that regardless of errors of judgment or inability to carry out their duties, federal judges would be "independent of the people, of the legislature, and of every power under heaven." He also worried that these largely unaccountable judges would have the final say on the meaning of the Con- Judicial Independence and the Federal Judiciary ~ Federal Judicial Center 3 stitution, but Hamilton and other framers of the proposed government thought that the courts' responsibility to determine the constitutionality of laws, and thus to protect individual rights, was precisely the reason for the extraordinary protections of judicial independence. Hamilton dismissed concerns about unchecked judicial power, since the courts had "no influence over either the sword or the purse."

No War Answers

Yes War

International flashpoints make global war realistic

Cohen 14 (Roger. Roger Cohen is a columnist for *The New York Times* and an author. 8-2014. "Yes It Could Happen Again". The Atlantic. http://www.theatlantic.com/magazine/archive/2014/08/yes-it-could-happen-again/373465/. Accessed 7-8-2015. KC)

The unimaginable can occur. That is a notion at once banal and perennially useful to recall. Indeed, it has just happened in Crimea, where a major power has forcefully changed a European border for the first time since 1945. Russia's act of annexation and its evident designs on eastern Ukraine constitute a reminder that NATO was created to protect Europe after its pair of 20th-century self-immolations. NATO's core precept, as the Poles and other former vassals of the Soviet empire like to remind blithe western Europeans, is Article 5, by which the Allies agreed that "an armed attack against one or more of them in Europe or North America shall be considered an attack against them all," triggering a joint military response. This has proved a powerful deterrent against potential adversaries. Vladimir Putin, the Russian president, has been most aggressive in the no-man's-lands of Georgia and Ukraine, nations suspended between East and West, neither one a member of NATO. Had Ukraine been a member of NATO, the annexation of Crimea would have come only at the (presumably unacceptable) price of war. Article 5, until demonstrated otherwise, is an ironclad commitment. When a 19-year-old Bosnian Serb nationalist, Gavrilo Princip, assassinated the heir to the Austro-Hungarian throne in Sarajevo, on June 28, 1914, he acted to secure Serbia's liberty from imperial dominion. He could not have known that within weeks, Austria-Hungary would declare war on Serbia, goading Russia (humiliated in war a decade earlier by Japan) to mobilize in defense of its Slavic ally, which caused the kaiser's ascendant Germany to launch a preemptive attack on Russia's ally France, in turn prompting Britain to declare war on Germany. Events cascade. It is already clear that the nationalist fervor unleashed by Putin after a quarter century of Russia's perceived post–Cold War decline is far from exhausted. Russians are sure that the dignity of their nation has been trampled by an American and European strategic advance to their border dressed up in talk of democracy, the rule of law, and human rights. Whether this is true is irrelevant; they believe it. National humiliation, real or not, is a tremendous catalyst for war. That was the case in Germany after the Treaty of Versailles imposed reparations and territorial concessions; so, too, in Serbia more than 70 years later, after the breakup of Yugoslavia, a country Serbia had always viewed as an extension of itself. Russia, convinced of its lost greatness, is gripped by a Weimar neurosis resembling Germany's post–World War I longing for its past stature and power. The Moscow-backed separatists taking over government buildings in eastern Ukraine and proclaiming an independent "Donetsk People's Republic" demonstrate the virulence of Russian irredentism. Nobody can know where it will stop. Appetite, as the French say, grows with eating. Let us indulge in dark imaginings, then, in the cause of prudence. Here is one possible scenario: Clashes intensify between Ukrainian government forces and paramilitary formations organized by Russian fifth columnists. The death toll rises. The ongoing NATO dispatch of troops and F- 16s

to Poland and the Baltic states, designed as a deterrence, redoubles anger in Russia—"a great and humble nation besieged," a Russian general might declare. The American president, saying his war-weary country will not seek conflict, imposes sanctions on the entire Russian oil-and-gas sector. European states dependent on Russian energy grumble; a former German chancellor working in natural gas says his country's interests lie with Moscow. Then, say, an independence movement of the Russian minority gains momentum in Estonia, backed with plausible deniability by Moscow's agents, and announces support for the Donetsk People's Republic. A wave of cyberattacks disables Estonian government facilities, and an Estonian big shot calls the Russian leader an "imperialist troglodyte trapped in a zero-sum game." After an assassination attempt on the Estonian foreign minister at a rally in the capital, calls grow louder for the American president to invoke Article 5. He insists that "drawing red lines in the 21st century is not a useful exercise." The unimaginable can occur. Indeed, it has just happened in Crimea. Let us further imagine that shortly after the president delivers his speech, in a mysterious coincidence, a Chinese ship runs aground on one of the uninhabited Senkaku Islands, administered by Japan, in the East China Sea. China dispatches a small force to what it calls the Diaoyu Islands "as a protective measure." Japan sends four destroyers to evict the Chinese and reminds the American president that he has said the islands, located near undersea oil reserves, "fall within the scope" of the U.S.-Japan Treaty of Mutual Cooperation and Security. A Republican senator, echoing the bellicose mood in Washington, declares that "Estonia is more than a couple of rocks in the East China Sea" and demands to know whether "the United States has torn up the treaty alliances in Europe and Asia that have been the foundation of global security since 1945." The president gives China an ultimatum to leave the Japanese islands or face a military response. He also tells Russia that another act of secessionist violence in Estonia will trigger NATO force against Russian troops massed on the Estonian border. Both warnings are ignored. Chinese and Russian leaders accuse the United States of "prolonging Cold War hostilities and alliances in pursuit of global domination." World War III begins. It could not happen; of course it couldn't. Peace, if not outright pacifism, is now bred in the bones of Europeans, who contemplate war with revulsion. Europe is politically and economically integrated. America, after two wars without victory, is in a period of retrenchment that may last a generation. Wars no longer happen between big land armies; they are the stuff of pinpoint strikes by unpiloted drones against jihadist extremists. Putin's Russia is opportunistic—it will change the balance of power in Ukraine or Georgia if it considers the price acceptable—but it is not reckless in countries under NATO protection. China, with its watchword of "Harmony," is focused on its own rising success and understands the usefulness of the United States as an offsetting Pacific power able to reassure anxious neighbors like Japan and Vietnam. For the time being, Beijing will not seek to impose its own version of the Monroe Doctrine. It will hold nationalism in check even as the Asian naval arms race accelerates. Unlike in 1914 or 1939, the presence of large American garrisons in Europe and Asia sustains a tenacious Pax Americana. The United Nations, for all its cumbersome failings, serves as the guarantor of last resort against another descent into horror. The specter of nuclear holocaust is the ultimate deterrent for a hyperconnected world. Citizens everywhere now have the tools to raise a cacophony in real time against the sort of folly that, in World War I, produced the deaths of so many unidentifiable young men "known unto God," in Kipling's immortal phrasing. Convincing? It would certainly be nice to believe that, as President Clinton suggested in 1997, great-power territorial politics are a thing of the past. A new era had dawned, he said, in which "enlightened self-interest, as well as shared values, will compel countries to define their greatness in more-constructive ways." In fact, the realization that the Russian bear can bite as well as growl is timely. It is a reminder that a multipolar world in a time of transition, when popular resentments

are rising over joblessness and inequality, is a dangerous place indeed. The international system does not look particularly stable. The Cold War's bipolar confrontation, despite its crises, was predictable. Today's world is not. It features a United States whose power is dominant but no longer determinant; a one-party China that is a rising hegemon; an authoritarian Russia giddy on nationalism and the idea of a restored imperium; and a weak, navel-gazing, blasé Europe whose pursuit of an ever closer union is on hold and perhaps on the brink of reversal.

No war predictions parallel those before World War I and World War II

Cohen 14 (Roger. Roger Cohen is a columnist for *The New York Times* and an author. 8-2014. "Yes It Could Happen Again". The Atlantic. http://www.theatlantic.com/magazine/archive/2014/08/yes-it-could-happen-again/373465/. Accessed 7-8-2015. KC)

Pessimism is a useful prism through which to view the affairs of states. Their ambition to gain, retain, and project power is never sated. Optimism, toward which Americans are generally inclined, leads to rash predictions of history's ending in global consensus and the banishment of war. Such rosy views accompanied the end of the Cold War. They were also much in evidence a century ago, on the eve of World War I. Then, as now, Europe had lived through a long period of relative peace, after the end of the Napoleonic Wars. Then, too, rapid progress in science, technology, and communications had given humanity a sense of shared interests that precluded war, despite the ominous naval competition between Britain and Germany. Then, too, wealthy individuals devoted their fortunes to conciliation and greater human understanding. Rival powers fumed over provocative annexations, like Austria-Hungary's of Bosnia-Herzegovina in 1908, but world leaders scarcely believed a global conflagration was possible, let alone that one would begin just six years later. The very monarchs who would consign tens of millions to a murderous morass from 1914 to 1918 and bury four empires believed they were clever enough to finesse the worst. The unimaginable can occur. That is a notion at once banal and perennially useful to recall. Indeed, it has just happened in Crimea, where a major power has forcefully changed a European border for the first time since 1945. Russia's act of annexation and its evident designs on eastern Ukraine constitute a reminder that NATO was created to protect Europe after its pair of 20th-century self-immolations. NATO's core precept, as the Poles and other former vassals of the Soviet empire like to remind blithe western Europeans, is Article 5, by which the Allies agreed that "an armed attack against one or more of them in Europe or North America shall be considered an attack against them all," triggering a joint military response. This has proved a powerful deterrent against potential adversaries. Vladimir Putin, the Russian president, has been most aggressive in the no-man's-lands of Georgia and Ukraine, nations suspended between East and West, neither one a member of NATO. Had Ukraine been a member of NATO, the annexation of Crimea would have come only at the (presumably unacceptable) price of war. Article 5, until demonstrated otherwise, is an ironclad commitment. When a 19-year-old Bosnian Serb nationalist, Gavrilo Princip, assassinated the heir to the Austro-Hungarian throne in Sarajevo, on June 28, 1914, he acted to secure Serbia's liberty from imperial dominion. He could not have known that within weeks, Austria-Hungary would declare war on Serbia, goading Russia (humiliated in war a decade earlier by Japan) to mobilize in defense of its Slavic ally, which caused the kaiser's ascendant Germany to launch a preemptive attack on Russia's ally

France, in turn prompting Britain to declare war on Germany. Events cascade. It is already clear that the nationalist fervor unleashed by Putin after a quarter century of Russia's perceived post–Cold War decline is far from exhausted. Russians are sure that the dignity of their nation has been trampled by an American and European strategic advance to their border dressed up in talk of democracy, the rule of law, and human rights. Whether this is true is irrelevant; they believe it. National humiliation, real or not, is a tremendous catalyst for war. That was the case in Germany after the Treaty of Versailles imposed reparations and territorial concessions; so, too, in Serbia more than 70 years later, after the breakup of Yugoslavia, a country Serbia had always viewed as an extension of itself. Russia, convinced of its lost greatness, is gripped by a Weimar neurosis resembling Germany's post–World War I longing for its past stature and power. The Moscow-backed separatists taking over government buildings in eastern Ukraine and proclaiming an independent "Donetsk People's Republic" demonstrate the virulence of Russian irredentism. Nobody can know where it will stop. Appetite, as the French say, grows with eating. Let us indulge in dark imaginings, then, in the cause of prudence. Here is one possible scenario: Clashes intensify between Ukrainian government forces and paramilitary formations organized by Russian fifth columnists. The death toll rises. The ongoing NATO dispatch of troops and F- 16s to Poland and the Baltic states, designed as a deterrence, redoubles anger in Russia—"a great and humble nation besieged," a Russian general might declare. The American president, saying his war-weary country will not seek conflict, imposes sanctions on the entire Russian oil-and-gas sector. European states dependent on Russian energy grumble; a former German chancellor working in natural gas says his country's interests lie with Moscow. Then, say, an independence movement of the Russian minority gains momentum in Estonia, backed with plausible deniability by Moscow's agents, and announces support for the Donetsk People's Republic. A wave of cyberattacks disables Estonian government facilities, and an Estonian big shot calls the Russian leader an "imperialist troglodyte trapped in a zero-sum game." After an assassination attempt on the Estonian foreign minister at a rally in the capital, calls grow louder for the American president to invoke Article 5. He insists that "drawing red lines in the 21st century is not a useful exercise." The unimaginable can occur. Indeed, it has just happened in Crimea. Let us further imagine that shortly after the president delivers his speech, in a mysterious coincidence, a Chinese ship runs aground on one of the uninhabited Senkaku Islands, administered by Japan, in the East China Sea. China dispatches a small force to what it calls the Diaoyu Islands "as a protective measure." Japan sends four destroyers to evict the Chinese and reminds the American president that he has said the islands, located near undersea oil reserves, "fall within the scope" of the U.S.-Japan Treaty of Mutual Cooperation and Security. A Republican senator, echoing the bellicose mood in Washington, declares that "Estonia is more than a couple of rocks in the East China Sea" and demands to know whether "the United States has torn up the treaty alliances in Europe and Asia that have been the foundation of global security since 1945." The president gives China an ultimatum to leave the Japanese islands or face a military response. He also tells Russia that another act of secessionist violence in Estonia will trigger NATO force against Russian troops massed on the Estonian border. Both warnings are ignored. Chinese and Russian leaders accuse the United States of "prolonging Cold War hostilities and alliances in pursuit of global domination." World War III begins. It could not happen; of course it couldn't. Peace, if not outright pacifism, is now bred in the bones of Europeans, who contemplate war with revulsion. Europe is politically and economically integrated. America, after two wars without victory, is in a period of retrenchment that may last a generation. Wars no longer happen between big land armies; they are the stuff of pinpoint strikes by unpiloted drones against jihadist extremists. Putin's Russia is opportunistic—it will change the balance of power in Ukraine or Georgia if it

considers the price acceptable—but it is not reckless in countries under NATO protection. China, with its watchword of "Harmony," is focused on its own rising success and understands the usefulness of the United States as an offsetting Pacific power able to reassure anxious neighbors like Japan and Vietnam. For the time being, Beijing will not seek to impose its own version of the Monroe Doctrine. It will hold nationalism in check even as the Asian naval arms race accelerates. Unlike in 1914 or 1939, the presence of large American garrisons in Europe and Asia sustains a tenacious Pax Americana. The United Nations, for all its cumbersome failings, serves as the guarantor of last resort against another descent into horror. The specter of nuclear holocaust is the ultimate deterrent for a hyperconnected world. Citizens everywhere now have the tools to raise a cacophony in real time against the sort of folly that, in World War I, produced the deaths of so many unidentifiable young men "known unto God," in Kipling's immortal phrasing. Convincing? It would certainly be nice to believe that, as President Clinton suggested in 1997, great-power territorial politics are a thing of the past. A new era had dawned, he said, in which "enlightened self-interest, as well as shared values, will compel countries to define their greatness in more-constructive ways." In fact, the realization that the Russian bear can bite as well as growl is timely. It is a reminder that a multipolar world in a time of transition, when popular resentments are rising over joblessness and inequality, is a dangerous place indeed. The international system does not look particularly stable. The Cold War's bipolar confrontation, despite its crises, was predictable. Today's world is not. It features a United States whose power is dominant but no longer determinant; a one-party China that is a rising hegemon; an authoritarian Russia giddy on nationalism and the idea of a restored imperium; and a weak, navel-gazing, blasé Europe whose pursuit of an ever closer union is on hold and perhaps on the brink of reversal. Pacifist tendencies in western Europe coexist with views of power held in Moscow and Beijing that Bismarck or Clausewitz would recognize instantly. After the genocides in Rwanda and Bosnia, the UN General Assembly ratified the concept that governments have a "responsibility to protect" their citizens from atrocities. But in the face of Syria's bloody dismemberment and Ukraine's cynical dismantlement, idealism of that kind looks fluffy or simply irrelevant. The Baltic countries are front-line states once again. The fleeting post–Cold War dream of a zone of unity and peace stretching from Lisbon to Vladivostok has died. As John Mearsheimer observes in his seminal The Tragedy of Great Power Politics, "Unbalanced multipolar systems feature the most dangerous distribution of power, mainly because potential hegemons are likely to get into wars with all of the other great powers in the system." In this context, nothing is more dangerous than American weakness. It is understandable that the United States is looking inward after more than a decade of post-9/11 war. But it is also worrying, because the credibility of American power remains the anchor of global security. The nation's mood is not merely a reflection of economic hardship or the costs of war; it is also determined by the president's decisions and rhetoric. There was no American majority for involvement in World War I or World War II—until the president set out to forge one (helped decisively in Franklin D. Roosevelt's case by Pearl Harbor). As Jonathan Eyal of Britain's Royal United Services Institute says, "If a president stands up and says something, he can shift the debate." President Obama has made clear he does not believe in military force. His words spell that out; so does his body language. He asks, after Iraq and Afghanistan, what force accomplishes. These are fair questions; the bar must be very high for unleashing military power. But when an American president marches allies up the hill to defend his "red line"—as Obama did regarding Syria's use of chemical weapons—and then marches them back down again, he does something damaging that the world does not forget. And when Obama, in response to a recent question about whether declaring that the United States would protect the Senkaku Islands risked drawing another "red line," gives an evasive answer, he does

something so dangerous that his words are worth repeating: The implication of the question, I think, … is that each and every time a country violates one of these norms, the United States should go to war or stand prepared to engage militarily, and if it doesn't, then somehow we're not serious about these norms. Well, that's not the case. If these treaty obligations do not constitute a red line triggering a U.S. military response—the only way to prove the seriousness of "these norms"—all bets are off in a world already filled with uncertainties. A century ago, in the absence of clear lines or rules, it was just this kind of feel-good hope and baseless trust in the judgment of rival powers that precipitated catastrophe. But that, it may be said, was then. The world has supposedly been transformed. But has it? Consider this article in my father's 1938 high-school yearbook: The machine has brought men face to face as never before in history. Paris and Berlin are closer today than neighboring villages were in the Middle Ages. In one sense distance has been annihilated. We speed on the wings of the wind and carry in our hands weapons more dreadful than the lightning … The challenge of the machine is the greatest opportunity mankind has yet enjoyed. Out of the rush and swirl of the confusions of our times may yet arise a majestic order of world peace and prosperity. Optimism is irrepressible in the human heart—and best mistrusted. Our world of hyperconnectivity, and the strains and aspirations that accompany it, is not so novel after all. The ghosts of repetition reside alongside the prophets of progress. From the "rush and swirl" of 1938 where "distance has been annihilated" would follow in short order the slaughter of Stalingrad, the mass murder of European Jewry, the indiscriminate deaths in Hiroshima and Nagasaki, and the anguish of all humanity. We should not lightly discard a well-grounded pessimism or the treaties it has produced.

Nuclear escalation is probable in an international war, the other option is alliance collapse

Fisher 15 (Max. Max Fisher is a freelance journalist and a former writer and editor at The Atlantic. 6-29-2015. "How World War III became possible: A Nuclear conflict with Russia is likelier than you think". Vox. http://www.vox.com/2015/6/29/8845913/russia-war. Accessed 7/8/2015. KC)

The view among many Western analysts is that the nuclear-capable missiles are meant as a gun against the heads of the Americans and the Europeans: You better not mess with us Russians, or who knows what we'll do. Putin himself endorsed this view in a 2014 speech in Sochi, where he approvingly cited Soviet leader Nikita Khrushchev's 1960 address to the United Nations, when he hammered his shoe on the podium. "The United States and NATO thought, 'This Nikita is best left alone, he might just go and fire a missile. We better show some respect for them,'" Putin said. This sort of a nuclear threat could be a perfect way for Putin to attempt the sort of NATO-splitting scenario described by analysts like Piontkovsky. What if, Lucas asked as an example in his report, Putin found some excuse to declare a Russian "military exclusion zone" in the Baltic Sea, thus physically cutting off the Baltic states from the rest of NATO? "Would America really risk a nuclear standoff with Russia over a gas pipeline?" Lucas asked. "If it would not, NATO is over. The nuclear bluff that sustained the Western alliance through all the decades of the Cold War would have been called at last." Putin's love of brinksmanship, while perhaps born of Russia's weakness, is also deeply worrying for what it says about the leader's willingness and even eagerness to take on huge geopolitical risk. "Either he has a very weird theory of nuclear weapons, or he just doesn't take the West seriously and is trying to cow us with whatever threat he can make," Saideman, the political scientist, said, going on to draw yet another of the many

parallels analysts have drawn to the onset of World War I. "There are two visions of international relations: One is that threats work, and one is that threats don't, where they cause counter-balancing," Saideman continued. "This was the theory of the [German] Kaiser before World War I: the more threatening you are, the more people will submit to your will. That might be Putin's logic, that he's just going to threaten and threaten and hope that NATO bends. But the long run of international relations suggests that it goes the other way, where the more threatening you are the more you produce balancing." In other words, Putin is hoping to compensate for his weakness by expressing his willingness to go further, and to raise the stakes higher, than the more powerful Western nations. But his actions are premised on a flawed understanding of how the world works. In fact, he is virtually forcing the West to respond in kind, raising not just the risk of a possible war, but the ease with which such a war would go nuclear.

Postmodern hybrid war causes small conflicts to escalate into power war

Fisher 15 (Max. Max Fisher is a freelance journalist and a former writer and editor at The Atlantic. 6-29-2015. "How World War III became possible: A Nuclear conflict with Russia is likelier than you think". Vox. http://www.vox.com/2015/6/29/8845913/russia-war. Accessed 7/8/2015. KC) Note: "Hybrid war" is used in this article as unclear aggressive action that can escalate before it becomes apparent that it crosses in line into "war".

This poll is even worse than it looks. It assumes that Russia would launch an overt military invasion of the Baltics. What would actually happen is something far murkier, and far more likely to leverage European hesitation: the playbook from Ukraine, where Russia deployed its newly developed concepts of postmodern "hybrid war," designed to blur the distinction between war and not-war, to make it as difficult as possible to differentiate grassroots unrest or vigilante cyberattacks from Russian military aggression. Putin may already be laying the groundwork. In March of 2014, shortly after Russia had annexed Crimea, Putin gave a speech there pledging to protect Russians even outside of Russia, which many took as a gesture to the substantial Russian minorities in the Baltics. "That kind of misperception situation is definitely possible, and that's how wars start" Then, in October, Putin warned that "open manifestations of neo-Nazism" had "become commonplace in Latvia and other Baltic states" — repeating the language that he and Russian state media had earlier used to frighten Russian speakers in Ukraine into taking up arms. This April, several Russian outlets issued spurious reports that Latvia was planning to forcibly relocate ethnic Russians into Nazi-style ghettos — an echo of similar scaremongering Russian propaganda broadcast in the runup in Ukraine. Martin Hurt, a former senior official of the country's defense ministry, warned that his country's ethnic Russian minority could be "receptive to Kremlin disinformation." Moscow, he said, could generate unrest "as a pretext to use military force against the Baltic states." In early 2007, Estonia's parliament voted to relocate a Soviet-era military statue, the Bronze Soldier, that had become a cultural symbol and annual rallying point for the country's ethnic Russians. In response, Russian politicians and state media accused the Estonian government of fascism and Nazi-style discrimination against ethnic Russians; they issued false reports claiming ethnic Russians were being tortured and murdered. Protests broke out and escalated into riots and mass looting. One person was killed in the violence, and the next day hackers took many of the country's major institutions offline. Russia could do it again, only this time gradually escalating further toward a Ukraine-style conflict. NATO is just not built to

deal with such a crisis. Its mutual defense pledge, after all, rests on the assumption that war is a black-and-white concept, that a country is either at war or not at war. Its charter is from a time when war was very different than it is today, with its many shades of gray. Russia can exploit this flaw by introducing low-level violence that more hawkish NATO members would consider grounds for war but that war-averse Western European states might not see that way. Disagreement among NATO's member states would be guaranteed as they hesitated over where to declare a moment when Russia had crossed the line into war. Meanwhile, Russian state media, which has shown real influence in Western Europe, would unleash a flurry of propaganda to confuse the issue, make it harder to pin blame on Moscow for the violence, and gin up skepticism of any American calls for war. Germany, which is widely considered the deciding vote on whether Europe would go to war, would be particularly resistant to going to war. The legacy of World War II and the ideology of pacifism and compromise make even the idea of declaring war on Russia unthinkable. German leaders would come under intense political pressure to, if not reject the call to arms, then at least delay and negotiate — a de facto rejection of NATO's collective self-defense. In such a scenario, it is disturbingly easy to imagine how NATO's European member states could split over whether Russia had even crossed their red line for war, much less whether to respond. Under a fog of confusion and doubt, Russia could gradually escalate until a Ukraine-style conflict in the Baltics was foregone, until it had marched far across NATO's red line, exposing that red line as meaningless. But the greatest danger of all is if Putin's plan were to stumble: By overreaching, by underestimating Western resolve to defend the Baltics, or by starting something that escalates beyond his control, it could all too easily lead to full-blown war. "That kind of misperception situation is definitely possible, and that's how wars start," Saideman said, going on to compare Europe today with 1914, just before World War I. **"The thing that makes war most thinkable is when other people don't think it's thinkable."** In 1963, a few months after the Cuban missile crisis had almost brought the US and Soviet Union to blows, President John F. Kennedy gave a speech drawing on the lessons of the world's brush with nuclear war: "Above all, while defending our vital interests, nuclear powers must avert those confrontations which bring an adversary to a choice of either a humiliating retreat or a nuclear war." That is the choice that Putin may well force upon NATO.

National leaders think they can "win" a nuclear war – this makes it far more likely

Fisher 15 (Max. Max Fisher is a freelance journalist and a former writer and editor at The Atlantic. 6-29-2015. "How World War III became possible: A Nuclear conflict with Russia is likelier than you think". Vox. http://www.vox.com/2015/6/29/8845913/russia-war. Accessed 7/8/2015. KC)

There is a corollary in Russia's nuclear doctrine, a way in which the Russians believe they have solved the problem of Western military superiority, that is so foolhardy, so dangerous, that it is difficult to believe they really mean it. And yet, there is every indication that they do. That corollary is Russia's embrace of what it calls a "de-escalation" nuclear strike. Go back to the scenario spelled out in Russia's military doctrine: a conventional military conflict that poses an existential threat to the country. The doctrine calls for Russia to respond with a nuclear strike. But imagine you're a Russian leader: How do you drop a nuclear bomb on NATO's troops without forcing the US to respond with a nuclear strike in kind, setting off a tit-for-tat cycle of escalation that would end in total nuclear war and global devastation? Russia's answer, in the case of such a

conflict, is to drop a single nuclear weapon — one from the family of smaller, battlefield-use nukes known as "tactical" weapons, rather than from the larger, city-destroying "strategic" nuclear weapons. The idea is that such a strike would signal Russia's willingness to use nuclear weapons, and would force the enemy to immediately end the fight rather than risk further nuclear destruction. Nikolai Sokov, a nuclear weapons expert and former official in the Russian Foreign Affairs Ministry, explained in the Bulletin of Atomic Scientists that this is not a far-fetched option of last resort; it has become central to Russian war planning. "Such a threat is envisioned as deterring the United States and its allies from involvement in conflicts in which Russia has an important stake, and in this sense is essentially defensive," Sokov wrote. "Yet, to be effective, such a threat also must be credible. To that end, all large-scale military exercises that Russia conducted beginning in 2000 featured simulations of limited nuclear strikes." Buzhinsky, the recently retired member of Russia's General Staff, confirmed in our meeting that this is something the military sees as a viable option. "If Russia is heavily attacked conventionally, yes, of course, as it's written in the doctrine, there may be limited use of nonstrategic nuclear weapons," he said. "To show intention, as a de-escalating factor." **It is difficult to imagine a more dangerous idea** in the world of military planning today than of a "limited" nuclear war. Scholars have debated for decades, and still debate today, whether the concept of limited nuclear war is realistic, or whether such a conflict would inevitably spiral into total nuclear war. Put another way, no one knows for sure whether Russia's military planners have sown the seeds for global nuclear destruction. Seen from the Russian side, it is at least possible to imagine how this doctrine might make sense: The threat of NATO's conventional forces is widely seen as both overwhelming and imminent, making such an extreme step worth considering. Ever since the fall of the Soviet Union, Russia's strategic culture has increasingly emphasized its nuclear arsenal, the one remaining legacy of its fearsome great-power status. It is a sort of Russian cult of the nuclear weapon, or even a certain strategic fetish. With nukes so central to Russian strategic thinking, it is little wonder Moscow sees them as the solution to its greatest strategic problem. But when you consider this doctrine from the American side, you begin to see what makes it dangerous, even insane. Imagine that you are an American leader and your forces in Eastern Europe have somehow been drawn into conflict with the Russians. Perhaps, as artillery and planes from within Russia hammer your forces, you counterattack on Russian soil to take them out. The Kremlin, fearing the start of an invasion to take Moscow, drops a tactical nuclear warhead on your forces in Estonia or Latvia. You have no idea whether more Russian nuclear strikes are coming, either on the battlefield, more widely on Europe, or even against Washington or New York. Do you respond with an in-kind tactical nuclear strike, opening the risk of gradual escalation to total nuclear war? Do you, fearing the worst, move to take out the Russian leadership before they can order more attacks? Or do you announce a unilateral ceasefire, drawing your forces back in humiliation, rewarding Russia with a victory? It is difficult to imagine a more dangerous idea than "limited" nuclear war Russia's nuclear doctrine is betting that any American leader — not to mention the leaders of nuclear-armed France and the UK — would choose the last of those three options. If that prediction turned out to be wrong, it would mean nuclear war, perhaps global nuclear war and thus annihilation. This doctrine, in other words, is **gambling with the fate of the world**. Such a scenario, to be clear, is remote, as are all of the nuclear scenarios. It would require a cascading series of events, and for neither side to pull back in time as those events built. The odds of this happening are quite low. But they are greater than zero, and growing. Such a scenario is within the realm of possibility — if it were not, then Russia would not regularly conduct military exercises that imagine exactly this outcome. And recall that Alexander Vershbow, the deputy secretary general of NATO, told a conference in late April that NATO is gaming out exactly such

a crisis. There are yet more worrying implications to this Russian doctrine. Its logical conclusion is that Russia sees itself as able to fight a war with the conventionally superior United States without losing, and that it can do this by using battlefield nuclear weapons. Under this doctrine, Moscow is deeming not only full-blown war against the US as imaginable, but a full-blown war with at least one nuclear detonation. That, perhaps, can help explain why Putin has seemed so willing to ratchet up the possibility of a real war with the United States, even one involving nuclear threats — he may believe that through his superior will and brinksmanship, he can avoid defeat. Adding a nuclear element to any conflict would also seem to increase the odds of NATO's Western European members splitting over how to respond, particularly if Russian propaganda can make the circumstances leading up to the detonation unclear. But this also shows the degree to which his entire strategy may rest in part on a shoddy premise — that "limited" nuclear war can be winnable — and one that puts the entire world at risk.

The threat of great power war even if unlikely must factor into policy decision making

Gosnell and Orzetti 12 (Rachael and Orzetti. Rachel Gosnell is a Lieutenant Commander in the US Navy and Michael Orzetti is a Second Lieutenant in the US Marine Corps. 4-2012. "Now Hear This – Is Great-Power War Still Possible?". Proceedings Magazine – United States Naval Institute. http://www.usni.org/magazines/proceedings/2012-04/now-hear-great-power-war-still-possible. Accessed 7-8-2015. KC)

The Center for Naval Analyses recently published Grand Strategy: Contemporary Contending Analyst Views and Implications for the U.S. Navy , a survey of potential U.S. strategies being debated in the academic and defense communities. The study identifies four competing lines of strategic thought: maintaining American hegemony, selective engagement, offshore balancing, and integrating collective international efforts. Two additional options—isolationism and world government—are noted and disregarded as not viable. Under this list of strategic options a sharp division is apparent, dictated by the question, "Is great-power war obsolete?" This fundamental question must be answered before any logical strategic decisions can be made. If great-power war is possible, then the de facto existential threat to U.S. interests, latent in the international system, must be addressed before all others. There are enormous implications for weapon procurement, operational doctrine, and force levels driven by this single issue. Global strategists point to economic globalization and the proliferation of nuclear weapons as modern guarantors of peace among major powers. However, we contend that these very rational hedges against violence can still be shattered by decidedly irrational and reactionary forces. Thus, the possibility of great-power war between China and the United States cannot be ruled out. Economic interdependence offers benefits beyond the sheer transfer of capital and goods—there can be no doubt of that. However, history renders globalization's deterrent effects at least somewhat questionable. Substantial economic interdependence existed throughout Europe prior to World War I, and Japan was hugely dependent on American oil imports in the years leading up to World War II. It was this dependence that made the U.S oil embargo intolerable, ultimately motivating the Japanese to attack Pearl Harbor. On the other hand, the existential threat of nuclear weapons has certainly resulted in a universal desire keep Pandora's Box firmly shut. While we concede the remarkable ability of weapons of mass destruction to dampen the oscillations of great-power relations, it is unclear that the nuclear restraint against total war ever takes limited war off the table as a strategic option. More fundamentally, though, the arguments for a nuclear-based "state of peace" are constrained by the limits of rationality. Rational bounds do not apply to the

ephemeral—yet extremely powerful—waves of bellicose nationalism that can sweep up an entire nation. National pride is embedded in the Chinese DNA—and rightly so. In certain segments of society, however, the sentiment manifests itself with a particular fervor, and some elements of the People's Liberation Army (PLA) epitomize this zeal. Alarmingly, the Communist Party leadership appears increasingly unable to act as a check on the military. Both Mao Zedong and Deng Xiaoping had ironclad control over the PLA, having earned unquestionable credibility during the Long March. Neither General Secretary of the Communist Party Hu Jintao nor First Secretary Xi Jinping can claim a similar rapport with the PLA. Neither possesses a comparable level of control. Any surge of aggressive nationalism, either in the PLA or among the greater masses, could conceivably compel contemporary party leadership toward a bellicosity it does not desire. How might this happen? The two most likely scenarios deal with Chinese "core interests" in the Pacific: sovereignty in the South China Sea and Taiwan. The South China Sea is no stranger to conflict. Its location and material promise have led to a host of conflicting territorial claims and brought the Chinese and Vietnamese to armed conflict over the Spratly Islands in the late 1980s. After a period of relative calm, tensions have once again begun to flare. American commitment to freedom of the seas in the region, exemplified by Secretary of State Hillary Clinton's July 2010 speech in Hanoi, Vietnam, provides ample opportunity for a Sino-American butting of heads. Similarly, the Republic of China remains a perennially sore issue for the Chinese; the furor over the sale of American F-16s provides an ample platform for future, more-polarizing interactions over Taiwan. War between China and the United States is unlikely. Economic interdependence and nuclear weapons are powerful, persuasive deterrents against it. However, Sino-American dealings, particularly in Taiwan or the South China Sea, provide instances in which the powder keg of Chinese nationalism could explode, effectively forcing party leadership into a series of irrational but irreversible actions. As such, the possibility of great-power war, unlimited or otherwise, cannot be ruled out. **U.S. policymakers must plan accordingly.**

Yes war & Surveillance Inevitable – States will perform surveillance and declare war to maintain their image – States care more about their ontological self-image than physical threats

Ralston '14 (Robert Ralston is a second-year Master's student in the Department of Political Science at Virginia Tech. His research interests broadly include international relations, critical security studies, cyberpolitics, and surveillance. Robert is writing a thesis that examines state ontological insecurity with respect to cyberspace, and how state surveillance practices are justified through narratives of liberty and security, MILTON WOLF SEMINAR, "CYBERSPACE AND SURVEILLANCE: CHALLENGES TO STATE IDENTITY AND ONTOLOGICAL SECURITY IN THE DIGITAL AGE" http://www.global.asc.upenn.edu/app/uploads/2015/04/Milton-Wolf-2014-Compendium.pdf#page=41 DA:7/8/15 CB)

Increasing state surveillance of the internet and a seeming lack of global accountability and best practices regarding foreign and domestic internet policies **demands the attention of students, scholars, and practitioners of** media and **communication**, political science, sociology, computer science, and the like. With these concerns in mind, the 2014 Milton Wolf Seminar highlighted themes of surveillance, visibility, disclosure, and espionage in the digital age. This essay seeks to touch upon some of these themes, and to present a case for the study of ontological security in international relations as a way to explain, in part, U.S. practices of surveillance following the leaks by former National Security Administration (NSA) contractor Edward Snowden. Politically, the stakes are high as cyberpolitics becomes an issue of "high politics" in the study of international relations; states and the agents who produce narratives about the state frame cyber discourse in ways that attempt to justify practices of surveillance, espionage, and censorship. States justify intrusion into cyberspace in the name of stability and an idealized self-image. This, can prove violent and costly,

with parallels to justifying war on the basis of empire in offline venues. In cyber venues, the United States in particular has had to justify state intrusion into cyber venues. Void of routinized responses to "traditional" threats, the state must reshape or reconfigure its self-image in order to combat the contradictions inherent in state intrusions into cyberspace. Taking in consideration such concerns and dynamics, this essay first sets out to explain ontological security in the study of international relations and the discursive practices of U.S. state agents in justifying state surveillance practices. It then concludes by drawing parallels between these discursive practices and various presentations at the 2014 Milton Wolf Seminar. Ontological Security in International Relations Theory Physical security concerns dominate realist accounts of security in world politics (Mitzen 2006: 342). Ontological security in international relations goes beyond the premise that states are solely concerned with physical security. The assumption that states only seek physical security, Mitzen (2006: 364) argues, constrains international relations theory by failing to explain why states may seek or continue conflict at the expense of physical security. Inherent in the conception of a state's ontological security is the notion of the state as person, or at the very least, that states are concerned with their own self-image. 20 Ontological security is about constructing and maintaining the stability of a state's self-image. Power, in this regard, can be understood in terms 20 See Wendt (2004) for a discussion of the validity and appropriateness of understanding the state as person in international relations theory. 40 of "a centralized body's internal capacity to perceive its ability to operate upon its own selfimage, as well as influence others and determine outcomes" (Steele 2010: 15). Thus, power is not solely based upon a state's ability to make other actors do what they would otherwise not do, to pose material threats to other states, or assert global influence; power is about the state's recognition that it can use and recreate its own self-image. States put forward narratives about themselves through state agents, such as government officials. State actions must be justified, even if they go against the grain of international norms or expectations (Steele 2008: 10). What is particularly interesting about the U.S response to the Snowden disclosures is the manner in which the disclosures were framed, the contradictions that arose as a result of this framing, and how the narratives that the state produced regarding NSA practices harken back to the self-image-making of the U.S. state. Why the United States? When examining speeches made by U.S. state agents, publications regarding U.S. citizenship, and the ways the United States is presented in popular culture, common trends emerge: The United States is presented as exceptional, as a land of shared values-- liberty, freedom, and prosperity—which were created by the nation's founding fathers. David Campbell (1998: 131) suggests that America is an imagined community "par excellence." America, like all other states, is dependent upon practices that make up its ontological being. However, as Campbell (1998) argues: Defined, therefore, more by absence than presence, America is peculiarly dependent on representational practices for its being. Arguably more than any other state, the imprecise process of imagination is what constitutes American identity (p. 91). Space and time in reference to U.S. identity is crucial to this analysis because successful fulfillment of ontological state security is predicated upon that state's ability to maintain a consistent self-identity and self-image. Void of a people as a foundational element, the United States' self-identity is quite fleeting, and, thus, hinges on representational, symbolic, and iconic imagery in order to ascribe to itself some form of identity (Campbell 1998: 132). The U.S. State Narrative In a speech made prior to Snowden's disclosures, President Obama spoke of the necessity to secure cyber infrastructure while maintaining the internet as a free and open space: Our pursuit of cybersecurity will not—I repeat, will not include—monitoring private sector networks or Internet traffic. We will preserve and protect the personal privacy and civil liberties that we cherish as Americans. Indeed, I remain firmly committed to net neutrality so we can keep the Internet as it should be—open and free. In light of the Snowden disclosures, a contradiction arises between the actual behavior of the state through its national security agency and the self-image of the state. President Obama sends two distinct and seemingly irreconcilable messages regarding cyberspace: First, the United States, as a centralized power, recognizes the tensions that it must mediate between security and 41 liberty; Second, the United States has a vision for cyberspace, one focused on being "open and free." But free for whom? U.S. security policy is decentralized insofar as it attempts to do too much while still trying to keep a constant self-image (See Campbell 1998 and Gould and Steele 2014). Cyberspace is not an "American thing," but from cyberspace comes a multitude of images that only exacerbate the imagined nature of American identity. Thus, what cyberspace is and what cyberspace means, from an American perspective, is inherently American. Addressing the "noise" surrounding the practices of the National Security Administration, President Obama first noted the history of intelligence gathering by the United States: At the dawn of our Republic, a small, secret surveillance committee, born out of the Sons of Liberty, was established in Boston. And the group's members included Paul Revere. At night, they would patrol the streets, reporting back any signs that the British were preparing raids against America's early patriots. In order to find footing and precedent in the face of ontological insecurity in cyberspace two rhetorical moves are deployed. First, history is resurfaced and reworked to create a seemingly appropriate

metaphor for the present. This history is doused in a patriotic whitewash, whereby particular events are chosen but not others that are perhaps more indicative and relevant to the current situation. Further, the parallels put forward by Obama are not parallels at all; the nature of surveillance, global politics, globalization, and technology are not the same as they were 200 or so years ago. This history serves to maintain the state's self-image over time. Campbell (1998: 130) notes that the American quasi-war with France "demonstrated how previously established discursive strategies of otherness could be invoked in novel circumstances to provide powerful modes of understanding." Much in the same way, President Obama's return to history serves not only to ground justifications for NSA activities in seemingly consistent practices of state surveillance, but also in actions against threats from an "other," in this case, the British during the Revolutionary War. Threats in cyberspace come from a plethora of sources, including: other states, non-state actors, rogue Americans, or even cyberspace itself. Obama's second rhetorical move is to argue for American exceptionalism. He goes on to note, But America's capabilities are unique, and the power of new technologies means that there are fewer and fewer technical constraints on what we can do. That places a special obligation on us to ask tough questions about what we should do. The justification for (at least toned down) policies of NSA surveillance centers on the notion that "someone has to do it," and "we can do it better than anyone else." America's status as "the world's only superpower," as President Obama declares, opens itself up for interrogation. At the end of his speech on NSA reforms, President Obama demonstrates, perhaps unintentionally, that ontological insecurity is a powerful motivator for the United States in cyberspace: When you cut through the noise, **what's really at stake is how we remain true to who we are in a world that is remaking itself at dizzying speed. Whether it's the ability of 42 individuals to communicate ideas, to access information that would have once filled every great library in every country in the world, or to forge bonds with people on the other side of the globe, technology is remaking what is possible for individuals and for institutions and for the international order**. This is not to say that the United States consciously and reflexively recognizes its ontological insecurity in its relationship to cyberspace. However, the examples that are raised concerning the dangers of cyberspace—from cyberspace as a mechanism for terrorist mobilization to cyber wars of the future—do not paint an entirely clear picture of what makes cyberspace something truly different in global politics. This shift is not universal, or at least to the same degree, for every state. Cyberspace may provide a vehicle for dissent, organization, etc. for every state, but it burdens states that are fixed in terms of physical security and depend on an idealized self-image. States are pressured into explaining the contradictions that arise as a result of their self-image (freedom, openness, transparence, for example) and state-led intrusions into cyberspace. Foreign Policies of the Internet: Surveillance and Disclosure Revisited The 2014 Milton Wolf Seminar brought to bear, and framed well, this theoretical construction of state ontological security in international relations. In particular, many of the presentations dealt with the critical problematic of the balance that must be struck between state self-interest by way of national security and internet diplomacy, global governance, and transparency. Panelists discussed this problematic in various contexts ranging from state censorship of information, international law, and state sovereignty. The internet, and cyberspace more generally, has very real physical characteristics that are often forgotten in discourses of a "borderless digital world" or the metaphor of the internet as a "cloud." Indeed, the internet is built upon a physical framework, logical building blocks, and interaction (Choucri 2012); and each of these "layers" carries very real political ramifications. State ontological security in cyberspace, as described above, assumes the structural realities of power in international relations regarding the internet, and seeks to elaborate upon how states, beyond concern for their physical security, come to justify surveillance practices on the internet. In this sense, the Milton Wolf Seminar proved invaluable as practitioners and scholars sought to elaborate upon the role of the internet, censorship, privacy, and surveillance in diverse contexts including the national policies and practices of Russia, South Africa, the United States, China, and Britain. Further, the seminar participants elaborated upon shifting or different physical as well as content-layer considerations that need to be taken into account, such as changing modes of internet use, types of surveillance practices, and statecraft in the digital age. The discussion held over the course of the two-day seminar invoked more questions than answers; analysis of such issues has thus far moved, as one seminar participant described, "glacially" alongside the need for internet governance. Thus, the seminar was both timely and a necessary given the salience of internet security, privacy, and surveillance in international politics, along with the perhaps shifting role of the state, and traditional concepts of international politics: state power, sovereignty, and global governance

Speaking for Others Turn

Speaking for others bad

Speaking for others is impossible our interpretation of the other is hopelessly mired in our own subjectivities

Adams '05 (Tony E. Adams, Associate Professor and Chair of the Department of Communications Media and Theater Northeastern Illinois University Graduate, "SPEAKING FOR OTHERS: Finding the Whos of Discourse" Soundings: An Interdisciplinary Journal Vol. 88, No. 3/4 (Fall/Winter 2005), pp. 331-345, http://www.jstor.org/stable/41179130, Published in the Fall/Winter of 2015, Accessed July 9th 2015, CMT)

However, Husserl ontologically positions us as "constitutively interrelated monads" (*Cartesian* 128), internally closed off from each other, impenetrable Beings who come together and establish communities. This positions us first as individuals and second as they-constituted entities. Following this logic, we can only know others — their thoughts, actions, and possibilities — by how they appear for us: I can only know about you based on how you appear for me. Even if we try to know each other via dialogue, our subjectivities will still color our interpretation of one another. Perception is "simply a mental act of mine" (Husserl, *Idea* 16), and "one's own subjective meaning can never be laid side by side with another's and compared" (Schutz 165). Husserl argues that, "[b]y means of the alien [foreign] constitutings constituted in my own self, there becomes constituted for me… the common world for ''all of u'" (*Cartesian* 87) It is here that intersubjectivity surfaces: We become socialized into "there-ness-for-everyone" (*Cartesian* 92) structures in the world, shared systems of meaning that make possible our interactions with and understandings of each other (such as identity categories). However, our inner realms remain inaccessible to others (and, some would say, to ourselves [see Peters]); we are physically separate Beings who meet by way of the thereness-for-everyone qualities of a community.

Speaking for others makes white people feel good while producing no change since they don't have to give up any privilege

Tuck & Yang '12 (Eve Tuck & K. Wayne Wang, earned her Ph.D.in Urban Education at The Graduate Center, The City University of New York in 2008 & Ph.D. 2004 Social and Cultural Studies University of California Berkeley, "Decolonization is not a metaphor" Vol. 1, No. 1, 2012, pp. 1-40. http://risingtide604.ca/wp-content/uploads/2012/12/Decolonization-is-not-a-metaphor.pdf, Published in 2012. Accessed July 9th 2015, CMT)

We observe that another component of a desire to play Indian is a settler desire to be made innocent, to find some mercy or relief in face of the relentlessness of settler guilt and haunting (see Tuck and Ree, forthcoming, on mercy and haunting). Directly and indirectly benefitting from the erasure and assimilation of Indigenous peoples is a difficult reality for settlers to accept. The

weight of this reality is uncomfortable; the misery of guilt makes one hurry toward any reprieve. In her 1998 Master's thesis, Janet Mawhinney analyzed the ways in which white people maintained and (re)produced white privilege in self-defined anti-racist settings and organizations.8 She examined the role of storytelling and self-confession - which serves to equate stories of personal exclusion with stories of structural racism and exclusion - and what she terms 'moves to innocence,' or "strategies to remove involvement in and culpability for systems of domination" (p. 17). Mawhinney builds upon Mary Louise Fellows and Sherene Razack's (1998) conceptualization of, 'the race to innocence', "the process through which a woman comes to believe her own claim of subordination is the most urgent, and that she is unimplicated in the subordination of other women" (p. 335). Mawhinney's thesis theorizes the self-positioning of white people as simultaneously the oppressed and never an oppressor, and as having an absence of experience of oppressive power 8 Thank you to Neoma Mullens for introducing Eve to Mawhinney's concept of moves to innocence. 10 E. Tuck & K.W. Yang relations (p. 100). This simultaneous self-positioning afforded white people in various purportedly anti-racist settings to say to people of color, "I don't experience the problems you do, so I don't think about it," and "tell me what to do, you're the experts here" (p. 103). "The commonsense appeal of such statements," Malwhinney observes, enables white speakers to "utter them sanguine in [their] appearance of equanimity, is rooted in the normalization of a liberal analysis of power relations" (ibid.). In the discussion that follows, we will do some work to identify and argue against a series of what we call 'settler moves to innocence'. Settler moves to innocence are those strategies or positionings that attempt to relieve the settler of feelings of guilt or responsibility without giving up land or power or privilege, without having to change much at all.

(NOTE: "settler moves to innocence effect")

Their claim of the "one drop rule" simulates the Indian Grandmother Complex producing ressentiment in the other

Tuck & Yang '12 (Eve Tuck & K. Wayne Wang, earned her Ph.D.in Urban Education at The Graduate Center, The City University of New York in 2008 & Ph.D. 2004 Social and Cultural Studies University of California Berkeley, "Decolonization is not a metaphor" Vol. 1, No. 1, 2012, pp. 1-40. http://risingtide604.ca/wp-content/uploads/2012/12/Decolonization-is-not-a-metaphor.pdf, Published in 2012. Accessed July 9th 2015, CMT)

In this move to innocence, settlers locate or invent a long-lost ancestor who is rumored to have had "Indian blood," and they use this claim to mark themselves as blameless in the attempted eradications of Indigenous peoples. There are numerous examples of public figures in the United States who "remember" a distant Native ancestor, including Nancy Reagan (who is said to be a descendant of Pocahontas) and, more recently, Elizabeth Warren9 and many others, illustrating how commonplace settler nativism is. Vine Deloria Jr. discusses what he calls the Indiangrandmother complex in the following account from Custer Died for Your Sins: 9 See

Francie Latour's interview (June 1 2012) with Kim Tallbear for more information on the Elizabeth Warren example. In the interview, Tallbear asserts that Warren's romanticized claims and the accusations of fraud are evidence of ways in which people in the U.S. misunderstand Native American identity. Tallbear insists that to understand Native American identity, "you need to get outside of that binary, one-drop framework." Decolonization is not a metaphor 11 During my three years as Executive Director of the National Congress of American Indians it was a rare day when some white [person] didn't visit my office and proudly proclaim that he or she was of Indian descent... At times I became quite defensive about being a Sioux when these white people had a pedigree that was so much more respectable than mine. But eventually I came to understand their need to identify as partially Indian and did not resent them. I would confirm their wildest stories about their Indian ancestry and would add a few tales of my own hoping that they would be able to accept themselves someday and leave us alone. Whites claiming Indian blood generally tend to reinforce mythical beliefs about Indians. All but one person I met who claimed Indian blood claimed it on their grandmother's side. I once did a projection backward and discovered that evidently most tribes were entirely female for the first three hundred years of white occupation. No one, it seemed, wanted to claim a male Indian as a forebear. It doesn't take much insight into racial attitudes to understand the real meaning of the Indian-grandmother complex that plagues certain white [people]. A male ancestor has too much of the aura of the savage warrior, the unknown primitive, the instinctive animal, to make him a respectable member of the family tree. But a young Indian princess? Ah, there was royalty for the taking. Somehow the white was linked with a noble house of gentility and culture if his grandmother was an Indian princess who ran away with an intrepid pioneer... While a real Indian grandmother is probably the nicest thing that could happen to a child, why is a remote Indian princess grandmother so necessary for many white [people]? Is it because they are afraid of being classed as foreigners? Do they need some blood tie with the frontier and its dangers in order to experience what it means to be an American? Or is it an attempt to avoid facing the guilt they bear for the treatment of the Indians? (1988, p. 2-4)

True change never occurs when talking about the issue, public action must happen first

Tuck & Yang '12 (Eve Tuck & K. Wayne Wang, earned her Ph.D.in Urban Education at The Graduate Center, The City University of New York in 2008 & Ph.D. 2004 Social and Cultural Studies University of California Berkeley, "Decolonization is not a metaphor" Vol. 1, No. 1, 2012, pp. 1-40. http://risingtide604.ca/wp-content/uploads/2012/12/Decolonization-is-not-a-metaphor.pdf, Published in 2012. Accessed July 9th 2015, CMT)

Fanon told us in 1963 that decolonizing the mind is the first step, not the only step toward overthrowing colonial regimes. Yet we wonder whether another settler move to innocence is to focus on decolonizing the mind, or the cultivation of critical consciousness, as if it were the sole activity of decolonization; to allow conscientization to stand in for the more uncomfortable task of relinquishing stolen land. We agree that curricula, literature, and pedagogy can be crafted to aid people in learning to see settler colonialism, to articulate critiques of **settler epistemology**,

and set aside settler histories and values in search of ethics that reject domination and exploitation; this is not unimportant work. However, the front-loading of critical consciousness building can waylay decolonization, even though the experience of teaching and learning to be critical of settler colonialism can be so powerful it can feel like it is indeed making change. Until stolen land is relinquished, critical consciousness does not translate into action that disrupts settler colonialism. So, we respectfully disagree with George Clinton and Funkadelic (1970) and En Vogue (1992) when they assert that if you "free your mind, the rest (your ass) will follow."

Turns Case – War Increases Surveillance

War turns the Aff – causes adoption of ever-more totalitarian surveillance- Cold war proves.

Kullenberg '09 (Kullenberg, Christopher, PhD, University Gothenburg, His dissertation concerns the statistical social sciences, their epistemic problems and their role in modern societies, and contains a case-study of the SOM-institute, a Gothenburg research center that has been very successful in providing large surveys, "The social impact of IT: Surveillance and resistance in present-day conflicts." How can activists and engineers work together pg. 37-40. http://fiff.de/publikationen/fiff-kommunikation/fk-2009/fiff-ko-1-2009/fiko_1_2009_kullenberg.pdf DA: 7/8/15 CB)

Since the 9/11 attacks the world has been challenged with intrusive legislation upon civil liberties and increased use of surveillance technologies. As this development is proceeding rapidly, both from a legal point of view and the technological side, it takes more than parliamentary politics to pursue a democratic and open discussion about these matters. This is where the civil society, or rather the civil societies, need to collaborate. Thus, I will propose that engineers, software-programmers and people in the private sector of Information Technology could co-operate with activists, human-rights organizations and citizen-journalists in a very productive manner. I will also give tangible examples on how such activities have been pursued in Sweden during a controversy on the role of signals intelligence. Surveillance and war. Issues that keep arising in the backwaters of the "wars" on terrorists, drugs, and trafficking are often complex and require technical and legal expertise, not only to be understood, but more importantly, to be taken seriously in the public debate by the media. In order to avoid laws are passed without a proper debate or that technologies are implemented as merely technical solutions, I will propose that criticism could have a positive task in building a collaborative informational infrastructure, an effective media strategy, and other innovations. Let me give an example from Sweden. During 2008, a law was passed which allowed the government to pursue extensive signals intelligence on the Internet. It was termed the FRA-law in the press, since the authority responsible for signals intelligence is called Forsvarets Radioanstalt [1], which is the equivalent to the NSA in the United States, or the BND in Germany. The FRA was previously only allowed to search and intercept radio traffic, but this new law would allow the authority to intercept all internet traffic, by monitoring so-called "co-operation points" at the Internet Service Providers. By copying all the information passing through the cables, the FRA will be able to extract traffic-data from, the multitude of data, both domestic and international. Consequently, a mode of operation which was developed in the context of the post-war arms race will be transferred to the Internet as this law is effectuated during 2009. However, the Internet is largely used by private and corporate communication, rather than military information, a fact that raises questions concerning privacy, integrity and the rights to private communication. I will argue that if it were not for the active formation of a public, this law would have been passed without resistance or criticism. In order to understand how this works, the notion of a "public" is borrowed from the philosopher John Dewey, who explicitly stresses the importance of communication: "But participation in activities and sharing in results are additive concerns. They demand communication as a prerequisite. /…/ Communication of the results of social inquiry is the same thing as the formation of public

opinion." [2] Crucial to the formation of a participatory public issue, and to allow it to build political pressure, is there free flow of information in the sense that it operates without restrictions, something which is very different compared to traditional theories of mass-communication. This is where the Internet has a very interesting potential since its architecture, at least ideally, promotes participation, sharing and communication, which is precisely what Dewey is asking for. However, it seems that this free flow cannot be guaranteed by the internet alone, since the same abilities can be used for intrusive surveillance. Panspectric Surveillance. How are we then to conceive of contemporary technologies of surveillance? One way is to ask how technologies are used throughout society, by analyzing their performances and abilities in socio-technical assemblages. Digital technologies, besides sharing certain properties in hardware such as microprocessors, electricity-based operations and abilities to process instructions and algorithms, usually share many networked, or social effects. The internet as an assemblage of computers, routers, switches and all kinds of IP-based technologies, such as mobile devices and satellites, shapes emergent forms of effectuation. For example file-sharing, voice-transmission, e-mails etc. are all dependent on interconnectivity. Also, they operate on the potentiality of decentralization and read-write capacities, and on the ability to transfer the analogue world to a digital realm, which we see in the digitalization of images, sounds, and even in the keystrokes of keyboard. There is however a critical paradox built into our mundane technologies. We may use digital cameras on our mundane technologies. We may use digital cameras on our holiday trips and post the images on a blog, but we may also use the same capacities for an IP-based surveillance camera. The present any technologies are this at the same time what may liberate sounds, texts, images and videos from their "material imprisonment" and geographical spatiality, while they simultaneously make possible for what is called panspectric surveillance [3] The concept of panspectrocism comes from philosopher Manuel DeLanda, who situates the origin of these technologies in war. It is worthwhile to quote from his work War in the Age of Intelligent Machines (1991) in length: "There are many differences between the Panopticon and the Panspectron /…/ Instead of positiong some human bodies around a central sensor, a multiplicity of sensors is deployed around all bodies: its antenna farms, spy satellites and cable-traffic intercepts feed into its computers all the information that can be gathered. Thus is then processed through a series of "filters" or key-word watch lists. The Panspectron does not merely select certain bodies and certain (visual) data about them. Rather, it compiles information about all at the same time, using computers to select the segments of data relevant to its surveillance tasks [4]." DeLanada thus argues that the technologies we face in contemporary debates on Internet surveillance, originate in post-war setting which culminated during the cold war. Signals intelligence which culminated during the cold war. Signals intelligence was born in a combination of radio interception, transferring analogue signals to digital information, and computers which calculated patterns, attached meta-data, and filtered out only the relevant pieces of information in a multiplicity of signals. The birth of the panspectric technological framework, at least an abstract sense, this came from warfare. However, it was developed and refined during times when consumer technologies were not yet digital, and usually not even made for two-way communication (TV. Press, radio). What we see today is a complete change of orders. Signals intelligence performed by governments, such as the NSA, the FRA or the BND have entered a territory populated by ordinary citizens, rather than tanks, spy satellites and nuclear weapons. Contemporary panspectric surveillance depends on the interconnectedness of sensors and computational methods such as data mining, sociograms and databases. Sensors include RFID-chips, digital CCTV-cameras, credit cards, mobile phones, internet surveillance etc., and they all have the ability to record an ever increasing part of our everyday lives. This is where we get close

to the etymology of the words pan-, which means everything, and spectrum which is the entire range of detectable traces. The radical digitalisation of our societal functions and everyday lives, reconfigures and prolongs the range of surveillance. However, to make sense of this enormous abundance of data, methods of reducing complexity and finding relevant traces are needed. This is where the other pole of panspectrocism emerges; the need for supercomputers and advanced software and statistics. The FRA has bought one of the fastest supercomputers in the world, and it is plugged directly into the central fibre-cables of the Swedish Internet Service Providers. They will consequently receive a copy of all traffic-data, and then process it in several steps in order to find patterns. The problem is, however, that traffic-data (which contains information about with whom, at what time, how frequently etc. we communicate) can say a great deal about you and your life. If we make social network analyses of the meta-data you give off during a normal day, the surveyor can probably find out who most of your friends are, and where you are most likely to be located. With more and more data, the surveyor is able to tell your religion, sexuality, political affiliation and consumer behaviour. Citizen Journalism, Pirate Parties and Activists We can make a tripartite division of activities that may challenge the increasing use of legal and technological means of mass surveillance; citizen journalism, pirate parties and activism. They may sometimes resonate in the same direction, towards a clear goal, but their basic properties and relations are essentially heterogeneous. Issues, such as the FRA-law, can only stir up reactions and become "issues proper" if, following Dewey, there is communication between actors allowing them to react to what is imposed on them. It has been said that the case of the FRA-law was the first time in Swedish history that traditional newspapers lagged the blogosphere, and for the centre-conservative government the force of citizen journalism came as quite a surprise. The blogosphere displayed a few interesting abilities by cooperating and sharing knowledge. One important aspect of raising issues, needed to be accounted for in this case, is speed. Paul Virilio argues in his book Speed and Politics, that: "If speed thus appears as the essential fall out of styles of conflicts and cataclysms, the current arms race is in fact only the arming of the race toward the end of the world as a distance, in other words as a field of action." [5] Speed turns distance into action, and citizen journalism has a higher velocity than the traditional media, being dependent on printing presses, paid and professional journalists, or hierarchical organisations. During the passing of the FRA-law, the only ones being able to read legal documents, do proper research, and have a constructive discussion, were bloggers. In this case (and I do not want to generalise this observation to be valid for „the media" in general) we may say that the allocation of resources was much more efficient than that of large media corporations. The critical task for the blogosphere in making a successful attempt at stopping this law is knowledge production. Surveillance technologies and intrusive legislations are complex matters which are often secretive in character. Signals intelligence is maybe an extreme case, since details about methods and search criteria is necessarily kept away from the public. The first step in the case of the FRA was ontopolitical, in the sense that there was (and still is) a struggle to define whether signals intelligence is mass-surveillance, which would be a disaster for integrity, or simply a means to target very few „enemies of society" (terrorists). Bloggers analysed legal documents and government white papers, as a kind of swarm intelligence, and could argue convincingly that they entailed many legal exceptions for the FRA in registering political opinions, sexual orientation or religious background. The counter-argument from advocates of the law did not convince the bloggers, and the traditional media started covering the issue extensively. During the summer of 2008, there were articles in the newspaper almost every day for months, and many bloggers wrote extensively in both arenas

Terror DA – Turns Case

Perception alone turns the case.

Unegbu, Howard University JD candidate, 2013

[Cindy, 57 How. L.J. 433, "NOTE AND COMMENT: National Security Surveillance on the Basis of Race, Ethnicity, and Religion: A Constitutional Misstep" Lexis, accessed 7-6-15, TAP]

It is suspected that Abdulmutallab received his Islamic radicalization while living in London with his family, and later disappearing to Yemen, where al-Qaeda trained him. 48Link to the text of the note He, unfortunately, was not on the government's watch list. 49Link to the text of the note This was, perhaps, the most daunting aspect of the botched terror mission for the national government. 50Link to the text of the note An investigation revealed that the government had, in fact, received information on Abdulmutallab, but intelligence agencies failed to utilize all resources in order to connect the appropriate dots. 51Link to the text of the note As a result of this inadequacy, President Obama demanded a watch list overhaul. 52Link to the text of the note One of the most debated changes is the National Counterterrorism Center's (NCTC) ability to query different databases for individuals' personal information and retain the information for up to five years, even when the query results in no indication of criminal or terrorist activity. 53Link to the text of the note This change in procedure was primarily due to counterterrorism officials' belief that some information [443] could possibly prove helpful later. 54Link to the text of the note The Abdulmutallab attack marked the beginning of more intense counterterrorism measures, in which personal information is made subject to government surveillance without prior suspicion of criminal activity. 55Link to the text of the note Over time, as the threat of a terrorist attack on the United States has become increasingly hostile, the pressure placed on the federal government to ensure domestic safety has led to a broadening of surveillance authority. II. TREND TOWARD INVASIVE SURVEILLLANCE MEASURES After the 9/11 attacks, domestic fear of future terrorist attacks grew, spurring the national government's focus of more intrusive levels of surveillance. 56Link to the text of the note The government's focus on national security surveillance was indicative of the ballooning of the post-9/11 national security budget, the expansion of technological abilities, and the almost complete unaccountability and secrecy of national security covert operations. 57Link to the text of the note Former Vice President Dick Cheney, a well-known advocate of the government's surveillance programs, has argued that the surveillance programs are necessary if terrorist attacks are to be stopped. 58Link to the text of the note Other major political figures, like Robert Mueller, the current director of the FBI, assert that the loss of privacy for everyday Americans is justified because the eavesdropping has thwarted terrorist plots. 59Link to the text of the note In an address to Congress in 2013, Mueller stated that the "challenge in a position such as I have held in the last 11 years is to [444] balance on the one hand the security of the nation and on the other hand the civil liberties that we enjoy in this country." 60Link to the text of the note

Aff Key to Global Religious Pluralism

American religious pluralism spreads globally due to electronic globalization and international migration

Carroll, 12- Ph.D., Cornell University

(Bret E Carroll, "Worlds in Space: American Religious Pluralism in Geographic Perspective", 5/11/12, JSTOR)//Yak + Jmoney

Geographic perspectives on American religious pluralism are by no means confined to the local, regional, and national levels. We have become increasingly aware in recent years of several new approaches and developments that challenge us to stretch our thinking in new directions. We shall close with a brief survey of some of these emerging avenues for exploration.

One particularly important new approach, apparent throughout American studies, calls our attention to the nation's place in wider transnational and global communities and networks. American religious pluralism has always pointed beyond the nation, for its sources have been from the outset as much international as domestic. Such internal factors as the First Amendment and the identity movements of the 1960s have powerfully shaped its contours, of course, but religious life, Peggy Levitt has recently reminded us, regularly crosses borders and is not limited by geographic distances and boundaries (Levitt 2007b). Developments since 1965 have underscored her point, greatly amplifying the degree to which American religious space is part of, and participant in, global space. Contemporary American immigrants integrate into the United States just as their forebears did, yet the dynamic of immigration has also changed dramatically. Transnationalism, increasingly convenient global travel, an emergent global media, and new telecommunications technologies have made possible to an unprecedented extent immigrants' continuing attachment to sacred places and religious communities outside the country; their ongoing interaction with fellow emigrants who settle in other parts of the United States; their maintenance of distinctive beliefs, practices, and values; and the solidification of global religious communities—Muslim, Hindu, Pentecostal and evangelical Christian, and others—in which they and other Americans can and do take part. It is with these developments in mind that scholars have increasingly spoken of "diasporic" religion, an increasingly common phenomenon in which the dispersal of peoples and their religions across the globe from a particular geographic point of origin transforms and generates new forms of religious community, ideology, and practice (Tweed 1997; Warner and Wittner 1998; see also Tweed 2006). Transnationalism and diaspora have made "American religious pluralism and the globalization of religious life . . . part and parcel of the same dynamic" (Levitt 2007b: 107). National frameworks are becoming increasingly inadequate for fully understanding American religious lives. More than ever before, American religious worlds and American religious pluralism reach outside the nation's geographic boundaries and into transnational spaces (Stump 2001, 2008: 379–383; Chidester and Linenthal 1995: 29–30; Eck 2001: 5; Machacek 2002: 8; McAlister 2005; Levitt 2007a).

Nowhere is this reality more evident than in the nation's cities. Urban anthropologists speak of "world cities," places closely connected to other urban centers by the constant movement of people, ideas, and artifacts into and out of them made possible by rapid transportation, instantaneous communication, and global media. The result is what Ulf Hannerz has called an "intercontinental traffic in meaning" (Hannerz 1993: 68–69), a system in which religious worlds, less bound than previously to geographically specific locales considered definitive "homes," can achieve transnational scope and interact at once in local, national, and global arenas (Hannerz 1987; Orsi 1999a,1999b: 36).

Further complicating spatial considerations of American religious pluralism is the advent of virtual space. We have barely begun to examine, let alone comprehend, the implications of cyberspace and the Internet for the formation and encounter of religious worlds, though it is already clear that those implications are profound. In religion, as in other areas of human endeavor, interpersonal interactions become disembodied as they become electronic, raising the question not only of how to conceptualize this space in geographic terms but also of what electronic technology means for current notions of and actions in space (Kong 2001: 221–222). Whatever the implications of this new spatial frontier for the way we think about conventional geographic space, recent events in Winter, Wisconsin, where the school board in 1998 blocked access to electronic information about Buddhism and Wicca (Eck 2001: 304), suggest that struggles over space—religious worlds making spaces, seeking legitimation of their presence, facing attempted exclusion—have carried over into it. American religious pluralism in all its complexity has entered cyberspace (Williams 2002b: 250; see also Cowan 2005).

Globalization, international travel, and electronic communications have all had the effect of erasing determinate, particular space and contributed to a new pattern of community formation recently identified by geographers: heterolocalism (Zelinsky and Barrett 1998). The term refers to the possibility that ethnic or religious communities can maintain close ties without spatial propinquity, scattered instead over large urban, national, or international domains. Surely this emerging sociospatial phenomenon, by changing the way that religious worlds locate themselves in and relate themselves to space, will affect the geographic dynamics of religious pluralism. Indeed, Barbara Metcalf, surveying changes in Islam as its adherents have become globally dispersed, has proposed the term "postmodern pluralism" to describe these developing heterolocal realities (Metcalf 1996: 22). At least one study suggests that these new patterns have amplified the importance of buildings among groups seeking to establish religious communities in America (Bhardwaj and Rao 1998). But because they also challenge the notions of determinate and particular space on which our models of pluralistic engagement have so far been grounded, the precise contours of this new pluralism remain unclear (Zelinsky and Lee 1998; Zelinsky 2001: 132–151).

Solving religious persecution domestically and fundamentally changing our religious mindset is key to achieving our foreign policy objectives

Farr 08 --- PHD in History from the University of North Carolina, Visiting Associate Professor of Religion and International Affairs at the Edmund A. Walsh School of Foreign Service, Georgetown Unviersity. He directs the Religious Freedom Project and the Program on Religion and US Foreign at Georgetown's Berkley Center for Religion, Peace, and World Affairs, where he is a senior fellow (Thomas F., "Diplomacy in an Age of Faith: Religious Freedom and National Security", Foreign Affairs Vol. 87 No.2 pp. 110-120, 122-124, Jstor)//Jmoney+Yak

But the world today is, as the sociologist Peter Berger puts it, "as furiously religious as it ever was, and in some places more so than ever." Berger was one of the first scholars to challenge "secularization theory," which holds that religion will wither as modernity advances. In fact, over the past several decades, the opposite has happened. Faith, far from exiting the world's stage, has played a growing role in human affairs, even as modernization has proceeded apace. Iran's Shiite revolution in 1979, the Catholic Church's role in the "third wave" of democratization, the 9/11 attacks--all illustrated just how important a global force religion has become. For the most part, however, analysts and policymakers have remained either ignorant or baffled. Scholars are now scrambling to reexamine the question of faith in international affairs--its "return from exile," as one study puts it. Unfortunately, policymakers are lagging even further behind, and the implications for U.S. national interests are troubling.

To the extent that U.S. analysts and policymakers have registered the resurgence of religiosity at all, they have it viewed as a problem for U.S. foreign policy. Such concern is misguided. The United States should not see global desecularization in strictly defensive terms; it is as much an opportunity as it is a threat. Rather than being inimical to the advance of freedom, as many secularists assume, religious ideas and actors can buttress and expand ordered liberty. For much of the world, the religious quest lies at the heart of human dignity. History, moreover, suggests that protecting religious freedom and harnessing it for the common good are vital if democracy is to endure. Social science data show strong correlations between religious freedom and social, economic, and political goods.

Accordingly, U.S. diplomacy should move resolutely to make the defense and expansion of religious freedom a core component of U.S. foreign policy. Doing so would give the United States a powerful new tool for advancing ordered liberty and for undermining religion-based extremism at a time when other strategies have proved inadequate. One week before the presidential election in November, the landmark International Religious Freedom Act will have its tenth anniversary. That law mandated that the promotion of religious liberty be a central element of U.S. foreign policy. But neither Democratic nor Republican administrations, nor the U.S. State Department, have seen the IRF

Act as a broad policy tool--indeed, as anything more than a narrow humanitarian measure unrelated to broader U.S. interests. A new policy on religious freedom can begin by tapping the law's considerable potential. But long-term success will require a significant broadening of the current emphasis on opposing religious persecution and getting religious prisoners out of jail. An effective IRF policy must also address the balance between the overlapping authorities of religion and state, in particular the critical question of how religiously grounded norms might legitimately influence public policy.

DESECULARIZATION AND ITS DISCONTENTS

THE REAPPEARANCE of public religion on the world stage has complex implications. Religion has both bolstered and under-mined stable self-government. It has advanced political reform and human rightsbut also induced irrationality, persecution, extremism, and terrorism. Radical Islam may dominate the headlines, but the importance of religion is hardly confined to Muslim-majority countries or the Muslim diaspora. An explosion of religious devotion among Chinese citizens increasingly worries communist officials. Religious ideas and actors affect the fate of democracy in Russia, relations between the nuclear powers India and Pakistan, and the consolidation of democracy in Latin America. Even in western Europe--which has seen itself as a laboratory for secularization--religion, in the form of Islam and pockets of Christian revival, simply will not go away.

The world is overflowing with religious communities, theologies, and movements--with very public consequences. And there is little reason to believe that this state of affairs will change anytime soon. Polls from across the globe show a growth in religious affiliation and in the desire for religious leaders to be more involved in politics. Two leading demographers of religion, Todd Johnson and David Barrett, have concluded, "Demographic trends coupled with conservative estimates of conversions and defections envision over 80 percent of the world's population will continue to be affiliated to religions200 years into the future."

The central U.S. national security issue is Islamist terrorism, fed by radical interpretations of Islam. Wahhabism, which has provided much of the theological oxygen for al Qaeda, is still dominant in Saudi Arabia and has been exported to Sunni communities internationally. But Osama bin Laden and Wahhabism are hardly the only examples of "political Islam" that have major implications for U.S. security. In Iraq, Shiite doctrines and leaders are a major factor in determining whether Iraqi democracy will survive. In Iran, a central question is whether religious actors can reform the revolutionary Shiism bequeathed by Ayatollah Ruhollah Khomeini. Across the Middle East, the Sunni-Shiite divide is of growing importance.

Elsewhere in the Muslim world, religion drives powerful political forces in countries central to U.S. interests. In Egypt, the Muslim Brotherhood represents a strain of Islamism that has spawned or nourished radicals from Sayyid Qutb to Ayman al-Zawahiri and bin Laden, although it now operates as a democratic political party. An offshoot of the Brotherhood, Hamas, gained power in Palestinian elections and has put Islamist extremism at the center of the Israeli-Palestinian conflict. Hezbollah has emerged as a major player in Lebanese politics, even as it is funded from Tehran and continues to threaten Israel.

There are also encouraging developments in the Muslim world. In Turkey, the Islamist Justice and Development Party (AKP) won a decisive victory in parliamentary elections last year despite deep-seated fears of political Islam among wide swaths of a Turkish society weaned on Kemalist imposed secularism. The AKP is demonstrating that religious parties need not veer into fanaticism; it has succeeded with good governance, good economic policies, and the development of an Islamic governing philosophy that contains significant liberal elements. Polls show that Turks are becoming more religious and, at the same time, more opposed to extremist sharia laws. In Indonesia, Islamic communities are resisting extremism and making significant contributions to civil society and democratic governance. While Freedom House ranks Turkey and Indonesia high on political freedom and civil liberties, both remain weak on religious freedom. The consolidation of democracy in each will require progress on that front. Interestingly, that prospect seems to be increasing, not decreasing, with the democratic involvement of Islamic communities.

The response of U.S. diplomacy to the religious scaffolding that bestrides the international order has been at best inconsistent and often incoherent. A recent study by the Center for Strategic and International Studies concludes, "U.S. government officials are often reluctant to address the issue of religion, whether in response to a secular U.S. legal and political tradition ... or simply because religion is perceived as too complicated or sensitive. Current U.S. government frameworks for approaching religion are narrow, often approaching religions as problematic or monolithic forces, overemphasizing a terrorism-focused analysis of Islam and sometimes marginalizing religion as a peripheral humanitarian or cultural issue."

Ambivalence toward religion in general and Islam in particular has been a profound weakness in the U.S. strategy to counter Islamist extremism. In regard to public and private diplomacy and foreign-aid and democracy programs, U.S. policy has been plagued by confusion about what role, if any, should be played by Islamic communities. In deciding how to "drain the swamps" of the social, political, and economic pathologies that feed Islamist extremism, U.S. officials have never arrived at an overarching policy toward Islam--or even decided what, exactly, a "moderate Muslim" is. U.S. dollars for democracy promotion have flooded the Middle East since 9/11, but the resulting programs as a rule have not addressed the main drivers of culture, politics, and civil society there--Muslim religious communities and Islamist political parties.

Various strategies for engaging Muslims have been floated and withdrawn, from the ill-fated Shared Values Initiative to the Muslim World Outreach program. Some reflected the United States' own moral confusion and poll-driven culture. Attempts to "reach out" to Muslim youth have often centered on American pop music; a chair of the U.S. Broadcasting Board of Governors once solemnly declared that the pop star Britney Spears "represents the sounds of freedom." Assessing the performance of the departing public diplomacy czar, Karen Hughes, the political scientist Robert Satloff observed that she saw her job as increasing U.S. poll numbers, not engaging in Islam's war of ideas.

THE SECULARIST BLIND SPOT

THE PROBLEM is rooted in the secularist habits of thought pervasive within the U.S. foreign policy community. Most analysts lack the vocabulary and the imagination to fashion remedies that draw on religion, a shortcoming common to all the majors schools of foreign policy. Modern realists see authoritarian regimes as partners in keeping the lid on radical Islam and have nothing to say about religion except to describe it as an instrument of power. Liberal internationalists are generally suspicious of religion's role in public life, viewing religion as antithetical to human rights and too divisive to contribute to democratic stability. Neoconservatives emphasize

American exceptionalism and the value of democracy, but most have paid little serious attention to religious actors or their beliefs. The U.S. "freedom agenda" has been seriously weakened as a result.

There is widespread confusion over the proper role of religion in public policy. The persistent belief that religion is inherently emotive and irrational, and thus opposed to modernity, precludes clear thinking about the relationship between religion and democracy. Insufficient policy attention is paid to the work of social scientists, such as Brian Grim and Roger Finke, that suggests religious freedom is linked to the well-being of societies. Most U.S. officials were weaned on a strict separation-of-church-and-state philosophy and simply resist thinking about religion as a policy matter. (In the late 1990s, a memorandum to the secretary of state on the subject of religion was returned by a senior official with a stern note saying that this was not an appropriate subject for analysis.) Although some U.S. actions in the realm of religion may raise constitutional issues, the U.S. Constitution neither mandates ignorance about religion nor proscribes its public practice. What it unambiguously requires is the defense of religious freedom.

Such disarray cuts across the conventional left-right divide. The left's strict separationist instincts dictate that religion should be a private matter, but liberal multiculturalism pushes in a different direction. Some on the right want their religion in the public square, but not Islam, which they view as theologically flawed and a launching pad for extremism. In this sense, conservatives' views on political Islam coincide with those of liberal secularists.

Unduly influenced by such thinking, U.S. foreign policy does not seek to advance religious freedom in any systematic way. The State Department has made modest efforts to fight persecution, but U.S. denunciations seldom have much impact. And even if they did reduce persecution, that alone would not constitute religious freedom. In a press conference to announce the governments that are considered, under the IRF Act, to be the worst religious persecutors, a State Department spokesperson said that U.S. policy goals were "to oppose religious persecution, to free religious prisoners, and to promote religious freedom." That summary exemplifies what has gone wrong. The first two goals have been so dominant that the third has been all but lost.

[ILLUSTRATION OMITTED]

Religious persecution is generally associated with egregious abuse--torture, rape, unjust imprisonment--on the basis of religion. A political order centered on religious liberty is free of such abuses, to be sure, but it also protects the rights of individuals and groups to act publicly in ways consistent with their beliefs. Those rights include, most importantly, the freedom to influence public policy within the bounds of liberal norms. Addressing this aspect of religious liberty is a critical step in creating stable self-government in societies with powerful religious groups--a step that current U.S. policy ignores.

After the United States deposed the Taliban in 2001, the Afghans elected a democratic government and ratified a democratic constitution, and the terrible religious persecution of Afghan women and minority Shiites slowed dramatically. But these developments did not bring about religious freedom. The Afghan government no longer tortures people on the basis of religion, but it continues to bring charges against apostates and blasphemers, including officials and journalists seeking to debate the teachings of Islam. Instead of seeing such cases as serious obstacles to the consolidation of Afghan democracy, the State Department has treated them as humanitarian problems. It declared victory when U.S. pressure sprang the Christian convert Abdul Rahman from an apostasy trial (and from certain execution), permitting him to flee the country in fear of his life.

But the Rahman case was actually a defeat for U.S. IRF policy, because it ignored the real problem: Afghanistan's democracy is unlikely to endure unless it defends the right of all Afghan citizens to full religious liberty, especially the right of Muslims to debate freedom and the public good, the role of sharia, and the religion-state nexus. This kind of sustained discourse is vital to the success of any Islamic democracy and to overcoming Islamist radicalism. U.S. IRF policy should be confronting this problem in Afghanistan and elsewhere, but it lacks the resources, the bureaucratic clout, and the policy mandate to do so.

The IRF Act created an office in the State Department, headed by an ambassador at large, to monitor religious persecution around the world, to issue an annual report on religious freedom, and to produce an annual list of the worst persecutors. When a country appears on the list, the secretary of state must consider taking some punitive action, such as imposing economic sanctions, against it. This framework has had some modest successes. IRF ambassadors have headed off the passage of some bad laws and achieved the release of some religious prisoners. The current ambassador has negotiated with governments on the fist, most notably Vietnam and Saudi Arabia, over what they must do to be taken off.

Unfortunately, the effort against religious persecution is generally considered little more than an isolated humanitarian gambit. Most foreign governments view it as a matter of "America management." In the State Department, IRF policy is functionally and bureaucratically quarantined. Both the Clinton and the Bush administrations nested the IRF ambassador and his office in the human rights bureau, itself outside the mainstream of foreign policy. This means, among other things, that the ambassador is subordinate to a lower-ranking official and, unlike other ambassadors at large, does not attend senior staff meetings. When senior meetings are held on U.S. policy in China or Saudi Arabia--or even on engaging Islam--the IRF function is not considered relevant. This may seem trivial to those outside the State Department. Inside, it communicates a deadly message: IRE is not a mainstream foreign policy issue and can safely be ignored.

Some of these problems are slowly being addressed. U.S.-funded programs, especially those administered by the Asia Foundation, are paying dividends in Indonesia, where a moderate understanding of sharia appears to be developing. The U.S. embassy in Nigeria has gotten Muslims and Christians thinking together about the religious benefits of democracy. But such programs are underresourced and are operating without any clear policy mandate.

The situation will truly improve only if Washington more fully integrates religious considerations into its foreign policy. The message cannot be carried by one ambassador in one small office in the State Department who is unfortunately perceived as the representative of a special interest. This must be addressed within the department by, among other things, elevating the ambassador's authority. But much more will be required than bureaucratic reshuffling. Major policy changes will be necessary if religious freedom is to contribute to U.S. national security.

DESECULARIZING DIPLOMACY

HOW CAN a new strategy on religion and religious freedom lend consistency to U.S. foreign policy while advancing U.S. security interests in the Muslim world and elsewhere? First, by adopting an overarching principle: religion is normative, not epiphenomenal, in human affairs.

Policymakers should approach religion much as they do economics and politics--that is, as something that drives the behavior of people and governments in important ways. Like political and economic motives, religious motives can act as a multiplier of both destructive and constructive behaviors, often with more intense results. When faith is associated with social identity, ethnicity, or nationality, it becomes all the more important as a focus of foreign policy.

The problem is most urgent in the greater Middle East. At least five states in that region--Iraq, Iran, Saudi Arabia, Pakistan, and Egypt--are of critical importance to U.S. national security, because each is a major source of Islamist extremism. The consolidation of democracy in any one of them would provide a boost to reform in nearby countries, but each presents distinct, formidable obstacles. The United States' current IRV policy is seen by reformers in these countries as U.S. unilateralism and cultural imperialism. A refurbished policy could help overcome such fears, encourage religious actors to embrace democratic institutions, and lead over the long term to religious freedom and durable democracy.

Iraq's quasi-liberal constitution and elections have both demonstrated how Iraqi political culture is driven by religion. It is now clear that the United States did not pay sufficient attention to this factor, along with many others, in its planning for Iraq. A lasting solution in Iraq will require the involvement of religious actors who can speak from the heart of their respective communities. U.S. diplomacy, accordingly, should work to empower religious leaders such as the influential Shiite cleric Grand Ayatollah Ali al-Sistani and his Sunni counterparts. The Iraq Study Group's recommendation for an American Shiite envoy to Sistani should be adopted, but he should not be treated as simply one among other sectarian leaders in Iraq. Sistani's brand of Shiism, which is open to democratic and, to some extent, liberal norms, could be instrumental in consolidating Iraqi democracy. It could provide a theological warrant for tolerance and, over time, religious freedom. It could also play a positive role in Iran, where Sistani was born and educated and where he now has many followers.

Iran has substantial democratic potential, and not simply among the 30-something secular modernists who are the hope of Western analysts. A little-studied path to democratic reform in Iran lies with Iranian jurists who might be diverted from the Khomeini model of clerical despotism, some of whom are interested in the Sistani experiment. For the time being, Supreme Leader Ali Khamenei and President Mahmoud Ahmadinejad, despite popular dissatisfaction with the current government, have succeeded in connecting dissent with treason. But U.S. policymakers should still find ways to work with Iranian religious scholars in Qom and elsewhere. Among other things, this means dearly communicating that the United States is interested in, and open to, Shiite reformers. For example, the Catholic University of America's Interdisciplinary Program in Law and Religion has yielded substantive exchanges with Iranian jurists on topics such as family law and weapons of mass destruction. By judiciously supporting such efforts, the United States can encourage internal reform that rejects both theocracy and terrorism as inimical to Shiism.

Saudi Arabia is the most difficult of the Muslim states to envision as a democracy, notwithstanding mild reformist tendencies shown by King Abdullah. The Wahhabi establishment and its pernicious political theology remain deeply rooted, and no political or social institution has been effective in countering its influence. Wahhabi-blessed candidates would very likely dominate national elections. U.S. diplomacy should be working to change this dynamic--for example, by pressing Abdullah to permit the development of national Islamic political parties, both Sunni and Shiite, that are open to democracy. Washington should urge the disbandment of the mutawiyin (religion and morals police), which is currently under unusual scrutiny for its usual extremist activities, and support the emergence of a non-Wahhabi Islamic polity that is capable of developing liberal norms. This could take several forms, including a constitutional monarchy.

Pakistan's nuclear weapons capability, its status as a safe haven for Islamist extremists, and its instability in the wake of the assassination of former Prime Minister Benazir Bhutto make the country an exceptionally important case. Pakistan's military, like that of Turkey, has played a critical role in the development of the state's political culture. Unlike the secular Turkish military, however, Pakistan's military (including former General Pervez Musharraf) has supported extremist Islamist parties as a means of retaining power. But radical Islamists have not achieved electoral success on their own in Pakistan. Historically, their popularity has increased with authoritarianism and decreased with free and fair elections. The United States should adopt a broader antiradical agenda in Pakistan. It should certainly encourage a return to democracy, the development of a moderate political center, and more effective action against Islamist extremists. It should also support religious actors who are capable of undermining extremism by developing a more liberal political theology, sustaining madrasah reform, and conducting a public debate over Islam and democracy.

Egypt arguably has the greatest potential for lasting democratic reform. It is the largest of the Arab states and the traditional center of Sunni jurisprudence. Despite half a century of authoritarian regimes, it has some experience with constitutional rule, the beginnings of a civil society, professional and entrepreneurial classes, a fairly independent judiciary, and a Christian Coptic community that accounts for 10-15 percent of the population. Over the years, the United States has paid Cairo more than $50 billion to buy stability and predictability and keep the lid on radical Islam. According to Hosni Mubarak's government, if the Muslim Brotherhood, the Islamist opposition movement, were to gain power, it would revoke the Camp David accords, precipitate war with Israel, and work to restore a caliphate.

U.S. aid has helped, but it has prevented neither the growing appeal of radical Islam in Egypt nor its continued export, both of which are increased by Mubarak's policies. If free elections were held, the Muslim Brotherhood would very likely win. Unfortunately, the United States has little idea what this would mean. Despite indications that some Brothers are adopting liberal norms, Washington refuses to talk to them officially and rejects opportunities to influence their political evolution. Its policy is to support the Mubarak regime and hope for the best.

This is the logic that led to 9/11. The United States cannot eradicate Islamist radicalism through unconditional support for authoritarian regimes. Even in Iraq, assuming the continued success of U.S. military strategy, extremism and terrorism can in the final analysis only be defeated by Muslims speaking from the heart of Islam. And the only means of affording them the opportunity is durable democracy grounded in religious freedom for all--especially Muslims.

In Egypt, the United States should adopt a policy of engaging all religious and political communities, including the Muslim Brotherhood. But it should not assume that the Brothers are liberals aborning. To the contrary, it must find out precisely what they are and whether they are capable of political and theological evolution. The United States must not repeat the mistakes it made in Iran during the late 1970s, which led to its waking up one morning to face an Islamist group in power without any secure understanding of its vocabulary, let alone its goals.

The objective should be to encourage the Brotherhood to explain publicly what Islamic democracy would mean in Egypt. Handled correctly, this would force the organization to clarify its understanding of religious freedom and, necessarily, of pluralist democracy. Does the understanding include, for example, the right to debate Islamic teachings in public, to demand full equality under the law for women and religious minorities, to change religions? It is by no means inevitable, but certainly possible, that nascent liberals would be empowered by such a discourse. At the very least, it would increase U.S. understanding of what the Brotherhood in power would mean.

This strategy of discovery could include several elements adaptable to a global IRF policy. What the Brotherhood says in private must be said publicly, in Arabic, in Egypt. U.S. diplomats must speak not only the Brothers' Arabic language but their religious language as well. Training at the Foreign Service Institute should be revamped. The self-defeating instruction to U.S. diplomats "Avoid using religious language," which was presented in the 2007 public diplomacy strategy paper, should be reversed. Washington should support the development of Islamic feminism, a potentially fruitful skirmish in the Muslim war of ideas. A privately funded Islamic Institute of American Studies on U.S. soil could bring the best jurists and religious leaders from across the Muslim world to study U.S. history, society, politics, and--most important--religion.

REDISCOVERING THE AMERICAN MODEL

DESPITE THE failure of U.S. foreign policy to understand and address religion, the U.S. system of religious freedom remains vigorous and adaptive. American history should itself be instructive as U.S. policymakers seek to adjust their bearings in an age of faith. In the 1660s, colonial Congregationalists tortured and hanged Quakers on Boston Common. A century later, Americans embraced a system of religious liberty that remains unsurpassed in history. This system was not the result of the Enlightenment alone or of separating religion from society or politics. It was the result of theology and politics developing in tandem. Surely that system has contributed to the fact that American Muslim communities, despite being subject to Wahhabi influences for decades, have not been radicalized in the way that many of Europe's Muslim communities have. The Economist noted the irony: "The strange thing is that when America has tried to tackle religious politics abroad--especially jihadist violence--it has drawn no lessons from its domestic success. Why has a country so rooted in pluralism made so little of religious freedom?"

As the United States commemorates the tenth anniversary of the IRF Act, its foreign affairs scholars and foreign-policy makers must retrieve one of the nation's founding beliefs: religious freedom means much more than the right not to be persecuted for one's religion or the right to worship as one pleases in private; religious liberty protects human dignity and bolsters civil society. It means the durable and mutual accommodation of religion and the state within the boundaries of liberal democracy. And this accommodation matters not only for humanitarian reasons. It will also give the United States a new and powerful tool for addressing national security threats and foreign policy challenges that have so far proved confounding to a foreign policy establishment blinded by secularism.

Global democracy is on the brink – strong commitment from the US key to prevent backsliding

Diamond 15 [Larry, founding coeditor of the Journal of Democracy, senior fellow at the Hoover Institution and the Freeman Spogli Institute for International Studies at Stanford University, and director of Stanford's Center on Democracy, Development, and the Rule of Law; January, 2015; Facing Up to the Democratic Recession; Project Muse; 7/12/15; jac]

The Democratic Recession: Breakdowns and Erosions The world has been in a mild but protracted democratic recession since about 2006. Beyond the lack of improvement or modest erosion of global levels of democracy and freedom, there have been several other causes for concern. First, **there has been a significant and, in fact, accelerating rate of democratic breakdown**. Second, the quality or stability of democracy has been declining in a number of large and strategically important

emerging-market countries, which I call "swing states." Third, authoritarianism has been deepening, including in big and strategically important countries. And fourth, **the established democracies, beginning with the United States, increasingly seem to be performing poorly and to lack the will and self-confidence to promote democracy effectively abroad.** I explore each of these in turn. First, let us look at rates of democratic breakdown. Between 1974 and the end of 2014, 29 percent of all the democracies in the world broke down (among non-Western democracies, the rate was 35 percent). In the first decade and a half of this new century, the failure rate (17.6 percent) has been substantially higher than in the preceding fifteen-year period (12.7 percent). Alternatively, if we break the third wave up into its four component decades, we see a rising incidence of democratic failure per decade since the mid-1980s. The rate of democratic failure, which had been 16 percent in the first decade of the third wave (1974–83), fell to 8 percent in the second decade (1984–93), but then climbed to 11 percent in the third decade (1994–2003), and most recently to 14 percent (2004–13). (If we include the three failures of 2014, the rate rises to over 16 percent.) Since 2000, I count 25 breakdowns of democracy in the world—not only through blatant military or executive coups, but also through subtle and incremental degradations of democratic rights and procedures that finally push a democratic system over the threshold into competitive authoritarianism (see Table). Some of these breakdowns occurred in quite low-quality democracies; yet in each case, a system of reasonably free and fair multiparty electoral competition was either displaced or degraded to a point well below the minimal standards of democracy. One methodological challenge in tracking democratic breakdowns is to determine a precise date or year for a democratic failure that results from a long secular process of systemic deterioration and executive strangulation of political rights, civil liberties, and the rule of law. No serious scholar would consider Russia today a democracy. But many believe that it was an electoral democracy (however rough and illiberal) under Boris Yeltsin. If we score 1993 as the year when democracy [End Page 144] emerged in Russia (as Freedom House does), then what year do we identify as marking the end of democracy? In this case (and many others), there is no single obvious event—like Peruvian president Alberto Fujimori's 1992 autogolpe, dissolving Congress and seizing unconstitutional powers—to guide the scoring decision. I postulate that Russia's political system fell below the minimum conditions of electoral democracy during the year 2000, as signaled by the electoral fraud that gave Vladimir Putin a dubious first-ballot victory and the executive degradation of political and civic pluralism that quickly followed. (Freedom House dates the failure to 2005.) The problem has continuing and quite contemporary relevance. For a number of years now, Turkey's ruling Justice and Development Party (AKP) has been gradually eroding democratic pluralism and freedom in the country. The overall political trends have been hard to characterize, because some of the AKP's changes have made Turkey more democratic by removing the military as an autonomous veto player in politics, extending [End Page 145] civilian control over the military, and making it harder to ban political parties that offend the "deep state" structures associated with the intensely secularist legacy of Kemal Atatürk. But the AKP has gradually entrenched its own political hegemony, extending partisan control over the judiciary and the bureaucracy, arresting journalists and intimidating dissenters in the press and academia, threatening businesses with retaliation if they fund opposition parties, and using arrests and prosecutions in cases connected to alleged coup plots to jail and remove from public life an implausibly large number of accused plotters. This has coincided with a stunning and increasingly audacious concentration of personal power by Turkey's longtime prime minister Recep Tayyip Erdoğan, who was elected president in August 2014. The abuse and personalization of power and the constriction of competitive space and freedom in Turkey have been subtle and incremental, moving with nothing like the speed of Putin in the early 2000s. But by now, these trends appear to have crossed a threshold, pushing the country below the minimum standards of democracy. If this has happened, when did it happen? Was it in 2014, when the AKP further consolidated its hegemonic grip on power in the March local-government elections and the August presidential election? Or was it, as some liberal Turks insist, several years before, as media freedoms were visibly diminishing and an ever-wider circle of alleged coup plotters was being targeted in the highly politicized Ergenekon trials? A similar problem exists for Botswana, where a president (Ian Khama) with a career military background evinces an intolerance of opposition and distaste for civil society beyond anything seen previously from the long-ruling Botswana Democratic Party (BDP). Increasing political violence and intimidation—including assaults on opposition politicians, the possible murder of a leading opposition candidate three months before the October 2014 parliamentary elections, and the apparent involvement of the intelligence apparatus in the bullying and coercion of the political opposition—have been moving the political system in a more authoritarian direction. Escalating pressure on the independent media, the brazen misuse of state television by the BDP, and the growing personalization and centralization of power by President Khama (as he advances his own narrow circle of family and friends while splitting the ruling party) are further signs of the deterioration, if not crisis, of democracy in Botswana.7 Again, Levitsky and Way had argued a number of years ago that Botswana was not a genuine democracy in the first place.8 Nevertheless, whatever kind of system it has been in recent decades, "respect for the rule of law and for established institutions and processes" began to diminish in 1998, when Khama ascended to the vice-presidency, and it has continued to decline since 2008, when the former military commander "automatically succeeded to the presidency."9 There are no easy and obvious answers to the conundrum of how to [End Page 146] classify regimes in the gray zone. One can argue about whether these ambiguous regimes are still democracies—or even if they ever really were. Those who accept that a democratic breakdown has occurred can argue about when it took place. But what is beyond argument is that there is a class of regimes that in the last decade or so have experienced significant erosion in electoral fairness, political pluralism, and civic space for opposition and dissent, typically as a result of abusive executives intent upon concentrating their personal power and entrenching ruling-party hegemony. The best-known cases of this since 1999 have been Russia and Venezuela, where populist former military officer Hugo Chávez (1999–2013) gradually suffocated democratic pluralism during the first decade of this century. After Daniel Ortega returned to the presidency in Nicaragua in 2007, he borrowed many pages from Chávez's authoritarian playbook, and left-populist authoritarian presidents Evo Morales of Bolivia and Rafael Correa of Ecuador have been moving in a similar direction. In their contribution to this issue, Scott Mainwaring and Aníbal Pérez-Liñán assert that democratic erosion has occurred since 2000 in all four of these Latin American countries (Venezuela, Nicaragua, Bolivia, and Ecuador) as well as in Honduras, with Bolivia, Ecuador, and Honduras now limping along as "semidemocracies." Of the 25 breakdowns since 2000 listed in the Table, eighteen have occurred after 2005. Only eight of these 25 breakdowns came as a result of military intervention (and of those eight, only four took the form of a conventional, blatant military coup, as happened twice in Thailand). Two other cases (Nepal and Madagascar) saw democratically elected rulers pushed out of power by other nondemocratic forces (the monarch and the political opposition, respectively). The majority of the breakdowns—thirteen—resulted from the abuse of power and the desecration of democratic institutions and practices by democratically elected rulers. Four of these took the form of widespread electoral fraud or, in the recent case of Bangladesh, a unilateral change in the rules of electoral administration (the elimination of the practice of a caretaker government before the election) that tilted the electoral playing field and triggered an opposition boycott. The other nine failures by executive abuse involved the more gradual suffocation of democracy by democratically elected executives (though that too was occurring in several of

the instances of electoral fraud, such as Ukraine under President Viktor Yanukovych [2010–14]). Overall, nearly one in every five democracies since the turn of this century has failed. The Decline of Freedom and the Rule of Law Separate and apart from democratic failure, there has also been a trend of declining freedom in a number of countries and regions since 2005. The most often cited statistic in this regard is the Freedom House [End Page 147] finding that in each of the eight consecutive years from 2006 through 2013 more countries declined in freedom than improved. In fact, after a post–Cold War period in which the balance was almost always highly favorable—with improvers outstripping the decliners by a ratio of two to one (or greater)—the balance simply inverted beginning in 2006. But this does not tell the whole story. Two important elements are noteworthy, and they are both especially visible in Africa. First, the declines have tended to crystallize over time. Thus, if we compare freedom scores at the end of 2005 and the end of 2013, we see that 29 of the 49 sub-Saharan African states (almost 60 percent) declined in freedom, while only fifteen (30 percent) improved and five remained unchanged. Moreover, twenty states in the region saw a decline in political rights, civil liberties, or both that was substantial enough to register a change on the seven-point scales (while only eleven states saw such a visible improvement). The larger states in sub-Saharan Africa (those with a population of more than ten million) did a bit better, but not much: Freedom deteriorated in thirteen of the 25 of them, and improved in only eight. Another problem is that the pace of decay in democratic institutions is not always evident to outside observers. In a number of countries where we take democracy for granted, such as South Africa, we should not. In fact, there is not a single country on the African continent where democracy is firmly consolidated and secure—the way it is, for example, in such third-wave democracies as South Korea, Poland, and Chile. In the global democracy-promotion community, few actors are paying attention to the growing signs of fragility in the more liberal developing democracies, not to mention the more illiberal ones. Why have freedom and democracy been regressing in many countries? The most important and pervasive answer is, in brief, bad governance. The Freedom House measures of political rights and civil liberties both include subcategories that directly relate to the rule of law and transparency (including corruption). If we remove these subcategories from the Freedom House political-rights and civil-liberties scores and create a third distinct scale with the rule-of-law and transparency scores, the problems become more apparent. African states (like most others in the world) perform considerably worse on the rule of law and transparency than on political rights and civil liberties.10 Moreover, rule of law and political rights have both declined perceptibly across sub-Saharan Africa since 2005, while civil liberties have oscillated somewhat more. These empirical trends are shown in Figure 2, which presents the Freedom House data for these three reconfigured scales as standardized scores, ranging from 0 to 1.11 The biggest problem for democracy in Africa is controlling corruption and abuse of power. The decay in governance has been visible even in the best-governed African countries, such as South Africa, which suffered [End Page 148] a steady decline in its score on rule of law and transparency (from .79 to .63) between 2005 and 2013. And as more and more African states become resource-rich with the onset of a second African oil boom, the quality of governance will deteriorate further. This has already begun to happen in one of Africa's most liberal and important democracies, Ghana. The problem is not unique to Africa. Every region of the world scores worse on the standardized scale of transparency and the rule of law than it does on either political rights or civil liberties. In fact, transparency and the rule of law trail the other two scales even more dramatically in Latin America, postcommunist Europe, and Asia than they do in Africa (Figure 3). Many democracies in lower-income and even middle- or upper-middle-income countries (notably, Argentina) struggle with the resurgence of what Francis Fukuyama calls "neo-patrimonial" tendencies.12 Leaders who think that they can get away with it are eroding democratic checks and balances, hollowing out institutions of accountability, overriding term limits and normative restraints, and accumulating power and wealth for themselves and their families, cronies, clients, and parties. In the process, they demonize, intimidate, and victimize (and occasionally even jail or murder) opponents who get in their way. Space for opposition parties, civil society, and the media is shrinking, and international support for them is drying up. Ethnic, religious, and other identity cleavages polarize many societies that lack well-designed democratic institutions to manage those cleavages. State structures are too often weak and porous—unable to secure order, protect rights, meet the most basic social needs, or rise above corrupt, clientelistic, and predatory impulses. [End Page 149] Democratic institutions such as parties and parliaments are often poorly developed, and the bureaucracy lacks the policy expertise and, even more so, the independence, neutrality, and authority to effectively manage the economy. Weak economic performance and rising inequality exacerbate the problems of abuse of power, rigging of elections, and violation of the democratic rules of the game. Political Rights, Civil Liberties, and Transparency/Rule of Law, 2013 Source: Freedom House raw data for Freedom in the World, 2013. The Strategic Swing States A different perspective on the global state of democracy can be gleaned from a focus not on regional or global trends, but on the weightiest emerging-market countries. These are the ones with large populations (say, more than fifty million) or large economies (more than US$200 billion). I count 27 of these (including Ukraine, which does not quite reach either measure, but is of immense strategic importance). Twelve of these 27 swing states had worse average freedom scores at the end of 2013 than they did at the end of 2005. These declines took place across the board: in fairly liberal democracies (South Korea, Taiwan, and South Africa); in less liberal democracies (Colombia, Ukraine, Indonesia, Turkey, Mexico, and Thailand before the 2014 military coup); and in authoritarian regimes (Ethiopia, Venezuela, and Saudi Arabia). In addition, I think three other countries are also less free today than they were in 2005: Russia, where the noose of repressive authoritarianism has clearly been tightening since Vladimir Putin returned to the presidency in early 2012; Egypt, where the new military-dominated government [End Page 150]

under former general Abdel Fattah al-Sisi is more murderous, controlling, and intolerant than even the Mubarak regime (1981–2011); and Bangladesh, where (as noted above) democracy broke down early in 2014. Only two countries (Singapore and Pakistan) are freer today (and only modestly so) than in 2005. Some other countries have at least remained stable. Chile continues to be a liberal-democratic success story; the Philippines has returned to robust democracy after an authoritarian interlude under President Gloria Macapagal-Arroyo (2001–10); and Brazil and India have preserved robust democracy, albeit with continuing challenges. But overall, among the 27 (which also include China, Malaysia, Nigeria, and the United Arab Emirates) there has been scant evidence of democratic progress. In terms of democracy, the most important countries outside the stable democratic West have been either stagnating or slipping backward. The Authoritarian Resurgence An important part of the story of global democratic recession has been the deepening of authoritarianism. This has taken a number of forms. In Russia, space for political opposition, principled dissent, and civil society activity outside the control of the ruling authorities has been shrinking.13 In China, human-rights defenders and civil society activists have faced increasing harassment and victimization. The (mainly) postcommunist autocracies of the Shanghai Cooperation Organization, centered on the axis of cynical cooperation between Russia and China, have become much more coordinated and assertive. Both countries have both been aggressively flexing their muscles in dealing with their neighbors on territorial questions. And increasingly they are pushing back against democratic norms by also using instruments of soft power—international media (such as RT, Russia's slick 24/7 global television "news" channel), China'ss Confucius Institutes, lavish conferences, and exchange programs—to try to discredit Western democracies and democracy in general, while promoting their own models and norms.14 This is part of a broader trend of renewed authoritarian skill and energy in using state-run media (both traditional and digital) to air an eclectic mix of proregime narratives, demonized images of dissenters, and illiberal, nationalist, and anti-American diatribes.15 African autocrats have increasingly used China's booming aid and investment (and the new regional war on Islamist terrorism) as a counterweight to Western pressure for democracy and good governance. And they have been only too happy to point to China's formula of rapid state-led development without democracy to justify their own deepening authoritarianism. In Venezuela, the vise of authoritarian populism has tightened and the government's toleration (or even organization) of criminal violence to demobilize middle-class opposition has risen. The [End Page 151] "Arab Spring" has imploded in almost every country that it touched save Tunisia, leaving in most cases even more repressive states or, as in the case of Libya, hardly a state at all. The resurgence of authoritarianism over the past eight years has been quickened by the diffusion of common tools and approaches. Prominent among these have been laws to criminalize international flows of financial and technical assistance from democracies to democratic parties, movements, media, election monitors, and civil society organizations in authoritarian regimes, as well as broader restrictions on the ability of NGOs to form and operate and the creation of pseudo-NGOs to do the bidding (domestically and internationally) of autocrats.16 One recent study of 98 countries outside the West found that 51 of them either prohibit or restrict foreign funding of civil society, with a clear global trend toward tightening control; as a result, international democracy-assistance flows are dropping precipitously where they are needed most.17 In addition, authoritarian (and even some democratic) states are becoming more resourceful, sophisticated, and unapologetic in suppressing Internet freedom and using cyberspace to frustrate, subvert, and control civil society.18 Western Democracy in Retreat **Perhaps the most worrisome dimension of the democratic recession has been the decline of democratic efficacy, energy, and self-confidence in the West, including the United States.** There is a growing sense, both domestically and internationally, that democracy in the United States has not been functioning effectively enough to address the major challenges of governance. The diminished pace of legislation, the vanishing ability of Congress to pass a budget, and the 2013 shutdown of the federal government are only some of the indications of a political system (and a broader body politic) that appears increasingly polarized and deadlocked. As a result, both public approval of Congress and public trust in government are at historic lows. The ever-mounting cost of election campaigns, the surging role of nontransparent money in politics, and low rates of voter participation are additional signs of democratic ill health. Internationally, promoting democracy abroad scores close to the bottom of the public's foreign-policy priorities. And the international perception is that democracy promotion has already receded as an actual priority of U.S. foreign policy. **The world takes note of all this. Authoritarian state media gleefully publicize these travails of American democracy in order to discredit democracy in general and immunize authoritarian rule against U.S. pressure. Even in weak states, autocrats perceive that the pressure is now off: They can pretty much do whatever they want to censor the media, crush the opposition, and perpetuate their rule, and Europe and the United** [End Page 152] **States will swallow it.** Meek verbal protests may ensue, but the aid will still flow and the dictators will still be welcome at the White House and the Elysée Palace. **It is hard to overstate how important the vitality and self-confidence of U.S. democracy has been to the global expansion of democracy during the third wave.** While each democratizing country made its own transition, pressure and solidarity from the United State and Europe often **generated a significant and even crucial enabling environment that helped to tip finely balanced situations toward democratic change, and then in some cases gradually toward democratic consolidation**. If this

solidarity is now greatly diminished, so will be the near-term global prospects for reviving and sustaining democratic progress. A Brighter Horizon? Democracy has been in a global recession for most of the last decade, and there is a growing danger that the recession could deepen and tip over into something much worse. Many more democracies could fail, not only in poor countries of marginal strategic significance, but also in big swing states such as Indonesia and Ukraine (again). There is little external recognition yet of the grim state of democracy in Turkey, and there is no guarantee that democracy will return any time soon to Thailand or Bangladesh. Apathy and inertia in Europe and the United States could significantly lower the barriers to new democratic reversals and to authoritarian entrenchments in many more states. Yet the picture is not entirely bleak. We have not seen "a third reverse wave." Globally, average levels of freedom have ebbed a little bit, but not calamitously. Most important, there has not been significant erosion in public support for democracy. In fact, what the Afrobarometer has consistently shown is a gap—in some African countries, a chasm—between the popular demand for democracy and the supply of it provided by the regime. This is not based just on some shallow, vague notion that democracy is a good thing. Many Africans understand the importance of political accountability, transparency, the rule of law, and restraint of power, and they would like to see their governments manifest these virtues. While the performance of democracy is failing to inspire, authoritarianism faces its own steep challenges. There is hardly a dictatorship in the world that looks stable for the long run. The only truly reliable source of regime stability is legitimacy, and the number of people in the world who believe in the intrinsic legitimacy of any form of authoritarianism is rapidly diminishing. Economic development, globalization, and the information revolution are undermining all forms of authority and empowering individuals. Values are changing, and while we should not assume any teleological path toward a global "enlightenment," generally the movement is toward greater distrust of authority and more [End Page 153] desire for accountability, freedom, and political choice. In the coming two decades, these trends will challenge the nature of rule in China, Vietnam, Iran, and the Arab states much more than they will in India, not to mention Europe and the United States. Already, democratization is visible on the horizon of Malaysia's increasingly competitive electoral politics, and it will come in the next generation to Singapore as well. The key imperative in the near term is to work to reform and consolidate the democracies that have emerged during the third wave—the majority of which remain illiberal and unstable, if they remain democratic at all. With more focused, committed, and resourceful international engagement, it should be possible to help democracy sink deeper and more enduring roots in countries such as Indonesia, the Philippines, South Africa, and Ghana. It is possible and urgently important to help stabilize the new democracies in Ukraine and Tunisia (whose success could gradually generate significant diffusion effects throughout the Arab world). It might be possible to nudge Thailand and Bangladesh back toward electoral democracy, though ways must be found to temper the awful levels of party polarization in each country. With time, the electoral authoritarian project in Turkey will discredit itself in the face of mounting corruption and abuse of power, which are already growing quite serious. And the oil-based autocracies in Iran and Venezuela will face increasingly severe crises of economic performance and political legitimacy. It is vital that democrats in the established democracies not lose faith. Democrats have the better set of ideas. Democracy may be receding somewhat in practice, but it is still globally ascendant in peoples' values and aspirations. This creates significant new opportunities for democratic growth. If the current modest recession of democracy spirals into a depression, it will be because those of us in the established democracies were our own worst enemies.

Judicial independence is the cornerstone of democracy --- essential step in forming new democracies

Gardbaum 15 [Stephen, MacArthur Foundation Professor of International Justice and Human Rights, University of California, Los Angeles, School of Law; 01/20/15; "Are Strong Constitutional Courts Always a Good Thing for New Democracies?"; Social Science Research Network; 07/07/15; jac]

III. INDEPENDENCE OF THE JUDICIARY: THE MOST ESSENTIAL GOAL FOR COURTS IN NEW DEMOCRACIES The premise of my argument in this Article is that, as far as courts are concerned, the most important, basic, and essential goal for new democracies in their transition to becoming stable ones is not establishing the power of one or more courts to invalidate legislation, but establishing and maintaining the overall independence of the judiciary. Judicial review may or may not be (instrumentally or normatively) necessary for the rule of law and constitutional democracy,89 but the independence of the judiciary undoubtedly is, and securing the latter

must be the top priority if and to the extent there is any practical tension or conflict between them.90 While certainly among stable, established democracies there are several well-known examples of countries that long rejected judicial review, and a few that still do, there are none that do not adhere to the basics of an independent judiciary.91 Moreover, although there is a robust academic debate within constitutional/democratic theory between proponents and opponents of judicial review, **no one**, to the best of my knowledge, **argues against the central importance of judicial independence**.92 It is true that the classical notion of separation of powers between three of the major functions of government—making, executing, and adjudicating the law—has been under almost permanent siege ever since it was fully formulated by the end of the eighteenth century. The perceived necessity of the institutional separation between the executive and legislative branches (King and Parliament) was undermined first by the subsequent birth of parliamentary government in the nineteenth century that famously "fused" them93 and then by the growth of modern political parties as the central locus of political competition in both parliamentary and presidential systems.94 The later development of the administrative state and its increasing functional independence of the executive challenged the "holy trinity" of government branches.95 But what has not changed or come under siege is the perceived importance of the institutional separation of the judicial function from the others— usually referred to as the independence of the judiciary. This independence was first achieved in England by the 1701 Act of Settlement, granting life tenure to His Majesty's judges during good behavior (removable only on proof to the contrary by parliamentary impeachment) and ending royal assertions of a power to dismiss.96 To be sure, such separation does not require that courts be hermetically insulated from the other branches. Judicial independence does not—and has never been understood to—mean complete judicial autonomy or self-governance. For just under three hundred years, members of the independent judiciary in England were appointed in the monarch's name by the Lord Chancellor, who served simultaneously as head of the judiciary and as a senior cabinet minister.97 Among established democracies, judicial autonomy currently varies in degree from the near-total self-governance of Higher Judicial Councils in Italy and Spain and the collegium system in India, to independent judicial appointment commissions on which judges are usually in a minority, as in the United Kingdom, to the more traditional roles of ministers of justice in promotion decisions as mostly in Germany and France.98 Legislatures typically play a significant role in the appointment of constitutional court judges.99 As is well known, the independence of the judiciary has two key elements. First, judges should be free from government control, pressure, or influence in performing their adjudicatory functions.100 The situation in China, where the work of judges is closely supervised by both local governments and the Communist Party with direct power over salaries and promotions, may serve as a paradigm of non-independence in this regard.101 Second, judges should perform these functions impartially, without political, partisan, or personal bias, and according to the law and facts.102 Here, for example, the election and re-election of state court judges in the United States, especially where campaign contributions by potential litigants are involved, raise concerns about this second dimension of independence. Of course, the first element is one of the preconditions of the second: freedom from government control enables judges to adjudicate impartially—although it does not guarantee it. My claim is that both elements of the independence of the judiciary are more likely to be placed under stress when courts have and exercise strong-form judicial review powers than when they do not. That is, there may be a practical tension and conflict between the independence of the judiciary and judicial review resulting in additional—and, from a rule of law/constitutional democracy perspective, unnecessary—pressures and strains in an already difficult context. Unnecessary because just as judicial independence is not equivalent to and does not require full autonomy from the other branches of government,103 so too it is not equivalent to and does not require judicial supremacy over them. In other words, although there is no single model for ensuring judicial independence,104 there may be a single model for endangering it in the particular context of new and transitional democracies.

Privileging of national security interests in the U.S. is destroying democratic modeling in African countries

Schmitter 15 [Philippe, Emeritus Professor of the Department of Political and Social Sciences at the European University Institute; Crisis and Transition, But Not Decline; 01/15; Journal of Democracy Volume 26, Number 1, January 2015; Project Muse; 07/05/15; jac]

Finally, the illiberal acts of the United States and other Western democratic nations in the post-9/11 global "war on terror" have given Africa's elected autocrats easy justification for their own retreat from the principles and practices of democratic accountability. **African political elites opportunistically cite U.S. actions** such as the rendition or waterboarding **of suspected terrorists as examples to justify their own privileging of national-security interests over citizens' rights**. Similarly, Africa's elected autocrats are finding great comfort in the resurgence of authoritarian and illiberal role models provided by China, Iran, Russia, Venezuela, and others.

Nigeria models U.S. separation of powers

Mwalimu, 5 --- Senior Legal Specialist at Law Library of Congress (The Nigerian Legal System: Public Law, Pg. 6)

Nigeria is a country of special significance to the United States. The Nigerian constitutional system is patterned after that of the United States. From the point of view of influence of the American Constitution on Nigerian constitutional practices, this author has postulated that this impact is discernible and encompasses the whole regime of the political function in Nigeria during the period of civil rule. This feature of Nigerian constitutionalism, based on the United States model, finds particular expression in the constitutions of 1963 to 1999. These instruments are predicated on the presidential system of government guided by principles of separation of powers. More than any other factor, this consideration merits an in-depth exposition of the law of Nigeria as a testimony to this special affinity in constitutional formulation between the United States and Nigeria.

Nigerian democratic collapse spills over to overall African democratization

Diamond 8 [Larry, founding coeditor of the Journal of Democracy, senior fellow at the Hoover Institution and the Freeman Spogli Institute for International Studies at Stanford University, and director of Stanford's Center on Democracy, Development, and the Rule of Law; April, 2008; "The Democratic Rollback"; Foreign Affairs; 07/13/15; jac]

Where democracy survives, it often labors under serious difficulties. In most regions, majorities support democracy as the best form of government in principle, but substantial minorities are willing to entertain an authoritarian option. Furthermore, in much of the democratic world, citizens lack any confidence that politicians, political parties, or government officials are serving anyone other than themselves. According to surveys by Latinobarómetro (a Santiago-based corporation conducting public opinion surveys throughout Latin America), only one-fifth of the Latin American population trusts political parties, one-quarter trusts legislatures, and merely one-third has faith in the judiciary. According to similar surveys conducted by the Scotland-based New Democracies Barometer, the figures are even worse in the new democracies of eastern Europe. Public confidence in many civilian constitutional regimes has been declining. The Asian Barometer (which conducts public opinion surveys throughout Asia) found that the percentage of Filipinos who believe democracy is always the best form of government dropped from 64 percent to 51 percent between 2001 and 2005. At the same time, satisfaction with democracy fell from 54 percent to 39 percent, and the share of the Filipino population willing to reject the option of an authoritarian "strong leader" declined from 70 percent to 59 percent. The Afrobarometer (which conducts similar surveys in African countries) uncovered even sharper decreases in Nigerians' public confidence in democracy between 2000 and 2005 and also found that the proportion of the Nigerian public that felt the government was working to control corruption dropped from 64 percent to 36 percent. This is no surprise: during this period, President Olusegun Obasanjo saw many of his laudable economic reforms overshadowed or undone by continuing massive corruption, by his obsessive bid to remove a constitutional term limit on his presidency, and by the gross rigging of the 2007 elections on behalf of his ruling party. Electoral fraud and endemic corruption have once again ravaged a promising democratic experiment. If Nigeria reverts to military rule, descends into political chaos, or collapses, it will deal a harsh blow to democratic hopes across Africa. Indeed, the many African countries that remain blatantly authoritarian will never liberalize if the continent's new and partial democracies cannot make democracy work.

Nigerian democracy is key to survival of Nigeria

Leadership 13, Nigeria's "Most Influential Newspaper", Oct 1, 2013, http://leadership.ng/news/011013/democracy-has-stabilised-nigeria-babatope

Former Transport Minister, Chief Ebenezer Babatope, on Tuesday, said democracy has stabilised Nigeria.

Babatope said in Yenagoa that the positive impact of democratic rule in governance had helped the country to stabilise the polity.

He made the remark at the 17th Anniversary Public Lecture organised by the Bayelsa government, in commemoration of the 17 years of the state's creation.

The News Agency of Nigeria (NAN) reports that the anniversary lecture has ``Good Governance as Panacea for Promoting Stable Democracy and Sustainable Development'' as its theme.

The ex-minister said that in spite of its challenges, Nigeria recorded great feats as a nation under democracy.

``Nigeria is a multi-tribal and multi-religious nation. Our delicate balancing of the operations of these essential features of our socio-political lives had helped tremendously in ensuring the triumph of democracy in our nation.

``Though we have conflicts, our nation has not gone under because no matter our faults, we have not allowed the basic tenets of democracy and democratic governance to be subverted in our country.

``Democracy, therefore, has gone a long way to stabilise our nation.''

Babatope noted that the current challenges facing the country centered on how to make democracy work and survive.

According to him, it is clear that **democracy is the only form of government that can guarantee the survival of Nigeria as a nation**.

That destabilizes Africa — refugee flows will be massive

Buhari 4 – Former Head of State of the Federal Republic of Nigeria (Muhammadu, "Alternative Perspectives on Nigeria's Political Evolution", http://www.dawodu.com/buhari1.htm, April 8th, 2004, KTOP)

You are perhaps not all aware of the current state of affairs in Nigeria, characterized as they are by a failure of political leadership and failed governance. Nigeria, the largest and potentially the wealthiest country in sub-Saharan Africa, is today a basket case, confronted by problems that threaten not only its nascent democracy, but its very existence. The country's sheer size and complexity, its rich human and vast material endowments, provide both an opportunity and a challenge, depending on the attitude of Nigerians and their friends and partners, especially the U.S. It is worth observing that ignoring Nigeria and Nigerians by the U.S. or the world will have far-reaching negative consequences for the region and beyond. An unstable Nigeria driven by internal wars, insurrections, or other manifestations of a failed state has the potential to destabilize the whole continent of Africa. The common symptomatic phenomena of internal disarray by way of civil wars and refugees and internally displaced persons have been dealt with by the world with varying successes in the past. The two world wars in the last century and developments in their wake, the collapse of the Soviet Empire in Eastern Europe, Central Asia, the Middle East and the Balkans, have produced millions of refugees - which were and still are unacceptable. But the break-up of Nigeria with a population of 130 million willproduce a refugee crisis of unimaginable proportions. African countries will be overwhelmed and both Europe and Asia will be under severe strain. The highest number of refugees the world has had to deal with has never exceeded 25 million, with another 30 million or so displaced persons. This is about one third of the refugee potential of a war torn Nigeria. The international community, especially the U.S. will see it in their interest to forestall this major tragedy for Africa and for the world. Since independence in 1960, Nigeria has gone through many crises including a bloody civil war that lasted from 1967 to 1970, and cost nearly a million lives, with attendant destruction, hunger, disease and massive population movements. The Nigerian military has, like its Turkish and Pakistani counterparts, deemed it prudent to intervene in the politics of Nigeria for reasons I will not want to delve into, in this submission. As a rule most of such interventions, even when adjudged necessary and or appropriate, have done permanent damage to the military's espirit de corps, professionalism and preparedness, and have more often than not, done permanent damage to political institution building and emergent consensus creation and articulation - so necessary to security, progress and prosperity, in a nation with such diverse and multifarious socio-economic and political constituencies. The Nigerian military have been compelled to surrender power and return to the barracks by the imperatives of political reality and the heavy, definitely unbearable toll on the institution. Nigeria is once again at a crossroad, at a defining moment in its history and the history of Africa.

That causes global war

Glick 7, Middle East fellow at the Center for Security Policy, Condi's African holiday,http://www.carolineglick.com/e/2007/12/condis-african-holiday.php?pf=yes

The Horn of Africa is a dangerous and strategically vital place. Small wars, which rage continuously, can easily escalate into big wars. Local conflicts have regional and global aspects. All of the conflicts in this tinderbox, which controls shipping lanes from the Indian Ocean into the Red Sea, can potentially give rise to regional, and indeed global conflagrations between competing regional actors and global powers

XT: US Signal Key

A strong US signal and internal checks and balances are key to a successful democracy

Diamond 14 [Larry, Senior fellow at the Hoover Institution and at the Freeman Spogli Institute at Stanford University;10/24/14; "Chasing Away the Democracy Blues"; Foreign Policy; 07/10/15; jac]

So what is to be done? We need to begin by disaggregating the problem. Let's start at the top of the hierarchy of democratic development and work down. I used to add at the end of this kind of lecture a reflective caveat, "Physician, heal thyself." In other words, **we can't be credible and effective in promoting democracy abroad if we don't reform and improve its functioning at home**.That was usually the last imperative I mentioned. Now it needs to be the first. Like many of you who travel widely, **I am increasingly alarmed by how pervasive and corrosive is the worldwide perception — in both autocracies and democracies — that American democracy has become dysfunctional and is no longer a model worth emulating**. Fortunately, there are many possible models, and most American political scientists never recommended that emerging democracies copy our own excessively veto-ridden institutions. Nevertheless **the prestige, the desirability, and the momentum of democracy globally are heavily influenced by perceptions of how it is performing in its leading examples**. If we do not mobilize institutional reforms and operational innovations to reduce partisan polarization, encourage moderation and compromise, energize executive functioning, and reduce the outsized influence of money and special interests in our own politics, how are we going to be effective in tackling these kinds of challenges abroad? Second, we need to be absolutely sure that we have harvested and preserved the low-hanging fruit. That is, we must truly help to consolidate incipient or assumed success stories. One of the biggest mistakes the global democracy promotion community has made over the last thirty years is to cross too many countries off the list of democracy assistance recipients, because once the transition is completed and the new democracy lifts off in a middle-income country, we assume it can take care of itself. Or we believe that ten or twenty years of democratic assistance and engagement should be enough. This is all summed up in the term, "graduation." In my profession, we prefer the term "commencement" to "graduation." Sometimes our graduates still need and deserve our help in certain areas. A strong and capable state; a genuine rule of law, buttressed by a neutral and capable judiciary; effective institutions of horizontal accountability; competent and honest local administration; a pluralistic and resourceful civil society; a culture of tolerance, vigilance, and civic responsibility — these and other foundations of a secure liberal democracy do not get constructed overnight. Many of them emerge gradually with economic development. In more mature economies, they can develop more quickly. But even many of the countries listed as "upper middle income" by the World Bank remain well within the danger zone of democratic decay — as were Russia and Venezuela a decade and a half ago. The list of upper middle income countries includes Argentina, which is going through a profound economic and political crisis; Turkey, where the AKP has become a hegemonic party, the press functions in a state of fear, and the opposition parties are in disarray; Romania, an EU country where endemic corruption continues to undermine the health of democracy and governance; South Africa, where a corrupt leadership exhibits visibly declining commitment to the rule of law and liberal values; Thailand, which is now in the grip of a nasty military dictatorship that is not at the moment behaving as if it is transitional; Libya, which had a

revolutionary uprising against Qaddafi, and then a state collapse; and Tunisia, which could become the one success story of the Arab Spring, but still faces serious political, economic, and security challenges. A long-term strategic approach to promoting democracy would make the following resolution: Once a country (and especially a middle-income country) achieves or renews democracy, we should do everything possible to help lock it into place for the long run, to consolidate it. Once a country (and especially a middle-income country) achieves or renews democracy, we should do everything possible to help lock it into place for the long run, to consolidate it. That means that when a new, fragile Libyan transitional government appeals to us for security assistance (assistance, not occupying troops) we don't say, "sorry pals, we helped you get there, now let somebody else help you stay there." It means that we need to go to the new democratically elected Tunisian government after these approaching elections and ask them what it needs. What can we do to help revive the economy and rejuvenate flows of tourism and investment? Beyond our existing programs of party training, election observation, and other assistance, what can we do to support new civil society monitoring and training initiatives, to strengthen independent journalism and policy think tanks, to advance democratic civic education in the schools and the media, to support women's groups, student groups, human rights groups, and many other initiatives to build a culture and civic infrastructure to sustain democracy? If we want to promote democracy in the Arab world for the long run, we should invest very heavily in Tunisia in every possible way, because what the Arab world most needs now is one example of a decent, functioning democracy that can serve as a lesson, an inspiration, and a point of diffusion for the region. The same goes for Ukraine, though it is not as economically advanced. Ukraine is at a pivotal point in its history. It cannot afford another democratic regression, or an authoritarian, xenophobic Russia may swallow up the rest of it. It is struggling mightily with entrenched patterns of corruption, bad governance, and weak institutions. But it has some remarkable actors in the party system, the mass media, and civil society organizations. We need to invest heavily in these people and institutions, and in economic reform, revival, and integration with the West. It should be one of the major priorities for democracy assistance for the next decade or two. And we need to sustain these investments over an extended period of time in all three critical sectors: The state, the party and representative institutions, and civil society.

Improving the U.S. democratic model key to reverse global decline in democracy

Diamond 14 [Larry, Senior fellow at the Hoover Institution and at the Freeman Spogli Institute at Stanford University; 11/24/14; "Is Democracy in Decline?"; http://nextgenerationdemocracy.org/624/; 07/10/14; jac]

The Decline of Freedom and the Rule of Law There has also been a trend of declining freedom since 2005. In each of the last eight years more countries have declined in freedom than have improved, usually by a factor of two to one or more. Since 2005, 29 of the 49 sub-Saharan African states (almost 60 percent) declined in freedom, while only fifteen countries (30 percent) improved. The trend of erosion in freedom and accountability is not always evident to outside observers. In a number of countries where we take democracy for granted, such as South Africa, we should not. In fact, there is not a single country on the African continent where democracy is firmly consolidated and secure today—the way it is, for example, in such third-wave democracies as South Korea, Poland, and Chile. In the global democracy-promotion community, few actors are paying attention to the growing signs of fragility in some more liberal developing democracies, not to mention the more illiberal ones. Why have freedom and democracy been regressing in many countries? The most important and pervasive answer is bad governance. If we reorganize the Freedom House data into three scales—political rights, civil liberties, and transparency and the rule of law—we find that every region performs worse on transparency than on political rights and civil liberties. The deterioration in transparency and rule of law since 2005 has been particularly visible, even in a supposedly liberal democracy such as South Africa. As more and more African states become resource-rich, with the onset of a second African oil boom, the quality of governance will deteriorate further. This has already begun to happen in one of Africa's most liberal and important democracies, Ghana. Around the world, democracies are struggling with the resurgence of what Francis Fukuyama calls "neo-patrimonial" tendencies. Leaders who think that they can get away with it are eroding democratic checks and balances, overriding term limits and normative restraints, violating opposition rights, and accumulating power and wealth for themselves and their families, cronies, clients, and parties. Space for opposition parties, civil society, and the media is shrinking, and international support for them is drying up. Ethnic, religious, and other identity cleavages polarize many societies that lack well-designed democratic institutions to manage those cleavages. State structures are too often unable to secure order, protect rights, meet the most basic social needs. Democratic institutions such as parties and

parliaments are often poorly developed, and the bureaucracy lacks the policy expertise, and even more so the independence and authority, to effectively manage the economy. Weak economic performance and rising inequality exacerbate popular disaffection. Another recent blow has been the crushing or implosion of Arab movements for democratic change. Levels of freedom are actually lower in most Arab countries today than they were at the end of 2010, and nowhere has the resurgence or reinvention of authoritarianism been more evident than in Egypt, where the military has given a thin electoral façade to a regime more repressive and intolerant than the worst days of Hosni Mubarak's rule. The Authoritarian Resurgence The resurgence of authoritarianism in the Arab world has been part of **a recent global trend**. In Russia, space for political opposition, principled dissent, and civil society activity outside the control of the ruling authorities has been shrinking. In China, human rights defenders and civil society activists have faced increasing harassment and victimization. The autocracies of the Shanghai Cooperation Organization have become much more coordinated and assertive. Russia and China have both been aggressively flexing their muscles on territorial questions. And increasingly they are pushing back against democratic norms by also using instruments of soft power to try to discredit democracies while promoting their own models and norms. This is part of a broader trend of renewed authoritarian skill and energy in using state-run media (both traditional and digital) to air an eclectic mix of proregime narratives, demonized images of dissenters, and illiberal, xenophobic diatribes. The resurgence of authoritarianism has been quickened by the diffusion of common tools, such as laws to criminalize international flows of financial and technical assistance from democracies to democratic parties, movements, media, election monitors, and civil society organizations in authoritarian regimes. There have also been broader restrictions on the ability of NGOs to form and operate and the creation of pseudo-NGOs to do the bidding of autocrats. In addition, authoritarian (and even some democratic) states are becoming more resourceful, sophisticated, and unapologetic in suppressing Internet freedom and using cyberspace to frustrate, subvert, and control civil society. Western Democracy in Retreat Perhaps the most worrisome dimension of the democratic recession has been the decline of democratic efficacy, energy, and self-confidence in the West, including the United States. We in the U.S. and in parts of the EU have some hard reform work ahead to reduce polarization, foster better policymaking and diminish the corrupting influence of money in electoral politics and lobbying. **The lackluster performance of democracy in the West, most of all the US, is hurting its cause globally.** As a global democratic community, we also need to recover our energy, and our confidence in our own values. If we do not undertake more rapid, resourceful, coordinated, and explicit actions to confront the resurgence of authoritarianism, the mild democratic recession of the past decade will mutate into something far worse. It is vital that the established democracies not lose faith. Democrats have the better set of ideas. Democracy may be receding somewhat in practice, but it is still globally ascendant in peoples' values and aspirations. This creates significant new opportunities for democratic growth if **we can restore the global normative climate of vigorous democratic solidarity and assistance**.

Democracy must be constantly reaffirmed to prevent global backsliding

Kagan 15 [Robert, Senior fellow with the Project on International Order and Strategy at the Brookings Institution in Washington; January 2015; "The Weight of Geopolitics"; Project Muse; 07/12/15; jac]

Democracy, Autocracy, and Power What about today? With the democratic superpower curtailing its global influence, regional powers are setting the tone in their respective regions. Not surprisingly, dictatorships are more common in the environs of Russia, along the borders of China (North Korea, Burma, and Thailand), and in the Middle East, where long dictatorial traditions have so far mostly withstood the challenge of popular uprisings. But even in regions where democracies remain strong, authoritarians have been able to make a determined stand while their democratic neighbors passively stand by. Thus Hungary's leaders, in the heart of an indifferent Europe, proclaim their love of illiberalism and crack down on press and political freedoms while the rest of the European Union, supposedly a club for democracies only, looks away. In South America, democracy is engaged in a contest with dictatorship, but an indifferent Brazil looks on, thinking only of trade and of North American imperialism. Meanwhile in Central America, next door to an indifferent Mexico, democracy collapses under the weight of drugs and crime and the resurgence of the caudillos. Yet it may be unfair to blame regional powers for not doing what they have never done. Insofar as the shift in the geopolitical equation has affected the fate of democracies worldwide, it is probably the change in the democratic superpower's behavior that bears most of the responsibility. If that superpower does not change its course, we are likely to see democracy around the world rolled back further. There is nothing inevitable about democracy. The liberal world order we have been living in these past decades was not bequeathed by "the Laws of Nature and of Nature's God." It

is not the endpoint of human progress. There are those who would prefer a world order different from the liberal one. Until now, however, they have not been able to have their way, but not because their ideas of governance are impossible to enact. [End Page 29] Who is to say that Putinism in Russia or China's particular brand of authoritarianism will not survive as far into the future as European democracy, which, after all, is less than a century old on most of the continent? Autocracy in Russia and China has certainly been around longer than any Western democracy. Indeed, it is autocracy, not democracy, that has been the norm in human history—only in recent decades have the democracies, led by the United States, had the power to shape the world. Skeptics of U.S. "democracy promotion" have long argued that many of the places where the democratic experiment has been tried over the past few decades are not a natural fit for that form of government, and that the United States has tried to plant democracy in some very infertile soils. Given that democratic governments have taken deep root in widely varying circumstances, from impoverished India to "Confucian" East Asia to Islamic Indonesia, we ought to have some modesty about asserting where the soil is right or not right for democracy. Yet it should be clear that the prospects for democracy have been much better under the protection of a liberal world order, supported and defended by a democratic superpower or by a collection of democratic great powers. Today, as always, democracy is a fragile flower. It requires constant support, constant tending, and the plucking of weeds and fencing-off of the jungle that threaten it both from within and without. In the absence of such efforts, the jungle and the weeds may sooner or later come back to reclaim the land.

XT: Judicial Influence Key to Democracy

Judicial Independence is key to separation of powers which prevents collapse of emerging democracies

Issacharoff 7 [Samuel, Reiss Professor of Constitutional Law at NYU; 04/2007; "FRAGILE DEMOCRACIES"; JSTOR; 07/07/15; jac]

Across the range of cases in which democratic regimes have sought to prevent antidemocratic elements from securing the advantages of the electoral arena, three forms of procedural concerns emerge. Although there is no judicial discussion (that I am aware of) setting out these considerations in comprehensive fashion, taken together they highlight some of the primary protections against the potential misuse of viewpoint-based suppression of political activity. The first and undoubtedly most significant procedural safeguard is the concentration of the power to suppress away from self-interested political actors. In all these cases, the judiciary acts based on the government's petition or the public prosecutor's charges,202 but it acts as an independent arbiter of the legitimacy of the government's professed need to suppress an antidemocratic threat. Independent judicial review takes on particular significance in parliamentary systems. There is an ever-present risk in democratic systems that the claimed exigencies necessitating the use of emergency powers, including the power to suppress antagonistic political speech, will become the rule that swallows the exception. Too many putative democracies, particularly in the immediate post-colonial world, have succumbed to one-party rule under the claimed necessity of domestic emergencies for any prescriptive account to ignore this threat. The common feature of fledgling democracies that collapse into strongman regimes is the concentration of unilateral power in the executive, an inherent risk whenever there is a claimed threat to national security. In the United States, the separation between presidential and legislative election allows the Congress to play a checking role on claims of unilateral presidential authority, even over the nation's response to military threats. Indeed, the role of the courts in American national security cases has largely been to ensure that the executive not act beyond the scope of congressional authorization.203 Because parliamentary systems vest executive power in representatives of the legislative majority, such separation of powers is not likely to have the same force as in presidential systems. But separation of powers remains a critical protection in preventing the use of extraordinary powers for quotidian political gain. Requiring that there be an independent source of legislative authority for the prohibition of a political party and that there be a source of review independent of the executive provides a check on the misuse of this dangerous power. Perhaps the clearest example is the use of international tribunals, such as the European Court of Justice, to review party prohibitions. Such crossnational bodies are removed from any immediate accountability to domestic political processes and are unlikely to respond narrowly to partisan or sectional interests. Even at the domestic level, the requirement of independent review of such charged decisions as a ban on a political party may be thought of

as a form of "constrained parliamentarianism" that protects democratic integrity by "insulating sensitive functions from political control."204 Germany provides the best example of the role of independent judicial review within a national setting, beginning with the seminal cases after World War II. The German Basic Law accepts both the importance of political parties in a democratic order and the need to ban those that seek to destroy democracy from within, a necessarily perilous line to draw. Under the German constitution, however, an important procedural protection for political parties is that only the Federal Constitutional Court can declare a political party unconstitutional.205 The court addressed this topic in the Socialist Reich Party Case, stating that the framers of the German constitution, in deciding to limit the freedom of parties "seeking to abolish democracy by using formal democratic means," had to consider "the danger that the government might be tempted to eliminate troublesome opposition parties."206 Therefore, the framers committed the decision on unconstitutionally to the Federal Constitutional Court. The court distinguished Article 9(2), which allows the executive to ban "associations whose purposes or activities ... are directed against the constitutional order."207 Precisely "[b]ecause of the special importance of parties in a democratic state," they could not be banned under the general executive powers of Article 9(2), and could be declared unconstitutional only bv the Federal Constitutional Court.208 Later cases confirmed the court's exclusive jurisdiction to determine the constitutionality of political activity. The reasoning of the German Constitutional Court in the Radical Groups Case, which struck down a decision of state radio and television stations denying airtime to radical left-wing parties, is instructive.209 The court held that so long as an advertisement was related to the election, and so long as the party had not been declared illegal by the court, contentbased interference with expression was beyond the power of the broadcast media or the government. An organization acquires rights of expression as a political party, and only the court has the authority to rule on the constitutionality of a party: "The jurisdictional monopoly of the Federal Constitutional Court categorically precludes administrative action against the existence of a political party, regardless of how anticonstitutional the party's program may be."210 A similar form of procedural protection emerged in France after World War II, in the Fifth Republic. By contrast to the concentration of power in the legislature under the Fourth Republic, the post- 195 French constitutional order hewed much more closely to a formal recognition of separation of powers in which judicial oversight emerged as an additional source of power211 - a surprisingly late development in the land of Montesquieu.212 Perhaps the most significant decision of the Conseil Constitutionnel in establishing the principle of independent judicial oversight came in 1971, precisely in the area of the banning of political parties.213 The Conseil declared unconstitutional a law that would have vested in the executive branch the authority to prohibit the formation of a political party, a power it had previously denied to the legislature acting on its own accord.214

Rule of law and the legitimacy of the government are key to long term democratic transitions

Fukuyama, 15 [Francis, Olivier Nomellini Senior Fellow at the Center on Democracy, Development and the Rule of Law at Stanford; January, 2015; "Why Is Democracy Performing So Poorly; Project Muse; 07/12/15; jac]

The Necessity of Enforcement The United States had one important advantage, however, that is lacking in many of today's new democracies. It always had strong police power and could enforce the laws that it passed. This capacity was rooted in the Common Law, which the colonies inherited from England and had become well-institutionalized before their independence. American governments at all levels always maintained relatively strong police power to indict, try, and convict criminals at various levels of government. This coercive power was backed by a strong belief in the legitimacy of law, and was therefore converted into genuine authority in most places. The capacity to enforce constitutes an area where state capacity overlaps with the rule of law, and it is critical in dealing with a problem like corruption. The behavior of public officials depends on incentives—not just getting adequate pay for doing their jobs, but the fear of punishment if they break the law. In very many countries, taxes are not paid and bribes are collected because there is very little likelihood of lawbreakers going to jail. Effective enforcement was central to the success of one of the most notable recent efforts to improve public-sector performance, that of Georgia. Following the 2003 Rose Revolution, the government of Mikheil Saakashvili cracked down on corruption on a number of fronts, tackling the traffic police, tax evasion, and the pervasive operations of criminal gangs known as the "thieves-in-law." While some of this was done through transparency initiatives and positive incentives (for example, by publishing government data online and by increasing police salaries by an order of magnitude), effective enforcement was dependent on the creation of new police units that did things like making highly publicized arrests of high-ranking former officials and businessmen. By the end of the Saakashvili administration, this enhanced police power had come to be abused in many ways, setting off a political reaction that led to the election of Bidzina Ivanishvili and the Georgian Dream party.11 Such abuses should not obscure the importance of the state's coercive power in achieving effective enforcement of the law. Controlling corruption requires the wholesale shifting of a population's normative expectations of behavior—if everyone around me is taking bribes, I will look like a fool if I do not participate as well. Under these circumstances, [End Page 18] fear is a much more effective motivator than good intentions or economic incentives. Prior to the Rose Revolution, Georgia had the reputation of being one of the most corrupt places in the former Soviet Union. Today, by a number of governance measures, it has become one of the least corrupt. It is hard to find examples of effectively governed polities that do not exert substantial coercive power. Contemporary efforts to promote good governance through increased transparency and accountability without simultaneously incorporating efforts to strengthen enforcement power are doomed to fail in the end. In Political Order in Changing Societies, Samuel Huntington argued that the political dimensions of development often fail to keep pace with social mobilization and thus lead to political disorder. There can be a corresponding failure of state institutions to keep up with the development of democratic ones. This conclusion has a number of important implications for the way in which the United States and other democracies pursue democracy promotion. In the past, there has been heavy emphasis on leveling the playing field in authoritarian countries through support for civil society organizations, and on supporting the initial transition away from dictatorship. Creating a viable democracy, however, requires two further stages during which the initial mobilization against tyranny gets institutionalized and converted into durable practices. The first is the organization of social movements into political parties that can contest elections.

Civil society organizations usually focus on narrow issues, and are not set up to mobilize voters—this is the unique domain of political parties. The failure to build political parties explains why more liberal forces have frequently failed at the ballot box in transitional countries from Russia to Ukraine to Egypt. The second required stage, however, concerns state-building and state capacity. Once a democratic government is in power, it must actually govern—that is, it must exercise legitimate authority and provide basic services to the population. The democracy-promotion community has paid much less attention to the problems of democratic governance than it has to the initial mobilization and the transition. Without the ability to govern well, however, new democracies will disappoint the expectations of their followers and delegitimate themselves. Indeed, as U.S. history shows, democratization without attention to state modernization can actually lead to a weakening of the quality of government.

XT: Democracy Brink

United States democracy efforts are in retrenchment-causes global democratic backsliding-pre-WWII Europe proves

Kagan 15 [Robert, Senior fellow with the Project on International Order and Strategy at the Brookings Institution in Washington; January 2015; "The Weight of Geopolitics"; Project Muse; 07/12/15; jac]

These are relevant questions again. We live in a time when democratic nations are in retreat in the realm of geopolitics, and when democracy itself is also in retreat. The latter phenomenon has been well documented by Freedom House, which has recorded declines in freedom in the world for nine straight years. At the level of geopolitics, the shifting tectonic plates have yet to produce a seismic rearrangement of power, but rumblings are audible. The United States has been in a state of retrenchment since President Barack Obama took office in 2009. The democratic nations of Europe, which some might have expected to pick up the slack, have instead turned inward and all but abandoned earlier dreams of reshaping the international system in their image. As for such rising democracies as Brazil, India, Turkey, and South Africa, they are neither rising as fast as once anticipated [End Page 21] nor yet behaving as democracies in world affairs. Their focus remains narrow and regional. Their national identities remain shaped by post-colonial and nonaligned sensibilities—by old but carefully nursed resentments—which lead them, for instance, to shield rather than condemn autocratic Russia's invasion of democratic Ukraine, or, in the case of Brazil, to prefer the company of Venezuelan dictators to that of North American democratic presidents. Meanwhile, insofar as there is energy in the international system, it comes from the great-power autocracies, China and Russia, and from would-be theocrats pursuing their dream of a new caliphate in the Middle East. For all their many problems and weaknesses, it is still these autocracies and these aspiring religious totalitarians that push forward while the democracies draw back, that act while the democracies react, and that seem increasingly unleashed while the democracies feel increasingly constrained. It should not be surprising that one of the side effects of these circumstances has been the weakening and in some cases collapse of democracy in those places where it was newest and weakest. Geopolitical shifts among the reigning great powers, often but not always the result of wars, can have significant effects on the domestic politics of the smaller and weaker nations of the world. Global democratizing trends have been stopped and reversed before. Consider the interwar years. In 1920, when the number of democracies in the world had doubled in the aftermath of the First World War, contemporaries such as the British historian James Bryce believed that they were witnessing "a natural trend, due to a general law of social progress."1 Yet almost immediately the new democracies in Estonia, Latvia, Lithuania, and Poland began to fall. Europe's democratic great powers, France and Britain, were suffering the effects of the recent devastating war, while the one rich and healthy democratic power, the United States, had retreated to the safety of its distant shores. In the vacuum came Mussolini's rise to power in Italy in 1922, the crumbling of Germany's Weimar Republic, and the broader triumph of European fascism. Greek democracy fell in 1936. Spanish democracy fell to Franco that same year. Military coups overthrew democratic governments in Portugal, Brazil, Uruguay, and Argentina. Japan's shaky democracy succumbed to military rule and then to a form of fascism. Across three continents, fragile democracies gave way to authoritarian forces exploiting the vulnerabilities of the democratic system, while other democracies fell prey to the worldwide economic depression. There was a ripple effect, too—the success of fascism in one country strengthened similar movements elsewhere, sometimes directly. Spanish fascists received military assistance from the fascist regimes in Germany and Italy. The result was that by 1939 the democratic gains of the previous forty years had been wiped out. [End Page 22] The period after the First World War showed not only that democratic gains could be

reversed, but that democracy need not always triumph even in the competition of ideas. For it was not just that democracies had been overthrown. The very idea of democracy had been "discredited," as John A. Hobson observed.2 Democracy's aura of inevitability vanished as great numbers of people rejected the idea that it was a better form of government. Human beings, after all, do not yearn only for freedom, autonomy, individuality, and recognition. Especially in times of difficulty, they yearn also for comfort, security, order, and, importantly, a sense of belonging to something larger than themselves, something that submerges autonomy and individuality—all of which autocracies can sometimes provide, or at least appear to provide, better than democracies. In the 1920s and 1930s, the fascist governments looked stronger, more energetic and efficient, and more capable of providing reassurance in troubled times. They appealed effectively to nationalist, ethnic, and tribal sentiments. The many weaknesses of Germany's Weimar democracy, inadequately supported by the democratic great powers, and of the fragile and short-lived democracies of Italy and Spain made their people susceptible to the appeals of the Nazis, Mussolini, and Franco, just as the weaknesses of Russian democracy in the 1990s made a more authoritarian government under Vladimir Putin attractive to many Russians. People tend to follow winners, and between the wars the democratic-capitalist countries looked weak and in retreat compared with the apparently vigorous fascist regimes and with Stalin's Soviet Union.

There is a significant risk of global democratic backsliding --- the window of opportunity is closing to reverse the trend in the short term

Diamond 14 [Larry, Senior fellow at the Hoover Institution and at the Freeman Spogli Institute at Stanford University;05/02/14; Democracy's Deepening Recession; http://www.theatlantic.com/international/archive/2014/05/the-deepening-recession-of-democracy/361591/; 07/10/15; jac]

While the world's attention has been riveted on Ukraine and what move an emboldened Vladimir Putin will make next, diverse threats to democracy have intensified on other fronts as well. The story is not new. According to Freedom House, 2013 was the eighth consecutive year in which more countries experienced declines in political rights or civil liberties than improvements. Since 2005, democracy has ceased its decades-long expansion, leveling off at about 60 percent of all independent states. And since the military coup in Pakistan in 1999, **the rate of democratic breakdowns has accelerated, with about one in every five democracies failing**. The downfall of several Arab autocracies in 2011 seemed to augur a new burst of democratic progress, but that progress has not materialized. While Tunisia has emerged as the first Arab democracy in 40 years, Egypt is more repressive now than at any time in the last decade of Hosni Mubarak's rule. Since the end of 2010, more Arab countries have regressed in freedom and political pluralism than have advanced. The democratic recession we're witnessing has been particularly visible in big "swing states"—the non-Western countries with the largest populations and economies. Since the late 1990s, democracy has broken down in Russia, Nigeria, Venezuela, the Philippines, Pakistan, Bangladesh, Thailand, and Kenya. The Philippines is the one relative bright spot in the group today, with a democratically elected president, Benigno Aquino, committed to serious governance reforms. Russia has become not just a venal and despotic state, but a neo-imperial menace to its neighbors as well. Nigeria has reverted back to tragic levels of political kleptocracy and fraud, feeding political polarization, ethnic resentment, citizen alienation, and an increasingly virulent Islamic terrorist movement in the north. The grip of "Bolivarian socialism" has weakened in Venezuela as governance has deteriorated, violence has exploded, and the opposition has unified behind a liberal challenger first to Hugo Chávez and then to his designated successor. But it will be a pyrrhic victory for democrats if the Chavista regime falls and social order collapses alongside it. In January, democracy in Bangladesh suffered a major setback when the principal opposition party boycotted parliamentary elections after the ruling party abandoned neutral arrangements for electoral administration, and trust between the two parties collapsed. While Freedom House judges that democracy has returned to Pakistan, Kenya, and Thailand, these governments are so illiberal and corrupt that it is difficult to say what exactly they are. In Thailand, enmity between the "yellow shirt" urban, middle-class backers of the monarchy and the "red shirt" partisans of populist former Prime Minister Thaksin Shinawatra

has paralyzed the government and increasingly veered toward violence. Instability has been a chronic issue since the military ousted Thaksin in 2006, suspending the country indefinitely between resilient majority support for Thaksin's party and the yellow-shirt camp's continuing control of key levers of the "deep state." Since November, more than 20 people have been killed and over 700 injured in fevered street confrontations between the two camps. And the worst may be yet to come. In January, one Red Shirt militant vowed, "I want there to be lots of violence to put an end to all this…. It's time to clean the country, to get rid of the elite, all of them." As in Nigeria, renewed military intervention won't solve the country's problems. Yet if things continue to degenerate, the military is waiting in the wings. During his 11 years in power, Turkey's domineering prime minister, Recep Tayyip Erdogan, has managed to politically neutralize the military and the independent press, along with many other countervailing forces in politics and society. Those who hoped his authoritarian drift might be slowed by local elections in late March were severely disappointed, as his Justice and Development Party (AKP) won a convincing victory across Turkey's municipalities. Erdogan's victory speech that night was anything but magnanimous. He threatened those who had exposed the mounting corruption of his government (and reportedly his own family), assured his supporters that "we are the owners of this country," and portrayed his victory as a "full Ottoman slap" to all his opponents. As Erdogan prepares to run either for prime minister or president (if he can amend the constitution to enhance the latter's powers), Turkey is in deepening trouble. Journalists fear to report the truth, and with good reason; more of them are jailed in Turkey than in any other country. Businesses fear to support opposition parties, judges fear to rule against the ruler, and the AKP—long hailed in the West for its success in reconciling Islam and democracy—is increasingly looking like an old-fashioned hegemon bent on securing its dominance. With every passing day, Turkey looks more like the fake democracy of Malaysia than any real democracy in Europe. Meanwhile, Malaysia failed to record the democratic breakthrough many expected in 2013. Even though the opposition, led by Anwar Ibrahim, won a clear majority of the vote in general elections, brazen gerrymandering and over-representation of ruling-party strongholds nullified the preference of most Malaysians. The Democracy Report Nor should we take India, the world's biggest democracy, for granted. In the parliamentary elections that are rolling across the sub-continent between early April and mid-May, a great pageant of democratic choice and accountability is once again unfolding on a scale never before seen in human history. It is happening largely free of violence, and with impressive administrative skill. And it will do what democracy should: Punish the corrupt, under-performing incumbents by evicting them from power. But the likely victory of the opposition BJP will bring to power a paradox. In his 12 years as chief minister of Gujarat, Narendra Modi has not only delivered vigorous economic development, but also a style of politics so intolerant of criticism, so demanding of fawning obedience, that many Indian liberals now shudder at the prospect of his becoming prime minister. The news is not all bad. 2014 is a year of critical elections in many places. In Indonesia, many democrats are pinning their hopes on the dynamic reformist mayor of Jakarta, Joko Widodo, who is the odds-on favorite to win the presidency. In South Africa, the spiraling corruption and lackluster performance of the ANC and its leader, President Jacob Zuma, is spawning more pluralistic politics and growing support for the liberal opposition, the Democratic Alliance. Even Afghanistan seems to be in the midst of a reasonably credible and popular electoral process that will produce a significantly more purposeful president than Hamid Karzai. In the long run, economic development, globalization, and the growth of civil society will induce democratic change in a number of autocracies, including China and Vietnam, and, well before them, Singapore and Malaysia. But if **democracy cannot be reformed and revived in the world's key swing states, the "long run" will be a lot further off than it need be—and the near term won't be hospitable to the advance of freedom**.

Democracy is in retreat-- increased involvement by successful democracies is key

Diamond 14 [Larry, Senior fellow at the Hoover Institution and at the Freeman Spogli Institute at Stanford University; 11/24/14; "Is Democracy in Decline?"; http://nextgenerationdemocracy.org/624/; 07/10/14; jac]

And then, around 2006, the expansion of freedom and democracy in the world came to a prolonged halt. Since 2006, there has been no net expansion in the number of electoral democracies, which has hovered around 60 percent of the world's states. And since 2006, the average level of political rights and civil liberties in the world has deteriorated slightly. One could see the past decade as a period of equilibrium. Given that democracy expanded to a number of countries with weak facilitating conditions (such as poverty or an authoritarian neighborhood), it is impressive that democracy survived (or revived) in so many places. It's hard to argue that the state of democracy globally is not so good, but also not so bad. Yet **the world has been in a mild but protracted democratic recession since 2006**. Beyond the stagnation or modest erosion of global levels of democracy and freedom, there have been several other causes for concern. One has been a significant and accelerating rate of democratic breakdown. Second, the quality or stability of democracy has been declining in some large and important emerging-market countries, like Turkey, Thailand, and Bangladesh. Third, authoritarianism has been deepening. And fourth, the established democracies have been performing rather poorly and seem to lack the will and self-confidence to promote democracy effectively abroad. Let me try briefly to touch on each of these. If we break the third wave up into its four component decades, we see a rising incidence of democratic breakdown per decade since the mid-1980s. The rate of democratic failure, which had been 16 percent in the first decade of the third wave (1974–83), fell to 8 percent in the second decade (1984–93), but then climbed to 11 percent in the third decade (1994–2003). In this most

recent decade, the rate has jumped back up to 16 percent. One in six of all the democracies that has existed since 2004 has failed. Since 2000, I count 25 breakdowns of democracy in the world—not only through blatant military or executive coups, but also through incremental degradations of democratic rights and procedures that finally push democracy over the threshold into authoritarianism. It is sometimes difficult to assign a particular date to the latter form of failure, since there is no sharply disruptive single act, like Alberto Fujimori's autogolpe. But just as Vladimir Putin and Hugo Chavez gradually strangled democracy in Russia and Venezuela, I think Prime Minister, now President, Recep Tayyip Erdoğan and his AK Party have by now done so in Turkey. Some of the AKP's changes have made Turkey more democratic by removing the military as an autonomous veto player in politics. But the AKP has gradually entrenched its political hegemony, extending partisan control over the judiciary and the bureaucracy, arresting journalists and intimidating dissenters in the press and academia, threatening businesses with retaliation if they fund opposition parties, and using prosecutions in cases connected to alleged coup plots to jail and remove from public life an implausibly large number of accused plotters. This has coincided with a stunning and increasingly audacious concentration of personal power by President Erdoğan. Following the Hugo Chavez playbook, Daniel Ortega has quashed democracy in Nicaragua, and many worry that the populist presidents in Bolivia and Ecuador are dragging their country in the same direction. In Botswana a president with a career military background evinces an undemocratic intolerance of opposition and distaste for civil society. There are growing warning signs of the demise of this, Africa's longest-standing democracy. These include increasing political violence and intimidation, escalating pressure on the independent media, the brazen misuse of state television by the ruling party, and the growing personalization and centralization of power by President Ian Khama. Only eight of the 25 democratic breakdowns since the year 2000 came as a result of military intervention. The majority resulted from the abuse of power and the desecration of democratic rules by democratically elected rulers. Any international actor that seeks to stem the decline of democracy must find ways to confront this challenge of executive abuse in timely fashion.

Democracy is in decline-autocrats are seizing power because of the perception that they can get away with it

Diamond 14 [Larry, Senior fellow at the Hoover Institution and at the Freeman Spogli Institute at Stanford University;10/24/14; "Chasing Away the Democracy Blues"; Foreign Policy; 07/10/15; jac]

This article is based on the keynote address from the conference "Does Democracy Matter?" co-sponsored by the Foreign Policy Research Institute and the Kennan Institute in Washington, D.C., on October 20. This is an important and volatile time for democracy in the world. Many people are questioning the viability of democracy and the wisdom of trying to promote it. The fashionable mood these days is skepticism, if not downright pessimism, about the near-term prospects for democracy. The fashionable mood these days is skepticism, if not downright pessimism, about the near-term prospects for democracy. We tried to do too much, one argument goes, and we should scale back our expectations. It's still popular to think that these people in Africa, the Arab world, or Russia, weren't ready for democracy, don't value it culturally, and don't have the social conditions to make it work. Some believe democracy promotion was always a fool's errand. Others contend that we did what we could and should now pull back. Or that after 30 years of intensive democracy promotion, we still don't know how to do it effectively, except in places where democratic progress would have happened anyway. And finally (for now) there is the view that we have more important issues to deal with, like ISIS, Ebola, a rising China, a marauding Putin, a nuclear-weapons chasing Iran, drug violence in Mexico, child mortality among the bottom billion, and so on.I wish I had an hour just to rebut all these currents of pessimism, determinism, and despair. But since I don't, let me begin by trying to set the record straight on where we are and where I think we have come in terms of global democracy. My analysis is not rosy, but I don't think anything close to despair is warranted either. Then I'll come to some of the challenges and opportunities for democracy promotion, especially by the United States, at this critical juncture for democracy globally. Yes, it's a difficult and messy time for democracy and freedom around the world. **We have been in a global democratic recession for something like a decade.** In each one of the last eight years, as Freedom House has documented, the number of countries declining in political rights or civil liberties has outpaced (by at least two to one) the number of countries gaining in freedom. And this has come after 15 post-Cold War years when precisely the reverse was true. There have been a lot of democratic breakdowns in this new century. In fact, the rate of democratic breakdown in these last thirteen years has been 50 percent higher than in the preceding period. Since the third wave of global democratic expansion began forty years ago, one-third of all the democratic regimes have failed. Since the third wave of global democratic expansion began forty years ago, one-third of all the democratic regimes have failed. And half of these failures have been just in the last thirteen years. **Many of these breakdowns have come in big and strategically important states, like Russia, Nigeria, Pakistan, and Venezuela.** In some cases, like the Philippines, democracy has been restored. In others, like Thailand, which recently

suffered its second military coup in a decade, democracy has broken down repeatedly. In others, like Pakistan and Kenya and Turkey, the regime seems to occupy a gray zone somewhere in between electoral democracy and electoral authoritarianism. But in countries like Turkey, the authoritarian drift has been so steady, so serious, and so prolonged that an authoritarian threshold appears to have been crossed. This has long since happened in Sri Lanka and Nicaragua, and it seems to be approaching in Bolivia and Ecuador as well. Moreover, instead of confronting or at least condemning the godfather regime of creeping authoritarianism in the Andes, Venezuela, most Latin American democracies have turned a blind eye toward its abuses, even supporting it to obtain a seat on the UN Security Council. Democracy has also eroded quite significantly in Africa, where many elected leaders think China's booming aid and investment gives them an alternative to Western conditionality, while the new war on terror gives them additional leverage as well. There is also the crushing implosion of the Arab Spring; the growing self-confidence, assertiveness, and cooperation of authoritarian states like China, Russia, and their club of fellow autocracies, the Shanghai Cooperation Organization; the mounting legal assaults and constraints on civil society; the sharing and development of tools of Internet censorship and suppression; and the poor performance of many of the most advanced democracies, beginning with the United States. **If you care about democracy in the world, we are in trouble.** But this is not the whole story. We are in a prolonged political recession, not a depression. **We have not yet seen the onset of "a third reverse wave."** The extraordinary expansion in the number of democracies essentially halted around 2005. Since then, it has not significantly increased, but neither has it substantially diminished. Globally, average levels of freedom have ebbed a little bit, but not calamitously. Most importantly, there has not been significant erosion in public support for democracy. In fact, what [the African opinion survey project] Afrobarometer has consistently showed is a gap — in some African countries, a chasm — between the popular demand for democracy and the regime supply of it. And this is not just some shallow, vague notion that democracy is a good thing. Many Africans understand political accountability, transparency, the rule of law, and restraint of power. And they would like to see their government manifest these virtues. One problem is that the pace of decay in democratic institutions is not always clearly visible. A number of countries we take for granted, such as South Africa, we should not. In fact, there is not a single country on the African continent where democracy is firmly consolidated and secure the way it is, for example, in some third-wave democracies such as Korea, or Poland, or Chile. Add new oil wealth to the mix, as in Ghana, and you have a major new challenge to the quality of governance. In the global democracy promotion community, few actors are paying attention to the growing signs of fragility in the more liberal developing democracies, not to mention the more illiberal ones. Broadly, we know why democracy and freedom are slipping back. What Francis Fukuyama calls "neo-patrimonial" tendencies are resurgent. Leaders who think they can get away with it are eroding democratic checks and balances, hollowing out accountability institutions, overriding term limits and normative restraints, and accumulating power and wealth for themselves and their families, cronies, clients, and parties. Space for opposition parties, civil society, and the media is shrinking, and international support for them is drying up. Space for opposition parties, civil society, and the media is shrinking, and international support for them is drying up. Ethnic, religious, and other identity cleavages polarize many societies that lack well-designed democratic institutions to manage those cleavages. State structures are too often weak and porous, unable to secure order, protect rights, meet the most basic social needs, or rise above corrupt, clientelistic, and predatory impulses. Democratic institutions — parties and parliaments — are often poorly developed, and the bureaucracy lacks the policy expertise, and even more so the independence, neutrality, and authority, to effectively manage the economy. So weak economic performance, and certainly rising inequality, is added to the mix. It isn't easy to develop democracy in poor countries and weak states. And there is a significant failure rate even in middle-income countries. But if we don't become more focused, more creative, more determined, more resourceful, and less apologetic in promoting democracy, the democratic recession is going to mutate into a wave of democratic regression, a bleak period for freedom, political stability, and the American national interest.

XT: African Democracy Declining Now

African Democracies are tenuous

Gyimah-Boadi 15 [E., Director of the Center for Democratic Development Ghana; 01/15; "Africa's Waning Democratic Commitment"; http://muse.jhu.edu.proxy.lib.umich.edu/journals/journal_of_democracy/v026/26.1.gyimah-boadi.html; Journal of Democracy Volume 26, Number 1, January 2015; 07/05/15/; jac]

In the early 1990s, a wave of democratization (and, in some cases, redemocratization) began to unfold in sub-Saharan Africa. In the years since, a majority of the continent's citizens have come to view democracy as the ideal political regime, and many African countries made considerable strides up through the mid-2000s in liberalizing their political systems and establishing democratic institutions. But for nearly a decade now, that progress has slowed and in some places reversed. Foremost among the obstacles to democracy on the continent is the waning commitment to the democratic project on the part of political elites. **Moreover,** the supply of democratic goods—in particular, government responsiveness and accountability—has become increasingly scarce. Even in Ghana, a country held up as one of Africa's star democratizers, there has been a recent spate of corruption scandals and, despite strong whistleblower protections, subsequent government reprisals against those who expose wrongdoing. **While popular aspirations for democratic governance have gone largely unmet, citizens' desire for democracy is deepening. What is causing democratic progress to falter on the continent, and what are the prospects for democratic development in the future? Over the past several decades, most African countries have seen the development of four major democratic trends: the embrace of elections; the acceptance of constitutional norms; the emergence of free media and an active civil society; and the establishment of regional prodemocratic conventions and protocols. To begin with, the ballot box has replaced the military coup as the chief instrument for changing governments and electing political leaders. The holding of regularly scheduled and increasingly competitive elections has become the norm in most of Africa. [End Page 101] The number of multiparty elections for the executive has risen significantly over the past two decades, from an average of slightly less than one a year (1960–89) to around seven per year (1990–2012), and just over a fifth of these contests have led to a change in leadership.1 Indeed, the number of "electoral democracies" in sub-Saharan Africa has risen from just a handful in the early 1990s to 19 of the region's 49 countries, according to the Freedom House rankings for 2013.2 Most African countries are now governed by constitutions that are—at least on paper—more or less democratic. Many of these charters mandate some degree of separation of powers and include a bill of rights that anchors independent judiciaries, ombudsmen, human-rights and anticorruption commissions, and election-management bodies. The imposition of presidential term limits in a number of countries (ranging from two four-year terms, as in Ghana, to two seven-year terms, as in Senegal) may be the most important indicator of how entrenched constitutionalism has become in the new era on a continent notorious for its de jure and de facto "presidents-for-life." Moreover, parliaments have been flourishing, making at least some legislative oversight of the executive increasingly common in sub-Saharan Africa today (at least in the minimalist terms of approving the annual budget and public accounts, presidential nominations to ministerial positions, and legislation initiated by the executive). Since the mid-1990s, an ever-expanding network of private FM radio, free-to-air and cable television, newspapers, and magazines has reduced states' monopoly over print and electronic media. Most African governments have relaxed official censorship, making possible the practice of real investigative journalism and the occasional discovery and exposure of government malfeasance by local media. Associational freedoms have been expanding as well. As a result, civil society organizations have multiplied and are now undertaking (often with financial, technical, and moral support from the international community) a vast array of activities—including the promotion of social, economic, and political inclusion as well as human rights, equity, clean elections, and governmental transparency and accountability—to countervail state power. Yet another measure of the embrace of democratic norms in the region, even if largely symbolic, may be found in the raft of prodemocracy agreements adopted by the African Union (AU) and the various subregional organizations.3 In the early postindependence period, military despots were common figures at African summit meetings. The AU, by contrast, denies official recognition to governments and leaders who ascend to power through "unconstitutional" means.4 In accordance with prodemocracy conventions and protocols, both the AU and the Economic Community of West African States (ECOWAS) denied official recognition and suspended the memberships of Togo in 2005, Mauritania in 2005–2007 and 2008–2009, Guinea in 2008–2009, Niger [End Page 102] in 2009–2011, Côte d'Ivoire in 2010–2011, and Mali in 2012. Beyond these symbolic gestures, the AU now routinely deploys teams to monitor elections in member states and, through the African Peer Review Mechanism (APRM), assesses members' progress and performance on democratic governance. Shortcomings and Deficiencies The progress of democracy chronicled above describes the general trend during the first decade and a half of the democratization process in the region.5 Hardcore authoritarian rule gave way to electoral democracy in many countries, and African citizens began to enjoy much greater voice than at any time in the postindependence era. While there have been instances of democratic backsliding, there has not yet been a case of permanent reversal to the status quo ante of robust authoritarianism. With the benefit of hindsight, however, these achievements can be seen to represent the harvest of African democratization's "low-hanging fruit." The march of democratic progress in Africa that received such fanfare seems to have been succeeded by a long phase of stagnation.** Democracy has substantively improved in only a minority of sub-Saharan countries so that barely one in five qualified as Free in Freedom House's 2014 rankings.**6 The growing acceptance of the ballot box as the sole means by which political power can legitimately be acquired is undermined by the intensity of the conflict and violence that so often accompany the electoral process. Candidates, parties, and their supporters often treat elections as do-or-die affairs, and** election campaigns tend to be as acrimonious and violent as they are colorful. It is not uncommon for parties and candidates to resort to all manner of vote-rigging schemes in their quest to keep or take power. **Ruling presidents and parties flagrantly exploit the advantages of incumbency, abuse resources, and unleash physical intimidation on voters in the pursuit of victory (as did Zimbabwe's ruling ZANU-PF in 2008, for example), while defeated candidates and parties have been known to deny the legitimacy of the vote (as when Malawi's President Joyce Banda unsuccessfully attempted to annul the 2014 election, citing irregularities, after coming in a distant third). Conflict over Côte d'Ivoire's 2010 presidential election degenerated into a bitter civil war that lasted more than a year. Violence also plagued polls in the Democratic Republic of the Congo (DRC) in 2011, Gabon in 2009, Kenya in 2007, Nigeria in 2003, 2007, and 2011, and Togo in 2005, among others. Once elections have been held, the next task is to improve democratic quality—in particular, to render Africa's elected governments and officials rule-bound, accountable, and responsive to citizens. This has proven extremely challenging. Citizens regularly voice outrage over the [End Page 103] scandalous deeds of their elected and appointed officials, and bemoan government incompetence and underperformance. Allegations of gross official corruption and abuse of power feature constantly in African and international news.7 But significant sanctions rarely are imposed on officials implicated in these scandals, nor are the governments in which they serve often punished at the polls as a result of their misdeeds. For example, most of the African National Congress (ANC) officials allegedly involved in a massive arms-procurement scandal in 1999 have gone unpunished. Similarly, the top government officials behind the multimillion-dollar Anglo Leasing scam in Kenya, which was exposed in 2004 and continues to vex the country to this day, have yet to** be held accountable. In sum, African citizens are experiencing "voice without accountability." Nepotism has also been widespread and corrosive. It is not just old-school autocrats like former presidents Omar Bongo (d. 2009) of Gabon and Francisco Macías Nguema (d. 1979) of Equatorial Guinea or Angola's current president José Eduardo dos Santos (in power since 1979) who have favored close family members with state appointments and patronage. Extensive and poorly regulated

presidential powers in supposedly democratic states have enabled Liberian president Ellen Johnson-Sirleaf's three sons, Fomba, Charles, and Robert, to secure top state positions (head of the national-security agency, deputy-governor of the central bank, and chairman of the national oil company, respectively), and the 25-year-old daughter of South African president Jacob Zuma to be appointed chief of staff of that country's department of telecommunications and postal services. **Democratic constitutions have done little to restrain African presidents and political elites from wanton displays of impunity. Nigerian president Goodluck Jonathan was able unilaterally to sack Lamido Sanusi, governor of the central bank. Jacob Zuma has gotten away with spending an astonishing US$24 million in unauthorized public funds on his Nkandla homestead. And Ghana's government airlifted more than $4 million in cash to the World Cup games in Brazil in order to pay Ghana's soccer team and Ghana Football Association officials. In addition, in many places the media and civil society still operate under constant threat of closure or severe constriction. In the last few years, a number of countries, including Ethiopia, Sierra Leone, Sudan, Uganda, Zambia, and Zimbabwe, have considered or enacted legislation, adopted policies, or otherwise taken measures to limit the space for media and civil society. Recent efforts to constrain domestic civil society have included criminalizing unregistered associational activity (as in Uganda and Zambia), imposing burdensome registration requirements on civil society organizations (as in Sierra Leone and Mozambique), subjecting NGOs to political litmus tests (as in Nigeria), and severely restricting their access to foreign funding (as in Ethiopia). [End Page 104]** Other pernicious government regulations involve invasive government supervision and monitoring of civil society organizations' activities, including the requirement to secure government authorization for operations and programs. **Under Zambia's Non-Governmental Organisations' Act (2009), for instance, an operator of an unregistered NGO can be fined or imprisoned up to three years; and Zimbabwe's Interception of Communications Act (2007) authorizes the issuance of a warrant to intercept mail, phone calls, and emails "to prevent a serious offence by an organized criminal group" or that concern a "potential threat to public safety or national security."8>> Although legal restrictions on the media have been relaxed in many places and the number of media outlets has increased, reporters still face serious risks. Journalists continue to suffer intimidation, harassment, violence, and even assassination.9 Media operators must tread cautiously even in African countries that normally win plaudits for allowing a free press. In Ghana in recent years, reporters have been detained for refusing to disclose their sources; members of the press have been jailed for making critical comments about televised judicial proceedings; and reporters have been accused by the government of seeking "regime change" for having doggedly investigated and reported on government corruption. In South Africa in 2013, despite vehement opposition from media and civil society activists, the ANC-dominated parliament passed the Protection of State Information Bill (the "Secrecy Bill"), regulating the classification of state information and allowing prison terms of up to 25 years for those who disclose such material. The bill's opponents fear that it will empower the government to crackdown on whistleblowers and impede anticorruption investigations. President Zuma refused to sign the bill in 2013 and it remains in limbo.**

African democratic progress is stalling now

Schmitter 15 [Philippe, Emeritus Professor of the Department of Political and Social Sciences at the European University Institute; Crisis and Transition, But Not Decline; 01/15; Journal of Democracy Volume 26, Number 1, January 2015; Project Muse; 07/05/15; jac]

What's Stopping Democracy in Africa? The obstacles to Africa's democratic progress are legion. Their origins are both domestic and international. To begin with, despite the restoration of formal constitutional rule, many African countries remain bereft of the spirit of constitutionalism.**10 Even in the few decent constitutional democracies, such as Botswana, Ghana, and South Africa,** political, economic, and symbolic power continues to be concentrated in the executive and, arguably, the ruling party (which often is the president's party). The broad discretion in the exercise of authority enjoyed by presidents and their appointees effectively negates the voice of the people**, as expressed via elections, print and electronic media, and even lawsuits. More than anything,** the unwillingness of political elites—particularly presidents—to relinquish authoritarian control has stymied democratic **[End Page 105] progress on the continent.** Leaders tend to be either uninterested in or hostile toward reforms that might rein in their power, strengthen institutional checks and balances, or mandate compliance with transparency and accountability obligations **(such as freedom of information laws or the mandatory disclosure of public office-holders' assets). It is not only presidents who have discarded their military uniforms and donned civilian clothes (such as Ghana's Flight Lieutenant Jerry Rawlings) or who practically inherited the presidency from their military-ruler fathers (such as the DRC's Joseph Kabila and Togo's Faure Gnassingbé) who refuse to submit fully to democratic control. And** it is not only crusty autocrats like Zimbabwe's Robert Mugabe and the Republic of Congo's Denis Sassou-Nguesso who have cunningly managed to regain the autocratic controls that they had been forced to cede early in the era of democratization. **Even presidents such as Zambia's Frederick Chiluba (1991–2002) and Malawi's Joyce Banda (2012–14), who rode the wave of democratization to power, have proven equally resistant to implementing reforms that would have compelled them to be responsive and accountable to the public. Moreover, aging authoritarians such as Cameroon's Paul Biya and Uganda's Yoweri Museveni have not been the only ones to launch brazen campaigns seeking to end or weaken constitutional limits on presidential tenure. Even presidents who were touted in the late 1990s and early 2000s as committed democrats—for example, South Africa's Thabo Mbeki, Nigeria's Olusegun Obasanjo, and Senegal's Abdoulaye Wade—later embarked on escapades of their own to extend presidential term limits.** Another hurdle obstructing democratization in Africa is the domestic political economy. **African economies have posted high growth rates in recent years. The regional average for the last ten years was 5.08 percent; in 2013, Côte d'Ivoire's GDP grew by 8.9 percent, Angola's and the DRC's by 8.2 percent, and Ghana's by 8 percent;** only nine of the region's 49 economies grew less than 4 percent.**11 Yet that growth has not been matched by more jobs, and** its benefits have

not been shared evenly among citizens.12 The masses of poor people who have been left behind economically are susceptible to vote-buying and cooptation through political patronage, and this presents a mortal danger to democracy on the continent. State dominance over the formal economy has remained **largely** intact **[End Page 106]** despite the economic liberalization of the 1980s and 1990s and the sway of globalization. The domestic private sector typically is weak and small **(though much larger today than it was in the first two decades of independence).13** This leaves the state as the key source of formal-sector employment, the chief dispenser of coveted land, mineral, forestry, and other natural resources, and the source of lucrative construction and supply contracts. **The extremely limited opportunities available outside the state sector for accumulating personal wealth and influence make the capture of the state and the economic, political, and social resources that it controls the main object of electoral competition. This dynamic is a key driver of the clientelization of democratic politics in Africa.** Unchecked state power is also a source of the pervasive fear among Africans of government reprisal, which leads to a great deal of self-censorship. Democratization's progress in Africa is also hampered by a lingering authoritarian political culture rooted in the status quo ante of precolonial, colonial, and postcolonial Africa. **Even where the formal processes of democracy have been put in place,** the internalization of liberal values is lagging. **Africa's traditional communitarian values continue to clash with liberalism's emphasis on individual rights.** Consequently, citizens and the press cheer as governments in Uganda and Zambia pass legislation criminalizing homosexuality because they believe that such laws protect religious and community values. Furthermore, in countries that gained independence through armed struggle **(especially where the national-liberation party is still in power, as in Angola, South Africa, and Mozambique)** or that have recently emerged from civil war **(such as South Sudan)** or genocide **(such as Rwanda),** reverence for the liberation movement and its heroes, as well as vigilance against enemies—internal or external, real or imagined—are emphasized over "critical citizenship."**14 Although not all the news has been bad—in 2012, for example, 55 percent of Afrobarometer survey15 respondents reported joining others to raise an issue in the previous year—there clearly remains room for improvement with regard to the development of democratic citizenship in Africa. That same year (Round 5 of the survey), about 4 in 7 respondents (or 57 percent) said that they found politics and government too complicated to understand, and fewer than 1 in 4 believed that citizens are responsible for monitoring the performance of elected officials. Furthermore, Round 4 (2008) of the survey found that three-fifths of Africans saw the relationship between citizen and government as one not between boss and employee but instead between child and parent.16 Moreover,** the embrace of democratic ideals by African regional bodies and some members of the political elite in the early 2000s was short-lived. The APRM, **which had been lauded as an example of a new prodemocratic model of African leadership,** seems to have lost steam. The promise of peer appraisals of countries' achievements and short-comings **[End Page 107]** according to shared benchmarks has degenerated into what is increasingly a meaningless charade. APRM assessment standards and protocols have been progressively diluted in order to accommodate the continent's aging autocrats and reluctant democrats. **Worse still,** there is a growing list of incumbent presidents who are currently trying to extend constitutional term limits, **including Pierre Nkurunziza of Burundi, Joseph Kabila of the DRC, Denis Sassou-Nguesso of the Republic of Congo, Omar al-Bashir of Sudan. Previously, there was Blaise Compaoré of Burkina Faso, whose late-October 2014 attempt to change the country's constitution via referendum provoked huge popular protests and ultimately led to his ouster.** The lack of commitment to democratic principles also is reflected in the recent AU vote to amend the AU Protocol on the Statute of the African Court of Justice and Human Rights. The amendment gives "serving heads of state" and "senior government officials," while they are in office, blanket immunity from prosecution for crimes against humanity and genocide in the AU's own court and allows them to evade other international courts.

Democracy Key to Peace

Perception of democratic stability key to peace, perception of stasis in a regime is the controlling factor in use of force

Poznansky 15 [Michael, re-doctoral research fellow at the Belfer Center for Science and International Affairs at the John F. Kennedy School of Government; 03/17/15; "Stasis or Decay? Reconciling Covert War and the Democratic Peace"; Wiley Online Library; 07/05/15; jac]

The Case for a Dynamic Democratic Peace This section outlines the basic contours of the stasis-decay framework. After unpacking the causal logic of the theory, I demonstrate how incorporating expectations about regime trajectory, such as a state's future status as a democracy, helps existing theories of the democratic peace account for covert intervention. Aside from some important work on the unique conflict dynamics of transitioning democracies (Mansfield and Snyder 2005), the existing literature on democratic peace operates under an implicit assumption that once a state achieves the status of a democracy—that is, a regime that allows for regular, competitive elections and protects basic civil and political liberties (Lipson 2003:18)—it will remain as such into the future. This assumption is particularly pronounced for consolidated democratic regimes. The main explanatory variable examined here, an expectation of stasis or decay, forms any time one democratic regime assesses the viability of democracy in another state. By expectations of stasis, I mean the belief that democracy is likely to persist; expectations of decay refer to the belief that democracy is likely to erode. While expectations of stasis allow the usual restraint found between democracies to flourish, expectations of decay work insidiously to erase the constraints that would otherwise obtain were these institutions expected to persist. Existing arguments overlook this variation by invoking snapshots of regime type, assessing whether a state is presently democratic or nondemocratic. By introducing a dynamic element, we can more accurately model how democratic decision makers act on the basis of expected regime trajectory. As with most perceptual variables, it is necessary to ensure that the beliefs of decision makers are not simply endogenous to strategic interests. Providing an objective basis for expectations of stasis and decay—the perceptual variable under consideration—is thus a critically important undertaking. To the extent that expectations reflect observable political developments within the target state in question, our confidence in their validity increases. Barbara Farnham's work on democratic peace and threat perception is instructive in this regard. According to Farnham (2003:402), Roosevelt took Hitler's blatant disregard for norms of political accommodation during the Munich crisis "to be a sign of unlimited aims which could never be satisfied by normal diplomatic means." The coupling of threat perception to observable developments increases our confidence that Roosevelt's assessments of Hitler had a firm basis in objective, exogenous events. For our purposes, expectations of decay can form in response to a wide range of political developments, including the assumption of power by leaders espousing an anti-democratic ideology, alterations to democratic institutions that could be exploited to consolidate a leader's hold on power, the presence of weak leaders who risk losing power to more radical alternatives, and so forth. The causal logic of the stasis-decay framework is predicated on the assumption that democratic regimes treat fellow democracies differently depending on whether they are expected to remain in their current form or backslide into authoritarianism. When regimes are expected to remain democratic into the future, they enjoy the benefits of mutual restraint in their relations with other democracies; the normal constraints of democratic peace hold. When expectations of democratic decay set in, however, these constraints atrophy. Although the decaying democracy is perceived as democratic at time t, the anticipation of dealing with an autocratic regime at time t + 1 changes the prospective intervener's decision-making calculus. Democracies expected to backslide into authoritarianism are treated as though they were functionally nondemocracies in the present. In short, the separate peace forged between democratic regimes functions only when both states are expected to remain democratic into the foreseeable future (Doyle 1983:324–325). On their own, expectations of stasis and decay do not provide a self-sufficient explanation for forcible intervention between democracies. Instead, expectations about regime trajectory mediate how democratic states pursue their political, economic, and military interests with respect to other democracies in the present. When democratic regimes have a strong interest in the policies another democracy has adopted (e.g., geopolitical, economic, ideological) and view their regime as relatively stable, the restraints of democratic peace should operate normally, thereby lowering the probability of covert forcible regime change to zero; the need for covert democracy promotion is nil. The decision-making calculus changes, however, when we introduce a moderate threat of democratic decay in a state of some strategic importance: H1: As expectations of stasis move from high to moderate, democratic interveners are more likely to engage in covert activity intended to strengthen the regime and to weaken perceived opponents of democracy. It is only when leaders believe that there is a strong probability that a target state will abandon democracy that the possibility of lethal action comes to the fore: H2: When expectations of stasis are low—i.e. expectations of decay are high—prospective interveners are more likely to sponsor coups and otherwise engage in covert forcible regime change against democratic targets. By highlighting the importance of regime trajectory, the logic of stasis and decay refines our understanding of how extant arguments for the democratic peace might account for covert intervention between democracies. In terms of the rationalist accounts, perceptions of democratic decay mean that leaders will expect institutional and informational mechanisms to cease in the future, thus removing the benefits associated with dealing with another democracy. At the very least, the effectiveness of such mechanisms in restraining the use of force, either covertly or overtly, will atrophy as decision makers anticipate their impending disappearance. The stasis-decay framework also helps to refine the sociocultural mechanisms. When expectations of decay obtain, sociocultural factors will not only reduce in salience—insofar as leaders

anticipate that the target country will no longer belong to the "we-group" and will feel less normatively restrained—but also start to provide a rationale for intervention. In other words, the restraint embedded in sociocultural mechanisms flips from recommending "no intervention" to recommending "intervention"; what was previously a presumption of amity becomes a presumption of enmity. However, some combination of uncertainty about regime trajectory and concerns about the reputational effects of overt intervention in another democracy creates incentives for covert intervention, particularly when existing circumstances facilitate this option. Before proceeding, an important caveat is in order. The reasons why a democratic intervener might choose to forcibly target another democracy covertly are most likely many and varied. Concerns about the reputational effects of intervening overtly in another democracy and legitimation problems, both at home and at abroad, are each plausible candidates. Rather than taking sides, the logic of stasis and decay is ultimately neutral as to why interventions are undertaken in secret rather than in public. Instead, the most relevant consideration is that an expectation of decay precedes the decision to use force. Contrary to the way in which the debate about covert action is currently framed, then, it is not the publicity of an intervention that is most relevant for the democratic peace but rather the distinction between lethal and nonlethal intervention against another democracy (Barkawi 2001:113; Barkawi and Laffey 2001:107).7 Expectations of decay put the option of force on the table; the rationale for using force covertly comes later.

Democracy key to international peace-liberal cooperation through global spread of judicial independence key

Kersch 6 [Ken, founding director of the Clough Center for the Study of Constitutional Democracy and associate professor of political science, history, and law at Boston College; 06/22/06; "The Supreme Court and international relations theory."; The Free Library; 07/10/15; jac]

B. Liberalism Liberal theories of international relations hold that international peace and prosperity are advanced to the degree that the world's sovereign states converge on the model of government anchored in the twin commitment to democracy and the rule of law. (52) Liberal "democratic peace" theorists hold that liberal democratic states anchored in rule of law commitments are less aggressive and more transparent than other types of states. (53) When compared with nonliberal states, they are thus much better at cooperating with one another in the international arena. (54) Because they share a market-oriented economic model, moreover, international relations liberals believe that liberal states hewing to the rule of law will become increasingly interdependent economically. (55) As they do so, they will come to share a common set of interests and ideas, which also enhances the likelihood of cooperation. (56) Many foreign policy liberals--sometimes referred to as "liberal internationalists"--emphasize the role that effective multilateral institutions, designed by a club or community of liberal-democratic states, play in facilitating that cooperation and in anchoring a peaceful and prosperous liberal world order. (57) The liberal foreign policy outlook is moralized, evolutionary, and progressive. Unlike realists, who make no real distinctions between democratic and non-democratic states in their analysis of international affairs, liberals take a clear normative position in favor of democracy and the rule of law. (58) Liberals envisage the spread of liberal democracy around the world, and they seek to advance the world down that path. (59) Part of advancing the cause of liberal peace and prosperity involves encouraging the spread of liberal democratic institutions within nations where they are currently absent or weak. (60) Furthermore, although not all liberals are institutionalists, most liberals believe that effective multilateral institutions play an important role in encouraging those developments. (61) To be sure, problems of inequities in power between stronger and weaker states will exist, inevitably, within a liberal framework. (62) "But international institutions can nonetheless help coordinate outcomes that are in the long-term mutual interest of both the hegemon and the weaker states." (63) Many foreign policy liberals have emphasized the importance of the judiciary in helping to bring about an increasingly liberal world order. To be sure, **the importance of an independent judiciary to the establishment of the rule of law within sovereign states has long been at the core of liberal theory**. (64) Foreign policy liberalism, however, commonly emphasizes the role that judicial globalization can play in promoting democratic rule of law values throughout the world. (65) Post-communist and post-colonial developing states commonly have weak commitments to and little experience with liberal democracy, and with living according to the rule of law, as enforced by a (relatively) apolitical, independent judiciary. (66) In these emerging liberal democracies, judges are often subjected to intense political pressures. (67) International and transnational support can be a life-line for these judges. It can encourage their professionalization, enhance their prestige and reputations, and draw unfavorable attention to efforts to challenge their independence. (68) In some cases, support from foreign and international sources may represent the most important hope that these judges can maintain any sort of institutional power--a power essential to

the establishment within the developing sovereign state of a liberal democratic regime, the establishment of which liberal theorists assume to be in the best interests of both that state and the wider world community. (69) Looked at from this liberal international relations perspective, judicial globalization seems an unalloyed good. To many, it will appear to be an imperative. (70) When judges from well-established, advanced western democracies enter into conversations with their counterparts in emerging liberal democracies, they help enhance the status and prestige of judges from these countries. This is not, from the perspective of either side, an affront to the sovereignty of the developing nation, or to the independence of its judiciary. It is a win-win situation which actually strengthens the authority of the judiciary in the developing state. (71) In doing so, it works to strengthen the authority of the liberal constitutional state itself. Viewed in this way, judicial globalization is a way of strengthening national sovereignty, not limiting it: it is part of a state-building initiative in a broader, liberal international order. (72)

Democracy Reduces Terrorism

Democratic rule of law has a dampening effect on homegrown terrorism-judicial legitimacy key

Choi 10 [Seung-Whan, Department of Political Science University of Illinois; 11/25/10; Fighting Terrorism through the Rule of Law?; Sage Pub; 07/08/15; jac]

The Dampening Effect of the Democratic Rule of Law on Domestic and International Terrorist Incidents Before exploring the link between the rule of law and terrorism, these two concepts must be clarified, as their definitions remain controversial. Terrorism is a particularly difficult concept to define because of its value-laden nature: one country's terrorist may be another country's freedom fighter. For analytical clarity, I follow the definition of terrorism of LaFree and Ackerman (2009, 348) as ''the threatened or actual use of illegal force, directed against civilian targets, by non state actors, in order to attain a political goal, through fear, coercion or intimidation.''4 Domestic terrorism includes incidents such as the Oklahoma City bombing since they arise only against domestic targets of the terrorists' home country. International terrorism, then, is a situation in which a terrorist incident in country A involves perpetrators, victims, institutions, governments, or citizens of country B (Enders and Sandler 2006, 7; Dugan 2010). These subtle differences are important, as they provide clarity to a discussion of terrorism in general. Like the concept of terrorism, the rule of law is also ''subject to various definitional and normative disputes'' (O'Donnell 2004, 34). For analytical parsimony, I limit myself to two fundamental components that should be present in most democratic societies with a high-quality rule of law: (1) fair, impartial, and effective judicial systems and (2) a nonarbitrary basis according to which laws and the legal system as a whole can be viewed as legitimate.5 As legal scholar Joseph Raz (1977, 198-201) argues, fair and impartial judicial systems require at least an independent judiciary branch with fair-minded judges, prosecutors and lawyers, as well as strong and stable law enforcement or police (for a similar view, see Fuller 1969). Institutionalizing an independent judiciary system reflects a strong commitment by government to the basic principle that all people are equal before the law and those people deserve the opportunity to have their grievances and disputes heard and settled in court. **Only when fair and independent judicial bodies have been institutionalized are citizens able to have trust and confidence in legal norms, procedures, courts, and the police.** When this is the case, citizens are more likely to consult established laws and legal procedures to reconcile political and personal differences rather than turn to physical violence as a means of dispute resolution. Indeed, it is only when citizens believe in the likelihood of a fair and impartial legal ruling in court that citizens are willing to turn to domestic justice systems. Undoubtedly, such a high level of citizen trust in the legal institutions of the state brings a beneficial degree of order to the political and social relations of a society (Hardin 2001; O'Donnell 2004). The Linkage between the Rule of Law and Domestic Terrorism The above discussion leads to the inference that ordinary citizens have incentives to use political violence against other citizens, political figures, institutions, or the government under three conditions: (1) when they hold grievances, (2) when they find no peaceful means of resolving these grievances, exacerbating feelings of hopelessness, and desperation, and (3) when they view terrorist action as a legitimate and viable last resort to vent their anger and frustration. The lynchpin of this line of reasoning is that as long as ordinary citizens have access to a peaceful mechanism for conflict resolution, they are less likely to contemplate terrorist violence as a practical option to settle disputes. Along this line, I argue that **since liberal democracies promote a high-quality rule of law system, which serves as an effective conflict resolution mechanism, they are likely to experience fewer activities of domestic terrorism**. As a fundamental building block of democratic societies, a high-quality legal system ''serves to protect people against anarchy as well as from [the] arbitrary exercise of power by public officials and allows people to plan their daily affairs with confidence'' (Wilson 2006, 153). Since liberal democratic judicial systems ensure independent adjudication of legal rules, they create a fair chance for the interests at stake in each case to be properly heard in efficient but inexpensive legal outlets. Thus, in the presence of an effective, independent judicial system in liberal democratic societies, ordinary citizens do not need to resort to illegal terrorist measures to resolve their complaints

and grievances. Eyerman (1998, 154) makes a similar observation: since democracies ‘‘increase the expected return of legal activity and offer multiple channels of non-violent expression without the threat of government retaliation,’’ they assuage potentially growing bitterness and dissatisfaction that may turn ordinary people into terrorists (see also Frey and Luechinger 2003). In contrast, where sound judicial systems are lacking, dissatisfied people are likely to embrace the principle of retributive justice and become more likely to initiate terrorist attacks. Furthermore, since democratic citizens are socialized to trust in the fairness and impartiality of the legal system in times of disputes, they subscribe to established laws as a means to settle political grievances. From this perspective, engaging in violence would be self-defeating behavior ultimately undermining a legal institution seen as important and necessary. Furthermore, because democratic citizens see these institutions as both fair and legitimate, citizens will tend to subscribe to the established legal order, even if they disagree with individual legal statutes and rulings. Democratic citizens trust that legal adjudication produces a right and fair result, even if it is not the result they might have wanted.6 It is then not hard to imagine why ordinary people in democratic countries would be less likely to become perpetrators of domestic terrorism than those in nondemocratic countries, where the legal system is suited mainly for the rich and powerful: a nonarbitrary creation of law and a dispassionate legal system that metes out appropriate punishment make extralegal violence untenable and/or undesirable. Because citizens who live in countries without the rule of law view their own governments as illegitimate, public policy decisions as arbitrary, and peaceful participation futile, they are more likely to resort to attacks against domestic targets (or to support terrorist groups that do so). It is important to note that, in fighting domestic terrorism, law-abiding citizens in democratic societies are no less important than the actual presence of an independent judiciary with fair-minded judges and law enforcement officials. As we have seen, judicial institutions alone cannot produce a high-quality rule of law. Other factors within a society, especially the citizenry, must be actively involved. Exclusive reliance on legal authority is less likely to create and maintain safe and healthy communities if democratic citizens do not willingly cooperate with judicial institutions to resolve grievances and if democratic citizens do not serve as watchful eyes and ears against illegal activities of domestic terrorism (Hogg and Brown 1998; Hardin 2001). Alex P. Schmid (2005, 28), Senior Crime Prevention Officer of the United Nations, presents a compelling argument relating to this point: ‘‘where the rule of law is firmly in place, it ensures the responsiveness of government to the people as it enables enhanced critical civil participation. The more citizens are stakeholders in the political process, the less likely it is that some of them form a terrorist organization. In this sense, it can be argued that the rule of law has a preventive effect on the rise of terrorism’’ (emphasis added). In sum, ordinary people within democracies can resolve grievances through rule of law systems, which they have trust in, thereby mitigating the likelihood that they will commit terrorist acts, and resulting in less politically motivated violence.

Strong democracies check international terrorism

Choi 10 [Seung-Whan, Department of Political Science University of Illinois; 11/25/10; Fighting Terrorism through the Rule of Law?; Sage Pub; 07/08/15; jac]

The Linkage between the Rule of Law and International Terrorism It appears that existing studies of international terrorism suffer from two common misperceptions. First, many studies put forward religious and ideological motives as the main causes of international terrorism (e.g., Reich 1990).7 Typically, the terrorist activities of Al-Qaeda and the Taliban are seen as examples of organizations that advance their religious and ideological agenda. However, these studies overlook the fundamental question of what causes ordinary people to become terrorists in the first place. Religion and ideology, by themselves, do not necessarily drive ordinary citizens to resort to terrorist violence. **When ordinary citizens with grievances lack peaceful outlets of conflict resolution, they tend to join radicalized terrorist groups** that justify their violent actions through the selective use of religion and ideology. Second, some students of terrorism tend to misperceive the nature of international terrorist incidents. The international aspect of terrorism does not necessarily require the involvement of notorious international terrorist organizations such as Al-Qaeda. As noted earlier, as long as the origin of victims, targets, or perpetrators in political violence can be traced back to at least two different countries, this violence is regarded as international terrorism. I argue that ordinary people have incentives to terrorize foreigners and foreign facilities when two conditions are met: (1) when they hold grievances against foreigners who violate political and legal rights of local citizens and (2) when these local people, due to poor-quality rule of law in the home country, do not believe in the effectiveness of pursuing justice peacefully. Students of terrorism often fail to observe the fact that when local people have grievances against Western foreigners, they have little chance of resolving them through the legal authority due to an omnipotent presence of foreign power or an unequal

international treaty in which foreigners' crimes are immune from the domestic jurisdiction. This impotence of domestic justice systems makes local people feel helpless and desperate. Consequently, disgruntled local people turn to terrorist violence as a last resort. There are several examples that illustrate how disgruntlement among locals later transforms into violence at the hands of terrorists. In May 2006, several Iraqis abducted two U.S. soldiers at a checkpoint and they were subsequently murdered. The Iraqis learned that the two soldiers raped and killed fourteen-year-old Abeer al-Janabi and committed the murder of her mother, father, and six-year-old sister in their home south of Baghdad (Robertson and Kakan 2009, May 8). On January 12, 2009, several Pakistanis, who were displeased with America's political support for Israel, terrorized the U.S. consulate in Karachi rather than seek peaceful channels of conflict resolution (see http://chinaconfidential.blogspot.com/2009/01/pakistanistudents-storm-us-consulate.html). These two examples show how distressed local people are inclined to make use of terrorist violence against foreigners when they do not have an adequate rule of law system to hear their grievances. There are four main archetypal narratives that can better illustrate and explain the causal mechanisms underlying the relationship between the rule of law and international terrorism. The first causal mechanism involves situations where ordinary citizens within their own country feel hopeless and desperate against foreigners who abuse fellow citizens' legal rights at home or abroad and who exploit the home country's political and economic interests. When foreigners are not subject to domestic legal jurisdiction, or when they are unfairly protected by the home country's justice systems, residents of the home country are likely to take justice into their own hands through locally coordinated terrorist attacks against foreigners and foreign facilities. An example is the insurgency of Iraqi civilians against armed privately contracted soldiers who operate not only with virtual immunity from Iraqi law but also from the laws of their own countries (see Broder and Risen 2007, September 20). The second causal mechanism is an extension of the first, where **hopeless citizens become international terrorists** as a strategy to advance their domestic agendas. In this instance, discontented citizens who are frustrated with a low-quality rule of law at home, **go abroad to carry out their attacks against foreign targets of the host country**. These attacks represent an attempt to rectify foreign exploitation of their home country or to undermine Western support for brutal regimes (e.g., in the Middle East). This is done either because foreign targets are more vulnerable to attack or because there is some strategic advantage in putting the attack on an international stage rather than on a domestic one. In the former case, foreign targets may be more subject to attack due to easy access (Enders and Sandler 2006). In the latter case, the purpose of international terrorist attacks is to evoke domestic opposition in the host country, demanding the end of the foreign presence (Pape 2005; Wade and Reiter 2007). The suicide car bombing of the UN headquarters in Baghdad on August 19, 2003, is an illustrative example. The followers of the late Abu Musab alZarqawi, a Jordanian militant Islamist, intentionally targeted the United Nations and killed at least eight Iraqis and fourteen foreigners including Se´rgio Vieira de Mello, a Brazilian UN diplomat (Enders and Sandler 2006). The third causal mechanism of international terrorism is one in which discontented people are angry at politically influential foreign targets operating within their own country. However, in these situations, citizens possess no readily available means to retaliate against those foreigners or their well-guarded foreign facilities. In such cases, feelings of powerlessness among disgruntled citizens may lead them to elicit the support of international terrorists because they see it as the best strategy to redress their frustrations and grudges (Tessler and Robbins 2007). These circumstances provide ideal opportunities for international terrorist groups to build inroads with the disaffected locals, giving these groups easy access to material resources, safe havens, and better channels through which to execute militant operations against foreign targets in the host country (i.e., foreign terrorist attacks on some other foreign target). For example, many Iraqis welcome and support Al Qaeda operatives from other countries, like Pakistan, to fight against U.S. forces. The fourth causal mechanism involves situations where citizens have grievances against their own government but have no avenue for redress because corrupt domestic justice systems take the government's side. This breakdown of the basic perceptions necessary for the rule of law to materialize allows for the possibility of ''mob rule'' and lawlessness. However, the citizens themselves are often too weak to revolt, which makes them likely to turn to outside sources such as international terrorist groups to take action on their behalf (i.e., foreign terrorist attacks on a domestic target). Possessing global financial resources and disciplined members operating in autonomous terrorist cells, international terrorists are capable of luring local people who feel alienated and disadvantaged, using them to help push forward and carry out their own terrorist plots. For example, disgruntled Pakistani tribesmen joined together with foreign Al Qaeda members, Uzbek militants, and Taliban fighters to initiate terrorist attacks against the people and places attached to the Musharraf government (Masood 2008, January 18). To recap, the rule of law reinforces a political system's legitimacy by protecting the rights of citizens and foreigners and by providing the means for them to settle grievances in nonviolent ways. It thus acts as a cornerstone of liberal democracies, making it unnecessary for ordinary people to rely on terrorist violence as a last resort to resolve disputes. **An independent judiciary with fair-minded judges and police officers, who enforce the letter of the law, creates a nonviolent environment in which the public recognizes established laws as a legitimate channel to settle disputes peacefully.** Thus, the combined impact of impartial judicial systems and ordinary citizens' recognition of the law as legitimate is likely to **reduce all types of terrorism in democratic countries**.8 This leads to the following hypothesis: Hypothesis 1: The democratic rule of law has a dampening effect on domestic and international terrorism: fair and impartial judicial systems along with the public's recognition of the law as legitimate will discourage any type of terrorist acts.

Non-democracies are more likely targets for terrorists

Abrahms [Max, doctoral candidate in political science at the University of California, Los Angeles; 06/06/07; "Why Democracies Make Superior Counterterrorists"; Taylor and Francis Online; 07/08/15; jac]

WITS= Workshop on Issues in the Theory of Security

WITS, a newly released U.S. government dataset, is not limited to international or suicide terrorist attacks and is thus an unprecedented and superior resource for analyzing terrorist target selections. WITS contains events data of domestic and international terrorist incidents from 1 January 2004 to 1 June 2005. Terrorism scholars have appealed for the creation of such a dataset not only to expand the sample of terrorist events data, but also to blunt the distinction between domestic and international terrorist attacks, which has increasingly become regarded as a contrivance. Nearly all domestic terrorist campaigns have an international dimension, with terrorist leaders devoting significant effort to securing external sources of money, weapons, fighters, safe haven, and political support.37 According to Bruce Hoffman, the distinction between domestic and international terrorism has been "evaporating" since the late 1990s. The majority of Aum Shinrikio's members hailed from Russia, not Japan; the Oklahoma City bombers were allegedly linked with neo-Nazis in Britain and Europe; networks of Algerian Islamic extremists have operated in France, Great Britain, Sweden, and Belgium; and alQaeda-affiliated movements have joined forces with nationalist insurgencies in countries such as Iraq.38 Furthermore, according to a 2005 report by the State Department, twenty-seven of the fifty most active terrorist organizations are comprised of or are supported by segments of ethnonationalist diasporas, which highlights the increasing difficulty, even obsolescence of separating domestic and international terrorist attacks.39 Like other studies testing the relationship between democracy and terrorism, this study uses Freedom House's "Freedom in the World" rankings to determine the regime types of the target countries.40 Freedom House annually classifies countries as Not Free, Partially Free, or Free based on their commitment to political rights and civil liberties. I used Freedom House's 2004 rankings, rather than the 2005 rankings, to minimize the problem of endogeneity; the earlier rankings reduce any potential for the dependent variable (terrorism) to influence the independent variable (regime type). The KruskalWallis test was used to compare the distribution of the average number of incidents and fatalities among the three regime types. If the conventional wisdom is supported, we would expect to see a significantly greater number of terrorist incidents and fatalities directed against Free countries. The results did not, however, indicate a significant difference in the average number of terrorist incidents among the three regime types.41 The average (SD) number of incidents was 55.7 (254.8), 30.8 (105.8), and 26.6 (116.8) for the Not Free, Partially Free, and Free countries, respectively (P = 0.11). There was also no significant difference in the average number of fatalities among the three regime types. The average (SD) number of fatalities was 161 (822), 53 (149), and 26 (134) for the Not Free, Partially Free, and Free countries, respectively (P = 0.068). According to Cohen, small, medium, and large effect sizes for a one-way ANOVA are f = 0.1; f = 0.25; f = 0.4, respectively.42 The effect sizes for the average number of incidents (f = 0.08) and fatalities (0.13) were thus small. Therefore, contrary to prevailing popular and scholarly opinion, when the universe of terrorist attacks was included in the analysis, I did not find sufficient evidence that Free countries were targeted more or suffered a greater number of fatalities than either Not Free or Partially Free countries. In fact, the data suggest the exact opposite trend: Not Free countries had on average more than twice as many incidents and six times as many fatalities as Free countries. The relative absence of fatalities in Free countries was most evident among the most fatality-ridden countries, as only two of the ten most dangerous countries were Free. TABLE 1 Top Ten Target Countries by Fatalities Rank Country Regime type 1 Iraq Not Free 2 India Free 3 Nigeria Partially Free 4 Nepal Partially Free 5 Afghanistan Not Free 6 Russia Not Free 7 Pakistan Not Free 8 Colombia Partially Free 9 Uganda Partially Free 10 Philippines Free ∗NCTC, WITS dataset, 1 January 2004 to1 June 2005. As we have seen, democracies supposedly attract terrorism because of their liberal constraints. Spearman's rho correlation coefficient is used to test the association between the civil liberty scores of the target countries and both the number of terrorist incidents and fatalities. Freedom House's civil liberty index operates on a seven point scale: countries with a score of one come closest to the ideal of permitting freedom of expression, assembly, association, education, and religion, while countries with a score of seven permit "virtually no freedom."43 If the conventional wisdom is supported, we would expect to see a negative association between terrorist activity and the target countries' civil liberty scores. The results, however, indicate a statistically significant, positive association between the number of terrorist attacks and the civil liberty scores of the target countries rho = 0.18 (P = 0.015). There was also a statistically significant, positive association between the number of fatalities and the civil liberty scores of the target countries rho = 0.22 (P = 0.002). There was thus statistically significant evidence of greater terrorist activity in countries with poorer civil liberties— even when Iraq was treated as an outlier and excluded from the analysis. The moderate positive association between terrorist activity and illiberal countries found in this analysis understates the extent to which terrorism is aimed at illiberal countries. The NCTC warns of "difficulty in gathering data on Iraq and Afghanistan" because of high levels of crime and sectarian violence. Consequently, "the dataset does not provide a comprehensive account of all incidents in these two countries."44 Undercounting terrorist activity in illiberal countries is hardly restricted to these two illiberal countries. Political scientists have long noted that the events data in illiberal countries are undercounted for five main reasons. First, collectors of events data depend on open, publicly available sources. In practice, this means news sources, which are by definition less robust in illiberal countries. Second, the media in illiberal countries are often owned or controlled by the state, and authoritarian regimes tend to conceal challenges to their rule, including terrorist attacks. Third, the international media do not devote equal coverage to all geographical regions. Laqueur found that "while in Western societies even the smallest incidents are recorded, this is not so in other parts of the world ..."45 Fourth, the international media tend to report only spectacular events. This poses a problem for data collectors where political violence has become the norm. Because political unrest is symptomatic of illiberal

countries, attacks on civilians by substate actors often go unreported. Fifth, and perhaps most important, terrorist incidents in illiberal countries are undercounted for reasons of semantics. Terrorism typically refers to select incidences of violence. When the level of violence rises to a certain level, the campaign is generally reclassified as a civil war or genocide. In the course of these intense and sustained campaigns, politically motivated attacks by substate actors against civilians are generally excluded from the terrorism events data. Terrorist incidents in these countries are systematically undercounted because mass-based insurgencies are characteristic of illiberal countries. For all of these reasons, it is reasonable to assume that the positive association between terrorist attacks and illiberal countries is significantly stronger than even the WITS data indicate.46 Indeed, in the only study to quantifiably assess the presumed underreporting bias of terrorism events data in illiberal countries, the authors conclude: "Underreporting is indeed present . . . the databases used by applied researchers represent an understatement of true terrorist activity worldwide ... this understatement is not simply an overall scaling-down effect randomly distributed across countries . . . it is highly concentrated in countries whose press is not free, which typically correspond to countries that lie on low levels of the polity scale (nondemocracies) ... this has significant implications for issues such as constructing indices of terrorism risk on a country level ..."47

Democracy spread stops violent extremism from wrecking the world

Lagon '11 --- adjunct senior fellow for Human Rights (Mark P, "Promoting Democracy: The Whys and Hows for the United States and the International Community," Council on Foreign Relations, February 2011, http://www.cfr.org/democratization/promoting-democracy-whys-hows-united-states-international-community/p24090)//Mnush

Markets and Democracy Briefs are published by CFR's Civil Society, Markets, and Democracy initiative. They are designed to offer readers a concise snapshot of current thinking on critical issues surrounding democracy and economic development in the world today. Stakes in Democracy Furthering democracy is often dismissed as moralism distinct from U.S. interests or mere lip service to build support for strategic policies. Yet **there are tangible stakes for the United States and indeed the world in the spread of democracy—namely, greater peace, prosperity, and pluralism.** Controversial means for promoting democracy and frequent mismatches between deeds and words have clouded appreciation of this truth. Democracies often have conflicting priorities, and democracy promotion is not a panacea. Yet one of the few truly robust findings in international relations is that established democracies never go to war with one another. Foreign policy "realists" advocate working with other governments on the basis of interests, irrespective of character, and suggest that this approach best preserves stability in the world. However, durable stability flows from a domestic politics built on consensus and peaceful competition, which more often than not promotes similar international conduct for governments. There has long been controversy about whether democracy enhances economic development. The dramatic growth of China certainly challenges this notion. Still, history will likely show that democracy yields the most prosperity. Notwithstanding the global financial turbulence of the past three years, democracy's elements facilitate long-term economic growth. These elements include above all freedom of expression and learning to promote innovation, and rule of law to foster predictability for investors and stop corruption from stunting growth. It is for that reason that the UN Development Programme (UNDP) and the 2002 UN Financing for Development Conference in Monterey, Mexico, embraced good governance as the enabler of development. These elements have unleashed new emerging powers such as India and Brazil and raised the quality of life for impoverished peoples. Those who argue that economic development will eventually yield political freedoms may be reversing the order of influences—or at least discounting the reciprocal relationship between political and economic liberalization. Finally, democracy affords all groups equal access to justice—and equal opportunity to shine as assets in a country's economy. Democracy's support for pluralism prevents human assets—including religious and ethnic minorities, women, and migrants—from being squandered. Indeed, a shortage of economic opportunities and outlets for grievances has contributed significantly to the ongoing upheaval in the Middle East. Pluralism is also precisely what is needed to stop violent extremism from wreaking havoc on the world

Judicial Independence Key to Economic Growth

Judicial independence solves economic growth in developing countries

Wright et al 15 [Joseph, Associate Professor, Pennsylvania State University; Simone Dietrich, Assistant Professor, University of Missouri; Molly Ariotti, Ph.D. Student, Pennsylvania State University; 04/06/15; "Foreign Aid and Judicial Independence"; http://aiddata.org/sites/default/files/wright_et_al_2015_aid_judicial_independence.pdf; 07/07/15; jac]

this card has a lot of typos

Many democracy scholars acknowledge the importance of the rule of law for democratic stability and consolidation (Elster and Slagstad, 1993; Linz and Stepan, 1996; Maravall and Przeworski, 2003; Baylies and Szeftel, 1997; O'Donnell, 1998). Some have explored the extent to which independent and impartial judiciaries influence the balance of power within governments,

finding, for example, that independent courts decrease the chances of democratic backsliding (Gibler and Randazzo, 2011) and reduce instability (Esarey and Sarkari, 2010).9 Judicial independence entails both autonomy from other political actors, particularly the executive, as well as the expectation that court ruling are enforced by other actors in the state. It can arise from the duration of the judicial appointment or executive control over judicial administration (Russell, 2001). The degree of independence may be associated with the size of the budget (Domingo, 2000), judges' discipline (Hanssen, 1999), and the power of judicial review (Ginsburg, 2003; Hammergreen, 2007).10 Beyond its influence on democratic consolidation, judicial independence shapes the prospects for economic growth.11 Many scholars in the institutionalist tradition concur that courts help secure property and contract enforcement. By increasing judicial independence, governments reduce the risk that governments expropriate private property, which in turn enhances the government's credibility vis-a-vis investors. This increase in credibility leads to greater investment and economic development (Williamson, 1985; North, 1990; Acemoglu, Johnson and James, 2001; La Porta, Lopez-de Silanes and Pop-Eleches, 2004). Alternatively, judicial independence influences economic growth through the mechanism of institutional checks. Henisz (2000) argues that independent courts serve as a veto player in the policy-making process, and finds that a higher number of veto players leads to higher levels of economic growth. Finally, judicial independence imposes checks on corruption insofar as it secures equal treatment and procedural fairness in interactions betweeen public and private actors (Haber et al. 2003). Checks on corruption also directly increase the capacity of state institutions to to ensure long-time economic growth (Haggard and Tiede, 2011). A growing number of scholars have found evidence that governments across different regime types, including democracies and autocracies have incentives to establish independent judiciaries (Tate, 1993; Whittington, 2003; Ginsburg, 2003; Hirschl, 2004; Wright, 2009; VonDoepp, 2009; Yadav and Mukherjee, 2014). These incentives are derived largely from **the economic prospects associated with judicial independence**. The literatures on judicial independence, democracy, and economic growth provide policymakers in both donor and recipient governments with an incentive to promote judicial reform. In the donor community, representatives recognize the importance of judicial independence, or the rule of law, more generally. As Lord Paddy Ashdown claimed in October of 2002 shortly after taking up the post of UN High Representative for Bosnia and Hercegovina: "In Bosnia, we thought that democracy was the highest priority and we measured it by the number of elections we could organize. In hindsight, we should have put the establishment of rule of law first, for everything else depends on it: a functioning economy, a free and fair political system, the development of civil society, and public confidence in police and courts. We should do well to reflect on this as we formulate our plans for Afghanistan, and, perhaps, Iraq."12 Inspite of this awareness, little systematic evidence exists about the conditions under which donor efforts are successful in promoting judicial independence. Drawing on case studies, some speculate that a need to satisfy external observers may influence the relationship between the judiciary and other branches towards greater levels of independence (Tate, 1993; VonDoepp, 2009), while others claim more explicitly that states receiving foreign aid are more likely to be responsive to external pressure to promote judicial independence (Hirschl, 2004; Bill Chavez, 2008). Skeptics, on the other hand, argue more generally that external democracy-promotion may only play a supporting role in the instances where domestic actors are already acquiescent (Bratton and van de Walle, 1997; Carothers, 2007), which is an argument that could apply to judicial reform. We contribute to this debate by presenting an argument that differentiates between the mechanisms of democracy promotion (conditionality via economic aid and direct investment via democracy and governance aid) and political institutions in the aid-receiving country, with a particular focus on the election cycle in aid-receiving countries. We specify when aid contributes to judicial independence and in doing so explain why donor efforts have fallen short of strengthening the judiciary abroad during election times. Donor tactics, recipient politics, and the promotion of judicial independence

Judicial independence is important for both democratic stability and improvement of the investment climate or corruption control – both necessary to strengthen and sustain economic growth. The respective literatures provide systematic evidence thereof, which serves as a basis for donor and recipient government policy preferences. We posit that both donor and recipient governments recognize the benefits of judicial independence and seek its promotion. Indeed, since the mid-1990s, the donor community has moved beyond its narrow focus on election day to champion the promotion of good goverance, which includes judicial reform. It has done so in two ways: First, donor governments have expanded their use of governance-related conditionalities attached to economic aid in scope and depth. In 2000, Kapur and Webb (2000, 4) present initial analyses on new trends in IMF conditionality, noting that the burden of governancerelated conditionality on borrowers, including judicial reform, "has grown significantly. The average number of criteria for a sample of 25 countries having a program with the IMF in 1999, with programs initiated between 1997 and 1999, is 26. This compares to about six in the 1970s and ten in the 1980s." Today IMF lending is infused with governance-related conditions, as are economic aid packages of other multilateral and bilateral donors. Through conditionality, donor governments aim to extract reform concession from incumbents. Of these conditions, many prescribe specific reforms in the rule of law sector but they do not spell out details as to how governments should go about pursuing these reforms. The conditionality mechanism is therefore diffuse as recipient governments can choose among various policy strategies that entail political reform.13 Even within the area of judicial reform, as Dallara (2014) notes, international donors do not necessarily share the same priorities. In her research on judicial reform in South-Eastern Europe, she shows that the United States has tended to push for judicial independence across time while the European Union focused on strengthening judicial capacity. At the same time, donor governments have increased their budgets for specific governance activities, in general, as captured through "democracy and governance aid," and for judicial reform activities, specifically. We claim that specific investment in governance represents a different strategy of democracy promotion, which differs from the conditionality-strategy in two ways: first democracy and governance aid represents only a fraction of the total aid budget, while conditionality is associated with economic assistance in general. Second, democracy and governance is earmarked for the promotion of specific judicial reform activities, while conditionality prescribes reforms but does not specify the implementation of the reforms. Across the

world international donors have spent hundreds of millions of dollars on direct investment in democracy and governance activities. Over time an increasing proportion of foreign aid has been directed at judicial reform. Donor governments' judicial reform activities in Jordan serve as a case in point: like in many other countries, Jordan's judiciary was not guaranteed independence through the Constitution. In 2001, the adoption of legislation referred to as the "Law on the Independence of the Judiciary" or "Indepdence Law" suggested some progress by declaring that judges were independent "except as specified by this law." However, the law was limiting insofar as it established a Judicial Council that had the power to appoint and dismiss judges, thus restricting the judiciary's independence (Burgis, 2007). Over the course of the next ten years, national efforts such as the "Royal Committee for Judicial Upgrade"14 aimed to further improve the judiciary branch by institutionalizing "independence of the legal system" and by enhancing "the efficiency of the judicial inspection methodology as well as develop the institutional capacity of the Judicdial Council."15 In 2013, this effort resulted in an amendment to the judicial independence law that now allows the judiciary to operate without political interference. Examples of donor investment in Jordan's judicial reforms include the European Union's 1.1 million Euro initiative, entitled "Technical Assistance for Institutional Strengthening of the Ministry of Justice," which trained judges, clerks and legal professionals, alongside efforts to build modern legal case management systems.16 USAID's "Rule of Law Programme (MASAQ)" in Jordan supports judicial indepdence through similar activities. The World Bank also contributed to donor efforts to foster judicial independence by conducting training programs to upgrade Jordanian judges' capabilites as well as the skills of prosecutors in Amman. The "Jordan Legal and Judicial Reform Learning Program" focused on analyzing and discussing strategies to secure private property and oversee administrative agencies.17 All three projects are examples of targeted investments in the strengthening of judicial independence. They are part of democracy and governance assistance. In addition, they were were supported by and conducted in collaboration with the Jordanian Ministry of Justice and the Ministry of Planning and International Cooperation. As such, these programs were incorporated into a multi-year government-led judical reform strategy. According to Burgis (2007) and independent news sources, the Jordanian government's motive for promoting an indepdent judiciary was economic. Indeed, King Hussein made this rationale explicit when he suggested that judical independence would "help translate the countrys reform plans into facts on the ground, including economic reform and efforts to increase the countrys economic competitiveness."18 When the 2013 amendment to the constitutional laws was passed, the King praised it, suggesting that the amendment would further "reduce investors' fears regarding the judiciary's independence." These anecdotes of donor involvement in Jordan indicate that recipient governments recognize the economic benefits of judicial reform. While anecdotal, the Jordanian case suggests that the recipient government recognizes the economic benefit of judicial independence, resulting in alignment of donor and government preferences in favor of implementing judicial reform projects. This discusion generates two related hypotheses. • Hypothesis 1: Economic economic aid and democracy and governance aid increases judicial independence. • Hypothesis 2: The positive effects should be stronger for targeted democracy and governance aid than for diffuse economic aid. We extend our argument by introducing an important contextual factor, elections, that we argue conditions the relationship between foreign aid and judicial independence. So far, our discussion has focused on the economic gains associated with judicial independence, which we expect the recipient government to recognize and pursue. Yet, this discussion masks concerns of recipient governments have about the potential political costs of judicial reform. Importantly, judicial indepdence not only promotes economic growth, but also helps secure freedom of expression for political opponents and strengthens checks on the abuse of power by incumbents. Progress in strengthening judicial independence may therefore be particularly threatening during times when an incumbent government's position of power is more uncertain, as it would be during times of election. Before and around election day, the judiciary can influence election outcomes in multiple ways. During election campaigns, pro-incumbent courts can punish opposition and political mobilization by, for example, subduing the press, upholding jail sentences for opposition leaders, or condoning unfair electoral rules. After election day, the judiciary can turn a blind-eye to election fraud or allegations of election-related political violence. In contrast, an independent judiciary can prevent incumbents from punishing electoral opponents during campaigns and promote democratic accountability after an election by settling vote-counting disputes or fraud allegations fairly. Courts can therefore directly influence the balance of political power in the aid-receiving country. While political economists have long recognized governments' motivations regarding the timing of economic-policy activity (e.g. Golden and Poterba 1980, Price 1998) we argue that electoral motivations influence the incumbents timing for promoting judicial reform, in general, but also for implementing externally funded governance projects, specifically. Because the lionshare of externally-funded governance projects are implemented in cooperation with the relevant Ministries in the recipient country, the incumbent government has direct influence in the implementation process and can exert control.

Democracy Key to Asian Stability

Democracy promotion is key in Asia

VOA 15 ("Promoting Democracy in Asia," Editorials – Asia, 6/30/15, http://editorials.voa.gov/content/promoting-democracy-asia/2842754.html)//Mnush

Promoting democracy and human rights in Asia is of crucial importance to the United States. In testimony before Congress regarding the state of democracy in Asia, U.S. Assistant Secretary of State Tom Malinowski and Principal Deputy Assistant Secretary of State Scot Marciel spoke of the crucial importance of promoting democracy and human rights. Promoting Democracy in Asia Helping to further democratic governance is not only the right thing to do, said Assistant Secretary of State Malinowski, it also advances our strategic interest by building more stable societies; and, most importantly, "it aligns the United States with the aspirations of everyday people across this region." Principal Deputy Assistant Secretary of State Marciel highlighted U.S. efforts to promote democracy in three very different places: Cambodia, Thailand and Hong Kong. After the 2013 parliamentary election in Cambodia, the United States –- particularly through its embassy in Phnom Penh -- worked to help bring the government and opposition together in direct dialogue to resolve a year-long standoff. Much work still remains, but now the two sides sit in parliament together, said Mr. Marciel. Regarding Cambodia's civil society, the United States is connecting directly with a new generation of leaders, and standing with Cambodians who are pushing for a voice as new

laws are drafted. "This," he said, "sends a reminder that democracy isn't only about free elections, it's also about citizens' ability to hold their governments accountable." Thailand has long been a friend and ally, and the United States has stood for democracy there through a decade of political turmoil. Our message to the government since the 2014 coup, said Mr. Marciel, is that our bilateral relationship can be restored to its fullest only when democracy is reestablished. It is critical for Thailand to have an inclusive political process and to fully restore civil liberties. Regarding Hong Kong, the United States has consistently voiced its core belief that an open society respecting the rights of its citizens is essential to Hong Kong's continued stability and prosperity. With respect to electoral reform, Mr. Marciel noted the United States continues to affirm its long-standing position that the legitimacy of the chief executive and of Hong Kong's overall governance can be enhanced through a competitive election that features a meaningful choice of candidates who represent the will of the voters. The work to promote good governance is never complete, but the United States will continue to support efforts to build and strengthen democracy in Asia.

Interdependence and historical trends indicate that future democratic transitions in Asia will remain stable

Lind 11 [Jennifer, Associate Professor of Government at Dartmouth College; 05/09/11; "Democratization and Stability in East Asia"; Wiley Online Library; 07/08/15; jac]

The Economist has wondered whether in Asia, "economic integration will in the end restrain political hot heads?"43 Based on IR theory and evidence from past democratization in the region, this article says yes: that China and Korea are unlikely to pursue nationalistic, belligerent foreign policies during their future political transitions. This article examined theories making competing claims about the stability of these upcoming transitions (theories within the "democratization and war" school and economic interdependence theory). In the cases of previous East Asian transitions, process-tracing evidence shows that the destabilizing processes expected by the broad version of democratization and war theory were not present. Politicians did not pursue prestige strategies overseas in order to curry favor with a jingoistic public, and logrolls for hawkish policies did not form. Rather, consistent with the more recent and narrower version of this theory within this school, domestic institutions were robust enough to manage the demands of transition without unleashing nationalistic, belligerent foreign policies. Furthermore, each case exhibits the pacifying role of economic interdependence. Economic actors served as restraining, moderating forces, and democratization only increased their influence in the policy-making process. Because of the disruption costs associated with international strife, foreign expansionism was not the preferred goal for which business leaders would be willing to trade favors with coalition partners; quite the contrary, they viewed international instability as a scenario to be avoided at all costs. As Solingen (1998:12) argues, the time at which these transitions took place, which allowed the option of a trading state strategy, "produces a different set of actors and different proclivities among them than might have been expected from existing coalitional frameworks, prominently that of Snyder." In other words, given the internationalist strategies pursued by these states, the business community sought to avoid war and instead "logrolled for peace." The Future East Asian Transitions Many scholars have speculated that political transitions in China and Korea could lead to the stoking of xenophobic, jingoistic nationalism and the adoption of hawkish foreign policies (Bachman 2000:209; Gilley 2004; Goldstein 2005:95; Mansfield and Snyder 2005; Bass 2006). To be sure, both countries have powerful grievances that could fuel nationalistic mobilization. China is aggrieved about its "century of humiliation" vis-à-vis the great powers (Gries 2004: chapter 3; Schell 2008). Disputes with the United States (the EP-3 incident, the US bombing of the Chinese embassy in Belgrade) previously triggered widespread protests across China. Furthermore, the Chinese resent Japan not only for its invasion and brutal occupation in the 1930s and 1940s, but also for Japan's failure to candidly remember this period in its textbooks or commemoration (Gries 2004; Shirk 2007; Wang 2008). Japan and China also have territorial disputes that could provide a causus belli for nationalistic sentiment.44 Koreans, for their part, hold strong animosity toward Japan for its past aggression (Cha 1999:20–23; Lind 2008). They also resent China because of Chinese claims that Korea's ancient kingdom of Koguryo was part of China (Gries 2005). Many Koreans—both North and South—deeply resent the American role in Korea's division (Harrison 2003:187). Korean resentment, or han, is characterized as the deep and accumulated resentment of people who feel their small nation is continually and helplessly pushed around by larger countries. In the future, Korean politicians may be tempted to exploit such resentment for their own political gain. As many scholars have argued, both these cases appear to be fertile ground for nationalistic mobilization. This article suggests greater optimism. The narrower version of democratization and war theory (supported in the previous East Asian cases) does not expect that Chinese or Korean transitions will trigger the onset of xenophobic nationalism and war. This theory holds that countries with relatively robust domestic institutions can democratize without unleashing praetorian politics that lead to violence. This model does not expect an elevated risk of war in the cases of either China or South Korea: using Gurr's method for calculating domestic concentration, both countries fall within the range of stronger domestic institutions, with China scoring a 5 and South Korea an 8. Therefore, the model expects governments in China and Korea to be able to "manage the rivalry of elite factions and minimize the adverse consequences of interest-group logrolling." Mansfield and Snyder conclude that "with the stronger institutional resources of a more centralized and better regulated state at its disposal, the regime is likely to have less reason to rely on reckless nationalist appeals to consolidate its authority" (2005:88). In sum, the narrow version of democratization and

war theory borne out in the previous East Asian cases does not expect political transitions in China and Korea to fuel more hawkish policies and interstate war. Second, economic interdependence theory also predicts stability for these transitions. Both countries lifted themselves from poverty to wealth through a strategy of global integration and export-led growth, and their continued prosperity depends on access to export markets and international capital. China's trade is 72% of its GDP; China receives more foreign direct investment than any other country in the world, totaling $111 billion in 2008 (World Bank 2009).45 Its ample foreign direct investment is often cited as a key engine of Chinese economic growth and prosperity. South Korea is also highly economically interdependent, with trade constituting 90 percent of its GDP (World Bank 2009). Furthermore, the countries with which friction might be expected (because of territorial or historical disputes) are major economic partners. The United States is China's No. 1 export destination and its No. 3 source of imported goods; Japan is China's No. 2 destination for exports and No. 1 source of imports (CIA 2009). Taiwan, the United States, Japan, and the ROK are also the largest sources of China's FDI (Kang and Lee 2007). As Cheng (2005:105) points out, Taiwanese firms operating in China not only provide China with its largest source of FDI, they export most of the goods they produce there, accounting for more than a fifth of China's total exports. Similarly, Seoul's sometimes tense relations with Tokyo exist in the context of deep economic interdependence. Japan is not only the ROK's top source for FDI, it is also the ROK's No. 3 destination for exports and ranks second as a source of imports (CIA 2009).46 In sum, China and South Korea are two countries pursuing strategies of deep economic integration; the countries with which they might be most likely to conflict due to various disputes are also those countries on which they depend for trade and capital. Economic interdependence theory thus would expect this to have a pacifying effect on their foreign relations. Business leaders in these countries are likely to pressure their governments for stable policies; they will be unwilling to "logroll" with other coalition members if doing so leads to involvement in a costly war.

AT: Transition Wars

No empirical evidence for transition wars-policy makers have no incentive not to promote democracy

Narang and Nelson 09 [Vipin, Associate Professor of Political Science at MIT; Rebecca, a Specialist in International Trade and Finance; April, 2009; "Who Are These Belligerent Democratizers? Reassessing the Impact of Democratization on War"; Cambridge Journals; 07/08/15; jac]

Based on Mansfield and Snyder's chosen measures for regime change and war, we therefore argue that there is no empirical basis for the claim that incomplete democratizations systematically unleash a wave of belligerent nationalism that results in external war+ Not only is there a severe dearth of observations involving incomplete democratization, weak institutions, and war, but we find that the main results hinge entirely on several unrepresentative observations clustered around the dismemberment of the Ottoman Empire+ Partly as a result, when we compare the full Mansfield and Snyder model to a parsimonious controls model, we find that the former adds no predictive power over the latter+ We note that it is entirely possible that the indicators that Mansfield and Snyder employ do not exactly operationalize the logic of the theory+ Certainly, changes in the various Polity measures may not capture what they consider to be incomplete democratization, and the Correlates of War data set may be a blunt measure for "belligerence," especially when the chosen measurement is simply war participation+ But given the best available measures for the phenomena of interest, we find no systematic empirical support for the theory that incomplete democratizers with weak institutions are more war-prone toward other states. Given the high-profile prominence and persistence of the Mansfield and Snyder claim, these results bear on both academic and policy debates+ Academically, our findings help provide some intellectual housekeeping in the debate between whether incomplete democratizers implode or explode+ In showing that there is a marked lack of empirical support for the relationship between these states and war participation, let alone initiation, our conclusions strengthen the findings of the state-failure project which argues that this class of states is particularly vulnerable to internal—not external—conflict+ Though there can certainly be spillover effects from internal conflicts, **there is no empirical evidence that incomplete democratizers pick fights with other states**+ Indeed, the Ottoman Empire observations that provide the entire statistical support for the Mansfield and Snyder results are more consistent with the state-failure hypothesis since the series of wars launched against the Ottoman Empire were primarily about dismembering it and parceling out its spoils, not about an incomplete democratizer with weak institutions engaging in diversionary external wars+ Furthermore, the most salient contemporary cases of incomplete democratization—such as post-Cold War Russia, Rwanda, and Yugoslavia—tended to invariably result in disintegration rather than external belligerence. Our findings are also relevant to policy debates concerning the consequences and

management of democracy promotion abroad+ Policymakers have invoked the finding that democratizing states are more likely to become war-prone members of the international system as a compelling argument against promoting democracy internationally+ In The National Interest, Mansfield and Snyder caution that a democratizing China, with its nationalist "demand to incorporate Taiwan in the People's Republic of China, @and# its animosity toward Japan" could pose serious threats to regional and international security. 55 They suggest that the international community should be extremely wary of a democratizing China and may need to take measures to contain potential Chinese belligerence during such a phase+ However, **the empirical evidence implies that concerns that democracy promotion will trigger international conflict are misplaced** since, historically, movements towards democracy have not unleashed belligerent foreign policies+ As such, adopting containment policies toward incomplete democratizers—whether it be China or others such as potentially Russia or Pakistan—in anticipation of aggression may be unnecessary and even possibly counterproductive since they risk triggering con-flict through the creation of security dilemmas or other pathways completely independent of democratization. We have thus shown that one concern about democracy promotion, that incomplete democratizers have a higher propensity to instigate external wars, is empirically unfounded+ This is not to say that democratization is at all a smooth process; we do not dispute that such transitions may be fraught with risks, and that the proper sequencing and pacing of the process is critical for full democratic consolidation+ But **there is simply no empirical basis to think, or adopt policies predicated on the fear, that incomplete democratizers will be more belligerent members of the international system**.

AT: Stealth Authoritarianism

Stealth authoritarianism is merely a stage in the development of democracies

Varol 15 [Ozan. O, Associate professor of law Lewis and Clark Law School ; 05/15; "Stealth Authoritarianism"; Lexis; 07/05/15; jac]

There remains, however, the possibility that the use of stealth authoritarianism can eventually usher in democratization. The use of stealth authoritarian practices may mark the beginning of the end of a repressive government. n435 Stealth authoritarianism, in other words, may represent a temporal snapshot in a regime's gradual transformation from a fully authoritarian government to a democracy. Although stealth authoritarian practices are anti-democratic in effect, they might, in some cases, produce the conditions by which democracy can mature, even if it does so in a manner that, on the surface, defies democracy. The rejection of openly repressive authoritarian tactics, and the adoption of legal mechanisms that exist in [*1741] democratic countries, can open up a democratic Pandora's box and foment further democratic reforms. It may be possible for subsequent generations to breathe democratic life into formal legal mechanisms that were initially adopted or used for stealth authoritarian purposes. As a result, even though formal legal mechanisms can provide the tools for stealth authoritarianism, they can also, in some cases, produce democracy-enhancing benefits.

State Secrets Privilege Bad

Courts Key to Address State Secrets Privilege / AT: Intel Leaks

The judiciary is the best actor to rein in abuse of the state secrets privilege --- there is minimal chance of intel disclosure

Windsor, 12

(J.D. candidate and Master of Security Studies candidate at Georgetown (Spring 2012, Lindsay, Georgetown Journal of International Law, "NOTE: IS THE STATE SECRETS PRIVILEGE IN THE CONSTITUTION? THE BASIS OF THE STATE SECRETS PRIVILEGE IN INHERENT EXECUTIVE POWERS & WHY COURT-IMPLEMENTED SAFEGUARDS ARE CONSTITUTIONAL AND PRUDENT," 43 Geo. J. Int'l L. 897)

V. A CONSTITUTIONAL SAFEGUARD: REQUIRED JUDICIAL REVIEW OF STATE SECRETS INVOCATION

The state secrets privilege is within the scope of executive authority under the Constitution, but it has been extensively criticized for its potential for abuse by the executive branch. n162 In light of this criticism, the Department of Justice (DOJ) recently established safeguarding procedures for the formal invocation of the privilege which echo and [*921] extend the requirements under Reynolds. n163 The DOJ will only defend an assertion of state secrets in litigation when "necessary to protect against the risk of significant harm to national security." n164 The regulations prohibit the Department from defending an invocation of the privilege

in order to (i) conceal violations of the law, inefficiency, or administrative error; (ii) prevent embarrassment to a person, organization or agency of the United States government; (iii) restrain competition; or (iv) prevent or delay the release of information the release of which could not reasonably be expected to cause significant harm to the national security. n165

Though these regulations establish a degree of safety to prevent abusive invocation of the privilege, the oversight remains entirely within the executive branch, and **an external check is needed to ensure the privilege is properly used**. Based on the constitutional separation of powers, the Court is better suited than Congress to impose this check. Such a safeguard would limit the potential for abuse with minimal risk to national security.

A. Courts Should Standardize Review of Invocations of the State Secrets Privilege

Reynolds' only procedural requirement was that the privilege be invoked by the head of an agency after "actual personal consideration" of the privileged documents. n166 Even this requirement is not always enforced. n167 Further, judicial review of the evidence argued to be privileged is occasional, irregular, and non-standardized. n168

Courts must begin by enforcing the basic requirements of the [*922] privilege established in 1953 and affirmed through half a century of jurisprudence. When a judge receives an affidavit asserting the privilege, the judge could confirm the "actual personal consideration" requirement by inference, where the affidavit describes the material with specificity and justification sufficient to satisfy the assertion of the privilege. If that is not sufficient, accurate contact information for the head of the agency should be provided in the affidavit so an unsatisfactory affidavit could garner prompt verification in a timely manner.

Additionally, in camera, ex parte judicial review of the evidence should be standard where the plaintiff shows "necessity" for the documents, as with claims concerning alleged warrantless domestic surveillance, torture, extraordinary rendition, targeted killings, and similar cases where core constitutional rights are at stake. n169 Reynolds recognized that the level of scrutiny for the privileged documents would vary based on the plaintiff's alleged causes of action. The Court held the plaintiff's necessity for the privileged material "determine[s] how far the court should probe in satisfying itself that the occasion for invoking the privilege is appropriate." n170 Since these cases implicate important constitutional rights, **they reasonably require a closer level of scrutiny. Even simply routine judicial inspection of the material would likely be sufficient to ensure the integrity of the privilege because it would verify proper invocation of the privilege and thereby place an external check on the executive branch.**

There are limitations on a court's ability to compel disclosure of the documents, however, **based on the separation of powers where national security matters are concerned**. The Court has repeatedly acknowledged that the authority to protect national security information is within the domain of the Executive and is not something the courts have the expertise or the ability to override. n171 Therefore, **a court could not require disclosure of the documents if it finds the procedures were not followed or if it disagrees with the Executive's decision that the material contains state secrets**, since this would exceed the Judiciary's conceded constitutional authority.

Nonetheless, another remedy is possible if the court nonetheless disagrees with the government's assertion. After a refusal to accommodate [*923] a legitimate request for in camera, ex parte review of the documents, or upon finding, after deferential review, that the documents did not meet the standard of "risk of significant harm to national security," n172 the court could take the facts in favor of the plaintiff and proceed to the case on the merits. Louis Fisher recommends this practice: "Disposing of a case in that manner may reward plaintiffs who have unproven cases, but it also puts the government on notice that asserting state secrets comes at a price." n173 For extreme cases where the privilege assertion was unresolved between judicial and executive branches, this would be an effective check on the Executive, would be within judicial discretion, and would provide plaintiffs a basis for relief in cases with core constitutional concerns.

B. The Judicial Branch is Best Suited to Impose a Safeguard on the Privilege

"[W]hen individual liberties are at stake," wrote the Court in 2004, "[the Constitution] most assuredly envisions a role for all three branches." n174 Judicial review in the manner described above satisfies this requirement, provides an effective check on the Executive, and nonetheless maintains the constitutional separation of powers required for **an effective state secrets privilege**.

The courts are best suited to exercise a safeguard over Executive invocation of the privilege. Though the courts do not have expertise in the field of foreign affairs, they do have expertise in matters of evidentiary procedures and thus can make these determinations. n175 **The risks of disclosing the privileged material to the court are minimal, because the disclosure would be only to one judge.** n176 In districts where national security cases routinely arise, some judges have become accustomed to handling issues of national security and classified information [*924] through extensive CIPA and FISA litigation. n177 Other courts frequently handle similar matters requiring government secrecy and protection of sources in criminal prosecutions, such as sting operations in drug cases. Limited judicial review through inspection of the privileged documents would verify the integrity of the privilege with minimal risk for public disclosure of the information. n178

Moreover, **the judiciary is better suited than Congress to establish the requirement of judicial review of the invocation of the privilege**. As noted above, Congress has acknowledged the presidential powers in this area by codifying them through legislation authorizing the President to establish regulations governing the classification procedures and access to classified material. n179 **The Supreme Court agrees that the authority to protect classified information is the Executive's; it does not fall within the responsibility of the legislative branch.** n180 In other words, the Executive's power is at its highest ebb because he is acting pursuant to express and implied authorization by Congress, so he can rely on all the inherent executive powers plus those Congress has delegated. n181

Thus, **Congress cannot constitutionally require the disclosure of classified information, even to a court**, so it has essentially no authority to change substantively the contours of the present privilege. n182 Since the privilege is constitutionally based in executive powers, Congress cannot rely solely on its Article III powers merely to change a rule of [*925] evidence. Congress might codify the existing law under Reynolds in combination with its Article III authority, but anything more would infringe upon clear executive authority.

For those scholars who recognize a constitutional basis for the privilege, most acknowledge the Executive's clear authority in the area of state secrets. n183 However, these scholars proceed to argue for an increased oversight role by Congress without adequately explaining the constitutional basis for Congress to exercise such a role. n184 The impetus appears to be based on the importance of the legal issues arising in post-9/11 state secrets cases, but this does not constitute legal cause to expand Congress' constitutional authority. Chesney and Frost asked what Congress can do to check the Executive and expand judicial oversight, but since Congress has limited authority where state secrets are concerned, the better question is what the courts can do more effectively to exercise the oversight the Constitution has already given them.

The Court has authority to establish this judicial review as enforcer of evidentiary procedures for federal cases and as arbiter of the constitutional separation of powers. n185 The Court created the requirements for invoking the state secrets privilege in Reynolds, so amending that process would certainly be within its purview. n186 Though Congress could codify the Reynolds privilege in statute, n187 **the court is better suited to establish further review procedures under its judicial review authority**. n188 Standardizing in camera, ex parte judicial review of the privileged material in this limited way would **prevent Executive abuses and add institutional legitimacy to the privilege.** n189

SSP Undermines War on Terror

State secret privilege enables Executive's abuses of power and prevent us from fighting terrorism effectively

Fichera '08 --- (Stephanie A, "Compromising Liberty for National Security: The Need to Rein in the Executive's Use of the State-Secrets Privilege in Post-September 11 Litigation," University of Miami Law Review, 1/1/08, http://repository.law.miami.edu/cgi/viewcontent.cgi?article=1295&context=umlr)//Mnush

The level of secrecy the state-secrets privilege affords to the Executive enables the Executive to abuse its power and erode the values, rights, and protections that define the American system of government and way of life. Such abuse of power divides the nation and **hinders its ability to fight terrorism effectively** because notions of freedom, justice, and open, democratic government must be observed stringently at home in order for others to struggle to adopt them abroad.

SSP Not Key to National Security / Undermines Executive

SSP guts public trust in the executive --- it's not key to national security

Fisher, 14 --- scholar in residence at the Constitution Project, visiting professor at College of William and Mary Marshall-Wythe School of Law (3/10/2014, Louis, The National Law Journal, "Government Errors Are Shrouded in Secrecy; The last two administrations have unfairly used state-secrets privilege to cover for their mistakes," Factiva)

A reliance on the **state-secrets privilege** is enabling the government to draw a cover over its mistakes so that **no one can fully understand when it is at fault**. Like all human institutions, governments make errors and injure innocent individuals. Why not admit error and demonstrate integrity, honesty and fairness, and at the same time build public trust? The administration of President George W. Bush invoked the statesecrets privilege repeatedly to prevent private litigants from challenging executive actions that violated statutes, treaties and the Constitution. The lawsuits included warrantless surveillance by the **N**ational **S**ecurity **A**gency and the practice of "extraordinary rendition" that sent suspects to other countries for interrogation and torture. In case after case, **federal judges deferred to executive branch warnings that allowing a case to proceed would do grave danger to the nation**. As presidential candidate in 2008, Barack Obama criticized this emphasis on secrecy and promised to promote a more transparent administration if elected. In a major speech in May 2009, he said the state-secrets privilege "has been overused" and remarked: "We must not protect information merely because it reveals the violation of a law or embarrassment to the government." In September of that year, U.S. Attorney General Eric Holder said the administration wound not invoke the statesecrets privilege to "conceal violations of the law, inefficiency, or administrative error." Still, the record of the Obama administration over the past five years on state secrets mirrors that of the Bush administration. Consider the case of Rahinah Ibrahim, a Malaysian Muslim pursuing graduate studies at Stanford University in construction, engineering and management. On Jan. 2, 2005, when she presented her ticket at the San Francisco airport to fly to Malaysia, she discovered that her name was on the federal government's no-fly list. An agency that is a part of the FBI compiles the names placed on the list. Although she was in a wheelchair recovering from a hysterectomy and recent complications, she was handcuffed and taken to the police station. Two hours later, the FBI told the police to release her. It was an apparent mistake by the federal government—and a good time for an apology. Obviously, the FBI did not regard her as a security risk because she was allowed to board a plane the next day to return to Malaysia. But there would be no apology from the federal government, and the situation would grow worse. Ibrahim was scheduled to return to Stanford in March 2005 to complete her doctorate. When she went to Kuala Lumpur International Airport to fly back, she was not allowed to board. She did not realize the government had revoked her student visa. Ibrahim filed a complaint in federal court in January 2006 to challenge the government's action and seek damages. At trial, the government conceded that she had no criminal record or links to terrorist activity. In a decision in December 2012, U.S. District Judge William Alsup was still unable to determine whether she was, or was not, on the no-fly list. The government wanted the case dismissed on the basis of secret evidence to be shared with the judge ex parte, with the records taken back to Washington after the court's review. He found that procedure unacceptable.¶ On April 23, 2013, Holder signed a declaration that claimed the state-secrets privilege over certain documents, warning that their disclosure "could reasonably be expected to cause significant harm to the national security." Alsup examined classified documents and allowed Ibrahim's attorneys to take three depositions, including of FBI Agent Kevin Michael Kelley. Only then did the government concede plain error. WHEN DID THE ERROR OCCUR? Alsup explained that Kelley in November 2004 recommended that Ibrahim be placed on a number of federal watch lists. But because he did not understand the form he filled out, her name ended up on the no-fly list. At trial, Kelley admitted he had checked the wrong box, filling out the form "exactly the opposite way" from the instructions given him. He said he did not know of his mistake until deposed in September 2013. This part of the trial record does not make sense. The "truth" wasn't discovered in 2013. When the FBI in January 2005 ordered Ibrahim released from police custody at San Francisco, it knew it had erred. Ibrahim faced other problems. When she reapplied for a visa in 2009, it was denied under the section of the Immigration and Nationality Act that can refer to terrorism. In September 2013, she applied for a visa to attend her trial in California. That, too, was denied. On January 14, 2014, Alsup ordered the government to remove all references to Kelley's mistaken designations, making clear they "were erroneous and should not be relied upon for any purpose." Also, he ordered the government to inform her of the specific subsection of the act that rendered her ineligible for a visa in 2009 and 2013.¶ Following the pattern of the Bush administration, Obama and the Justice Department have been willing at every step to invoke the state-secrets privilege to prevent any type of judicial relief for individuals wronged by the executive branch. It should not be difficult for the administration to admit error, issue an apology and reparations, and stop hiding behind

the state-secrets privilege. **Nothing** in the government's conduct in the Ibrahim trial **adds to national security.** Instead, it merely builds greater distrust toward executive officials.

AT: Detention Good Impact

Detention and GTMO are ineffective – they undermine counterterror strategies and generate more terror than they prevent^

Douglas 14

(Roger Douglas is a Professor of Law at La Trobe University, "law, liberty, and the pursuit of terrorism", Published September 2014, pg. 100, TMP)

The counterterrorist's dream is that of a government with the capacity to track down prospective terrorists and lock them away before they are able to execute their plans. The criminal law permits various forms of de facto preventive detention, but posttrial detention is usually possible only after a court is satisfied that the detainee has committed a crime; that the evidence proves the defendant's guilt; and that on the facts before the court, a custodial sentence¶ is warranted. Otherwise defendants must go free, regardless of whether they¶ pose a high actuarial risk. Further, in cases where proof of the relevant crime would require the disclosure of state secrets, **proof of guilt might be difficult if the government wishes to protect secrets from disclosure**. For reasons set out in the previous chapter, the seriousness of these problems can be exaggerated, especially given the recently created precursor offences and the courts' willingness to impose long sentences on people who did little to give effect to their plans. Moreover, if there is insufficient evidence to support a conviction for a precursor offence, this may be because there is little evidence that the suspect is indeed a potential terrorist. In addition, there are **costs** involved in detaining the innocent. These include costs to the detainees, but even if one is indifferent to these, there are others. **Detention is expensive.** Detention of the innocent is wasteful and involves the use of resources that could be used more profitably elsewhere: in January 2012, detention at Guantánamo Bay cost **$800,000** per detainee, and guarding each detainee required an average of 17 soldiers. 3 **Ill-tailored preventive detention can sometimes have the effect of generating more terrorism than it prevents**, by delegitimating governments and their counterterror policies. 2RPP Detention without Conviction • 171 Yet the craving for certainty means that the authoritarian's dream is capable of weaving its seductive web. There are precedents for the detention of people based on nothing more than attributes that mean that they are slightly less unlikely to constitute a threat than those without the attribute. An obvious example is provided by the wartime detention of enemy aliens, some of whom no doubt hoped their homeland would win, but few of whom ever seem to have done anything to further this end, either before or on release from detention. These precedents rightly stand as a warning as to the dangers of barely regulated detention. It is probably a warning heeded by modern governments and their judiciaries, but more by judiciaries than by governments

Solvency

Circumvention

Government will circumvent the plan --- cite privileges to avoid accountability

Windsor, 12

(J.D. candidate and Master of Security Studies candidate at Georgetown (Spring 2012, Lindsay, Georgetown Journal of International Law, "NOTE: IS THE STATE SECRETS PRIVILEGE IN THE CONSTITUTION? THE BASIS OF THE STATE SECRETS PRIVILEGE IN INHERENT EXECUTIVE POWERS & WHY COURT-IMPLEMENTED SAFEGUARDS ARE CONSTITUTIONAL AND PRUDENT," 43 Geo. J. Int'l L. 897)

B. The State Secrets Privilege in Context of Other Government Privileges

The Reynolds privilege is closely related to two other government privileges invoked by the executive branch. n41 The bar to litigation of espionage contracts and the executive privilege protecting presidential deliberations form the two ends of a spectrum of executive privileges based on the inherent constitutional authorities of the President.

1. The Bar to Litigation of Espionage Contracts

In Totten v. United States, the Supreme Court established an absolute bar to litigation of contracts for espionage based on rules of evidence and the inherent powers of the Executive. n42 When the estate of an individual who spied for the Union during the Civil War sued the government for failure to pay for his contracted services, the Supreme **Court upheld dismissal of the suit on grounds that the contract itself was secret and not subject to judicial review**. n43 The Court found affirmative authority for the President to enter into such a contract based on the Commander-in-Chief power under the Constitution. n44 However, **comparing the confidentiality of this espionage contract to the protected confidences of spousal or attorney-client communications, the Court reasoned that "public policy" forbids disclosure in trial of "matters which the law itself regards as confidential."** n45 The Court then held that contracts for espionage cannot be litigated and barred [*905] further consideration of the claim. n46 Totten's reasoning was thus founded both in the constitutional powers of the President and in evidentiary law.

Totten and Reynolds differ in three ways: whether the government is necessarily a party to the suit, the effect of the government's invocation of the privilege on the case, and the degree of judicial review over the invocation. First, the Totten bar to suing the government for espionage contracts is implicitly based on the common law doctrine of sovereign immunity: the government is immune from suit unless it waives this immunity. The Tucker Act, for example, waives sovereign immunity with respect to claims over contracts with the government. n47 The statute, though, requires that courts **"give due regard to the interests of national defense and national security"** when exercising jurisdiction over these claims. n48 Therefore the Totten bar still applies to contracts for espionage based on the inherent sovereignty of the government in matters of contracts for national security. n49 Unlike claims against the government based on an espionage contract, the state secrets privilege can arise when the government intervenes in a civil suit between two non-governmental parties in order to limit discovery of privileged evidence. n50

Second, though Totten bars all further litigation of the issue, Reynolds allows cases to proceed when supported by other evidence. Totten held that a claim over an espionage contract should be "dismissed on the pleadings without ever reaching the question of evidence" because "the very subject matter of the action . . . [is] a matter of state secret." n51 In contrast, a case may proceed to the merits after the government's invocation of the state secrets privilege where other evidence substantiates the plaintiffs case. n52 However, courts frequently **dismiss certain types of cases on the pleadings when the government invokes state secrets**, such as suits over domestic warrantless surveillance and extraordinary renditions when it is clear no non-privileged evidence

could substantiate the plaintiff's claim. n53 Reynolds has become, essentially, a [*906] Totten ban for these types of cases where the very subject matter of the case is a state secret. n54

Third, Totten's bar to judicial inspection of the evidence n55 differs from Reynolds because Reynolds was ambiguous regarding when, if ever, the court could insist on reviewing the evidence when the government invokes the state secrets privilege. Reynolds required a balancing of plaintiffs' necessity for the evidence with the government's privilege. n56 "Where there is a strong showing of necessity, the claim of privilege should not be lightly accepted." n57 On the other hand, "even the most compelling necessity cannot overcome the claim of privilege if the court is ultimately satisfied that military secrets are at stake." n58 Reynolds thereby left open the possibility of a court requiring disclosure of evidence the government claims privileged where a plaintiff shows compelling necessity and the court does not believe state secrets are involved. n59

They'll use the "executive privilege" instead to circumvent the plan

Windsor, 12

(J.D. candidate and Master of Security Studies candidate at Georgetown (Spring 2012, Lindsay, Georgetown Journal of International Law, "NOTE: IS THE STATE SECRETS PRIVILEGE IN THE CONSTITUTION? THE BASIS OF THE STATE SECRETS PRIVILEGE IN INHERENT EXECUTIVE POWERS & WHY COURT-IMPLEMENTED SAFEGUARDS ARE CONSTITUTIONAL AND PRUDENT," 43 Geo. J. Int'l L. 897)

2. The Executive Privilege

The executive privilege protects from disclosure another class of government information: confidential communications with the President. n60 The reasoning is that presidential advisors must be free to explore alternatives--"even blunt or harsh opinions"--in the process of decisionmaking, **and that advisors are likely to be inhibited if they anticipate their remarks will be later disclosed to others**. n61 The executive privilege is invoked by the President both in criminal n62 and civil [*907] court proceedings, n63 as well as vis-à-vis Congress. n64 In contrast, **the state secrets privilege is invoked primarily in civil cases**. n65

The Supreme Court has held that executive privilege is based in the powers of the President under separation of powers doctrine, but this privilege is not absolute. n66 In Nixon v. United States, the Court ordered Nixon to produce Oval Office tapes and records, rejecting his invocation of the executive privilege. n67 The Court held that where the President asserts only a generalized need for confidentiality and national security secrets are **not** at stake, the privilege must yield to the demonstrated specific need of a criminal prosecutor. n68 Where the President relies only on his Article II powers, the privilege is outweighed by "the primary constitutional duty of the Judicial Branch to do justice in criminal prosecutions." n69

Like the state secrets privilege, the executive privilege can arise in the national security context. n70 But the executive privilege is not coextensive with the President's national security powers because it **simply protects presidential deliberations**. n71 The Court noted that Nixon did not invoke "a claim of need to protect military, diplomatic, or sensitive national security secrets," implying that such a claim would be given greater weight under the separation of powers. n72

The executive privilege is the privilege with the least inherent [*908] government **authority on the spectrum of executive, state secrets, and Totten privileges**. It is based on the confidentiality of executive deliberations under the President's Article II powers, but this authority clearly yields to other government interests, such as criminal justice, when state secrets are not at stake. The bar to litigation of espionage contracts in Totten is the strongest exercise of government authority of the three privileges because it is based in inherent powers of government under the doctrine of sovereign immunity, it halts all further litigation of the matter, and the very subject matter prohibits analysis of the evidence and requires dismissal of the case. In the middle, the state secrets privilege balances plaintiff's necessity for the privileged material with the government interests, but it is stronger than the executive privilege because it is based, as described below, in the President's national security powers and its invocation can effectively halt further litigation.

Judicial Independence Answers

No Modeling

There is a negative correlation between the US government model and the implementation of judicial independence

Voigt and Hayo 14 [Stefan, Institute of Law & Economics, University of Hamburg; Bernd, professor of Macroeconomics, University of Marburg; 01/17/14; Mapping Constitutionally Safeguarded Judicial Independence—A Global Survey; Wiley Online Library; 07/07/15; jac]

Organizational Structure of the Judiciary An aspect related to legal origin is the underlying court model. There are various ways of designing constitutional review. (1) Review power can be allocated to each and every court of the country, as in the United States, which does not have a specialized court. This system implies that constitutional review is a posteriori, and uniformity is secured by the highest court of the country (in the United States, the Supreme Court). (2) The Austrian model, as proposed by Hans Kelsen and implemented into the Austrian Constitution in 1920, is characterized by a specialized constitutional court dealing with constitutional matters. This design can entail both abstract and concrete review, as well as ex ante and ex post review. (3) In the French model, constitutional matters are relegated to a special body (e.g., the Conseil Constitutionnel in France) traditionally constrained to ex ante review (Harutyunyan & Mavcic 1999). Most, but not all, constitutional systems can be grouped into one of these three designs. Additionally, Harutyunyan and Mavcic (1999) define a "New (British) Commonwealth Model" implemented by Mauritius, and a "Mixed (American Continental) Model," which can be found in a number of states, including Portugal, Columbia, Ecuador, Guatemala, and Peru. 10 The cross-tabulation between implementation of JI in the original constitution and court model in Table 14 shows that all mixed-type and French-type models include a relevant passage, and so do a majority of countries adhering to the Austrian/Continental-European and U.S. types of court model. There is a positive correlation between the Austrian/Continental-European type of court model and the implementation of judicial independence (0.29), which is significant at a 5 percent level. The negative correlation between the U.S. court model and judicial independence (–0.39) is significant at all plausible levels of significance.

Circumvention

US democracy promotion fails --- serves as a cover for the rise of stealth authoritarianism

Varol 15 [Ozan. O, Associate professor of law Lewis and Clark Law School ; 05/15; "Stealth Authoritarianism"; Lexis; 07/05/15; jac]

In that sense, democracy-promotion programs in the United States and elsewhere have achieved success by persuading authoritarians to adopt less morally questionable practices. As discussed above, however, existing democracy-promotion mechanisms have also facilitated a certain level of authoritarian learning and created the very conditions in which stealth authoritarian practices thrive. Because these mechanisms narrowly focus on detecting obvious democratic deficiencies, they are substantially less effective in detecting the subtle erosion of political competition that stealth authoritarianism effectuates. That, in turn, has provided significant incentives to authoritarians to replace transparently authoritarian mechanisms of control with stealth authoritarian practices. In addition, a state that satisfies the applicable democracy-promotion criteria is often bestowed with the label of "democracy," which can provide legal and political cover to stealth authoritarian practices. What does the prevalence of stealth authoritarianism in an authoritarian or hybrid regime portend for the regime's future? There are three primary paths: The regime can persist in its present form, decay into a more authoritarian regime, or mature into a democracy. Although less insidious than traditional forms of authoritarianism, stealth authoritarianism may also generate a more durable form of authoritarianism that allows the regime to persist in its present form or become more authoritarian. In the post-Cold War era, the use of transparently authoritarian mechanisms can reduce the lifetime of a repressive regime, whereas stealth authoritarianism can prolong it. As discussed above, the use of stealth authoritarian mechanisms can allow the incumbents to retain power by appeasing both global and domestic audiences, providing a limited space for the expression of discontent, and disabling political opponents through seemingly legitimate means. Because it relies on formal legal mechanisms that exist in regimes with favorable democratic credentials, stealth authoritarianism is more difficult to detect and eliminate than its more [*1740] transparent counterpart, which can bolster its durability. Stealth authoritarianism can also permit incumbents to retain their political monopoly even with the arrival of democratic reforms. Even where it is possible to dethrone the incumbent regime, the replacement regime can rely on the same legal mechanisms and structures set up by the incumbent to perpetuate its rule. n431 Newly elected political leaders often have little incentive to change a legal system that provides systematic advantages to the incumbents. As Steven Levitsky and Lucan Way observe, numerous electoral turnovers after the Cold War brought little institutional change, and

successor parties did not govern democratically. n432 In Russia, for example, the constitutional order constructed by President Boris Yeltsin, with a strong executive and weak checking institutions, has allowed the persistence of a competitive authoritarian regime long after Yeltsin's resignation. n433 Electoral turnover in hybrid regimes can therefore permit the perpetuation of stealth authoritarian practices. Stealth authoritarianism can also be pernicious because it can facilitate authoritarian learning and spread to other regimes. n434 Stealth authoritarian practices that generate durability in one regime can be emulated in others for anti-democratic purposes. Information that teaches incumbent officials how to retain political power while appeasing domestic and global audiences can effectively spread across different legal regimes via emulation or inter-regime dialogue, generating a stealth authoritarianism playbook.

Stealth authoritarianism uses the mechanisms of a democratic regime to prevent political change --- the signal of the plan is effectively circumvented

Varol 15 [Ozan. O, Associate professor of law Lewis and Clark Law School ; 05/15; "Stealth Authoritarianism"; Lexis; 07/05/15; jac]

B. Stealth Authoritarianism I describe the mechanisms of stealth authoritarianism in the next Part, but the concept can be articulated here briefly: Stealth authoritarianism refers to the use of legal mechanisms that exist in regimes with favorable democratic credentials for anti-democratic ends. Although the various ends that incumbent officeholders pursue are not always clear, anti-democratic ends, as used here, refer to the erosion of "partisan alternation," defined as the cycling of political power among more than one party. n40 Turnover in government control is a core component of democracy and evinces an electoral system that responds to change in electoral preferences and confirms that "the incumbents ... can be dethroned." n41 The erosion of partisan alternation can, in turn, enable the creation of a political monopoly. Stealth authoritarianism undermines partisan alternation by significantly increasing the costs of unseating the incumbent. Through the practices described below, stealth authoritarianism erodes mechanisms of accountability, weakens horizontal and vertical checks and balances, allows the incumbents to consolidate power, exacerbates the principal-agent problem n42 by curtailing the public's ability to monitor and sanction government policies, and paves the way for the creation of a dominant or one-party state where the electoral field is uneven and the incumbent enjoys systematic advantages. These practices make it significantly more difficult to dethrone the incumbents and undermine a core component of democracy: free, fair, and contested elections and the resulting turnover in government control. In other words, as a result of stealth authoritarian practices, partisan alternation might not occur even in the face of changing political preferences by the electorate. [*1685] Stealth authoritarianism creates a significant discordance between appearance and reality by concealing anti-democratic practices under the mask of law. In so doing, stealth authoritarian practices avoid, to a great extent, the costs associated with transparently authoritarian practices that are much more likely to draw the opprobrium of both the domestic and the international community. Practices that appear clearly repressive in a transparently authoritarian regime appear more ambiguous in a regime that employs stealth authoritarian practices. This is not to suggest that stealth authoritarian practices go completely unnoticed. As discussed in Part III, some cases of stealth authoritarianism are not so stealthy in that they draw the attention and opprobrium of the relevant domestic and global actors. The mechanisms of stealth authoritarianism are, however, relatively more difficult to detect than transparently repressive authoritarian strategies. Because stealth authoritarianism relies on the exercise of legal mechanisms that exist in regimes with favorable democratic credentials, it becomes more difficult to differentiate between their abuse and legitimate application. Although stealth authoritarianism utilizes legal mechanisms that exist in regimes with favorable democratic credentials, these mechanisms are not always verbatim replicas of their democratic counterparts. In some cases, the relevant laws may be subject to subtle reconfigurations that deviate in meaningful ways from those laws typically found in democracies. I examine these differences below in discussing the mechanisms of stealth authoritarianism. In some cases, however, the deviations from the typical democratic laws also exist in one or more established democracies, so that the deviation does not appear transparently anti-democratic. For example, as discussed below, Russia has criminalized defamation, which represents a deviation from the non-criminal nature of defamation in most democracies. But criminal defamation laws also exist in a number of regimes with favorable democratic

credentials, such as Canada, Italy, and the United States. The criminalization of defamation by established democracies allows Russian officials to rebut any criticism directed at their criminal libel laws by citing prominent democracies that also deviate from the norm. Although underexamined in the literature, formal rules are not entirely foreign to authoritarian governance. Historically, authoritarian leaders used formal rules to constrain rogue bureaucratic agents who operated the government. n43 They also used the legal system to maintain control over the populace. n44 In other words, laws were deployed, not to regulate and constrain the government, but to enable it to constrain others and ensure their [*1686] compliance with government authority. n45 Commentators have referred to this as the "rule by law" tradition, in contrast to the "rule of law" tradition in modern democracies. n46 The formal rules in rule-by-law regimes typically reflect their authoritarian nature with "brutal candor." n47 For example, the Saudi Arabian Constitution requires the media to "employ civil and polite language" and conform their publications to state regulation. n48 Likewise, the first constitution of the Soviet Union committed the state to "deprive[] individuals and sections of the community of any privileges which may be used by them to the detriment of the Socialist Revolution." n49 Pre-modern China and, to a lesser extent, pre-modern Korea are also good illustrations of a rule-by-law regime. n50 This Article's focus is different. Formal rules in rule-by-law regimes transparently express their authoritarian nature. In contrast, the mechanisms described in this Article obscure anti-democratic practices under the appearance of legal mechanisms that exist in regimes with favorable democratic credentials. Through the more complex, and more interesting, phenomenon of stealth authoritarianism, modern-day authoritarian practices are becoming increasingly more difficult to detect and eliminate for both domestic and global actors. The full story, however, is more nuanced. Modern authoritarian governments have not completely abandoned traditional, more transparent mechanisms of authoritarian control. Even in the case studies I discuss in the next Part, stealth authoritarian mechanisms are sometimes complemented by more transparently authoritarian strategies of control. Later in the Article, I analyze, drawing on rational-choice theory, why political leaders may adopt stealth authoritarian practices, how they are able to do so, and which types of regimes are more likely to benefit from the adoption of stealth authoritarian practices. But first, I discuss the mechanisms of stealth authoritarianism.

Judicial Independence Fails

Judicial independence gets undermined by judicial review and partisan appointments --- shatters the brittle democracies they are supposed to sustain

Gardbaum 15 [Stephen, MacArthur Foundation Professor of International Justice and Human Rights, University of California, Los Angeles, School of Law; 01/20/15; "Are Strong Constitutional Courts Always a Good Thing for New Democracies?"; Social Science Research Network; 07/07/15; jac]

The basic reason is that judicial review has a tendency to result in the politicization of the courts in two ways that correspond to, and jeopardize, the two key elements of judicial independence. On the first element, where a court has final authority on the validity of legislation—whether in the context of abstract review or concrete litigation—it inevitably becomes a powerful political actor as a veto player (Kelsen's "negative lawmaker"105), and so may come to be viewed as an opponent or potential rival of the government. It may serve as an effective check on politics, but, in so doing, it may also trigger political attacks that threaten to reduce the judiciary's independence. If, in one sense, judicial review exhibits the independence of the judiciary to its greatest extent, for that very reason it also poses the greatest practical threat to such independence—and in service of a function that is not an essential part of it. Just as the fusion of executive and legislative power in nineteenth century Britain initially seemed to manifest parliamentary strength by confirming its primacy over the monarch, but eventually undermined the independence of Parliament, so too in the context of new and transitional democracies the partial fusion of judicial and legislative power that is judicial review may end up undermining the independence of the courts. The pragmatic response to the fragility of judicial independence in new democracies is to protect and nourish it by reducing the potential pressures it faces, not maximizing them. Courts should not be cast in the role of the first or only line of defense. Exercises of judicial review can place great strain on a fledgling or brittle democracy, as the examples of the Egyptian court closing the then-recently elected parliament and the Turkish court's insistence on its brand of secularism illustrate.106 From this perspective, strong-form judicial review may be a luxury rather than a necessity for newer democracies, which must be able to walk with the ordinary judicial independence of a trial court before they can run with the Bundesverfassungsgericht. On the second, more internal, element of judicial independence, the risk of resulting politicization occurs in the following way. Because of the power they wield under judicial supremacy, the claim that constitutional court judges should be given whatever partial or indirect democratic accountability they can be given is generally viewed as an irresistible one.108 As a result, judicial appointments to these courts become political appointments, and, while there are several well-known variations in the precise mode of legislative/executive selection, in almost all

forms political affiliation is known and taken into account. As a result, appointments are not only made by politicians but are also made (at least in part) for political reasons.109 However, this often leads to constitutional court judges deciding important and close cases along predictable party or ideological lines, which threatens to undermine the second requirement of judicial independence: impartiality. Not in the sense of inputs or pressure—as life tenure or a long, fixed, non-renewable term insulates appointees once in office110—but in terms of outputs, of how courts make their decisions. As John Stuart Mill put it in his Considerations on Representative Government (1861): "While there are no functionaries whose special and professional qualifications the popular judgment is less fitted to estimate [than judges], there are none in whose case absolute impartiality, and freedom from connection with politicians or sections of politicians, are of anything like equal importance."111 This political or output "connection," in turn, may undermine their perceived legitimacy and lead frustrated governments to accuse constitutional courts (particularly those with a majority of their predecessors' appointees, as in Romania or Morsi-led Egypt) of being political bodies rather than independent ones and of abandoning the mantle—and so the protection—of independence, and tempt them to attack the courts. It also points to the limitations of insurance theory from an ex post, rather than an ex ante, perspective. The judges appointed by the first government may provide political insurance to its members once they are voted out of office by vetoing policies of the second, but they may also be viewed by the second government as political opponents in robes lacking a democratic mandate to obstruct. Of course, in addition to this perception problem, there may also be a more straightforward "reality" problem in that political appointment processes more easily permit governments to fill court vacancies with their supporters and thereby undermine judicial independence directly. To be sure, these same pressures exist wherever there is strong-form judicial review. It is almost always the controversial constitutional issues, rather than the non-constitutional ones, that trigger calls for proactive measures against the courts. In the United States, it was the striking down of the New Deal legislation that triggered President Franklin D. Roosevelt's "court-packing plan." Newspapers routinely print the names of federal judges followed by that of the President who nominated them as an assumed default predictor of political position; "independent" judges are those who vote against the party line. But these pressures are far more dangerous in fragile new democracies where the rule of law and the independence of the judiciary have far shallower roots, and the political costs of direct attack are likely to be lower.112 Here, compliance with court orders cannot ordinarily simply be taken for granted. With respect to impartiality, many (mostly civil law) countries attempt to contain the damage by either or both having (1) a centralized constitutional court, which leaves ordinary judges "untainted" by judicial review, and (2) supermajority requirements for political appointment of its judges, which may reduce their partisanship.113 But containment is not necessarily a solution: Hungary had both but was not spared.

A strong judiciary just as likely to be coopted by the regime-modeling can't solve for any countries that weren't democratic in the first place

Varol 15 [Ozan. O, Associate professor of law Lewis and Clark Law School ; 05/15; "Stealth Authoritarianism"; Lexis; 07/05/15; jac]

A. Judicial Review Judicial review is ordinarily assumed to be a check on the political branches of government. In this Subpart, I discuss three ways in which judicial review may function as a tool of stealth authoritarianism. Specifically, I analyze how judicial review may serve as a mechanism for consolidating power, bolstering the democratic credentials of the incumbent regime, and allowing the incumbents to avoid political accountability for controversial policies. 1. Consolidating Power Tom Ginsburg and Ran Hirschl have set forth separate theories on why political elites may choose to create and empower autonomous courts. According to Professor Ginsburg's "insurance model" of judicial review, if politicians drafting a new constitution "foresee themselves losing [power] in postconstitutional elections, they may ... entrench judicial review [in the constitution] as a form of political insurance." n51 Even if the constitutional drafters lose the elections, another avenue - judicial review - remains available to challenge legislation passed by their opponents. n52 Likewise, Professor Hirschl has argued that threatened political elites transfer power from political institutions to the judiciary to preserve their political hegemony and entrust their policy preferences to unelected judges who share the elites' ideology and shield the elites' policies from the vagaries of domestic politics. n53 **Even if the political elites lose power, unelected judges continue to enforce the elites' policy preferences via judicial fiat**. n54 Unlike the elites in Ginsburg's and Hirschl's models who empower a judiciary because they may lose power, my focus is on elites who desire to retain power indefinitely. At first blush, the creation of an autonomous judiciary may appear inconsistent with that quest. After all, the judiciary, [*1688] empowered with judicial review, can strike down anti-democratic legislation and expand individual rights and liberties related to the democratic process, thereby leveling, at least to some extent, the unlevel electoral playing field that may be crafted by the incumbents. That account, however, underestimates the extent to which judicial institutions can be structured to generate substantive outcomes that favor regime interests. The structure of the courts, the appointments process, and the rules of access to judicial review can all be adjusted to further the interests of the incumbents. The creation of the Turkish Constitutional Court is illustrative. The 15-member court was created following a military coup in 1960. n55 The military leaders structured the appointments process to the Court to ensure, to the extent possible, the

appointment of justices favorable to their interests. n56 According to the Constitution, which was drafted under military tutelage: Eight of the fifteen permanent members would be selected by other appellate courts (Council of State, High Court, and Court of Accounts), three by the Parliament, two by the Senate, and two by the President of the Republic. The power to select a majority of the members on the Constitutional Court was thus given to the unelected judiciary, whose members were more likely to be aligned with the military's policy preferences than were elected political actors. n57 To be sure, judicial autonomy can be a double-edged sword for the incumbent regime. Judiciaries may disappoint the leaders that established them or appointed their members. Judicial institutions can turn the relative autonomy provided to them against the political elites and challenge their policies and shed light on stealth authoritarian practices. In addition, any regime attempts to penalize the judiciary for unfavorable rulings may backfire by damaging regime credibility. For example, in Pakistan, Chief Justice Muhammad Chaudhry publicly resisted General Musharraf's attempts to remove him from office in 2007, damaging Musharraf's credibility and legitimacy. n58 Likewise, the impeachment of Peruvian Constitutional Court judges for attempting to limit President Fujimori's third term in office sparked major protests and drew the opprobrium of the international community. n59 [*1689] Although occasional judicial resistance remains a real possibility, consistent counter-establishment jurisprudence is unlikely. n60 Judges are strategic actors. They do not operate in a vacuum. The judiciary is influenced by the political environment in which it operates, and judges are unlikely to engage in a sustained resistance effort against powerful incumbents. As Professor Hirschl explains, "When contemplating highly charged political questions, constitutional courts - as a result of a combination of their members' ideological preferences and their own astute strategic behavior - tend to adhere closely to prevalent worldviews, national meta-narratives, and the interests of influential elites when dealing with political mega-questions." n61 The judiciary, whose structure may have been established or shaped by the incumbents or many of whose members may have been appointed by them, may thus turn out to be a reliable partner on questions of particular importance in protecting the political status quo. n62 For example, Vladimir Putin deployed judicial review to help consolidate his power in Russia. For the purported purpose of creating a unified political space, he authorized federal courts to nullify regional laws inconsistent with the federal constitution. n63 That authorization appears, at least on its surface, to be nothing more than a neutral, straightforward assertion of vertical federal supremacy and is consistent with the models in other federal states, including the United States. According to Putin, the new federal judicial authority to strike down regional laws would thus merely reemphasize "Russia's commitment to "legality and the state.'" n64 The Russian federal courts deployed their newfound power with zeal and struck down thousands of regional laws. n65 The elimination of those regional laws allowed Putin to centralize and consolidate his power and reduce the vertical checks on his power by regional governments. n66 Putin also enlisted support from the Russian Constitutional Court and its chairman, Valery Zorkin. n67 Once "described as "Russia's answer to Chief Justice John Marshall,'" Zorkin had unsuccessfully strived to preserve [*1690] constitutional legality during the strife between Boris Yeltsin and the Russian Parliament. n68 The Zorkin court struck down as unconstitutional Yeltsin's 1993 decree disbanding the Parliament, and Zorkin himself openly criticized Yeltsin for his disregard of the rule of law. n69 After assuming the presidency, Putin commended the Zorkin court's decision against Yeltsin, stating that the court had legitimately fought back against "politicians who appeal to political expediency rather than the standards of law." n70 The current Russian Constitutional Court, chaired by Zorkin, paid back Putin's commendation in spades. Recent Constitutional Court opinions upheld pro-government legislation, such as a law that gives the President the authority to appoint regional governors, on the basis that Russia needs a strong executive amidst a fragile transition process to democracy. n71 To gain their acquiescence, incumbents may also strategically reward judges with increased authorities, especially in areas of little importance to political control. For example, Zorkin's support for the Putin government has regained the court many of its former authorities. n72 The same errant executive power against which Zorkin rallied in the 1990s became more palatable once the same power was exercised to bolster the authorities of Zorkin and his court. n73 Judicial review may also be established to maintain control over the state's often unwieldy administrative hierarchy and mitigate principal-agent problems that arise when the lower-level administrative agents fail to act in the best interests of the principal, the incumbent officeholders. n74 Avenues for judicial relief may permit challenges to the actions of bureaucratic subordinates, n75 which serve two purposes. First, judicial review of administrative actions provides a legitimizing function, especially in states where corruption or abuse of state resources may be commonplace. Judicial review provides the appearance, if not the reality, of some level of relatively neutral checks on errant administrative practices. Second, it also allows regime elites to monitor the actions of subordinate administrative agents and discipline them where necessary, n76 thereby mitigating the principal-agent problem. [*1691] A relatively autonomous judiciary may thus be helpful in consolidating authority and retaining political power. A judiciary so empowered can safeguard the interests of the authoritarian elites even where the elites are deposed. For example, the Mubarak appointees in Egypt's courts have rendered a number of decisions in the

post-Mubarak era - such as a recent decision that bans the Muslim Brotherhood - that appear to promote political configurations that existed during the Mubarak autocracy. n77 2. Bolstering Democratic Credentials In addition to enlisting the courts in order to consolidate control, judicial review can also be used to bolster democratic credentials at home and abroad. Judicial review portrays the constitutional framework to the world as one imbued with checks and balances on arbitrary rule, n78 especially where the judiciary enjoys a better reputation than the political branches as a relatively neutral, impartial body. That, in turn, serves to promote the regime's image before domestic and global audiences and allows the regime to cite independent judicial review to rebut any criticism regarding anti-democratic practices. n79 For the judiciary to serve that legitimizing function, it must enjoy relative autonomy from the political branches and must, at least occasionally, act against the wishes of the incumbent regime. n80 Incumbents might thus tolerate, or perhaps even welcome, adverse decisions by the judiciary **to maintain the veneer of checks and balances**, so long as the judiciary does not pose a real threat to central areas of political control. For example, under Mubarak, the Egyptian judiciary enjoyed a large measure of judicial independence until the early 2000s. n81 The court enjoyed structural autonomy from the political branches and also selectively wielded the power of judicial review to expand and protect individual liberties. n82 The court also found electoral fraud in hundreds of elections and required judicial supervision of [*1692] the 2000 elections. n83 Remarkably, the Mubarak government complied with these decisions. n84 At the same time, however, it largely refrained from accepting any challenges to emergency laws or the trial of civilians in military tribunals, which were the primary tools of authoritarian control in Egypt. n85 Likewise, the same Zorkin court that upheld Putin's reform agenda, as discussed above, also accepted a number of constitutional challenges to criminal laws and surveillance laws that target members of the opposition. n86 The legitimacy provided by autonomous courts may also be helpful in attracting foreign investment and trade. n87 Judicial review can provide legal assurances to foreign investors by protecting property rights and ensuring stability in the economic sphere, especially in regimes with some level of government corruption. n88 For that reason, the World Trade Organization ("WTO") requires judicial supervision in trade-related areas, the establishment of which can convince a skeptical international community to invest in a state, despite any anti-democratic practices. n89 For example, the Egyptian Constitutional Court was provided interpretative power over the constitution in part to attract foreign investment and assure international investors that the court would deter any changes to a free market economy. n90 3. Avoiding Accountability Judicial review can also be established to avoid accountability by delegating controversial questions to the judiciary. n91 By entrenching its policy preferences in a relatively autonomous judiciary, the regime can allow the judiciary to protect its interests, authorize judges to issue controversial decisions that political elites approve but cannot publicly champion, and insulate themselves from political accountability in the process. n92 For [*1693] example, in a series of controversial decisions, the Egyptian Constitutional Court overturned socialist policies to the alacrity of the ruling elite, who avoided the political backlash that would have resulted from the enactment of the contentious reforms through the political process. n93

No Africa Democracy

No African Democratization-2008 global recession and growing influence of China as a regional power

Schmitter 15 [Philippe, Emeritus Professor of the Department of Political and Social Sciences at the European University Institute; Crisis and Transition, But Not Decline; 01/15; Journal of Democracy Volume 26, Number 1, January 2015; Project Muse; 07/05/15; jac]

Global Influences As the prodemocracy impetus that emerged from post–Cold War international developments has receded **in recent years,** so too has the external aid that it generated for African prodemocracy movements and process**es (local Transparency International chapters, domestic election-watchdog organizations, and other public-accountability advocacy groups).** This unfavorable trend is being aggravated by a number of recent global developments. Key among them is the 2008 global financial crisis. The resulting squeeze on donor-country budgets has induced radical cuts in aid that is considered

"nonessential" (that is, not directly related to a donor country's security or geostrategic interests). **Likewise,** most Western aid agencies have been moving to cut personnel, management, and other costs. In practice, this has accelerated a transfer of the grant-management load from donor-country aid agencies such as USAID and the United Kingdom's Department for International Development (DFID) to private firms and international NGOs with large grant-management bureaucracies. The global financial crisis has also spurred the trend of multidonor "basket funding" for African civil society groups and think tanks. Such arrangements typically require grantee organizations to work together on specific sets of donor-determined development priorities, ranging from transparency and accountability to poverty reduction, social protection, and gender. **Such arrangements can be a mixed blessing. On the one hand, they provide sustained funding to qualifying NGOs. On the other hand,** they consume considerable administrative resources since stand-alone domestic agencies must often be created to set national program **[End Page 108]** priorities and manage (under the supervision of an international accounting firm) the funds. In addition, they foster "forced marriages" among NGOs and tend to lead to collective-action and free-loading challenges. **The mammoth Strengthening Transparency, Accountability and Responsiveness in Ghana (STAR-Ghana) program is one example of such an arrangement. STAR-Ghana is funded by DFID, DANIDA (Denmark's development agency), the EU, and USAID, and is now the leading actor in external support for Ghanaian think tanks and civic-advocacy groups. Another example is Uganda's Democratic Governance Facility, funded by Austria, Denmark, Ireland, the Netherlands, Norway, the United Kingdom, and the EU.17** Another consequence of the 2008 financial crisis has been the return of the World Bank and IMF as the principal institutions through which the G-7 states channel resources for African development. This has unfortunate consequences for the African democracy and governance agenda, since such multilateral development bodies tend to deal exclusively with governments, thereby foreclosing the involvement of national legislatures and domestic nonstate actors. **The emergence of China and other nontraditional partners as key players on the global stage and as competitors for African commodities, markets, and loyalty is also undermining Africa's democratic prospects, as countering the growing influence of China, India, Brazil, and others has become a central goal of Western policy.** The toxic mix of the new "scramble for Africa" among the world's big powers with Western security imperatives and antiterrorism efforts has, in turn, begun to erode the liberal political values that have guided Western foreign policy since the end of the Cold War. **Faced with the prospect of losing the clout and influence they have traditionally enjoyed in Africa and with the need to counter terrorism,** Western powers are readjusting their established governance benchmarks in order to stay competitive in the contest for African energy, markets, and other geostrategic advantages, even where incumbent African governments are autocratic and nonreforming. **Western donors demonstrate an increasing reluctance to press democratic governance reforms in misgoverned but oil-rich states such as Angola, Chad, Equatorial Guinea, Nigeria, Sudan, and South Sudan. Unlike in the 2000s, when the Highly Indebted Poor Countries Initiative and U.S. Millennium Challenge Account were rolled out and direct budget support for selected African governments was the norm, democratic reforms now count for less in the deployment of Western bilateral and multilateral assistance and other soft-power instruments. Worse still,** countries benefiting from new U.S. programs such as Power Africa and the Young Africans Leadership Initiative include those with records of poor governance and abysmal management of their economies (Ethiopia, for example, is one of Power Africa's six focus countries). The global extractive-commodity boom has also had a negative impact [End Page 109] on democratization in Africa. First of all, it has increased the continent's appeal to China and other fast-growing non-Western economies that care little about accountable governance in their client states. The vigorous courtship by these new patrons is providing African governments with alternative non-Western markets, trade partners, and sources of military and development aid. With their national treasuries now flush with revenue from oil, gas, and other extractive commodities, resource-rich African countries now depend less on foreign **(especially Western)** aid, with all its conditions and demands for accountability. The governments of these resource-rich African countries are also less reliant on taxation of their citizens, which typically generates bottom-up demands for accountable governance.

Alt Cause

Can't solve democracy --- concentrated wealth and power

Ringen 14 [Stein, emeritus professor at Oxford University; 03/28/14; "Is American Democracy headed to extinction?"; http://www.washingtonpost.com/opinions/is-american-democracy-headed-to-extinction/2014/03/28/f8084fbe-aa34-11e3-b61e-8051b8b52d06_story.html; 07/06/15; jac]

Behind dysfunctional government, is democracy itself in decay? It took only 250 years for democracy to disintegrate in ancient Athens. A wholly new form of government was invented there in which the people ruled themselves. That constitution proved marvelously effective. Athens grew in wealth and capacity, fought off the Persian challenge, established itself as the leading power in the known world and produced treasures of architecture, philosophy and art that bedazzle to this day. But when privilege, corruption and mismanagement took hold, the lights went out. It would be 2,000 years before democracy was reinvented in the U.S. Constitution, now as representative democracy. Again, government by popular consent proved ingenious. The United States grew into the world's leading power — economically, culturally and militarily. In Europe, democracies overtook authoritarian monarchies and fascist and communist dictatorships. In recent decades, democracy's spread has made the remaining autocracies a minority. The second democratic experiment is approaching 250 years. It has been as successful as the first. But the lesson from Athens is that success does not breed success. Democracy is not the default. It is a form of government that must be created with determination and that will disintegrate unless nurtured. In the United States and Britain, democracy is disintegrating when it should be nurtured by leadership. If the lights go out in the model democracies, they will not stay on elsewhere. It's not enough for governments to simply be democratic; they must deliver or decay. In Britain, government is increasingly ineffectual. The constitutional scholar Anthony King has described it as declining from "order" to "mess" in less than 30 years. During 10 years of New Labor rule, that proposition was tested and confirmed. In 1997 a new government was voted in with a mandate and determination to turn the tide on Thatcherite inequality. It was given all the parliamentary power a democratic government could dream of and benefited from 10 years of steady economic growth. But a strong government was defeated by a weak system of governance. It delivered nothing of what it intended and left Britain more unequal than where the previous regime had left off. The next government, a center-right coalition, has proved itself equally unable. It was supposed to repair damage from the economic crisis but has responded with inaction on the causes of crisis, in a monopolistic -financial-services sector, and with a brand of austerity that protects the privileged at the expense of the poor. Again, what has transpired is inability rather than ill will. Both these governments came up against concentrations of economic power that have become politically unmanageable. Meanwhile, the health of the U.S. system is even worse than it looks. The three branches of government are designed to deliver through checks and balances. But balance has become gridlock, and the United States is not getting the governance it needs. Here, the link between inequality and inability is on sharp display. **Power has been sucked out of the constitutional system and usurped by actors such as PACs, think tanks, media and lobbying organizations.** In the age of mega-expensive politics, candidates depend on sponsors to fund permanent campaigns. When money is allowed to transgress from markets, where it belongs, to politics, where it has no business, those who control it gain power to decide who the successful candidates will be — those they wish to fund — and what they can decide once they are in office. Rich supporters get two swings at influencing politics, one as voters and one as donors. Others have only the vote, a power that diminishes as political inflation deflates its value. It is a misunderstanding to think that candidates chase money. It is money that chases candidates. In Athens, democracy disintegrated when the rich grew super-rich, refused to play by the rules and undermined the established system of government. That is the point that the United States and Britain have reached. Nearly a century ago, when capitalist democracy was in a crisis not unlike the present one, Supreme Court Justice Louis Brandeis warned: "We may have democracy, or we may have wealth concentrated in the hands of a few, but we can't have both." Democracy weathered that storm for two reasons: It is not inequality as such that destroys democracy but the more recent combination of inequality and transgression. Furthermore, democracy was then able to learn from crisis. The New Deal tempered economic free-for-all, primarily through the 1933 Banking Act, and gave the smallfolk new social securities. The lesson from Athens is that success breeds complacency. People, notably those in privilege, stopped caring, and democracy was neglected. Six years after the global economic crisis, the signs from the model democracies are that those in privilege are unable to care and that our systems are unable to learn. The crisis started in out-of-control financial services industries in the United States and Britain, but control has not been reasserted. Economic inequality has followed through to political inequality, and democratic government is bereft of power and capacity. Brandeis was not wrong; he was ahead of his time.

USAID cuts prevent US from effectively promoting democracy

Carothers 14 [Thomas, vice president for studies at the Carnegie Endowment for International Peace; 12/22/14; "Why is the United States shortchanging its commitment to democracy"; http://www.washingtonpost.com/opinions/falling-usaid-spending-shows-a-lack-of-commitment-to-fostering-democracy/2014/12/22/86b72d58-89f4-11e4-a085-34e9b9f09a58_story.html; 07/06/15; jac]

U.S. assistance to advance democracy worldwide is in decline. Such spending has shrunk by 28 percent **during Barack Obama's presidency and is now less than $2 billion per year.** The decline has been especially severe at the U.S. A**gency for I**nternational D**evelopment,** which traditionally funds the bulk of U.S. democracy assistance and established itself in the 1990s as the largest source of such aid worldwide. According to data provided by the agency, USAID spending to foster democracy, human rights and accountable governance abroad has fallen by 38 percent since 2009. **The drop-off affects almost every region to which such aid is directed.** It has been largest in the Middle East — a startling 72 percent cut that came just as much of the Arab world attempted a historic shift toward democracy. In Africa, a 43 percent decline has left a paltry $80 million for democracy work for the entire continent **outside of Liberia and South Sudan. Overall,** the number of countries where USAID operates dedicated democracy programs has fallen from 91 to 63. **To grasp just how unimpressive the U.S. commitment to aiding democracy abroad has become**, consider this: Leaving aside Iraq, Afghanistan and Pakistan, USAID spending on democracy, rights and governance in fiscal 2014 — $860 million — totaled less than what just one U.S. citizen, George Soros, spends annually to foster open society globally **(full disclosure: I chair an advisory board of one program of the Soros foundations). The main aid agency of the country that prides itself on being an unmatched force for democracy cannot even match the financial commitment of one of its citizens? Of course aid is not the only means by which the United States seeks to foster democracy in the world. Skillful diplomacy — resolving electoral standoffs, bolstering promising pro-democratic leaders and punishing toxic undemocratic ones — can accomplish much. But democracy aid plays a distinctive role**. It can be the glue that helps cement into place the foundational elements — such as effective legal institutions, representative parliaments, pluralistic political parties, civil society organizations and independent media — necessary to sustain democratic breakthroughs. Shortchanging the aid side of democracy support ensures longer-term failures. **Why this striking reduction in democracy aid?** It is not a product of a broader contraction of U.S. foreign aid spending, **which remains robust overall. Rather,** it is a policy choice, reflecting both skepticism about the relative importance of democracy work by senior U.S. aid officials and, more generally, the muted emphasis on democracy-building by the Obama foreign policy team. **Some might see the decline in U.S. democracy aid as an understandable response to the more unstable and conflict-prone world confronting policymakers. U.S. foreign policy in such a convulsive climate, the thinking goes, should emphasize stability above all — democracy will have to wait. A tempting idea, perhaps, but a dangerously wrong one. With the Middle East wracked by multiple civil wars,** falling back on the old habit of relying on authoritarian friends there to help manage security challenges to the United States may look like an appealing option. But it was precisely the festering sociopolitical and governance decay under stagnant dictatorial Arab governments that produced the conditions underlying today's civil conflicts and extremism. In Ukraine, the persistent failure over more than two decades to establish the rule of law and consolidate an accountable democratic system has led to the country's periodic political meltdowns, endemic corruption and vulnerability to Russian meddling. **The key to resolving the security sinkhole that Ukraine has become for the West is finally taking seriously those institution-building goals. In West Africa, dec**ades of mercurial dictators scornful of basic institution-building produced a legacy of crippling state weakness that left the region poorly prepared to deal with the Ebola crisis. **No emergency health delivery measures,** no matter how heroic in the short term, will solve the deeper governance problem. **Supporting democracy, human rights and better governance more substantially and effectively will not produce instant solutions to these and other crises. But** patiently and seriously pursued, such aid can be a crucial part of the longer-term solutions we seek. Troubled though our democracy can seem at home, our society still enjoys its unique stability and security thanks to its pluralistic, open political system rooted

in democratic accountability and the rule of law. **That formula remains the right one for our pursuit of stability and security abroad.**

Democracy Stable

No net democratic backsliding --- democracy is overall resilient

Levitsky and Way 15 [Steven, Professor of Government at Harvard University; Lucan, Associate Professor of Political Science at the University of Toronto; January, 15; "The Myth of Democratic Recession"; Project Muse; 07/05/15; jac]

The Empirical Record A look at **the empirical record suggests little or no evidence of a democratic recession**. We compared the scores of four prominent global democracy indices: **Freedom House, Polity, the Economist Intelligence Unit, and the Bertelsmann democracy index.11 Table 1 shows each index's mean level of democracy (on a normalized scale from 0 to 1)** from 2000 to 2013. All four indices' mean democracy scores remained the same or increased during this period. According to leading democracy indices such as Freedom House and Polity, then, the world is more democratic today than it was in 2000 (and considerably more democratic than it was in 1990 or any year prior to that). **Even if we take the mid-2000s—often cited as the beginning of the democratic recession—as our starting point, three of the four indices show either no change or a slight improvement.12 Only Freedom House shows a decline between 2005 and 2013, and that decline (from .63 to .62) is extremely modest. If we examine the overall number of democracies in the world, the data similarly suggest stability rather than decline. Table 2 shows the four indices' scores for the absolute number of democracies as well as the percentage of the world's regimes that were fully democratic between 2000 and 2013. Again, Freedom House and Polity show an increase in the number of democracies since 2000. Only if we look at the 2005–13 period do we see any decline, and that decline is very modest. Freedom House shows a drop-off of one democracy between 2005 and 2013. The pattern is similar with respect to the percentage of democracies in the world: Both Freedom House and Polity show a decline of one percentage point between 2005 and 2013. As an additional measure, we examined all cases of significant regime change—defined as countries whose Freedom House scores increased or decreased by three points or more—between 1999 and 2013. [End Page 46] Whereas 23 countries experienced a significant improvement in their Freedom House score between 1999 and 2013, only eight experienced a significant decline. Even between 2005 and 2013, the number of significantly improved cases (10) exceeded the number of significant decliners (8). Moreover,** most of the significant declines occurred not in democracies but in regimes that were already authoritarian, such as the Central African Republic, the Gambia, Guinea-Bissau, and Jordan. **Percentage and Absolute Number of Democracies According to Four Surveys Click for larger view Table 2. Percentage and Absolute Number of Democracies According to Four Surveys Indeed,** what is most striking about the 2000–13 period is **how few democracies actually broke down**. **Seven countries that Freedom House classified as Free in the late 1990s are no longer classified as Free today: Bolivia, Ecuador, Honduras, Mali, the Philippines, Thailand, and Venezuela.13 Of these seven cases, the scores for Ecuador, Bolivia, and the Philippines declined only marginally, and all three regimes remained borderline democracies in 2014 (indeed, the Philippines has redemocratized; Freedom House's decision to designate it as Partly Free appears to reflect problems of corruption, not violations of democratic rules of the game). Honduras and Mali suffered military coups in 2009 and 2012, respectively, but both authoritarian turns were subsequently reversed.14 That leaves Thailand and Venezuela as the only unambiguously democratic regimes that collapsed and remained authoritarian in 2014. The list of breakdowns could be expanded to include Nicaragua and Sri Lanka, two near-democracies (classified as Partly Free by Freedom House in the late 1990s) that deteriorated into authoritarianism in the 2000s. One might also add Hungary (still classified as Free by Freedom House in 2013), although it remains, at worst, a borderline case. Turkey, which is sometimes labeled a case of democratic breakdown, underwent a transition from one hybrid regime to another. Although the AKP government has shown clear authoritarian tendencies, the regime that preceded it—marked by vast military influence, restrictions on Kurdish and Islamist parties, and substantial media repression—was never democratic (in fact, Turkey's Freedom House score in 2013 was better than it was prior to the AKP's first election victory in 2002). [End Page 47]** Even if we categorized all these cases as democratic breakdowns, despite the fact that most of them are borderline cases **(Bolivia, Ecuador, Hungary, the Philippines)** or cases in which authoritarian turns were subsequently reversed **(Honduras, Mali, the Philippines),** **the number of breakdowns is matched by cases of democratic advance**. Eight countries—including some very important ones—entered Freedom House's Free category in the 2000s and remain there today: Brazil, Croatia, Ghana, Indonesia, Mexico, Peru, Senegal, and Serbia.1**5 This list does not include countries, such as Chile, that were already classified as Free but experienced major democratic advances (in the Chilean case, the establishment of full civilian control over the military). Nor does it include countries such as Nepal, Pakistan, and Tunisia, which became considerably more democratic after the mid-2000s but remained in Freedom House's Partly Free category. The big picture over the last decade, then, is one of net stability. Although it is certainly possible to identify cases of democratic backsliding, the existence of an equal or greater number of democratic advances belies any notion of a global democratic "meltdown." As Tables 1 and 2 make clear, the net change since the mid-2000s is essentially zero. Thailand, Venezuela, and perhaps Hungary are suffering democratic recessions. But** claims of a worldwide democratic downturn lack empirical foundation.

No democratic recession-their claims are based on false understandings of geopolitics

Levitsky and Way 15 [Steven, Professor of Government at Harvard University; Lucan, Associate Professor of Political Science at the University of Toronto; January, 15; "The Myth of Democratic Recession"; Project Muse; 07/05/15; jac]

A near consensus has emerged that the world has fallen into a "democratic recession." Leading observers and democracy advocates characterize the last decade as a period of democratic "rollback," "erosion," or "decline,"1 in which new democracies have fallen victim to a "powerful authoritarian undertow."2 In an article entitled "The Great Democracy Meltdown," for example, Joshua Kurlantzick claims that global freedom has "plummeted."3 Another observer suggests that "we might in fact be seeing the beginning of the end for democracy."4 The gloomy mood is made manifest in Freedom House's yearly reports in the Journal of Democracy. Summarizing Freedom House's annual survey of freedom, Arch Puddington warned in 2006 of a growing "pushback against democracy,"5 characterized 2007 and 2008 as years of democratic "decline,"6 claimed that the democratic erosion had "accelerated" in 2009,7 and described global democracy as "under duress" in 2010.8 Following a brief moment of optimism during the Arab Spring, Freedom House warned of a democratic "retreat" in 2012 and an "authoritarian resurgence" in 2013.9 This is a gloomy picture **indeed.** It is not, however, an accurate one. There is little evidence that the democratic sky is falling or (depending on your choice of fable) that the wolf of authoritarian resurgence has arrived.**10** The state of global democracy has remained stable over the last decade, and it has improved markedly relative to the 1990s. Perceptions of a democratic recession**, we argue,** are rooted in a flawed understanding of the events of the early 1990s. The excessive optimism and voluntarism that pervaded analyses of early post–Cold War transitions generated unrealistic expectations that**, when not realized,** gave **[End Page 45]** rise to exaggerated pessimism and gloom. In fact, despite increasingly unfavorable global conditions in recent years, new democracies remain strikingly robust.

No backsliding-they conflate autocratic decline with democratic transition

Levitsky and Way 15 [Steven, Professor of Government at Harvard University; Lucan, Associate Professor of Political Science at the University of Toronto; January, 15; "The Myth of Democratic Recession"; Project Muse; 07/05/15; jac]

The Illusion of Backsliding Why do many observers perceive there to be a democratic recession when the evidence for such a recession is so thin? The global regime landscape looks darkened today because observers viewed the events of the initial post–Cold War period through rose-tinted glasses. During the early 1990s, many observers slipped into an excessively optimistic—even teleological—mindset in which virtually all forms of authoritarian crisis or regime instability were conflated with democratization.16 The excessive optimism of the early 1990s was shaped, in part, by the extraordinarily successful democratizations of the early "third wave" period (1974–89). In Southern Europe (Greece, Spain, Portugal), South America (Argentina, Brazil, Chile, Uruguay), and Central Europe (Bulgaria, Czechoslovakia, Hungary, Poland), authoritarian crises consistently led to democratization. Initial authoritarian openings almost invariably escaped the control of regime elites and evolved into full-scale transitions. And when authoritarian regimes fell, they were almost invariably replaced by democracies. In retrospect, it is clear that these early third-wave transitions differed markedly from later transitions in Africa and the former Soviet Union. Transitions in Southern Europe, South America, and Central Europe occurred under conditions that favored successful democratization, including [End Page 48] relatively high levels of development, robust civic and opposition movements, functioning states, and extensive ties to the West. Yet observers generalized from these cases, drawing at least two false lessons that powerfully shaped the way that they interpreted the transitions of the 1990s.17 First, observers began to conflate authoritarian breakdown with democratization. The collapse of a dictatorship may yield diverse outcomes, ranging from democracy (post-1989 Poland) to the establishment of a new authoritarian regime (post-1979 Iran) to state collapse and anarchy (post-2011 Libya). Historically, in fact, most authoritarian breakdowns have not brought democratization.18 Thus, although the collapse of a dictatorship creates opportunities for democratization, there are no theoretical or empirical bases for assuming such an outcome. Yet that is exactly what many observers did in the 1990s. Wherever dictatorships fell and opposition groups ascended to power, transitions were described as democratization and subsequent regimes were labeled "new democracies." Second, all authoritarian openings were assumed to mark the onset of a transition that would eventually lead to democracy. Thus even limited openings aimed at deflecting international pressure were expected to escape the control of autocrats and take on a life of their own, as had occurred in countries such as Brazil, Chile, Hungary, Poland, and Spain. Such expectations ignored the fact that autocrats may (and often do) undertake "window-dressing" reforms aimed at defusing short-term crises, and then use their continued control of the army, police, and major revenue sources to reconsolidate power once the crisis has passed. The tendency to conflate authoritarian crisis and democratic transition was powerfully reinforced by the demise of communism. The fall of the Berlin Wall and the collapse of the Soviet Union generated a widespread perception that liberal democracy was the "only

game in town." Because all roads seemed to lead to democracy, observers began to interpret all regime crises as incipient democratic transitions. This excessively optimistic mindset led observers to mischaracterize many post–Cold War regime crises. Although the 1990s are widely viewed as a decade of unprecedented democratization, they are more accurately described as a period of unprecedented authoritarian crisis. The end of the Cold War posed an enormous challenge to autocrats. Both Soviet client states and Western-backed anticommunist dictatorships lost external support. Western democracies emerged as the dominant center of military and economic power, and the United States and the European Union began to promote democracy to an unprecedented degree. At the same time, deep economic crises deprived autocrats of the resources needed to sustain themselves in power. States were effectively bankrupted throughout much of Africa and the former Soviet Union, leaving governments unable to pay their soldiers, police, and bureaucrats. In many cases (Albania, Benin, Cambodia, Georgia, Haiti, Liberia, Madagascar, Tajikistan, Zaire), states either collapsed or were brought to the brink of collapse. [End Page 49] Conditions in the early 1990s thus amounted to a virtual "perfect storm" for dictatorships. Throughout Africa, the former Soviet Union, and elsewhere, autocrats confronted severe fiscal crises, weak or collapsing states, and intense international pressure for multiparty elections. Lacking resources, external allies, or reliable coercive institutions, many of these autocracies fell into severe crisis. The result was widespread "pluralism by default,"19 in which competition—and even turnover—occurred because governments lacked even rudimentary means to suppress opposition challenges. Autocrats fell from power in Albania, Belarus, Benin, the Central African Republic, Congo-Brazzaville, Georgia, Madagascar, Malawi, Mali, Moldova, Niger, Ukraine, and Zaire not because they faced robust democracy movements, but because they were bankrupt, their states were in disarray, and in many cases they had lost control of the coercive apparatus. Likewise, governments in Cambodia, Cameroon, Gabon, Kyrgyzstan, Mozambique, Russia, and elsewhere tolerated competitive multiparty elections because they lacked even minimal capacity to resist them. These moments of authoritarian weakness and instability were widely equated with democratization. Thus the ascent of noncommunists to power in Russia and other post-Soviet states, as well as the fall of autocrats in Madagascar, Malawi, Niger, Zambia, and other African states, were frequently characterized as democratic transitions. Similarly, the holding of multiparty elections in Angola, Cambodia, Cameroon, Gabon, Guinea-Bissau, Kenya, Mozambique, and Tanzania was said to mark the onset of democratic transitions, however "flawed" or "prolonged." Nearly all these regimes were characterized as "new democracies" or, at minimum, some diminished subtype of democracy (e.g., electoral, illiberal, unconsolidated).20 This optimism was shared by Freedom House, which upgraded autocracies in Gabon, Jordan, Kazakhstan, Uzbekistan, and even totalitarian Turkmenistan to Partly Free status in the early 1990s. Such evaluations were largely misguided. Many of the authoritarian crises of the early and mid-1990s did not constitute meaningful movement toward democracy. Numerous autocracies broke down because states either collapsed (e.g., Azerbaijan, Georgia, Sierra Leone, Tajikistan, Zaire) or weakened dramatically (e.g., Belarus, Madagascar, Malawi, Ukraine). State failure brings violence and instability; it almost never brings democratization. Many other regime "openings" were, in reality, moments of extraordinary incumbent weakness, driven not by [End Page 50] societal pressure for democracy but rather by severe fiscal crisis, state weakness, or external vulnerability. For example, Russian politics were competitive in the early 1990s not because Boris Yeltsin presided over a democratic transition but rather because he presided over a state in disarray, which left him unable to control his own security forces, bureaucracy, and regional governments. Likewise, Cambodia's competitive 1993 elections were a product of the virtual state collapse that followed Vietnamese and Soviet withdrawal. Bankruptcy and international isolation compelled the Hun Sen government to cede control of the electoral process to the UN. Similarly, autocrats in Cameroon and Gabon, facing severe fiscal crises, riots, and the specter of international isolation, were compelled to hold unusually competitive elections in the early 1990s.

True democracy is stable --- their examples of vulnerable democracies are really just weak authoritarian regimes

Levitsky and Way 15 [Steven, Professor of Government at Harvard University; Lucan, Associate Professor of Political Science at the University of Toronto; January, 15; "The Myth of Democratic Recession"; Project Muse; 07/05/15; jac]

For observers who viewed these and other cases of pluralism by default as democratic transitions, the developments of the 2000s were bound to be disappointing. The "perfect storm" conditions of the initial post–Cold War period eventually passed. For one, the economies of most developing countries improved during the 1990s and, thanks to soaring commodity prices, many of them boomed in the 2000s. Consequently, governments that a decade earlier had lacked funds to maintain patronage networks or even pay soldiers and bureaucrats were now flush with resources—helping to restore a minimum of state capacity. Second, autocrats adapted to the post–Cold War environment. Rulers whose ignorance of how to survive in a context of multiparty elections nearly cost them power in the early 1990s eventually learned how to manage competitive elections, coopt rivals and independent media, control the private sector, and starve civic and opposition groups of resources without resorting to the kind of naked repression or fraud that

could trigger a domestic legitimacy crisis and international isolation.21 Third, the geopolitical environment changed. The extraordinary influence of the United States and the EU, which had peaked in the immediate post–Cold War period, declined in the 2000s. At the same time, the emerging influence of China, Russia, and other regional powers, together with soaring oil prices, created more space for autocrats in Asia, the former Soviet Union, and Africa. By the 2000s, economic recovery, state-rebuilding, and a more permissive international environment had reduced the level of authoritarian weakness and instability that had characterized much of Africa, the former Soviet Union, and Asia during the initial post–Cold War period. Less vulnerable to international pressure, and with greater revenue and more effective states at their disposal, autocracies that had been highly vulnerable in the 1990s were, in many cases, able to reconsolidate power. In Cambodia, for example, improved finances and fading international pressure enabled the Hun Sen government to reestablish authoritarian dominance. Without the extreme fiscal and external constraints of the early 1990s, the ruling Cambodian People's Party was able to repress rivals and rig elections [End Page 51] with greater impunity. Likewise, Presidents Paul Biya in Cameroon and Omar Bongo in Gabon reconsolidated power in the late 1990s and early 2000s, reversing earlier concessions—such as constitutional term limits—that many observers had interpreted as democratic "openings." Similar processes of authoritarian reconsolidation occurred in Algeria, Angola, Burma, Congo-Brazzaville, Mozambique, and elsewhere. Much the same pattern could be observed in the former Soviet Union, where regimes that had been marked by weakness and instability during the initial postcommunist period consolidated during the 2000s. In Russia, for example, state-rebuilding and soaring oil prices allowed the Putin government to coopt the private sector and media, repress opponents, and manipulate elections to a degree that had been unthinkable a decade earlier.22 In Belarus, the government of Alyaksandr Lukashenka established vast control over the economy during the second half of the 1990s, which allowed him to effectively starve his opponents of resources. Authoritarian regimes also consolidated in Armenia, Azerbaijan, and Tajikistan. In sum, improved finances, state reconstruction, and a less hostile international environment enabled many authoritarian regimes that had been weak and unstable in the initial post–Cold War period to stabilize and even consolidate in the late 1990s and early 2000s. Unsurprisingly, countries such as Azerbaijan, Belarus, Cambodia, the Central African Republic, Congo-Brazzaville, Gabon, Guinea-Bissau, Jordan, Kazakhstan, Kyrgyzstan, Russia, Tajikistan, Turkmenistan, and Uzbekistan, all of which Freedom House had optimistically upgraded to Partly Free status in the early 1990s, were downgraded to Not Free. These transitions from weak or unstable authoritarianism to more stable authoritarian rule are often viewed as cases of democratic failure and taken as evidence of a democratic recession. Such characterizations are misleading. **Many of these regimes were never remotely democratic**, and in some of them (e.g., Azerbaijan, Cambodia, Jordan, Kazakhstan, Tajikistan, Uzbekistan), democracy was never even seriously on the agenda. Just as authoritarian crisis should not be equated with democratic transition, authoritarian (re)consolidation should not be equated with democratic rollback. In other cases, regime instability—often rooted in state failure—generated brief democratic "moments" in which intense international pressure or the extreme weakness of all major political actors permitted competitive elections and turnover (e.g., Bangladesh 1991; Haiti 1991; Congo-Brazzaville 1992; Belarus 1994; Niger 1999; Guinea-Bissau 2000; Madagascar 2002; Burundi 2005). Although these cases may have been minimally "democratic" on election day, they did not remain so after new governments took office—and thus could not be described as democratic regimes. Indeed, turnover occurred under conditions that overwhelmingly favored nondemocratic outcomes: Democratic institutions existed only on parchment (in many cases, they had never been tested); states were weak or collapsing, resulting in pervasive neopatrimonialism and the absence [End Page 52] of rule of law; private sectors were small and state-dependent; and civil societies and opposition parties were weak and disorganized. The combination of neopatrimonial states and impoverished societies gave incumbents vast resource advantages from day one, and in the absence of functioning democratic institutions, civil society, or an organized opposition, constraints on authoritarian abuse were minimal. Under such conditions, new governments almost inevitably abuse power, triggering either regime instability or another round of authoritarianism. "Democratic moments" thus proved ephemeral, if not illusory, in each of the cases listed above. For example, Congo-Brazzaville experienced electoral turnover in 1992, but new president Pascal Lissouba immediately dissolved parliament and held flawed elections that triggered an opposition boycott and an eventual descent into civil war and dictatorship. Similarly, Burundi's competitive elections in 2005 led Freedom House to label it an "electoral democracy," but President Domitien Ndayizeye immediately began to arrest opposition leaders and journalists, and subsequent elections were marred by fraud and repression. In Guinea-Bissau, the 1999 overthrow of João Bernardo Vieira led to internationally sponsored elections won by opposition leader Kumba Yala (which led Freedom House to label the country an electoral democracy). But Yala was as authoritarian as his predecessor, closing newspapers and arresting opposition leaders and the president of the Supreme Court before his overthrow in a 2003 coup. Newly elected presidents also immediately abused power in Bangladesh, Belarus, the Central African Republic, Haiti, Madagascar, Niger, and elsewhere. These regimes were never democracies in any meaningful sense, for any meaningful period of time. To label them as cases of subsequent "democratic breakdown" is, therefore, quite misleading. And yet most of the breakdowns cited by proponents of the democratic-recession thesis are precisely of this type—take the list of 25 post-2000 breakdowns in Larry Diamond's article in this issue (Table 1 on page 144). Nearly two-thirds of these breakdowns were of regimes that (at best) were no more than

ephemeral "democratic moments." If we limit our analysis to actual democratic regimes—**defined, say, as those in which at least one democratically elected government held free elections and peacefully ceded power to an elected successor**—16 of Diamond's 25 "democratic breakdowns" disappear. **Of the nine cases of breakdown that remain, 23 only five still had authoritarian regimes in 2014, and one of those was a microstate.**

Backsliding is false-they misread lack of progress as rollback

Levitsky and Way 15 [Steven, Professor of Government at Harvard University; Lucan, Associate Professor of Political Science at the University of Toronto; January, 15; "The Myth of Democratic Recession"; Project Muse; 07/05/15; jac]

Non-Democratization in the 2000s Contemporary pessimism about the fate of global democracy is also rooted in excessive voluntarism. Many of those who argue that democracy is in retreat focus less on democratic backsliding than on the absence of democratic progress. **In effect, nondemocratization [End Page 53] in China, the Middle East, or Central Asia is treated as a setback. For example, Puddington's 2009 report in the Journal of Democracy claimed that "perhaps the most disappointing development" in Asia in 2008 was "the failure of China to enact significant democratic reforms . . . during its year as host of the Olympic Games."24 The following year, he cited the Kazakh government's failure to undertake political reform as evidence of a "downward spiral" in Central Asia and pointed to the absence of political liberalization in Cuba as evidence of "continued erosion of freedom worldwide."25** Puddington's most recent Journal of Democracy report openly cites unmet expectations—as opposed to actual rollback—as a source of democratic gloom, writing that although observers had "predicted that China would rather quickly evolve toward a more liberal and perhaps democratic system," the government instead developed new strategies "designed to maintain rigid one-party rule."26 The failure of authoritarian regimes in China, the Middle East, or Central Asia to democratize should not be taken as evidence of democratic retreat (**doing so would be akin to taking a glass that is half full and declaring it not to be half empty but to be emptying out). Nor should it surprise us. By the mid-2000s, nearly every country with minimally favorable conditions for democracy had already democratized. With a handful of exceptions (e.g., Malaysia, Singapore, Thailand, Turkey, and now Venezuela), the low-hanging fruit had been picked.** Today, most of the world's remaining nondemocracies exist in countries that existing theory suggests are unlikely to democratize.27 **According to a substantial body of research, stable democratization is unlikely in very poor countries with weak states (e.g., much of sub-Saharan Africa), dynastic monarchies with oil and Western support (e.g., the Persian Gulf states), and single-party regimes with strong states and high growth rates (China, Vietnam, Malaysia, Singapore). Our own research suggests that democratization is less likely in countries with very low linkage to the West (e.g., Central Asia, much of Africa) and in regimes born of violent revolution (China, Ethiopia, Eritrea, Vietnam, Cuba, Iran, Laos, North Korea). If we take seriously these lessons generated by several decades of research, relatively few countries today could be considered true democratic underperformers. While the recent stagnation in the overall number of democracies in the world may be normatively displeasing, it is entirely consistent with existing theory. Why, then, has the lack of democratic expansion since the mid-2000s triggered so much pessimism and gloom? One reason is the unfounded expectations raised by the collapse of communism. After the extraordinary events of 1989–91, many observers simply assumed that the wave of democratic advances of the 1980s and 1990s would continue. Another reason for contemporary disappointment is excessive voluntarism. The early third-wave democratizations dealt a powerful blow to [End Page 54] the classic structuralist theories that had predominated in the 1960s and 1970s. These theories emphasized the social, economic, and cultural obstacles to democratization in the developing and communist worlds. Democratization in countries like Bolivia, El Salvador, Ghana, and Mongolia made it clear that democratization was possible anywhere. Yet this healthy skepticism regarding overly structuralist analysis evolved into exaggerated voluntarism. Evidence that structural factors such as wealth, low inequality, or a robust civil society are not necessary for democratization led many observers to conclude that they are causally unimportant. In other words, the important lesson that democratization can happen anywhere was taken by some observers to mean that it should happen**

everywhere. **There are simply no theoretical or empirical bases for such expectations**. **A wealth of research has shown that structural factors such as level of development, inequality, economic performance, natural-resource wealth, state capacity, strength of civil society, and ties to the West continue to powerfully affect the likelihood of achieving and sustaining democracy.** **It is no coincidence that most of the world's remaining non-democracies are clustered in the Middle East, sub-Saharan Africa, and the former Soviet Union. Many countries in these regions are characterized by multiple factors that scholars have associated with authoritarianism. One may hope (and work) for democratization in countries like Cambodia, Ethiopia, Kazakhstan, Libya, or Iraq, but expectations that democratization will occur in such cases lack theoretical or empirical foundation**. **And the dashing of unfounded expectations should not be confused with democratic recession.**

Democracy is resilient- it has remained stable through immense difficulty and no risk of backsliding

Levitsky and Way 15 [Steven, Professor of Government at Harvard University; Lucan, Associate Professor of Political Science at the University of Toronto; January, 15; "The Myth of Democratic Recession"; Project Muse; 07/05/15; jac]

Democracy's Surprising Resilience Disappointment over the lack of democratization in countries where it is unlikely to emerge should not obscure the extraordinary democratic achievements of the last quarter-century. When the Journal of Democracy was launched in 1990, there were 38 developing and postcommunist countries classified as Free by Freedom House. In 2014, that number stood at 60. **As impressive as the breadth of the third wave has been its robustness. At the time of the Journal of Democracy's inaugural issue, newly democratic regimes in Latin America and Central Europe were widely viewed as precarious. Scholars of democratization were skeptical that many of them would endure. In their classic book on transitions from authoritarian rule, for example, Guillermo O'Donnell and Philippe Schmitter characterized Latin American cases as "uncertain democracies."28 Likewise, few scholars expected that the 1989 transitions in Central Europe would produce almost uniformly stable democratic regimes. Yet with a few short-lived exceptions (e.g., Peru 1992–2000), the [End Page 55] democracies that emerged in South America and Central Europe have now survived for a quarter-century or more. Moreover, they survived despite severe economic crises and radical economic reforms that many scholars believed were incompatible with democracy. Between 1990 and 2000, several other important countries democratized, including Croatia, Ghana, Indonesia, Mexico, Serbia, Slovakia, South Africa, and Taiwan.** Although some of these new democracies were marked by deep racial or ethnic cleavages, they too proved strikingly robust. **These patterns did not change substantially after 2000.** Democratic breakdowns remained rare, often short-lived, and generally unrepresentative of broader trends. Although democracy retreated in Sri Lanka, Thailand, and Venezuela, it survived in a range of important middle-income countries, including Argentina, Brazil, Chile, Colombia, Croatia, India, Indonesia, Mexico, Poland, Serbia, South Africa, South Korea, and Taiwan. Democracy also survived in several countries with strikingly unfavorable conditions, including Benin, the Dominican Republic, El Salvador, Ghana, Guyana, Mongolia, and Romania. These were countries with little or no democratic tradition, weak states, high levels of poverty and inequality, and in some cases deeply divided societies. Yet their democracies endured, and some of them are now more than two decades old. **In several important countries,** democracy not only survived but strengthened during the 2000s. **In Brazil, which suffered severe governability problems in the 1980s and early 1990s, the stability and quality of democracy improved markedly in the 2000s; in India, expanding rates of participation, particularly among poorer and lower-caste citizens, have created an increasingly inclusionary democracy; in Chile, a 2005 constitutional reform eliminated remaining authoritarian enclaves and established full civilian control over the military; in Croatia, Ghana, Mexico, and Taiwan, former authoritarian ruling parties returned to power and governed democratically—a critical step toward consolidation. And in Colombia and Poland,** democratic institutions effectively checked the ambitions of autocratic-leaning presidents **(Alvaro Uribe in Colombia, Lech Kaczyński in Poland).** These were major democratic successes, many of which occurred in large and influential countries. Yet they received far less attention than democratic backsliding **in Thailand and Venezuela and nondemocratization in China. These successes suggest an alternative way of viewing the events of the 2000s. Over the last decade, several global developments posed a serious threat to new democracies. These included the severe post-2008 [End Page 56] economic crisis in Western democracies, the declining influence of the United States and the European Union, the growing power and self-confidence of China and Russia, and soaring oil prices. Yet** the number of actual democratic breakdowns has

been strikingly low. **Arguably, then,** the real story of the last decade is not democracy's "meltdown," but rather its resilience in the face of a darkening geopolitical landscape. **This resilience merits further study. Understanding its sources may help democracy advocates to prepare for the day when the wolf of authoritarian resurgence does, in fact, arrive.**

State Secrets Privilege Good Updates

SSP Maintains Detention / Rendition

The State Secrets Privilege used to maintain extraordinary renditions, and preventive detention programs

Goldstein '11 --- writer and commentator whose work has appeared in the Guardian, the Washington Post, Salon, the Nation and National Public Radio (Nancy, "The US national security smokescreen," The Guardian, 12/8/15, http://www.theguardian.com/commentisfree/cifamerica/2011/dec/08/us-national-security-smokescreen

Ben Wizner, the litigation director for the ACLU's national security project, cheerfully admits that its April 2011 Freedom of Information Act (FOIA) request for 23 of the very same US State Department diplomatic cables we all read this time last year, when WikiLeaks released them to five newspapers including the Guardian, was "cheeky" – a way to foreground the "absurdity of the US secrecy regime". And so it has. Nearly eight months after the original FOIA request, the State Department has finally released … 11 cables. Federal censors have helpfully redacted them, making it easy to see, by a simple act of comparison (which the ACLU performs for us, here), precisely which sections the State Department wants hidden. Missing are a dirty dozen cables the government refused to release – despite those cables having already been leaked, published and analysed in virtually every major national and international media venue – again, because they were classified as secret or deemed to contain sensitive information. Administration officials unleashed plenty of hyperbole and hysteria when the cables were first published. But it turned out that none of the information in them actually endangered American citizens, allies or informants. They did, however, prove embarrassing for the US and many foreign leaders. Because it turned out that claims about national security were often an excuse to prevent us from seeing our government engaged in unethical, unconstitutional and, sometimes, illegal practices. These ran the gamut from extraordinary renditions, detentions and torture to shaking down other governments in an attempt to influence their political processes and tamper with their criminal justice systems. We learned that the same Obama administration that had refused to pursue the perpetrators of the Bush torture regime at home had also tried to put its thumbs on the scales of justice in Spain – aggressively attempting to prevent a counter-terrorism judge from trying the senior legal minds of the Bush administration for their part in the torture of detainees at Guantánamo Bay. We learned about the US attempt to scuttle the case of German citizen Khaled el-Masri, the greengrocer mistaken for a senior al-Qaida official. He was kidnapped, tortured, drugged, beaten and thrown into Afghanistan's CIA-run Salt Pit prison, until – oops – they realised they had the wrong guy and dumped him in the Albanian outback. In public, Munich prosecutors issued arrest warrants for 13 suspected CIA operatives involved in his abduction and torture, and Angela Merkel's office called for an investigation. In private, the German justice ministry and foreign ministry both made it clear to the US that they were not interested in pursuing the case, emboldening the US to refuse to arrest or hand over the agents. If the first part of the ACLU's agenda in asking for the 23 already-leaked cables is to highlight what it calls a "penchant for excessive secrecy in defiance of all reason", the second is to spotlight the way in which the Bush and Obama administrations abuse the state secrets privilege to keep illegal programs from being judicially reviewed. When the ACLU challenged the CIA on behalf of el-Masri in 2005, a judge dismissed the case. The US government did not deny that he was wrongfully kidnapped. Instead, it successfully argued that his case be dismissed because litigation of his claims would expose state secrets and jeopardise American security. This despite the fact that, as el-Masri pointed out, "President Bush has told the world about the CIA's detention program, and even though my allegations have been corroborated by eyewitnesses and other evidence." First the Bush administration and then the Obama administration successfully evoked the state secrets privilege to prevent the ACLU from filing a federal lawsuit against Jeppesen DataPlan, Inc, the folks who helped the CIA fly extraordinary rendition victims to secret sites where they were detained, tortured and interrogated. Again, the government claimed that further litigation would undermine national security interests, even though much of the evidence needed to try the case was already available to the public. And again, it appears to have won. In the hall of mirrors that the US security regime has become, information that is not officially acknowledged cannot be used to hold government officials responsible in the courts. And an administration that can evade charges of misconduct, including torture, by hiding behind state secrets claims, even when all the details are publicly known, becomes the guardian of its own liability. That's bad news. Transparency and accountability are the oxygen of democracy. But don't hold your breath waiting for this administration to respond to requests for either one.

Detention Good

Guantanamo is necessary – key to effective war on terror

Spencer et al, 5

(Jack Spencer oversees Heritage Foundation research on a wide range of domestic economic and trade issues Vice President for the Institute for Economic Freedom and Opportunity.

Before his promotion to Vice President in January 2015, Spencer served as Director of the Roe Institute, where he spearheaded research initiatives on federal spending, taxes, regulation, energy and environment. Previously, he specialized in nuclear energy issues in both the domestic and global arenas as Heritage's senior research fellow in nuclear energy policy. Spencer was Heritage's go-to expert on nuclear waste management, technological advances, industry subsidies and international approaches to nuclear energy, Ariel Cohen PhD, The Davis Institute for National Security and Foreign Policy at The Heritage Foundation, James Phillips is the Senior Research Fellow for Middle Eastern Affairs at the Douglas and Sarah Allison Center for Foreign Policy Studies at The Heritage Foundation. He has written extensively on Middle Eastern issues and international terrorism since 1978.

Although his prime research interests are Iran, Iraq, Afghanistan, Persian Gulf security issues, and Middle Eastern terrorism, Phillips also has written numerous articles on the Arab-Israeli conflict, Islamic radicalism, Algeria, Egypt, Israel, Jordan, Kuwait, Lebanon, Libya, Morocco, Pakistan, Saudi Arabia, Somalia, Syria, Sudan, and Turkey. He has testified numerous times before congressional committees on these issues.

Phillips wrote papers that predicted the Soviet intervention in Afghanistan, the Soviet defeat there, and the dangers arising from U.S. withdrawal from engagement in that country, which contributed to the rise of the Taliban and the export of terrorism and Islamic radicalism. In 2000, he called for a comprehensive U.S. policy to support the Afghan opposition and overthrow the ultra-radical Taliban regime, rather than narrowly focusing on Osama bin Laden, who was then based in Afghanistan . Since the Sept. 11 attacks, he has written extensively on the global war against terrorism and its implications for U.S. policy in the Middle East .

Phillips has frequently been interviewed on a broad range of subjects by U.S. and foreign media, including ABC News, CBS News, NBC News, FOX News, CNN, C-SPAN, MSNBC, Sky News, Al Arabiya, Al Hurra, BBC Television, BBC World Service Radio, National Public Radio, and the Voice of America. He also has published numerous articles in American newspapers, including The New York Times, Washington Times, Newsday , New York Post, Atlanta Journal-Constitution, Baltimore Sun, Chicago Tribune, and USA Today .

Phillips is a member of the Committee on the Present Danger, a prestigious bipartisan group dedicated to winning the war on terrorism. He also is a member of the Board of Editors of Middle East Quarterly , the leading conservative journal of Middle Eastern policy studies.

Before joining Heritage in 1979, Phillips was a Research Fellow at the Congressional Research Service of the Library of Congress and a former Joint Doctoral Research Fellow at the East-West Center . He received a Bachelor's Degree in International Relations from Brown University as well as a Master's Degree and a M.A.L.D. in International Security Studies from the Fletcher School of Law and Diplomacy at Tufts University, No Good Reason To Close Gitmo, Heritage Foundation, http://www.heritage.org/research/reports/2005/06/no-good-reason-to-close-gitmo, TMP)

While billions are victim to the regular abuse and tyranny of governments such as those of Sudan and China, much of the world's media and non-profit "human rights" resources focus on the U.S. Naval base at Guantanamo Bay, Cuba. **Not a single person has been killed at the facility since it opened**, and yet the drumbeat of criticism grows by the day. Criticism and even calls to close the base have come not just from President Bush's critics, but also from members of his own party. But a rhetorical barrage is no reason to shut a base. **Those who would close the detainment center have failed to articulate a reasonable rationale for doing so**. They also overlook a major challenge: there are few options, right now, to replace the detainment center. There are, however, many reasons to keep it open.

1. The function of Guantanamo Bay will be served somewhere. Closing Guantanamo will not relieve the United States from needing a facility to house and interrogate suspected terrorists. Should Guantanamo close, the government would have to relocate these functions. If there are problems with the detainment center, those problems should be transparently addressed. The Pentagon has taken great pains to ensure that all appropriate domestic and international agencies have adequate access to the facilities and has been responsive to credible allegations of abuse. Unlike in the tyrannical or regimes of North Korea or China, for example, alleged abuses of prisoners are investigated and those found guilty are held responsible. Moreover, there are established avenues by which Congress, the International Committee of the Red Cross, Red Crescent, and the media exercise differing degrees of oversight in Guantanamo. Changing locations now would lead to a transition period during which these organizations would have less access than they do today.

2. Closing Guantanamo Bay to placate critics is unjustified. It would be naive for the United States to assume that the same unsubstantiated criticisms that now surround the Guantanamo Bay facility would not be transported to the next one. The facility itself and what happens at it do not drive its critics, exactly; rather, their activism is motivated by how the United States and its allies are conducting the war on terrorism in general. Critics of the war do not distinguish between the two. To appease the critics would require changing how the United States fights the war on terrorism, which is unacceptable.

American policymakers should be aware that conceding on Guantanamo, given the broad context of critics' complaints, would be **tantamount to conceding the war on terrorism itself.**

For instance, on a recent television interview a representative of a "human rights" organization manipulated statistics and rhetoric taken from the broader campaign against terrorism to describe the actions and facility at Guantanamo Bay.[1] **At one point in the interview, he argued that at least 28 individuals have died in U.S. custody as a result of criminal homicide**. **None** of these deaths, however, occurred at Guantanamo. The implication was that whether these actions took place at Guantanamo was irrelevant and that actions and events occurring at any point or place in the war on terrorism may be generalized to any specific place or event.

But the details do matter. According to the **D**epartment **o**f **D**efense, "The department works closely with the International Committee of the Red Cross (ICRC) and representatives visit detainees in our charge at their discretion. There have been 187 members of Congress and congressional staff who have visited Guantanamo to include (sic) 11 Senators, 77 Representatives and 99 Congressional staff members. There have also been some 400 media visits consisting of more than 1,000 national and international journalists."[2] Even skeptics must admit that it would be hard to carry out any systematic abuse of detainees under such intense and constant scrutiny.

3. Releasing the detainees now is not a realistic option. While holding detainees indefinitely is not likely, releasing them now is not a realistic option. Many **detainees released from Guantanamo Bay returned to their home countries only to resume terrorist attacks against civilians**. According to The Washington Post, at least 10 of the 202 detainees released from Guantanamo were later captured or killed while fighting U.S. and coalition forces in Afghanistan and Pakistan.[3] Mark Jacobson, a former special assistant for detainee policy at the Department of Defense, estimated that as many as 25 of the 202 had taken up arms again.

For example, Mullah Shahzada, a former Taliban field commander who apparently convinced officials at Guantanamo that he had sworn off violence, was freed in 2003, and immediately rejoined the Taliban. He was subsequently **killed in battle** in the summer of 2004 in Afghanistan. Maulvi Ghafar, a Taliban commander captured in 2001, was released in February 2004. He was subsequently killed in a shootout with Afghan government forces in September 2004. Abdullah Mesud, a Pakistani who was captured fighting alongside the Taliban in Afghanistan, bragged that he was able to hide his true identity for two years at Guantanamo before being released in March 2004. He was considered a low-risk security threat because of his artificial leg. After returning to Pakistan, Mesud led a group of Islamic militants-part of a campaign against the Pakistani government-that kidnapped two Chinese engineers working on a dam. One of the engineers and several militants were subsequently killed in a government raid.[4] Mesud is still at large.

Clearly, the **detainees kept at Guantanamo pose a significant threat to Americans, U.S. allies, and civilians in their home countries**. This threat must be weighed long and hard before any decision is made to release an individual detainee or to change the system under which detainees are held.

4. Changing the physical location of the detainees is not legally significant. Neither the detainees nor the United States stand to gain significantly in the legal arena if the detention center at Guantanamo Bay is closed. The "illegal enemy combatants" held at the facility have access to U.S. courts (as held by the Supreme Court in Rasul v. Bush[5]). Detainees have been making much use of their access to legal counsel, as evidenced, for example, by a November 2004 District Court opinion holding that the Bush Administration had overstepped its authority in several areas.

Moving the detainees within the continental United States **will not give them additional rights** because Guantanamo Bay is already considered sufficiently under U.S. control to provide rights to them.[6] After the Rasul opinion, the detainees and the U.S. government will have the same legal advantages and disadvantages within the U.S. as they do at Guantanamo Bay. There are no compelling legal reasons to move the detainees and close Guantanamo Bay.

5. Guantanamo Bay is no Gulag. Blinded by hatred of America and U.S. policies and seeking to shift the blame away from terrorist crimes, Amnesty International's Secretary-General Irene Zubeida Khan recently called Guantanamo Bay detention camp the "Gulag of our times." She added, according to some reports, "Ironic that this should happen as we mark the 60th anniversary of the liberation of Auschwitz."It is not clear whether this was a statement of deep ignorance or deliberate deception. Ms. Khan, though, is not alone in her criticism. Amnesty's Washington director, William Schulz, has said that Guantanamo's terrorist detention facility is "similar at least in character, if not in size, to what happened in the Gulag."

Comparing Guantanamo's tropical Caribbean detention facility with Soviet dictator Joseph Stalin's frozen concentration camp empire makes about as much sense as calling the London police "Nazis." Amnesty's gall in abusing the dead and trivializing their suffering for its own political purposes is appalling. Gulag (from "Main Directorate of Camps" in Russian) began as an extermination machine for political opponents. It quickly became a meat-grinder in which tens of millions of innocent Soviets and citizens of other countries perished. Islamists may manipulate some anti-American elements in

the human rights community whom they consider, to borrow Lenin's phrase, "useful idiots." This strategy has been surprisingly successful, perhaps due to the political inclinations of those who lead the major human rights groups in the U.S. today. For whatever reason, Amnesty and Ms. Khan are ignoring real threats to human rights, especially those of women in the Islamic world, and are playing into the hands of terrorists who are hell-bent on destroying the West. The human rights community's bizarre priorities are no reason, however, to close the detention facility at Guantanamo Bay.

Conclusion

The debate over whether or not to close the detention facility at Guantanamo Bay is about much more then that facility itself. **It is a debate over how the United States and its allies are conducting the war on terrorism.** If the United States concedes that its actions in Guantanamo Bay are such that they warrant closing the facility, how can the U.S. defend keeping other facilities open? And if the United States cannot house and interrogate suspected terrorists, how can it prosecute the Global War on Terrorism? The issue of whether the Gitmo detention facility should be closed should not be used as a proxy referendum for the Bush Administration's war on terrorism.

Jack Spencer is Senior Policy Analyst for Defense and National Security, Ariel Cohen, Ph.D., is Senior Research Fellow, Jim Phillips is Research Fellow in Middle Eastern Studies, and Alane Kochems is a Research Assistant, in the Kathryn and Shelby Cullom Davis Institute for International Studies at The Heritage Foundation.

Guantanamo is good – treatment is humane and new facility would ignite more extremism

Rogan, 12

(Tom Rogan is writer currently living in London, England. He recently completed a law course and holds a BA in War Studies from King's College London and an MSc in Middle East Politics from SOAS, London, "Why Guantanamo Bay should remain open", The Daily Caller, http://dailycaller.com/2012/09/24/why-guantanamo-bay-should-remain-open/ TMP)

The recent death (a suspected suicide) of a prisoner at the U.S. detention facility at Guantanamo Bay has helped reignite the debate over whether the facility should be closed. It's a complex issue. However, I think Guantanamo should remain open.

As I see it, there are two major considerations that should drive the debate about Guantanamo's future. The first is whether keeping the facility open is the best way for the U.S. government to protect the American people.

I think it is. **It offers several compelling advantages over the alternatives**. For one, the detainees are guarded by well-trained MPs, isolated from support and held in a place from which escape would be nearly impossible. Remember, many Guantanamo detainees are resourceful, ideologically committed enemies of the **U**nited **S**tates who have stated that they want to maim and kill Americans, so it's important that they're kept in a facility that's as secure as possible.

Closing the Guantanamo facility and opening a new detention facility in the U.S. would pose **profound security** risks. **The new facility would become a beacon for extremists and an expensive, highly complex challenge to secure**. Just look at what happened when the Obama administration attempted to try Khalid Sheik Mohammed in New York City (an effort which it has since abandoned). And while many politicians love the idea of a domestic detention facility, few want one in their backyard.

Moreover, over the years the government has invested an enormous amount of money in expanding the Guantanamo facility's support base. Inmates now have access to a well-stocked library, gym and soccer field. These outlets don't simply provide humane incarceration conditions and encourage rehabilitation; **they also directly serve our national security interests.** If the detainees were transferred out of Guantanamo, the benefit of these outlets would be lost.

The second consideration that should drive the Guantanamo debate is whether keeping the facility open is the best way to ensure justice for the detainees as well as the victims of terrorism

At the core here is a critical legal question: Are the Guantanamo detainees suspected illegal combatants subject to military authority, or are they suspected criminals and thus subject to the civilian criminal court system? I support the prior understanding. The **Guantanamo detainees were captured while engaged in armed hostilities against the United States**. Their objectives in fighting the United States were **manifestly political** — and their chosen mechanisms of action were undoubtedly military. Indeed, as criminal-approach advocates often neglect to mention, a substantial number of former

Guantanamo detainees have returned to the battlefield. Put simply, operating as part of organized groups like al Qaida, these detainees were at war. From my perspective, if the Guantanamo detainees are criminal suspects, laws of war cannot exist in a compatible reality.

Next, let's consider Guantanamo's procedural justice. In the past, many Guantanamo detainees haven't been given speedy trials. However, with President Obama having finally re-authorized the military commission process, more progress toward bringing detainees to trial will be made. That progress will illustrate America's commitment to the rule of law and undercut negative perceptions about Guantanamo. Contrary to popular opinion, anger toward Guantanamo amongst Islamic populations is not driven by an inherent discomfort with military commissions, but rather by the perception **that Guantanamo is a black hole of permanent**, un-reviewed detention.

Ultimately, the detention facility at Guantanamo Bay provides an imperfect solution to a highly complex problem. While **82% of all Guantanamo detainees have already been released,** wherever possible the U.S. government should expedite this process, repatriating those who are no longer believed to pose a substantial threat. At the same time, the accused should face military commissions. In the end, though, considering the many interests at stake and absence of good alternatives, I believe that the **Guantanamo detention facility must remain open for the foreseeable future.**

AT: SSP Misused / Overused

SSP is effective for national security – and multiple barriers check executive abuse

Nichols, 8 (Carl J Nichols served in the Department of Justice as the Deputy Assistant Attorney General for the Civil Division's Federal Programs Branch, " speech from, [Senate Hearing 110-923] [From the U.S. Government Printing Office] S. Hrg. 110-923 EXAMINING THE STATE SECRETS PRIVILEGE: PROTECTING NATIONAL SECURITY WHILE PRESERVING ACCOUNTABILITY", http://www.gpo.gov/fdsys/pkg/CHRG-110shrg53360/html/CHRG-110shrg53360.htm, TMP)

Mr. Nichols. Thank you very much. Chairman Leahy, Ranking Member Specter, and members of the Committee, thank you for the opportunity to testify concerning the important subject of today's hearing, the state secrets privilege. Since March 2005, I have served in the Department of Justice as the Deputy Assistant Attorney General for the Civil Division's Federal Programs Branch. In that capacity I've been involved in the decision-making process regarding whether, and when, the executive branch will assert the state secrets privilege in civil litigation. As the Committee is aware, **the state secrets privilege is a well-established legal doctrine that plays a vital role in protecting the national security** by ensuring that civil litigation does not result in the disclosure of information that, if made public, would cause serious harm to the United States. **This privilege plays an important role in times of war and times of peace**, has been asserted by the executive branch, and has been recognized by the courts, since the 19th century, and is subject to review by the judiciary. While the judiciary plays an important role in assessing any assertion of the state secrets privilege, the privilege **does have a constitutional pedigree**. The Supreme Court made that clear in United States v. Nixon when it stated that ``a claim of privilege on the ground that information constitutes military or diplomatic secrets"--that is,--the state secrets privilege--necessarily involves areas of Article 2 duties assigned to the President. It is important to emphasize-- however--I think it is very important to emphasize that although the state secrets privilege emanates from the President's constitutional authority, **the privilege is neither limitless nor unchecked.** It is also important to emphasize that the executive branch asserts the privilege selectively, and when doing so details the specific harms to national security That would occur if sensitive information is publicly **revealed**, and **it is important to emphasize that not every assertion of the state secrets privilege results in the dismissal of a pending case.** Any assertion of the state secrets privilege involves a **rigorous procedural and judicial process** to ensure that the privilege is not, in the words of the Supreme Court, lightly invoked. To begin, several formal requirements apply to the privilege assertion. **The privilege can be invoked only by the United States**, only through a formal claim of privilege,

only by the head of the department which has control of the matter, and only after that official has given actual personal consideration to the question. Meeting these requirements typically requires several layers of substantive departmental review and coordination, an important part of which is the agency head's--often Cabinet official's--personal review of various materials, including the declaration or declarations that he or she must sign, under penalty of perjury, in order to assert the privilege. **Once it has been decided that it is appropriate to assert the privilege in a particular case**, the **judicial branch** plays a **vital role in assessing whether the privilege will be upheld**. Specifically, the court must decide whether the invocation of the privilege is predicated upon a reasonable danger that disclosure of the information will harm national security. In making that determination, a court often reviews not just publicly available materials, but also classified declarations and other information providing further detail for the court's review. A common **misperception** is that classified information is never, or only rarely, shared with the courts and that the courts are therefore asked to uphold the privilege based on trust and non-specific claims of national security. **That is simply inconsistent with our practice**. In every case of which I am aware, we have made available to the courts both unclassified and classified declarations that justify, often in considerable detail, the bases for the privilege assertions.**Once a court has concluded that the information is privileged**, the information is removed from the case and the court plays a second and equally important role. It must decide whether, and if so how, the case can proceed without that information. **Sometimes a case must be dismissed because it is obvious that the case could not proceed without information that would harm the United States.** However, in other cases, and **contrary to a popular misconception**, the privileged information is peripheral and the case can proceed without it. Thus, rather than playing a passive role in accepting at face value blanket executive assertions of the state secrets privilege, **courts play a vital role in determining whether the privilege will be upheld and adjudicating how and when cases can proceed if sensitive national security information is excluded**. These dual roles underline the crucial role of the judiciary in checking assertions of the state secrets privilege and assuring against the disclosure of national security that would cause serious harm to the United States.Mr. Chairman, I would like to conclude with the following point. While there may be disagreement as to when this privilege ought to be asserted, rigorous **executive branch safeguards and judicial review ensure that it is invoked and upheld only in circumstances necessary to protect the national security of the United States.** On this point there should be no disagreement: such a privilege is not only desirable, but necessary to avert serious harm to national security. Thank you for the opportunity to appear before the Committee. I would be pleased to answer any questions you may have.

Safeguards prevent illegitimate overuse of state secrets privilege

Biskupic, 11

(1/17/2011, Joan, USA Today, "Cases challenge use of 'state secrets' shield ; Justices get rare chance to address exemption," Factiva)

WASHINGTON -- In a post-9/11 world, the federal government increasingly has invoked a "state secrets" argument to keep sensitive information out of court, notably in disputes over warrantless surveillance and the secret transfer of prisoners to foreign countries for interrogation.

Now, for the first time since the 2001 terrorist attacks and the first since the Supreme Court recognized the state-secrets exemption in 1953, the justices will hear a dispute testing some dimensions of the privilege intended to protect national security.

The paired cases to be argued Tuesday involve a long-running, otherwise dry defense-contracting conflict over a canceled stealth aircraft. Yet they offer the justices a rare chance to address the controversial privilege used to shut down litigation.

Most broadly at stake is the government's ability to shield information or win dismissal of a case based on a claim that the airing of sensitive material would hurt national security.

"We hope the court will take the opportunity to revisit and reform the privilege that has become more important in this era," says Sharon Bradford Franklin, a lawyer with the non-profit Washington, D.C.-based Constitution Project, which submitted a brief siding with the contractors that protests use of the state-secrets privilege.

Yet the Electronic Frontier Foundation, a San Francisco-based civil liberties group that has challenged National Security Agency wiretap programs, has entered the dispute (not on either side) to urge the justices to take a limited view and not delve into whether constitutional grounds exists for the state-secret privilege.

For years, the larger debate over the state-secrets privilege has played out in lower courts, in Congress and in the Bush and Obama administrations. Democrats. led by Sen. Patrick Leahy, D-Vt., and Rep. Jerrold Nadler, D-N.Y., have proposed legislation to set uniform procedures for such cases and require judges faced with state-secret claims to review in private evidence that the government says should be shielded.

More accountability sought

The Obama team generally has carried over Bush administration state-secrets arguments in lower-court cases. But in September 2009, it issued new overall guidelines to try to ensure greater accountability in the use of the privilege. Attorney General Eric **Holder said it should be "invoked only when necessary and in the narrowest way possible."**

One high-profile case related to the issue has just arrived at the Supreme Court, although the justices are not likely to announce until early spring whether they would accept Mohamed v. Jeppesen DataPlan.

It was brought by five men who say they were kidnapped by the CIA and flown to other countries by Jeppesen DataPlan, a subsidiary of Boeing, for harsh interrogation, including torture.

A deeply split U.S. appeals court dismissed the case on state-secret grounds after the government intervened. The ACLU, which represents the men, filed an appeal last month at the Supreme Court, arguing that the government is improperly using state-secrets privilege "to deny justice to torture victims." Responses from Jeppesen and the U.S. government are due to the court in February.

In the dispute justices will hear this week, the paired cases of General Dynamics Corp. v. U.S. and Boeing Co. v. U.S. began with a quarrel over development of the A-12 Avenger aircraft. Unlike in the usual state-secrets situations, where the government is being sued, the government started this case.

The Navy contracted in 1988 with General Dynamics and McDonnell Douglas Corp. (now Boeing) to develop the A-12, but after delays and conflicts over costs, terminated the contract for default in 1991 and sought return of more than $1 billion paid. The defense giants brought their own claim, arguing they were stalled by the government's reluctance to turn over secret technology needed for the project.

The government said that the main differences centered on costs, rather than access to certain information, yet invoked the state-secrets privilege to prevent disclosure of what it deemed highly sensitive information.

Safeguards asserted

As the case wended its way through courts for nearly two decades, the companies contended that by raising the state-secrets privilege and limiting access to documents, the government prevented them from proving they were not responsible for delays and should not have to repay the money. Lower courts ruled for the government.

General Dynamics and Boeing say that while there are times the state-secrets privilege is legitimately invoked, in this case it was used for a litigation advantage.

Department of Justice lawyers, led by acting Solicitor General Neal Katyal, defend the government's use of the state-secrets privilege in the A-12 dispute and insist that **sufficient "safeguards against capricious invocation of the state-secrets privilege" exist**.

No outside groups have joined the government's side. With the contractors, along with the Constitution Project, are business groups including the Chamber of Commerce. They say the federal government should not be able to invoke the privilege to its financial gain.

Carter Phillips, who represents the chamber and will argue the case for the two big contractors, said, "What distinguishes this case from others is that the government ... is trying to use the privilege as a mechanism to take away a contractor's ability to defend itself. This is not using it as a shield. This is unquestionably using it as a sword."

Solvency

Note for Glennon / Circumvention Ev

FYI --- "Trumanites" in the Glennon, 14 ev refers to:

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

President Harry S. Truman, more than any other President, is responsible for creating the nation's "efficient" national security apparatus.99 Under him, Congress enacted the National Security Act of 1947, which unified the military under a new Secretary of Defense, set up the CIA, created the modern Joint Chiefs of Staff, and established the National Security Council ("NSC").100 Truman also set up the National Security Agency, which was intended at the time to monitor communications abroad.101 Friends as well as detractors viewed Truman's role as decisive.102 Honoring Truman's founding role, this Article will substitute "Trumanite" for "efficient," referring to the network of several hundred high-level military, intelligence, diplomatic, and law enforcement officials within the Executive Branch who are responsible for national security policymaking.

1nc Circumvention

A network of national security officials actually determines policy --- enacting external checks just legitimates them without providing any constraint

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

VI. Conclusion

U.S. national security policy has **scarcely changed from** the **Bush to** the **Obama** Administration. The theory of Walter Bagehot explains why. Bagehot described the emergence in 19th-century Britain of a "disguised republic" consisting of officials who actually exercised governmental power but remained unnoticed by the public, which continued to believe that visible, formal institutions exercised legal authority.601 Dual institutions of governance, one public and the other concealed, were referred to by Bagehot as "double government."602 A similar process of bifurcated institutional evolution has occurred in the United States, but in reverse: a network has emerged within the federal government that **exercises predominant power with respect to national security matters**. It has evolved in response to structural incentives rather than invidious intent, and it consists of the several hundred executive officials who manage the military, intelligence, diplomatic, and law enforcement agencies responsible for protecting the nation's security. These officials are as little disposed to stake out new policies as they are to abandon old ones. **They define security more in military and intelligence terms rather than in political or diplomatic ones.** Enough examples exist to persuade the public that the network is subject to judicial, legislative, and executive constraints. This appearance is important to its operation, for **the network derives legitimacy from the ostensible authority of the public, constitutional branches of the government**. **The appearance of accountability is**, however, **largely an illusion** fostered by those institutions' pedigree, ritual, intelligibility, mystery, and superficial harmony with the network's ambitions. The courts, Congress, and even the presidency in reality **impose little constraint**. **Judicial review is negligible**; **congressional**

oversight dysfunctional; and presidential control nominal. **Past efforts to revive these institutions have thus fallen flat**. **Future reform efforts are no more likely to succeed**, relying as they must upon those same institutions to restore power to themselves by exercising the very power that they lack. External constraints—public opinion and the press—are insufficient to check it. Both are manipulable, and their vitality depends heavily upon the vigor of constitutionally established institutions, which would not have withered had those external constraints had real force. Nor is it likely that any such constraints can be restored through governmental efforts to inculcate greater civic virtue, which would ultimately concentrate power even further. Institutional restoration can come only from an energized body politic. The prevailing incentive structure, however, encourages the public to become less, not more, informed and engaged.

Executive will just ignore Congress and FISA typically defers to it

Bendix & Quirk, 15 --- *assistant professor of political science at Keene State College, AND **Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia (March 2015, William Bendix and Paul J. Quirk, "Secrecy and negligence: How Congress lost control of domestic surveillance," http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf, JMP)

Even if Congress at some point enacted new restrictions on surveillance, **the executive might ignore the law and continue to make policy unilaterally**. The job of reviewing executive conduct would again fall to the FISA Court.56 In view of **this court's history of broad deference to the executive**, Congress would have a challenge to ensure that legislative policies were faithfully implemented.

Executive lawyers provides the means to circumvent the plan

Shane, 12 --- Jacob E. Davis and Jacob E. Davis II Chair in Law, The Ohio State University Moritz School of Law (Peter M., Journal of National Security Law & Policy, "Executive Branch Self-Policing in Times of Crisis: The Challenges for Conscientious Legal Analysis," 5 J. Nat'l Security L. & Pol'y 507))

II. The Breakdown of Government Lawyering

The military and foreign policy disasters generated by presidential unilateralism demonstrate the practical importance of maintaining a pluralist view of checks and balances. Political officials are not simply rational actors who respond with dispassionate calculation to evidence and circumstance. Facts and options are always filtered through ideological prisms. Presidentialism narrows the prism. Pluralism works to offset that filtering. Pluralism guards against too much distortion by seeking to maximize the number of meaningful institutional voices in the policy making process.

Equally troubling is the risk of presidentialism to the rule of law. Even in normal times, a heavy burden falls on government attorneys in virtually every agency. Government lawyering frequently represents the exclusive avenue through which the law is actually brought to bear on decisionmaking. This professional review within the executive branch is crucial. Most

government decisions are simply too low in visibility, or too diffuse in impact, to elicit judicial review or congressional oversight as ways of monitoring legal compliance. Yet, **the ideological prism of presidentialism can bend the light of the law so that nothing is seen other than the claimed prerogatives of the sitting chief executive**. **Champions of executive power** - even skilled lawyers who should know better - wind up asserting that, to an extraordinary extent, the President as a matter of constitutional entitlement is simply **not subject to legal regulation by either of the other two branches of government**.

[*511] Government attorneys must understand their unique roles as both advisers and advocates. In adversarial proceedings before courts of law, it may be fine for each of two contesting sides, including the government, to have a zealous, and not wholly impartial, presentation, with the judge acting as a neutral decisionmaker. But in their advisory function, government lawyers must play a more objective, even quasi-adjudicative, role. They must give the law their most conscientious interpretation. If they fail in that task, frequently there will be no one else effectively situated to do the job of assuring diligence in legal compliance. Government lawyers imbued with the ideology of presidentialism too easily abandon their professional obligations as advisers and too readily become ethically blinkered advocates for unchecked executive power.

Jack Goldsmith headed the Office of Legal Counsel (OLC) for a little less than ten months in 2003-2004. Of the work done by some government attorneys and top officials after 9/11, he said they dealt with FISA limitations on warrantless surveillance by the National Security Agency (NSA) "the way they dealt with other laws they didn't like: **they blew through them in secret** based on flimsy legal opinions that they guarded closely so no one could question the legal basis for the operations." n7 He describes a 2003 meeting with David Addington, who was Counsel and later Chief of Staff to Vice President Dick Cheney, in which Addington denied the NSA Inspector General's request to see a copy of OLC's legal analysis in support of the NSA surveillance program. Before Goldsmith arrived at OLC, "not even NSA lawyers were allowed to see the Justice Department's legal analysis of what NSA was doing." n8

OLC's analysis of the legality of NSA surveillance, issued on January 19, 2006, justified the program on two grounds: the President's inherent war powers and the Authorization for Use of Military Force (AUMF). However, the AUMF did not say anything about electronic surveillance. In 1978, Congress expressly stated that no statute other than the Foreign Intelligence Surveillance Act (FISA) or Title III - the law that applies to ordinary federal criminal prosecution - provides authority for electronic surveillance by the federal government. The AUMF could supersede FISA by repealing it, but only by making the repeal explicit. An argument that the AUMF implicitly repealed FISA necessarily falls short. OLC also argued that the President had an inherent constitutional power to conduct the NSA program no matter what FISA said. According to OLC, if FISA of 1978, as amended, were read to preclude the NSA program, the statute would be unconstitutional. n9

[*512] What prompted the Justice Department to argue in this fashion? One answer might be that Justice Department lawyers are institutionally expected to advocate for the President's powers and simply adopt the most ambitious arguments consistent with appropriate standards of professional competence in legal research and analysis. However, it is not the responsibility of Justice Department lawyers to advocate for every contemplated assertion of presidential authority, no matter how far-fetched. Even in my brief period at Justice, I witnessed multiple and significant examples of Department lawyers refusing to provide analytic support for legally ill-conceived proposals for executive action. Moreover, it is difficult to make a case for the

professional competence of the FISA memorandum. Although the Justice Department manages to elaborate its views in over forty pages of single-spaced and highly technical verbiage, its memorandum never confronts the enormity of the initiative it is endorsing or the power of alternative arguments. Instead, it proffers distinctions from contrary precedents that are often, in a word, silly. Even if the authors felt institutionally constrained to reach a particular bottom line, the failure to assert any principle limiting the claims being made and the too-frequent lack of rhetorical judgment in structuring their argument suggest something other than diligent lawyering was at play.

What accounted for the bad arguments was political and professional pressure. When I worked at Justice, the refusal to take positions that could not be defended by respectable standards did not harm the lawyer. As anyone who has ever worked in an organization knows, however, informal pressure can be an extraordinarily effective method of stifling disagreement and guiding decisions in the way top management desires. We know that supervision of the process of executive branch lawyering on the NSA memorandum was significantly usurped by the Office of the Vice President. David Addington, the Vice President's Counsel, and John Yoo, then a deputy in OLC, worked together to craft a series of arguments for unprecedented claims of executive power to pursue the campaign against terrorism. n10 Jack Goldsmith reports that Addington blackballed from future advancement in the executive branch any lawyer who dared cross swords with him. n11

The deficiencies of legal analysis of NSA surveillance were replicated in other initiatives after 9/11, including the treatment of persons captured and suspected of aiding and abetting terrorism. The Justice Department, through OLC, produced legal opinions stating, in effect, that anyone [*513] captured in the Afghanistan campaign had few, if any, rights under U.S. or international law and certainly no rights susceptible to vindication in U.S. courts. n12 The function of these legal opinions - indeed, their obvious purpose - was to ratify a scheme of maximum license to do with the detainees whatever the military, the CIA, or any other U.S. authority might choose to do with them. The Administration's lawyering process cleared the path to horrors at the Abu Ghraib prison and Guantanamo - crimes whose stain upon our national honor is likely to remain, for decades at least, firmly embedded in the world's collective memory, deeply undermining our image and influence abroad.

It is understandable that the Administration would want some flexibility in dealing with a threat it rightly regarded as in some ways unprecedented and of very grave magnitude. And yet, to move the detainees so completely beyond the realm of normal legal process was itself a plainly risky strategy in terms of compromising international support, exposing U.S. military personnel to mistreatment, risking the honor of U.S. military culture, and weakening the fabric of international law generally in its protection of both combatants and civilians during wartime. The desire for flexibility was understandable, but not at the cost of all other values.

On a number of the most important points discussed in the OLC lawyers' memoranda, the courts subsequently held them to be wrong. Contrary to OLC, the Supreme Court held that foreign detainees at Guantanamo who challenged their classification as enemy combatants were entitled to judicial review of the legality of their detention. n13 Contrary to OLC, the Court held that the Geneva Conventions protected the detainees, whether or not they strictly qualified as prisoners of war. n14 Contrary to OLC and Justice Department briefs, the Court held that the military commissions as originally constituted were not sufficiently protective of the detainees' rights to permit their use for war crimes trials. n15

On all of these questions, whether of morality, policy, or law, there were at least serious arguments to be entertained by both sides. The fact that the Administration reached incorrect conclusions is, in itself, only a limited indictment of its lawyering. Even good lawyers make mistakes, and the fact that executive branch lawyers would consistently make mistakes erring on the side of executive authority is not in itself damning. What is damning, however, is that on critical questions - questions going to the core of national honor and identity - executive branch lawyering was not just [*514] wrong, misguided, or ethically insensitive. It was incompetent. It was so sloppy, so one-sided, and at times so laughably unpersuasive that it cannot be defended as ethical lawyering in any context. Tax advice this bad would be malpractice. Government lawyering this bad should be grounds for discharge.

--- 2nc Circumvention

The plan can't solve --- creates illusion of control that allows national security bureaucracy to flourish

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

V. Is Reform Possible? Checks, Smoke, and Mirrors

Madison, as noted at the outset,543 believed that a constitution must not only set up a government that can control and protect the people, but, equally importantly, must protect the people from the government.544 Madison thus anticipated the enduring tradeoff: the lesser the threat from government, the lesser its capacity to protect against threats; the greater the government's capacity to protect against threats, the greater the threat from the government.

Recognition of the dystopic implications of double government focuses the mind, naturally, on possible legalist cures to the threats that double government presents. Potential remedies fall generally into two categories. First, strengthen systemic checks, either by reviving Madisonian institutions—by tweaking them about the edges to enhance their vitality— or by establishing restraints directly within the Trumanite network. Second, cultivate civic virtue within the electorate.

A. Strengthening Systemic Checks

The first set of potential remedies aspires to tone up Madisonian muscles one by one with ad hoc legislative and judicial reforms, by, say, narrowing the scope of the state secrets privilege; permitting the recipients of national security letters at least to make their receipt public; broadening standing requirements; improving congressional oversight of covert operations, including drone killings and cyber operations; or strengthening statutory constraints like FISA545 and the War Powers Resolution.546 Law reviews brim with such proposals. But their **stopgap approach** has been tried repeatedly since the Trumanite network's emergence. **Its futility is now glaring.** Why such efforts would be any more fruitful in the future is hard to understand. The Trumanites are committed to the rule of law and their sincerity is not in doubt, but the rule of law to which they are committed is largely devoid of meaningful constraints.547 **Continued focus on**

legalist band-aids merely buttresses the illusion that the Madisonian institutions are alive and well—and with that illusion, an entire narrative premised on the assumption that it is merely a matter of identifying a solution and looking to the Madisonian institutions to effect it. **That frame deflects attention from the underlying malady**. What is needed, if Bagehot's theory is correct, is a fundamental change in the very discourse within which U.S. national security policy is made. For **the question is no longer: What should the government do?** The questions now are: What should be done about the government? What can be done about the government? What are the responsibilities not of the government but of the people?

--- 2nc Turns the Case

Reform attempts just provide a veneer of legitimacy for national security officials to continue making decisions to perpetuate their existence

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Nonetheless, in the United States today, as in Bagehot's Britain, "[m]ost do indeed vaguely know that there are some other institutions"239 involved in governance besides those established by the Constitution. But the popular conception of an "invisible government," "state within," or "national security state" is off the mark. The existence of the Trumanite network is no secret. The network's emergence has not been the result of an enormous, nefarious conspiracy conceived to displace constitutional government. The emergence of the Trumanite network has not been purposeful. America's dual national security framework has evolved gradually in response to **incentives woven into the system's structure** as that structure has reacted to society's felt needs. Yet, as a whole, Americans still do not recognize the extent to which **Madisonian institutions have come to formulate national security policy in form more than in substance**.

One reason that they do not is that the double government system has exceptions. For the dual institutional structure to work, it is crucial, Bagehot believed, to "hide where the one begins and where the other ends."240 Overlap is required. Enough counterexamples must exist to persuade an optimistic public that the reason for policy continuity is human, not systemic. Thus, the counterexamples must be sufficient for the public to believe that if they elect different people then policy will change, **giving credence to the idea that the real institutions have not lost all power in making national security policy**. Similarly, the Trumanites often include some quasi-Madisonian officers, such as the Secretaries of State and Defense, who themselves generate deference through the same theatrical show common to the Madisonian institutions. Congress, the President, and the courts do sometimes say no to the Trumanites. But they do not do so often enough to endanger double government. The Trumanite network makes American national security policy; it is occasional exceptions to that policy that are made by the Madisonian institutions.

It is a unique turn --- Madisonians' role is decreasing now which risks exposing the illusion of double government

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

E. Implications for the Future

The aim of this Article thus far has been to explain the continuity in U.S. national security policy. An all-too-plausible answer, this Article has suggested, lies in Bagehot's concept of double government. Bagehot believed that **double government could survive only so long as the general public remains sufficiently credulous to accept the superficial appearance of accountability**, and only so long as the concealed and public elements of the government are able to **mask their duality** and thereby sustain public deference.501 As evidence of duality becomes plainer and public skepticism grows, however, Bagehot believed that the cone of governance will be "balanced on its point."502 If "you push it ever so little, it will depart farther and farther from its position and fall to earth."503

If Bagehot's theory is correct, the United States now confronts a precarious situation. Maintaining the appearance that Madisonian institutions control the course of national security policy **requires that those institutions play a large enough role in the decision-making process to maintain the illusion**. But the Madisonians' role is too visibly shrinking, and the Trumanites' too visibly expanding, to maintain the plausible impression of Madisonian governance.504 For this reason and others, public confidence in the Madisonians has sunk to new lows.505 The Trumanites have resisted transparency far more successfully than have the Madisonians, with unsurprising results. The success of the whole dual institutional model depends upon the maintenance of public enchantment with the dignified/ Madisonian institutions. This requires allowing no daylight to spoil their magic,506 as Bagehot put it. An element of mystery must be preserved to excite public imagination. But transparency—driven hugely by modern internet technology, multiple informational sources, and social media— leaves little to the imagination. "The cure for admiring the House of Lords," Bagehot observed, "was to go and look at it."507 The public has gone and looked at Congress, the Supreme Court, and the President, and their standing in public opinion surveys is the result. Justices, senators, and presidents are not masters of the universe after all, the public has discovered. They are just like us. Enquiring minds may not have read enough of Foreign Affairs508 to assess the Trumanites' national security polices, but they have read enough of People Magazine509 to know that the Madisonians are not who they pretend to be. While the public's unfamiliarity with national security matters has no doubt hastened the Trumanites' rise, too many people will soon be too savvy to be misled by the Madisonian veneer,510 and those people often are opinion leaders whose influence on public opinion is disproportionate to their numbers. There is no point in telling ghost stories, Holmes said, if people do not believe in ghosts.511

--- XT: National Security Officials = Circumvention

No solvency --- executive officials control national security policy and will circumvent

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Abstract

National security policy in the United States has remained largely constant from the Bush Administration to the Obama Administration. This continuity can be explained by the "double government" theory of 19th-century scholar of the English Constitution Walter Bagehot. As applied to the United States, Bagehot's theory suggests that U.S. national security policy is defined by the network of executive officials who manage the departments and agencies responsible for protecting U.S. national security and who, responding to **structural incentives** embedded in the U.S. political system, **operate largely removed from public view and from constitutional constraints**. The public believes that the constitutionally-established institutions control national security policy, but that view is mistaken. **Judicial review is negligible**; **congressional oversight is dysfunctional**; and presidential control is nominal. Absent a more informed and engaged electorate, little possibility exists for restoring accountability in the formulation and execution of national security policy.

Entrenched national security officials ensure circumvention

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Introduction

Few who follow world events can doubt that the Obama Administration's approach to multiple national security issues has been essentially the same as that of the Bush Administration.2 The Obama Administration, like its predecessor, has sent terrorism suspects overseas for detention and interrogation;3 claimed the power to hold, without trial, American citizens who are accused of terrorism in military confinement;4 insisted that it is for the President to decide whether an accused terrorist will be tried by a civilian court or a military tribunal;5 kept the military prison at Guantánamo Bay open,6 argued that detainees cannot challenge the conditions of their confinement,7 and restricted detainees' access to legal counsel;8 resisted efforts to extend the right of habeas corpus to other offshore prisons;9 argued that detainees cannot invoke the Geneva Conventions in habeas proceedings;10 denied detainees access to the International Committee of the Red Cross for weeks at a time;11 engaged the United States in a military attack against Libya without congressional approval, in the face of no actual or imminent threat to the nation;12 and continued, and in some respects expanded, the Bush Administration's ballistic missile defense program.13

The Obama Administration, beyond ending torture, has changed "virtually none" of the Bush Administration's Central Intelligence Agency ("CIA") programs and operations,14 except that in continuing targeted killings, the Obama Administration has increased the number of covert drone strikes in Pakistan to six times the number launched during the Bush Administration.15 The Obama Administration has declined to prosecute those who committed torture (after the President

himself concluded that waterboarding is torture);16 approved the targeted killing of American citizens (Anwar al-Awlaqi and a compatriot17) without judicial warrant;18 rejected efforts by the press and Congress to release legal opinions justifying those killings or describing the breadth of the claimed power;19 and opposed legislative proposals to expand intelligence oversight notification requirements.20 His administration has increased the role of covert special operations,21 continuing each of the covert action programs that President Bush handed down.22 The Obama Administration has continued the Bush Administration's cyberwar against Iran (code-named "Olympic Games")23 and sought to block lawsuits challenging the legality of other national security measures,24 often claiming the state secrets privilege.25

The Obama Administration has also continued, and in some ways expanded, Bush-era surveillance policies. For example, the Obama Administration continued to intercept the communications of foreign leaders; 26 further insisted that GPS devices may be used to keep track of certain citizens without probable cause or judicial review27 (until the Supreme Court disapproved28); continued to investigate individuals and groups under Justice Department guidelines re-written in 2008 to permit "assessments" that require no "factual basis" for FBI agents to conduct secret interviews, plant informants, and search government and commercial databases;29 stepped up the prosecution of government whistleblowers who uncovered illegal actions,30 using the 1917 Espionage Act eight times during his first administration to prosecute leakers (it had been so used only three times in the previous ninety-two years);31 demanded that businesses turn over personal information about customers in response to "national security letters" that require no probable cause and cannot legally be disclosed;32 continued broad National Security Agency ("NSA") homeland surveillance;33 seized two months of phone records of reporters and editors of the Associated Press for more than twenty telephone lines of its offices and journalists, including their home phones and cellphones, without notice;34 through the NSA, collected the telephone records of millions of Verizon customers, within the United States and between the United States and other countries, on an "ongoing, daily basis" under an order that prohibited Verizon from revealing the operation;35 and tapped into the central servers of nine leading U.S. internet companies, extracting audio and video chats, photographs, emails, documents, and connection logs that enable analysts to track foreign targets and U.S. citizens.36 At least one significant NSA surveillance program, involving the collection of data on the social connections of U.S. citizens and others located within the United States, was initiated after the Bush Administration left office.37

These and related policies were formulated and carried out by numerous high- and mid-level national security officials who served in the Bush Administration and continued to serve in the Obama Administration.38

Given Senator Obama's powerful criticism of such policies before he took office as President, the question,39 then, is this: Why does national security policy remain constant even when one President is replaced by another who as a candidate repeatedly, forcefully, and eloquently promised fundamental changes in that policy?

The affirmative focuses on the wrong area of government --- U.S. national security decisions are made by executive officials, separate from even the President.

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

As it did in the early days of Britain's monarchy, power in the **U**nited **S**tates lay initially in one set of institutions—the President, Congress, and the courts. These are America's "dignified" institutions. Later, however, a second institution emerged to safeguard the nation's security. This, America's "efficient" institution (actually, as will be seen, more a network than an institution) **consists of the several hundred executive officials** who sit atop the military, intelligence, diplomatic, and law enforcement departments and agencies that have as their mission the protection of America's international and internal security. Large segments of the public continue to believe that America's constitutionally established, dignified institutions are the locus of governmental power; by promoting that impression, **both sets of institutions maintain public support**. But when it comes to defining and protecting national security, the public's impression is mistaken. America's efficient institution makes most of the key decisions concerning national security, removed from public view and from the constitutional restrictions that check America's dignified institutions. The **U**nited **S**tates has, in short, moved beyond a mere imperial presidency to a bifurcated system—a structure of double government—in which **even the President now exercises little substantive control over the overall direction of U.S. national security policy**. Whereas Britain's dual institutions evolved towards a concealed republic, America's have evolved in the opposite direction, toward greater centralization, less accountability, and emergent autocracy.

--- XT: FBI Circumvents

FBI surveillance continues even after restrictions on its activities

Fisher, 4 --- Associate Professor of Law and Director, Center for Social Justice, Seton Hall Law School (Winter 2004, Linda E., Arizona Law Review, "Guilt by Expressive Association: Political Profiling, Surveillance and the Privacy of Groups," 46 Ariz. L. Rev. 621, Lexis, JMP)

The history of the FBI and other law enforcement surveillance gives scant comfort to those engaged in lawful political and religious activities who are [*623] concerned about becoming targets of surveillance. n5 From its inception until restrictions on its activities were imposed in the mid-1970s - **and even sometimes thereafter** - the FBI regularly conducted politically motivated surveillance, choosing targets based on their political or religious beliefs. As part of its investigations, it compiled and widely disseminated political dossiers, engaged in warrantless searches, and disrupted the lawful First Amendment activities of a wide array of groups opposed to government policy. n6 Local police "Red Squads" did the same. n7 During the war in Vietnam, the CIA, **despite restriction of its mission to foreign intelligence**, also conducted domestic surveillance operations. n8 Religious groups engaged in political activity were among the targets of intelligence agency investigations. n9

--- XT: NSA Circumvents

Yes circumvention --- recent NSA action proves

Ackerman, 15 --- American national security reporter and blogger, national security editor for the Guardian (6/1/2015, Spencer, The Guardian, "Fears NSA will seek to undermine surveillance reform; Privacy advocates are wary of covert legal acrobatics from the NSA similar to those deployed post-9/11 to circumvent congressional authority," Lexis, JMP)

Privacy advocates fear the **N**ational **S**ecurity **A**gency will attempt to **weaken new restrictions** on the bulk collection of Americans' phone and email records with **a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday.

Related: Bush-era surveillance powers expire as US prepares to roll back NSA power

The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret.

Attorneys for the intelligence agencies react scornfully to the suggestion that they will **stretch their authorities to the breaking point**. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act.

Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that **NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions** on bulk phone records collection by taking an expansive view of the bill's definitions, thanks to a pliant, secret surveillance court.

"My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]," Paul said on the Senate floor on Sunday.

Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform.

"My time on the intelligence committee has taught me to always be vigilant for secret interpretations of the law and new surveillance techniques that Congress doesn't know about," Wyden, a member of the intelligence committee, told the Guardian.

"Americans were rightly outraged when they learned that US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens. The American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind."

The USA Freedom Act is supposed to prevent what Wyden calls " secret law ". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance.

Yet in recent memory, the US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004.

Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, an internal NSA draft history records that attorneys found a different legal rationale that " essentially gave NSA the same authority to collect bulk internet metadata that it had ".

After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa court, that Section 215 of the Patriot Act authorized it all along - precisely the contention that the second circuit court of appeals rejected in May.

--- XT: CIA Circumvents

CIA controls policy --- it empirically lies and gets what it wants

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Justice Douglas, a family friend of the Kennedys, saw the Trumanites' influence first-hand: "In reflecting on Jack's relation to the generals, I slowly realized that the military were so strong in our society that probably no President could stand against them."375 As the roles of the generals and CIA have converged, the CIA's influence has expanded—aided in part by **a willingness to shade the facts, even with sympathetic Madisonian sponsors**. A classified, 6,000-word report by the Senate Intelligence Committee reportedly concluded that the CIA was "so intent on justifying extreme interrogation techniques that it blatantly misled President George W. Bush, the White House, the Justice Department and the Congressional intelligence committees about the efficacy of its methods."376 **"The CIA gets what it wants,"** President Obama told his advisers when the CIA asked for authority to expand its drone program and launch new paramilitary operations.377

CIA fights any restraints --- comes after legislators that try and reign it in

Friedersdorf, 14 (Conor, 3/20/2014, "Nancy Pelosi: When Legislators Take on the CIA, 'They Come After You'; A powerful legislator on the costs of properly overseeing the intelligence community," http://www.theatlantic.com/politics/archive/2014/03/nancy-pelosi-when-legislators-take-on-the-cia-they-come-after-you/284524/, JMP)

House Minority Leader Nancy Pelosi's remarks in support of fellow legislator Dianne Feinstein, who is embroiled in a dispute with the CIA, ought to be the sort of thing that alarms everyone. After all, another powerful member of Congress claims that the spy agency she is charged with overseeing illegitimately **resists checks on its autonomy**.

Here's how she put it:

"I salute Senator Feinstein. I tell you, you take on the intelligence community, you're a person of courage. And she does not do that lightly. Not without evidence."

"Wherever the decision is, whether it's from the administration, as was the case in the Bush Administration, to withhold information from Congress, I fought that. But you don't fight it without a price, because they come after you, and they don't always tell the truth about it. Now, where that's motivated from, I don't know."

"This is a matter of great seriousness, the attitude that the CIA had, to the rights of Congress in all of this. It's pretty appalling, what is being alleged or charged."

"The administration is the custodian of intelligence information. It is not the owner."

If Feinstein were taking on ATF or the Food and Drug Administration, no one would think to describe her as being a "person of courage." Congressional Republicans have been brutally attacking the IRS. None of them has suggested that, as a result, IRS officials or appointed leadership are bound to come after them.

In other words, **the CIA is out of control** in a way that these other agencies aren't. And the reason this isn't considered scandalous? We've grown to expect it. There are many patriots who serve their country in the intelligence community, Pelosi said. And presidential administrations are partly to blame here. She is absolutely right—none of which changes the urgent need to rein in the CIA.

--- XT: Agency Fill In

Other agencies empirically fill in to continue surveillance

Ackerman, 15 --- American national security reporter and blogger, national security editor for the Guardian (6/1/2015, Spencer, The Guardian, “Fears NSA will seek to undermine surveillance reform; Privacy advocates are wary of covert legal acrobatics from the NSA similar to those deployed post-9/11 to circumvent congressional authority,” Lexis, JMP)

The rise of what activists have come to call "bulky" surveillance, like the "large collections" of Americans' electronic communications records the FBI gets to collect under the Patriot Act, continue unabated - or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday.

Related: FBI used Patriot Act to obtain 'large collections' of Americans' data, DoJ finds

That collection, recently confirmed by a largely overlooked Justice Department inspector general's report, points to a slipperiness in shuttering surveillance programs - one that creates opportunities for clever lawyers.

The Guardian revealed in 2013 that Barack Obama had permitted the NSA to collect domestic internet metadata in bulk until 2011. Yet even as Obama closed down that NSA program, the Justice Department inspector general confirms that by 2009, **the FBI was already collecting the same "electronic communications" metadata under a different authority**.

It is unclear as yet how the FBI transformed that authority, passed by Congress for the collection of "business records", into large-scale collection of Americans' email, text, instant message, internet-protocol and other records. And a similar power to for the FBI gather domestic internet metadata, obtained through non-judicial subpoenas called "National Security Letters", also exists in a different, non-expiring part of the Patriot Act.

--- AT: President Will Comply

The President doesn't matter --- Glennon says a double government exists and a network of officials exists within government that exercises predominant power on national security.

The President can't ensure compliance --- the national security bureaucracy firmly controls the process

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Put differently, the question whether the President could institute a complete about-face supposes a top-down policy-making model. The **illusion** that presidents issue orders and that subordinates simply carry them out is nurtured in the public imagination by media reports of "Obama's" policies or decisions or initiatives, by the President's own frequent references to "my" directives or personnel, and by the Trumanites own reports that the President himself has "ordered" them to do something. But true top-down decisions that order fundamental policy shifts are rare.369 The reality is that when the President issues an "order" to the Trumanites, **the Trumanites themselves normally formulate the order**.370 The Trumanites "cannot be thought of as men who are merely doing their duty. They are the ones who determine their duty, as well as the duties of those beneath them. They are not merely following orders: **they give the orders**."371 They do that by "entangling"372 the President. This dynamic is an aspect of what one scholar has called the "deep structure" of the presidency.373 As Theodore Sorensen put it, "Presidents rarely, if ever, make decisions—particularly in foreign affairs—in the sense of writing their conclusions on a clean slate . . . . [T]he basic decisions, which confine their choices, have all too often been previously made."374

National security bureaucracy acts independent of the President

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Sometimes, however, the Trumanites **proceed without presidential approval**. In 1975, a White House aide testified that the White House "didn't know half the things" intelligence agencies did that might be legally questionable.378 "If you have got a program going and you are perfectly happy with its results, why take the risk that it might be turned off if the president of the United States decides he does not want to do it," he asked.379 Other occasions arise when Trumanites in the CIA and elsewhere originate presidential "directives"—directed to themselves.380 Presidents then ratify such Trumanite policy initiatives after the fact.381 To avoid looking like a bystander or mere commentator, the President embraces these Trumanite policies, as does Congress, with the pretense that they are their own.382 To maintain legitimacy, **the President must appear to be in charge**. In a narrow sense, of course, Trumanite policies are the President's own; after all, he did formally approve them.383 But the policies ordinarily are formulated by Trumanites—who prudently, in Bagehot's words, prevent "the party in power" from going "all the lengths their orators propose[]."384 The place for presidential oratory, to the Trumanites, is in the heat of a campaign, not in the councils of government where cooler heads prevail.385

Military frames decision-making to force President to accept the policy it wants

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Presidential choice is further circumscribed by the Trumanites' ability to frame the set of options from which the President may choose— even when the President is personally involved in the decisionmaking process to an unusual degree, as occurred when President Obama determined the number of troops to be deployed to Afghanistan.414 Richard Holbrooke, the President's Special Representative for Afghanistan and Pakistan, predicted that the military would offer the usual three options— the option they wanted, bracketed by two unreasonable alternatives that could garner no support.415 "And that is exactly what happened,"416 Nasr recalled. It was, as Secretary Gates said, "the classic Henry Kissinger model . . . . You have three options, two of which are ridiculous, so you accept the one in the middle."417 The military later expanded the options— but still provided no choice. "You guys just presented me [with] four options, two of which are not realistic." The other two were practically indistinguishable. "So what's my option?" President Obama asked. "You have essentially given me one option."418 **The military was "really cooking the thing in the direction that they wanted,"** he complained. "They are not going to give me a choice."419

Presidential control is very limited

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

This is, again, hardly to suggest that the President is without power. Exceptions to the rule occur with enough regularity to create the impression of overall presidential control. "As long as we keep up a double set of institutions—one dignified and intended to impress the many, the other efficient and intended to govern the many—we should take care that the two match nicely," Bagehot wrote.420 He noted that "[t]his is in part effected by conceding some subordinate power to the august part of our polity . . . ."421 Leadership does matter, or at least it can matter. President Obama's decision to approve the operation against Osama bin Laden against the advice of his top military advisers is a prominent example.422 Presidents are sometimes involved in the decisional loops, as Bagehot's theory would predict. Overlap between Madisonians and Trumanites preserves the necessary atmospherics. Sometimes even members of Congress are brought into the loop.423 But seldom do presidents participate personally and directly, let alone the Madisonian institutions in toto. The range of presidential choice is tightly hemmed in.424 As Sorensen wrote in 1981, "[e]ven within the executive branch, the president's word is no longer final . . . ."425 When the red lights flash and the sirens wail, it is the Trumanites' secure phones that ring.

--- AT: Other Branches Check

Checks by federal branches fail --- national security bureaucracy is only concerned with increasing its own power to address threats

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

A third internal "check," the Foreign Intelligence Surveillance Court, subsists formally outside the executive branch but for all practical purposes might as well be within it; as noted earlier, it approved 99.9% of all warrant requests between 1979 and 2011.561 In 2013, it approved the NSA collection of the telephone records of tens of millions of Americans, none of whom had been accused of any crime.562 An authentic check is one thing; smoke and mirrors are something else.

The first difficulty with such proposed checks on the Trumanite network is circularity; all rely upon Madisonian institutions to restore power to Madisonian institutions by exercising the very power that Madisonian institutions lack. All assume that the Madisonian institutions, in which all reform proposals must necessarily originate, can somehow magically impose those reforms upon the Trumanite network or that the network will somehow merrily acquiesce. All suppose that the forces that gave rise to the Trumanite network can simply be ignored. All assume, at bottom, that Madison's scheme can be made to work—that an equilibrium of power can be achieved—without regard to the electorate's fitness.

Yet Madison's theory, again,563 presupposed the existence of a body politic possessed of civic virtue. It is the personal ambition only of officeholders who are chosen by a virtuous electorate that can be expected to translate into institutional ambition. It is legislators so chosen, Madison believed, who could be counted upon to resist encroachments on, say, Congress's power to

approve war or treaties because a diminution of Congress's power implied a diminution of their own individual power. Absent a virtuous electorate, personal ambition and institutional ambition no longer are coextensive. Members' principal ambition564 then becomes political survival, which means accepting, not resisting, Trumanite encroachments on congressional power. The Trumanites' principal ambition, meanwhile, remains the same: to broaden their ever-insufficient "flexibility" to deal with unforeseen threats—that is, to enhance their own power. The net effect is imbalance, not balance.

This imbalance has suffused the development of U.S. counterterrorism policy. Trumanites express concerns about convergence, about potentially dangerous link-ups among narco-terrorists, cyber-criminals, human traffickers, weapons traders, and hostile governments.565 Yet their concerns focus largely, if not entirely, on only one side of Madison's ledger —the government's need to protect the people from threats—and little, if at all, on the other side: the need to protect the people from the government. As a result, the discourse, dominated as it is by the Trumanites, emphasizes potential threats and deemphasizes tradeoffs that must be accepted to meet those threats. The Madisonians themselves are not troubled about new linkages forged among the newly-created components of military, intelligence, homeland security, and law enforcement agencies—linkages that together threaten civil liberties and personal freedom in ways never before seen in the United States. The earlier "stovepiping" of those agencies was seen as contributing to the unpreparedness that led to the September 11 attacks,566 and after the wearying creation of the Department of Homeland Security and related reorganizations, the Madisonians have little stomach for re-drawing box charts yet again. And so the cogs of the national security apparatus continue to tighten while the scaffolding of the Madisonian institutions continues to erode.

Lack of civic virtue prevents effective constraints by 3 branches

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

There is a third, more fundamental, more worrisome reason why the Madisonian institutions have been eclipsed, as noted earlier in this Article.575 It is the same reason that **repairs** of the sort enumerated above likely will not endure. And it is not a reason that can be entirely laid at the feet of the Trumanites. It is a reason that goes to the heartbeat of democratic institutions. The reason is that Madisonian institutions rest upon a foundation that has proven unreliable: a general public possessed of civic virtue.

Civic virtue, in Madison's view, required acting for the public interest rather than one's private interest.576 Madison, realist that he was, recognized that deal-making and self-interest would permeate government; this could be kept in check in part by clever institutional design, with "ambition . . . to counteract ambition"577 among governmental actors to maintain a power equilibrium. But no such institutional backup is available if the general public itself lacks civic virtue—meaning the capacity to participate intelligently in self-government and to elect officials who are themselves virtuous.578 Indeed, civic virtue is thus even more important,579 Madison believed, for the public at large than for public officials; institutional checks are necessary but not sufficient. Ultimately, the most important check on public officials is, as Madison put it, "virtue and intelligence in the community . . . ."580 Institutional constraints are necessary but not

sufficient for the survival of liberty, Madison believed; they cannot be relied upon absent a body politic possessed of civic virtue.581

The negative feedback loop ensures that 3 branches will continue to atrophy and be unable to check national security bureaucracy

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

This is the nub of the negative feedback loop in which the United States is now locked. Resuscitating the Madisonian institutions requires an informed, engaged electorate, but voters have little reason to be informed or engaged if their efforts are for naught—and as they become more uninformed and unengaged, they have all the more reason to continue on that path. The Madisonian institutions thus continue to atrophy, the power of the Trumanite network continues to grow, and the public continues to disengage.

3 branches can't check national security bureaucracy --- they have an incentive to fall in line

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

The second difficulty with legal and public-opinion based checks on the Trumanite network is the assumption in Madison's theory that the three competing branches act independently. "[I]t is evident that each department should have a will of its own," says The Federalist.570 This is achieved by ensuring that each is "so constituted that the members of each should have as little agency as possible in the appointment of the members of the others."571 Different policy preferences will obtain because the three Madisonian branches will act upon different motives. But when it counts, the branches do not. Each branch has the same ultimate incentive: to bring its public posture into sync with the private posture of the Trumanites.572 The net effect is "balance," after a fashion, in the sense that the end result is outward harmony of a sort easily mistaken for Madisonian-induced equipoise. But the balance is not an equilibrium that results from competition for power among three branches struggling "for the privilege of conducting American foreign policy," as Edward S. Corwin memorably put it.573 The "system" that produces this ersatz consensus is a symbiotic tripartite co-dependence in which **the three Madisonian branches fall over themselves to keep up with the Trumanites**. The ostensible balance is **artificial**; it reflects a juridical legerdemain created and nurtured by the Trumanite network, which shares, defends, and begins with the same static assumptions. Bagehot relates the confidential advice of Lord Melbourne to the English Cabinet: "It is not much matter which we say, but mind, we must all say the same."574 The Madisonian institutions and the Trumanite network honor the same counsel.

Congress and courts can't constrain the national security establishment

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

IV. The Reality of Madisonian Weakness

Although the Madisonian institutions seem to be in charge and, indeed, to be possessed of power broad enough to remedy their own deficiencies, a close look at each branch of government reveals why they are not. A more accurate description would be that those institutions are in a state of entropy and have become, in Bagehot's words, "a disguise"—"the fountain of honour" but not the "spring of business."241 The Presidency, Congress, and the courts appear to set national security policy, but in reality **their role is minimal**. **They exercise decisional authority more in form than in substance.** This is the principal reason that the system has not, as advertised, self-corrected.242

--- AT: Congress Checks

Congress can't ensure implementation and enforcement --- it is a tool of the national security bureaucracy

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

B. The Congress

Like the courts, Congress's apparent power also vastly outstrips its real power over national security. Similar to the Trumanites, its members face a blistering work load. Unlike the Trumanites, their work is not concentrated on the one subject of national security. On the tips of members' tongues must be a ready and reasonably informed answer not only to whether the United States should arm Syrian rebels, but also whether the medical device tax should be repealed, whether and how global warming should be addressed, and myriad other issues. The pressure on legislators to be generalists creates a need to **defer to national security experts**. To a degree congressional staff fulfill this need. But **few can match the Trumanites' informational base**, drawing as they do on intelligence and even legal analysis that agencies often withhold from Congress. As David Gergen put it, "[p]eople . . . simply do not trust the Congress with sensitive and covert programs."344

The Trumanites' threat assessments,345 as well as the steps they take to meet those threats, are therefore **seen as presumptively correct** whether the issue is the threat posed by the targets of drone strikes, by weapons of mass destruction in Iraq, or by torpedo attacks on U.S. destroyers in the Gulf of Tonkin. Looming in the backs of members' minds is the perpetual fear of casting a career-endangering vote. No vote would be more fatal than one that might be tied causally to a cataclysmic national security breakdown. While the public may not care strongly or even know about many of the Bush policies that Obama has continued, the public could and would likely know all about any policy change—and who voted for and against it—in the event Congress

bungled the protection of the nation. No member wishes to confront the "if only" argument: the argument that a devastating attack would not have occurred if only a national security letter had been sent, if only the state secrets privilege had been invoked, if only that detainee had not been released. Better safe than sorry, from the congressional perspective. Safe means strong. Strong means supporting the Trumanites.

Because members of Congress are chosen by an electorate that is disengaged and uninformed, **Madison's grand scheme of an equilibrating separation of powers has failed**, and a different dynamic has arisen.346 His design, as noted earlier,347 anticipated that ambition counteracting ambition would lead to an equilibrium of power and that an ongoing power struggle would result among the three branches that would leave room for no perilous concentration of power.348 The government's "several constituent parts" would be "the means of keeping each other in their proper places."349 But the overriding ambition of legislators chosen by a disengaged and uninformed electorate is not to accumulate power by prescribing policy for the Trumanites, as Madison's model would otherwise have predicted. Their overriding ambition is to win reelection, an ambition often inconsistent with the need to resist encroachments on congressional power. All members of Congress know that they cannot vote to prescribe—or proscribe—any policy for anyone if they lose reelection. It is not that Madison was wrong; it is that the predicate needed for the Madisonian system to function as intended—civic virtue—is missing.

As a result, **Trumanite influence permeates the legislative process**, often eclipsing even professional committee staff. Trumanites draft national security bills that members introduce. They endorse or oppose measures at hearings and mark-ups. They lobby members, collectively and one-on-one. Their positions appear on the comparative prints that guide members through key conference committee deliberations. Sometimes Trumanites draft the actual language of conference reports. They wait outside the chambers of the House and Senate during floor debates, ready on-the-spot to provide members with instant arguments and data to back them up. Opponents frequently are blind-sided. **Much of this activity is removed from the public eye**, leading to the impression that the civics-book lesson is correct; **Congress makes the laws. But the reality is that virtually everything important on which national security legislation is based originates with or is shaped by the Trumanite network**.

Conversely, congressional influence in the Trumanites' decisionmaking processes is all but nil. The courts have, indeed, told Congress to keep out. In 1983, the Supreme Court invalidated a procedure, called the "legislative veto," which empowered Congress to disapprove of Trumanite arms sales to foreign nations, military initiatives, and other national security projects.350 The problem with the concept, the Court said, was that it permitted Congress to disapprove of executive action without the possibility of a presidential veto.351 A legislative proposal thereafter to give the Senate Intelligence Committee the power to approve or disapprove covert actions was rejected, on the grounds that the Court had ruled out such legislative controls.352

Restrictions will fail --- executive will circumvent

Pierce, 14 (Charles P., 2/17/2014, "The Imperial Masquerade of Barack Obama," http://www.esquire.com/blogs/politics/Imperial_Masquerade)

As much as we probably would like it not to happen, the Lawless President narrative seems to have reached that stage in our national dialogue in which enough of "some people" are "saying"

things about it that the courtier press feels obligated to "cover the controversy," which is how we're all going to have to spend months listening to our radio Tom Paines -- on whom the actual Tom Paine would not have deigned to spit -- tell us that Liberty (!) is indeed threatened by what the president is about these days.

Look, if I thought our current political class capable of engaging the public in a serious debate over the wild-assed expansion of executive power over the last 50 years, and if I thought it had the courage to do something about it, I'd be at the front of the line. But, come on, can you see the Congress making a serious attempt to re-establish the constitutional war powers that it has deeded away piecemeal to the Executive over the past 70 years? (In the long view of history, it was plain that the War Powers Act essentially was dead from birth.) Can you see the establishment of legitimate congressional oversight of, say, the intelligence community, and the use to which every president puts it? Can you imagine a serious congressional prohibition of drone warfare that the Executive would not feel free to violate with impunity? Instead, we get an argument whittled down to a fine point of stupid -- Our President Is A Nicer Authoritarian Than Yours Is. There is a Democrat in the White House so it is the Republicans -- and the conservative monkeyhouse that is the party's policy apparatus -- howling about imperial presidencies after being deadly silent about C-Plus Augustus and his signing statements and the vast arrogation of power that occurred under the doctrine of the unitary executive. And vice versa. And so on, forever, we go. Charlie Savage, the truly invaluable national-security reporter at The New York Times, put it plainly in Takeover, his book on the imperial administration of George W. Bush and Dick Cheney:

> Whenever presidentialists have gained control of the White House, they have tended to make grandiose claims of presidential power. Then, when scandals and misgovernment have arisen, the presidentialists have temporarily retreated, only to slowly retake the ground they lost. The Korean War, the Vietnam War and the Watergate scandal, the Iran-Contra scandal, and now the Iraq War and the war on terrorism are all chapters in this history. Each one has also been a difficult time in America.

As loud as is the current frothing over some unlateral tinkering with the Affordable Care Act, and the president's decision to get the Pentagon janitors a raise, prior to the John Yoo-sanctified follies of the previous administration, the clearest example of how destructive an unmoored and unrestrained Executive can be was, as Savage points out, the Iran-Contra foolishness, which remains the great lost opportunity for the country and its politicians to stuff the presidency back into the constitutional corral where it belongs. We all blew that one -- the politicians did, certainly, but so, disgracefully, did the elite media and, ultimately, so did the American people their own selves. In 1988, knowing full well what had gone on, we elected to the presidency a vice-president who was hip-deep in the crimes and the cover-up, and we did it because he was able to feign anger convincingly enough while lying his withered hindquarters off to Dan Rather. In A Very Thin Line, his definitive account of the Iran-Contra crimes, historian Theodore Draper gives us an account of what happened to the only serious congressional attempt to respond to the demonstrable lawlessness of the Reagan administration.

As you may recall, Iran-Contra was essentially an attempt by the Reagan White House to evade a law prohibiting direct American aid to the various priest-killers and nun-rapers we were supporting in Central America. (There were a number of other facets, but that's basically what it was all about.) One of the ways the Reagan people tried to get around the law was to solicit aid -- financial and otherwise -- from third countries. In the summer of 1989, Senator Daniel Patrick Moynihan introduced a bill specifically designed to close that loophole, and to make what the

Reaganauts tried to do a felony. As Draper points out, all hell promptly broke loose. President George H.W. Bush threatened to veto the bill, which he eventually did at the end of November. Nobody in the country said boo, even though Moynihan had drafted a bill that specifically addressed the crimes at the heart of a scandal that had occupied the government for two years, and that nearly blew up a presidency, and probably should have, and a president who knew goddamn good and well what had gone on vetoed the bill, which was directly aimed at prohibiting activities in which said president had been intimately involved.

The nation yawned. A lot of it was simple apathy, and the steady abandonment on the part of the country of the obligations of self-government, and the concomitant lassitude as to their duties by the politicians elected by an apathetic electorate. Some of it was simple fear; this was particularly true of the press, which, as Mark Hertsgaard explains in On Bended Knee, didn't want to be thought of as having "destroyed" another lawless presidency, as though that wasn't the essential job description in Amendment I. (This, of course, was not a consideration in the 1990's, when a lot of the same people spent two years chasing Bill Clinton's penis all over the Beltway.) This dereliction was usually excused within the elite media with the condescending argument that "the people" could not stand the trauma of another "failed presidency." But this is inexcusable timidity. As Draper writes:

Not every dispute over the Constitution endangers it. This one, however, is qualitatively different. An authoritarian, autocratic presidency in "the management of foreign relations" is still a clear and present danger, "most susceptible of abuse of all the trusts committed to a Government." And whatever we may think of the constitutional issue, there remains the question: Do we want that kind of presidency?

The answer, for the moment, remains generally yes. Everything else is political noise.

--- AT: Courts Check

Judicial restrictions can't solve --- will either throw out cases or be biased and defer

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

The judiciary, in short, does not have the foremost predicate needed for Madisonian equilibrium: "a will of its own."304 Whatever the court, judges normally are able to find what appear to the unschooled to be sensible, settled grounds for **tossing out challenges to the Trumanites' projects**. Dismissal of those challenges is **couched in arcane doctrine** that harks back to early precedent, invoking implicitly the courts' mystical pedigree and an aura of politics-transcending impartiality. But challenges to the Trumanites' projects **regularly get dismissed** before the plaintiff ever has a chance to argue the merits either before the courts or, sometimes more importantly, the court of public opinion. Try challenging the Trumanites' refusal to make public their budget305 on the theory that the Constitution does, after all, require "a regular statement and account of the receipts and expenditures of all public money";306 or the membership of Members of Congress in the military reserve307 on the theory that the Constitution does, after all, prohibit Senators and Representatives from holding "any office under the United States";308 or the

collection of phone records of the sort given by Verizon to the NSA on the theory that the law authorizing the collection is unconstitutional.309 Sorry, no standing, case dismissed.310 Try challenging the domestic surveillance of civilians by the U.S. Army311 on the theory that it chills the constitutionally protected right to free assembly,312 or the President's claim that he can go to war without congressional approval313 on the theory that it is for Congress to declare war.314 Sorry, not ripe for review, case dismissed.315 Try challenging the introduction of the armed forces into hostilities in violation of the War Powers Resolution.316 Sorry, political question, non-justiciable, case dismissed.317 Try challenging the Trumanites' refusal to turn over relevant and material evidence about an Air Force plane accident that killed three crew members through negligence,318 or about racial discrimination against CIA employees,319 or about an "extraordinary rendition" involving unlawful detention and torture.320 Sorry, state secrets privilege, case dismissed.321

Sometimes the courts have no plausible way of avoiding the merits of national security challenges. **Still, the Trumanites win.** The courts eighty years ago devised a doctrine—the "non-delegation doctrine"—that forbids the delegation of legislative power by Congress to administrative agencies.322 Since that time it has rarely been enforced, and never has the Court struck down any delegation of national security authority to the Trumanite apparatus.323 Rather, **judges stretch to find "implied" congressional approval of Trumanite initiatives**. Congressional silence, as construed by the courts, constitutes acquiescence.324 Even if that hurdle can be overcome, the evidence necessary to succeed is difficult to get; as noted earlier,325 the most expert and informed witnesses all have signed nondisclosure agreements, which prohibit any discussion of "classifiable" information without pre-publication review by the Trumanites. As early as 1988, over three million present and former federal employees had been required to sign such agreements as a condition of employment.326 Millions more have since become bound to submit their writings for editing and redaction before going to press. And as **the ultimate trump card**, the Trumanites are cloaked in, as the Supreme Court put it, "the very delicate, plenary and exclusive power of the President as the sole organ of the federal government in the field of international relations—a power which does not require as a basis for its exercise an act of Congress."327 **The basis of their power, the Court found, is, indeed, not even the Constitution itself**; the basis of Trumanite power is external sovereignty—the membership of the **U**nited **S**tates in the community of nations, which confers extra-constitutional authority upon those charged with exercising it.328

Courts can't effectively constrain executive national security officials

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Yet the larger picture remains valid. Through the long list of military conflicts initiated without congressional approval—Grenada, Panama, Kosovo, and, most recently, Libya—the courts have never stopped a war, with one minor (and temporary) exception. In 1973, Justice William O. Douglas did issue an order to halt the bombing of Cambodia333—which lasted a full nine hours, until the full Supreme Court overturned it.334 The Court's "lawless" reversal was effected through an extraordinary telephone poll of its members conducted by Justice Thurgood Marshall. "[S]ome Nixon men," Douglas believed, "put the pressure on Marshall to cut the corners."335

Seldom do judges call out even large-scale constitutional violations that could risk getting on the wrong side of an angry public, as American citizens of Japanese ethnicity discovered during World War II.336 Whatever the **cosmetic effect**, the four cases representing the Supreme Court's supposed "push-back" against the War on Terror during the Bush Administration freed, at best, a tiny handful of detainees.337 As of 2010 fewer than 4% of releases from Guantánamo followed a judicial release order.338 A still-unknown number of individuals, numbering at least in the dozens, fared no better. These individuals were detained indefinitely— without charges, based on secret evidence, sometimes without counsel—as "material witnesses" following 9/11.339 One can barely find a case in which anyone claiming to have suffered even the gravest injury as the result of the Bush-Obama counterterrorism policies has been permitted to litigate that claim on the merits—let alone to recover damages. The Justice Department's seizure of Associated Press ("AP") records was carried out pursuant to judicially-approved subpoenas, in secret, without any chance for the AP to be heard.340 The FISC 341 has barely pretended to engage in real judicial review. Between 1979 and 2011, the court received 32,093 requests for warrants. It granted 32,087 of those requests, and it turned down eleven.342 In 2012, the court received 1,789 requests for electronic surveillance, one of which was withdrawn. All others were approved.343 The occasional counterexample notwithstanding, **the courts cannot seriously be considered a check on America's Trumanite network**.

And, at best, the plan just perpetuates the façade that the judiciary can effectively constrain the executive

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

As is true with respect to the other Madisonian institutions, there are, of course, instances in which the judiciary has poached on the Trumanites' domain. The courts rebuffed an assertion of the commander-inchief power in ordering President Truman to relinquish control of the steel mills following their seizure during the Korean War.329 Over the Trumanites' objections, the courts permitted publication of the Pentagon Papers that revealed duplicity, bad faith, and ineptitude in the conduct of the Vietnam War.330 The Supreme Court did overturn military commissions set up to try enemy combatants for war crimes,331 and two years later found that Guantánamo detainees had unlawfully been denied habeas corpus rights.332 Personnel does sometimes matter. Enough apparent counterexamples exist to **preserve the façade**.

--- AT: We Make Congress / Courts / President Better

Madisonian institutions can't be reformed to effectively restrict national security bureaucracy

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

Some suggest that the answer is to admit the failure of the Madisonian institutions, recognize that for all their faults the external checks are all that really exist, acknowledge that the Trumanite

network cannot be unseated, and try to work within the current framework.530 But the idea that external checks alone do or can provide the needed safeguards is false. If politics were the effective restraint that some have argued it is,531 politics—intertwined as it is with law—would have produced more effective legalist constraints. It has not. The failure of law is and has been a failure of politics. If the press and public opinion were sufficient to safeguard what the Madisonian institutions were designed to protect, the story of democracy would consist of little more than a series of elected kings, with the rule of law having frozen with the signing of Magna Carta in 1215. Even with effective rules to protect free, informed, and robust expression—which is an enormous assumption—public opinion alone cannot be counted upon to protect what law is needed to protect. The hope that it can do so recalls earlier reactions to Bagehot's insights—the faith that "the people" can simply "throw off" their "deferential attitude and reshape the political system," insisting that the Madisonian, or dignified, institutions must "once again provide the popular check" that they were intended to provide.532

That, however, is exactly what many thought they were doing in electing Barack Obama as President. The results need not be rehearsed; little reason exists to expect that some future public effort to resuscitate withered Madisonian institutions would be any more successful. Indeed, the added power that the Trumanite network has taken on under the Bush- Obama policies would make that all the more difficult. It is simply naïve to believe that a sufficiently large segment of informed and intelligent voters can somehow come together to ensure that sufficiently vigilant Madisonian surrogates will somehow be included in the national security decisionmaking process to ensure that the Trumanite network is infused with the right values. Those who believe that do not understand why that network was formed, how it operates, or why it survives. They want it, in short, to become more Madisonian. The Trumanite network, of course, would not mind appearing more Madisonian, but its enduring ambition is to become, in reality, less Madisonian.

--- AT: Public Opinion Ensures Compliance

National security bureaucracy will buck the President and manipulate public opinion to control policymaking

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

The idea that presidential backbone is all that is needed further presupposes a model in which the Trumanites share few of the legitimacy-conferring features of the constitutional branches and will easily submit to the President. But that supposition is erroneous. Mass entertainment glorifies the military, intelligence, and law enforcement operatives that the Trumanites direct. The public is emotionally taken with the aura of mystery surrounding the drone war, Seal Team Six, and cyber-weapons. Trumanites, aided by Madisonian leaks, embellish their operatives' very real achievements with fictitious details, such as the killing of Osama bin Laden386 or the daring rescue of a female soldier from Iraqi troops.387 They cooperate with the making of movies that praise their projects, like Zero Dark Thirty and Top Gun, but not movies that lampoon them, such as Dr. Strangelove (an authentic F-14 beats a plastic B-52 every time).388 Friendly fire incidents are downplayed or covered up.389 The public is further impressed with operatives' valor as they

are lauded with presidential and congressional commendations, in the hope of establishing Madisonian affiliation.390 Their simple mission—find bad guys and get them before they get us—is powerfully intelligible. Soldiers, commandos, spies, and FBI agents occupy an honored pedestal in the pantheon of America's heroes. Their secret rituals of rigorous training and preparation mesmerize the public and fortify its respect. To the extent that they are discernible, the Trumanites, linked as they are to the dazzling operatives they direct, command a measure of admiration and legitimacy that the Madisonian institutions can only envy.391 Public opinion is, accordingly, a flimsy check on the Trumanites; it is a **manipulable tool of power enhancement**. It is therefore rarely possible for any occupant of the Oval Office to prevail against strong, unified Trumanite opposition, for the same reasons that members of Congress and the judiciary cannot; a non-expert president, like a non-expert senator and a non-expert judge, is intimidated by expert Trumanites and does not want to place himself (or a colleague or a potential political successor) at risk by looking weak and gambling that the Trumanites are mistaken. So presidents wisely "choose" to go along.

The public and media is not a suitable check

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

It might also be supposed that existing, non-Madisonian, external restraints pose counterweights that compensate for the weakness of internal, Madisonian checks. The press, and the public sentiment it partially shapes, do constrain the abuse of power—but only up to a point. To the extent that the "marketplace of ideas" analogy ever was apt, that marketplace, like other marketplaces, is given to distortion. Public outrage is notoriously fickle, manipulable, and selective, particularly when driven by anger, fear, and indolence. Sizeable segments of the public—often egged on by public officials—lash out unpredictably at imaginary transgressors, failing even in the ability to identify sympathetic allies.518 "[P]ublic opinion," Sorensen wryly observed, "is not always identical with the public interest."519

The influence of the media, whether to rouse or dampen, is thus limited. The handful of investigative journalists active in the United States today are the truest contemporary example of Churchill's tribute to the Royal Air Force.520 In the end, though, access remains everything to the press. Explicit or implicit threats by the targets of its inquiries to curtail access often yield editorial acquiescence. Members of the public obviously are in no position to complain when a story does not appear. Further, even the best of investigative journalists confront a high wall of secrecy. Finding and communicating with (on deep background, of course) a knowledgeable, candid source within an opaque Trumanite network resistant to efforts to pinpoint decision-makers521 can take years. Few publishers can afford the necessary financial investment; newspapers are, after all, businesses, and the bottom line of their financial statements ultimately governs investigatory expenditures. Often, a second corroborating source is required. Even after scaling the Trumanite wall of secrecy, reporters and their editors often become victims of the deal-making tactics they must adopt to live comfortably with the Trumanites. Finally, members of the mass media are subject to the same organizational pressures that shape the behavior of other groups. They eat together, travel together, and think together. A case in point was the Iraq War. The Washington Post ran twenty-seven editorials in favor of the war along with dozens of op-ed

pieces, with only a few from skeptics.522 The New York Times, Time, Newsweek, the Los Angeles Times, and the Wall Street Journal all marched along in lockstep. 523 As Senator Eugene McCarthy aptly put it, reporters are like blackbirds; when one flies off the telephone wire, they all fly off.524

More importantly, the premise—that a vigilant electorate fueled by a skeptical press together will successfully fill the void created by the hollowed-out Madisonian institutions—is wrong.525 This premise supposes that those outside constraints operate independently, that their efficacy is not a function of the efficacy of internal, Madisonian checks.526 But the internal and external checks are woven together and depend upon one another. 527 Non-disclosure agreements (judicially-enforced gag orders, in truth) are prevalent among those best positioned to criticize.528 Heightened efforts have been undertaken to crush vigorous investigative journalism and to prosecute and humiliate whistleblowers and to equate them with spies under the espionage laws. National security documents have been breathtakingly over-classified. The evasion of Madisonian constraints by these sorts of policies has the net effect of narrowing the marketplace of ideas, curtaining public debate, and gutting both the media and public opinion as effective restraints.529 The vitality of external checks depends upon the vitality of internal Madisonian checks, and the internal Madisonian checks only minimally constrain the Trumanites.

--- AT: Consensus Exists

Consensus not meaningful --- it is just political branches trying to stay in sync with national security bureaucracy

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

It is no answer to insist that, whatever the system's faults, the Madisonian accountability mechanisms have at least generated a political consensus.567 Even if consensus exists among the Madisonians themselves, the existence of a public consensus on national security policy is at best doubtful.568 Further, if the application of Bagehot's theory to U.S. national security policy is correct, whatever consensus does exist at the political level is synthetic in that it derives not from contestation among the three branches of the federal government but from efforts of the Madisonian institutions to remain in sync with the Trumanite network. That network is the moving force behind any consensus. It has forged the policies that the consensus supports; it has orchestrated Madisonian support. Finally, even if real, the existence of a Madisonian/Trumanite consensus says nothing about the content of the consensus—nothing about whether Madison's second great goal of protecting the people from the government has been vindicated or defeated. Autocracy can be consensus-based. The notion of a benign modern-day consensus on national security policy is, indeed, reminiscent of the observation of Richard Betts and Leslie Gelb who, reviewing agreements that emerged from national security deliberations during the Johnson Administration, concluded that "the system worked."569 Well, perhaps; the result was Vietnam.

--- AT: Double Government Thesis Wrong

Double government does exist in the U.S. --- bureaucracy is self-multiplying

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, JMP)

To many, inculcated in the hagiography of Madisonian checks and balances and oblivious of the reach of Trumanite power, the response to these realizations will be denial. The image of a double national security government will be shocking. It cannot be right. It sounds of conspiracy, "a state within," and other variations on that theme. "The old notion that our Government is an extrinsic agency," Bagehot wrote, "still rules our imaginations."603 That the Trumanite network could have emerged in full public view and without invidious intent makes its presence all the more implausible. Its existence challenges all we have been taught.

There is, however, little room for shock. The pillars of America's double government have long stood in plain view for all to see. We have learned about significant aspects of what Bagehot described—from some eminent thinkers. Max Weber's work on bureaucracies showed that, left unchecked, the inexorability of bureaucratization can lead to a "polar night of icy darkness" in which humanitarian values are sacrificed for abstract organizational ends.604 Friedrich Hayek's work on political organization led him to conclude that "the greatest danger to liberty today comes from the men who are most needed and most powerful in government, namely, the efficient expert administrators exclusively concerned with what they regard as the public good."605 Eric Fromm's work on social psychology showed how people unconsciously adopt societal norms as their own to avoid anxiety-producing choices, so as to "escape from freedom."606 Irving Janis's work on group dynamics showed that the greater a group's esprit de corps, "the greater the danger that independent critical thinking will be replaced by groupthink, which is likely to result in irrational and dehumanizing actions directed against out-groups."607 Michael Reisman's work on jurisprudence has shown how de facto operational codes can quietly arise behind publicly-embraced myth systems, allowing for governmental conduct that is not approved openly by the law.608 Mills' 1956 work on power elites showed that the centralization of authority among officials who hold a common world view and operate in secrecy can produce a "military metaphysic" directed at maintaining a "permanent war economy."609 One person familiar with Mills' work was political scientist Malcolm Moos, the presidential speechwriter who five years later wrote President Eisenhower's prophetic warning.610 "In the councils of government," Eisenhower said, "we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist."611

Bagehot anticipated these risks. Bureaucracy, he wrote, is "the most unimproving and shallow form of government,"612 and the executive that commands it "the most dangerous."613 "If it is left to itself," he observed, "without a mixture of special and non-special minds," decisional authority "will become technical, **self-absorbed, self-multiplying**."614 The net result is responsibility that is neither fixed nor ascertainable but diffused and hidden,615 with implications that are beyond historical dispute. "The most disastrous decisions in the twentieth century," in Robert Dahl's words, "turned out to be those made by authoritarian leaders freed from democratic restraints."616

The benefits derived by the **U**nited **S**tates from double government—enhanced technical expertise, institutional memory and experience, quick-footedness, opaqueness in confronting adversaries, policy stability, and insulation from popular political oscillation and decisional idiosyncrasy —need hardly be recounted. Those benefits, however, have not been cost-free. The price lies in well-known risks flowing from centralized power, **unaccountability**, and **the short-circuiting of power equilibria**. Indeed, in this regard the Framers thought less in terms of risk than certainty. John Adams spoke for many: "The nation which will not adopt an equilibrium of power must adopt a despotism. There is no other alternative."617

CVE fails for a number of reasons --- won't check extremism

- Not implemented correctly, bureaucratic turf fights, lacks funding, doesn't make Americans safer

Crowley, 15 (1/8/2015, Michael, "No answer for homegrown terrorism? Obama's plan to combat radicalization is a flop, critics say," http://www.politico.com/story/2015/01/homegrown-terrorism-obama-administration-114100.html, JMP)

In early 2011, White House officials realized they had a problem on their hands: the threat of homegrown Islamic radicalism

In the two years since President Obama had taken office, several young Muslim Americans had plotted terrorist attacks at home, including one who nearly exploded a car bomb in Times Square. White House aides concluded that the government's efforts to combat radicalism within America's Muslim communities were a disjointed mess.

Denis McDonough, a top Obama aide who is now White House chief of staff, took charge of the problem, overseeing a strategy to prevent violent extremism. Released that summer, the plan focused on creating closer partnerships with community leaders to help identify budding radicals and steer them to a peaceful path.

Obama, McDonough said in a speech that year, "has been focused on this since he took office. Behind closed doors, he has insisted that his national security team make this a priority."

But after a recent string of attacks on their fellow citizens by Islamic radicals, including Wednesday's massacre in Paris by a pair of French nationals, critics complain that **the plan has**

been halfheartedly implemented, **produced bureaucratic turf fights**, **lacks funding**, and **does little to make Americans safer** at a moment when the Islamic extremist message is more prevalent than ever.

"I don't think we have a strategy," said House Homeland Security Committee Chairman Michael McCaul. "We don't see a lead agency, there's no line item in the budget. There are no metrics to measure success. We don't even have a common definition for what it is."

The complaints don't come only from Republicans like McCaul. Even one of the key authors of the 2011 White House strategy, issued under the president's signature, now doubts its effectiveness.

"Considering where we started, we've made progress. Is it really affecting things on the ground? I don't know," said Quintan Wiktorowicz, a former Obama national security council aide who specializes in radical extremism.

Their "Muslim-American cooperation" claim is wrong and offensive

Crowley, 15 (1/8/2015, Michael, "No answer for homegrown terrorism? Obama's plan to combat radicalization is a flop, critics say," http://www.politico.com/story/2015/01/homegrown-terrorism-obama-administration-114100.html, JMP)

Meanwhile, even as Obama's strategy takes fire from national security hawks like McCaul, it has rankled some civil liberties advocates — as well as senior law enforcement officials in Washington — who call it misguided and even counterproductive.

A public outreach strategy is built on a "false premise," says Mike German, a former undercover FBI agent now with the Brennan Center for Justice, namely that "there is a monolithic Muslim community [whose leaders] know who the bad guys are and simply aren't telling. **That's both factually wrong and insulting to the innocent Muslim community."**

Some Muslim leaders have in fact complained about Obama's strategy, which was careful not to single out any particular religion but has focused on Muslim communities in practice. Homeland Security Secretary Jeh Johnson has called building that trust "a personal priority," and has held closed-door meetings with American Muslim leaders.

Officials say that several would-be domestic terrorists have been identified thanks to tips from within their communities, and that better trust between law enforcement and Muslim leaders will encourage more such reporting.

But German warns that a "If you see something, say something" policy can be counter-productive, creating false alarms and deluging law enforcement officials with false leads.

German noted that, in an April 2014 speech, Obama's top counterterrorism advisor, Lisa Monaco, suggested that parents be alert to "sudden personality changes in their children at home — becoming confrontational."

"Okay, but do we want every parent with a belligerent teenager to call the FBI?" German asked. "Rather than spending resources focusing on innocent people and communities, they should be focusing their time and attention on people they have some factual basis to suspect of wrongdoing."

Programs to prevent extremism will fail --- we don't understand the causes AND Britain proves community outreach programs create a stigma that actually reduces cooperation

Byman, 15 --- professor in the security studies program at Georgetown University and research director of the Center for Middle East Policy at Brookings (2/13/2015, Daniel, "Five myths about violent extremism," http://www.washingtonpost.com/opinions/five-myths-about-violent-extremism/2015/02/13/2dc72786-b215-11e4-827f-93f454140e2b_story.html, JMP)

Citing the "tragic attacks in Ottawa, Sydney, and Paris," the White House on Wednesday is convening a summit on violent extremism. Its goal is admirable and ambitious: neutralizing terrorism's root causes by stopping people from radicalizing in the first place. **Yet the causes of violent extremism are poorly understood, and programs are often targeted at the wrong audiences.** So to help the world leaders at the summit do more good than harm, let's dispel some of the biggest myths.

1. We understand radicalization.

The just-released National Security Strategy warns repeatedly of the danger of extremism, citing weak governance, widespread grievances, repression and the lack of a flourishing civil society among other causes that allow "extremism to take root." This list suggests that we know what motivates radicalization — but almost every social malady falls into these categories. The difficult reality is that **there is no single path toward radicalization; it varies by country, by historical period and by person**.

Experts have long searched for a useful psychological profile of terrorists, without much success. The problem, as terrorism scholar Bruce Hoffman observed many years ago, is "how disturbingly 'normal' most terrorists seem."

Nor does the answer lie in the realm of faith. Many volunteers for terrorist groups have little knowledge of religion. Indeed, their lack of religious knowledge makes them easy prey for recruiters who don the mantle of religious authority. The two British Muslims who bought "Islam for Dummies" before heading to Syria are more the rule than the exception.

And **describing an entire religious group as potentially dangerous isn't especially helpful**. Britain's Prevent program, which included efforts to promote community cohesion and fight extremist ideology, **made Muslims feel stigmatized and made it harder to gain their cooperation**.

Community outreach not key to counter-terror programs AND Muslim-American communities are already providing info

Crowley, 15 (2/18/2015, Michael, "Barack Obama's 'extremism' language irks both sides; His carefully selected words on ISIL have frustrated both the left and the right," http://www.politico.com/story/2015/02/barack-obamas-extremism-language-irks-both-sides-115304.html, JMP) *****Note --- Hina Shamsi is director of the American Civil Liberties Union's national security project**

Critics of community outreach programs say **little data exists to demonstrate their effectiveness in spotting terrorists**. One academic guest at Wednesday's summit admitted as much, Shamsi said.

Nor, they argue, is there reason to believe Muslim-American communities are shy about reporting would-be radicals: A 2011 study by a University of North Carolina at Chapel Hill sociologist found that "the largest single source of initial information [about terror plots] … involved tips from the Muslim-American community."

The plan won't make CVE effective --- mistrust of government runs too deep because of past outreach programs that doubled as surveillance policies

Crowley, 15 (2/18/2015, Michael, "Barack Obama's 'extremism' language irks both sides; His carefully selected words on ISIL have frustrated both the left and the right," http://www.politico.com/story/2015/02/barack-obamas-extremism-language-irks-both-sides-115304.html, JMP)

Barack Obama's summit on violent extremism has come under fire from conservatives who are bashing his reluctance to use the words "Islam" and "Muslim" to describe the threat from terror groups like Al Qaeda and the Islamic State in Iraq and the Levant.

But in his remarks at the event Wednesday, Obama sounded more concerned about mollifying Muslim Americans who feel targeted by government outreach to their communities, promising not to "securitize" the relationship. Even so, some Muslim American and civil rights leaders said much of Wednesday's session of the White House's three-day Countering Violent Extremism summit — which focused on the threat from domestic radicals — **was based on flawed premises**.

"Today's summit confirmed that there are significant reasons for concern about [such] approaches and that none of the hard questions about protection of civil rights and privacy have yet been answered," said Hina Shamsi, director of the American Civil Liberties Union's national security project. Shamsi, who attended Wednesday's proceedings, said that while White House officials had listened to such concerns in private meetings, they were given little airing at the summit.

With Americans joining ISIL and Al Qaeda in Syria, and after recent domestic terror attacks in Europe and Canada, the Obama administration is on high alert for terror attacks staged from within. A plan to counter domestic radicalism launched in 2011 under the supervision of Denis McDonough, now Obama's chief of staff, aimed to identify possible terrorists before they struck through education about risk factors and greater dialogue and trust between law enforcement and local communities. On Wednesday, Obama touted pilot programs in Boston, Los Angeles and Minneapolis-St. Paul that embody such efforts.

Many Muslim leaders protest that they are the obvious focus of the initiatives, even if they are described in the generic, non-religious terms that annoy conservatives. And they say the difficult art of discerning emerging terrorists from brooding social misfits is outweighed by the risk of civil liberties violations.

"Since Sept. 11, Muslims have been targeted and profiled, and **we have created this narrative that we need to 'watch out' for the Muslim community**," said Jaylani Hussein, executive director of the Minnesota chapter of the Council on Muslim-American Relations.

In his remarks on Wednesday, Obama took care to address such anxieties.

"I know some Muslim Americans have concerns about working with government, particularly law enforcement. And their reluctance is rooted in the objection to certain practices where Muslim Americans feel they've been unfairly targeted," Obama said.

"So, in our work, we have to make sure that abuses stop, are not repeated, that we do not stigmatize entire communities. Nobody should be profiled or put under a cloud of suspicion simply because of their faith. Engagement with communities can't be a cover for surveillance."

Critics of Obama's efforts were not satisfied.

"The idea that you're tying outreach to terrorist activity is both offensive to the community and specious from a counterterrorism research perspective," said Mike German of the Brennan Center for Justice at New York University School of Law.

The frustration extends beyond civil liberties advocates and into the Muslim-American communities the Obama administration hopes to reach.

One of them is the Minneapolis-St. Paul area, home to a large Muslim immigrant population and the site of one of three counter-radicalism pilot programs featured by the White House during Wednesday's program. CAIR's Hussein said **many Muslims there mistrust government outreach** — especially after recent efforts appeared to be doubling as a means of surveillance.

After 22 Somali-Americans left the area to join the radical Islamic group Al Shabab in Somalia from 2007 to 2009, the FBI helped the Justice Department expand a longstanding community policing effort with no particular terrorism focus known as the Community Outreach program.

Unknown to local residents, according to a September 2014 report by the Brennan Center that drew from government documents, that program was funded and run by FBI counterterrorism officials in Washington collecting data on possible radicals.

The FBI revised its policies in 2010 to draw a clearer line between outreach and intelligence. "[M]embers of the public contacted through a community outreach activity," one internal memo noted, "generally do not have an expectation that information about them will be maintained in an FBI file or database."

The **mistrust lingers within Muslim communities**, Hussein said: "People believe that even talking about foreign policy puts you on some kind of watch list."

--- XT: CVE Fails

CVE won't solve --- funding shortages discourage outreach and there is resistance within the government to it

Crowley, 15 (1/8/2015, Michael, "No answer for homegrown terrorism? Obama's plan to combat radicalization is a flop, critics say," http://www.politico.com/story/2015/01/homegrown-terrorism-obama-administration-114100.html, JMP) *****note --- Quintan Wiktorowicz is a former Obama national security council aide who specializes in radical extremism, and Michael McCaul is House Homeland Security Committee Chairman**

Adding to frustration among the program's advocates, the White House announced in September that it would host an October summit dedicated to the issue. But the event has since been postponed twice, and a firm date still has not been set.

A senior administration official made no apology for the plan on Thursday, touting it as "a centerpiece of this administration's counterterrorism strategy."

"Our CVE approach is premised on the principle that local partners, including local law enforcement and communities, are at the forefront of preventing violent radicalization and recruitment both online and person-to-person," says the official.

But Wiktorowicz echoes McCaul's concern that no federal dollars are specifically allocated to the kind of counter-extremism programs Obama's 2011 strategy described, which included better communication between the government and community leaders from religious figures to Little League coaches, as well as efforts to challenge radical interpretations of Islam.

That means departments and agencies see a zero-sum game when it comes to reaching out to Muslim communities. A former government official says that local FBI offices often consider such outreach to be "social work" that requires agents to be pulled off active criminal cases. And while the FBI set up a Countering Violent Extremism Office in 2011, it **has been plagued by "personnel turnover, underfunding, and resistance from CVE skeptics in the Bureau**," Wictorowicz wrote in a June post for the national security blog Lawfare.

Funding shortfalls will undermine the program

Schmitt, 14 (10/5/2014, Eric, "U.S. Is Trying to Counter ISIS's Efforts to Lure Alienated Young Muslims," Lexis, JMP)

But efforts at countering violent extremism, especially at home, "have lagged badly behind other counterterrorism pillars," said Michael Leiter, a former director of the National Counterterrorism Center. "It is heartening to see the administration attempt to invigorate those efforts, but it is unfortunate that it has, despite the efforts of many, been so long in coming."

Government supporters question whether funds will be available to sustain these programs. "The administration has the right framework for doing this, but **long-term success will depend on sustainable resourcing to help local government, communities and law enforcement build initiatives** that can have impact," said Quintan Wiktorowicz, a former senior White House aide who was one of the principal architects of the current strategy.

That strategy here at home, called countering violent extremism, has proved much more difficult for American officials to master than the ability of the Pentagon and spy agencies to identify, track, capture and, if necessary, kill terrorists overseas.

--- XT: Muslim-American Cooperation Answers

Muslim leaders already cooperating to challenge ISIS recruitment

Goodstein, 15 (2/19/2015, Laurie, "U.S. Muslims Take On ISIS' Recruiting Machine," http://www.nytimes.com/2015/02/20/us/muslim-leaders-in-us-seek-to-counteract-extremist-recruiters.html?_r=0, JMP)

STERLING, Va. — Imam Mohamed Magid tries to stay in regular contact with the teenager who came to him a few months ago, at his family's urging, to discuss how he was being wooed by online recruiters working for the Islamic State, the extremist group in Syria and Iraq.

But the imam, a scholar bursting with charm and authority, has struggled to compete. Though he has successfully intervened in the cases of five other young men, persuading them to abandon plans to fight overseas, the Islamic State's recruiting efforts have become even more disturbing, he said, and nonstop.

"The recruiters wouldn't leave him alone," Imam Magid said of the young man he met with recently. "They were on social media with him at all hours, they tweet him at night, first thing in the morning. If I talk to him for an hour, they undo him in two hours."

President Obama on Wednesday described the fight against violent extremism as a "generational challenge" that would require the cooperation of governments, religious leaders, educators and law enforcement. But even before he called on more than 60 nations to join the effort, the rise of the Islamic State and the attacks by homegrown terrorists in Paris, Ottawa, Copenhagen and Sydney, Australia, **had jolted American Muslims into action**.

Muslim leaders here and elsewhere have already started organizing or expanding prevention programs and discussions on countering violent extremism, often with assistance from law enforcement officials and trained counter-recruiters who emphasize that the Internet's dangers for young Muslims now go far beyond pornography.

With the Islamic State in particular deploying savvy online appeals to adolescents alongside videos of horrific executions, the sense of urgency has grown. Though some Muslim leaders still resist cooperating with the government, fearing that they would be contributing to religious profiling and anti-Muslim bigotry, **many have been spurred to respond** as they have come into contact with religiously ardent youths who feel alienated by life in the West and admit that they have been vulnerable to the Islamic State's invitation to help build a puritanical utopia.

"The number is small, but one person who gets radicalized is one too many," said Rizwan Jaka, a father of six and the board chairman of the All Dulles Area Muslim Society, where Imam Magid is the spiritual leader. "It's a balancing act: We have to make sure our youth are not stereotyped in any way, but we're still dealing with the real issue of insulating them from any potential threat of radicalization."

No uniqueness for their internal link --- moderate Muslims are speaking out now against extremist violence

Byman, 15 --- professor in the security studies program at Georgetown University and research director of the Center for Middle East Policy at Brookings (2/13/2015, Daniel, "Five myths about violent extremism," http://www.washingtonpost.com/opinions/five-myths-about-violent-extremism/2015/02/13/2dc72786-b215-11e4-827f-93f454140e2b_story.html, JMP) *****note --- Byman is listing "myths" about violent extremism and answering them**

2. Moderate Muslims need to speak out.

Whenever an attack occurs, commentators chide moderate Muslims for not doing enough. Fox News contributor Monica Crowley argued that Muslims "should be condemning" the Charlie Hebdo attack but said that she hadn't "heard any condemnation." Bill Maher made a similar point when he claimed that "hundreds of millions" of Muslims "applaud an attack like this."

Impressionable young people should know that their communities reject violence, and Muslims should indeed speak out — **and they do. All the time**. They condemn specific attacks such as the Charlie Hebdo killings, and they condemn terrorism in general. As the Islamic State emerged, more than 120 Muslim scholars from around the globe issued a point-by-point rebuttal of its religious arguments.

One problem for Sunni Islam is that it lacks a single church or spokesperson, so unlike Catholicism or the more hierarchical Shiite Islam, it can't condemn (or endorse) anything in a categorical way. Blogger Daniel Haqiqatjou mockingly called for an iCondemn app that would allow Muslims to efficiently denounce acts of terror around the globe and reassure non-Muslims as to where they stand.

Of course, we shouldn't hold ordinary people responsible for what violent people do in their name. Catholics should condemn the killing of an abortion doctor, but I don't blame them for the murder if they don't.

Cooperation now with Muslim communities --- including on the CVE program

Audi, 15 (4/20/2015, Tamara, "U.S. Muslim Community Divided Over White House Outreach Plan; Law-enforcement efforts to prevent radicalization provoke both support and suspicion," http://www.wsj.com/articles/u-s-muslim-community-divided-over-white-house-outreach-plan-1429555173, JMP) ***** CVE = plan called Countering Violent Extremism**

Despite the criticism, government officials say **many Muslim communities have embraced the program**, such as in Denver and Detroit, especially in the wake of more high-profile prosecutions of young people from the U.S. attempting to join Islamic State.

Hennepin County Sheriff Rich Stanek, whose county includes Minneapolis, spoke about his outreach efforts at the White House summit on CVE earlier this year. He and others from his department attend Somali community events several nights a week. His department also hired a Somali refugee to serve as ambassador to the Somali community. Under CVE, Mr. Stanek said he hopes to expand that outreach with more community liaisons to the Somali community.

"We've built trust and that's paid off tremendously," Mr. Stanek said, pointing to the arrests in Minnesota as partly the result of information provided by community members. "This is what community outreach progarms are about."

"People are really worried about" ISIS recruitment, said an administration official. "So if Muslim-American groups are concerned, that's not the government singling them out. That's the government responding to their needs."

Another administration official recalled that in meetings with Muslim leaders at the White House earlier this year, President Barack Obama said that "there have been cases in the past that made the community more mistrustful, and said that's why it's so important for the community to be more involved."

"The core of this program is building healthy and resilient communities, promoting civic participation," said Joumana Silyan-Saba of the Los Angeles Human Relations Commission, who worked on L.A.'s CVE. Law enforcement has a role, she said, but the program also calls for beefing up social services for immigrant families.

Muslim anti-terror cooperation now

Glionna, 14 (11/3/2014, John M., "U.S. Muslim leaders say FBI pressuring people to become informants," http://www.latimes.com/nation/la-na-muslims-fbi-20141103-story.html, JMP)

In Florida, tips from the Muslim community led to the arrest of Sami Osmakac, later convicted of planning a terrorist attack at a Tampa-area nightclub. Osmakac was found guilty in June of attempted possession of a weapon of mass destruction.

--- AT: Economic Development & Education Solve Extremism

Economic development and education won't reduce terrorism

Byman, 15 --- professor in the security studies program at Georgetown University and research director of the Center for Middle East Policy at Brookings (2/13/2015, Daniel, "Five myths about violent extremism," http://www.washingtonpost.com/opinions/five-myths-about-violent-extremism/2015/02/13/2dc72786-b215-11e4-827f-93f454140e2b_story.html, JMP) *****note --- Byman is listing "myths" about violent extremism and answering them**

3. The best response is economic development and education.

It seems intuitive that poor people would be angry and that uneducated people would be more susceptible to terrorist brainwashing — a view that conservatives as well as liberals have embraced. President George W. Bush declared that it was important to fight poverty "because hope is an answer to terror." The 9/11 Commission also called for supporting public education and economic openness.

Yet even a moment's reflection shows the limits of this logic. Billions suffer poverty worldwide, and discrimination and ignorance are tragically widespread, yet few among these billions commit acts of terrorism. Religious schools in Pakistan do educate terrorists, but so do Pakistan's public

schools — and Western universities. Doctors and engineers are well represented in the ranks of international terrorists: Ayman al-Zawahiri, the current leader of al-Qaeda, is a trained surgeon.

Promoting education and economic development is good in its own right — but don't expect it to combat terrorism.

Instead, we should think small, in part because in the West the problem involves small numbers of potential terrorists: thousands, not millions. The focus should be on high-risk communities, both Muslim and non-Muslim. Prisons, for example, are breeders of terrorists, and ensuring that radicals do not dominate religious instruction behind bars and that there are programs (and intelligence agents) in place to stop terrorist recruitment is vital.

Particularly important is targeting what terrorism expert William McCants calls "law-abiding supporters" — those who embrace jihadist ideas on social media or are otherwise clearly at risk of joining a terrorist group, but have not yet broken the law. Using community interventions and other means to move these people off the path of violence will prevent the stark choice of jail or Syria, and give family members of potential recruits a reason to seek out government help.

--- 1nc Defense – No Impact

ISIS not plotting attacks against the West --- surveillance will prevent fighters returning home from carrying out attacks

Byman, 15 --- professor in the security studies program at Georgetown University and research director of the Center for Middle East Policy at Brookings (2/13/2015, Daniel, "Five myths about violent extremism," http://www.washingtonpost.com/opinions/five-myths-about-violent-extremism/2015/02/13/2dc72786-b215-11e4-827f-93f454140e2b_story.html, JMP) *****note --- Byman is listing "myths" about violent extremism and answering them**

4. The fighting in Iraq and Syria will spawn terrorism in the West.

The flow of foreign fighters to Iraq and Syria has understandably alarmed security officials around the world. FBI Director James Comey expressed the views of many when he warned in May 2014 that "there's going to be a diaspora out of Syria at some point, and we are determined not to let lines be drawn from Syria today to a future 9/11."

But officials raised similar fears about foreign fighters involved in earlier conflicts, especially after the 2003 U.S. invasion of Iraq, and those conflicts did not produce a surge in terrorism in Europe or the **U**nited **S**tates. Many of the most dangerous foreign fighters die on the battlefield, blowing themselves up in suicide attacks or perishing in firefights. Others opt to continue fighting in the region. And **those who return home are likely to be under the surveillance of state security services, inhibiting their ability to carry out attacks**.

So far the Islamic State's agenda is first and foremost local and regional — killing Alawites and Shiites, toppling the governments in Iraq and Syria, and so on — **not plotting attacks against the West**. There remains a real threat, especially from "lone wolf" attacks, as the cachet of the Islamic State inspires Muslims around the world. But such attacks are **unlikely to be on the scale of 9/11 or carried out in a sustained way**.

1nc Islamophobia / Discrimination Adv

****Note when prepping file --- this particular evidence is referencing an article by Michael Greenwald (https://firstlook.org/theintercept/2014/07/09/under-surveillance/) that claimed Muslim American Leaders were being spied on because of their race, religion, and political views.*

Their internal link is nearly impossible to prove --- built in checks prevent worst forms of discrimination

Harris, 14 --- senior staff writer at Foreign Policy, covering intelligence and cyber security (7/9/2014, Shane, "The FBI's Dirty Little Secret; The NSA wasn't the only one snooping on ordinary Americans," http://foreignpolicy.com/2014/07/09/the-fbis-dirty-little-secret/, JMP)
*****Mike German is a former FBI agent**

If the racial and religious profiling allegations prove true, the FBI would not only have broken the law, but it would be guilty of the worst intelligence abuses since the days of COINTELPRO, the covert and occasionally illegal spying programs that targeted American political activists, Vietnam War protesters, civil rights leaders, and even some U.S. government officials for their political associations and views. The ensuing scandal gave birth to the system of privacy laws that govern spying on Americans today.

But the article doesn't provide that evidence. The spreadsheet came from the seemingly endless trove of classified government documents that Snowden, a former NSA contractor, has provided to reporters, including Greenwald. **It apparently doesn't include the individual applications for warrants that Justice Department attorneys may have submitted** to the Foreign Intelligence Surveillance Court before collecting the men's emails. "It is unclear whether the government obtained any legal permission to monitor the Americans on the list," wrote Greenwald and his co-author, Murtaza Hussain. And given that any government justification for spying is presumably classified, "it is impossible to know why their emails were monitored, or the extent of the surveillance," they wrote.

And there's the rub. Absent the underlying presentations that FBI agents and Justice Department lawyers made to the court or to senior U.S. officials, **it's impossible to know what evidence the government believed justified reading the emails of five U.S. citizens**. That doesn't diminish the significance of the story in one respect: It's practically unheard of for a target of intelligence surveillance to be publicly identified. Usually, the targets themselves never find out. But without clear evidence that the men were spied on because they're of Muslim heritage, because they spoke out against government counterterrorism policies, or even because they represented individuals or groups accused of terrorism, as one lawyer did, the tale of the FBI spying is unlikely to provoke outrage on Capitol Hill or lead to any significant changes in U.S. surveillance law.

To bring more transparency to a historically secretive process, Congress is considering a bill that would require the intelligence surveillance court to hear challenges to the government's warrant requests from an adversarial attorney, one appointed by the court and allowed to examine classified information. The Intercept story could give ammunition to the backers of that proposal.

The story underscores how opaque the court process is to most Americans and even to lawmakers, German said. "There are some issues about the candor involved in these interactions between the government and the court," he added.

Government lawyers present their case, based largely off information collected by the FBI or the NSA. But a warrant application, which can number from 50 to 100 pages of material, is never made public, so it's impossible to publicly evaluate the merits of the government's argument. That has always been true, however, and is arguably essential to preserve the secrecy of covert intelligence operations. The system also **has a significant check**, defenders of the process point out: FBI agents and federal prosecutors can go to jail for misrepresenting facts to the court.

Supporters of the FBI saw not only an absence of evidence of illegal spying in the Intercept story, but said it was **highly unlikely that the government would have based its suspicions of terrorist ties solely on the targets' public speech or associations**. Surveillance court judges, they said, would **never approve a warrant based on activities protected by the First Amendment**.

The Justice Department and the Office of the Director of National Intelligence were quick to categorically deny the central allegations of the monitored men. "It is entirely false that U.S. intelligence agencies conduct electronic surveillance of political, religious or activist figures solely because they disagree with public policies or criticize the government, or for exercising constitutional rights," the agencies said in a joint statement.

Without acknowledging that the FBI collected the men's emails or whether a court approved the spying, the statement noted that the government, except for limited cases like emergencies, must obtain a court order "to target any U.S. citizen or lawful permanent resident for electronic surveillance." And that **permission only comes following a showing of "probable cause, based on specific facts** … that the person is an agent of a foreign power, a terrorist, a spy, or someone who takes orders from a foreign power," the statement said.

The former senior intelligence official said it would be illegal to monitor any of the five men simply because of their jobs or political affiliations. "Someone might be the head of a Muslim organization. But that cannot be the basis for suspicion" used to obtain a surveillance warrant, the former official said. "You have to make the case. **You have to have probable cause.** It can't be a fishing expedition."

Stewart Baker, who was the NSA's general counsel in the early 1990s, echoed that prohibition and added that the mere fact of someone's profession isn't proof that he was unfairly or illegally targeted. "Just because someone is a senior official at the Council on American-Islamic Relations doesn't answer the question of whether there's probable cause" to suspect him of terrorism or espionage, Baker said. "But it's not proof that he must be a victim of a witch hunt."

Ultimately, the FBI may not have to offer any public evidence of why it targeted the five men. Lawmakers on Wednesday showed no immediate signs that they were eager to hold hearings or grill the bureau and the Justice Department on the standards it uses in presenting evidence to the surveillance court — in this case or any others.

Rep. Michael Rogers, the chairman of the House Intelligence Committee and a former FBI agent, questioned how one spreadsheet showing a list of email addresses could lead to any definitive

answers about FBI spying. **"They're basing conclusions on a slide,"** Rogers said in an interview.

Recent court ruling will increase FBI transparency and accountability

ACLU, 15 (3/26/15, "FBI Ordered To Disclose Surveillance Tactics On Muslim Communities; As the FBI has expanded its activities to include generalized monitoring and surveillance, unconnected to any suspected criminal activity, it is critical that records related to those broad surveillance programs be available for public scrutiny," http://www.mintpressnews.com/fbi-ordered-to-disclose-surveillance-tactics-on-muslim-communities/203726/, JMP)

Today, a federal district court in San Francisco issued an important ruling for government transparency and accountability. Judge Richard Seeborg disallowed the FBI's attempt to use a "law enforcement exemption" in the Freedom of Information Act to shield from public disclosure details of the agency's surveillance programs.

The case originated in 2010, when—concerned about new FBI initiatives like "domain management" and "threat assessments" that do not require a criminal predicate, as well as intense and sometimes frightening efforts to recruit Muslim community members to become "informants"—the ACLU of Northern California, Asian Americans Advancing Justice – Asian Law Caucus and the San Francisco Bay Guardian filed a Freedom of Information Act request for records relating to FBI surveillance of Northern California's Arab, Middle Eastern, Muslim and South Asian ("AMEMSA") communities. Then, with the help of Morrison & Foerster, we filed suit to force release of the records and received over 50,000 pages of documents, many of which revealed troubling practices (see below).

But many of those documents were redacted in part, and many others withheld in full, based on a variety of rationales. One asserted justification—the one that was the sole focus of the court's opinion today—was that the records were "complied for law enforcement purposes," also called exemption 7. We argued that the documents related to surveillance techniques and activities that did not involve enforcement of a particular federal law could not be withheld based on that exemption. We highlighted records describing training to recruit community members to be "informants" unconnected to any actual criminal investigation, documents describing community outreach efforts, and threat assessment and domain management documents, which by definition do not require a criminal predicate. The court agreed with us and held, "Because the FBI's explanation of the link between its law enforcement activities and the particular documents withheld fails to meet the [applicable] 'rational nexus' standard . . ., the FBI is altogether precluded from withholding information under [the law enforcement exemption]." The court confirmed that "'generalized monitoring and information-gathering' are not sufficient justifications to apply Exemption 7." And, in this case, because the FBI failed to show any additional justification and failed to "tether the activities the withheld documents concern to the enforcement of any particular law," the court ruled that the FBI cannot rely on Exemption 7 to withhold the documents at issue.

This ruling well upholds the purpose of the Freedom of Information Act and its limited law enforcement exemption.

Review the documents

Documents that we received through this litigation have shed considerable light on FBI's surveillance activities and biased approach to AMEMSA communities, for example:

The FBI used "community" outreach to collect and possibly illegally store intelligence information on Americans' political and religious beliefs;

The FBI engaged in problematic racial profiling and racial "mapping;"

The FBI had used Anti-Arab and Anti-Muslim counterterrorism training materials; and

The FBI was not as responsive to hate crime complaints from some Northern California AMEMSA communities

Impact is overhyped and the only evidence is based on anecdotal claims

Tobin, 13 --- Senior Online Editor of Commentary magazine (11/26/13, Jonathan S., "FBI Stats Again Belie Islamophobia Myth," https://www.commentarymagazine.com/2013/11/26/fbi-stats-again-belie-islamophobia-myth/, JMP)

When it comes to the question of America's alleged Islamophobia, there is a consensus in the American media: American Muslims have been under siege since the 9/11 attacks. Every attempt on the part of law-enforcement agencies to probe the growth of homegrown terrorism and the possible incitement to hate and violence being conducted at some mosques, as well as by community groups influenced or controlled by Islamists, is branded as more proof of the allege persecution of Muslims and Arabs. The fact that **no proof of discrimination or systematic violence** other than anecdotal claims is ever brought forward is disregarded so as not to impinge on the need for Americans to feel guilty about the treatment of Muslims.

But with the annual release of the FBI's hate crime numbers, statistical proof is once again available for those who are interested in the real answer as to which groups are subjected to the most attacks. This year's numbers, like those of every other previous year since they began compiling such statistics, are clear: Jews remain the No. 1 target of hate crimes in America and no other group comes even close. Incidents involving Muslims, who are, according to the unchallenged meme that is central to every story or broadcast about the subject, the prime targets actually suffer only a fraction as much as Jews. Is it too much to ask reporters who regurgitate the same tired, unproven story lines about Muslims in the coming year to take these facts into account?

As in previous years, Jews top the figures for hate crimes, which the FBI claims are down from previous years. Of the 1,340 incidents of anti-religious hate crimes reported, 674 or 62.4 percent were anti-Jewish in nature. Only 130 incidents or 11.6 percent involved Muslim victims. These figures are not much different from those assembled by the government for previous years. In virtually every year, the number of anti-Semitic incidents is a multiple of those involving Muslims.

It is possible that some anti-Muslim attacks might be categorized as an ethnic issue involving Arabs rather than a religious one. But even if we were to try and take some attacks involving national origins, again the enormous gap between the anti-Semitic incidents and those about Muslims is not bridged. The total number of those attacks involving that category that were not

about targeting Hispanics (which make up over 60 percent of that total) was 283 and it is likely that, at best, only some of those were about Muslims or Arabs.

It is true that the Anti-Defamation League has criticized the FBI report for trumpeting the overall decline in hate crimes. The ADL rightly points out that hate crimes reporting isn't mandatory in parts of the country and that the number of agencies funneling figures to the FBI actually declined from 14,500 to 1,3022 in 2012. So it's likely that there wasn't any real decline in the number of hate crimes.

But there is no proof or any logical reason to believe that this flaw would lead to any underreporting of anti-Muslim crimes since the percentage of such incidents in 2012 is essentially the same as in previous years.

What does this all mean?

First, as much as we should decry all hate crimes and urge those responsible to be prosecuted and harshly punished, no matter who their victims might be, **there is no epidemic of such incidents directed at any single group**.

Though Jews are the most likely victims of religious crimes, no reasonable person can claim that they are under siege or that Jewish life is under attack in any manner in this country. Indeed, as the Pew Survey on American Jews that I discussed in the November issue of COMMENTARY reported, less than 20 percent of Jews have even experienced an anti-Semitic remark, let alone an attack. Anti-Semitism is on the rise around the world and particularly in Europe, but in a nation where a tenth of the U.S. Senate and a third of the U.S. Supreme Court are Jews, its impossible to argue that there are any genuine obstacles to Jewish achievement, let alone a wave of Jew-hatred.

Yet, we are asked by the mainstream media to believe that a group which claims to have roughly the same small slice of the national population as the Jews but which, at best, suffers only a fifth of the hate crimes incidents as Jews, is actually laboring under a grievous and discriminatory wave of bias attacks. It not only makes no sense, **it is not even remotely congruent with the facts**.

America isn't perfect. Hate still exists against religious and ethnic groups, and religious minorities. Yet once again the annual release of FBI statistics debunks the notion of a post 9-11 backlash against Muslims. But don't expect the liberal mainstream media to notice this or to take it into account when they resurrect the same misleading story lines in the coming year.

Doesn't solve --- most profiling occurs during traffic stops and pat-downs of pedestrians by state and local agents

Hannon, 14 (12/8/2014, Elliot, "Justice Department Announces New Limits on Racial Profiling by Law Enforcement," http://www.slate.com/blogs/the_slatest/2014/12/08/new_limits_on_racial_profiling_by_law_enforcement_announced.html, JMP)

The Obama administration released a new set of guidelines on Monday aimed at curtailing the profiling of specific groups by law enforcement. The Justice Department issued the expanded rules prohibiting profiling on the basis of race, religion, national identity, gender, sexual orientation, and gender identity by federal law enforcement—such as the FBI. The new policy

broadens the Bush administration's 2003 policy that banned racial and ethnic profiling, except for cases of national security. The new rules, however, "won't apply to screening at borders and airports, where Department of Homeland Security personnel have long given extra scrutiny to people from certain countries," the Wall Street Journal reports. "The policy also doesn't apply to local or state law enforcement, beyond those personnel assigned to federal task forces."

Attorney General Eric Holder ordered the review to the Justice Department policy in 2009 and the new guidlines were announced this week as local police tactics faced enormous criticism following the deaths of Michael Brown and Eric Garner. While the newly announced guidelines extend the restrictions on the use of profiling, **"[c]oncerns about racial profiling on the part of civil-liberties groups mostly have to do with traffic stops and pat-downs of pedestrians,"** according to the Journal. "Because **federal law-enforcement agents rarely engage in those activities**, barring them from profiling may have little impact on how and why people are stopped in their everyday lives."

Maximizing all lives is the only way to affirm equality

Cummiskey 90 – Professor of Philosophy, Bates (David, Kantian Consequentialism, Ethics 100.3, p 601-2, p 606, jstor)

We must not obscure the issue by characterizing this type of case as the sacrifice of individuals for some abstract "social entity." It is not a question of some persons having to bear the cost for some elusive "overall social good." Instead, the question is whether some persons must bear the inescapable cost for the sake of other persons. Nozick, for example, argues that "to use a person in this way does not sufficiently respect and take account of the fact that he is a separate person, that his is the only life he has."30 Why, however, is this not equally true of all those that we do not save through our failure to act? By emphasizing solely the one who must bear the cost if we act, one fails to sufficiently respect and take account of the many other separate persons, each with only one life, who will bear the cost of our inaction. In such a situation, what would a conscientious Kantian agent, an agent motivated by the unconditional value of rational beings, choose? We have a duty to promote the conditions necessary for the existence of rational beings, but both choosing to act and choosing not to act will cost the life of a rational being. Since the basis of Kant's principle is "rational nature exists as an end-in-itself' (GMM, p. 429), the reasonable solution to such a dilemma involves promoting, insofar as one can, the conditions necessary for rational beings. If I sacrifice some for the sake of other rational beings, I do not use them arbitrarily and I do not deny the unconditional value of rational beings. **Persons** may **have "dignity**, an unconditional and incomparable value" that transcends any market value (GMM, p. 436), **but**, as rational beings, persons **also** have **a fundamental equality which dictates that some must** sometimes **give way for the sake of others.** The formula of the end-in-itself thus does not support the view that we may never force another to bear some cost in order to benefit others. If one focuses on the equal value of all rational beings, then equal consideration dictates that one sacrifice some to save many. [continues] According to Kant, the objective end of moral action is the existence of rational beings. Respect for rational beings requires that, in deciding what to do, one give appropriate practical consideration to the unconditional value of rational beings and to the conditional value of happiness. Since agent-centered constraints require a non-value-based rationale, the most natural interpretation of the demand that one give equal respect to all rational beings lead to a consequentialist normative theory. We have seen that there is no sound Kantian reason for abandoning this natural consequentialist interpretation. In particular, a consequentialist interpretation does not require sacrifices which a Kantian ought to consider unreasonable, and it does not involve doing evil so that good may come of it. It simply requires an uncompromising commitment to the equal value and equal claims of all rational beings and a recognition that, in the moral consideration of conduct, one's own subjective concerns do not have overriding importance.

No risk of endless warfare

Gray 7—Director of the Centre for Strategic Studies and Professor of International Relations and Strategic Studies at the University of Reading, graduate of the Universities of Manchester and Oxford, Founder and Senior Associate to the National Institute for Public Policy, formerly with the International Institute for Strategic Studies and the Hudson Institute (Colin, July, "The Implications of Preemptive and Preventive War Doctrines: A Reconsideration", http://www.ciaonet.org/wps/ssi10561/ssi10561.pdf)

7. A policy that favors preventive warfare expresses a futile quest for absolute security. It could do so. Most controversial policies contain within them the possibility of misuse. In the hands of a paranoid or boundlessly ambitious political leader, prevention could be a policy for endless warfare. However, the American political system, with its checks and balances, was designed explicitly for the purpose of constraining the executive from excessive folly. Both the Vietnam and the contemporary Iraqi experiences reveal clearly that although the conduct of war is an executive prerogative, in practice that authority is disciplined by public attitudes. Clausewitz made this point superbly with his designation of the passion, the sentiments, of the people as a vital component of his trinitarian theory of war. 51 It is true to claim that power can be, and indeed is often, abused, both personally and nationally. It is possible that a state could acquire a taste for the apparent swift decisiveness of preventive warfare and overuse the option. One might argue that the easy success achieved against Taliban Afghanistan in 2001, provided fuel for the urge to seek a similarly rapid success against Saddam Hussein's Iraq. In other words, the delights of military success can be habit forming. On balance, claim seven is not persuasive, though it certainly contains a germ of truth. A country with unmatched wealth and power, unused to physical insecurity at home—notwithstanding 42 years of nuclear danger, and a high level of gun crime—is vulnerable to demands for policies that supposedly can restore security. But we ought not to endorse the argument that the United States should eschew the preventive war option because it could lead to a futile, endless search for absolute security. One might as well argue that the United States should adopt a defense policy and develop capabilities shaped strictly for homeland security approached in a narrowly geographical sense. Since a president might misuse a military instrument that had a global reach, why not deny the White House even the possibility of such misuse? In other words, constrain policy ends by limiting policy's military means. This argument has circulated for many decades and, it must be admitted, it does have a certain elementary logic. It is the opinion of this enquiry, however, that the claim that a policy which includes the preventive option might lead to a search for total security is **not at all convincing**. Of course, folly in high places is always possible, which is one of the many reasons why popular democracy is the superior form of government**.** It would be absurd to permit the fear of a futile and dangerous quest for absolute security to preclude prevention as a policy option. Despite its absurdity, this rhetorical charge against prevention is a stock favorite among prevention's critics. It should be recognized and dismissed for what it is, a debating point with little pragmatic merit. And strategy, though not always policy, **must be nothing if not pragmatic**.

--- XT: Doesn't Solve State / Locals

Plan doesn't solve state and local officers that commit most of the abuses --- no modelling either

Saab, 14 --- Senior Government Relations Analyst at Deloitte (12/8/2014, Maria, "One Step Forward, Two Steps Back: DOJ Profiling Guidance Revisions Fail to Ban Profiling," http://www.aaiusa.org/blog/entry/one-step-forward-two-steps-back-doj-profiling-guideline-revisions-fail-to-a/, JMP)

Holder's new guidelines arrive during a time where law enforcement activities are under intense scrutiny. Conversations regarding immigration reform, border security, and recent events in Ferguson, MO., New York City, and Cleveland not only emphasize the need to address such activities, but also highlight how little these new guidelines will address the real issues at stake. For one thing, the changes will only apply to federal law enforcement agencies, and **will not extend to local and state law enforcement officers, which have been the source of a number of related controversies**. The Obama Administration hopes that the new guidelines will serve as a possible roadmap for local police to reform their own practices regarding profiling, but **this**

does not ultimately guarantee change on behalf of local police forces that work closely with particularly vulnerable communities.

Addressing only federal practices allows discriminatory surveillance to continue at the local level

Saab, 14 --- Senior Government Relations Analyst at Deloitte (12/8/2014, Maria, "One Step Forward, Two Steps Back: DOJ Profiling Guidance Revisions Fail to Ban Profiling," http://www.aaiusa.org/blog/entry/one-step-forward-two-steps-back-doj-profiling-guideline-revisions-fail-to-a/, JMP)

But profiling will by and large continue to be permitted in cases where national security and border protection are concerned. For example, federal agents are not obligated to abide by the Guidance's prohibitions within 100-miles of national borders, which includes nearly one-third of the country and places 197.4 million people under potentially arbitrary investigation. TSA officers will also be allowed to stop passengers at airports based on prohibited qualities. The national security exception will also allow for the FBI to continue "mapping" specific communities on the basis of race, religion, and ethnicity, which has been of particular concern to Arab American and American Muslim communities nationwide. Because the guidance is confined to federal law enforcement practices, this does nothing to address the types of discriminatory targeting and surveillance programs that local agencies, such as the New York Police Department, conduct in contravention to numerous constitutionally protected freedoms.

--- XT: Util

Consequentialism key---their existentialist focus is complicit with evil

Isaac 2 --- Professor of Political Science at Indiana-Bloomington, Director of the Center for the Study of Democracy and Public Life, PhD from Yale (Jeffery C., Dissent Magazine, Vol. 49, Iss. 2, "Ends, Means, and Politics," p. Proquest)

As a result, the most important political questions are simply not asked. It is assumed that U.S. military intervention is an act of "aggression," but no consideration is given to the aggression to which intervention is a response. The status quo ante in Afghanistan is not, as peace activists would have it, peace, but rather terrorist violence abetted by a regime--the Taliban--that rose to power through brutality and repression. This requires us to ask a question that most "peace" activists would prefer not to ask: What should be done to respond to the violence of a Saddam Hussein, or a Milosevic, or a Taliban regime? What means are likely to stop violence and bring criminals to justice? Calls for diplomacy and international law are well intended and important; they implicate a decent and civilized ethic of global order. But they are also **vague and empty**, because they are not accompanied by any account of how diplomacy or international law can work effectively to address the problem at hand**. The campus left offers no such account.** To do so would require it to **contemplate tragic choices** in which moral goodness is of limited utility. Here what matters is not purity of intention but the intelligent exercise of power. Power is not a dirty word or an unfortunate feature of the world. It is the core of politics. Power is the ability to effect outcomes in the world. Politics, in large part, involves contests over the distribution and use of power. To accomplish anything in the political world, one must attend to the means that are necessary to bring it about. And to develop such means is to develop, and to exercise, power. To say this is not to say that power is beyond morality. It is to say that power is not reducible to morality. As writers such as Niccolo Machiavelli, Max Weber, Reinhold Niebuhr, and Hannah Arendt have taught, an unyielding concern with moral goodness **undercuts political responsibility**. The concern may be morally laudable, reflecting a kind of personal integrity, but it suffers from three fatal flaws: (1) It fails to see that the purity of one's intention

does not ensure the achievement of what one intends. Abjuring violence or refusing to make common cause with morally compromised parties may seem like the right thing; but if such tactics entail impotence, then it is hard to view them as serving any moral good beyond the **clean conscience of their supporters**; (2) it fails to see that in a world of real violence and injustice, moral purity is not simply a form of powerlessness; it is often a form of **complicity in injustice**. This is why, from the standpoint of politics--as opposed to religion--**pacifism** is always a potentially immoral stand. In categorically repudiating violence, it refuses in principle to oppose certain violent injustices with any effect; and (3) it fails to see that **politics is as much about unintended consequences as it is about intentions**; it is the effects of action, rather than the motives of action, that is most significant. Just as the alignment with "good" may engender impotence, it is often the pursuit of "good" that generates evil. This is the lesson of communism in the twentieth century: it is not enough that one's goals be sincere or idealistic; it is equally important, always, to ask about the effects of pursuing these goals and to judge these effects in pragmatic and historically contextualized ways. Moral absolutism inhibits this judgment. It alienates those who are not true believers. It promotes arrogance. And it undermines political effectiveness.

Ethical policymaking requires calculation of consequences

Gvosdev 5 – Rhodes scholar, PhD from St. Antony's College, executive editor of The National Interest (Nikolas, The Value(s) of Realism, SAIS Review 25.1, pmuse)

As the name implies, realists focus on promoting policies that are achievable and sustainable. In turn, the morality of a foreign policy action is judged by its results, not by the intentions of its framers. A foreign policymaker must weigh the consequences of any course of action and assess the resources at hand to carry out the proposed task. As Lippmann warned, Without the controlling principle that the nation must maintain its objectives and its power in equilibrium, its purposes within its means and its means equal to its purposes, its commitments related to its resources and its resources adequate to its commitments, it is impossible to think at all about foreign affairs.8 Commenting on this maxim, Owen Harries, founding editor of The National Interest, noted, "This is a truth of which Americans—more apt to focus on ends rather than means when it comes to dealing with the rest of the world—need always to be reminded."9 In fact, Morgenthau noted that "there can be no political morality without prudence."10 This virtue of prudence—which Morgenthau identified as the cornerstone of realism—should not be confused with expediency. Rather, it takes as its starting point that it is more moral to fulfill one's commitments than to make "empty" promises, and to seek solutions that minimize harm and produce sustainable results. Morgenthau concluded: [End Page 18] Political realism does not require, nor does it condone, indifference to political ideals and moral principles, but it requires indeed a sharp distinction between the desirable and the possible, between what is desirable everywhere and at all times and what is possible under the concrete circumstances of time and place.11 This is why, prior to the outbreak of fighting in the former Yugoslavia, U.S. and European realists urged that Bosnia be decentralized and partitioned into ethnically based cantons as a way to head off a destructive civil war. Realists felt this would be the best course of action, especially after the country's first free and fair elections had brought nationalist candidates to power at the expense of those calling for inter-ethnic cooperation. They had concluded—correctly, as it turned out—that the United States and Western Europe would be unwilling to invest the blood and treasure that would be required to craft a unitary Bosnian state and give it the wherewithal to function. Indeed, at a diplomatic conference in Lisbon in March 1992, the various factions in Bosnia had, reluctantly, endorsed the broad outlines of such a settlement. For the purveyors of moralpolitik, this was unacceptable. After all, for this plan to work, populations on the "wrong side" of the line would have to be transferred and resettled. Such a plan struck directly at the heart of the concept of multi-ethnicity—that different ethnic and religious groups could find a common political identity and work in common institutions. When the United States signaled it would not accept such a settlement, the fragile consensus collapsed. The United States, of course, cannot be held responsible for the war; this lies squarely on the shoulders of Bosnia's political leaders. Yet Washington fell victim to what Jonathan Clarke called "faux Wilsonianism," the belief that "high-flown words matter more than rational calculation" in formulating effective policy, which led U.S. policymakers to dispense with the equation of "balancing commitments and resources."12 Indeed, as he notes, the Clinton administration had criticized peace plans calling for decentralized partition in Bosnia "with lofty rhetoric without proposing a practical alternative." The subsequent war led to the deaths of tens of thousands and left more than a million people homeless. After three years of war, the Dayton Accords—hailed as a triumph of American diplomacy—created a complicated arrangement by which the federal union of two ethnic units, the Muslim-Croat Federation, was itself federated to a Bosnian Serb republic. Today, Bosnia requires thousands of foreign troops to patrol its internal borders and billions of dollars in foreign aid to keep its government and economy functioning. Was the aim of U.S. policymakers, academics and journalists—creating a multi-ethnic democracy in Bosnia—not worth pursuing? No, not at all, and this is not what the argument suggests. But aspirations were not matched with capabilities. As a result of holding out for the "most moral" outcome and encouraging the Muslim-led government in Sarajevo to pursue maximalist aims rather than finding a workable

compromise that could have avoided bloodshed and produced more stable conditions, the peoples of Bosnia suffered greatly. In the end, the final settlement was very close [End Page 19] to the one that realists had initially proposed—and the one that had also been roundly condemned on moral grounds.

Survival focus inevitable, doesn't lead to tyranny, and preconditions all other human values

Callahan 73 (Daniel, The Tyranny of Survival, p 90-1, AG)

Moreover, I would want to argue that, in order to remain human, they should not be all that responsive. Or better, they should be responsive only to those survival arguments which manage to integrate the need for survival with a whole range of other human needs, some of which would risk survival for the achievement of higher values. A beginning can be made toward this integration by noting some of the uses and abuses of the concept of survival. Historically, the uses have been more evident than the abuses. Among the uses are those of a fundamental perception of a biological reality principle: unless one exists, everything else is in vain. That is why survival, the desire to live, is so potent a force, and why the right to life is such a basic part of any reasonably enlightened social, political and legal system. Politically, particularly in time of war, national survival has been a potent force for mobilization of community effort, transcendence of self-interest, and creation of patriotic spirit. For individuals, the desire to ensure the survival of offspring has been the source of great and selfless sacrifice and the voluntary acceptance of obligation to future generations. Within the private self, a will to live, to survival at all costs has literally kept people alive, starving off a despair which would otherwise have been totally destructive. That individuals, tribes, communities and nations have committed so much will, energy and intelligence to survival has meant that they have survived, and their descendants are present to tell the tale. Nothing is so powerful a motive force, for self or society, as the threat of annihilation, nothing so energizing as the necessity to live. Without life, all else is in vain. Leaving aside the question of whether we need more enlightened attitudes toward suicide in our society, which we may, it is still not for nothing that suicide has been looked upon with abhorrence, whether from a religious or a psychological perspective. It seems to violate the most fundamental of human drives, and has always required a special explanation or justification.

Extinction irreversibility justifies prioritizing survival

Callahan 73 (Daniel, The Tyranny of Survival, p 106-7)

At what point in the deterioration should survival become a priority? Observe that I said a priority; it should never become the priority if that means the sacrifice of all other values. But there are surely conditions under which it could become a priority, and a very high one. The most important of those conditions would be the existence of evidence that irreversibility was beginning to set in, making it increasingly impossible to return to the original conditions.

--- AT: No Value to Life

"No value to life" doesn't outweigh---prioritize existence because value is subjective and could improve in the future

Torbjörn **Tännsjö 11**, the Kristian Claëson Professor of Practical Philosophy at Stockholm University, 2011, "Shalt Thou Sometimes Murder? On the Ethics of Killing," online: http://people.su.se/~jolso/HS-texter/shaltthou.pdf

I suppose it is correct to say that, if Schopenhauer is right, if life is never worth living, then according to utilitarianism we should all commit suicide and put an end to humanity. But this does not mean that, each of us should commit suicide. I commented on this in chapter two when I presented the idea that utilitarianism should be applied, not only to individual actions, but to collective actions as well.¶ It is a well-known fact that people rarely commit suicide. Some even claim that no one who is mentally sound commits suicide. Could that be taken as evidence for the claim that people live lives worth living? That would be rash. Many people are not utilitarians. They may avoid suicide because they believe that it is morally wrong to kill oneself. It is also a possibility that, even if people lead lives not worth living, they believe they do. And even if some may believe that their lives, up to

now, have not been worth living, their future lives will be better. They may be mistaken about this. They may hold false expectations about the future.¶ From the point of view of evolutionary biology, it is natural to assume that people should rarely commit suicide. If we set old age to one side, it has poor survival value (of one's genes) to kill oneself. So it should be expected that it is difficult for ordinary people to kill themselves. But then theories about cognitive dissonance, known from psychology, should warn us that we may come to believe that we live better lives than we do.¶ My strong belief is that most of us live lives worth living. However, I do believe that our lives are close to the point where they stop being worth living. But then it is at least not very far-fetched to think that they may be worth not living, after all. My assessment may be too optimistic.¶ Let us just for the sake of the argument assume that our lives are not worth living, and let us accept that, if this is so, we should all kill ourselves. As I noted above, this does not answer the question what we should do, each one of us. My conjecture is that we should not commit suicide. The explanation is simple. If I kill myself, many people will suffer. Here is a rough explanation of how this will happen: ¶ ... suicide "survivors" confront a complex array of feelings. Various forms of guilt are quite common, such as that arising from (a) the belief that one contributed to the suicidal person's anguish, or (b) the failure to recognize that anguish, or (c) the inability to prevent the suicidal act itself. Suicide also leads to rage, loneliness, and awareness of vulnerability in those left behind. Indeed, the sense that suicide is an essentially selfish act dominates many popular perceptions of suicide. ¶ The fact that all our lives lack meaning, if they do, does not mean that others will follow my example. They will go on with their lives and their false expectations — at least for a while devastated because of my suicide. But then I have an obligation, for their sake, to go on with my life. It is highly likely that, by committing suicide, I create more suffering (in their lives) than I avoid (in my life).

The plan will be contentious --- Congress has consistently demonstrated an anti-Muslim attitude

Haqiqatjou, 15 (1/22/2015, Daniel, "Congress Doesn't Applaud Muslim Tolerance – Are We Surprised?" http://muslimmatters.org/2015/01/22/congress-doesnt-applaud-muslim-tolerance-are-we-surprised/, JMP)

Trust me, Congress. The feeling is mutual.

By now, we have all seen it. During the State of the Union, President **Obama called for a rejection of offensive Muslim stereotypes. Instead of applauding approval, the crowd went dead silent.** As far as we can tell, Congress and the other government officials who were in attendance are perfectly fine with offensively stereotyping Muslims.

My question is, are we really surprised?

Let's take a look at a brief list of facts in order to gauge how Muslim-friendly Congress and the US government at large have been over the years.

1. This is the same Congress and the same President that have initiated and continued the "War on Terror," backing military operations in seven different Muslim nations over the past fourteen years: Afghanistan, Iraq, Libya, Somalia, Yemen, Syria, North West Pakistan. In the few Muslim nations that have not been subjected to direct assault, the US has supported brutal dictators (Egypt, the Gulf) or perpetuated punitive sanctions (Iran, pre-invasion Iraq). The loss of innocent life in these parts of the Muslim world is beyond tallying. To add insult to injury, the instability

caused by the "War on Terror" has directly led to the rise of brutal warlords and radical groups, like ISIS, which predominantly kill Muslims.

2. Did you know that as of 2014, there are eight US states that ban Shariah law? Did you know that 34 states have considered banning Shariah just in the past five years?

3. Some Muslims have praised President Obama for speaking against offensive Muslim stereotypes in the State of the Union address. But, let's not overlook the fact that right before the Muslim stereotypes line, Obama said, "As Americans, we respect human dignity, even when we're threatened, which is why I've prohibited torture and worked to make sure our use of new technology like drones is properly constrained." Is it not interesting that he references two programs that have disproportionately affected Muslims? Many will argue that Obama's drone program is anything but "constrained," considering the hundreds of civilians killed to date, as well as the brutal tactic of "double tapping" strike targets. Also, it is inaccurate for Obama to claim that he has "prohibited torture." Torture was prohibited by President Reagan in 1988 when he signed the UN General Assembly's Conventions Against Torture. In light of the CIA Torture Report, Obama is violating international law by not prosecuting those in the Bush Administration who authorized torture.

4. On that point, let's not forget the recent CIA Torture Report and how the victims of CIA torture were, again, predominantly Muslim, many of whom were not even suspected of any wrongdoing. So far, neither President Obama nor Congress has felt the need to prosecute the perpetrators of these crimes against humanity. Again, failing to prosecute torturers is itself a crime according to international law.

5. Also mentioned in the State of the Union was good ol' Guantanamo. Obama promised to shut it down. We can only wonder if this latest promise will be as hollow as the promise he made as a presidential candidate in 2008. Be that as it may, the fact remains that the majority of Gitmo prisoners are Muslims who have not been charged with any crime, yet have had to endure torture and all manner of barbarity.

6. The 2011 Congressional hearing on "domestic Islamic terrorism" is a great example of how many key members of Congress have viewed the American Muslim community and Muslims at large. The House Committee on Homeland Security, which orchestrated this farce, was accused of "Muslim McCarthyism" by implying that all Muslims are loosely responsible for terrorism. Rep. Peter King went so far as to question the legitimacy of CAIR, i.e., the most important legal advocacy group the American Muslim community has. Of course, we were all left wondering, what is the grave "domestic Islamic terrorism" threat Congress is so concerned about, since the vast majority of domestic terrorism in the US is not conducted by Muslims. The FBI itself reports that, between 1980 and 2005, there were more Jewish acts of terrorism within the United States than Muslim (7% vs. 6%). In light of this fact and others, multiple university studies have concluded that the threat of American Muslim terrorism is greatly exaggerated. Hmm, who could possibly benefit from this overt stigmatization of Muslims?

7. How about NYPD illegal surveillance of Muslims? Just your everyday racial profiling run amok, putting hundreds of thousands of innocent American Muslims under the pressure of unfounded suspicion. But what did the federal government have to say? Well, John Brennan, Obama's Homeland Security adviser at the time praised the program. Obama himself praised Ray Kelly, the NYPD commissioner who oversaw Muslim surveillance, and in 2013 strongly considered appointing him as Secretary of Homeland Security.

8. Another major federal agency is the FBI. Perhaps you have heard of the FBI's entrapment program, known best for foiling terror plots of its own making. According to a report published by Project SALAM, nearly 95% of terror related arrests post 9/11 have been the result of the FBI foiling terror plots of its own making. As the report describes: "The government uses agents provocateur to target individuals who express dissident ideologies and then provides those provocateurs with fake (harmless) missiles, bombs, guns, money, encouragement, friendship, and the technical and strategic planning necessary to see if the targeted individual can be manipulated into planning violent or criminal action." I highly encourage people to peruse all the different cases of Muslim entrapment over the years as the details are often unbelievable. Some have even reported on how the FBI and other agencies use "outreach" programs to spy on the Muslim community. As far as the Obama Administration is concerned, Attorney General Eric Holder of the DOJ has expressed support for the FBI's tactics with respect to the Muslim community.

9. It hardly requires mention, but surely we cannot overlook President Obama demanding, in an address to the UN last year, that Muslims denounce ISIS and radical Islamic ideologies. As myself and many other commentators have repeatedly explained, requiring Muslims as a collective to apologize for and denounce the crimes of a deranged few to which we have no connection is nothing other than racist stereotyping. Even comedian Aziz Ansari made this simple point on Twitter, but apparently our President and much of Congress are too dense to understand this. If Obama wants us to reject offensive Muslim stereotypes, he should start with himself.

10. Remember the "Ground Zero Mosque"? How many members of Congress actively condemned it back in 2010? Quite a few, actually. Obama did make some tepid comments in support of Park51 initially but quickly backtracked and stated: "I was not commenting and I will not comment on the wisdom of making the decision to put a mosque there." So much for offensive Muslim stereotypes.

11. So, we have covered the CIA, the FBI, the DOJ, the Department of Homeland Security. How about the NSA? Do they have a disproportionate interest in Muslims? Why, yes indeed! As the Snowden leaks detail, the NSA has been datamining the communications of Muslim leaders and activists for years.

12. We would be remiss not to mention the Israeli Lobby and the US government's undying support for every crime and act of genocide that that nation commits, despite the fact that Israel has more spies in the US than any other country. The fact that Palestinians are majority Muslim I'm sure has no impact on influencing how congressmen view Muslims in general, given that those same congressmen grovel at the feet of their Zionist handlers. Let's be real.

Anyway, this brief list merely scratches the surface. An entire five volume set could be written cataloging the depth and breadth of US policy disproportionately and negatively impacting Muslims in America and abroad, causing all manner of death, destruction, detention, bullying, and violence in the past 14 years alone. And it is no secret that Islamophobia and riling people up with anti-Muslim fervor is quite lucrative for everyone involved.

So, no, it is not a surprise that Congress withheld applause for Muslims. At least they were consistent, unlike President Obama, who, as always, waxes poetic about tolerance, acceptance, mutual understanding, etc., while his policies, in effect if not intent, are diametrically opposed to those ideals.

The plan will be contentious --- there is political division over the issue

Mint Press, 13 (4/23/2013, Mint Press News Desk, "Ellison Fights Back Against Calls For Police Surveillance Of Muslim American Communities," http://www.mintpressnews.com/ellison-fights-back-against-calls-for-police-surveillance-of-muslim-american-communities/61575/, JMP)

"This individual came to the attention of the FBI because of things he said and things he did. That's appropriate. What should not be cause for alarm is somebody's status as a member of a particular religious faith or how devout they may happen to be," Congressman Keith Ellison (D-Minn.) said in an interview this week with Tamron Hall on MSNBC.

Ellison was speaking about the recent arrest of Dzhokhar Tsarnaev, the sole surviving Boston bombing suspect who is being held in police custody and charged with crimes that could carry the death penalty if he is convicted. Ellison, one of only two Muslims elected to the U.S. Congress, has tried to stave off the onslaught of accusations against Muslims living in the U.S., **pitting himself against other elected officials calling for broad FBI surveillance of Muslim communities**.

"Ninety-nine percent of the Muslims are outstanding Americans," said Rep. Peter King (R-N.Y.) on "Fox News Sunday." "The fact is, that's where the threat is coming from. When the FBI was after the Westies, they went to the Irish community. When they were after the mafia, they went to the Italian community. If you know a certain threat is coming from a certain community, that's where you have to look."

The FBI and U.S. police departments began broad surveillance of mosques and Muslim communities in the aftermath of the Sept. 11, 2001 attacks, a method some believe has unfairly targeted a group of people for their religious affiliation and physical appearance.

"All Americans should be concerned," said New York City Democratic Councilmember Daniel Dromm after the release of "Mapping Muslims," a report issued by the Muslim American Civil Liberties Coalition, the Asian American Legal Defense and Education Fund and the Creating Law Enforcement Accountability & Responsibility (CLEAR) project last month. "The policing that's going on now encourages mistrust or distrust within the Muslim community. It is not good policing."

These rights groups claim that the NYPD has targeted Muslim communities around the city. The report alleges that since 2001, the NYPD "has mapped, monitored and analyzed American Muslim daily life throughout New York City, and even its surrounding states."

In the present case, some elected officials are calling for similar surveillance techniques for Muslim communities in the wake of the bombings and shootings that killed four and injured 170.

Ellison has led the pushback in Congress against expanding surveillance based upon religion or physical appearance, saying, "In all these cases, where you see acts of radicalized individuals using violence, they may have a religious affiliation, but oftentimes, when they give reasons for why they did what they did, it is politics." He added, "The FBI did not go after all Italians or all Irish people. No one ever said let's surveil a whole ethnic community. They went after people who were criminals and who were exhibiting criminal behavior … To say that because of the

Westies that every Irish person was under suspect; Everyone in America knows that is ridiculous. But still, [King] wants to cast a wide net with regard to Muslims."

The plan will be contentious --- there is congressional division on the issue

Gentilviso, 13 (4/28/2013, Chris, "Peter King, Keith Ellison Spar Over Muslim Community Views (VIDEO)," http://www.huffingtonpost.com/2013/04/28/peter-king-keith-ellison_n_3175292.html, JMP)

Reps. Peter King (R-N.Y.) and Keith Ellison (D-Minn.) **clashed** on Sunday **over the idea of using surveillance in America's Muslim communities**.

One week after stressing the need to go after known threats from "a certain community," King reinforced that notion, specifically questioning the FBI's decision to not speak to Boston police about now deceased bombing suspect Tamerlan Tsarnaev.

Ellison recognized the need for public safety. But he sees it as "ineffective law enforcement to go after a particular community."

"Once you start saying we're going to dragnet or surveil a community, what you do is you ignore dangerous threats that are not in that community and you go after people who don't have anything to do with it," Ellison said.

Ellison pointed to events in the past and present, notably the recent string of ricin letters in Washington and historic example of Japanese Americans in World War II. King scoffed at that latter comparison, saying that "no one is talking about internment."

New profiling rules preserves FBI flexibility to fight terrorism --- broader restrictions will wreck mission effectiveness

Apuzzo, 14 (4/9/2014, Matt, **"Profiling Rules Said to Give F.B.I. Tactical Leeway,"** http://www.nytimes.com/2014/04/10/us/profiling-rules-said-to-give-fbi-tactical-leeway.html?_r=0, JMP)

WASHINGTON — Attorney General Eric H. Holder Jr.'s long-awaited revisions to the Justice Department's racial profiling rules would allow the F.B.I. to continue many, if not all, of the tactics opposed by civil rights groups, such as mapping ethnic populations and using that data to recruit informants and open investigations.

The new rules, which are in draft form, expand the definition of prohibited profiling to include not just race, but religion, national origin, gender and sexual orientation. And they increase the standards that agents must meet before considering those factors. But they **do not change the way the F.B.I. uses nationality to map neighborhoods, recruit informants, or look for foreign spies**, according to several current and former United States officials either involved in the policy revisions or briefed on them.

While the draft rules allow F.B.I. mapping to continue, they would eliminate the broad national security exemption that former Attorney General John Ashcroft put in place. For Mr. Holder, who has made civil rights a central issue of his five years in office, **the draft rules represent a compromise between his desire to protect the rights of minorities and the concern of career national security officials that they would be hindered in their efforts to combat terrorism**.

The Justice Department has been reworking the policy for nearly five years, and civil rights groups hope it will curtail some of the authority granted to the F.B.I. in the aftermath of the 9/11 terrorist attacks. Muslims, in particular, say federal agents have unfairly singled them out for investigation. The officials who described the draft rules did so on the condition of anonymity because they were not authorized to discuss them.

Mr. Holder, who officials say has been the driving force behind the rule change, gave a personal account of racial profiling on Wednesday before the National Action Network, the civil rights group founded by the Rev. Al Sharpton.

"Decades ago, the reality of racial profiling drove my father to sit down and talk with me about how, as a young black man, I should interact with the police if I was ever stopped or confronted in a way I felt was unwarranted," he said.

Throughout the review process, however, the attorney general and his civil rights lawyers ran up against a reality: **Making the F.B.I. entirely blind to nationality would fundamentally change the government's approach to national security**.

The Bush administration banned racial profiling in 2003, but that did not apply to national security investigations. Since then, the F.B.I. adopted internal rules that prohibited agents from making race or religion and nationality the "sole factor" for its investigative decisions.

Civil rights groups see that as a loophole that allows the government to collect information about Muslims without evidence of wrongdoing.

Intelligence officials see it as an essential tool. They say, for example, that an F.B.I. agent investigating the Shabab, a Somali militant group, must be able to find out whether a state has a large Somali population and, if so, where it is.

As written, the new rules are unlikely to satisfy civil rights groups and some of the administration's liberal allies in Congress. Senator Richard J. Durbin, Democrat of Illinois, has said the existing rules "are a license to profile."

The Justice Department rules would also apply to the Drug Enforcement Administration, and the Bureau of Alcohol, Tobacco, Firearms and Explosives, but it is the F.B.I. that takes the lead on most national security investigations.

Farhana Khera, the president of Muslim Advocates, said expanding the rules to cover nationality and religion would be a significant step forward. But she opposed any rule that allowed the F.B.I. to continue what it calls "domain mapping" — using census data, public records and law enforcement data to build maps of ethnic communities. **Agents use this data to help assess threats and locate informants.**

"It would certainly mean we have work to do," said Ms. Khera, who was one of several rights advocates who met with Mr. Holder about the profiling rules last week. "We want an effective ban on all forms of profiling."

Before federal agents could consider religion or other factors in their investigations under the new rules, they would need to justify it based on the urgency and totality of the threat and "the nature of the harm to be averted," according to an official who has seen the draft.

That would not prevent agents from considering religion or nationality, but officials said the goal was to establish clear rules that made doing so rare.

Department officials were prepared to announce the new rules soon and had told Congress to expect them imminently. But recently, the White House intervened and told Mr. Holder to coordinate a larger review of racial profiling that includes the Department of Homeland Security, officials said.

That is significant because the Bush-era racial profiling rules also contained an exception for border investigations, which are overseen by the department. Hispanic advocacy groups are as opposed to that caveat as Muslims are to the exception for national security investigations.

Mr. Holder cannot tell Homeland Security what rules to follow. But he has told colleagues that he believes border agents can conduct their investigations without profiling and by following the same rules as the Justice Department, one law enforcement official said.

It is not clear how long this broader review will take, but for now it has delayed release of the Justice Department rules.

Relations between the F.B.I. and Muslims have at times been strained since the weeks after 9/11, when agents arrested dozens of Muslim men who had no ties to terrorism.

Since then, the F.B.I. has adopted new policies and invested heavily to explain them to Muslim populations. Senior agents speak at mosques and meet regularly with imams and leaders of Muslim nonprofit groups, but suspicions remain.

Internal F.B.I. documents revealed that agents used their relationship-building visits at mosques as a way to gather intelligence. Leaked training materials, which the F.B.I. quickly disavowed, described the Prophet Muhammad as a cult leader and warned that mainstream Muslims shared the same "strategic themes" as terrorists.

The draft rules would establish a program to track profiling complaints. The current process is less organized, making it difficult to track patterns in complaints or how they are resolved.

Surveillance of Muslim communities key to prevent terrorism

Lengell, 15 (1/7/2015, Sean, "Peter King: Surveillance of Muslim community vital for national security," http://www.washingtonexaminer.com/peter-king-surveillance-of-muslim-community-vital-for-national-security/article/2558311, JMP)

Rep. Peter King said Wednesday's attack on a Paris newspaper that killed a dozen people highlights the need for enhanced police surveillance in Muslim communities to help combat terrorism.

"It shows us that we should put political correctness aside and realize that it is important to have police in the communities to be using sources, to be using informers," the conservative New York Republican told Fox News on Wednesday.

“Let's face it. The threat is coming from — for the most part, it's coming out of the Muslim community. It's a small percentage, but that's where it's coming from.”

King said law enforcement spying of certain ethnic communities is nothing new, saying that police for decades have used such tactics to combat the Italian-American Mafia and the Westies, a gang that sprang from New York City's Irish-American community in the 1960s.

“We have to be able to go in there and find out what's happening so we can be tipped off and not stand back and treat all communities as if they're the same,” he said. "If it's Islamist terrorism, we have to have more surveillance in those communities.”

The Associated Press reported that three masked gunmen shouting "Allahu akbar!" stormed the Paris offices of the satirical weekly newspaper Charlie Hebdo, killing 12 people, including its editor, before escaping in a car. The publication's caricatures of the Prophet Muhammad have frequently drawn condemnation from Muslims.

King said that while it’s uncertain if enhanced surveillance could have stopped the Paris shooting, “it shows the absolute necessity” of “on-the-ground intelligence.

“You can't provide security for every soft target in a major city. But if you have surveillance, if you're in the community, if you have informers, that shows how essential this [is], like the NYPD's been doing over the years,” he said.

Terrorism DA Link Uniqueness

Recent DOJ guidelines won’t result in any changes to FBI practices and still permits surveillance in critical areas

Phelps, 14 (12/9/2014, Timothy M., “Comey says new profiling guidelines will have no effect on the FBI,” http://www.latimes.com/nation/la-na-fbi-comey-profiling-20141209-story.html, JMP)

The new Justice Department guidelines governing profiling by federal law enforcement officers **will have no effect on FBI practices**, its director, James B. Comey, said Tuesday.

On Monday, Comey’s boss, Atty. Gen. Eric H. Holder Jr., said the new guidelines were “a major and important step forward to ensure effective policing by federal law enforcement officials.”

But at a press briefing Tuesday, Comey said that the FBI, the lead federal law enforcement agency, is already in compliance with the new guidelines and strongly asserted that no changes were required.

The guidelines “don’t have any effect on the FBI,” he said

Asked whether the new guidance would change anything to FBI does now, Comey said, “No, nothing. It doesn’t require any change to our policies or procedures.”

He said the FBI field manual for agents would not be changed because it was already in compliance with the guidelines, which expand restrictions on racial and ethnic profiling to cover religion, national origin, sexual orientation and gender identity.

He defended the FBI practice of "mapping" communities to identify neighborhoods by race, religion or national origin. Civil rights leaders were critical Monday of the failure of the Justice Department to curtail the practice.

"We need to be able to understand the communities we serve and protect," Comey said. "When there is a threat from outside the country, it makes sense to know who inside the country might be able to help law enforcement."

"It is about knowing the neighborhoods: what's it like, where's the industry, where are the businesses, are there particular groups of folks who live in a particular area?"

Despite shortcomings, recent review demonstrates FBI's effectiveness because of unfettered surveillance

Ackerman, American national security reporter and blogger, national security editor for the Guardian, **and Yuhas, 15** (3/25/2015, Spencer & Alan, The Guardian, "FBI told its cyber surveillance programs have actually not gone far enough; In-house 9/11 Review Commission calls for further expansion of informant and cyber surveillance networks but largely ignores domestic intelligence gathering," Lexis, JMP)

An in-house review of the FBI has found the agency failing to go far enough in its expansion of physical and cyber surveillance programs, urging the bureau to recruit deeper networks of informants and bring its technological abilities up to pace with other intelligence agencies.

While billed as a damning critique of the FBI, the in-house assessment known as the 9/11 Review Commission primarily attacks the bureau for not moving fast enough to become a domestic intelligence agency, precisely the direction in which the FBI has pivoted since the 2001 terror attacks.

The majority of the panel's findings recommend bureaucratic changes - such as expanded training for FBI intelligence analysts or expanding cooperation with local and state law enforcement through the agency's Joint Terrorism Task Force - or otherwise urge Director James Comey onward in the long-set course he and predecessor Robert Mueller have set, such as bolstering the FBI's "human intelligence" (Humint) network of informants.

In particular, the report found that the agency fails to support analysts and linguists who interpret intelligence behind the scenes. The "imbalance" between support for field agents and analysts "needs urgently to be addressed to meet growing and increasingly complex national security threats, from adaptive and increasingly tech-savvy terrorists, more brazen computer hackers, and more technically capable, global cyber syndicates", the report's authors wrote.

Yet the "Review Commission cannot say that with better JTTF collaboration, Humint or even intelligence analysis that the FBI would have detected those plots beforehand", the panel concedes, offering only that FBI counterterrorism "might have benefited" with an acceleration of what the agency has already been doing.

Much of the report remarked approvingly on the FBI's activities of the past decade, **praising the way it shares information with government agencies and the new rules that allow it to surveil a target without a warrant**.

"With the new and almost entirely unclassified AG Guidelines, special agents working on national security issues could now at the assessment stage 'recruit and task sources, engage in interviews of members of the public without a requirement to identify themselves as FBI agents and disclose the precise purpose of the interview, and engage in physical surveillance not requiring a court order' just as special agents working on organized crime investigations could do," the authors wrote.

Administrative Law CP

Notes

Given how well this counterplan clashes with the FBI political and religious surveillance aff, you probably don't need to risk competition issues by including "propose [the plan]" in text. You can credibly say that the two mandates resolve civil liberty concerns.

1nc Administrative Law CP

The United States federal government should propose [the plan] but require that:

The Attorney General or FBI Director provide both notice of a decision to amend the Attorney General's Guidelines for Domestic FBI Operations or the Domestic Investigations and Operations Guide and written justifications for their ultimate decisions.

Any changes to the Guidelines regime be accompanied by a binding "Civil Liberties Impact Statement" prepared by the Justice Department, and that the Privacy and Civil Liberties Oversight Board be given veto power in the process of drafting or modifying the Guidelines and their implementing regulations.

The counterplan solves the case and still preserves the FBI's decision-making role and expertise to prevent terrorism

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

A recent quote from former Director of National Intelligence Mike McConnell captures the sentiment of many security policymakers. In his view, the American people have "very little appreciation for the threat," and "special interests, particularly civil liberty groups with privacy concerns," prevent the intelligence community from doing its job as well as it otherwise could.

n153 This view of the need to consider privacy concerns as a [*41] hurdle to effective policy, rather than as an integral part of policymaking, illustrates the tension that sometimes arises between the FBI's primary mission and its responsibility to protect civil liberties. As others have pointed out, the FBI will value success in carrying out its primary mission and will favor terrorism prevention "over competing concerns such as the protection of civil liberties." n154

Pointing out the elevation of the FBI's anti-terrorism mission over other considerations is not meant to be an indictment. That mission is a vital one that should be pursued vigorously. **And with over a century of experience conducting criminal and security investigations, the FBI is the agency in the best position to determine the most effective means of pursuing that mission.** This includes decisions regarding which investigative methods will be most successful in countering threats to the country. **This expertise should not be undervalued.**

At the same time, the decision about what level of intrusiveness society is prepared to accept in pursuit of security is not a matter of technical, investigative, or intelligence-collection expertise. Determining the intrusiveness of an investigation justified by any particular set of circumstances necessarily involves normative judgments implicating fundamental values. As should now be clear however, the only true constraints on the FBI's intelligence-collection activities are the Guidelines and the DIOG. This leaves decisions regarding the appropriate balance between the FBI's security mission and the interests on the other side of the scale in the hands of the Attorney General. He, in turn, has delegated many of those [*42] decisions to the FBI itself. Thus, concerns over security will have a prominent role in such decision making and other interests will be short-changed.

III. Administrative Strategies as Governance

If the usual tools of governance fail to apply effectively to the Guidelines and the DIOG, how do we devise mechanisms to fill this governance gap? This Part argues that we can borrow from the institutional design principles of the administrative state to address three specific challenges presented by the Guidelines regime. First, the absence of both doctrinal and practical limits on the FBI's intelligence collection confers expansive discretion on the Attorney General and the FBI. Second, the lack of judicial, legislative, or public scrutiny of FBI policy results in a deficit of both accountability and democratic legitimacy. And third, the FBI's focus on threat prevention creates a risk that its rulemaking decisions will give insufficient attention to liberty and privacy interests. With respect to each of these challenges, this Part identifies strategies the administrative state employs, and uses those strategies to develop concrete suggestions to improve intelligence-collection governance.

This examination of administrative law strategies--**designed to channel discretion, increase accountability and legitimacy, and ensure that competing priorities are afforded sufficient attention**--suggests the following concrete reform proposals. First, a reason-giving framework should be implemented that (1) requires the Attorney General to provide notice of his or her intention to modify the Guidelines; and (2) specifies that any modifications must be justified in writing. n155 Second, to promote meaningful pluralist input, the Attorney General should be obligated to consider as part of the Guidelines-development process the views of stakeholders outside the intelligence community (though not necessarily outside the government). n156 Third, in order to ensure liberty interests are not marginalized, [*43] (1) the Justice Department should be required to prepare a statement indicating the likely impact on civil liberties of any changes to the Guidelines, and (2) the Privacy and Civil Liberties Oversight Board should be empowered to

participate meaningfully in the Guidelines' development. n157 Before beginning the analysis that suggests these particular reforms, however, a few preliminary points are in order.

2nc Must Read for Net Benefits & Solvency ***

CP is a distinct process that avoids our net benefits because it doesn't require FBI to cede any particular powers or to discontinue existing policy, BUT it solves better because adopting the procedural framework will result in better substantive rules. The counterplan boosts FBI transparency, consistency, fairness, and accountability and ensures public confidence.

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP) *****Note – APA = Administrative Procedure Act**

[*46] Given the appropriate political environment, there are at least three reasons to think that the imposition of a framework like the one suggested here is not entirely implausible. As an initial matter, there is the FBI's concern over legitimacy. The Bureau's ability to succeed in its mission requires constructive relationships with the communities in which it operates. n168 Yet its aggressive intelligence-collection tactics--and their concentration in Muslim communities--has alienated many members of that community, raised suspicion and distrust of the Bureau in some quarters, and undermined cooperative relationships. n169 Improved governance is thus not the only benefit that would flow from implementing APA-like procedures; institutionalizing rulemaking procedures would also yield improvements in community relations, public perceptions of legitimacy, and consequently, FBI effectiveness. In addition, government documents and scholarly commentary are replete with arguments about the value of process in legitimating government action. n170 The FBI's practice of reaching out to nongovernmental organizations in anticipation of issuing new intelligence-collection rules indicates an awareness of the benefits of generating the support of outside stakeholders. n171 Subjecting itself to a set of procedural rules would go far in this regard. And finally, none of the proposals here are substantive. **They do not call upon the FBI to cede any particular powers, or to discontinue existing policy.** Indeed, **they acknowledge the Attorney General's and FBI's role in generating the rules by which the FBI operates**, so long as they can show [*47] both that changes in the FBI's authority are needed and that the proposed changes are reasonable ones. And finally, **when it comes to imposing limits on government actors, broad procedural frameworks often face less opposition than substantive policy changes**. n172

A second preliminary note concerns the role of the APA. While several of the proposed reforms are inspired by provisions of the APA, **this Article does not argue that the APA's procedural rules apply to the FBI as a matter of binding law**. n173 In fact, it does not take a position with respect to whether the Guidelines or the DIOG constitute legislative rules subject to APA requirements, or whether they represent informal guidance documents or "rules of agency organization, procedure, or practice," which are explicitly exempt from many of the APA's constraints. n174 Instead, the Article looks to the way the APA and other sources of administrative law address particular concerns and argues that **intelligence-collection governance would benefit from implementing procedures inspired the animating principles behind these sources of administrative law**.

The idea of imposing a governance framework on the development of rules in the absence of a statutory requirement to do so is not a novel one. The Office of Management and Budget (OMB)--part of the Executive Office of the President tasked with overseeing the regulatory decisions of administrative agencies n175--in its Final Bulletin for Agency Good Guidance Practices "establishes policies and procedures for the development, issuance, and use of significant guidance [*48] documents." n176 These policies are designed to **increase the quality, transparency, consistency, fairness, and accountability of agency guidance practices**. n177 To that end, the Bulletin suggests that agencies engage in "procedures similar to APA notice-and-comment requirements" for some types of guidance documents in order to **"increase the quality of the guidance and provide for greater public confidence in and acceptance of the ultimate agency judgments."** n178 Similar language appears in the Department of Homeland Security's (DHS) official guidance on preparing Privacy Impact Assessments (PIAs), n179 which all agencies--including the FBI--must generate for any substantially revised or new Information Technology System that collects, maintains, or disseminates personally identifiable information from or about members of the public. n180 According to the DHS Guidance, requiring agencies to follow procedures designed to call attention to issues of legitimacy **"demonstrates to the public and to Congress" that the new systems "have consciously incorporated privacy protections."** n181 In other words, both OMB and DHS policy takes the position that **procedural constraints result in both better substantive rules and an increase in the perceived legitimacy of those rules, even when those constraints are self-imposed rather than statutorily required.**

2nc Terrorism NB

Continued congressional delegation to the FBI is necessary for counter-terrorism effectiveness

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

The accountability gap left by the absence of judicial review will not be filled by legislative or public scrutiny. The origin story of the original Attorney General Guidelines included a significant role for Congress. n121 Having been prompted by the Church [*35] Committee's findings of misconduct and the resulting public outrage, the legislature was intimately involved in developing the contents of the Guidelines. n122 Congress held a series of hearings on the issue over the course of several years, and saw its suggestions ultimately reflected in the Levi Guidelines. n123 Given that the Guidelines were implemented, at least in part, to avoid more stringent legislative action, n124 this is not a surprise. Surely Attorney General Levi knew that if the rules he instituted did not appear to address Congress's concerns, they would fail to sap the momentum for enacting a statutory charter for the FBI.

The contemporary political economy of congressional oversight in this area means that legislative oversight will not provide any more effective a check than judicial action. Legislators' incentives weigh against aggressive involvement. The downside risks of unsuccessful counterterrorism policies (additional attacks) are high. n125 If those policies are developed outside of the legislative process, Congress can share (if not entirely evade) blame. Moreover,

counterterrorism policy "is a subject matter that is especially prone to legislative delegation because it often entails hard trade-offs," which are the types of questions Congress is least likely to address. n126 In addition to undermining legislative involvement in counterterrorism policy formulation, existing institutional features also render [*36] congressional oversight of domestic intelligence-collection policy ineffectual. Congress, of course, retains oversight authority over the FBI. n127 If it wants to play a more active role in overseeing the Guidelines, it has the tools to do so. n128 After all, Congress determines whether and to what degree the FBI's intelligence-collection activities are funded. n129 Moreover, the relevant committees of jurisdiction conduct regular oversight hearings at which the Attorney General and FBI Director appear. n130 Legislators can ask Justice Department and FBI officials for information about the Guidelines or the FBI's activities at any time. n131

Administrative governance balance competing missions so security is not undermined

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

[*66] D. Reconciling Conflicting Missions

Administrative governance also has developed ways to address the challenges posed when agencies are responsible for pursuing multiple, competing goals. The FBI must carry out its mission of preventing security threats from manifesting while simultaneously protecting fundamental rights. The principles behind the administrative state's tactics for reconciling conflicting missions offer ideas about how to **implement structural checks to prevent the FBI's intelligence-collection mission from overwhelming these other important interests**.

1. Juggling Mandates

Conflict among agency missions comes about when one or more statutes issue mandates to a single agency that come into tension with one another or when government-wide mandates conflict with the primary goals of individual agencies subject to those mandates. n251 In one example, the National Park Service must protect the natural resources of the parks while simultaneously developing facilities for visitors. n252 Similarly, the Fish and Wildlife Service is required to manage wildlife refuges for the conservation of plants and animals while also providing for recreation on those refuges. n253 And the National Environmental Policy Act of 1969 (NEPA) n254 requires "all federal agencies" to minimize the environmental impacts of their actions. n255 For an agency focused on, for example, building roads [*67] through environmentally sensitive territory, the charge to protect the environment can be at odds with this focus.

The FBI's mandate to protect civil liberties can be viewed as a "secondary" mission--one that frequently comes into tension with its primary mission of preventing security threats. n256 Studies show that an agency will focus on what it considers to be its primary mission, and it will shirk on performing "secondary" or less easily evaluated goals. n257 As a secondary mission, protection of civil liberties is, therefore, sure to be short-changed in favor of security in the same way that environmental concerns have so often gone under-addressed in favor of development or other economically profitable activities.

2. Relieving the Tension Among Multiple Missions

Fortunately, **several administrative law strategies suggest ways to ensure that the Guidelines regime sufficiently takes into account civil liberties concerns as well as security concerns**. n258 Though all of the options discussed below are possible paths to follow, the final two approaches discussed below seem particularly promising.

Regulatory strategies can ensures the protection of civil liberties without undermining the FBI's ability to prevent terrorism

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

HIGHLIGHT: Abstract

Scholars have long recognized that a Federal Bureau of Investigation wielding robust domestic intelligence-collection powers poses a threat to civil liberties. Yet the FBI's post-9/11 mandate to prevent terrorist attacks (not merely investigate completed attacks) demands that the agency engage in broad intelligence-collection activities within the **U**nited **S**tates--activities that can threaten fundamental freedoms. This Article argues that strategies derived from administrative law principles can help alleviate the tendency of threat-prevention efforts to erode civil liberties.

The fundamental problem this Article tackles is that the traditional governance mechanisms we rely upon to protect individual rights are ineffective in the domestic intelligence-collection realm. This failure of traditional checks stems from, first, the absence of practical constraints to channel the enormous discretion that the Justice Department and the FBI enjoy in determining the scope and nature of the FBI's domestic 6intelligence-collection activities; second, the lack of judicial or political checks on these activities, resulting in a deficit of democratic legitimacy and accountability; and third, the risk that the FBI's singular focus on terrorism prevention will overwhelm rights-protection concerns.

Drawing on principles of administrative law, this Article explains how regulatory strategies can be employed to **improve governance of domestic intelligence gathering**. It recommends imposing procedural requirements on the exercise of discretion, facilitating meaningful pluralist input into relevant decision making processes, and augmenting the attention given to civil liberties concerns by requiring the Justice Department to prepare Civil Liberties Impact Statements and by including in the process an entity whose primary goal is the protection of civil liberties. These governance reforms will prompt domestic intelligence regulation to take account of civil liberties **while preserving the ability of law enforcement to pursue security**.

--- AT: Secrecy Link Applies to CP

Notice and justification can be limited to those with a security clearance to maintain necessary secrecy

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

Rules should similarly dictate that the Attorney General or FBI Director provide notice explaining the reasons for any proposed changes to the Guidelines or the DIOG and a justification for the ultimate decisions that demonstrates that all of the relevant available information was taken into consideration and that there was a valid basis for the change. The distinctions between traditional administrative law and national security administration require, however, some adjustments to the usual procedural design. While most agency notices of proposed rulemaking are part of the public record and freely available for wide dissemination, the classified nature of much of the FBI's activity and some of the rules contained in the DIOG requires that the dissemination of the notice and justification will often be limited to individuals with the necessary security clearance. n205 Imagine, for example, a proposed rule-change designed to modify surveillance operations to make them less likely to be detected by the target. Publicizing that intention and [*55] the resulting rule might undermine entirely the purpose of the revision.

1nc Politics NB

Only the plan will face congressional opposition --- Congress wants to defer to the executive on the issue and avoid blame for intelligence failures

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

First, some brief thoughts on political economy. This Article aims to propose some plausible reforms in an area where what Professor Heather Gerken calls the "here to there" problem is a significant obstacle. n158 Perhaps even more than in other policy areas, expectations that Congress will act to implement these recommendations--through legislation or through other available levers of power--are likely to be disappointed. Indeed, congressional oversight of national security policy has long been considered ineffective by government officials, outside task forces, and scholars. n159 The dearth of public information about national [*44] security policy, which makes oversight significantly more challenging, is partially to blame. n160 But there are also perverse incentives at work: **legislators have no incentive to engage in aggressive oversight of intelligence-collection powers**. n161 Legislators gain little by taking ownership over security policy. n162 Meanwhile, **so long as Congress can label such policies "executive," it cannot be blamed for intelligence failures**. n163 The result is that all electoral incentives point toward congressional deference to executive policy preferences in this area. n164 This is [*45] especially so for intelligence-collection policies imposing disproportionate impact on certain segments of society, such as minorities or noncitizens, whose interests carry little electoral weight with legislators. n165 Expectations that Congress will take action in this area are thus likely to be disappointed.

CP avoids political battles in congress and insulates policies from backlash

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

Similarly, because granting decision-making authority to bureaucrats not subject to electoral forces that constrain other policymakers **removes those decisions from the field of political battle**, Congress both eludes responsibility for making difficult policymaking decisions and **insulates the policies themselves from electoral backlash**. n185 Broad agency discretion thus undermines the very nature of participatory democracy and raises concerns about political accountability for critical decisions of national policy. n186

[*51] And while the Supreme Court's decisions limiting legislative delegations to agencies were confined to the New Deal-era, n187 so long as Congress sets down an "intelligible principle" for the agency to follow, n188 many of the procedural rules developed in the administrative state serve to cabin discretion. n189 Thus, while agency decision makers continue to enjoy significant leeway, the threat to democracy and accountability posed by agency discretion has not gone unaddressed.

CP alone doesn't link to politics --- Congress wants to delegate the policy-making to others

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

The accountability gap left by the absence of judicial review will not be filled by legislative or public scrutiny. The origin story of the original Attorney General Guidelines included a significant role for Congress. n121 Having been prompted by the Church [*35] Committee's findings of misconduct and the resulting public outrage, the legislature was intimately involved in developing the contents of the Guidelines. n122 Congress held a series of hearings on the issue over the course of several years, and saw its suggestions ultimately reflected in the Levi Guidelines. n123 Given that the Guidelines were implemented, at least in part, to avoid more stringent legislative action, n124 this is not a surprise. Surely Attorney General Levi knew that if the rules he instituted did not appear to address Congress's concerns, they would fail to sap the momentum for enacting a statutory charter for the FBI.

The contemporary political economy of congressional oversight in this area means that legislative oversight will not provide any more effective a check than judicial action. Legislators' incentives weigh against aggressive involvement. The downside risks of unsuccessful counterterrorism policies (additional attacks) are high. n125 **If those policies are developed outside of the legislative process, Congress can share (if not entirely evade) blame.** Moreover, **counterterrorism policy "is a subject matter that is especially prone to legislative delegation** because it often entails hard trade-offs," which are the types of questions Congress is least likely to address. n126 In addition to undermining legislative involvement in counterterrorism policy formulation, existing institutional features also render [*36] congressional oversight of domestic

intelligence-collection policy ineffectual. Congress, of course, retains oversight authority over the FBI. n127 If it wants to play a more active role in overseeing the Guidelines, it has the tools to do so. n128 After all, Congress determines whether and to what degree the FBI's intelligence-collection activities are funded. n129 Moreover, the relevant committees of jurisdiction conduct regular oversight hearings at which the Attorney General and FBI Director appear. n130 Legislators can ask Justice Department and FBI officials for information about the Guidelines or the FBI's activities at any time. n131

Perhaps as a result of the existing incentive structure, however, **Congress has shown little appetite to pursue Guidelines-related issues of late**. n132 The most recent modification to the Guidelines, for example, failed to reflect congressional input. The Justice Department provided the Senate Judiciary [*37] Committee a completed draft of the Mukasey Guidelines a few months before they were implemented. n133 A handful of senators requested that Attorney General Mukasey delay their implementation until Congress had the opportunity to develop suggestions regarding ways to minimize civil liberties concerns. n134 Their request went unanswered. And even when FBI Director Robert Mueller III inaccurately testified in 2010 before Congress that the FBI did not have the authority to conduct unpredicated investigations, legislators took no follow-up action. n135

While Congress has shown little interest in scrutinizing the Guidelines, the public is not given a choice in the matter. Activity undertaken pursuant to the Guidelines is secret and therefore rarely apparent on its own or reported in sufficient detail in the news media. n136 Moreover, information about how the Guidelines are used is exempt from disclosure under the Freedom of Information Act on the basis of either the law enforcement or the classified-information exemption contained in that statute. n137 The public also lacks means to scrutinize how the rules are [*38] implemented. In some cases even the rules themselves are secret. The publicly available version of the DIOG, for example, entirely redacts the rules governing undisclosed participation in religious or political gatherings. n138

Attorney General Guidelines are empirically designed to prevent legislative action

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

Over time, both the Bureau's focus and the rules governing its activities have swung back and forth along the spectrum between the targeted investigations of crime solving and the broader intelligence gathering associated with prevention. The Guidelines themselves are the product of the FBI's early-1970s move away from intelligence collection. After the United States Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities, commonly known as the Church Committee for its chair Senator Frank Church (D-ID), [*13] revealed that decades of unregulated intelligence collection by the FBI had resulted in widespread abuses of the government's investigative powers, n29 Congress determined that the FBI should be subject to a legislative charter setting out strict limits on its intelligence-collection authority. n30 **In an effort to stave off potentially more restrictive legislative action**, President Gerald Ford's Attorney General, Edward Levi, issued in 1976 the first set of Attorney General's Guidelines--known as the Levi Guidelines. n31

Guidelines are shrouded from public criticism

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

While Congress has shown little interest in scrutinizing the Guidelines, the public is not given a choice in the matter. Activity undertaken pursuant to the Guidelines is secret and therefore rarely apparent on its own or reported in sufficient detail in the news media. n136 Moreover, information about how the Guidelines are used is exempt from disclosure under the Freedom of Information Act on the basis of either the law enforcement or the classified-information exemption contained in that statute. n137 The public also lacks means to scrutinize how the rules are [*38] implemented. In some cases even the rules themselves are secret. The publicly available version of the DIOG, for example, entirely redacts the rules governing undisclosed participation in religious or political gatherings. n138

2nc Solvency ***

****note when prepping file --- the ev in "AT: No Enforcement" is also very useful to defend the general solvency of the counterplan. The ev in both blocks are useful in many different ways.*

Indicts of the administrative law process assume the current Guidelines and do not reflect the counterplan's changes to the process --- it creates a more transparent, accountable, and legitimate means to balance security objectives with the protection of civil liberties.

CP ensures accountability and constrains agency abuses

- Reason-giving requirements will help constrain agency abuses and ensure accountability --- CP would have prevented most dangerous changes in 2008 Guidelines

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

B. Reason-Giving as Constraint

Courts and commentators have raised a litany of reasons why extending broad discretion to administrative agencies can be problematic from a governance standpoint--reasons that apply with equal force to the FBI's exercise of intelligence-collection powers. **Agency strategy for channeling discretion, largely dominated by reason-giving requirements, is therefore an important source of ideas for addressing that concern in the context of the Guidelines regime.**

1. The Downsides of Discretion

Consigning significant policy choices to administrative agencies operating with broad discretion undermines the constitutional mechanism of promoting both accountability and sound decision making. When it comes to legislation, the Constitution seeks to avoid these concerns by subjecting legislative decisions to the deliberation and contestation that serves as a bulwark against faction and tyranny. n182 Freed from [*50] the requirements of Article 1, § 7, n183 however, agency decision makers might engage in a wise and thoughtful decision-making process; but they are equally capable of making poor choices, opting for policies that are uninformed, arbitrary, irrational, self-interested, or otherwise untethered to the public interest. n184 Absent some alternative check on the way in which discretion is exercised, there is therefore no reason to expect an agency's decision-making process to result in the best outcome--however that is defined.

Similarly, because granting decision-making authority to bureaucrats not subject to electoral forces that constrain other policymakers removes those decisions from the field of political battle, Congress both eludes responsibility for making difficult policymaking decisions and insulates the policies themselves from electoral backlash. n185 Broad agency discretion thus undermines the very nature of participatory democracy and raises concerns about political accountability for critical decisions of national policy. n186

[*51] And while the Supreme Court's decisions limiting legislative delegations to agencies were confined to the New Deal-era, n187 so long as Congress sets down an "intelligible principle" for the agency to follow, n188 many of the procedural rules developed in the administrative state serve to cabin discretion. n189 Thus, while agency decision makers continue to enjoy significant leeway, **the threat to democracy and accountability posed by agency discretion has not gone unaddressed**.

2. Channeling Discretion into Reasoned Decision-Making

The administrative state has grappled with legitimizing broad delegations throughout its history. n190 Over the years, reasoned decision making emerged as an important means of [*52] limiting discretion and improving the quality of agency policymaking by requiring agencies to justify their actions. n191 And while these reason-giving requirements exist in part to facilitate judicial review of agency action, they also have the intrinsic value of promoting agency experts' exercise of their discretion in a thoughtful, principled fashion. n192 These requirements come from two sources: the Administrative Procedure Act n193 supplemented by the requirement from SEC v. Chenery Corp. (Chenery II) n194 that agency actions are valid only if they can be upheld according to the rationale given by the agency at the time the decision was made. n195

[*53] The APA procedures for informal rulemaking employ two strategies for ensuring that agencies can engage in a process of reasoned decision making. n196 First, the APA has a notice requirement, which is designed to broaden the range of information and perspectives the agency must take into account n197 in order to promote more informed decision making. n198 To ensure these goals are met, the APA demands that an agency's notice must "fairly apprise interested persons of the subjects and issues" at stake whenever they intend to engage in a rulemaking n199 and indicate the rulemaking's legal and factual basis as well as its policy purpose. n200 Thus, the APA aims to ensure that agencies have before them all relevant information when making policy decisions

The second element of the APA's strategy for channeling discretion is the obligation that agencies issue a public statement when announcing a final rule. n201 Just as written judicial opinions demonstrate that a court's decision is supported by facts, law, and [*54] precedent, these statements of purpose serve to demonstrate that agency officials considered all of the information before them and engaged in a "process of reasoned decision-making." n202 To that end, the statement must include the rule's basis and purpose as well as a justification of the decisions that led to its adoption, and it must "indicate the major issues of policy that were raised in the proceedings and explain why the agency decided to respond to these issues as it did." n203 Moreover, under Chenery II, only if the purpose provided by the agency constitutes a valid justification for the decision will it be legitimate. n204

Rules should similarly dictate that the Attorney General or FBI Director provide notice explaining the reasons for any proposed changes to the Guidelines or the DIOG and a justification for the ultimate decisions that demonstrates that all of the relevant available information was taken into consideration and that there was a valid basis for the change. The distinctions between traditional administrative law and national security administration require, however, some adjustments to the usual procedural design. While most agency notices of proposed rulemaking are part of the public record and freely available for wide dissemination, the classified nature of much of the FBI's activity and some of the rules contained in the DIOG requires that the dissemination of the notice and justification will often be limited to individuals with the necessary security clearance. n205 Imagine, for example, a proposed rule-change designed to modify surveillance operations to make them less likely to be detected by the target. Publicizing that intention and [*55] the resulting rule might undermine entirely the purpose of the revision.

While the effect of limited dissemination of notice and justification will not be as robust as a process that is entirely transparent, limits on dissemination need not render written notice and justification worthless. In addressing concerns over excessive discretion, the crucial elements of the relevant administrative strategy are (1) that the notice broaden the range of information and perspectives that the agency considers and (2) that the written justification demonstrates that the agency's decision enjoys sufficient factual and legal support. To accomplish this, the notice and justification must go to individuals or entities whose participation would serve to expand the information and perspectives available to the decision makers and whose scrutiny of the ultimate justification would encourage the adoption of rules supported by reasoned argument and available evidence.

Candidates to receive this notice and justification are both inside and outside the Justice Department. The Justice Department's Civil Rights Division and Office of Privacy and Civil Liberties as well as the National Security Division could be invited to comment. Similarly, other members of the intelligence community, such as the Office of the Director of National Intelligence should be involved. But the Privacy and Civil Liberties Oversight Board (PCLOB) should contribute its perspective as well. This is not meant to be an exhaustive list of possibilities. Nor will each of these institutions necessarily take on the role of civil-liberties champion or do so effectively. n206 For now, it is enough to say that so long as they have access to the relevant information and bring a perspective different from the one within the Attorney General's office or the FBI, their participation would help to channel discretion in a productive direction.

The 2008 modifications to the Guidelines provide a concrete example of how the requirement that the Attorney General provide reasons justifying amendments could impact the process. [*56] One proffered justification for amending the Guidelines in 2008 was that they were necessary to

provide tools the FBI needed to support its preventive role. n207 But the then-existing Guidelines already described prevention as the FBI's "central mission," and included several provisions added in 2002 that were aimed at empowering and enabling this aspect of the FBI's activities. n208 In asserting that the 2008 Guidelines were necessary for terrorism prevention, the Bureau had no obligation to explain how its activities were unacceptably constrained by the rules that were then in effect, which were drafted for the same purpose. n209 Under these proposed rules, the Attorney General would have had to make that case, allowing those entities that were notified the opportunity to question the need for changes and possibly even make those concerns public. n210 And if the Attorney General could not do so satisfactorily, it would have made altering the Guidelines a much more controversial proposition.

Requiring written justification of the final rules also might have had an impact on the 2008 revisions. On the one hand, the Justice Department downplayed the extent to which the Guidelines expanded the FBI's powers. The new Guidelines were characterized as merely consolidating several existing sets of rules without making substantive changes. n211 In fact, Justice Department officials asserted that assessments were nothing [*57] new, and that under the pre-2008 Guidelines it could already conduct assessments using pretext interviews, physical surveillance, and the tasking of informants. n212 But there was no "assessment" level in the pre-2008 Guidelines. n213 Indeed, they explicitly prohibited both pretext interviews and physical surveillance until a preliminary inquiry--a predicated investigation--had been opened. n214 "Threat assessments" were permitted in some contexts under the 2003 National Security Investigation Guidelines, but by the FBI's own admission, some of the techniques available in today's assessments were prohibited in that context. n215 Had the Attorney General or FBI Director been required to explain exactly what changes were being made and provide the rationale for the new rules, the creation of assessments in their current form--the central innovation of the 2008 Guidelines--might have met with more resistance. In particular, the ways in which assessments expanded the FBI's powers, for example permitting use of several investigative techniques historically reserved for predicated investigations, would have become clear and consequently would have been subject to closer examination. As it was, the Attorney General could simply disclaim the idea that new powers were being granted without having to substantiate that statement.

[*58] In addition to any substantive differences to the 2008 Guidelines that would have resulted, a notice and justification requirement would have provided other concrete benefits. First, **it would have guaranteed that decision makers had the benefit of additional perspectives while they were still developing the policy**. It is much easier--and therefore more likely--for policymakers to incorporate alternative perspectives into policy still being developed than once that policy is nearing its final form. n216 Second, obligating the Attorney General to address the information that was submitted to him and to explain in writing why the Guidelines should be implemented in his chosen format would force him to digest that information and therefore might actually **result in a more informed decision**. n217 Third, **it would have added additional legitimacy to the final product** if n218 the 2008 Guidelines development had been based on specific, reasoned arguments regarding the need for modifications.

CP's participatory process makes the guidelines more democratic and boosts support and cooperation from communities

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

C. Participatory Policymaking

Nowhere does the Constitution provide for the existence of administrative agencies, much less for specific means of ensuring that their actions do not infringe on fundamental rights or that they are subject to democratic accountability. n219 The administrative state has grappled with this "democracy deficit" almost since its inception. n220 One means employed to address it has been through increasing opportunities for broad participation in agency decision making. Designing ways to employ these [*59] strategies for increased participation could lend increased democratic legitimacy to the intelligence-collection realm.

1. Administrative Agencies' Democracy Deficit

Administrative agencies initially were viewed either as entities merely implementing congressional will or as bastions of expertise, making decisions on the basis of scientific or technical knowledge. n221 By the latter half of the twentieth century, however, it had become clear that many congressional delegations are vague and that many agency decisions cannot be resolved definitively through substantive expertise. n222 Instead, such decisions often rest on subjective judgments about policy priorities, the value of human well-being, and who should bear the costs of inevitable risks. The Guidelines are thus not alone in their undemocratic nature. This democracy deficit "has spawned an extensive literature concerning the legitimacy of the administrative state." n223 Indeed, Professor Jody Freeman has suggested that "[a]dministrative law scholarship has organized itself largely around the need to defend the administrative state against accusations of illegitimacy" n224 based on the unaccountability of agency officials, a lack of transparency, and limited opportunities for public participation. n225

[*60] 2. Increasing Democracy, Increasing Participation

One answer to the democracy deficit implemented by the administrative state has been to boost the democratic pedigree of agency rules by insisting on broad participation. n226 **A variety of procedural and doctrinal rules in the administrative state promote the broad participation of interested stakeholders.** As with limits on discretion, the informal rulemaking process set out in the APA promotes participation through the implementation of strategies that can help **improve the democratic pedigree of the Guidelines and the DIOG**.

The first element of the strategy for improved democratic legitimacy is that the notice of proposed rulemaking itself must be provided in such a way as to facilitate meaningful participation, n227 such as including the legal and factual basis for the proposed rule n228 and the data on which the agency relied in making its proposal. n229 These mandates ensure that stakeholders who want to participate have enough information to permit them to raise objections, provide additional information, or offer alternative perspectives. The notice, therefore, not only alerts diverse interested parties that there is a decision being contemplated for which they might want to provide input, but also ensures that input can be meaningful. Second, the agency must actually consider this input. A final rule's statement of basis and purpose must "indicate the major issues of policy that [*61] were raised in the proceedings and explain why the agency decided to

respond to these issues as it did." n230 Thus any failure to take into account relevant comments can invalidate the rule. **This risk of invalidation discourages the development of rules that do not take all relevant perspectives into consideration.** n231

Again, these requirements will also result in rules that enjoy more democratic legitimacy than a rule prepared without such input. Affected parties are more likely to view agency decisions as legitimate if the process provides for a meaningful opportunity for presentation and consideration of their views. And **if the rules are considered legitimate, the FBI will be much more likely to enjoy the full support and cooperation of the communities it is policing, leading to more effective intelligence collection**.

Devising rulemaking mechanisms that are inclusive and allow for meaningful input from interested stakeholders presents a challenge when it comes to the domestic-intelligence regime because secrecy presents a formidable barrier to inclusion. n232 Even with respect to rules that are themselves public, such as the Guidelines, robust public participation in the process is impractical because there is insufficient public information about how those rules are implemented. The public may know, for example, that FBI agents are permitted to attend any religious service that is open to the public. n233 But it will not know how [*62] often agents engage in this activity, what information they collect, or what is done with the information. Rules that are themselves secret, such as portions of the DIOG, present an even more formidable challenge. To be sure, a strong case can be made that the existing levels of secrecy--with respect to both the rules and the policy implementation--are excessive. n234 Unless and until that secrecy is reduced, however, intelligence-collection policies will struggle to gain the benefits that inhere in broadly inclusive agency rulemaking.

Yet, the Justice Department clearly hopes to realize at least some of the benefits of democratic input when it comes to the Guidelines. Recall the Department's 2008 briefing of relevant congressional committees and other interested parties prior to the Guidelines' adoption. n235 The Bureau did the same thing in 2001 when it revised the DIOG. n236 These meetings allowed the FBI to characterize these documents as rules developed with input from an array of stakeholders and thus deserving of the enhanced legitimacy that broad participation confers. n237 So even if the consultations themselves failed to result in meaningful participation beyond the Justice Department, n238 they indicate recognition that agency decision makers desire (at least the appearance of) an inclusive process.

The benefits of participatory decision making require a more robust process than the one undertaken in 2008. Recognizing that [*63] the public at large will not be able to play a meaningful role, a second-best measure is to seek out proxies for points of view currently not formally represented in the process of developing the Guidelines and the DIOG. An example comes from Professors DeShazo and Freeman's empirical case study of the licensing practices of the Federal Energy Regulatory Commission. n239 In the amended Electric Consumers Protection Act of 1986, n240 "Congress [required the Commission] to consult with fish and wildlife agencies prior to issuing licenses [and demanded] that nondevelopmental values be given 'equal consideration' with power concerns." n241 DeShazo and Freeman explain that this amendment was specifically intended to strengthen the role of resource agencies in the Federal Energy Regulatory Commission's decision-making process n242 and that it did in fact have the desired effect. n243

[*64] A procedural regime governing the Guidelines' development could similarly mandate the participation of particular entities that will bring alternative perspectives to the discussion. Each of the entities noted as a potential recipient of notice and source of information could play this role. One especially promising candidate for this role is the Privacy and Civil Liberties Oversight Board (PCLOB), a statutorily created independent agency charged with ensuring that privacy and civil liberties concerns are considered in the development and implementation of laws, regulations, and policies related to terrorism. n244 The PCLOB took several years to get off the ground. n245 In the wake of recent revelations regarding NSA surveillance, however, it has demonstrated its ability to participate in the surveillance-policy conversation by insisting on a classified briefing about the controversial surveillance programs, meeting with the President, n246 holding a public hearing seeking concrete suggestions for improving the civil liberties protections included as part of those programs. n247 Based in part on what members of the Board learned at that meeting, the PCLOB issued a detailed report recommending specific changes to one existing surveillance program and anticipates issuing similar reports about other programs. n248 Whether any of the PCLOB's recommendations will [*65] be adopted remains to be seen. But giving the Board an official role in the process in which the Guidelines and the DIOG are formulated would ensure that the civil liberties point of view is represented.

This participation could take one of several forms, ranging from an opportunity to express views to veto power. n249 If the requirement is modeled on the concept behind the participation requirements included in notice-and-comment rulemaking, then it will end up somewhere between these two extremes, with something like the following arrangement: The PCLOB would have the opportunity to submit its perspective; having received this input, the Attorney General or the FBI Director would be required to demonstrate that it was taken into consideration.

Finding ways to broaden the perspectives involved when it comes to the DIOG is particularly important. Currently, nobody outside the FBI must be involved. Ensuring that alternative perspectives are voiced and requiring that the final rules reflect, or explain why they fail to reflect, these perspectives may provide some of the benefits of the multilateral, deliberative process that truly pluralist rulemaking procedures promote. n250

Administrative state mechanisms can check the AG and FBI --- external checks fail

- The administrate state has developed mechanisms that can be borrowed to ensure the Attorney General and FBI protect civil liberties and maintain anti-terror effectiveness --- other external checks will fail

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

[*5] I. Introduction

In the summer of 2013, former National Security Agency contractor and Central Intelligence Agency employee Edward Snowden shook the world with revelations of extensive United States government surveillance activities--including surveillance of American citizens. n1 The revelations sparked a renewed debate about the proper scope of intelligence collection in a democracy. What has gone unaddressed in this debate, however, is the vast investigative powers

conferred on America's domestic surveillance agency--the Federal Bureau of Investigation (FBI). And unlike the foreign-intelligence programs disclosed by Snowden's leaks, some of the FBI's most powerful domestic intelligence-collection authorities include neither statutory limits nor judicial oversight. n2

If the FBI determines that an individual's daily life is relevant to a terrorism investigation, it can easily draw a detailed picture of that life. n3 With no reason at all for suspicion and no judicial approval, agents can follow the individual around the clock to ascertain where he goes. They can ask his neighbors about their conversations with him, or dispatch an informant to his house of worship to report on the individual's religious [*6] observance. With the minimal process associated with issuing an administrative subpoena, n4 the government can establish a record of the individual's movements and social dealings by acquiring financial and employment records, a list of email addresses with which he has corresponded, and a list of phone numbers he has dialed.

These broad investigative powers operate in tension with fundamental rights. Collecting extensive personal information about innocent Americans raises concerns about privacy; about impact on freedoms of expression, association, and religious practice; and to the extent that such activity is disproportionately focused on particular communities, it can raise equal protection concerns as well. n5 The challenge, then, is how to mitigate these civil liberties threats without unduly interfering with the FBI's ability to prevent terrorist attacks.

This Article argues that **administrative law strategies suggest several measures that, taken together, would represent a domestic intelligence governance regime better equipped to safeguard civil liberties**. This argument bridges a gap between two growing areas of literature. The first, which I label "risk-management literature," advocates taking a regulatory approach to the threat of terrorism--to treating it not as an enemy to defeat, but, like environmental or health and safety risks, as a chronic problem to be assessed and managed. n6 The other, the [*7] "rights-protection literature," argues that the current domestic intelligence-collection governance regime fails to address effectively the tension with civil liberties created by the FBI's contemporary counterterrorism efforts. n7 I contend that the risk-management literature's valuable insight that administrative law can usefully be applied to improve governance in the security context suggests a means of mitigating the rights-protection scholars' concerns

These rights-protection concerns arise in large part because **traditional means of regulating executive power cannot effectively protect civil liberties in this area**. This failure of traditional checks results from three characteristics of the regime regulating domestic intelligence collection. First, it lacks both doctrinal and practical constraints on the FBI and Justice Department's enormous discretion in drafting and implementing the applicable rules. n8 Second, the checks that normally ensure the accountability and democratic legitimacy of government actions--judicial review, congressional oversight, and public scrutiny--simply **do not operate effectively in the secretive world of intelligence collection**. n9 And third, in its vigorous pursuit of [*8] terrorism prevention, the FBI is not subject to any structural checks to prevent it from undervaluing rights protection. n10

This broad discretion, democracy deficit, and absence of counterweight to the FBI's prevention goal means that--despite the privacy and liberty implications of the FBI's activities--**the responsibility of striking a balance between security needs and other important interests is left almost entirely to the Attorney General and the FBI itself**. Restraints on the FBI's

domestic intelligence-collection activities come from the Attorney General's Guidelines for Domestic FBI Operations (Guidelines) n11 and the Domestic Investigations and Operations Guide (DIOG). n12 The Guidelines are developed by the Attorney General and set out a basic framework for the FBI's operations; the several-hundred-page DIOG, promulgated by the FBI, specifies more detailed rules for the Guidelines' implementation. n13 The Guidelines were originally created to forestall impending legislative efforts to cabin the Bureau's intelligence-collection powers n14 but due to subsequent changes--particularly post-9/11 changes aimed at promoting terrorism-prevention efforts--the Guidelines and DIOG now serve to facilitate rather than limit the Bureau's intelligence-collection role.

[*9] Conceptualizing the threat of terrorism as a regulatory challenge represents a significant first step toward devising an improved governance regime for the Guidelines and the DIOG. But there are additional steps that the existing risk-management literature has not yet taken. The idea of how administrative law would apply to intelligence collection remains undertheorized--an unsurprising state of affairs given the recent emergence of this line of inquiry. Scholars have not yet tackled the thorny question of how to truly reap the benefits that the regulatory approach offers, while simultaneously taking into account the unique governance challenges presented by the domestic-intelligence context. Nor has the literature to date sufficiently grappled with civil liberties concerns. n1

This Article seeks to fill these gaps, drawing on administrative law principles to suggest novel governance designs custom tailored to address the civil liberties concerns inherent in domestic intelligence collection. To do so it looks to areas of administrative law that present similar governance challenges, identifies how those challenges have been addressed in the administrative state, and suggests how to adapt those strategies to function in the intelligence-collection context. n16

Each of the governance challenges this Article identifies has an analog in the administrative state. Take first the scope of discretion conferred on federal officials. This delegation of discretionary authority to the Attorney General and the FBI resembles the broad delegations in statutes establishing administrative agencies' powers and responsibilities. Concerns arising from the scope of these delegations are addressed through [*10] the Administrative Procedure Act's (APA) n17 procedural requirements. n18 Second, the absence of judicial, legislative, or public involvement in the design and implementation of the Guidelines is reminiscent of the democracy deficit inherent in the promulgation of regulations by technical experts so often at the heart of debates over the legitimacy of the administrative state. **The administrative state has responded to this deficit by developing mechanisms to increase the participatory nature of administrative activity.** n19 And third, the risk that the Guidelines privilege the FBI's primary mission--the prevention of terrorism and protection of national security--over concerns for fundamental rights mirrors the many circumstances where agencies are charged simultaneously with multiple, competing goals. **A menu of regulatory tools has been developed to reconcile competing agency missions.** n20 Looking to the lessons that can be gleaned from these administrative governance strategies provides a useful roadmap for filling the intelligence-collection governance gap in a way that also protects civil liberties.

The Article proceeds in three parts. Part II first argues that the expansive scope of investigative authority that the current Attorney General's Guidelines and the FBI's implementing procedures confer on the Bureau exist in tension with the protection of civil liberties. It then contends that the lack of practical, traditional judicial or political, and structural checks to impose effective

oversight on domestic intelligence gathering necessitates the implementation of alternative governance mechanisms.

In Part III, the Article harnesses administrative law strategies to suggest regulatory tools custom tailored to yield [*11] regulatory benefits that protect fundamental rights in the context of the FBI's Guidelines regime. To do so, it first explores the underlying purposes and justifications of traditional administrative law tools that are used to address governance challenges conceptually similar to those that the Guidelines regime presents. n21 It then suggests specific reforms designed to achieve the same ends as those traditional tools in the intelligence-collection context. n22 First, the Attorney General's discretion in the development and implementation of the Guidelines should be subject to a reason-giving requirement. Specific procedural limitations should require that the Attorney General or FBI Director provide both notice of a decision to amend the Guidelines or the DIOG and written justifications for their ultimate decisions. Second, to enable meaningful pluralist input into the process, the FBI must go beyond the cursory meetings with interested stakeholders that it has relied upon to date. Instead, a variety of entities inside the government should be empowered to participate in the amendment process. Third, **to balance the government's interest in security with privacy and liberty concerns**, (1) any changes to the Guidelines regime should be accompanied by a "Civil Liberties Impact Statement" prepared by the Justice Department, and (2) stakeholders whose primary goal is the protection of liberties--rather than the pursuit of security--should be involved in the process of drafting or modifying the Guidelines and their implementing regulations. n23 This approach will impose a meaningful governance regime crafted for domestic intelligence gathering that **mitigates concerns about the impact on civil liberties without sacrificing security**.

Part IV addresses some possible sources of skepticism for this proposal. It first explains why reliance on existing administrative law tools--even if those tools are partially modified to operate in the intelligence-collection realm--will be [*12] insufficient to protect civil liberties. n24 It then responds to questions about how to enforce these reforms in the absence of judicial review, suggesting alternative compliance mechanisms. n25

CP ensures that civil liberties are considered and protected

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

V. Conclusion

Domestic intelligence collection presents a challenge in a democracy. While it can play a crucial role in keeping our nation secure, it also poses threats to the very freedoms that make that nation worth defending. When the prevention of terrorism is viewed as a regulatory problem--one to be managed rather than defeated--the challenge becomes more manageable. Examining regulatory strategies developed over the past half-century in the administrative state provides a roadmap for **the development of structural and procedural mechanisms to channel executive discretion into reasoned, evidence-based decisions**; to include viewpoints from outside the intelligence community in the process; and to **ensure that the Justice Department explicitly takes into account the civil liberties perspective**. n350 The need to substitute alternative mechanisms for tools that are often effective in governing agency action, such as judicial review and public

scrutiny, means that they may be less directly effective in achieving their goals. n351 But developing such a framework is a [*91] viable second-best option in a context where the traditional means of government oversight break down. n352 It will contribute to generating the appropriate FBI for the twenty-first century, one that takes into account not only the nature of the disease, but also the potential costs of the cure.

Solves Terrorism / Community Trust / Legitimacy

****note when prepping file --- there is also ev in "2nc Solvency" that defends why the CP boosts ties with communities.*

CP allows the FBI to boost its legitimacy and rebuild trust with communities

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

[*46] Given the appropriate political environment, there are at least three reasons to think that the imposition of a framework like the one suggested here is not entirely implausible. As an initial matter, there is the FBI's concern over legitimacy. The Bureau's ability to succeed in its mission requires constructive relationships with the communities in which it operates. n168 Yet its aggressive intelligence-collection tactics--and their concentration in Muslim communities--has alienated many members of that community, raised suspicion and distrust of the Bureau in some quarters, and undermined cooperative relationships. n169 Improved governance is thus not the only benefit that would flow from implementing APA-like procedures; institutionalizing rulemaking procedures would also yield improvements in community relations, public perceptions of legitimacy, and consequently, FBI effectiveness. In addition, government documents and scholarly commentary are replete with arguments about the value of process in legitimating government action. n170 **The FBI's practice of reaching out to nongovernmental organizations in anticipation of issuing new intelligence-collection rules indicates an awareness of the benefits of generating the support of outside stakeholders.** n171 Subjecting itself to a set of procedural rules would go far in this regard. And finally, none of the proposals here are substantive. They do not call upon the FBI to cede any particular powers, or to discontinue existing policy. Indeed, they acknowledge the Attorney General's and FBI's role in generating the rules by which the FBI operates, so long as they can show [*47] both that changes in the FBI's authority are needed and that the proposed changes are reasonable ones. And finally, when it comes to imposing limits on government actors, broad procedural frameworks often face less opposition than substantive policy changes. n172

The problem with the current FBI Guidelines is that they shrouded from public input and criticism

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

While Congress has shown little interest in scrutinizing the Guidelines, the public is not given a choice in the matter. Activity undertaken pursuant to the Guidelines is secret and therefore rarely apparent on its own or reported in sufficient detail in the news media. n136 Moreover, information about how the Guidelines are used is exempt from disclosure under the Freedom of Information Act on the basis of either the law enforcement or the classified-information exemption contained in that statute. n137 The public also lacks means to scrutinize how the rules are [*38] implemented. In some cases even the rules themselves are secret. The publicly available version of the DIOG, for example, entirely redacts the rules governing undisclosed participation in religious or political gatherings. n138

AT: Solvency Deficit --- Top Level

Aff can't solve any better --- external checks embodied in the plan aren't applicable in this context

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

B. Existing Failures of Intelligence-Collection Governance

If the FBI's intelligence-collection authorities do not run afoul of existing legal limits, why is the way in which they are governed a cause for concern? Because despite these authorities' [*29] undisputed implications for civil liberties n94--indeed, their tendency to result in civil liberties infringements is what inspired the implementation of the Guidelines in the first instance--they are untouched by the nondoctrinal constraints that usually accompany law enforcement activities. This means that the only constraints on the FBI's intelligence-collection powers are the internal rules the Justice Department and the FBI have imposed on themselves.

Several inherent differences between intelligence collection and crime-solving investigations account for the inapplicability of constraints that usually limit government action. First, the very nature of the intelligence-collection enterprise is inherently more expansive in scope--proactive rather than reactive and less narrowly targeted. n95 Consequently, practical constraints that usually serve to limit law enforcement agencies' activities--resource limitations and a focus on solving individual crimes--are inapplicable. Second, **the secretive nature of intelligence-collection activities renders them effectively immune to judicial review as well as scrutiny from the legislature and the public**. n96 And third, the Justice Department and the FBI generate the Guidelines and the DIOG in the context of the FBI's post-9/11 focus on terrorism prevention. n97 This means that the rules are crafted by government officials with security and intelligence-collection expertise. There are, therefore, no structural checks to remove from the hands of security technocrats the normative judgments that must be made about the relative importance of [*30] aggressive intelligence collection and rights protections. n98 The result is that, despite the fact that intelligence collection implicates important values, the only constraints on that collection are effectively self-imposed.

AT: Solvency Deficit --- Court Specific

CP solves better --- judicial restrictions will fail for 3 reasons

- Secrecy, no standing, state secrets privilege

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

2. Intelligence Collection and Judicial or Political Constraints

In engaging in the broad intelligence-collection activities envisioned by the Guidelines, the FBI will elude traditional checks on power, such as judicial review and congressional or public oversight. The result is that the Guidelines and their implementation lack both the accountability and the democratic legitimacy that usually accompanies government policy. n108

There are several obstacles to judicial review of the Guidelines and the activities undertaken pursuant to them. As an initial matter, the Guidelines themselves disclaim any intention to create enforceable rights, so any action taken pursuant to them can be challenged only if it is otherwise unlawful. n109 In addition, the secrecy of these activities ensures that individuals who seek to challenge intelligence-collection regimes will struggle to demonstrate a sufficiently concrete injury to establish standing to sue. n110 Surveillance tactics are designed to prevent targets from being alerted to the fact that law enforcement is gathering information about them, so it is difficult to point to specific government action causing harm. n111 Moreover, courts have held [*33] that neither allegations of general chill nor an "objectively reasonable likelihood" that a plaintiffs' communications will be subject to surveillance are sufficient. n112 Thus, standing remains a bar to the courthouse door.

Another barrier that has proved fatal to judicial review of intelligence collection is the state secrets privilege, n113 which allows the government to withhold evidence whose disclosure might endanger national security. n114 At times the privilege results in a case being dismissed outright. n115 In other instances, a [*34] suit may proceed with evidence that the government is willing to share only ex parte, n116 undermining the proceedings' adversarial nature.

The government's investigative actions are most frequently scrutinized through motions to suppress evidence collected in violation of the Fourth Amendment. n117 But this process generally eludes the targets of surveillance. When the government gathers information for the purposes of criminal prosecution and seeks to introduce it as evidence at trial, only the individual about whom the information was gathered--the criminal defendant--will have the opportunity to challenge the government's actions through a suppression motion. n118 This means that these practices will face challenges in those circumstances where the government's case is most compelling--when a guilty person seeks to exclude probative inculpatory evidence. n119 Moreover, **much of the government's intelligence-collection activity never leads to prosecution**. As a result, innocent targets of surveillance--those whose information is collected because it is deemed "relevant" to an investigation, or members of a house of worship who change their religious practices due to fear of surveillance--**will be unable to invoke judicial protection**. n120

AT: Solvency Deficit --- Congress Specific

Congress can't solve --- strong incentives will discourage effective follow through

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

The accountability gap left by the absence of judicial review will not be filled by legislative or public scrutiny. The origin story of the original Attorney General Guidelines included a significant role for Congress. n121 Having been prompted by the Church [*35] Committee's findings of misconduct and the resulting public outrage, the legislature was intimately involved in developing the contents of the Guidelines. n122 Congress held a series of hearings on the issue over the course of several years, and saw its suggestions ultimately reflected in the Levi Guidelines. n123 Given that the Guidelines were implemented, at least in part, to avoid more stringent legislative action, n124 this is not a surprise. Surely Attorney General Levi knew that if the rules he instituted did not appear to address Congress's concerns, they would fail to sap the momentum for enacting a statutory charter for the FBI.

The contemporary political economy of congressional oversight in this area means that legislative oversight will not provide any more effective a check than judicial action. Legislators' incentives weigh against aggressive involvement. The downside risks of unsuccessful counterterrorism policies (additional attacks) are high. n125 **If those policies are developed outside of the legislative process, Congress can share (if not entirely evade) blame.** Moreover, counterterrorism policy "is a subject matter that is especially prone to legislative delegation because it often entails hard trade-offs," which are the types of questions Congress is least likely to address. n126 In addition to undermining legislative involvement in counterterrorism policy formulation, existing institutional features also render [*36] congressional oversight of domestic intelligence-collection policy ineffectual. Congress, of course, retains oversight authority over the FBI. n127 If it wants to play a more active role in overseeing the Guidelines, it has the tools to do so. n128 After all, Congress determines whether and to what degree the FBI's intelligence-collection activities are funded. n129 Moreover, the relevant committees of jurisdiction conduct regular oversight hearings at which the Attorney General and FBI Director appear. n130 Legislators can ask Justice Department and FBI officials for information about the Guidelines or the FBI's activities at any time. n131

Perhaps as a result of the existing incentive structure, however, Congress has shown little appetite to pursue Guidelines-related issues of late. n132 The most recent modification to the Guidelines, for example, failed to reflect congressional input. The Justice Department provided the Senate Judiciary [*37] Committee a completed draft of the Mukasey Guidelines a few months before they were implemented. n133 A handful of senators requested that Attorney General Mukasey delay their implementation until Congress had the opportunity to develop suggestions regarding ways to minimize civil liberties concerns. n134 Their request went unanswered. And even when FBI Director Robert Mueller III inaccurately testified in 2010 before Congress that the FBI did not have the authority to conduct unpredicated investigations, legislators took no follow-up action. n135

AT: Doesn't Curtail Surveillance

Attorney General Guidelines have the capability to curtail surveillance --- only recently has there been a departure from those past restrictions

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

Over time, both the Bureau's focus and the rules governing its activities have swung back and forth along the spectrum between the targeted investigations of crime solving and the broader intelligence gathering associated with prevention. The Guidelines themselves are the product of the FBI's early-1970s move away from intelligence collection. After the United States Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities, commonly known as the Church Committee for its chair Senator Frank Church (D-ID), [*13] revealed that decades of unregulated intelligence collection by the FBI had resulted in widespread abuses of the government's investigative powers, n29 Congress determined that the FBI should be subject to a legislative charter setting out strict limits on its intelligence-collection authority. n30 In an effort to stave off potentially more restrictive legislative action, President Gerald Ford's Attorney General, Edward Levi, issued in 1976 the first set of Attorney General's Guidelines--known as the Levi Guidelines. n31

The Levi Guidelines strictly curtailed domestic intelligence investigations through a basic regulatory structure that subsequent versions of the Guidelines have largely retained. n32 [*14] This structure consists of multiple investigative levels. For each successive level, a higher threshold of suspicion is necessary to proceed; the investigative tools agents may use are more intrusive; and procedural safeguards, such as the need for supervisory approval and limits on the temporal length of investigations, are more robust. n33 The Guidelines continue to function as the primary constraint on the FBI's operations and remain a justification for the lack of a statutory charter governing the FBI's activities, but they have not remained static. n34 Multiple modifications made in the years between 1976 and 2001 eased, though ultimately retained, restrictions on intelligence collection. n35

With 9/11, however, came a wholesale rejection of the anti-intelligence-collection mindset of the Levi era, resulting in a dramatic shift in favor of an aggressive prevention paradigm. The FBI's prioritization of preventing terrorism was reflected not only in the allocation of its resources, its focus, and its conception of its core mission but also in some dramatic modifications to the Guidelines themselves. n36 The eventual result was a set of [*15] Guidelines--which were implemented by Attorney General Michael Mukasey in 2008 and remain in effect today--embodying an unprecedented license for domestic intelligence collection and delegating to the FBI responsibility for imposing limits on that power. n37

AT: No Enforcement

Justification requirements create incentives for agencies to follow the impact statement – the Inspector General will make up for the secret nature of the process

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis)

B. Oversight of Procedural Requirements

One possible objection to this Article's proposals is that, in eschewing judicial review and conceding the secret nature of the Guidelines regime, they relinquish all means of enforcing their requirements. As with the proposed procedural rules themselves, however, the principles behind the administrative state's compliance mechanisms offer a (partial) solution. n332

Notice-and-comment rulemaking employs the transparency of the rulemaking process followed by public and judicial review to enforce the regulatory regime to which agency decision making is subjected. n333 The public's role in that regime is to play watchdog. Because rulemaking and its results are conducted in a transparent fashion, interested stakeholders can be relied upon to object if they believe that an agency has not acted appropriately. n334 The public will scrutinize not only proposed rules to ensure that they do not suffer from procedural, logical, or evidentiary deficiencies, but also any information that is made public as part of the process. If, for example, an Environmental Impact Statement predicts dire environmental consequences from a proposed agency action, environmental activists will use that [*86] Statement to lobby not only the agency but also Congress and the President to prevent the agency from taking the proposed action. n335 Another important compliance-related element of public scrutiny is the fact that it can lead to legal challenges to agency rules. If a regulated entity believes that a regulation applied to it was adopted through flawed procedures, it can bring suit, thereby subjecting the regulation to judicial review. n336 Through this review, courts serve to confirm that agency decisions are not unjustified exercises of discretion and that they followed the mandated procedures. n337 Consequently, courts engage in a "searching and careful" review of the record an agency makes of its decision-making process n338 and will invalidate the results of proceedings that are "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." n339 These standards are not necessarily particularly stringent, but like public scrutiny, [*87] they do ensure that agency decisions have been reached through the proper procedures and therefore that they are reasoned rather than arbitrary or irrational.

Perhaps just as importantly, the roles that the public and the courts play impose an important "prior restraint" on agencies. Knowing that their rules and the justifications that they offer for them will be public and potentially subject to judicial scrutiny, **agencies will be more likely to be conscientious, hoping to ensure that their decision-making processes pass judicial muster**. n340 In other words, they will take any procedural requirements seriously from the outset knowing that, if they do not, any resulting rule could ultimately be invalidated.

Fashioning equally effective means of supervising Justice Department or FBI compliance with any relevant rules is a challenge, because the transparency that facilities both public scrutiny and judicial review is concededly difficult to replicate. Any proceedings regarding the Guidelines that take place outside of public view are shielded from the public-as-watchdog. If the relevant rules were legislatively mandated, challenges to any failure to abide by them theoretically could be reviewed by the courts. n341 But even in the unlikely event that Congress imposes procedural requirements akin to those suggested here, such suits will fall prey to the same barriers that

currently exist to challenging the FBI's intelligence-collection activities--any individual or entity seeking to challenge the Guidelines or the DIOG on the grounds that they did not follow the required procedures would struggle to establish standing and to overcome the state secrets privilege. n342

As with the reforms suggested to channel the Justice Department's discretion and to improve the participatory nature of the Guidelines' development process, ensuring compliance with procedural requirements would necessitate a means of approximating the traditionally public and judicial roles. One [*88] option in this regard would be to enlist proxies within the executive branch to engage in scrutiny of the decision-making process, to inquire whether the process complied with any required procedures, and to consider whether the required statement(s) of justification are adequate. A government watchdog could be assigned to take the place of the public and judicial watchdogs that normally play this role. n343 The Justice Department's Inspector General (IG)--who is statutorily empowered to conduct audits, investigations, inspections, and reviews of Justice Department programs and to issue reports to Congress regarding the results of any investigations that it does conduct--might play a constructive role in holding the Attorney General and FBI Director accountable for following any applicable procedural rules. The IG investigates not only alleged violations of the law by DOJ employees, but also audits and inspects DOJ programs regularly. n344 That office could perform reviews of the process employed each time the Guidelines or the DIOG are amended. Audits conducted by the IG would be especially effective in replicating the effects of traditional transparency if the results of those audits could be released publicly. Indeed, IGs have, at times, **played quite important roles in uncovering violations of law and policy in pursuit of security**. n345 **Perhaps more than any other oversight mechanism** (with the exception of unlawful leaks of classified information), **audit reports from the** Justice Department's **I**nspector **G**eneral **have shed light on the FBI's investigative activities** in the wake of 9/11. These reports, some of which revealed violations of law or [*89] policy, **drew both public and congressional attention, and consequently prompted changes to internal FBI policy**. n346

To be sure, even publicly released IG conclusions would lack some of the other compliance-enhancing characteristics of public and judicial scrutiny. The IG does not have the power to invalidate rules that are adopted through flawed procedures or lack sufficient justification. It can point out flaws and insufficiencies, but ultimately any findings or recommendations would be nonbinding. This absence of compulsory power sacrifices some of the sword-of-Damocles threat inherent in the promise of judicial review. If, however, the findings and recommendations can be made public, the threat of reputational costs to the FBI still imposes some ex ante incentive to comply with required procedures. And IGs have been particularly successful in generating public reports for reviews of even the most sensitive programs. n347

Civil Liberties Impact Statement will force information assessments that facilitate oversight efforts from the public, the legislature, or internal watchdogs and check government abuses

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

Generating Information. More promising models of reconciling conflicting priorities are **focused on agency culture, rather than agency structure**. One mechanism for placing pressure on

agency culture and prompting decision makers to consider factors that they otherwise might not give much weight is a requirement that an agency generate certain types of [*71] information. According to Professor Eric Biber, for example, "[a] major goal of NEPA was to force agencies that formerly had focused too heavily on primary missions such as highway construction, water-project development, or the extraction of natural resources, to also consider the impacts of their actions on the environment." n272 To accomplish this goal, NEPA requires all federal agencies proposing actions that will "significantly [affect] the quality of the human environment" to prepare an Environmental Impact Statement and make copies available to the public for written comments. n273 These statements augment the information available to agencies, including the possible impacts on the environment, and proposals about how to avoid adverse environmental effects. n274 And commentators agree that NEPA has been successful in integrating environmental goals into agency decision making. n275 Similarly, all agencies--including the FBI--must generate a Privacy Impact Assessment (PIA) for "any substantially revised or new Information Technology System" n276 that collects, maintains, or disseminates personally identifiable information from or about members of the public. n277 And the Department of Homeland Security's Office of Civil Rights and Civil Liberties generates Civil Rights and Civil Liberties Impact Assessments when required to do so by statute, when [*72] they are requested by Department officials, or when the Officer for Civil Rights and Civil Liberties believes it appropriate. n278

Generating these assessments not only **facilitates oversight efforts from the public, the legislature, or internal watchdogs**, but--like requiring written justifications for changes--it has other benefits as well. As an initial matter, **it forces agency decision makers to consciously consider the impact their proposed policy will have**. n279 As one set of commentators put it, "a systematic review of potential impacts **during the planning process** can focus the attention of decision makers on issues that they would otherwise deem to be outside their agency's mandate." n280 Requiring that effort will, at times, lead to agency choices more solicitous of the issue on which the assessment is focused. Decision-makers might simply need to be made aware of the impact of their choices. In addition, they will recognize that the substance of the assessment will be subject to scrutiny and, perhaps, criticism that they would rather avoid. And by ensuring that this information is before the decision makers while they are engaged in the decision-making process--rather than after the fact--makes the exercise all the more likely to have an impact. n281 In addition, DHS's Privacy Office Official Guidance on Privacy Impact Assessments notes that the use of PIAs "demonstrates to the public and to Congress" that the new systems "have consciously incorporated privacy protections," **contributing to the legitimacy of the systems**. n282

In order to ensure that the Attorney General or FBI Director consider explicitly specific "secondary" goals, he or she should be required to prepare a "Civil Liberties Impact Statement," [*73] articulating the likely effects of any proposed changes to the Guidelines. Requiring the Attorney General to consider, and to explain, whether the cost to civil liberties of any particular rule or tactic outweighs its investigative benefits is **sure to raise the profile of civil liberties protection in the decision-making process**. And while these Statements will not include the detailed scientific analysis that forms part of Environmental Impact Statements, they will identify the potential civil liberties impacts of proposed rules and **force government officials both to note those impacts, and to think about what steps can be taken to mitigate them**.

Strong PCLOB role will force the FBI to internalize the protection of civil liberties

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

Inter-Agency Lobbying. A final mechanism the administrative state has used successfully to force agencies to consider specific, under-emphasized perspectives is for the political branches to **enlist other agencies to police the primary decision-making agency**. This idea, too, has potential in the Guidelines context. In some ways, this approach is simply a form of expanding the scope of participation, including a "lobbying" agency in the decision-making process to represent a particular interest that the decision-making agency is required to consider. n283 In other words, for the lobbying agency, its primary mission is to promote an interest that may be a "secondary" goal to the decision-making agency. This approach can differ from merely expanding participation in the process in that it envisions a more active role for the lobbying agency than merely providing a particular view to the decision maker. Again, a recommendation already mentioned provides an example. Recall Professors DeShazo and Freeman's study about the licensing practices of the Federal Energy Regulatory Commission and the impact of Congress's requirement that the Commission consult with fish and wildlife agencies prior to issuing licenses. n284 They concluded that this requirement had a real impact on the Commission's treatment of the fish and wildlife agencies' concerns. n285

[*74] Conferring a role in the decision-making process on an agency whose priority is the protection of fundamental rights might **mitigate concerns that the FBI's primary mission will unnecessarily endanger civil liberties**. The Attorney General might, for example, be required to include officials from such an agency in the process of devising the FBI's investigative rules--to give them a seat at the table. Just as including the Fish and Wildlife Service in agency decision making ensures that decisions take animal habitats into account, including an agency like the PCLOB could play a similar role with civil liberties concerns in the intelligence-collection context. n286 Members and staff of the board--many of whom, unlike staff at the Office of the Director for National Intelligence (ODNI) or FBI charged with protecting civil liberties offices, are drawn from the privacy and civil liberties advocacy community n287--could raise civil liberties concerns that particular rules present, offer alternative means of achieving the FBI's desired ends, suggest procedural protections that should accompany particular rules, or argue that certain rules should not be approved at all. Most importantly, ensuring an entity such as the PCLOB a seat at the table means that there is a voice actively involved in the process whose primary concern is not necessarily the prevention of terrorist acts.

While this type of interagency influence exertion can happen informally, n288 the regulatory or legislative creation of more hierarchical forms of agency interaction to vindicate "secondary" goals is likely more effective. Such a hierarchical structure causes decision makers to regulate in the "shadow" of that lobbying agency, **prompting the decision-making agency "to internalize the** [*75] **secondary mandates."** n289 Consider the role of the OIRA, through which the Executive Office of the President monitors regulation. n290 A presidential order places OIRA in a hierarchical position over federal agencies to evaluate whether the benefits of agencies' proposed rules exceed their costs. n291 And OIRA has the power not just to make suggestions for modifications but actually to block implementation of an agency regulation on this basis. n292 This "veto" power requires those agencies to take into account what they might consider a secondary goal--efficiency--when contemplating regulatory action. n293

As with the requirement that the Attorney General or FBI Director consider input from particular entities, the impact and effectiveness of this model would be highly contingent on the degree to which Justice Department officials were obligated to take the PCLOB's opinions into account. n294 **An agency statutorily empowered to overrule DOJ proposals would have enormous practical effect.** But such drastic (and implausible) measures are not required. Again, there are a range of possible roles for the PCLOB. For example, it could simply be given a seat at the table during the formulation of the Guidelines, allowing its representative to raise civil liberties concerns. n295 Or a stronger [*76] thumb on the scale of civil liberties might be to require a report to Congress about any instances in which the PCLOB and the Attorney General or FBI Director are unable to reach agreement on a particular issue. n296

In sum, the procedural framework for the Guidelines should explicitly require that the Attorney General or FBI Director take into account the civil liberties costs when weighing policy options by preparing a "Civil Liberties Impact Statement" detailing the likely impact of the proposed changes on fundamental rights, and should empower the PCLOB to play an active role in formulating the Guidelines. These suggested procedures will not eliminate all concerns about civil liberties raised by the Guidelines and the DIOG. But in a context where preferred methods of rights protection break down, they offer a second-best option. n297

AT: CP Process is Burdensome / Costly

Potential costs or personnel tradeoffs are productive --- they will serve as a barrier to arbitrary or unnecessary changes

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

A final preliminary note: implementing these reforms would not be costless. As an initial matter, any increase in the onerousness of modifying the Guidelines creates pressure to shift [*49] policy-making decisions to a level where these rules do not apply, making accountability even more elusive. For this reason, any efforts at reform would have to apply to changes to the DIOG as well as the Guidelines, and consider ways to prevent further devolution of decision-making responsibility. These suggested changes would also, of course, consume time and personnel not currently devoted to the Guidelines. But these costs need not be prohibitive. As an initial matter, **the costs themselves would impose a potentially valuable barrier to arbitrary or unnecessary changes**. Only when changes are in fact necessary will the Attorney General or FBI Director undertake the amendment process. Moreover, the Guidelines and DIOG are modified so infrequently that the need to allocate additional resources to the project would be rare. If implemented effectively, these rare additional costs would be justified by their benefits.

AT: SQ Laws Prevent the CP

Very few statutory or constitutional constraints --- Justice Department and FBI set their own internal rules

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

In this Part, Section A demonstrates the scope of some of the FBI's contemporary intelligence-collection powers and their potential to create tension with privacy; rights of association, expression, and religious exercise; and equal protection principles. n38 Section B then argues that the absence of nondoctrinal checks--whether practical, judicial, political, or [*16] structural--on domestic intelligence collection means that **the only constraints on the FBI's intelligence-collection powers are the internal rules that the Justice Department and the FBI have imposed on themselves**.

A. The Scope of the FBI's Intelligence-Collection Powers

Statutory and constitutional doctrine provides very few limits on government access to a vast amount of information about innocent Americans. n39 Any information that we have disclosed to a third-party individual or business entity, for example, lacks Fourth Amendment protection against unreasonable searches and seizures. n40 Thus the Constitution places no limits on the collection of information contained in credit card transactions, bank records, Internet service provider (ISP) records, Amazon.com transaction histories, Facebook activities, electronic toll records, cell-tower location data (in some jurisdictions n41), and even statements made to undercover agents or government informants--regardless of whether the agent or informant discloses his intention to share the contents of the conversation. n42 The First Amendment similarly lacks purchase [*17] here. Intelligence-collection powers that impact religious practice would likely run afoul of the Free Exercise Clause as a facial matter only if they were being implemented with the purpose of suppressing religious exercise. n43 And if the Guidelines chill expression or curtail association, the activities they permit would be immune to facial constitutional challenge so long as they were narrowly tailored to further the compelling interesting in preventing terrorism, an interest that has been afforded great weight by the courts. n44 Statutes provide only slightly more protection. n45

The permissiveness of the doctrine means that the FBI's intelligence-collection powers face very few external legal constraints. In this doctrinal vacuum, the Attorney General was able to make several post-9/11 amendments to the Guidelines that facilitate an aggressive intelligence-collection role for the FBI. The first relevant amendment is the Guidelines' expression of the FBI's newly adopted preventive mission. Specific language explicitly affirms the FBI's role in the intelligence community and specifies authority to collect, retain, and analyze information for intelligence purposes. The Guidelines declare that "[t]he FBI is an intelligence agency as well as a law enforcement agency . . . [whose] functions accordingly extend beyond limited [*18] investigations of discrete matters" n46 and urge the Bureau to use its analytic authority to "identify and understand trends, causes, and potential indicia of criminal activity and other threats to the United States that would not be apparent from the investigation of discrete matters alone." n47 To facilitate this analytical project, the Guidelines provide that all information collected "at all stages of investigative activity is . . . to be retained and disseminated for [intelligence purposes to facilitate the solution and prevention of crime, protect the national security, and further foreign intelligence objectives] regardless of whether it furthers investigative objectives in a narrower or

more immediate sense." n48 Even information that wholly exonerates a group or individual from suspicion remains in government databases for storage, analysis (sometimes by algorithmic data-mining), and dissemination for inclusion in other government agencies' databases. n49

AT: Permutation – Do the CP

****note when prepping file --- a longer version of this ev is the "2nc Must Read" block*

Permutations severs --- doesn't mandate curtailment of government surveillance. It just institutes a process that might in the future result in reduced FBI powers.

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP) *****Note – APA = Administrative Procedure Act**

[*46] Given the appropriate political environment, there are at least three reasons to think that the imposition of a framework like the one suggested here is not entirely implausible. As an initial matter, there is the FBI's concern over legitimacy. The Bureau's ability to succeed in its mission requires constructive relationships with the communities in which it operates. n168 Yet its aggressive intelligence-collection tactics--and their concentration in Muslim communities--has alienated many members of that community, raised suspicion and distrust of the Bureau in some quarters, and undermined cooperative relationships. n169 Improved governance is thus not the only benefit that would flow from implementing APA-like procedures; institutionalizing rulemaking procedures would also yield improvements in community relations, public perceptions of legitimacy, and consequently, FBI effectiveness. In addition, government documents and scholarly commentary are replete with arguments about the value of process in legitimating government action. n170 The FBI's practice of reaching out to nongovernmental organizations in anticipation of issuing new intelligence-collection rules indicates an awareness of the benefits of generating the support of outside stakeholders. n171 Subjecting itself to a set of procedural rules would go far in this regard. And finally, none of the proposals here are substantive. **They do not call upon the FBI to cede any particular powers, or to discontinue existing policy.** Indeed, **they acknowledge the Attorney General's and FBI's role in generating the rules by which the FBI operates**, so long as they can show [*47] both that changes in the FBI's authority are needed and that the proposed changes are reasonable ones. And finally, when it comes to imposing limits on government actors, broad procedural frameworks often face less opposition than substantive policy changes. n172

A second preliminary note concerns the role of the APA. While several of the proposed reforms are inspired by provisions of the APA, **this Article does not argue that the APA's procedural rules apply to the FBI as a matter of binding law**. n173 In fact, it does not take a position with respect to whether the Guidelines or the DIOG constitute legislative rules subject to APA requirements, or whether they represent informal guidance documents or "rules of agency organization, procedure, or practice," which are explicitly exempt from many of the APA's constraints. n174 Instead, the Article looks to the way the APA and other sources of administrative law address particular concerns and argues that intelligence-collection governance

would benefit from implementing procedures inspired the animating principles behind these sources of administrative law.

Reject severance --- prevents testing the opportunity costs of the plan with counterplans and disadvantages.

They are disingenuous --- the 1ac is littered with references why external controls are necessary for the FBI. The CP takes a very different approach that promotes internal, agency based limitations.

Relevant scholarly literature also proves the counterplan is a competing policy option --- you should defer to lit because that is the source of topic education and legal experts have a much greater understanding of policy precision.

Berman, 14 --- Visiting Assistant Professor of Law, Brooklyn Law School (Winter 2014, Emily, Washington & Lee Law Review, "Regulating Domestic Intelligence Collection," 71 Wash & Lee L. Rev. 3, Lexis, JMP)

2. Relieving the Tension Among Multiple Missions

Fortunately, **several administrative law strategies suggest ways to ensure that the Guidelines regime sufficiently takes into account civil liberties concerns as well as security concerns**. n258 Though all of the options discussed below are possible paths to follow, the final two approaches discussed below seem particularly promising.

Congress Reclaims Authority. One option, of course, is for Congress simply to relieve an agency of responsibility for one of [*68] the competing goals, reclaiming that decision-making authority for itself. n259 Following revelations of civil liberties violations in the 1970s, Congress reclaimed some decision-making authority regarding the executive's surveillance powers by enacting the Foreign Intelligence Surveillance Act (FISA). n260 Or Congress could generate more piecemeal limitations, barring particular techniques that pose threats to civil liberties, or defining the circumstances under which such techniques could be used. Congress could, for example, statutorily reinstate the rule regarding the use of undercover agents to investigate First Amendment protected activities as it existed in the Guidelines in 2001, which required that the FBI have probable cause or a reason to believe a crime had been committed before sending an agent into the meetings of a religious or political group. n261

Congress need not legislate to bring such changes about. If Congress wanted to alter particular investigative tactics, or even to pressure the Justice Department to adopt of its own volition the type of procedural framework suggested in this Article, it has an array of tools at its disposal to press for its desired policy change. Just the threat of legislation, so long as it is credible, can spur executive action. Recall that the original Attorney General's Guidelines were implemented to sap the momentum from Congress's efforts to enact a legislative charter for the FBI. n262 So long as the option of enacting an FBI charter remains a viable means for Congress to limit the Attorney General's discretion when it comes to FBI investigations, the threat of such legislation can be used to press for Congress's desired policy outcomes. Congress possesses carrots as well as

sticks--its control over the FBI and Justice Department's budget also can impose a great [*69] deal of pressure for policy change. Given the political economy of this policy area, n263 however, reliance on Congress to reconcile the tension between the FBI's security mission and civil liberties is not the most promising route.

Separate Agency Functions. Another way that the administrative state deals with competing mandates is to separate agency functions, assigning one mandate to another (new or pre-existing) agency and leaving each free to focus solely on its own particular mandate. The APA's requirement that investigative and adjudicative functions be separated from one another, thereby insulating some decision making from possibly biased influences, n264 is a way to implement this division-of-functions idea within a single agency. Professor Rachel Barkow has advocated, for example, for the separation of adjudicative and enforcement functions within prosecutors' offices. n265 And in the domestic investigative context, the United Kingdom offers an illustration. Rather than relying on one agency both to enforce criminal laws and to collect intelligence, those functions are divided between two different agencies. n266 The police forces investigate crimes and enforce criminal law, and MI5 collects intelligence. n267 Some commentators have argued that the United States should consider more closely the idea of spinning off the FBI's intelligence-collection function into an independent agency. n268 This alone would not, of course, address many of the concerns that the FBI's current powers raise. But it is possible that, recognizing the special threats to civil liberties that [*70] intelligence collection poses, an agency designed solely for that purpose would be subjected to more stringent limits. Indeed, to prevent overreaching, MI5's expansive intelligence-collection powers do not include arrest or detention authority. n269 Thus powers that are necessary for successful anti-crime efforts could nonetheless be off-limits or curtailed for the intelligence agency.

This division-of-functions solution, whether within or between agencies, is also unlikely to garner much support in the Guidelines context. As an initial matter, congressional passivity with respect to intelligence oversight will undermine any legislative efforts in this direction. But more importantly, many of the reforms to the intelligence community's structure in the past decade-plus have been explicitly designed to consolidate, rather than separate, functions. Perceived information-sharing failures prior to 9/11 led to a chorus of calls for breaking down barriers both within and between agencies, n270 and both Congress and the executive branch have responded. The USA PATRIOT Act's removal of the so-called "wall," which barred coordination between law enforcement and intelligence officials, is perhaps the most well-known, though by no means the only, post-9/11 change along these lines. n271 Regardless of the salutary impact that separation of functions might have on civil liberties, the perceived security value of consolidation means that neither Congress nor the executive seems likely to reverse this trend.

Generating Information. **More promising models of reconciling conflicting priorities are focused on agency culture, rather than agency structure.** One mechanism for placing pressure on agency culture and prompting decision makers to consider factors that they otherwise might not give much weight is a requirement that an agency generate certain types of [*71] information. According to Professor Eric Biber, for example, "[a] major goal of NEPA was to force agencies that formerly had focused too heavily on primary missions such as highway construction, water-project development, or the extraction of natural resources, to also consider the impacts of their actions on the environment." n272 To accomplish this goal, NEPA requires all federal agencies proposing actions that will "significantly [affect] the quality of the human environment" to prepare an Environmental Impact Statement and make copies available to the

public for written comments. n273 These statements augment the information available to agencies, including the possible impacts on the environment, and proposals about how to avoid adverse environmental effects. n274 And commentators agree that NEPA has been successful in integrating environmental goals into agency decision making. n275 Similarly, all agencies--including the FBI--must generate a Privacy Impact Assessment (PIA) for "any substantially revised or new Information Technology System" n276 that collects, maintains, or disseminates personally identifiable information from or about members of the public. n277 And the Department of Homeland Security's Office of Civil Rights and Civil Liberties generates Civil Rights and Civil Liberties Impact Assessments when required to do so by statute, when [*72] they are requested by Department officials, or when the Officer for Civil Rights and Civil Liberties believes it appropriate. n278

Generating these assessments not only facilitates oversight efforts from the public, the legislature, or internal watchdogs, but--like requiring written justifications for changes--it has other benefits as well. As an initial matter, it forces agency decision makers to consciously consider the impact their proposed policy will have. n279 As one set of commentators put it, "a systematic review of potential impacts during the planning process can focus the attention of decision makers on issues that they would otherwise deem to be outside their agency's mandate." n280 Requiring that effort will, at times, lead to agency choices more solicitous of the issue on which the assessment is focused. Decision-makers might simply need to be made aware of the impact of their choices. In addition, they will recognize that the substance of the assessment will be subject to scrutiny and, perhaps, criticism that they would rather avoid. And by ensuring that this information is before the decision makers while they are engaged in the decision-making process--rather than after the fact--makes the exercise all the more likely to have an impact. n281 In addition, DHS's Privacy Office Official Guidance on Privacy Impact Assessments notes that the use of PIAs "demonstrates to the public and to Congress" that the new systems "have consciously incorporated privacy protections," contributing to the legitimacy of the systems. n282

In order to ensure that the Attorney General or FBI Director consider explicitly specific "secondary" goals, he or she should be required to prepare a "Civil Liberties Impact Statement," [*73] articulating the likely effects of any proposed changes to the Guidelines. Requiring the Attorney General to consider, and to explain, whether the cost to civil liberties of any particular rule or tactic outweighs its investigative benefits is sure to raise the profile of civil liberties protection in the decision-making process. And while these Statements will not include the detailed scientific analysis that forms part of Environmental Impact Statements, they will identify the potential civil liberties impacts of proposed rules and force government officials both to note those impacts, and to think about what steps can be taken to mitigate them.

Inter-Agency Lobbying. A final mechanism the administrative state has used successfully to force agencies to consider specific, under-emphasized perspectives is for the political branches to enlist other agencies to police the primary decision-making agency. This idea, too, has potential in the Guidelines context. In some ways, this approach is simply a form of expanding the scope of participation, including a "lobbying" agency in the decision-making process to represent a particular interest that the decision-making agency is required to consider. n283 In other words, for the lobbying agency, its primary mission is to promote an interest that may be a "secondary" goal to the decision-making agency. This approach can differ from merely expanding participation in the process in that it envisions a more active role for the lobbying agency than merely providing a particular view to the decision maker. Again, a recommendation already

mentioned provides an example. Recall Professors DeShazo and Freeman's study about the licensing practices of the Federal Energy Regulatory Commission and the impact of Congress's requirement that the Commission consult with fish and wildlife agencies prior to issuing licenses. n284 They concluded that this requirement had a real impact on the Commission's treatment of the fish and wildlife agencies' concerns. n285

[*74] Conferring a role in the decision-making process on an agency whose priority is the protection of fundamental rights might mitigate concerns that the FBI's primary mission will unnecessarily endanger civil liberties. The Attorney General might, for example, be required to include officials from such an agency in the process of devising the FBI's investigative rules--to give them a seat at the table. Just as including the Fish and Wildlife Service in agency decision making ensures that decisions take animal habitats into account, including an agency like the PCLOB could play a similar role with civil liberties concerns in the intelligence-collection context. n286 Members and staff of the board--many of whom, unlike staff at the Office of the Director for National Intelligence (ODNI) or FBI charged with protecting civil liberties offices, are drawn from the privacy and civil liberties advocacy community n287--could raise civil liberties concerns that particular rules present, offer alternative means of achieving the FBI's desired ends, suggest procedural protections that should accompany particular rules, or argue that certain rules should not be approved at all. Most importantly, ensuring an entity such as the PCLOB a seat at the table means that there is a voice actively involved in the process whose primary concern is not necessarily the prevention of terrorist acts.

While this type of interagency influence exertion can happen informally, n288 the regulatory or legislative **creation of more hierarchical forms of agency interaction** to vindicate "secondary" goals is likely more effective. Such a hierarchical structure causes decision makers to regulate in the "shadow" of that lobbying agency, prompting the decision-making agency "to internalize the [*75] secondary mandates." n289 Consider the role of the OIRA, through which the Executive Office of the President monitors regulation. n290 A presidential order places OIRA in a hierarchical position over federal agencies to evaluate whether the benefits of agencies' proposed rules exceed their costs. n291 And OIRA has the power not just to make suggestions for modifications but **actually to block implementation of an agency regulation on this basis**. n292 **This "veto" power** requires those agencies to take into account what they might consider a secondary goal--efficiency--when contemplating regulatory action. n293

As with the requirement that the Attorney General or FBI Director consider input from particular entities, the impact and effectiveness of this model would be highly contingent on the degree to which Justice Department officials were obligated to take the PCLOB's opinions into account. n294 **An agency statutorily empowered to overrule DOJ proposals would have enormous practical effect.** But such drastic (and implausible) measures are not required. Again, there are a range of possible roles for the PCLOB. For example, it could simply be given a seat at the table during the formulation of the Guidelines, allowing its representative to raise civil liberties concerns. n295 Or a stronger [*76] thumb on the scale of civil liberties might be to require a report to Congress about any instances in which the PCLOB and the Attorney General or FBI Director are unable to reach agreement on a particular issue. n296

In sum, the procedural framework for the Guidelines should explicitly require that the Attorney General or FBI Director take into account the civil liberties costs when weighing policy options by preparing a "Civil Liberties Impact Statement" detailing the likely impact of the proposed changes on fundamental rights, and should empower the PCLOB to play an active role in

formulating the Guidelines. These suggested procedures will not eliminate all concerns about civil liberties raised by the Guidelines and the DIOG. But in a context where preferred methods of rights protection break down, they offer a second-best option. n297

And, the counterplan gives the PCLOB a veto over the process, means no certain outcome is guaranteed.

"Should" means "must" and requires immediate legal effect

Summers 94 (Justice – Oklahoma Supreme Court, "Kelsey v. Dollarsaver Food Warehouse of Durant", 1994 OK 123, 11-8, http://www.oscn.net/applications/oscn/DeliverDocument.asp?CiteID=20287#marker3fn13)

¶4 **The legal question to be resolved by the court is whether the word "should"**13 in the May 18 order connotes futurity or **may be deemed a ruling *in praesenti***.14 The answer to this query is not to be divined from rules of grammar;15 it must be governed by the age-old practice culture of legal professionals and its immemorial language usage. To determine if the omission (from the critical May 18 entry) of the turgid phrase, "and the same hereby is", (1) makes it an in futuro ruling - i.e., an expression of what the judge will or would do at a later stage - or (2) constitutes an in in praesenti resolution of a disputed law issue, the trial judge's intent must be garnered from the four corners of the entire record.16

[CONTINUES – TO FOOTNOTE]

13 "*Should*" not only is used as a "present indicative" synonymous with *ought* but also is the past tense of "shall" with various shades of meaning not always easy to analyze. See 57 C.J. Shall § 9, Judgments § 121 (1932). O. JESPERSEN, GROWTH AND STRUCTURE OF THE ENGLISH LANGUAGE (1984); St. Louis & S.F.R. Co. v. Brown, 45 Okl. 143, 144 P. 1075, 1080-81 (1914). For a more detailed explanation, see the Partridge quotation infra note 15. **Certain contexts mandate a construction of the term "should" as more than merely indicating** preference or **desirability**. Brown, supra at 1080-81 (jury instructions stating that jurors "should" reduce the amount of damages in proportion to the amount of contributory negligence of the plaintiff was held to imply an *obligation and to be more than advisory*); Carrigan v. California Horse Racing Board, 60 Wash. App. 79, 802 P.2d 813 (1990) (one of the Rules of Appellate Procedure requiring that a party "should devote a section of the brief to the request for the fee or expenses" was interpreted to mean that a party is under an *obligation* to include the requested segment); State v. Rack, 318 S.W.2d 211, 215 (Mo. 1958) **("should" would mean the same as** "shall" or **"must"** when used in an instruction to the jury which tells the triers they "should disregard false testimony"). 14 ***In praesenti* means literally "at the present time."** BLACK'S LAW DICTIONARY 792 (6th Ed. 1990). In legal parlance **the phrase denotes** that which in **law is** *presently* or ***immediately effective*, as opposed to something that *will*** or *would* **become effective *in the future*** *[in futurol*]. See Van Wyck v. Knevals, 106 U.S. 360, 365, 1 S.Ct. 336, 337, 27 L.Ed. 201 (1882).

Current Scholarship exaggerates the claims of civil liberties abuses.

Deflem & McDonough, 15 --- *Professor of Sociology at the University of South Carolina, AND ** Instructor, Social Sciences at Allen University (February 2015, Mathieu & Shannon, Society, "The Fear of Counterterrorism: Surveillance and Civil Liberties Since 9/11," Volume 52, Issue 1, SpringerLink database, WM)

The terrorist attacks of September 11, 2001 have dramatically heightened concerns over national security and brought about, in the United States perhaps more than anywhere else, a sharp rise in anti-terrorism laws and related initiatives to build and improve counterterrorism efforts. In addition to a sharp increase in the budget and resources assigned to counterterrorism investigations and intelligence-gathering agencies, US Congress formally approved the expansion of power of the executive branch, including the authorization of new surveillance techniques and procedures for law enforcement agencies in terrorist-related investigations (Deflem 2010). The most prominent and commonly scrutinized source of the formal expansion of investigative powers in the United States since 9/11 is the 2001 USA PATRIOT Act ("Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism"), which was swiftly passed with little congressional debate in October of 2001. Civil liberties organizations as well as a number of academic scholars have routinely criticized post-9/11 counterterrorism initiatives as unconstitutional and major threats to civil liberties and privacy. Harmonizing with the claims from civil liberties groups are contributions in the popular and scholarly discourse on surveillance and counterterrorism that lament the purported negative impact of governmental policies and related surveillance and intelligence activities on personal rights and liberties. The revelations by former security contractor Edward Snowden in June 2013 concerning alleged spying practices by the National Security Agency (NSA) greatly reinvigorated these debates. We investigate here if there is any counter-evidence to the alarmist statements that are often made in the popular and scholarly discourse on civil liberties and surveillance. Against the background of academic scholarship on surveillance and criticisms from civil liberty and privacy groups, we rely on archival sources, government documents, and media reports to examine a variety of claims made concerning civil liberties violations by security agencies. **Our analysis reveals that at least a sizeable number of claims raised against counterterrorism practices are without objective foundation in terms of any actual violations**. As an explanation for this markeddiscrepancy, we suggest that, as various survey data show, there is a relatively distinct, albeit it uneven and not entirely stable, culture of privacy and civil liberties in contemporary American society which independently contributes to **a fear of counterterrorism, rather than of terrorism**. These specific cultural sensitivities bring about an increase in the amount of civil rights allegations independent of actual violations thereof. Surveillance Studies Meets Civil Liberties Advocacy In recent years, especially since the events of 9/11, a new social-science field of surveillance studies has been developing (Ball et al. 2012; Contemporary Sociology 2007; Lyon 2007). Briefly reviewing this new burgeoning area, it can be observed that most contributions exhibit a critical and, implicitly or explicitly, fearful view of surveillance as a powerful and deeply invasive social force. Such worrying observations are particularly made in the context of the development of technologically advanced means of information gathering that can threaten privacy and civil liberties. Surveillance expert David Lyon (2003, 2007), for example, laments the inherent consequences of the new surveillance methods as a powerful tool for profiling that would produce and reinforce long-term social inequalities. Surveillance scholars have suggested such novel concepts as a 'surveillant assemblage' to denote the convergence of once separate and discrete surveillance

systems in order to mark nothing short of a gradual destruction of privacy (Haggerty and Ericson 2000). Surveillance technologies are argued to turn into instruments of totalitarian control that create or exacerbate inequality and lack accountability (Haggerty and Ericson 2006). Some differences in perspective on the impact of surveillance are to be noted among social-science scholars (Deflem 2008; Dunér 2005), but the research community has nonetheless not sufficiently acknowledged whatever gains and positive contributions have been made in providing security.

No FBI racial profiling --- it doesn't target individuals based on race or ethnicity and investigates only to protect the communities it serves

Arab American News, 11

(10/29/11, Arab American News, "ACLU says documents obtained from FBI show unconstitutional racial profiling", ProQuest)//Yak

In response to the ACLU release, Detroit Special Agent in Charge of the FBI Andy Arena said that accusations of profiling were not accurate.

"I would not describe it as racial profiling, it is geo-spacial mapping and domain awareness, it's about knowing the area that you serve," he said.

"All it basically is looking at the makeup of communities across the board, not any specific person, and learning about who are potential victims and targets but not targeting any specific individual or group."

His office also said that it is mainly responding to profiling allegations with a statement on the FBI's website. The statement said: "FBI joins the ACLU in opposing racial or ethnic discrimination. The AG Guidelines and the FBI's Domestic Investigations and Operations Guide **(DIOG) clearly prohibit the predication of investigative activity solely on the exercise of First Amendment rights, including freedom of religion, or on race or ethnicity**. The FBI does not investigate individuals, groups, or communities based on ethnicity or race.

"Certain terrorist and criminal groups target particular ethnic and geographic communities for victimization and/or recruitment purposes. This reality must be taken into account when determining if there are threats to the United States.

"These efforts are intended to address specific threats, not particular communities."

The FBI has an outstanding civil rights record

Deflem & McDonough, 15 --- *Professor of Sociology at the University of South Carolina, AND ** Instructor, Social Sciences at Allen University (February 2015, Mathieu & Shannon, Society, "The Fear of Counterterrorism: Surveillance and Civil Liberties Since 9/11," Volume 52, Issue 1, SpringerLink database, WM)

Civil-Liberties Allegations Against the FBI On the basis of news reports retrieved via Lexis-Nexis, we investigated civil liberties violations against the FBI in the period between January 1, 2002 and December 31, 2013. Though not based on a complete universe of cases or a random sample thereof, evidence gathered from these sources suggests that the number of civil rights violations by the FBI has been reported to be **much lower** than one would expect considering the potential problems voiced in the discourse on post-9/11 surveillance. During the examined period, some 20 cases

involving allegations against the FBI received media attention. Some of the cases involves multiple individuals or groups claiming civil liberties violations. Only five cases involved a substantiated violation, two of which concerned certain provisions of the Patriot Act before they were excluded as unconstitutional upon reauthorization of the Act. Other claims are either still under investigation or were proved to be unsubstantiated. Among the unsubstantiated claims are the cases of Mohamad K. Elzahabi and the FBI surveillance of protesters before the 2004 political conventions. In 2004, the FBI questioned Mohamad K. Elzahabi, a Lebanese national put on an FBI watch list after 9/11. Elzahabi claimed that the FBI violated his rights when they questioned him for 17 days before his arrest in 2004 (Louwagie 2006). Elzahabi made statements during questioning that he taught sniping in Afghanistan and associated with Al Qaeda leaders, which his lawyers attempted to suppress, claiming coercion and involuntary detention. However, in June 2007, a judge denied the request, concluding that FBI agents explicitly told Elzahabi participation in the questioning was voluntary (Browning 2007).

--- XT: Impact Exaggerated

Actual civil rights violations are small compared to ALLEGED threat to liberties

Deflem & McDonough, 15 --- *Professor of Sociology at the University of South Carolina, AND ** Instructor, Social Sciences at Allen University (February 2015, Mathieu & Shannon, Society, "The Fear of Counterterrorism: Surveillance and Civil Liberties Since 9/11," Volume 52, Issue 1, SpringerLink database, WM)

Surveillance and counterterrorism activities are by definition oftentimes secretive and raise sensitive matters on rights and justice. Such issues are particularly important in a democratic society where violations of civil liberties by intelligence and other security agencies, even in an area as pressing as terrorism, cannot be condoned. Yet, a democratically committed society will also be more likely to produce a cultural climate in which concerns surrounding privacy and civil liberties can lead to claims over rights-related violations that cannot be substantiated on the basis of actual incidents of such violations. Our findings suggest that the amount of civil rights violations in the post-9/11 context is relatively **small** when compared to the **alleged** threat to civil liberties suggested in the surveillance discourse among academicians and advocates. In view of our analysis, it is important for social-science scholars to understand the social realities involved with surveillance and counterterrorism as involving a subjective dimension related to legitimacy—especially the lack thereof— that co-exists with objective conditions that are rooted in technology and bureaucratic development. For whereas government and private measures against terrorism and other security concerns have certain measurable consequences, it is also to be noted that they are evaluated by a citizenry that is more or less concerned about such issues irrespective of actual violations. The need is thereby affirmed for sociologists to examine the social conditions affecting security measures regardless of stated motives. Since the classic contributions of Emile Durkheim on the role of law and punishment (Durkheim 1893), it can no longer suffice to view counterterrorism (and other forms of social control) as a mere dependent variable related to terrorism (and other crimes). Instead, as our analysis shows, a more useful framework examines the entire range of factors shaping surveillance activities, ranging from situational factors to deep-rooted cultural traditions. From the viewpoint of civil liberties, our study should not be misinterpreted to assume that we would suggest that the contemporary practices of surveillance and counterterrorism in post-9/11 America (and in other nations across the world) would not have the potential and actuality to violate civil rights. Our analysis does not imply that the threats that surveillance programs and practices may pose to civil liberties should be dismissed, a priori or otherwise. Instead, we suggest that a cultural fear of surveillance and counterterrorism may be so pervasive and deep-rooted that it leads to **overstating the amount of civil liberties violations**. The culturally embedded assumption that surveillance is powerful and harmful to rights and liberties, which is also sustained by claims-making by surveillance scholars and activists alike, may drive civil liberties allegations independent from actual violations thereof. In the interest of both social-science analysis as well as civil liberties protection, surveillance scholars

and civil liberties advocates would do well to not overestimate and speculate, without evidence, on the powers of surveillance and counterterrorism outside of the social context in which relevant practices as well as their study and debate take place.

The rise of civil liberty groups has created an unwarranted culture of distrust towards counter terrorism efforts

Deflem & McDonough, 15 --- *Professor of Sociology at the University of South Carolina, AND ** Instructor, Social Sciences at Allen University (February 2015, Mathieu & Shannon, Society, "The Fear of Counterterrorism: Surveillance and Civil Liberties Since 9/11," Volume 52, Issue 1, SpringerLink database, WM)

Besides surveillance scholars, major civil liberties organizations have greatly criticized the post-9/11 expansion of the surveillance powers of government and intelligence agencies by means of aggressive public campaigns, critical reports, and lawsuits. The American Civil Liberties Union (ACLU) is one of the most active and prolific of such groups oriented at protecting the rights granted to US citizens by the constitution. The ACLU has instituted a so-called 'Safe and Free' campaign to address a number of issues related to surveillance and civil liberties on the basis of the notion that "there has never been a more urgent need to preserve fundamental privacy protections and our system of checks and balances than the need we face today, as illegal government spying, provisions of the Patriot Act and government-sponsored torture programs transcend the bounds of law and our most treasured values in the name of national security" (ACLU website). The ACLU claims that post-9/11 systems of mass surveillance threaten civil liberties more than that they can effectively combat terrorism. Yet, ACLU campaign tactics may aggravate the fear of surveillance by exaggerating the actual threat to civil liberties. For example, an analysis of an ACLU 'Safe and Free' commercial regarding the FBI's authority to perform 'sneak-and-peek' searches shows that the ACLU overstates the extent of the threat to civil liberties imposed by counterterrorism laws (Factcheck.org 2004). The ACLU's ad claims that the Patriot Act authorizes government agencies to search homes without notification, leaving out the condition of obtaining a warrant from a judge on the basis of regular probable-cause criteria. Campaigns similar to those launched by the ACLU have also been established by other civil liberties organizations. The Electronic Frontier Foundation (EFF), for example, set up the FLAG (FOIA Litigation for Accountable Government) Project, which "aims to expose the government's expanding use of new technologies that invade Americans' privacy… [and] to protect individual liberties" (EFF website). The project utilizes Freedom of Information Act (FOIA) requests to reduce government secrecy and thwart potential abuses of power in regard to government surveillance. Likewise, the Electronic Privacy Information Center (EPIC) works to "focus public attention on emerging civil liberties issues and to protect privacy, the First Amendment, and constitutional values" (EPIC website). EPIC has set up a 'Watching the Watchers' program to assess the impact of public surveillance programs proposed following 9/11 (ObservingSurveillance.org). An EPIC report reviewing a budget plan of the Department of Justice criticizes the proposed surveillance programs for their inadequate public scrutiny and possible violations of civil rights under the telling title of "Paying for Big Brother" (EPIC 2002). Using such strong imagery and provocative language, civil liberties groups may effectively contribute to create a fear of surveillance and counterterrorism irrespective of actual practices concerning rights violations.

Amount of actual civil liberties abuses by agencies ON THE WHOLE is still incredibly miniscule --- proves their examples are just isolated cases

Deflem & McDonough, 15 --- *Professor of Sociology at the University of South Carolina, AND ** Instructor, Social Sciences at Allen University (February 2015, Mathieu & Shannon,

Society, "The Fear of Counterterrorism: Surveillance and Civil Liberties Since 9/11," Volume 52, Issue 1, SpringerLink database, WM)

An analysis of the findings of the OIG reports pertaining to investigations between October of 2001 and June of 2013 reveals that the number of civil rights claims and allegations far exceeds the number of violations. Table 1 presents the distribution of all claims versus credible claims in each investigative half-year period. Overall, in the period between 2001 and 2013, the Office of the Inspector General received 21,248 claims of civil rights or civil liberties violations. Of these claims, only 3,421 fell within DOJ's jurisdiction or warranted further review. Of the DOJ claims warranting further review, only 265 were deemed credible enough to open an OIG investigation. Thus, only 7.7 % of the claims within DOJ jurisdiction warranting further review and 1.2 % of the total claims received were identified as potential civil liberties violations, showing that the number of civil liberties violation claims made against DOJ far exceeds the number of credible claims.

--- NYPD Surveillance Program Ended

DeBlasio is ending the NYPD's intrusive Muslim surveillance measures due to political pressure

Paybarah, 14 --- senior writer at Capital New York. He's covered politics in New York for The New York Observer, WNYC Public Radio, New York Sun and New York Press.

(4/16/14, "Was it Justice or Politics that Killled the NYPD Muslim Spy Unit?", http://www.thedailybeast.com/articles/2014/04/16/was-it-justice-or-politics-that-ended-the-police-program-to-spy-on-new-york-s-muslim-community.html)//Yak

New York is the country's largest city and one of its most progressive but since 2001 it's also been at the forefront of some of the most aggressive and controversial anti-terrorism tactics. Yesterday, city officials announced the end of one of those major tactics: targeted spying on Muslim communities.

But there's some strange timing going on here. For one thing, New York's liberal Mayor Bill de Blasio was in favor of the surveillance program before he was against it. Then there's the fact that just days after the New York Times reported that Attorney General Eric Holder will sign off on new guidelines for the FBI that would allow it to continue using nationality to map and surveil neighborhoods, the NYPD program that had been assembling detailed files on Muslim neighborhoods is being publicly dismantled.

More on that in a bit, first some background on the program itself.

Officially, the spying was done under the auspices of the NYPD's "Zone Assessment Unit." Muslims in New York City saw their mosques, restaurants and, in some cases, student associations infiltrated by undercover NYPD officials and confidential informants who took notes on overheard conversations, television programs that were playing, nationality of store owners and customers, and anything else that NYPD officials thought gave them a flavor for what was happening in the city's cloistered immigrant communities that catered to Muslims from the Middle East, North Africa and Eastern Europe.

The Associated Press first reported on NYPD spying in 2011, in a series of articles that later were awarded the Pulitzer Prize. The series culminated in a 2013 book by those reporters, Matt Apuzzo and Adam Goldman, arguing that the labor-intensive and intrusive tactics were also not effective.

Justin Elliott at Pro Publica also questioned the NYPD's claims that its anti-terrorism tactics helped ward off more than a dozen terrorist plots, as was claimed by police officials. Setting aside that debate, the politics of ending what critics called "muslim spying" weren't as easy or palatable in New York City as observers might think. As Michael Powell noted in an unrelated television interview, New York City is progressive … as long as everything is functioning.

But the criticisms made of the spying program weren't heeded by the Justice Department when it reviewed racial profiling rules for a similar FBI program that used ethnic mapping to focus intelligence and recruit informants. According to the Daily News, the Justice Department's ruling, "should once and for all settle the debate about whether what's been wrongly labeled "Muslim surveillance" should continue under Bill Bratton." But the opposite has happened. Shortly after Holder's decision on the FBI, Bratton has discontinued a high profile unit in the NYPD's own surveillance program.

So, what gives? As usual in New York, this is about politics.

Bill de Blasio's meteoric rise from fourth to first place in last year's mayoral race was predicated on a few simple facts: addressing New York's out of control income inequality (who doesn't want someone richer than them to pay a little more?) and, electing someone as far away as possible from Mayor Michael Bloomberg, who earned a lot of resentment from New Yorkers after extending term limits to stay in office.

De Blasio took office with a progressive mandate and promises to reform New York law enforcement policies and make them more responsive to minority concerns. But the public safety issue de Blasio focused on wasn't Muslim spying. It was the controversial stop-and-frisk tactic. The reason was simple, stop-and-frisk was the high profile cause that grabbed headlines. Regular reporting on frisking was required under city law; professors had reams of data to study and analyze; and local lawmakers from majority-minority districts had countless constituents who were the victims of this policy. And in a Democratic primary, those constituents would make up a decisive number of votes.

The targets of Muslim spying had much less ammunition at their disposal. There was hardly any data to analyze — the surveillance programs were, by design, kept from public disclosure. Most information gleaned about the program came from leaks, primarily to Apuzzo and Goldman. Politically, Muslims were a fraction of the voting bloc in New York, and had no real recognizable spokesperson. The only Muslim elected official in New York City — Councilman Robert Jackson of Harlem — questioned the program, but hardly made a sustained effort to be seen as the face of its opposition.

De Blasio himself initially backed the NYPD as the first wave of Associated Press stories were published. In April 2013, de Blasio told me "I spent a lot of time with Commissioner Kelly reviewing the situation. I came to the conclusion that the NYPD had handled it in a legal and appropriate manner with the right checks and balances." He also said he wanted to "constantly monitor" them to make sure "it was done right."

By October, after more AP stories, de Blasio was standing in front of "Muslims for de Blasio," and publicly distinguishing between his policies and Ray Kelly's, telling reporters that spying would have to be based on "specific leads" and not done "on a wholesale basis."

When de Blasio appointed Bill Bratton as the city's police commissioner, he might as well have announced the end of Kellys' surveillance program too.

After the AP stories first appeared in 2011, Kelly defended the program as necessary and accused the outlet of inaccuracies and biases and, later, ginning up stories to promote their forthcoming book. No corrections were ever run. The series won a Pulitzer Prize. (And, in an ironic twist, the Rupert Murdoch-owned TV operation bought the rights to the book, despite the vicious attacks it got on the editorial pages of a Rupert Murdoch-owned paper.)

Years earlier, Bratton had his own short-lived Muslim controversy but he handled it very differently than Kelly did. To observers, he began to look like the opposite of Ray Kelly.

In 2007, as police commissioner in Los Angeles, Bratton sent Michael Downing, the LAPD's commanding officer for Counterterrorism and Special Operations, to testify at a Senate Homeland Security Committee hearing. Downing said, "We probably have over 700,000 American Muslims throughout the Los Angeles region but we don't really know where they live, or what they do or how they're structured" and "We have great outreach and we've got great relationships, but the idea here is to actually map out, to find out where the Pakistani Muslims live, the Somalians, the Chechnyans, the Jordanians."

Sixteen days later, Bratton held a press conference to announce there would be no mapping.

The FBI and NYPD are revising their surveillance policies and moving away from informal informants

Apuzzo and Goldstein, 14- Matt Apuzzo is a Pulitzer Prize-winning American journalist. Apuzzo was born in Cumberland, Maine and attended Colby College.

(4/15/14, "New York Drops Unit that Spied on Muslims", http://www.nytimes.com/2014/04/16/nyregion/police-unit-that-spied-on-muslims-is-disbanded.html)//Yak

The New York Police Department has abandoned a secretive program that dispatched plainclothes detectives into Muslim neighborhoods to eavesdrop on conversations and built detailed files on where people ate, prayed and shopped, the department said.

The decision by the nation's largest police force to shutter the controversial surveillance program represents the first sign that William J. Bratton, the department's new commissioner, is backing away from some of the post-9/11 intelligence-gathering practices of his predecessor. The Police Department's tactics, which are the subject of two federal lawsuits, drew criticism from civil rights groups and a senior official with the Federal Bureau of Investigation who said they harmed national security by sowing mistrust for law enforcement in Muslim communities.

To many Muslims, the squad, known as the Demographics Unit, was a sign that the police viewed their every action with suspicion. The police mapped communities inside and outside the city, logging where customers in traditional Islamic clothes ate meals and documenting their lunch-counter conversations.

"The Demographics Unit created psychological warfare in our community," said Linda Sarsour, of the Arab American Association of New York. "Those documents, they showed where we live.

That's the cafe where I eat. That's where I pray. That's where I buy my groceries. They were able to see their entire lives on those maps. And it completely messed with the psyche of the community."

Ms. Sarsour was one of several advocates who met last Wednesday with Mr. Bratton and some of his senior staff members at Police Headquarters. She and others in attendance said the department's new intelligence chief, John Miller, told them that the police did not need to work covertly to find out where Muslims gather and indicated the department was shutting the unit down.

The Demographics Unit, which was renamed the Zone Assessment Unit in recent years, has been largely inactive since Mr. Bratton took over in January, the department's chief spokesman, Stephen Davis, said. The unit's detectives were recently reassigned, he said.

"Understanding certain local demographics can be a useful factor when assessing the threat information that comes into New York City virtually on a daily basis," Mr. Davis said. "In the future, we will gather that information, if necessary, through direct contact between the police precincts and the representatives of the communities they serve."

The department's change in approach comes as the federal government reconsiders and re-evaluates some of its own post-9/11 policies. Although the police department's surveillance program was far smaller in scope than, say, the bulk data collection by the National Security Agency, a similar recalibration seems to be unfolding.

The Demographics Unit was the brainchild of the Central Intelligence Agency officer Lawrence Sanchez, who helped establish it in 2003 while working at the Police Department and while he was still on the spy agency's payroll.

The goal was to identify the mundane locations where a would-be terrorist could blend into society. Plainclothes detectives looked for "hot spots" of radicalization that might give the police an early warning about terrorist plots. The squad, which typically consisted of about a dozen members, focused on 28 "ancestries of interest."

Detectives were told to chat up the employees at Muslim-owned businesses and "gauge sentiment" about America and foreign policy. Through maps and photographs, the police noted where Albanian men played chess in the afternoon, where Egyptians watched soccer and where South Asians played cricket.

After years of collecting information, however, the police acknowledged that it never generated a lead. Since The Associated Press published documents describing the program in 2011, Muslims and civil rights groups have called for its closing.

Mr. Bratton has said that he intends to try to heal rifts between the Police Department and minority communities that have felt alienated as a result of policies pursued during the Bloomberg administration. The meeting last week put Mr. Bratton in the room with some of his department's harshest critics.

"This is the first time we've felt that comfort sitting with them," said Ahmad Jaber, who resigned from the Police Department's Muslim advisory board last year to protest the surveillance tactics. "It's a new administration, and they are willing to sit with the community and listen to their concerns."

1nc Terrorism Adv

CVE focuses counter-radicalization efforts in Muslim communities --- that ignores the threat of attacks from non Islamic groups --- results in Islamophobia and turns the Muslim cooperation internal link

Iyer and Sarsour, 2/17/15 --- *South Asian American activist and the former executive director of South Asian Americans Leading Together, AND **National Advocacy Director for the National Network for Arab American Communities (NNAAC), the Executive Director of the Arab American Association of New York.

(Deepa and Linda, 2/17/15, "Obama wants to 'counter violent extremism'. He should look beyond Muslims", http://www.theguardian.com/commentisfree/2015/feb/17/obama-counter-violent-extremism-conference-muslims)//Yak

On Tuesday, the White House will convene a national summit on combatting violent extremism – but, despite a plethora of attacks by domestic right-wing extremists and the increase in white supremacist hate groups, no one expects that to be on the agenda.

Just a week ago, Craig Hicks, an apparently militant anti-theist murdered three American Muslim college students in Chapel Hill; the FBI and local law enforcement have opened an inquiry into the possibility that it was a hate crime. In August 2012, Wade Michael Page, an avowed white supremacist, stormed into the Sikh Temple of Wisconsin outside Milwaukee and killed six people. Page died, but Attorney General Holder made it clear that the community had endured an act of terrorism and hatred at Page's hands. Frazier Glenn Miller Jr, a neo-Nazi who founded the White Patriot Party, allegedly killed three people at a Jewish retirement community in Overland Park, Kansas on 13 April 2014. He awaits trial for murder.

One would think the federal government's response to this and other threats against communities of color would be to develop programs and practices to confront the very real threat of right-wing violence and the alarming increase of such hate groups in the United States. Instead, the Obama Administration's programs to counter violent extremism (CVE) almost exclusively focus on the recruitment and radicalization of Muslims to engage in terrorist attacks in this country.

While it is important for our government to address all forms of violent extremism to keep Americans safe, the CVE framework is deeply flawed because of its failure to do that and its reliance on unworkable models. Last December, a range of interfaith, community and civil rights organizations sent a letter to the White House expressing these concerns. They noted that the CVE program characterizes Muslims as suspect – which fosters the existing culture of Islamophobia and hostility in the country that leads to discrimination.

Moreover, the government's practice of providing funds to Muslim community partners in the fight against violent extremism has also raised concerns about the true goal of these partnerships. Are they being formed in order to gather intelligence and information about community members, or to actually engage in valuable community outreach about civil rights protections? CVE programs can foster mistrust between government entities and community members. To counter that, the government should engage with Muslim, Arab and South Asian communities to protect

their civil rights – especially since hate violence and discrimination against our communities have not abated.

The threat of right-wing domestic extremism is not far-fetched. According to the Southern Poverty Law Center (SPLC), since the year 2000, the number of hate groups in the United States has increased by 56%; they now include anti-immigrant, anti-LGBT, anti-Muslim and anti-government "Patriot" groups. The federal government too is aware of the threats from these groups. In April 2009, a report by the Department of Homeland Security (DHS) on right-wing extremism was leaked and then withdrawn. It revealed the government's assessment that "white supremacist lone wolves" posed the most significant domestic terrorist threat in the US.

Yet, despite this complicated and growing landscape of domestic right-wing groups, the Obama Administration's Countering Violent Extremism programs continue to focus on the threat of radicalization in Muslim communities. Last September, Attorney General Holder announced that the Department of Homeland Security, the National Counterterrorism Center and the White House would be working with local US Attorney offices to conduct pilot programs in Boston, Los Angeles and Minneapolis to counter violent extremism. At the CVE summit held by the White House this week, these programs will likely be highlighted. Participants at the Summit must ask whether, in these cities, government agencies are focusing on the range of organizations that espouse violent extremism, including hate groups and white supremacists.

One thing is clear: **the federal government's one-note approach to countering violent extremism fosters distrust and hostility towards Muslim communities** while disregarding threats to Americans' safety from racist hate groups in the country. As the CVE Summit unfolds this week, we must ask critical questions about the government's implementation of CVE programs for the sake of not only Muslim communities, but all Americans.

No homegrown terrorist threat --- unreliable studies, increased law enforcement, execution failures

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Is the Muslim homegrown terrorism threat growing?

Despite the concerns expressed by many analysts and public officials, the evidence does not support the conclusion that Americans face a growing threat of deadly attacks plotted by Muslims in the United States. First, it is unclear that more American Muslims are intent on mounting such attacks. Although it may yet prove to be the case, the evidence at present does not substantiate such a finding. The exploratory nature and approach of studies of radicalization provide limited tools for evaluating whether Muslim Americans are increasingly exhibiting cognitive and behavioral changes that predispose them to violence. Even if the behaviors and beliefs sometimes associated with radicalization are detected, it is unclear that they will culminate in individuals undertaking terrorist activity, and if so, in what incidence individuals will engage in violent acts. Other evidence that radicalization is increasing, such as a surge in arrests, is also a poor indicator of a growing inclination toward violence. The surge could be the result of a clustering of arrests of those long engaged in militancy or the apprehension of large groups, such as the members of

the Daniel Boyd network or the al-Shabaab recruits. Improvements in detection or other actions by law enforcement could also be contributing to an increase in the number of individuals charged with terrorist offenses independent of any larger trends in the population.

Second, there is a dearth of evidence suggesting that American Muslims, even if they were to aspire in greater numbers to plot deadly attacks, would be more capable of doing so without being prematurely apprehended than their counterparts in the past. The evidence cited above suggests that a significant grassroots investigative and monitoring architecture is in place in the United States, such that those who do aspire to plot will continue to be hard pressed to do so undetected. There is no basis for anticipating that the security environment has become more permissive for terrorists. If anything, the commitment to a steady growth of resources, an emphasis on federal, state, and local cooperative initiatives in counterterrorism, ongoing signs of societal vigilance, and continued resistance to militancy in Muslim communities suggest that terrorist plots, as in the past, have a high probability of being detected and foiled before they culminate in the deaths of Americans.

Finally, even if attacks are not foiled, there is little basis for anticipating that those that are executed will be less prone to failure than in the past. Muslim homegrown terrorists in 2009 or 2010 do not appear to have been better equipped to overcome the challenges of bomb making, or preparing attacks, than in prior years. Indeed, mistakes in operational security and tradecraft are common even among skilled terrorists and, in the case of the mostly inexperienced and unprofessional cohort of American terrorists, may be endemic.110 The evidence from several 2010 cases, including those of Finton, Smadi, Farooque, Martinez, and Mohamud, suggests that militants make even the most basic mistakes in terrorist tradecraft, including soliciting help from friends for their plots, advertising their intentions on the internet, and trusting informants and undercover agents often with few questions asked.111 Even the most capable homegrown terrorists—such as those few who managed to navigate security obstacles to obtain overseas training and guidance—ran into difficulty in preparing for their attacks. For example, both Zazi and Shahzad had to contend with serious technical problems and committed errors in operational security.

No impact --- Acquiring and storing equipment and preparation mistakes

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Acquiring equipment, or simply storing materials, generates yet another set of risks of being exposed. Recall the case of the Saudi student, Khalid Aldawsari, who was arrested in February 2011 after he was reported to authorities, first by the chemical company from which he ordered a large quantity of phenol and second from the freight-forwarding company he hoped to use to receive the shipment.80 According to the New York City Police commissioner, Shahzad purchased fertilizer with an inferior grade of ammonium nitrate and bought M-88 fireworks rather than more powerful equipment to lessen the chance his expenditures would be detected.81 Shahzad's example illustrates how the security environment could indirectly elevate the capabilities required for attacks by forcing militants to rely on obscure or difficult-to-work-with materials in order to evade detection.82

Finally, fabricating viable explosive devices is not the only obstacle that terrorists must overcome to prepare and execute deadly attacks. Preparing attacks often entails pre-operational activity, including identifying and surveilling targets while maintaining operational security. Errors in pre-operational activity are common even among established or well-resourced terrorist networks and organizations and are likely to be pervasive among less experienced militants.83 Take, for example, the 2003 Casablanca suicide bombings. In that case, the plotters had a secure community sanctuary and a skilled coordinator (and, at least according to the Moroccan authorities, help from al-Qaida).84 Yet they still made serious errors in surveillance and planning, including blowing up a Jewish community center on a Saturday. Fortunately, no one was killed, because the plotters did not consider that the center would be closed for the Sabbath.85

Empirics prove resiliency to terrorist attacks --- focusing on Muslim threats ignores far more lethal right wing extremists

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

A final way of evaluating the seriousness of the homegrown Islamist threat is to compare it with other terrorist threats that Americans have faced in the past and others they face in the present—threats the population has heretofore managed rather capably. Seen in light of the threats posed by other segments of the population, the one posed by Muslim Americans appears neither especially novel, nor severe. Take, for example, the United States' recent history with terrorism. As Brian Jenkins observes, in the 1970s the country experienced a rash of bombings by Puerto Rican nationalist groups and the militant left, such as the Weather Underground, which combined were responsible for more than 100 bombings.127 Contemporaneous reports underscore the magnitude of the threat at the time. Between January 1969 and October 1970, 370 bombings occurred in New York City alone, an average of more than one every other day.128 In just over two weeks in March 1970, 14 bombs exploded in New York City, and there were nearly 2,300 bomb scares—numbers that defy imagination today.129 Overall, according to the National Consortium for the Study of Terrorism and Responses to Terrorism, from 1970 to 2007 the United States experienced nearly 1,300 terror attacks—an average of more than 36 per year—with about 10 percent yielding at least one fatality.130

The United States' recent experience with terrorist violence from offshoots of antigovernment and Christian Patriot movements as well as white supremacist groups provides further evidence of Americans' resilience in the face of terrorism, and therefore their capacity to weather terrorist attacks of the kind most likely to originate with Muslim homegrown terrorists.131 In some ways similar in form to the terrorist violence that has been perpetrated by Muslims, right-wing terrorism is often inspired by an overarching ideology or worldview and occurs in operationally disconnected attacks usually outside the boundaries of formal organizations or hierarchies.132 According to the Southern Poverty Law Center's Intelligence Project, there were nearly sixty rightwing terrorist plots largely of this nature from 1995 to 2005.133 Another study found that from September 2001 through September 2010, there were eighty domestic plots involving primarily right-wing terrorists.134

Moreover, a subset of these cases appears to be especially frightening. When white supremacist William Klar was apprehended in 2003 as the result of a postal mistake and the actions of an alert citizen, he had allegedly amassed a large amount of sodium cyanide for use in a terror attack.135 In 2009 a wealthy white supremacist acquired materials that he hoped to use in a radio logical weapon.136 In 2010, members of a local Michigan militia helped to expose a plot by the Hutaree militia, which allegedly sought to kill a policeman and then bomb attendees at his funeral—an assault, as Al-Jazeera's correspondents did not fail to observe, that is as serious in its particulars as those of other recent "jihadi" plots.137

Interestingly, Americans do not seem especially terrorized by the right-wing threat. Even the 1995 Oklahoma city bombing of the Alfred P. Murrah Federal Building—the most lethal attack on U.S. soil bar September 11—seemed to horrify more than terrify people, even though among the 168 dead were 19 children less than six years old. As one study of public opinion in the aftermath of the Oklahoma City bombing concluded, the bomber's actions "altered neither the public's assessment of personal risk nor its reported behavior."138 Despite a jump in the month following the April 1995 attack in the number of respondents who said they were very concerned about terrorist violence in the United States, by June 1995 that figure had fallen below its July 1993 level. The title of the public opinion study captured the prevailing sentiment: "The Terror That Failed."139

In short, Americans have long experience in dealing with the kind of terrorist challenges that Muslim homegrown terrorism is most likely to present.

--- XT: CVE Bad Turns

Community engagement turns on itself exacerbates intercommunal inequalities

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

Part III moves to the material implications of community engagement. Community engagement efforts constitute one of many entry points for federal law enforcement into Muslim communities today. But unlike other types of radicalization policing, community engagement efforts draw their legitimacy from ideas of inclusion and democratic participation. Most acutely, my concern is that **community engagement turns on itself by providing police with greater power and discretion over marginalized communities**. Rather than enhance participation, community engagement may simply provide opportunities for select members of Muslim communities to approve preexisting law enforcement commitments - and create an additional source of pressure on Muslim communities to perform their Americanness - without meaningful openings for Muslim communities to communicate, collaborate, and contest the relationship, its modalities, and its outputs. The coercive effect of these practices has been underexplored, even as their success at increasing democracy and inclusion is taken for granted. While it is beyond the scope of this Article to engage the premise that cultivating pro-law-enforcement attitudes is necessary for democracy, the Article does raise questions about how the government should cultivate these attitudes, and how cultivating such attitudes may clash with the duty of people to hold their governments accountable.

Focusing only on Muslim communities and linking CVE to terror efforts stigmatizes Muslim Americans

Muslim Advocates, 14- letter from civil liberty organizations to Obama about CVE

(12/18/14, "Coalition Letter to Obama Administration on Countering Violent Extremism", http://www.muslimadvocates.org/coalition-letter-to-obama-administration-on-countering-violent-extremism/)//Yak

The undersigned human rights, civil liberties and community-based organizations write to express our concern about the targeting of American Muslim communities and communities presumed to be Muslim through activities conducted under the auspices of Countering Violent Extremism (CVE).

In 2011, the White House released a strategic implementation plan with the overarching goal of "preventing violent extremists and their supporters from inspiring, radicalizing, financing or recruiting individuals or groups in the United States to commit acts of violence." 1 The plan describes federal support for "community-led efforts to build resilience to violent extremism" and "preventative programming." It tasks the Department of Homeland Security, Department of Justice and FBI to execute CVE programs and emphasizes the coordinating role of local US Attorneys' Offices. However, the White House has not described the basic parameters, methods and metrics of CVE, which appear to vary at the local level.

Our organizations have diverse perspectives on the wisdom and legality of CVE and therefore do not take a final position on CVE here; however, we all agree that where the federal government encourages these efforts, it also bears responsibility for their impacts. In this letter, we describe some of these impacts, including on: religious exercise; freedom of expression; government preference for or interference in religion; stigmatization of American Muslims; and ongoing abusive surveillance and monitoring practices. We recommend necessary initial steps toward addressing our concerns.

Impact on Religious Exercise and Political Expression

One purported method of CVE is to provide a space for community discussion of alternative political opinions and religious viewpoints, without the threat of government surveillance and monitoring. Yet CVE may also task community members to expansively monitor and report to law enforcement on the beliefs and expressive or associational activities of law-abiding Americans. That approach to American Muslim communities—or any belief community—reproduces the same harm as government surveillance and monitoring. The result of generalized monitoring—whether conducted by the government or by community "partners"—is a climate of fear and self-censorship, where people must watch what they say and with whom they speak, lest they be reported for engaging in lawful behavior vaguely defined as suspicious.

Religious exercise and political expression are among the casualties, as individuals may abandon discussions about religion and politics—or avoid mosque and community spaces altogether—to avoid being tracked into CVE programs that brand them as "at risk" or potential "terrorists." Indeed, insofar as CVE trainings and guidance promote a theory of "radicalization" and malleable "indicators" and "predictors" of violence including patterns of lawful political activism, ideology and religious worship, they are likely to result in law enforcement targeting based on political opinion and religious exercise. These are First Amendment-protected activities—no government-sponsored programs should chill them and law enforcement cannot use them as a basis for action.

Even where the parameters of CVE and community outreach are more narrowly defined, we are concerned based on prior incidents of law enforcement overreach that law enforcement may use them as a pretext for intelligence gathering activities that treat entire communities as suspect. Indeed, in any community roundtable or event, the presence of Justice Department officials and police creates the risk that community members' participation and statements may be recorded in intelligence databases.

Improper Characterization of American Muslims as a Suspect Community

CVE's stated goal is to "support and help empower American communities."2 Yet CVE's focus on American Muslim communities and communities presumed to be Muslim stigmatizes them as inherently suspect. It sets American Muslims apart from their neighbors and singles them out for monitoring based on faith, race and ethnicity.

CVE's focus on supporting local communities links it to traditional community policing initiatives. Yet federal support for community policing should focus on crime reduction in communities overall—and not succumb to a singular focus on terrorism or American Muslims. The federal government's support for community policing should also be delinked from "radicalization" theory and related concepts. Empirical studies show that violent threats cannot be predicted by any religious, ideological, ethnic, or racial profiling. The evidence suggests that there is no direct link among religious observance, radical ideas and violent acts.

Moreover, all agencies involved in CVE should be mindful of potential stigmatizing impacts when they publicize and promote their efforts to engage with American Muslim communities. Materials should avoid linking federal engagement with these communities to actions to counter armed groups such as ISIS, especially as many federal officials acknowledge ISIS does not pose a credible threat of attack within the United States and the number of Americans who have allegedly traveled to join ISIS—let alone returned—is miniscule.

Harmful associations with ISIS and other armed groups play into fear-mongering about American Muslim communities. They are amplified and distorted by the media and can be exploited by individuals and groups who promote anti-Muslim rhetoric. Government and law enforcement authorities have the power to significantly shape public discourse and send a strong message to the American public that fundamental rights such as equal protection and religious liberty must be defended. Singling out one community for special interventions and enhanced monitoring may have the effect of aggravating existing prejudices and reinforcing intolerance.

CVE provides legitimacy to status quo FBI practices- encourages community to spy on each other and creates a global industry upon counterproductive law enforcement practices- results in international violations on human rights

Fernandez, 15 --- journalist who observes political and social events (4/17/14, Belén, "The pseudoscience of countering violent extremism", http://america.aljazeera.com/opinions/2015/4/the-pseudoscience-of-countering-violent-extremism.html)//Yak

The CVE industry

Despite the seemingly innocuous nature of government campaigns such as "If You See Something, Say Something™," the field of domestic terrorism prevention is one of refined Orientalist pseudoscience. Among its guiding texts is a 2007 manual, courtesy of the NYPD's Intelligence Division, which lists signs that an individual may be on a path to "Jihadization."

According to the report, a person's "progression along the radicalization continuum" can be signaled by "giving up cigarettes, drinking, gambling and urban hip-hop gangster clothes" or "becoming involved in social activism and community issues."

Beneath the invented technical jargon is an invitation to unabashed and limitless racial and religious profiling, with the apparent crime of being Muslim further underscored by an expansive list of "radicalization incubators" and "nodes" that can host the radicalization process. In addition to mosques, these include "cafes, cab driver hangouts, flophouses, prisons, student associations, nongovernmental organizations, hookah (water pipe) bars, butcher shops and book stores."

Meanwhile, given that "urban hip-hop gangster clothes" often trigger other police responses such as stop-and-frisk, it might be helpful if the NYPD sat down and composed a coherent inventory of approved wardrobe items.

No serious government undertaking is complete without acronyms, and here too the counter-radicalization program shines. Take the NSI: the Nationwide Suspicious Activity Reporting (SAR) Initiative — a collaborative effort between the Department of Homeland Security, the Federal Bureau of Investigation and SLTT (state, local, tribal, and territorial law enforcement outfits). As a blog post by American Civil Liberties Union attorney Julia Harumi Mass notes, this has enabled the FBI to collect a colossal database of information, because the state's "loose standards define practically anything as suspicious."

Then there's the trendy business of Countering Violent Extremism (CVE), which, among other things, encourages teachers and parents to serve as the eyes and ears of the national security state. The problem here, Harumi Mass writes, is that "under CVE, normal teenage behavior could be an indicator of the potential to engage in terrorism."

DHS advocates a prevention-focused, community-based approach to CVE, which will ideally render the members of said community "more inclined to share suspicious information with law enforcement." A CVE working group (CVEWG) led by a CVE Coordinator has been established to oversee operations.

To be sure, there's no better way to promote resilient and cohesive communities that aren't susceptible to radical antisocial pathologies than by **having residents spy on one another** and parents terror-tattle on their children. (Better still when the FBI pays informants to radicalize folks.)

Beyond its own immediate battle against Domestic Terrorists and Homegrown Violent Extremists (HVEs), the U.S. is also deeply concerned with helping other nations confront their problems. In February, the White House Summit To Counter Violent Extremism gathered foreign leaders, United Nations officials, and "a broad range of international representatives and members of civil society" — including those interested in making a buck off the CVE industry.

And many a buck is to be made, judging from the White House's press release about the summit, which plugs "social media solutions" to violent extremism. According to the release, the US "and our partners in the private sector are organizing multiple 'technology camps' in the coming

months, in which social media companies will work with governments, civil society, and religious leaders to develop digital content that discredits violent extremist narratives and amplifies positive alternatives." Google, Facebook and Twitter were all represented at the summit.

Violence and safe spaces

Among America's illustrious allies in its global counterterrorism effort is the United Arab Emirates, which with the United Kingdom co-chairs the CVE working group at the Global Counterterrorism Forum, launched in New York in 2011. Abu Dhabi also plays host to Hedayah, the International Center for Excellence in Countering Violent Extremism, which is listed as one of DHS's crucial CVE partners.

Never mind that the Emirates' version of CVE appears to include such dubious actions as deporting resident Shiites en masse and hiring Erik Prince, the founder of Blackwater (rebranded as Academi), to form secret mercenary armies. It's no doubt fitting that the UAE, an eager client of the U.S. defense industry, has been propelled to the vanguard of counter-jihad.

A State Department fact sheet boasting $188 million worth of "ongoing and planned CVE efforts" emphasizes support for Hedayah as well as other initiatives such as those that "seek to create safe spaces for dialogue between women community leaders and law enforcement" and that "amplify … the voices of victims/survivors of terrorism." Drone-strike survivors need not apply.

This brings us to the question: **how does one counter violent extremism when so much of what one does qualifies as extreme violence**? Furthermore, don't one's own violent acts — drone assassinations, bombing civilians, torturing people and supporting oppressive governments — help breed the very violence that must then be countered? Owning up to this arrangement would, of course, mean ceasing to have our cake and eat it too.

In an op-ed for Al Jazeera America on the February summit in Washington, Amnesty International USA director Steven W. Hawkins warned that abusive **regimes could take advantage of CVE-mania and use international funding to violate human rights** if the U.S. failed to insist on appropriate safeguards.

But this analysis overlooks the fact that CVE programs are already an affront to these rights, right here at home. As the ACLU's National Security Project Director Hina Shamsi recently emailed me, the CVE strategy "does not include necessary safeguards to protect privacy and constitutional rights [and] risks treating people, especially young people, as security threats based on vague and virtually meaningless criteria."

In the end, she wrote, the strategy "**risks further alienating the very communities it's meant to engage**."

Surely it's nothing that can't be fixed with CAI, a counter-alienation industry.

Only community initiated reforms can solve – plan doesn't hold police accountable

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

For community policing to be an effective tool in changing the relationship between the marginalized and law enforcement, marginalized communities cannot simply be offered a seat at the table to participate in preconceived policing [*907] programs. They **must have the political power to hold police accountable**. For community policing mechanisms to offer potential for real change to marginalized communities, communities must **build capacity** and political power to demand accountability. So while we might advocate for law enforcement to engage marginalized communities, we cannot rely on law enforcement initiatives to recalibrate **relationships long rife with deep inequality**. The pressure for meaningful change must come from outside, from the communities themselves organizing for change. n325

--- XT: No Homegrown Terrorist Threat

Empirics prove threat of homegrown terrorism threat is low

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

How serious is the threat?

If there are no solid reasons for anticipating that the threat of deadly attacks in the United States is growing, how should Americans evaluate the seriousness of the threat of Muslim homegrown terrorism? A first step is to review the record of homegrown terrorism in the years since September 11. From September 2001 through December 2010, approximately 175 Muslim citizens or residents of the United States were charged with terrorist-related offenses, including fundraising on behalf of an overseas terrorist organization such as alQaida or al-Shabaab, seeking to join one, or plotting an attack in the United States.112 The surge in arrests noted at the start of this article included 43 people in 2009 and 32 in 2010.113 Among these were 31 individuals seeking to join or aid al-Shabaab as well as 9 individuals involved in sting operations.114

Within the smaller sample of operational plots aimed at homeland targets within the United States (the focus of this article), there were 18 such plots from 2001 to 2010. Of those, 12 involved the extensive participation of informants and undercover agents from the plots' early or formative phase. Two—the Little Rock and Fort Hood shootings—resulted in deaths.115 The perpetrators of those attacks had singled out soldiers, as have about one-third of all terrorist-related activities and attacks in the United States and overseas.116 Only one plot reached the execution stage—Shahzad's Times Square bombing attempt—without the perpetrator being known to law enforcement before the attack. No explosive device has been successfully detonated by a Muslim American in a terrorist attack in the United States.

Thus the record suggests, on both analytical and empirical grounds (to the extent one can extrapolate from such a small number of successful attacks), that the plots most likely to succeed are those that involve accessible weapons (e.g., firearms) and small numbers of individuals and

that require minimal skill and pre-operational steps. Because individual plotters do not risk exposure through contacts with others and may use weapons that require minimal skills, they likely have the greatest chance of avoiding detection and being successful.117

No risk of terror in Muslim communities --- cultural values, societal connections, and reporting of suspicious activity already exist

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

I first consider the possibility that militants could and a complicit environment within American Muslim communities that could constitute a form of community or local sanctuary. The conventional wisdom, as noted above, has been that Muslim communities are inhospitable to militancy, especially compared with those in Europe, because American Muslims are more thoroughly assimilated and enjoy middle-class status.43

Studies of Muslim communities provide little evidence of changes or trends that suggest they are becoming any less resilient against the threat of militancy in their midst.44 For example, one major effort funded by the Department of Justice, in which researchers resided for periods of two to three months in four midsized Muslim American communities, found that several features of these communities rendered them intrinsically resistant to militancy, including, in particular, the strength of their communal organizations and social networks. In addition, there were efforts expressly geared toward preventing and exposing any signs of militancy, including both outreach programs and a variety of internal monitoring, or self-policing, practices.45

In particular, two forms of self-policing underscore Muslim American resistance to militancy. First is the willingness of members to voluntarily alert authorities, through unsolicited tips, when an individual professes extreme views or is engaging in suspect behavior. In table 1, I detail the central role played by informers and tips from the community in exposing militants. In addition, a study by Syracuse University found that from 2001 through 2010, in 22 percent of all cases in which defendants were charged with some terrorist related offense, tips from family or community members brought the person to law enforcement's attention.46 Another indication that communities—or at least some crucial subset of their members—are repulsing rather than embracing militants is the (not uncontroversial) success that law enforcement has had in cultivating informants. Informants are individuals who are engaged by law enforcement to covertly monitor people and activities in their communities. The Syracuse University study, for example, found that 35 percent of terrorist cases have involved an informant. Another 9 percent of cases involved undercover officers exposing plots.47

Finally, even if some Muslims sympathize with militant causes, and believe that violence might occasionally be justiªed in some political contexts,48 attitudes alone do not indicate a willingness to support terrorism, especially when aimed against fellow citizens.49 Beyond any moral or ethical considerations it raises, supporting terrorism is a costly act that can result in the perpetrator and his or her community becoming objects of suspicion.50

Militants cannot avoid suspicion --- alert citizens will report suspicions of homegrown terror before attacks

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Anonymity

A second option for militants hoping to avoid detection is to seek anonymity by living in population centers where individuals of similar backgrounds reside, or in places where social norms or environmental factors render them less likely to be observed (e.g., urban areas, rural/remote places, or commuter/transient neighborhoods). For example, depending on their ethnicity, some militants could conceal themselves in immigrant population centers where they blend in demographically.51 In the United States, there are both moderately sized and several large population centers of Muslims (e.g., Chicago, Los Angeles, the Bay Ridge neighborhood of Brooklyn, New York, and Dearborn, Michigan).

The mere existence of such large population centers, however, does not mean it is easy to hide within them, especially given the social norms and intracommunal patterns of engagement observed within these communities. According to one survey, American Muslims engage in social services at their mosque at a rate equivalent to U.S. congregations in general and are slightly more likely to engage in activities in the community beyond (38 percent vs. 32 percent).52 These patterns suggest that there are interconnections among individuals that heighten the odds that individuals who withdraw from the community or exhibit changes in belief or behavior will be noticed. Especially when militants are young and inexperienced—as in the 2010 case of the accused Portland bomber, whose family apparently tipped off authorities about his increasingly extreme views—they may be especially likely to do and say things that draw attention to themselves.53

Enhanced societal vigilance and awareness of terrorism after the September 11 attacks may also render it harder for militants to remain anonymous. Compare the environment in which the September 11 hijackers operated to that in the present-day United States. Despite warnings by the plot's mastermind, Khalid Sheikh Mohammed, to avoid Muslim communities— warnings that underscore the recognized dangers of living within them—some of the operatives did just the opposite, without provoking the suspicions of those around them.54 Zacarias Moussaoui befriended members of a Norman, Oklahoma, mosque who apparently did not question his potential pursuit of terrorist activity even when he professed extreme views.55 Similarly, in San Diego, two of the September 11 hijackers relied on the hospitality of members of a local mosque to find them an apartment and purchase a car.56

Contrast the reaction of members of a Hawaiian mosque who in October 2010 reported a new member to authorities after they became suspicious about his recent move to the area.57 Consider, also, the case of Khalid Aldawsari, the Saudi student who in February 2011 was charged with plotting bomb attacks on U.S. targets after he was reported to the FBI and local police by, respectively, employees at a chemical company and a freight vendor.58 Or take the example of the Circuit City employee who helped to foil the 2007 Fort Dix plot after observing disturbing footage on a video and informing authorities.59 In each case, alert citizens, otherwise unacquainted with the militants, helped to expose their potential interest in violent activity

--- XT: No Impact

No impact to lone wolf terrorists- they prioritize psychological effect over the number of lives taken

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

The difficulties associated with plotting attacks in the United States help to explain why "lone wolf" attackers are sometimes identified as the mainline domestic threat.118 How serious a threat do such disconnected, unsophisticated attacks pose to Americans? They can certainly prove lethal. Take, for example, Maj. Nidal Hasan's shooting spree at Fort Hood, Texas, which killed 13 soldiers and wounded many more. Alternatively, consider the outcome if Times Square bomber Faisal Shahzad had chosen an easier method of attack and a more dependable weapon—firing his newly purchased Kel-Tec semiautomatic riºe into the square on a Saturday night, rather than attempting a technically ambitious car bombing. He could have killed a large number of people with a higher probability of success.119 As demonstrated by the 421 workplace shootings that, according to the U.S. Bureau of Labor Statistics, occurred in 2008, simple attacks can be deadly.120

Whether attacks of this kind present a serious terrorist threat, however, is a somewhat different question.121 Conceptually, terrorism is commonly understood as being about more than killing; its impact depends on whether attacks generate deeply rooted psychological reverberations in society. As one ob server captures it, "Terrorism is about terrorizing. It's about creating fear; it is not just about attacking."122 Moreover, as terrorists themselves appear to understand implicitly, the operational complexity of their attacks can affect how much they terrorize: generating a psychological impact requires undertaking attacks that demonstrate ruthlessness, premeditation, and technical capability.123 For example, there is likely a reason why Shahzad chose to use a bomb instead of his riºe, or why al-Qaida did not use its U.S.-based operatives to shoot up suburban malls in the days following the September 11 attacks and why, since then, it may be willing to advocate doing so only as a last resort.124 The very fact that aspiring militants are regularly attracted to using explosives,125 despite the risks of detection and failure they invite, underscores a desire to generate the maximum psychological effect possible.126

Homegrown terror studies are flawed --- analysts have not understood the radicalization process, and those who avoided terrorist activities are excluded from studies

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

While there may be evidence of common changes or behaviors observed within these samples of militants, it is unclear whether evidence of similar changes in the present-day Muslim American population would reliably indicate that its members will initiate terrorist activity. How or when

such actions or beliefs will lead to terrorism is not yet well understood. Analysts, for example, acknowledge that "only a tiny minority of radicalized individuals actually cross over to become terrorists."19 Although the problem of anticipating when people will turn to violence is understandably complex, without a better grasp of that process, arguments about when terrorist acts will occur based on observed changes in thought or actions will suffer from analytical indeterminacy. This, in turn, makes it difficult to hypothesize about when a set of individuals—such as American Muslims—is inclined to engage in terrorist related activity.

Moreover, it is unclear whether analysts are at present able to provide insight into what to look for in the beliefs and behaviors of American Muslims, even in a preliminary or exploratory effort to assess any propensity for violence. General arguments about how radicalization results in individuals becoming involved in terrorism are derived from the experiences of a sample of individuals known to have engaged in terrorist activity. To establish that these patterns in beliefs and behaviors are causally related to the turn to terrorism and generalizable across cases, however, the arguments need to be evaluated against new data, beyond that from which the patterns were initially induced.

Another limiting factor is a research design in which analysts of radicalization select cases to study on the dependent variable—that is, they analyze only cases of individuals charged with terrorism. By not also looking at individuals who have forgone violence, analysts cannot determine if they have isolated what is unique or distinctive about those individuals who engage in terrorism. Many people could be doing or thinking things similar to those committed to violence, but never take actions related to terrorism. They may listen to radical sermons and engage with activists, discuss with friends Muslim persecution across the globe, and exhibit the signifiers of extremist modes of thinking, without considering plotting an attack or otherwise aiding a terrorist organization. Two recent studies of militant Muslims in Europe that do employ control groups of nonmilitants, for example, suggest that the beliefs of those inclined toward violence and those who pursue nonviolent political change may not be very different.20

The number cases of homegrown terrorism exaggerate the real number of homegrown terror attacks

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Finally, it is worth considering the nature of the particular cases that represent the surge of arrests to see what they reveal about a supposed growing trend in Muslim homegrown terrorism. Several features of that data cast doubt on whether they represent the "watershed" in plots that some analysts fear.

From 2002 to 2008, the number of arrests involving Muslim Americans varied considerably, from a low of 5 individuals charged in 2008 to a high of 23 in 2003.39 Estimates for 2009 cite 11 to 13 terrorist incidents, involving 43 Americans charged in the United States or abroad.40 In 2010 the number charged was 32, or 33 if one ambiguous case is included. (See the online appendix and table 1 for details on 2009–10 cases.) Those numbers clearly represent a major slice of the 175 total number of individuals charged from 2001 to 2010.

Consider, however, that although terrorist indictments against Muslim Americans in 2009 involved an unusually large number of individuals, many were charged in groups. For example, 14 individuals were charged in two groups with joining or aiding a foreign insurgency, Somalia's al-Shabaab; a group of 5 Americans was charged with seeking terrorist training in Pakistan; and another group of 7 North Carolina men, led by Daniel Patrick Boyd, was charged with seeking to aid foreign insurgencies in Israel and Kosovo (this group was also suspected of plotting an attack against the Marine base at Quantico, Virginia).

The 2009 figures could also represent a clustering of arrests for terrorist cases that had been unfolding for years prior, such as that of Bryant Neal Vinas, who traveled to Waziristan, Pakistan, in 2007 only to be apprehended in 2008 and charged in January 2009. Similarly, Terek Mehanna's long odyssey to become a terrorist allegedly began in 2002, although he was not arrested until 2009. The charges against Boyd and his cohort include acts committed as early as November 2006 (and his militant actions allegedly long predate those activities).41

The al-Shabaab cases raise an additional issue. On definitional grounds, it makes sense to include them as instances of Muslim homegrown terrorism in that the cases represent Americans engaging in terrorist activity. Conceptually grouping these cases with all other terrorist offenses, however, might obscure very different phenomena that fall under the rubric of homegrown terrorism. There are reasons why officials worry about the al-Shabaab cases (especially that the individuals will someday return to the United States and do harm). Leaving the United States to join a group engaged in a regional insurgency, such as al-Shabaab or the Taliban, however, may be different from plotting to attack Americans within their own borders even if the intent is to attack American soldiers or Marines overseas.42 This means that the 43 arrests in 2009 do not really represent a singular threat, but rather the conglomeration of actors with somewhat different militant aspirations.

Finally, if 2009 represents a watershed year, one might expect to see a continuation in the upward trend in Muslim American terrorist activity in 2010. Although still elevated, especially compared with 2008 (which represented a low point in terrorism arrests), the number of arrests in 2010 fell to 33, which suggests that 2009 could have been an empirical anomaly.

Reports of homegrown terrorism are only a result of harsher law enforcement --- no real increase in terrorist activity

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Do terrorist arrests indicate a growing threat?

If studies of radicalization shed little light on the propensities toward violence of Muslims in the United States, then what should Americans make of the surge in terrorism arrests observed in 2009? Do they indicate a growing trend of radicalization and propensity toward terrorist violence among American Muslims?

Focusing on a surge in arrests as an indication of radicalization could be misleading for at least two reasons. First, there could be alternative explanations: more terrorist offenses could have

come to official attention, and produced arrests, as a result of more aggressive law enforcement. Second, the spike could be the result of factors related to the timing of those arrests and the other details of the cases, which would suggest that the increase is more an artifact of the data than indicative of a larger trend in the population.

Since the September 11 attacks, the Department of Homeland Security and other entities have invested significant resources aimed at monitoring and investigating terrorist activity within the United States (see table 1). In turn, there are two ways that this "grassroots" law enforcement effort could be contributing to an increase in arrests and the appearance that homegrown terrorism is on the rise, even if the incidence of terrorist activity within the Muslim population has not actually increased. First, a more comprehensive law enforcement effort could result in more cases being detected that in the past might have been missed. For example, incidents in which individuals travel overseas to join or aid a terrorist organization, such as those related to the Somali terrorist group al-Shabaab, which, over the 2009–10 period amounted to thirty-one cases, could conceivably have been missed and never found their way into terrorist statistics without a comprehensive law enforcement effort to detect terrorist activity (see the online appendix).

Second, some terrorist acts might be detected and produce arrests, which in the past might never have become known to law enforcement because the militants abandoned their plots or failed to progress beyond the "talking" or aspirational stage without taking actions monitored by authorities. There is, in fact, evidence that authorities might be better prepared to detect potential terrorist activity in its initial phases.21 In December 2008, the Justice Department provided new guidance to federal agents that allows the FBI to initiate "assessments" to "proactively" pursue information against a potential terrorist outside of a formal investigation, and therefore without supplying a particular factual justification for the evaluation.22 Among the activities authorized under an assessment are employing human sources or informants.23 According to documents provided by the FBI to the chairman of the Senate Judicatory Committee, Patrick Leahy, from December 2008 through March 2009, the FBI initiated 11,667 assessments of persons and groups, which produced 427 more intensive investigations.24 In the summer of 2011, the FBI further loosened restrictions, rendering it easier for agents to employ lie detector tests, comb through people's trash, and search databases prior to initiating an assessment.25

One piece of evidence that also suggests that detection has been occurring at early stages is the declination rates observed in terrorism cases (i.e., the rate of terrorism matters referred by law enforcement for criminal prosecution that prosecutors decline to pursue). The declination rate rose to 73 percent in fiscal year (FY) 2008 from 61 percent in FY 2005 and from 31 percent in 2002.26 These cases often lack sufªcient evidence and are too weak for prosecutors to pursue.27 One cause for the increase in declination rates is that authorities could be unearthing terrorist-related activity at earlier stages, when it is less likely to form the basis of a substantial case. If, as a result, even some number of these cases that might in the past have gone under the radar result in arrests, then the actions of law enforcement, independent from any actual change in the amount of terrorist activity being undertaken by the population, could be producing larger numbers of recorded terrorist incidents.

Equally important, law enforcement may not just be detecting more cases; it could also be generating more cases through its actions in two ways. First, law enforcement could be seeking to build more substantial cases against those accused of terrorism-related offenses, which could increase the number of incidents counted in the data. Law enforcement officials might, for example, hope to push down the high prosecutorial declination rate noted above by investing

more resources in investigations or holding out longer before making arrests. One expert captures this rationale, "[I]f you nip [the case] too early in the bud, then you may not have credible evidence to use in court."28 Alternatively, officials might be motivated to build stronger cases, so that defendants can be charged with serious terrorism violations, rather than lesser or "preventive charges" such as immigration violations.29 For example, the Center for Law and Security reports that between September 2001 and September 2010, only 31.6 percent of defendants in cases associated with terrorism (defined as cases in which the word "terrorism" is mentioned in indictments or press releases) were charged on core terrorism statutes, while an additional 12.2 percent were charged with national security violations.30

The case of Hosam Smadi, who was accused of trying to blow up a Dallas office building in 2009, is instructive in this regard. As a special agent involved in the case reported, Smadi had overstayed his visa, and "law enforcement could have arrested and deported him." Instead, the FBI decided to use undercover agents "to set up a sting."31 Given the political pressure over declination rates that the FBI has experienced in the past, it makes sense that officials might seek to build the most substantial cases possible whenever they suspect that an individual is seriously inclined toward militancy.32 In turn, if cases that might otherwise have ended in lesser or no charges being ªled are instead pursued by agents to the point where they seem viable, this could yield an increase in the number of terrorist-associated offenses recorded in the data.33

No threat of Muslim homegrown terrorism --- overstating the threat is counterproductive for national security and decreases resiliency against attacks

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Conclusion

This article demonstrates that the threat posed by Muslim homegrown terrorism is not particularly serious, and it does not appear to be growing, especially in its most lethal incarnation—deadly attacks within the United States. Indeed, many analysts and public officials risk overstating the threat posed by Muslim American terrorism. Mischaracterizing that threat, in turn, is potentially costly and counterproductive for the security of the United States and the welfare of its citizens, for several reasons.

First, misjudging the homegrown threat could lead the country to overinvest or poorly spend on counterterrorism initiatives. Since the September 11 attacks, the government's investments in resources oriented toward grassroots homeland security have risen steadily. Although these are modest in comparison with other federal expenditures, they nevertheless detract from other priorities. Consider, for example, how the reallocation of resources toward terrorism within the FBI has undermined its capacity to pursue white-collar crimes. After 2001, the FBI reduced the number of agents for its criminal program by 30 percent (from 6,179 in 2001 to 4,353 in 2008), while the number of agents speciªcally allocated for white-collar crime fell by 36 percent, from 1,722 to 1,097. Consequently, the number of cases brought forward related to financial institution fraud plummeted by 48 percent (dropping from 2,435 to 1,257), and during the height of the 2008

financial crisis, the FBI was left struggling to find resources to investigate major financial and other mortgage and securities crimes.141 In short, the "terrorism trade-off" can be significant, especially if serious questions remain about whether that investment is warranted.142

Second, overstating or poorly characterizing the challenges posed by Muslim American terrorism risks undermining societal resilience in the face of terrorism.143 Take, for example, Director Leiter's characterization of the homegrown threat: while noting that recent attacks are "operationally unrelated," he nonetheless described them as being "indicative of a collective subculture and a common cause that rallies independent extremists to want to attack the homeland."144 Alternatively, consider FBI Director Mueller's warning that homegrown terrorists "inspired by a violent jihadist message . . . may be as dangerous as groups like Al Qaida, if not more so."145 This language reinforces the sense of homegrown terrorism constituting not only a major threat, but a monolithic campaign against Americans.

--- Overstating Terrorist Threat Bad

Their framing of the Muslim threat undermines societal resilience to a terror attack threats of terror activity

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

If a shooting at Fort Hood is scary, however, more terrifying is seeing it as part of a larger conspiracy against Americans and their livelihoods. Comments that magnify the threat undermine society's capacity to withstand what in fact are mostly self-initiated, disconnected attacks whose only real association to a centralized conspiracy is within the minds of the terrorists.

Public officials and expert commentators might consider reframing the Muslim American homegrown threat by doing more, for example, to present it as one among many domestic threats of terrorist activity posed by ideologically motivated segments of society—threats, for the most part, that Americans do not appear especially afraid of and have managed rather capably.146 Officials might also emphasize what Leiter duly observed is the "operational unrelatedness" of recent plots and the diversity of terrorist offenses grouped under the rubric of homegrown terrorism. Instructive is former National Intelligence Director Dennis Blair's characterization in February 2011 of violence from "homegrown jihadists" as "sporadic," in which a "handful of individuals and small, discrete cells will seek to mount attacks each year, with only a small portion of that activity materializing into violence against the homeland."147 Such framing efforts could help to render threats of militancy originating from Muslim Americans more familiar and less formidable—akin to other terrorist threats from domestic militants the country faces. There are, however, serious obstacles to such a balanced discussion of terrorism in American politics. One indication of the problem is the political backlash that ensued after the Department of Homeland Security issued a report in 2009 warning that the threat from violent right-wing extremist activity was growing.148 Secretary Napolitano came under fire for one section of the report that warned that returning veterans could become drawn to extremist groups. She subsequently issued an apology letter to the American Legion, posted on the department's

website a formal statement clarifying the report's intent, and eventually disowned the report, calling it "not a well-produced product."149 Perhaps unsurprisingly, the Department of Homeland Security has been notably reticent to label right-wing attacks "terrorism," even when they qualify by many people's standards.150

These political obstacles aside, more should be done to promote a balanced discussion of terrorist threats in the United States. Otherwise, Americans are presented with a distorted picture in which terrorist attacks appear to be originating primarily with Muslims, rather than with extremists of all varieties. In an era when the mistrust of Muslim communities is a serious social and political issue, this unbalanced presentation is corrosive to American society.151

Finally, mischaracterizing and inflating the Muslim homegrown American threat could prove self-defeating to the country's efforts to defend against it. Especially worrisome is the potential that, in an atmosphere in which the threat of homegrown terrorism appears serious and worsening, law enforcement will employ counterproductive methods that threaten the trust between its officials and Muslim communities—trust that underpins the demonstrated capacity and willingness of American Muslim communities to self-police and root out militants in their midst.152 For example, although the cultivation of informants and infiltration of undercover agents into Muslim communities can be helpful to investigators, there are inevitable risks associated with these methods, and using them requires care and awareness of how they may affect the communities in which they are employed. In many places, federal law enforcement and local police departments have sought to build strong relationships through outreach to Muslim communities. Such efforts help to lay the groundwork for good relations and ease tensions associated with law enforcement's monitoring efforts.153 But FBI sting operations, such as those employed in the case of the Portland bombing suspect, Mohamed Osman Mohamud, can seriously test those relationships.154 Evidence of mismanagement and insensitivity are similarly troubling.155 More broadly, the perception that authorities "routinely run armies of informers" through American Muslim communities contributes to the sense, as the president of the Islamic Society of North America describes it, that "law enforcement is viewing our communities not as partners but as objects of suspicion."156 Equally insidious is how these tactics, by generating suspicion and eroding norms of communal openness, undermine the community's capacity to self-police, thereby making it harder for members to detect militants in their midst.157

No homegrown terrorism due to lack of incentive or capability --- US rhetoric undermines Muslim cooperation and stigmatizes Muslims

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Are Muslims born or living in the United States increasingly inclined to engage in terrorist attacks within the country's borders? For much of the post–September 11 era, the answer to that question was largely no. Unlike its European counterparts, the United States was viewed as being relatively immune to terrorism committed by its residents and citizens—what is commonly referred to as "homegrown" terrorism—because of the social status and degree of assimilation evinced by American Muslims.1 In 2006, in the long shadow cast by the Madrid 2004 and London 2005 attacks perpetrated by European homegrown terrorists, there was a perceptible shift

in the characterization of the threat posed by American Muslims.2 Public officials began to speak more regularly and assertively about the potential threat of some Muslims taking up terrorism, elevating it in their discussions alongside threats from foreign operatives and transnational terrorist organizations.3 By 2009, in part catalyzed by a surge in terrorist-related arrests and concerns that they could portend a growing radicalization of the American Muslim population, policymakers and terrorist analysts seemed increasingly worried about homegrown terrorism.4 When U.S. Special Forces killed Osama bin Laden in May 2011, some members of Congress and other commentators argued that the threat of homegrown terrorism would become even more important.5

Thus, in the decade since the September 11 attacks, homegrown terrorism has evolved from a peripheral issue to a major theme in contemporary debates about the terrorist threats facing the United States. Public officials such as Secretary of Homeland Security Janet Napolitano, Federal Bureau of Investigation Director Robert Mueller, and Attorney General Eric Holder regularly counsel that the number of Americans engaging in terrorist activity has risen.6 As Napolitano cautions, "One of the most striking elements of today's threat picture is that plots to attack America increasingly involve American residents and citizens."7 According to Holder, "The American People would be surprised at the depth of the [homegrown terrorist] threat."8

Concerns about homegrown terrorism, in turn, have generated a variety of think tank reports and associated warnings by many of the country's most accomplished terrorism researchers.9 Analysts such as Peter Bergen, Paul Cruickshank, Bruce Hoffman, and Marc Sageman have all expressed concern about a potential rise in terrorism initiated by Muslim Americans.10 Indeed, Bergen and Hoffman call the year 2009 a "watershed in terrorist attacks and plots in the United States."11

Clearly, public officials and analysts are worried about the prospect that Americans will face a growing trend of violent attacks from extremist elements within the country's Muslim population. Less certain, however, is whether those warnings and the sense of urgency associated with the homegrown terrorism threat are warranted. In fact, the threat of Muslim American terrorism may not be especially serious or growing. It could remain a modest challenge, similar to what it was for much of the decade following September 11.

The stakes for Americans in an accurate assessment of the threat of Muslim homegrown terrorism are significant. If the threat is overstated, the United States risks becoming preoccupied with this incarnation of terrorism and could make unwarranted investments in intelligence and law enforcement to address it, while underemphasizing other terrorist or nonterrorist threats. Overstating or miscasting the homegrown threat could also undermine society's resilience to terrorism, while feeding a climate of fear and misunderstanding between Muslims and other Americans. In addition, overestimating the threat could contribute to the adoption of counterproductive counterterrorism methods, especially those that threaten to alienate Muslim communities from law enforcement. Given that cooperation from these communities has proven a major safeguard against the homegrown threat, any breach of trust between their members and government authorities would be a worrisome development.

It is therefore essential that Americans have a clear picture of the magnitude of the threat they face from Muslim homegrown terrorism. This article aids in that endeavor by systematically analyzing the argument that Muslim residents or citizens of the United States represent a serious and growing terrorist threat to American society, particularly in their supposed willingness or

capacity to execute deadly attacks in the United States. I structure my analysis around three alternative pathways, or conditions, that alone or in combination could in principle contribute to a growing threat of homegrown terrorism. In so doing, I probe what is known about the motivations and capacity of American Muslims to execute deadly attacks in the United States and thus provide a comprehensive analysis of that threat.

My conclusion should be generally reassuring to Americans: Muslim homegrown terrorism does not at present appear to constitute a serious threat to their welfare. Nor is there a significant analytical or evidentiary basis for anticipating that it will become one in the near future. It does not appear that Muslim Americans are increasingly motivated or capable of engaging in terrorist attacks against their fellow citizens and residents.

--- AT: Terrorists Train Abroad

Training abroad fails --- western recruits get rejected and value of training is limited

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

The difficulty of acquiring expertise overseas

What if homegrown terrorists do not need to acquire skills or plan and prepare their attacks in the United States and can instead travel overseas to train and then return to execute them?96 Some analysts contend that training Westerners who travel overseas to then attack targets in their countries of residence is a favored strategy of al-Qaida Central, and that this is contributing to a growing homegrown terror threat.97

There are, however, considerable obstacles to receiving remote training that cast doubt on whether it offers such unmitigated benefits to aspiring terrorists. To start, leaving the United States and reentering requires navigating significant post–September 11 security regimes in Western countries; similarly, entering and exiting a terrorist camp in the foreign country without exposing one's identity can be a complicated process.98 According to Nesser, many activists in Europe in the last decade who traveled overseas to obtain training were exposed or captured before they could undertake their missions.99

In addition, Western "self-recruits" have to connect with terrorist organizations in their base countries, and leaders have to accept them for training. Take the case of five Muslim American suspects who traveled to Pakistan for training but were repeatedly turned down "because they were foreigners and had no local references."100 Or consider the case of Terek Mehanna, whose associate sought to solicit training, only to be turned down by two Pakistani militant groups.101 Even someone with significant personal ties to Pakistan, such as Faisal Shahzad, can encounter problems; he reported that establishing his connection with the Tehrik-e-Taliban organization took six months.102 Indeed, from the perspective of militant groups, as much as American or European citizens represent an opportunity to train Westerners and send them back to wreak havoc in their home countries, they also represent serious security risks to the organization.103

Finally, even if a recruit is accepted for training, the practical value of that remote instruction once the militant is back home may be limited.104 The cases of Najibullah Zazi and Faisal Shahzad, the respective New York subway and Times Square bombers, are instructive. Zazi was extensively trained and guided by an al-Qaida operative.105 Still, he ran into technical problems while fabricating his TATP bombs in a hotel kitchenette and was forced to contact his associates in Pakistan for instruction; those communications were intercepted.106 Or consider that Faisal Shahzad was trained by the Pakistani Taliban for forty days, in which five were devoted to explosives training and yet, leaving aside his use of nonexplosive fertilizer, his device was poorly constructed.107 He also made several errors in operational security, including failing to destroy one VIN number on his vehicle, as well as leaving behind car keys and a prepaid cellphone used to receive calls from Pakistan and to call the ªreworks store where he purchased bomb-making materials—errors that helped to ensure he would be unable to repeat his attempt, despite his professed plans to do so.108 Even if Shahzad's training was cursory or incompetent, it underscores the necessity and difficulty of bringing together professional experts with capable students.109 Finally, trainees still face the selflimiting conditions of their untrained counterparts once they are back home, which will also complicate their efforts to undertake pre-operational activity and execute attacks without first being detected; for all his overseas training, for example, Zazi's plot was still detected by authorities in the United States.

--- AT: Terrorists Get Info from Internet

Militants are unable to deploy information from the internet effectively --- especially in insecure environments

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

The internet as a technical and instructional resource

The proliferation of online training and explosives manuals has raised serious concerns that these materials could enhance the skills of aspiring terrorists. Director of the National Counterterrorism Center Michael Leiter captured these worries, "[I]ncreasingly sophisticated English language jihadist propaganda remains easily downloadable via the internet and provides young extremists with guidance to carry out Homeland attacks." As Gabriel Weimann contends, the internet constitutes an "online terrorism university."68

These concerns aside, there are analytical and empirical reasons to question how much online resources can improve militant capabilities. One set of problems relates to the quality of information available from training and explosives manuals. In a survey of online Arabic- and English-language training materials, for example, Anne Stenerson found that the information in her sample was often poorly conveyed or organized.69 In a separate study, Jennifer Yang Hui found that many of the technical instructions for explosives appearing on Indonesian militant websites were patchy and incomplete.70 Although analysts at Jane's Intelligence Weekly observed improvements over time in online materials, they nonetheless concluded as recently as 2006 that "it is probably fair to say that the jihadist online infrastructure is still in its infancy."71

In addition to shortcomings in training manuals, militants may have a difficult time employing technical information effectively, especially when, as Michael Kenney describes, they lack practical experience and the capacity to tailor abstract information to local conditions.72 Failed attacks in Europe (where attempted attacks have been more plentiful than in the United States) provide numerous examples of these difficulties. In 2006 two Lebanese men left suitcase bombs on German trains that failed to detonate because of errors in the fabrication of the explosives. In 2007 a British engineer and medical doctor set gas cylinder bombs in automobiles outside London nightclubs, which also exhibited technical flaws.73 Most striking is Nesser's finding: in his detailed survey of plots in Western Europe, Nesser could not find a single example of terrorist cells developing operational capabilities, including building working bombs, solely from instructions downloaded from the internet.74 Consider that even members of technically capable organizations often make errors, including the leader of the Basque nationalist group ETA, who was killed by his own bomb,75 or the operatives maimed by the Provisional Irish Republican Army's "own goals."76

Moreover, in evaluating the implications of online manuals, it is essential to consider the security context in which militants in the United States operate and how this bears on their capacity to capitalize on those resources. In a permissive security environment, militants might be able to experiment, train over time, and perfect their skills and capacity to translate abstract information into practical know-how. In a less secure environment, however, efforts to practice, especially with explosive devices, generate risks that the militants will be observed and exposed. Consider the network responsible for the Madrid bombings on March 11, 2004. When members of the network rented a farm house to train and practice using detonators, their activities were noticed by the local population; although not reported, the fact that they were observed underscores the risk inherent in such activities.77 In the United States, the 2003 Virginia paintball network was uncovered as a result of a tip about its efforts to enhance its skills through paramilitary training.78 Even seemingly inconspicuous bomb-making activities can be detected. Producing chemicals can leave telltale signs on interior spaces, changing paint colors and generating fumes, which may be observed by alert hotel operators or landlords.79

--- AT: Terrorists Will Use Remote Communications

Remote communications have limited utility for terrorists --- errors and increased risk of detection

Brooks, 11 --- Associate Professor of Political Science. Ph.D., UC-San Diego

(Fall 2011, Risa A Brooks, "Muslim "Homegrown" Terrorism in the United States How Serious Is the Threat?", projectmuse) //Yak

Although arguably of limited use for building explosives and training, the internet could help militants implement their attacks more effectively in another way: it could mitigate the risks of exposure inherent in pre-operational activity, especially by facilitating communications and substituting for on-theground surveillance.86 Maps and satellite imagery, for instance, can be helpful in gathering information about targets. Shahzad, for example, reportedly tracked pedestrian traf^{a}c in Times Square with real-time video feeds.87 Also, communications may be facilitated through the use of methods such as "electronic dead-drops," in which militants leave

messages in the draft folder of an email account and others retrieve the information without sending the message.88

Nonetheless, there are limits to the utility of the internet for these purposes. Take, for example, the 2008 Mumbai attack by Lashkar-e-Taiba. In preparing for the attack, leaders employed satellite maps, GPS, mobile phone applications, and a variety of other technologies.89 Those leaders, however, also sent an American, David Headley, on five surveillance trips to Mumbai during which he scouted targets and hired fishermen for private tours of the harbor to determine landing points for the attackers.90 Despite being trained in surveillance techniques, Headley made several errors in a subsequent plot aimed at the Danish newspaper Jyllands-Posten, and he was ultimately apprehended because of his activities in preparation for that attack.91

As one U.S. military study observes, figuring out the details of local targets and their defenses often requires some physical surveillance.92 Consider the requirements of a 2004 plot in which two men sought to bomb the subway station in Herald Square by leaving explosive devices in refuse containers and under benches. Before undertaking the attack, the plotters "wanted to know the number and location of cops on the platforms at different times of the day. Which areas were covered by video cameras? Since the likeliest place to hide a bomb was a garbage can, they needed to know how many there were, where they were located, and when they got emptied. And they needed to find the best path to go in and then get out quickly after planting the device."93 Growing advances in the technology and methodology of countersurveillance increase the risks inherent in such surveillance activities.94

This discussion, in fact, underscores an overarching constraint facing militants in the United States, which originates in the country's significant investment in security and dearth of community sanctuaries. Assume that an individual is able to connect with an acquaintance and they can securely interact and discuss in the abstract a terrorist plot. As soon as they attempt to recruit others, seek training or resources, or undertake surveillance, they create security risks that threaten to expose themselves to authorities. In this sense, terrorist plotting in the United States may be self-limiting: the greater the number and layers of complexity in the campaign, the more it requires resources and activities that render the plotters vulnerable to exposure.95

AT: First Amendment Adv

The First Amendment legitimizes hate speech and reaffirms status quo notions of racial minority's inferiority.

Delgado and Stefancic 97 – Delgado is the founder of critical race theory and professor of civil rights and race theory at the University of Alabama School of Law; Stefancic is an Affiliate Professor at the University of Alabama in Civil Rights, Constitutional Law, and Critical Race Theory (Richard Delgado, Jean Stefancic, *Must We Defend Nazis?*, NYU Press, January 1 1997, **fc*)

In the last few years observers have noticed a sharp upsurge in intellectual activity surrounding the role of speech and expression. Reformers have been demonstrating how hate speech and

pornography injure minorities and women. Postmodernists have been pointing out how every speech controversy can be approached in at least two ways. (See chapter 4.) A the same time, defenders of tradition such as the ACLU and other free-speech absolutists have been writing books and articles defending an unfettered First Amendment, to which yet other observers such as Jack Balkin reply: they are caught up in "ideological drift"—failure to notice how an instrument that once promoted dissent and other causes dear to liberals is now wielded chiefly by white supremacists, pornographers, and other dubious allies.

Is this debate merely about who possesses the correct ~~vision~~ [idea]—about who is the real defender of the right and the true? No. We think there is another, far more intellectually intriguing explanation for the rifts and tugs-of-war over issues such as pornography and hate speech that are testing the limits of First Amendment orthodoxy. In this other ~~vision~~ [idea], the skirmishes are not so much questions of standing one's ground, as some of the old-timers see it, or even of refining that ground slightly, as some want to make it appear. Rather the ground itself is shifting. The prevailing First Amendment paradigm is undergoing a slow, inexorable transformation. We are witnessing the arrival, nearly seventy years after its appearance in other areas of law, of First Amendment legal realism. The old, formalist views of speech as a near-perfect instrument for testing ideas and promoting social progress is passing into history. Replacing it is a much more nuanced, skeptical, and realistic view of what speech can do, one that looks to self- and class interest, linguistic science, politics, and other tools of the realist approach to understand how expression functions in our political system. We are losing our innocence about the First Amendment, but we will all be wiser, not to mention more humane, when that process is complete.

The Transition

Early in American history, we thought the First Amendment was the crowning jewel of our jurisprudence. As recently as 1970, scholars de-scribed our system of free expression in sweeping, exalted terms.; But shortly thereafter some writers began expressing doubts about whether First Amendment doctrine was capable of delivering on its lofty promises.4 In the last few years, under the impetus of challenges from critical race, feminist, and other writers, the trickle of doubts has turned into a flood.' The transition to the new paradigm is far from complete. Those who write in the new tradition still expend much energy defending themselves from charges that they are Satanic, forgetful of history, deluded, in league with fascism, etc.6 It is impossible to predict what the new understanding of the First Amendment will look like when fully mature, just as the early Realists, seventy years ago, scarcely could have predicted how their move-ment would lead the way to clinical legal education, perspectivism, critical legal studies, and elite law reviews. With these cautions, we offer here the themes and outlines of a new conception of the First Amendment. We make no claim to be comprehensive; the list may be personal to us.

The New First Amendment Legal Realism First, the paradigm includes an awareness of the First Amendment's limitations. Early in our republic, we made grandiose claims for what the system of free expression could do.7 But recently, scholars have shown that our much-vaunted marketplace of ideas works best in connection with questions that are narrowly limited in scope. Is this parking space safer to leave the car in than another? Does a heavy object fall faster than a light one in a vacuum? Would a voucher school-finance scheme ad-versely affect the poor? (See chapter 5.) With such clearly bounded disputes, free speech can often help us avoid error and arrive at a consen-sus. But with systemic social problems like racism and sexism, the market-

place of ideas is much less effective. These broad-scale ills are embedded in the reigning paradigm, the set of meanings and conventions by which we construct and interpret reality. Someone who speaks out against the racism of his or her day is seen as extreme, political, or incoherent. Speech, it turns out, is least effective where we need it most.

A second theme of First Amendment legal realism is the role of free expression in legitimating the status quo.' If, as a starting point, we posit a perfect marketplace of ideas, then, according to the old paradigm, the current distribution of social power and resources must be roughly what fairness and justice would dictate. Our more energetic European ideas, for example, competed with others and won: it was a fair fight. But, of course, it was not fair: communication is expensive, so the poor are often excluded; the dominant paradigm renders certain ideas unsayable or incomprehensible; and our system of ideas and images constructs certain people so that they have little credibility in the eyes of listeners.

This leads to a third component of the new approach, namely that language and expression can sometimes serve as instruments of positive harm. Incessant depiction of a group as lazy, stupid, and hypersexual—or ornamental for that matter—constructs social reality so that members of that group are always one-down.' Thereafter, even the most scrupulously neutral laws and rules will not save them from falling further and further behind as private actions compound their disadvantage. (See chapter 5.) Affirmative action becomes necessary, which in turn reinforces the view that members of these groups are naturally inferior (because they need special help). Pornography and hate speech are the two most visible fronts on which the fight to make the legal order recognize and prevent these harms is waged, often against great resistance. But when powerful groups find a particular type of speech offensive and likely to render them one-down, they blithely pass a law to curtail it. We rarely notice these "exceptions" and special doctrines, however, because they are time-hon-ored and second nature. Of course there would be an exception for state even label, secrets, plagiarism, false advertising, and dozens of other types of speech, we say. But one to protect eighteen-year-old black undergraduates at dominantly at white institutions? Oh no, we say, the First Amendment must be a seamless web.10

1nc Religion Freedom Adv

The chilling effect isn't real – Muslims respond to surveillance with increased visibility.

Bayoumi 12 – Associate Professor of English at Brooklyn College, City University of New York, with a Ph.D. in English and Comparative Literature from Columbia (Moustafa Bayoumi, The Nation, "Fear and Loathing of Islam," June 14 2012, http://www.thenation.com/article/168383/fear-and-loathing-islam, *fc)

Does this mean that the United States is an Islamophobic country? Of course not. Large support for American Muslims exists in many quarters [see Laila Al-Arian's essay in this issue, page 31]. Polls may suggest that about half the population is anti-Muslim, but that leaves half that isn't. In many quarters of the country, there is genuine, not suspicious, interest in American Muslims and the realities they face, as evidenced by the fact that TLC produced All-American Muslim. Aasif Mandvi's contributions to The Daily Show routinely deflate the power of this contemporary prejudice, and libraries, museums, classrooms and houses of worship across the country now

regularly include Muslims and Islam in their programming in an attempt to further understanding and combat bigotry.

American Muslims have responded to events over the past decade and the expansion of an anti-Muslim network largely by being more, not less, visible. The number of mosques grew 74 percent over the past decade, despite the opposition Muslims sometimes confront in their construction. Even if a 2011 poll found that 48 percent of American Muslims reported experiencing discrimination in the previous twelve months, they also showed more optimism than other Americans in the poll that their lives would be better in five years (perhaps, in part, because of today's discrimination). The guiding belief in the American Muslim community today is that the country will recognize that Muslims have always been and will continue to be a part of America.

An ordinary life is more meaningful than it sounds. It signifies being able to live your life as you define yourself, not as others define you, and being able to assume a life free of unwarranted government prying. In fact, ordinariness is the foundation of an open society, because it endows citizens with a private life and demands that the government operate openly—not the other way around, which is how closed societies operate.

IRF programs have existed for decades and are expanding

Mandaville and Silvestri, 15 – *Peter, Professor in Government & International Affairs at George Mason U and ** Sara, Senior Lecturer in Religion and International Politics at City University London and Director of Research at U of Cambridge ("Integrating Religious Engagement into Diplomacy: Challenges & Opportunities" 1/29/15, Brookings Institution, http://www.brookings.edu/~/media/research/files/papers/2015/01/29-religious-engagement-diplomacy-mandaville-silvestri/issuesingovstudiesmandavillesilvestriefinal.pdf,//BR/)

The last few years have witnessed a flurry of interest and activity around religion and religious engagement in diplomatic circles on both sides of the Atlantic. In 2013, the US State Department established a new Office of FaithBased Community Initiatives as part of a broader national strategy on religious leadership and faith community engagement led by the White House's National Security Council.1 Within the same year, the European Union issued new guidelines on the promotion and protection of freedom of religion or belief; the Canadian Department of Foreign Affairs, Trade and Development opened a new office focused on similar issues; and the French Foreign Ministry sponsored a major conference on the question of religion and foreign policy with a keynote address delivered by Foreign Minister Laurent Fabius. <These moves are but the latest in a much longer story of efforts on the part of foreign policy leaders to integrate greater attention to religion in the conduct of diplomacy. Since the end of the Cold War and the accompanying upsurge in world events driven by questions of identity and culture, observers of international affairs have been searching for answers and solutions in religion. In 1995, Doug Johnston and Cynthia Sampson published Religion: the Missing Dimension of Statecraft, a pioneering book that sought to make a case for including a focus on religion within the practice of diplomacy.2 Regarded at the time as somewhat radical, the fact that the volume's contents would raise very few eyebrows today speaks to just how prescient it was. There is now a considerable track record of diplomats having worked both formally and informally to include a focus on religion and religious engagement in their work. For example, the advancement of religious freedom has been a formal component of U.S. foreign policy since the late 1990s with the passage of the International Religious Freedom Act (IRFA), which created a United States Commission on International Religious Freedom as well as an Office of International Religious Freedom within the State Department. Certain domains of foreign policy have seen more attention paid to the question of religion than others. The United States Agency for International Development (USAID), for example, has had an office focused

on faith-based actors in development since 2002. Since 9/11, the national security services of the United States and many of its European partners have devoted enormous time and resources to the question of religion and violent extremism—and almost exclusively with a focus on the Muslim world.

IRF fails – religious presumptions and the constitution

Mandaville and Silvestri, 15 – *Peter, Professor in Government & International Affairs at George Mason U and ** Sara, Senior Lecturer in Religion and International Politics at City University London and Director of Research at U of Cambridge ("Integrating Religious Engagement into Diplomacy: Challenges & Opportunities" 1/29/15, Brookings Institution, http://www.brookings.edu/~/media/research/files/papers/2015/01/29-religious-engagement-diplomacy-mandaville-silvestri/issuesingovstudiesmandavillesilvestriefinal.pdf,//BR/)

<Properly undertaken, any effort to better appreciate the role of religion in foreign affairs must involve at least some modicum of willingness to examine the assumptions we hold about the place of religion in society. This is not about advocating for diplomats to accept as correct or appropriate a more expansive role for religion in society. Rather, it is about pointing out that it may only become possible to see and appreciate the bigger picture of religion's role in some societies if we first set aside our own particular set of lenses on this issue. For some—particularly in the United States—the aversion to mixing religion and diplomacy arises not out of an ideological commitment to secularism but more from concerns about the need to respect the legal sense of secularism embedded in the US constitution. The key question here is about whether the so-called "establishment clause" of the First Amendment, which prohibits any act that would indicate a specific religious preference on the part of the federal government—applies overseas. Case law history is mixed on this issue, but the overall trend is one that suggests a tendency in American jurisprudence to view the establishment clause as indicative of a universal principle.7

The plan fails – can't resolve Islamophobia on a state or local level

Ghazali, 14 - Abdus Sattar, Chief Editor of the Journal of America ("2013: Another Hard Year For American Muslims" Countercurrents, 1/2/14, http://www.countercurrents.org/ghazali020114.htm,//BR/)

Anti-Sharia (read anti-Islam) bills Anti-Muslim prejudice is now institutionalized at the state level, as well. Over the past two years, lawmakers in 32 legislatures across the country have targeted Muslims by moving to ban Islamic law, or "Shariah." Seven states - Arizona, Kansas, Louisiana, North Carolina Oklahoma, South Dakota and Tennessee - have signed the proposed ban into law, despite the inability of legislators to name a single specific case in which a court ruling based on Shariah law was allowed to stand. The bills were patterned on a template produced by a leading Islamophobe David Yerushalmi who founded an organization in 2006 with the acronym SANE (the Society of Americans for National Existence) with the aim of banishing Islam from the US. He proposed a law that would make adherence to Islam a felony punishable by 20 years in prison. What is the fall out of the anti-Sharia campaigns? Such campaigns increase bias among the public by endorsing the idea that Muslims are second-class citizens. They encourage and accelerate both the acceptability of negative views of Muslims and the expression of those negative views by the public and government agencies like the police. Anti-Muslim sentiment has not only manifested itself through mosque arsons, assaults, murders and invariably hostile rhetoric from society's extreme fringes. It has also become a permanent fixture of the very institutions that should provide safeguards against those things. The fallout of anti-Islam and anti-Muslim rhetoric, which is socially acceptable, appeared in different spheres. Hate crimes against

Muslims or perceived to be Muslim is not an uncommon phenomenon while Mosques also became a target of hate. NYPD declares mosques as terrorist organizations Amid the concerted Islamophobic campaigns the America Muslim community was stunned to know that the New York Police Department (NYPD) has secretly designated mosques as "terrorist organizations." The Associated Press reported on August 28 that the designation allowed the police to use informants to record sermons and spy on imams, even without any evidence of criminal activity. According to the AP report, designating an entire mosque as a terrorism enterprise means that anyone who attends prayer services there is a potential subject of an investigation and fair game for surveillance. The AP report further said: "Since the 9/11 attacks, the NYPD has opened at least a dozen "terrorism enterprise investigations" into mosques..... The TEI, as it is known, is a police tool intended to help investigate terrorist cells and the like. Many TEIs stretch for years, allowing surveillance to continue even though the NYPD has never criminally charged a mosque or Islamic organization with operating as a terrorism enterprise." It may be pointed out that in August 2011, the AP exposed the NYPD spy program, which is allegedly being conducted with the assistance of individuals linked to the CIA. The AP reported that the NYPD is using covert surveillance techniques "that would run afoul of civil liberties rules if practiced by the federal government" and "does so with unprecedented help from the CIA in a partnership that has blurred the bright line between foreign and domestic spying." Understandably, on June 18, 2013, civil rights groups filed a federal lawsuit charging that the NYPD's Muslim Surveillance Program has imposed an unjustified badge of suspicion and stigma on hundreds of thousands of innocent New Yorkers. It was filed on behalf of religious and community leaders, mosques, and a charitable organization that were all swept up in the NYPD's dragnet surveillance of Muslim New Yorkers.

No spillover post-plan – Obama, Congress, and State Department are ineffective – empirics prove

Farr 11 – Professor of Religion and International Affairs – Georgetown's Edmund A. Walsh School of Foreign Service and Director (Thomas F., Berkley Center for Religion, Peace, and World Affairs "Preventing Another Attack: International Religious Freedom", 9/23/11, http://berkleycenter.georgetown.edu/posts/preventing-another-attack-international-religious-freedom, //11)

Given the evidence that religious freedom can contribute to de-radicalization, American foreign policy should be integrating international religious freedom into its governance strategies for the broader Middle East. Unfortunately, it is failing to do so. In his June 2009 Cairo speech, President Obama said that "freedom of religion is central to the ability of peoples to live together." He's right; but **words do not substitute for policy action.** It took the Obama administration two and a half years to get in place its ambassador-at-large for international religious freedom—the senior official who implements American policy on religious freedom—and when the ambassador finally stepped into her office, she found herself working for a **lower-ranking official, far removed** from the Secretary of State. While other similarly ranked officials, such as the ambassador-at-large for women's issues, work directly under Secretary Clinton, the ambassador for religious freedom remains isolated and under-resourced. Meanwhile, minority Christians, disfavored Muslims, and other groups are being persecuted around the globe. In 2009, the Pew Forum reported that 70 percent of the world's population lives in countries where their religious freedom is severely restricted, often by violent persecution. An August update says that the problem is getting worse. Political upheaval in the Middle East will likely lead to catastrophe unless the religion-state problem is resolved. Yet the administration does not see the urgency. Obama and Clinton have prioritized other foreign policy issues, investing the administration's energy and resources in projects like climate change research, closing Guantanamo, "engaging Islam," and internationalizing gay rights. Of late, **Congress also has done little to advance the cause of religious freedom.** In 1998, it passed the International Religious Freedom Act, which provided the statutory basis for U.S. policy. Recently, a bipartisan group in the House sponsored a bill with amendments that would force the State Department to prioritize religious freedom—putting the ambassador under the Secretary, allocating democracy funding to religious freedom, and mandating training for American diplomats. Unfortunately, neither Senate Democrat nor House Republican leaders appear to see the value of passing these amendments. In mid-September, all

State Department language was summarily stripped from the bill, leaving only the reauthorization of an advisory panel called the Commission on International Religious Freedom. The Commission is important and should be reauthorized, but it is only an advisory body, unable to drive U.S. policy.

Cultural Movements are emerging to challenge islamophobia

Haddad and Harb 6-12-**14** – Yvonne Yazbeck*, The Center for Muslim-Christian Understanding, Georgetown University, and Nazir Nader**, Department of Arabic and Islamic Studies, Georgetown University, ("Post-9/11: Making Islam an American Religion," Religions, http://www.mdpi.com/2077-1444/5/2/477/htm,//BR/)

10. American Muslims Engaging in New Ways American Muslims have responded to Islamophobia and shari'aphobia in variegated and creative ways [111]. They have assumed a redemptive posture in combatting misinformation about Islam and American Muslim identity while reclaiming each by supporting, participating in, and initiating community and civic engagement projects as well as contributing to U.S. politics, popular culture, and an ongoing national interfaith dialogue. American Muslims today emphasize what they see as shared American and Islamic values of honoring and celebrating difference. They also envision their efforts to integrate Islam into the tapestry of American society as a way of protecting themselves from the phobias that adversely affect and threaten their communities. In 2006, the first Muslim congressman in the U.S., Keith Ellison of Minnesota, was sworn into office on a copy of Thomas Jefferson's Qur'an from 1734, after much consternation over whether or not an oath is valid on any scripture other than the Bible [112]. His experience paved the way in 2008 for Andre Carson, democrat from Indiana, the second Muslim elected to Congress whose campaign and election were much quieter and drew fewer questions about his religion [113]. American Muslims today understand newfound forms of cultural engagement and civic activism to be important avenues for securing the right of religious freedom in the name of the Constitution and the Bill of Rights for American Muslims. U.S.-based partnerships like the 501(c)(3) Clergy Beyond Borders (CBB), founded jointly by Muslim, Jewish, and Christian American clerics, further illustrate this larger trend among forward-looking Muslim Americans and their counterparts in other faiths to integrate Islam into America's cultural and religious fabric. The CBB website emphasizes the organization's vision that "all religions contain a message of commitment to improving the world" [114]. CBB advocates "mutual recognition among religious communities, seeking not to remove meaningful borders between them, but rather to build bridges of understanding and cooperation" [114]. Like American Muslim youth organizations, part of the goal of CBB is to educate non-Muslims and Muslims about the uniquely democratic, pluralistic, and modern nature of Islam, or at least American Islam [114,115]. Muslim American youth have set out to integrate Islam into the American popular conception of religious pluralism and diversity through the modern avenues of networking, blogging, events on college campuses, and conferences and seminars open to the public that cater to non-Muslims around the country [116]. Other Muslim-based organizations, including the United Muslims of America (UMA), the American Muslim Alliance (AMA), the Council on American Islamic Relations (CAIR), the Muslim Ummah of North America (MUNA), and the Muslim Public Affairs Council (MPAC), began increasingly to support interfaith engagement across the United States after 9/11 [117]. Appropriating "One God We Trust," UMA's website features a full section devoted to interfaith activism. The description of the section explains that UMA sees "America as one nation, endeavoring to create one family through interfaith understanding. We promote racial and religious harmony through religious institutions, projecting an image of America as a world leader who stands up for the human rights for all communities." Eboo Patel, well-known for his work in interfaith around the world, drew a lot of attention with the establishment of the Interfaith Youth Core that some people likened to a "Muslim Peace Corps" interfaith organization [117]. American Muslims have found a kind of special kinship with American Jews in working toward greater interfaith cooperation [118]. Not to be left in the dust of the rapid advancements in post-9/11 Muslim interfaith engagement, ISNA president Mohamed Magid and a delegation of imams from around the world, along with Congressman Keith Ellison, traveled with the U.S. State Department to the Wall of Death in Auschwitz, Germany to offer prayers where many thousands of Jewish prisoners

were killed during the Nazi Holocaust [119]. Muslim-Christian alliances in the 12 years after 9/11 have also expanded widely and, along with improving Muslim-Jewish relations, may help to create a more accepting space for American Muslims in U.S. society in the long term [120]. American Muslim communities, particularly mosques, which may not be directly affiliated with interfaith organizations, have also opened their doors to Americans of other faiths to join in worship services as well as holiday celebrations. American Muslims have also led prayer services and vigils at times of national mourning in the last 12 years, whether or not the assailant was allegedly Muslim [121]. Ramadan, the holy Muslim month of fasting, provides an opportune venue for interfaith engagement at meals where Muslims are encouraged to break the day's fast with their neighbors [122]. An important feature of American Islam in the last 12 years has also been intra-faith dialogue and engagement—"intra-faith" in this case refers to work by American Muslims on improving Sunni-Shi'a relations. The website The American Muslim (TAM), run by Sheila Musaji, a leader in developing frameworks of understanding American Islam, quotes a 1959 fatwa, or religious treatise, by Shaikh Mahmood Shaltoot of Al-Azhar University: "Islam does not require a Muslim to follow a particular Madh'hab (school of thought). Rather, we say: every Muslim has the right to follow one of the schools of thought which has been correctly narrated and its verdicts have been compiled in its books" [123]. The excerpt goes on to specify that the Shi'ite school of thought is "religiously correct to follow in worship as are other Sunni schools of thought." Musaji's piece includes a nearly exhaustive list of articles and links to websites dedicated to Sunni-Shi'a, or "SuShi", reconciliation, mutual understanding, and intra-faith engagement [124]. This too marks a significant shift in American Muslim attitudes since 9/11. Whereas before 9/11, American Muslims either ignored Sunni-Shi'a issues or assumed sectarianism was not a problem in the United States, post-9/11, American Muslims are acknowledging that this is an important area with increasingly profound consequences for the world community of Muslims [125]. In fact, the sphere of Sunni-Shi'a intra-faith activism may be one field in which American Muslims are leading the way forward internationally. Amid rising tensions between Sunni and Shi'a Muslims in Iraq, Pakistan, Lebanon, Syria and other countries where sectarian violence has spilled over into civil war and attempts at genocide, a group of American Muslim scholars and Imams were convened by ISNA in September 2013 to sign the "Washington Declaration Uniting Shi'ah and Sunni Scholars of North America" [126]. According to one of the signatories, "this declaration rejects all forms of sectarian violence between schools of thought within Islam… It calls for the respect of religious symbols of all sects of Islam… (and) for dialogue between the schools of thought and calls for imams to carry this message of mutual respect to their communities" [127]. ISNA president Mohamed Magid asserted that "ISNA is a platform for the unity of Muslims—whatever brings Muslim together strengthens all of them." Among some of the most active groups of American Muslims in the pre- and post-9/11 efforts to integrate Islam into the mainstream of American psyches and culture have been activist youth programs [128]. The February 2010 Purple Hijab Day was promoted as an annual event where women don purple headscarves to end domestic violence "in our ummah," a reference to the Muslim community [129]. Green Muslims in the District, based in Washington D.C., have evolved from an online blog to a full website where events are coordinated, such as Zero Trash Parties and networking mixers for Muslim green activists to meet and pool efforts [130]. The nationwide Ramadan Fast-a-Thon has quickly developed a positive legacy on campuses across the country. Muslim Student Associations typically organize a day of fasting where non-Muslims are invited to join their Muslim classmates in abstaining from food and water from sunup to sundown and are then welcomed to partake in a special meal to break the fast (iftar) and accompanying prayers. They donate the funds they gather to a charity. Students spend the day in communication and many participants have explained that Fast-a-Thon helped them better relate to Muslims in America and at their universities.10 Other programs established by American Muslims are run by professionals but targeted toward American Muslim youth, such as IMAN's Takin' it to the Streets, Patel's above-mentioned Interfaith Youth Core (IFYC), and the Muslim Public Service Network (MPSN) [131]. More and more Muslim college students are finding creative ways to reach out to their local communities beyond their campuses as well. Georgetown University's Muslim Chaplaincy, one of only 13 such programs in the United States, offered a "Muslim Alternative Spring Break" for the first time in March 2012. After a competitive selection process, 12 Muslim undergraduate students led by their campus Imam traveled to Parkersburg, West Virginia to work with Habitat for Humanity building homes for a family in need. Students spent their entire Spring Break in service working side-by-side in the community. Parkersburg is a city with likely very little to no direct exposure to Islam or Muslims in the recent past. The Georgetown group attended church services in solidarity with the local community and baked cookies for the congregation after the service. The church community broke bread with the Muslim students before the week's end, and they are working to maintain strong ties and possibly return to Parkersburg the following year. Their service was noted by local newspapers and television news media who pointed out that these students willingly came to snowy Parkersburg rather than enjoy a more "traditional" Spring Break [132]. As American Muslims come to define Islam in America, they are also poised to contribute to Islamic scholarship and the training of Imams. In 2008, the Zaytuna Institute, founded in 1996 in Berkeley, California by Muslim "rock stars" Hamza Yusuf, Zaid Shakir, and Hatem Bezian, became Zaytuna College. The college follows an integrated curriculum of Islamic studies, Arabic language, and liberal arts including U.S. history and literature. Its motto is "Where America meets Islam," and its goal is to be accredited by the University of California system—it compares itself to private religiously-based universities founded by American Jews and Christians [133].

--- XT: International Religious Freedom Fails

The government is not equipped to promote Religious freedom diplomatically

Mandaville and Silvestri, 15 – *Peter, Professor in Government & International Affairs at George Mason U and ** Sara, Senior Lecturer in Religion and International Politics at City University London and Director of Research at U of Cambridge ("Integrating Religious Engagement into Diplomacy: Challenges & Opportunities" 1/29/15, Brookings Institution, http://www.brookings.edu/~/media/research/files/papers/2015/01/29-religious-engagement-diplomacy-mandaville-silvestri/issuesingovstudiesmandavillesilvestriefinal.pdf,//BR/)

One final challenge relating to institutional capacity has to do with the structure and relatively short timelines—often two years—that govern diplomatic postings. This is not a new problem, and it is not at all uncommon for Foreign Service officers to complain that such brief tenures make it difficult for diplomats to develop sustained competencies. They arrive in a new position or posting, spend the better part of a year acculturating and getting up to speed, and then deliver at full capacity for only a few months before starting to focus on the next assignment and a new transition. This problem is particularly pronounced when it comes to specialized skill sets such as those required for effective religious engagement. Rather than cultivating institutional memory about how a focus on religion can help to advance the objectives of a particular bureau or overseas post, it is far more common for the departure of a foreign affairs officer competent in religious affairs to create a situation where that office has to start over from scratch when the next designee comes into position. The fact of the matter is, however, that very few Foreign Service officers and other diplomats possess either sufficient understanding of religion or the necessary skillsets to effectively undertake religious engagement. This fact speaks to the need for any serious effort at integrating religion into foreign policy to do more than just create new functionaries or offices with a religious designation. Rather, it is crucial to build an awareness of religion and the many ways it bears on foreign policy and national security objectives into the systems and curricula used for training and preparing professional diplomats.

Structural trends – including restrictions in other countries – prevent effective reform of religious freedoms abroad

George 14 – holds the McCormick Chair in Jurisprudence at Princeton University, founding director of the James Madison Program in American Ideals and Institutions at Princeton University, Vice Chairman of the US Commission on International Religious Freedom (Robert, Foreign Policy Research Institute, "The State Of International Religious Freedom and Why It Matters", November 2014, http://www.fpri.org/articles/2014/11/state-international-religious-freedom-and-why-it-matters, //11)

When it comes to state hostility toward religions, some of these governments, like North Korea or China, are secular tyrannies which consider all religious beliefs as **potential competitors** of state secularist ideology such as Communism. Others, like Iran, Saudi Arabia, and Sudan, are religious tyrannies which **enthrone one religion or religious interpretation over all others**, which they see as rivals to the one they favor. Still others, like Russia, are a hybrid of secular and religious. In North Korea, the government severely represses religious activity, and individuals who defy it are arrested, imprisoned, tortured, or executed. In China, the government continues its persecution of Tibetan Buddhists and Uighur Muslims. To stem the growth of independent Catholic and Protestant groups, Beijing has arrested leaders and shut churches down. There have been reports of officials even going after registered churches, tearing down crosses and church steeples. Members of Falun Gong, as well as those of other groups deemed "evil cults," face long jail terms, forced

renunciations of faith, and torture in detention. In Iran, the government has executed people for "waging war against God," while relentlessly targeting reformers among the Shi'a Muslim majority, as well as religious minorities, including Sunni and Sufi Muslims, Bahai's, and Christians. Pastor Sayeed Abedini remains in prison, and the regime has stirred up anti-Semitism and promoted Holocaust denial. Saudi Arabia completely bans the public expression of religions other than Islam. Not a single church or other non-Muslim house of worship exists in the country. In addition, the Kingdom enthrones its own interpretation of Sunni Islam over all others and has arrested individuals for apostasy, blasphemy, and sorcery. Sudan continues its policy of Islamization and Arabization, imposing Shari'ah law in Muslims and non-Muslims alike, using amputations and floggings for acts of so-called indecency and immorality and arresting Christians for proselytizing. And finally, Russia has a secular government but favors the Moscow Patriarchate of the Russian Orthodox Church while persecuting competitors, such as Jehovah's Witnesses, or those it deems a threat to the state, such as Muslims. Regarding state sponsorship of radical ideology which targets others' religious freedom, Saudi Arabia continues to export its own extremist interpretation of Sunni Islam through textbooks and other literature which teach hatred and even violence toward other religious groups. Regarding state enforcement, Egypt and Pakistan enforce anti-blasphemy or anti-defamation codes, with religious minorities bearing the brunt of the enforcement. And finally, regarding state failure to protect religious freedom, the abysmal record of the governments of Burma, Egypt, Iraq, Nigeria, Pakistan, and Syria exemplifies those of nations which do not protect their citizens against religion-related violence. In Burma, sectarian violence and severe abuses against Christians and Muslims continue with impunity. The plight of the Rohingya Muslims is especially alarming and heartbreaking, as countless numbers are stateless, homeless, and endangered. In Egypt, Cairo has failed repeatedly over time to protect religious minorities, including Coptic Orthodox and other Christians, Baha'is, Shi'a Muslims, and dissident Sunni Muslims from violence or to bring perpetrators to justice. In Iraq, the rise of the so-called "Islamic State" is a major consequence of the government's continued failure to protect the lives and freedoms of non-Muslims minorities such as Christians and Yazidis, as well as Shi'a Muslims and dissenting Sunni Muslims. In Nigeria, as Boko Haram attacks Christians, as well as fellow Muslims, the government continues its failure to prosecute perpetrators of religiously-related violence that has killed more than 14,000 Nigerians, both Christian and Muslim, since the turn of the century. In Pakistan, the government's continued failure to protect Christians, Ahmadis, Shi'a, and Hindus, has created a climate of impunity resulting in further vigilante violence. And in Syria, a civil war triggered at least in part by the Assad regime's refusal to respect human rights and embrace reform has devolved into a sectarian religious conflict. We now have a combination of state tyranny and state failure to protect life and freedom. While the Assad regime targets Sunni Muslims, its terrorist opponents (such as the "Islamic State") are targeting those on all sides, from Sunnis and Alawites to Christians, who oppose their dictates. It is a complete nightmare. THE TOTALITARIAN IMPULSE As we survey this bleak landscape for religious freedom abroad, **we detect a number of unmistakable patterns and trends.** We see the **rise of violent religious extremism**, largely through radical Islamism, and its continued conflicts with the majority of Muslims, as well as with non-Muslim religious minorities**. We see the continued persecution of Christians**—a persecution the sheer size and scope of which is astonishing. And we see the stubborn persistence and in some places revival of anti-Semitism across countries and cultures. Let me offer a few words on these disturbing patterns and trends. It has often been said that radical Islamism and its leaders seek to recover a mythical golden age from a far-distant past. While this is undoubtedly the case, we must also realize that they are also propelled by an inescapably modern—and terrifying—idea. Surfacing in the last century, that idea came to be known as **totalitarianism.** What defines totalitarianism is a series of demands which may be summarized as follows: Give fanatical leaders and movements absolute and permanent authority. Make these leaders and their followers into virtual gods, charged with seizing control of history and transforming humanity itself. Release these leaders and their followers from accountability to any law or institution, belief or custom, and moral norm or precept. Grant these leaders and their followers complete control of every facet of human existence, from outward conduct to the innermost workings of conscience. For the better part of a century, those promoting and exploiting this malignant idea have advanced it by dressing it up in a variety of costumes and by hijacking various ideals and institutions and putting them to work in its cause. In the 1930s and 1940s, it threatened humanity through Nazism and other forms of fascism which exploited the concept of race and the ideology of nationalism. After World War II, totalitarianism posed its greatest threat through Communism, which exploited the concepts of class and class consciousness and highjacked people's strivings for social justice. By the close of the 20th century, these movements had committed every crime under the sun, triggering the deaths of nearly 150 million human beings. They also waged war against the rights and duties of conscience, leaving behind a world where to this day, most people live in countries that are hostile—in many cases deeply hostile—to freedom of religion or belief. Today, that same totalitarian impulse which drove Nazism and Communism has hijacked religion as its latest vehicle, creating radical Islamism. From the "Islamic State" in Iraq and Syria to the extremist mullahs in Iran, and from al Qaeda to the Taliban, these new totalitarians pose similar threats to the world. Displaying utter contempt for the rule of law and for any distinction between combatants and non-combatants in the conduct of war, they target civilians and commit mass torture and murder, precisely as the Nazis and Communists did. Many observers presume that these movements and their leaders simply represent Islam on steroids. Some even claim they represent the "true Islam." I submit to you today that they are mistaken. Granted, the history of nearly every religion—including Islam—contains periods of despotism and bloodshed. Granted, every major religion has had to go through periods of reform or clarification of some of its beliefs and ideas. Granted, as so many Muslim reformers have stated repeatedly, Islam should be no exception. But let us be clear. No civilized religion—certainly no creed in the tradition of ethical

monotheism—including Islam, ever stood in principle, as the Nazis and Communists did, and as the "Islamic State" does today, for what amounts to sheer, unadulterated nihilism—the idea that any and every means—torture, rape, prostitution, drug sales, the slaughter of innocent children and defenseless elderly people, genocide—may be carried out in the cause of regional hegemony and, ultimately, world domination. No world religion ever granted any human being, group, or government the permanent right in principle to flout any rule, break any law, or commit any atrocity at will. In other words, **the struggle we face is not that of one religion against another, nor of religion against humanity**. Rather, it is a struggle that pits lawlessness and tyranny against basic decency and dignity. And in this struggle, reformers must be applauded for their resolute stand not only to reform and clarify from within, but to stand against the hijacking of Islam by those driven by the same impulse that drove the likes of Hitler and Stalin, Mao Zedong and Pol Pot. They must rip away radical Islamism's religious mask – revealing its idolatrous soul before the world. At the hands of violent religious extremists, Christians especially face severe persecution. Ironically, it is in the Middle East, the cradle of Christianity, that both persecution and the flight of the persecuted cloud the future of the world's oldest Christian communities. Unless circumstances change, many are asking whether a graveyard will one day replace the cradle. In Egypt, violence against Coptic Christians reached alarming proportions in recent years. In Iraq, severe violence against Christians, which peaked after Saddam Hussein's fall, has returned with a vengeance. The "Islamic State" is principally to blame for that. Once home to approximately one million Christians, Iraq has half that number today. Many Iraqi Christians sought refuge in Syria, where fellow Christians and Muslims—from Sunnis to Shi'a, including Alawites—once had co-existed peacefully. We all know how that turned out. For Christians, Syria's civil war has been nothing short of calamitous. In Saudi Arabia and Iran, it is mainly the government that severely represses Christians and other religious minorities. And just outside the Middle East, in Pakistan, attacks against Christians are escalating. In September 2013, suicide bombers launched the worst anti-Christian attack in Pakistan's history, assaulting All Saints Church in Peshawar, leaving nearly 100 dead and more than 150 other parishioners wounded. In looking at the plight of Christians, especially those in the Middle East, those who know Jewish history see something hauntingly familiar. Iraq's Jewish community provides a somber example of what the future may hold. Like Iraq's Christians, the Jews were there for a long time—perhaps as many as 20 centuries or even more. As of 1947, the country's Jewish population exceeded 50,000. Today only a handful remain. People professed shock when it was revealed that in 2010, Mohammed Morsi, who was later elected Egypt's president, depicted the Jewish people as "descendants of apes and pigs," whom Egyptian children and grandchildren must be taught to hate "down to the last generation." Yet his comments were no worse than those of Iranian leaders, who denied the Holocaust and allowed state-run media to broadcast anti-Semitic messages and hateful cartoons. Nor are they worse than the lies and defamations against Jews and Judaism that one finds in the media elsewhere in the region, including in Egypt itself. Yet it would be a mistake to say that anti-Semitism is confined to the Middle East. In post-Soviet Russia, skinhead groups commit acts of anti-Semitism in the name of Russian nationalism. In Belarus, the anti-Jewish utterances of President Lukashenko and the state media are accompanied by a failure to identify or punish the vandals of Jewish cemeteries and other property. Even in Western Europe, anti-Semitism has been making a comeback. Since 2000, anti-Jewish graffiti increasingly have appeared in Paris and Berlin, Madrid and Amsterdam, London and Rome, and synagogues have been vandalized or set ablaze in France and Sweden. In Malmo, Sweden, physical attacks fueled a Jewish exodus. In France, according to a report by the security unit of its Jewish community, there were 614 anti-Semitic incidents in 2012, compared to 389 in 2011. Who are the perpetrators of these hateful acts in Europe? Some are neo-Nazis. Others claim to act in the name of Islam. Compounding the problem are four factors. First, **European officials remain reluctant to identify the ideological or religious motivations of perpetrators.** Second, surveys show that anti-Semitic attitudes among Europe's population are shockingly widespread. Third, these surveys confirm that some of this bias manifests itself in harsh and unbalanced criticisms of the state of Israel. While no nation is beyond reproach, when such criticism includes language intended to delegitimize Israel, demonize its people, and apply to it standards to which no other state is held, we must call it what it is—anti-Semitism. Finally, a number of European governments and political parties have **added fuel to the fire by backing restrictions on vital religious expression** such as the donning of religious garb in public or the performance of kosher slaughter and male infant circumcision. They have proposed or enacted similar kinds of restrictions on practitioners of other religions, including Christianity and Islam. France and Belgium, for example, bar students in state schools and government workers from wearing "conspicuous" religious symbols, such as the Muslim headscarf, the Sikh turban, large crosses, and the Jewish yalmulke and Star of David. Sweden, Switzerland, Norway, and Iceland have banned kosher and halal slaughter. In Germany and Sweden, government authorities have told Jewish and Christian parents that they cannot homeschool their children for religious reasons. And government officials in the United Kingdom are forcing Catholic adoption agencies to shut down because they follow the moral criteria of their faith—criteria that are by no means idiosyncratically Catholic—in placing orphaned children in homes that provide a mother and father and not in same-sex headed households. What drives these governments and parties is an attempt to grant secularist ideology dominance in the public square by placing serious restrictions on religious expression or practice. It is an extreme view of state-church separation which seeks to relegate religion to the purely private domain of the home, church, synagogue, mosque, or temple.

IRF fails – leaders who need to convert are already too far gone

Farr, 9 - Thomas F., Professor of Religion and International Affairs – Georgetown's Edmund A. Walsh School of Foreign Service and Director – Berkley Center for Religion, Peace, and World Affairs ("The Future of U.S. International Religious Freedom Policy", Research Gate,//BR/)

The arguments presented above about the value of democracy and religious freedom are highly unlikely to appeal to religious actors who are already radicalized. There is some evidence that a few radicals have experienced "conversions" to more moderate forms of Islam under the influence of reeducation programs performed by authoritarian governments such as Saudi Arabia and Yemen . While such programs may be useful, they are unproven and should not be the primary content of U .S. diplomatic efforts against Islamist terrorism. Those efforts should center on the empowerment of democratic Muslim reformers, speaking from the heart of Islam, rather than relying on the actions of authoritarian governments. Second, Islamist organizations that have engaged in the democratic process, such as Egypt's Muslim Brotherhood or Pakistan's Jamaat-eIslami, contain factions that have historically undertaken violence and terrorism. The radicalism of such groups does not arise solely in reaction to authoritarian regimes; their arguments for extremist measures, including illiberal measures in criminal law, the treatment of women, and the treatment of religious minorities, derive from religious arguments as well. But on balance authoritarian settings exacerbate the violent and radical tendencies of such groups while democratic settings can lead them to be more moderate and peaceful than they otherwise would be. Part of the moderating mechanism is the requirement to submit their religious and political truth claims to public scrutiny and debate. It is by no means inevitable that moderation will result from opening a political environment, but democracy grounded in religious freedom can increase the chances of political and religious moderation. Third, a key obstacle to the employment of IRF policy as a counterterrorism strategy is the arguments made by terrorists themselves, i.e., that U.S. policy is intended to separate Islam from politics and facilitate the operation of American missionaries. Islamist radicals have successfully exploited Muslim familiarity with the French model of managing and marginalizing religion. They have conflated the French and American models, and branded American "freedom" strategy as secular, godless, and anti-Islamic. U.S. IRF policy can overcome these perceptions by communicating, in public and private diplomacy, foreign aid, democracy programs, and Track II efforts, that religious freedom means the right of religious communities to participate in forming the laws and policies of a democratic state. It does not mean the banishment of Islam from public life.

Legitimizing Multilateralism is a prerequisite to solvency

Farr, 9 - Thomas F., Professor of Religion and International Affairs – Georgetown's Edmund A. Walsh School of Foreign Service and Director – Berkley Center for Religion, Peace, and World Affairs ("The Future of U.S. International Religious Freedom Policy", Research Gate,//BR/)

One of the ironies of U .S. IRF policy is that while some critics accuse it of being a peculiarly and unilaterally American crusade, international law has long been abundantly clear in setting robust standards for freedom of religion or belief. Article 18 of the Universal Declaration of Human Rights is unambiguous and remarkably comprehensive in defining these freedoms. The Universal Declaration was adopted by the General Assembly without a single negative vote and to this day is still regarded as the seminal international human rights document. The Universal Declaration's Article 18 is also the source text of subsequent international human rights instruments, notably the International Covenant on Civil and Political Rights (ICCPR), which stipulates that religious freedom cannot be impinged even during war-time. It is listed as one of the ICCPR's "non-derivable" rights. Freedom of religion or belief is reinforced in other human rights declarations and treaties as well, including the UN Declaration on Elimination of all Forms of Intolerance and of Discrimination Based on Religion or Belief, the European Convention for the Protection of Human Rights and Fundamental Freedoms (which established the European Court of Human Rights), the American Convention on Human Rights, the African Charter on Human Rights, and key documents of the Organization for Security and Cooperation in Europe (OSCE) such as the Helsinki Final Act and the Vienna Concluding Document . Furthermore, many of the formal protections for religious freedom in international law and institutions came into being not in spite of American unilateralism but with active American multilateral engagement. Former First Lady Eleanor Roosevelt was the driving force behind the UN's adoption of the Universal Declaration. American diplomats and NGOs were also deeply engaged in other international human rights efforts, such as the ICCPR and the Declaration on Elimination of all Forms of Intolerance and of Discrimination Based on Religion or Belief. American diplomats were likewise key players working to ensure that OSCE documents included language on religious freedom. And

it was the U .S. that introduced the UN resolution creating a Special Rapporteur on Freedom of Religion or Belief. In short, international law has been important to the cause of international religious freedom, and international religious freedom has been important in the development of international human rights law. At least on paper, there is now and has long been widespread international support for freedom of religion or belief. And there are ample precedents of American leadership and cooperation in efforts to include these freedoms in multilateral documents and institutions. Notwithstanding the existence of these international protections for religious freedom on paper, many signatory nations violate religious freedom in practice. Moreover, signatory nations that are not themselves gross violators of religious freedom will often take no meaningful action, either individually or via international law/institutions, in response to gross violators. This problem is, of course, not unique to religious freedom; other human rights are also often ignored in favor of competing national and political interests. The practical weakness of existing international institutions leads some frustrated U .S. policy makers to abandon or neglect multilateral engagement. Indeed, the U .S. can rightly be criticized for inconsistency in its relationship to international human rights. While the U .S. has at times exercised leadership in creating international human rights law, and its rhetoric on the global stage is full of bold statements on human rights, it has not always avoided the temptation to seek exceptions for itself. It has even failed to ratify human rights treaties that its own officials were influential in negotiating. Of course, human rights treaties will never be perfect—some may never warrant U .S. approval, and others may only warrant approval with specific reservations. But the U .S. has not invested deeply and consistently enough in the development of legitimate international institutions capable of enforcing the high ideals of international law. The U .S. needs efficacious international human rights institutions in order to promote genuinely sustainable religious freedom and in order to protect its own interests and reputation. Its lack of investment undermines U .S. credibility when it tries to use its own foreign policy tools (such as those available under IRFA) to influence other nations' human rights records.

Post 9/11 hysteria is fading and the government is learning its wrongdoing - inevitably solving Religious free speech

Awad, 11 – Nihad, target of NSA surveillance, Executive Director and Founder of the Council on American-Islamic Relations ("Muslims and religious freedom in post-9/11 America", San Diego Union Tribune, 9/11/11, http://www.utsandiego.com/news/2011/sep/09/muslims-and-religious-freedom-in-post-911-america/all/,//BR/)

Oddly, in an interview about the CIA-NYPD spying, the FBI's own legal counsel said that sending an informant into a mosque with no evidence of wrongdoing runs "right up against core constitutional rights. You're talking about freedom of religion." In another California case involving spying on Muslims, government lawyers admitted to lying to a federal judge, then justified the deceit on national security grounds. The case involved a routine attempt to obtain government documents using the Freedom of Information Act. Such deception of a judge undermines the checks and balances the founding fathers believed were crucial to preserving our liberty. I am confident that at this point in the debate about Islam in America we have reinforced our nation's commitment to religious freedom. I say this because Muslims – a disliked minority – can still run for president, are able to file lawsuits to challenge discriminatory laws and are still considered adherents of a recognized religion. I say this because the legal and advocacy tools to challenge spying have not been stripped away in a misguided effort to defend America by morphing it into a tyranny. My confidence in American common sense is

reinforced by other facts. Since 9/11, two Muslims have been elected to the U.S. Congress. General revulsion at a Florida pastor's plan to burn a Quran last year was an inspiring reminder that America can both respect free speech and at the same time marginalize bigots. Broad-based pushback against Rep. Peter King's anti-Muslim hearings is another sign that pluralism is alive and well. Our national debate will end when American Muslims no longer have a need to employ legal tools because Islam is seen as equal among many faiths in America's pluralistic society. Until that day, Muslims are honored to be on the cutting edge of the struggle to preserve American religious freedom.

AT: Islamophobia Adv

Terrorism is only the media's mask for a deeper issue – Islamophobia is rooted in a xenophobic concern of a new religion challenging Western culture.

Iqbal, 10 – Professor of Media and Communication Studies at the International Islamic University, Islamabad (Zafar Iqbal, Islamic Studies, Vol. 49, No. 1, "Islamophobia or Islamophobias: Towards Developing a Process Model", Spring 2010, JSTOR, *fc)

The evidence presented above indicates that Islam has been perceived primarily as a contra religio-political force with a great **potential to threaten the West. It appeared to be the 'new enemy' of the West, providing the latter with justification of hoarding ammunitions** and pursuing its designs of expansionism. 'Cultural anomie,'46' opposing cultural ecologies,'47a 'challenge' and 'threat' to the western world,48a 'threat to western security,'49'present terror of the world,' 'the Other,'50 and 'fifth column'51 are some of the labels that have been applied to Islam in the recent past. Strangely, the confusion underlying this contrast between Islam, a religion, and the West, a geographical area, has scarcely been noticed.52

Coming to the contemporary posture of the problem, we find that Islam appeared to be a 'powerful' socio-politico-religious force of the medieval times when other religions were passing through their 'Dark Age.' **This presents a passive-active relationship between the West and Islam which was negatively viewed by Christianity and instead of improving that relationship, the West resorted to jingoistic policies**, which finally resulted in the Crusades- a struggle to balance out dominant socio-politico-religious forces of the time. **The antagonism towards Islam spanning over centuries has led to the emergence of anti-Islamic and anti-Muslim racial and cultural sentiments in contemporary times.** Not long ago, the 'political' or 'active Islam'53 in the Muslim world, especially the Arabian peninsula and Iran, added insult to the injury and cultural and racial prejudices turned into threats from Islam and the Muslims. Thus, Islamophobia is more than mere hostility, or else we would have found it in the former USSR, a home to a large Muslim population, and in India, Thailand, and Malaysia (with a Muslim population almost equal to that of non-Muslims).

It is quite strange that although the racial and cultural prejudices against Islam and Muslims are fairly noticeable, Islam can hardly be found as a threatening 'other' in literature. It was the demise

of communism that gave impetus to the portrayal of these stereotypes in the media. Therefore, communism- a great 'threat' to the West and the rest of the world- was replaced by Islam as a threatening 'other.'54**This seems to be the replacement of one threatening' ideology' with 'another.'** The fact that the contemporary Muslim world is suffering from problems like those of terrorism, subjugation, subversion and animosity substantiate the western notion that Islam and Muslims are 'threatening others.'

Another dimension of the difference between Islam and 'others' rests on the concept of 'race.' 'Race' was a concept in Arabic literature which referred to a lineage of animals, particularly applied to horses, while 'ethnicity' referred to people with common histories, languages, rituals, food, songs, etc.55 Nevertheless, the Spanish literature took 'race' to be synonymous with 'blood' and 'religion.' New terminologies were introduced. People of the newly discovered America were labelled 'mestizo' - mixed blood - , and the mixed breed of Spanish and black as 'mulatto.'56 Thus, while tracking the traces of difference between various segments of humanity in history, we find that not only 'blood' but 'colour' was also thought to be an ingredient of the concept of 'race.'

Islam became a victim of racial prejudice due to its rapid expansion worldwide in a very short span of time. Its erstwhile tendency to grow swiftly **challenged the West theologically, politically and culturally.**57As a result of mass conversions to Islam,58 **the West found it easier to demonize this religion and its followers than to take up the challenge to understand it.**59 Islam and Muslims were thus labelled with demonizing racial stereotypes meant to arouse hatred towards them. The long stretched' Crusades' further aggravated the situation and institutionalized the racial prejudice between 'us and them.' Today, these prejudices, having historical reasons, and the growing unrest and rise of 'jihadt' movements across the Muslim world, are responsible for augmenting the process. Hence, new terminologies have been constructed for the historic differences which seem to continue apace. Thy name is Islamophobia.

Government policy alone can't solve – Islamophobia is too deeply engrained in a history of religious conflict.

Iqbal, 10 – Professor of Media and Communication Studies at the International Islamic University, Islamabad (Zafar Iqbal, Islamic Studies, Vol. 49, No. 1, "Islamophobia or Islamophobias: Towards Developing a Process Model", Spring 2010, JSTOR, *fc)

Intolerance towards other religions or doctrines is universal and perhaps as old as humanity itself. The worst of its manifestations have been the wars spanning over centuries- crusades, genocides and deep rooted hostility on the basis of religious identities. Islam, at the time of its emergence in history, faced severe opposition since some quarters represented it as a **'problem'**6 **to the world.**7 This negative representation of Islam has marked the human history especially that of last 14 centuries by mutual hostilities despite the affinity that could bind Muslims, Christians and Jews the as 'people of the book,' as Prince of Wales rightly pointed out during his speech at the Oxford Centre for Islamic Studies on 27 October 1993.8

The Byzantine Christians, Greek monks and the Church establishment, threatened by the rapid spread of Islam from Arabia to its close and remote neighbours, started an obdurate campaign of slander and vilification against Islam, depicting it as a mere "apostasy"9 and a sort of "barbaric paganism."10 The foundation of this antagonism against Islam was articulated in the early Islamic period mainly by John of Damascus (676-749), a Christian scholar of the Umayyad

period, by declaring Islam to be a "pagan cult," and heaping derogations on the Prophet (peace be on him).11 For long, his writings and accusations remained the major source of the writings against Islam.

In addition to Christian scholars, the church elders regarded Islam as evil and "absolutely alien to God."12 Alexander Gainem, a freelance journalist, also observes that the campaign to reject Islam and Muslims touched its peak in Dante Alighieri's Divine Comedy.13 Dante Alighiri (1265-1321) was an Italian poet, known as "the Supreme Poet,"14 and his work is one of the masterpieces in the Italian language, in fact, Western literature as a whole. Hence, his views had a strong impact on the European attitude to Islam.

Some religious stalwarts in 14th century also saw Islam as a "theological heresy" at the level of morals and practice.15A round this period, the Council of Vienna met between 1311 and 1312, 16 declaring that Muslims could not be converted or persuaded and thus an academic onslaught should be initiated against them.17 The Qur'an was also subjected to criticism in the meetings of the Council.

Early 15th century witnessed further hostility towards Islam and Muslims when the controversial painting 'The Last Judgment'18 by Giovanni Da Modena (c. 1409-c. 1455) was displayed in Italy. It attacked the Prophet (peace be on him), thereby further widening the already existing gulf between Islam and Christianity.

The sensitivity of the issue was further aggravated by the introduction of the concept of La Raza in the 15th century. La Raza was a campaign to create a 'mix' of conflicting races. The 'mix' was desired to be different in its outlook, having prominent attributes of the dominant cultures, but, with least cultural incompatibility. José Vasconselos (1882-1959) in his work titled La Raza Cósmica 19 attempted to trace the historical outline of the phenomenon from 15th century and hoped it to be the 'Fifth Race'20- an acceptable blend of all human races irrespective of colour, creed and caste in order to develop a new civilization, ' Universópoli.s'2 1 Referring to La Raza, an American scholar has suggested that the efforts in this regard emerged from Spain where the existence of races seemed more consciously observable. He adds that even Columbus's voyage to America was racially biased since the salves he brought with him were mostly Muslims.22

Another's important name in the history of the Christian version of Islamophobia is that of Humphrey Prideaux, who saw the emergence of Islam as a part of God's inscrutable purposes: i.e. as a punishment for the sins of Christians.23 He took the establishment of the Muslim continental rule as a scourge to Christians and expected it to continue till they mend themselves. Some of his contemporaries like Peter Heylyn (1599-1662) in his work Cosmographie1a4n d Alexander Ross25 (c. 1590-1654) in Pansebeia were grossly illogical in condemning a religion with a large body of followers. Following in the footsteps, Broughton's Dictionary of All Religions (1745) categorized the world religions into 'true religions' (Christianity and Judaism) and 'false religions' (all others).26

The same attitude towards Islam prevailed during the 19th and 20th centuries. J. Alley published Vindicia Christiana attacking Islam, Hinduism and other religions on grounds of being "perpetual falsehood, pernicious and extravagant."27 The Balkan War of 1912-1913 was depicted, mainly by the British press, as a 'Crusade against Islam.'28 More recent web bloggers and literary artifacts like The House of Apostasy keep the door open for hurling blasphemy and libel at Muslims as 'intellectually weak' and as people who 'enjoy killing.'29 William Miller says, "Islam is Satan's most brilliant and effective invention for leading men astray,"30 and John Laffin

condemns the "Islamic" concept of "holy war" and stresses that the treaties with infidels be broken.31 Of course, Salman Rushdie and Taslima Nasrin are just recent manifestations of indignation against Islam and Muslims;32 nevertheless, media contributed substantially to making their works world famous.

Analysis of the media is necessary to deconstruct Islamophobia – constant portrayals of Muslims as foreign and violent negatively shape people's understandings.

Iqbal, 10 – Professor of Media and Communication Studies at the International Islamic University, Islamabad (Zafar Iqbal, Islamic Studies, Vol. 49, No. 1, "Islamophobia or Islamophobias: Towards Developing a Process Model", Spring 2010, JSTOR, *fc)

In the present days Islamophobia appears to be a heavily mediated construct. Hence, **it is pertinent to observe the involvement of media in the process of constructing it.** This is thanks to the power of the media in **conveying, explaining and articulating specific discourses that help represent or misrepresent a social group or minority.**2 Media critics argue that media misrepresentation has been influential in the spread of Islamophobia in the West.3 Media develop stereotypes by framing the attributes of a community or individual more often in a systematic way. The Australian experience shows that media portrayed Muslims as alien and foreign to the Western society,4 as a "backward, uneducated, vulgar, violent"5 community which consequently strained the relations between Muslims and other Australians. Thus, while discussing and explaining Islamophobia, we shall also dwell on the media's role in framing the Muslims and Islam for it shapes the way people understand them, eventually generating Islamophobia or Islamophilia as a process of binary schematization.

1nc Judicial Independence Adv

Partisan judicial appointments make judicial independence impossible

King 7 — Carolyn Dineen King, Circuit Judge, United States Court of Appeals for the Fifth Circuit, 2007 (CHALLENGES TO JUDICIAL INDEPENDENCE AND THE RULE OF LAW: A PERSPECTIVE FROM THE CIRCUIT COURTS, Marquette Law Review, Summer, Vol. 90, No. 4, http://scholarship.law.marquette.edu/cgi/viewcontent.cgi?article=1072&context=mulr)

Instead, the Supreme Court generally takes cases where the law is unclear or in need of further development or where the circuits are in conflict. What this means is that the intermediate federal appellate courts are the courts of the last resort for all but the handful of cases that the Supreme Court will agree to hear. It is precisely that fact that has resulted in the politicization of the intermediate federal appellate court appointment process. Political and issue activists understand only too well that ideologically committed judges on these benches can make an **enormous difference** in the outcomes of **hundreds of cases each year**. Too, it would be a mistake to think that ideologically committed judges affect the outcomes only in cases that involve the so-called hot button issues: the civil rights of racial and ethnic minorities and women; abortion; the rights of criminal defendants; the death penalty; and states' rights (or the proper balance of power between federal and state governments). My own observations suggest that these judges cast a much wider net. They have strong views on plaintiffs' jury verdicts, especially (but not only)

large ones; on class actions; on a wide range of federal statutes imposing burdens on corporate defendants; on religion in schools and in public areas; and on and on.

If candidates for the presidency of both parties continue, as they have now for decades, to energize issue activists within or allied with their parties by promising the appointment of judges who will pursue the respective political and ideological agendas of those parties in their decisions, then **judicial independence will continue to be severely threatened**, and with it the rule of law in the United States. The Washington Post, in a 2005 editorial, captured the imminence of the threat:

The war [over Justice O'Connor's successor] is about money and fundraising as much as it is about jurisprudence and the judicial function. It elevates partisanship and political rhetoric over any serious discussion of law. In the long run, the war over the courts—which teaches both judges and the public at large to view the courts simply as political institutions—threatens judicial independence and the integrity of American justice."8

Judiciary will never be legitimate as long as financing and elections are common practice

Sarokin 14—retired federal judge--(08/07/2014, Judge H. Lee, "For Sale -- Going Fast: An Independent Judiciary -- Buy a Judge Today," Huffington Post, http://www.huffingtonpost.com/judge-h-lee-sarokin/judicial-elections_b_5655959.html) . WM

According to the New York Times the retention election of three Tennessee judges "has been preceded by an expensive and acrimonious campaign bolstered by organizations like Americans for Prosperity, which receives financial support from the billionaires Charles G. and David Koch and other conservative groups". Those supporting retention of the judges have been compelled to raise "more than $1 million" to combat the effort to defeat them. Could there be anything more unseemly or contrary to the purposes for which the judiciary was established?

I do not doubt that there are persons out there (and even corporations now) who contribute to judicial campaigns for the purpose of electing or retaining judges who are fair, competent and impartial and who will carry out the applicable laws and enforce the state and federal constitutions. Then there are the other 99 percent who wish to influence particular matters or judicial philosophy in general. Judges are not and were never intended to be elected representatives. I cringe at the constant contention that judges should be held "accountable". They are accountable to the laws and the Constitution. They should not be subject to the whim of those who find certain past rulings objectionable or seek to influence future ones by buying elections. Nothing could weaken the independence of the judiciary more than having judges removed or not re-elected because of prior decisions that they have made.

The whole concept of judicial independence is that judges should feel to rule as they deem correct without fear of retaliation. Nor should judges undertake the position with some feeling that they are indebted to those who have financed their election. Per the Times: "The Republican State Leadership Committee, a national group, plans to spend at least $5 million on judicial races this year." Why? Because they want to influence future judicial decisions.

Let's face it -- this movement is exclusively a conservative one. Conservatives own it. Judges are to be ousted for "liberal" rulings like upholding same-sex marriage, ordering new trials in death penalty cases or generally ruling in favor of persons charged with crimes -- stuff like upholding

the Constitution. Judicial elections are degrading. Voters do not know whether or not the candidates are qualified. And finally money has further corrupted the process. I have said on prior occasions: Can you imagine a lawyer or a litigant walking up to a judge in the middle of a trial and handing the judge a check for his or her campaign? Would it make any difference if the check was delivered a week before? And isn't it even worse now that the big boys are coming in with even bigger checks?

We should end judicial elections entirely, but until we do, we must find a way to limit the corrupting influence of money in the election process and stop putting the judiciary up for sale.

No modelling --- Supreme Court losing international influence

Liptak 08 (Adam, Supreme Court correspondent for NYT. "U.S. Supreme Court's global influence is waning," NYT. 9/17/2008.
http://www.nytimes.com/2008/09/17/world/americas/17iht18legal.16249317.html?pagewanted=all&_r=0)//CB

But now American legal influence is waning. Even as a debate continues in the court over whether its decisions should ever cite foreign law, a diminishing number of foreign courts seem to pay attention to the writings of American justices."One of our great exports used to be constitutional law," said Anne-Marie Slaughter, the dean of the Woodrow Wilson School of Public and International Affairs at Princeton. "We are losing one of the greatest bully pulpits we have ever had."

From 1990 through 2002, for instance, the Canadian Supreme Court cited decisions of the United States Supreme Court about a dozen times a year, an analysis by The New York Times found. In the six years since, the annual citation rate has fallen by more than half, to about five.

Australian state supreme courts cited American decisions 208 times in 1995, according to a recent study by Russell Smyth, an Australian economist. By 2005, the number had fallen to 72.

The story is similar around the globe, legal experts say, particularly in cases involving human rights. These days, foreign courts in developed democracies often cite the rulings of the European Court of Human Rights in cases concerning equality, liberty and prohibitions against cruel treatment, said Harold Hongju Koh, the dean of the Yale Law School. In those areas, Dean Koh said, "they tend not to look to the rulings of the U.S. Supreme Court."

The rise of new and sophisticated constitutional courts elsewhere is one reason for the Supreme Court's fading influence, legal experts said. The new courts are, moreover, generally more liberal that the Rehnquist and Roberts courts and for that reason more inclined to cite one another.

Another reason is the diminished reputation of the United States in some parts of the world, which experts here and abroad said is in part a consequence of the Bush administration's unpopularity abroad. Foreign courts are less apt to justify their decisions with citations to cases from a nation unpopular with their domestic audience.

"It's not surprising, given our foreign policy in the last decade or so, that American influence should be declining," said Thomas Ginsburg, who teaches comparative and international law at the University of Chicago.The adamant opposition of some Supreme Court justices to the citation of foreign law in their own opinions also plays a role, some foreign judges say

"Most justices of the United States Supreme Court do not cite foreign case law in their judgments," Aharon Barak, then the chief justice of the Supreme Court of Israel, wrote in the Harvard Law Review in 2002. "They fail to make use of an important source of inspiration, one that enriches legal thinking, makes law more creative, and strengthens the democratic ties and foundations of different legal systems."

Partly as a consequence, Chief Justice Barak wrote, the United States Supreme Court "is losing the central role it once had among courts in modern democracies."

Justice Michael Kirby of the High Court of Australia said that his court no longer confines itself to considering English, Canadian and American law. "Now we will take information from the Supreme Court of India, or the Court of Appeal of New Zealand, or the Constitutional Court of South Africa," he said in an interview published in 2001 in The Green Bag, a legal journal. "America" he added, "is in danger of becoming something of a legal backwater."

Independent judiciaries continue to apply state corruption in rulings—judge selection.

Gibler and Randazzo 11. (Douglas, professor of political science at University of Alabama. Kirk, assistant professor of political science at University of South Carolina. "Testing the Effects of Independent Judiciaries on the Likelihood of Democratic Backsliding," American Journal of Political Science. Vol. 55, No. 3. July 2011. JSTOR.)//CB

The difficulties of establishing judicial independence have led some to argue that courts only reflect elite interests. Tsebelis (2002), for example, argues that courts almost never constitute a separate veto player within a polity. Judicial-selection procedures in most countries practically guarantee that courts will fail to provide new constraints on the policymaking process. Only when other political actors take extreme positions or when a new issue, not related to judicial selection, comes before the court can the judiciary pose an effective veto. This is why judicial independence does not necessarily lead to higher rates of judicial annulment (Burbank, Friedman, and Goldberg 2002). This is also why institutionalization of the courts matters as newly independent courts will tend to reflect executive and/or legislative policy preferences on most issues (Epstein, Knight, and Shvetsova 2001). Nevertheless, the attention other political actors devote to the courts suggests that judicial institutions can matter. Yeltsin was concerned enough with the Russian constitutional court to dismiss it entirely, as was Argentina's military regime in 1976 and its democratic regime in 1983. These rulers understand that even courts lacking judicial independence can provide increased legitimacy for the dominant position of other political actors (Larkins 1998.)

Political intimidation undermines judicial independence — empirics

Dinh 7 — Viet D. Dinh, Professor of Law, Georgetown University Law Center; A.B., J.D., Harvard University, 2007 (Threats to Judicial Independence, Real and Imagined, Georgetown Law Journal, Vol. 95, http://georgetownlawjournal.org/files/pdf/95-4/dinh.pdf)

B. THREATS OF IMPEACHMENT AND POLITICAL INTIMIDATION

Criticism of judges by politicians is not new, either, but its frequency has picked up in recent decades. While virtually everyone agrees that federal judges may be impeached if they commit crimes31, in the modern era, threats of impeachment often follow unpopular rulings. In 1996, Judge Harold Baer, a federal district judge in New York, ordered the suppression of evidence found during a traffic stop in New York City's Washington Heights neighborhood. The judge reasoned that, in that neighborhood, it was reasonable for people to fear the police and so the defendants' running did not give the officers a reasonable basis for searching the car. 32 Judge Baer's ruling was immediately denounced, and by members of both political parties. The Clinton Administration called for the judge's resignation, while some congressional Republicans proposed impeachment.33 **Several weeks later, Judge Baer reconsidered the case and reversed his prior ruling**.34

More recently, former House Majority Leader Tom DeLay advocated impeachment investigations of several sitting judges such that Congress could be "a check on the court system."35 The House Judiciary Committee has considered creating an office of inspector general for the Judiciary to investigate allegations of judicial misconduct.36 The goal of such proceedings is not necessarily to actually remove the judges from the bench. Rather, **threats of impeachment can serve as a tool of intimidation**, having a chilli**ng effect** that encourages judges to look over their shoulders when deciding cases.

The desire for decisional accountability in the judge selection process undermines judicial independence

Geyh 8 — Charles G. Geyh, Professor of Law at University of Indiana, J.D. at University of Wisconsin School of Law, 2008 (The Endless Judicial Selection Debate and Why It Matters for Judicial Independence, THE GEORGETOWN JOURNAL OF LEGAL ETHICS, Vol. 21, http://www.repository.law.indiana.edu/cgi/viewcontent.cgi?article=1052&context=facpub)

V. CONCLUSION

In our existing legal structure, states lay claim to having independent judiciaries, whose judges take oaths to uphold the law. They have codes of judicial conduct that direct judges, on pain of discipline and removal, to follow the law and resist public and political pressure to do otherwise. And they require judges in all courts of general jurisdiction to have training and experience in the law, because unlike legislators and governors who make or execute the law, judges who interpret the law must possess special expertise that non-lawyers lack. These features of the legal structure are compatible with judicial elections as originally conceived. As originally envisioned, contested elections were to promote judicial independence and the rule of law by transferring control of judicial selection from manipulative governors and legislatures to the people, and were to promote behavioral accountability by weeding out the incompetent, the lazy and the corrupt.

In the new world order, however, the primary justification for contested judicial elections has moved from preserving judicial independence and behavioral accountability to promoting **decisional accountability** by subjecting judges to loss of tenure for making decisions unpopular with the electorate. This new justification is fundamentally incompatible with the principles that underlie the existing legal structure. It assumes either that average voters are able to review judicial decisions for themselves and intelligently second guess a judge's interpretations of law, or that the decisions judges make are matters of public policy rather than law, which voters have a

right to control. The first assumption is at odds with the notion embedded in state law, that intelligently interpreting the law requires judges who have years of legal training and expertise that non-lawyers lack. The second assumption—that judges simply make policy masquerading as law—guts the rule of law altogether and de-legitimizes constitutional structures and codes of conduct that preserve judicial independence.

Judges are paid off-alt cause to judicial legitimacy

Zelden 13 --- professor of history at Nova Southeastern University in Fort Lauderdale, Florida (June 2013, Charles L. Reviews in American History, "The Many Faces of Judicial Independence", Volume 41, Number 2, Project Muse)//Jmoney

In the last decade, the cost of running for judicial office in America has exploded, doubling to over $200-million nationwide. With each election cycle, running for judicial office has only grown costlier, as ever-larger amounts of money are raised, and then spent, to elect state judges. As the cost of running for judicial office has grown, so too have charges of vote-buying and undue influence.

Most infamous in this regard was the 2002 Supreme Court election in West Virginia, where the CEO of Massey Energy, a coal company facing a fifty-million–dollar verdict for illegal and fraudulent business practices, spent three-million dollars in support of a successful judicial campaign by Brent Benjamin for a seat on that court. In turn, Benjamin proved to be the deciding vote in overturning the fifty-million–dollar jury award in 2007. When the case was appealed to the U.S. Supreme Court, a five-to-four majority of the Justices overturned the West Virginia Supreme Court's decision and returned the case to the lower court for further proceedings; in so doing, the Justices addressed the dangers that funding support for judicial candidates could pose. "There is a serious risk of actual bias," noted Justice Anthony Kennedy for the majority, "when a person with a personal stake in a particular case had a significant and disproportionate influence in placing the judge on the case by raising funds . . . when the case was pending or imminent." Where this was the case, the majority ruled, elected judges were supposed to recuse themselves from the proceedings.1

Yet despite the Supreme Court's words of warning, the West Virginia example is but one among many cases in which those with personal or ideological interests before the courts have given significant financial support to judicial candidates—and those candidates later ruled in favor of their financial backers. Such examples have become so numerous, in fact, that many ask if justice is for sale in America—or, as Andrew Rosenthal of the New York Times put it: does America have "The Best Courts Money Can Buy"?2 For too many [End Page 356] Americans, the answer to this question is a resounding "yes." As former U.S. Supreme Court Justice Sandra Day O'Connor noted in 2010, the unchecked role of money in judicial elections has produced a "crisis of confidence in the impartiality of the judiciary," undermining faith in "the rule of law that the courts are supposed to uphold." Her solution, one advocated by many others, is to take the partisanship out of judicial elections, either by adopting judicial appointment with retention elections as the means of choosing judges or by publicly funding judicial races.3

Political interference undermines independence --- lifetime appointment doesn't solve for corruption

Zelden 13 --- professor of history at Nova Southeastern University in Fort Lauderdale, Florida (June 2013, Charles L. Reviews in American History, "The Many Faces of Judicial Independence", Volume 41, Number 2, Project Muse)//Jmoney

Lifetime appointment did not fully isolate the judiciary from political interference, however. As the nation's politics evolved into a tug-of-war between competing political parties, judicial rulings inevitably came to have political consequences. Viewed in this light, the power of judicial review, articulated at various points during the 1790s and famously asserted in 1803's Marbury v. Madison, became a two-edged sword for the courts. Whereas judicial review gave judges the capacity to affect the direction and scope of government policies and actions, it also inevitably put judges into conflict with the popularly elected branches of government. This conflict was potentially catastrophic for the courts, Shugerman argues. Though the implementation of lifetime appointment "took very significant steps toward an independent judiciary, there still were plenty of ways to change, challenge, or undermine the . . . courts" (p. 22). Angry politicians could punish assertive judges by "sweeping them off the bench or [by] abolishing their jobs" (p. 31). After 1800, state legislatures also shortened judicial tenures from lifetime to term appointments varying[End Page 358] in length from seven years to no term at all (known as "at pleasure" tenure). The result was that appointed judges needed to be very careful in the application of their powers of judicial review—"announcing the theory of judicial review . . . but often refus[ing] to put this theory into practice" in the face of political pressures. The consequence, Shugerman argues, was that, although many landmark judicial rulings during the Early Republic pushed the theory of judicial review, they refused to apply these powers in practical ways. In other words, as Shugerman puts it, judicial review in the Early Republic was "more paper than practice, more bark than bite" (p. 9).

--- XT: No Modelling

Other countries are gaining more influence than the US due to its conservative nature and lack of judicial activism

Liptak, 08- Adam Liptak is the Supreme Court correspondent of The New York Times

(9/17/08, Adam Liptak, "U.S. Court Is Now Guiding Fewer Nations", http://www.nytimes.com/2008/09/18/us/18legal.html?pagewanted=all&_r=0)//Yak

The trend abroad, moreover, is toward decisions of a distinctly liberal sort in areas like the death penalty and gay rights. "What we have had in the last 20 or 30 years," Professor Fried said, "is an enormous coup d'état on the part of judiciaries everywhere — the European Court of Human Rights, Canada, South Africa, Israel." In terms of judicial activism, he said, "they've lapped us."

American Foundations

The rightward shift of the Supreme Court may partly account for its diminished influence. Twenty years ago, said Anthony Lester, a British barrister, the landmark decisions of the court

were "studied with as much attention in New Delhi or Strasbourg as they are in Washington, D.C."

That is partly because the foundational legal documents of many of the world's leading democracies are of quite recent vintage. The Indian Constitution was adopted in 1949, the Canadian Charter of Rights and Freedoms in 1982, the New Zealand Bill of Rights in 1990 and the South African Constitution in 1996. All drew on American constitutional principles.

Particularly at first, courts in those nations relied on the constitutional jurisprudence of the United States Supreme Court, both because it was relevant and because it was the essentially the only game in town. But as constitutional courts around the world developed their own bodies of precedent and started an international judicial conversation, American influence has dropped.

Judge Guido Calabresi of the federal appeals court in New York, a former dean of Yale Law School, has advocated continued participation in that international judicial conversation.

"Since World War II, many countries have adopted forms of judicial review, which — though different from ours in many particulars — unmistakably draw their origin and inspiration from American constitutional theory and practice," he wrote in a 1995 concurrence that cited the German and Italian constitutional courts.

"These countries are our 'constitutional offspring,' " Judge Calabresi wrote, "and how they have dealt with problems analogous to ours can be very useful to us when we face difficult constitutional issues. Wise parents do not hesitate to learn from their children." (Judge Calabresi is Professor Calabresi's uncle.)

The openness of some legal systems to foreign law is reflected in their constitutions. The South African Constitution, for instance, says that courts interpreting its bill of rights "must consider international law" and "may consider foreign law." The constitutions of India and Spain have similar provisions.

Many legal scholars singled out the Canadian Supreme Court and the Constitutional Court of South Africa as increasingly influential.

"In part, their influence may spring from the simple fact they are not American," Dean Slaughter wrote in a 2005 essay, "which renders their reasoning more politically palatable to domestic audience in an era of extraordinary U.S. military, political, economic and cultural power and accompanying resentments."

Frederick Schauer, a law professor at the University of Virginia, wrote in a 2000 essay that the Canadian Supreme Court had been particularly influential because "Canada, unlike the United States, is seen as reflecting an emerging international consensus rather than existing as an outlier."

In New Zealand, for instance, Canadian decisions were cited far more often than those of any other nation from 1990 to 2006 in civil rights cases, according to a recent study in The Otago Law Review in Dunedin, New Zealand.

"As Canada's judges are, by most accounts, the most judicially activist in the common-law world — the most willing to second-guess the decisions of the elected legislatures — reliance on Canadian precedents will worry some and delight others," the study's authors wrote.

American precedents were cited about half as often as Canadian ones. “It is surprising,” the authors wrote, “that American cases are not cited more often, since the United States Bill of Rights precedents can be found on just about any rights issue that comes up.”

--- Argentina Answer

Judicial reform fails --- empirical example

Mander 06 (Feb 21, 2006, Benedict Mander is Southern Cone correspondent for the Financial Times, “Argentina move 'will undermine the judiciary',” The Financial Times, http://www.laits.utexas.edu/lawdem/unit07/index.html)

Argentina's lower house of Congress is expected to pass on Wednesday key reforms to the judicial council that critics fear will "seriously undermine" the independence of the judiciary and fail to promote the appointment of good judges.

Already approved by the Senate, the proposed reforms to the judicial council, which is responsible for the appointment and dismissal of judges, will reduce its size from 20 to 13 members, with the intention of enhancing its efficiency and transparency.

But the relative weighting of political representatives on the council will be increased significantly, falling from nine to seven members, while independent members; represented by judges, lawyers and academics; will fall from 11 to six.

"The government will end up with a remarkable power of veto, which is very serious indeed. The council will become pointless," said Daniel Sabsay, a constitutional lawyer, explaining that five of the seven political representatives would be from the ruling party.

With a two-thirds majority required to approve appointments and dismissals, the government will effectively be able to block decisions with which it disagrees. "**There are serious risks for the independence of the judiciary**, which is absolutely shameful," Mr Sabsay said. Opponents of the reforms also worry they will fail to promote the necessary conditions to attract the best applicants. This is one of the few issues to unify what has otherwise been a deeply fragmented opposition, which political analysts say has little chance of defeating President Néstor Kirchner in the elections in 2007; so long as the economy remains healthy until then.

Agustín Rossi, the president of Mr Kirchner's party, Frente para la Victoria, said: "We are convinced that this is just an attempt by the opposition to stigmatise the government."

He argues that criticisms from lawyers and academics are self-interested and designed to preserve their own influence.

Mr Rossi points to reforms made shortly after Mr Kirchner became president which overhauled the mechanism for selecting the Supreme Court's judges, placing limits on the president's power while giving way to a more participatory selection process.

But non-partisan groups such as New York-based Human Rights Watch have also criticised this list of reforms.

In an open letter to Mr Kirchner, the organisation said the reforms would "jeopardise the constitutional principles on which the council is based and seriously undermine the progress that Argentina has made under this government in consolidating judicial independence and the rule of law".

Ricardo Gil Lavedra, a lawyer and former justice minister, said: "Argentina maintains a façade of the state of law but in practice there is a great disequilibrium." Against a comfortable majority in the Senate, the judiciary is an important check on the executive's power, he argues.

Mr Gil Lavedra is concerned about what he sees as the president's increasingly authoritarian style, made possible by the popularity he has gained from Argentina's impressive recovery since its debt crisis four years ago. Mr Kirchner has never held a cabinet meeting. "He is his own economy minister, his own foreign minister," Mr Gil Lavedra said.

Observers say the independence of institutions in general; not just the judiciary; is weakening, with the media and the central bank often cited as examples. "Kirchner is trying to take control [by himself] and he has been very successful," said Ricardo López Murphy, one of the main opposition candidates and leader of the Recrear party, who came third in the 2003 presidential election.

--- States Secrets Privilege Answers

Government secrets are here to stay

--can't change bureaucracies

--double government

--American people think of the political system wrong

Smith '14 --- contributing writer citing Tuft's University Michael Glennon (Jordan Michael, "Vote all you want. The secret government won't change," The Boston Globe, 10/19/14, https://www.bostonglobe.com/ideas/2014/10/18/vote-all-you-want-the-secret-government-won-change/jVSkXrENQlu8vNcBfMn9sL/story.html)//Mnush

THE VOTERS WHO put Barack Obama in office expected some big changes. From the NSA's warrantless wiretapping to Guantanamo Bay to the Patriot Act, candidate Obama was a defender of civil liberties and privacy, promising a dramatically different approach from his predecessor. But six years into his administration, the Obama version of national security looks almost indistinguishable from the one he inherited. Guantanamo Bay remains open. The NSA has, if anything, become more aggressive in monitoring Americans. Drone strikes have escalated. Most recently it was reported that the same president who won a Nobel Prize in part for promoting nuclear disarmament is spending up to $1 trillion modernizing and revitalizing America's nuclear weapons. Why did the face in the Oval Office change but the policies remain the same? Critics tend to focus on Obama himself, a leader who perhaps has shifted with politics to take a harder line. But Tufts University political scientist Michael J. Glennon has a more pessimistic answer: Obama couldn't have changed policies much even if he tried. **Though it's a bedrock American principle that citizens can steer their own government by electing new officials, Glennon suggests that in practice, much of our government no longer works that way.** In a new book, "National Security and Double Government," he catalogs the ways that the defense and national security apparatus is effectively self-governing, with virtually no accountability, transparency, or checks and balances of any kind. He uses the term "double government": There's the one we elect, and then there's the one behind it, steering huge swaths of policy almost unchecked. Elected officials end up serving as mere cover for the real decisions made by the bureaucracy. Glennon cites the example of Obama and his team being shocked and angry to discover upon taking office that the military gave them

only two options for the war in Afghanistan: The United States could add more troops, or the United States could add a lot more troops. Hemmed in, Obama added 30,000 more troops. (Advertisement omitted) Glennon's critique sounds like an outsider's take, even a radical one. In fact, he is the quintessential insider: He was legal counsel to the Senate Foreign Relations Committee and a consultant to various congressional committees, as well as to the State Department. "National Security and Double Government" comes favorably blurbed by former members of the Defense Department, State Department, White House, and even the CIA. And he's not a conspiracy theorist: Rather, he sees the problem as one of "smart, hard-working, public-spirited people acting in good faith who are responding to systemic incentives"—without any meaningful oversight to rein them in. How exactly has double government taken hold? And what can be done about it? Glennon spoke with Ideas from his office at Tufts' Fletcher School of Law and Diplomacy. This interview has been condensed and edited. IDEAS: Where does the term "double government" come from? GLENNON:It comes from Walter Bagehot's famous theory, unveiled in the 1860s. Bagehot was the scholar who presided over the birth of the Economist magazine—they still have a column named after him. Bagehot tried to explain in his book "The English Constitution" how the British government worked. He suggested that there are two sets of institutions. There are the "dignified institutions," the monarchy and the House of Lords, which people erroneously believed ran the government. But he suggested that there was in reality a second set of institutions, which he referred to as the "efficient institutions," that actually set governmental policy. And those were the House of Commons, the prime minister, and the British cabinet. IDEAS: What evidence exists for saying America has a double government? GLENNON:I was curious why a president such as Barack Obama would embrace the very same national security and counterterrorism policies that he campaigned eloquently against. Why would that president continue those same policies in case after case after case? I initially wrote it based on my own experience and personal knowledge and conversations with dozens of individuals in the military, law enforcement, and intelligence agencies of our government, as well as, of course, officeholders on Capitol Hill and in the courts. And the documented evidence in the book is substantial—there are 800 footnotes in the book. IDEAS: Why would policy makers hand over the national-security keys to unelected officials? GLENNON: It hasn't been a conscious decision....Members of Congress are generalists and need to defer to experts within the national security realm, as elsewhere. They are particularly concerned about being caught out on a limb having made a wrong judgment about national security and tend, therefore, to defer to experts, who tend to exaggerate threats. The courts similarly tend to defer to the expertise of the network that defines national security policy. **The presidency itself is not a top-down institution, as many people in the public believe, headed by a president who gives orders and causes the bureaucracy to click its heels and salute.** National security policy actually bubbles up from within the bureaucracy. Many of the more controversial policies, from the mining of Nicaragua's harbors to the NSA surveillance program, originated within the bureaucracy. John Kerry was not exaggerating when he said that some of those programs are "on autopilot." IDEAS: Isn't this just another way of saying that big bureaucracies are difficult to change? GLENNON: It's much more serious than that. These particular bureaucracies don't set truck widths or determine railroad freight rates. They make nerve-center security decisions that in a democracy can be irreversible, that can close down the marketplace of ideas, and can result in some very dire consequences. IDEAS: Couldn't Obama's national-security decisions just result from the difference in vantage point between being a campaigner and being the commander-in-chief, responsible for 320 million lives? GLENNON: There is an element of what you described. There is not only one explanation or one cause for the amazing continuity of American national security policy. But obviously there is something else going on when policy after policy after policy all continue virtually the same way that they were in the George W. Bush administration. IDEAS: This isn't how we're taught to think of the American political system. GLENNON: I think the American people are deluded, as Bagehot explained about the British population, that the institutions that provide the public face actually set American national security policy. They believe that when they vote for a president or member of Congress or succeed in bringing a case before the courts, that policy is going to change. Now, there are many counter-examples in which these branches do affect policy, as Bagehot predicted there would be. But the larger picture is still true—policy by and large in the national security realm is made by the concealed institutions. IDEAS: Do we have any hope of fixing the problem? GLENNON: The ultimate problem is the pervasive political ignorance on the part of the American people. And indifference to the threat that is emerging from these concealed institutions. That is where the energy for reform has to come from: the American people. Not from government. Government is very much the problem here. The people have to take the bull by the horns. And that's a very difficult thing to do, because the ignorance is in many ways rational. There is very little profit to be had in learning about, and being active about, problems that you can't affect, policies that you can't change.

Solvency

Circumvention

FBI circumvents the law —they'll punish whistleblowers and be deceptive regardless of policy.
*we don't endorse ableist language

ACLU, 13 (September 2013, "UNLEASHED AND UNACCOUNTABLE; The FBI's Unchecked Abuse of Authority," https://www.aclu.org/sites/default/files/assets/unleashed-and-unaccountable-fbi-report.pdf)//CB

B. Suppressing Government Whistleblowers

The FBI has a notorious record of retaliating against FBI employees who report misconduct or abuse in the FBI and has used aggressive leak investigations to suppress other government whistleblowers.

Congress exempted the FBI from the requirements of the Whistleblower Protection Act of 1989 and instead required the Justice Department to establish an internal system to protect FBI employees who report waste, fraud, abuse, and illegality. Still, FBI Director Robert Mueller repeatedly vowed to protect Bureau whistleblowers:

I issued a memorandum on November 7th [2001] reaffirming the protections that are afforded to whistleblowers in which I indicated I will not tolerate reprisals or intimidation by any Bureau employee against those who make protected disclosures, nor will I tolerate attempts to prevent employees from making such disclosures.180

Yet court cases and investigations by the Justice Department Office of Professional Responsibility and Inspector General have repeatedly found that FBI officials continue to retaliate against FBI employees who publicly report internal misconduct, including Michael German,181 Sibel Edmonds,182 Jane Turner,183 Robert Wright,184 John Roberts,185 and Bassem Youssef.186 Other FBI whistleblowers choose to suffer retaliation in silence. Special Agent Chad Joy courageously blew the whistle on a senior FBI agent's serious misconduct during the investigation and prosecution of Alaska Sen. Ted Stevens, which resulted in the trial judge overturning the conviction against him, but only after the senator had lost re-election.187 Special Agent Joy was publicly criticized by his then-retired supervisor, subjected to a retaliatory investigation, and then taken off criminal cases.188 Joy resigned and no longer works at the FBI, while the FBI agent responsible for the misconduct in the Stevens' case continues to be assigned high-profile investigations—a clear sign that the FBI culture continues to protect agents involved in misconduct more than those who report it.189

These high-profile cases of whistleblower retaliation discourage other FBI personnel from coming forward. A 2009 Inspector General report found that 28 percent of non-supervisory FBI employees and 22 percent of FBI supervisors at the GS-14 and GS-15 levels "never" report misconduct they see or hear about on the job.190 That such a high percentage of officials in the government's premiere law enforcement agency refuse to report internal misconduct is shocking and dangerous and perpetuates the risk that Americans like Sen. Stevens will continue to be victimized by overzealous investigations and prosecutions.

The FBI has also been involved in suppressing other government whistleblowers through inappropriately aggressive leak investigations. For example, when the U.S. media reported in 2005 that the National Security Agency (NSA) was spying on Americans' communications without warrants in violation of the Foreign Intelligence Surveillance Act, the FBI didn't launch an investigation to enforce the law's criminal provisions. It instead went after the whistleblowers, treating leaks to the American public about government malfeasance as espionage.191 After more than a year of aggressive investigation and interviews, armed FBI agents conducted coordinated raids on the homes of four former NSA and Justice Department officials and a House Intelligence Committee staffer, treating them as if they were dangerous Mafiosi instead of dedicated federal employees who held the government's highest security clearances. William Binney, who served more than 30 years in the NSA, described an FBI agent pointing a gun at his head as he stepped naked from the shower.192 The only prosecution, alleging Espionage Act violations against the NSA's Thomas Drake, collapsed at trial in 2011, and the government's methods earned a stern rebuke from Judge Richard D. Bennett:

I don't think that deterrence should include an American citizen waiting two and a half years after their home is searched to find out if they're going to be indicted or not. I find that unconscionable. … It was one of the most fundamental things in the Bill of Rights that this country was not to be exposed to people knocking on the door with government authority and coming into their homes. And when it happens, it should be resolved pretty quickly, and it sure as heck shouldn't take two and a half years before someone's charged after that event.193

The deterrence effect from such enforcement activity isn't felt just by the person ultimately charged, however, or even those searched but never charged. The FBI's aggressive investigations of whistleblowers send a clear message to other federal employees that reporting government wrongdoing will risk your career, your financial future, and possibly your freedom. And more FBI leak investigations are resulting in criminal prosecutions than ever before. The Obama administration has prosecuted more government employees for leaking information to media organizations than all other previous administrations combined, often charging them with Espionage Act violations and exposing them to draconian penalties.194 Though leaks of classified information are a common occurrence in Washington, almost invariably these leak prosecutions have targeted federal employees who exposed government wrongdoing or criticized government policy.

FBI circumvents the AG guidelines

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

A. Attorney General Guidelines The Attorney General's Guidelines on FBI Confidential Human Sources n157 ("Guidelines"), issued in 2006 by the Department of Justice, n158 **are agency guidelines, not regulations**, and as such have no binding legal effect. n159 [*259] Much of the problem of FBI informant misuse stems from this fact. The Guidelines outline the rules the FBI should follow in undercover investigations involving informants, which include documenting new informants and recording agreements made. n160 The Guidelines are also subject to review and modification by the Attorney General in accordance with federal laws, and are afforded great deference by the courts. n161 The major problems with the Guidelines, however, are that they lack consequences, are not subject to judicial review, and are not followed by agents. n162 While the Guidelines may have internal consequences n163 for FBI agents who violate them, they

have no meaningful effect beyond internal regulation and cannot be enforced by the public via judicial review. n164 Judicial review for violations only occurs when criminal prosecutions reveal the FBI's activities in the investigation. n165 However, the informants in these cases typically remain confidential, and any inquiry into their actions does not extend beyond the handling agent's conduct and the recruitment methods used. n166 Evidence shows that in many cases, **FBI agents fail to follow the Guidelines when recruiting and handling informants**. A 2005 study conducted by the Department of Justice Office of the Inspector General found that the FBI did not provide enough support to agents to properly follow the pre-2006 Attorney General Guidelines Regarding the Use of Confidential Informants. n167 In fact, **noncompliance** with the guidelines was a problem in **87 percent of the cases** the Inspector General reviewed. In particular, agents failed to properly review the suitability of potential informants, properly document informants' illegal activities, and notify informants of their limitations. n168 Given the high levels of noncompliance and agents' nearly unlimited discretion in extending immigration rewards, agent abuse is likely also high.

No Solvency – Pooling

Congressional oversight fails ---- different executive agencies can "pool" together resources in order to dodge restraints put on only one agency

Renan 15 --- Alexander Fellow, New York University School of Law; formerly Attorney Advisor, Office of Legal Counsel, and Counsel, Office of the Deputy Attorney General (Daphna, "POOLING POWERS", Columbia Law Review, 115 Colum. L. Rev. 211, Lexis)//Jmoney
B. Congress

Legal and political theory generally regards Congress as the designer-in-chief of the administrative state. Congress generates administrative capacity and supervises the work of administration, including through agency design. Pooling qualifies this narrative. By bridging a fragmentary bureaucracy, the executive can generate capacity that would not otherwise exist. Pooling thus becomes a substitute, concededly imperfect, for capacity building through legislation. Pooling also challenges a central analytic claim--that Congress controls future agency outputs through legislation designing the agency's structure and process. Pooling reveals a shape-shifting bureaucracy, reconfiguring its own organizational and procedural boundaries from within.

1. Pooling Generates Capacity Without Congress. -- The executive's resort to administration to effect policy change, particularly where legislative achievement becomes less viable, is a dynamic well trodden in the administrative law scholarship. n219That literature has focused on centralization tools like presidential directives to the agencies to undertake (or to decline to take) particular administrative action, and regulatory review by the White House. n220

[*256] Part of what makes pooling distinctive, however, is the executive's ability to generate power of administration not otherwise available to any single administrative actor. To be sure, at the margins, the scope of plausible authority each agency can exercise is pliable. Presidential directives may energize a given agency's mission, and legal interpretation may press the bounds of what is permissible. n221 But the synergistic potential of pooling is different in degree, if not in kind.

The joint efforts by the FCC and the federal agencies constituting Team Telecom, for instance, enable the executive to augment its law enforcement and surveillance capabilities. The

requirements that Team Telecom imposes through the Network Security Agreements effectively regulate the cable carriers. But while legal leverage is supplied by the FCC's licensing authority, Team Telecom's effective power to so regulate the carriers is not rooted in any legislative scheme. n222

Pooling's ability to create regulatory space is illuminated by comparing Team Telecom's effective jurisdiction to the formal jurisdiction that the same agencies have through participation in another structure that has been codified by Congress--the Committee on Foreign Investment in the United States (CFIUS). Congress has authorized CFIUS to review proposed foreign acquisitions that could result in the transfer of control of a U.S. business to a foreign entity in order to determine the effects of such a transaction on national security. n223 The members of Team Telecom--the DoD, the DoJ, and the DHS--are also members of CFIUS (though CFIUS includes additional agencies as well). n224 Congress has authorized CFIUS to enter into "mitigation agreements," pursuant to which the acquirer agrees to certain conditions to mitigate national security concerns. n225 But CFIUS lacks jurisdiction over so-called greenfield investments (or startups), where there is no transfer of control over an [*257] existing U.S. business. n226 And CFIUS's authority to require mitigation conditions is limited to threats to national security. n227

Team Telecom's effective power, by contrast, stems not from CFIUS but from the FCC's authority to review and grant licenses in the "public interest" under the Communications Act. n228 Team Telecom reviews greenfield investments in addition to transfers of control, n229 and the security agreements it negotiates can consider aspects of public safety beyond national security. n230 Team Telecom's effective "jurisdiction," then, is distinct from CFIUS, the closest statutory analog. n231

Pooling thus enables the executive to create capacity without Congress. Pooling also poses challenges for core tools through which Congress superintends the administrative state.

2. Pooling Is a Mechanism of Bureaucratic Drift. -- Administrative design theory owes its current incarnation in large part to positive political theory. That theory conceptualizes Congress's delegation of authority to agencies as a principal--agent problem: How can Congress (the principal) bring its agent (the agency) into line with its policy preferences? n232 This problem implicates two types of uncertainty--what theorists have termed bureaucratic drift and coalitional drift. Bureaucratic drift is the difference between the policy preferences of Congress and [*258] the policy preferences of the agency. n233 Coalitional drift is the difference between the policy preferences of the enacting Congress and the policy preferences of a future Congress.n234

Pooling is a tool through which the executive can achieve policy objectives distinct from those Congress set out to achieve in the initial allocation of power. It can facilitate bureaucratic drift. Agencies can use resources designed for a particular purpose to achieve a different policy objective.

As with other mechanisms of bureaucratic drift, Congress can still respond to pooling, including to ratify or prohibit it. For example, Congress embraced the DHS--NSA collaboration in the cybersecurity context. In 2012, Congress included a provision in the National Defense Authorization Act to mandate "interdepartmental collaboration" between the DHS and NSA on cybersecurity. n235 In introducing the amendment, Senator John McCain indicated that it was intended to codify the 2010 cybersecurity memorandum of agreement between the two agencies. n236 Congress also can terminate pooling after it has occurred (when pooling is visible

to Congress). But the status quo has been changed. And Congress will now need to overcome its own collective action hurdles to alter the executive's design. n237

In part because Congress's abinlity to correct bureaucratic drift after it occurs is often quite difficult, theorists have looked for ways in which [*259] Congress can exercise ex ante control over administration. Here, again, pooling complicates a central narrative.

An influential argument in administrative law theory is that Congress exercises ex ante control over the bureaucracy through administrative design. The claim was initially advanced by political scientists Matthew McCubbins, Roger Noll, and Barry Weingast ("McNollgast"), n238 and it has been refined by others. n239 Through a mix of structural and procedural controls enacted in legislation, the argument goes, Congress ameliorates bureaucratic drift. Administrative design injects the interest groups that formed the enacting coalition into the administrative process, thereby enabling those interest groups to influence the agency's policy outputs and to alert Congress when issues warranting its oversight arise. n240 As McNollgast explains, "By structuring who gets to make what decisions when, as well as by establishing the process by which those decisions are made, the details of enabling legislation can stack the deck in an agency's decision-making." n241

Pooling complicates this account. It suggests that at least some of the action occurs through joint structures that bridge those initial agency [*260] design choices. Pooling, in effect, can alter who makes what decisions when, and through what process. It calls into question the stickiness of those initial structural bargains.

a. Overcoming Procedural Constraints. -- Congress uses a variety of design tools, including temporal constraints, to control agencies through legislation. n242 **An agency facing such limits on its delegated authority, however, can in effect circumvent those statutory constraints by pooling with another agency that Congress has not subjected to the same limitations.**

For example, under the Hart-Scott-Rodino Antitrust Improvements Act of 1976 ("HSR Act"), Congress has delegated to the DoJ the authority to review certain mergers before they occur to ensure compliance with antitrust laws. n243 But the HSR Act establishes a strict timetable for the Department's review. The DoJ has an initial thirty-day period to conduct its review, n244 which the agency may extend for an additional thirty days when additional information is requested from the companies. n245After this waiting period expires, the companies are free to consummate their proposed merger unless the government files suit in district court and seeks a preliminary injunction. n246 The HSR Act's stringent deadlines address congressional concern that "protracted delays . . . might effectively 'kill' most mergers." n247

When reviewing potential telecommunications mergers, however, the DoJ is able to work around the HSR Act deadlines and the obligation to seek a preliminary injunction in court by pooling with the FCC. The FCC reviews proposed mergers pursuant to its licensing authority under the Communications Act of 1934. n248 Unlike the DoJ's review under the HSR Act, the FCC confronts no statutory deadlines for its premerger review under the Communications Act. As a matter of policy, the FCC has adopted an aspirational "benchmark" of 180 days from public notice to [*261] complete its review. n249 But it has made clear that even this timeline is flexible and that the Commission may depart from it. n250

There is a trend toward greater collaboration between the DoJ and the FCC in reviewing proposed telecommunications mergers. n251 The agencies' joint efforts, in practice, enable the DoJ to work around the stringent procedural constraints that the statutory scheme imposes. n252

b. Diversifying Interest Groups. -- Another mechanism through which Congress can curb bureaucratic drift is the organizational design of the agency. n253 That initial design choice, shows Jonathan Macey, has the effect of "perpetuat[ing] the power and legitimacy of certain groups and undermin[ing] the power and legitimacy of others." n254 By choosing winners and losers upfront through the agency's organizational design, Congress "hardwire[s]" into the agency structure the legislature's policy preferences. n255

Consider the congressional design choice to create a single-industry agency, beholden to a single interest group, rather than a multi-industry agency. Congress's decision to create the single-industry agency, Macey [*262] argues, bolsters Congress's control over the agency's policy outputs. n256 The single-industry design choice augments that particular interest group's access to the agency, and it shapes the type of expertise that will be relevant to the agency's mission--expertise that the interest group itself possesses. n257 By empowering a particular interest group, Congress has hardwired certain preferences into the design of the agency.

Through pooling, however, the executive can convert a single-industry regulatory space into a multi-industry--or multi-interest group--regulatory space. The joint structure's preferences will look different from those of the single agency acting alone. Pooling thus enables the executive to work around Congress's initial structural hardwiring.

The EPA--NHTSA joint rulemaking illustrates how pooling can diversify the interest groups influencing a regulatory task, as well as how pooling can overcome other constraints on expertise building that Congress imposes through legislation. The joint rulemaking enabled the EPA to exercise influence over NHTSA, n258 an agency with a very different, and in some respects historically incapacitating, relationship to the auto industry. n259 Coordination in any form might diversify the operative interest groups. n260 But pooling can be particularly effective at altering the impact of particular interest groups as compared, for instance, to OIRA review.

Pooling can affect more of the lifecycle of agency policymaking than centralization tools like OIRA have the practical ability to influence, and pooling can be accompanied by institutional changes inside the agencies that deepen collaboration. Both of these dimensions are evident in the EPA--NHTSA joint rulemaking. The EPA and NHTSA collaborated on a variety of major tasks including syncing up the timing of "key milestones [*263] of each rulemaking." n261 And the two agencies formed a number of joint structures to support the pooled effort, including "joint technical teams," which drove the effects of coordination deep into the two agencies' bureaucratic cores. n262 In this sense, pooling is able to affect some of the more subtle dynamics of organizational design that Macey identified. For example, "hardwiring" turns in part on the makeup of the experts populating the regulatory space, which Macey emphasizes are often drawn from the regulated industry. n263

Pooling in the EPA--NHTSA example also enabled the executive to overcome a specific statutory impediment to NHTSA's own expertise building. While Congress had curbed NHTSA's ability to build expertise through a multiyear appropriations restriction, the joint structure enabled NHTSA to "borrow" that expertise from the EPA after the ban was lifted. n264

Pooling thus adds complexity to a central causal claim in administrative law theory: that Congress exercises control over the agency's ongoing policy outputs through agency design. It illuminates an assumption implicit in that theory--the stability of the initial structural bargain as a matter of actual, or effective, administrative decisionmaking. I do not want to overstate the claim. To be sure, initial design has effects on the agency's policymaking. But pooling suggests that the reliance the existing account places on ex ante design choice might be overdrawn. n265

Pooling undercuts oversight

Dalal 14 --- JD Yale Law School, BS University of Pennsylvania (Anjali S, Michigan State Law Review, "SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE", 2014 Mich. St. L. Rev. 59, Lexis)//Jmoney

3. Pooling Can Diminish the Effectiveness of Congress's Committee Oversight Structures. -- Pooling also can muddle ongoing congressional oversight of administrative decisionmaking. **It can obscure which administrative actor is responsible for a given course of conduct**. It can mask the true mover behind an administrative decision. And it can diminish Congress's ability to exercise effective oversight to the extent that pooled structures bridge Congress's own oversight committee structures.

For example, the intelligence oversight committees in Congress differ from the armed services oversight committees, and the executive's reporting requirements with respect to intelligence collection and military action are distinct. Pooling arrangements combining intelligence and military authorities--that is, the Title 10--Title 50 joint structures--have [*264] created confusion, if not obfuscation, regarding congressional oversight. n266

Indeed, the House Permanent Select Committee on Intelligence has publicly expressed concerns that certain intelligence activities are not being reported to it and to the Senate Select Committee on Intelligence because they are being aggressively categorized as military activity instead. n267 Those activities also are slipping through gaps in the oversight practices of the Senate and House Armed Services Committees because the executive's notification obligations to those committees were designed with very different considerations in mind. n268

4. Pooling Circumvents Some of Congress's Funding-Related Constraints. -- A final tool through which Congress exercises control over executive action is funding. Congress can discipline specific pooling arrangements through its funding decisions. Congress can choose to defund a particular program or agency or to prohibit a particular interagency effort, including as a mechanism to penalize pooling. n269

But Congress also structures executive design at a more systematic level through appropriations law, and pooling poses challenges to this more systematic form of congressional control.

Pooling allows the executive to work around constrains in the Economy Act

Renan 15 --- Alexander Fellow, New York University School of Law; formerly Attorney Advisor, Office of Legal Counsel, and Counsel, Office of the Deputy Attorney General (Daphna, "POOLING POWERS", Columbia Law Review, 115 Colum. L. Rev. 211, Lexis)//Jmoney

b. The Economy Act. -- Through pooling, the executive also can work around some of the constraints that Congress has imposed under the Economy Act. In 1932, Congress passed legislation authorizing agencies to contract with one another for their services or materials. n280 The Act, as amended, authorizes "[t]he head of an agency or major organizational unit within an agency" to "place an order with a major organizational unit within the same agency or another agency for goods or services" where certain conditions are met. n281 The Act was designed to address intraexecutive outsourcing, and so its constraints generally focus on the transfer of funds or legal authority from one agency to another. n282

There are anticircumvention ideas driving interpretations of the Economy Act by the Comptroller General. For example, **an outsourcing agency cannot use an Economy Act agreement to fund work that it would not itself be authorized to undertake**. n283Nor can the outsourcing agency obtain under the Economy Act services from another agency that its own enabling statute prohibits. n284

[*267] Those constraints do not easily translate to pooling, however. There is no transfer of authority with pooling. And the aggregation of authorities that pooling achieves, sometimes formally and sometimes informally, is not clearly governed by the Economy Act.

No Solvency – Immigrant Informants

Plan can't solve – FBI targets non-US informants

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

Introduction In 2004, the FBI approached Imam Foad Farahi, a cleric at a mosque in South Florida, and promised him lawful permanent resident status n1 in return for information on members of his South Florida Muslim community. n2 Farahi had entered the United States on a student visa that had since expired, and was at the time applying for political asylum. n3 When Farahi refused the FBI's offer and told the agents that he had no information beyond his mere acquaintance with the individuals sought by the agents, the FBI agents threatened to deport Farahi to Iran and charge him with providing material support to terrorism unless he cooperated by acting as an informant. n4 Because the FBI's post-9/11 establishment of a preventative stance towards terrorism n5 has increased the need for intelligence, n6 the agency has [*237] turned to the **increased use of immigration law** and residence status to recruit more confidential informants. n7 Although the FBI does not comment on its informant recruitment methods, n8 numerous stories similar to Farahi's have been reported since 9/11. n9 In fact, allegations of the FBI's **aggressive** use of past [*238] violations of immigration laws to pressure individuals whom the agency believes may have terrorism knowledge have repeatedly surfaced. n10 The Informants, a yearlong investigation into the FBI's use of informants, led by Trevor Aaronson and the University of California at Berkeley's Reporting Program in conjunction with Mother Jones, details the FBI's expanded use of informants in terrorism investigations. n11 Of the approximately five hundred federal terrorism prosecutions conducted since 9/11, about half used an informant, n12 and forty-nine of them were the result of work done by agent provocateurs. n13 Aaronson's investigation also shed light on the FBI's use of immigration law and the threat of deportation to incentivize informants to cooperate. n14 Aaronson explains, A typical scenario will play out like this: An FBI agent trying to get someone to cooperate will look for evidence that the person has immigration troubles. If they do, he can ask [Immigration and Customs Enforcement

(ICE)] to begin or expedite deportation proceedings. **If the immigrant then chooses to cooperate, the FBI will tell the court that he is a valuable asset, averting deportation**. n15

The abundance of fabricated info from immigrant informants turns case – encourages ethnic profiling, chills free speech, and wastes resources

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

[*239] Using the threat of immigration consequences like deportation to produce terrorism intelligence presents novel problems for the intelligence gathering process and the informants. When individuals are pressured into becoming informants by the threat of deportation, which may remove them from their family and all sources of support, the decision essentially becomes a Hobson's choice. n16 Informants recruited in this manner who also lack legitimate ties to foreign terrorist organizations n17 have an enormous incentive to fabricate information to fulfill their end of the agreement and avoid deportation. n18 Attorney Stephen Downs of Project SALAM explained, Community life is shattered as the government often forces Muslim immigrants to spy on their own communities or give false testimony with the threat that the Muslim's immigration status will be "revised" if the Muslims do not cooperate. Such practices generate fear and alienation in the Muslim community and diminish our security rather than enhance it. n19 As Downs notes, the intelligence these informants provide can be unreliable, n20 because these individuals may feel they must offer up something to the government to avoid being removed from their families, jobs, and lives. **The threat of false intelligence is grave.** In addition to the possibility of entrapment n21 by agent provocateurs, false intelligence may encourage ethnic and religious profiling of Muslim and Middle Eastern communities, n22 **chill free speech**, n23 and **waste finite intelligence resources**. Recruitment through [*240] immigration law also affords less protection to informants than recruitment done by offering monetary rewards or reductions in sentencing. n24 For example, unlike criminal offenses, there is no statute of limitations governing civil penalties like deportation, removal, or exclusion orders, which means that **the FBI can use immigration violations to leverage cooperation** from out-of-status individuals who have been in the country for years. Moreover, unlike an informant who is promised a sentence reduction or lessened charges and who can enforce his or her bargain with the government through plea bargaining, an informant promised immigration benefits has no way of enforcing these promises. n25 Furthermore, the Sixth Amendment's guarantee of counsel n26 does not apply to immigration violations. n27 Finally, according to some reported cases, the government has failed to reward informants with the promised immigration benefits after receiving their cooperation. n28

Immigrant informants perpetuate ethnic profiling

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

B. Mosque Surveillance Encourages Religious and Ethnic Profiling In addition to eroding the First Amendment's free speech rights of Muslims and Middle Easterners, the FBI's informant surveillance tactics also inappropriately target these religious and ethnic groups. Most of the organizations designated as Foreign Terrorist Organizations by the State Department are Muslim or Arab groups. n89 Many post-9/11 policies, like the extensive detention of Muslims and Middle Easterners, indicate that the federal government views Muslims and Middle Eastern immigrants as potential terrorists. n90 **Popular perception of Muslims has moved in the same direction**, with huge opposition, for example, to the construction of an Islamic community center - Park 51 - near the site of the World Trade Center in New York. n91 Other examples include state laws banning the use of Shari'ah law in judicial decisions n92 and Islamophobia n93 rising in the United States n94 and abroad. n95 [*250] By sending immigrant informants into mosques and

religious and ethnic communities with little more than a vague directive to find terrorists, the **FBI perpetuates ethnic profiling and the conflation of Islam and terrorism**. In recruiting terrorism informants from the immigrant population, the FBI puts an ethnic and religious face on terrorism, and perpetuates the popular perception of what terrorists look like. Sending these informants into mosques and immigrant communities greatly increases the chances that alleged suspects fit the ethnic and religious stereotypes of terrorists. Put differently, if an informant is assigned to surveil a mosque, the chances of the informant bringing back a non-Muslim or non-Middle Eastern suspect are low. This surveillance policy becomes a **vicious cycle**. The FBI recruits immigrant individuals from suspect communities to become informants, pressures them into producing terrorism suspects that fit the popular perception of what terrorists are like, and then prosecutes these suspected terrorists. All this reinforces the public conflation of immigrants, Muslims, Middle Easterners, and terrorists. Ethnic and religious profiling further alienates Muslim and Middle Eastern communities, and deepens their mistrust for government. n96 Additionally, by predisposing many Americans to view Muslims, immigrants, and Middle Easterners as potential terrorist threats, **ethnic and religious profiling may also bias juries in terrorism prosecutions.** n97 Although suspects often claim entrapment as a defense, after 9/11 the entrapment defense has never been successfully used in terrorism cases. n98 In fact, many, if not most, terrorism cases never reach the jury because the chances of successfully defending against terrorism charges after 9/11 are almost nonexistent. n99 Popular stereotypes concerning Muslims and Middle Easterners play a role in this. Although the use of immigration law in recruiting informants is only one of many factors contributing to this harmful cycle, the use of coercive tactics like immigration law to recruit informants creates a [*251] higher risk of unfounded terrorism prosecutions against innocent individuals who do not pose a risk. Consequently, this fuels the public perception that a stereotypical terrorist is a Middle Easterner or Muslim.

Judicial Action Fails

Courts misunderstand how police surveillance is conducted and can't act effectively without future legislation

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)//Mnush

[*24] II. THE LAW OF POLICE SURVEILLANCE Traditionally, courts have shied away from regulating police surveillance in public spaces. This is because the courts have operated under a set of jurisprudential assumptions of police surveillance. These jurisprudential assumptions were reasonable in the past because of the limited technological efficiency of previous surveillance technologies. In Jones, the Supreme Court had the opportunity to confront these jurisprudential assumptions in light of modern technology. A majority of the justices indicated that these jurisprudential assumptions were increasingly unsupportable in today's digitally efficient world of policing. n118 But the Court did not alter these doctrinal assumptions in any way, nor did they offer much indication on how they may alter these assumptions in the future. Thus, after the Jones decision, the law of police surveillance today is as incoherent as ever. I have previously argued that the digitally efficient investigative state does not run afoul of the Fourth Amendment, based on the presence of these jurisprudential assumptions, n119 but dicta in the concurrences of the Jones case imply that these jurisprudential assumptions may not exist for much longer. Even so, there is no clear indication how the Court could establish a default rule that both narrowly limits some uses of digitally efficient technologies without adversely affecting other non-invasive, legitimate uses. In this section, I evaluate the doctrinal basis for the traditional jurisprudential assumptions about police surveillance. I then spend considerable time analyzing the dicta in the Jones case to predict how the Court may respond to these technologies in the future. I conclude that, while the Court will likely make some effort to rein in the digitally efficient investigative state in the future, any regulation will be limited in capacity. The regulation will almost certainly rely upon an often-ineffective enforcement tool like the exclusionary rule. Thus, **even if the judiciary is institutionally capable of controlling the digitally efficient investigative state, the legislature must also take a proactive role in any future regulation**.

Judicial oversight fails --- non enforceable, extremely high standards, and executive privilege

Dalal 14 --- JD Yale Law School, BS University of Pennsylvania (Anjali S, Michigan State Law Review, "SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE", 2014 Mich. St. L. Rev. 59, Lexis)//Jmoney

1. Judicial Intervention

The Church Committee, reflecting on the Keith decision, emphasized the importance of judicial intervention in the national security arena when it reminded the public that warrantless wiretapping "had been permitted by successive presidents for more than a quarter of a century without 'guidance from the Congress or a definitive decision of the Courts.'" n308 Unfortunately, there are three barriers to judicial intervention that facilitate shadow administrative constitutionalism in the national security arena: the lack of judicially enforceable rights, the standing hurdle, and the growth of executive privilege.

a. Judicially Enforceable Rights

By the time the Civiletti Guidelines were issued in 1980, the DOJ made eminently clear that the Attorney General Guidelines were "solely for the purpose of internal Department of Justice guidance" n309 and would otherwise be legally binding. Specifically, the Guidelines made clear that "[t]hey are not intended to, do not, and may not be relied upon to create any rights, substantive or procedural, enforceable at law by any party in any manner, civil or criminal." n310 Such rights-limiting language prevents any injured party from using the governing document of the FBI to enforce the self-imposed limitations on the Bureau's power.

[*129] b. The Standing Hurdle

The lack of judicially enforceable rights is not, however, the only problem. Those who might bring a First Amendment claim based on the surveillance authorized by the Attorney General Guidelines face immense difficulty simply getting into court. n311One of the primary problems with surveillance is that it has the power to coerce people into self-censorship--or chilled speech. This makes surveillance, fundamentally, a First Amendment issue and a prime subject for constitutional litigation. As our communications are increasingly subject to the prying eyes of the government, our ability to speak freely is directly curtailed. However, after the Supreme Court's decision in Laird v. Tatum, litigants suing under the First Amendment theory of chilled speech are subject to a high standing bar that, more often than not, prevents them from having their case heard at all.

The first mention of the term "chill" in Supreme Court jurisprudence occurred in 1952 in Wieman v. Updegraff, a case overturning an Oklahoma law that required all state employees to take a loyalty oath denying all affiliation, direct and indirect, with "any foreign political agency, party, organization or Government, or with any agency, party, organization, association, or group whatever which has been officially determined by the United States Attorney General or other authorized agency of the United States to be a communist front or subversive organization." n312 In an important concurrence, Justice Frankfurter argued that the loyalty oath had "an unmistakable tendency to chill that free play of the spirit which all teachers ought especially to cultivate and practice." n313 From that time to when the term "chilling effect" was first used in Dombrowski v. Pfister n314 thirteen years later, Professor Frederick Schauer argues

that [*130] the term evolved from an "emotive argument into a major substantive component of first amendment [sic] adjudication." n315

However, after Laird v. Tatum, litigating on the basis of chilling effects has become difficult. Tatum requires litigants to first prove that the surveillance in question led to a cognizable harm before they will be granted standing and further held that "the mere existence . . . of a governmental investigative and data-gathering activity that is alleged to be broader in scope than is reasonably necessary for the accomplishment of a valid governmental purpose" was simply not a cognizable harm. n316

As a result of Tatum, before an individual can bring a First Amendment claim against FBI based on the authorizations of the Attorney General Guidelines, she must first prove that she has been harmed by the often-secret surveillance. n317 Because of the difficulty of first affirmatively identifying that one is the subject of government surveillance in order to allege a cognizable harm under the law, such litigation has been made increasingly unlikely under Tatum.

For example, in 2005, The New York Times exposed the President's Surveillance Program (PSP), a program developed after 9/11 that secretly authorized the NSA to intercept "the international telephone calls and international e-mail messages of hundreds, perhaps thousands, of people inside the United States without warrants over the past three years in an effort to track possible 'dirty numbers' linked to Al Qaeda." n318 "Additionally, the NSA told Congress that privileged communications, such as those between an attorney and her client, would not be 'categorically excluded' from interception." n319

This discovery led prominent civil rights organizations, including the American Civil Liberties Union (ACLU), to file [*131] lawsuits against the government arguing that their speech was chilled because their communications were likely targets of the surveillance program. n320 The ACLU filed on behalf of itself and a group of journalists, scholars, and other organizations that regularly communicate with likely targets of the PSP. n321 Importantly, none of the plaintiffs had evidence that they were in fact the subject of NSA surveillance. n322 This was a fact that only the government knew and would not disclose. The Supreme Court held that, without this information, the plaintiffs lacked standing to pursue their case. n323

The standing barrier created by Tatum is especially problematic given the nature of surveillance today. Surveillance today no longer presents viable Fourth Amendment claims because so much of our most personal information is mediated through third parties, and the third-party doctrine limits the extent of Fourth Amendment protections. n324 While Justice Sotomayor's concurrence in United States v. Jones provides some indication that this doctrine may be up [*132] for reconsideration by the Supreme Court, n325 until that time, the Fourth Amendment no longer provides a powerful source of legal recourse against the growth of surveillance authority. As a result, now, more than ever, the chilling effects doctrine must be revived in order to provide a First Amendment backstop to the growing problem of government surveillance.

c. Executive Privilege

As Professor Heidi Kitrosser describes, "A claim of executive privilege is generally a claim by the President of a constitutional right to withhold information." n326 It is a claim whose authority lies not in the text of the Constitution or of any specific law, but rather in the "notion that some information requests effectively infringe on the President's Article II powers, threatening his ability to receive candid advice or to protect national security." n327

Executive privilege as a means of obfuscation facilitates shadow administrative constitutionalism by preventing judicial oversight. Professor Jack Balkin first made this claim nearly ten years ago when he argued that, increasingly we exclude more and more executive action from judicial review on the twin grounds of secrecy and efficiency. . . . [A]n independent judiciary plays an important role in making sure that zealous officials do not overreach. If the executive seeks greater efficiency, this requires a corresponding duty of greater disclosure before the fact and reporting after the fact to determine whether its surveillance programs are targeting the right people or are being abused. n328

The courts have not taken heed to his warning.

In the wake of the disclosure of the PSP, there was one case that survived the extremely high standing bar set in Tatum. In Al-Haramain Islamic Foundation v. Bush, an Islamic charity based in Oregon discovered that the government inadvertently sent them classified documents demonstrating that their communications were [*133] subject to warrantless surveillance. n329 With proof that they were in fact subject to surveillance, Al-Haramain proceeded to court. However, the government argued that the state-secrets privilege prevented the introduction of the classified documents and permitted the government to avoid acknowledging the existence of the surveillance program. n330 Despite the fact that the classified information had already been disclosed (and in seemingly direct conflict with the government's otherwise settled third-party doctrine), the Ninth Circuit agreed with the government's position. n331

The doctrinal barriers that prevent judicial intervention are significantly harder to overcome than the failures that stymie intrabranch checks and balances. This is in no small part due to the doctrine of stare decisis and the value of having binding precedent. Even judges who recognize the problems with the current system and wish to reassert their role in determining both small-"c" and ultimately large-"C" constitutional meaning cannot. Judge Colleen McMahon expressed her frustration with the state-secrets privilege in a court opinion, saying, "I can find no way around the thicket of laws and precedents that effectively allow the Executive Branch of our Government to proclaim as perfectly lawful certain actions that seem on their face incompatible with our Constitution and laws, while keeping the reasons for its conclusion a secret." n332 As a result, without a major shift in the doctrine, the judiciary will be limited in its ability to provide useful oversight.

Rushin admits that judicial action alone won’t solve

Rushin, 11 --- PhD student at the University of California, Berkeley, Jurisprudence and Social Policy Program (Fall 2011, Stephen, University of Illinois Journal of Law, Technology & Policy, “THE JUDICIAL RESPONSE TO MASS POLICE SURVEILLANCE,” 2011 U. Ill. J.L. Tech. & Pol'y 281, Lexis,)//Mnush

VI. Conclusion Neither judicial responses nor "legislative rulemaking is ...a panacea." n376 Even if the judiciary successfully recognizes a remedy similar to that discussed in this Article, the legislatures must play a critical role in developing more nuanced and specific enactments to implement this constitutional floor. The potential harms of the digitally efficient investigative state are real. There is legitimate concern that the broad and integrated use of these technologies can create a mass surveillance state. Central to this debate is the proper role of the judiciary in regulating policy activity. Courts have previously relied upon an often fragile dichotomy between technologies that merely improve police efficiency and those that offer officers a new,

extrasensory ability. For the first time, the judiciary may be forced to limit the efficiency of law enforcement technologies. Implicit in this action will be the recognition that sometimes improvements in efficiency can be, quite simply, so efficient as to be unconstitutionally harmful. Unregulated efficiency can facilitate police wrongdoing, discrimination, and calumniate political dissenters. Unregulated efficiency in policing technology undermines central protections and tenants of a democratic state. The relationship between efficiency of criminal investigations and privacy rights will be a new frontier for the courts in the coming decades. The courts should forcefully, but prudently, protect against the unregulated efficiency of emerging investigative and surveillance technologies. The judicial response offered in this Article would be but one more example of the courts exercising their proper role as a limited but effective policymakers.

Congress Overrides Courts

The courts fail – Congress can just override decisions.

Bayoumi 12 – Associate Professor of English at Brooklyn College, City University of New York, with a Ph.D. in English and Comparative Literature from Columbia (Moustafa Bayoumi, The Nation, "Fear and Loathing of Islam," June 14 2012, http://www.thenation.com/article/168383/fear-and-loathing-islam, *fc)

There is a real danger **that the same tools that enable today's Islamophobia will continue to migrate and expand with little or no public outcry.** The FBI deploys a strategy of sting operations against Occupy protesters that is eerily familiar to American Muslims, to little outrage. The president enacts a law that allows for the indefinite detention of American citizens, and **after a federal judge strikes it down as unconstitutional, Congress rushes in two days later to try to keep it on the books.** American citizens can be assassinated by presidential decree, making a mockery of due process. Forget the Muslims. This mission creep is as good a reason as any to pay attention to Islamophobia today—because when the ordinary affairs of the United States include such actions, the stakes are nothing less than extraordinary.

Disadvantages

Politics Links

The reduction of domestic surveillance is extremely unpopular in congress-empirical congressional actions and terror rhetoric

Harris, 10 --- Professor of Law, University of Pittsburgh School of Law (David, New York University Review of Law & Social Change, "LAW ENFORCEMENT AND INTELLIGENCE GATHERING IN MUSLIM AND IMMIGRANT COMMUNITIES AFTER 9/11," 34 N.Y.U. Rev. L. & Soc. Change 123, Lexis)//Jmoney

While legislation at either the federal or state level could impose judicial supervision requirements and legal standards on the use of informants, the enactment of such legislation seems as unlikely in the current political climate as a reversal of the Hoffa and White cases by the Supreme Court. In 2006, Congress reauthorized the expiring provisions of the Patriot Act n219 with few changes, despite strong opposition. n220 In the fall [*173] of 2006, Congress passed the Military Commissions Act, n221 which, among other things, withdrew the possibility of using the writ of habeas corpus in cases arising from detention at Guantanamo Bay, Cuba. n222 In addition, the summer of 2007 saw the enactment of legislation that provided additional procedures for the National Security Agency to acquire foreign intelligence through a warrantless wiretapping program. n223 The state laws regulating the use of informants, discussed above, were passed many years ago, n224 and, in more recent years, states have leaned in the other direction, passing their own "Patriot Acts." n225 In all, **statutory restraints on the use of informants seem unlikely in today's political climate because a political opponent could easily accuse a legislator advocating such restraints as being soft on terrorism or handcuffing our police and national security forces**.

Plan would require massive political capital

Dalal 14 --- JD Yale Law School, BS University of Pennsylvania (Anjali S, Michigan State Law Review, "SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE", 2014 Mich. St. L. Rev. 59, Lexis)//Jmoney

The solution to a lack of congressional oversight is conceptually easy but practically difficult. It requires Congress to pass legislation governing the FBI and regularly exercise its statutory oversight authority, both of which **require significant political capital and effort**. However, the Snowden scandal may have created the momentum necessary to motivate congressional action in this area. Senator Ron Wyden recently echoed this sentiment while imploring his colleagues to act stating, "'If we do not seize this unique moment in out [sic] constitutional history to reform our surveillance laws and practices we are all going to live to regret it.'" n337

Terrorism DA Links

Community mapping is crucial to counter domestic terrorism

Blumenfeld 13 – researcher with the Middle East Forum and with the U.S. Department of Justice (Teri, Middle East Quarterly, "Denying Islam's Role in Terror: Problems in the FBI", Spring 2013, http://www.meforum.org/meq/pdfs/3478.pdf, //11)

The fact that such lapses and "failures of intelligence" continue to plague U.S. security agencies is in itself an abysmal failure. The continuing denial of Islamism as motivator in countless plots on American soil is **indisputable**. If Islamic radicalization and its deadly impact continue to be overlooked in favor of privacy protection and misconceived notions of religious freedom, and if these policies remain intact in intelligence protocols, such **tragedies** as the Fort Hood massacre are **likely to recur**. Islamists often raise the specter of "Islamophobia" whenever any legitimate question about or criticism of Islam is broached. But real Islamophobia stalks the corridors of Washington and other Western capitols: **The fear of upsetting Muslims of any stripe is so rampant that the security of the American citizenry has been compromised.**

Surveilling domestic Muslims enables us to counter the jihadist threat

Groenig 14 – reporter for One News Now, cites former FBI agent Guandolo who created and implemented the FBI's first Counterterrorism Training/Education Program (Chad, One News Now, "Former FBI says only way to defeat Islam is to crush it", 7/15/14, http://www.onenewsnow.com/national-security/2014/08/15/former-fbi-says-only-way-to-defeat-islam-is-to-crush-it, //11)

A terrorism expert says it is time for the western world to stop political correctness and engage in an **all-out effort** to crush radical Islam. John Guandolo is a former FBI agent who created and implemented the FBI's first Counterterrorism Training/Education Program. He is co-author of Sharia - The Threat to America. Guandolo says the western world needs to recognize that radical Islam is **a threat that is not going away**, and no amount of wishing it away or talking to it or negotiating with it is going to stop it. "What stopped the Nazis was we killed and crushed them on the field of battle," he says. "What stopped the Communists is we did the same thing on the fields of battle in places where the Soviet Communists were supporting actual warfare." And Guandolo says that's what's going to end the war against the jihadists. "We need to **find the Islamic movement anywhere it is**, including in the United States, and crush it and defeat it now," he tells OneNewsNow. "Because every month that has gone by for the last thirteen years they get stronger, better organized, better funded and more militarily capable."

State Secrets Good DA

1nc State Secrets Privilege DA

State secrets privilege is good --- protects against lawsuits that would challenge drone police
Rosen 11 --- Professor of Law and Director (Richard D, Center for Military Law and Policy, Texas Tech University School of Law, "PART III: ARTICLE: DRONES AND THE U.S. COURTS", 2011, 37 Wm. Mitchell L. Rev. 5280, lexis)//Mnush

V. **State Secrets: The Death Knell of Drone Cases**

Assuming a complaint survives the jurisdictional, justiciability, immunity, and other hurdles to lawsuits challenging U.S. drone policy, the state secrets doctrine is likely to bring the suit to a quick end. n93 Under the doctrine, the United States may prevent the disclosure of information in judicial proceedings if there is a reasonable danger of revealing military or state secrets. n94 Once the privilege is properly invoked and a court is satisfied that release would pose a reasonable danger to secrets of state, "even the most compelling necessity cannot overcome the claim of privilege." n95

Not only will the state secrets doctrine thwart plaintiffs from acquiring or introducing evidence vital to their case, n96 it could result in dismissal of the cases themselves. Under the doctrine, the courts will dismiss a case either because the very subject of the case involves state secrets, n97 or a case cannot proceed without the privileged evidence or presents an unnecessary risk of revealing [*5293] protected secrets. n98 Employing drones as a weapons platform against terrorists and insurgents in an ongoing armed conflict implicates both the nation's military tactics and strategy as well as its delicate relations with friendly nations. n99 As such, **lawsuits challenging the policy cannot be tried without access to and the possible disclosure of highly classified information relating to the means, methods, and circumstances under which drones are employed.**

Lawsuits will release vital intelligence about drones – that undermines tech leadership
Murphy and Radsan 9 --- AT&T Prof. of Law @ Texas Tech University, Professor @ William Mitchell College of Law (Richard and Afsheen, "ARTICLE: DUE PROCESS AND TARGETED KILLING OF TERRORISTS", November, 32 Cardozo L. Rev. 405, lexis)//Mnush

In defense of this anomaly, there are obvious policy reasons for not allowing Bivens-style claims against American officials for targeted killings wherever they occur in the world. Among them, we do not want federal courts damaging national security through excessive, misdirected second-guessing of executive judgments; nor do we want [*442] **the litigation process to reveal information that national security requires to be kept secret.** In Arar v. Ashcroft, a divided panel of the Second Circuit cited these "special factors" to disallow a plaintiff from bringing a Bivens claim against officials he alleged subjected him to extraordinary rendition. n209

But as the dissenting judge in Arar noted, these special factors lose much of their force once one acknowledges that a Bivens-style action needs to overcome formidable hurdles of fact and law. n210 As to practical hurdles, most people left alive by a Predator strike or other targeted killing

would not turn to American courts for relief. Some would not sue because they are, in fact, the enemy - Osama bin Laden is not going to hire an American lawyer. n211 Others would not sue because doing so is beyond their means - a villager from the mountains of Afghanistan is not likely to hire an American lawyer either.

As to legal hurdles, Boumediene itself poses a high one to lawsuits by non-U.S. citizens for overseas attacks. Here we may seem to contradict our earlier insistence that Boumediene presupposes some form of constitutional protection worldwide for everyone. n212 Yet Boumediene shows that the requirement of judicial process depends on a pragmatic analysis. n213 As part of its balancing, Boumediene made clear that courts should favor the interests of American citizens and of others with strong connections to the United States. n214 Although the Boumediene petitioners lacked the preference in favor of citizens, they persuaded a slim majority of the Court to extend constitutional habeas to non-resident aliens detained at Guantanamo. This result, however, took place under exceptional circumstances: among them, Guantanamo is de facto United States territory; n215 the executive had held detainees [*443] there for years and claimed authority to do so indefinitely; and the Supreme Court doubted the fairness and accuracy of the CSRTs. n216 Absent such circumstances, Boumediene leaves courts to follow their habit of deferring to the executive on national security. For targeted killing, that may mean cutting off non-citizens from American courts.

The state-secrets privilege poses another barrier to Bivens-style actions. This privilege allows the government to block the disclosure of information in court that would damage national security. n217 It could prevent a case from proceeding in any number of ways. For instance, the government could block plaintiffs from accessing or using information needed to determine whether a Predator attack had a sound basis through human or technical sources of intelligence. n218 By this trump card, the government could prevent litigation from seriously compromising intelligence sources and methods. n219

In addition, the doctrine of qualified immunity requires dismissal of actions against officials if a court determines they reasonably believed they were acting within the scope of their legal authority. n220 Defendants would satisfy this requirement so long as they reasonably [*444] claimed they had authority under the laws of war (assuming their applicability). These standards are hazy, and a court applying them would tend to defer to the executive on matters of military judgment. n221

In view of so many practical and legal hurdles, some courts and commentators might be inclined to categorically reject all Bivens-style challenges to targeted killings. In essence, they might view lawsuits related to targeted killing as a political question left to the executive. n222 This view parallels Justice Thomas's that courts should not second-guess executive judgments as to who is an enemy combatant. n223 Contrary to Justice Thomas's view, the potency of the government's threshold defenses means that targeted-killing cases that make it to the merits would likely involve the most egregious conduct - for example, killing an unarmed Jose Padilla at O'Hare Airport on a shoot-to-kill order. For these egregious cases, a judicial check on executive authority is most necessary.

In terms of a Mathews balancing, the question becomes whether the benefits of Bivens actions on targeted killings of terrorists outweigh the harms. The potential harm is to the CIA's sources and methods on the Predator program. Lawsuits might harm national security by forcing the disclosure of sensitive information. The states-secrets privilege should block this result, however.

Lawsuits might also harm national security by causing executive officials to become risk-averse about actions needed to counter terrorist activities. Qualified immunity, however, should ensure that liability exists only where an official lacks any justification for his action. On the benefit side, allowing lawsuits to proceed would, in truly exceptional cases, serve the private interest of the plaintiff in seeking compensation and, perhaps more to the point given the incommensurability of death and money, would provide accountability. Still more important, all people have an interest in casting light on the government's use of the power to kill in a world-wide war in which combatants and targets are not easily identified.

Unmanned vehicle tech leadership is key to naval power all around the world

Berkowitz '14 --- independent national security and intelligence analyst and author (Bruce, "Sea Power in the Robotic Age," Issues in Science and Technology, winter 2014, http://issues.org/30-2/bruce-2/)//Mnush

Note* - UMS = unmanned maritime system

The U.S. Navy's recent interest in UMSs is partly tied to the "strategic pivot." Officials believe that U.S. military forces will more likely be used in the Pacific and Indian Oceans, rather than in Central Asia, the Middle East, and Europe. This presents the Navy with new challenges.

One is distance. Operating in Asia takes personnel further from home, stretches logistics, demands greater operating range from ships, and so on. Also, potential hot spots in Asia are highly dispersed. Looking north to south, they include the resource-rich Arctic (Russia is making new territorial claims); Korea (Pyongyang, along with its traditional invasion, submarine, and artillery threat to South Korea, has added a nuclear missile threat to nations throughout the region); the perennial Taiwan Strait flashpoint; ocean claims by China against Japan, the Philippines, and Vietnam; military and pirate threats to Indian Ocean sea lanes; and so on. The result is greater demand for a U.S. presence over a much larger, more distant area.

As the saying goes, even the best warship cannot be in two places at the same time. But **under current plans the Navy will shrink, not grow.** The five-year budget the Navy proposed to Congress in 2013 cut $58 billion from its FY 2012-13 proposal. Current plans will leave the Navy's budget essentially flat at $152-156 billion annually through FY 2018-19. Few experts believe the Navy will top 300 surface ships during the next decade; some think it may have fewer than 250. By comparison, at the Cold War's end it had almost 560 ships.

Sea-based robots cannot fill the gap completely, but they can fill important missions and add new capabilities to confound potential adversaries. Some scenarios discussed include:

• Counter-mine warfare. Mines are a particular concern for the Strait of Hormuz and Strait of Malacca. As noted, mine clearing has been a primary mission of UMSs. Robotic systems can often clear a larger area faster and usually more safely than older methods. Countermine UMSs could be kept on station in such hotspots and also to serve as a deterrent.

• Anti-submarine warfare. Countries such as Iran and China are deploying new submarines that many Western analysts believe could threaten maritime trade or prevent the United States from delivering supplies and reinforcements to its regional allies in wartime. **UMSs could assume part of the mission of detecting, tracking, and following them, partly offsetting the Navy's shrinking submarine fleet.**

• Information operations. Because UUSs are usually quieter than submarines, it is straightforward to equip them to mimic the sounds of their manned counterparts. Again, this capability could help as the U.S. submarine force is stretched thin. Such "spoofing" complicates targeting for an adversary in wartime, and its ability to develop reliable signatures and databases of U.S. forces before a conflict begins.

• Strike warfare and area denial. It would be possible to adapt short- and medium-range precision-guided missiles to UMSs, just as missiles were added to unmanned aerial vehicles (UAVs) such as Predator and Reaper. In one scenario, the Navy could position armed UUSs close to a potential hotspot such as North Korea or the Taiwan Strait. During a crisis some might be surfaced as a "show of force," and then the weapons would be concealed to serve as a deterrent. UUSs could also attack enemy ships in port or en route. They could provide greater endurance than manned vessels for remaining on station, and greater ability than traditional torpedoes or mines to adapt to changing conditions.

•Infiltration and payload emplacement. Prior to amphibious operations in World War II, Navy frogman surveyed approaches, emplaced demolitions to destroy enemy defenses, and planted navigation beacons to guide forces to their targets. SEALs perform similar activities today. UMSs could allow them to work from a greater distance.

• Infrastructure inspection and servicing. The Navy maintains an extensive underwater infrastructure for command, control, and communications. UMSs could be used to maintain this infrastructure, much as the oil exploration industry uses them today to service offshore rigs.

• Harbor policing. **The Navy has performed this function in operations overseas and as part of its force protection responsibilities at home. They could use UMSs to detect intruders and inspect vessels, as could the Coast Guard, Customs and Border Protection, and local police.**

• Ad-hoc sensor and communication networks. Today when U.S. forces go to war, one of their first tasks is to establish "tactical intranets" to move information among units. UMSs offer a means to establish such networks quickly in a combat zone offshore or at sea, using a combination of radio frequency, acoustic, and pre-laid fiber optic links.

• Environmental monitoring and oceanography. UMSs can be used to determine conditions in littorals just before a military operation and collect information on ocean conditions for long-term planning and research.

Naval power puts a cap on conflict and solves every impact

NLUS, 12 – a nonprofit organization dedicated to educating our citizens about the importance of sea power to U.S. national security and supporting the men and women of the U.S. Navy, Marine Corps, Coast Guard and U.S.-flag Merchant Marine and their families (Navy League of the United States, "Maritime Primacy & Economic Prosperity: Maritime Policy 2012-13", Navy League of the United States, 1/21/2012, http://www.navyleague.org/files/legislative_affairs/maritime_policy20122013.pdf)

Global engagement is critical to the U.S. economy, world trade and the protection of democratic freedoms that so many take for granted. The guarantors of these vital elements are hulls in the water, embarked forward amphibious forces and aircraft overhead. The Navy League of the United States' Maritime Policy for 2012-13 provides recommendations for strategy, policy and the allocation of national resources in support of our sea services and essential to the successful execution of their core

missions. We live in a time of complex challenges — terrorism, political and economic turmoil, extremism, conflicts over environmental resources, manmade and natural disasters — and potential flash points exist around the globe. **It is** the **persistent** forward **presence and engagement of maritime forces that keep these flash points in check, prevent conflict and crisis escalation**, and allow the smooth flow of goods in a global economy. The United States has fought multiple wars and sacrificed much to ensure un challenged access to sea lanes and secure the global commerce upon which the U.S. economy depends. The "persistent naval presence" provided by our forward-deployed Navy and Marine Corps ships, aircraft, Sailors and Marines is the guarantor of that hard-won maritime security and the critical deterrent against those who might seek to undermine that security. Maintaining naval forces that can sustain our national commitment to global maritime security and dissuade transnational aggression in the future must be a national imperative.

The privilege applies to drones

Sinnar 13 --- Assistant Professor of Law at Stanford (Shirin, "Protecting Rights from Within? Inspectors General and National Security Oversight", May, 65 Stan. L. Rev. 1027, lexis)//Mnush

More than a decade after September 11, 2001, the debate over which institutions of government are best suited to resolve competing liberty and national security concerns continues unabated. While the Bush Administration's unilateralism in detaining suspected terrorists and authorizing secret surveillance initially raised separation of powers concerns, the Obama Administration's aggressive use of drone strikes to target suspected terrorists, with little oversight, demonstrates how salient these questions remain. Congress frequently lacks the [*1029] information or incentive to oversee executive national security actions that implicate individual rights. Meanwhile, **courts often decline to review counterterrorism practices challenged as violations of constitutional rights out of concern for state secrets** or institutional competence. n1 These limitations on traditional external checks on the executive - Congress and the courts - have led to increased academic interest in potential checks within the executive branch. Many legal scholars have argued that executive branch institutions supply, or ought to supply, an alternative constraint on executive national security power. Some argue that these institutions have comparative advantages over courts or Congress in addressing rights concerns; others characterize them as a second-best option necessitated by congressional enfeeblement and judicial abdication.

Empirics prove – state secrets have hidden the drone program

Bazzle 12 --- J.D. Georgetown University Law Center (Tom, "Shutting the Courthouse Doors: Invoking the State Secrets Privilege to Thwart Judicial Review in the Age of Terror", 2012, 23 Geo. Mason U. Civ. Rts. L.J. 29, lexis)//Mnush

C. A New Frontier: The Obama Administration's Invocation of State Secrets to Prevent Judicial Oversight of Its Plan to Target and Kill Anwar al-Aulaqi The American-born Yemeni cleric Anwar al-Aulaqi was perhaps the most notorious member of the Obama Administration's controversial "targeted killing" list, n171 a classified but widely-known-to-exist list of alleged terrorists identified by intelligence agencies for targeted killing by U.S. forces and the government's growing arsenal of unmanned drones. n172 As a propagandist of the Al Qaeda in the Arabian Peninsula (AQAP), al-Aulaqi's incendiary statements and alleged involvement in recently foiled terrorist plots n173 led the Obama Administration to conclude that he posed such a

sufficient threat to U.S. security to justify the unprecedented step of targeting him for capture or killing. n174 Despite outcries from across the political spectrum [*56] that targeting a U.S. citizen for assassination without first charging him and convicting him of a crime amounted to an unconscionable violation of due process rights, n175 the Obama Administration continued undeterred in its search for al-Aulaqi. This pursuit ended on September 30, 2011, when an American drone strike in Yemen killed al-Aulaqi and several others, including an American citizen of Pakistani origin that had edited Al Qaeda's online jihadist magazine. n176 Prior to al-Aulaqi's killing, his father, Nasser al-Aulaqi - represented by the ACLU and Center for Constitutional Rights (CCR) - filed a claim in the District Court for the District of Columbia to enjoin his assassination, and in response, the Obama Administration invoked the **state secrets privilege**. n177 Al-Aulaqi charged that the authority contemplated by the Obama Administration is far broader than what the Constitution and international law allow. n178 According to al-Aulaqi, outside of armed conflict, both the Constitution and international law prohibit targeted killing except as a last resort to protect against concrete, specific, and imminent threats of death or serious physical injury. n179 Al-Aulaqi further argued that an extrajudicial policy, under which names are added to CIA and military "kill lists" for a period of months, through a secret executive process, is plainly limited to imminent threats. n180

Revealing secrets could threaten national security

Conan and Abramson ’06 --- Host and Reporter (Neil and Larry, “Invoking the State Secrets Privilege,” npr, June 19, 2006, http://www.npr.org/templates/story/story.php?storyId=5495919)//Mnush

ABRAMSON: Right and - but **let's give the government their due**. If you are asked to disclose how you target members of a terrorist group in order to allow litigation to go forward, **you're basically giving away the keys to the store. You're telling people how to avoid surveillance.** And the same thing goes for some of these employment discrimination cases. They did possibly threaten a lot of sensitive information that would have jeopardized, perhaps, the lives of people working undercover.

So it's very difficult for them - for the government to explain in public why they're trying to keep something secret, because, you know, it's a secret. And that's the nature of it, and they can't jeopardize somebody's life in order to allow a civil proceeding to go ahead.

Government keeps secrets to maintain national security

Wencker ’13 --- attorney representing local and small governments (Chris, “Why does the government keep secrets from us?” Law Office of Christopher Wencker P.L.C, http://www.wenckerlaw.com/governmental-perspective-blog/why-does-the-government-keep-secrets-from-us)//Mnush

The ongoing saga of Edward Snowden and his legal troubles in the wake of his disclosure of classified information has generated lively discussion about the role of government surveillance in creating security for our society. Many people are debating whether or not the government should be keeping secrets about its surveillance activities. I recently heard an interview on the radio in which the guest explained that, in his opinion, secret security systems were ineffective, because they are not improved by being subjected to scrutiny and constant testing. While this may be a valid point for computer firewalls and the like, **I think this misunderstands the justification for government secrecy in some programs. The purpose of**

keeping information from general dissemination is -- or at least should be -- to prevent the information from benefiting those who would do harm to society. For example, if the police are aware that organized criminals are using a particular location to discuss their murder plans, and they can plant a listening device in that location, allowing the general public to know about the device will defeat its purpose. The criminals will simply find another, more private, location to hatch their plan. In situations such as this, **secrecy is key**. Secrecy is a problem, on the other hand, when it is used to prevent the public from uncovering illegal activity. Unfortunately, many people assume that information is kept secret for the latter reason, when in actuality it is for the former. Please keep this in mind when seeking information from the government. For the most part, the people working in these areas are genuinely motivated by a desire to help their fellow citizens, by stopping those who would seek to harm us. This includes most police officers and intelligence professionals. They generally have no interest in your personal discussions about what to make for dinner, and would rather focus on discussions about criminal activity. If you request documents about a particular government program and are denied because the information is classified, do not assume that the program is targeting you.

Unmanned Vehicle Tech Leadership Key to Naval Power

Unmanned vehicle tech leadership is key to naval power

Landay et al. 4 (William E. Landay III – RDML (Rear Admiral), USN, Concurring with the following: Michael A. LeFever, RDML, USN Raymond A. Spicer, RDML, USN Roseanne M. Levitre, RDML, USN Steven J. Toma szeski, RADM, USN, Oceanographer of the Navy, Approved by Joseph A. Walsh and Roger M. Smith of US Navy, "The Navy Unmanned Undersea Vehicle (UUV) Master Plan", 11/9, http://www.navy.mil/navydata/technology/uuvmp.pdf)

The Vision for UUVs and the Objective of the UUV Master Plan Today our naval forces enjoy **maritime superiority** around the world and find themselves at a **strategic inflection point** during which future capabilities must be pondered with **creativity** and **innovation** . **Change must be embraced** and made an ally in order to take advantage of emerging technologies, concepts, and doctrine; thereby preserving the nation's **global leadership**. Sea Power 21 has additionally **specified unmanned vehicles** as force multipliers and risk reduction agents for the Navy of the future. Transformation applies to what we buy as well as how we buy and operate it–all while competing with other shifting national investment priorities. The growing use of unmanned systems– air, surface, ground, and underwater is continually demonstrating new possibilities. While admittedly futuristic in vision , one can conceive of scenarios where UUVs sense, track, identify, target, and destroy an enemy–all autonomously and tie in with the full net-centric battlespace. UUV systems will provide a **key undersea component** f o r FORCEnet, contributing to an integrated picture of the battlespace. Even though today's planners, operators, and technologists cannot accurately forecast the key applications for U UVs in the year 2050, this plan provides a roadmap to move toward that vision. Pursuit of this plan's updated recommendations beginning in the year 2004, will place increasingly large numbers of UUVs in the hands of warfighters. Thus, xvii UUV Master Plan UUVs can begin addressing near-term needs while im proving understanding of mid- to far-term possibilities. Even the most futuristic applications can evolve in a confident, cost-effective manner. This confidence is based on several factor s: the Sea Power 21 Sub-Pillar capabilities identified he readdress a broad ran g e of user needs; critical technologies are identified that will enable tomorrow's more complex applications; and key principles and best practices are recommended that p r o v ide for a logical, flexible, and affordable development effort.

Navy Prevents Great Power War

Strong navy is key to prevent great power – deterrence

Eaglen 11 (Mackenzie, Heritage Foundation Research Fellow for National Security Studies, Allison Center for Foreign Policy Studies, May, 16, 2011, "Thinking about a Day without Sea Power: Implications for U.S. Defense Policy", http://www.heritage.org/research/reports/2011/05/thinking-about-a-day-without-sea-power-implications-for-us-defense-policy)

Under a scenario of dramatically **reduced naval power**, the United States would **cease to be active** in any international alliances. While it is reasonable to assume that land and air forces would be similarly reduced in this scenario, the lack of credible maritime capability to move their bulk and establish forward bases would render these forces irrelevant, even if the Army and Air Force were retained at today's levels. In Iraq and Afghanistan today, 90 percent of material arrives by sea, although material bound for Afghanistan must then make a laborious journey by land into theater. **China's** claims on the South China Sea, previously disputed by virtually all nations in the region and routinely contested by U.S. and partner naval forces, are accepted as a fait accompli, effectively turning the region into a "Chinese lake." China establishes expansive oil and gas exploration with new deepwater drilling technology and secures its local sea lanes from intervention. **Korea**, unified in 2017 after the implosion of the North, signs a mutual defense treaty with China and solidifies their relationship. **Japan** is increasingly isolated and in 2020–2025 executes long-rumored plans to create an indigenous nuclear weapons capability.[11] By 2025, Japan has 25 mobile nuclear-armed missiles ostensibly targeting China, toward which Japan's historical animus remains strong. China's entente with Russia leaves the Eurasian landmass **dominated by Russia** looking west and China looking east and south. Each cedes a sphere of dominance to the other and remains largely unconcerned with the events in the other's sphere. Worldwide, **trade** in foodstuffs **collapses**. Expanding populations in the Middle East **increase pressure** on their governments, which are already stressed as the breakdown in world trade disproportionately affects food importers. Piracy increases worldwide, driving food transportation costs even higher. In the Arctic, Russia aggressively asserts its dominance and effectively shoulders out other nations with legitimate claims to seabed resources. No naval power exists to counter Russia's claims. India, recognizing that its previous role as a balancer to China has lost relevance with the retrenchment of the Americans, agrees to supplement Chinese naval power in the Indian Ocean and Persian Gulf to protect the flow of oil to Southeast Asia. In exchange, China agrees to exercise increased influence on its client state Pakistan. The great typhoon of 2023 strikes Bangladesh, killing 23,000 people initially, and 200,000 more die in the subsequent weeks and months as the international community provides little humanitarian relief. Cholera and malaria are epidemic. Iran dominates the Persian Gulf and is a nuclear power. Its navy aggressively patrols the Gulf while the Revolutionary Guard Navy harasses shipping and oil infrastructure to force Gulf Cooperation Council (GCC) countries into Tehran's orbit. Russia supplies Iran with a steady flow of military technology and **nuclear** industry expertise. Lacking a regional threat, the Iranians happily control the flow of oil from the Gulf and benefit economically from the "protection" provided to other GCC nations. In Egypt, the decade-long experiment in participatory democracy ends with the ascendance of the Muslim Brotherhood in a violent seizure of power. The United States is identified closely with the previous coalition government, and riots break out at the U.S. embassy. Americans in Egypt are left to their own devices because the U.S. has no forces in the Mediterranean capable of performing a noncombatant evacuation when the government closes major airports. Led by Iran, a coalition of Egypt, Syria, Jordan, and Iraq **attacks Israel**. Over 300,000 die in six months of fighting that includes a limited nuclear exchange between Iran and Israel. Israel is defeated, and the State of Palestine is declared in its place. Massive "refugee" camps are created to house the internally displaced Israelis, but a humanitarian nightmare ensues from the inability of conquering forces to support them. The NATO alliance **is shattered**. The security of European nations depends increasingly on the lack of external threats and the nuclear capability of France, Britain, and Germany, which overcame its reticence to military capability in light of America's retrenchment. Europe depends for its energy security on Russia and Iran, which control the main supply lines and sources of oil and gas to Europe. Major European nations stand down their militaries and instead make limited contributions to a new EU military constabulary force. No European nation maintains the ability to conduct significant out-of-area operations, and Europe as a whole maintains little airlift capacity.

Strong navy key to allied response- creates a super-deterrent

Lyons, 13 -- retired Navy admiral

[James, commander in chief of the U.S. Pacific Fleet and senior U.S. military representative to the United Nations, "Where are the carriers?" Washington Times, 1-15-13, l/n, accessed 1-22-13]

To keep pressure on and **raise the level of deterrence**, movement of naval forces, particularly carrier strike groups, must remain unpredictable. In a deteriorating crisis situation, our Navy gains maximum

impact by moving the carrier strike group into the crisis area. That sends a **special signal** of our intent to respond to our potential enemies and to our allies as well. Such a signal has a telling effect on our regional allies and encourages them to **employ their** air force and naval **assets in a coordinated manner**, which certainly should **raise the deterrent equation**.

Naval Power Key to the Economy

Naval power collapse kills the economy and trade

Eaglen 11 (Mackenzie, Heritage Foundation Research Fellow for National Security Studies, Allison Center for Foreign Policy Studies, May, 16, 2011, "Thinking about a Day without Sea Power: Implications for U.S. Defense Policy", http://www.heritage.org/research/reports/2011/05/thinking-about-a-day-without-sea-power-implications-for-us-defense-policy, 2/16/13, atl)

If the United States slashed its Navy and ended its mission as a guarantor of the free flow of transoceanic goods and trade, globalized world trade would decrease substantially. As early as 1890, noted U.S. naval officer and historian Alfred Thayer Mahan described the world's oceans as a "great highway…a wide common," underscoring the long-running importance of the seas to trade.[12] Geographically organized trading blocs develop as the maritime highways suffer from insecurity and rising fuel prices. Asia prospers thanks to internal trade and Middle Eastern oil. Europe muddles along on the largesse of Russia and Iran, and the Western Hemisphere declines to a "new normal" with the exception of energy-independent Brazil. For America, Venezuelan oil grows in importance as other supplies decline. Mexico runs out of oil—as predicted—when it fails to take advantage of Western oil technology and investment. Nigerian output, which for five years had been secured through a partnership of the U.S. Navy and Nigerian maritime forces, is decimated by the bloody civil war of 2021. Canadian exports, which a decade earlier had been strong as a result of the oil shale industry, decline as a result of environmental concerns in Canada and elsewhere about the "fracking" (hydraulic fracturing) process used to free oil from shale. State and non-state actors increase the hazards to seaborne shipping, which are compounded by the necessity of traversing key chokepoints that are easily targeted by those who wish to restrict trade. These chokepoints include the Strait of Hormuz, which Iran could quickly close to trade if it wishes. More than half of the world's oil is transported by sea. "From 1970 to 2006, the amount of goods transported via the oceans of the world…increased from 2.6 billion tons to 7.4 billion tons, an increase of over 284%."[13] In 2010, "$40 billion dollars [sic] worth of oil passes through the world's geographic 'chokepoints' on a daily basis…not to mention $3.2 trillion…annually in commerce that moves underwater on transoceanic cables."[14] These quantities of goods simply cannot be moved by any other means. Thus, a reduction of sea trade reduces overall international trade. U.S. consumers face a greatly diminished selection of goods because domestic production largely disappeared in the decades before the global depression. As countries increasingly focus on regional rather than global trade, costs rise and Americans are forced to accept a much lower standard of living. Some domestic manufacturing improves, but at significant cost. In addition, shippers avoid U.S. ports due to the onerous container inspection regime implemented after investigators discover that the second dirty bomb was smuggled into the U.S. in a shipping container on an innocuous Panamanian-flagged freighter. As a result, American consumers bear higher shipping costs. The market also constrains the variety of goods available to the U.S. consumer and increases their cost. A Congressional Budget Office (CBO) report makes this abundantly clear. A one-week shutdown of the Los Angeles and Long Beach ports would lead to production losses of $65 million to $150 million (in 2006 dollars) per day. A three-year closure would cost $45 billion to $70 billion per year ($125 million to $200 million per day). Perhaps even more shocking, the simulation estimated that employment would shrink by approximately 1 million jobs.[15] These estimates demonstrate the effects of closing only the Los Angeles and Long Beach ports. On a national scale, such a shutdown would be catastrophic. The Government Accountability Office notes that: [O]ver 95 percent of U.S. international trade is transported by water[;] thus, the safety and economic security of the United States depends in large part on the secure use of the world's seaports and waterways. A successful attack on a major seaport could potentially result in a dramatic slowdown in the international supply chain with impacts in the billions of dollars.[16] As of 2008, "U.S. ports move 99 percent of the nation's overseas cargo, handle more than 2.5 billion tons of trade annually, and move $5.5 billion worth of goods in and out every day." Further, "approximately 95 percent of U.S. military forces and supplies that are sent overseas, including those for Operations Iraqi Freedom and Enduring Freedom, pass through U.S. ports."[17]

Naval power key to the global economy

Conway, Roughead, and Allen, 07- *General of U.S. Marine Corps and Commandant of the Marine Corps, **Admiral of U.S. Navy and Chief of Naval Operations, ***Admiral of U.S. Coast Guard and Commandant of the Coast Guard (*James Conway, **Gary Roughead, ***Thad Allen, "A Cooperative Strategy for 21st Century Seapower", Department of the Navy, United States Marine Corps, United States Coast Guard, http://www.navy.mil/maritime/MaritimeStrategy.pdf, KONTOPOULOS)

The world economy is tightly interconnected. Over the past four decades, total sea borne trade has more than quadrupled: 90% of world trade and two-thirds of its petroleum are transported by sea. The sea-lanes and supporting shore infrastructure are the lifelines of the modern global economy, visible and vulnerable symbols of the modern distribution system that relies on free transit through increasingly urbanized littoral regions. Expansion of the global system has increased the prosperity of many nations. Yet their continued growth may create increasing competition for resources and capital with other economic powers, transnational corporations and international organizations. Heightened popular expectations and increased competition for resources, coupled with scarcity, may encourage nations to exert wider claims of sovereignty over greater expanses of ocean, waterways, and natural resources—potentially resulting in conflict.

Secrecy Key to U.S. Nuclear Deterrent

Secrecy is key to the US nuclear deterrent

Green 97 (Tracey – Associate with McNair Law Firm, J.D. – University of South Carolina, "Providing for the Common Defense versus Promoting the General Welfare: the Conflicts Between National Security and National Environmental Policy", South Carolina Environmental Law Journal, Fall, 6 S.C Envtl. L.J. 137, lexis)

The deployment of **nuclear weapons**, however, is a DoD action for which **secrecy is crucial** and, thus, **is classified** by Executive Order. n59 According to the American policy of deterrence through mutually assured destruction (MAD), nuclear weapons are essential to **an effective deterrent**. n60 If DoD disclosed the location of these weapons, disclosure would reduce or **destroy the deterrent**. An adversary could destroy all nuclear weapons with an initial strike, leaving the country **exposed** to nuclear terror. n61 Additionally, terrorists would know where to strike to obtain material for nuclear blackmail. In short, secrecy regarding nuclear weapons has **enormous implications** for national security. While the armed services must consider the environmental effects of maintaining nuclear weapons, they cannot release any information regarding the storage of these weapons.

Escalates to global nuclear war

Caves 10 (John P. Jr., Senior Research Fellow in the Center for the Study of Weapons of Mass Destruction – National Defense University, "Avoiding a Crisis of Confidence in the U.S. Nuclear Deterrent", Strategic Forum, No. 252, http://www.ndu.edu/inss/docUploaded/SF%20252_John%20Caves.pdf)

Perceptions of a compromised U.S. **nuclear deterrent** as described above would have profound policy implications, particularly if they emerge at a time when a nuclear-armed great power is pursuing a more aggressive strategy toward U.S. allies and partners in its region in a bid to

enhance its regional and global clout.

- A dangerous period of vulnerability would open for the United States and those nations that depend on U.S. protection while the United States attempted to rectify the problems with its nuclear forces. As it would take more than a decade for the United States to produce new nuclear weapons, ensuing events could preclude a return to anything like the status quo ante.

- The assertive, nuclear-armed great power, and other major adversaries, could be willing to challenge U.S. interests more directly in the expectation that the United States would be less prepared to threaten or deliver a military response that could lead to direct conflict. They will want to keep the United States from reclaiming its earlier power position.

- Allies and partners who have relied upon explicit or implicit assurances of U.S. nuclear protection as a foundation of their security could lose faith in those assurances. They could compensate by accommodating U.S. rivals, especially in the short term, or acquiring their own nuclear deterrents, which in most cases could be accomplished only over the mid- to long term. A more nuclear world would likely ensue over a period of years.

- Important U.S. interests could be compromised or abandoned, or a **major war could occur** as adversaries and/or the United States miscalculate new boundaries of deterrence and provocation. At worst, war could lead to **state-on-state employment of** weapons of mass destruction (**WMD**) on a scale far more catastrophic than what nuclear-armed terrorists alone could inflict.

Kritiks – Top Level

CVE / Terrorism Links

Conceptions of the radicalization of Islam ignores the complexity of violence and posits an ethnicity as coterminous with terrorist. Counter-radicalization strategies skew our perceptions of Islam by exaggerating the threat of terror

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11 and gingE)

B. Radicalization, Counterradicalization, and National Security n183 Like broken windows theory, radicalization theory has been highly contested and yet broadly influential in shaping contemporary policing. While U.S. government accounts take for granted a problem with radicalization that warrants government intervention, the literatures of governments, academics, experts, and civil society stakeholders around the world express profound disagreement over the meaning of radicalization, and the nature and extent of threat embodied by Muslims. n184 Radicalization discourse purports to predict future terrorism, drawing from studies of prior terrorist acts to identify trends and details that will aid in identifying future terrorists. In so doing, radicalization redefines and expands the legitimate scope of government concern from terrorism - a question of political violence, of crime, even of war crime - to radicalization - a question of religious and political cultures and beliefs. Before moving further into the problems inherent in overlaying radicalization theory onto community engagement, it is worth exploring the similarities and differences between the work of radicalization theory and broken windows theory. The primary similarities are threefold. First, both radicalization and broken windows are **preventative theories of crime control**, calling for **prophylactic state action against noncriminal behavior.** Second, while both theories appear concerned with disorder or radicalization in the abstract, their practical effect is to **bring considerable scrutiny to communities already marginalized by virtue of race and religion**. As a practical matter, broken windows theory foregrounds race and inequality as instigators or signs of disorder. n185 Counterradicalization and CVE, in practice and in theory, are almost exclusively focused on Muslims. n186 Moreover, when manifest in community policing and community engagement approaches, the theories work to cultivate partnerships with community members in order to increase the legitimacy and reach of law enforcement into the subject communities. Third, in addition to shaping community policing/engagement [*877] approaches, both theories have had great influence on the broader field of policing tactics in the relevant communities (and beyond). There are at least two important differences. In terms of (contested) causal claims, broken windows theory focuses on physical signs of disorder as signals of deteriorating social order, whereas radicalization emphasizes ideological currents of disorder as motivators for acts of terrorism. **Radicalization's concern is predicated on a false belief in the teleological character of Islam** - that if Muslims communities witness conservative religious practice and critical politics, they will view such currents as acceptable and gravitate toward radicalism, thereby producing more terrorists. Second, the theories arguably have propelled different types of police action. Whereas broken windows theory leads to aggressive enforcement against misdemeanor and minor crimes, counterradicalization produces increased surveillance. n187 This distinction has its limits, since broken windows policing serves an intelligence-gathering function, and counter-radicalization shapes prosecutorial priorities. But while both theories expand the role of the state and the blueprint of policing, their mechanics are distinct. To be clear, I'm less concerned with anaologies between the causal mechanics of the theories, and more concerned with how the theories construct the categories of the disorderly and the radical, and the implications those constructions have for policing and the subject communities. 1. Blurring Dissent and Difference With Violence Even aside from the disproportionate focus on politically motivated violence by Muslims in terrorism studies, there are key definitional problems with radicalization discourse. Most fundamentally, **the terms radicalization and extremism are used sloppily** and with **unclear meaning**, with a causal connection assumed between radical ideas and committing acts of terrorism. n188 [*878] Empirical research "has emphatically and repeatedly concluded" that there is no single terrorist profile and no obvious markers for the process by

which someone becomes a terrorist. n189 The process by which people embrace violence is not linear but complex. n190 Importantly, studies of so-called homegrown terrorism also reject the ideas that Islam and terrorism are linked, or that observing the Muslim faith constitutes a step toward violence. n191 Nor is there data to suggest that Muslims are becoming more radical in their views, let alone more violent. n192 National security prosecutions in the headlines provide a skewed sense of the threat; the vast majority of those prosecutions do not charge defendants with any violent crime, or with any intent to commit violent crime, but instead with material support for terrorism - a very broad concept typically far removed from violence. n193 Despite their continued hold on law enforcement, the NYPD and FBI reports are transparent **paper tigers** - now **deconstructed many times over**. n194 The stages and factors of radicalization are internally **inconsistent and vague** enough to justify surveillance of any person who identifies as Muslim, or is linked with Muslim religious or political community. Consider, for example, that the NYPD [*879] report marks as "radicalization incubators" "cafes, cab driver hangouts, flophouses, prisons, student associations, nongovernmental organizations, hookah (water pipe) bars, butcher shops and book stores": mostly locations where Muslims or those from Muslim-majority countries are likely to spend their time, whether for religious, political, or sentimental reasons. n195 The reports offer **little to no data** in support of their ambitious conclusions, with the **lack of substantiation reflecting** and reconstituting the marginalization and stigmatization of American Muslims. The data on which the reports rely include national security prosecutions involving questionable tactics by law enforcement: constructing the plot, providing the means, and incentivizing the conduct. In other words, the data results in part from cases in which the FBI created or molded the behavior it then purported to model. n196 In other cases, the defendants never committed a violent act, confounding the link between their behavior and a willingness to commit terrorist acts. n197 Overall, there remains no trustworthy empirical account of radicalization that suggests the idea has explanatory or predictive power. n198

Counter-radicalization normalizes a system of suspicion that portrays all Muslims as terrorists – Muslim identity becomes synonymous with state resistance and anti-Americanism, which causes violence against those who aren't "American" enough

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11 and gingE)

[*883] The political vector marks your relationship to the project of American statecraft vis a vis your concern and commune with other Muslims. The ideological questions are awash in a loyalty calculus, focused on whether you foreground concern with Muslim community and Muslim suffering at home and abroad, or the imperatives of the U.S. government in effectuating its policies. Implicit here is the idea that such concern is compatible with American identity only to the extent that it comes second or does not compete with U.S. government interests. n212 The activity dimensions focus on Muslim engagement with political issues vis a vis other Muslims and the U.S. government. Does this person or community protest U.S. foreign or national security policy? Does this person or community comply with requests to inform on the local mosque when asked by the FBI to do so? The radicalization and counterradicalization discourses have clear implications for the meaning of good citizenship on the part of American Muslims: To be a good citizen is to have a compliant relationship with the state, rather than to relate from an oppositional or contesting stance. Are you with us or against us? n213 remains the question. If radicalization creates ideological force for the idea that the state should monitor Muslims, and radical Muslims in particular, then counterradicalization initiatives operationalize the distinction, offering American Muslims an opening to perform their Americanness by partnering with the government. n214 The distinction emerges not simply from how Muslims signal their identity or allegiance with regard to Muslim religious practices or other Muslims. The distinction between the radical and American Muslim emerges in part from how Muslims relate to U.S. statecraft or U.S. government initiatives. [*884] Counterradicalization creates friction between loyalty to the U.S. project and practices of Muslim identity. In particular, the Muslim concept of the ummah, or global Muslim community, comes into conflict with counterradicalization commitments. Resistance to, or criticism of, American foreign policy in Muslim lands is a factor of radicalization. n215 So is concern for Muslim casualties abroad, or discrimination against Muslims in the United States. n216 Traveling abroad to Muslim countries, even for

hyphenated second-generation Americans visiting family, suggests suspicious connection. n217 In classifying Muslims who attend mosque, who travel or send money abroad, or who oppose the U.S. drone policy in Yemen and Pakistan, as within the process of radicalization toward terrorism, the theory marks individuals and geographies as sufficiently different to be outside the protections of the state, transforming them into legitimate objects of state scrutiny. n218 Radical Muslims become the lawless out-of-place subjects deserving of little protection. n219 Counterradicalization cleaves Muslim from American identities in another way, equating cooperation with the state with Americanness and loyalty, and **dissent with Muslimness, radicalization, and terrorism**. Efforts at partnering with Muslim communities in counterradicalization efforts create opportunities for American Muslims to signal their allegiance. Like the "regulars" and the "lawful" in the broken windows account, those considered American Muslims are partners in counterradicalization - they stand for the state's values, will cooperate with the police in their efforts to monitor and influence coreligionists, and will step down in the face of conflict. By exercising a right of refusal to cooperate with the state, the American Muslim moves toward radicalism, the radical emerging in response to the state's policing. [*885] b. Creating the Terms of Racial Obedience Radicalization and counterradicalization place identity pressures on American Muslims in their interactions with each other, the public, and the state. n220 To cooperate - no matter the substance of law enforcement's demand and expectation - is to validate one's American identity. To refuse or to dissent is to express radicalism, or at least openness to it. n221 Radicalization policing creates the "racial obedience toward, and fear of, the police," manifested in "particular kinds of performances .... to signal acquiescence and respectability." n222 Of course this **racialized pressure emerges from a larger social context** - people of color are subject to more frequent and more severe police scrutiny, and they are fearful that refusing the police will stoke racial animosity or race-based suspicion and aggravate an already bad situation. n223 Immigrants in particular are less likely to know their rights. In all these contexts, accountability is minimal, so the police "have an **incentive to exploit vulnerabilities**." n224 Radicalization theory has created a post-9/11 reality in which Muslims "are more vulnerable to compliance requests, more likely to comply, and have to give up more privacy to do so." n225 Radicalization-informed policing produces a **loyalty discourse** in which there are "good" and "bad" Muslims, and thereby "**entrenches the idea of [Muslimness] as a crime of identity**," n226 "encourages group surveillance," and incentivizes Muslims "to be available for, indeed advocate for, white [*886] racial inspection of [Muslimness]." n227 As with the politics of respectability in Black communities, this approach does not protect the "good" Muslims but, instead, renders all Muslims "vulnerable to racial profiling." n228 Indeed, radicalization creates **geographies of suspicion**. While the geography of broken windows theory was effectively one of class and race - hoisting the specter of the poor Black neighborhood - the sphere of radicalization is religious and cultural (though of course inflected by race and class as well). n229 In large metropolitan centers, there are certainly physically contiguous neighborhoods where Muslims of similar racial or class backgrounds reside. In the rest of the country, however, Muslims of different classes, races, nationalities, and linguistic and ethnic groups are more dispersed. In these places, government surveillance creates a different kind of geography out of the places where Muslims gather: the mosque, the halal butcher, or the Indian or Somali grocery store. And visiting these places makes you vulnerable to police scrutiny. n230 Beyond the policing practices themselves, there is the realm of public discourse and debate in which Muslims make their choices. The most public and theatrical government initiative drawing attention to radicalization occurred with Peter King's first in a series of hearings before the House Homeland Security Committee in 2011 and 2012, meant to address "a crisis of radicalization to violence ... within the Muslim-American community" n231 [*887] and a refusal by Muslims to cooperate. n232 Those called by King as representatives of Muslim communities testified that American Muslims were ignoring concerns with radicalization and could do more to cooperate. n233 The witnesses lampooned a number of mainstream and prominent American Muslim advocacy organizations - Muslim Advocates, the Council on American Islamic Relations, and the Muslim Public Affairs Council, all of which have met regularly with federal, state, and local city officials - for undermining Muslim cooperation with law enforcement efforts. The organizations and other community leaders came under fire especially for their recent initiatives counseling community members to retain a lawyer before dealing with the FBI. n234

Counter-radicalization of terrorism is shrouded in a politics of anti-knowledge and exaggeration of threat – silences the Muslim community and pathologizes social problems

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

c. Racializing Ideology In addition to shaping modes of political engagement with the state, radicalization discourse and counterradicalization practice affect the parameters of religious and political conversations and contestation by rendering certain viewpoints or topics as off limits. n239 Of course it is not just the existence of the discourse at work here - it is the recurring and regularized interactions with police that serve as constant reminders of the stakes for American Muslims. Much of terrorism and radicalization discourses are enshrouded in a politics of "**anti-knowledge**." n240 Terrorism studies tend to "reduce complex social, historical, and political dynamics." n241 Chief among the "constraints shaping what can be said about terrorism" is "**denial of the possibility of rational causes**, and the attribution of terrorism to pure evil." n242 The mainstream narrative "implies that, once an individual has adopted an extremist religious ideology, terrorism will result, irrespective of political context or any calculation on the part of any organisation or social movement." n243 Similarly, radicalization and violent extremism discourse displaces any attention on political context with a focus on theological and psychological factors that supposedly foment radicalization. n244 [*889] Radicalization theory marks certain topics or viewpoints as beyond the pale by suggesting that they are un-American or likely to draw government scrutiny. n245 As a result, radicalization discourse puts pressure on the contours of conversation among Muslim communities about the public issues of our times to which many American Muslims are particularly attuned. n246 American Muslims are thus **less likely to vocalize concerns** about the exercise of American war power in Iraq, Afghanistan, Pakistan, Somalia, Yemen, and so on. n247 The absence of Muslim voices on these issues is particularly notable given how much of contemporary U.S. foreign policy is focused on Muslim populations. Equally important, the space for religious debate - on questions such as the meaning of "jihad" or different modes of interpretation - in mosques and other Muslim community space has also **shrunk and warped**. n248 "Since 9/11, mosque leaders have been under pressure to eject anyone expressing radical views, rather than engaging with them and seeking to challenge their religious interpretation, address their political frustrations, or meet their emotional needs." n249 Moreover, radicalization discourse may serve to **pathologize complex social problems**, **displace focus** from the role of government activity in creating those problems, and place the burden of solving them on already marginalized communities. Broken windows theory could be criticized along the same lines: The underlying roots of ordinary crime - poverty, joblessness, mass incarceration, disenfranchisement - disappear under the discourse of "disorder." In the context of national security, the complicated political historical terrain between the U.S. government and Muslim communities within the United States on the one hand, and the United States, Muslim-majority countries, and international terrorist groups on the other, disappears under the discourse of radicalization and the terrorist Other.

"Radicalized" Muslim Links

The construction of radicalized Muslim identity allows the surveillance apparatus to subordinate Muslims as an object of policing – this creates anxiety in society when everyday acts become potential terrorist threats, which creates racist stereotypes

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11 and gingE)

2. Racializing Muslims Under the guise of predicting future terrorism, radicalization provides a guide for government activity. In so doing, it redefines and expands the relevant field of state concern: from

terrorism to radicalization in Muslim communities. Marking religious and political activities as the indicators of radicalization, the discourse links religious and political practices in Muslim communities with the likelihood of terrorism - inviting state scrutiny into the halls of Muslim communities, and changing the terms of engagement with the state for Muslims. The theory creates the Muslim, her religious and political habits, as an **object of policing**. [*880] The theory is **racially productive**, n199 contributing to the racialization of American Muslims. n200 I use the term racialization knowing that it imperfectly describes the shape and nature of the stigma that has attached to American Muslim communities after 9/11, not least because African Americans make up a considerable portion of the Muslim population in the United States. American Muslims are unique in their diversity, varying by race, language, ethnicity, nationality, and class. Still, racialization best approximates the process by which a diverse group of people become lumped together by stigma, stereotype, and fear, all of which draw from a range of physical attributes and signifiers, mobilized by law, as a **method of control and subordination**. As with other subordinated and racialized groups (for example, Blacks, Latinos, Native Americans), there are for example, physical attributes associated with Muslim identity, from skin color to facial hair to garb. n201 By focusing on the post-9/11 era, I do not mean to minimize the reality that Muslims were racialized before 9/11, or that a significant portion of American Muslim communities are African American and have long been central to the story of race in America. While crime is the primary lens through which African Americans figure in the American imaginary, terrorism is the lens through which Muslims appear. African American and Muslim identities are carved by and in opposition to particularized types of suspicion. So the politics of respectability of each group is distinct - with the pressure on African Americans to disavow and respond to Black-on-Black crime, and for American Muslims to disavow and respond to terrorism. [*881] a. Creating Muslim Suspects The categories of "law-abiding" and "lawless," n202 "radical" and "moderate," are both overinclusive and indeterminate, n203 depending entirely for their meaning on police deployment and creating deep vulnerability for Muslim communities. n204 Muslims are forced to carry the stigma borne of such intense scrutiny and are powerless to escape it, given that both playing up and minimizing Muslim identity can be seen as potentially suspicious. n205 Evidence suggests, however, that Muslims have changed their behaviors in response to the reality and perception of extensive surveillance. For example, individuals report signaling their Muslimness less openly, by praying at home rather than at the mosque, avoiding political conversation in mosques and other Muslim-specific spaces, or reducing donations to Muslim organizations. Similarly, mosques may ask speakers to avoid political content, including criticism of U.S. foreign policy. n206 Radicalization discourse **crystallizes the Muslim as a figure of legitimate police scrutiny**. n207 As Harcourt observed in the context of broken windows theory, "the theory of deterrence and punishment focuses on the disorderly person rather than the criminal act, and thereby facilitates a policy of control, relocation, and exclusion of the disorderly"; "the category of the disorderly is the product, in part, [*882] of the [policing] itself." n208 Broken windows theory does its work in a two-step dialectic: It shifts the object of policing from crime to the out-of-place person, and in so doing, constructs the out-of-place person as someone who needs to be surveilled and controlled by the state. Similarly, radicalization theory and policing shift law enforcement's attention from actual plans to commit a terrorist crime to Muslim religious and political activity by literally marking observance of Muslim religious practice, or expressions of political solidarity with other Muslims, as within its causal framework. The radical Muslim, by virtue of noncriminal behavior - attending a halaqa (religious study group), visiting family in Pakistan, growing a beard, or paying off a mortgage n209 - embodies the potential threat of terrorism, and in so doing becomes a legitimate object of policing even when engaging in **wholly noncriminal (now suspicious) behavior**. "Politicization," "becoming involved in social activism and community issues," and "watching jihadi videos ... that highlight atrocities committed against Muslims" bring you within the third stage. It is not until the fourth stage that the theory concerns itself with any intent to undertake a criminal act. In other words, you could be three-fourths radicalized - a nearly full blown threat, one would imagine - and have yet to form any concrete thoughts of committing any crime. You might have radical beliefs, but no intent to commit a violent crime. The conservative Muslim, rolling up his pant sleeve in accord with a certain religious practice, or attending the Friday sermon criticizing U.S. foreign policy, embodies this disorder, and the potential for a much larger threat. The religious and political vectors of radicalization theory work in different, if intersecting, ways; both vectors reflect concerns with the ideas and activities of Muslim communities. The religious vector marks basic observant behavior and conservative modes of Muslim religious practice as radical, and therefore worthy of suspicion. "Giving up cigarettes, drinking, [and] gambling," for example, or "wearing traditional Islamic clothing" are markers of radicalization. n210 It matters both what type of Islam you believe in and what you practice: whether your actions (do you follow to a tee the hadith of the Prophet Muhammad?) or level of devotion and study (do you regularly attend a halaqa?) adhere to more conservative modes of practice. The "more Muslim" you are in the religious sense, the more radical, and the more potentially threatening you appear to be. n211

Community Engagement Links

The federal nature of community engagement subjects the Muslim community to domination by the state – degrades our democratic credibility

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

[*890] III. Community Engagement's Coercion While community engagement aims to build relationships with Muslim communities, to gain trust and enhance communication, it also functions as a technique of policing radicalization, encouraging all-encompassing surveillance of Muslim communities and working to **cultivate in Muslims a suspicion of coreligionists' religiosity and politicization**. n250 Community engagement becomes yet another pressure point at which Muslims must participate in surveillance or else suggest disloyalty to the American project. Given its anchoring in counterradicalization, the order that community engagement seeks to impose draws from ideas about the proper ways to practice Islam in America, the right balance between religious and secular life, and a demand for a certain form of political assimilation. n251 It closes, or at least narrows, possibilities for meaningful contestation and collaboration, while obscuring, and even reinforcing, the power differential between Muslim communities and law enforcement. The space between how community engagement appears - as a democracy-or inclusion-enhancing venture - and the work it actually does to reinforce coercive policing is what this Part explores. Throughout the foregoing discussion, I have emphasized the dangers associated with law enforcement's community engagement efforts - in particular how counterradicalization and community engagement work to cultivate pro-law-enforcement attitudes and affectations, such that Muslims open up their communities in various ways for government inspection and regulation. In so emphasizing, I do not mean to disparage civic engagement, which is no doubt constitutive of democracy. The quality of civic engagement has to matter, though, if the end is **democracy** of any meaningfully participatory or accountable variety, and if the goal is to bring outsider communities into the fold. I am not convinced that encouraging marginalized citizens' interactions with their government is constructive of democracy when it is achieved through coercive means - which do not allow for contestation of terms or meaningful input, and instead provide pressure on communities to participate in the very policing tactics that create the gulf in trust that propels the need for forays into trust building. When this participation and consent are shaped by a pressure to perform [*891] Americanness and to dispel racialized assumptions about loyalty and allegiance, the coercion raises acute **equality and antisubordination concerns.** The federal government has an interest in community engagement apart from democracy: national security. Through the surveillance and acculturation of communities marked as vulnerable to anti-American persuasion, the government hopes to prevent attacks on its (non-Muslim) citizens. But while a fear of Muslims or so-called Islamic terrorism fuels the push for community engagement, the data does not substantiate the extent of the concerns. When one considers the size of the global Muslim population, or even simply the American Muslim population, the few acts of terrorism committed by Muslims in the United States are infinitesimal, including as compared to other threats. n252 The bloated concern with terrorism seems to be motivated more by politics than by facts. Community policing generates its moral authority by tapping into the ideas of community support and democratic legitimacy, but the slippery quality of the term community, and the terrain of inequality that gives rise to the push for such programs, provokes two nested concerns. First, community engagement programs are largely **top down**, with federal **government prerogatives imposed** on Muslim communities. Community engagement creates the aesthetics of democracy and inclusion without necessarily reflecting any substantive commitments to those values. Concretely, the police may select partners that ratify preexisting police practices, n253 or pursue community engagement primarily as another entry point for surveillance and norms molding, as opposed to a source of accountability or contestation. The appearance of collaboration, without any real possibility of significant contestation, may **undermine rather than bolster democracy**, augmenting the **coercive power of the state**. Moreover, to the extent community engagement draws on racialized pressures on Muslims to perform their Americanness, and disavow their Muslimness, as a way to prove their American bona fides, the police partnerships exacerbate autonomy, equality, and subordination concerns implicated in the broader regime of policing radicalization. Second, the police partnerships may exacerbate hierarchies within Muslim communities. [*892] Police partnerships may have distributive effects internal to the community, such that the elite may be further empowered over the marginalized - even as they themselves are subject to coercive state power. If the inclusive and democratic work of community

engagement is questionable, and the fear of Muslims outsized, we must be suspect of the heightened push for community engagement with Muslim communities. My primary concern here is to test or problematize the democratic claims of this tactic. n254 A. A Top-Down Approach If we are to take the democracy and inclusion claims of community engagement seriously, we should expect that communities are able to "exert meaningful influence" n255 or have a determinative role in setting policing "goals, priorities, and strategies." n256 If community engagement does not provide opportunities for meaningful or determinative input but rather facilitates involvement only to the extent that participants lend support to preexisting law enforcement priorities, then its **claim to democratic legitimacy should be questioned.** There is strong reason to question the democratic claims of community engagement. As with community policing in the ordinary criminal context, a basic tenet of community engagement is that there is value for Muslim communities and law enforcement in cultivating channels of communication. The emphasis in official government statements is on relationship and trust building, inclusion, and democracy. But community engagement efforts, steeped in counterradicalization, play **important norms-molding and intelligence-gathering functions**, raising important questions about the implicit claims to democracy enhancement on which the efforts rely. Moreover, whereas building trust and relationships is based generally on the idea of two-way obligations, in reality the government has done little to address the fundamental root of distrust - which starts with the overly broad and punitive approach to policing entire Muslim communities. n257 Interacting with Muslim communities, law enforcement's prevailing focus is national security, [*893] foregrounding threat potential in government's interactions with Muslim communities. n258

AT: Community Policing is Net Better / More Democratic

Community policing does not allow American Muslims to reset priorities – they just ratify law enforcement's work

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

Above and beyond the concerns with community engagement serving as a cover for surveillance and norms molding, the federal government has repeatedly signaled **little room** for American Muslim communities to play a determinative role in setting priorities. Community engagement provides opportunities for American Muslims to **partake in and ratify** law enforcement's work. In a community engagement push by federal law enforcement with Minnesota's Somali communities, for example, "[an] FBI private acknowledged, there was no possibility of the community [having] influenced how the investigations were carried out." n259 To the contrary, the aims were more **one-sided**: to "correct what its agents called "misperceptions' ... such as that suspects in Somalia might be imprisoned without trial or targeted for drone killings (such community fears were consistent with official US policy ...)" and "to encourage community leaders to pass information to federal agents about young people." n260 While there might be space to raise concerns with the government, there is little reason to suggest any real possibility for meaningful or determinative input. n261 The detachment of community engagement from its claim to democratic authority starts at the foundational level. Community policing's historical aim has been to reduce crime in an inner city or even a particular neighborhood. The subject community could in some sense be imagined to be working with the police to enhance its own welfare. Central to proponents' arguments for community policing has been the idea that African American communities suffer from underenforcement by police and need more policing to rid their communities of [*894] crime. n262 In its national security manifestation, however, community engagement's aim is to secure the state. **Muslims are made responsible** not for their own condition but for the welfare of the entire nation - and for protecting the nation against terrorists. It is a "particularized responsibility [for the welfare of the nation] ... not shared by other groups." n263 The assignment of responsibility should trouble us for a number of reasons, including basic American proscriptions against guilt by association and racial and religious profiling. Muslim communities had not identified radicalization or violent extremism as an issue of concern

before the government's framing of radicalization and violent extremism as a national priority. n264 By and large, Muslim communities and advocacy groups have not only objected to the radicalization framework and the assertion of growing radicalization in Muslim communities, n265 but have also insisted that they are cooperating with law enforcement efforts. n266 Community engagement - in its current manifestation, grounded in counterradicalization and CVE - has, in some sense, been foisted on Muslim communities. n267 [*895] The federal nature of the underlying concern also undercuts community engagement's democratic potential. Federal law enforcement entities, national in scope and in responsibility, take the lead in community engagement efforts, whereas local police embody community policing as originally conceived. Even in the community policing context, critics worried that more marginalized communities or more marginalized segments of communities - the ones most in need of protection from abusive, unaccountable policing - would be unable to exert enough power to contest or hold police accountable. In the federal context, not to mention the politically charged realm of national security, the concern is even more acute. The idea that marginalized, dispersed, and diverse Muslim communities could hold accountable the federal government or federal law enforcement on national security issues is dubious. **If Muslims had the political power to hold the police accountable, community engagement programs would not be necessary from a democracy or inclusion perspective to begin with.**

Community engagement appears more benign but it is still a form of racialized policing

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

*** Government officials tout these community engagement efforts as the pinnacle of good governance, providing Muslim communities with opportunities to educate and hold the government accountable, and providing the government with the chance to learn from Muslim communities. n147 Indeed, community engagement initiatives may seem preferable to, or at least less coercive than, other forms of policing. One might argue that the overt nature of community engagement efforts obviates any concern about coercion or consent. Communities of color - overpoliced as they are - must know that their interactions with the police are recorded and shared. (The FBI thinks otherwise: The recently released 2009 FBI Policy Directive on community engagement asserts that "members of the public contacted through a community outreach activity generally do not have an expectation that information about them will be maintained in an FBI file or database." n148) How can communities later complain that they are under watch, even as they exchange pleasantries at a mosque outreach event with the local FBI agent? **This is to miss, however, a larger set of normative concerns about the dialectic between the exercise of police power and the ways it restricts the options available to communities of color.** The remainder of this Article attempts to unpack these concerns. II. Disorder and Racialization Community policing's elasticity has been integral to its currency and longevity. An approach by local police in the 1970s and 1980s to working with poor, urban Black communities in response to ordinary crime and historical distrust [*869] has proved sufficiently flexible to be put to use in service of the post-9/11 paradigm. Federal law enforcement has adopted community-policing-like tactics nationwide with Muslim communities in response to national security concerns, deploying the vocabulary and aspirations of community policing. n149 While community engagement is regularly invoked in the same breath, or included in the same conceptual universe, as community policing, unnamed is the dynamic between counterradicalization/CVE and broken windows theory. At first blush, there is an obvious parallelism: Counterradicalization defines the contours of community engagement as broken windows often shaped practices of community policing. Both counterradicalization and broken windows theories are preventative theories of crime control laid atop efforts at bettering relationships between marginalized communities and law enforcement. n150 Both theories also motivate traditional policing tactics and approaches beyond those that claim as their central normative force partnerships with the community. Yet there are important theoretical and material distinctions between broken windows and counterradicalization, and between community policing and community engagement. In focusing on the critiques of community policing inflected by broken windows theory, I do not mean to suggest that all community policing is defined by broken windows theory, or that order maintenance (which is more directly linked to broken windows, in theory as well as practice) follows from community policing. n151 Community policing and broken windows theory can certainly be [*870] decoupled: n152 Community policing's center of gravity is in communication and collaboration with local communities, while broken windows theory centers police discretion to pursue disorder and minor crimes. n153 In practice - and in particular in the 1980s and 1990s - the divide has

proven more illusory. n154 When community policing and broken windows theory have been linked in practice and in study, the combination provides an important lens through which to see the problems that emerge when a theory of crime control that attaches predictive authority to social markers of difference shapes police communication with marginalized communities. The literature examining community policing shaped by broken windows theory provides insights on similar problems that emerge when community engagement is shaped by counterradicalization.

AT: Community Policing is Cooperative

Community policing is not cooperative – they ignore the continued power imbalance not predetermined by the more powerful police prerogatives

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

A. Community Policing, Broken Windows, Ordinary Crime n155 The basic intuition behind community policing is that increased communication and collaboration between police and communities will benefit both parties and cultivate a stronger ethos of civic engagement in marginalized communities - those with less social power and socioeconomic standing. n156 The precise causal mechanics of this process, however, are far from clear. n157 While the literature takes as a starting point the poor relationships between law enforcement and marginalized communities, it generally fails to meaningfully engage the question of how community policing practices should account for the power differential between police and those communities, instead **assuming** that the communication will itself have a democracy-enhancing function. n158 Proponents advocate for more interaction and flexibility, but provide **little guidance** on how to ensure that communication and police action is not predetermined by the more powerful police prerogative. n159 [*872] Beyond its basic orientation toward communication, **the theory and practices of community policing are muddled.** n160 Reading the literature, one encounters an avalanche of terminology: preventive policing, n161 problem-oriented policing, neighborhood policing, hot spots policing, third-party policing, order-maintenance policing, zero-tolerance policing, quality-of-life policing, broken windows theory, social norms theory, intelligence-led policing, and so on. n162 These concepts represent an evolving spectrum of approaches to policing. n163 Often [*873] these concepts fill in the vagaries of or complement one on another, but they also **clash and confuse**; where one set of practices ends and the other begins is often unclear and subject to debate. n164 Broken windows theory defines much community policing in the context of ordinary crime - one could even argue that it is a central spoke in contemporary preventive policing concepts. For purposes of this Article, a basic account of the theory's adaptation to policing should suffice. In 1969, in a famous psychology experiment, two cars were left in two very different neighborhoods without license plates, and with hoods open: one in wealthy Palo Alto, and one in a poor neighborhood in the Bronx. n165 The Bronx car was quickly stripped of its valuables. The Palo Alto car went untouched - until the study's progenitor publicly smashed in the windows, precipitating others to codemolish and rob the car. n166 In 1982, social scientists George L. Kelling and James Q. Wilson announced their broken windows theory in The Atlantic, parlaying the psychology experiment into a theory of crime control: They argued that outward signs of "disorder" invite law-breaking criminality by signaling to would-be criminals that the geography's inhabitants lack effective practices of social cohesion and control. n167 If the police can fix the visible signs of disorder (broken windows), the argument goes, they can reduce serious criminal activity. The translation from psychology experiment to preventive policing theory n168 was not the only translation at work, however. Kelling and Wilson also forwarded broken windows as a theory to motivate collaboration between police and the policed. n169 The Atlantic story featured a 1970s foot patrol initiative in which [*874] foot patrol worked with the "regulars" or "decent folk" to protect them from "disorderly people" - "disreputable or obstreperous or unpredictable people: panhandlers, drunks, addicts, rowdy teenagers, prostitutes, loiterers, the mentally disturbed." n170 In the legal academy, social norm theorists n171 championed community policing efforts inflected by broken windows theory. n172 Community policing was framed as a powerful tool for the government to address the legitimacy deficit in African American communities, wherein relationships with police were defined by **histories of distrust and police violence**. n173 But community policing also [*875] had its critics, n174 many of whom pointed to how broken windows theory - even in a community policing guise - had shifted the focus of policing from criminal conduct to "disorder." Broken windows theory assumed dichotomies between "order and disorder," "insider and outsider," and the "law-abiding and lawless;" n175 assumed these categories were stable and observable; and then privileged order, insiders, and the law abiding over their counterparts. n176 The meanings of disorder, outsiders, and lawlessness were left to police discretion, assuming the police would not inevitably

draw from preexisting terrains of difference, and particularly the anti-Black racial text linking Blackness and criminality, in making these distinctions. n177 Indeed, more recent work has contested broken windows theory's assumption that the "perception of disorder is governed by actual, observed levels of disorder." n178 Instead, "racial and immigrant concentration proved more powerful predictors of perceived disorder than did carefully observed disorder." n179 Broken windows theory, in its construction of the disorderly, the lawless, and the outsider as legitimate subjects of policing, rendered already vulnerable individuals as even more vulnerable to policing. n180 Critics also pointed out that there was **no empirical evidence** to suggest that policing order decreased crime n181 or increased civic engagement. n182

Community based model won't improve overall law enforcement – will still serve to marginalize and radicalize Muslim communities

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

Certainly there are strong normative reasons, including those that motivate this Article, to expect and demand that law enforcement account for the realities of marginalized communities. But we cannot expect that dialogue will necessarily lead to accountability, meaningful contestation, or realignment of police approaches in marginalized communities. After all, **law enforcement is itself a significant vehicle for marginalization and racialization in the United States**. It is reasonable to question whether community policing - or policing at all - can be expected to be the vehicle for the change we are seeking. The problem and the solution may be entirely mismatched.

AT: Defer to Government Evidence

Don't evaluate their evidence – government reports are overblown and biased

Akbar 15 – Assistant Professor of Law at Michael E. Moritz College of Law at the Ohio State University (Amma, The Reagents of the University of California UCLA Law Review, "National Security's Broken Windows", May 2015, 62 UCLA L. Rev. 834, Lexis, //11)

Within the broader framework of community engagement, federal, state, and local law enforcement have stepped up efforts to establish channels of communication with Muslim communities. While on the surface these efforts are necessarily less secretive than other national security law enforcement efforts - indeed their basic function is partly aesthetic - the concrete data on these efforts is **scattered** and **incomplete**. n113 Government accounts are **papered in promotional language**, and community accounts are few and far between. n114 Given limited information on what these efforts entail, the parameters in which they function, n115 the absence of a central repository for information, and [*863] the fast pace of growth of such efforts, the descriptions below are necessarily limited. n116

Terrorism Kritik

Problem Solution Link

The aff's overidentification with problem-solving political approaches legitimizes the state's short-term terroristic methods by framing them as the necessary and logical solution to the 'terrorist threat' – ignoring social and historical context, this reestablishes terrorists as the 'other' and means that the aff can't solve its impacts.

Gunning, 7 – Director of the Durham Global Security Institute for Defense, Development and Diplomacy in the School of Government and International Affairs, with a PhD in Middle Eastern and Islamic Studies (Jeroen Gunning, *Government and Opposition*, Vol. 42, No. 3, "A Case for Critical Terrorism Studies?", Summer 2007, **fc*)

However, if we consider the typical characteristics of a 'problemsolving' or 'traditional' approach,37 we find that many of these both dominate 'terrorism research' (including many of the contributions of Silke's 'one-timers')38 and can be directly linked to the shortcomings witnessed in this research. In its most 'uncritical' manifestation – and it must be emphasised that few scholars are wholly uncritical in a Coxian sense – **a 'problem-solving' approach does not question its framework of reference, its categories, its origins or the power relations that enable the production of these categories.**39 It is statecentric, takes security to mean the security of the state rather than that of human beings, on the assumption that the former implies the latter, and sees security in narrow military or law-and-order terms, as opposed to the wider conception of human security, as for instance developed by critical security studies.40 It is ahistorical and ignores social and historical contexts; if it did not, it would have to account for the historical trajectory of the state, which would undermine the state's claim to being uniquely legitimate. **The problem-solving approach is positivist and objectivist, and seeks to explain the 'terrorist other' from within state-centric paradigms rather than to understand the 'other' inter-subjectively using interpretative or ethnographic methods.** It divides the world sharply into dichotomies (for instance, between the legitimate and 'good' state, and the illegitimate and 'evil' 'terrorists'). It posits assumptions based on these dichotomies, often without adequately exploring whether these assumptions are borne out in practice. It sees interests as fixed, and it regards those opposed to the status quo as the problem, without considering whether the status quo is part of the problem and transformation of both sides is necessary for its solution.

Not only can many of these characteristics be found in more or less diluted form in 'terrorism research'41 – a legacy of the field's origins as a sub-field within 'traditional' security and strategic studies – but these 'problem-solving' characteristics can also be shown to contribute directly to its observed shortcomings. The reported lack of primary data, the dearth of interviews with 'terrorists' and the field's typical unwillingness to 'engage subjectively with [the terrorist's] motives',42 is in part **fuelled by the field's over-identification with the state, and by the adoption of dichotomies that depict 'terrorism' as 'an unredeemable atrocity like no other'**, that can only be approached 'with a heavy dose of moral indignation', although other factors, such as security concerns, play a role too.43 Talking with 'terrorists' thus becomes taboo, unless it is done in the context of interrogation.44

Such a framework also makes it difficult to enquire whether the state has used 'terroristic' methods. If the state is the primary referent, securing its security the main focus and its hegemonic ideology the accepted framework of analysis, 'terrorism', particularly if defined in sharp dichotomies between legitimate and illegitimate, can only be logically perpetrated by insurgents against the state, **not by state actors themselves.** State actors are engaged in counterterrorism, which is logically depicted as legitimate, or at least, 'justifiable' given the 'terrorist threat' and the field's focus on shortterm 'problem-solving'. Where 'traditional terrorism studies' do focus on state terrorism, it is in the context of the 'other': the authoritarian or totalitarian state that is the nemesis if not the actual 'enemy' of the liberal democratic state.45

Alt Solves

A critical approach solves best – broader analysis of terrorism would break down dichotomies and open up new approaches to address terrorism.

Gunning, 7 – Director of the Durham Global Security Institute for Defense, Development and Diplomacy in the School of Government and International Affairs, with a PhD in Middle Eastern and Islamic Studies (Jeroen Gunning, *Government and Opposition*, Vol. 42, No. 3, "A Case for Critical Terrorism Studies?", Summer 2007, **fc*)

A 'critical' approach would enable scholars to analyse how 'terrorism' discourse is used to discredit oppositional groups and justify state policies, and what structures underpin its production.62 It would encourage research into how discourse is used by oppositional groups to discredit state elites, and what structures make such discourse possible.63 It would facilitate research to move beyond paradigms that a priori seek the eradication of violent nonstate actors through military action and contemplate the need for political solutions and in particular political transformation, for instance, by drawing on the insights from conflict transformation studies.64 It would enable scholars to move from paradigms where the non-state actor is a priori considered to be the problem, to one where, a priori, all sides are assumed to be part of both the problem and the solution.

Methodologically, it would encourage researchers to engage with their 'research subjects' at a human level with the purpose of, in the words of Sara Roy (a scholar outside 'terrorism studies'), 'humanizing the other'.65 It would facilitate the adoption of ethnographic methodologies, of considering interviews as a pivotal source, and of living among the communities from where oppositional groups stem.66 It would encourage scholars to break down us–them dichotomies and wrestle with Richardson's observation that:

When I consider a terrorist atrocity I do not think of the perpetrators as evil monsters but rather I think about the terrorists I have met, and the people I have known who have joined terrorist groups . . . I grapple with how a young idealist can believe that in murdering innocent people he or she is battling injustice and fighting for a fairer world. I think, as the Protestant martyr John Bradford said 500 years ago, 'There but for the grace of God, go I.'67

Such an approach would enable a shift from a limited focus on 'terroristic' violence (however defined) to one also encompassing both 'non-terroristic' violence and 'non-violent' behaviour, although the boundary between these two categories depends on the definition of 'violence' and 'non-violent'. This would mean taking into account 'non-terroristic' violence such as guerrilla

tactics,68 enforced recruitment of child soldiers, executions, torture, house demolitions, and 'collateral damage', as well as 'non-violent' acts, such as 'structural violence', economic strangulation, imprisonment, charitable aid (and not just in relation to 'terrorist funding'), education, limiting freedom of speech or marginalizing alternative lifestyles.69 Without such a widening of the agenda, key aspects of the conflict would be missed. One cannot understand the Italian Red Brigades without analysing the wider left-wing movement of the 1960s and 1970s, and the behaviour of the Italian state towards it. Similarly, one cannot understand Hamas without analysing its relationship with its wider constituency, or the impact of Israeli occupation and settlement practices (including 'structural violence') on that constituency. 70 **Such a widening of the agenda, moreover, would deny 'terrorism' the capacity to portray itself as somehow exceptional, and thus exceptionally frightening, rather than as one form of violence among many.** It would also deny it the capacity to isolate itself from its wider social context, enabling researchers to engage cognate theories such as democratization theory, which concern themselves with broader trends, of which violence is but one aspect.

A critical approach is a necessary prerequisite to overcome shortcomings of current political approaches to terrorism.

Gunning, 7 – Director of the Durham Global Security Institute for Defense, Development and Diplomacy in the School of Government and International Affairs, with a PhD in Middle Eastern and Islamic Studies (Jeroen Gunning, *Government and Opposition*, Vol. 42, No. 3, "A Case for Critical Terrorism Studies?", Summer 2007, **fc*)

SINCE 9/11, STUDIES ON THE PHENOMENON OF 'TERRORISM' HAVE mushroomed.2 On entering almost any bookshop, one is overwhelmed by the number of books discussing the war on terror, 'Islamic terrorism' or 'terrorism' more generally. Conference papers on 'terrorism' abound and interest in issues related to 'terrorism' has increased dramatically among scholars in cognate disciplines; degree programmes have been set up;3 funding opportunities have increased. And yet, as recent reviews of the field have shown,4 core epistemological, methodological and political-normative problems persist, ranging from lack of conceptual clarity and theoretical sterility to political bias and a continuing dearth of primary research data.

A number of reasons have been cited for this state of affairs, which will shortly be detailed. But two reasons are often overlooked: the predominance of 'problem-solving' approaches in the study of 'terrorism', which accounts for many of the observed methodological and conceptual shortcomings of 'terrorism research'; and the dispersed nature of much of the more rigorous, critical and conceptually innovative research on 'terrorism' that is published outside the core journals of 'terrorism studies' and thus often fails either to reinvigorate, or to learn from, 'terrorism studies'. It is the argument of this article that a 'critical turn'5 in the field of 'terrorism studies'6 is necessary to reverse these two trends, and that this turn must be conceived in such a way as to **maximize the field's inclusiveness and, importantly, its policy relevance.7**

AT: State Good

Quick, state-centric solutions to terrorism can't solve – a lack of historical and critical reflection means that the aff just reentrenches negative assumptions of 'religious terrorism' and reproduces threats.

Gunning, 7 – Director of the Durham Global Security Institute for Defense, Development and Diplomacy in the School of Government and International Affairs, with a PhD in Middle Eastern and Islamic Studies (Jeroen Gunning, *Government and Opposition*, Vol. 42, No. 3, "A Case for Critical Terrorism Studies?", Summer 2007, **fc*)

The observed disregard for historical context and wider sociopolitical dynamics46 can similarly be traced to the ahistorical propensity of 'problem-solving' approaches and their state-centric understanding of security. The typical focus is thus on violent acts against the state, and the immediate 'terrorist' campaign, not on how these acts relate to a wider constituency and its perception of human security, history and the state, or what role the evolution of the state has played in creating the conditions for oppositional violence.47

The lack of critical and theoretical **reflection**48 **can be linked to the 'problem-solving' tendency to be short-termist and practical,** and to deal in fixed categories and dichotomies that **privilege the state** and its dominant ideological values. From such a standpoint, scholars would not readily explore how 'terrorism' discourse is produced and how it is used to marginalize alternative conceptions, discredit oppositional groups, and legitimize counter-terrorism policies that transgress international law.49 Nor would they be particularly likely to consider how the development of the modern state or the international system might have contributed to the evolution of 'terrorism', or how theories of the state and the international system can help illuminate the 'terrorism' phenomenon. Drawing on cognate theories more broadly is similarly discouraged since 'terrorism' is framed as an exceptional threat, unique and in urgent need of a practical solution.50

The state-centricity, inflexibility and dichotomous nature of such a framework also makes it easier to recycle unproven assumptions, such as the notion that 'religious terrorism' is not concerned with constituencies and knows no tactical constraints against killing 'infidels', 51 without having to test these assumptions empirically across different samples. It thus becomes possible to argue, for instance, that negotiating with 'terrorists' encourages further 'terrorism' without need for empirical proof – a point already observed by Martha Crenshaw in 198352 – or to insist that 'terrorists' inherently lack legitimacy without reflection on whether the state lacks legitimacy in the experience of those who support the 'terrorists'.53 The combined result of these tendencies is often a **less than critical support** (whether tacit or explicit) **for coercive counterterrorism policy** without adequate analysis of **how this policy contributes to the reproduction of the very terrorist threat it seeks to eradicate.**

State Bar CP

1nc Bar Association CP

Counterplan text: The American Bar Association should issue and enforce the following rule:

No prosecuting attorney shall supervise, advise, or otherwise take part in a criminal investigation that involves the surveillance or infiltration of a religious organization, unless specific and articulable facts provide a basis for suspecting criminal activity by the organization or one of its members.

State bars solve best – they have the expertise to establish uniform rules and prevent unwarranted surveillance.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

D. Regulation in State Bars' Ethical Codes

While not ideal, this final alternative may offer the greatest promise. State bars could modify their codes of ethics to incorporate a requirement that prosecutors may not take part in the surveillance or infiltration of religious organizations absent a particularized suspicion that a member of the organization is breaking the law. Some scholars support a greater reliance on state bars to set ethical standards for prosecutors, n318 although no scholar has addressed the precise topic considered here.

The first issue to consider is whether state bar associations have sufficient expertise to promulgate such rules. n319 Congress appears to have answered this question by deferring to state bars as the regulators of federal prosecutors' ethics. n320 Most state bars have already **adopted a limited set of ethical rules for prosecutors.** n321 State bars have a unique advantage in that they bring a **range of viewpoints** to the table - not simply those of prosecutors, but also of defense attorneys. State bars also include both federal and state practitioners. Officials in state bars are not elected by the public at large, and are **less likely to be susceptible to the political pressures** that influence legislative debates over criminal justice matters. Moreover, the rules adopted by a particular state's bar association must be approved by that state's supreme court before they take effect, and this overlay of judicial approval provides an **assurance that state bars will not abuse their power as regulators.** For all of these reasons, **state bars are in a unique position to formulate ethical rules for prosecutors.**

State bars are probably more willing than legislatures, courts, or law enforcement agencies to impose limits on investigations of religious organizations. Indeed, defense attorneys generally outnumber prosecutors in bar associations. n322 The bars have already taken significant steps in [*1270] limiting the power of prosecutors. Examples include rules against serving grand jury subpoenas on defense attorneys, rules against publicly divulging details of a case in advance of trial, and rules directing attorneys not to make contact with represented persons. n323

State bar associations could prove to be surprisingly effective in enacting a comprehensive, uniform regulatory scheme for prosecutors and, indirectly, for law enforcement officers. While the full development of this argument must await the next section, it is important at this juncture to dispel the myth that a state-based regulatory system cannot achieve uniformity throughout the nation. n324 The fact is that states are now closer than ever to aligning their ethical rules in virtually all respects. n325 The A.B.A.'s blueprint, the Model Rules of Professional Conduct, has now won approval in forty-four states. n326 Each of theses states has adopted a version of Model Rule 3.8, which is the A.B.A.'s rule governing prosecutorial ethics (although some jurisdictions have labeled this rule differently). n327 The near unanimous adoption of the Model Rules suggests that state bar associations [*1271] would be capable of **enacting uniform rules that limit prosecutors' participation in the infiltration and surveillance of religious groups.**

V. The Case for Revising State Bars' Ethical Codes

I propose that a new rule be added to the states' ethical codes for lawyers. In the forty-four states that follow the template of the A.B.A. Model Rules of Professional Conduct, the new rule would appear as a subsection of Rule 3.8, which regulates the conduct of prosecuting attorneys. The new rule would provide as follows: "**No prosecuting attorney shall supervise, advise, or otherwise take part in a criminal investigation that involves the surveillance or infiltration of a religious organization, unless specific and articulable facts provide a basis for suspecting criminal activity by the organization or one of its members**."

In evaluating whether such a rule would be desirable, four questions arise. First, would this rule actually have an effect on the conduct of police agencies? Second, is it appropriate for states' ethical codes to prescribe very specific duties for prosecutors? Third, could states' ethical codes affect the conduct of federal prosecutors? Fourth, would my proposal hinder investigations of terrorism? I will address each of these questions in turn.

2nc Solvency

Bar Association rules impose ethical guidelines on lawyers that prohibit racial or religious discrimination.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

4. Unique Ethical Concerns for Lawyers

Additionally, prosecutors who take part in the surveillance and infiltration of religious organizations may violate their ethical duties under various codes of professional conduct. Two categories of ethical rules come into play: the rules imposing vicarious liability on prosecutors for the actions of law enforcement agents and the rules prohibiting prosecutors from discriminating on the basis of religion.

The A.B.A. Model Rules of Professional Conduct include provisions imposing vicarious liability on lawyers for the conduct of non-lawyers. Pursuant to Rules 5.3 and 8.4 of the A.B.A. Model Rules, a lawyer is accountable for the conduct of a non-lawyer if the lawyer has directed, assisted,

induced, or ratified that conduct. n261 In fact, Alabama is the only state that has exempted prosecutors from vicarious liability for the conduct of law enforcement officers. n262 In addition to the overarching standards of [*1257] vicarious liability set forth in A.B.A. Model Rules 5.3 and 8.4, there are some rules that apply the same principles in particular contexts. n263

Because prosecutors and law enforcement agents work closely together in the investigative phase, n264 prosecutors could theoretically become entangled in liability for the conduct of the officers. This vicarious liability could arise even where the officer, if acting alone, would not be subject to any discipline. The key question is whether the prosecutor has utilized the officer to do that which the prosecutor cannot himself do.

The **ethical rules make clear that lawyers cannot take part in discriminating on the basis of religion.** For example, Rule 8.4(d) provides that a lawyer shall not "engage in conduct that is prejudicial to the administration of justice ... ." n265 The commentary indicates that a lawyer violates Rule 8.4(d) when the lawyer "knowingly manifests by words or conduct, bias or prejudice based upon race, sex, religion, national origin, disability, age, sexual orientation or socioeconomic status," if "such actions are prejudicial to the administration of justice." n266 Some states' ethical codes have gone even further than the A.B.A. template in emphasizing the need for prosecutors to avoid prejudice based on religion. n267 The A.B.A. Code of Judicial Conduct directs judges to prevent all lawyers from expressing religious prejudice in the courtroom. n268

Even stronger language appears in other bodies of rules that apply specifically to prosecutors. For example, the A.B.A. Standards Relating to [*1258] the Administration of Criminal Justice, n269 which include a section entitled "The Prosecution Function," strongly prohibit discrimination based on religion. Standard 3-3.1, entitled "Investigative Function of Prosecutor," provides in subsection (b) that "[a] prosecutor should not invidiously discriminate against or in favor of any person on the basis of race, religion, sex, sexual preference, or ethnicity in exercising discretion to investigate or to prosecute." n270 The American Trial Lawyers Association's Code of Conduct also provides that "in exercising discretion to investigate," a prosecutor "shall not show favoritism for, or invidiously discriminate against, one person among others similarly situated." n271

Ethical rules prohibiting religious discrimination by lawyers are reinforced by other requirements for lawyers' conduct in the courtroom. For example, Rule 610 of the Federal Rules of Evidence prohibits lawyers from impeaching witnesses based on their religious views. n272 Also, lawyers in many jurisdictions are prohibited from striking prospective jurors because of their religious beliefs. n273

The F.B.I.'s current policy of counting mosques throughout the United States and conducting surveillance and infiltration of mosques without any specific suspicion arguably involves discrimination based on religion. Indeed, in the new investigative guidelines, the Department of Justice has reserved the right for the F.B.I. to infiltrate mosques even when there is no basis for suspicion other than the mere fact that the subjects under investigation are Muslim. **A prosecutor who directs such an investigation, or who ratifies it by presenting charges based on information developed in the investigation, has arguably violated the ethical rules against prejudice** - either directly or indirectly through the doctrine of vicarious liability.

2nc Net Benefit --- Avoids Backlash

Solves the case – avoids backlash that would implicate Congress or Courts

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

In Part III, I will consider the alternative means for reinstating the suspicion requirement in investigations of religious organizations. I will focus on four options: (1) statutory regulation; (2) judicial regulation; (3) internal regulation by law enforcement agencies; and (4) regulation through states' ethical codes for lawyers. I will ask a series of questions to evaluate whether each institution is well suited for the task. Does the institution have sufficient expertise to promulgate rules for the investigative activities of prosecutors and law enforcement agents? Could the institution establish an effective, uniform regulatory scheme? Is the institution willing to undertake such regulation? After considering the expertise, efficacy, and willingness of each institution, I conclude that **state bar associations are in the best position to revive the "reasonable suspicion" requirement** in the Levi Guidelines. Other institutions could affect this reform more easily if they chose to, but it is doubtful that Congress, the courts, or the Department of Justice would have the will to impose such limitations in the present climate. State bar associations - with a higher membership of criminal defense attorneys than prosecutors - **may be the only forums in which the advocates of reform could prevail**.

Part V will address possible objections to the proposal that state bars should regulate prosecutors' involvement in investigations of religious groups. Anticipating concerns about the efficacy of my proposal, I will explain that prosecutors increasingly serve as "gatekeepers" in proactive investigations. I will show that ethical constraints on prosecutors have a transitive effect in limiting the conduct of police under the prosecutors' supervision. I will cite the example of Oregon, where new ethical regulations for prosecutors effectively shut down certain categories of proactive [*1210] investigations by F.B.I. agents. Further, in response to scholars who criticize the micromanagement of prosecutorial ethics by state bars, I will argue that the bars have a legitimate role to play in the interstices left by other bodies of authority. I will show why the Supremacy Clause does not thwart state bars from regulating federal prosecutors. Finally, I will explain why my proposal would not hinder investigations of terrorist cells and would actually improve such investigations by fostering greater comity between the Muslim Community and law enforcement officials.

In sum, there is a good reason why three Republican and two Democratic administrations required a predicate of reasonable suspicion before authorizing the surveillance and infiltration of religious organizations by the F.B.I. Our religious freedom is too precious to sacrifice without at least a moment's reflection on the quantum of evidence supporting the need for an investigation.

2nc Solvency – Terrorism

Regulations are good for terrorism investigations – requiring suspicion ensures that the government doesn't encroach on Constitutional rights or gather extraneous data.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

D. Would New Ethical Rules Impede Investigations of Terrorism?

It is true that terrorists have sometimes congregated in mosques, n374 and my proposal would be ill-advised if it hindered law enforcement officers from investigating these terrorists. However, as explained below, the reinstatement of the "reasonable suspicion" standard in a new ethical rule would not significantly impede the detection of terrorist cells in the United States.

The F.B.I.'s experience with the Rahman investigation in the 1990s shows that **the suspicion requirement does not foreclose effective counterterrorism investigations.** Indeed, the investigators of Rahman - "encumbered" as they were by the suspicion requirement - achieved greater success than the F.B.I. has achieved during the one-year period since Attorney General Ashcroft deleted the suspicion requirement. n375 An official with the Department of Justice admitted to Congress in May 2003 that the [*1282] authority to infiltrate religious organizations without reasonable suspicion had not yet yielded a single lead that was valuable enough for the F.B.I. to write in a report. n376

Some might fear that my proposal could create confusion about what sort of group would qualify as a "religious organization" entitled to protection under the new ethical rule. How far from mainstream religious groups would the line be drawn? The task of defining religion is always a daunting one, but it is a bridge that we have crossed before when we determined the scope of the clergy-penitent privilege, n377 when we determined who has authority to conduct marriage, when we determined who may claim a religious basis for conscientious objector status, and when we determined which groups qualify for tax exemptions as religious institutions. Importing definitions from these other contexts would go a long way in clarifying which groups can qualify as "religious organizations" for purposes of the new ethical rule.

Even if we can agree on what constitutes a cognizable religion, how do we discern what constitutes a religious institution (e.g., a building) that police should avoid unless they have reasonable suspicion? For example, it is sometimes difficult to discern what is or is not a mosque. Not every mosque is located in a conspicuous building. Some are located in small non-descript commercial buildings or even homes. n378 However, those who worship in a [*1283] particular mosque or other religious facility should be given the discretion to decide how conspicuously they will label the facility. If they opt for a nondescript appearance, they run the risk that the F.B.I. would not accord the building the same privacy rights as an easily recognizable religious institution. Of course, the F.B.I. cannot be heard to complain about its inability to discern what is or is not a mosque when field offices were instructed to complete an inventory of every mosque in country at the start of 2003.

Another frequently voiced concern is that terrorists will utilize mosques as "havens" that are free from government surveillance. Many commentators have insisted that terrorists should not be able to hide behind the "shield" of religion. n379 This concern should not detain us long. In order to permit infiltration of a religious organization, my proposal would require only a minimum level of suspicion. In fact, under the Levi Guidelines, the F.B.I. could easily infiltrate a religious

organization simply by explaining a valid purpose for the infiltration. As James Dempsey told Congress in May 2003:

the old guidelines allowed F.B.I. agents to go into any mosque or religious or political meeting if there was reason to believe that criminal conduct was being discussed or planned there, and in fact, over the years the F.B.I. conducted terrorism investigations against a number of religious organizations and figures. n380

In other words, **if F.B.I. agents could ever think of a good reason to go to a religious service, they could go** - just as long as they did not target a particular organization for reasons such as religious profiling or the purposeful suppression of First Amendment rights. n381

In a speech at Stanford Law School, F.B.I. Director Robert Mueller asked a rhetorical question: "When, if ever, would it be appropriate to put leaders of Muslim mosques under surveillance? Are calls to kill Americans in [*1284] strident sermons a lawful exercise of free speech or something more ... ?" n382 Mueller's inquiries seemed calculated to suggest a justification for the F.B.I.'s new authority to infiltrate religious groups. Yet Mueller failed to mention that the F.B.I. could have monitored such speeches under the old F.B.I. guidelines because the speeches advocate lawbreaking and, ipso facto, give rise to a reasonable suspicion of criminal activity. n383 The investigation of Arizona churches - which by all accounts was based on a permissible factual predicate under the old investigative guidelines - was justified by church leaders' public pronouncements of their support for the Sanctuary Movement. Just as the old guidelines were not too constraining for the investigation of immigration offenses, they would not be too constraining for the investigation of terrorism. The small subset of mosques where leaders advocate criminal activity would not be immune from the F.B.I.'s surveillance under a new rule that reinstated the "reasonable suspicion" requirement.

2nc Solvency – Police

The counterplan solves best – constraining prosecutors inherently restricts police abilities to conduct unwarranted surveillance.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

A. The Efficacy of Regulating Lawyers Rather than Police

The notion that ethical rules for prosecutors could limit activity by the entire "team" of law enforcement agencies - including non-lawyers such as police officers - may seem fanciful on first impression. But in fact, prosecutors are so vital to the investigation of complex criminal cases that any ethical restrictions on prosecutors will have a substantial effect on police.

Especially in the federal system, prosecutors play a significant role in supervising proactive investigations. n328 As Professor Rory Little has noted, "public prosecutors in this country have become increasingly involved in the investigative stages of criminal matters during the twentieth century." n329 According to Professor Little, "prosecutors today are centrally involved in

proactive criminal investigations." n330 So great is the involvement of [*1272] prosecutors in the investigative phase that the Supreme Court has conferred immunity on prosecutors for their good-faith investigative decisions. n331

Consider the many ways in which prosecutors serve as gatekeepers in proactive investigations. Prosecutors must sign off on the use of certain investigative techniques so that officers will avoid the risk that evidence generated by such techniques will be suppressed in court. n332 Prosecutors must actually prepare requests for judicial approval of certain highly intrusive techniques such as pen registers, wiretaps, and mobile tracking devices ("bumper beepers"). n333 The involvement of prosecutors is necessary to present a search warrant to a judge, or to obtain a grand jury subpoena for testimony or records. n334 Prosecutors must generally prepare subpoenas for records, except in jurisdictions where police can use administrative subpoenas. The approval of prosecutors is usually necessary before investigative agents can offer leniency to co-conspirators as an enticement for cooperation. Police need the assistance of prosecutors in order to navigate the minefields of entrapment and selective prosecution. Sometimes police need guidance from prosecutors to determine whether a suspect under investigation has actually violated the law, and if so, whether the case fits the prosecutorial guidelines in a particular jurisdiction. Further, officers need to rely on prosecutors for advice about civil liability that may arise from the use of certain investigative techniques. n335 Perhaps the best testament to the ascendancy of prosecutors in the investigative phase is the fact that a former Assistant U.S. Attorney, Robert Mueller, is now the director of the F.B.I.

Among the various categories of criminal investigations, investigations of terrorism are particularly likely to require the close involvement of prosecutors. The criminal statutes at issue are novel, and police officers are usually less familiar with these statutes than with statutes in garden-variety cases involving drugs or violent crime. Terrorism investigations may necessitate the use of special investigative techniques requiring the assistance or approval of prosecutors, such as electronic surveillance and Foreign Intelligence Surveillance Act (FISA) warrants. Moreover, due to the [*1273] high profile and high stakes of terrorism investigations, police are particularly concerned not to run afoul of the law, and they will rely on the frequent advice of prosecutors to avoid any embarrassing mishaps.

Because officers are so highly dependent on the involvement of prosecutors in proactive investigations, it should come as no surprise that constraints on prosecutors often have the transitive effect of constraining the police officers involved in a particular investigation. The best example of this phenomenon is the recent experience of Oregon, where the state supreme court construed an ethical rule to prevent prosecutors from supervising undercover investigations. In the case In re Gatti, n336 the court interpreted DR 1-102(A)(4) of the Oregon Code of Professional Responsibility, which prohibits a lawyer from "engaging in conduct involving dishonesty, fraud, deceit or misrepresentation." n337 The court determined that this language prevented prosecutors from supervising investigations in which law enforcement officers posed as participants in criminal activity, such as drug users seeking to buy drugs from a target under investigation. n338 The Oregon State Bar eventually revised DR-102 to make clear that prosecutors could supervise such investigations, and the Oregon Supreme Court approved this change. n339 But in the meantime, for the two- [*1274] year period in which "the Gatti rule" remained in effect, proactive criminal investigations ground to a halt in Oregon. F.B.I. Agent Nancy Savage, the Special Agent in Charge of the F.B.I. office in Eugene, Oregon, commented on a national television broadcast that the Gatti rule had "shut down major undercover

operations" in Oregon. n340 In summary, as defense attorneys sometimes joke, the prosecutor is "the head of the snake" in proactive investigations: without the prosecutor, the investigation cannot proceed.

The foregoing provides cause to believe that law enforcement agents would reduce their suspicionless surveillance and infiltration of religious organizations if the ethical rules prohibited prosecutors from taking part in an investigation where such techniques were used, yet there is one other possibility that should be considered. What if the increased regulation of prosecutors actually drove a wedge between prosecutors and police? Perhaps prosecutors would become isolated from investigative decisions, so police would be free to pursue all the investigative options that would be available to them but for the prosecutors' supervision. Some scholars have expressed concern that any disparity in the regulation of prosecutors and police could create a rift between them, n341 leading police to strike out on their own without the benefit of prosecutors' advice and moderating influence. This possibility requires special consideration in the context of terrorism investigations because the Department of Justice has made clear that its top priority is the prevention of terrorism, rather than the prosecution of terrorism n342 - a change in emphasis that arguably could reduce the dependence of police on prosecutors.

There are reasons, however, to believe that the close cooperation between prosecutors and police would persist even if prosecutors are subject to stricter rules than police. First and foremost, police need prosecutors to unlock the door to the closet where the most valuable investigative tools are kept: wiretaps, FISA warrants, grand jury investigations, plea agreements offering leniency in exchange for cooperation, etc. The heightened importance of these tools in terrorism investigations offsets the fact that [*1275] officers are somewhat less beholden to prosecutors because the investigations rarely culminate in prosecutions.

The prosecutor is more than the superego to the police officer's id; **the prosecutor is an indispensable teammate in complex proactive investigations**. Stricter regulation of prosecutors will not cause the divorce of prosecutors and police - especially when the effect of that regulation is simply to impose the same "reasonable suspicion" requirement that federal agents have lived with for the last twenty-six years.

2nc Solvency – Specific Rules

The counterplan's specific rules are key – they allow comprehensive regulation to ensure compliance.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

A third view - adopted in the present Article - is that **the states' ethical codes should include specific rules regulating the interstices where other bodies of law do not extend.** Without such specific rules, state bars have little hope of asserting control over the conduct of the lawyers in their jurisdictions. Hortatory rules are difficult to enforce, n348 and rules that "backstop" other authority are usually of greater concern to the first authority than to the state bar. Specific rules are easier for practitioners to understand. Another advantage of specific rules is that they allow a

jurisdiction to establish a comprehensive, internal cohesive regulatory scheme. On the other hand, a code of ethics that includes specific regulations will take more time to draft, will cost more to administer, and will likely be more voluminous than a code that sorts forth general principles. In the end, the debate over specificity really boils down to a debate over efficacy. If the state bars are to be effective regulators, they need specific bright-line rules.

Nowhere is the need for specific rules more evident than in the state bars' regulation of prosecutors. The states have very few specific rules for prosecutors, n349 and this lack of specificity is one of the reasons why very few [*1277] disciplinary cases are brought against prosecutors. n350 A greater number of specific regulations for prosecutors would be salutary for a number of reasons. First, a particularized set of rules for prosecutors would embolden state disciplinary panels to exercise their authority over prosecutors. Presently the state bars find the regulation of prosecutors to be somewhat intimidating. The bars' disciplinary panels are daunted by the prospect of "prosecuting a prosecutor." It would be far easier for bar authorities to assume that function if the states' ethical rules for prosecutors were specific and lucid, leaving little dispute as to the propriety of the conduct at issue in a disciplinary proceeding. As Professor Bruce Green and Professor Fred Zacharias have noted, state bar associations are unlikely to discipline prosecutors "except in situations involving unambiguously wrongful conduct." n351 Similarly, the U.S. Department of Justice's Office of Professional Responsibility (OPR) - which disciplines federal prosecutors for violations of all applicable rules, including state bar rules - will have less difficulty applying states' ethical rules if these rules are specific rather than hortatory. n352

A second argument in favor of **specific rules** is that they **actually help prosecutors.** Many prosecutors supervise long-term, proactive investigations that will not come under public scrutiny for months, maybe years. Without bright-line ethical rules, these prosecutors cannot be certain how their conduct will be viewed when they finally unveil their cases after the defendants are arrested. The ethical responsibilities of prosecutors at the investigative stage are vital, but **self-policing is the only means of securing compliance at this stage. Bright-line rules increase the effectiveness of self-policing.**

One last justification for greater specificity in states' regulation of prosecutors is the **need to avoid disparity between the rules for federal and state prosecutors.** If the state bar plays only a minimal role in regulating the ethics of prosecutors practicing within its boundaries, then the federal and state prosecutors will be governed primarily by the internal strictures of their own agencies. These rules will probably differ in many ways, and these differences could invite the unseemly prospect of "ethics shopping" by law enforcement officers whose decision to pursue a prosecution in state or [*1278] federal court could depend in part on the ethical rules applicable to prosecutors in each system.

AT: State Rules Won’t Solve Federal Prosecutors

The mandates would of the counterplan will solve federal surveillance efforts --- federal prosecutors would not be able to evade it

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, “Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups,” April 2004, Lexis, **fc*)

C. A Chink in the Armor of the Supremacy Clause

Ordinarily the Supremacy Clause of the U.S. Constitution protects federal officials from regulation by the states. For example, the Supremacy Clause places F.B.I. agents beyond the reach of state and local laws limiting the surveillance powers of police. Earlier in 2003, when a defendant in a federal terrorism prosecution claimed that a federal agent had not complied with a state rule limiting surveillance of churches, the Assistant U.S. Attorney quickly brushed aside the argument by invoking the Supremacy Clause. n357

[*1279] Curiously, however, Congress has waived federal prosecutors' immunity from state regulation. The legislation that subjected federal prosecutors to states' ethical codes is known as the McDade Act of 1998. n358 This law provides that an attorney for the U.S. Department of Justice "shall be subject to the State laws and rules, and local Federal court rules, governing attorneys in each State where such attorney engages in that attorney's duties, to the same extent and in the same manner as other attorneys in that State." n359 Congress passed this legislation in response to concerns that federal prosecutors had abused their authority in investigating Representative Joseph McDade, who was tried and acquitted on charges of racketeering and bribery. n360

The proponents of the McDade Act made clear that they intended for states to take over the regulation of federal prosecutors' ethics. For example, Representative Tillie Fowler made the following statement on the House floor:

I see this as an issue of accountability. **Department of Justice attorneys should be required to abide by the same ethics rules as all other attorneys.** These attorneys should be held accountable to the same standards set by the State Supreme Court that granted each lawyer his or her license to practice law in that State. n361

Representative Steve Buyer presented a similar viewpoint: "Quite simply the issue before us is whether the government attorneys at the Department of Justice should abide by ethical rules that all other attorneys have to abide by, or can they make up their own standards of conduct?" n362 Congress emphatically answered this question, requiring the Department of Justice's attorneys to observe the ethical rules of every state in which they practice. n363

Despite this unequivocal expression of congressional intent, the **Department of Justice has attempted to evade certain state rules by challenging the rules under the Supremacy Clause.** For example, in United States v. Colorado Supreme Court, n364 the Tenth Circuit considered whether federal prosecutors must abide by Colorado's attorney-subpoena rule. The Tenth Circuit held that the resolution of this challenge would "turn[] on whether the rule is a rule of professional ethics clearly covered by the McDade Act, or a substantive or procedural rule that is inconsistent with [*1280] federal law." n365 The Tenth Circuit found that Colorado's attorney-subpoena rule fell within the former category. Therefore, the attorney-subpoena rule was "a rule of ethics applicable to federal prosecutors by the McDade Act." n366

One year later, the Department of Justice brought a similar challenge in United States v. Oregon State Bar. n367 The Department argued that federal prosecutors were not subject to a provision of the state ethics code that the state supreme court had construed to prohibit prosecutors from supervising deceptive undercover investigations. n368 The Justice Department claimed that such a rule conflicted with federal law, n369 but the bar's attorneys analogized the case to Colorado Supreme Court, suggesting that internal Justice Department guidelines authorizing deceptive

investigations do not preempt state regulation on this issue. n370 The District Court avoided a decision on this issue for over a year because the state bar decided to revise the rule in question. Observers thought that the Justice Department's position must have been weak because otherwise the court would have granted the Department's motion for summary judgment instead of postponing a decision for over a year.

The rule proposed in this Article would also fall within the scope of the McDade Act. There is no on-point federal statute or regulation that would conflict with a state ethical rule prohibiting prosecutors from directing surveillance and infiltration of religious organizations absent reasonable [*1281] suspicion. n371 The mere fact that such suspicionless investigations are not prohibited in the federal system is a far cry from preemption. For instance, attorney subpoenas are not prohibited in the federal system, but federal prosecutors are still subject to state ethical rules that limit the use of these subpoenas. n372 In an analogous context, while the federal regulations promulgated under the Sarbanes-Oxley Act permit attorneys to disclose clients' confidences in some circumstances, the attorneys are nonetheless subject to state ethical rules that prohibit such disclosures. n373 In sum, an activity permitted under federal law is not necessarily off-limits to regulation in states' ethical codes - especially where, as here, Congress has declared its intention to subject federal prosecutors to the states' ethical regulation.

AT: Congress Solves

Congress fails – lacks expertise and links to politics.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

A. Statutory Regulation

Conceivably, Congress or state legislatures could impose a "particularized suspicion" requirement akin to the test set forth in the Levi Guidelines. n290 Indeed, some state legislatures have already enacted statutes along these lines. n291 Several commentators have expressed enthusiasm for an increased legislative role in the regulation of prosecutors n292 and law [*1263] enforcement agencies, n293 yet such a strategy is also subject to criticism on a number of grounds.

First, the expertise of the legislative branch is not ideal for this undertaking. Among the alternative regulators considered here - the legislative branch, the courts, the Department of Justice, and state bars - the legislative branch is the only institution in which non-lawyers outnumber lawyers. Perhaps for this reason, Congress has usually refrained from assuming much responsibility in the regulation of prosecutors and law enforcement agencies. n294 Congress declined to enact a legislative charter for the F.B.I., and Congress deferred to the Department of Justice to formulate its investigative guidelines internally. n295 Congress also declined to prescribe ethical standards for federal prosecutors, determining instead that prosecutors should be subject to the ethical rules in state bar codes. n296 This history suggests that Congress acknowledges its own **limited expertise in setting parameters for federal criminal investigations.** n297

Second, it is unclear whether the legislative branch has the will to restrict the authority of prosecutors and law enforcement agents. Very few in Congress have shown the political fortitude to question the [*1264] counterterrorism campaign. Proposals to amend the USA PATRIOT Act have not attracted many co-sponsors. n298 While the cause of religious freedom is popular on both sides of the aisle, n299 this instinct is offset by the general tendency among legislators to side with the prosecution rather than the accused. n300 Even if these two considerations were close to equipoise, the tiebreaker may be the loyalty commanded by President Bush in the current Congress. It is highly unlikely that a congress controlled by the president's own party would seek to rein in (and thereby embarrass) an executive agency with a presidential election looming in 2004.

Third, the efficacy of legislative regulation may be somewhat limited. **Congress and state legislatures have only limited resources available for proactive oversight,** and the normal means of ensuring compliance with their laws (i.e., litigation brought by the federal or state departments of justice) would be **of little avail when these agencies are themselves the subjects of the regulation in question.** Another important limitation is the inability of Congress to regulate the state criminal justice system, n301 and the [*1265] inability of state legislatures to regulate the federal criminal justice system. n302 It is likely that an undesirable patchwork n303 could result from legislative regulation - especially given the varying willingness of legislative bodies to constrain the authority of law enforcement agencies.

AT: Courts Solve

Courts can't solve – they're biased, reluctant to play a regulatory role, and usually conduct haphazard regulation.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

B. Judicial Regulation

Some scholars favor an increase in judicial regulation of prosecutors and law enforcement officials. n304 There are three possible means through which the judicial system could limit the surveillance and infiltration of religious organizations. First, the courts could suppress evidence seized through such investigations. Second, the courts could grant injunctive or declaratory relief prohibiting such investigations proactively. Third, the courts could simply prescribe standards for prosecutors or law enforcement officers that appear before them; the power to regulate in this manner might arise from the courts' inherent supervisory power, or from a delegation of power by Congress. n305

The expertise of the judiciary in dealing with these issues is unquestionably superior to the expertise of the legislative branch, and is likely superior to the expertise of state bar associations as well. Judges' day-to-day involvement in the criminal justice system gives them a unique [*1266] vantage point from which to observe, and perhaps also to regulate, the conduct of prosecutors and law enforcement agents. Furthermore, the life tenure of federal judges makes them immune to political pressure (except those who seek appointment to a higher court), yet **the**

risk of bias does not disappear if the judiciary takes over responsibility for prescribing the rules for prosecutors and law enforcement personnel. In fact, the very reason for judges' expertise - their immersion in the day-to-day adjudication of criminal cases - also creates the potential that courts might **craft rules that favor the courts' interests in this system**. n306

Would courts be willing to take on a greater role in regulating prosecutors and law enforcement personnel? **Federal courts have busy dockets and finite resources.** State courts are even more burdened. When presented with an opportunity to play a proactive regulatory role in the criminal justice system, some courts have declined to do so. In particular, federal courts have been **wary of involving themselves in the affairs of state and local police departments.** Despite - or perhaps because of - a few highly publicized examples in New York City and Chicago, the federal courts appear to be reluctant to set standards for local law enforcement agencies. In Rizzo v. Goode, the Supreme Court vacated a federal district court's order prescribing steps for the Philadelphia Police Department to remediate abusive practices. n307 Among other reasons for this ruling, the Supreme Court argued that a federal court should not intervene deeply in the internal affairs of a local agency, especially one concerned with law enforcement. n308

The efficacy of judicial regulation is the biggest stumbling block for this alternative. When courts take a passive approach to regulating the conduct of prosecutors and police - i.e., when courts simply wait to adjudicate suppression motions and civil lawsuits that litigants might present - **the regulatory scheme takes a long time to emerge, and its coverage is more haphazard than uniform.** Another problem is that because many of the arguments against the expanded surveillance of religious groups are not constitutionally cognizable, n309 courts will rarely be able to grant the relief sought by petitioners. Finally, the recent relaxation of the restrictions imposed by the consent decrees in Handschu and Alliance to End Repression indicates that judicial regulation is more malleable than some civil libertarians would prefer.

AT: DoJ Solves

The Department of Justice fails – self-determination means that regulatory government agencies would prioritize personal interests.

Lininger, 4 – Assistant Professor at the University of Oregon School of Law (Tom Lininger, 89 Iowa L. Rev. 1201, "Sects, Lies, and Videotape: The Surveillance and Infiltration of Religious Groups," April 2004, Lexis, **fc*)

C. Internal Regulation by Law Enforcement Agencies

Some commentators believe that the Department of Justice and other law enforcement agencies should have the primary responsibility for regulating the conduct of their employees. n310 According to this view, no regulatory authority is better suited to determine the proper requirements for prosecutorial and investigative activities (including infiltration of religious groups) than the agencies that conduct these activities.

There can be little question that law enforcement agencies have the requisite expertise to formulate such rules. Professor Roberta K. Flowers argues that the Department of Justice is better qualified than any other institution to play this role, n311 due in part to the Department's unique familiarity with the prosecutorial and investigative functions, and due to the Department's access

to fast-breaking information about the latest exigencies in investigating terrorism. The very reason for this expertise, however, is the Department's direct stake in the matters to be regulated. That **self-interest could lead (and arguably has led) to a regulatory regime that favors the Department's interests over competing concerns such as the protection of civil liberties.** Professor Fred Zacharias and Professor Rory Little fear that the Department's institutional interests could compromise its objectivity as a regulator of prosecutorial ethics. n312 Granting the Attorney General exclusive authority to regulate the ethics of federal prosecutors is tantamount to allowing "the fox to guard the hen house." n313

Would autonomous law enforcement agencies be willing to ratchet up their own internal regulations? On the federal level, it seems unlikely that Attorney General Ashcroft would reinstate a suspicion requirement that he has so ardently opposed for the last year. On the local level, police departments seem even less fond of red tape than their federal counterparts. Vesting law enforcement agencies with **self-determination may actually remove any incentive they have for self-regulation.** In the past, they have proposed additional self-regulation in order to avert the risk of more drastic [*1268] regulation by other bodies, not because the law enforcement agencies have actually sought greater regulation in the first place.

The last problem with exclusive reliance on an internal regulatory scheme is the limited efficacy of such a system. Internal guidelines for prosecutors and law enforcement agents generally are not enforceable by outsiders - and certainly not by criminal defendants who might seek to invoke these provisions as protection of the defendants' rights. Since 1983, the Justice Department's investigative guidelines have included language making clear that they are not enforceable in court, n314 and they are not grounded in law that is itself enforceable. n315 Also, the United States Attorney's Manual is not enforceable in court. n316 Even if these bodies of law were somehow enforceable, they might **prove evanescent.** In most instances, internal regulations can be changed overnight with the stroke of a pen by a single official. n317 In fact, that is precisely what happened when Attorney General Ashcroft promulgated the new set of investigative guidelines in May 2002. Thus, there appears to be a number of strong reasons why the internal regulations of law enforcement agencies do not provide the best vehicle to reinstate the "reasonable suspicion" rule for infiltration of religious organizations.

S-6 Visas CP

1nc S-6 Visas CP

Text: the United States federal government should revise the S-6 visa requirements to

--increase the number of available visas

--protect the informants' civil liberties

--abolish the danger of retaliation

--abolish the requirement than an informant be eligible for a monetary reward

These revisions should require that the informants possess critical intelligence prior to agreeing to inform.

Counterplan solves – encourages cooperation and increases the quality of information

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

With **fewer bargaining options, less protection, and potentially more to lose** n29 than informants recruited through monetary incentives or promises of sentence reductions, there is greater incentive for informants "flipped" n30 via [*241] immigration violations to provide unreliable information. Furthermore, due to the latitude afforded to the executive branch in national security matters, there is a darker veil of secrecy shrouding measures for recruiting terrorism informants than for other types of informants. n31 **Immigration status offers a valuable way for the FBI to elicit cooperation and collect intelligence from individuals who otherwise would not be forthcoming.** However, this method for collecting intelligence can prove counterproductive when indiscriminately applied to situations where the informants lack useful connections to terrorist groups. Decreased intelligence benefits, lack of protection for informants, and increased ethnic and religious profiling suggest that changes to how the FBI recruits terrorism informants with immigration threats and rewards are needed. While the FBI appears to recruit most terrorism informants through informal means, an existing visa program already formally offers immigration benefits to informants in exchange for their cooperation with terrorism investigations. As part of the Violent Crime Control and Law Enforcement Act of 1994, n32 Congress specifically designed the S-6 visa to attract and reward immigrants who were willing to cooperate by giving terrorism intelligence. n33 However, given the small number of S-6 visas issued, the program likely fails to meet the FBI's intelligence recruitment needs. The fifty allotted S-6 visas per year n34 do not match up with the number of informants (fifteen thousand) used by the FBI. n35 In order to qualify for the S-6 visa, an informant must also meet the eligibility requirements of the Department of Justice's Rewards for Justice Program, a separate program designed to elicit and monetarily reward terrorism intelligence. n36 Lastly, access to the S-6 visa is further restricted by the requirement that the informant be subject to danger if he or she is returned to his or her home country. n37 Since the FBI has long used immigration law as an incentive to compel terrorism informants to act, it has little motivation to use a rewards program that presents additional barriers. The stringent eligibility requirements to obtain an S-6 visa explain its ongoing underuse. n38 [*242] This Comment proposes the S-6 visa requirements should be modified in a way that **encourages trust and cooperation** from informants by allowing informants to enforce their bargains with the FBI. A legislative overhaul that emphasizes pre-existing ties to terrorist organizations, increases the number of available visas, and lowers the barriers to the S-6 visa's use would produce more reliable and actionable intelligence, and **provide greater protection for the informants' civil liberties** and free speech. Congressional oversight of the FBI's use of S-6 visas would also provide

a **valuable check on the FBI's largely unlimited control** over terrorism informants. Part I examines the differences between the FBI's historical use of informants in investigating crimes such as drug smuggling and prostitution and the FBI's current use of informants investigating terrorism. Part II discusses how the use of immigration law to recruit informants, as well as the presence of informants in Muslim and Middle Eastern communities, chills free speech and encourages religious and ethnic profiling. Part II also addresses how the FBI's use of immigration law to recruit terrorism informants heightens the risk of false intelligence and increases the possibility of entrapment and prosecution of individuals who do not pose a true threat. Part III looks at limitations of the FBI's recruitment and use of informants, and analyzes the failure to protect informants from abuse by handlers and constrain the FBI's actions. Part IV explains the S-6 visa requirements and advises increasing the congressional allotment of S-6 visas and modifying the eligibility requirements to improve their efficacy in terrorism investigations. Finally, Part V concludes that a modified S-6 visa program will result in better relationships between law enforcement and the Muslim and Middle Eastern communities, less encroachment on civil rights, and ultimately, more effective counterterrorism investigations and prosecutions. I. Background: Traditional Informant Use Versus Modern Use in Terrorism Investigations Despite the FBI's long history of problematic relationships with informants, n39 both Congress and the Department of Justice - the FBI's parent agency - provide very little oversight of FBI informants. The lack of transparency, control, and accountability give the FBI almost unlimited power over how it recruits, handles, and rewards informants. n40 In particular, because of the greater secrecy afforded to national security investigations, the use of terrorism informants presents unique problems not present in traditional, nonterrorism use of informants. [*243] The use of informants in terrorism investigations differs in several ways from their use in the investigation of domestic crimes like smuggling, prostitution, and financial impropriety. Although the FBI has been using informants to conduct investigations since the agency's inception, n41 informants were traditionally used to investigate "victimless" crimes such as white-collar crimes n42 and crimes dealing with prostitution, drugs, and corruption. n43 Informants proved especially useful in those cases because all parties to the crime were usually guilty and not likely to inform authorities, making it difficult for law enforcement agents to discover the crime on their own. n44 Consequently, because individuals already part of the criminal organization or conspiracy had the trust and confidence of the organization and could provide the most useful information to law enforcement over a longer period of time, the FBI has generally recruited informants in these investigations from the inside. The FBI's "Top Echelon" informant program, for example, sought to recruit high-ranking members of the mafia as informants. n45 Notably, however, even the FBI's traditional method of recruiting informants from within the criminal organizations resulted in false intelligence and botched cases. n46 While there are no detailed studies on the differences between terrorism informants and traditional informants because the FBI keeps most of this information confidential, n47 broad observations can still be made. First, the FBI's preventative stance on terrorism has significantly increased reliance on informants' intelligence. n48 After 9/11, the FBI drastically expanded the use of [*244] informants n49 from around 1,500 in 1975 n50 to an estimated 15,000 today. n51 Informants have become the number one tool for preventing terrorist acts. n52 Second, law enforcement dealings with terrorism informants receive greater deference from courts and other limiting actors because terrorism is considered a national security matter instead of simply a domestic law enforcement matter. n53 The executive branch has greater control over national security and foreign intelligence matters than over domestic law enforcement, an area traditionally reserved to the states. n54 Thus, the post-9/11 characterization of terrorism as a national security matter results in courts affording more leeway to terrorism investigations than domestic criminal investigations. n55 In other words, the federal government is afforded more secrecy in matters of national security. n56 Hence, because the government can invoke national security concerns to keep information about the informant and handler privileged, there is less regulation governing the recruitment and handling of terrorism informants than traditional criminal informants. n57 [*245] Third, while false and inaccurate intelligence has generally been a problem with informants, n58 recent terrorism investigations raise the question of whether the alleged terrorist crimes would have occurred without law enforcement instigating the terrorist activities. n59 Informants in these cases aggressively instigated the defendants' participation in the plot. n60 Recruiting informants who lack ties to terrorist organizations may be at the root of this problem, because they lack predetermined targets known to be involved in terrorist groups. n61 Without these targets, informants under pressure to avoid deportation or other immigration consequences, for example, are more likely to produce false information. n62 Further complicating this issue, the government has suffered from credibility problems in terrorism investigations for not always fulfilling the promises made to informants. n63 One FBI informant, a Yemeni citizen named Mohamed Alanssi, set himself on fire in front of the White House after alleging that the FBI had broken numerous promises to him. n64 Governmental credibility is critical to maintaining a relationship of trust between law enforcement and informants, and thereby facilitates the gathering of credible intelligence. Due to the vast number of terrorism informants today, the secrecy underlying the investigations, n65 and the potential for false intelligence, the recruitment and use of informants in terrorism investigations present unique problems to the FBI. Because of increased confidentiality surrounding national security issues, the government has the means and incentives to shield the true extent of its recruitment and use of terrorism informants from courts and the public. n66 To increase accountability and lessen the risk of abuse, more oversight over the FBI's dealings with terrorism informants is needed. Notably, some limits on the FBI's use of informants do exist. However, given the secrecy [*246] surrounding national security concerns, whether these limits apply in terrorism investigations remains unclear. II. Problems with Recruiting Informants Based on Immigrant Status The FBI's use of immigration rewards and threats to recruit informants undermines civil liberties and cooperation with Muslim, Middle Eastern, and other immigrant communities. n67 In general, the presence of informants in mosques and the surrounding community creates suspicion and distrust of law enforcement efforts, chilling free speech. That is, when community members know that informants are potentially monitoring their speech, community members are less likely to cooperate with law enforcement efforts. Furthermore, by sending informants into Muslim and Middle Eastern communities without specific targets to surveil, the FBI encourages ethnic and religious profiling and helps conflate Islam and terrorism in the public eye. Because informants recruited via immigration law possess less bargaining power and face potentially more serious consequences than those recruited via criminal law incentives, there is greater incentive for these informants to supply false information and accuse innocent individuals. Ethnic and religious profiling, combined with the indiscriminate surveillance carried out by informants, can entrap individuals who do not pose a threat. Entrapment wastes government resources and undermines public confidence in the justice system and law enforcement. Although the FBI's problematic surveillance of Muslim and Middle Eastern communities stems from the use of all types of informants and not merely those recruited with immigration promises, a modification to the use of immigration law in rewarding or coercing terrorism informants would provide a step toward producing more useful intelligence and reducing the risk of harm to innocent individuals. A. Mosque Surveillance Chills Free Speech In 2002, Attorney General John Ashcroft updated the Attorney General's FBI Guidelines, n68 and did away with restrictions on entering mosques and other places of worship. n69 The Guidelines read in pertinent part: "For the purpose of [*247] detecting or preventing terrorist activities, the FBI is authorized to visit any place and attend any event that is open to the public, on the same terms and conditions as members of the public generally." n70 Thus, FBI agents can now enter any mosque or attend any religious gathering without probable cause. Under the previous Guidelines, issued in 1979 by Attorney General Benjamin Civiletti, an agent could only conduct an investigation where "the facts or circumstances reasonably indicate that two or more persons are engaged in an enterprise for the purpose of furthering the political or social goals ... through activities that involve force or violence and a violation of the criminal laws of the United States." n71 In the past, the FBI's Domestic Investigations and Operations Guide ("DIOG"), which provides guidance on implementing the Attorney General's Guidelines, allowed supervisory agents to delegate to inferior agents decisions concerning the surveillance of mosques and other religious gathering places. n72 Recently, however, restrictions have been slightly strengthened by requiring agents in charge of the field operations to approve surveillance. n73 Nevertheless, this change may not really improve matters, as numerous instances of mosque surveillance have already eroded Muslim communities' trust of law enforcement. n74 By placing informants in places of worship and cultural spaces, the FBI has chilled free speech and damaged the most reliable way of obtaining accurate terrorism intelligence from these communities. In a well-publicized and egregious case, an FBI informant named Craig Monteilh was assigned to surveil a mosque in Irvine, California. n75 The FBI instructed Monteilh, a convicted felon working as a paid informant, n76 to [*248] indiscriminately surveil worshippers at the mosque, without concentrating on a particular target or activity. n77 After congregants noticed Monteilh's inflammatory rhetoric and repeated talks about instigating terrorism, they reported him to the FBI. n78 The FBI failed to investigate further, and after the arrest of another suspected terrorist, Monteilh revealed his identity as an FBI informant. n79 This incensed the Islamic community, in part because an FBI Assistant Director had promised a year earlier that the agency would not surveil mosques. n80 In response, Islamic groups like the Council on American-Islamic Relations and the American Muslim Task Force on Civil Rights and Elections, which had previously cooperated with the FBI and urged community members to do the same, reversed course and stopped their outreach efforts to aid law enforcement. n81 In the end, Craig Monteilh's story is just one of many that demonstrate why Muslim communities have soured on helping the FBI locate suspicious people within their communities. n82 Although Monteilh was neither an immigrant nor was offered immigration incentives in return for intelligence, his story shows how the use of informants can potentially damage both law enforcement and immigrant communities. Monteilh's story also illustrates why many communities feel mosque surveillance infringes on their freedom of speech. Once a community becomes aware that FBI informants may be surveilling its mosques, the fear that informants will target them chills the free exchange and expression of ideas and speech. n83 Given the constitutional guarantees of the First Amendment, places of worship should be treated with utmost sensitivity by law enforcement, n84 as the self-editing that occurs when people know they are being watched curtails the free exchange of ideas. The very knowledge of potential surveillance may caution people against discussing their political and religious viewpoints for fear of being targeted by informants like Monteilh. Consequently, mosque attendance falls n85 and community cohesion suffers, thwarting the First Amendment's protection of free expression. Even those not harboring extreme viewpoints may be [*249] dissuaded from political speech for fear of misinterpretation. For example, after revelations of potential FBI surveillance surfaced at the Islamic Center of Irvine, congregant Omar Turbi attested, "It gives you a little bit of apprehension about who you trust ... . Makes you think twice about what you say; what if people misunderstand you?" n86 Similarly, the executive director of the Council on American-Islamic Relations in Anaheim stated, "Some average Muslims interested only in praying are avoiding mosques for fear of somehow being monitored or profiled ... . Everybody is afraid, and it is leading to an infringement of the free practice of our religion." n87 Although some states like Indiana, Pennsylvania, and Oregon have enacted laws prohibiting the surveillance of religious sites without reasonable suspicion, n88 it should not be necessary to rely on state laws to protect the integrity and values of the First Amendment. B. Mosque Surveillance Encourages Religious and Ethnic Profiling In addition to eroding the First Amendment's free speech rights of Muslims and Middle Easterners, the FBI's informant surveillance tactics also inappropriately target these religious and ethnic groups. Most of the organizations designated as Foreign Terrorist Organizations by the State Department are Muslim or Arab groups. n89 Many post-9/11 policies, like the extensive detention of Muslims and Middle Easterners, indicate that the federal government views Muslims and Middle Eastern immigrants as potential terrorists. n90 Popular perception of Muslims has moved in the same direction, with huge opposition, for example, to the construction of an Islamic community center - Park 51 - near the site of the World Trade Center in New York. n91 Other examples include state laws banning the use of Shari'ah law in judicial decisions n92 and Islamophobia n93 rising in the United States n94 and abroad. n95 [*250] By sending immigrant informants into mosques and religious and ethnic communities with little more than a vague directive to find terrorists, the FBI perpetuates ethnic profiling and the conflation of Islam and terrorism. In recruiting terrorism informants from the immigrant population, the FBI puts an ethnic and religious face on terrorism, and perpetuates the popular perception of what terrorists look like. Sending these informants into mosques and immigrant communities greatly increases the chances that alleged suspects fit the ethnic and religious stereotypes of terrorists. Put differently, if an informant is assigned to surveil a mosque, the chances of the informant bringing back a non-Muslim or non-Middle Eastern suspect are low. This surveillance policy becomes a vicious cycle. The FBI recruits immigrant individuals from suspect communities to become informants, pressures them into producing terrorism suspects that fit the popular perception of what terrorists are like, and then prosecutes these suspected terrorists. All this reinforces the public conflation of immigrants, Muslims, Middle Easterners, and terrorists. Ethnic and religious profiling further alienates Muslim and Middle Eastern communities, and deepens their mistrust for government. n96 Additionally, by predisposing many Americans to view Muslims, immigrants, and Middle Easterners as potential terrorist threats, ethnic and religious profiling may also bias juries in terrorism prosecutions. n97 Although suspects often claim entrapment as a defense, after 9/11 the entrapment defense has never been successfully used in terrorism cases. n98 In fact, many, if not most, terrorism cases never reach the jury because the chances of successfully defending against terrorism charges after 9/11 are almost nonexistent. n99 Popular stereotypes concerning Muslims and Middle Easterners play a role in this. Although the use of immigration law in recruiting informants is only one of many factors contributing to this harmful cycle, the use of coercive tactics like immigration law to recruit informants creates a [*251] higher risk of unfounded terrorism prosecutions against innocent individuals who do not pose a risk. Consequently, this fuels the public perception that a stereotypical terrorist is a Middle Easterner or Muslim. C. Terrorism Informants' Presence in Muslim and Middle Eastern Communities Damages Intelligence Efforts Many argue that tactics like recruiting informants through immigration law and surveilling mosques are necessary to prevent terrorist attacks, and that national security must be the nation's top priority, whatever the cost. These arguments fail to recognize that when informants lack a specific target and direction, the gathered intelligence does not necessarily enhance the nation's security. Instead, the FBI - with little concern for the actual gravity of the original threat posed by the suspect - creates an elaborate terrorism plot for the surveillance targets to participate in. n100 After 9/11, many individuals who showed no signs of violence or extremism prior to involvement with informants and government-created plots have been prosecuted under terrorism charges. n101 Until the informants provided the means, these individuals did not have the finances or the proper connections to conceive and carry out these terrorism plans. Although orchestrating these plots makes the FBI's preventative stance appear successful in the public eye, it diverts law enforcement resources from focusing on real targets. Moreover, Professor David A. Harris claims that "the unregulated use of informants in mosques and other religious and cultural settings can also do great damage because it poses the risk of cutting off our best possible source of intelligence: the voluntary, cooperative relationships that have developed between law enforcement and Muslim communities." n102 Having community members report suspicious information to the FBI may be a more effective way of obtaining reliable terrorism intelligence from these communities. n103 For example, in the few domestic terrorist prosecutions where a terrorist attack plan actually existed prior to informant involvement, community members who had noticed something amiss were the first to alert the FBI and identify the subjects. n104 In fact, since 9/11, community members have assisted law enforcement in stopping potential terrorism plots in a number of cases. n105 A [*252] recent example, the case of Umar Farouk Abdulmutallab, the "Underwear Bomber," shows that the attempted bombing could have been prevented had law enforcement heeded the warnings that Abdulmutallab's father gave the CIA at the U.S. embassy in Nigeria. n106 As the president of the San Francisco Board of Supervisors and former criminal prosecutor, David Chiu testified regarding the Arab, Middle Eastern, Muslim, and South Asian communities in San Francisco: "Without that level of cooperation, that level of trust, everything falls apart ... . Surveillance only serves to continue to drive wedges when cooperation is what is needed most." n107 Analogous to the way informants in mosques target vulnerable individuals despite these individuals' lack of connection to terrorist organizations or predilection for extremism, a 2011 study by the Migration Policy Institute demonstrates a similar phenomenon within other communities. n108 The 287(g) initiative, named after the section of the Immigration and Nationality Act that authorized it, allows ICE to enter into memorandums of agreement with state and local law enforcement agencies, empowering these agencies to directly enforce immigration laws. n109 However, the study found that half of the jurisdictions using 287(g) did not direct their enforcement efforts toward serious or violent offenders, n110 as the 287(g) initiative had originally envisioned. n111 Instead, these jurisdictions sought to deport as many offenders as possible regardless of the severity of the crime. n112 Study respondents "believe that 287(g) program activities affect the community in distinct and adverse ways, including by causing declines in Latino immigrant populations, [creating] avoid[ance of] public places by these populations, changing [] driving behavior, [creating] fear and mistrust of the police and other authorities, and reducing crime reporting." n113 These behaviors were more acute in jurisdictions with nontargeted enforcement, [*253] where any offense could constitute grounds for deportation. n114 Just as Latino immigrant communities became distrustful of law enforcement and withdrew from crime reporting when threatened with deportation, so did Muslim and Middle Eastern communities when threatened with FBI surveillance of communal spaces. As the study notes, "these operations can generate widespread distrust of police. Such distrust in turn prompts immigrants to change their behavior to avoid contact with police and other authorities." n115 In order to procure accurate intelligence from any community, a relationship of trust and respect between law enforcement and the community must exist. n116 However, from the mass arrest and detention of Muslims shortly after 9/11 n117 to the ongoing allegations of ethnic and religious profiling today, n118 the federal government has made serious errors in dealing with Muslim and Middle Eastern communities since 9/11. While the government recognizes that community policing n119 is the best way to obtain reliable intelligence, n120 the FBI is caught between two contradictory strategies and must choose between sending informants into mosques without reasonable suspicion, and gaining the trust and cooperation of Muslim and Middle Eastern communities. As one congregant in a surveilled mosque observed, "The FBI wants to treat the Muslim community as a partner while investigating us behind our backs ... . They can't have it both ways." n121 While it is unrealistic to think that the FBI will stop using informants in these communities, a more restrained use of informants based on reasonable suspicion of wrongdoing would mitigate perceived damages to community relations. Requiring the FBI to have preexisting reasonable suspicion would add credibility to the agency and alleviate some of the fear surrounding terrorism investigations involving informants. [*254] By virtue of their connections and daily interactions, those active in a particular community are in the best position to notice when others in the community act strangely. Unlike informants who may be new to the community and who other members may view with suspicion, well-established community members may already know what is going on in their community and can more accurately spot genuine threats. Notably, the argument that Muslims and Middle Easterners are in the best position to provide accurate intelligence on terrorist activities within their respective communities risks fueling the government's conflation of those communities with terrorism. n122 However, in analyzing how best to procure counterterrorism intelligence, it would be amiss not to recognize the FBI's and other law enforcement agencies' heavy focus on Muslim and Middle Eastern communities. This is largely due to most recognized foreign terrorist organizations being based out of the Middle East or having Islamic ties. n123 Law enforcement efforts, immigration law, surveillance policies, and pre-9/11 incidents like the 1993 attack on the World Trade Center have categorized the typical terrorist as male, Middle Eastern, and devoutly Muslim. n124 The reality is that even though recently immigrated Muslims and Middle Easterners have become synonymous with terrorism, terrorists come from various ethnicities, religions, and communities. n125 While acknowledging and attempting not to replicate that stereotype, this Comment seeks to recommend ways to improve the relationship between law enforcement and potential terrorism informants who typically belong to the same religion or ethnicity as those they surveil. The government's focus on Muslim and Middle Eastern communities as potential breeding grounds for terrorist groups also directs the focus of this Comment. However, this Comment resists the broad characterization of these communities as prone to extremism and violence. In fact, a recent statistical analysis of terrorism activity after 9/11 discredits the stereotype that Muslims and Middle Easterners account for most of the terrorism within the United States. n126 In total, the report found that U.S.-originated non-Muslims accounted for 107 post-9/11 plots while U.S.-originated Muslims accounted for 49. n127 Conversely, the report found that cooperation with Muslim communities helped prevent 40 percent of all Al-Qaeda plots after 9/11. n128 As the report notes, "[a] singular focus on Muslim terrorists is both bad for national security and civil society ... . Numerous studies and experts have stated that there is no reliable [*255] "terrorist profile."" n129 When compared to the actual threat posed by members of Muslim and Middle Eastern communities, then, the FBI's explicit target of Muslim and Middle Eastern communities is excessive. D. Indiscriminate Use of Informants Leads to Entrapment Entrapment is another problem arising from the broad use of terrorism informants. Since 9/11, many informants have been involved with cases where the government effectively created a terrorist plot and then pressured the defendant into agreeing to it. n130 As the Council on American-Islamic Relations stated in a 2009 report, informants "are paid and/or rewarded based on the amount of information they produce; therefore, these informants are inclined to exaggerate, instigate, and fabricate cases of a "terrorist' nature." n131 Many of the terrorist plots the FBI touts to the public as victories have been the result of informants pressuring vulnerable, young, or impressionable individuals who lacked ties to terrorist organizations or prior terrorist inclinations. n132 In United States v. Cromitie, n133 a striking case that illustrates the extent to which informants and their handlers can go in fabricating prosecutions, the defendant pled outrageous government conduct as a defense. n134 In contrast to an entrapment defense, claims of outrageous government conduct focus on government action rather than the defendant's. n135 Shahed Hussain, the informant in Cromitie, began working for the FBI in 2002 after facing deportation and criminal charges over a Department of Motor Vehicle scam he ran. For his work as an informant, Hussain was paid around $ 100,000. n136 Following Cromitie's conviction for conspiring to commit terrorist acts, Cromitie moved to dismiss the indictment based on the outrageous conduct of the government and, specifically, Hussain. n137 Before his arrest, Cromitie expressed to Hussain interest in joining a Pakistani terrorist group. In subsequent conversations with Hussain, however, Cromitie reacted negatively [*256] to suggestions of suicide bombing. n138 Further, in recorded conversations between Cromitie and Hussain, Cromitie at times sounded ambivalent about jihad and other times expressed violent sentiments. n139 However, "whenever Hussain asked Cromitie to act on those sentiments ... Cromitie did none of the above." n140 Hussain then escalated the pressure, promising Cromitie a BMW for carrying out a mission and offering him money for "doing jihad." n141 In addition to the pressure exerted on Cromitie to commit a crime, the FBI made other serious missteps while building its case against him. During the investigation, the FBI failed to corroborate Cromitie's alleged past crimes and ties to Afghanistan. n142 The court specifically noted: Before deciding that the defendants (particularly Cromitie, who was in their sights for nine months) presented any real danger, the Government appears to have done minimal due diligence, relying instead on reports from its Confidential Informant ... no one thought it necessary to check before offering a jihadist opportunity to a man who had no contact with any extremist groups and no history of anything other than drug crimes. n143 In fact, although FBI officials concluded during a meeting that Cromitie "was unlikely to commit an act without the support of the FBI source," officials nevertheless continued the investigation. n144 Even after Hussain realized that Cromitie's stories of visiting Afghanistan and committing crimes were false, he continued to offer Cromitie money in exchange for committing crimes, promising him up to $ 250,000 without authorization from the FBI. n145 After Cromitie lost his job at Wal-Mart and grew desperate for money, Hussain "leveraged that unfortunate situation to coax Cromitie to go forward with a jihadist plot. Cromitie protested that he did not want to be a martyr, but nonetheless agreed to go forward." n146 Cromitie helped recruit several lookouts, surveilled potential sites, and planted what he thought was a bomb. Cromitie was subsequently arrested. n147 The court described the government's involvement in this plot: As it turns out, the Government did absolutely everything that the defense predicted in its previous motion to dismiss the indictment. The Government indisputably "manufactured" the crimes of which defendants stand convicted. The Government invented all of the details of the scheme - many of them, such as the trip to Connecticut and the [*257] inclusion of Stewart AFB as a target, for specific legal purposes of which the defendants could not possibly have been aware ... . The Government selected the targets. The Government designed and built the phony ordnance that the defendants planted ... . The Government provided every item used in the plot ... . The Government funded the entire project. And the Government, through its agent, offered the defendants large sums of money, contingent on the participation in the heinous scheme. n148 Surprisingly, the court nevertheless concluded that the government's actions were neither outrageous nor shocking. n149 In fact, the court stated that it would have been negligent for the FBI not to investigate Cromitie after the statements he made regarding Jews, the United States, and Pakistan?despite these statements never becoming specific threats or incitements to action. n150 Even though the court did not find outrageous conduct, it nevertheless recognized that [Hussain, as the informant,] was the prime mover and instigator of all the criminal activity that occurred, right up until the last moments of the conspiracy, when he had to stop the car he was driving and "arm" the "explosive device" because the utterly inept Cromitie could not figure out how to do it. n151 Although "this court is not familiar with a case in which so many different tactics were used on a single individual ... Cromitie justified the Government's persistence when he proved to be ready and willing to commit terrorist acts." n152 Cromitie raises the question whether government action would ever rise to the level of outrageousness that the courts demand. In Cromitie, the court suggested that only duress, physical deprivation, or coercion by the government is prohibited when pursuing a potential prosecution. n153 Although Cromitie's sentiments toward Americans and Jews are neither admirable nor politically correct, the court strongly suggested that he never posed a real threat. n154 [*258] Nevertheless, despite its aggressive actions, the government received nothing more than a verbal slap on the wrist. n155 Stories like Cromitie's underscore Muslim and Middle Eastern communities' fears of informants. Community members realize that the chances of a successful defense against the government based on the tactics of an informant and the FBI are extremely low, regardless of the coerciveness of the methods used. III. Limitations on the FBI's Use of Informants Cromitie demonstrates that the FBI lacks substantial restraints on how it recruits and uses informants. Currently, there are four restrictions on how the FBI recruits informants: (1) internal FBI limitations, (2) constitutional limitations, (3) the entrapment defense and the outrageous government conduct doctrine, and (4) enforcement of nondeportation agreements in plea bargains. Because these limitations have neither curtailed the FBI's mismanagement of informants nor ensured a high degree of accuracy in information obtained, these restrictions have failed to protect both the public from terrorism and informants from abuse. n156 A. Attorney General Guidelines The Attorney General's Guidelines on FBI Confidential Human Sources n157 ("Guidelines"), issued in 2006 by the Department of Justice, n158 are agency guidelines, not regulations, and as such have no binding legal effect. n159 [*259] Much of the problem of FBI informant misuse stems from this fact. The Guidelines outline the rules the FBI should follow in undercover investigations involving informants, which include documenting new informants and recording agreements made. n160 The Guidelines are also subject to review and modification by the Attorney General in accordance with federal laws, and are afforded great deference by the courts. n161 The major problems with the Guidelines, however, are that they lack consequences, are not subject to judicial review, and are not followed by agents. n162 While the Guidelines may have internal consequences n163 for FBI agents who violate them, they have no meaningful effect beyond internal regulation and cannot be enforced by the public via judicial review. n164 Judicial review for violations only occurs when criminal prosecutions reveal the FBI's activities in the investigation. n165 However, the informants in these cases typically remain confidential, and any inquiry into their actions does not extend beyond the handling agent's conduct and the recruitment methods used. n166 Evidence shows that in many cases, FBI agents fail to follow the Guidelines when recruiting and handling informants. A 2005 study conducted by the Department of Justice Office of the Inspector General found that the FBI did not provide enough support to agents to properly follow the pre-2006 Attorney General Guidelines Regarding the Use of Confidential Informants. n167 In fact, noncompliance with the guidelines was a problem in 87 percent of the cases the Inspector General reviewed. In particular, agents failed to properly review the suitability of potential informants, properly document informants' illegal activities, and notify informants of their limitations. n168 Given the high levels of noncompliance and agents' nearly unlimited discretion in extending immigration rewards, agent abuse is likely also high. [*260] Immigration rewards appear only once in the Guidelines, yet this single reference exemplifies the impunity with which law enforcement procures informants. The Guidelines state that "no promises or commitments can be made, except by the United States Department of Homeland Security, regarding the alien status of any person or the right of any person to enter or remain in the United States." n169 The Guidelines also note that informants should receive this information if and when they have any issues regarding immigration status. n170 While acknowledging that FBI agents may only offer immigration benefits to informants pursuant to DHS's agreement, the Guidelines do not answer the questions raised by this arrangement. Unlike monetary rewards, for which the Guidelines establish a number of rules regarding proper payment procedures and conditions, n171 it is not clear under what circumstances immigration rewards must be documented and whether they are subject to conditions similar to those of monetary rewards. Their brief appearance in the Guidelines shows the FBI's recognition of immigration benefits as a method to elicit informant cooperation, but details on their use are nonexistent. This absence of information indicates that agents may possess vast discretion when using immigration rewards to recruit informants. It also indicates that executing these rewards is ultimately in the hands of DHS. B. Constitutional Limitations In theory, both the Fourth Amendment and the Due Process Clause of the Fifth Amendment restrict the FBI's use of informants in terrorism investigations. However, neither Amendment has actually limited the Agency's recruitment tactics when dealing with subjects facing immigration-related pressures to serve as informants. The Fourth Amendment's prohibition against unreasonable searches and seizures n172 does not offer any substantive restrictions on the FBI's use of informants in terrorist investigations. In criminal investigations where the Fourth Amendment does apply, it places few restrictions on the use of information gathered by informants. n173 To obtain a warrant based on intelligence gathered by an informant, the information must be reliable in establishing the requisite probable cause. n174 In matters of national security however, the search standard is less stringent than the probable cause standard [*261] used in criminal investigations. n175 In fact, the United States Supreme Court has never held that the Fourth Amendment applies to national security investigations. n176 In particular, the Foreign Intelligence Surveillance Act of 1978 (FISA) n177 shields federal agents from standard criminal warrant requirements when carrying out electronic surveillance and searches. The Foreign Intelligence Surveillance Court, a secret court n178 created by FISA to issue warrants in national security investigations, n179 only requires probable cause that "the target of the electronic surveillance is a foreign power or an agent of a foreign power." n180 Hence, because agents do not have to produce evidence of criminal activity before initiating electronic or physical surveillance, they are able to use informants more freely. n181 Under FISA, the Attorney General can also authorize surveillance for up to a year without court order. n182 Furthermore, in 1982, President Reagan's Executive Order No. 12,333 identified the FBI as the primary gatherer of domestic intelligence and held that the Attorney General holds the power to carry out warrantless searches and surveil agents of foreign powers. n183 Executive Order No. 12,333 essentially paved the way for the FBI's use of informants to conduct domestic surveillance of foreign agents, including members of foreign terrorist organizations, without [*262] adhering to the restrictions inherent in the use of informants in domestic criminal investigations. In domestic criminal investigations, agents are required by law to corroborate informants' intelligence and credibility before a warrant is issued. n184 However, under Executive Order No. 12,333, this corroboration is not required in terrorism investigations. n185 For informants facing deportation and immense pressure to cooperate, these lax warrant requirements remove an important check on the validity of their intelligence. The requirements also give the FBI more opportunities to abuse its power. Although no court has explicitly found Executive Order No. 12,333 constitutional, no court has found it unconstitutional and thus it remains good law. Indeed, the Northern District of Illinois found that FBI reliance on the Order in conducting physical searches for foreign intelligence gathering was reasonable. n186 The Due Process Clause of the Fifth Amendment has provided a way to avoid deportation to some informants facing deportation under the state-created danger doctrine. n187 The doctrine allows for recovery and injunctive relief for civil rights violations. It holds that "the government has a constitutional duty to protect a person against injuries inflicted by a third-party when it affirmatively places the person in a position of danger the person would not otherwise have faced." n188 To establish a successful claim under this doctrine, a valid relationship must have existed between the plaintiff and state; the state must have created the opportunity that ultimately harmed the plaintiff; the state must have acted in willful disregard for the plaintiff's safety; and the harm must have been foreseeable. n189 Notably, given its nearly exclusive use in domestic criminal cases, n190 the state-created danger doctrine has limited use for immigrant informants. The First and Third Circuits have declined to apply the danger doctrine in deportation cases because it intrudes on Congress's plenary power over immigration. n191 The Fifth and Ninth Circuits, however, have left the doctrine [*263] open for potential use by immigrant informants. n192 Nevertheless, even if the danger doctrine was applied in immigration cases, many of the terrorism informants in the United States lack ties to actual terrorist groups in or outside of the United States n193 and thus are not subject to threat of retaliation from actual terrorist groups if deported. Hence, the state-created danger doctrine may not help many terrorism informants avoid deportation. Additionally, the state-created danger theory only protects informants after recruitment, and provides no benefits to informants when negotiating the terms of their agreement with the FBI. While the knowledge that informants can later enforce their agreements may encourage more careful engagement with potential informants, ultimately bolstering informants' ability to vindicate their agreements with the government, the danger theory creates no incentive for the FBI to only recruit informants with established ties to terrorist organizations. In fact, because the danger doctrine is likely only useful when informants have preexisting ties to terrorist organizations, the doctrine may steer the FBI away from recruiting those with established ties because doing so would provide these informants with a way to enforce their agreements. Nevertheless, until courts actually extend the danger doctrine to deportation cases, the protective value of this theory is unknown. C. Entrapment Defense and Outrageous Government Conduct Doctrine The entrapment defense and the claim of outrageous government conduct are also possible sources of restriction on the FBI's use of informants. n194 These protect defendants who claim to lack the necessary predisposition for criminal activity but whom the government induced to commit criminal acts. n195 The test for entrapment used by most jurisdictions including the federal courts places the burden on defendants to show lack of predisposition to commit the alleged crimes. n196 The entrapment defense succeeds when "the criminal design originates with the officials of the Government, and they [*264] implant in the mind of an innocent person the disposition to commit the alleged offense and induce its commission in order that they may prosecute." n197 The mere provision of materials and opportunities by the government for the commission of a crime is not sufficient unless the government's action "actually implants the criminal design in the mind of the defendant." n198 In contrast, outrageous government conduct claims focus on government action. In United States v. Russell, the Supreme Court acknowledged that "we may some day be presented with a situation in which the conduct of law enforcement agents is so outrageous that due process principles would absolutely bar the government from invoking judicial processes to obtain a conviction." n199 Unlike entrapment, outrageous government conduct is not an affirmative defense. Rather, it seeks dismissal based on government violation of due process. n200 To prevail, an individual must show that the government's conduct offended "fundamental fairness" and shocked "the universal sense of justice." n201 A court has never found outrageous government conduct where defendants were predisposed to commit crimes by the acts of an informant. n202 The use of the entrapment or outrageous government conduct defense may raise questions about the behavior of the informant and the government agent's instructions to the informant. While the entrapment defense may allow a defendant to escape criminal liability, an examination of government relations with informants may call for public and political limitations on the FBI's dealings with informants. n203 Usually, because law enforcement values the secrecy of its dealings with informants, evidence about informant recruitment and handling only surfaces after egregious cases involving informants acting as agent provocateurs. n204 For example, in Cromitie, the defendant argued that the government entrapped and subjected him to outrageous conduct. n205 Although neither claim ultimately prevailed, Cromitie exposes how far the government may go to set up an individual for a crime, including offering a car and a quarter million dollars to participate in terrorist acts. n206 Cases like Cromitie do little to restrict the FBI's dealings with informants. If courts were more receptive to claims of entrapment and outrageous [*265] government conduct, law enforcement agencies would be threatened by the risk of exposure, which in turn might encourage them to curtail their aggressive tactics. Nevertheless, most terrorism investigations and cases involving terrorist defendants never go to trial, making Cromitie an unusual case. n207 In terrorism cases, defendants must overcome an unusually heavy burden because irrespective of the government's conduct or the defendant's vulnerability, committing or assisting in the commission of terrorist acts is always considered evidence of a predisposition to terrorism. n208 Cromitie demonstrates that even though courts acknowledge the government's outrageous conduct, courts may nevertheless find that a defendant's agreement to participate in terrorist acts demonstrates the necessary predisposition. n209 The fact that the FBI suffered no repercussions for aggressively recruiting Cromitie shows that entrapment and outrageous government conduct claims effectively do not restrain the FBI's use of aggressive terrorism informant recruitment tactics. D. Nondeportation Agreements in Plea Bargains Nondeportation agreements have also failed to effectively restrain the FBI's use of informants via immigration law. In the United States, most criminal cases are resolved by plea bargains. n210 Before the 1970s, plea bargaining was conducted in relative secrecy and deals between the parties were not recorded. n211 In the 1970s, the Supreme Court held that if prosecutors [*266] reneged on plea bargains, petitioners were entitled to specific performance, resentencing, or withdrawal of the guilty plea. n212 Traditionally, courts have treated nondeportation agreements and plea bargains as contracts. n213 Thus, when the prosecution does not follow through with the promised benefits of a plea agreement, defendants may enforce the agreement as though it were a contract. n214 Further, nondeportation agreements are similar to plea bargains in that the defendant agrees with the government to some detriment in exchange for a benefit. Due to these similarities, until the 1990s the Eighth and Ninth Circuits routinely enforced plea bargains when informants were promised immigration benefits in exchange for information. n215 In addition to the standard contract elements of offer, acceptance, and consideration, two additional elements must have been present in the agreement in order to establish an enforceable claim against the government. First, the government agent must have had "actual authority" to ensure government performance. n216 Second, agency principles must have been present in the agreement. Agency is present when one person, namely the agent, consensually acts on behalf of another - the principal. n217 Hence, an agreement entered into by the prosecutor, as the agent, creates a contract between the principal (the immigration official) and the third party (the informant). n218 Nevertheless, in 1996 the Department of Justice issued regulation 28 C.F.R. § 0.197 which stated that immigration officials could not be held responsible for prosecution-made plea agreements in criminal proceedings or investigations that involved immigration laws. n219 Further, in order for agreements to count under 28 C.F.R. § 0.197, there must be written authorization from DHS. Cases that have addressed 28 C.F.R. § 0.197 since its enactment have affirmed it. For instance, in Bao Tai Nian v. Holder, the Ninth Circuit affirmed [*267] petitioner's deportation and held that a letter from an Assistant United States Attorney presumably promising nondeportation had no bearing on the case because according to existing regulation, "absent written authorization from the Commissioner of the Immigration and Naturalization Service ("INS'), the INS shall not be bound by cooperation agreements that government agencies may reach with alien witnesses." n220 Similarly, in Frimpong v. Holder, petitioner alleged that a federal prosecutor had promised him relief from deportation in exchange for information against petitioner's coconspirators. n221 There, the court dismissed his argument because there was no evidence of written authorization from DHS for the agreement, as required by the regulation. n222 Effectively, unless authorized by DHS, an FBI offer of nondeportation as an incentive does not bind the FBI to performance. Considering the Guidelines, various constitutional limits, the entrapment defense, and the near complete unenforceability of nondeportation agreements, the FBI has great discretion and little potential liability when recruiting informants. Very little prevents the FBI from pursuing aggressive recruiting tactics like probing an individual's background for immigration violations and using these as ways to elicit cooperation. Once the informant cooperates, almost nothing prevents the FBI from disregarding the promise of immigration benefits. Today, nothing adequately restrains the FBI's recruitment practices, leaving informants particularly vulnerable to coercion and thus more likely to provide faulty information. IV. A Possible Solution: The S-6 Visa As it currently exists, the S-6 visa may be a way of controlling the FBI-informant relationship in cases involving promised immigration benefits. The S-6 visa rewards terrorism informants with legal permanent residency status. However, as discussed infra, in order for the S-6 visa to effectively restrain the FBI and produce useful intelligence, the S-6 visa needs to be modified. The examples discussed supra in Part II illustrate how the overbroad and indiscriminate use of informants, particularly those recruited with immigration threats or rewards, harms the acquisition of useful information, fails to identify and protect against legitimate threats, chills speech, and encourages ethnic and religious profiling. Immigration law offers less protection to informants than promises of leniency in criminal matters, thus increasing the potential for informants to produce faulty intelligence. Part III, supra, demonstrates that limitations on FBI dealings with informants are practically nonexistent. This Part proposes a revision to the S-6 visa that would help diminish the harmful effects discussed in Part II by increasing transparency and providing [*268] more procedure for FBI informant recruitment via immigration law. Specifically, providing immigrant informants with better bargaining power and ways to vindicate their agreements through the S-6 visa would alleviate some of the aforementioned harms. Although there have been few reports of the FBI abandoning immigration promises in counterterrorism investigations, n223 the FBI has repeatedly broken alleged immigration and monetary n224 promises made to informants in exchange for participation in drug investigations, n225 human trafficking investigations, n226 and pre-9/11 terrorism prosecutions. n227 Providing a more straightforward and transparent way for the FBI to offer immigration benefits to informants would help decrease informants' potential vulnerability and limit the FBI's power. With modifications, the S-6 visa could help resolve these problems. A. The Current S-6 Visa Requirements Established in 1994 as part of the Violent Crime Control and Law Enforcement Act, the S-6 visa, or "snitch visa," n228 rewards terrorism informants and their families with legal permanent residence. n229 More specifically, the Act allows the government to give a temporary (three-year) material witness visa to people with probative knowledge of criminal activity. n230 During this three-year stay, an S-6 visa recipient can apply for permanent resident status, or a "green card," which may subsequently permit the recipient to apply for citizenship. n231 S-6 visas are subject to a different allotment system than immigrant-type visas. n232 Specifically, Congress allots fifty S-6 visas each year, and unused visas cannot be carried forward. n233 Furthermore, respective family members who are also eligible to come to the United States do not count toward the [*269] allotment. n234 To qualify for the S-6 visa, however, those providing critical and reliable information necessary for the successful investigation or prosecution of terrorist organizations n235 must be in danger of retaliation in their home country, and qualify for a reward under the State Department's Rewards for Justice Program. n236 The State Department's Rewards for Justice program was established in 1984 under the Act to Combat International Terrorism. n237 At the discretion of the Attorney General, the Program provides rewards of up to $ 500,000 to "any individual who furnishes information leading to the arrest or conviction, in any country, of any individual or individuals for the commission of [or conspiracy to commit] an act of terrorism against a United States person or United States property." n238 Individuals cannot apply for the S-6 visa on their own behalf; only state or federal law enforcement agencies may apply on behalf of an individual. n239 Individuals eligible for immigration benefits under the S-6 visa program would generally be inadmissible in the United States or otherwise subject to deportation due to criminal or immigration status violations. n240 As part of the process, applicants must waive their rights to any deportation hearings and appeals should deportation proceedings occur n241 - further eroding their bargaining power - and must acknowledge that the S-6 visa is the sole authorization of their presence in the United States. n242 In turn, the United States Attorney with jurisdiction over the investigation that forms the basis for the request must certify that no promises regarding immigration benefits have been or will be made to applicants. n243 Furthermore, law enforcement agencies initiating the requests must provide affidavits, statements, or other evidence demonstrating applicants' cooperation, their grounds for exclusion, and the government's need for the terrorism intelligence. n244 Law enforcement agencies must then file this information with the Assistant Attorney General in the Criminal Division of the Department of Justice. n245 [*270] Upon reaching the Assistant Attorney General, the information is reviewed for accuracy and specific factors are weighed to determine eligibility for the S-6 visa. n246 When necessary, "representatives of the [Immigration and Naturalization] Service [(now the U.S. Citizenship and Immigration Services ("USCIS"))], Marshals Service, Federal Bureau of Investigation, Drug Enforcement Administration, Criminal Division, and the Department of State, and those representatives of other [law enforcement agencies], including state and federal courts designated by the Attorney General" are involved in the review process to determine which cases should receive priority. n247 Once the Attorney General approves the application and the Secretary of State certifies it, the application proceeds to the Immigration and Naturalization Services Commissioner (now the USCIS Director) n248 for final approval. n249 After notification is obtained from USCIS, the Assistant Attorney General may object to the decision within seven days, in which case the Deputy Attorney General makes a final decision. n250 Nevertheless, under no circumstances can law enforcement agencies and applicants appeal the decision. n251 During the time the informant works with the law enforcement agency, he or she must report to the agency on a quarterly basis, and the agency must report to the Assistant Attorney General in the Criminal Division. Finally, the Assistant Attorney General and the USCIS Director must together make an annual report to the Committee on the Judiciary of the House of Representatives and the Committee on the Judiciary of the Senate. Reports indicate that no S-6 visas were issued to terrorism informants between 1994 and 2006. n252 There is also no indication of how many S-6 visas, if any, were processed during this time. The lack of incentives for the FBI to apply for S-6 visas on behalf of informants may be responsible for this. That is, while the prospect of legal permanent residency may be tempting bait for the FBI to dangle in front of potential informants, the bureaucratic process involved in obtaining an S-6 visa is discouraging. n253 Hence, while the FBI may tout S-6 visas to potential informants, the use of coercive and unapproved [*271] threats of deportation is more likely to result in cooperation - with less time, effort, and oversight. Since informants waive their recourses in S-6 visa agreements, the FBI suffers no legal backlash when it fails to fulfill promises made to them. n254 Essentially, the potential benefits of using the S-6 visa are outweighed by the lengthy process involved, especially if the FBI can circumvent the process or break its promises. In the end, the FBI has no real reason to seek an S-6 visa for an informant. B. Proposed Modifications to the S-6 Visa Greater use of the S-6 visa would ensure judicial review of government practices by forcing the FBI to be more careful about following procedures in recruiting and dealing with informants. Changes to the S-6 visa program that provides material witness visas to informants with intelligence about terrorist activities could formalize the use of immigration rewards for terrorism intelligence in ways that would benefit the FBI and potential informants, and could help reduce the unnecessary and harmful surveillance of Muslim and Middle Eastern communities. In order for the S-6 visa to become a useful tool for the FBI without compromising civil liberties, the S-6 visa must be more readily available, easier to grant, and carefully tailored. The low numbers of S-6 visas used by law enforcement agencies may indicate several potential problems with the program. It may seem paradoxical to suggest that the available number of S-6 visas is too low when congressional reports reveal no S-6 visas were issued between 1994 and 2006. n255 However, these low numbers likely reveal more about the drawbacks of the S-6 visa program than they do about the value of immigration incentives as an intelligence tool. In particular, the inconveniences the S-6 visa application process imposes are barriers to efficient and productive use of the S-6 visa program. If FBI informants number in the thousands, as reports suggest, n256 and the FBI continues to make terrorism prevention a priority, then it seems Congress has failed to offer an appropriate number of S-6 visas for counterterrorism investigations. Whether or not the current number of informants in use is necessary for effective terrorism prevention is outside the scope of this Comment. Nevertheless, the current allotment of fifty S-6 visas per year seems low when compared to the premium the FBI places on terrorism investigation and prevention and the estimated fifteen thousand informants in use. n257 Although not all of these informants work on terrorism-related investigations, it [*272] is reasonable to assume that since terrorism prevention tops the list of FBI priorities, n258 there are more than fifty of them that do. If Congress truly intends the S-6 visa to become a viable instrument in fighting the war on terror, it must give the FBI the appropriate tools?and number of tools?to work with. In determining a useful and appropriate number of S-6 visas to allot, under this proposal Congress would also be forced to determine the number of terrorism informants in use and whether the FBI plans to reward these individuals with S-6 visas for themselves and their families. Furthermore, were a court to find that the FBI cannot bypass the S-6 visa process, and modify the eligibility requirements, the number of S-6 visas would likely rise. In sum, increasing n259 the statutory allotment of S-6 visas could ensure that there are enough S-6 visas available to cover the increased number of terrorism informants employed by the FBI. S-6 visa eligibility requirements also lack the proper tailoring to allow the FBI to make use of them while still guarding against overbroad informant recruitment and use which leads to religious and ethnic profiling. Changing the eligibility standards could better protect informants and produce more reliable intelligence for the FBI. For example, one potential change would do away with requiring informants to also be eligible for the State Department's Rewards for Justice Program established by the Act to Combat International Terrorism. n260 As previously mentioned, the Act gives the Secretary of State sole discretion to monetarily reward individuals who provide information leading to the arrest or conviction of anyone committing or conspiring to commit international terrorism against the United States. n261 Those who frustrate acts of terrorism or dismantle terrorist organizations are also covered by the Act. n262 In short, the Rewards for Justice Program eligibility requirements are quite high. Many informants may have useful terrorism intelligence that may not necessarily lead to an arrest or conviction. Furthermore, both the Attorney General and the Secretary of State approve awards on a discretionary basis not subject to judicial review. n263 Abolishing the requirement that an informant be eligible for a monetary reward under the Rewards for Justice Program would make S-6 visas available to more terrorism informants. While this would not [*273] necessarily curtail the FBI's ethnic and religious profiling, making the visa available to more informants may encourage the FBI to actually use it, thereby creating a more legitimate and transparent path to immigration rewards than that afforded by current government practices. Similarly, the S-6 visa requirement that informants be in danger of retaliation for providing critical and reliable intelligence n264 will likely not be met when immigration benefits are the impetuses for cooperation. Because informants recruited for counterterrorism investigations often have no connection to foreign terrorist organizations, n265 and are tasked with preventing "lone wolf" terrorists, they would likely not face threats from legitimate terrorist organizations if deported to their country of origin. Abolishing the "danger of retaliation" requirement would make the S-6 visa available to more informants and give them more incentive to cooperate with the FBI. It would also give the FBI greater assurance that informants' cooperation is not based on empty promises. In all, removing this requirement, along with the requirement that informants be eligible for the Rewards for Justice Program, would remove some of the barriers to receiving an S-6 visa.

2nc – Solvency / Terrorism Net Benefit

CP yields more trustworthy intelligence and limits ethnic profiling

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

Conclusion Offering S-6 visas to immigrant informants with established connections to terrorist organizations in exchange for their cooperation would be a **legitimate** way for the FBI to reward these informants. Further, informants would be able to rely on the FBI's promise and seek review should the [*276] agreement go awry. Gaining informants' trust and lessening the coercive aspect of recruitment would lead to **more trustworthy intelligence, and thereby enhance national security**. A larger but less committed

group of informants - characterized by the current underused S-6 visa program - does the country little good. Likewise, the indiscriminate and widespread surveillance of Muslims and Middle Easterners damages American communities and reifies assumptions and stereotypes about terrorists' identities and backgrounds. These assumptions may also blind law enforcement to real threats taking place in non-Muslim or non-Middle Eastern communities. Expanding and modifying the use of S-6 visas would turn a small, poorly designed program into a helpful law enforcement tool that better procures **reliable intelligence**. Furthermore, providing more oversight for FBI informant use and restricting practices that contribute to ethnic and religious profiling would improve Muslim and Middle Eastern communities' confidence in and cooperation with the government. This, in turn, would encourage communities to **effectively work with law enforcement** and report suspicious activities. Information offered from within a community is more likely to be accurate, n272 leading to more counterterrorism prosecutions that enhance national security and less waste of law enforcement resources on bogus threats. n273

2nc – Solves Profiling

Counterplan limits religious and ethnic profiling

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

To **limit the religious and ethnic profiling** created through the widespread use of informants, the S-6 visa should also require that informants possess critical and reliable intelligence prior to agreeing to inform. Critical and reliable information is based on preexisting ties to terrorists or terrorist organizations rather than on ethnicity or religion. In the cases at issue in this Comment, the FBI typically recruits informants without a specific surveillance target in mind. In some cases, "FBI handlers have tasked [informants] with infiltrating mosques without a specific target or "predicate' - the term of art for the reason why someone is investigated. They were, [informants] say, directed to surveil law-abiding Americans with no indication of criminal intent." n266 Informants receiving such directions from the FBI would not meet the "critical and reliable information" requirement. Hence, requiring informants to have potentially useful information that is not based purely on ethnicity or religion, but rather on preexisting ties to terrorists or terrorist organizations, would **lessen the indiscriminate surveillance practices of the FBI** without implementing the higher standards imposed by the Rewards for Justice Program. Finally, individuals who agree to provide information in exchange for an S-6 visa should not be forced to waive their right to a deportation hearing. Currently, informants must knowingly waive their rights to any deportation hearings and appeals should deportation proceedings occur. They must also waive their rights to contest their detention pending deportation until lawful [*274] permanent resident status is obtained. n267 Strikingly, informants relinquish all access to judicial review if their applications are mishandled or forgotten and they subsequently face deportation. In the past, informants have alleged that the FBI has mismanaged and reneged on promises, including immigration promises. n268 Allowing judicial review of the S-6 visa process would help lift the veil of secrecy under which the FBI operates. Furthermore, through redaction or other methods that preserve informants' identities, judicial review could be carried out without threatening national security. n269 Another benefit of this requirement would be increased transparency in the way the FBI recruits informants. Wider use of the S-6 visa, as well as greater judicial review, would allow the government to ascertain the number of individuals enlisted by the FBI as counterterrorism informants. This may further help **curb informant mishandling**, a problem that plagues the agency. Because informants would still be required to provide critical and reliable intelligence, the FBI would be required to articulate clear predicates for recruiting individuals, such as a close relationship between an individual and a known member of a foreign terrorist organization. This, in turn, would provide due process and could vindicate informants' rights. The proposed changes to the S-6 visa program would not only force the FBI to adjust its recruitment and use of counterterrorism informants, but would also help the FBI obtain more reliable and valuable intelligence while **rebuilding relationships with Muslim and Middle Eastern communities.** Despite the FBI's limited resources and financial limitations, the FBI and Congress should focus on finding the most accurate and efficient methods of acquiring intelligence. n270 Although the FBI's budget has not suffered greatly in the financial crisis, n271 the agency does have a finite amount of resources to work with. Sending unwilling informants into mosques in search of vulnerable and receptive attendees with no ties to terrorist organizations and with no independent plans to commit terrorist

acts is not efficient. Requiring the FBI to only use a modified version of the S-6 visa would channel the FBI's pursuit of existing leads. In turn, the FBI's presence in mosques would decrease, which would assuage community fears. Lastly, requiring the FBI to seek informants [*275] who possess reliable terrorist intelligence has the potential to reduce the possibility of informant entrapment, which would help repair the FBI's relationship with Muslim and Middle Eastern communities.

2nc – Regulates FBI

Revisions to S-6 visas increase transparency and regulate FBI practices

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

IV. A Possible Solution: The S-6 Visa As it currently exists, the S-6 visa may be a way of controlling the FBI-informant relationship in cases involving promised immigration benefits. The S-6 visa rewards terrorism informants with permanent residency status. However, as discussed infra, in order for the S-6 visa to effectively restrain the FBI and produce useful intelligence, the S-6 visa needs to be modified. The examples discussed supra in Part II illustrate how the **overbroad and indiscriminate use of informants**, particularly those recruited with immigration threats or rewards, harms the acquisition of useful information, fails to identify and protect against legitimate threats, chills speech, and encourages ethnic and religious profiling. Immigration law offers less protection to informants than promises of leniency in criminal matters, thus increasing the potential for informants to produce faulty intelligence. Part III, supra, demonstrates that limitations on FBI dealings with informants are practically nonexistent. This Part proposes a revision to the S-6 visa that would help diminish the harmful effects discussed in Part II by increasing transparency and providing [*268] more procedure for FBI informant recruitment via immigration law. Specifically, providing immigrant informants with better bargaining power and ways to vindicate their agreements through the S-6 visa would alleviate some of the aforementioned harms. Although there have been few reports of the FBI abandoning immigration promises in counterterrorism investigations, n223 the FBI has repeatedly broken alleged immigration and monetary n224 promises made to informants in exchange for participation in drug investigations, n225 human trafficking investigations, n226 and pre-9/11 terrorism prosecutions. n227 Providing a more straightforward and transparent way for the FBI to offer immigration benefits to informants would help decrease informants' potential vulnerability and limit the FBI's power. With modifications, the S-6 visa could help resolve these problems.

2nc – Reforms Informants

Current informants recruited with immigration measures degrade the quality and credibility of counterterrorism efforts

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

While there are no detailed studies on the differences between terrorism informants and traditional informants because the FBI keeps most of this information confidential, n47 broad observations can still be made. First, the FBI's preventative stance on terrorism has significantly increased reliance on informants' intelligence. n48 After 9/11, the FBI drastically expanded the use of [*244] informants n49 from around 1,500 in 1975 n50 to an estimated 15,000 today. n51 **Informants have become the number one tool for preventing terrorist acts**. n52 Second, law enforcement dealings with terrorism informants receive greater deference from courts and other limiting actors because terrorism is considered a national security matter instead of simply a domestic law enforcement matter. n53 The executive branch has greater control over national security and foreign intelligence matters than over domestic law enforcement, an area traditionally reserved to the states. n54 Thus, the post-9/11 characterization of terrorism as a national security matter results in courts affording more leeway to

terrorism investigations than domestic criminal investigations. n55 In other words, the federal government is afforded more secrecy in matters of national security. n56 Hence, because the government can invoke national security concerns to keep information about the informant and handler privileged, there is less regulation governing the recruitment and handling of terrorism informants than traditional criminal informants. n57 [*245] Third, while false and inaccurate intelligence has generally been a problem with informants, n58 recent terrorism investigations raise the question of **whether the alleged terrorist crimes would have occurred without law enforcement instigating the terrorist activities**. n59 Informants in these cases aggressively instigated the defendants' participation in the plot. n60 Recruiting informants who lack ties to terrorist organizations may be at the root of this problem, because they lack predetermined targets known to be involved in terrorist groups. n61 Without these targets, informants under pressure to avoid deportation or other immigration consequences, for example, are **more likely to produce false information**. n62 Further complicating this issue, the government has suffered from credibility problems in terrorism investigations for not always fulfilling the promises made to informants. n63 One FBI informant, a Yemeni citizen named Mohamed Alanssi, set himself on fire in front of the White House after alleging that the FBI had broken numerous promises to him. n64 **Governmental credibility is critical to maintaining a relationship of trust between law enforcement and informants**, and thereby facilitates the gathering of credible intelligence. Due to the vast number of terrorism informants today, the secrecy underlying the investigations, n65 and the potential for false intelligence, the recruitment and use of informants in terrorism investigations present unique problems to the FBI. Because of increased confidentiality surrounding national security issues, the government has the means and incentives to shield the true extent of its recruitment and use of terrorism informants from courts and the public. n66 To increase accountability and lessen the risk of abuse, more oversight over the FBI's dealings with terrorism informants is needed. Notably, some limits on the FBI's use of informants do exist. However, given the secrecy [*246] surrounding national security concerns, whether these limits apply in terrorism investigations remains unclear.

The presence of informants creates an unwarranted distrust and chilling effect - undermines counterterrorism cooperation

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

II. Problems with Recruiting Informants Based on Immigrant Status The FBI's use of immigration rewards and threats to recruit informants undermines civil liberties and cooperation with Muslim, Middle Eastern, and other immigrant communities. n67 In general, the presence of informants in mosques and the surrounding community creates suspicion and distrust of law enforcement efforts, chilling free speech. That is, when community members know that informants are potentially monitoring their speech, community members are less likely to cooperate with law enforcement efforts. Furthermore, by sending informants into Muslim and Middle Eastern communities **without specific targets to surveil**, the FBI encourages ethnic and religious profiling and helps conflate Islam and terrorism in the public eye. Because informants recruited via immigration law possess less bargaining power and face potentially more serious consequences than those recruited via criminal law incentives, there is greater incentive for these informants to supply false information and accuse innocent individuals. Ethnic and religious profiling, combined with the indiscriminate surveillance carried out by informants, can entrap individuals who do not pose a threat. **Entrapment wastes government resources and undermines public confidence** in the justice system and law enforcement. Although the FBI's problematic surveillance of Muslim and Middle Eastern communities stems from the use of all types of informants and not merely those recruited with immigration promises, a modification to the use of immigration law in rewarding or coercing terrorism informants would provide a step toward producing more useful intelligence and reducing the risk of harm to innocent individuals. A. Mosque Surveillance Chills Free Speech In 2002, Attorney General John Ashcroft updated the Attorney General's FBI Guidelines, n68 and did away with restrictions on entering mosques and other places of worship. n69 The Guidelines read in pertinent part: "For the purpose of [*247] detecting or preventing terrorist activities, the FBI is authorized to visit any place and attend any event that is open to the public, on the same terms and conditions as members of the public generally." n70 Thus, FBI agents can now enter any mosque

or attend any religious gathering **without probable cause.** Under the previous Guidelines, issued in 1979 by Attorney General Benjamin Civiletti, an agent could only conduct an investigation where "the facts or circumstances reasonably indicate that two or more persons are engaged in an enterprise for the purpose of furthering the political or social goals ... through activities that involve force or violence and a violation of the criminal laws of the United States." n71

The presence of current immigrant informants chills freedom of speech

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

The very knowledge of potential surveillance may caution people against discussing their political and religious viewpoints for fear of being targeted by informants like Monteilh. Consequently, mosque attendance falls n85 and community cohesion suffers, **thwarting the First Amendment's protection of free expression**. Even those not harboring extreme viewpoints may be [*249] dissuaded from political speech for fear of misinterpretation. For example, after revelations of potential FBI surveillance surfaced at the Islamic Center of Irvine, congregant Omar Turbi attested, "It gives you a little bit of apprehension about who you trust ... . Makes you think twice about what you say; what if people misunderstand you?" n86 Similarly, the executive director of the Council on American-Islamic Relations in Anaheim stated, "Some average Muslims interested only in praying are avoiding mosques for fear of somehow being monitored or profiled ... . Everybody is afraid, and it is leading to an infringement of the free practice of our religion." n87 Although some states like Indiana, Pennsylvania, and Oregon have enacted laws prohibiting the surveillance of religious sites without reasonable suspicion, n88 it should not be necessary to rely on state laws to protect the integrity and values of the First Amendment.

AT: CP Not Sufficient

Counterplan creates a more transparent system, increases quality of intelligence, and regulates the FBI's surveilling power

Stabile 14 – J.D., University of California, Berkeley, School of Law, 2013 (February 2014, Emily, California Law Review, "Recruiting Terrorism Informants: The Problems with Immigration Incentives and the S-6 Visa," 102 Calif. L. Rev. 235, Lexis, //11)

Changing the S-6 visa program and focusing on the FBI's use of immigration incentives to recruit informants may seem too narrow to appreciably influence national security and community relations. However, the point of this Comment is a narrow one: to showcase one problematic aspect in the way the FBI handles human intelligence. The recommendations here would not fully solve the problems of privacy violations, ethnic and religious profiling, and informant misuse. The use of immigration law and status to leverage informants is not the only way that the FBI recruits informants, and the S-6 visa program would likely remain relatively small even if expanded. However, as previously explained, the proposed changes to the S-6 visa would generate a **more transparent system** and **more fruitful intelligence**, and would help **ensure the FBI operates within the scope of its power**. Individuals pressured to provide intelligence information would have a legitimate chance to receive an S-6 visa, and the FBI would have a greater incentive to stop its overtly coercive recruitment tactics such as deportation threats. Due to the popularity and longstanding use of informants, it is unrealistic to think that the FBI will stop using immigration law as a way to leverage cooperation. In the past, informants have aided national security by providing useful intelligence, and so they are highly valued as a source of intelligence. Hence, **no matter how narrow in scope** the proposed changes are, changes to the S-6 visa would greatly benefit the FBI, informants, and Muslim and Middle Eastern communities. Better intelligence may mean the difference between wasting government resources on empty threats and preventing the loss of life in future terrorist attacks. While narrow, the proposed changes to the S-6 visa provide a **promising way** for expending law enforcement resources where needed, preventing manipulative informant recruitment tactics, and adding transparency to informant dealings with the FBI. Congress has the power

to increase the allotment of S-6 visas and to explicitly restrict the FBI from promising immigration benefits outside of this program. The FBI should be forced to use the S-6 visa program when using immigration status as an incentive. The proposed changes would allow the FBI to use the S-6 visa as an incentive, while inhibiting its use of unnecessarily forceful tactics that lead to faulty intelligence, entrapment, and religious and ethnic profiling.

Negotiated Agreements CP

1nc Negotiated Agreement CP (Long Version)

CP Text: Local Law Enforcement within the United States should engage in informal negotiations with Muslim communities with regards to the use of informants

The CP solves the case and avoids politics / courts disads

Harris, 10 --- Professor of Law, University of Pittsburgh School of Law (David, New York University Review of Law & Social Change, "LAW ENFORCEMENT AND INTELLIGENCE GATHERING IN MUSLIM AND IMMIGRANT COMMUNITIES AFTER 9/11," 34 N.Y.U. Rev. L. & Soc. Change 123, Lexis)//Jmoney

B. An Attainable Alternative: The Negotiated Approach

If change with respect to the use of informants seems unlikely to happen via either judicial or legislative action, there is still another way in which change in how law enforcement uses informants in mosques might yet occur. This solution depends not on raw political power or legal reasoning but on something else: the recognition of how the interests of law enforcement and the community overlap. n234 Viewed correctly, these [*176] mutual interests can serve as the springboard for the negotiation of a set of agreed-upon local practices for using informants. Such negotiation could get law enforcement what it most needs: good (or at least workable) relations with Muslim communities, a continued flow of information from these same communities, and an ability to use informants when a real need exists for them. This process could also get Muslim communities at least some of what they need: a formal recognition of their opposition to the use of informants, as well as protection from some of the most egregious (as they may see it) uses of informants against them. Law enforcement would give up the right to use informants with total freedom, and the community would find itself protected, to a degree, from the possibility that police would place informants into mosques or other religious settings without a solid, fact-based reason. n235 The path would be difficult, fraught with obstacles, and, in certain respects, downright unsatisfactory. But it represents the most promising - and perhaps the only - way forward for both law enforcement and Muslim communities.

1. What the Negotiated Approach Is and What It Might Strive to Attain

a) Description of the Process

What might such a negotiated approach look like? To start, **such arrangements would be both local and informal.** Any given mosque or Muslim organization would work toward agreement on the use of informants with its local FBI field office, local agents of the Department of Homeland Security, and the local police department (if the local [*177] department involves itself in this type of informant-based investigation). n236 A negotiation between locals on both sides of the issue stands the best chance of succeeding, because those involved in the negotiations may know each other from efforts already made to build bridges and connections. The negotiations themselves can serve as trust-building measures, enhancing and strengthening relationships that already exist, or helping to create new relationships. These efforts would be informal in the sense that they would strive not for the imposition of a strict set of legal standards - for example, a free-standing system for procuring "informant warrants" - but rather for a set of

agreed-upon practices that the parties would then follow. If one of the **parties came to feel that the agreed-upon practices no longer work, the parties could, together, agree to adjust them**. Best and most importantly**, these practices could be tailored to fit local facts and circumstances** - the specific realities that both the community and law enforcement agencies face daily.

Why would any law enforcement agency agree to negotiate away any of its power to use informants as part of an arrangement with precisely the people whom it may want to spy on? The fact that some police agencies already use internal guidelines to - or at least attempt to - limit some of the ways in which they use informants, highlights the idea that limiting agency power to something less than what the Fourth Amendment would allow can in fact represent the best available practice. n237 Given that the FBI, NYPD, and other law enforcement groups want something from the Muslim communities - continued and increased cooperation, especially intelligence on suspicious activities - and given that use of informants in an unregulated fashion puts those very benefits in jeopardy by undermining connections with the community, law enforcement may prove more willing than one might initially assume to engage in such a negotiation.

b) What Might Negotiations Strive to Attain?

What exactly might the Muslim community and the police try to agree upon? Both the interests of the parties and the contours of different types of anti-terror investigations suggest some initial goals.

[*178]

i) Passive Versus Active Informants and the Standards for Using Them

First, we must examine the methods by which, and the circumstances within which, law enforcement might use informants. For the sake of simplicity, let us break the methods of using informants - that is, the types of informants - into two categories: passive informants and active informants. In passive informant activity, the informant attends or participates in any activity - goes to a political rally, takes part in a worship service, listens to a speech or a sermon, or the like - to the same extent that any private citizen might. The passive informant observes and reports to the police what she sees and hears. In other words, the passive informant acts as a walking camera and audio recorder, n238 absorbing everything around her and reporting what she sees. The passive informant cannot target any particular individual, and she cannot do anything more than observe. She might interact with other individuals who are present at the scene of the observation, but only in ways that prove necessary to deflect suspicion.

An active informant, on the other hand, would target a particular person or specific group for observation and interaction. She would seek to actively connect with these individuals in an effort to gather evidence of wrongdoing, plotting, or other behavior. An active informant might "work" a targeted individual closely, perhaps befriending the target and her family, as long as the informant did not in any way press the target toward illegal conduct. n239

[*179] The critical distinction between passive and active informants could serve as the basis for negotiating the circumstances under which law enforcement could use informants. The parties could pledge to have informants work only in a strictly passive way, unless and until some proof of activity indicating possible terrorist or criminal behavior emerged during passive observation -

exactly as the FBI's rules used to dictate under the Levi Guidelines. n240 The idea would be an informant who would blend in completely and act no differently from any other person present.

Given that we cannot exclude the possibility that religious groups might (knowingly or unknowingly) harbor small groups or individuals bent on terrorism, law enforcement should retain the ability to use informants in these settings, but only passively, as a way to check leads or find out if any activity exists which deserves some greater degree of attention. A negotiated agreement would allow law enforcement to have the presence it sometimes needs, and to have it without any proof of wrongdoing; in other words, they could use passive informants at their discretion, as they may now under existing law. At the same time, law enforcement would agree to exercise this power only passively, so as to minimize intrusion and interference. This arrangement seems like a good idea from both the point of view of law enforcementsuccess, because it allows police and security agencies to look and listen for any indicators of real trouble, and from the point of view of the communities, because they would have assurance that the worship and fellowship that form the core of activities at religious institutions would not encounter government interference or disruption, unless absolutely necessary. n241

[*180] Something more would be required for law enforcement to make use of active informants under a negotiated agreement. In particular, the use of active informants would require some evidence. Law enforcement could use active informants only if some reasonable, fact-based suspicion existed to link a particular suspect or suspects to engagement in terrorist activity or other criminal conduct. That is, the police would agree not to use an active informant just to make sure nothing is happening. Rather, the use of active informants would require some minimal evidence - **something more than a hunch, feeling, or intuition -** indicating that illegal activity has been, is, or will be taking place. Police officers involved in any investigation should have little difficulty understanding this reasonable, fact-based suspicion rule because it comes from Terry v. Ohio, under which courts have used the same standard to test police officers' decisions to stop and frisk suspects for almost forty years. n242 A system regulating informant use according to whether the facts would support a passive or active informant operation would allow the government to use relatively unintrusive passive informants without seeking permission; more intrusive (i.e., active) informant activity would require fact-based suspicion that terrorist or other criminal activity might be afoot. This bifurcation would give the government the flexibility it needs to gather information or investigate leads, but it would also require some evidence to conduct active informant investigations and limit these investigations to situations potentially posing danger.

[*181]

ii) The "Entrapment" Problem: No Encouragement

Second, communities and police departments could use negotiated agreements to address the issue of entrapment. As earlier discussion makes clear, neither the entrapment defense nor its cousin, the claim of outrageous government conduct, does much to safeguard targets of police informants against government or informant overreaching. n243 At worst, entrapment actually permits the government to create crimes as long as the defendant has the appropriate "predispostion." n244

The lack of protection these defenses provide targeted individuals in practice begins to rankle when viewed with an eye more lay than legal. For example, in Hamid Hayat's case in Lodi,

California, the jury convicted Hayat of providing material support or resources to terrorists, even though an informant deliberately and purposely pushed and goaded Hayat to attend a terrorist training camp. n245 Even the U.S. Attorney whose office charged and convicted Hayat stated that he wished that "other things had occurred" during the course of conversations between the informant and Hayat. n246

Cases like these may not constitute entrapment in the legal sense, but they leave the impression that law enforcement may not play fair in pursuit of a conviction. Put another way, just because the police can use informants in this aggressive way without running afoul of entrapment law, does not mean that law enforcement should do just that. All Americans want law enforcement to apprehend dangerous terrorists and halt their plans. However, the government's use of overly aggressive and possibly unfair tactics to pursue individuals who seem to pose no real threat to our national security undermines the public's confidence in anti-terror work. Whether right or wrong, these perceptions that the government has not played fair do damage to law enforcement's ability to obtain cooperation from the public.

Thus, as an element of their negotiations, police and Muslim communities could agree that **informants would not act in any way to encourage or shape the behavior of those under surveillance, either through incitement or agitation.** In some instances, it might be difficult to [*182] tell the difference between encouragement and providing an opportunity for criminal conduct, but an agreed-upon rule against pushing or goading targets would, in most cases, not prove difficult to apply. For example, a rule of this nature would not allow the type of behavior reflected in the testimony in the Hayat case, in which the informant threatened the target and belittled him for failing to go to a terrorist camp. n247

iii) Use of Informants as a Last (or at Least Latter) Option

When it becomes known or suspected, the placement of informants in religious institutions like mosques does considerable damage. The presence of informants, either real or imagined, can undermine religious custom and practices, undercut the ability of believers to trust each other, and pull apart the social fabric that binds co-religionists together. n248 Given the explicit First Amendment protections provided for the free exercise of religion in the United States n249 and the chilling effect that even the possibility of informant use may have, the use of informants in mosques and other religious settings ought not to occur regularly.

As part of an agreement, communities and local police or the FBI might agree that, because the insertion of informants into religious institutions carries with it significant First Amendment implications and the potential for damage both to individuals and to the whole religious community spied on, **the use of informants in religious settings will not be a routine practice**. The agreements can establish that law enforcement can use informants in these settings only when other, less intrusive methods either have not worked or could not work, and where use of an informant will most likely produce evidence. Both law enforcement and Muslim communities gain if the use of informants becomes a tactic of last resort (or nearly so) and not a method employed regularly. For many Muslim communities, the use of informants only when other methods will not work will reassure them that they need not fear the presence of informants at every point and that the government will exercise some restraint in using this tactic. It should also maximize the chances that informants will catch those who pose a real danger and minimize the chances that informants [*183] will snare only those most susceptible to persuasion.

1nc Negotiated Agreement CP (Short Version)

CP Text: Local Law Enforcement within the United States should engage in informal negotiations with Muslim communities with regards to the use of informants

The CP solves the aff and avoids link to politics

Harris, 10 --- Professor of Law, University of Pittsburgh School of Law (David, New York University Review of Law & Social Change, "LAW ENFORCEMENT AND INTELLIGENCE GATHERING IN MUSLIM AND IMMIGRANT COMMUNITIES AFTER 9/11," 34 N.Y.U. Rev. L. & Soc. Change 123, Lexis)//Jmoney

The possibility of terrorists on American soil, particularly the prospect of homegrown terrorists, means that we should expect law enforcement to use every legal tool at its disposal to gather intelligence necessary to thwart attacks. Given the law as it now stands, these tools include the almost complete discretion for police to plant and use informants. Thus, we [*190] should expect to see informants do almost anything to succeed in producing cases against targets.

Every person living in this country, whether she is an American citizen or not, has a strong interest in securing the nation against terrorist attacks. However, **just because the law says that police can use informants at almost any time, in any setting, does not mean that they should do so**. And the particular contours of the struggle in which we now find ourselves illuminates this can/should distinction as few others have. As the law enforcement officials and intelligence officers in charge of our safety and security know better than almost anyone, our ability to track potential terrorists and stop them before they act depends wholly on the availability of intelligence. Because the best, if not the only, source of crucial intelligence on potential extremists with Islamic backgrounds will continue to be American Muslim communities, **we must have solid, well-grounded relationships with these communities, both native and foreign-born.**

These relationships are not just a matter of public relations, political correctness, or appeasement. Rather, these communities must feel that they can regard law enforcement as trusted partners, because such relationships create the avenues and opportunities for the passing of critical information from the communities on the ground to law enforcement. The widespread use of informants in Muslim institutions, particularly mosques, will corrode these important relationships by sowing distrust. By causing Muslims to think that the FBI or any other police agency regards them not as trusted partners but as potential suspects, fear displaces trust. Moreover, fear will cause members of the Muslim community to become less likely to come forward with information - just as the members of any community would, given this type of scrutiny. On the one hand, we simply cannot afford for this to happen, but, on the other hand, we know that there will be cases - indeed, from the government's point of view, there already have been cases - in which the use of informants can play a crucial role.

Given these tensions, as well as the mutual interests of law enforcement and Muslim communities in the United States, the situation presents an **ideal context in which to try regulating the government's use of informants through local, negotiated agreements on acceptable practices**. In at least the four ways identified here, law enforcement and Muslim communities

could agree to limit the use of informants, without either ruling out their use or allowing their unrestricted use. Both sides would benefit. While the approach proposed here would certainly face substantial obstacles, it represents a chance to recalibrate an important aspect of the government's power to investigate, while at the same time preserving the sanctity of the community's institutions of worship to the greatest extent possible.

2nc Solvency

Mutual Education solves-Muslims can educate local police on culture while the police can education Muslim communities about suspicious activities and how to identify plots effectively

Harris, 10 --- Professor of Law, University of Pittsburgh School of Law (David, New York University Review of Law & Social Change, "LAW ENFORCEMENT AND INTELLIGENCE GATHERING IN MUSLIM AND IMMIGRANT COMMUNITIES AFTER 9/11," 34 N.Y.U. Rev. L. & Soc. Change 123, Lexis)

iv) Education Across the Divide
Fourth, the parties might agree on a process of mutual education. For its part, law enforcement might educate Muslim groups and congregations so that they could recognize actual suspicious behavior, as opposed to simply relying on hunches about people who have unusual opinions. It has become common for police departments and the FBI to appeal to Muslim communities to report anything suspicious, much as FBI Director Mueller did in the speech quoted at the beginning of this article. n250 While there is no reason to doubt the sincerity of Mueller's exhortation, it was also quite general. It is all very well to ask community members to report their suspicions, and even such a general request may produce leads for law enforcement. It is true that not all leads may actually help law enforcement; this is true even when all the leads in an investigation originate from law enforcement professionals. It seems likely that an untrained member of the public, if asked to provide information to the police about something as unusual as possible terrorist activity, would, in good faith, inevitably produce mostly (if not wholly) useless leads, which officers and agents must then spend their valuable time pursuing. Without some concrete indication of what "suspicious action" means, most lay people would stand little chance of spotting the real thing.

Training communities regarding the types of information that law enforcement agencies want is one way to improve the amount of useful information law enforcement receives. Moreover, the FBI, the Department of Homeland Security, and even local police are in a good position to provide such training. For their part, Muslim communities could educate law enforcement about social and religious customs, particularly habits of language. Considerable amounts of such cultural and religious training regarding the customs and mores of Islam, by Muslims for police and FBI agents, already takes place. n251 Many police chiefs and law enforcement administrators at all levels have expressed enthusiastic support for these efforts and stated that this type of training has greatly enhanced their agencies' capabilities, as well as relationships with the Muslim communities. n252

Language is a special area of concern that these trainings should [*184] specifically address. Arabic speakers may sometimes express opinions in Arabic in stronger, more vehement ways than one might hear in English; these kinds of comments can hit Western ears as angry, radical, or extremist - even when speakers intend nothing of the sort. n253 While it is true that law enforcement must react vigorously to any words expressing an intention to take some illegal or dangerous action, they must also exercise caution, because linguistic, stylistic, and idiomatic differences can give a listener a misleading impression.

A couple of recent examples help illustrate just how important linguistic understanding - or misunderstanding - can be. In Hamid Hayat's trial for, among other things, providing material support for a transnational terrorist act, prosecutors needed to prove that Hayat intended to commit terrorism. n254 To do so, they offered into evidence what became known as "the throat note," n255 a fragment of paper with Arabic writing on it that police had found in Hayat's wallet when they arrested him. n256 The prosecution first translated the words as "Lord, let us be at their throats, and we ask you to give us refuge from their evil." n257 After the defense protested, the prosecution amended the translation to "Oh Allah, we place you at their throats, and we seek refuge in you from their evil." n258 According to authoritative sources, the defense had been right to object because the passage contained a traditional prayer "reported to have been said by the Prophet [Mohammad] when he feared harm from a group of people." n259 Still, the prosecution told the jury that the note proved that Hayat had the "requisite jihadist intent." n260 In the end, Hayat's intent became the central question in jury deliberations, and the note played a crucial role in persuading the jury to convict him. n261

[*185] In the case of accused terrorist Jose Padilla, similar questions about language arose. The government's case against Padilla and two co-defendants relied heavily on hours of wiretapped phone calls, and a government witness testified that Padilla's co-defendants had used "code words" to speak about jihad. n262 An expert witness, an Arabic translator, disagreed; he said that the men were simply speaking indirectly - something common in the Arab world - and not in code. n263

Police need education so that they can tell the difference between an opinion - even a strongly expressed, non-mainstream, anti-American one - and clues to acts of terrorism. Having such opinions does not necessarily make people dangerous, and American citizens (if not all people living in America) have a right to hold and express such views. A person who says she approves of the actions of Osama Bin Laden, or who expresses her wish that the President of the United States were dead, or who says that America deserved what it got on 9/11, may strike us as intemperate, wrongheaded, or repugnant. But those statements make the person only a holder of repellent and terribly misinformed opinions, not a terrorist. Expressing opinions, even objectionable ones, remains an American right; doing so in a fashion that seems harsh or even aggressive has to do with style and custom of speech, and it does not necessarily make it likely that these opinions will ripen into action.

The CP allows law enforcement and Muslim communities to tailor policies to the local needs

Harris, 10 --- Professor of Law, University of Pittsburgh School of Law (David, New York University Review of Law & Social Change, “LAW ENFORCEMENT AND INTELLIGENCE GATHERING IN MUSLIM AND IMMIGRANT COMMUNITIES AFTER 9/11,” 34 N.Y.U. Rev. L. & Soc. Change 123, Lexis)//Jmoney

These four suggestions - distinguishing between active and passive informant activity and regulating accordingly, prohibiting encouragement, using informants only as a last resort, and instituting mutual education - just scratch the surface of what police agencies and the members of American Muslim communities could agree to. Given the local focus of the negotiations, many concerns particular to the jurisdiction might also surface. These focused elements would constitute a major advantage for this process, because **the better tailored the process is to its own context, the better its chances for success.** The local negotiation of a set of practices acceptable to both sides in the debate presents a workable alternative, and one that takes advantage of mutually reinforcing needs of law enforcement and the Muslim communities in our country, as well as the common need to protect ourselves from terrorism.

The negotiation process works-empirics

Harris, 10 --- Professor of Law, University of Pittsburgh School of Law (David, New York University Review of Law & Social Change, "LAW ENFORCEMENT AND INTELLIGENCE GATHERING IN MUSLIM AND IMMIGRANT COMMUNITIES AFTER 9/11," 34 N.Y.U. Rev. L. & Soc. Change 123, Lexis)//Jmoney

Given these obstacles, the outlook for local control of policy on informant use is decidedly mixed, but it is not hopeless. In the recent past, locally-generated ideas have proven very helpful to the FBI in some sensitive anti-terrorism efforts. For example, after the Department of Justice ordered the FBI to conduct 5000 "voluntary" interviews with young Arab and Muslim men not suspected of terrorism in late 2001, n271 many in law enforcement expressed doubts about this plan. n272 More important, many thought that the FBI would endanger the budding relationships it had built with the Arab and Muslim communities after 9/11. n273 **When FBI agents and others in Detroit came up with an alternative plan - sending letters to potential interviewees** - the Department of Justice showed flexibility and allowed them to try this.n274 **The alternative plan was unmistakably successful;** the Detroit field office had the highest rate of successfully completed interviews of any office in the nation. n275 Thus, it is certainly possible that the FBI and its governmental parent could negotiate localized solutions to intelligence gathering.

International Language CP

1nc Reframe Terrorism Language CP

Text: the United States Federal Government should reframe terrorism as a violation of international law.

The counterplan distances terrorism from religion and garners broader support for counterterrorism efforts

Corman, Trethewey, and Goodall 08 – *Corman: Professor and director of the Consortium for Strategic Communication in the Hugh Downs School of Human Communication at Arizona State University, consultant to the Department of Defense and Department of State on issues of strategic communication; *Trethewey: Associate Professor and Associate Director in the Hugh Downs School of Human Communication at Arizona State University, co-author of *Organizational Communication: Balancing Creativity and Constraing, 5th ed.*; *Goodall: Professor and Director of the Hugh Downs School of Communication at Arizona State University, serves as a U.S. Department of State International Speaker on countering ideological support for countering terrorism and improving public diplomacy (Steven R. Trethewey, Angela Trethewey, and H.L. Goodall Jr., "Weapons of Mass Persuasion: Strategic Communication to Combat Violent Extremism", Peter Lang Publishers, Frontiers in Political Communication Vol. 15, p.135-138, //11)

Policy Recommendations We propose that the United States Federal Government should adopt a new vocabulary in reference to what is now called the Global War on Terrorism. In discussing the debate over the language of war, Walid Phares calls for a clear alternative to present language, and alternative that presents the conflict as both ideological and global. We answer that call by providing a framework that **confers international legitimacy to counterterrorism efforts** as well as belittling the motivations for violent acts by groups such as al-Qaeda. Phares warns that to re-label the war would to embolden terrorist groups by not recognizing that they are "one ideology, a focused identity, [with] a global strategy," but we do not agree that any re-labeling would have this effect. On the contrary re-labeling it as a different kind of threat – as an organized criminal enterprise rather than a military struggle – can help **resist terrorists' religious legitimation** efforts, better **mobilize domestic Muslim support**, and could revitalize non-Muslim domestic attitudes at a time when support for the war frame is waning. The focus on criminal activity is a natural one given the strong connection between criminal activity and terrorism. Focusing on terrorism as a violation of international law accomplishes several purposes. Framing Terrorism as a Violation of International Law Makes it Possible to Communicate Success Americans understand that crime cannot be eliminated but that it can be **contained**. This means that when the coalition undertakes a successful operation it will be judged as to whether or not it decreased criminal activity, not whether or not it was a "total victory." Having attainable goals means that Americans are more likely to sustain support for the effort. Framing Terrorism as a Violation of International Law Increases Awareness of the Problem as a Global One This language reframes the discussion of terrorism against the backdrop of international standards. Hence, when the United States takes action against terrorism, we take action on behalf of the laws of the international community. This framing increases the opportunities for cooperation with other international actors who seek a more just world based on rule of law. Framing Terrorism as a Violation of International Means that Terrorists are Reduced to the Level of Criminals Positioning the conflict as a "war" confers a certain amount of legitimacy on terrorists, as a force defending a large collective interest. Reducing terrorists to criminals who seek money and power detracts from the allure of terrorism to possible recruits. **Framing Terrorism as a Violation of International Law Removes Any Connection of the Language to Religion**

Referring to terrorists as criminals rather than "jihadis" completely separates them from the Muslim faith. Distancing the conflicts from religion means that we are more likely to win moderate Muslim cooperation because we will implicitly acknowledge the disconnection between terrorist activity and Islam. Conversely, the current policy runs the constant risk of conflating "terrorist" with "Muslim." We cannot sustain this policy if we expect to win friends within the Muslim community. The new language of terrorism will require development, refinement, and contributions from a variety of sources. However, within the same framework we utilized in the analysis of presidential speeches, we have devised the basis for a vocabulary of terrorism that distinguishes the current situation from traditional warfare (Table 2). From our newly established vocabulary, we have rewritten one of Bush's speeches from his campaign during the anniversary of 9/11 (see appendix). In our modification, we have left much of the President's words intact, but have changed the instances where the traditional war frame appears. We are confident that readers who give this a fair reading will find that the language equally as tough, determined, and unfavorable to the terrorists. Conclusion With increasing doubts toward the Bush administration's policies in the War on Terror, new frameworks and vocabularies are necessary to revitalize public support. The War on Terror provides a new type of battle on an ambiguous front where victory will not be realized through peace treaties and flags atop hills. We have offered a new vocabulary, that of international crime, to reframe the War on Terror. This strategic new vocabulary paints terrorism as a persistent international problem and undermines the religious justification commonly asserted by Al Qaeda and other extremists. Removing the religious connotation of the War on Terror will **help mobilize moderate Muslims in support of efforts that reduce international crime**. Finally, reframing the War on Terror as an international crime problem allows international bodies to enforce existing law systems which already govern criminal acts.

2nc Solvency

The CP's change in language solves – helps build support domestically and globally to solve terrorism

Corman, Trethewey, and Goodall 08 – *Corman: Professor and director of the Consortium for Strategic Communication in the Hugh Downs School of Human Communication at Arizona State University, consultant to the Department of Defense and Department of State on issues of strategic communication; *Trethewey: Associate Professor and Associate Director in the Hugh Downs School of Human Communication at Arizona State University, co-author of *Organizational Communication: Balancing Creativity and Constraing, 5th ed.*; *Goodall: Professor and Director of the Hugh Downs School of Communication at Arizona State University, serves as a U.S. Department of State International Speaker on countering ideological support for countering terrorism and improving public diplomacy (Steven R. Trethewey, Angela Trethewey, and H.L. Goodall Jr., "Weapons of Mass Persuasion: Strategic Communication to Combat Violent Extremism", Peter Lang Publishers, Frontiers in Political Communication Vol. 15, p.129-130, //11)

As the fight against terrorism continues, language plays a pivotal role. In current policies, the language of war continues to dominate. Based on analysis of President Bush's September 11th anniversary campaign speeches, we propose that war metaphors and language, such as victory, enemies, and allies, occlude the reality of counterterrorism efforts. It is difficult to pinpoint victory in this conflict, a requisite of the vocabulary of war familiar to lay audiences.

We call for a new language to illustrate the nature of our present conflict, a new vocabulary of international crime as an effective replacement for discussions of counterterrorism. There are four main benefits of this new language. First, domestic audiences are accustomed to the persistence of crime; it is **a manageable social ill**. Second, the labeling of terrorist organizations as "criminal" decreases the perceived legitimacy of their acts by potential recruits. Third, international crime is **a global**

problem, not a war perpetrated by the United States. Global problems require global solutions, and such a language will help **garner support from the global community**. Finally, crime language separates the religious connotation associated with labels of terrorism or "jihadism." This **allows moderate Muslims to reframe their faith away from extremist and violent acts**.

State Legislatures CP

1nc State Legislation CP

Text: The fifty states and all relevant United States' territories should pass legislation that requires law enforcement to:

-differentiate between observational comparison and indiscriminate data collection

-abide by data integrity, access, privacy restrictions, and establish and publicly announce a formalized policy on data retention

-limit the retention, identification, access, and sharing of data

-have a legitimate law enforcement purpose in identifying the person associated with any data retained by community surveillance technologies

-establish a formal internal policy documenting each time a police employee accesses community surveillance databases, departments shall not allow anyone except authorized and trained police employees to access and search these databases

-share information contained in community surveillance databases with other government agencies, as long as all participating departments honor the minimum requirements established in this statute.

-all evidence acquired by law enforcement in violation of this statute shall be inadmissible in state criminal courts

-the Attorney General of this state shall have a civil right of action against any police department that engages in a pattern or practice of violating this statute

-the Attorney General of this state shall have the authority to periodically audit departmental policies to ensure compliance with this statute. The Attorney General will publicly post the results of this audit to bring attention to noncompliant departments

Counterplan solves the case

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)//Mnush

[*51] C. Model Statute to Regulate Police Surveillance The presently available statutes and model guidelines suggest a key set of concerns that any future state legislative body must consider. They demonstrate five common regulatory needs: data retention, identification, access, sharing, and training. The model statutory language I offer includes a possible solution for each of these areas. In doing so, I also try to honor the foundational principles for the regulation of police surveillance identified above. The model statute provides a clear standard that law enforcement agencies can implement. It attempts to give departments some latitude to alter their own policies to meet local needs. But the law also includes specific and detailed regulations in hopes of preventing organizational mediation. The proposed statute also includes multiple enforcement mechanisms to ensure compliance. The model excludes from criminal court any evidence obtained in violation of this statute, thus removing the incentive for police departments to violate the policy. Of

course, evidentiary exclusion is "limited as a means for promoting institutional change" because it is filled with exceptions and is narrower than the scope of police misconduct. n330 Thus, I propose two additional enforcement mechanisms. First, the model statute gives the state attorney general authority to initiate litigation against departments that fail to comply with these mandates. Other statutes regulating police misconduct, like 42 U.S.C. § 14141, have used a similar mechanism. n331 Second, the model mandates periodic state audits of departmental policies and data records to ensure compliance. Overall, the proposed law broadly addresses many of the problems implicit in the digitally efficient state and establishes a number of enforcement mechanisms to ensure organizational compliance. 1. Applicability, Definitions, and Scope The first part of the proposed statute defines the scope of the legislation, including the technologies regulated by the statute. In this section of the statute, I tried to reflect the foundational principle of regulating police surveillance technologies by creating a tightly defined scope of presently available technologies that fall under the statute's regulatory purview. This might make the statute under-inclusive at some point in [*52] the future, but works to the benefit of avoiding over-inclusivity that can stifle the development of new technologies. n332 § 1 Applicability, Definitions, and Scope This statute applies to all community surveillance technologies used by law enforcement that collect personally identifiable, locational data. "Community surveillance technology" means any device intended to observe, compare, record, or ascertain information about individuals in public through the recording of personally identifiable information. This includes, but is not limited to, surveillance collected with automatic license plate readers, surveillance cameras, and surveillance cameras with biometric recognition. This scope provision specifically addresses community surveillance devices, such as ALPR and surveillance cameras, as distinguished from traditional surveillance tools like GPS devices and wiretaps. As I have previously argued, "networked community surveillance technologies like ALPR surveil an entire community as opposed to a specific individual." n333 While the use of a GPS device to monitor the movements of one criminal suspect over a long period of time might be constitutionally problematic, such a practice raises an entirely different set of public policy questions. At minimum, the kind of tracking at issue in Jones was narrowly tailored to only affect one criminal suspect. The digitally efficient investigative state uses community surveillance technologies like ALPR and surveillance cameras that can potentially track the movements of all individuals within an entire community regardless of whether there is any suspicion of criminal wrongdoing. Hence, this statute is carefully limited to a small subset of technologies that pose similar risks and thus require similar regulation. 2. Differential Treatment of Observational Comparison and Indiscriminate Data Collection Next, I propose that state laws should differentiate between observational comparison and indiscriminate data collection. n334 The model law permits the use of community [*53] surveillance technologies for observational comparison. When a department uses these technologies for observational comparison, the device is "an incredibly efficient law enforcement tool that is reasonably tailored to only flag the suspicious." n335 § 2 Observational Comparison and Indiscriminate Data Collection Police departments may use community surveillance technologies as needed for observational comparison. But police departments using community surveillance technologies for indiscriminate data retention must abide by data integrity, access, and privacy restrictions outlined in § 3 through § 6. "Observational comparison" is defined as the retention of locational or identifying data after an instantaneous cross-reference with a law enforcement database reveals reasonable suspicion of criminal wrongdoing. "Indiscriminate data collection" is defined as the retention of locational or identifying data without any suspicion of criminal wrongdoing. This distinction strikes a reasonable balance by facilitating law enforcement efficiency in identifying lawbreakers, but also avoiding the unlimited and unregulated collection of data. When applied to ALPR, this statute would mean that police could use that technology to flag passing license plates that match lists of stolen cars or active warrants. But they could not retain locational data on license plates that do not raise any concerns of criminal activity without abiding by the regulations that follow. 3. Data Integrity, Access, and Privacy I recommend that the indiscriminate collection of data be subject to four separate requirements that limit the retention, identification, access, and sharing of data. The statutory language below was designed to give law enforcement some leeway to create workable internal policies that meet organizational and community needs. As a result, the policy simply serves as a minimum floor of regulation, above which departments could adopt their own regulations. [*54] § 3 Data Retention Police departments using community surveillance technologies for indiscriminate data collection must establish and publicly announce a formalized policy on data retention. Departments may not retain and store data for more than one calendar year unless the data is connected to a specific and ongoing criminal investigation. The one-year retention period is the most significant regulation this statute would place on indiscriminate data collection. Even the IACP acknowledges that the "indefinite retention of law enforcement information makes a vast amount of data available for potential misuse or accidental disclosure." n336 Without limits on retention, police surveillance can develop into "a form of undesirable social control" that can actually "prevent people from engaging in activities that further their own self-development, and inhibit individuals from associating with others, which is sometimes critical for the promotion of free expression." n337 At the same time, law enforcement often claim that information that seems irrelevant today may someday have significance to a future investigation. n338 Without regulation, there is a cogent argument to be made that police would have every incentive to keep as much data as possible. n339 Thus, I recommend that data retention be capped at one year. This would prevent the potential harms of the digitally efficient investigative state that come from long-term data aggregation. The one-year time window represents a reasonable compromise. The median law enforcement department today retains data for around six months or less. n340 But before accepting this retention limit, state legislatures should critically assess their own state needs to determine whether there is a legitimate and verifiable need for retention beyond this point. The next section of the statute addresses identification of stored data. [*55] § 4 Data Identification Police employees must have a legitimate law enforcement purpose in identifying the person associated with any data retained by community surveillance technologies. The limit on data identification is somewhat different than most current statutory arrangements. This measure would, potentially, limit the ability of law enforcement to use the stored data for secondary uses. A

secondary use is the use of data collected for one purpose for an unrelated, additional purpose. n341 This kind of secondary use can generate[] fear and uncertainty over how one's information will be used in the future." n342 By limiting the identification of the data, the statute attempts to prevent such secondary use. Another way to avoid secondary use is to limit access to data and external sharing, as I attempt to do in the next portions of the statute. § 5 Internal Access to Stored Data Departments must establish a formal internal policy documenting each time a police employee accesses community surveillance databases. Departments shall not allow anyone except authorized and trained police employees to access and search these databases. § 6 External Data Sharing Police departments may share information contained in community surveillance databases with other government agencies, as long as all participating departments honor the minimum requirements established in this statute. I propose that police limit access to data even among police employees. And each time a police employee accesses data, I require that the department document this event. This achieves two results. First, it creates a record of previous access points that the attorney general or state criminal courts can, theoretically, use to hold police accountable for improper data access. Secondly, and relatedly, this formalized documentation process may prevent nefarious secondary uses of the information. Because some evidence suggests that police retain community surveillance data in databases accessible to [*56] private companies and civilians, n343 this would place the impetus on police departments to take responsibility for internal data management. And while the model statute does not limit the sharing of digitally efficient data, it does require that all departments with access to data abide by the statutory limits. This would promote the sharing of data across jurisdictional lines to facilitate efficient investigations, while providing a consistent level of minimum privacy protection in the state. 4. Enforcement Mechanisms To ensure that departments abide by these minimal regulations, I propose a combination of enforcement mechanisms. The judicial and legislative branches have previously used these three enforcement mechanisms in other contexts to regulate police misconduct. By permitting a wide range of enforcement mechanisms, the statute attempts to avoid the traditional problems associated with police and organizational regulation. The first enforcement mechanism involves evidentiary exclusion. § 7 Evidentiary Exclusion All evidence acquired by law enforcement in violation of this statute shall be inadmissible in state criminal courts. The judiciary generally excludes evidence obtained in violation of the constitution. This mechanism is "by far the most commonly used means of discouraging police misconduct and perhaps the most successful." n344 Empirical evidence suggests that evidentiary exclusion can change law enforcement behavior and incentivize compliance with the law. n345 But the exclusionary rule suffers from several limitations. As Rachel Harmon has explained, the exclusionary rule is "riddled with exceptions and limitations, many of which are inconsistent with using the exclusionary rule as an [*57] effective deterrent of police misconduct." n346 Thus, if the misconduct happens to fall into one of these many exceptions, the exclusionary rule may not be an effective deterrent. But perhaps more importantly, as Harmon explains, "the scope of the exclusionary rule is inevitably much narrower than the scope of illegal police misconduct." n347 After all, the exclusionary rule would only work as a mechanism for preventing police misuse of digitally efficient databases if the police intended to use the resulting evidence in a criminal trial. But much of the misconduct I discuss in this article and previous work involves police utilizing retained data for undetermined secondary purposes. The exclusionary rule may do little to prevent this type of misconduct. To remedy this problem, I propose two other enforcement mechanisms. § 8 Attorney General Right of Action The Attorney General of this state shall have a civil right of action against any police department that engages in a pattern or practice of violating this statute. § 9 State Audit of Departmental Policy The Attorney General of this state shall have the authority to periodically audit departmental policies to ensure compliance with this statute. The Attorney General will publicly post the results of this audit to bring attention to noncompliant departments. Two of the statutes currently in operation only classify the violation of data retention and access policies as a minor criminal act. n348 In theory, these laws could result in the prosecution of a police officer who fails to abide by their parameters. But as Harmon concludes, "prosecutions against police officers are too rare to deter misconduct." n349 This is because juries tend to sympathize with defendant police officers, and the criminal prosecution of minor misconduct is rarely among the top priorities for over-worked prosecutors. n350 Consequently, I avoid establishing criminal liability for officers who violate this statute. Instead, I suggest that the state [*58] attorney general office should take on a proactive role in ensuring compliance through suing noncompliant agencies and occasionally auditing departmental policies. The first alternative enforcement mechanism gives the state attorney general statutory authority to bring suit against departments that engage in a pattern of practice of violating this statute. This is similar to the statutory mandate given to the Department of Justice (DOJ) by 42 U.S.C. § 14141. n351 Police scholar Barbara Armacost has called § 14141 "perhaps the most promising mechanism" for addressing organizational misconduct. n352 The late Bill Stuntz even believed that § 14141 may be "more significant, in the long run, than Mapp v. Ohio . . . which mandated the exclusion of evidence obtained in violation of the Fourth Amendment." n353 Pattern and practice litigation, as authorized in § 14141, is unique because it permits the DOJ to bring federal suit against police departments that engage in systematic misconduct; in practice, the DOJ successfully ensured the appointment of judicial monitors in targeted cities to oversee organizational and policy reform. n354 Although there is only a small amount of empirical research on the effectiveness of § 14141 in reducing police misconduct, the available evidence suggests it is one of the most effective means of bringing about organizational change. n355 One of the only potential pitfalls of this form of regulation is that the state attorney general may have limited resources. n356 If resource constraints make lawsuits unlikely for noncompliant departments, a police agency might rationally calculate that the benefits of noncompliance outweigh the potential costs of litigation. n357 To remedy the concern over resource limitations, I propose that the state attorney general have statutory [*59] authority to audit police departments. This would expand the regulatory reach of the statute while also harnessing the power of public opinion to force police compliance. This would also guarantee regular interaction between the attorney general and local departments, allowing the attorney general to check up on data practices. Rather than facing only the remote possibility of a pattern or practice lawsuit, departments would be faced with regular, random audits of their data policies. Because the results of this regular audit system would be posted online, the departments would also be publicly accountable if they fail to abide by the statute. This could incentivize administrators to follow state law for fear of public embarrassment that could threaten their job security. Rachel Harmon has suggested the DOJ utilize a similar policy to overcome resource limits and expand the potential impact of § 14141. n358 In sum, these regulations attempt to holistically regulate the digitally efficient investigative state by limiting data retention and ensuring stored data are handled in a way that protects individual privacy, while still leaving ample room for legitimate law enforcement purposes. The enforcement mechanisms are sufficiently varied to ensure widespread compliance. And the statute as a whole follows the

foundational principles of police surveillance regulations. The regulations are clear enough to avoid organizational mediation. They allow for individual variation. And they define the scope narrowly to only include a small subset of technologies like ALPR and surveillance cameras that pose a similar social risk. CONCLUSION The digitally efficient investigative state is here to stay. The empirical evidence clearly demonstrates that extremely efficient community surveillance technologies are an increasingly important part of American law enforcement. The language in Jones suggests that the judiciary may somehow limit public surveillance technologies in the future. To do so, the Court will have to confront the jurisprudential assumptions of police surveillance. That is no easy task. Much of the Court's previous treatment of police surveillance has rested on the belief that individuals have no expectation of privacy in public places, and [*60] that surveillance technologies that merely improve the efficiency of police investigations comport with the Fourth Amendment. At present, it remains unclear how and when the Court will begin to alter these important assumptions. The language in Jones offers little guidance. But even when the Court does eventually broach this subject, the judiciary's institutional limitations will prevent it from crafting the type of expansive solution necessary to protect against the harms of the digitally efficient investigative state. In the absence of regulation, police departments across the country have developed dramatically different policies on the use of public surveillance technologies. **Legislative bodies must take the lead and proactively limit the retention, identification, access, and sharing of personal data acquired by digitally efficient public surveillance technologies.** The model state statute proposed in this Article would be **a substantial step in reigning in the "unregulated efficiency of emerging investigative and surveillance technologies."**

State Legislation Solvency

State legislation solves – they have the requisite mechanisms and oversight to end digitally efficient investigation

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)//Mnush

III. THE LEGISLATIVE RESPONSE Any future judicial response must be coupled with state legislation. Even if the judiciary eventually accepts some version of the mosaic theory in interpreting the Fourth Amendment, we should not expect the Court to hand down detailed regulations for the use of these technologies. Justice Alito's concurrence in Jones is telling. His proposal to regulate the efficiency of surveillance technologies would only control data retention. n261 And the amount of data that a police department could reasonably retain without a warrant would vary from one situation to the next based upon the relative seriousness of the possible crime at issue. n262 This barely scratches the surface of broader problems posed by the digitally efficient state. Under what conditions should we permit extensive data retention? When should we limit this kind of retention? Is data aggregation more acceptable as long as the data is not cross-referenced with other databases, thereby personally identifying individuals? Should we regulate law enforcement's access to this personal data? And where should this data be stored? Even my original proposal for judicial regulation of mass police surveillance only addressed a handful of these questions. I recommended that courts require police to develop clear data retention policies that are tailored to only retain data as long as necessary to serve a legitimate law enforcement [*42] purpose. n263 Like Alito's proposal, such a standard would vary according to the seriousness of the crime under investigation and the individual circumstance. I also argued that in cases where police retain surveillance data without a warrant through electronic means, they should have a legitimate law enforcement purpose before cross-referencing that data with other databases for the purposes of identifying individuals. n264 Both the Jones concurrence and my previous proposal would establish a broad judicial principle mandating that police regulate data retention according to the seriousness of the crime under investigation and the legitimate need for such retention. This type of judicial response is limited in nature. Legislative bodies would likely need to step in to provide more detailed standards. The legislative branch has several advantages over the judiciary that make it appropriate for this type of detailed policy building. **The legislature has a wider range of enforcement mechanisms than the judiciary.** The legislature can mandate in-depth and regular oversight. And it has the resources and tools to develop extensive, complex regulations. As a result, **the legislature is the best-positioned**

branch to address some of the critical issues raised by the digitally efficient investigative state, such as data storage, access, and sharing policies. In this Part, I offer guidelines for a legislative response to mass police surveillance. I first detail some of the foundational principles that legislative bodies ought to recognize in regulating police use of technology. Next, I give a brief overview of how a handful of states have attempted to regulate these technologies. I conclude by offering and defending my statutory recommendations. A. Foundational Principles for Regulating Police Surveillance Technology In making this legislative recommendation, I rely on three foundational principles about legislative regulation of law enforcement technologies. First, any regulation must provide clear and articulable standards that law enforcement can and will easily enforce. n265 Courts and legislators have often agreed [*43] that police regulations should be easy to apply across many different factual circumstances. n266 **If a regulation is unclear, there is a higher probability that law enforcement will, even in good faith, misapply the standard.** For example, in Atwater v. City of Lago Vista, Texas state law permitted officers to arrest offenders who violated traffic laws for failure to wear a seatbelt, even though the final punishment for such a violation was a mere fine. n267 In upholding an officer's decision to arrest a woman for failure to buckle her seatbelt, the Court stressed that police need rules that emphasize "clarity and simplicity." n268 Earlier regulations have encountered resistance from law enforcement because they were not easily administrable standards. For example, in Arizona v. Gant, the Court upended a longstanding doctrine that said police could search an automobile incident to an arrest of a person in that vehicle. n269 The new standard said that police "may search a vehicle incident to a recent occupant's arrest only if the arrestee is within reaching distance of the passenger compartment at the time of the search or it is reasonable to believe the vehicle contains evidence of the offense of arrest." n270 Justice Alito found this new standard undesirable compared to the previous standard. In Alito's mind, the Court should strive for "a test that would be relatively easy for police officers and judges to apply." n271 While some commentators disagree about the relative importance of clear and simple rules, n272 most judges and policymakers agree that any policymaker should consider the administrability of a mandate. Clear and simple rules also have another advantage over ambiguous mandates--these kinds of clear directives are less susceptible to organizational mediation. n273 If a state regulation of a policing organization is "vague or ambiguous," the police organization may "mediate the implementation and impact the law." n274 Lauren Edelman had demonstrated this [*44] type of mediation in the case of equal employment and affirmative action laws that are intended to change the behavior of private organizations. n275 These initial laws only established broad regulatory goals without offering clear and explicit procedural limitations. n276 This type of ambiguous mandate gave private companies room to interpret the laws and construct the meaning of compliance, thereby mediating "the impact of the law on society." n277 In the past, the police have been guilty of organizational mediation of a variety of legal mandates. The general police response to Miranda is particularly demonstrative of this phenomenon. Scholars like Richard Leo and Charles Weisselberg have carefully shown how police have navigated around the limitations of the original Miranda decision to nonetheless engage in seemingly coercive interrogation techniques aimed at acquiring information. n278 The original Miranda opinion provided some limitations on interrogations, but the decision and subsequent holdings may have been ambiguous, thereby allowing for departments to navigate around them without technically violating the law. Thus, in crafting rules for police, both the Court and legislatures should aim to create easily administrable law enforcement rules if at all possible, but also laws that are specific enough to avoid organizational mediation. Second, communities differ in their need for public surveillance. For example, New York City and Washington, D.C. have previously been targets for international terrorism. Given their plethora of high value targets and landmarks, these two cities may have a legitimate need for more public surveillance than other communities. n279 In arguing for a malleable standard for local departments, the IACP has suggested that some locations--namely bridges, critical infrastructure, and other high value targets--demand more surveillance and data retention to ensure public safety. n280 As an example, the IACP cites the fact that locations targeted on September 11, 2001 were part of a terrorist attack that took many years to plan and execute. n281 [*45] Thus, certain communities may legitimately need and prefer longer retention periods around certain important targets. Conversely, a medium-sized suburb with low crime that places a higher value on privacy might prefer a bar on the retention of surveillance data all together. While any state statute should establish minimally acceptable requirements on data retention, the law must be sufficiently broad to permit necessary variation at the local level. A one-size-fits-all approach may not be workable, given the unique law enforcement needs of each city. Third, any regulation must clearly articulate the narrow scope of technologies and devices that fall under its regulatory purview. Because technology changes rapidly, this ensures that the law will not be misapplied to future, emerging technologies. Kerr has previously argued that regulations of technology ought to proceed cautiously until the technology has stabilized. n282 Technology may have unforeseen uses that will take time to develop and understand. For example, in 1988, Congress passed the Video Privacy Protection Act. n283 This law protected the privacy of videotape rental information. n284 Congress passed the law after Judge Robert Bork's video rental history became public during his Supreme Court nomination process. n285 But in crafting this limitation on video rentals, Congress defined the term "video tape service provider" expansively as "any person, engaged in the business . . . of rental, sale, or delivery of prerecorded video cassette tapes or similar audio visual material."

n286 On one hand, this expansive definition of a videotape service provider is useful because it is broad enough to avoid antiquation. As videotape technology waned in popularity and DVDs became the chosen medium for most movie rental providers, the law maintained its statutory force. But the vague language used by the original drafters of the law left online streaming content providers like Netflix wondering whether the law actually applied to their services. n287 It was also unclear what kind of approval Netflix and other providers had [*46] to obtain to allow users to share their viewing history on social media platforms like Facebook. n288 After years of ambiguity, Congress recently amended the law to permit users to share content watching habits on streaming sites like Netflix after they have given one-time approval. n289 Before the law change, Netflix complained that the law's language was confusing, making them hesitant to adopt social media integration. n290 Similarly, when regulating police technology use, legislative bodies should adopt language that is sufficiently broad to avoid immediate antiquation. They should also be careful not to select language that is so overly broad as to limit the use of new, potentially important technological tools.

State regulations can be reformed to ensure less discriminatory surveillance

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)//Mnush

The legislative recommendation I make in this Part attempts to follow these three guiding principles: it attempts to (1) clearly define the limited scope of the applicable technologies, (2) be clear and simple for law enforcement to administer, and (3) permit some level of local variation to meet the needs of unique municipalities. My starting point for crafting this model was to analyze the small number of statutes already passed by state legislators. The next section looks at these statutes to demonstrate common trends B. Current State Regulations A handful of states have laid out regulations of the digitally efficient investigative state. These state laws operate by either regulating ALPR and surveillance cameras specifically, or by establishing broad standards for data retention. For example, states like Virginia have passed relatively broad laws that regulate the retention of data by the government in all forms. n291 In other states, like New Jersey, the state attorney general has used state constitutional authority to hand down directives regulating the use of ALPR and establishing limitations on data collection. n292 States like Maine, Arkansas, New Hampshire, Vermont, and Utah have regulated ALPR through legislative measures. n293 Some states, like New York, have also handed down suggested model guidelines to inform [*47] internal policymakers. n294 In this section, I demonstrate that most of these early efforts to regulate the digitally efficient surveillance technologies share a handful of common concerns. They limit the identification of personal data, the length of data retention, the sharing of information with other departments, and law enforcement access to stored data. These early models also rely on a bevy of enforcement mechanisms. Thus, any model legislation aimed at holistically managing the digitally efficient investigative state should consider the possible solutions offered by existing laws. First, the laws generally limit the length of data retention in some way. Maine's law on ALPR limits retention to 21 days. n295 New Hampshire also puts a strict limit on the collection of law enforcement data, barring "retention of surveillance data except for a few, specific situations." n296 By stark contrast, the New Jersey Attorney General has ordered that data be retained for no more than five years. n297 Model guidelines like those offered by the State of New York do not establish a maximum length of data retention, n298 but the New York recommendations do encourage departments to establish a clear policy on the length of data retention. n299 Arkansas limits retention to 150 days, n300 Utah allows retention by government agents for nine months, n301 and Vermont permits retention for up to 18 months. n302 Each of these statutes reaches a different conclusion on the appropriate length of data retention. The disparity between the New Jersey data retention limit of five years and relatively strict retention limits in states like Maine and New Hampshire is striking. But the Maine law might not be as restrictive as it initially appears. Although it does limit retention in most cases to 21 days, it also makes an exception for cases where law enforcement is engaged in an ongoing investigation or intelligence operation. n303 Overall, state legislatures have reached dramatically different conclusions on the relative threat posed by long-term data retention. [*48] Second, a few of the available laws demonstrate a concern for the identification of personal data collected by the state. The New Jersey Attorney General Directive intends in part to limit the "disclos[ure] [of] personal identifying information about an individual unless there is a legitimate and documented law enforcement reason for disclosing such personal information to a law enforcement officer or civilian crime analyst." n304 In New York, the model guidelines would also require that officers attempting to query stored data for identifying matches have a legitimate law enforcement purpose for doing so, and that they record their identification procedure. n305 Neither Maine nor New Hampshire has a substantial policy on the identification of data, likely due in large part to their strict limitations on retention. n306 The longer a state legislature permits data retention, the more legitimately concerned it may be about the possibility of this data becoming personally identified. After all, the combination of long-scale retention and data identification procedures may allow law enforcement to create "digital dossiers" on innocent people that reveal private information about their habits, preferences, and daily movements. n307 Third, the available laws and recommended models tend to put restrictions on the sharing of information with other agencies. The New Jersey directive permits the sharing of ALPR data among police departments in the state, provided that the departments keep records of the data being shared and all departments involved abide by the New Jersey rules. n308 Nonetheless, New Jersey uses regulations on sharing as a way to encourage the development of a consistent and organized state database. n309 The Utah law permits sharing and disclosure only under narrow circumstances. n310 Arkansas, by contrast, strictly prohibits sharing of collected data. n311 Other states, like New York, have been relatively hands-off when it comes to data sharing. They simply urge departments to build procedures for sharing data that are consistent with their overall recommendations on data protection. n312 We may expect states [*49] to want to encourage departments to share whatever

data they can legally retain. By doing so, departments can have access to significantly more information on the potential whereabouts of criminal suspects who travel outside jurisdictional lines. n313 Fourth, available and model rules document and limit access to stored data. New Jersey's regulation requires departments to record all user access to stored ALPR data, including the name of the user accessing the data, the time and date of the access, whether the person used automated software to analyze the data, and the name of the supervisor who authorized the access. n314 New York's model guidelines also suggest that departments document when officers search and analyze stored data. n315 Officers should also only analyze data if they have a legitimate law enforcement purpose for doing so. n316 Additionally, the Maine provision stresses the importance of confidentiality in stored data. n317 That law restricts access to law enforcement officers. n318 And in Vermont, the law explicitly states that access to stored data should be limited to specified or previously designated personnel. n319 Thus, the current array of statutes acknowledges the need for limited access to available data and confidentiality of stored information. Fifth, some of the model regulations require departments to train employees in the proper procedures for handling data. They also discipline employees who fail to follow policy parameters. The New York suggested guidelines recommend that departments establish a list of designated personnel who are authorized to access ALPR data, n320 and encourage departments to establish a training program to teach officers about the proper use of ALPR technology. n321 The New Jersey directive also requires that departments "designate all authorized users, and that no officer or civilian employee will be authorized to operate an ALPR, or to access or use ALPR stored data, unless the officer or civilian employee has received training by the department on the proper operation of these devices." n322 Once more, the New Jersey directive mandates that "any sworn officer or civilian employee of the [*50] agency who knowingly violates the agency's policy, or these Guidelines, shall be subject to discipline." n323 Conversely, neither the Maine nor New Hampshire laws touch on officers' training in data retention. n324 But this is likely because they do not permit significant data accumulation, thereby making training in data management less imperative. On the whole, those states and entities that do permit large-scale data collection also encourage officer training as a safeguard against abuse. Sixth, the current array of regulations uses a wide range of enforcement mechanisms. In New Jersey, as a penalty for non-compliance, the Attorney General maintains the authority to temporarily or permanently revoke a department's right to use ALPR devices. n325 Arkansas provides for civil remedies for individuals when a violation of the law causes them actual harm. n326 Utah, by contrast, simply makes violation of the statute a criminal misdemeanor. n327 Both the New Hampshire and the Maine laws have made the violation of ALPR regulations a criminal act in the state. n328 Although New York's regulations are non-mandatory, they still recommend that departments begin creating records in case the state someday begins to audit data access and retention records. n329 In sum, current state statutes and recommended guidelines address a number of concerns related to the digitally efficient state. It is worth noting again that these laws go far beyond anything the judiciary would likely implement. The Supreme Court is institutionally limited in its capacity to develop a response to the digitally efficient investigative state. The variation on the mosaic theory adopted by Alito in his Jones concurrence would only establish a broad principle that long-term data retention by efficient public surveillance technologies may eventually violate a person's reasonable expectation of privacy. Such a rule is ambiguous and does not touch on data storage, access, and identification. State legislation offers the possibility of establishing detailed and definitive standards.

Legislation solves best

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)//Mnush

In this article, I present a model statute that a state could enact to regulate the digitally efficient investigative state. This statute adheres to three major principles about the regulation of police surveillance. First, any regulation must provide clear standards that law enforcement can easily understand and apply. n23 Second, as communities differ substantially in their need for public surveillance, any legislation must provide local municipalities with some ability to vary standards to meet their legitimate law enforcement needs. Third, any regulation must articulate the narrow scope of technologies and devices that fall under its regulatory purview. Because technology changes rapidly, this ensures that the law will not be misapplied to future, emerging technologies. The model statute I offer in this article honors these three important principles. The statute regulates the indiscriminate collection and retention of data by law enforcement surveillance technologies, while also permitting the use of technological surveillance for mere observational comparison. The statute [*5] establishes a maximum length of time for data retention. It also limits the sharing of personally identifiable information, and requires

that law enforcement demonstrate a legitimate investigative purpose for identifying and accessing data. To enforce these broad regulations, the statute gives the state attorney general the authority to bring lawsuits against police departments that fail to abide by these regulations and excludes from criminal court any locational evidence obtained in violation of the statute. This statute would not address all of the concerns of the digitally efficient investigative state. After all, no statute can fully predict and control the development of new and emerging technologies. Nevertheless, it would be a major step toward coherency. This legislation would give a police department discretion to craft unique data policies tailored to its community's specific needs, while also encouraging some level of statewide consistency. To date, only a small handful of law review articles have addressed the unique issues raised by digitally efficient community surveillance technology, such as automatic license plate readers (ALPR). n24 Furthermore, none of this work has offered a comprehensive legislative response that could guide future regulation. Thus, this article fills a void in the available legal scholarship.

Police departments have expanded advanced surveillance technologies and the Supreme Court can't stop it without State legislatures

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)//Mnush

Over the last two decades, police departments have dramatically expanded the use of advanced surveillance technologies. In 1997, around 20% of American police departments reported using some type of technological surveillance. n1 By 2007, that number had risen to over 70%. n2 And no longer do police rely exclusively on basic surveillance technologies. The increasingly efficient and technologically advanced law enforcement of the twenty-first century utilizes a wide range of surveillance devices including automatic license plate readers (ALPR), n3 surveillance cameras, n4 red light cameras, n5 speed cameras, n6 and biometric technology like facial recognition. n7 [*2] I have previously called this radical shift in policing the beginning of the digitally efficient investigative state. n8 By this, I mean that police today utilize technological replacements for traditional investigations that dramatically improve the efficiency of surveillance. These digitally efficient technologies do not give police any unique extrasensory ability. n9 They merely improve the efficiency of public surveillance. Furthermore, these technologies only collect information on public movements and behaviors. They do not intrude on any constitutionally protected or private space. n10 However, these tools have developed into a form of widespread community surveillance, which presents privacy concerns for many members of the community. In addressing public surveillance under the Fourth Amendment, the Supreme Court has previously operated under two important presumptions. I call these two general rules the jurisprudential assumptions of police surveillance. First, individuals have no reasonable expectation of privacy in any activities they make in public that may be visible to law enforcement. n11 So while officers need probable cause or a warrant to enter a home or automobile, they do not need any [*3] authorization to investigate or record a person's activities in public. Second, while technologies that give the state an extrasensory ability may violate an individual's reasonable expectation of privacy, technologies that merely improve the efficiency of otherwise permissible investigation techniques are presumptively permissible. n12 Thus, while officers must obtain a warrant before using some extrasensory technologies, the Court generally does not regulate efficiency-enhancing technologies. These jurisprudential assumptions of police surveillance have been workable in the past because of the limited use and capability of efficiency-enhancing technologies. I have previously argued, however, that in the age of the digitally efficient investigative state, efficiency-enhancing technologies have become sufficiently intrusive as to demand a new doctrinal path. n13 In United States v. Jones, the Supreme Court considered one such efficiency-enhancing surveillance technology--global positioning systems (GPS). n14 There, law enforcement officers installed a GPS device on a suspect's car without a valid warrant. n15 The government argued that the police did not need a warrant to install the GPS device because it was merely an efficient replacement for an otherwise legal police investigation tactic--public surveillance. n16 But Antoine Jones claimed that he had a reasonable expectation that all of his movements over the course of a month would not be recorded in great detail by the state, even if they were executed in public. n17 The Jones case presented the perfect opportunity for the Court to amend one or both of the jurisprudential assumptions of police surveillance, but the Court punted the issue. The majority merely found that the installation

of a GPS device violated the Fourth Amendment because of the device's physical installation on the automobile. n18 Post-Jones, many academics criticized the Court for not addressing the privacy issues raised by police surveillance technologies. n19 I believe the Court will eventually regulate the digitally efficient investigative state in some manner. Indeed, dicta in the concurrences by Justices Sotomayor and Alito [*4] suggest that the Court will be receptive to broader regulation of efficiency-enhancing surveillance technology in the near future. n20 Nevertheless, history dictates that any judicial regulation will be limited and likely rely on the often-ineffective exclusionary rule for enforcement. n21 As a result, Congress and state legislators must play a significant role in any future regulation of police surveillance. Given that law enforcement in the United States is highly decentralized, n22 **much of this regulation will have to come from state legislatures.**

Counterplans vs State Secrets Privilege / Judicial Independence Advs

1nc CP Executive

CP Text: The executive branch should:

-conduct an across-the-board review of pending litigation where the state secrets privilege was invoked

-issue an executive order that sets out substantive legal standards regarding use of the privilege

-create a durable and extensive review process within the executive branch for deciding when to assert the privilege in future cases

-institute a formal process for invoking the privilege, by setting out a list of offices or officials who must sign off on the decision

-institute a system to automatically refer evidence that it asserts is privileged to an Office of the Inspector General

-encourage the Congress to enact the State Secrets Protection Act

CP solves

Frost '09 --- American University Washington College of Law (Amanda, "Reforming the State Secrets Privilege," American University College of Law, 4/1/2009, http://digitalcommons.wcl.american.edu/cgi/viewcontent.cgi?article=1001&context=fac_works_pubs)// Mnush

The next administration should consider implementing the following measures upon taking office. These proposals could be adopted individually, or grouped together as a comprehensive package. The list below is not intended to be exhaustive, but rather to suggest useful avenues for the new administration to pursue. First, the new administration should conduct an across-the-board review of all pending litigation in which the government—either as a party or an intervenor—has invoked the state secrets privilege. Just because the Bush Administration invoked the privilege in a particular case does not mean the new administration should consider itself bound by its predecessor's litigation approach. This across-the-board review should be carried out by a joint group of career employees and political appointees of the new administration, and should include officials from both the Justice Department and the intelligence and national security communities. It should cover not only cases that are pending in district courts, but also those in which the state secrets privilege is at issue on appeal. Second, the next president should issue an executive order, binding on all federal agencies, that sets out substantive legal standards regarding use of the privilege. This order might include a new definition of what constitutes a state secret and what evidence the government believes is appropriately subject to the privilege, based either on the current classification system,80 or the definitions of "state secrets" in proposed legislation that is currently pending before Congress. An important element of an executive order on the privilege would be creating a standard for when the government may seek outright dismissal of a case, at the pleadings stage, on the basis of the privilege. For example, an effective order could emphasize that this approach is supported by precedent only in cases involving secret espionage agreements, such as those at issue in Totten v. United States and Tenet v. Doe, and may not be appropriate in cases relating to other subjects. The executive order should take into account the harm to litigants and the public of invoking the privilege either to prevent introduction of evidence or seek dismissal of the case. **The president's constitutional responsibilities include not only protecting the nation's security, but also taking care that**

the laws are properly enforced.81 If important evidence is kept out of court, or entire cases are dismissed on the pleadings, the law cannot be optimally followed and enforced. Accordingly, the executive branch should adopt a substantive standard that requires it to evaluate the harm that will result when invoking the state secrets privilege. Third, either as part of an executive order or through a formal memorandum issued by the new attorney general, the administration should create a durable and extensive review process within the executive branch for deciding when to assert the privilege in future cases. Internal procedural requirements within the bureaucracy can create a strong layer of checks and balances, taking advantage of the benefits of multiple viewpoints and the experience and judgment of career civil servants.82 When just a few executive branch officials make decisions without broader consultation and input, the results can be severely flawed. This is especially the case with complex legal analysis, as demonstrated by the failures resulting from the Bush Administration's refusal to seek input from different officials within the administration.83 As Professor Goldsmith testified before the Senate Judiciary Committee, "[c]lose-looped decisionmaking by like-minded lawyers resulted in legal and political errors that would be very costly to the administration down the road. Many of these errors were unnecessary and would have been avoided with wider deliberation and consultation." Judicial doctrine provides that the state secrets privilege may only be "lodged by the head of the department which has control over the matter"—not a low-level official.85 That official must give "actual personal consideration" to the issue, and attest to this in a formal declaration.86 Recent practice suggests, however, that these doctrinal procedural requirements are insufficient in light of the significant impact of invocation of the privilege. And although officials from the Bush Justice Department have asserted that attorneys from the Department, in addition to counsel from the relevant agency, are involved in determining when to invoke the privilege, they have not indicated the existence of any formal review process within the Justice Department. The new administration or Justice Department should institute a formal process for invoking the privilege, by setting out a list of offices or officials who must sign off on the decision. To begin, a senior official within the Department, perhaps the deputy attorney general, should be required to personally approve all invocations of the privilege. This will provide accountability for secrecy at the highest levels of the administration. Moreover, a new review process might include a referral to the Department's Professional Responsibility Advisory Office (PRAO) to ensure that the privilege is not being invoked out of a conflict of interest.88 Further, the Justice Department should consider establishing a litigant's ombudsman who could serve as an advocate for the members of the public who would be harmed by invocation of the privilege.89 By requiring that these offices approve the government's exercise of the privilege, the new administration would bring more viewpoints into its deliberations and reduce the likelihood of error or unnecessary harm to the interests of justice. Fourth, the administration should institute a system to automatically refer evidence that it asserts is privileged to an Office of the Inspector General (OIG). Even if the privilege is invoked appropriately and narrowly by the administration, and subjected to careful review by the courts, the state secrets privilege will prevent the introduction of some important evidence in court. This is the very purpose of the privilege, and it may sometimes be necessary to prevent the disclosure of secret information that would harm the nation's security—even when that evidence demonstrates illegal activity. Because even proper use of the privilege can disrupt the usual system of checks and balances and limit oversight of the executive branch, it is important that an independent body within the executive branch review the evidence and take action to prevent or ameliorate violations of the law that cannot be disclosed in court. By mandating referral of assertedly privileged evidence to an OIG, the new administration can ensure that any evidence of abuse or wrongdoing—even if properly covered by the privilege—will be addressed and corrected. The Justice Department's OIG has demonstrated extraordinary integrity and independence in recent years, and thus would be the appropriate office to conduct the review. However, if the administration believes it appropriate, the privileged evidence could be referred to the relevant department or agency OIG, for example that within the Department of Defense or the CIA. The OIG could then serve as a partial substitute for the courts by investigating and providing accountability for any wrongdoing revealed by the privileged evidence. Finally, the new administration should encourage the next Congress to enact the State Secrets Protection Act, discussed below, or similar legislation. Rather than work with Congress to craft state secrets legislation, the Bush Administration has attempted to undermine the proposed legislation by making specious attacks on its constitutionality and vowing to veto any bill passed by Congress.90 The new administration should work with members of the House and Senate Judiciary Committees to pass and sign into law the State Secrets Protection Act. At a minimum, it should cooperate with the Judiciary Committees to modify these bills to address its concerns. The next section discusses the legislation and its benefits in more detail. Adopting these measures would enable the new administration to restore a proper balance between the branches of government, fulfill its constitutional responsibilities to enforce the rule of law, and protect both national security and the interests of justice.

Congress Solvency

Congress can pass legislation changing how state secrets are evaluated --- boosts judicial independence

Fisher 08' --- specialist in Constitutional Law (Louis, "Reform of the State Secrets Privilege," House Committee on the Judiciary , 1/29/2008, http://www.loc.gov/law/help/usconlaw/pdf/Fisher_statement_12508.pdf)//Mnush

There should be little doubt that Congress has constitutional authority to provide new guidelines for the courts. It has full authority to adopt rules of evidence and assure private parties that they have a reasonable opportunity to bring claims in court. What is at stake is more than the claim or assertion by the executive branch regarding state secrets. Congress needs to protect the vitality of a political system that is based on separation of powers, checks and balances, and safeguards to individual rights. In the past-half century, Congress has repeatedly passed legislation to fortify judicial independence in cases involving national security and classified information. Federal judges now gain access to and make judgments about highly sensitive documents. Congressional action with the FOIA amendments of 1974, the FISA statute of 1978, and the CIPA statute of 1980 were conscious decisions by Congress to empower federal judges to review and evaluate highly classified information. Congress now has an opportunity to pass effective state secrets legislation.

Congress solves --- can regulate the process through which the privilege is asserted

Chesney '08 --- Wake Forest Law School (Robert M, "Legislative Reform of the State Secrets Privilege," Roger Williams University Law Review, spring 2008, http://docs.rwu.edu/cgi/viewcontent.cgi?article=1389&context=rwu_LR)//Mnush

In any event, let us assume for the sake of argument that the state secrets privilege serves constitutionally-protected values relating to the executive branch's national security and diplomatic functions. Would it follow that Congress is disabled from regulating in this area? It is not obvious that it would. Indeed, some forms of regulation would seem clearly to remain within the control of Congress in the exercise of the authorities mentioned above, even if other forms of legislation might prove more controversial. The key is to distinguish between legislation regulating the process by which privilege assertions are to be adjudicated, and legislation that functions to override or waive the privilege itself. At a minimum, Congress should have authority to regulate the process through which assertions of the privilege are adjudicated. This would include, for example, the power to codify prerequisites to the assertion of the privilege (such as the Reynolds requirement that the privilege be invoked by the head of the relevant department based on personal consideration of the matter)34 or to require particular procedures to be followed by the court in the course of resolving the government's invocation. Whether Congress should be able to override the privilege once it attaches-for example, by compelling the executive branch to choose between conceding liability in civil litigation and disclosure of privileged information in a public setting-is far less clear. That question may be academic, however, at least so far as the SSPA is concerned. A close review of the bill suggests that most if not all of its provisions are best viewed as process regulations. It does not follow, of course, that all the changes contemplated in the SSPA are wise. On the contrary, there are at least a few elements in the bill that go too far in seeking to ameliorate the impact of the privilege. Congress may have the authority to adopt these measures notwithstanding the competing constitutional values involved, but it is advisable to emphasize less-intrusive reform options whenever possible.

Subjecting the states secrets privilege to a procedural framework solves

Chesney '08 --- Wake Forest Law School (Robert M, "Legislative Reform of the State Secrets Privilege," Roger Williams University Law Review, spring 2008, http://docs.rwu.edu/cgi/viewcontent.cgi?article=1389&context=rwu_LR)//Mnush

Note* SSPA = State Secret's Privilege Act

IV: Conclusion The SSPA will not entirely please either critics or supporters of the state secrets status quo. By subjecting the privilege to a more rigorous procedural framework, the SSPA may reduce the range of cases in which the privilege is found to apply, and in some respects it may cause marginal increases in the risk that sensitive information will be disclosed (though with the amendments proposed above such risks would be significantly diminished). On the other hand, even under the SSPA, the privilege will continue to have a harsh impact on litigants who bring claims that implicate protected information: discovery will still be denied, complaints will still be dismissed, and summary judgment will still be granted. Such tradeoffs are inevitable, however, **in crafting legislation designed to reconcile such important public values as national security, access to justice, and democratic accountability. The SSPA has its flaws, to be sure, but subject to the caveats noted above it marks an important step forward in the ongoing evolution of the state secrets privilege.**

CPs vs Religious Freedom Adv

1nc Religious Diplomacy CP

CP: The United States federal Government should mandate that all State Department Diplomats receive courses in religious literacy

Allows the US to utilize effective religious diplomacy

Mandaville and Silvestri, 15 – *Peter, Professor in Government & International Affairs at George Mason U and ** Sara, Senior Lecturer in Religion and International Politics at City University London and Director of Research at U of Cambridge ("Integrating Religious Engagement into Diplomacy: Challenges & Opportunities" 1/29/15, Brookings Institution, http://www.brookings.edu/~/media/research/files/papers/2015/01/29-religious-engagement-diplomacy-mandaville-silvestri/issuesingovstudiesmandavillesilvestriefinal.pdf,//BR/)

<In recent years, diplomatic training schools in the United States and some European countries have begun to offer courses and seminars on religious engagement. The State Department's Foreign Service Institute (FSI) now regularly offers a week-long seminar on religion and foreign policy. This course, however, is offered on an ad hoc, elective (i.e. non-mandatory) basis and tends to be taken by Foreign Service officers who are already comfortable with and committed to religious engagement. This means the capacity of such courses to significantly widen the ranks of those equipped to do such work is limited.10 Similar efforts run by the British government also operate on an exclusively voluntary basis. The topics covered in such classes also tend to reinforce existing paradigms for religion in foreign policy—such as international religious freedom and interfaith work—and as such do not serve to broaden the aperture or take in sectors and issue areas less commonly associated with religion. The training on religion offered by EU member states and EU institutions for their respective officials tends to be even more ad hoc than in the United States. For instance, training on Islamism—which generally takes the form of guest lectures by outside speakers—has been regularly provided to EU officials since Islamic radicalization became a major issue in the mid-2000s. Yet there is a risk that for lack of experience or bandwidth, European countries end up uncritically adopting initiatives and approaches created in Washington D.C. or London, without re-adapting them to different cultural and social system and, simultaneously, importing the many oversimplifications and blind spots that characterize government approaches to the quite distinct issues of countering violent extremism (CVE) and Islamist engagement. For training and professional development efforts around religion to truly make a lasting difference, they would need to be baked into the mandatory preparation that all diplomats receive. The US State Department has tentatively started a process to explore ways that this can be achieved via the A-100 Class, the basic training platform for all Foreign Service officers regardless of eventual postings or career specializations. Providing "religious literacy" as a fundamental diplomatic competency is a complex and fraught undertaking. What are the appropriate approaches and modalities for teaching these issues given the legal sensitivities and institutional culture concerns raised above? What, precisely, is to be taught? It is unrealistic and inappropriate to think that purpose of such training would be to teach foreign services officers to think and talk like theologians, or to use religious reasoning to justify foreign policy or national security interests. Rather, a "religious literacy" paradigm for training diplomats would have three core components: 1. World religions and global religious demography – A basic overview of major world religions including history, core beliefs, and key contemporary institutions/leaders. Introduction to major trends in religious demography 2. Religion and the advancement of foreign policy interests – A module to introduce diplomats to the varying roles that religions play in different societies and to develop

analytic capacity to better understand where religion is (and, conversely, is not) relevant to various issues and topics in diplomatic practice. This should also include coverage of policy areas not previously or conventionally associated with religion. 3. Religious engagement in diplomacy – An introduction to the practical aspects of engaging with religious leaders, faith-based organizations, and other religious actors. In addition to protocol issues and questions of cultural sensitivity to faith requirements for example, this module would also help diplomats develop a capacity to engage the subject matter of their work in terms that relate to values, culture, and philosophy. The pedagogy here would be informed more by the sorts of questions and debates typical of the humanities—meaning, morality, and purpose—than by theology, per se. At a time when higher and professional education place an increasing premium on science, technology, engineering, and math (STEM) subject areas, the clear centrality of religion to international affairs reminds us that the fields comprising the humanities—philosophy, history, literature, the arts—continue to be of vital importance for the advancement of foreign policy and national security interests. The introduction of such a curriculum as a core aspect of diplomatic training faces numerous challenges, not least of all the likelihood of certain objections being raised on principle. Given time pressures and scarcity of resources, any new subject area competing to enter the fray of a major governmental training system has to compete with other new priority areas as well as well-established topics that already feel they get short shrift. Such training will also have maximum impact in the shortest amount of time if accompanied by aspects of mid-career training and professional development tailored for middle managers and senior officials. The more those in positions of authority are able to appreciate the importance of religion and religious engagement to fulfilling the mission of the units they lead, the more likely they are to help those who serve under them to feel incentivized and "safe" in taking some of the risks associated with religious outreach and engagement. >

Text: The United States Federal Government should integrate an agenda of International Religious Freedom into its foreign democracy programs.

Secures the efficacy of democratization

Farr, 9 - Thomas F., Professor of Religion and International Affairs – Georgetown's Edmund A. Walsh School of Foreign Service and Director – Berkley Center for Religion, Peace, and World Affairs ("The Future of U.S. International Religious Freedom Policy", Research Gate,//BR/)

Successfully integrating religious freedom promotion into U .S. policy on democratization and civil society will require understanding the significant obstacles that exist, both abroad and at home, to doing so. Of all the tasks of democratic consolidation, embracing religious liberty is, for many cultures, the most difficult. Many majority religious communities (e .g., Russian Orthodox, Afghan Sunnis, Indian Hindu nationalists) see religious freedom in general, and U .S . Religious freedom policy in particular, as a threat to communal identity or an attack on religious tradition. These communities often seek to maintain a national monopoly over belief and practice by reliance on civil law and policy as a means of keeping competing religious groups at a disadvantage and retaining their own adherents. The result is public policies that are incompatible with and destructive of stable democracy, such as anti-apostasy, blasphemy, conversion, and defamation laws. Moreover, there is a widespread perception in Muslim-majority societies and elsewhere that America's democracy promotion policy is fundamentally anti-religious because it seeks a strict separation of religion from public life and the marginalization of religious ideas and actors in matters of public policy. That perception extends to U.S. IRF policy, which is often seen as designed to pave the way for American missionary efforts. When it comes to encouraging religious communities to consider themselves as elements of a broader civil society, U .S. democracy programs are key. It will be important for those programs not only to target religious communities but also to fund civil society institutions, religious and secular, that advance religious freedom. Unfortunately, the United States does not now do this in any systematic way. None of its direct or indirect grant making—e .g. the

U .S. Agency for International Development (USAID), the State Department, the National Endowment for Democracy, the National Democratic Institute, the International Republican Institute—see religious freedom as critical to the rooting of democracy. While each pays rhetorical tribute to religious freedom, and each has important individual programs that engage religious actors or communities, none has a comprehensive strategy that integrates religious freedom into its operational planning or programs.
