Trafficking DA

By getting rid of section 2421 they are allowing the unfair acts of women to continue
Donna M. **Hughes** July 3, 200**4** (Professor & Carlson Endowed Chair in Women's Studies University of Rhode Island)

By tolerating or legalizing prostitution, the state, at least passively, is contributing to the demand for victims. The more states regulate prostitution and derive tax revenue from it, the more actively they become part of the demand for victims. If we consider that the demand is the driving force of trafficking, then it is important to analyze the destination countries' or cities' laws and policies. Officials in destination countries or cities do not want to admit responsibility for the problem of prostitution and sex trafficking or be held accountable for creating the demand. At this point to a great extent, the wealthier destination countries control the debate on how trafficking and prostitution will be addressed. Sending countries or regions are usually poorer, less powerful, and more likely to be influenced by corrupt officials and/or organized crime groups. They lack the power and the political will to insist that destination countries and cities stop their demand for women for prostitution. In destination places, strategies are devised to protect the sex industries that generate hundreds of millions of dollars per year for the state where prostitution is legal, or for organized crime groups and corrupt officials where the sex industry is illegal. Exploiters exert pressure on the lawmakers and officials to create conditions that allow them to operate. They use power and influence to shape laws and policies that maintain the flow of women to their sex industries. They do this through the normalization of prostitution and the corruption of civil society. 5 There has been a global movement to normalize and legalize the flow of women into sex industries. It involves a shift from opposing the exploitation of women in prostitution to only opposing the worst violence and criminality. It involves redefining prostitution as "sex work," a form of labor for poor and psychologically damaged women. It involves redefining the movement of women for prostitution as labor migration, called "migrant sex work." It involves legalizing prostitution, and changing the migration laws to allow a flow of women for prostitution from sending regions to sex industry centers. The normalization of prostitution is often recommended as a way to solve the problem of trafficking. States protect their sex industries by preventing resistance to the flow of women to their sex industry centers. They do this by silencing the voice of civil society. In many sending countries, civil society is weak and undeveloped. Governments of states with powerful sex industries fund non-governmental organizations (NGOs) to promote the permission and accommodating views of prostitution and the flow of women into sex industries. Authentic voices of citizens who do not want their daughters and sisters to become "sex workers" are replaced by the voice of the exploiters, which say that prostitution is good work for women. The result is a corruption of civil society. Many well-intentioned individual and groups start believing and promoting this supportive view of prostitution in the mistaken belief that they are helping women. In a number of countries, the largest anti-trafficking organizations are funded by states that have legalized prostitution. These funded NGOs often support legalized prostitution. They only speak about "forced prostitution" and movement of women by force, fraud, or coercion. They remain silent as thousands of victims leave their communities for "sex work." Effectively, these NGOs have abandoned the women and girls to the exploiters and men who purchase sex acts.

The Affs hopes to make prostitution better is wishful thinking they don't solve for anything they just make things worse

Donna M. **Hughes** July 3, 200**4** (Professor & Carlson Endowed Chair in Women's Studies University of Rhode Island)

Around the world today, there is a human rights crisis of sexual abuse of millions of women, children, and thousands of men in prostitution and other forms of sexual exploitation. There are regions of the world where prostitution has gone from being almost non-existent to a hundred million dollar moneymaking industry. I am going to talk about prostitution and sex trafficking. I don't believe you can talk about one without the other. They are inextricably linked. Those who favor legalized prostitution have led a 15-year campaign to delink them – to convince us that trafficking has nothing to do with prostitution. That is false. As countries and activists who favor legalization have tried to separate prostitution and trafficking, most of the global attention has focused on trafficking. I am happy that the conference organizers in Santiago have had the courage to address prostitution. Still, we should be clear that we have to talk about both prostitution and trafficking together. Sex trafficking is the process that delivers victims into prostitution. It includes the recruitment, harboring, movement, and methods by which victims are compelled to stay in prostitution, whether by violence, coercion, threat, debt, or cultural manipulation. Prostitution and sex trafficking are based on a balance between the supply of available victims and the demand for victims to provide the sex acts. Victims are recruited from marginalized, poor, and vulnerable populations. These potential victims may be from the same city or country as the exploiters, or they may be trafficked from other countries or continents. They may be women and girls who are poor, uneducated, and naïve, and therefore easy to control, or they may be educated, middle-class girls who have been sexually abused until their bodily integrity and identities are destroyed and they no longer know how to resist abuse and exploitation. Prostitution and trafficking begin with the demand for victims to be used in prostitution. It begins when men go in search of sex that can be purchased. In countries where prostitution is illegal, it begins when pimps place orders with their criminal networks for women and children. In 2 countries where prostitution is legal, it begins when brothels places job ads with government employment agencies. In places where buying sex acts is popular and profitable, pimps cannot recruit enough local women to fill up the brothels, so they have to bring in victims from other places. Let me give you the example of the Czech Republic. Ten to fifteen years ago, prostitution was rare, certainly, there wasn't a sex industry. Now, according to a study by the Czech Ministry of Interior, there are over 860 brothels in the Czech Republic, of which 200 are in Prague. The Czech Republic is a destination country for Western European sex tourists. By one estimate, 65 percent of men who buy sex acts there are foreigners. The capital city has the reputation of being a "stag party" capital of Europe, meaning it is a favorite beer and sex party spot for men, mainly Great Britain and Germany. There are almost 200 web sites on the Internet for prostitution services in the Czech Republic, up from 45 in 1997, that enable sex tourists to book their travel and appointments to buy sex acts before they leave home. The Czech police estimate that there are 15,000 women and children in prostitution in the Czech Republic. Thousands of them stand along the roads or wait in roadhouses along the German and Austrian borders. Mafias control most of the victims. The Czech-German border has become a well-known site for child prostitution. German men, in particular, cross the border to buy children for sex acts. All this expansion of the sex industry has occurred in the last decade. Over the past decade, the most popular proposed solutions to sex trafficking and "out of control" prostitution is legalization of prostitution. Prostitution has been legalized with the expectation that it would bring positive outcomes in Australia, the Netherlands, Germany, and recently, in New Zealand. Although legalization has resulted in big legal profits for a few, the other benefits have not materialized. Organized crime groups continue to traffic women and children and run illegal prostitution operations along-side the legal businesses. In Victoria, Australia, legalization of brothels was supposed to eliminate street prostitution. It did not; in fact, there are many more women on the street than before legalization. Last year, there were calls for legalizing street prostitution in order to "control it." Legalization does not reduce prostitution or trafficking; in fact, both activities increase because men can legally buy sex acts and pimps and brothel keepers can legally sell and profit from them. Cities develop reputations as sex tourist destinations. In the Netherlands, since legalization, there has been an increase in the use of children in prostitution. German lawmakers thought they were going to get hundreds of millions of euros in tax revenue when they legalized prostitution and brothels. But keeping with criminal nature of prostitution, the newly redefined "business owners" and "freelance staff" in brothels will not pay their taxes. Germany is suffering a budget deficit, and the Federal Audit Office estimates that the government has lost over two billion euros a year in unpaid tax revenue from the sex industry. Recently, lawmakers started to look for ways to increase collection of taxes from prostitutes. This has put the government into the traditional role of pimp – coercing prostitutes to give them more money. This predatory behavior of the government sharply contrasts to the promised benefits of legalization in Germany, such as government benefits and rights for women. Legalization was supposed to enable women to get health insurance and retirement benefits, and enable them to join unions The normalization of prostitution as work has not occurred in Germany, the Netherlands, or Australia. Following legalization, few women have signed up for benefits or for unions. The reason has to do with the basic nature of prostitution. It is not work; it is not a job like any other. It is abuse and exploitation that women only engage in if forced to or when they have no other options. Even where prostitution is legal, a significant proportion of women is trafficked. Women and children controlled by pimps and mafias cannot register with an authority or join a union. Women who are making a more or less free choice to be in prostitution do so out of immediate necessity – debt, unemployment, and poverty. They consider resorting to prostitution as a temporary means of making money, and assume as soon as a debt is paid or a certain sum of money is earned for poverty-stricken families, they will go home. They seldom tell friends or relatives what they are doing to earn money. They do not want to register with authorities and create a permanent record of being a prostitute. And unionization of "sex workers" is a fantasy; it is completely incompatible with the coercive and abusive nature of prostitution.

Politics or Elections DA

Answers to

Sex Work is empowering

Women and girls are not empowered from prostitution it is merely exploitation of the poor and those who are forced into prostitution

Donna M. **Hughes** July 3, 200**4** (Professor & Carlson Endowed Chair in Women's Studies University of Rhode Island)

The culture, particular mass media, is playing a large role in normalizing prostitution by portraying prostitution as glamorous or a way to make a lot of money quickly and easily. Of course, within the commercial world of entertainment, there are many connections between the film and publishing industries and pornography production, between tourist entertainment and sex tourism. Generally, the media is invested in supporting the expansion of the sex industry. Within academia, and to my great disappointment, the area of women's studies, prostitution is presented as "sex work." And "sex workers" are represented as being empowered, independent, liberated women. This is a false and destructive ideology that has invaded our courses in universities. We should be asking, "Who really benefits when we redefine prostitution as a legitimate form of work for women?" Do women and girls benefit? Where are these women and girls going to come from? Because as prostitution become legal and normal, more and more women and girls will be needed. Is this our solution to women's poverty and unemployment? Certainly, it will benefit the exploiters, and the state will easily solve the poverty and unemployment problem for one sector of society. Turn them into sex workers. Within the culture, churches are the voice of moral authority. Unfortunately, in the battle against prostitution, the voice of moral authority that condemns all forms of sexual exploitation and abuse is being lost. Some churches are compromising on their mission and their vision. In years past, they have been accused of being "moralistic," so they have retreated into "non-judgmental" 6 positions and ways of addressing prostitution. They need to reexamine their retreat from this issue and reengage in the debate. There is an important role for churches to play in describing the harm of prostitution to women, children, families, and communities. Religious communities, from the grassroots to the leadership, need to use their voice of authority to combat the increasing sexual exploitation of victims and its normalization.

Consumers shouldn't be criminalized

Consumers of sex are not just "lonely guys" but men who are just fine and often abuse prostitutes

Donna M. **Hughes** July 3, 200**4** (Professor & Carlson Endowed Chair in Women's Studies University of Rhode Island)

Their Matthew 08 Card talks about how we should criminalize consumers because theyre just "acting on impulses" and some stuff about how they're usually disabled or don't have good relationships with women. This card answers that.

The men, the buyers of commercial sex acts, are the ultimate consumers of trafficked and prostituted women and children. They use them for entertainment, sexual gratification, and acts of violence. It is men who create the demand, and women and children who are the supply. I

recently completed a report for the TIP Office, U.S. Department of State on the demand side of sex trafficking that focuses on the men who purchase sex acts. Typically, when prostitution and sex trafficking are discussed, the focus is on the women. The men who purchase the sex acts are faceless and nameless. We need to shine more light on these men, their behavior, and their choice and decision making to purchase sex acts. Research on men who purchase sex acts has found that many of the assumptions we make about them are myths. Seldom are the men lonely or have sexually unsatisfying relationships. In fact, men who purchase sex acts are more likely to have more sexual partners than those who do not purchase sex acts. They often report that they are satisfied with their wives or partners. They say that they are searching for more – sex acts that their wives will not do or excitement that comes with the hunt for a woman they can buy for a short time. They are seeking sex without relationship responsibilities. A significant number of men say that the sex and interaction with the prostitute were unrewarding and they did not get what they were seeking; yet they compulsively repeat the act of buying sex. Researchers conclude that men are purchasing sex acts to meet emotional needs, not physical needs Men who purchase sex acts do not respect women, nor do they want to respect women. They are seeking control and sex in contexts in which they are not required to be polite or nice, and where they can humiliate, degrade, and hurt the woman or child, if they want.

Medical Records JDI

Medical Records Misc Addendum

2AC – AT: T Substantial

1. We meet - even if medical records haven't always made up a huge portion of surveillance, the shift to electronic records has vastly increased their dissemination and ability to be surveilled

Zheng et. al 14

(Hongzhang, Holly Gaff, Gary Smith, and Sylvain DeLisle, NCIB, "Epidemic Surveillance Using an Electronic Medical Record: An Empiric Approach to Performance Improvement," 2014, http://www.ncbi.nlm.nih.gov/pmc/articles/PMC4090236/) /jdi-mm

Electronic data offer the opportunity for more timely and complete gathering of health information compared to what has historically been achieved through manual, paper-based reporting [8]. The increasingly rapid deployment of electronic medical records (EMR) [9] **broadens the array of data that could be recruited for surveillance purposes** [10], [11]. EMR-based surveillance could improve our response to a serious outbreak of ARI not only by allowing earlier recognition, but also by offering an efficient conduit for the information necessary to manage actual patients and to keep abreast of the evolving epidemic [12]–[14]. At present, however, the tantalizing potential of EMR-based surveillance remains in the making [15]–[18]. To gain insight on the conduct of surveillance in an EMR environment, we previously evaluated how EMR entries should be assembled to discover individuals with ARI [19]. We found that computerized free-text analyses aimed at uncovering ARI symptoms documented in outpatient clinical notes could complement diagnostic codes and other structured data to improve case detection. In this report, we asked if those EMR-enabled gains in case-detection could accelerate the discovery of ARI outbreaks. Using software to reconstitute a surveillance system operating prospectively on historical data sets, we compared alternative case-detection approaches for their ability to reduce the delay in detecting a modeled community outbreak of influenza. Our approach and results begin to chart how EMR-based information could be systematically organized to better serve public health surveillance.

2. And, counter-interpretation- the curtailment has to be substantial-

3. We meet our counter interpretation, drone courts are legal restrictions on the targeted killing activities of the president

Plan meets substantial curtailment- eliminates surveillance provisions in 1AC

Association of State and Territorial Health Care Officials, No Date

(Association of State and Territorial Health Care Officials, "Comparison of FERPA and HIPAA Privacy Rule for Accessing Student Health Data," http://www.astho.org/Programs/Preparedness/Public-Health-Emergency-Law/Public-Health-and-Schools-Toolkit/Comparison-of-FERPA-and-HIPAA-Privacy-Rule/) /jdi-mm

HIPAA In general, a state law or regulation that conflicts with HIPAA and the Privacy Rule is preempted by the federal law. The Privacy Rule contains exceptions that allow differing state requirements to control if the state law: (1) relates to privacy of individually identifiable health information and provides greater protections or rights than the Privacy Rule; (2) requires the reporting of disease, injury, child abuse, birth, or death, and for public health surveillance, investigation, or intervention; or (3) requires certain reporting by health plans, such as for management or financial audits or evaluations. States can also request a determination that a conflicting state law will not be preempted by HIPAA if the state can demonstrate one of the conditions listed in the rule, including, but not limited to, that the conflicting provision serves a compelling public health, safety, or welfare interest, and, if the conflicting provision relates to a privacy right, that the intrusion into privacy is warranted given the public interest being served.

4. Prefer our interpretation

a. Education - having substantial modify "surveillance" means that only the NSA aff is topical, destroys aff innovation and potential for small aff ground, skirts most interesting lit bases, and dis-incentivizes research

b. Predictability— medical surveillance is the crux of the privacy debate, and there are links to enough to any of the topic DA's while maintaining aff flexibility

5. Prefer reasonability over competing interpretations- competing interpretations yields shallow standard debates- if the aff doesn't make debate impossible than you shouldn't vote against us

2AC – AT: Biosurveillance good

Biosurveillance shouldn't be the justification to erode privacy issues- privacy critical to resolving any bioterror attack- no turns

Hodge et al 03

(James, is an Assistant Public Health Professor, Johns Hopkins Bloomberg School of Public Health; Adjunct Professor of Law, Georgetown University Law Center; and Executive Director, Center for Law and the Public's Health at Georgetown and Johns Hopkins Universities. Erin Fuse Brown is a J.D./M.P.H. candidate at Georgetown University Law Center and the Johns Hopkins Bloomberg School of Public Health, and a research assistant for the Center for Law and the Public's Health. Jessica P. O'Connell is a J.D./M.P.H. candidate at Georgetown University Law Center and the Johns Hopkins Bloomberg School of Public Health, and a research assistant for the Center for Law and the Public's Health, "The HIPAA Privacy Rule and Bioterrorism Planning, Prevention, and Response," 2003) //jdi-mm

While individual privacy interests should not trump societal needs for health data sharing during a bioterrorism event, **they cannot simply be dismissed. Protecting individual privacy and communal health and safety are synergistic. Maintaining some standard of privacy of identifiable health data even during a bioterrorism event may be essential to accomplishing public health and law enforcement objectives.** People will not tolerate objectionable privacy abuses by government or the private sector. Failing to respect the confidentiality of a person's health information leads individuals to avoid, or limit their participation in, public health programs, criminal investigations, research, and even clinical care.(3) Large-scale avoidance of these services or activities during a bioterrorism event would be **disastrous**. Conversely, **everyone benefits from governmental and societal efforts to control the spread of disease or other conditions resulting from a bioterrorism event.** Individuals alone cannot ensure their safety. They need to cooperate with public health and other authorities to protect their own and others' health and welfare. People must be willing to confidentially share their health data for public health or law enforcement purposes during a bioterrorism event.

2AC – AT: Informed Consent CP

Informed consent won't solve- people have no desire to share their information

National Research Council 08

(National Research Council, Committee on Technical and Privacy Dimensions of Information for Terrorism Prevention and Other National Goals Committee on Law and Justice and Committee on National Statistics Division on Behavioral and Social Sciences and Education Computer Science and Telecommunications Board Division on Engineering and Physical Sciences, Library of Congress Cataloging-in-Publication Data, "Protecting Individual Privacy in the Struggle Against Terrorists: A Framework for Assessment," 2008, https://epic.org/misc/nrc_rept_100708.pdf) //jdi-mm

The implications of these findings for public support of databases designed to monitor public health threats are threefold. First, **concerns about privacy make respondents hesitant about any online health database system.** Second, respondents expect to exert no small degree of control over how their medical information is used and to whom it is released. Third, when respondents perceive personal benefits, they are more willing to consider online storage and sharing of information, but they do not appear to be motivated to share information by broader concerns about social well-being or by any sense of civic duty. Thus, to the extent that members of the public regard disease outbreaks or bioterrorist attacks as remote possibilities that will probably not affect them directly, they are unlikely to wish to share medical information to help track such occurrences.

Informed Consent won't solve, efforts are autonomous

Sandip **Patel**, Feb 11 **2014** [Sandip Patel, MD, is an expert on cancer immunotherapy and early phase clinical trials involving immunotherapy across all types of cancer, "The Limits of Informed Consent", Feb 11 2014, https://scholarblogs.emory.edu/philosophy316/2014/02/11/the-limits-of-informed-consent/]

The autonomy of the patient has triumphed, in legal terms at least. Doctors and health care personnel are legally required to disclose information about treatments to patients, and patients have the legal right to say "yes" or "no" to any treatment. But how practical is informed consent? The legal implementation of informed consent seems to be mostly a matter of filling out extra paperwork. So **that seems practical enough. On the other hand, actually practicing the moral values behind informed consent is much more difficult.** We value the freedom to choose on so many levels. We have a right to choose as consumers, as voters, as citizens and as competent people in general – so then why not as patients? Of course **patients should have a right to consider multiple opinions, assess alternative treatments, and then make a choice on their own. But in reality, a patient's autonomy is highly limited. A lot of the limiting factors are neither inconsequential nor easily avoidable.** In Barriers to informed consent, Lidz et al. outline how patient trust, physician expertise, acute illnesses, and complex medical systems make true informed consent difficult to achieve. Are we morally obligated to try to overcome these obstacles? Or can they be viewed as the practical, real-world limits to our abstract ideals of patient autonomy? This question isn't really about obstacles like access to healthcare or the complexity of the healthcare system. There's no question that we should be trying to increase access to care and streamlining the system. The interesting obstacles are those that deal with the doctor-patient relationship. Should we be trying to change this relationship on a moral basis? Let's consider patient trust and physician expertise – both important obstacles to informed consent. **Patients often**

don't really want to make a decision based on what they know about their medical condition. They instead trust the physician enough to make such decisions for them. I see this as a clear act of autonomy. It's a very rational choice to trust a trained professional's informed decision over one's own, likely less-informed decision. Ah but that's where physicians have to make sure patients are fully and objectively informed, right? Well even if a physician explains the relevant diagnosis and treatment to the patient in an easily comprehendible way, most patients will not know the essential mechanisms and pathology behind the physician's decision. They'll instead be given a simplified picture of a complex system – one that is inevitably going to be biased towards the physician's decision anyway. We can't blame physicians for such simplified, biased explanations any more than we can blame scientists for being biased towards one particular theory or paradigm. In the words of Galileo, "**it is not within the power of the practitioners of demonstrative sciences to change opinion at will**," (p 125). **They are compelled to believe what they believe by the power of reason.**

Informed consent wouldn't solve the trust advantage- causes manipulation of research data- studies prove

Loftus and Fries 08

(Elizabeth, Distinguished Professor at the University of California - Irvine. She holds faculty positions in three departments (Psychology & Social Behavior; Criminology, Law & Society; and Cognitive Sciences), and in the School of Law, and is also a Fellow of the Center for the Neurobiology of Learning and Memory. She received her Ph.D. in Psychology from Stanford University, James, Professor of Medicine at Stanford University School of Medicine, Mcgill Journal of Medicine, "The Potential Perils of Informed Consent," 2008, http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2582663/) /jdi-mm

At the time we were immersed in this issue, we conducted an unpublished pilot study with patients at Stanford University Medical School who had been diagnosed with scleroderma and were enrolled in an experiment testing the efficacy of a particular drug cocktail (propanolol and alpha-methyldopa). The known side effects of the drugs did include upset stomach, tearfulness, dizziness, and headache. Before beginning the clinical trial involving the drug or placebo, patients received either a standard informed consent message or a "special message." Both messages informed them of possible side effects of the drug, and listed the known side effects, plus some implausible made-up ones that had not been associated with the drug (e.g., ringing in ears, burning sensation in feet). Some of our subjects received a "special message" as part of their "informed consent." It read as follows: "You should keep in mind one important point about these possible side effects. Research has shown that simply mentioning possible annoying symptoms causes some people to experience these symptoms – even when no drug is taken at all. This happens because mention of the symptoms causes some people to expect that they will experience them, and a person's expectations can then lead to the actual experience. Very few people will actually have these problems and you can help yourself guard against these sorts of discomfort by keeping yourself optimistic and stopping yourself from expecting that side effects are going to happen to you." Our pilot study revealed, not surprisingly, that subjects experienced side effects, some of which were physiologically unlikely. The suggestion in the informed consent led even those given a placebo to this unpleasant fate. A special message that explained the powerful role that expectations can have in producing unlikely symptoms reduced the reported side effects, and also decreased somewhat the use of medications to treat those unlikely symptoms. Our hope is that future researchers will do a full scale study that tests the impact of variations in informed consent rituals. While our special message may not be the best message to accomplish these hoped-for benefits, and we did not study whether it will work with different kinds of drugs or patients, our preliminary result should pique the interest of future researchers in considering both the positive and negative impacts of information that they ply their subjects and patients with. One size is not likely to fit all. Flexibility in informed consent protocols might convey to patients and subjects their right to as little harm as possible.

Must prohibit all NSA authority to solve- only prior approval solves

TF '14 [Tech Freedom, April 1, 2014, TF, CDT, and 40 others tell Congress what real NSA reform should look like, http://techfreedom.org/post/81391689035/tf-cdt-and-40-others-tell-congress-what-real-nsa]

The White House has expressed support for reining in the NSA's bulk collection of Americans' phone records, but with multiple bills in Congress it's uncertain which specific reforms will be included in the debate moving forward. To ensure whichever NSA reform bill advances is as strong as possible, TechFreedom and 41 other nonprofits and businesses have sent a joint letter to key policymakers outlining what any bill aiming to reform bulk surveillance should include.

Read the text below, and see the full letter for the list of signatories and recipients:

We the undersigned are writing to express support for ending the government's bulk collection of data about individuals. We strongly urge swift markup and passage of the USA FREEDOM Act (H.R.3361), which would enact appropriate surveillance reforms without sacrificing national security. This letter focuses on bulk collection, but overbroad NSA surveillance raises many more privacy and security issues that Congress and the Administration should address.

We appreciate that Congress and the Administration are converging on consensus that the National Security Agency's (NSA) bulk collection of telephone records must end. Among other things, legislation on bulk collection should:

Prohibit bulk collection for all types of data, not just phone records. Section 215 of the PATRIOT Act applies broadly to business records, and the Department of Justice has claimed authority for bulk collection of any records that reveal relationships between individuals. Legislation that focuses only on phone records may still allow for the bulk collection of, for example, Internet metadata, location information, financial records, library records, and numerous other records that may help "identify unknown relationships among individuals."

Prohibit bulk collection under Section 214 as well as Section 215 of the PATRIOT Act, **or under any other authority**. While the NSA's bulk collection of telephone records under the purported authority of Section 215 has received considerable attention, the NSA engaged in the bulk collection of Internet metadata using the Pen/Trap authority under Section 214 until 2011. Legislation that focuses solely on Section 215 would still fail to prohibit the bulk collection of phone and Internet metadata using Section 214, the National Security Letter (NSL) statutes, or another authority.

Require prior court approval for each record request. Under current law, the government must obtain approval from the FISA court before it can force private entities to turn over records (in bulk or otherwise) under Sections 215 and 214 of the PATRIOT Act. In addition, President Obama, in his January 17th policy announcement, established that a judicial finding is required before the government can query the phone records that the NSA collected in bulk. Congress should leave this key safeguard in place. If there is concern that the FISA Court would move too slowly to authorize domestic surveillance beforehand, then **the solution should be to provide the FISA Court with sufficient resources**.

Impacts

Drug-Resistant Diseases

Drug-resistant diseases rising now—will cause an unstoppable epidemic

Sample 13 (Joseph, [Ian Sample is science editor of the Guardian. He has a PhD in biomedical materials from Queen Mary's, University of London], *The Guardian*, 1/23/13, http://www.theguardian.com/society/2013/jan/23/antibiotic-resistant-diseases-apocalyptic-threat)

Britain's most senior medical adviser has warned MPs that the **rise in drug-resistant diseases could trigger a national emergency comparable to a catastrophic terrorist attack, pandemic flu or major coastal flooding**. Dame Sally Davies, the chief medical officer, said the threat from infections that are resistant to frontline antibiotics was so serious that the issue should be added to the government's national risk register of civil emergencies. She described what she called an "**apocalyptic scenario**" where people going for simple operations in 20 years' time die of routine infections "because we have run out of antibiotics". The register was established in 2008 to advise the public and businesses on national emergencies that Britain could face in the next five years. The highest priority risks on the latest register include a deadly flu outbreak, catastrophic terrorist attacks, and major flooding on the scale of 1953, the last occasion on which a national emergency was declared in the UK. Speaking to MPs on the Commons science and technology committee, Davies said she would ask the Cabinet Office to add antibiotic resistance to the national risk register in the light of an annual report on infectious disease she will publish in March. Davies declined to elaborate on the report, but said its publication would coincide with a government strategy to promote more responsible use of antibiotics among doctors and the clinical professions. "We need to get our act together in this country," she told the committee. She told the Guardian: ""**There are few public health issues of potentially greater importance for society than antibiotic resistance**. It means we are at increasing risk of developing infections that cannot be treated – but resistance can be managed. Advertisement "That is why we will be publishing a new cross-government strategy and action plan to tackle this issue in early spring." The issue of drug resistance is as old as antibiotics themselves, and arises when drugs knock out susceptible infections, leaving hardier, resilient strains behind. The survivors then multiply, and over time can become unstoppable with frontline medicines. Some of the best known are so-called hospital superbugs such as MRSA that are at the root of outbreaks among patients. "In the past, most people haven't worried because we've always had new antibiotics to turn to," said Alan Johnson, consultant clinical scientist at theHealth Protection Agency. "What has changed is that the development pipeline is running dry. **We don't have new antibiotics that we can rely on** in the immediate future or in the longer term." Changes in modern medicine have exacerbated the problem by making patients more susceptible to infections. For example, cancer treatments weaken the immune system, and the use of catheters increases the chances of bugs entering the bloodstream. "We are becoming increasingly reliant on antibiotics in a whole range of areas of medicine. If we don't have new antibiotics to deal with the problems of resistance we see, we are going to be in serious trouble," Johnson added. The supply of new antibiotics has dried up for several reasons, but a major one is that drugs companies see greater profits in medicines that treat chronic conditions, such as heart disease, which patients must take for years or even decades. "There is a broken market model for making new antibiotics," Davies told the MPs. Davies has met senior officials at the World Health Organisation and her counterparts in other countries to develop a strategy to tackle antibiotic resistance globally. Drug resistance is emerging in diseases across the board. Davies said 80% of gonorrhea was now resistant to the frontline antibiotic tetracycline, and infections were rising in young and middle-aged people. Multi-drug resistant TB was also a major threat, she said. Another worrying trend is the rise in infections that are resistant to powerful antibiotics called carbapenems, which doctors rely on to tackle the most serious infections. Resistant bugs carry a gene variant that allows them to destroy the drug. What concerns some scientists is that **the gene variant can spread freely between different kinds of bacteria,** said Johnson.

A drug-resistant pandemic will destroy society and cause extinction

Scientific American 14 (Dina Maron, [associate editor for health and medicine], *Scientific American*, 4/30/14, http://www.scientificamerican.com/article/antibiotic-resistance-is-now-rife-across-the-globe/)

A first-ever World Health Organization assessment of the growing problem calls for rapid changes to avoid the misery and deaths of a potential "post-antibiotic era" Dangerous **antibiotic-resistant bacteria and other pathogens have now emerged in every part of the world and threaten to roll back a century of medical advances.** That's the message from the World Health Organization in its first global report on this growing problem, which draws on drug-resistance data in 114 countries. "A post antibiotic-era—in which **common infections and minor injuries can kill**—far from being an apocalyptic fantasy, is instead a **very real** possibility **for the 21st century**," wrote Keiji Fukuda, WHO's assistant director general for Health Security, in an introduction to the report. The crisis is the fruit of several decades of overreliance on the drugs and careless prescribing practices as well as routine use of the medicines in the rearing of livestock, the report noted. Antibiotic resistance is putting patients in peril in both developing and developed countries, as bacteria responsible for an array of dangerous infections evolve resistance to the drugs that once vanquished them. Gonorrhea, once well treated by antibiotics, is once again a major public health threat due to the emergence of new, resistant strains. Drugs that were once a last resort treatment for the sexually transmitted disease—which can lead to infertility, blindness and increased odds of HIV transmission if left untreated—are now the first-line treatment and are sometimes ineffective among patients in countries such as the U.K., Canada, Australia, France, Japan, Norway, South Africa, Slovenia and Sweden. Drugs to treat Klebsiella pneumoniae—a common intestinal bacteria that can cause life-threatening infections in intensive care unit patients and newborns—no longer work in more than half of patients in some countries. And fluoroquinolones, drugs used to treat urinary tract infections, are also ineffective in more than half of sufferers in many parts of the world. Efforts to limit the spread of multidrug-resistant tuberculosis, malaria and HIV are also all under threat due to increasing bacterial resistance. Although the development of resistance is to be expected over time, overuse of the drugs has accelerated the process by supplying additional selective pressure, noted the report, which was authored by an extensive team of researchers with WHO. And there are few drugs to replace the ones that are now ineffective: The last entirely new class of antibacterial drugs was discovered 27 years ago, according to the report. WHO warns that **the situation could have sweeping effects on global medicine, economics and societies unless global actions are taken swiftly.** A dearth of effective antibiotics will mean that **infected patients will need more extensive care, require longer hospital stays and die in greater numbers**. To tackle the problem, the report calls for global, coordinated actions on the scale of those that nations are taking to mitigate and adapt to climate change.

Impact UQ

Drug-resistance exists NOW—death tolls are massive and will just keep getting worse

McKenna 14 (Maryn McKenna, [Maryn McKenna is a journalist for national magazines and a Senior Fellow of the Schuster Institute at Brandeis University. She is the author of SUPERBUG and BEATING BACK THE DEVIL, and is writing a book about food for National Geographic.], *Wired*, "The Coming Cost of Superbugs: 10 Million Deaths per Year."

If you weren't taking antibiotic resistance seriously before, now would be a good time to start. A project commissioned by the British government has released estimates of the near-future global toll of antibiotic resistance that are jaw-dropping in their seriousness and scale: **10 million deaths per year**, more than cancer, **and at least $100 trillion in sacrificed gross national product.** The project, called the Review on Antimicrobial Resistance, was commissioned by UK Prime Minister David Cameron last summer, a follow-on to the dire report issued in 2013 by the UK's Chief Medical Officer, which ranked resistance as serious a threat to society as terrorism. To chair the effort, Cameron recruited Jim O'Neill, previously the head of economic research for Goldman Sachs (and the person credited with coining the acronym BRICs — Brazil, Russia, India, China — as part of forecasting that global economic power would shift south and east). The Review is envisioned as a two-year project that will publish periodically, ending in July 2016 with recommendations for actions to blunt the threat that antibiotic resistance poses worldwide. (The project is supported by the nonprofit Wellcome Trust.) Their first

paper, released late last week, is based on work by two consulting teams, from RAND and KPMG, examining just the effect of resistance in six pathogens: three commonly resistant bacterial infections, Klebsiella pneumoniae, E. coli and MRSA; and three globally important diseases: HIV, TB and malaria. It doesn't examine the effect of resistance in other pathogens; and it doesn't attempt to estimate either healthcare costs or secondary social costs (more on that below). So it is a conservative effort, several different ways. And yet, its baseline estimates of the size of the global problem are breathtaking. Among them: **Antibiotic resistance currently accounts for an estimated 50,000 deaths in the US and Europe**, which have surveillance to support those numbers. (The CDC puts the number for the US at 23,000.) But the project estimates that the actual current death toll is **700,000 worldwide**. If antibiotic resistance were allowed to grow unchecked — that is, if there were no successful efforts to curb it or no new drugs to combat it (the latter is very plausible) — the number of deaths per year would balloon to 10 million by 2050. For comparison, that is more than the 8.2 million per year who currently die of cancer and 1.5 million who die of diabetes, combined. Those deaths would cost the world up to 3.5 percent of its total gross domestic product, or up to $100 trillion by 2050. Moreover, the toll of deaths — and the cost of them — would fall unevenly across the world, with the global south and Asia suffering to a greater extent and losing greater amounts of income. In one example, they estimate that 25 percent of all deaths in Nigeria could be caused by resistance if trends continue unchecked. Notably, the project doesn't attempt to estimate what they call the secondary costs of resistance: that is, the **cost of having to forego routine medical procedures such as cancer care, joint and organ transplants and surgeries**, because without antibiotics, the danger of infection would be too great. (They estimate that C-sections alone contribute 2 percent to annual GDP.) It also doesn't try to estimate what the healthcare costs would be of caring for those additional resistance illnesses and deaths.

Internal

Trust Key

Lack of patient trust would make it impossible to treat diseases

AAOS 10 (S. Terry Canale, MD, *American Academy of Orthopedic Surgeons,* "Patient-Physician Trust," July 2010, http://www.aaos.org/news/aaosnow/jul10/youraaos1.asp)

The importance of trust Why is trust so important in the medical field? Because of one simple concept—"adherence." I am not going to let anyone put me to sleep—much less operate on me—if I don't trust the situation or the person performing the surgery. I'm not going to take my medication if I don't trust the person prescribing it. Even if you don't believe in trust, believe that adherence is vitally important for the well-being of our patients. Today in the United States, one third of all new prescriptions are not filled, one third are only partially taken, and one third are filled and taken as prescribed. Some of that may be due to economics, when a physician says "Take this," the trusting patient will speak up, ask for help, and bend over backwards to do what needs to be done. So how do we as physicians maintain the trust of our patients? By being honest with others and honest with ourselves. Rigorous honesty is the key to trust. Recently, medicine—orthopaedics in particular—has come under scrutiny from the Department of Justice. Device companies were hit hard. We should learn from this—transparency is extremely important and there is nothing wrong with being a consultant as long as the arrangement is legitimate and transparent, one you'd be proud to have featured on the front page of The Wall Street Journal.

New Drugs Key

Development and adoption of new drugs is key to halt the pandemic

Chambers 15 (Henry F, [Dr. Chambers clinical and research interests are antimicrobial drug resistance, staphylococcal infections, experimental therapeutics, and epidemiology and pathogenesis of disease caused by Staphylococcus aureus. He is editor for the Sanford Guide to Antimicrobial Therapy and he has over 200 original publications and textbook chapters in the areas of drug resistance, endocarditis, bacterial infections, and staphylococcal diseases.], *Healio*, "Drug Development Critical for Combating Drug Resistance," June 2015, http://www.healio.com/infectious-disease/vaccine-preventable-diseases/news/print/infectious-disease-news/%7Bec88f3ba-ee8d-4303-836b-ad0edf184133%7D/drug-development-critical-to-combating-antibiotic-resistance)

Since they were first discovered in 1928, antibiotics have saved countless lives from deadly infections. Continued antibiotic misuse, however, has contributed to antimicrobial resistance, a significant threat to human health that sickens more than 2 million people and kills at least 23,000 annually in the United States, according to the CDC. he global view is just as bleak. WHO has documented resistance worldwide to carbapenem antibiotics — the therapy of last resort in the treatment ofKlebsiella pneumoniae — and widespread resistance to fluoroquinolones. In some countries, fluoroquinolones are ineffective in more than half of treated patients. "The problem of **antibiotic resistance continues to grow**, and our inability to meet the challenge, in particular with antibiotics, is even greater than it was 5 years ago," Helen W. Boucher, MD, director of the Infectious Diseases Fellowship Program at Tufts Medical Center and associate professor at Tufts University School of Medicine, told Infectious Disease News. Return to a pre-antibiotic era What is more, there are few prospects in the antibiotic research and development pipeline, which could mean a return to the pre-antibiotic era, when simple infections were a death sentence. "We're coming dangerously close to a time when we have to tell our patients that we can't offer therapies that we really think they deserve, such as organ transplants, chemotherapy for cancer or neonatal intensive care," said Boucher, who also is a member of the Infectious Diseases Society of America's (IDSA) Antimicrobial Resistance Committee. "This is incredibly scary. We don't want to get to another pre-antibiotic era." **Combating antibiotic resistance is possible, however, with a multipronged approach that includes infection prevention, antibiotic stewardship and new drug development**. To encourage development of antibacterial agents, in 2010 the IDSA established its 10 x '20 initiative, a global call to develop 10 new antibiotics by 2020. This initiative is primarily focused on developing systemically administered antibiotics that target the ESKAPE pathogens:Enterococcus faecium, Staphylococcus aureus, Klebsiella pneumoniae,Acinetobacter baumanii, Pseudomonas aeruginosa, and Enterobacter species. "The 10 x '20 initiative is really just a rallying point to identify problems to get stakeholders thinking about what the issue is," Stephen B. Calderwood, MD,chief of the division of infectious diseases at Massachusetts General Hospital and president of the IDSA, said in an interview. At the midpoint of the initiative, Infectious Disease News spoke with experts about the success of the initiative so far, the federal response to antibiotic resistance and the challenges that remain in creating a more robust antibiotic pipeline.

Congress CP

1nc

The United States Congress should <insert plan's mandates> by enacting the Surveillance State Repeal Act.

The SSRA effectively curtails US domestic surveillance

Buttar 15 (Shahid, executive director @ Bill of Rights Defense Committee in its efforts to restore civil liberties, constitutional rights, and rule of law principles undermined by law enforcement and intelligence agencies within the United States, 4/18, "Can the Surveillance State Repeal Act Shift the Course on Spying?" http://www.occupy.com/article/can-surveillance-state-repeal-act-shift-course-spying)

This spring, Congress will consider whether to extend three provisions of the notoriously controversial PATRIOT Act set to expire in June. When it debates whether to allow mass surveillance, it will do so in the dark, with Members unaware of many crucial facts. How vast are government surveillance programs? Have they actually helped protect national security, or just the job security of the officials who have repeatedly lied to protect their powers and budgets? Is mass surveillance even constitutionally permissible in the first place, given our Founders' multiple attempts to restrain executive power run amok? Eager to reset the debate and anchor it in long overdue transparency, a bipartisan block of representatives have introduced a bill to **restore civil liberties, privacy, and freedom of thought**. The Surveillance State Repeal Act, HR 1466, would do this by repealing the twin pillars of the NSA dragnet: the PATRIOT Act (not only the three expiring provisions) and the 2008 FISA amendments. On multiple occasions, executive officials have lied under oath to congressional oversight committees about the scope of domestic surveillance. Yet the very same officials still appear in oversight hearings as if they maintained any credibility. It took whistleblowers resigning their careers to prove that senior government officials' blithe assurances to Congress were in fact self-serving lies. Some members of Congress paid attention: the authors of the PATRIOT Act moved to curtail their own legislative opus, and have encouraged their colleagues not to reauthorize the expiring provisions unless they are first curtailed. HR 1466 (the SSRA) **represents a profound challenge** by members of Congress from across the political spectrum fed up with the national security establishment and its continuing assault on our Constitution. By repealing the twin pillars of the surveillance dragnet, the SSRA would essentially shift the burden of proof, forcing intelligence agencies like the NSA and FBI to justify the expansion of their powers from a constitutional baseline, rather then the illegitimate status quo. Most policymakers forget the 9/11 commission's most crucial finding: the intelligence community's failures that enabled the 9/11 attacks were not failures of limited data collection, but rather failures of data sharing and analysis. Over the last 15 years, Congress has allowed the agencies to expand their collection capacities, solving an imaginary problem while creating a host of real threats to U.S. national security far worse than any act of rogue violence: the specter of state omniscience, immune from oversight and accountability, and thus vulnerable to politicization. This was among the fears of which President Eisenhower warned us in his last speech as President. Meanwhile, the SSRA would preserve what the PATRIOT Act's authors have said they meant to authorize: targeted investigations of particular people suspected by authorities to present potential threats. HR 1466 would also advance transparency, both by protecting conscientious whistleblowers from the corrupt retaliation of agencies and careerists, and by giving judges on the secret FISA court access to technical expertise they have been denied. Finally, the bill would directly address disturbing government duplicity, prohibiting agencies from hacking encryption hardware and software, and from using an executive order authorizing foreign surveillance as a basis to monitor Americans. Mass surveillance has never been popular in America. Hundreds of cities and multiple states have raised their voices seeking a restoration of constitutional limits on an increasingly imperial federal executive. Nor is mass surveillance constitutional. A 1979 case contorted by agency lawyers into providing a legal basis for surveillance stands for nothing of the sort: Smith v Maryland was a case addressing targeted surveillance of a particular person, based on reasonable suspicion, limited to a particular time. Intelligence agencies today monitor every American, without any basis for suspicion, all the time. Members of Congress who remember their oaths of office should support the

SSRA to force a **long overdue transparent debate**. And Americans who value privacy, checks and balances, or freedom of thought should take a moment to educate Members of Congress who might not.

SSRA Solves – 2nc

SSRA solves – transparency and strict limits on surveillance

Eddington 15 (Patrick, policy analyst in Civil Liberties and Homeland Security at the CATO Institute, "Legislators Move against Mass Surveillance," 3/24, http://www.cato.org/publications/commentary/legislate-move-against-mass-surveillance)

Nearly two years after Edward Snowden's sensational revelations about the scope of the National Security Agency's mass surveillance programs targeting the communications of Americans, Congress has yet to pass legislation to end those programs. Two House lawmakers have just offered a bill to do just that. Reps. Thomas Massie (R-Ky.) and Rep. Mark Pocan (D-Wis.) are the House sponsors of the Surveillance State Repeal Act, a bill which **would not only end the mass surveillance laws currently on the books** (the PATRIOT Act and the FISA Amendments Act), **but also prevent the federal government** from forcing tech companies to build NSA-exploitable flaws into smartphones, tablets, WiFi routers, and other devices. This so-called "back door" issue has become a major political controversy ever since FBI Director James Comey publicly criticized companies like Apple for building high-quality encryption into applications like iMessage. Privacy and security experts are in broad agreement that sound encryption is an essential privacy and online commerce tool, and the bill would prohibit the federal government from forcing companies to make products with defective encryption. The bill would **dramatically strengthen** whistleblower protections for federal intelligence agency employees and contractors. This portion of the bill was inspired by the searing experience of former NSA senior official Thomas Drake, who, a decade before Edward Snowden came on the scene, attempted to alert Congressional investigators and the Defense Department's own inspector general of waste, fraud and abuse. Despite complying with all laws and regulations for reporting such abuse, Drake was wrongfully prosecuted by the Justice Department. The bill would make this kind of retaliation a firing offence. **The SSRA would also improve congressional oversight** of surveillance activities by mandating Government Accountability Office compliance audits to ensure that previously collected data on Americans is destroyed unless an American is the subject of an ongoing federal investigation. The bill has the support of groups from across the political spectrum–from the libertarian-leaning FreedomWorks and Campaign for Liberty to progressive groups like CREDO Action, Demand Progress, and the Bill of Rights Defense Committee. In June 2014, portions of an earlier version of the SSRA were added as an amendment to the House version of the Fiscal Year 2015 Defense Department appropriations bill. The amendment, offered by Massie and Rep. Zoe Lofgren (D-Calif.) A), included a prohibition on searching the stored communications of Americans under Sec. 702 of the FISA Amendments Act, as well as a prohibition on government-mandated "back doors" in tech products. That amendment passed by a bipartisan, veto-override majority of 293–123, a victory made possible in part because of the announcement by FreedomWorks that it was scoring the amendment vote as a "key vote YES." It was the first time that an electorally active interest group had weighed in on a vote over NSA mass surveillance and the threat it represents to basic Fourth Amendment protections. FreedomWorks' support for a full repeal of the mass surveillance apparatus in place for nearly 14 years is a major political development. In renewing the fight to reform America's surveillance practices, Massie and Pocan have the clock on their side. Three existing provisions of the PATRIOT Act are due to expire on June 1st, and executive branch officials are once again fear mongering about the prospect, especially since Congress will adjourn on May 22 for a long Memorial Day recess that will run beyond the provisions' expiration date. Civil liberties advocates argue that all three provisions should be allowed to expire, especially Sec. 215 of the PATRIOT Act, which was the source of the metadata mass surveillance program exposed by Snowden. The pressure of that looming expiration date provides an opening for Massie, Pocan and other surveillance reformers **to force real changes** in surveillance law through Congress. In making the attempt, they will not only have to deal with reluctant colleagues in both chambers, but a U.S. intelligence community and federal law enforcement leadership that is even now still seeking to weaken basic internet security standards in the name of "national security". One of the most important public battles over the issue of security versus surveillance is about to begin.

SSRA solves – imposes MEANINGFUL limits on government surveillance

Wheeler 4/21/15 (Marcy, Columnist @ Salon + EmptyWheel.net, "The government's bogus PATRIOT games: Why latest spying "reforms" won't do much," http://www.salon.com/2015/04/21/the_governments_bogus_patriot_games_why_latest_spying_reforms_wont_do_much/)

Congress has just a month and a half left to decide what to do about a bunch of laws governing surveillance. Most of the attention on this time crunch has focused on one provision of the PATRIOT Act scheduled to expire on June 1: Section 215, which authorizes the NSA's domestic phone dragnet, which

aspires to collect all Americans' phone records. But Section 215 also authorizes a lot of other collection. Along with Section 215, the Lone Wolf provision (which for years the government claimed it had never used) and the Roving Wiretap provision (which the government secretly used in 2007 to conduct expansive surveillance) are also due to sunset. Congress will decide whether to reauthorize those provisions, permit them to lapse, or rush through a watered down version of USA Freedom Act (USAF), the bill reforming surveillance that failed to pass the Senate last year. As an alternative, Congressmen Tom Massie and Mark Pocan are offering the Surveillance State Repeal Act, which **would impose more meaningful limits on surveillance**, but which thus far has attracted little support. But the PATRIOT Act is not the only surveillance bill in play in the next few months. Even as Congress prepares to consider USAF, it will debate various versions of a cyber-information sharing bill. While all versions make it easier for government and private industry to share information related to cyber-attacks and require the government itself to disseminate information internally immediately, such sharing would do little to prevent most cyber-attacks, and are in no way the most important thing the government could do to rein in cyber-attacks. Plus, all these bills permit information collected in the name of cybersecurity to be used for a wide variety of other uses, including investigating a broad range of felonies. Because of the mismatch between the purported goal of preventing cyber-attacks and the lack of protections for Americans' privacy, Senator Ron Wyden called the Senate Intelligence Committee version of cyber-information sharing a surveillance bill earlier this month. "Any information-sharing legislation that lacks adequate privacy protections is not simply a cybersecurity bill, but a surveillance bill by another name." But like USAF, these cyber-information sharing bills would give corporations immunity to share data that would otherwise be protected from disclosure to the government, with varying limits on how much personal information may be shared along with evidence of cyber-threats. USAF — at least in its last incarnations — offered immunity (and compensation) even for information sharing that did not involve good faith compliance with orders. In other words, amid a general discussion of reforming surveillance, Congress is rushing to find new ways to give corporations less reason to challenge government information requests. That's important because – for much of this sharing – the government claims only the providers have standing to challenge an order in court. Each time the government grants corporations immunity for information sharing, then, it makes it far less likely they'll resist requests to share their customers' information. And the rush to give corporations expanded immunity comes at a time when the government has had problems getting what it wants. Take the phone dragnet, for example. While the court order to one subsidiary of Verizon, revealed by Edward Snowden almost two years ago, required the phone company to turn over all its phone records, for some reason the government has been unable to get all records of domestic cell calls in this manner, perhaps because Verizon doesn't keep what the government wants as business records (although parts of the government, including NSA, do access plenty of cell call data via other means). Immunity and compensation will give the government a way to expand the number of records potentially included in such surveillance. And at least in other programs where the telecoms keep records and perform analysis for the government — such as the Hemisphere program in which AT&T uses call records and location data to identify suspects for the DEA and other agencies — the companies access additional domestic data that would be unavailable for the government, which might happen under USAF as well. Or take Internet records. Just 5 of roughly 180 Section 215 orders last year authorized the phone dragnet. The majority of Section 215 orders collected Internet data, probably including data showing Internet traffic flows and URL searches and complete profiles of what people do online (it's unclear whether these orders get targeted at individuals or larger groups or entire companies). Until 2009, the FBI got this data using National Security Letters, orders that required no judicial review and imposed no limits on what the FBI could do with the data. Now, the FISA Court not only reviews the applications, but also orders minimization procedures that impose some limits on what the FBI can do with the extraneous data from this collection (and given that it has imposed such procedures, there is extraneous data collected), meaning Section 215 — reviled for its use with the phone dragnet — actually provides Americans more protections than what the FBI had used to obtain this Internet data before. Given FBI's recent claims that it relies on Section 215 for its cyber-security investigations, there's a good chance some of this production could be obtained without court review if the cyber sharing bills pass. If so, then FBI could go back to keeping it all, and even expand its dissemination within the government. That's not to say these bills offer Americans no benefit. The cyber-sharing bills might marginally improve protection against hackers. USAF would stop the government from holding onto a significant portion of all Americans' call records for five years, a really important benefit. Plus — in some incarnations though not in others — USAF would impose some limits on the volume of information the government can collect using Section 215, might expand transparency, and would take initial steps toward making the FISA Court more functional. But the bills, likely, also involve shifting surveillance under new shells, to get more information, to undergo less court oversight, to share more data more broadly. This is the Intelligence Community's idea of "reform:" new ways to achieve the same results that have never proven to fulfill their stated purpose. Nowhere in this reform process, for example, has Congress asked for a public accounting of the programs, not even with Section 215, which has never prevented a terrorist attack. Given that the cybersharing bills would do so little to prevent most hacks, it would be a good time to demand some evidence that the sharing will accomplish the goal ostensibly intended. Meanwhile, by far the bulk of NSA's surveillance — that collected under Executive Order 12333, which likely collects a great deal of Americans' Internet traffic and much of their international calls — continues with no court oversight. And the FBI can continue to read the contents of Americans' communications collected under Section 702 using back door searches without a warrant or even a reason to suspect someone of wrong-doing. The point is, the discussion of urgent efforts to reform surveillance — **short of passing something like the Surveillance State Repeal Act** — would do little to actually rein in surveillance. Not only is the Intelligence Community likely just shifting programs to hide them under new names. But no one is asking whether any of this spying does what it is supposed to do.

SSRA solves – effectively repeals governmental surveillance programs

Massie 5/1/15 (Thomas, US House of Reps - KY + MA in Mechanical Engineering @ MIT, "Repeal the Patriot Act," http://www.maysville-online.com/news/opinion/editorial/repeal-the-patriot-act/article_5430bbd2-8177-54f1-a43b-43e598295076.html)

Congress and the American people now know, thanks to whistleblower leaks, that federal agencies like the National Security Agency (NSA) regularly perform mass surveillance on Americans without bothering to obtain a warrant. As constitutional law scholar Randy Barnett wrote in the Wall Street Journal, "the National Security Agency has seized from private companies voluminous data on the phone and Internet usage of all U.S. citizens. . . . this dangerously violates the most fundamental principles of our republican form of government." He concludes that, "[s]uch indiscriminate data seizures are the epitome of 'unreasonable,' akin to the 'general warrants' issued by the Crown to authorize searches of Colonial Americans." One of the tools that enables this warrantless, mass harvesting of call information and data records—Section 215 of the Patriot Act—is one of the three provisions set to expire on June 1st of this year. This looming deadline presents the best opportunity we have in the foreseeable future to stop lawless surveillance. That is why Congressman Mark Pocan and I recently introduced the bipartisan "Surveillance State Repeal Act" (H.R. 1466). H.R. 1466

would repeal the entire Patriot Act, as well as its companion, the FISA Amendments Act of 2008. I believe **the best option is to repeal both of these bills and start over.** If congressmen believe that individual provisions of either the Patriot Act or the FISA Amendments Act are critical to our national security, then we should bring each separate provision to the floor, allow full debate, and schedule an up-or-down-vote on each provision. This process would also give the American people an opportunity to fully understand exactly what each section of each bill would supposedly accomplish. Some claim it's too late to roll back these surveillance programs. I disagree. **We can win this fight**, as recent legislative victories indicate. For example, in 2013, Rep. Justin Amash led the charge against Section 215 of the Patriot Act by offering an amendment to the Department of Defense Appropriations Act. His amendment would have ended the indiscriminate collection of Americans' telephone records. He came very close to victory. The Amash amendment lost by a mere handful of votes, and I believe he would have won if misinformation about his amendment had not been published on the eve of the vote. Rep. Amash's amendment set the groundwork for a subsequent legislative victory. Last year, my amendment to the Department of Defense Appropriations bill, co-sponsored with Rep. Zoe Lofgren and many others, passed the House of Representatives by an overwhelming bipartisan, veto-proof majority. The amendment, which passed by a vote of 293 to 123, would have banned warrantless surveillance currently performed via the authority of Section 702 of the Foreign Intelligence Surveillance Act (FISA). Although my amendment did not specifically address Section 215 of the Patriot Act, it would have put an end to surveillance that is arguably worse than the collection of records allowed under Section 215 (as bad as that is). Section 702 allows the government warrantless access to actual content of Americans' communications, including emails and phone calls. Sadly, despite my legislative victory, congressional leadership refused to include the amendment language in the final version of last year's government spending bill. The votes on both the Amash and Massie amendments demonstrate that there is overwhelming support for ending mass surveillance, despite what the establishment in both Congress and our federal intelligence agencies claim. The Founders of this great nation fought and died to stop the kind of warrantless spying and searches that the Patriot Act and the FISA Amendments Act authorize. What happens between now and June 1st depends on the American people. It is imperative that every freedom-loving American demand an end to these unconstitutional programs. At the very least, the expiring provisions of the Patriot Act should not be renewed on June 1st. After that, the entire Patriot Act should be repealed so we can start over and establish law enforcement programs that respect our Constitution.

A2 CP Links More to Terror/Intel DA

SSRA still allows for targeted surveillance – it ends mass surveillance by requiring a warrant to intercept Americans' communications

Kibbe 15 (Matt, President and CEO of FreedomWorks, previously worked as Chief of Staff to U.S. Representative Dan Miller (R-FL), Senior Economist at the Republican National Committee, Director of Federal Budget Policy at the U.S. Chamber of Commerce, and Managing Editor of Market Process, 3/24, "Letter in Support of the Surveillance State Repeal Act" http://www.freedomworks.org/content/letter-support-surveillance-state-repeal-act)

The Surveillance State Repeal Act would repeal the misguided USA PATRIOT Act and the FISA Amendments Act of 2008. The PATRIOT Act, passed in the panicked aftermath of the tragic September 11th attacks, gives the federal government an unprecedented amount of power to monitor the private communications of U.S. citizens without a warrant. The FISA Amendments Act of 2008 expanded the wiretapping program to grant the government more power. Both laws clearly violate our 4th Amendment right against unreasonable searches. The Surveillance State Repeal Act would prohibit the government from collecting information on U.S. citizens obtained through private communications without a warrant. It would mandate that the Government Accountability Office (GAO) regularly monitor domestic surveillance programs for compliance with the law and issue an annual report. A section of the bill explicitly forbids the government from mandating that electronic manufacturers install "back door" spy software into their products. This is a legitimate concern due to a recently released security report finding government spying software on hard drives in personal computers in the United States. It's important to note that the Surveillance State Repeal Act **saves anti-terrorism tools that are useful** to law enforcement. It retains the ability for government surveillance capabilities against targeted individuals, regardless of the type of communications methods or devices being used. It would also protect intelligence collection practices involving foreign targets for the purpose of investigating weapons of mass destruction.

A2 Can't Solve Signal

Process matters—legislation is comparatively more effective at achieving social change than is court action

Stoddard 97 (Thomas, Fmr Prof of Law @ NYU, 72 N.Y.U.L. Rev. 967, November, lexis)

Many of my colleagues seeking social justice have deliberately avoided legislatures in recent decades, both because of the difficulty of making change there and because of the perception that politicians will not be receptive to their claims. They have turned by and large to the courts. While applauding the changes these lawyer-activists have helped to bring about, and while acknowledging the shortcomings and frustrations of legislative change, I submit that **those of us in the business of "culture-shifting" should upend our traditional preference for judicial activity and embrace the special advantages of legislative change**. E.M. Forster appended to the title page of his novel Howard's End the enigmatic aphorism: "Only connect ..." n46 It is an apt injunction to lawyers like me. If we lawyer-activists truly seek deep, lasting change, we have to "connect" with the public. We have to accord as much attention to public attitudes as we do to the formal rules that purport to guide or mold those attitudes. **That means thinking as concertedly about process as we do about substance. Process matters. How a new rule comes about may, in the end, be as important as what it says.** Except on the most difficult racial questions, those of urban school and housing segregation, the simple fact that Congress has acted is itself a major force for change. **It is seen as a legitimate action, probably in a sense that executive action or court decisions never can be**. Lyndon Johnson had an acute sense of the importance of this fact, evident in his explanation of why he insisted on a law rather than an executive order on fair housing: Most of my advisers, black and white, argued for abandoning the legislative struggle in favor of an Executive order....[NAACP lobbyist Clarence Mitchell] knew how difficult it would be, even with legislation, to induce the people in the heartlands and the suburbs, the cities and the countryside, to change their deep-seated sense of individualism in buying and selling their homes.... **Without the moral force of congressional approval behind us, the struggle for open housing would be lost before it had ever begun**."

Congress solves signals BETTER than the court – history proves

Orfield 95 (Gary, Prof of Education + Social Policy @ Graduate School of Education—Harvard, African Americans and the Living Constitution, p. 156-8)

Once Congress acts, it is difficult to repeal an important law, as long as it retains any significant support. The same inertia and the same process of multiple vetoes requiring extraordinary majorities that long block enactment of the policy later make it very difficult to repeal a policy that has been written into the U.S. Code. It is far more difficult to reverse a principle that is embedded in law by Congress than it is to change an order issued by a president or even to change a Supreme Court decision under some circumstances. A new majority on the Supreme Court has the full authority to reverse or distinguish away a previous policy by a simple majority vote; it is constrained only by its own sense of respect for precedent. Changing a policy in Congress, on the other hand, requires much more than a majority in favor-a policy change can be blocked by a hostile committee or subcommittee in either house, by the Rules Committee, by the floor leadership, by a filibuster, or by a hostile majority in either house. Congressional policy has been far more consistent than that of the White House or the courts on some major areas of civil rights policy. This does not mean, of course, that the congressional policies were consistently enforced, but only that they remained in place for possible enforcement by the courts and by more sympathetic future administrations. In twenty-two years of political conflict from 1968 to 1990, most of it dominated by conservative opponents of civil rights, none of the basic civil rights laws of the 1960s have been weakened by Congress in a major way-with the single exception of the busing issue-and there have been significant strengthening provisions enacted in voting rights, fair employment, and open housing laws, as well as affirmative action and minority set-aside programs. In striking contrast, the body supposedly more independent and free of political control, the Supreme Court, narrowed its interpretation of many of the basic provisions of civil rights law during this period, particularly in its decisions on voting rights, affirmative action, and the nondiscrimination in institutions receiving federal aid. In each of these cases, a well-established civil rights policy was seriously limited by judicial decisions, some of them representing rather sudden changes of interpretation. The conservative movement never got firm control of Congress on racial issues, in part because Congress is so well insulated from any dramatic change in representation. During the last forty years, with recessions, wars, scandals of all sorts, and huge landslide presidential victories for both liberal and conservative presidents, nothing has changed the partisan control of the House of Representatives. With very few exceptions, 90 to 95 percent of the incumbents running for reelection win, regardless of the changes in the larger political issues. It may well be that Congress, particularly the House, is actually more insulated from sharp political change than is the Supreme Court. **Congressional action** is extremely

important for civil rights. It **is consequential-, legitimate, and long-lasting**. **The fact that Congress has debated and decided an issue has an effect on public behavior**. In contrast to the bitter debates over the legality and appropriateness of action by the courts, apart from the substantive merit of those actions, **there is little doubt about the legitimacy of Congress passing a law**. When Congress has written a major new statute, that policy is likely to remain on the books for a long time.

A2 Can't Solve Certainty

Congress has many comparative advantages vis-à-vis the Supreme Court in protecting liberty
--legislation = more flexible

--Congress = greater access to information/fact finding

--remedies are general in nature = more conducive to social change

--more room to experiment with rights protections

McCormick 4 (Marcia, Visiting Assistant Professor of Law, Chicago-Kent College of Law, 37 Ind. L. Rev. 345, lexis)

The Constitution is designed to limit the powers of the government in order to promote the rights of individuals. Therefore, it must set a minimum standard for equality and liberty, upon which no government can encroach. It makes no sense in most cases to think that the Constitution describes the mechanism by which equality and liberty can be maximized on a national scale. n147 The values of national citizenship, liberty, and equality are best served by recognizing that the Constitution establishes the minimum protection necessary for individuals and then by allowing Congress to legislate in a wide variety of areas and to provide private rights of action for money damages against states through that legislation. Congress should be allowed to experiment with ways to promote equality, liberty, and the benefits of national citizenship to the full extent of its enumerated powers as constrained by the amendments other than the Fourteenth, which is not a constraint on the federal power. As a part of its power, Congress must be able to enact the most effective remedy to accomplish its goals. Legislation rather than judicial action promotes these goals best for a number of reasons. **First, legislation is more flexible**. One of the reasons the Court hesitates to acknowledge that some classes should get protection or that some rights warrant protection is that once it does so, it cannot easily go back on its decision. n148 Congress, on the other hand, is **free to repeal legislation** so long as the rights it grants are not required by the Constitution. Second, the very reasons why Congress is the appropriate body to make policy and the Court is not, support that Congress should be given its full authority. The process of legislative factfinding and investigation allows a wider variety of information and views to be considered. Courts, on the other hand, are limited to the facts presented by particular cases before them and are allowed access to only certain types of information. Moreover, the wide access Congress has to more types of information make it easier for Congress to discern a pattern of troubling activity and work through the possible causes or potential ramifications of that activity. Courts can only hear cases, which must be presented in an adversarial setting, which must be brought under an already recognized cause of action, and which are brought only when the parties have resources sufficient to warrant the time, money, and energy it costs to litigate and appeal. **Thus, courts simply cannot see trends the way Congress can**. n149 **Finally, Congress can engineer more social change because the remedies it can provide are general in nature not limited to a particular party from a particular case**. **Not only is legislation the appropriate vehicle for experimenting with ways to maximize equality and liberty, but the federal legislature is in the best position to do so**. First, as argued above, the Constitution values national citizenship, which suggests that maximum equality should be shared by all national citizens, which individual

states cannot guarantee. Additionally, the Fourteenth Amendment tells us that the states cannot be trusted to maximize equality and liberty even for their own citizens. Moreover, because Congress is focused on the entire country, it has a much clearer view than the states can have of patterns of troubling activity. Finally, the interest of the states are adequately protected by the composition of Congress. While there might be some concern that since senators are popularly elected, rather than elected by the state legislature, they do not represent the states as states, the fact that each state has equal power within the Senate decreases the possibility that a tyrannical minority could completely eviscerate the power of the states. n150 This is not an argument that the states have no role in enhancing liberty or equality of the people, and it is not an argument that Congress' power to legislate should be unbridled. The argument is, instead, that analysis of civil rights legislation should focus on whether the legislation maximizes individual equality and liberty. Both the state legislatures and the federal legislature should be given the power to experiment with ways to maximize that equality and liberty. Moreover, the Supreme Court retains a role by declaring the minimum protection the Constitution requires. The federal legislature can enact protections above that minimum, whereby its enactments become the minimum protection of individuals. Above that, the states would be allowed to protect individuals to an extent further than Congress and the Federal Constitution both. This conception of power to enact civil rights laws comports with institutional competencies of each branch and type of government and ensures a wide variety of experimentation. **Additionally, it allows the widest latitude to experiment in protecting groups like gays and lesbians, or rights, like the right to die,** that may not qualify for strict scrutiny under the constitutional analysis, but nonetheless warrant protection. n151

Court lacks necessary expertise and tools to solve problems compared to Congress

Sunstein 91 (Cass Sunstein, Prof of Law @ Univ. of Chicago, California Law Review, MAY, 1991, SYMPOSIUM: CIVIL RIGHTS LEGISLATION IN THE 1990s: Three Civil Rights Fallacies, lexis)

Despite innovative theories and practices, n57 adjudication remains an extremely poor system for achieving social reform. Courts are rarely expert in the area before them. Moreover, the focus on the litigated case hampers judges' efforts to understand the complex systemic effects of legal intervention. A decision to require expenditures on school busing might, for example, divert resources from an area with an equal or greater claim to the public fisc. More fundamentally, legal thinking and legal procedures are most suited to ideas growing out of the tradition of compensatory justice, which is poorly adapted to the achievement of serious social reform. Adjudication is ill-suited to undertaking the necessary changes. Many of the most important problems in current civil rights policy are systemic and complex. The lack of adequate schools, job training, or jobs creates a cycle of poverty, vulnerability to drugs and to crime, teenage pregnancy, and single-parent households. n58 **Courts simply lack the tools to respond to these problems**. Of course, they might make things better [*769] rather than worse. But the legislative and executive branches must provide the principal initiative for the necessary programs. These criticisms of the judiciary are hardly novel. Though voiced most recently by conservatives during and after the period of the Warren Court, critics voiced analogous complaints during the New Deal period, when it would have seemed extremely peculiar to suggest that courts should shape social reform for the disadvantaged. Indeed, the rise of modern regulatory agencies was largely a product of a belief that the judiciary lacked the will, the means, and the democratic pedigree to create social reform on its own. n59 With respect to civil rights, we should see a similar constellation of ideas in the period we are now entering.

A2 CP Hurts Judicial Indy

Judicial acquiescence in the face of strong Congressional pressure ACTUALLY preserves judicial legitimacy by solving the perception of sustained obstructionism

Paisner 05 (Michael, J.D. Candidate 2005. Senior Editor, Columbia Law Review, March, 105 Colum. L. Rev. 537, lexis)

Of course, the difficult task confronting the Court is determining which challenges are indeed "impermissible." Ultimately, the Court must interpret both the separation of powers norm and the norm against pretextual uses of congressional power in light of the long-term relationship between Congress and the Court. This relationship develops through iterated interactions, sometimes, as in the case of the religion statutes, involving conflict over the scope of

congressional power and constitutional interpretation. In these interactions, the sustained will of the people as transmitted through Congress **must eventually win out** against the Court's resistance, but the seriousness of the challenge offered by Congress can help determine the extent to which the judiciary resists congressional demands for constitutional reinterpretation. n223 One does not have to accept that the religion statutes signal the arrival of a "constitutional moment" to recognize that sustained pressure from Congress on the religious freedom issue demands some judicial movement. **The relatively weak and unaccountable judiciary must be prepared to moderate its positions in the face of continued political pressure, lest it lose its legitimacy through sustained obstructionism**.

A2 Agent CPs Bad

Comparisons between the legislature and the judiciary are key to education

Koopmans 3 (Tim, Professor of Constitutional Law, University of Leiden, Former Professor of Constitutional Law, University of Leiden, Former judge of the Court of Justice of the European Communities, Former Advocate General of the Dutch Supreme Court, Courts and Political Institutions: A Comparative View, Cambridge University Press, P: 11-12)

My second assumption is that **you learn more** from studying the relationship between these three powers than from examining each of them individually. **The position of the judiciary can only be understood by contrast with the activities of the legislative and executive bodies**. The relationship between the legislative and the judicial power presents a striking example. We can develop two basic models: in the first, laws passed by the legislative bodies can never be challenged before the courts, because these laws are the very foundation of the constitutional system in question; in the second, the constitutional system is founded on a written constitution which defines or limits the powers of the legislature and allows the courts to check whether legislation tallies with constitutional provisions. The first model is very close to the British doctrine of the 'sovereignty of Parliament'; the second embodies systems characterized by judicial review of legislation, such as the American and the German. When elaborating and developing this comparison, we shall discover the existence of systems which do not conform to either of the models but must more or less be considered as mixed. This is particularly the case with France since 1958.

Court Stripping DA

1nc

War on terror judicial restrictions spur massive court stripping

Reinhardt 6 (Stephen – Judge, U.S. Court of Appeals for the Ninth Circuit, "THE ROLE OF THE JUDGE IN THE TWENTY-FIRST CENTURY: THE JUDICIAL ROLE IN NATIONAL SECURITY", 2006, 86 B.U.L. Rev. 1309, lexis)

Archibald Cox - who knew a thing or two about the necessity of government actors being independent - emphasized that an essential element of judicial independence is that "there shall be no tampering with the organization or jurisdiction of the courts for the purposes of controlling their decisions upon constitutional questions." n2 Applying Professor Cox's precept to current events, we might question whether some recent actions and arguments advanced by the elected branches constitute **threats** to **judicial independence**. Congress, for instance, recently passed the Detainee Treatment Act. n3 The Graham-Levin Amendment, which is part of that legislation, **prohibits any court from hearing or considering** habeas petitions filed by aliens detained at Guantanamo Bay. n4 The Supreme Court has been asked to rule on whether the Act applies only prospectively, or whether it applies to pending habeas petitions as well. It is unclear at this time which interpretation will prevail. n5 But if the Act is ultimately construed as applying to pending appeals, one must ask whether it constitutes "tampering with the ... jurisdiction of the courts for the purposes of controlling their decisions," which Professor Cox identified as a key marker of a violation of judicial independence. All of this, of course, is wholly aside from the question of whether Congress and the President may **strip the courts** of such jurisdiction prospectively. And it is, of course, also wholly apart from the Padilla case, n6 in which many critics believe that the administration has played **fast** and **loose** with the **courts' jurisdiction** in order to **avoid a substantive decision** on a fundamental issue of great importance to all Americans. Another **possible threat** to judicial independence involves the position taken by the administration regarding the **scope of its war powers**. In challenging cases brought by individuals charged as enemy combatants or detained at Guantanamo, the administration has argued that the President has "**inherent powers**" as Commander in Chief under Article II and that actions he takes pursuant to those powers are essentially **not reviewable by courts** or subject to limitation by Congress. n7 The administration's position in the initial round of Guantanamo cases was that **no court anywhere had any jurisdiction** to consider [*1311] any claim, be it torture or pending execution, by any individual held on that American base, which is located on territory under American jurisdiction, for an indefinite period. n8 The executive branch has also relied on sweeping and often startling assertions of executive authority in defending the administration's domestic surveillance program, asserting at times as well a congressional resolution for the authorization of the use of military force. To some extent, such assertions carry with them a challenge to judicial independence, as they seem to rely on the proposition that a **broad range of cases** - those that in the administration's view **relate to the President's exercise of power** as Commander in Chief (and that is a broad range of cases indeed) - are, in effect, **beyond the reach of judicial review**. The full implications of the President's arguments are open to debate, especially since the scope of the inherent power appears, in the view of some current and former administration lawyers, to be limitless. What is clear, however, is that the administration's stance raises important questions about how the constitutionally imposed system of checks and balances should operate during periods of military conflict, questions judges should not shirk from resolving.

Stripping sends a signal that undermines global democracy

Gerhardt 5 (Michael J. Gerhardt, William & Mary School of Law Professor, Lewis & Clark Review, "THE CONSTITUTIONAL LIMITS TO COURT-STRIPPING," 9 Lewis & Clark L. Rev. 347, lexis)

Beyond the constitutional defects with the Act, n40 it may not be **good policy**. It may send **the wrong signals** to the **American people** and to people **around the world**. It expresses **hostility** to our Article III

courts, in spite of their special function in upholding constitutional rights and enforcing and interpreting federal law. If a branch of our government demonstrates a **lack of respect** for federal courts, our citizens and citizens **in other countries** may have a **hard time figuring** out why they should do otherwise. Rejecting proposals to exclude all federal jurisdiction or inferior court jurisdiction for some constitutional claims extends an admirable tradition within Congress and reminds the world of our hard-won, justifiable confidence in the special role performed by Article III courts throughout our history in **vindicating the rule of law.**

Democracy's on the brink --- consolidation solves global WMD conflict

Halperin 11 (Morton H., Senior Advisor – Open Society Institute and Senior Vice President of the Center for American Progress, "Unconventional Wisdom – Democracy is Still Worth Fighting For", Foreign Policy, January / February, http://www.foreignpolicy.com/articles/2011/01/02/unconventional_wisdom?page=0,11)

As the **U**nited **S**tates struggles to wind down two wars and recover from a humbling financial crisis, realism is enjoying a renaissance. Afghanistan and Iraq bear scant resemblance to the democracies we were promised. The Treasury is broke. And America has a president, Barack Obama, who once compared his foreign-policy philosophy to the realism of theologian Reinhold Niebuhr: "There's serious evil in the world, and hardship and pain," Obama said during his 2008 campaign. "And we should be humble and modest in our belief we can eliminate those things." But one can take such words of wisdom to the extreme- as realists like former Secretary of State Henry Kissinger and writer Robert Kaplan sometimes do, arguing that the United States can't afford the risks inherent in supporting democracy and human rights around the world. Others, such as cultural historian Jacques Barzun, go even further, saying that America can't export democracy at all, "because it is not an ideology but a wayward historical development." Taken too far, such realist absolutism can be just as dangerous, and wrong, as neoconservative hubris. For there is one thing the neocons get right: As I argue in *The Democracy Advantage*, democratic governments are **more likely** than autocratic regimes to engage in conduct that advances U.S. interests and avoids situations that pose a **threat** to peace and security. Democratic states are more likely to develop and to avoid **famines** and **economic collapse**. They are also **less likely** to become **failed states** or suffer a **civil war**. Democratic states are also more likely to cooperate in dealing with security issues, such as **terrorism** and **proliferation** of **w**eapons of **m**ass **d**estruction. As the bloody aftermath of the Iraq invasion painfully shows, democracy cannot be imposed from the outside by force or coercion. It must come from the people of a nation working to get on the path of democracy and then adopting the policies necessary to remain on that path. But we should be careful about overlearning the lessons of Iraq. In fact, the outside world can make an **enormous difference** in whether such efforts succeed. There are numerous examples-starting with Spain and Portugal and spreading to Eastern Europe, Latin America, and Asia-in which the struggle to establish democracy and advance human rights received critical support from multilateral bodies, including the United Nations, as well as from regional organizations, democratic governments, and private groups. It is very much **in America's interest** to provide such assistance now to new democracies, such as Indonesia, Liberia, and Nepal, and to stand with those advocating democracy in countries such as Belarus, Burma, and China. It will still be true that the United States will sometimes need to work with a nondemocratic regime to secure an immediate objective, such as use of a military base to support the U.S. mission in Afghanistan, or in the case of Russia, to sign an arms-control treaty. None of that, however, should come at the expense of speaking out in support of those struggling for their rights. Nor should we doubt that America would be more secure if they succeed.

Link – War on Terror Rulings

Courts will be stripped – particularly on war on terror rulings

Katz 9 (Martin J. – Interim Dean and Associate Professor of Law, University of Denver College of Law; Yale Law School, J.D, "GUANTANAMO, BOUMEDIENE, AND JURISDICTION-STRIPPING: THE IMPERIAL PRESIDENT MEETS THE IMPERIAL COURT", Constitutional Commentary, Summer, 25 Const. Commentary 377, lexis)

More likely, the Court may have been provoked on a macro level. Since the beginning of the **war on terror**, President Bush had claimed **extraordinary** - some might say imperious - powers. n164 In response, one might have expected, perhaps hoped, [*419] that the Court would step up and try to stop such exercises of an imperial presidency. n165 In this respect, one might even comment on the Court's restraint. The Court certainly had the opportunity to push back against an imperious President in earlier cases, such as Hamdi and Hamdan. But notably, in its earlier cases in the war on terror, the Court did not push back directly against the President. Instead, the Court looked to Congress to control any excesses of an imperial presidency. n166 For example, in Hamdi, the Court invited Congress to create a set of procedures for military tribunals to determine "enemy combatant" status. n167 And in Hamdan, the Court invited the President to ask Congress to pass a law authorizing him to use military commissions to try individuals accused of certain types of wrongdoing. n168 The idea seemed like a sound one. If the Court could stand back and let Congress act as a check on an imperial President, the problem might be solved - the imbalance redressed - with no need for the Court to seem imperious. n169 The problem is that, in the **climate of the war on terror**, Congress seemed only too happy to **comply with any request** from the President. n170 In fact, the Court might have come to view Congress not as a check on imperious presidential power, but as an enabler of such power. After the Court ruled against the President and held [*420] that the general habeas statute permitted review of aliens at Guantanamo, n171 Congress passed the Detainee Treatment Act (DTA), **precluding such review**. n172 And after the Court ruled against the President and held that the DTA was not retroactive (thereby permitting review of claims that were already pending) and that Congress had not authorized trials by military commissions, n173 Congress passed the Military Commissions Act, precluding pending claims and authorizing trial by military commissions. n174 So it may well have appeared to the Boumediene Court that Congress simply was not up to the task of counter-balancing an imperious executive. Thus, the Court may have decided to take that role upon itself.

Terrorism decisions invoke congressional backlash and stripping

Shay and Kalb 7 (Giovanna – Assistant Professor at Western New England College School of Law, and Johanna – Yale Law School, J.D. 2006, "MORE STORIES OF JURISDICTION-STRIPPING AND EXECUTIVE POWER: INTERPRETING THE PRISON LITIGATION REFORM ACT (PLRA)", 2007, 29 Cardozo L. Rev. 291, lexis)

Cases like Minix provide **sufficient cause** for concern, n39 but the significance of the PLRA decisions extends beyond their immediate impact on prison litigation. John Boston, the foremost practitioner expert on PLRA doctrine, has described the PLRA as "the new face of court stripping," because it limits review through **"new standards** and [*297] **... procedures**," rather than explicitly drawing "lines and erecting walls." n40 In so doing, the PLRA cases demonstrate yet **another form** of **jurisdiction-stripping**, contributing to the **overall shift** of power to the executive that we currently see in other contexts, including in **the "War on Terror" on all its fronts**. n41

Link – Striking Down Legislation
Courts set their agenda to defer to Congress – plan immediately starts a fight

Geyh 6 (Charles Gardner, Indiana University Law Professore Former American Judicature Society's Center for Judicial Independence Director and counsel to the House of Representatives Judiciary Committee, "When Courts and Congress Collide", p. 231-2)

There are very few cases that the Supreme Court is required by law to hear. In the vast majority of cases, the Supreme Court **picks** and **chooses** from among thousands of petitions for writs of certiorari and agrees to hear only those matters it wants to hear. As various scholars have argued, this gives the Court **the discretion** to set its agenda by selecting cases that will **further the justices' personal political goals**, meet the Court's institutional responsibilities to settle conflicts among the lower courts, and respond to external forces (e.g., the legal profession, interest groups, and the Department of Justice) that mobilize to pursue their causes

in the courts. It likewise provides the Court with the discretion to decide what will **not be on its agenda**—such as cases that would **provoke unwanted fights with Congress.**

That causes congressional retaliation

Geyh 6 (Charles Gardner, Indiana University Law Professore Former American Judicature Society's Center for Judicial Independence Director and counsel to the House of Representatives Judiciary Committee, "When Courts and Congress Collide", p. 223-4)

The **restraint** that Congress has **traditionally exhibited** toward the judiciary in most contexts has been **reciprocated** by the courts in three ways. First, the courts have developed myriad **conflict-avoidance** doctrines to sidestep controversies that could **provoke congressional retaliation**. Second, the courts have sometimes averted crises by **acquiescing to congressional will** in key cases when cycles of court-directed hostility have reached their peak. Third, the courts have traditionally exercised their powers of self-government in ways **deferential to and solicitous** of the desires of Congress.

Double bind –

If the Court overturns stripping – destroys legitimacy

Virelli III 12 (Louis J. – Associate Professor of Law, Stetson University College of Law, "Congress, the Constitution, and Supreme Court Recusal", Washington & Lee Law Review, 2012, 69 Wash & Lee L. Rev. 1535, lexis)

The remaining normative arguments against the Court striking the recusal statute are perfectly in line with the concerns expressed by proponents of recusal reform- protection of the Court's public reputation and, in turn, **its legitimacy** as the final expositor of constitutional law. As Justice O'Connor explained, "The Court's power lies, rather, in its legitimacy, a product of [*1586] substance and perception that shows itself in the people's acceptance of the Judiciary as fit to determine what the Nation's law means and to declare what it demands." n179 She went on to explain that "[t]he underlying substance of this legitimacy . . . is expressed in the Court's opinions, and our contemporary understanding is such that a decision without principled justification would be no judicial act at all." n180 Striking the portion of the recusal statute that governs the Justices invites criticism that the Court is aggrandizing power at the expense of at least one of the political Branches. This criticism, especially when combined with parallel critiques that the Court is becoming overly politicized, n181 could undermine public confidence in the institution and its fitness not only to adjudicate, but also to fulfill its role under the separation of powers as a check on the other Branches. The Court's legitimacy could be similarly imperiled by a decision striking regulations on Supreme Court recusal if such a decision appeared unprincipled. Particularly in an area such as Supreme Court recusal and the separation of powers, in which the constitutional text, history, and judicial precedent are at best sparse, a decision in which the Court favors its own authority over that of another branch-even in the face of a written opinion explaining the decision-could be seen as pretextual and thus democratically illegitimate. Finally, the Court's Exceptions Clause jurisprudence provides yet another reason why the Court should refrain from using its power of review in the debate over recusal. Whereas application of the recusal statute could harm litigants by precluding them from receiving an otherwise constitutionally-provided level of judicial review in a single case, n182 the application of a jurisdiction-stripping statute is **almost certainly** more likely to **bar review** in a wider array of [*1587] cases. Nevertheless, despite their potential for harm, the Court has been **extremely reluctant to strike jurisdiction-stripping statutes** under the Exceptions Clause. To the extent that the harmful impact on litigants of a jurisdiction stripping statute is greater than that of a recusal statute, there is even less reason for the Court to overturn the latter. Because the Court cannot remedy its impasse with Congress without doing **precisely the damage** to its **institutional reputation** and **legitimacy** that proponents of recusal reform seek to avoid, the task lies with Congress to employ the non- legislative tools at its disposal to alleviate the interbranch tension over recusal.

Takes out solvency

Hansford 6 (Thomas, Assistant Professor of Political Science – University of South Carolina and James Spriggs, Associate Professor of Political Science – University of California, Davis, The Politics of Precedent on the U.S. Supreme Court, p. 18-24)

Judges promote legitimacy because they recognize that it encourages **acceptance of** and **compliance with** their **decisions** (Gibson 1989; Mon¬dak 1990, 1994; Tyler and Mitchell 1994). In our view of Supreme Court decision making, the justices value legitimacy for instrumental reasons, namely, as a means to the end of producing efficacious policy (see Epstein and Knight 1998). As discussed more fully below, court decisions are not self-executing and thus third parties must implement them before they have any real effects. Since legitimacy encourages compliance, it enhances the power of courts and facilitates their ability to cause legal and political change. Landes and Posner (1976, 273) make this point when stating: "No matter how willful a judge is, he is likely to follow precedent to some extent, for if he did not the practice of decision according to precedent (stare decisis, the lawyers call it) would be undermined and the precedential significance of his own decisions thereby reduced." Justice Stevens (1983, 2) reiterates this point by noting that stare decisis "obvi¬ously enhances the institutional strength of the judiciary." The significance of institutional and decisional legitimacy follows from two well-known characteristics of the judiciary. While these features apply to all courts, we will discuss them in the context relevant for our purposes-the U.S. Supreme Court. First, unlike elected officials or bureaucrats, the justices are expected to provide neutral, legal justifica¬tions for their decisions (Friedman et al. 1981; Maltz 1988). One important element of this expectation is that the justices show respect for the Court's prior decisions (Powell 1990). A recent national survey, for instance, demonstrates that the American public expects the Court to decide based on legal factors (Scheb and Lyons 2001). Nearly eighty-five percent of respondents to this survey indicated that precedent should have some or a large impact on the justices' decisions. By contrast, over seventy-three percent of respondents thought that whether judges were Democrats or Republicans should have no influence on their decisions. As these data indicate, Americans overwhelmingly believe in the idea that judges should make decisions based on neutral, legal criteria. Second, the Court lacks significant implementation powers and thus relies on its external reputation to encourage implementation of and compliance with its decisions. Alexander Hamilton pointed this idea out in Federalist 78: "The judiciary on the contrary has no influence over either the sword or the purse, no direction either of the strength or of the wealth of the society, and can take no active resolution whatever. It may truly be said to have neither Force nor Will, but merely judgment; and must ultimately depend upon the aid of the executive arm for the efficacy of its judgments." The basic idea is that the Court must rely on third parties to implement its policies, and a central way to promote compliance is through fostering institutional and decisional legitimacy (see Knight and Epstein 1996). If the Court, or a particular majority opinion, is perceived as somewhat illegitimate, then the prospects for compliance may **decrease**. The power of the Court, that is, rests on its "prestige to persuade" (Ginsburg 2004, 199).

Link – Surveillance

Surveillance rulings embolden Congressional backlash – they'll double down on current law

Wittes 15 (Ben, editor in chief of Lawfare and a Senior Fellow in Governance Studies at the Brookings Institution, "A Few Thoughts on the Second Circuit's 215 Decision and Its Importance," 5/9, http://www.lawfareblog.com/2015/05/a-few-thoughts-on-the-second-circuits-215-decision-and-its-importance/)

There are a number of key variables still lurking out there. One of them is the DC Circuit, which could rule any time on its own 215 case and whose ruling **could easily embolden** those both in the intelligence community and in the Senate who want to **double down on current law**. Another is simple congressional dysfunction, which seems to prevent legislative movement even when everyone basically agrees. But I think there's a good chance that the Second Circuit here has been the catalyst for legislative action that was otherwise stalled. That would be a very happy outcome.

Link – International Law

Citing international law results in court stripping – turns case

Davis 6 (Martha – Associate Professor, Northeastern University School of Law, "REALIZING DOMESTIC SOCIAL JUSTICE THROUGH INTERNATIONAL HUMAN RIGHTS: PART I: THE SPIRIT OF OUR TIMES: STATE CONSTITUTIONS AND INTERNATIONAL HUMAN

RIGHTS", New York University Review of Law & Social Change, 2006, 30 N.Y.U. Rev. L. & Soc. Change 359, lexis)

Despite reference to transnational law in cases such as Roper and Lawrence, federal judicial reliance on transnational law has been the topic of **highly publicized debate** in recent years. U.S. Supreme Court Justices have argued regarding the merits of such reliance both in the pages of their opinions and in public speeches. Whereas a majority of the Rehnquist Court ascribed to the practice, members of Congress have introduced a series of proposals - none of which have been endorsed by the full body - designed to **discourage** **U**nited **S**tates judges from **looking abroad** for relevant support or authority. n79 Some of these proposals would go so far as to **bar citation** to **international and foreign law** in constitutional construction, to **strip** domestic cases **relying on foreign decisions** of precedential value, and to threaten impeachment of federal judges who rely on such foreign law. n80 However, as discussed below, the arguments offered to support this position on the federal level have much less traction in the state arena.

International law causes massive backlash

Ku and Yoo 6 (Julian – Associate Professor of Law, Hofstra University School of Law, and John – Professor of Law, University of California at Berkeley School of Law, "HAMDAN v. RUMSFELD: THE FUNCTIONAL CASE FOR FOREIGN AFFAIRS DEFERENCE TO THE EXECUTIVE BRANCH", 2006, 23 Const. Commentary 179, lexis)

The doctrines requiring judicial deference to executive interpretations of laws affecting foreign affairs, especially during wartime, have a **solid** and **undisputed** formal pedigree. But these doctrines also have a strong functional basis. The executive branch has strong institutional advantages over courts in the interpretation of laws relating to the conduct of war. Hamdan's refusal to give deference to the executive branch, if followed in the future, will further disrupt the traditional system of political cooperation between Congress and the President in wartime. It will raise the transaction costs for policymaking during war without any serious benefit and potentially at large cost. Congress expressed its displeasure with Hamden by **stripping federal courts** of jurisdiction and reducing their interpretive freedom over **foreign affairs statutes** and **international law**.

Link – Controversial Decisions

Controversial decisions spark court stripping initiatives

Katz 9 (Martin J. – Interim Dean and Associate Professor of Law, University of Denver College of Law; Yale Law School, J.D, "GUANTANAMO, BOUMEDIENE, AND JURISDICTION-STRIPPING: THE IMPERIAL PRESIDENT MEETS THE IMPERIAL COURT", Constitutional Commentary, Summer, 25 Const. Commentary 377, lexis)

Ever since the Supreme Court declared that it had the power to review acts of Congress and the President for constitutionality more than 200 years ago, n5 legal thinkers have wondered whether Congress **could control this power** by **restricting the jurisdiction** of the federal courts. The question has tended to come up most visibly in two contexts. n6 First, in the wake of **controversial federal court decisions**, opponents have occasionally proposed laws to **strip the federal courts** of jurisdiction to **hear the type of case** that had been at issue (presumably with the idea that state courts will ignore or refuse to apply the controversial precedent). n7 For example, after the Supreme Court decided Roe v. Wade, providing constitutional protection for a right to abortion, some legislators proposed legislation that would strip the federal courts of jurisdiction to hear those cases. n8 Similar legislation has been proposed in [*380] response to decisions on school busing, loyalty oaths, school

prayer, reapportionment, and the pledge of allegiance. n9 Notably, in this context, while the constitutionality of such legislation has been hotly debated, such legislation has rarely if ever been passed - perhaps as a result of Congressional doubt regarding the constitutionality, or at least the wisdom, of such legislation. n10

A2 Court Stripping Now

Congress pushing court stripping measures - unlikely to succeed now

Benen 4/24/15 (Steve, Columnist @ MSNBC, "Steve King unveils radical court scheme," http://www.msnbc.com/rachel-maddow-show/steve-king-unveils-radical-court-scheme)

As we talked about at the time, it's "rarely invoked" because the approach – known as "court-stripping" or "jurisdiction-stripping" – is usually too bizarre for most policymakers to pursue. The idea isn't complicated: under this scheme, Congress would pass a federal law effectively telling the courts, "We've identified a part of the law that judges are no longer allowed to consider." To reiterate what we discussed two weeks ago, let's say you live in a state with a law that discriminates against same-sex couples. You decide to challenge the constitutionality of the law, get an attorney, and go to court. Under Steve King's bill, the judge would have no choice but to ignore the case – the courts would have no legal authority to even review lawsuits related to marriage equality because congressional Republicans say so. Whatever one thinks of marriage equality, this certainly isn't "constitutional conservatism." Indeed, it's effectively the congressional version of "legislating from the bench" – King and his cohorts want to adjudicate from the legislature.* To be sure, this isn't entirely new. Back in the 1980s, Sen. Jesse Helms (R-N.C.) repeatedly tried to prevent federal courts from hearing cases related to school prayer. About a decade ago, Sam Brownback and Todd Akin (remember him?) worked on similar measures related to the Pledge of Allegiance. Now, a handful of House Republicans are dipping their feet in the same radical waters. Looking ahead, if the GOP-led House tried to pursue this idea in 2015, there's simply no way it'd overcome a Democratic filibuster in the Senate or get President Obama's signature. But the fact that several members of Congress are pushing such a proposal – all while Ted Cruz expresses interest in the same idea – speaks to an ugly strain of radicalism among Republican lawmakers. Correction: I'd originally said Congress "never" passes court-stripping schemes, which isn't correct. **It's rare, but it has happened.** I've edited the above text accordingly.

A2 Court Stripping Won't Happen

Prefer specific evidence - YES stripping is possible on surveillance issues

Dorf 13 (Mike, Prof of Law @ Cornell, "EPIC's Mandamus Petition and the "Holy Grail" of Federal Jurisdiction," 7/15, http://webcache.googleusercontent.com/search?q=cache:vO1Q7h768ZUJ:www.dorfonlaw.org/2013/07/epics-mandamus-petition-and-holy-grail.html+&cd=7&hl=en&ct=clnk&gl=us)

My latest Verdict column addresses the procedural question raised by the Supreme Court mandamus petition of Electronic Privacy Information Center (EPIC) challenging the government's collection of Verizon customer "metadata." I explain why the Court is arguably without jurisdiction to grant the petition and, in any event, almost certainly won't grant it **as a matter of its equitable discretion**. For the latter point (spoiler alert!), I rely on the fact that EPIC has other options available: In particular, it can simply sue Verizon and/or government officials for injunctive relief in federal district court. Here I want to raise a question that my analysis in the column suggests. Suppose Congress thinks that federal district court litigation of FISA court orders should also be foreclosed and accordingly strips all courts, including the U.S. Supreme Court, of the authority to entertain challenges to NSA surveillance. Would that be permissible? Alumni of the federal courts class--which I regard as the most important course in law school for anyone who wants to litigate in the federal courts, but then, I teach it, so take that with a grain of salt--will instantly recognize the question as the "holy grail" of the subject area. In 1953, Henry Hart published a law review article that was styled as a Socratic dialogue, in which he raised a bewildering set of questions about federal jurisdiction, but the central question he asked was this: how much power does Congress have to control the jurisdiction of the federal courts? The text of the Constitution, standing alone, appears to give Congress near-complete control over federal court jurisdiction: (1) Pursuant to the so-called "Madisonian Compromise" at the Constitutional Convention between those who wanted there to be lower federal courts and those who thought such courts unnecessary, Article III gives Congress the power to create as many or as few federal courts as it wishes, and

thus, it is generally assumed, to vest in them as much or as little of the jurisdiction described in Article III as it wishes; and (2) Although the Constitution sets out the appellate jurisdiction of the Supreme Court, it also authorizes Congress to make "Exceptions" to that jurisdiction. Accordingly, under one fairly straightforward reading of Article III, Congress could strip both the lower federal courts and the Supreme Court of the power to adjudicate any or all cases. Yet a moment's reflection reveals that Congress may not draw any lines it wishes when it comes to jurisdiction. In particular, constitutional provisions outside of Article III--such as the Fifth Amendment Due Process Clause--impose limits on how Congress carves up jurisdiction, just as such provisions limit how Congress may exercise any of its other powers. For example, although Congress could completely eliminate the diversity jurisdiction of the federal district courts, it cannot restrict diversity jurisdiction to cases in which the plaintiff is a white person or a man, because such a restriction would violate the equal protection component of the Fifth Amendment's Due Process Clause. Nearly everyone agrees that Congress is bound by such "external" limits. The trickier questions are whether there are any limits that are "internal" to Article III and, if so, what they are. Hart himself thought that Congress could not use its power under the Exceptions Clause in such a way as to undermine the essential functions of the Supreme Court. More recently, Larry Sager argued that, at a minimum, that means preserving jurisdiction in constitutional cases. Another source of proposed limits can be traced to Justice Story, who elaborated a theory under which Congress was obligated to ensure that some federal forum was available for just about all categories of cases that are preceded by the word "all" in Article III. Akhil Amar revived and refined Story's theory some years ago. Finally, and to my mind most compellingly, Larry Tribe argued in the early 1980s that, whatever else Congress may do to control the jurisdiction of the federal courts, it may not engage in "jurisdictional gerrymandering"--i.e., it may not, in the guise of a jurisdictional statute, disfavor particular constitutional rights. Bills that would do just that--e.g., to strip the federal courts of the power to hear cases involving challenges to the Pledge of Allegiance or to abortion restrictions--have been floated from time to time, but rarely enacted. Perhaps the most notorious example of a jurisdictional gerrymander that did get enacted was the Portal-to-Portal Act of 1947. The substantive provisions of the Act deprived workers of certain overtime compensation that they had previously been held to be entitled under the Fair Labor Standards Act (FLSA). The procedural provisions stripped the federal courts of the power to enforce awards based on the more generous reading of the FLSA that the substantive provisions repudiated. The validity of the jurisdictional provision was never adjudicated by the Supreme Court but in Battaglia v. General Motors, the U.S. Court of Appeals for the Second Circuit upheld the jurisdiction-stripping; however, it did so (it said) only because it thought that the substantive provision was valid. If the substantive provision had been invalid--i.e., if the workers were constitutionally entitled to their remedy under the FLSA--then the court implied that Congress could not eliminate any forum for its enforcement. Battaglia's impact is unclear for multiple reasons: (1) The SCOTUS never affirmed it; (2) It suggests there are limits on jurisdiction-stripping but doesn't find any in the particular case; and (3) It appears to collapse the internal and external questions. In other cases in which Congress has appeared to engage in jurisdiction-stripping, the Supreme Court has bent over backwards to read the statutory language as preserving jurisdiction, and thus has studiously avoided deciding the precise scope of the general power of jurisdiction-stripping. (The Court has clearly limited the power of Congress to strip the federal courts of jurisdiction in habeas corpus cases, but it has done so pursuant to the Suspension Clause of Article I, not pursuant to Article III). The Portal-to-Portal Act was notable not only for stripping federal courts of jurisdiction but also stripping jurisdiction from state courts. Sometimes jurisdiction-stripping proposals leave the state courts available as a possible venue for bringing federal claims. That's problematic from a policy perspective, because with Supreme Court review eliminated, there's no body that can maintain the uniformity of federal law, but it's not clear that it would be unconstitutional for Congress to relegate some category of federal law claims to state courts only. That category is limited, however, by the fact that some of the most important cases would be ones in which the plaintiff seeks injunctive relief against a federal official, but the Supremacy Clause has generally been interpreted to bar such state-to-federal orders. So, to return to the framing question: Could Congress strip the courts of the power to entertain challenges to FISA orders by surveillance targets? **The answer is a resounding maybe.**

All their evidence assumes direct stripping – it can be done through various procedures – doesn't have to be explicit

Shay and Kalb 7 (Giovanna – Assistant Professor at Western New England College School of Law, and Johanna – Yale Law School, J.D. 2006, "MORE STORIES OF JURISDICTION-STRIPPING AND EXECUTIVE POWER: INTERPRETING THE PRISON LITIGATION REFORM ACT (PLRA)", 2007, 29 Cardozo L. Rev. 291, lexis)

Cases like Minix provide **sufficient cause** for concern, n39 but the significance of the PLRA decisions extends beyond their immediate impact on prison litigation. John Boston, the foremost practitioner expert on PLRA doctrine, has described the PLRA as "the new face of court stripping," because it limits review through **"new standards** and [*297] **... procedures,"** rather than explicitly drawing "lines and erecting walls." n40 In so doing, the PLRA cases demonstrate yet **another form** of **jurisdiction-stripping**, contributing to the **overall shift** of power to the executive that we currently see in other contexts, including in **the "War on Terror" on all its fronts**. n41

Controversy means it's more likely

Barrett 8 (Amy – Associate Professor of Law, Notre Dame Law School, "Stare Decisis And Nonjudicial Actors: Introduction", Notre Dame Law Review, May, 83 Notre Dame L. Rev. 1147, lexis)

V. Court Packing, Jurisdiction Stripping, and Other Indirect Attacks With some frequency, nonjudicial actors have registered disagreement with Supreme Court opinions indirectly, by launching an institutional attack on the Court. Jurisdiction-stripping legislation is a common instance of this kind of attack. When the Supreme Court hands down a **controversial decision**, opponents of it often respond with a proposal to **modify** the Court's jurisdiction so as to **remove future similar cases** from the Court's docket (and, for that matter, all federal dockets), typically leaving their resolution to the state courts. n98 Jurisdiction-stripping measures have been introduced on any number of topics, including school prayer, abortion, busing, and affirmative action. n99 Most of the time, these proposals die in Congress. n100 Very [*1166] occasionally, **they do become law** - as did the Detainee Treatment Act of 2005, n101 which, in response to the Court's decision in Rasul v. Bush, n102 forbids any federal court to hear a petition for a writ of habeas corpus filed by an enemy combatant held at Guantanamo Bay. n103

Shifting public perceptions encourage court stripping – their evidence doesn't assume recent shifts in attitude

Norton 6 (Helen – Visiting Assistant Professor of Law, University of Maryland School of Law, "RESHAPING FEDERAL JURISDICTION: CONGRESS'S LATEST CHALLENGE TO JUDICIAL REVIEW", Wake Forest Law Review, Winter, 41 Wake Forest L. Rev. 1003, lexis)

Not only are these efforts **increasingly successful**, they are likely to **reemerge in future proposals** to shape subject matter jurisdiction and thus the balance of judicial power. The House's passage of two separate court-stripping bills in the same Congress represents a high-water mark in the court-shaping movement, as does its passage of the Pledge Protection Act in successive Congresses. Indeed, some of the dynamics that helped thwart earlier court-stripping measures appear to have diminished or disappeared altogether. n97 In the past, for example, the courts - and especially the Supreme Court - may have survived congressional attack due to their comparatively strong public reputation. n98 **Shifting perceptions** of government institutions may **weaken that shield**, as one survey found that a majority of respondents agreed "that "judicial activism' [*1027] has reached **the crisis stage**, and that judges who ignore voters' values should be impeached. Nearly half agreed with a congressman who said judges are "arrogant, out-of-control and unaccountable.'" n99 Other recent polls also suggest a **drop in public support** for the courts, including the Supreme Court, at least in some quarters. n100 Changes in public opinion, accompanied by proponents' sheer political power, may **encourage further jurisdictional realignment**.

Even failed court stripping crushes legitimacy

Segal et. al, January **2011** (Jeffrey - chair of political science at Stony Brook University, Chad Westerland - associate professor of political science at the University of Arizona, and Stefanie Lindquist - professor of law at Texas, Congress, the Supreme Court, and Judicial Review, American Journal of Political Science, Vol. 55, No. 1, p. 91-92)

Rosenberg (1992) provides a list of 10 such mechanisms, all which he argues have been attempted by either Congress, the President, or both at some point in American history. This list includes withdrawal of the Court's appellate jurisdiction, slashing the budget, and altering the size of the Court (cf. George 2003). We would add holding up pay increases to the list. Note that each of these steps could be taken by means of ordinary legisla- tion. For Epstein, Knight, and Martin (2001), successful attempts to curb judicial authority are **extremely costly to the Court**, and they argue that **even unsuccessful attempts incur costs** to the Court by **damaging the Court's legitimacy**. Cross and Nelson (2001) concur, asserting that the only thing Congress can do to the Court in statu- tory cases is reverse the Court's decision, which leaves the Court no worse off—at least from an institutional standpoint—than if it had initially taken Congress's pre- ferred path. But in the constitutional realm, "the courts are more likely to be responsive to other sources of influ- ence, ranging from threats of impeachment to controls on jurisdiction to budgetary pressures to reluctance to implement the spirit or the letter of the courts' opin- ions. Cumulatively, these influences are potentially sig- nificant and may substantially impact judicial decision- making" (1437). As Segal

and Spaeth note, the Court can be expected to back down whenever Congress mounts a clear and imminent threat to the Court's authority (2002, 350).

A2 Social Costs Deter Stripping

Thesis of this argument makes no sense – they are in a double bind – either public pressure dictates congressional action, in which case congress should be enacting restrictions in the status quo or it proves that congressional action doesn't require public support

Public perception of courts is low – makes threat of stripping real

Geyh 6 (Charles Gardner, Indiana University Law Professore Former American Judicature Society's Center for Judicial Independence Director and counsel to the House of Representatives Judiciary Committee, "When Courts and Congress Collide", p. 263-4)

More recent data suggests that the public has become **increasingly critical** of the courts. An Associated Press poll conducted in April 2005 found that 43 percent thought that "judges rely mostly on **personal feelings** and **political views,**" while just over half thought that "judges make decision mostly on their interpretation of the law." Five months later, a poll conducted for the A.B.A. Journal found that **56 percent agreed** with the statement that "judicial activism . . . seems to have **reached a crisis**" because "judges routinely overrule the will of the people, invent new rights, and ignore traditional mortality." In that same poll, 56 percent believed that court opinions should be in line with voters' values and judges who repeatedly ignore those values should be impeached, while 46 percent believed that judges were "arrogant, out of control, and unaccountable," as compared to only 38 percent who disagreed. Against that backdrop, the recent **round of attacks on "judicial activism**" and "legislating from the bench" may signify more than just **another cycle of court-directed animus**.

Momentum is building – threat of "activist" judiciary is perceived

Hooper 5 (Alexander, "RECENT DEVELOPMENT: JURISDICTION-STRIPPING: THE PLEDGE PROTECTION ACT OF 2004", Harvard Journal on Legislation, Summer, 42 Harv. J. on Legis. 511, lexis)

The 108th Congress, however, brought **a resurgence of court-stripping proposals**. n37 Widespread **public** and **congressional** concerns about an "**activist" judiciary**, n38 engendered by high-profile constitutional decisions affecting [*515] social policy, n39 provided Congress with the impetus to "**rein in a renegade judiciary**." n40 In the 108th Congress, at least five court-stripping bills had been introduced in the House, two of which passed, and at least two court-stripping measures were introduced in the Senate. n41 Although none of these measures received a vote by both Houses of Congress, sponsors of some of the bills have stated their commitment to reintroduce them during the 109th Congress. n42 The political controversies that sparked the bills' introductions **will continue**, and therefore an analysis of the language and principles underlying the proposed court-stripping in the Pledge Protection Act remains informative.

Public desires presidential control of war powers

Devins and Fisher 2 (Neal – Goodrich Professor of Law and Professor of Government, College of William and Mary, and Louis – Senior Specialist in Separation of Powers, Congressional Research Service, "THE STEEL SEIZURE CASE: ONE OF A KIND?", 2002, 19 Const. Commentary 63, lexis)

When taking social and political forces into account, moreover, the Court is apt to "exercise the rights of governance that bring it prestige and to avoid exercising the rights of governance that may bring it harm." n87 For example, when Congress signals the Court that it has doubts about the constitutionality of its handiwork, the Court does not risk much political capital by striking down that law. n88 * * * * * Under **contemporary conditions**, courts have **little incentive** to involve themselves in **war powers disputes**. Unlike Youngstown, unilateral executive war-making is now **the norm**. Not only has Congress abandoned its traditional role, the **public** and the media also see the president as the "**sole organ**" of modern day war-making.

A2 Courts Will Strike Down

Courts are stripped if they make controversial detention ruling AND won't be struck down

Katz 9 (Martin J. – Interim Dean and Associate Professor of Law, University of Denver College of Law; Yale Law School, J.D, "GUANTANAMO, BOUMEDIENE, AND JURISDICTION-STRIPPING: THE IMPERIAL PRESIDENT MEETS THE IMPERIAL COURT", Constitutional Commentary, Summer, 25 Const. Commentary 377, lexis)

A second context in which **jurisdiction-stripping** has been **proposed** - and actually passed - is during times of armed conflict. During such times, Congress has occasionally attempted to **restrict federal court jurisdiction** as a way to maximize the President's ability to wage war - for example, **permitting him to detain** those seen as an impediment to the war effort. n11 It was a statute such as this that was at issue in Boumediene. In the Detainee Treatment Act of 2004 and Military Commission Act of 2006, n12 Congress (1) created a non-judicial procedure for determining whether certain individuals are "enemy combatants," and thus subject to detention, and (2) limited the ability of the federal courts to review such determinations. Generally, when Congress has passed, or even proposed, jurisdiction-stripping legislation, it has spawned debate over whether such legislation is or would be constitutional. This debate has engaged the minds of many of the country's finest constitutional scholars. n13 [*381] It is beyond the scope of this Article to revisit the debates of these constitutional scholars. My purpose here is not to weigh in on the question of how courts should address jurisdiction-stripping statutes (though this Article does implicate that issue). Rather, my purpose here is to address how the Supreme Court - after centuries of largely avoiding the debate - has now suggested answers to certain fundamental questions in that debate. Accordingly, this Part will identify some of the fundamental questions in that debate. The primary question is when, if ever, Congress can strip jurisdiction from the federal courts. However, for Congress to be able to do this, it would need to exercise two distinct powers: (1) the power to strip jurisdiction from **the lower federal courts**, and (2) the power to strip **appellate jurisdiction** from the Supreme Court. So this section will begin by examining both of those powers before examining whether Congress can combine those powers in order to preclude all federal court jurisdiction. n14 [*382] This Part will also show how the Court has gone to great lengths to avoid providing definitive answers to these questions (particularly to the question of the ability of Congress to preclude all federal court jurisdiction). A. Stripping Jurisdiction from Lower Federal Courts The first question in the jurisdiction-stripping debate is whether Congress can restrict the jurisdiction of the lower federal courts (district courts and circuit courts) to hear a particular type of case. This question assumes that only the lower federal courts are closed - that the Supreme Court's original and appellate jurisdiction remains intact. n15 Proponents of allowing this form of jurisdiction-stripping point to the text of Article III, which gives Congress the power to "ordain and establish" lower federal courts. n16 The argument is that (1) the Ordain and Establish Clause gave Congress discretion over whether to create lower federal courts, and (2) if Congress could decline to create lower federal courts, then Congress can limit such courts' jurisdiction. n17 Most commentators today seem to accept the basic idea that the Ordain and Establish Clause permits Congress to **restrict** or **even eliminate** the jurisdiction of the lower federal courts. n18 [*383] Some of these commentators have also suggested that there might be limits on this power. For example, nearly all commentators have suggested that the "ordain and establish" power is limited by substantive provisions elsewhere in the Constitution, such as the Equal Protection Clause; so Congress could not, for example, preclude jurisdiction only over cases brought by African Americans or Catholics. n19 Also, as noted above, most of the commentators who believe Congress has the power to limit lower federal court jurisdiction assume that some alternative court would remain open to hear the cases in question - an assumption which is likely incorrect in a case like Boumediene. n20 But subject to these two potential limits, n21 the "traditional view" is that Congress can exercise its "ordain and establish" power to close lower federal courts. n22 The courts, too, n23 seem largely to accept the "traditional view" - that Congress **has the power** to restrict lower **federal court jurisdiction**. The Supreme Court has, on at least five occasions, suggested that

Congress can limit lower federal court jurisdiction pursuant to the Ordain and Establish Clause. n24 However, none of these cases appears to have tested the potential [*384] limits on the exercise of this power. n25 As I will discuss below, Boumediene suggests such a limit. n26

A2 Prez Will Veto

Makes zero sense – if the executive wanted expansive war powers, it's in their interest to pass legislation that would give them those powers

Executive won't veto jurisdiction stripping in the context of the war on terror

Grove 12 (Tara Leigh – Assistant Professor, William and Mary Law School, "THE ARTICLE II SAFEGUARDS OF FEDERAL JURISDICTION", 2012, 112 Colum. L. Rev. 250, lexis)

Thus, the executive branch seems **most likely** to **consent** to **jurisdictional restrictions** (1) following a major historical event, and (2) when the jurisdictional restriction is integrated into an expansive statute, the bulk of which the President supports. These factors may help explain the enactment of recent **jurisdiction-stripping laws** in response to the "**war on terror**." n342 Notably, these statutes largely preserved the Supreme Court's [*310] appellate jurisdiction and federal jurisdiction over constitutional claims n343 and thus did not interfere with the executive branch's principal concerns about federal jurisdiction. But one provision of the Military Commissions Act of 2006 (MCA) does purport to eliminate federal jurisdiction over a detainee's challenge to his "conditions of confinement" during his detention. n344 It does not appear that the second Bush Administration made any public statements about this provision during the legislative process. n345 But the executive branch's acceptance of this jurisdiction-stripping measure arguably accords with the analysis here. The MCA was enacted in the wake of a major historical event: the attacks of September 11, 2001 and the ensuing **war on terror**. Moreover, the MCA was an expansive statute, the bulk of which the President supported. However, with respect to the MCA, there are reasons to doubt that the executive branch simply acquiesced in a jurisdictional restriction championed by members of Congress. Although the executive does not [*311] appear to have taken a position on the "conditions of confinement" measure, the second Bush Administration generally sought to **avoid judicial oversight** of its actions in the "war on terror." n346 It therefore seems quite possible that the Administration supported the "conditions of confinement" measure

Stripping Hurts Democracy – 2NC

Stripping undermines democracy and an independent judiciary

Brown 10 (Rebecca – Newton Professor of Constitutional Law, USC Gould School of Law, "WILL AND PRINCIPLE", 2010, Mich. St. L. Rev. 569, lexis)

Friedman has shown us that there is an eventual correlation between the Court's interpretations of the Constitution and some zone of approval that can be attributed to the American public. n5 The burning question, how [*572] ever, is why. The book offers both weaker and stronger versions of an answer to this question. In the weaker version, The Will of the People suggests that the institutional structure of the Court, including political appointment and need for enforcement of its decisions by the political branches, very generally operates to ensure that decisions will be within some degree of acceptability to the larger public. But Friedman does not find this explanation sufficient. n6 In the end, he embraces the strong version of the answer, which relies on an anthropomorphism of both the Court and the public. "If [the people] simply raise a finger, the Court seems to get the message." n7 Friedman's answer suggests that individual justices have consciously made outcome-determinative decisions in cases based on their sense of the direction of public opinion. n8 Furthermore, they have done so out of **self interest.** The motivation

for accommodating popular opinion is a fear of **popular efforts to "discipline" the Court**: imposing political checks on the judiciary such as impeachment, defiance of court orders, court-packing, and **jurisdiction-stripping.** n9 Two aspects of Friedman's account make me uneasy. Both involve a lurking concern I have that this account of judicial review **minimizes** what I hold to be profoundly important values in **our constitutional democracy**. The first of these values is the public **commitment to an independent judiciary**, and the second is the **importance of judgment to constitutional interpretation.** I will discuss each in turn.

Destroys democracy

Committee on Federal Legislation 9 ("CHECKS AND BALANCES: CONGRESSIONAL RESTRICTION OF FEDERAL COURT JURISDICTION", 2009, 64 The Record 143, lexis)

The American Constitutional system is based on **checks** and **balances**. Throughout our history, competing branches of government have struggled to define their own respective jurisdictions, to prevent encroachments on that power by other branches, and even to seek the expansion of their own authority at the expense of other branches. This struggle is particularly acute today as Congress has attempted, through the enactment of legislation, to **divest the courts of their jurisdiction** over specific subjects and even over specific cases. This congressional action, often referred to as **"court stripping,"** reflects Congress' disagreement with the way the courts have resolved particular issues, or its desire to keep certain [*144] groups of litigants from seeking redress in the federal courts. This legislation may, in some cases, disrupt the delicate and essential system of **checks and balances that is central** to our **nation's democracy**.

Democracy Turns Everything

Transitions are coming now – err negative because democratic structures are more likely to prevent escalation of their impact – countries are less likely to go to war

Diamond 95 (Larry, Senior Fellow – Hoover Institution, Promoting Democracy in the 1990s, December, http://wwics.si.edu/subsites/ccpdc/pubs/di/1.htm)

OTHER THREATS This hardly exhausts the lists of threats to our security and well-being in the coming years and decades. In the former Yugoslavia nationalist aggression tears at the stability of Europe and could easily spread. The flow of illegal drugs intensifies through increasingly powerful international crime syndicates that have made common cause with authoritarian regimes and have utterly corrupted the institutions of tenuous, democratic ones. **N**uclear, **c**hemical, and **b**iological **weapons continue to proliferate. The very source of life** on Earth, **the global ecosystem, appears** increasingly **endangered.** Most of **these** new and unconventional **threats** to security **are associated with** or aggravated by the weakness or **absence of democracy, with its provisions for** legality, **accountability**, popular sovereignty, **and openness**. LESSONS OF THE TWENTIETH CENTURY The experience of this century offers important lessons. Countries that govern themselves in a truly democratic fashion **do not go to war** with one another. They do not aggress against their neighbors to aggrandize themselves or glorify their leaders. Democratic governments do not ethnically "cleanse" their own populations, and they are much less likely to face ethnic insurgency. Democracies do not sponsor terrorism against one another. They do not build weapons of mass destruction to use on or to threaten one another. Democratic countries form more reliable, open, and enduring trading partnerships. In the long run they offer better and more stable climates for investment. They are more environmentally responsible because they must answer to their own citizens, who organize to protest the destruction of their environments. They are better bets to honor international treaties since they value legal obligations and because their openness makes it much more difficult to breach agreements in secret. Precisely because, within their own borders,

they respect competition, civil liberties, property rights, and the rule of law, democracies are the only reliable foundation on which a new world order of international security and prosperity can be built.

Democracy promotion prevents oppression, war, economic decline, and famine globally

Beng 2K (Phar Kim, Senior Correspondent @ Straits Times + consultant to Waseda University in Japan on Southeast Asian matters, Straits Times, 1/14, lexis)

The spread of democracy can enhance US national interests in four major ways. Firstly, by encouraging other nations to democratise, the political conditions of otherwise repressive republics would improve. **The pressure and attraction for others to enter America illegally would thus be reduced significantly**. Secondly, as more countries democratise, that is by instituting multi-party electoral competition, the prospect of governments launching wars against one another would decline exponentially. This is because the decision to go to war would not be made by any one man or party at the helm, but would be subject to the purview and discretion of the public. Given the greater degree of public accountability, it would be **correspondingly difficult** for any government to justify the launching of an open war against the US or other nations. Democratic peace would, therefore, prevail across the world, much to the US' interests. Thirdly, democracy is also conducive to economic growth. A World Survey of Economic Freedom for 1995 to 1996, found that the countries rated "free" generated 81 per cent of the world's output even though they had only 17 per cent of the world's population. In another study by The Heritage Foundation, it was found that countries classified as "free" had annual 1980-1993 real per capita Gross Domestic Product (GDP) growth rates of 2.88 per cent. In "mostly-free" countries, the rate was 0.97 per cent; in "mostly-not-free" ones, minus 0.32 per cent; and in "repressed" countries, minus 1.44 per cent. Fourthly, the US should spread democracy because the citizens of democracies do not suffer from famines. Most of the countries that have experienced severe famines in recent decades have been among the world's least democratic: the Soviet Union (Ukraine in the early 1930s), China, Ethiopia, Somalia, Cambodia and Sudan. **Throughout history, famines have occurred in many different types of countries, but never in a democracy**. Democracies do not experience famines for reasons of greater transparency and accountability. To the extent that the incidence of famine continues to fall, massive cross-border human emigration would cease, too. **Global and regional security would thus be enhanced, by which the US would no doubt stand to gain due to its extensive political and economic interests abroad**.

Democracy Solves Environment

Democracy is key to environmental protection

Li and Reuveny 7 (Quan, Professor of Political Science – Penn State University and Rafael, Professor of Public and Environmental Affairs, "The Effects of Liberalism on the Terrestrial Environment", Conflict Management and Peace Science, 24(3), September)

Moving to the view that democracy reduces the level of environmental degradation, one set of considerations focuses on the institutional qualities of democracy. The responsiveness argument is that democracies are more responsive to the environmental needs of the public than are autocracies due to their very nature of taking public interests into account (Kotov and Nikitina, 1995). It is also argued that democracies comply with environmental agreements well, since they respect, and respond to, the rule of law (Weiss and Jacobsen, 1999). The freedom of information channel is offered by Schultz and Crockett (1990) and Payne (1995). They theorize that political rights and greater freedom for information flows help2 to promote the cause of environmental groups, raise public awareness of problems and potential solutions, and encourage environmental legislation to curtail environmental degradation. Democracies also tend to have market

economies, which further promotes the flow of information as economic efficiency and profits requires full information. Hence, unlike the above argument, this channel expects that profit-maximizing markets will promote environmental quality (Berger, 1994).

Extinction

Kline 98 (Gary, Associate Professor of Political Science, Georgia Southwestern State University, Journal of Third World Studies, 15(1), Spring)

Additionally, natural ecosystems provide certain less obvious services that are **crucial to life** as we know it.6 The atmosphere of our planet is the product largely of ecosystem operations. About twenty-one percent of our atmosphere is made up of oxygen, the result of plant photosynthesis which releases the gas. Approximately seventy-eight percent of the remaining air we breathe is nitrogen, which is regulated by the nitrogen cycle of plant production. Ecosystems then influence weather and climate patterns by affecting the circulation of air in this atmosphere. Plants, and especially forests, are instrumental in retaining and conserving our soil and water. Destruction of forest areas results in soil erosion (deleterious to agriculture and plant life in general), floods, and droughts. The rapid decertification of large tracts of land in places like north Africa are a direct consequence of loss of such ecosystems. Each year an area equivalent in size to Belgium falls victim to decertification. Plant and animal life, much of it not visible to the naked eye, helps create and maintain soil by breaking down rocks into finer and finer pieces and by adding organic material to it, enriching it for agriculture. Except for some of the most troublesome products of Humankind, like DDT and plastics, these same plants and animals work to dispose of wastes. Decomposed wastes are then recycled as nutrients into the food chain for the sustenance of new life. Natural ecosystems also produce mechanisms in plants for the resistance of pests and diseases and for the pollination of flowering plants, essential to their reproduction, including many of our food crops. It should be apparent that biodiversity and life are synonymous. The organisms in an ecosystem are part of a "trophic pyramid," as labelled by scientists. That is, a large mass of plants supports a smaller number of herbivores; these support a smaller number of primary carnivores and an even smaller number of second order carnivores. Due to their more rapid rates of reproduction, the lower order life forms are generally better able to adapt to changes in their environment than the higher forms. The latter are also disadvantaged by bioconcentration of harmful substances which make their way into the food chain. Every organism has some niche and work to perform in the pyramid. Homo sapiens occupy a position at the top and are therefore vulnerable to instability at the base. Human activity which threatens the pyramid is **akin to playing Russian roulette**. Of this, Humankind is now more aware. As Garrison Wilkes of the University of Massachusetts put it, "We have been building our roof with stones from the foundation."7 This problem is now manifesting itself especially in an area of human endeavor which is essential to our existence: agriculture.

Democracy Solves Heg

Democracy is key to heg – checks counter-balancing

Owen 1 (John M., Assistant Professor of Government and Foreign Affairs – University of Virginia, “Transnational Liberalism and U.S. Primacy”, International Security, 26(3))

In this article I argue that the degree to which a state counterbalances U.S. power is a function of how politically liberal that state is, measured by the degree to which its internal institutions and practices are liberal and the degree to which liberals influence foreign policy. Political liberalism is an ideology that seeks to uphold individual autonomy and prescribes a particular set of domestic institutions as means to that end.[15] No coalition has formed to counterbalance U.S. power because political liberalism constitutes a transnational movement that has penetrated most potential challenger states at least to some degree. How liberal a state is affects both how it responds to U.S. power and policy and how the United States treats it. Liberal elites the world over tend to perceive a relatively broad coincidence of interest between their country and other liberal countries. They tend to interpret the United States as benign and devote few state resources to counterbalancing it. In turn, the liberals who govern the United States tend to treat other liberal countries relatively benignly. But antiliberal elites tend to perceive a more malign United States and devote relatively more state resources to counterbalancing; the United States meanwhile tends to treat less benignly countries governed by such elites and their favored institutions.

The interactions between the United States and a given potential challenger are mutually reinforcing, and so each relationship is on a path that is difficult to abandon. Unilateral moves by the administration of George W. Bush on issues such as the

environment and missile defense may perturb and even anger U.S. allies, but should not drive them toward military counter-balancing. Similarly, U.S. policies are unlikely to cause China to abandon counterbalancing. The U.S.-Russian relationship is the least settled, in part because the Russian domestic regime is itself unsettled. Should Russia end up with an antiliberal regime, it will likely counterbalance the United States more consistently. U.S. policies toward Russia can have a marginal effect on the fate of Russian liberalism: The more objectively threatening are U.S. gestures toward Russia, the more Russian liberals lose domestic credibility and influence. In this way the power of transnational liberal identity is limited, as is the durability of U.S. primacy. If Americans want to preserve primacy—and the benefits of U.S. primacy outweigh the costs for many non-Americans as well as for Americans—their country must walk a difficult line, simultaneously preserving not only its power but transnational liberalism where it can, and yet guarding against actions that appear imperialistic to foreign elites.

Global nuclear war

Khalilzad 95 (Zalmay, RAND Corporation, Losing The Moment? Washington Quarterly, Vol 18, No 2, p. 84)

Under the third option, the United States would seek to retain global leadership and to preclude the rise of a global rival or a return to multipolarity for the indefinite future. On balance, this is the best long-term guiding principle and vision. Such a vision is desirable not as an end in itself, but because a world in which the United States exercises leadership would have tremendous advantages. First, the global environment would be more open and more receptive to American values -- democracy, free markets, and the rule of law. Second, such a world would have a better chance of dealing cooperatively with the world's major problems, such as nuclear proliferation, threats of regional hegemony by renegade states, and low-level conflicts. Finally, U.S. leadership would help preclude the rise of another hostile global rival, enabling the United States and the world to avoid another global cold or hot war and all the attendant dangers, including a **global nuclear exchange**. U.S. leadership would therefore be more conducive to global stability than a bipolar or a multipolar balance of power system.

Democracy Solves Econ

Democracy is key to economic growth

Lynn-Jones 8 (Sean M., Editor – International Security, “Why the United States Should Spread Democracy”, International Security, March, http://belfercenter.ksg.harvard.edu/publication/2830/why_the_united_states_should_spread_democracy.html)

A third reason for promoting democracy is that democracies tend to enjoy greater prosperity over long periods of time. As democracy spreads, more individuals are likely to enjoy greater economic benefits. Democracy does not necessarily usher in prosperity, although some observers claim that "a close correlation with prosperity" is one of the "overwhelming advantages" of democracy.32 Some democracies, including India and the Philippines, have languished economically, at least until the last few years. Others are among the most prosperous societies on earth. Nevertheless, over the long haul democracies generally prosper. As Mancur Olson points out: "It is no accident that the countries that have reached the highest level of economic performance across generations are all stable democracies."33 Authoritarian regimes often compile impressive short-run economic records. For several decades, the Soviet Union"s annual growth in gross national product (GNP) exceeded that of the United States, leading Soviet Premier Nikita Khrushchev to pronounce "we will bury you." China has posted double-digit annual GNP increases in recent years. But autocratic countries rarely can sustain these rates of growth for long. As Mancur Olson notes, "experience shows that relatively poor countries can grow extraordinarily rapidly when they have a strong dictator who happens to have unusually good economic policies, such growth lasts only for the ruling span of one or two dictators."34 The Soviet Union was unable to sustain its rapid growth; its economic failings ultimately caused the country to disintegrate in the throes of political and economic turmoil. Most experts doubt that China will continue its rapid economic expansion. Economist Jagdish Bhagwati argues that "no one can maintain these growth rates in the long term. Sooner or later China will have to rejoin the human race."35 Some observers predict that the stresses of high

rates of economic growth will cause political fragmentation in China.36 Why do democracies perform better than autocracies over the long run? Two reasons are particularly persuasive explanations. First, democracies-especially liberal democracies-are more likely to have market economies, and market economies tend to produce economic growth over the long run. Most of the world"s leading economies thus tend to be market economies, including the United States, Japan, the "tiger" economies of Southeast Asia, and the members of the Organization for Economic Cooperation and Development. Two recent studies suggest that there is a direct connection between economic liberalization and economic performance. Freedom House conducted a World Survey of Economic Freedom for 1995-96, which evaluated 80 countries that account for 90% of the world"s population and 99% of the world"s wealth on the basis of criteria such as the right to own property, operate a business, or belong to a trade union. It found that the countries rated "free" generated 81% of the world"s output even though they had only 17% of the world"s population.37 A second recent study confirms the connection between economic freedom and economic growth. The Heritage Foundation has constructed an Index of Economic Freedom that looks at 10 key areas: trade policy, taxation, government intervention, monetary policy, capital flows and foreign investment, banking policy, wage and price controls, property rights, regulation, and black market activity. It has found that countries classified as "free" had annual 1980-1993 real per capita Gross Domestic Product (GDP) (expressed in terms of purchasing power parities) growth rates of 2.88%. In "mostly free" countries the rate was 0.97%, in "mostly not free" ones -0.32%, and in "repressed" countries -1.44%.38 Of course, some democracies do not adopt market economies and some autocracies do, but liberal democracies generally are more likely to pursue liberal economic policies. Second, democracies that embrace liberal principles of government are likely to create a stable foundation for long-term economic growth. Individuals will only make long-term investments when they are confident that their investments will not be expropriated. These and other economic decisions require assurances that private property will be respected and that contracts will be enforced. These conditions are likely to be met when an impartial court system exists and can require individuals to enforce contracts. Federal Reserve Chairman Alan Greenspan has argued that: "The guiding mechanism of a free market economy ... is a bill of rights, enforced by an impartial judiciary."39 These conditions also happen to be those that are necessary to maintain a stable system of free and fair elections and to uphold liberal principles of individual rights. Mancur Olson thus points out that "the conditions that are needed to have the individual rights needed for maximum economic development are exactly the same conditions that are needed to have a lasting democracy. ... the same court system, independent judiciary, and respect for law and individual rights that are needed for a lasting democracy are also required for security of property and contract rights."40 Thus liberal democracy is the basis for long-term economic growth. A third reason may operate in some circumstances: democratic governments are more likely to have the political legitimacy necessary to embark on difficult and painful economic reforms.41 This factor is particularly likely to be important in former communist countries, but it also appears to have played a role in the decisions India and the Philippines have taken in recent years to pursue difficult economic reforms.42

Extinction

Beardon 00 (T.E., Director of Association of Distinguished American Scientists, The Unnecessary Energy Crisis: How to Solve It Quickly," Space Energy Access Systems, http://www.seaspower.com/EnergyCrisis-Bearden.htm)

History bears out that desperate nations take desperate actions. Prior to the final economic collapse, the stress on nations will have increased the intensity and number of their conflicts, to the point where the arsenals of weapons of mass destruction (WMD) now possessed by some 25 nations, are almost certain to be released. As an example, suppose a starving North Korea launches nuclear weapons upon Japan and South Korea, including U.S. forces there, in a spasmodic suicidal response. Or suppose a desperate China — whose long-range nuclear missiles (some) can reach the United States — attacks Taiwan. In addition to immediate responses, the mutual treaties involved in such scenarios will quickly draw other nations into the conflict, escalating it significantly. Strategic nuclear studies have shown for decades that, under such extreme stress conditions, once a few nukes are launched, adversaries and potential adversaries are then compelled to launch on perception of preparations by one's adversary. The real legacy of the MAD concept is this side of the MAD coin that is almost never discussed. Without effective defense, the only chance a nation has to survive at all is to launch immediate full-bore pre-emptive strikes and try to take out its perceived foes as rapidly and massively as possible. As the studies showed, rapid escalation to full WMD exchange occurs. Today, a great percent of the WMD arsenals that will be unleashed, are already on site within the United States itself. The resulting great Armageddon will destroy civilization as we know it, and perhaps most of the biosphere, at least for many decades.

Democracy Solves Trade

Democracy sustains free trade

Li and Reuveny 7 (Quan, Professor of Political Science – Penn State University and Rafael, Professor of Public and Environmental Affairs, "The Effects of Liberalism on the Terrestrial Environment", Conflict Management and Peace Science, 24(3), September)

If trade can be used as a tool of power, who will trade with whom? Grieco (1988), Gowa (1994), and Gowa and Mansfield (1993), among others, expect that states will avoid trade with states they consider to be their actual or potential adversaries. In such situations, the concern for relative gains—who gains more from trade—may reduce trade flows to trickles, as the side that gains less will worry that the side that gains more may translate the gain to military power. During the Cold War, for example, the U.S. regulated its trade with the Soviet bloc based on this logic. Since democracies are expected not to engage in wars against each other, they feel more secure in their bilateral trade and may be content with trade regardless of who gains more. Democracy, then, should promote trade (e.g., Russett & Oneal, 2001; Morrow, 1997; Snidal, 1991). Moreover, since democracy is associated with the rule of law and respect for property rights, agents will feel more secure to trade as the level of democracy rises, as it is more likely they will be able to enjoy the fruits of their investments (e.g., Olson, 1993; Clauge et al., 1996).

Extinction

Pazner 8 (Michael J., Faculty – New York Institute of Finance, Financial Armageddon: Protect Your Future from Economic Collapse, p. 137-138)

The rise in isolationism and protectionism will bring about ever more heated arguments and dangerous confrontations over shared sources of oil, gas, and other key commodities as well as factors of production that must, out of necessity, be acquired from less-than-friendly nations. Whether involving raw materials used in strategic industries or basic necessities such as food, water, and energy, efforts to secure adequate supplies will take increasing precedence in a world where demand seems constantly out of kilter with supply. Disputes over the misuse, overuse, and pollution of the environment and natural resources will become more commonplace. Around the world, such tensions will give rise to full-scale military encounters, often with minimal provocation. In some instances, economic conditions will serve as a convenient pretext for conflicts that stem from cultural and religious differences. Alternatively, nations may look to divert attention away from domestic problems by channeling frustration and populist sentiment toward other countries and cultures. Enabled by cheap technology and the waning threat of American retribution, terrorist groups will likely boost the frequency and scale of their horrifying attacks, bringing the threat of random violence to a whole new level. Turbulent conditions will encourage aggressive saber rattling and interdictions by rogue nations running amok. Age-old clashes will also take on a new, more heated sense of urgency. China will likely assume an increasingly belligerent posture toward Taiwan, while Iran may embark on overt colonization of its neighbors in the Mideast. Israel, for its part, may look to draw a dwindling list of allies from around the world into a growing number of conflicts. Some observers, like John Mearsheimer, a political scientists at the University of Chicago, have even speculated that an "intense confrontation" between the United States and China is "inevitable" at some point. More than a few disputes will turn out to be almost wholly ideological. Growing cultural and religious differences will be transformed from wars of words to battles soaked in blood. Long-simmering resentments could also degenerate quickly, spurring the basest of human instincts and triggering genocidal acts. Terrorists employing biological or nuclear weapons will vie with conventional forces using jets, cruise missiles, and bunker-

busting bombs to cause widespread destruction. Many will interpret stepped-up conflicts between Muslims and Western societies as the beginnings of a new world war.

Democracy Solves Russia

Democracy checks Russian expansion

Diamond 95 (Larry, Senior Fellow – Hoover Institution, Promoting Democracy in the 1990s, December, http://www.wilsoncenter.org/subsites/ccpdc/pubs/di/1.htm)

A HOSTILE, EXPANSIONIST RUSSIA

Chief among the threats to the security of Europe, the United States, and Japan would be the reversion of Russia--with its still very substantial nuclear, scientific, and military prowess--to a hostile posture toward the West. Today, the Russian state (insofar as it continues to exist) appears perched on the precipice of capture by ultranationalist, anti-Semitic, neo-imperialist forces seeking a new era of pogroms, conquest, and "greatness." These forces feed on the weakness of democratic institutions, the divisions among democratic forces, and the generally dismal economic and political state of the country under civilian, constitutional rule. Numerous observers speak of "Weimar Russia." As in Germany in the 1920s, the only alternative to a triumph of fascism (or some related "ism" deeply hostile to freedom and to the West) is the development of an effective democratic order. Now, as then, this project must struggle against great historical and political odds, and it seems feasible only with international economic aid and support for democratic forces and institutions.

Nuclear war

Pry 99 (Peter Vincent, Professional Military Advisor to the US House of Representatives, War Scare, p. 274)

Russian internal troubles—such as a leadership crisis, coup, or civil war—could aggravate Russia's fears of foreign aggression and lead to a miscalculation of U.S. intentions and to nuclear overreaction. While this may sound like a complicated and improbable chain of events, Russia's story in the 1990s is one long series of domestic crises that have all too often been the source of nuclear close calls. The war scares of August 1991 and October 1993 arose out of coup attempts. The civil war in Chechnya caused a leadership crisis in Moscow, which contributed to the nuclear false alarm during Norway's launch of a meteorological rocket in January 1995. Nuclear war arising from Russian domestic crises is a threat the West did not face, or at least faced to a much lesser extent, during the Cold War.

Democracy Solves China

Democracy stops Chinese aggression

Diamond 95 (Larry, Senior Fellow – Hoover Institution, Promoting Democracy in the 1990s, December, http://www.wilsoncenter.org/subsites/ccpdc/pubs/di/1.htm)

A HOSTILE, EXPANSIONIST CHINA

In China, the threat to the West emanates from success rather than failure and is less amenable to explicit international assistance and inducement. Still, a China moving toward democracy--gradually constructing a real constitutional order, with established ground rules for political competition and succession and civilian control over the military--seems a much better prospect to be a responsible player on the regional and international stage. Unfair trade practices, naval power projection, territorial expansion, subversion of neighboring regimes, and bullying of democratic forces in Hong Kong and Taiwan are all more likely the more China resists political liberalization. So is a political succession crisis that could disrupt incremental patterns of reform and induce competing power players to take risks internationally to advance their power positions at home. A China that is building an effective rule of law seems a much better prospect to respect international trading rules that mandate protection for intellectual property and forbid the use of prison labor. And on these matters of legal, electoral, and institutional development, international actors can help.

Global war

Swaine 98 (Michael, Senior Associate and Co-Director of the China Program – Carnegie Endowment for International Peace, et al., Sources of Conflict in the 21st Century, p. 54-55)

These events pose major implications for the future security of the Asia-Pacific region. Indeed, China today arguably constitutes the most critical and least understood variable influencing the future Asian security environment and the possible use of U.S. military forces in that region. If current growth trends continue into the next century and most of the problems mentioned above are overcome, China could emerge as a major military and economic power in Asia, capable of projecting air, land, and naval forces considerable distances from its borders while serving as a key engine of economic growth for many nearby states. Such capabilities could embolden Beijing to resort to coercive diplomacy or direct military action in an attempt to resolve in its favor various outstanding territorial claims or to press other vital issues affecting the future economic and security environment of the region. The possibility of military conflict across the Taiwan Strait in particular has become a more urgent concern in some quarters, largely as a result of rapid, and in many ways revolutionary, domestic changes occurring on both sides of the Strait. The above developments could eventually reorder the regional security environment in decidedly adverse directions, producing various conflict scenarios. For example, a confident, chauvinistic China could apply unprecedented levels of political and military coercion against an increasingly independent Taiwan in an effort to reunify the island with the mainland, thereby prompting a confrontation and even military conflict with the United States and possibly Japan. Equally negative outcomes would likely emerge from a reversal or wholesale collapse of Beijing's experiment in combining political authoritarianism with liberalizing market-led reform. National fragmentation, breakdown, and/or complete chaos could result, leading to severe economic decline and a loss of government control over the population and over China's national borders. Such developments would almost certainly generate massive refugee flows and send economic shockwaves across the region, producing major crises for neighboring countries. A weak, fragmented Chinese political and social environment could also lead to the adoption of a highly xenophobic, anti-foreign stance by

many Chinese elites and social groups, possibly resulting in confrontations with the outside over a variety of territorial and other issues.

Democracy Solves Terrorism

Terrorism inevitable without democracy

Diamond 95 (Larry, Senior Fellow – Hoover Institution, Promoting Democracy in the 1990s, December, http://www.wilsoncenter.org/subsites/ccpdc/pubs/di/1.htm)

Terrorism and immigration pressures also commonly have their origins in political exclusion, social injustice, and bad, abusive, or tyrannical governance. Overwhelmingly, the sponsors of international terrorism are among the world's most authoritarian regimes: Iran, Iraq, Syria, Libya, Sudan. And locally within countries, the agents of terrorism tend to be either the fanatics of antidemocratic, ideological movements or aggrieved ethnic and regional minorities who have felt themselves socially marginalized and politically excluded and insecure: Sri Lanka's Tamils, Turkey's Kurds, India's Sikhs and Kashmiris. To be sure, democracies must vigorously mobilize their legitimate instruments of law enforcement to counter this growing threat to their security. But a more fundamental and enduring assault on international terrorism requires political change to bring down zealous, paranoiac dictatorships and to allow aggrieved groups in all countries to pursue their interests through open, peaceful, and constitutional means.

Terrorism will go nuclear, sparking global nuclear war

Speice 6 (Patrick, JD Candidate, 47 Wm and Mary L. Rev. 1427, February, Lexis)

Terrorist groups could acquire a nuclear weapon by a number of methods, including "steal[ing] one intact from the stockpile of a country possessing such weapons, or ... [being] sold or given one by [*1438] such a country, or [buying or stealing] one from another subnational group that had obtained it in one of these ways." 40 Equally threatening, however, is the risk that terrorists will steal or purchase fissile material and construct a nuclear device on their own. Very little material is necessary to construct a highly destructive nuclear weapon. 41 Although nuclear devices are extraordinarily complex, the technical barriers to constructing a workable weapon are not significant. 42 Moreover, the sheer number of methods that could be used to deliver a nuclear device into the United States makes it incredibly likely that terrorists could successfully employ a nuclear weapon once it was built. 43 Accordingly, supply-side controls that are aimed at preventing terrorists from acquiring nuclear material in the first place are the most effective means of countering the risk of nuclear terrorism. 44 Moreover, the end of the Cold War eliminated the rationale for maintaining a large military-industrial complex in Russia, and the nuclear cities were closed. 45 This resulted in at least 35,000 nuclear scientists becoming unemployed in an economy that was collapsing. 46 Although the economy has stabilized somewhat, there [*1439] are still at least 20,000 former scientists who are unemployed or underpaid and who are too young to retire, 47 raising the chilling prospect that these scientists will be tempted to sell their nuclear knowledge, or steal nuclear material to sell, to states or terrorist organizations with nuclear ambitions. 48 The potential consequences of the unchecked spread of nuclear knowledge and material to terrorist groups that seek to cause mass destruction in the United States are truly horrifying. A terrorist attack with a nuclear weapon would be devastating in terms of immediate human and economic losses. n49 Moreover, there would be

immense political pressure in the United States to discover the perpetrators and retaliate with nuclear weapons, massively increasing the number of casualties and potentially triggering a **full-scale nuclear conflict**. n50 In addition to the threat posed by terrorists, leakage of nuclear knowledge and material from Russia will reduce the barriers that states with nuclear ambitions face and may trigger widespread proliferation of nuclear weapons. n51 This proliferation will increase the risk of nuclear attacks against the United States [*1440] or its allies by hostile states, n52 as well as increase the likelihood that regional conflicts will draw in the United States and escalate to the use of nuclear weapons.

Democracy Solves War

Democratic peace theory is true – statistically proven

Dafoe 11 (Allan, PhD Candidate in Political Science – UC Berkeley, Midwest Political Science Association, , "Statistical Critiques of the Democratic Peace: Caveat Emptor," American Journal of Political Science, 55(2), April)

The "democratic peace"—the inference that democracies rarely fight each other—is one of the most important and empirically robust findings in international relations (IR).1 The apparent empirical association2 between joint democracy3 and peace has been debated and challenged since its first discovery by political scientists to the present (Gartzke 2007). Scholars have argued that this empirical association is in fact a product of other confounding factors, such as Cold War alliances (Farber and Gowa 1997; Gowa 1999), satisfaction with the regional status quo (Kacowicz 1995), shared foreign policy interests (Gartzke 1998, 2000), unmeasured factors such as dyad-specific effects (Green, Kim, and Yoon 2001), stable borders (Gibler 2007), and capital openness and development (Gartzke 2007; Gartzke and Hewitt 2010). Despite the large number of serious challenges, most current quantitative analyses continue to find a substantial, robust, and **statistically significant association** between joint democracy and the absence of militarized conflict. This article will analyze a recent challenge to the democratic peace (Gartzke 2007), situate it in the context of other statistical challenges to the democratic peace, and show that the democratic peace persists as a compelling finding. In so doing, this article also identifies new features of the democratic peace. It is important to be clear about what this empirical association implies about international politics. Despite the robustness of this result to different model specifications, this observational finding by itself does not prove that it is characteristics of democracies—such as regular competitive elections, constraints on the executive, liberal norms, or civil rights—that make these countries more peaceful toward each other. Even less does it prove that the forceful spread of democracy in particular regions of the world will reduce the frequency or severity of wars. Justifying causal claims such as these exclusively using analyses of observational data requires the leverage of strong assumptions. It is for this reason that there is less agreement about the actual causal mechanisms of the democratic peace than that around the underlying explanandum. Scholars have proposed that the democratic peace arises because of **shared norms** (Maoz and Russett 1993), **restraint on democratic leaders** (Bueno deMesquita et al. 1999),**more credible communication** through transparency (Schultz 1998) or domestic audience costs (Fearon 1994; Tomz 2007; Weeks 2008), greater capacity to reach stable bargains (Lipson 2003), and other possible causal pathways. On the other hand, it may not be a "democratic" characteristic at all that accounts for the peace, but some other co-occurring or preceding factor, such as shared strategic circumstances, shared political systems, capitalism, prosperity, liberal economic norms, or other factors. Nonetheless, the democracy-peace empirical association remains of paramount importance because, despite our best attempts to "control for" other possible correlates of this peace, the fact that two countries are democratic remains **strongly associated** with them having peaceful relations. Furthermore, under relatively modest assumptions this apparently peaceful proclivity seems unlikely to have arisen by chance (that is, the finding is "statistically significant"). This empirical association is foundational to a vast literature testing, refining, and extending theories about the apparent relationship between regime type and peace. Thus it matters greatly whether this association is robust to potential confounders (for reviews of this literature, see George and Bennett 2004; Ray 1995).

A2 Transition Wars

Our impact outweighs – lack of democracy makes extinction inevitable through war, prolif, and environmental collapse – its try-or-die – that's Diamond – their wars are small

Democratic transition decreases war – best models

Ward and Gleditsch 98 (Michael D., Professor of Political Science – University of Washington and Kristian S., Graduate Research Trainee in the Globalization and Democratization Program – University of Colorado, Boulder, American Political Science Review, March)

As Figure 1 details, democratization-whether in mild or strong degrees-is accompanied by reduction, not increase, in the risk of war. Though we do not present graphs of the converse, changes toward autocracy and reversals of democratization are accompanied by increased risks of war involvement. These risks are proportionally greater than the decline or benefits of further democratization. Thus, there is strong evidence that democratization has a monadic effect: It reduces the probability that a country will be involved in a war. Although the probability of war involvement does not decrease linearly, it does decrease monotonically, so that over the entire range of democracy minus autocracy values, there is a reduction of about 50%. During the democratic transition, at **every point** along the way as well as at the end points, there is an attendant reduction in the probability of a polity being at war. We also find that reversals toward greater levels of autocracy (not shown) not only increase the probability of war involvement. Apparently, it is more dangerous to be at a given level of democracy if that represents an increase in the level of authoritarianism than it is to be at the same level of democracy if that represents a decrease in the authoritarian character of the regime. Stated differently, reversals are riskier than progress. It has been argued that institutional constraints are theoretically important in translating the effect of democracy into foreign policy (Bueno de Mesquita, Siverson, and Woller 1992; Siverson 1995). If the idea of democracy is separated into its major components, then the degree of executive constraints empirically dominates the democracy and autocracy scales (Gleditsch and Ward 1997). Accordingly, we demonstrate that moving toward stronger executive constraints also yields a visible reduction in the risk of war.

[Continues]

CONCLUSION Our results show that the process of democratization is accompanied by a decrease in the probability of a country being involved in a war, either as a target or as an initiator. These results were obtained with a more current (and corrected) database than was used in earlier work, and our analyses also focus more clearly on the process of transition. In comparison to studies that look only at the existence of change in authority characteristics, we examine the direction, magnitude, and smoothness of the transition process.

Authoritarianism makes recurring transition crises inevitable

Halperin 5 (Morton, Senior Vice President – Center for American Progress and Director – Open Society Policy Center, The Democracy Advantage, p. 50-51)

Adaptability. Political Stability. An established mechanism for replacing leaders augments democracies' political stability. The recognized legitimacy of this succession process serves as a deterrent to those who would contemplate unconstitutional seizures of power. Periodic elections allow for the peaceful replacement of ineffectual leaders, limiting the damage they can do, mitigating the disastrous effects of their unchallenged policy assumptions and preventing the institutional sclerosis endemic to governments that remain in power for prolonged periods or are beholden to special interests. By contrast, in authoritarian systems, the very narrowness of their

claim on power carries with it the ever-present risk that leaders in these systems will be deposed through unconstitutional means. As Mancur Olson noted, the stability of even durable autocrats is limited to a single lifetime. Even if a leader isn't overthrown but dies or retires, the succession process must be reinvented every time. And the absence of a legal mechanism for a transition practically guarantees unscrupulous behavior on the part of potential successors.

A2 Mansfield/Snyder

Only 25% risk of war – at worst

Snyder 00 (Jack, Professor of International Relations – Columbia University, From Voting to Violence, p. 20)

Though democratization heightens a state's risk of war, historical evidence shows that three out of four democratizing states nonetheless avoided war in the decade after their democratization. Moreover, once liberal democracy became entrenched, no mature democracies have ever fought wars against each other. In those countries where transitions to democracy were fully consolidated during the l990s, the rights of ethnic minorities tended to improve, and ethnic conflicts were rare.'

Mansfield and Snyder are wrong

Narang and Nelson 9 (Vipin and Rebecca, Ph.D. Candidates – Harvard University, "Who Are These Belligerent Democratizers? Reassessing the Impact of Democratization on War", International Organization, 63)

Over the past decade, Edward D. Mansfield and Jack Snyder have argued for a qualification to the democratic peace theory.1 Mansfield and Snyder contend that while mature democracies may be more pacific in their relations with each other, incompletely democratizing states with weak central institutions are more likely to initiate external wars than stable regimes or fully democratizing and autocratizing states. Using regression analysis, Mansfield and Snyder show that this specific class of states is roughly eight to ten times more likely to be involved in war than a stable state undergoing no transition.2 These statistical findings are bolstered by a series of case studies illustrating the causal mechanisms of incomplete democratization and war initiation. This finding has been cited across the academic and foreign policy world as a crucial caveat to the democratic peace theory and has been posited as a robust relationship across the pages of such influential media as the New York Times, Foreign Affairs, Foreign Policy, National Public Radio, and even Slate Magazine.3 By Google Scholar's count, articles and books put forth by Mansfield and Snyder about the dangers of democratization and war have been cited more than 500 times. It has informed debates about the wisdom and sequencing of attempting democracy promotion in countries such as Iraq and the broader Middle East.4 It has been cited as a key reason why the United States should be careful about promoting democracy in China, where "greater political freedom … could at worst empower more aggressive leaders in a nuclear-armed economic powerhouse."5 The Mansfield and Snyder argument has gained plenty of high-profile traction but does the empirical evidence support the argument? We find in our study that it does not. In particular, we find few observations involving incomplete democratization, weak

institutions, and war between 1816 and 1992. Furthermore, we show that the purported relationship between incomplete democratization and war rests entirely on a cluster of unrepresentative observations involving the dismemberment of the Ottoman Empire prior to World War I. Finally, we discover that the cases selected to support the hypothesis rarely involved incomplete democratization with weak institutions. This is not to say that incomplete democratizers face no risks—indeed, scholars have recently shown that these states face a serious increased propensity for state failure or internal conflict.6 But while incomplete democratizers may face a heightened risk of imploding, we show that there is scant empirical support for the argument that these states are at risk of exploding and becoming more belligerent members of the international system.

Your authors conclude aff – creating institutions focused on civic action allow successful transitions

Mansfield and Snyder 7 (Edward D., Professor of Political Science – University of Pennsylvania, and Jack L., Professor of International Relations – Colombia Universoty, "The Sequencing "Fallacy"," Journal of Democracy, 18(3), July, p. 5-10, Project Muse)

There is, however, one key issue on which we may disagree with Berman and Carothers. We suggest not only that democratization is often violent (Berman's main point), but also that premature, out-of sequence attempts to democratize may make subsequent efforts to democratize more difficult and more violent than they would otherwise be. When elections are held in an institutional wasteland like Iraq, for example, political competition typically coalesces around and reinforces the ethnic and sectarian divisions in traditional society. To forge liberal, secular coalitions that cut across cultural divisions, it is necessary to have impartial state institutions that provide a framework for civic action and a focal point for civic loyalty. Without reasonably effective civic institutions, the outcome in culturally diverse societies is likely to resemble Iraq and Lebanon. Once a country starts on an illiberal trajectory, ideas are unleashed and institutions are established that tend to continue propelling it along that trajectory. A key danger is that premature democratization will push a country down this path. We highlight the importance of sequencing not because we are so optimistic about the prospects of engineering a properly ordered democratization, but because we are so concerned about the consequences of transitions occurring under other conditions. Our findings are consistent with the conjecture that out-of-sequence transition attempts delay the eventual achievement of stable democracy, although this issue was not a central focus of our research. Many troubled partial democracies have long retained the institutional deformities born of an initial transition from autocracy that failed to produce a coherent democracy. For example, the connection between Serbian ethnic nationalism and political demagogy began with early experiments with mass electoral politics in the nineteenth century, a pattern that persisted in the face of communist and liberal attempts to break this connection. Likewise, the foundational role of the military in Argentine, Pakistani, and Turkish mass-nationalist politics established a recurrent pattern of oscillations between semidemocracy and military rule. Similarly, Colombia's pattern of urban semidemocracy and violent rural anarchy, established during the "La Violencia" bloodletting that followed the disastrous opening to mass politics in the late 1940s, has become entrenched in subsequent decades.

A2 US Democracy Not Key/Modeled

US democracy developments are modeled internationally

Johnson 4 (Eddie, US House of Representatives—Texas, Roll Call, 7/14)

I write this letter in response to recent criticisms around my support for a letter to United Nations Secretary General Kofi Annan, asking the United Nations to monitor our upcoming election. I stand behind that letter because I believe in the principles of American democracy. I believe in telling the truth about the flaws in our electoral system to the American people, and improving and restoring integrity into our democracy. People may believe that to not trust the system 100 percent is un-American, and to that I say we must have trust in the system, but **we must** also **look for opportunities to improve it**. It is more American to improve than it is to sit back and ignore problems within our electoral system. **We owe our efforts to improve upon our democracy not only to Americans, but also to the rest of the world. The world looks to the United States as a role model for freedom and justice**.

Domestic improvements in democracy are modeled globally

Malinowski 4 (Tom, WASHINGTON ADVOCACY DIRECTOR @ Human Rights Watch, 3/10, FDCH)

A third challenge for the United States in regaining its authority as a champion of freedom in the Middle East is to lead by example at home. Throughout American history, this has been the greatest contribution the United States has made to the struggle for democracy around the world - **by serving as a beacon and as a model** of a society where the power of government to limit the freedom of its people is itself limited by law.

US democracy is a powerful global model

Stacy 3 (Helen, Center on Democracy, Development, and the Rule of Law, Institute for International Studies, Stanford University, and Faculty of Law, Queensland University of Technology, Australia, Stanford Law Review, 5/1)

The United States represents a high water mark of individual rights and freedoms in the post-World War II and post-Cold War period. It has **given inspiration** to both postcolonial and post-Cold War peoples in recrafting their societies. Human rights ideas were a crucial catalyst to these revolutions around the world and to internal debates about the relative rights of people within sovereign states. That the U.S. model is in some respects no more than an idealized chimera (take, for example, the death penalty) does not detract from the model's potency for political mobilization. Nor is the power of the U.S. model diminished by the failure of some postcolonial and post-Cold War nations to convert their dreams of a new society into rule of law democracies and human rights havens. Rather, **the U.S. model**--with all of its contradictions and failures--**continually beckons**. It provides people with a moral and rhetorical framework in which to press their claims with their own sovereigns or before the international community.

Legalism Links

Legal Restriction Link

The aff's legal restriction is merely hollow political stagecraft – it serves to reinforce the abusive power of the totalitarian state

Hedges 14 (Chris, Author and foreign affairs correspondent, "Our Sinister Dual State," 2/18, http://therealnews.com/t2/component/content/article/282-chris-hedges/1973-our-sinister-dual-state)

On Thursday the former National Security Agency official and whistle-blower William E. Binney and I will debate Stewart A. Baker, a former general counsel for the NSA, P.J. Crowley, a former State Department spokesman, and the media pundit Jeffrey Toobin. The debate, at Oxford University, will center on whether Edward Snowden's leaks helped or harmed the public good. The proposition asks: "Is Edward Snowden a Hero?" But, on a deeper level, the debate will revolve around our nation's loss of liberty.¶ The government officials who, along with their courtiers in the press, castigate Snowden insist that congressional and judicial oversight, the right to privacy, the rule of law, freedom of the press and the right to express dissent remain inviolate. They use the old words and the old phrases, old laws and old constitutional guarantees **to give our corporate totalitarianism a democratic veneer**. They insist that the system works. They tell us we are still protected by the Fourth Amendment: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized." Yet the promise of that sentence in the Bill of Rights is pitted against the fact that every telephone call we make, every email or text we send or receive, every website we visit and many of our travels are tracked, recorded and stored in government computers. The Fourth Amendment was written in 1789 in direct response to the arbitrary and unchecked search powers that the British had exercised through general warrants called writs of assistance, which played a significant part in fomenting the American Revolution. A technical system of surveillance designed to monitor those considered to be a danger to the state has, in the words of Binney, been "turned against you."¶ We live in what the German political scientist Ernst Fraenkel called "the dual state." Totalitarian states are **always dual states**. In the dual state civil liberties are abolished in the name of national security. The political sphere becomes a vacuum "as far as the law is concerned," Fraenkel wrote. There is no legal check on power. Official bodies operate with impunity outside the law. In the dual state the government can convict citizens on secret evidence in secret courts. It can strip citizens of due process and detain, torture or assassinate them, serving as judge, jury and executioner. It rules according to its own arbitrary whims and prerogatives. The outward forms of democratic participation—voting, competing political parties, judicial oversight and legislation—**are hollow, political stagecraft**. Fraenkel called those who wield this unchecked power over the citizenry "the prerogative state."¶ The masses in a totalitarian structure live in what Fraenkel termed "the normative state." The normative state, he said, is defenseless against the abuses of the prerogative state. Citizens are subjected to draconian laws and regulations, as well as arbitrary searches and arrests. The police and internal security are omnipotent. The internal workings of power are secret. Free expression and opposition political activity are pushed to the fringes of society or shut down. Those who challenge the abuses of power by the prerogative state, those who, like Snowden, expose the crimes carried out by government, are made into criminals. Totalitarian states always invert the moral order. It is the wicked who rule. It is the just who are damned.¶ Snowden, we are told, could have reformed from the inside. He could have gone to his superiors or Congress or the courts. But Snowden had numerous examples—including the persecution of the whistle-blower Thomas Drake, who originally tried to go through so-called proper channels—to remind him that **working within the system is fatal**. He had watched as senior officials including Barack Obama lied to the public about internal surveillance. He knew that the president was dishonest when he assured Americans that the Foreign Intelligence Surveillance Court, which meets in secret and hears only from the government, is "transparent." He knew that the president's statement that Congress was "overseeing the entire program" was false. He knew that everything Director of National Intelligence James Clapper told the press, the Congress and the public about the surveillance of Americans was a lie. And he knew that if this information was to be made available to the public he would have to do so through a few journalists whose integrity he could trust.¶ I was a plaintiff before the Supreme Court in Clapper v. Amnesty International, which challenged the FISA Amendments Act of 2008. This act authorizes surveillance without a showing, or probable cause, that a targeted person is an agent of a foreign power. The court dismissed our lawsuit because, it said, the idea that we were targets of surveillance was "based too much on speculation." That Supreme Court ruling was then used by the 2nd Circuit Court of Appeals to deny the credibility, or standing, of the other plaintiffs and me when it heard the Obama administration's appeal of our successful challenge to Section 1021 of the National Defense Authorization Act (NDAA), a provision that permits the U.S. military to detain citizens in military facilities, strip them of due

process and hold them indefinitely. The government, in both court cases, did not attempt to defend the surveillance and detention programs as constitutional. It said that I and the other plaintiffs had no right to bring the cases to court. And the courts agreed.¶ This deadly impasse, the tightening of the corporate totalitarian noose, would have continued if Snowden had not jolted the nation awake by disclosing the crimes of the prerogative state. Snowden's revelations triggered, for the first time, a genuine public debate about mass surveillance. Since the disclosures, three judges have ruled on the NSA's surveillance program, one defending it as legal and two accusing the NSA of violating the Constitution. A presidential panel has criticized the agency's blanket surveillance and called for reform. Some members of Congress—although that body authorized the Patriot Act and its Section 215, which ostensibly permitted this wholesale surveillance of the public—have expressed dismay at the extent of the NSA's activities and the weakness of its promised reforms. Maybe they are lying. Maybe they are not. Maybe reforms will produce improvements or maybe they will be merely cosmetic. But before Snowden we had nothing. Snowden's revelations made us conscious. And as George Orwell wrote in his dystopian novel "1984": "Until they become conscious they will never rebel. ..."¶ "Now, we're all familiar with Congress' most dramatic oversight failure," said Ben Wizner, the director of the American Civil Liberties Union Speech, Privacy & Technology Project and a legal adviser to Snowden, in a recent debate over Snowden with R. James Woolsey, a former director of the Central Intelligence Agency. "And this was in the notorious exchange between Sen. Ron Wyden and Director of National Intelligence James Clapper. Wyden had asked, did the NSA collect any type of data on millions or hundreds of millions of Americans? Clapper's answer was, 'No, sir.' Now, this brazen falsehood is most often described as Clapper's lie to Congress, but that's not what it was. Wyden knew that Clapper was lying. Only we didn't know. And Congress lacked the courage to correct the record—allowed us to be deceived by the director of national intelligence."¶ Societies that once had democratic traditions, or periods when openness was possible, are often seduced into totalitarian systems because those who rule continue to pay outward fealty to the ideals, practices and forms of the old systems. This was true when the Emperor Augustus dismantled the Roman Republic. It was true when Lenin and the Bolsheviks seized control of the autonomous soviets and ruthlessly centralized power. It was true following the collapse of the Weimar Republic and the rise of Nazi fascism. Thomas Paine described despotic government as a fungus growing out of a corrupt civil society. And this is what has happened to us.¶ No one who lives under constant surveillance, who is subject to detention anywhere at any time, whose conversations, messages, meetings, proclivities and habits are recorded, stored and analyzed, can be described as free. The relationship between the U.S. government and the U.S. citizen is now one of **master and slave**. Yet the prerogative state assures us that our rights are sacred, that it abides by the will of the people and the consent of the governed.¶ The defense of liberty, which Snowden exhibited when he cast his fortune, his safety and his life aside to inform the public of the forces arrayed against constitutional rights, entails grave risks in dual states. It demands personal sacrifice. Snowden has called us to this sacrifice. He has allowed us to see who we are and what we have become. He has given us a chance. He has also shown us the heavy cost of defiance. It is up to us to seize this chance and **dismantle the prerogative state**. This means removing from power those who stole our liberty and lied to us. It means **refusing to naively trust in their promised reform**—for reform will never come from those who are complicit in such crimes. **It will come through Americans' construction of mass movements and alternative centers of power that can mount sustained pressure**. If we fail to sever these chains we will become, like many who did not rise up in time to save their civil societies, human chattel.

Surveillance Reform Link

Reforms like the affirmative leave completely unchanged the primary mechanisms of governmental surveillance – fundamental limits are impossible absent INDIVIDUAL resistance to governmental power

Greenwald 14 (Glenn, 11/14, journalist, constitutional lawyer, and author of four New York Times best-selling books on politics and law, "CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD," https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/)

The boredom of this spectacle was simply due to the fact that this has been seen so many times before—in fact, every time in the post-9/11 era that the U.S. Congress pretends publicly to debate some kind of foreign policy or civil liberties bill. Just enough members stand up to scream "9/11″ and "terrorism" over and over until the bill vesting new powers is passed or the bill protecting civil liberties is defeated. Eight years ago, when this tawdry ritual was still a bit surprising to me, I live-blogged the 2006 debate over passage of the Military Commissions

Act, which, with bipartisan support, literally abolished habeas corpus rights established by the Magna Carta by sanctioning detention without charges or trial. (My favorite episode there was when GOP Sen. Arlen Specter warned that "what the bill seeks to do is set back basic rights by some nine hundred years," and then voted in favor of its enactment.) In my state of naive disbelief, as one senator after the next thundered about the "message we are sending" to "the terrorists," I wrote: "The quality of the 'debate' on the Senate floor is so shockingly (though appropriately) low and devoid of substance that it is hard to watch." So watching last night's Senate debate was like watching a repeat of some hideously shallow TV show. The only new aspect was that the aging Al Qaeda villain has been rather ruthlessly replaced by the show's producers with the younger, sleeker ISIS model. Showing no gratitude at all for the years of value it provided these senators, they ignored the veteran terror group almost completely in favor of its new replacement. And they proceeded to save a domestic surveillance program clearly unpopular among those they pretend to represent. There is a real question about whether the defeat of this bill is good, bad, or irrelevant. To begin with, it sought to change only one small sliver of NSA mass surveillance (domestic bulk collection of phone records under section 215 of the Patriot Act) **while leaving completely unchanged the primary means of NSA mass surveillance**, which takes place under section 702 of the FISA Amendments Act, based on the lovely and quintessentially American theory that all that matters are the privacy rights of Americans (and not the 95 percent of the planet called "non-Americans"). There were some mildly positive provisions in the USA Freedom Act: the placement of "public advocates" at the FISA court to contest the claims of the government; the prohibition on the NSA holding Americans' phone records, requiring instead that they obtain FISA court approval before seeking specific records from the telecoms (which already hold those records for at least 18 months); and reducing the agency's "contact chaining" analysis from three hops to two. One could reasonably argue (as the ACLU and EFF did) that, though woefully inadequate, the bill was a net-positive as a first step toward real reform, but one could also reasonably argue, as Marcy Wheeler has with characteristic insight, that the bill is **so larded with ambiguities and fundamental inadequacies** that it **would forestall better options** and advocates for real reform should thus root for its defeat. When pro-privacy members of Congress first unveiled the bill many months ago, it was actually a good bill: real reform. But the White House worked very hard— in partnership with the House GOP—to water that bill down so severely that what the House ended up passing over the summer did more to strengthen the NSA than rein it in, which caused even the ACLU and EFF to withdraw their support. The Senate bill rejected last night was basically a middle ground between that original, good bill and the anti-reform bill passed by the House. * * * * * All of that illustrates what is, to me, the most important point from all of this: the last place one should look to impose limits on the powers of the U.S. government is . . . the U.S. government. Governments don't walk around trying to figure out how to limit their own power, and that's particularly true of empires. The entire system in D.C. is designed at its core to prevent real reform. **This Congress is not going to enact anything resembling fundamental limits on the NSA's powers of mass surveillance**. Even if it somehow did, this White House would never sign it. Even if all that miraculously happened, the fact that the U.S. intelligence community and National Security State operates with no limits and no oversight means they'd **easily co-opt** the entire reform process. That's what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA "oversight" court—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and "Dutch" Ruppersberger, while the court quickly became a rubber stamp with subservient judges who operate in total secrecy. Ever since the Snowden reporting began and public opinion (in both the U.S. and globally) began radically changing, the White House's strategy has been obvious. It's vintage Obama: Enact something that is called "reform"—so that he can give a pretty speech telling the world that he heard and responded to their concerns—**but that in actuality changes almost nothing, thus strengthening the very system he can pretend he "changed."** That's the same tactic as Silicon Valley, which also supported this bill: Be able to point to something called "reform" so they can trick hundreds of millions of current and future users around the world into believing that their communications are now safe if they use Facebook, Google, Skype and the rest. In pretty much every interview I've done over the last year, I've been asked why there haven't been significant changes from all the disclosures. I vehemently disagree with the premise of the question, which equates "U.S. legislative changes" with "meaningful changes." But it has been clear from the start that U.S. legislation is not going to impose meaningful limitations on the NSA's powers of mass surveillance, at least not fundamentally. Those limitations are going to come from—are now coming from —very different places: 1) **Individuals refusing to use internet services that compromise their privacy**. The FBI and other U.S. government agencies, as well as the U.K. Government, are apoplectic over new products from Google and Apple that are embedded with strong encryption, precisely because they know that such protections, while far from perfect, are serious impediments to their power of mass surveillance. To make this observation does not mean, as some deeply confused people try to suggest, that one believes that Silicon Valley companies care in the slightest about people's privacy rights and civil liberties. As much of the Snowden reporting has proven, these companies don't

care about any of that. Just as the telecoms have been for years, U.S. tech companies were more than happy to eagerly cooperate with the NSA in violating their users' privacy en masse when they could do so in the dark. But it's precisely because they can't do it in the dark any more that things are changing, and significantly. That's not because these tech companies suddenly discovered their belief in the value of privacy. They haven't, and it doesn't take any special insight or brave radicalism to recognize that. That's obvious. Instead, these changes are taking place because these companies are petrified that the perception of their collaboration with the NSA will harm their future profits, by making them vulnerable to appeals from competing German, Korean, and Brazilian social media companies that people shouldn't use Facebook or Google because they will hand over that data to the NSA. That—fear of damage to future business prospects—is what is motivating these companies to at least try to convince users of their commitment to privacy. And the more users refuse to use the services of Silicon Valley companies that compromise their privacy—and, conversely, resolve to use only truly pro-privacy companies instead—the stronger that pressure will become. Those who like to claim that nothing has changed from the NSA revelations simply ignore the key facts, including the serious harm to the U.S. tech sector from these disclosures, driven by the newfound knowledge that U.S. companies are complicit in mass surveillance. Obviously, tech companies don't care at all about privacy, but they care a lot about that. Just yesterday, the messaging service WhatsApp announced that it "will start bringing end-to-end encryption to its 600 million users," which "would be the largest implementation of end-to-end encryption ever." None of this is a silver bullet: the NSA will work hard to circumvent this technology and tech companies are hardly trustworthy, being notoriously close to the U.S. government and often co-opted themselves. But as more individuals demand more privacy protection, the incentives are strong. As The Verge notes about WhatsApp's new encryption scheme, "'end-to-end' means that, unlike messages encrypted by Gmail or Facebook Chat, WhatsApp won't be able to decrypt the messages itself, even if the company is compelled by law enforcement." 2) Other countries taking action against U.S. hegemony over the internet. Most people who claim nothing has changed from the Snowden disclosures are viewing the world jingoistically, with the U.S. the only venue that matters. But the real action has long been in other countries, acting individually and jointly to prevent U.S. domination of the internet. Brazil is building a new undersea internet infrastructure specifically to avoid U.S. soil and thus NSA access. That same country punished Boeing by denying the U.S. contractor a long-expected $4.5 billion contract for fighter jets in protest over NSA spying. Another powerful country, Germany, has taken the lead with Brazil in pushing for international institutions and regulatory schemes to place real limits on NSA mass surveillance. U.S. diplomatic relations with numerous key countries have been severely hampered by revelations of mass surveillance. In July, Pew reported that "a new…survey finds widespread global opposition to U.S. eavesdropping and a decline in the view that the U.S. respects the personal freedoms of its people" and that, while the U.S. remains popular in many countries, particularly relative to others such as China, "in nearly all countries polled, majorities oppose monitoring by the U.S. government of emails and phone calls of foreign leaders or their citizens." After just one year of Snowden reporting, there have been massive drops in the percentage of people who believe "the U.S. government respects personal freedom," with the biggest drops coming in key countries that saw the most NSA reporting: All of that has significantly increased the costs for the U.S. to continue to subject the world, and the internet, to dragnets of mass surveillance. It has resulted in serious political, diplomatic, and structural impediments to ongoing spying programs. And it has meaningfully altered world opinion on all of these critical questions. 3) U.S. court proceedings. A U.S. federal judge already ruled that the NSA's domestic bulk collection program likely violates the 4th Amendment, and in doing so, obliterated many of the government's underlying justifications. Multiple cases are now on appeal, almost certainly headed to the Supreme Court. None of this was possible in the absence of Snowden disclosures. **For a variety of reasons, when it comes to placing real limits on the NSA, I place almost as little faith in the judiciary as I do in the Congress and executive branch**. To begin with, the Supreme Court is dominated by five right-wing justices on whom the Obama Justice Department has repeatedly relied to endorse their most extreme civil-liberties-destroying theories. For another, of all the U.S. institutions that have completely abdicated their role in the post-9/11 era, **the federal judiciary has probably been the worst**, the most consistently subservient to the National Security State. Still, there is some chance that one of these cases will result in a favorable outcome that restores some 4th Amendment protections inside the U.S. The effect is likely to be marginal, but not entirely insignificant. 4) Greater individual demand for, and use of, encryption. In the immediate aftermath of the first Snowden reports, I was contacted by countless leading national security reporters in the U.S., who work with the largest media outlets, seeking an interview with Snowden. But there was a critical problem: despite working every day on highly sensitive matters, none of them knew anything about basic encryption methods, nor did their IT departments. Just a few short months later, well over 50 percent of the journalists who emailed me did so under the protection of PGP encryption. Today, if any journalist emails me without encryption, they do so apologetically and with embarrassment. That is reflective of a much broader change from the Snowden reporting, perhaps the most important one: a significantly increased awareness of the need for encryption and its usage around the world. As Wired reported in May: Early last year—before the Snowden revelations—encrypted traffic accounted for 2.29 percent of all peak hour traffic in North America, according to Sandvine's report. Now, it spans 3.8 percent. But that's a small jump compared to other parts of the world. In Europe, encrypted traffic went from 1.47 percent to 6.10 percent, and in Latin America, it increased from 1.8 percent to 10.37 percent. As a result, there are people genuinely devoted to privacy (as opposed to Silicon Valley profit-driven companies) developing all-new, free encryption capabilities. The New York Times recently urged all media outlets to provide default "HTTPS" protection for their sites to protect user privacy (The Intercept is currently only one of three news sites to do so). Increased individual encryption use is a serious impediment to NSA mass surveillance: far stronger than any laws the U.S. Congress might pass. Aside from the genuine difficulty the agency has in cracking well-used encryption products, increased usage presents its own serious problem. Right now, the NSA—based on the warped mindset that anyone who wants to hide what they're saying from the NSA is probably a Bad Person—views "encryption usage" as one of its key factors in determining who is likely a terrorist. But that only works if 10,000 people around

the world use encryption. Once that number increases to 1 million, and then to 10 million, and then to default usage, the NSA will no longer be able to use encryption usage as a sign of Bad People. Rather than being a red flag, encryption will simply be a brick wall: one that individuals have placed between the snooping governments and their online activities. That is a huge change, and it is coming. So let Saxby Chambliss and Susan Collins and Marco Rubio scream into their insular void about ISIS and 9/11 and terrorism. Let Barack Obama, Dianne Feinstein and Nancy Pelosi deceitfully march under a "reform" banner as they do everything possible to protect the NSA from any real limits. Let the NSA and other national security officials sit smugly in the knowledge that none of the political branches in D.C. can meaningfully limit them even if they wanted to (which they don't). The changes from the Snowden disclosures are found far from the Kabuki theater of the D.C. political class, and they are unquestionably significant. That does not mean the battle is inevitably won: The U.S. remains the most powerful government on earth, has all sorts of ways to continue to induce the complicity of big Silicon Valley firms, and is not going to cede dominion over the internet easily. **But the battle is underway and the forces of reform are formidable—not because of anything the U.S. congress is doing, but despite it**.

Metadata Link

The affirmative's focus on the (il)legality of metadata surveillance obfuscates more important questions regarding the technological infrastructure that enables such surveillance – this framing ensures the continuation of privacy violations and the ineffectiveness of reform

Reed and Soghoian 15 (John and Chris, managing editor of Just Security and a research fellow at NYU Law School's Center for Human Rights and Global Justice + ACLU's chief technologist, 6/1, "Chris Soghoian on What's Wrong With the Debate on Section 215," http://justsecurity.org/23369/chris-soghoian-wrong-focusing-section-215/)

It's great that the sunset of Section 215 has reignited the debate about mass surveillance in the United States, but all the focus on this one provision, more specifically on the telephone metadata program it permited, **may miss the mark**, according to Chris Soghoian, the ACLU's chief technologist and longtime fixture at the intersection of digital security and privacy. He thinks a lack of technological understanding and diversity of experience is **preventing us from asking the most important questions** about the ways the United States government is collecting communications data and how effective this collection is in light of the government's rationales for gathering it. Last night's expiration of Section 215 offers the chance to give our readers a taste of a Q+A that yours truly recently did with Soghoian. His comments align with the news about Section 215, but it's pretty safe to assume Soghoian's remarks will be relevant to other surveillance-related discussions that emerge in the coming months and years. The excerpt below stems from a portion of a conversation about the harm being caused by a lack of both diversity of experience and technological expertise among legal experts, policymakers, and journalists involved in the debate over mass surveillance programs. High-level discourse about when government can access data is good, but this discussion **should be informed by an understanding of how government actually gathers and uses that data**. Bringing in voices with greater technological understanding and a more diverse range of backgrounds would enable more potent oversight, a more thorough understanding of such efforts' effectiveness, and a better ability to judge the costs and benefits of surveillance programs. **A debate that focuses solely on the legality of surveillance without details of a technological infrastructure** that may exist through numerous changes in law, policy, and even governments **is truly deficient**. Click through the jump to read Soghoian's comments. Section 215 and our focus on the wrong collection programs "[Marcy Wheeler] keeps harping on this point and I think she's 100% right. The FISA Court issued 180 [Section] 215 orders last year. And five of them were for the domestic telephony metadata program. Five. So we are having a debate right now about reauthorizing 215, but we don't know what 175 of the 180 215 orders were used for. What kind of debate is that? That is the most fraudulent debate I can imagine. And again, I really think that debate around the metadata program is an intentional diversion. People in the IC have said this is not actually a particularly useful program. When they're being honest, they'll say they can live without it. They would rather have the fight be over this than the 175 other uses for this kind of order. It boggles the mind that in 2015, at a time when most Americans have a smart phone, that the only debate taking place is about how the NSA collects phone records about that device. Of course they're collecting Internet records. They are a high tech agency that employs thousands of hackers. Of course they are doing Internet metadata collection and analysis. But we're not having a conversation about how they do domestic Internet collection. We're not

having a debate about how Americans' data gets transmitted over international links and then gets picked up by the NSA. **The trap which we have allowed this debate to be framed solely around** — or constrained solely around **the program that the intelligence community doesn't really give a shit about and is willing to have it be sacrificed as a pawn to protect the other things**. And **we've played into their hands**. We played into that trap completely. That's a problem that we've not done a good job with."

Politics Links

Costs Pol Cap

Ending metadata surveillance costs political capital – creates grave political risks

Heymann 15 (Philip, James Barr Ames Professor of Law @ Harvard and former Deputy Atty General under Clinton, "LAWFARE RESEARCH PAPER SERIES," http://www.lawfareblog.com/wp-content/uploads/2013/08/Lawfare-Philip-Heymann-SURVEILLANCE-for-publ-10-May-2015.pdf)

No one will feel responsible to ensure that the group discuss and consider the social consequences of the fears of American citizens likely to be aroused by such a massive and continuing program. Many citizens are already deeply suspicious of government and untrusting of secret judicial institutions and of a congress that enjoys less than ten percent public approval. What's worse, the program may well endure whether or not is useful. It is unlikely to be cut off even if it produces no useful information, so long as that ineffectiveness is kept secret. Cutting it off would **create grave political risks** of revelation and of being accused of prying, wasting money, and, inconsistently, now endangering the American public. So there is likely to be little effort to monitor the effectiveness of the program and no effort to weigh the social effects. There will be no public criticisms unless the existence of the program leaks and, in any event, there is legal authority for it, which many will consider provides whatever moral or social legitimacy is needed.

Metadata reform costs political capital – sucks up all the legislative oxygen

Vladeck 15 (Steve, co-editor-in-chief of Just Security. Steve is a professor of law at American University Washington College of Law, and is also a senior editor of the Journal of National Security Law & Policy; a contributing editor to the Lawfare blog; a fellow of the Fordham University School of Law Center on National Security; the Supreme Court Fellow for the Constitution Project; a member of the American Law Institute; and the Chair of the Section on Federal Courts of the Association of American Law Schools, "How Rand Paul Hijacked Surveillance Reform," 6/1, http://justsecurity.org/23353/rand-paul-hijacked-surveillance-reform/)

I, though, come to bury Caesar, not to praise him. As I explain in the post that follows, Senator Paul's focus on the substantive validity and wisdom of the phone records program has obscured two larger problems with the USA FREEDOM Act: (1) that it says nothing at all about the government's other controversial surveillance authorities, especially those carried out pursuant to Executive Order 12,333 and the FISA Amendments Act of 2008; and (2) that its procedural reforms, especially with respect to judicial review by the FISA Court, are laughably modest. These shortcomings could easily be dismissed if it was clear that Congress means to address them in subsequent legislation. But by all accounts, section 215 is–and has been–the ballgame. Thus, Senator Paul's grandstanding on the call records program may well come to epitomize what I've elsewhere described as "libertarian hijacking," "wherein libertarians form a short-term coalition with progressive Democrats on national security issues, only to pack up and basically go home once they have extracted concessions that don't actually resolve the real issues." Even worse, as I've explained, "**such efforts . . . consume most (if not all) of the available oxygen and political capital**, obfuscating, if not downright suppressing, the far more problematic elements of the relevant national security policy." So too, here.

Surveillance reform costs political capital AND Obama gets involved

Roberts 15 (Dan, Columnist @ The Guardian, 6/1, "Charges against Edward Snowden stand, despite telephone surveillance ban," http://www.theguardian.com/us-news/2015/jun/01/charges-against-edward-snowden-stand-despite-telephone-surveillance-ban)

Obama administration spokesman Josh Earnest rejected the argument that the imminent passage of legislation banning the practice meant it was time to take a fresh look at the charges against the former National Security Agency contractor. "The fact is that Mr Snowden committed very serious crimes, and the US government and the Department of Justice believe that he should face them,"

Earnest told the Guardian at the daily White House press briefing. “That’s why we believe that Mr Snowden should return to the United States, where he will face due process and have the opportunity to make that case in a court of law.” Earnest refused to comment on whether Snowden could be allowed to employ a whistleblower defence if he choose to return voluntarily, something his supporters have argued is impossible under current Espionage Act charges. “Obviously this is something that the Department of Justice would handle if they are having [those conversations],” said Earnest. “The thing I would put out is that there exists mechanisms for whistleblowers to raise concerns about sensitive national security programmes.” “Releasing details of sensitive national security programmes on the internet for everyone, including our adversaries to see, is inconsistent with those protocols that are established for protecting whistleblowers,” he added. But the White House placed itself firmly on the side of NSA reform, when asked if the president was “taking ownership” of the USA Freedom Act, which is expected to pass Congress later this week. Analysis US surveillance reform: what has happened and what happens next? Is the Patriot Act gone forever? What exactly is the USA Freedom Act? Can the government still monitor terrorist groups? Here’s what you need to know Read more “To the extent that we’re talking about the president’s legacy, I would suspect [it] would be a logical conclusion from some historians that the president ended some of these programmes,” replied Earnest. “This is consistent with the reforms that the president advocated a year and a half ago. And these are reforms that **required the president and his team to expend significant amounts of political capital** to achieve over the objection of Republicans.”

A2 No Spillover

Surveillance fights spillover to weaken momentum for TPA

Wright 15 (Andy, Founding Editor @ Just Security + formerly faculty of Savannah Law School after serving two years as Associate Counsel to the President in the White House Counsel’s Office, "The Patriot Act's Sunset Recess," 5/29, http://justsecurity.org/23308/patriot-acts-sunset-recess/)

As one former Senate leadership aide put it to me, “fatigue and jet fumes” usually fuel a photo finish even on controversial sunsets. However, **that has not been the case here**. **The Senate lost valuable floor time and political capital on the controversy over trade authority**. In addition, it is more difficult to reach legislative compromise on surveillance reform when there are numerous presidential candidates jockeying within the Republican caucus. As recounted by Patrick Eddington and Jennifer Granick, Sen. Rand Paul’s (R-Ky.) May 20 filibuster had the effect of preventing a vote on Sen. Mitch McConnell’s (R-Ky.) clean reauthorization bill (i.e, extend Section 215 without reforms) before the House of Representatives went on recess. The House seems content to let pressure build on senators as the sunset approaches rather than engage in compromise negotiations.

Circumvention Turn

1nc

NSA will circumvent and weaken new restrictions

Ackerman 6/1/15 (Spencer, Columnist @ the Guardian, "Fears NSA will seek to undermine surveillance reform," http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law)

Privacy advocates fear the National Security Agency **will attempt to weaken new restrictions** on the bulk collection of Americans' phone and email records **with a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday. The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret. Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act. Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions on bulk phone records collection by taking an expansive view of the bill's definitions, thanks to a pliant, secret surveillance court. "My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]," Paul said on the Senate floor on Sunday. Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform. "My time on the intelligence committee has taught me to always be vigilant for secret interpretations of the law and new surveillance techniques that Congress doesn't know about," Wyden, a member of the intelligence committee, told the Guardian. "Americans were rightly outraged when they learned that US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens. The American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind." The USA Freedom Act is supposed to prevent what Wyden calls "secret law". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance. Yet in recent memory, the US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004. Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, an internal NSA draft history records that attorneys found a different legal rationale that "essentially gave NSA the same authority to collect bulk internet metadata that it had". After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa court, that Section 215 of the Patriot Act authorized it all along – precisely the contention that the second circuit court of appeals rejected in May. Despite that recent history, veteran intelligence attorneys reacted with scorn to the idea that NSA lawyers will undermine surveillance reform. Robert Litt, the senior lawyer for director of national intelligence, James Clapper, said during a public appearance last month that creating a banned bulk surveillance program was "not going to happen". "The whole notion that NSA is just evilly determined to read the law in a fashion contrary to its intent is bullshit, of the sort that the Guardian and the left – but I repeat myself – have fallen in love with. The interpretation of 215 that supported the bulk collection program was creative but not beyond reason, and it was upheld by many judges," said the former NSA general counsel Stewart Baker, referring to Section 215 of the Patriot Act. This is the section that permits US law enforcement and surveillance agencies to collect business records and expired at midnight, almost two years after the whistleblower Edward Snowden revealed to the Guardian that the Patriot Act was secretly being used to justify the collection of phone records from millions of Americans. With one exception, the judges that upheld the interpretation sat on the non-adversarial Fisa court, a body that approves nearly all government surveillance requests and modifies about a quarter of them substantially. The exception was reversed by the second circuit court of appeals. Baker, speaking before the Senate voted, predicted: "I don't think anyone at NSA is going to invest in looking for ways to defy congressional intent if USA Freedom is adopted." The USA Freedom Act, a compromise bill, would not have an impact on the vast majority of NSA surveillance. It would not stop any overseas-focused surveillance program, no matter how broad in scope, nor would it end the NSA's dragnets of Americans' international communications authorized by a different law. Other bulk domestic surveillance programs, like the one the Drug Enforcement Agency operated, would not be impacted. The rise of what activists have come to call "bulky" surveillance, like the "large collections" of Americans' electronic communications records the FBI gets to collect under the Patriot Act, continue unabated – or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday. That collection, recently confirmed by a largely overlooked

Justice Department inspector general's report, **points to a slipperiness in shuttering surveillance programs – one that creates opportunities for clever lawyers**.

2nc

Yes NSA will circumvent

Gaist 6/2/15 (Thomas, Columnist @ WSWS, "US Senate prepares to extend NSA spy powers," http://www.wsws.org/en/articles/2015/06/02/nsas-j02.html)

Defending the agency before the Senate this week, the NSA's top in-house lawyer Stewart Baker acknowledged that the readings of Section 215 by NSA and DoJ lawyers from 2005 required some inventiveness. "The interpretation of 215 that supported the bulk collection program was creative," admitted Baker. Baker then proceeded to speak in favor of passage of the USA Freedom Act legislation, saying that such legal "creativity" would no longer be necessary should the law pass. "I don't think anyone at NSA is going to invest in looking for ways to defy congressional intent if USA Freedom is adopted," Baker said, implying that the bill provides all the necessary leeway for the NSA to operate as it desires.

Baker's testimony makes clear that for all the talk of "ending NSA spying" and "shutting down NSA servers," what is emerging out of the USA Freedom Act saga is, in reality, **a blank check for the spy agency to continue and expand its operations**, which are targeting the entire US and world population. Even assuming that constraints against telephone metadata were actually enforced, the USA Freedom Act in no way limits the NSA's existing authority to conduct limitless dragnet surveillance against targets in foreign countries, against US persons who communicate with persons abroad, and against US data "incidentally" collected from servers located overseas. The vast majority of domestic surveillance operations developed by the NSA, FBI, DEA and other agencies with increasing speed since 9/11 **would** also **not be subject to any new constraints**.

Internet Freedom Adv Answers

Nationalization Good

Internet nationalization key to cybersecurity – prevents attacks

Renda 13 (Andrea Renda, , Senior Research Fellow, Centre for European Policy Studies, "Cybersecurity and Internet Governance," May 3, 2013, http://www.cfr.org/councilofcouncils/global_memos/p32414)

Cybersecurity is now a leading concern for major economies. Reports indicate that hackers can target the U.S. Department of Justice or Iranian nuclear facilities just as easily as they can mine credit card data. Threats have risen as the Internet has become a critical infrastructure for the global economy, with thousands of operations migrating onto it. For example, the innocuous practice of bring-your-own-device to work presents mounting dangers due to malware attacks--software intended to corrupt computers. Between April and December 2012, the types of threats detected on the Google Android platform increased by more than thirty times from 11,000 to 350,000, and are expected to reach one million in 2003, according to security company Trend Micro (See Figure 1). Put simply, as the global economy relies more on the Internet, the latter becomes increasingly insidious. There is no doubt that the Internet is efficient. But it now needs a more concerted global effort to preserve its best aspects and guard against abuses. The rise of the digital cold war Cyber threats and cyberattacks also reveal an escalating digital cold war. For years the United States government has claimed that cyberattacks are mainly state-sponsored, initiated predominantly by China, Iran, and Russia. The penetration of the U.S. Internet technology market by corporations such as Huawei, subsidized by the Chinese government, has led to more fears that sensitive information is vulnerable. After an explicit exchange of views between President Barack Obama and President Xi Jinping in February 2013, the United States passed a new spending law that included a cyber espionage review process limiting U.S. government procurement of Chinese hardware. U.S. suspicions intensified when Mandiant, a private information security firm, released a report detailing cyber espionage by a covert Chinese military unit against 100 U.S. companies and organizations. In March 2013, the U.S. government announced the creation of thirteen new teams of computer experts capable to retaliate if the United States were hit by a major attack. On the other hand, Chinese experts claim to be the primary target of state-sponsored attacks, largely originating from the United States. But in reality the situation is more complex. Table 1 shows that cyberattacks in March 2013 were most frequently launched from Russia and Germany, followed by Taiwan and the United States. What is happening to the Internet? Created as a decentralized network, the Internet has been a difficult place for policymakers seeking to enforce the laws of the real world. Distributed Denial of Service (DDoS) attacks—consisting of virus infected systems (Botnet) targeting a single website leading to a Denial of Service for the end user—became a harsh reality by 2000, when companies such as Amazon, eBay, and Yahoo! had been affected. These costs stem from the direct financial damage caused by loss of revenue during an attack, disaster recovery costs associated with restoring a company's services, a loss of customers following an attack, and compensation payments to customers in the event of a violation of their service level agreements. As the Internet permeates everyday life, the stakes are becoming even higher. In a few years, society could delegate every aspect of life to information technology imagine driverless cars, machine-to-machine communications, and other trends that will lead to the interconnection of buildings to trains, and dishwashers to smartphones. This could open up these societies to previously unimaginable disruptive cyber events. What is as concerning is that in cyberspace, attacks seem to have a structural lead over defense capabilities: it can be prohibitively difficult to foresee where, how, and when attackers will strike. Confronted with this challenge, the global community faces a dilemma. The neutrality of the Internet has proven to be a formidable ally of democracy, but the cost of protecting users' freedom is skyrocketing. Critical services, such as e-commerce or e-health, might never develop if users are not able to operate in a more secure environment. Moreover, some governments simply do not like ideas to circulate freely. Besides the "giant cage" built by China to insulate its Internet users, countries like Pakistan have created national firewalls to monitor and filter the flow of information on the network. And even the Obama administration, which has most recently championed Internet freedom initiatives abroad, is said to be cooperating with private telecoms operators on Internet surveillance, and Congress is discussing a new law imposing information sharing between companies and government on end-user behavior, which violates user privacy. The question becomes more urgent every day: Should the Internet remain an end-to-end, neutral environment, or should we sacrifice Internet freedom on the altar of enhanced security? The answer requires a brief explanation of how the Internet is governed, and what might change. The end of the Web as we know it? Since its early days, the Internet has been largely unregulated by public authorities, becoming a matter for private self-regulation by engineers and experts, who for years have taken major decisions through unstructured

procedures. No doubt, this has worked in the past. But as cyberspace started to expand, the stakes began to rise. Informal bodies such as the Internet Corporation for Assigned Names and Numbers (ICANN)—a private, U.S.-based multi-stakeholder association that rules on domain names and other major aspects of the Internet have been increasingly put under the spotlight. Recent ICANN rulings have exacerbated the debate over the need for more government involvement in Internet governance, either through a dedicated United Nations agency or through the International Telecommunications Union (ITU), an existing UN body that ensures international communication and facilitates deployment of telecom infrastructure. But many experts fear that if a multi-stakeholder model is abandoned, the World Wide Web would cease to exist as we know it. Last year's World Conference on International Telecommunications, held in Dubai, hosted a heated debate on the future of cyberspace. Every stakeholder was looking for a different outcome. The ITU looked to expand its authority over the Internet; European telecoms operators wanted to secure more revenues by changing the rules for exchanging information between networks; China, Russia, and India wanted stronger government control over the Internet; the United States and Europe stood to protect the multi-stakeholder model of ICANN; and a group of smaller countries sought to have Internet access declared a human right. When a new treaty was finally put to vote, unsurprisingly, as many as fifty-five countries (including the United States and many EU member states) decided not to sign. Since then, the question on how the Internet will be governed remains unresolved.

Cyber attacks between states results in great power war

Gable 10 (Kelly A. Gable, Adjunct Professor of Public International Law, Drexel University Earle Mack School of Law, Cyber-Apocalypse Now: Securing the Internet Against Cyberterrorism and Using Universal Jurisdiction as a Deterrent, Vanderbilt Journal of Transnational Law, January, 2010, 43 Vand. J. Transnat'l L. 57, lexis)

Spoofing attacks are concentrated on impersonating a particular user or computer, usually in order to launch other types of attacks. n122 Spoofing is often committed in connection with password sniffing; after obtaining a user's log-in and password, the spoofer will log in to the computer and masquerade as the legitimate user. The cyberterrorist typically does not stop there, instead using that computer as a bridge to another, hopping in this fashion from computer to computer. This process, called "looping," effectively conceals the spoofer's identity, especially because he or she may have jumped back and forth across various national boundaries. n123 Even more disturbing is the possibility of misleading entire governments into believing that another, potentially hostile government is attempting to infiltrate its networks. Imagine that a cyberterrorist perpetrates an attack on the network maintained by the U.S. Treasury and steals millions of dollars, transferring the money to his own account to be used for funding further terrorist activities. n124 He has used the spoofing technique, however, which causes the U.S. government to believe the Russian government to be behind the attack and to accuse them of the attack. The Russian government denies the accusation and is insulted at the seemingly unprovoked hostility. Tensions between the governments escalate and boil over, potentially **resulting in war**. Though this may be only a hypothetical example, **it is frighteningly plausible**. In fact, it may have been used in the attacks on U.S. and South Korean websites - the South Korean government initially was so certain that North Korea was behind the attack that it publicly accused the North Korean government, despite already tense relations. n125 Similarly, in the 2007 attack on Estonia, Estonian authorities were so certain that the Russian government was behind the attack that they not only publicly accused them but requested military assistance from NATO in responding to the attack. n126 It was later determined that Russia was not behind the attack and that at least some of the attackers were located in Brazil and Vietnam. n127

Government control over the internet key to prevent and mitigate cyber disasters

Baldor 9 (Lolita C. Baldor, Associated Press, "How much government control in cybercrisis?," http://www.nbcnews.com/id/33038143/ns/technology_and_science-security/t/how-much-government-control-cybercrisis/#.VWXbAvlViko]

There's no kill switch for the Internet, no secret on-off button in an Oval Office drawer. Yet when a Senate committee was exploring ways to secure computer networks, a provision to give the president the power to shut down Internet traffic to compromised Web sites in an emergency set off alarms. Corporate leaders and privacy advocates quickly objected, saying the government must not seize control of the Internet. Lawmakers dropped it, but the debate rages on. How much control should federal authorities

have over the Web in a crisis? How much should be left to the private sector? It does own and operate at least 80 percent of the Internet and argues it can do a better job. "We need to prepare for that digital disaster," said Melissa Hathaway, the former White House cybersecurity adviser. "We need a system to identify, isolate and respond to cyberattacks at the speed of light." So far at least 18 bills have been introduced as Congress works carefully to give federal authorities the power to protect the country in the event of a massive cyberattack. Lawmakers do not want to violate personal and corporate privacy or squelching innovation. All involved acknowledge it isn't going to be easy. For most people, the Internet is a public haven for free thought and enterprise. Over time it has become the electronic control panel for much of the world's critical infrastructure. Computer networks today hold government secrets, military weapons specifications, sensitive corporate data, and vast amounts of personal information. Millions of times a day, hackers, cybercriminals and mercenaries working for governments and private entities are scanning those networks, looking to defraud, disrupt or even destroy. Just eight years ago, the government ordered planes from the sky in the hours after the Sept. 11 terrorist attacks. Could or should the president have the same power over the Internet in a digital disaster? If hackers take over a nuclear plant's control system, should the president order the computer networks shut down? If there's a terrorist attack, should the government knock users off other computer networks to ensure that critical systems stay online? And should the government be able to dictate who companies can hire and what they must do to secure the networks that affect Americans' daily life.

A2 Nationalization Bad

Nationalization inevitable AND doesn't break the Internet

Goldstein 14 (Gordon M. Goldstein, 6/25/2014. Served as a member of the American delegation to the World Conference on International Telecommunications. "The End of the Internet?" The Atlantic, http://m.theatlantic.com/magazine/archive/2014/07/the-end-of-the-internet/372301/)

Some experts anticipate a future with a Brazilian Internet, a European Internet, an Iranian Internet, an Egyptian Internet—all with different content regulations and trade rules, and perhaps with contrasting standards and operational protocols. Eli Noam, a professor of economics and finance at Columbia Business School, believes that such a progressive fracturing of the global Internet is inevitable. "We must get used to the idea that the standardised internet is the past but not the future," he wrote last fall. "And that **the future is a federated internet**, not a uniform one." Noam thinks that can be managed, in part through the development of new intermediary technologies that would essentially allow the different Internets to talk to each other, and allow users to navigate the different legal and regulatory environments.

Open Internet impossible AND regulation and nationalization key to Net growth

Mansell 11 (Robin, Department of Media and Communications , London School of Economics and Political Science , London, UK. New visions, old practices: Policy and regulation in the Internet era, Continuum: Journal of Media & Cultural Studies, 25:01, 19-32)

Champions of an open Internet, not subject to regulation, have so far managed to convince policy makers that direct intervention under conventional telecommunication or broadcasting regulatory mechanisms is not needed and would suppress innovative activity (Benkler 2000; Johnson and Post 1996). Internet Service Providers (ISPs)4 have been classed in the **U**nited **S**tates as information service providers, not subject to traditional common carriage regulations by the Federal Communications Commission (FCC 2005). In Europe, the Internet **is unregulated**, at least in so far as it is not understood to involve carriage, and it is not classed as a mass media audio-visual service (EC 2009b, 2010b). It is important to

recall, however, that the Internet 'sits' on top of a network infrastructure. **There are corporate interests in the sale of routers**, **network cables**, **microware towers**, **terminals and handsets and in software applications and content**. Many of these market segments are subject to regulation in the public interest which has been affected by the neoliberal agenda. Thus, claims that the Internet has escaped this agenda entirely **are misguided**.5 Scarcity and corporate interest in the Internet Political economy analyses of the content and telecommunication industries have revealed the market power of the large companies (Bettig and Hall 2003; McChesney 2004; Mosco 2004), but there has been **remarkably little research** on the specific interests of companies that are dominating many aspects of the Internet. Even if the distributed nature of the Internet enables many actors to participate in content production and communicative processes, empirical analysis indicates that emerging strategies are **similar to the monopolizing tendencies of the earlier media and communication industries.** Exploiting labour power Cohen (2008, 7), for example, analyses corporate interests in social interactions among users of Facebook. She considers whether audiences are 'empowered' when they serve as co-producers of content,6 suggesting that users are providing their unpaid labour **in support of the profit-seeking motives of large companies**. The Web 2.0 applications are being put into the service of capital, 'reorganizing production and distribution in order to increase wealth and extend control over the labour force' (7). The unpaid work of users enables the owners of Facebook and other similar sites to build revenue models **around users who 'self-service' themselves**.7 Her analysis of the political economy of the new online social media recalls Smythe's earlier discussion of the 'audience commodity' in the age of the mass media (Smythe 1977).8 If today's 'audience' comprises globally networked users who seem to **derive pleasure through social networking**, producing a 'productive composition of bodies as aggregates of networked ICTs' (Cote´ and Pybus 2007, 97), then '**immaterial labour 2.0**' on Facebook or MySpace offers companies a basis for targeting their marketing of goods and services. As Cote´ and Pybus (103) argue, these networked relations of affinity 'are an emergent form of contestation of neoliberal globalization' but they also serve capitalist interests increasingly well, **offering new sites for co-optation.** The dialectic of co-optation and resistance is evident in the proliferation of peer-to-peer (P2P) file sharing of copyright-infringing content (David 2010) and in the use of social networking to mount social movements of many different kinds. The Internet is being used to support political opposition, but these activities **remain subject to co-optation** either by mainstream media or they are subject to surveillance and other online counter-insurgency activities of the state (Bennett 2003; Cammaerts 2008; Latham and Sassen 2005; McCurdy 2009; Rogers 2004). The existence of involuntary, **or even voluntary co-optation,** creates a prima facie case for public oversight, if not a case for regulatory intervention. In this paper, the focus is on the strategies **of the corporate world** rather than on those of the state. In the next sub-sections I discuss whether the open Internet is being managed to create scarcity conditions that are necessary for the exercise of discriminatory corporate power.

A2 Internet Collapse

No Internet collapse – too robust

Dvorak 7 {John C., syndicated technology and computing analyst, Bachelors in History (California-Berkley), "Will the Internet Collapse?" PC Mag, 5/1, http://www.pcmag.com/article2/0%2c2817%2c2124376%2c00.asp#THUR}

When is the Internet going to collapse? The answer is **NEVER**. The Internet is amazing for no other reason than that **it hasn't simply collapsed**, never to be rebooted. Over a decade ago, many pundits were predicting an all-out catastrophic failure, and back then the load was nothing compared with what it is today. So how much more can this network take? Let's look at the basic changes that have occurred since the Net became chat-worthy around 1990. First of all, only a few people were on the Net back in 1990, since it was essentially a carrier for e-mail (spam free!), newsgroups, gopher, and FTP. These capabilities remain. But the e-mail load has grown to phenomenal

proportions and become burdened with megatons of spam. In one year, the amount of spam can exceed a decade's worth, say 1990 to 2000, of all Internet traffic. It's actually the astonishing overall growth of the Internet that is amazing. In 1990, the total U.S. backbone throughput of the Internet was 1 terabyte, and in 1991 it doubled to 2TB. Throughput continued to double until 1996, when it jumped to 1,500TB. After that huge jump, it returned to doubling, reaching 80,000 to 140,000TB in 2002. This ridiculous growth rate has continued as more and more services are added to the burden. The jump in 1996 is attributable to the one-two punch of the universal popularization of the Web and the introduction of the MP3 standard and subsequent music file sharing. More recently, the emergence of inane video clips (YouTube and the rest) as universal entertainment has continued to slam the Net with overhead, as has large video file sharing via BitTorrent and other systems. Then VoIP came along, and IPTV is next. All the while, e-mail numbers are in the trillions of messages, and spam has never been more plentiful and bloated. Add blogging, vlogging, and twittering and it just gets worse. According to some expensive studies, the growth rate has begun to slow down to something like 50 percent per year. But that's growth on top of huge numbers. Petabytes. So when does this thing just grind to a halt or blow up? To date, we have to admit that the structure of the Net is robust, to say the least. This is impressive, considering the fact that **experts were predicting a collapse in the 1990s**. Robust or not, this Internet is a transportation system. It transports data. All transportation systems eventually need upgrading, repair, basic changes, or reinvention. But what needs to be done here? This, to me, has come to be the big question. Does anything at all need to be done, or do we run it into the ground and then fix it later? Is this like a jalopy leaking oil and water about to blow, or an organic perpetual-motion machine that fixes itself somehow? Many believe that the Net has never collapsed because **it does tend to fix itself.** A decade ago we were going to run out of IP addresses—remember? **It righted itself**, with rotating addresses and subnets. Many of the Net's **improvements are self-improvements**. **Only spam, viruses, and spyware represent incurable diseases** that could kill the organism. I have to conclude that the worst-case scenario for the Net is an outage here or there**, if anywhere**. After all, the phone system, a more machine-intensive system, never really imploded after years and years of growth, did it? While it has outages, it's **actually more reliable than the power grid it sits on**. Why should the Internet be any different now that it is essentially run by phone companies who know how to keep networks up? And let's be real here. The Net is being **improved daily**, with newer routers and better gear being constantly hot-swapped all over the world. This is not the same Internet we had in 1990, nor is it what we had in 2000.

A2 Internet Solves Extinction

Internet doesn't solve existential threats

Mnookin 12 (Seth, teaches science writing at MIT and blogs at the Public Library of Science, Download the Universe, March 23, 2012, "The Frozen Future of Nonfiction", http://www.downloadtheuniverse.com/dtu/2012/03/why-the-net-matters-how-the-internet-will-save-civilization-by-david-eagleman-canongate-books-2010-for-ipad-by-set.html)

Or maybe you're like me, and you can no longer remember when you first became aware of Eagleman and his work--you just know you're curious about whatever it is he decides to tackle next because it will inevitably be interesting and erudite and thought-provoking and, in all likelihood, fun. At least, that's what I assumed before I read Why The Net Matters, Eagleman's frustrating 2010 e-book about how and why the Internet will save civilization. (I reviewed the $7.99 iPad version, which is the platform it was designed for; a stripped-down, text-based version is available on the Kindle for the portentous price of $6.66.) The problems start with Eagleman's premise, which is so vague and broad as to be **practically meaningless**. There are, he writes, just "a handful of reasons" that civilizations collapse: "disease, poor information flow, natural disasters, political corruption, resource depletion and economic meltdown." Lucky for us (and Eagleman does offer readers "[c]ongratulations on living in a fortuitous moment in history"), the technology that created the web "obviates many of the threats faced by our ancestors. In other words...[t]he advent of the internet represents a watershed moment in history that just might rescue our future." **On the other hand, it just might not**: In order to make his point, Eagleman **either ignores or doesn't bother to look** for any evidence that might undercut it. The first of six "random access" chapters that make up the bulk of Why The Net Matters is devoted to "Sidestepping Epidemics," like the smallpox outbreak that helped bring down the Aztec Empire. In the future, Eagleman writes, the "protective net," in the form of telemedicine, telepresence ("the ability to work remotely via computer"), and sophisticated information tracking, will save us from these outbreaks. **That** all **sounds lovely**, but what of the fact that **we're currently experiencing a resurgence in vaccine-preventable diseases such as measles**...a

resurgence which is fueled in no small part by **misinformation spread over that very same "protective net"?** A few chapters later, in a section celebrating the benefits of the hive mind, Eagleman invokes Soviet pseudoscientist Trofim Lysenko, a famed quack who took over the U.S.S.R.'s wheat production under Stalin. Because the Soviet Union spanned 13 time zones, Eagleman writes, "central rule-setting was disastrous for wheat production. … Part of the downfall of the USSR can be traced to this centralization of agricultural decisions." That sounds nice, and might even be true—but it's not a point that's supported by Lysenko, whose main shortcoming was not that he believed in a one-size-fits-all approach; **it was that he was a fraud**. Moving to the present day, Eagleman addresses wildfires that swept through Southern California in 2007, which, he writes, "brought into relief the relationship between natural disasters and the internet." At the beginning of the outbreak in October, Californians were glued to their television screens, hoping to determine if their own homes were in danger. But at some point they stopped watching the televisions and turned to other sources. A common suspicion arose that the news stations were most concerned with the fate of celebrity homes in Malibu and Hollywood; mansions that were consumed by the flames took up airtime in proportion to their square footage, which made for gripping video but a poor information source about which areas were in danger next. So people be-gan to post on Twitter, upload geotagged cell phone photos to Flickr, and update Facebook. I had been fairly obsessed with the wildfires, and since I didn't remember this "common suspicion," I decided to check the article Eagleman cites as the source of this info, which was **a Wired blog post** titled "Firsthand Reports from California Wildfires Pour Through Twitter." It contained no references to a celebrity-obsessed news media; instead, the piece described how "the local media [was] overwhelmed." It also talked about a San Diego resident who was "[a]cting as an ad hoc news aggregator of sorts" by "watching broadcast television news, listening to local radio reports and monitoring streaming video on the web" and then posting information, along with info gleaned from IMs, text messages, and e-mails, to his Twitter account.

A2 Key to Econ

Internet not key to economic growth – data confirms

Kenny 13 (Charles Kenny, 6/17/2013. senior fellow at the Center for Global Development. "Think the Internet Leads to Growth? Think Again," Bloomberg Business Week, http://www.businessweek.com/articles/2013-06-17/think-the-internet-leads-to-growth-think-again)

Remember the year 2000 in the months after the Y2K bug had been crushed, when all appeared smooth sailing in the global economy? When the miracle of finding information online was so novel that The Onion ran an article, "Area Man Consults Internet Whenever Possible?" It was a time of confident predictions of an ongoing economic and political renaissance powered by information technology. Jack Welch—then the lauded chief executive officer of General Electric (GE)—had suggested the Internet was "the single most important event in the U.S. economy since the Industrial Revolution." The Group of Eight highly industrialized nations—at that point still relevant—met in Okinawa in 2000 and declared, "IT is fast becoming a vital engine of growth for the world economy. … Enormous opportunities are there to be seized by us all." In a 2000 report, then-President Bill Clinton's Council of Economic Advisers suggested (PDF), "Many economists now posit that we are entering a new, digital economy that could inaugurate an unprecedented period of sustainable, rapid growth." It hasn't quite worked out that way. Indeed, if the last 10 years have demonstrated anything, it's that for all the impact of a technology like the Internet, thinking that any new innovation will set us on a course of high growth is almost certainly wrong. That's in part because many of the studies purporting to show a relationship between the Internet and economic growth relied on shoddy data and dubious assumptions. In 1999 the Federal Reserve Bank of Cleveland released a study that concluded (PDF), "… the fraction of a country's population that has access to the Internet is, at least, correlated with factors that help to explain average growth performance." It did so by demonstrating a positive relationship between the number of Internet users in a country in 1999 with gross domestic product growth from 1974 to 1992. Usually we expect the thing being caused (growth in the 1980s) to happen after the things causing it (1999 Internet users). In defense of the Fed, researchers at the World Bank recently tried to repeat the same trick. They estimated that a 10 percent increase in broadband penetration in a country was associated with a 1.4 percentage point increase in growth rate. This was based on growth rates and broadband penetration from 1980 to 2006. Given

that most deployment of broadband occurred well after the turn of the millennium, the only plausible interpretation of the results is that countries that grew faster from 1980 to 2006 could afford more rapid rollouts of broadband. Yet the study is widely cited by broadband boosters. Many are in denial about the failure of the IT revolution to spark considerable growth. Innovation in information technology has hardly dried up since 2000. YouTube(GOOG) was founded in 2005, and Facebook (FB) is only a year older. Customer-relations manager Salesforce.com (CRM), the first cloud-based solution for business, only just predates the turn of the millennium. And there are now 130 million smartphones in the U.S., each with about the same computing power as a 2005 vintage desktop. Meanwhile, according to the U.S. Department of Commerce (PDF), retail e-commerce as a percentage of total retail sales has continued to climb—e-commerce sales were more than 6 percent of the total by the fourth quarter of 2012, up from less than 2 percent in 2003. Yet despite continuing IT innovation, we've seen few signs that predictions of "an unprecedented period of sustainable, rapid growth" are coming true. U.S. GDP expansion in the 1990s was a little faster than the 1980s—it climbed from an annual average of 3 percent to 3.2 percent. But GDP growth collapsed to 1.7 percent from 2000 to 2009. Northwestern University economist Robert Gordon notes that U.S. labor productivity growth spiked briefly—rising from 1.38 percent from 1972 to 1996 to 2.46 percent from 1996 to 2004—but fell to 1.33 percent from 2004 and 2012. Part of the labor productivity spike around the turn of the century was because of the rapidly increasing efficiency of IT production (you get a lot more computer for the same cost nowadays). Another part was because of considerable investments in computers and networks across the economy—what economists call "capital deepening." But even during the boom years it was near-impossible to see an economywide impact of IT on "total factor productivity"—or the amount of output we were getting for a given input of capital and labor combined. Within the U.S., investment in the uses of the Internet for business applications had an impact on wage and employment growth in only 6 percent of counties—those that already had high incomes, large populations, high skills, and concentrated IT use before 1995, according to a recent analysis (PDF) by Chris Forman and colleagues in the American Economic Review. Investments in computers and software did yield a return for most companies—but the return wasn't anything special. So what happened to the promised Internet miracle? While the technology has had a dramatic impact on our lives, it hasn't had a huge impact on traditional economic measures. Perhaps that shouldn't come as a surprise. To understand why, think about television in the 1970s. Broadcast to the home for free, and all we had to pay for was the set and the electricity to run it. Despite that small expenditure, we spent hours a day watching TV. Fast-forward four decades: 209 million Americans spent an average 29 hours online in January, according toNielsen; 145 million U.S. Facebook visitors spent an average six hours in January on that site alone. And each month, YouTube users spend 6 billion hours watching videos—or 684,000 times as long as it took to paint the Sistine Chapel. They pay for the PC and Internet connection, but per hour, surfing the Web is a cheap form of entertainment. And all that time online has knock-on effects. Andirana Bellou at the University of Montreal suggests that broadband adoption has led to increasing marriage rates among 21- to 30-year-olds as they meet online in chatrooms and dating sites, but has "significantly reduced the time young people spend on socializing and physically communicating." This may be why the link between Internet usage and measures of contentment are pretty weak. According to the World Database of Happiness, answers to a poll that asked if you were not happy (a score of 1), somewhat happy (2), or very happy (3) averaged 2.28 in the U.S. in 1990. That fell to 2.11 in 2010. Studies of Internet use tend to suggest that people who spend more time online are less happy (PDF) than the rest of us—although it may be that less happy people are surfing more rather than surfing being the cause of their misery. Regardless, the Internet has been behind a massive shift in our use of time during the past two decades, and not necessarily one that has generated a huge amount of positive feelings. Of course, we also use the Internet to sell stuff on e-Bay and look for jobs. While Betsy Stevenson has suggested (PDF) in a National Bureau of Economic Research paper that the widespread use of the Internet in job searches may be one factor behind employed people switching jobs more often, she concludes there's little evidence that the Web helps the unemployed find jobs faster. Perhaps one reason we haven't seen a huge impact on productivity because of access to the Internet is because, once we find a job, we spend quite a lot of time surfing the Web at the office. (Some of that time is used to look for a different job, apparently.) Ninety percent of workers with a PC also say they surf recreational sites at work. Almost the same number say they send personal e-mails, and more than half report they cybershop. The reality may be worse: Tracking software suggests that 70 percent of employees visit retail sites, and more than one-third check out X-rated sites. Perhaps we're using the Internet to do more in less time at work. Yet

we're using the extra hours to check out pictures of Kate Upton or cats playing the piano rather than producing more widgets for the boss.

Internet not key to econ – economic consensus, not key to jobs

Lowrey 11 (Annie, Tech Columnist @ Slate, "Freaks, Geeks, and the GDP", Slate, Mar 8; www.slate.com/articles/business/moneybox/2011/03/freaks_geeks_and_gdp.html)

If you have attended any economists' cocktail parties in the past month or so—lucky you!—then you have probably heard chatter about Tyler Cowen's e-book, The Great Stagnation. The book seeks to explain why in the United States median wages have grown only slowly since the 1970s and have actually declined in the past decade. Cowen points to an innovation problem: Through the 1970s, the country had plenty of "low-hanging fruit" to juice GDP growth. In the past 40 years, coming up with whiz-bang, life-changing innovations—penicillin, free universal kindergarten, toilets, planes, cars—has proved harder, pulling down growth rates across the industrialized world. But wait! you might say. In the 1970s, American businesses started pumping out amazing, life-changing computing technologies. We got graphing calculators, data-processing systems, modern finance, GPS, silicon chips, ATMs, cell phones, and a host of other innovations. Has the Internet, the most revolutionary communications technology advance since Gutenberg rolled out the printing press, done nothing for GDP growth? The answer, **economists broadly agree**, is: Sorry, but no—at least, **not nearly as much as you would expect.** A quarter century ago, with new technologies starting to saturate American homes and businesses, economists looked around and expected to find computer-fueled growth everywhere. But signs of increased productivity or bolstered growth were few and far between. Sure, computers and the Web transformed thousands of businesses and hundreds of industries. But overall, things looked much the same. The GDP growth rate did not tick up significantly, nor did productivity. As economist Robert Solow put it in 1987: "You can see the computer age everywhere but in the productivity statistics." An overlapping set of theories emerged to explain the phenomenon, often termed the "productivity paradox." Perhaps the new technologies advantaged some firms and industries and disadvantaged others, leaving little net gain. Perhaps computer systems were not yet easy enough to use to reduce the amount of effort workers need to exert to perform a given task. Economists also wondered whether it might just take some time—perhaps a lot of time—for the gains to show up. In the past, information technologies tended to need to incubate before they produced gains in economic growth. Consider the case of Gutenberg's printing press. Though the technology radically transformed how people recorded and transmitted news and information, economists have failed to find evidence it sped up per-capita income or GDP growth in the 15th and 16th centuries. At one point, some economists thought that an Internet-driven golden age might have finally arrived in the late 1990s. Between 1995 and 1999, productivity growth rates actually exceeded those during the boom from 1913 to 1972—perhaps meaning the Web and computing had finally brought about a "New Economy." But that high-growth period faded quickly. And some studies found the gains during those years were not as impressive or widespread as initially thought. Robert Gordon, a professor of economics at Northwestern, for instance, has found that computers and the Internet mostly helped boost productivity in durable goods manufacturing—that is, the production of things like computers and semiconductors. "Our central theme is that computers and the Internet do not measure up to the Great Inventions of the late nineteenth and early twentieth century, and in this do not merit the label of Industrial Revolution," he wrote. Gordon's work leads to another theory, one espoused by Cowen himself. Perhaps the Internet is just not as revolutionary as we think it is. Sure, people might derive endless pleasure from it—its tendency to improve people's quality of life is undeniable. And sure, it might have revolutionized how we find, buy, and sell goods and services. But that still **does not necessarily mean it is as transformative of an economy** as, say, railroads were. That is in part because the Internet and computers tend to push costs toward zero, and have the capacity to reduce the need for labor. You are, of course, currently reading this article for free on a Web site supported not by subscriptions, but by advertising. You probably read a lot of news articles online, every day, and you probably pay nothing for them. Because of the decline in subscriptions, increased competition for advertising dollars, and other Web-driven dynamics, journalism profits and employment have dwindled in the past decade. (That Cowen writes a freely distributed blog and published his ideas in a $4 e-book rather than a $25 glossy airport hardcover should not go unnoted here.) Moreover, **the Web- and computer-dependent technology sector itself does not employ that many people**. And it does not look set to add workers: The Bureau of Labor Statistics estimates that employment in information technology, for instance, will be lower in 2018 than it was in 1998. That **the Internet has not produced an economic boom** might be hard to believe, Cowen admits. "We have a collective historical memory that technological progress brings a big and predictable stream of revenue growth across most of the economy," he writes. "When it comes to the web, those assumptions are turning out to be wrong or misleading. The revenue-intensive sectors of our economy have been slowing down and the big technological gains are coming in revenue-deficient sectors." But revenue is not always the end-all, be-all—even in economics. That brings us to a final explanation: Maybe it is not the growth that is deficient. Maybe it is the yardstick that is deficient. MIT professor Erik Brynjolfsson * explains the idea using the example of the music industry. "Because you and I stopped buying CDs, the music industry has shrunk, according to revenues and GDP. But we're not listening to less music. There's more music consumed than before." The improved choice and variety and availability of music must be worth something to us—even if it is not easy to put into numbers. "On paper, the way GDP is calculated, the music industry is disappearing, but in reality it's not disappearing.

It is disappearing in revenue. It is not disappearing in terms of what you should care about, which is music." As more of our lives are lived online, he wonders whether this might become a bigger problem. "If everybody focuses on the part of the economy that produces dollars, they would be increasingly missing what people actually consume and enjoy. The disconnect becomes bigger and bigger." But providing an alternative measure of what we produce or consume based on the value people derive from Wikipedia or Pandora proves an extraordinary challenge—indeed, no economist has ever really done it. Brynjolfsson says it is possible, perhaps, by adding up various "consumer surpluses," measures of how much consumers would be willing to pay for a given good or service, versus how much they do pay. (You might pony up $10 for a CD, but why would you if it is free?) That might give a rough sense of the dollar value of what the Internet tends to provide for nothing—and give us an alternative sense of the value of our technologies to us, if not their ability to produce growth or revenue for us. Of course, if our most radical and life-altering technologies are not improving incomes or productivity or growth, then we still have problems. Quality-of-life improvements do not put dinner on the table or pay for Social Security benefits. Still, even Cowen does not see all doom and gloom ahead, with incomes stagnating endlessly as we do more and more online and bleed more and more jobs and money. Who knows what awesome technologies might be just around the bend?

Alt Caus – Net Neutrality

Net neutrality thumps the Internet AND econ

Ammory 14 (Marvin, Future Tense Fellow at the New America Foundation, "The Case for Net Neutrality.," Foreign Affairs. Jul/Aug2014, Vol. 93 Issue 4, p62-73. 12p, ebsco)

What's Wrong With Obama's Internet Policy For all the withering criticism leveled at the White House for its botched rollout of HealthCare.gov, that debacle is not the biggest technology-related failure of Barack Obama's presidency. That inauspicious distinction belongs to his administration's incompetence in another area: reneging on Obama's signature pledge to ensure "net neutrality," the straightforward but powerful idea that Internet service providers (ISPS) should treat all traffic that goes through their networks the same. Net neutrality holds that ISPS shouldn't offer preferential treatment to some websites over others or charge some companies arbitrary fees to reach users. By this logic, AT&T, for example, shouldn't be allowed to grant iTunes Radio a special "fast lane" for its data while forcing Spotify to make do with choppier service. On the campaign trail in 2007, Obama called himself "a strong supporter of net neutrality" and promised that under his administration, the Federal Communications Commission would defend that principle. But in the last few months, his FCC appears to have given up on the goal of maintaining an open Internet. This past January, a U.S. federal appeals court, in a case brought by Verizon, struck down the net neutrality rules adopted by the FCC in 2010, which came close to fulfilling Obama's pledge despite a few loopholes. Shortly after the court's decision, Netflix was reportedly forced to pay Comcast tens of millions of dollars per year to ensure that Netflix users who connect to the Internet through Comcast could stream movies reliably; Apple reportedly entered into its own negotiations with Comcast to secure its own special treatment. Sensing an opening, AT&T and Verizon filed legal documents urging the FCC to allow them to set up a new pricing scheme in which they could charge every website a different price for such special treatment. Obama wasn't responsible for the court's decision, but in late April, the administration signaled that it would reverse course on net neutrality and give ISPS just what they wanted. FCC Chair Tom Wheeler circulated a proposal to the FCC'S four other commissioners, two Democrats and two Republicans, for rules that would allow broadband providers to charge content providers for faster, smoother service. The proposal would also authorize ISPS to make exclusive deals with particular providers, so that PayPal could be the official payment processor for Verizon, for example, or Amazon Prime could be the official video provider for Time Warner Cable. Word of the proposal leaked to the press and sparked an immediate backlash. One hundred and fifty leading technology companies, including Amazon, Microsoft, and Kickstarter, sent a letter to the FCC calling the plan a "grave threat to the Internet." In their own letter to the FCC, over 100 of the nation's leading venture capital investors wrote that the proposal, if adopted as law, would "stifle innovation," since many start-ups and entrepreneurs wouldn't be able to afford to access a fast lane. Activist groups organized protests outside the FCC'S headquarters in Washington and accused Wheeler, a former lobbyist for both the cable and the wireless industries, of favoring his old clients over the public interest. Nonetheless, on May 15, the FCC released its official proposal, concluding tentatively that it could authorize fast lanes and slow lanes on the Internet. Although the FCC is now officially gathering feedback on that proposal, it has promised to adopt a final rule by the end of this year. Despite the missteps so far, the administration still has a second chance to fix its Internet policy, just as it did with HealthCare.gov. Preferably working with policymakers of all stripes supportive of open markets, it should ensure that the FCC adopts rules that maintain the Internet as basic infrastructure that can be used by entrepreneurs, businesses, and average citizens alike -- not a limited service controlled by a few large corporations. In the arcane world of federal administrative agencies, that guarantee comes down to whether

the FCC adopts rules that rely on flimsy legal grounds, as it has in the past, or ones that rely on the solid foundation of its main regulatory authority over "common carriers," the legal term the U.S. government uses to describe firms that transport people, goods, or messages for a fee, such as trains and telephone companies. In 1910, Congress designated telephone wires as a common carrier service and decreed that the federal government should regulate electronic information traveling over wires in the same way that it regulated the movement of goods and passengers on railroads across state lines through the now defunct Interstate Commerce Commission, which meant that Congress could prevent companies from engaging in discrimination and charging unreasonable access fees. When the FCC was created in 1934 by the Communications Act, those common carrier rules were entrusted to it through a section of the law known as Title II. Today, the broadband wires and networks on which the Internet relies are the modern-day equivalent of these phone lines, and they should be regulated as such: like telephone companies before them, ISPS should be considered common carriers. This classification is crucial to protecting the Internet as public infrastructure that users can access equally, whether they run a multinational corporation or write a political blog. However, in 2002, Michael Powell, then chair of the FCC, classified ISPS not as common carriers but as "an information service," which has handicapped the FCC's ability to enforce net neutrality and regulate ISPS ever since. If ISPS are not reclassified as common carriers, Internet infrastructure will suffer. By authorizing payments for fast lanes, the FCC will encourage ISPS to cater to those customers able and willing to pay a premium, at the expense of upgrading infrastructure for those in the slow lanes. **The stakes for the U.S. economy are high**: failing to ban ISPS from discriminating against companies would make it harder for tech entrepreneurs to compete, because the costs of entry would rise and ISPS could seek to hobble service for competitors unwilling or unable to pay special access fees. Foreign countries would likely follow Washington's lead, enacting **protectionist measures** that would close off foreign markets to U.S. companies. But the **harm would extend even further**. Given how much **the Internet has woven itself into every aspect of daily life**, the laws governing it shape economic and political decisions **around the world and affect every industry**, almost **every business, and billions of people**. If the Obama administration fails to reverse course on net neutrality, the Internet could turn into a **patchwork of fiefdoms**, with **untold ripple effects**. INNOVATION SUPERHIGHWAY Net neutrality is not some esoteric concern; it has been a major contributor to the success of the Internet economy. Unlike in the late 1990s, when users accessed relatively hived-off areas of cyberspace through slow dial-up connections, the Internet is now defined by integration. The credit for this improvement goes to high-speed connections, cellular networks, and short-distance wireless technologies such as WiFi and Bluetooth, which have allowed companies large and small -- from Google to Etsy -- to link up computers, smartphones, tablets, and wearable electronics. But all this integration has relied on a **critical feature** of the global Internet: no one needs permission from anyone to do anything. Historically, ISPS have acted as gateways to all the wonderful (or not so wonderful) things connected to the Internet. But they have not acted as gatekeepers, determining which files and servers should load better or worse. From day one, the Internet was a public square, and the providers merely connected everyone, rather than regulating who spoke with whom. That allowed the Internet to evolve into a form of basic infrastructure, used by over a billion people today. The Internet's openness has radically transformed all kinds of industries, from food delivery to finance, by lowering the barriers to entry. It has allowed a few bright engineers or students with an idea to launch a business that would be immediately available all over the world to over a billion potential customers. Start-ups don't need the leverage and bank accounts of Apple or Google to get reliable service to reach their users. In fact, historically, they have not paid any arbitrary fees to providers to reach users. Their costs often involve nothing more than hard work, inexpensive cloud computing tools, and off-the-shelf laptops and mobile devices, which are getting more powerful and cheaper by the day. As Marc Andreessen, a co-founder of Netscape and a venture capitalist, has pointed out, the cost of running a basic Internet application fell from $150,000 a month in 2000 to $1,500 a month in 2011. It continues to fall. In some ways, the Internet is just the latest and perhaps most impressive of what economists call "general-purpose technologies," from the steam engine to the electricity grid, all of which, since their inception, have had a **massively disproportionate impact on innovation and**

economic growth. In a 2012 report, the Boston Consulting Group found that the Internet economy accounted for 4.1 percent (about $2.3 trillion) of GDP in the G-20 countries in 2010. If the Internet were a national economy, the report noted, it would be among the five largest in the world, ahead of Germany. And a 2013 Kauffman Foundation report showed that in the previous three decades, the high-tech sector was 23 percent more likely, and the information technology sector 48 percent more likely, to give birth to new businesses than the private sector overall. That growth, impressive as it is, could be just the beginning, as everyday objects, such as household devices and cars, go online as part of "the Internet of Things." John Chambers, the CEO of Cisco Systems, has predicted that the Internet of Things could create a $19 trillion market in the near future. Mobile-based markets will only expand, too; the Boston Consulting Group projects that mobile devices will account for four out of five broadband connections by 2016.

Net Neutrality thumps – disputes hurt open Internet

Quittner 14 (Jeremy, staff writer for Inc. magazine and Inc.com. He previously covered technology for American Banker and entrepreneurship for BusinessWeek, 2/25, http://www.inc.com/jeremy-quittner/netflix-net-neutrality-comcast-direct-deal.html)

In the past week, Netflix has made agreements with AT&T, Comcast, and Verizon to connect directly to their broadband networks. While these deals seem to have very little to do with the Net Neutrality regulations currently being formulated by the Federal Communications Commission, they are actually connected. In order to get to the networks operated by the big broadband providers, Netflix has had to rely on third party network connections that are ungoverned by the FCC. And it's here where a new battle is brewing, because these middlemen, which make up the backbone of the Internet, and which many small businesses also depend on for access, are now competing head-on with enormous providers like Comcast and Verizon. In other words, Netflix's deals may not overtly challenge Net Neutrality, but the prospects for preserving an open Internet going forward don't look good. "**Disputes like this hurt the open Internet**," Craig Aaron, president and chief executive of Free Press, whose Save the Internet campaign lobbies to maintain net neutrality, wrote on the company's website Monday. "They hurt consumers. And they'll become par for the course if [Internet service providers] are allowed to get even bigger and operate without the Federal Communications Commission stepping in."

Internet Tech Adv Answers

Offshoring Good

Fears of ‘domestic surveillance’ are driving companies to abandon US technology companies and services for foreign competitors

Wall St Journal 13 (**“**NSA Internet Spying Sparks Race to Create Offshore Havens for Data Privacy,” 9/27, http://www.wsj.com/articles/SB10001424052702303983904579096082938662594]

Google Inc.,Facebook Inc. and other American technology companies were put on the defensive when Edward Snowden's allegations about U.S.-government surveillance of Internet traffic emerged this spring. Outside the U.S., some companies and politicians saw an opportunity. Three of Germany's largest email providers, including partly state-owned Deutsche Telekom AG, teamed up to offer a new service, Email Made in Germany. The companies promise that by encrypting email through German servers and hewing to the country's strict privacy laws, U.S. authorities won't easily be able to pry inside. More than a hundred thousand Germans have flocked to the service since it was rolled out in August. Politicians outside the U.S. are pushing new data-privacy rules in the wake of Edward Snowden's revelations. "We can say that we protect the email inbox according to German law," says Jorg Fries-Lammers, a spokesman for one of the German companies, 1&1 Internet AG. "It's definitely a unique selling point." The U.S. National Security Agency has acknowledged collecting email data about Americans through phone and Internet companies. Silicon Valley companies have said that they don't give the government unfettered access to user data but that they are barred from disclosing details. **Fueled by the controversy**, countries are seeking to use data-privacy laws as a competitive advantage—a way to boost domestic companies that long have sought an edge over Google, Microsoft Corp. and other U.S. tech giants. "Countries are competing to be the Cayman Islands of data privacy," says Daniel Castro, a senior analyst at the Information Technology and Innovation Foundation, a nonpartisan Washington, D.C., think tank that receives funding from the tech industry.

That ‘offshoring’ is key to economic growth and avoiding inflationary fears.

Raimondi 5 (Mike Raimondi, **Global Insight IT/**Telecom Advisory Service, IT Outsourcing and the U.S. Economy, http://www.ihsglobalinsight.com/MultiClientStudy/MultiClientStudyDetail846.htm)

A new study by Global Insight concluded that IT outsourcing, while displacing some IT workers, actually benefits the U.S. economy and increases the number of U.S. jobs. According to the 2005 study, The Impact of Offshore IT Software and Services Outsourcing on the U.S. Economy and the IT Industry, the U.S. economy has much to gain from global sourcing and an environment of free trade, open markets and robust competition. Benefits include job creation, higher real wages, higher real GDP growth, contained inflation and expanded exports resulting in increased economic activity. The Study was commissioned by The Information Technology Association of America (ITAA), the leading trade association for the IT industry, and led by Global Insight's chief economist Dr. Nariman Behravesh. Major Findings include: Worldwide sourcing of IT services and software increases total employment in the United States. This activity generated an additional 257,042 net new U.S. jobs in 2005; by 2010, net new jobs will total 337,625; Workers enjoy higher real wages. Global sourcing adds to the take-home pay of the average U.S. worker. With inflation kept low and productivity high, worldwide sourcing will increase real hourly wages in the U.S. by $0.06 in 2005, climbing to $0.12 in 2010; The cost savings and use of offshore resources lower inflation, increase productivity, and lower interest rates. This boosts spending and increases economic activity; Worldwide sourcing contributes significantly to real U.S. Gross Domestic Product, adding $68.7 billion in 2005. By 2010, the real GDP will be $147.4 billion higher than it would be in an environment in which offshore IT software and services outsourcing does not occur; Spending for global sourcing of computer software and services will grow at a compound annual rate of 20 percent, from approximately $15.2 billion in 2005 to $38.2 billion in 2010. Total spending on software and services will also continue to increase in the U.S. During the same time period, total cost

savings from worldwide sourcing of computer software and services will grow from $8.7 billion to $20.4 billion, much of which will be reinvested in the U.S.; Demand for U.S. exports increases due to global sourcing. Countries can buy more because they can sell more; the U.S. has more to sell through increased investment in new products and services, better productivity and lower inflation. Global sourcing contributed $5.1 billion to U.S. exports in 2005, growing to $9.7 billion by 2010; The U.S. continues to run a large and robust trade surplus in IT services with the rest of the world;

Surveillance sparks IT offshoring

DNS 13 (Online Technology Blog, DNS Made Easy, "NSA Fallout Continues: U.S. Companies Seeking "Offshore Havens" for Data Privacy, Silicon Valley Anticipates Billions In Lost Revenue," http://www.dnsmadeeasy.com/nsa-fallout-continues-u-s-companies-seeking-offshore-havens-for-data-privacy-silicon-valley-anticipates-billions-in-lost-revenue/)

As a result of NSA"s snooping, U.S. companies are seeking refuge overseas to protect their data. And U.S. companies aren't the only ones who are now feeling suspicious about privacy issues on the internet. Numerous governments are turning away from the IT community in the U.S., and it turns out that Silicon Valley is not immune to the fallout from revelations about widespread surveillance by the NSA. In fact, the Valley is bracing itself for losses in the range of $35 billion in annual revenue. Why such a big loss? **Companies are seeking storage of their data elsewhere**. Indeed, damaging information about NSA's tactics is spurring an IT renaissance in several countries. For instance, Brazil wants data about its own citizens stored there. So, the government is pushing a bill, once languishing most likely in some dead-end queue, to create servers to store data, ensuring that it won't be looked at by NSA eyes. European leaders are asking for a "Euro cloud." This Euro cloud would allow Europeans to share data with one another, but it would stop there – those outside of Europe would not be able to access the information. Google and Yahoo Inc. might be in for an ugly surprise, too. Apparently, India is moving forward with a measure that would prohibit government employees to use the mail services of these two companies. It is unclear whether or not they have already moved forward with this ban. Despite these measures, it is unlikely that data will be protected from snoopers, because other countries are eager to catch up to Washington's spying capabilities. So such measures are most likely futile, as it is probably inevitable that surveillance systems, if not already in place, will be built or improved upon outside of the United States. What's the reality? So-called private data on the internet is not really protected, and outfits, such as the NSA, will always have access to so-called protected information. That said, citizens as well as companies are unnerved by the revelations about spying that Snowden, the former NSA contractor and whistle blower, brought to light this past summer.

Domestic surveillance fears motivate offshoring of tech

Bednar 15 (Chuck Bednar, Red Orbit Staff Writer , "Storing data offshore won't protect it from NSA, expert says," http://www.redorbit.com/news/technology/1113307187/storing-data-offshore-would-not-make-it-safe-from-nsa-expert-says-010315/)

Ever since Edward Snowden first blew the lid off the US National Security Agency's data collection practices, Americans have been looking for a way to keep their information safe from prying eyes in the federal government. Some tech companies, including Google, have **explored the possibility of using floating data centers to move servers offshore**. However, in a new article penned for TechCrunch, former Obama administration director of privacy and civil liberties and Brown University fellow Tim Edgar says that simply moving data centers offshore will not protect them from the NSA. "The natural reaction of many citizens, companies and governments is to try to get their data out of the United States and out of the hands of American companies," Edgar wrote, calling the idea "a seductive one, even for Americans." "This offshoring of data to avoid surveillance is not just an idle notion," he continued. "As a privacy lawyer with experience in the intelligence community and the Obama White House, technology companies have asked me how they might pursue such a strategy. It turns out that shifting user data abroad or into the hands of foreign companies is a very poor way to combat American surveillance." While the NSA's top brass have "stated quite openly their desire to collect everything American law permits," Edgar explained that regulations governing what they do depends upon where they are collecting information. The Foreign Intelligence Surveillance Act (FISA), places stricter guidelines on data collected from domestic servers than from those located overseas, he noted.

Offshoring drives business confidence and growth – no turns

Balasubramaniyan 4 (SM, general manager at Wipro Technologies, a global IT services provider, "Offshoring's positives outweigh its negatives,"http://www.networkworld.com/article/2323783/software/offshoring-s-positives-outweigh-its-negatives.html]

Organizations all over the world are under constant pressure to provide value to their customers and meet the challenges of competition. In globalized free economies, this is truer today than ever. The primary factor that directly or indirectly contributes toward a company's business success is the cost of production and operation. Among the many initiatives that have succeeded in reducing the cost of producing goods and services is the outsourcing/offshoring model. This model has taken many forms and its characteristics have been refined over a period of time. Before enumerating the benefits of offshoring, it must be acknowledged that its success does not come without pain, mainly in the form of job cuts and the phasing out of low-earning products and services. However, organizations that take a well-planned and articulated approach to offshoring succeed in managing this situation better than ones that rush in without due consideration. Offshoring happens through two means: outsourced offshoring through vendor partners, or in-house offshoring. In the former, the work is performed at the offshore partner's premises, using the partner's resources. In the latter, a U.S. company establishes its own global centers in other countries. Perhaps the greatest benefit of offshoring is the **cost advantage it produces, which directly affects the company's bottom line**. In tight fiscal situations, any savings in operating costs will contribute toward the company's sustenance and growth. Companies in recession segments sustain themselves and grow through innovation. Lower operating costs means they have more money to invest in innovation, resulting in a stabilized domestic workforce. In the service sectors, the cost saving from offshoring enables companies to create new service lines, many of which had been deferred for want of investment. New services increase customer satisfaction and become new revenue streams, as well as growth paths for companies. The geographic nature of offshoring brings its own advantages. It helps the company expand its reach, thereby helping the company grow. This growth mitigates any negative effects of offshoring. Offshoring also helps a company be closer to its global customers, thereby providing appropriate offerings to its regional market and ensuring speedier problem resolution. Developers and support personnel in the relevant geographies have a better understanding of customers' needs, regulatory compliances and regional preferences, and can better implement the product or provide the service.

IT outsourcing good for the US economy

Miller 4 (Michael J. Miller, chief information officer at Ziff Brothers investments, "The Benefits of Offshore Outsourcing," 4/28/14, Offshoring is lowering costs and actually creating jobs by fostering a more efficient economy. Also: IT jobs are changing, and Adobe's CEO speaks his mind, http://www.pcmag.com/article2/0,2817,1573729,00.asp)

As more companies transfer programming and call- center jobs offshore, the topic of offshore outsourcing is raging throughout the information technology industry. I understand the frustration of workers whose jobs have moved and of customers who fail to get their technical-support questions answered. But the backlash may be overblown. One of the latest studies indicates that the trend may actually be creating more jobs. At least that's the conclusion of a recent study by Global Insight, sponsored by the Information Technology Association of America (ITAA). Given our global economy, the globalization of the IT industry is inevitable. Most big IT companies do much of their business overseas and naturally want to have some of their employees in those markets. Lower wages in some countries are also a huge incentive to move operations, especially since high-speed communication removes many of the barriers to dealing with U.S.-based colleagues and customers. I think that some of the criticism of offshore outsourcing is misplaced. According to the Global Insight study, from 1998 through 2003 offshore IT software and services spending increased from $2.5 billion to $10 billion; the figure could reach $31 billion by 2008. It also estimates that as of 2003 nearly 104,000 IT software and services jobs were displaced. The same study says that 372,000 IT jobs have been lost in this country since 2000, accounting for about 10 percent of the total number of such jobs in the U.S. The main reasons for the loss: the dot-com bust, the recession, and the growth in productivity. Interestingly, Global Insight says that rather than reducing the number of jobs

in the U.S., offshoring is lowering costs for everyone and actually creating jobs, thanks to a more efficient economy. It says that about 194,000 new jobs—both IT and non-IT—were created in 2003 thanks to offshore IT outsourcing, and by 2008 the number will reach over 589,000. According to a study by Gartner, fewer than 5 percent of U.S. IT jobs have moved offshore. But analysts predict that by 2010 25 percent will be in developing countries. They urge companies to proceed carefully, as such moves could result in the loss of future talent, intellectual assets, and organizational performance.

A2 Cloud Computing

NASA already has its own cloud system for climate modeling

Network World 10 (Network World, 2/1/2010. Jon Brodkin. "NASA building cloud service for climate modeling," http://www.networkworld.com/article/2243438/saas/nasa-building-cloud-service-for-climate-modeling.html)

NASA is aiming to improve its climate research capabilities by creating a software-as-a-service interface for scientists and students who need to build complex climate models. NASA: Astronauts start Twitter from space station "Right now the climate models that we have are very complex, the software is upwards of 500,000 to 1 million lines of code," says Michael Seablom, head of the software integration and visualization office at NASA's Goddard Space Flight Center in Maryland. A climate model might, for example, predict what would happen to global temperatures over the next hundred years if humans double carbon dioxide emissions. "Trying to get the models running is difficult and it costs us a lot of money here because we have to help groups build the system on their local machine," Seablom says. "The problem with that is if you're a graduate student, you could spend months just trying to get the model running and verify that it's working correctly." NASA's goal is to build a Web portal for investigators to log onto, allowing them to run the climate models on remote systems provided by the space agency. The grid computing software company Parabon Computation was awarded a two-year, $600,000 contract to help NASA build the system. Parabon says the Web-based platform will be built upon its Frontier Grid software, which can take idle computing capacity from many machines and manage it as one large computational grid, with applications running on virtual machines. Seablom says NASA's climate modeling teams will tap into processors from NASA's Nebula cloud computing platform and could someday purchase computing cycles from public cloud platforms. "I hate to use the term 'cloud computing' because I've heard the term so much and I'm sick of it," Seablom says. "But the fact of the matter is this is a very good cloud computing model and we're going to save a lot of money doing it. I'm very excited." Parabon uses its own software to buy idle computing capacity from universities and businesses and then resells computing cycles as an online service, says Parabon CEO Steven Armentrout. In this case, Parabon is selling its platform to NASA as an enterprise software package to be deployed internally behind the NASA firewall, he says. "These tools -- such as a browser-based source code editor, online collaboration utilities, and virtualized build and runtime environment management interfaces -- will allow developers to more efficiently create and modify a wide variety of high-performance computing (HPC) applications," Parabon states in an announcement of the NASA contract. Frontier can be used to harness the unused CPU power of desktops and servers, Armentrout notes. "I believe they [NASA] have 80,000 desktops," he says. "If they were to put Frontier on all 80,000 they would have one of the fastest supercomputers in the world." Although the system will initially run climate models, it can be used for many types of scientific research.

No internal link to adaptation --- we have models and information now but people still refuse to acknowledge the reality of warming

Pope 10 (Vicky Pope, 9/16/2010. Head of climate science advice at the Met Office Hadley Centre, "How science will shape climate adaptation plans," http://www.guardian.co.uk/environment/cif-green/2010/sep/16/science-climate-change-adaptation)

Some would argue that the demand for information on how climate change will affect our future outstrips the current capability of the science and climate models. My view is that as scientists, we can provide useful information, but we need to be clear about its limitations and strive to improve information for the future. We need to be clear about the uncertainties in our projections while still extracting useful information for practical decision-making. I have been involved in developing climate models for the last 15 years and despite their limitations we are now able to assess the probability of different outcomes for the first time. That means we can quantify the risk of these outcomes happening. These projections – the UK climate projections published in 2009 - are already forming the backbone of adaptation decisions being made in the UK for 50 to 100 years ahead. A project commissioned by the Environment Agency to investigate the impact of climate change on the Thames estuary over the next 100 years concluded that current government predictions for sea level rise are realistic. A major outcome from the scientific analysis was that the worst-case scenarios for high water levels can be significantly reduced - from 4.2m to 2.7m – because we are able to rule out the more extreme sea level rise. As a result, massive investment in a tide-excluding estuary barrage is unlikely to be needed this century. This will be reviewed as more information becomes available, taking a flexible approach to adaptation. The energy industry, working with the Met Office, looked at the likely impact of climate change on its infrastructure. The project found that very few changes in design standards are required, although it did highlight a number of issues. For instance, transformers could suffer higher failure rates and efficiency of some types of thermal power station could be markedly reduced because of increasing temperatures. A particular concern highlighted by this report and reiterated in today's report from the Climate Change Committee - the independent body that advises government on its climate targets - is that little is known about how winds will change in the future - important because of the increasing role of wind power in the UK energy mix. Fortunately many people, from private industry to government, recognise the value of even incomplete information to help make decisions about the future. Demand for climate information is increasing, particularly relating to changes in the short to medium term. More still needs to be done to refine the climate projections and make them more usable and accessible. This is especially true if we are to provide reliable projections for the next 10 to 30 years. The necessary science and modelling tools are being developed, and the first tentative results are being produced. We need particularly to look at how we communicate complex and often conflicting results. In order to explain complex science to a lay audience, scientists and journalists are prone to progressively downplay the complexity. Conversely, in striving to adopt a more scientific approach and include the full range of uncertainty, we often give sceptics an easy route to undermine the science. All too often uncertainty in science offers a convenient excuse for delaying important decisions. However, in the case of climate change there is overwhelming evidence that the climate is changing — in part due to human activities — and that changes will accelerate if emissions continue unabated. In examining the uncertainty in the science we must take care to not throw away what we do know. Science has established that climate is changing. Scientists now need to press on in developing the emerging tools that will be used to underpin sensible adaptation decisions which will determine our future.

A2 Heg

Hegemony solves war isn't true – data's on our side

Fettweis 11 (Christopher J., Department of Political Science, Tulane University, "Free Riding or Restraint? Examining European Grand Strategy", 9/26, Comparative Strategy, 30:316–332, Ebsco)

It is perhaps worth noting that **there is no evidence to support a direct relationship between the relative level of U.S. activism and international stability. In fact, the limited data we do have suggest the opposite may be true**. During the 1990s, the United States cut back on its defense spending fairly substantially. **By 1998, the United States was spending $100 billion less on defense in real terms than it had in 1990**.51 **To** internationalists, defense hawks and **believers in hegemonic stability**, **this irresponsible "peace dividend" endangered both national and global security**. "No serious analyst of American military capabilities," argued Kristol and Kagan, "doubts that the defense budget has been cut much too far to meet America's responsibilities to itself and to world peace."52 On the other hand, if the pacific trends were not based upon U.S. hegemony but a strengthening norm against interstate war, one would not have expected an increase in global instability and violence. **The verdict from the past two decades is fairly plain: The world grew more peaceful while the United States cut its forces. No state seemed to believe that its security was endangered by a less-capable United States military**, or at least none took any action that would suggest such a belief. **No militaries were enhanced to address power vacuums, no security dilemmas drove insecurity or arms races, and no regional balancing occurred** once the stabilizing presence of the U.S. military was diminished. The rest of the world acted as if the threat of international war was not a pressing concern, despite the reduction in U.S. capabilities. Most of all, the United States and its allies were no less safe. The incidence and magnitude of global conflict declined while the United States cut its military spending under President Clinton, and kept declining as the Bush Administration ramped the spending back up. No complex statistical analysis should be necessary to reach the conclusion that the two are unrelated. Military spending figures by themselves are insufficient to disprove a connection between overall U.S. actions and international stability. Once again, one could presumably argue that spending is not the only or even the best indication of hegemony, and that it is instead U.S. foreign political and security commitments that maintain stability. Since neither was significantly altered during this period, instability should not have been expected. Alternately, advocates of hegemonic stability could believe that relative rather than absolute spending is decisive in bringing peace. Although the United States cut back on its spending during the 1990s, its relative advantage never wavered. However, even if it is true that either U.S. commitments or relative spending account for global pacific trends, then at the very least stability can evidently be maintained at drastically lower levels of both. In other words, even if one can be allowed to argue in the alternative for a moment and suppose that there is in fact a level of engagement below which the United States cannot drop without increasing international disorder, a rational grand strategist would still recommend cutting back on engagement and spending until that level is determined. Grand strategic decisions are never final; continual adjustments can and must be made as time goes on. Basic logic suggests that the United States ought to spend the minimum amount of its blood and treasure while seeking the maximum return on its investment. And if the current era of stability is as stable as many believe it to be, no increase in conflict would ever occur irrespective of U.S. spending, which would save untold trillions for an increasingly debt-ridden nation. It is also perhaps worth noting that if opposite trends had unfolded, if other states had reacted to news of cuts in U.S. defense spending with more aggressive or insecure behavior, then internationalists would surely argue that their expectations had been fulfilled. If increases in conflict would have been interpreted as proof of the wisdom of internationalist strategies, then logical consistency demands that the lack thereof should at least pose a problem. As it stands**, the only evidence we have regarding the likely systemic reaction to a more restrained United States suggests that the current peaceful trends are unrelated to U.S. military spending. Evidently the rest of the world can operate quite effectively without the presence of a global policeman. Those who think otherwise base their view on faith alone**.

A2 Warming

Warming won't cause extinction or laundry list impacts

Kopits et al 14 -- National Center for Environmental Economics, US Environmental Protection Agency; Alex Marten, Ann Wolverton (Elizabeth, 9/1/2014, "Incorporating 'catastrophic' climate change into policy analysis," Climate Policy 14(5), Galileo)

It is common within the academic and public discourse on climate change for the term '**catastrophe'** to be invoked when describing possible outcomes of a changing climate and in justifying particular responses to the problem. It has been suggested that the potential for abrupt, large-scale 'catastrophic impacts' due to climate change is the most important aspect for determining the optimal level of response (Pindyck & Wang, 2012; Weitzman, 2009) and that 'the economic case for a stringent GHG abatement policy, if it is to be made at all, must be based on the possibility of a catastrophic outcome' (Pindyck, 2012). Thus, it is perhaps not surprising that analyses of GHG mitigation benefits are often criticized for failing to adequately capture catastrophic impacts (e.g. National Academy of Sciences, 2010; Tol, 2009). However, despite the seeming importance of such potential climate change-related events, there has been little progress in defensibly integrating catastrophic impacts into analyses of the benefits of climate policy. One obstacle that has impeded progress on this front is the **inconsistent and sometimes nebulous way in which the expression 'catastrophic impacts' has been used** (Hulme, 2003). The term often refers to any climate-induced impact that exhibits one or more characteristics: relatively sudden occurrence, irreversible transition to a new state after crossing a threshold, and relatively large physical or

welfare impacts. In addition, some researchers consider catastrophic impacts to necessarily result from low-probability events. For this reason the types of impacts covered under the catastrophic label are often **numerous and heterogeneous**, everything from dieback of Amazon rainforests over the coming decades to the potential massive release of methane emissions from the sea floor over the next thousand years (Lenton et al., 2008). Some have even argued for establishing a global threshold for climate change, below which there is negligible risk of violating 'planetary boundaries' that 'define the safe operating space for humanity' ... [and] avoid crossing threshold levels of key variables 'with deleterious or potentially even disastrous consequences for humans' scales' (Rockstrom et al., 2009, p. 472).1 In public discourse, catastrophic impacts are often invoked as a **seemingly monolithic occurrence**,2 a tendency that is also often present in economic analyses of such events. By assuming uniformity, researchers have **severely limited their ability to substantively inform policy discussions**. This tendency may arise from an absence of literature that summarizes significant differences between potential large-scale climate events and what that means for incorporating them into economic analysis. In addition, many economic modelling efforts fall substantially short in incorporating scientific evidence regarding the causes, likelihood, and potential physical impacts of such climate change-induced events. While one expects a natural lag in the incorporation of new scientific findings into economic models, this shortcoming appears to stem more from fundamental differences between disciplines as to what constitutes relatively rapid or large changes (the scientific literature does not even use the term catastrophe, instead relying on the phrase 'abrupt climate change') and the appropriate end points to measure in policy analysis. Both of these concerns have been observed by natural scientists (e.g. Hulme, 2003), and calls are increasing across the scientific community for more research on welfare impacts, with **better links to the scientific evidence on how physical processes are likely to unfold** (e.g. Lenton, 2011; Lenton & Ciscar, 2013).

Best data proves climate change doesn't cause conflict

Erik **Gartzke 11**, Associate Professor of Political Science at UC-San Diego, March 16, 2011, "Could Climate Change Precipitate Peace?," online: http://dss.ucsd.edu/~egartzke/papers/climate_for_conflict_03052011.pdf

An evolving consensus that the earth is becoming warmer has led to increased interest in the social consequences of climate change. Along with rising sea levels, varying patterns of precipitation, vegetation, and possible resource scarcity, perhaps the **most incendiary claims** have to do with conflict and political violence. A second consensus has begun to emerge among policy makers and opinion leaders that global warming may well result in increased civil and even interstate warfare, as groups and nations compete for water, soil, or oil. Authoritative bodies, leading government officials, and even the Nobel Peace prize committee have highlighted the prospect that climate change will give rise to more heated confrontations as communities compete in a warmer world. Where the basic science of climate change preceded policy, this second consensus among politicians and pundits about climate and conflict **formed in the absence of substantial scientific evidence**. While anecdote and some focused statistical research suggests that civil conflict may have worsened in response to recent climate change in developing regions (c.f., Homer-Dixon 1991, 1994; Burke et al. 2009). these claims have been **severely criticized** by other studies (Nordas & Gleditsch 2007; Buhaug et al. 2010: Buhaug 2010).1 In contrast, **long-term macro statistical studies** find that **conflict increases in periods of climatic chill** (Zhang et al. 2006, 2007; Tol & Wagner 2010).2 Research on the more recent past reveals that interstate conflict has declined in the second half of the twentieth century, the very period during which global warming has begun to make itself felt (Goldstein 2002; Levy et al. 2001; Luard 1986, 1988; Hensel 2002; Sarkees, et al. 2003; Mueller 2009).3 While talk of a "climatic peace" is premature, broader claims that global warming causes conflict must be evaluated in light of **countervailing evidence** and a contrasting set of causal theoretical claims.4

Judicial Indy Adv Answers

Citing ECHR Hurts Judicial Indy

New courts ensure no modeling AND citing the ECHR diminishes US influence

Morag-Levine 6 (Noga – Associate Professor, Michigan State University College of Law, "THE MARYLAND/GEORGETOWN CONSTITUTIONAL LAW SCHMOOZE: JUDGES, LEGISLATORS, AND EUROPE'S LAW: COMMON-LAW CONSTITUTIONALISM AND FOREIGN PRECEDENTS", Maryland Law Reivew, 2006, 65 Md. L. Rev. 32, lexis)

The **global emergence** of **powerful**, politically assertive courts has **redefined** the process and meaning of **legal transplantation.** With the rise of powerful judiciaries outside the **U**nited **S**tates, court opinions have emerged as a novel avenue for cross-national importation of law. In this environment, newly created or emboldened courts can draw inspiration from statutes of other countries and the opinions of foreign judges. Courts were encouraged in this direction over the past two decades by a growing sense of community among members of the judiciary worldwide. n1 A distinctive result has been a marked increase in the prevalence of citation to foreign court opinions on the part of a growing number of national supreme courts and international adjudicative bodies. n2 The U.S. Supreme Court has been comparatively slow to follow this trend. n3 Nonetheless, it is in the United States that the practice of citing foreign precedents seems to have met with the greatest controversy. The role of foreign law in Supreme Court jurisprudence is currently the topic of extensive discussion on the Internet, in the press, in academic journals, and in Congress. A number of Supreme Court Justices have addressed the issue directly in their opinions, n4 and, more unusually, in off the bench writings and speeches. n5 [*33] The controversy is perplexing in part because it appears to be restricted to the United States. There is little evidence to suggest parallel mobilization in opposition to foreign citations by courts abroad. n6 Moreover, even when viewed strictly within the parameters of American law and politics, the foreign citation controversy seems to deviate from the prevailing pattern. The Court tends to draw political fire in response to controversial results rather than contested modes of reasoning. The usual line of criticism, familiar from responses to the Court's decisions on abortion or flag burning, works back from a hot-button decision to the absence of a legal basis sufficient to justify interference with the decisions of the democratically elected legislative branch. By contrast, opposition to the citing of foreign cases puts front and center the Court's reasoning as such. Even if we take the view that opposition to foreign references serves as a proxy for substantive disagreement with the rulings, the benefits of such a strategy are not self-evident. If the goal was defense of criminal prohibitions on sodomy or the juvenile death penalty (to take two prominent areas where references to foreign cases have recently appeared), why deflect from these politically potent issues by framing the question at hand in reference to the citation of foreign law? Alternatively, if we opt to view opposition to the Court's comparative jurisprudence in principled terms, the principle at stake is not simple to pinpoint. Supreme Court opinions are replete with references to extra-legal sources such as philosophical treatises and social science research. n7 Why single out foreign case law as deserving of special condemnation? [*34] This Essay seeks the answer in American legal history. Throughout the nineteenth century, American elites divided over the question of whether political and legislative principles inspired by the continental civil-law tradition were compatible with American constitutionalism. Legal treatises, political pamphlets, and newspaper articles attest to the depth of disagreements regarding codification initiatives, social legislation, and other European-inspired reform agendas. n8 Opponents of such reforms offered a dual line of response based in political theory and constitutional law: the first cast the civil-law tradition as an absolutist instrument of authoritarian origin, and the second equated constitutional due process with a closed set of common-law procedures and principles. n9 Defined in this fashion, due process served to bar civil-law-based legislative reforms. Today's controversy bears a striking similarity to the nineteenth-century dispute. Contemporary opponents of judicial citations to foreign law stress the importance of **securing the boundary** between American and European constitutionalism. n10 The timing of the current controversy is instructive in this regard. Citations to foreign judicial opinions are hardly a novel development in American jurisprudence. Supreme Court Justices across the nineteenth and the twentieth centuries repeatedly referenced the views of their overseas English-speaking colleagues regarding the constitutional disputes of the day. n11 Opposition to the practice, however, materialized only once the Justices began to look beyond the common-law world for comparative insights. **Critical attention** to foreign citations in the **U**nited **S**tates closely **tracks growth in the global influence** of **European courts**, most importantly the **E**uropean **C**ourt of **H**uman **R**ights (ECHR). Entrusted with enforcing the European Convention on Human Rights, the ECHR "has become a source of authoritative pronouncements on human rights law" for adjudicative bodies **well beyond Europe**, including the courts of South Africa and Zimbabwe, writes Anne-Marie Slaughter. n12 This ascendancy has **been matched by** [*35] a **decline in the American Supreme Court's influence** on the **jurisprudence of foreign courts. n13**

No Judicial Modeling

U.S. judicial leadership is not modeled – influence is on the decline

Liptak 12 (Adam – J.D. – Yale Law School, NYT Supreme Court Correspondent, 'We the People' Loses Appeal With People Around the World, 2/6, http://www.nytimes.com/2012/02/07/us/we-the-people-loses-appeal-with-people-around-the-world.html?_r=2&partner=MYWAY&ei=5065)

In 1987, on the Constitution's bicentennial, Time magazine calculated that "of the 170 countries that exist today, more than 160 have written charters modeled directly or indirectly on the U.S. version." A quarter-century later, the picture looks very different. "The U.S. Constitution appears to be **losing its appeal** as a model for constitutional drafters elsewhere," according to a new **study** by David S. Law of Washington University in St. Louis and Mila Versteeg of the University of Virginia. The study, to be published in June in The **N**ew **Y**ork **U**niversity Law Review, bristles with data. Its authors coded and analyzed the provisions of **729 constitutions** adopted by 188 countries from 1946 to 2006, and they considered 237 variables regarding various rights and ways to enforce them. "Among the world's democracies," Professors Law and Versteeg concluded, "constitutional similarity to the **U**nited **S**tates has **clearly gone into free fall**. Over the 1960s and 1970s, democratic constitutions as a whole became more similar to the U.S. Constitution, only to **reverse course** in the 1980s and 1990s." "The turn of the twenty-first century, however, saw the beginning of a **steep plunge** that continues through the most recent years for which we have **data**, to the point that the constitutions of the world's democracies are, on average, less similar to the U.S. Constitution now than they were at the end of World War II." There are lots of possible reasons. The **U**nited **S**tates Constitution is **terse** and **old**, and it guarantees relatively few rights. The commitment of some members of the Supreme Court to interpreting the Constitution according to its original meaning in the 18th century may **send the signal** that it is of little current use to, say, **a new African nation**. And the Constitution's **waning influence** may be part of a general **decline in American power and prestige**. In an interview, Professor Law identified a **central reason** for the trend: the availability of newer, sexier and more powerful operating systems in the constitutional marketplace. "Nobody wants to copy **Windows 3.1**," he said. In a television interview during a visit to Egypt last week, Justice Ruth Bader Ginsburg of the Supreme Court seemed to agree. "I would not look to the **U**nited **S**tates Constitution if I were drafting a constitution in the year 2012," she said. She recommended, instead, the South African Constitution, the Canadian Charter of Rights and Freedoms or the European Convention on Human Rights. The rights guaranteed by the American Constitution are **parsimonious** by international standards, and they are frozen in amber. As Sanford Levinson wrote in 2006 in "Our Undemocratic Constitution," "the U.S. Constitution is the **most difficult to amend** of any constitution currently existing in the world today." (Yugoslavia used to hold that title, but Yugoslavia did not work out.) Other nations routinely trade in their constitutions wholesale, replacing them on average every 19 years. By odd coincidence, Thomas Jefferson, in a 1789 letter to James Madison, once said that every constitution "naturally expires at the end of 19 years" because "the earth belongs always to the living generation." These days, the overlap between the rights guaranteed by the Constitution and those most popular around the world is spotty. Americans recognize rights not widely protected, including ones to a speedy and public trial, and are outliers in prohibiting government establishment of religion. But the Constitution is out of step with the rest of the world in failing to protect, at least in so many words, a right to travel, the presumption of innocence and entitlement to food, education and health care. It has its idiosyncrasies. Only 2 percent of the world's constitutions protect, as the Second Amendment does, a right to bear arms. (Its brothers in arms are Guatemala and Mexico.) The Constitution's **waning global stature** is consistent with the **diminished influence** of the Supreme Court, which "is losing the central role it once had among courts in modern democracies," Aharon Barak, then the president of the Supreme Court of Israel, wrote in The Harvard Law Review in 2002. Many foreign judges say they have become **less likely** to cite decisions of the **U**nited **S**tates Supreme Court, in part because of what they consider its **parochialism**. "America is in danger, I think, of becoming something of a **legal backwater**," Justice Michael Kirby of the High Court of Australia said in a 2001 interview. He said that he looked instead to India, South Africa and New Zealand.

Judiciary isn't modeled – new courts, no foreign citations, and diminished credibility

Liptak 8 (Adam – J.D. – Yale Law School, NYT Supreme Court Correspondent, "U.S. Court Is Now Guiding Fewer Nations ", 9/17, http://www.nytimes.com/2008/09/18/us/18legal.html?pagewanted=all&_r=0)

But now American legal influence is **waning**. Even as a debate continues in the court over whether its decisions should ever cite foreign law, a **diminishing number** of foreign courts seem to **pay attention** to the writings of American justices. "One of our great exports used to be constitutional law," said Anne-Marie Slaughter, the dean of the Woodrow Wilson School of Public and International Affairs at Princeton. "We are **losing one of the greatest bully pulpits** we have ever had." From 1990 through 2002, for instance, the Canadian Supreme Court cited decisions of the United States Supreme Court about a dozen times a year, an analysis by The New York Times found. In the six years since, the annual citation rate has **fallen by half**, to about six. Australian state supreme courts cited American decisions 208 times in 1995, according to a recent study by Russell Smyth, an Australian economist. By 2005, the **number had fallen** to 72. The story is similar **around the globe**, legal experts say, particularly in cases involving human rights. These days, foreign courts in developed democracies **often cite** the rulings of the European Court of Human Rights in cases concerning equality, liberty and prohibitions against cruel treatment, said Harold Hongju Koh, the dean of the Yale Law School. In those areas, Dean Koh said, "they tend **not to look to the rulings** of the U.S. Supreme Court." The rise of **new** and **sophisticated** constitutional courts elsewhere is one reason for the Supreme Court's **fading influence**, legal experts said. The new courts are, moreover, generally more liberal than the Rehnquist and Roberts courts and for that reason more inclined to cite one another. Another reason is the **diminished reputation** of the **U**nited **S**tates in some parts of the world, which experts here and abroad said is in part a consequence of the Bush administration's **unpopularity** around the world. Foreign courts are **less apt to justify their decisions** with citations to cases from a nation unpopular with their domestic audience. "It's not surprising, given our foreign policy in the last decade or so, that American influence should be declining," said Thomas Ginsburg, who teaches comparative and international law at the University of Chicago. **Aversion to Foreign Law** The adamant opposition of some Supreme Court justices to the citation of foreign law in their own opinions **also plays a role**, some foreign judges say. "Most justices of the United States Supreme Court do not cite foreign case law in their judgments," Aharon Barak, then the chief justice of the Supreme Court of Israel, wrote in the Harvard Law Review in 2002. "They fail to make use of an important source of inspiration, one that enriches legal thinking, makes law more creative, and strengthens the democratic ties and foundations of different legal systems." Partly as a consequence, Chief Justice Barak wrote, the **U**nited **S**tates Supreme Court "is **losing the central role** it once had among courts in modern democracies." Justice Michael Kirby of the High Court of Australia said that his court no longer confined itself to considering English, Canadian and American law. "Now we will take information from the Supreme Court of India, or the Court of Appeal of New Zealand, or the Constitutional Court of South Africa," he said in an interview published in 2001 in The Green Bag, a legal journal. "America" he added, "is in danger of becoming something of a **legal backwater**."

No modeling – newest ev

Law and Versteeg 12 (David, Prof. of Law and Prof of PoliSci @ Washington University, St Louis, PHD @ Stanford, JD @ Harvard Law, Mila, Assoc. Prof, U of Virginia Law, D.Phil @ Oxford, "The Declining Influence of the United States Constitution" New York University Law Review -- Vol 87:762 -- www.law.nyu.edu/ecm_dlv2/groups/public/@nyu_law_website__journals__law_review/documents/documents/ecm_pro_072892.pdf)

There are growing suspicions, however, **that America's days as a¶ constitutional hegemon are coming to an end**. ¶ 12¶ It has been said that **the U**nited **S**tates **is losing constitutional influence because it is¶ increasingly out of sync with an evolving global consensus** on issues of¶ human rights.¶ 13¶ Indeed, **to the extent that other countries still look to¶ the U**nited **S**tates **as an example, their goal may be less to imitate**¶ American constitutionalism **than to avoid its** perceived **flaws** and mistakes.¶ 14¶ Scholarly and popular attention has focused in particular¶ upon the influence of American constitutional jurisprudence. **The¶ reluctance of the U.S. Supreme Court to pay "decent respect to the¶ opinions of mankind" 15 by**

participating in an ongoing "global judicial¶ dialogue"¶ 16¶ is supposedly **diminishing the global appeal and influence¶ of American** constitutional **jurisprudence**.¶ 17¶ **Studies conducted by scholars** in other countries have begun to **yield empirical evidence that¶ citation to U.S. Supreme Court decisions by foreign courts is** in fact **on the decline**.¶ 18¶ By contrast, however, the extent to which the U.S.¶ Constitution itself continues to influence the adoption and revision of¶ constitutions in other countries remains a matter of speculation and¶ anecdotal impression.¶ With the help of an extensive data set of our own creation that¶ spans all national constitutions over the last six decades, this¶ Article explores the extent to which various prominent¶ constitutions—including the U.S. Constitution—epitomize generic¶ rights constitutionalism or are, instead, increasingly out of sync with¶ evolving global practice. **A stark contrast can be drawn between the¶ declining attraction of the U.S. Constitution as a model** for other¶ countries **and the increasing attraction of the model provided by**¶ America's neighbor to the north, **Canada**. We also address the possibility that **today's constitution makers look for inspiration not only to¶ other national constitutions, but also to regional and international¶ human rights instruments such as the Universal Declaration of¶ Human Rights and the European Convention on Human Rights**. **Our findings do little to assuage American fears of diminished influence in¶ the constitutional sphere**.

Statistical analysis of citations proves

L'Heureux-Dube 98 (Honourable Claire – Puisne Justice, Supreme Court of Canada, "Conference on the Rehnquist Court: The Importance of Dialogue: Globalization and the International Impact of the Rehnquist Court", Tulsa Law Journal, Fall, 34 Tulsa L.J. 15, lexis)

Despite these cautions, there is a **general perception** that the Rehnquist Court's impact has **declined relative** to that of its predecessors. First, this is borne out by **statistical analysis**, at least of the situation in Canada. An informal analysis of Canadian Supreme Court decisions since 1986 revealed that the Rehnquist Court was cited in **fewer than one-half** as many cases as the Warren Court, and in just under one-third the number of Burger Court cases. This suggests a **sharp drop in influence**. There is an even **greater disparity** if one compares the number of Rehnquist Court decisions cited by the Canadian court to the number of its predecessors' cases cited; Burger court cases, in particular, vastly outnumber cases from the Rehnquist Court. Though I have not compiled statistics, a similar trend is **easily discernable** through reading judgments from other countries. When the U.S. Supreme Court is cited, it is usually Warren or Burger Court decisions, and sometimes older ones. The Rehnquist Court is **much less frequently cited**. A couple of examples will suffice, beginning with the Indian Supreme Court decision in Rajagopal and Another v. State of Tamil Nadu. n54 Central to the case were issues of balancing freedom of expression and of privacy, and the court relied heavily on American jurisprudence. The court devoted several pages to the cases of New York Times Co. v. Sullivan, n55 Cox Broadcasting Corp. v. Cohn, n56 Griswold v. Connecticut, n57 and Roe v. Wade, n58 all classic Warren and Burger Court cases. It included extensive descriptions of the facts and holdings, and provided lengthy citations from several of these cases. The only reference to Rehnquist Court jurisprudence, however, was a one sentence [*30] comment that "though [Roe v. Wade] received a few knocks in the recent decision in Planned Parenthood v. Casey (1992), 120 L. Ed. (2d) 683, the central holding of this decision has been left untouched -- indeed affirmed." n59 This decision illustrates the trend of focusing on Warren and Burger Court decisions, and giving less attention to Rehnquist Court judgments modifying or explaining those decisions. The contrast between the strong focus on the reasoning of the older decisions and the passing reference to the Rehnquist Court decision is striking. Another example is the opinion of Justice Ackermann of the Constitutional Court of South Africa in Ferreira v. Levin NO. n60 The case dealt with the right to liberty and freedom from self-incrimination. The court examined the protections of the Fifth Amendment, and referred to the judgments in Miranda, Feldman v. United States, n61 Hoffman v. United States, n62 United States v. James, n63 Ullmann v. United States, n64 Bolling v. Sharpe, n65 Board of Regents v. Roth, n66 and Meyer v. Nebraska, n67 quoting from several of them. Again, though the court cited a wide variety of Fifth Amendment decisions from various eras of constitutional jurisprudence, no Rehnquist Court decisions were considered. The Ferreira decision also illustrates the declining prominence of American constitutional jurisprudence in general, since American cases were much less prominent in this opinion than those of Canadian, German, and British Courts, as well as the European Court of Human Rights. This is true of other cases as well. Thus, though the Rehnquist Court's impact has declined internationally, so has the influence of the United States Supreme Court in general. Therefore, though it is not scientifically demonstrable, at least not at this stage and not without more in-depth research, a variety of indicators show that the Rehnquist Court's international **impact is smaller** than that of its predecessors, and corresponds to a general **relative decline in influence** of the U.S. Court, particularly on human rights issues. As a force driving the definition of human rights around the world, the **U**nited **S**tates is **not as influential** as it used to be. This does not mean, however, that American decisions are not still very prominent in human rights jurisprudence in all jurisdictions; the Rehnquist Court's jurisprudence is regularly consulted and considered. The "overseas trade" in the Bill of Rights, described by Lord Lester, is far from being at an end. But numbers and general perceptions suggest a decline relative to previous courts. There are several reasons for this new phenomenon, particularly in the area of human rights. Some of these are within the control of the Rehnquist Court; others are beyond its power to change.

A2 Africa

African and Arab countries don't model the US – not effective for them

Horowitz 12 (Jake, co-founder of PolicyMic, "Why is the U.S. Constitution Losing Influence Across the World?" http://www.policymic.com/articles/3975/why-is-the-u-s-constitution-losing-influence-across-the-world)

But, my sense is that the **Constitution is slipping** because America has **lost its power** and prestige as a shining democracy due to over a decade of constitutional excess. In particular, the Bush administration's War on Terror policies which interpreted the Constitution to permit torture, deprive suspected terrorists of due process, sanction wire-tapping and domestic spying, and amass unprecedented power in the hands of the executive eroded the credibility of the document and undermined our democracy. After a decade of America's imprisoning and torturing Arab citizens under the guise of the Constitution, it is no wonder that it no longer holds any weight in **newly emerging democracies** like Egypt and Tunisia. Moreover, the decline in influence is also a reflection of the all-too-often forgotten fact that American liberal democracy is **not for every country**. The U.S. Constitution guarantees certain rights, like the separation of religion and state, which may **not neatly fit** into other countries' models of democracy. Stanford democracy expert Larry Diamond has written often about public opinion polling of the Arab world, which indicates that although the majority of Arabs want democracy, they also believe **Islam should play a strong role** in governing their society. The U.S. Constitution, then, **provides little guidance** for structuring newly emerging democracies with more devout populations. Although the decline of the Constitution is likely to unnerve the bevy of IR theorists and pundits who routinely lament America's decline, this study is not necessarily cause for concern. Rather, that emerging democracies are adapting democracy to fit their context serves as a powerful reminder that liberal democracy **cannot be imposed from the outside**, something the U.S. learned well this past decade in Iraq. It should also serve as a stark warning to President Barack Obama, however, that the longer Guantanamo remains open, and the more the administration chips away at our civil liberties by signing bills like the NDAA, the more U.S. influence, leadership, and credibility will wane across the globe.

African war doesn't escalate

Barrett 5 (Robert, MA in Conflict Analysis and Management, Jun 1, "Understanding the Challenges of African Democratization through Conflict Analysis," http://papers.ssrn.com/sol3/papers.cfm?abstract_id=726162)

This is a problem, as Western nations may be increasingly wary of intervening in Africa hotspots after experiencing firsthand the unpredictable and unforgiving nature of societal warfare in both Somalia and Rwanda. On a costbenefit basis, the West continues to be somewhat reluctant to get to get involved in Africa's dirty wars, evidenced by its political hesitation when discussing ongoing sanguinary grassroots conflicts in Africa. Even as the world apologizes for bearing witness to the Rwandan genocide without having intervened, the United States, recently using the label 'genocide' in the context of the Sudanese conflict (in September of 2004), has only proclaimed sanctions against Sudan, while dismissing any suggestions at actual intervention (Giry, 2005). Part of the problem is that traditional military and diplomatic approaches at separating combatants and enforcing ceasefires have yielded little in Africa. No powerful nations want to get embroiled in conflicts they cannot win – especially those conflicts in which the intervening nation has very little interest.

No disease can cause human extinction – they either kill their hosts too quickly or aren't lethal

Posner 5 (Richard A, judge on the U.S. Court of Appeals, Seventh Circuit, and senior lecturer at the University of Chicago Law School, Winter. "Catastrophe: the dozen most significant

catastrophic risks and what we can do about them."
http://findarticles.com/p/articles/mi_kmske/is_3_11/ai_n29167514/pg_2?tag=content;col1)

Yet the fact that Homo sapiens has managed to survive every disease to assail it in the 200,000 years or so of its existence is a source of genuine comfort, at least if the focus is on extinction events. There have been enormously destructive plagues, such as the Black Death, smallpox, and now AIDS, but none has come close to destroying the entire human race. There is a biological reason. Natural selection favors germs of limited lethality; they are fitter in an evolutionary sense because their genes are more likely to be spread if the germs do not kill their hosts too quickly. The AIDS virus is an example of a lethal virus, wholly natural, that by lying dormant yet infectious in its host for years maximizes its spread. Yet there is no danger that AIDS will destroy the entire human race. The likelihood of a natural pandemic that would cause the extiinction of the human race is probably even less today than in the past (except in prehistoric times, when people lived in small, scattered bands, which would have limited the spread of disease), despite wider human contacts that make it more difficult to localize an infectious disease. The reason is improvements in medical science. But the comfort is a small one. Pandemics can still impose enormous losses and resist

A2 Latin America

No Latin modeling – they follow Europe

Garoupa and Maldonado 11 (Nuno – Professor of Law and H. Ross & Helen Workman Research Scholar, University of Illinois College of Law, and Maria – J.D. at University of Illinois, "CHINA'S ASSET MANAGEMENT PLATFORMS & CLEANTECH SECTOR: ARTICLE: THE JUDICIARY IN POLITICAL TRANSITIONS: THE CRITICAL ROLE OF U.S. CONSTITUTIONALISM IN LATIN AMERICA", Cardozo Journal of International and Comparative Law, Summer, 19 Cardozo J. Int'l & Comp. L. 593, lexis)

In Europe, the political transitions of the twentieth century also evidence creative ways of addressing the incumbent judiciary. Some examples of such include: **Germany** and Italy after WWII; **Portugal, Spain and Greece** at the end of their authoritarian regimes in the late 1970s; and the former communist Central and Eastern European countries in the 1990s. n16 The Argentina and [*600] Chile regime transitions from military to democratic in the early 1990s have more recently become the focus of much debate. Judicial reform in Latin America is constrained by the needs to address the role of the judiciary and their difficult past in terms of democratic legitimacy. n17 **Unlike the United States**, Europe and Latin America have a **common civil law tradition**. Although subject to debate, comparative law usually includes the Latin American countries in the French civil law family, because of Portuguese and Spanish **colonial influence**, whereas the German civil law stands as a separate and distant relative. n18

US model empirically fails

Garoupa and Maldonado 11 (Nuno – Professor of Law and H. Ross & Helen Workman Research Scholar, University of Illinois College of Law, and Maria – J.D. at University of Illinois, "CHINA'S ASSET MANAGEMENT PLATFORMS & CLEANTECH SECTOR: ARTICLE: THE JUDICIARY IN POLITICAL TRANSITIONS: THE CRITICAL ROLE OF U.S. CONSTITUTIONALISM IN LATIN AMERICA", Cardozo Journal of International and Comparative Law, Summer, 19 Cardozo J. Int'l & Comp. L. 593, lexis)

The essence of reputation in the Latin American judiciary has been questionable for a long time. n57 Unfortunately, the reforms imposed by international organizations at the end of the twentieth century have **largely failed** to address this problem. The persistent organizational, administrative, and managerial problems of the Latin American judiciary have been described in detail in the literature: financial and political corruption, lack of capacity and resources, poorly organized courts, weak judicial education and training, ineffective delivery of justice, utilizing the judiciary as an arm of the government, and violence against the judiciary. n58 These traditional problems require a profound reform of the executive and

legislative powers that have been largely unaddressed. Also, as expected, the incumbent judiciary is usually hostile to any implementation of new legal policies. A structural change requires [*616] a new judicial culture that influences new law by adding legislation where there are gaps in the law. However, a new judicial culture is usually unavailable. n59 **Importing U.S. models** has not worked for **obvious local reasons** that are generally ignored by international organizations. n60 Narrow judicial reforms based on the view that an American-inspired judiciary would consolidate democracy **have changed little** and, in some cases, have **been counter-productive**. n61 An unhealthy judicial organization with a serious deficit of prestige has prevailed for most of the twentieth century to the present. n62

Instability won't escalate

Cárdenas 11 (Mauricio, senior fellow and director of the Latin America Initiative at the Brookings Institution, was cabinet minister during the Gaviria and Pastrana administrations in Colombia. Think Again Latin America, Foreign Policy, http://www.foreignpolicy.com/articles/2011/03/17/think_again_latin_america?page=full)

"**Latin America is violent** and dangerous." Yes, **but not unstable**. Latin American countries have among the world's highest rates of crime, murder, and kidnapping. Pockets of abnormal levels of violence have emerged in countries such as Colombia -- and more recently, in Mexico, Central America, and some large cities such as Caracas. With 140,000 homicides in 2010, it is understandable how Latin America got this reputation. Each of the countries in Central America's "Northern Triangle" (Guatemala, Honduras, and El Salvador) had more murders in 2010 than the entire European Union combined. Violence in Latin America is strongly related to poverty and inequality. When combined with the insatiable international appetite for the illegal drugs produced in the region, it's a noxious brew. As strongly argued by a number of prominent regional leaders -- including Brazil's former president, Fernando H. Cardoso, and Colombia's former president, Cesar Gaviria -- a strategy based on demand reduction, rather than supply, is the only way to reduce crime in Latin America. **Although some fear the Mexican drug violence could spill over into the southern United States, Latin America poses little to no threat to international peace or stability. The major global security concerns today are the proliferation of nuclear weapons and terrorism. No country in the region is in possession of nuclear weapons -- nor has expressed an interest in having them. Latin American countries**, on the whole, **do not have much history of engaging in cross-border wars. Despite the recent tensions on the Venezuela-Colombia border, it should be pointed out that Venezuela has never taken part in an international armed conflict**. **Ethnic and religious conflicts are very uncommon** in Latin America. Although the region has not been immune to radical jihadist attacks -- the 1994 attack on a Jewish Community Center in Buenos Aires, for instance -- they have been rare. **Terrorist attacks on the civilian population have been limited** to a large extent to the FARC organization in Colombia, a tactic which contributed in large part to the organization's loss of popular support.

A2 Sri Lanka

No chance of war from economic decline---best and most recent data

Daniel W. **Drezner 12**, Professor, The Fletcher School of Law and Diplomacy, Tufts University, October 2012, "The Irony of Global Economic Governance: The System Worked," http://www.globaleconomicgovernance.org/wp-content/uploads/IR-Colloquium-MT12-Week-5_The-Irony-of-Global-Economic-Governance.pdf

The final outcome addresses a dog that hasn't barked: the effect of the Great Recession on cross-border conflict and violence. During the initial stages of the crisis, multiple analysts asserted that the financial crisis would lead states to increase their use of force as a tool for staying in power.37 Whether through greater internal repression, diversionary wars, arms races, or a ratcheting up of great power conflict, there were genuine concerns that the global economic downturn would lead to an increase in conflict. Violence in the Middle East, border disputes in the South China Sea, and even the disruptions of the Occupy movement fuel impressions of surge in global public disorder. ¶ The

aggregate data suggests otherwise, however. The Institute for Economics and Peace has constructed a "Global Peace Index" annually since 2007. A key conclusion they draw from the 2012 report is that "The average level of peacefulness in 2012 is approximately the same as it was in 2007."38 Interstate violence in particular has declined since the start of the financial crisis – as have military expenditures in most sampled countries. Other studies confirm that the Great Recession has not triggered any increase in violent conflict; the secular decline in violence that started with the end of the Cold War has not been reversed.39 Rogers Brubaker concludes, "the crisis has not to date generated the surge in protectionist nationalism or ethnic exclusion that might have been expected."40¶ None of these data suggest that the global economy is operating swimmingly. Growth remains unbalanced and fragile, and has clearly slowed in 2012. Transnational capital flows remain depressed compared to pre-crisis levels, primarily due to a drying up of cross-border interbank lending in Europe. Currency volatility remains an ongoing concern. Compared to the aftermath of other postwar recessions, growth in output, investment, and employment in the developed world have all lagged behind. But the Great Recession is not like other postwar recessions in either scope or kind; expecting a standard "V"-shaped recovery was unreasonable. One financial analyst characterized the post-2008 global economy as in a state of "contained depression."41 The key word is "contained," however. Given the severity, reach and depth of the 2008 financial crisis, the proper comparison is with Great Depression. And by that standard, the outcome variables look impressive. As Carmen Reinhart and Kenneth Rogoff concluded in This Time is Different: "that its macroeconomic outcome has been only the most severe global recession since World War II – and not even worse – must be regarded as fortunate."42

No risk of India-Pakistan war

Mutti 9 – over a decade of expertise covering on South Asia geopolitics, Contributing Editor to Demockracy journal (James, 1/5, Mumbai Misperceptions: War is Not Imminent, http://demockracy.com/four-reasons-why-the-mumbai-attacks-wont-result-in-a-nuclear-war/)

Writer Amitav Ghosh divined a crucial connection between the two messages. "When commentators repeat the metaphor of 9/11, they are in effect pushing the Indian government to mount a comparable response." Indeed, India's opposition Hindu nationalist BJP has blustered, "Our response must be close to what the American response was." Fearful of imminent war, the media has indulged in frantic hand wringing about Indian and Pakistani nuclear arsenals and renewed fears about the Indian subcontinent being "the most dangerous place on earth." As an observer of the subcontinent for over a decade, I am optimistic that war will not be the end result of this event. As horrifying as the Mumbai attacks were, they are not likely to drive India and Pakistan into an armed international conflict. The media frenzy over an imminent nuclear war seems the result of the media being superficially knowledgeable about the history of Indian-Pakistani relations, of feeling compelled to follow the most sensationalistic story, and being recently brainwashed into thinking that the only way to respond to a major terrorist attack was the American way – a war. Here are four reasons why the Mumbai attacks will not result in a war: 1. For both countries, a war would be a disaster. India has been successfully building stronger relations with the rest of the world over the last decade. It has occasionally engaged in military muscle-flexing (abetted by a Bush administration eager to promote India as a counterweight to China and Pakistan), but it has much more aggressively promoted itself as an emerging economic powerhouse and a moral, democratic alternative to less savory authoritarian regimes. Attacking a fledgling democratic Pakistan would not improve India's reputation in anybody's eyes. The restraint Manmohan Singh's government has exercised following the attacks indicates a desire to avoid rash and potentially regrettable actions. It is also perhaps a recognition that military attacks will never end terrorism. Pakistan, on the other hand, couldn't possibly win a war against India, and Pakistan's military defeat would surely lead to the downfall of the new democratic government. The military would regain control, and Islamic militants would surely make a grab for power – an outcome neither India nor Pakistan want. Pakistani president Asif Ali Zardari has shown that this is not the path he wants his country to go down. He has forcefully spoken out against terrorist groups operating in Pakistan and has ordered military attacks against LeT camps. Key members of LeT and other terrorist groups have been arrested. One can hope that this is only the beginning, despite the unenviable military and political difficulties in doing so. 2. Since the last major India-Pakistan clash in 1999, both countries have made concrete efforts to create people-to-people connections and to improve economic relations. Bus and train services between the countries have resumed for the first time in decades along with an easing of the issuing of visas to cross the border. India-Pakistan cricket matches have resumed, and India has granted Pakistan "most favored nation" trading status. The Mumbai attacks will undoubtedly strain relations, yet it is hard to believe that both sides would throw away this recent progress. With the removal of Pervez Musharraf and the election of a democratic government (though a shaky, relatively weak one), both the Indian government and the Pakistani government have political motivations to ease tensions and to proceed with efforts to improve relations. There are also growing efforts to recognize and build upon the many cultural ties between the populations of India and Pakistan and a decreasing sense of animosity between the countries. 3. Both countries also face difficult internal problems that present more of a threat to their stability and security than does the opposite country. If they are wise, the governments of both countries will work more towards addressing these internal threats than the less dangerous external ones. The most significant problems facing Pakistan today do not revolve around the unresolved situation in Kashmir or a military threat posed by India. The more significant threat to Pakistan comes from within. While LeT has focused its firepower on India

instead of the Pakistani state, other militant Islamic outfits have not. Groups based in the tribal regions bordering Afghanistan have orchestrated frequent deadly suicide bombings and clashes with the Pakistani military, including the attack that killed ex-Prime Minister Benazir Bhutto in 2007. The battle that the Pakistani government faces now is not against its traditional enemy India, but against militants bent on destroying the Pakistani state and creating a Taliban-style regime in Pakistan. In order to deal with this threat, it must strengthen the structures of a democratic, inclusive political system that can also address domestic problems and inequalities. On the other hand, the threat of Pakistani based terrorists to India is significant. However, suicide bombings and attacks are also carried out by Indian Islamic militants, and vast swaths of rural India are under the de facto control of the Maoist guerrillas known as the Naxalites. Hindu fundamentalists pose a serious threat to the safety of many Muslim and Christian Indians and to the idea of India as a diverse, secular, democratic society. Separatist insurgencies in Kashmir and in parts of the northeast have dragged on for years. And like Pakistan, India faces significant challenges in addressing sharp social and economic inequalities. Additionally, Indian political parties, especially the ruling Congress Party and others that rely on the support of India's massive Muslim population to win elections, are certainly wary about inflaming public opinion against Pakistan (and Muslims). This fear could lead the investigation into the Mumbai attacks to fizzle out with no resolution, as many other such inquiries have. 4. The international attention to this attack – somewhat difficult to explain in my opinion given the general complacency and utter apathy in much of the western world about previous terrorist attacks in places like India, Pakistan, and Indonesia – is a final obstacle to an armed conflict. Not only does it put both countries under a microscope in terms of how they respond to the terrible events, it also means that they will feel international pressure to resolve the situation without resorting to war. India and Pakistan have been warned by the US, Russia, and others not to let the situation end in war. India has been actively recruiting Pakistan's closest allies – China and Saudi Arabia – to pressure Pakistan to act against militants, and the US has been in the forefront of pressing Pakistan for action. Iran too has expressed solidarity with India in the face of the attacks and is using its regional influence to bring more diplomatic pressure on Pakistan.

A2 Nepal

Indo-China disputes inevitable AND won't escalate

Wagner & Agarwal '10 (Daniel, Managing Dir. – Country Risk Solutions (a pol and econ risk consultancy), and Subhash, New-Delhi based political analyst and founer – India Focus, Huffington Post, "The State of Indian-Sino Relations", 2010, http://www.huffingtonpost.com/daniel-wagner/the-state-of-indian-sino_b_458847.html)

Indian/Sino friction will continue in the coming decade and is likely will be based on three primary issues: 1) The disputed border: Having never formally resolved their lingering border dispute, both countries will continue to find the absence of a resolution an irritant that will underlay and influence the health of bilateral relations; 2) Naval rivalry in the Indian Ocean: As China seeks to project its power regionally, India's navy will continue to be the only regional impediment to China's blue water ambitions. Other countries in the region may object to China's projection of sea power, but only India has the ability to challenge it; and 3) Pakistan: China's continuing support of Pakistan's military, and by extension its ability to remain an irritant on the subject of Kashmir, will remain a point of contention for India. India is of course aware that China has deftly spread its diplomatic influence globally in a very short span of time, largely through the disbursement of overseas aid (to African and Latin American nations) and through careful nurturing of its political connections in the West. Indian business, more than Indian diplomats, look longingly at the list of former U.S. government officials who have at some point in the past two decades acted as intermediaries and lobbyists for Chinese business interests -- from Henry Kissinger to Alexander Haig to Cyrus Vance. India also knows that Chinese ascendancy is much more than economic. Part of the future competition between India and China will be based on whether India can develop its military hardware and rebuild its naval muscle faster than Chinese attempts to build cultural and diplomatic sophistication. **But neither China nor India have an interest in overt or uncontrolled hostility. Both will work for their respective long-term interests within the rules of the present global order,** with China having greater deliberation and speed than India. It is most unlikely that China will attack India, even in the Northeast. Any military action by China towards any of its neighbors, especially a democracy like India, will erode the carefully crafted image of its "peaceful rise" and will only serve to reignite the Tibet issue. It would also provide a diplomatic opportunity for the U.S. to justify its continued militarily presence in Asia, as well as prompt Japan to want to expand its own military presence in the region.

Human Rights Adv Answers

US Not Key

U.S. policy has no effect on human rights --- past rejection of international norms proves --- other states don't pay attention

Moravcisk 2 [Andrew, Professor of International Politics at Princeton, "Why is US Human Rights Policy So Unilateralist?" Multilateralism & US Foreign Policy]

Yet little evidence suggests a close link between U.S. behavior and international norms, let alone domestic democratizations. Everywhere in the world, human rights norms have spread without much attention to U.S. domestic policy. Under the European Convention on Human Rights, the Europeans have established the most effective formal system for supranational judicial review of human rights claims, based in Strasbourg, without U.S. participation in the wake of the "third wave" of democratization in Eastern Europe, East Asia, and Latin America, government after government moved ahead toward more active domestic and international human rights policies without paying much attention to U.S. domestic practice. Indeed, emerging democracies in the Western Hemisphere are following Europe's lead in ratifying and accepting compulsory jurisdiction of a regional human rights court, while ignoring U.S. unwillingness to ratify the American Convention on Human Rights, let alone accept jurisdiction of a supranational court. One might argue with equal plausibility that the pride of Latin American democracies in full adherence to the American Convention on Human Rights is strengthened by the unwillingness of the United States, Canada, Mexico, and the stable democracies in the Anglophone Caribbean to adhere. Likewise, 191 countries have ratified the CRC in record time without waiting to see what the United States would do. There is little evidence that Rwandan, Serbian, or Iraqi leaders would have been more humane if the United States had submitted to more multilateral human rights commitments. The human rights movement has firmly embedded itself in public opinion and NGO networks, in the United States as well as elsewhere, despite the dubious legal status of international norms in the United States. In sum, the consequences of U.S. nonadherence to global norms, while signaling a weakening in theory, is probably of little import in practice.

Alt Causes

-- Alt causes –

A) Prisoner abuse

Wang 5 (Jisi, Dean – School of International Studies, Peking U., Foreign Affairs, Sept/Oct, Lexis)

Since then, the extent of armed resistance to the U.S. occupation of Iraq has exceeded the Bush administration's expectations. Meanwhile, revelations of prisoner abuse by U.S. personnel in Iraq and elsewhere have undermined the credibility of U.S. rhetoric on human rights and further damaged the United States' image in the world. U.S. "soft power"--the country's ability to influence indirectly the actions of other states--has been weakened. The United States also faces serious competition and disagreement from Europe, Japan, and Russia on many economic and development-related issues, and there have been disputes on arms control, regional policies, and the role of the United Nations and other international organizations.

B) State visits and War on terror

Delhunt 7 (Bill, US Representative, D-MA, FNS, 5-2, Lexis)

But let me suggest that it is not simply our counterterrorism policies that have undermined our claim to world leadership in terms of human rights. In the same inaugural address that I quoted earlier, President Bush spoke of how the "untamed fire of freedom will reach the darkest corners of our world." But as the reports clearly lay out, some of the darkest corners of the world are governed by some of our allies in the so-called war on terror, or those with whom we have important economic relationships. Now, the administration is right to criticize governments of countries like Iran or Cuba or North Korea for violations of human rights and a lack of democracy. But I would suggest that that criticism rings hollow when the president welcomes Hu Jintao of China or Islam Karimov of Uzbekistan or Abdullah of Saudi Arabia **to the White House**; or when Vice President Cheney visits Kazakhstan's dictator, Nazarbayev, and expresses, in his words, admiration for all that has been accomplished here in Kazakhstan; or Secretary Rice herself refers to Teodoro Obiang of Equatorial Guinea as a "good friend." And outside of the reports that we're reviewing here today, there is silence as to these leaders' abysmal human rights records. I'm not naive. I understand that absolute consistency in foreign relations is impossible, and that sometimes the choice is not between good and evil, but between more evil and less evil. But I also know that America's power ultimately comes not from our military and economic strength, but it emanates from our core values: our commitment to human rights and democracy, and from how we fulfill that commitment in our action, not just with our rhetoric. The unfortunate fact is that many of our policies have not lived up to those inspiring words of President Bush. This inconsistency between words and deeds makes us vulnerable to the charge of hypocrisy, and hypocrisy erodes our claim to moral leadership and to the sincerity of our commitment to human rights and dignity, which has always, always been so appealing to the rest of the world about the United States. And as the Government Accountability Office has concluded, that growing negative opinion of the United States can have real and dangerous consequences for the safety and the interests of the American people.

C) United Nations support

Shattuck 7 (John, CEO – John F. Kennedy Library Foundation, CQ Testimony, 3-29, Lexis)

4. The U.S. decision to disengage from U.N. human rights institutions undermines its position as a human rights leader. For more than sixty years the U.S. has been a world leader in building international institutions to promote human rights. Today, unfortunately, we seem to have renounced that leadership by withdrawing from the new U.N. Human Rights Council and by refusing to participate in efforts to shape the new International Criminal Court. In both cases the U.S. now has no influence over the future of these two flawed institutions. In the case of the Human Rights Council, the U.S. abandoned its support when it was unable to limit the Council's membership to countries with good human rights records, despite the fact that the Council membership requirements adopted in the recent U.N. reforms are an improvement over those of the dysfunctional Human Rights Commission which it replaced. In the case of the International Criminal Court, many structural changes need to be made in order for the U.S. to become a full participant. Nevertheless, in recent years the U.S. has lost all leverage over the Court's development by withdrawing its signature from the treaty establishing it. In addition, an active U.S. campaign to put pressure on governments not to join the Court has engendered international ill will and further undermined the capacity of the U.S. to exercise human rights leadership.

Cred/Promotion Fails

Human rights promotion fails --- modern warfare

Gentry, 1999 [John, researcher and writer on defense/security issues, traveled with the US Army in Bosnia, "Human Rights, Ethnicity, and National Identity," Vol. 22, No. 4:Pg 95, Lexis]

<Bureaucratic concerns and national ambitions aside, there are fundamental reasons why major parts of the international human-rights agenda make little sense. Warfare in recent decades has changed dramatically toward total warfare of a sort that prominently involves civilians as both targets and participants, which often is in alleged defense of group rights. The 1992-1995 Bosnian war is a classic example. In this conflict, simply put, grievances among three ethnic factions -- Bosnian Serbs, Bosnian Croats, and Bosnian Muslims -- led to combat whose strategic as well as tactical objectives focused on increasing the size and security of pockets of land held nearly completely by one's own ethnic group. This required expansion of key chunks of ethnically homogeneous land

and capture of some strategic locations, which simplified the demographic mosaic of prewar Bosnia. Pejoratively called ethnic cleansing, the strategy that all three sides employed had at its heart the advancement of the rights of their own group over those of others and the targeting of members of other groups who stubbornly resisted achievement of those goals by refusing to leave their homes. When bombast did not work, the groups used murder and other "atrocities" to move people to other places, either horizontally as corpses or vertically as living beings. This type of warfare both tramples the human rights of victims and fosters alleged rights to personal and group security and self-actualization. Western descriptions, such as victim or war criminal, depend largely on who won and who lost, not on behavior. This kind of conflict is incompatible with current international rules of warfare that define acceptable actions between groups of fighters called soldiers who are government employees. That is, the 1949 Geneva Conventions and other conventions that regulate by voluntary state compliance the conduct of the armies fighting conventional wars are woefully inadequate to describe, let alone regulate, intrasocietal and intersocietal wars. In a conflict such as Bosnia's in which movement of civilians was a major strategic goal, all significant participants were war criminals by conventional standards because they targeted noncombatants. In societal wars the distinction is often unclear between combatants and noncombatants who provide logistical, intelligence, and other support to people who pull triggers.>

Soft Power Fails

Soft power fails---no coordination between US diplomatic agencies and it's not key to influence

Adelman 11---Master's and PhD from Georgetown's School. Frmr director of the U.S. Arms Control and Disarmament Agency, former Ambassador to the UN, and former member of Pentagon's Defense Policy Board (6/18/11, Ken, Not-So-Smart Power, http://www.foreignpolicy.com/articles/2011/04/18/not_so_smart_power)

I didn't hear of similar activities from soft-power agencies -- past diplomats, USAID directors, agricultural-aid types -- with their Egyptian counterparts. The only diplomatic initiative that got any public attention involved the gifted former U.S. ambassador to Egypt, Frank Wisner, who was suddenly dispatched to Cairo at Clinton's request. But he, or she, made a real hash of it, for just as Obama had finally realized that Mubarak must go, Wisner publicly announced that Mubarak must stay -- at least for a while, to provide stability in any transition. **Not exactly a case study in smart power.** To his credit, even Nye admits that the line between soft and hard power is a blurry one, though he generally equates the former with the State Department and USAID budgets and the latter with the Pentagon. Yet the distinction breaks down pretty quickly, especially when you consider that many U.S. military activities have boosted America's reputation and enhanced its influence abroad -- more so than any diplomatic or U.S. foreign-aid event. The U.S. Navy's quick, effective reaction to the 2004 Indian Ocean tsunami, its timely assistance to Cyclone Nargis in Burma, its relief from awful flooding in Pakistan, and now its efforts in Japan have all been superb. What case studies from soft-power budgets that Joe Nye so desperately wants maintained could he use in his Kennedy School of Government classes to match these from the hard-power Pentagon budget?¶ Moreover, America's prime soft-power agency may be too soft to be effective. Let's recall: The State Department agreed to the Mubarak government's request for its approval before any U.S. democracy programs for Egypt got launched. To put it simply, the soft-power agency consented that anti-dictator programs appropriated by the U.S. Congress first get approved by that dictator.¶ And recent Washington Post editorials have complained about the State Department being unable, or unwilling, to spend allocated funds on an effective freedom agenda. Its Feb. 5, 2011, editorial, for instance, included this astonishing fact: "Congress allocated $30 million in the fiscal 2010 budget for the State Department to fund Internet freedom. But 16 months later, none of the funds have been allocated." What's not to like in such a mission?¶ The State Department has been reluctant, if not resistant, in helping modern-day freedom fighters in Iran, Libya, and Syria. This seems a no-brainer, as they're all places of need. There should be none of the usual fears of offending the host government, because the governments of these three countries couldn't be any more hostile to the United States or more ferocious toward their own people than they are now.¶ Besides resting on soft assumptions, **emphasis on soft power may lead to soft thinking**. Take Clinton's hallmark "three Ds" of defense, diplomacy, and development. While Americans do defense and diplomacy**, they don't do development** well. The United States can't be held responsible for another country doing what's needed to develop. By now, there's a checklist of how countries can go from poverty to prosperity -- low taxes, private property protected by law, restrained and limited government, solid currency, modern infrastructure, and attacks on corruption. But the State Department simply can't do much to ensure these elements are done well.¶ I wish to end on a positive note, especially because Joseph Nye is such a fine person. He's contributed enormously to the United States, always asking hard questions on conventional thinking. He surely would welcome the same on today's fashionable thinking.¶ All this may boil down to a big difference. I've come to believe that liberals focus primarily on intentions, while conservatives focus more on results. No doubt the soft-power goals of the State Department and USAID on diplomacy, foreign aid, exchange programs, and the like seem wonderful. They're peaceful, caring, intercultural, and so on. They signal the right intentions.¶ The hard-power association with Pentagon budgets, weapons, and soldiers seems quite contrary. They signal the wrong intentions. **But looking at the actual results of soft power** versus hard power may yield results that **make today's fashionable thinking seem soft, if not altogether squishy.**

Soft power fails

Rachman 9 [Gideon Rachman is the Economist's bureau chief in Brussels, June 1 http://www.ft.com/cms/s/0/e608b556-4ee0-11de-8c10-00144feabdc0.html]

Barack Obama is a soft power president. But the world keeps asking him hard power questions. From North Korea to Guantánamo Bay, from Iran to Afghanistan. Mr Obama is confronting a range of vexing issues that cannot be charmed out of existence. The problem is epitomised by the US president's trip to the Middle East this week. Its focal point will be a much-trailed speech in Cairo on Thursday June 4, in which he will directly address the Muslim world. The Cairo speech is central to Mr Obama's efforts to

rebuild America's global popularity and its ability to persuade – otherwise known as soft power. The president has been trying out potential themes for the speech on aides and advisers for months. He is likely to emphasise his respect for Islamic culture and history, and his personal links to the Muslim world. He will suggest to his audience that both the US and the Islamic world have, at times, misjudged and mistreated each other – and he will appeal for a new beginning. George W. Bush launched a military offensive in the Middle East. Mr Obama is launching a charm offensive. There is plenty to be said for this approach. Mr Bush embroiled America in a bloody war in Iraq that strengthened Iran and acted as a recruiting sergeant for America's enemies. Mr Obama's alternative strategy is based on diplomacy, engagement and empathy. Mr Bush had a shoe thrown at him in his last appearance in the Middle East. So if Mr Obama receives his customary standing ovation in Cairo, that will send a powerful symbolic message. But the president should not let the applause go to his head. Even if his speech is a success, the same foreign-policy problems will be sitting in his in-tray when he gets back to the Oval Office – and they will be just as dangerous as before. In particular, there is chatter in official Washington that the Israelis may be gearing up to attack Iran's nuclear facilities before the end of the year. The Obama administration is against any such move and it is normally assumed that Israel would not dare to pull the trigger without the go-ahead from Washington – not least because the Israelis would have to fly across US-controlled airspace to get to their targets. But the Americans do not have a complete veto over Israel's actions. One senior US official asks rhetorically: "What are we going to do? Shoot down their planes?" A conflict between Israel and Iran would scatter the Obama administration's carefully laid plans for Middle East peace to the winds. It would also make talk of improving American soft power around the world seem beside the point. The immediate task would be to prevent a wider regional war. In the meantime, the US will press on with the effort to achieve peace between the Israelis and the Palestinians. But even that goal is unlikely to be advanced much by Mr Obama's trip to the Middle East. Many in the audience in Cairo and in the wider Islamic world will want and even expect the new president to lay out a complete vision for a peace settlement and to apply unambiguous pressure on Israel. For reasons of domestic politics, diplomacy and timing, Mr Obama is highly unlikely to do this. Yet while his Arab audience may be disappointed by what he has to say about the Middle East peace process, Mr Obama is already facing an increasingly tense relationship with the new Israeli government. The administration has now clashed openly with the Israelis over the Netanyahu government's tolerance of expanded settlements in occupied Palestinian land. Mr Obama is also running up against the limits of soft power elsewhere. Closing the prison camp at Guantánamo was meant to be the ultimate tribute to soft power over hard power. The Obama team argued consistently that the damage that Guantánamo did to America's image in the world outweighed any security gains from holding al-Qaeda prisoners there. Yet, faced with the backlash against releasing the remaining 240 prisoners or imprisoning them in the US, the Obama administration has back-tracked. It is not clear whether Guantánamo will be closed on schedule or what will happen to the riskier-sounding prisoners, who may still be held indefinitely. The much-criticised military trials are likely to be revived. In Afghanistan, Mr Obama is trying a mixture of hard and soft power. There will be a military surge – but also a "civilian surge", designed to build up civil society and governance in Afghanistan. Old hands in Washington are beginning to shake their heads and mutter about Vietnam. Mr Obama's preferred tools of diplomacy, engagement and charm do not seem to be of much use with Kim Jong-il of North Korea, either. The North Koreans have just tested a nuclear weapon – leaving the Obama administration scratching its head about what to do. The president's charisma and rhetorical skill are real diplomatic assets. If Mr Obama can deploy them to improve America's image and influence around the world, that is all to the good. There is nothing wrong with trying to re-build American "soft power". The danger is more subtle. It is that President Yes-we-can has raised exaggerated hopes about the pay-off from engagement and diplomacy. In the coming months it will become increasingly obvious that soft power also has its limits.

Europe Add-On Answers

Policy Divergence Good

Judicial divergence between the US and Europe is good – ensures European political stability and creates international policy choice which solidifies global stability

Delahunty and Yoo 11 (Robert and John, Associate Professor at the University of St. Thomas School of Law + Professor of Law at the University of California at Berkeley School of Law and Visiting Scholar at the American Enterprise Institute, "Outsourcing American Law," http://www.aei.org/wp-content/uploads/2011/10/20090820-Chapter8.pdf)

This leads to two objections to using European decisions. First, as just suggested, the American political system should remain several steps removed from European "innovations" because it keeps the nation from falling into extremes of policy. Some attribute this moderation in American politics, in part, to our written Constitution.146 The separation of powers and federalism make it difficult to enact any sweeping, ideologically-inspired legislation, and the Bill of Rights places some obstacles before government action that might infringe on individual liberties. Appealing to European decisions would evade these structural checks on federal lawmaking, since the Supreme Court's decisions themselves are not subject to the strict restraints of bicameralism, presentment, and federalism that apply to Congress and the President. Second, the modern European experience should lead us to question whether its current phase of development is inevitably superior to the American. It may appear to some today that European constitutional schemes seem to protect individual liberties more effectively, or better balance the tension between government power and rights. It is difficult to determine now, however, whether history will vindicate the choices that Europe has made. It may have appeared to some American observers at the time that fascism and communism were modern, progressive ideologies from which the United States could learn, but history demonstrated their failure. Those ideologies produced tens of millions of deaths from inter-European warfare and from the oppression of domestic populations147 -- not exactly a sterling example to follow. Not only are their histories different, but the United States and Europe face very social and political circumstances so different as to counsel against any transplanting of constitutional values from the latter to the former. Europe has spent the last 60 years turning away from great power conflict and forming itself into a nation-state, one that has solved the problem of German ambition and melded former enemies into a broad economic common market.148 Military power and conquest have not been the tools for this amazing integration, but supranational institutions, international law, and diplomacy. As Robert Kagan has put it, "Europe is turning away from power, or to put it a little differently, it is moving beyond power into a self-contained world of laws and rules and transnational negotiation and cooperation."149 The United States, on the other hand, has chosen to rely more on power than international law, on military force as much as on persuasion, and sees a world threatened by terrorist organizations, rogue nations, and the proliferation of weapons of mass destruction.150 While Europe "is entering a post-historical paradise of peace and relative prosperity, the realization of Immanuel Kant's 'perpetual peace,'" the United States "remains mired in history, exercising power in an anarchic Hobbesian world where international law and rules are unreliable, and where true security and the defense and promotion of a liberal order still depend on the possession and use of military might."151 Europeans, in other words, may be unusually reliant upon international law, legal instruments, and legal institutions because these tools have been one of the key mechanisms by which they have promoted integration. If this view of European-American relations is correct, then European judicial decisions may be particularly inappropriate for guidance for American constitutional interpretation, because they take place in an environment of reliance upon law and legal institutions that makes no sense in the American context. In fact, **it may well be the case that the difference between our political systems has both promoted the integration of Europe and permitted the Europeans to attempt a different experiment in political organization**.152 That European nations have been able to put aside their historical animosities and engage in integration may be thanks to an American security guarantee. The North Atlantic Treaty Organization allowed the integration of Europe to proceed without heavy demands for military spending, thanks to the stationing of United States forces to contain the Soviet Union. As Lord Ismay, the first secretary general of NATO, famously quipped, the purpose of the Atlantic alliance was "to keep the Americans in, the Russians out, and the Germans down."153 That disparity in spending on defense is even starker since the end of the Cold War. In the 1990s, Europeans discussed increasing collective defense expenditures from $150 billion to $180 billion a year while the United States was spending $280 billion a year.154 Ultimately, the Europeans could not, and there was little political desire now remains to, come within shouting distance of the United States, which in the wake of September 11 and the wars in Afghanistan and Iraq plans to spend $400 billion a year on defense.155 The large gap in power between the United States and Europe is perhaps even more apparent qualitatively; the United States has become the

"indispensible nation" without which Europe could not even handle the internal civil war along its borders in Kosovo. Only the United States has the power to project power globally or to fight more than one large regional war at the same time.156 Without the United States' willingness to engage in power politics, Europe would not have had the luxury to integrate. If this is correct, then European constitutional values are particularly inappropriate for the United States. They have been developed and enjoyed because their governments enjoy a different tradeoff between national security on the one hand, and individual liberties and economic prosperity on the other. The United States, however, which has greater responsibilities for keeping international peace, and for guaranteeing stability in Europe, faces a different balance between national security demands and constitutional liberties. One last reason why European precedents should not find an easy home in American constitutional law draws on the lessons of federalism. Federalism makes sense, in part, because it creates a decentralized system of government that allows jurisdictions to offer a diversity of social, economic, and political policies. Similarly, at the international level, states may compete for residents and businesses by offering different mixes of economic and social policies. As in a market, citizens can satisfy their preferences by deciding to live in states that provide the tax, education, welfare or family policies that they agree with. Diversity of policies enhances social welfare by allowing individuals to increase their utility by living in jurisdictions that offer their desired policies. Certainly, there are certain minimum rights and structures that every jurisdiction should recognize, just as in a market certain basic rules must exist in order for a market to function. It is important, however, that before a universal right is recognized, that it really be one that we are sure must be universal, rather than one that is best handled through choice available from diverse jurisdictions. Indeed, diversity of policies will permit experimentation that will make apparent which policies may best work. Just as Justice Brandeis praised federalism because it permitted experimentation by the state laboratories of democracy,157 so too international decentralization allows jurisdictions to experiment before committing to a single policy. A convergence of American and European constitutional systems, through the citation of precedents, **could reduce the ability of jurisdictions to offer the packages of policies that will enhance global welfare.**

Delahunty and Yoo 11 (Robert and John, Associate Professor at the University of St. Thomas School of Law + Professor of Law at the University of California at Berkeley School of Law and Visiting Scholar at the American Enterprise Institute, "Outsourcing American Law," http://www.aei.org/wp-content/uploads/2011/10/20090820-Chapter8.pdf)

It is essential to identify out the outset precisely what is and is not in controversy here. Some Justices appear to believe that foreign and international legal practices and opinions can serve, at the minimum, to illuminate possible solutions to questions similar to those that U.S. federal courts must address (just as U.S. federal courts may learn from U.S. state courts, and vice-versa). They can do so by providing relevant empirical information about the practical effects of particular social policies, e.g. legalized euthanasia; or, like law review articles, they can furnish original legal arguments for particular conclusions. To the extent that foreign and international legal materials are used only for those purposes, we consider that use unobjectionable. More boldly, however, some Justices may also think it desirable, for normative or policy reasons, for U.S. constitutional law to converge with the constitutional law of European and other democratic legal systems over a broad range of issues. The desire to promote such convergence may lead those Justices to give decisional effect to those materials, thus allowing them to be outcome-determinative in some constitutional cases. Foreign or international law in that use would be given legal force and effect in deciding the questions, e.g., whether a state had afforded "due process" to a criminal defendant; whether a parental notification requirement placed an "undue burden" on a minor's right to abortion; whether the President had committed a "high Crime or Misdemeanor;" whether a police search had been "reasonable;" whether the government had created an "establishment of religion;" whether a specific type of capital punishment was "cruel" and unusual." That is the use of foreign law with which we take issue here.28 In our judgment, foreign and international law are not legitimately used in an outcomedeterminative way to decide questions of constitutional interpretation except in one narrow category of cases: where the text of the Constitution itself refers to international or foreign law, as it does, e.g., when it vests in Congress the powers to "define and punish . . . Offences against the Law of Nations"29 or to "declare War."30 Under those clauses, the Constitution gives Congress – normally a body whose jurisdiction relates to domestic law only – the authority to promulgate rules of international law. As we shall discuss below, the Supreme Court early held that public international law (or more precisely, the Law of Nations) could be used to interpret the scope of Congress' power to "declare War."31 The power to "declare War" has been correctly seen, not as a matter of domestic separation of powers law enabling Congress to check the President's authority to engage in armed conflict, but rather as an exceptional grant of authority to Congress to make legal rules in the international sphere.32 Likewise, the scope of Congress' power to define and punish offenses against the "Law of Nations" can legitimately be measured against that body of law. Other than in such unusual cases,33 however, foreign and international law are not generally available as sources for interpreting the Constitution. This Article makes five observations regarding the Supreme Court's practice of relying upon foreign and international decisions in the manner just described for support of its constitutional rulings. Part I

outlines the separation of powers problems that arise if the use of foreign decisions is more than merely ornamental. If foreign decisions were to become, in close cases, outcome-determinative, or even triggered some type of deference, they would effectively transfer federal authority to bodies outside the control of the national government and the domestic political constituencies that that government is designed to represent. Part II argues that use of foreign decisions undermines the limited theory of judicial review, as set out in Marbury v. Madison. 34 Chief Justice Marshall justified the federal courts' power to ignore enacted laws that were inconsistent with the Constitution on the ground that such statutes fell outside the delegation of authority by the people to the government, as expressed in the Constitution.35 Relying on decisions that interpret a wholly different document runs counter to the notion that judicial review derives from the Court's duty to enforce the Constitution. Part III considers the relevance of the Constitution's Supremacy Clause and Law of Nations Clause to the Court's emerging use of foreign law. Part IV questions the Court's use of precedents that derive almost exclusively from Europe. We will suggest that Europe does not present the ideal model of constitutionalism for the United States to follow, and that in fact **deviation between the United States and Europe may significantly enhance global welfare**. Finally, Part V offers a tentative and preliminary explanation of why some of the Justices are attracted to using foreign law.

Rels Reslient

US-EU ties resilient

Dennison 13 (Susi, fellow at the London-based think tank, the European Council on Foreign Relations, 2/22/2013, "Kerry's first trip gives clues on EU-US relations," http://euobserver.com/opinion/119168)

When US leader Barack Obama first announced, in autumn 2011, that he was to intensify the US' role in the Asia-Pacific region, it prompted much hand-wringing in Europe. But it is unclear whether EU-US relations suffered as a result. The European Council on Foreign Relations' (ECFR) latest "scorecard," which tracks the effectiveness of European foreign policy year on year, found that in 2012 **EU-US ties were resilient**. We cited as evidence the success of the G8 summit at Camp David and the Nato summit in Chicago in May 2012, compared with the G20 summit in Los Cabos a month later, which delivered little and drew precious little attention. Whatever the intention may have been with regard to continuing or reducing US resources in MENA, throughout 2012, American attention kept being drawn to the region. From supporting Arab transitions, most notably in Egypt, to the ongoing conflict in Syria, to the Iranian nuclear programme and Israel's Operation Pillar of Defence in Gaza in autumn, the US remained watchful. In the majority of these dossiers **co-ordination with the EU has remained close**, on the E3+3 process on Iran, through the Friends of Syria Group and at the UN. As a result, the European External Action Service (EEAS) delegation in Washington is one of a select few EEAS missions which has begun to play a serious negotiation and co-ordination role in advancing EU policy.

Alt Causes

Populist takeover and Anti-EU sentiments in member countries prevents effective US-EU relationship

Mix 15 (Derek E. Mix; 2/3/15; European affairs focused political analyst; The United States and Europe: Current Issues; http://fas.org/sgp/crs/row/RS22163.pdf)

U.S. officials and Members of Congress assessing the partnership with Europe also face complex and changing political dynamics within the EU and its member states. The European financial and debt crisis that followed the 2008-2009 global downturn has forced European leaders to confront the fundamentally unfinished nature of the EU. Although leaders took a number of unprecedented measures in response to the crisis, the process of arriving at these reforms highlighted diverging preferences and outlooks that caused tensions between EU member states. Although the crisis appears to have receded, **there is a sense that its underlying causes remain unresolved** and that basic questions about the future of further EU integration remain unanswered. At the same time, the perceived inability of Europe's traditional mainstream parties to solve economic and social problems has led to an anti-establishment backlash among European

voters. In many countries, relatively new political parties are gaining strength, many of them populist parties advocating far-right and far-left policies. While such parties tend to variously embrace forms of nationalist, anti-immigration, or anti-Islam policies, nearly all are anti-EU to some degree, whether in terms of opposing the euro currency, further European integration, or even their country's membership in the union. "Euro-skeptic" parties of the far-right and far-left won approximately one quarter of the votes in the May 2014 European Parliament election. Following the victory of the radical-left Syriza party in the January 2015 Greek elections, the strength of this trend will be further tested over the course of the year with national elections in Estonia, Finland, Denmark, Portugal, Poland, Spain, and the United Kingdom. The UK elections, in particular, are expected to have major implications related to a possible national referendum on the EU membership of the country frequently regarded as the United States' closest European ally.4 In various ways, **European domestic challenges, including political instability, economic struggles, social unrest, and growing skepticism about the EU could affect Europe's ability to act in partnership with the United States.**

Cooperation Fails

EU partnership fails

Techau 11 (Jan, 10/6, director of Carnegie Europe, the European centre of the Carnegie Endowment for International Peace, "The Dirty Secret of US European relations" http://carnegieendowment.org/2011/10/06/dirty-secret-of-u-s-european-relations/8l1h)

For the internal psychology of the transatlantic relationship, this is undoubtedly good news. The more interesting question, however, seems to be whether all this new love translates into a more meaningful partnership on shared foreign-policy challenges. Here the answer is less clear. While cooperation on issues such as the Middle East, Iran and terrorism was and is constructive, one of the most crucial items on the Euro-American agenda remains untouched by the improved atmosphere: transatlantic burden sharing in the field of security and defense. Here, Europeans have for the last sixty years been in a position of utter dependence on the Washington's willingness and ability to guarantee their security. And even though the global strategic framework has drastically changed since the beginning of this transatlantic bargain in the 1950s, Europeans still conduct their defense planning as if American generosity were the most naturally abundant and easily accessible political commodity. By doing so, they increase their reliance on U.S. guarantees, and they become less and less interesting as an ally for their American counterparts. All attempts to wake Europeans up and make them rethink their priorities have died away without much impact.¶ It would be easy to blame President Obama for not using his popularity with allies intelligently enough to induce them to get their act together. But the European passivity on security and defense issues goes far beyond the reach of even the most popular American president. By and large, Europeans are unaware of their utter dependency; they don't feel particularly threatened, they hold a deep mistrust in all things military, and they have learned to look at the world without regard to strategic considerations. Despite Libya, their willingness for an active approach to the world around them and for intervention on behalf of values and interests is small. Their political leaders—to the extent that they are aware of today's realities—shy away from the enormous budgetary and political costs that a realistic security and defense posture would create. The dirty little secret of transatlantic relations is that, under these circumstances, they will undoubtedly become a whole lot less boring very soon. Both America and Europe are broke. Their ability to shape the world around them is getting weaker. The global center of gravity is shifting towards the Pacific. Americans are ultimately better suited to master this process of relative decline. But it is in Washington's fundamental interest to keep Europe safe and stable, to keep its best allies strong and to defend the enormous economic investments it has placed in the old world. Obsessing about perceptions and sympathy ratings will soon look like frivolous luxury. The ball is in the European court. For Americans, a Europe with a grown-up strategic culture will be more important than one that produces high approval ratings for the United States. For Europeans, investing in a relevant and workable transatlantic future will be more important than an American president they find easy to like.

Deference Add-On Answers

Deference Low Now

No judicial deference now – post-9/11 defeats

Scheppele 12 (Laurance S. Rockefeller Professor of Sociology and Public Affairs in the Woodrow Wilson School and University Center for Human Values; Director of the Program in Law and Public Affairs, Princeton University (Kim Lane, 2012, "THE NEW JUDICIAL DEFERENCE," Boston Univ Law Review, 92(89), http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf)

Bad though the legal plight of suspected terrorists has been, one might well have expected it to be worse. Before 9/11, the dominant response of courts around the world during wars and other public emergencies was to engage in judicial deference. 7 Deference counseled courts to stay out of matters when governments argued that national security concerns were central. As a result, judges would generally indicate that they had no role to play once the bullets started flying or an emergency was decl ared. If individuals became collateral damage in wartime, there was generally no judicial recourse to address their harms while the war was going on. As the saying goes, inter arma silent leges : in war, the law is mute. After 9/11, however, and while the conflict occasioned by those attacks was still " hot," courts jumped right in, dealing governments **one loss after another**. 8 After 9/11, **it appears that deference is dead.**

No judicial deference – data confirms

Wong 13 (U Jin, PhD dissertation in Government to Georgetown University, 4/22/2013, "THE BLANK CHECK: SUPREME COURT DECISION - MAKING IN NATIONAL SECURITY CLAIMS AND DURING WARTIME," http://repository.library.georgetown.edu/bitstream/handle/10822/558286/Wong_georgetown_0076D_12276.pdf?sequence=1)

This study started out with two questions. The first was: ?Does war influence judicial decision - making?? The second was: ?Do national security claims influence judicial decision - making?? The answer to the first question is: In a general hypothetical s ignificant war, there is a **statistically significant finding** of voting **against the government**. In the models run using the Spaeth database where the government is a party, the influence of all significant wars on judicial decision - making generally was to vote against the government. Presidential approval ratings are statistically significant only in wartime, but with a positive coefficient. Outside of wartime, presidential approval ratings are not statistically likely to influence Supreme Court behavior. This result suggests that while Courts vote strategically and support a popular president, they are still statistically likely to find against the government in a significant war. These findings altogether suggest that that the Supreme Court votes strat egically with an eye towards the popularity of the president, but revert to skepticism of government's wartime claims as the war progresses. The answer to the second question is: National security claims brought by the government achieve a statistically significant likelihood that the **Supreme Court will vote against the government**. National security claims were statistically significant with a negative signifier. This finding is consistent across all the major wars as well as peacetime. It also suggest s that **the Supreme Court generally is not predisposed to defer to the executive branch's arguments when it comes to national security claims**

Deference Good

Deference key executive urgency and flexibility

Posner & Sunstein 7 -- * Kirkland & Ellis Professor of Law, University of Chicago AND Karl N. Llewellyn Distinguished Service Professor, Law**

School and Department of Political Science, University of Chicago (Eric A. and Cass R., 4/1/2007, "Chevronizing foreign relations law" Yale Law Journal, L/N)

Critics of this transformation greatly fear executive overreaching, 180 and there is reasonable dispute about the extent of this risk and about how best to limit it; but critics and supporters agree that changes in the global environment jus tify at least some expansion of executive powers. A modern president, unlike George Washington, needs to be able to respond quickly to **intercontinental ballistic missiles, cyberattacks, terrorist attacks, global financial crises**, and other dange rs that will not wait for Congress to act. The critics of broad executive power have not argued that ambiguities in federal statutes should be construed by judges, rather than by the Pr esident and those who operate under him. To say this is not to take a stand on th e question whether the President can act on his own. It is merely to acknowledge that legislation often grants the executive some discretion to act rapidly in response to perceived threat s—and hence the increase in executive power, usually made possible by statutes, has reflect ed a recognition by Congress itself of this pragmatic point. 181 In these circumstances, deference to the executive's views on the meaning of ambiguous statutes, rather than invocation of the comity principles, is a step that seems at once modest and a bit late.

That solves numerous security threats

Yoo 12 (John, Law Professor at University of California, Berkeley and Visiting Scholar at the American Enterprise Institute Deputy Assistant U.S. Attorney General in the Office of Legal Counsel, Department of Justice (OLC), during the George W. Bush administration, Deputy Assistant U.S. Attorney General in the Office of Legal Counsel, Department of Justice (OLC), during the George W. Bush administration, War Powers Belong to the President, 2/1/12, http://www.abajournal.com/magazine/article/war_powers_belong_to_the_president)

Congress' track record when it has opposed presidential leadership has not been a happy one. Perhaps the most telling example was the Senate's rejection of the Treaty of Versailles at the end of World War I. Congress' isolationist urge kept the United States out of Europe at a time when democracies fell and fascism grew in their place. Even as Europe and Asia plunged into war, Congress passed the Neutrality Acts designed to keep the United States out of the conflict. President Franklin Roosevelt violated those laws to help the Allies and draw the nation into war against the Axis. While pro-Congress critics worry about a president's foreign adventurism, the real threat to our national security may come from **inaction and isolationism**. Many point to the Vietnam War as an example of the faults of the "imperial presidency." Vietnam, however, could not have continued without the consistent support of Congress in raising a large military and paying for hostilities. And Vietnam ushered in a period of congressional dominance that witnessed American setbacks in the Cold War and the passage of the ineffectual War Powers Resolution. Congress passed the resolution in 1973 over President Richard Nixon's veto, and no president, Republican or Democrat, George W. Bush or Obama, has ever accepted the constitutionality of its 60-day limit on the use of troops abroad. No federal court has ever upheld the resolution. Even Congress has never enforced it. Despite the record of practice and the Constitution's institutional design**,** critics nevertheless argue for a **radical remaking of the American way of war.** They typically base their claim on Article I, Section 8, of the Constitution, which gives Congress the power to "declare war." But these observers read the 18th century constitutional text through a modern lens by interpreting "declare war" to mean "start war." When the Constitution was written, however, a declaration of war served diplomatic notice about a change in legal relations between nations. It had little to do with launching hostilities. In the century before the Constitution, for example, Great Britain—where the framers got the idea of the declare-war power—fought numerous major conflicts but declared war only once beforehand. Our Constitution sets out specific procedures for passing laws, appointing officers and making treaties. There are none for waging war because the framers expected the president and Congress to struggle over war through the national political process. In fact, other parts of the Constitution, properly read, support this reading. Article I, Section 10, for example, declares that the states shall not "engage" in war "without the consent of Congress" unless "actually invaded, or in such imminent danger as will not admit of delay." This provision creates exactly the limits desired by anti-war critics, complete with an exception for self-defense. If the framers had wanted to require congressional permission before the president could wage war, they simply could have repeated this provision and applied it to the executive. Presidents, of course, do not have complete freedom to take the nation to war. Congress has ample powers to control presidential policy, if it wants to. Only Congress can raise the military, which gives it the power to block, delay or modify war plans. Before 1945, for example, the United States had such a small peacetime military that presidents who started a war would have to go hat in hand to Congress to build an army to fight it. Since World War II, it has been Congress that has authorized and funded our large standing military, one primarily designed to conduct offensive, not defensive, operations (as we learned all too tragically on 9/11) and to swiftly project power worldwide. If Congress wanted to discourage presidential initiative in war, it could build a smaller, less offensive-minded military. Congress' check on the presidency lies not just in the long-term raising of the military. It can also block any immediate armed conflict through the power of the purse. If Congress feels it has been misled in authorizing war, or it disagrees with the president's decisions, all it need do is cut off funds, either all at once or gradually. It can reduce the size of the military, shrink or eliminate units, or freeze supplies. Using the power of the purse does not even require affirmative congressional action. Congress can just sit on its hands and refuse to pass a law funding the latest presidential adventure, and the war will end quickly. Even the Kosovo war, which lasted little more than two months and involved no ground troops, required special funding legislation. The framers expected Congress' power of the purse to serve as the primary check on presidential war. During the 1788 Virginia ratifying convention, Patrick Henry attacked the Constitution for failing to limit executive militarism. James Madison responded: "The sword is in the hands of the British king; the purse is in the hands of the Parliament. It is so in America, as far as any analogy can exist." Congress ended America's involvement in Vietnam by cutting off all funds for the war. Our Constitution has succeeded because it favors swift presidential action in war, later checked by Congress' funding power. If a president continues to wage war without congressional authorization, as in Libya, Kosovo or Korea, it is only because Congress has chosen not to exercise its easy check. We should not confuse a desire to escape political responsibility for a defect in the Constitution. A radical change in the system for making war might **appease critics of presidential power**. But it could also seriously threaten American national security. In order to forestall another 9/11 attack, or to take advantage of a window of opportunity to strike terrorists or rogue nations, **the executive branch needs flexibility**. It is not hard to think of situations where congressional consent cannot be obtained in time to act. Time for congressional deliberation, which leads only to passivity and isolation and not smarter decisions, will come at the price of speed and secrecy. The Constitution creates a presidency that can respond forcefully to prevent serious threats to our national security. **Presidents can take the initiativ**e and Congress can use its funding

power to check them. Instead of demanding a legalistic process to begin war, the framers left war to politics. As we confront the new challenges of **terrorism**, **rogue nations** and **WMD proliferation**, now is not the time to introduce sweeping, untested changes in the way we make war.

France Add-On Answers

EU Econ Collapse Inevitable

Structural issues in the EU make solvency impossible

Porter 15 [Eduardo Porter, New York Times; "Local Politics Are Fracturing European Unity"; 2/3/2015; http://www.nytimes.com/2015/02/04/business/political-fractures-in-european-economic-unity.html]

To be fair, many economists — mostly on this side of the Atlantic — have long recognized the flaws of the euro area's monetary arrangement. But still wedded to the notion of European solidarity, euro advocates failed to grasp the **crucial, irreducible obstacle** to their economic plan that Mr. Feldstein highlighted: **Politics are still local.**¶ "They made the mistake of thinking that a solution had to happen at the eurozone level rather than at the country level," Professor Feldstein told me. "That anything they could do to increase the sense of European solidarity would be a good thing."¶ Desperate Greek voters ignited the latest panic in Europe's rolling crisis. Last week they elected a new populist government that promised to put an end to the drastic budget-cutting imposed by Europe in exchange for financial support.¶ But Greece is hardly the only problem. **Political contagion is in the air.** In Spain, "Podemos," a left-wing party born last year out of anger at Europe, has surged in the polls ahead of general elections to be held later this year. If elected, it promises to **write off much of Spain's debt**.¶ "The politics we see now are the result of an economic strategy," said Paul De Grauwe, a former member of the Belgian Parliament now at the London School of Economics. "When you push countries to impose deep austerity policies, you shouldn't be surprised that the unemployed push for extreme parties."¶ The economics are pretty straightforward.¶ The euro area suffers, principally, from a lack of growth. Indebted countries on Europe's periphery — which include not only Greece and Spain but also countries like Italy and Ireland — have been slashing their budgets, cutting jobs and trimming wages, hoping to lighten their burden of debt.¶ Germany, the biggest creditor country and main architect of the European Union's strategy, argues that such austerity is an indispensable corrective for the boom years, when low interest rates fueled spending binges — in Greece by the government, in Ireland and Spain by the private sector.¶ But the traditional **corrective hasn't worked**: Indebted economies are shrinking faster than their debt. "The **killer incriminating fact** is that for all the costs and all the pain, the debt-to-G.D.P. ratios are nevertheless much higher than before the crisis," said Jeffrey Frankel of Harvard's Kennedy School. "Even if you don't care about the distress and the extremist governments, you haven't even restored financial stability."

No Europe War

No large-scale European war

Massie 12 (Allan Massie is a Scottish writer who has published nearly 30 books, including a sequence of novels set in ancient Rome. His non-fiction works range from a study of Byron's travels to a celebration of Scottish rugby. He has been a political columnist for The Scotsman, The Sunday Times and The Daily Telegraph and writes a literary column for The Spectator., 7/17/2012, "Nuclear Iran, revolution in Europe: it's fun to make your flesh creep, but Armageddon isn't really nigh", blogs.telegraph.co.uk/culture/allanmassie/100065078/nuclear-iran-revolution-in-europe-its-fun-to-make-your-flesh-creep-but-armageddon-isnt-really-nigh/)

Then we had our expert Finance blogger Thomas Pascoe in similar thank-God-it's-Friday "I wants to make your flesh creep" Fat Boy mode. We are too complacent, he says. **We are faced with "impending events that would have precipitated a revolution in almost any other place at almost any other time in history**- either the collapse of the currency or the complete secession of budgetary control to a supra-natural body in the EU." (When I read that I said "Golly", until I realised that he probably meant to write supranational rather than supra-natural, delightfully flesh-creeping though the idea of a spectral supra-natural body taking control of national budgets may be.) **Either of these may lead, he would**

have us think, to some form of fascist revolution. This is because in the nations enduring austerity, and indeed suffering from austerity, "the populations at large feel no culpability for the debts their leaders have amassed." Well, I suppose he's right there. How much culpability do you, dear reader, feel for the size of the UK's national debt? Do you beat your breast moaning "I blame myself", or wring your hands in shame? No? I thought not. So why should the Greeks, the Spaniards and the others "feel culpability"? In Fat Boy mode, Thomas Pascoe says that **either the EU will take complete control of all national budgets or that countries will default on their debts. Either way, populist politicians will emerge to stir up the masses, and we'll be back to the Thirties**. "**Europe," it seems, " is one demagogue away from causing an earthquake in global finance such that the current problems seem a tremor in comparison**. If Silvio Berlusconi – the only truly populist politician the Continent has produced in half a century – had been twenty years younger, I fancy it might have been him…" **Well, if the playboy "Mussolini in a blue blazer" is the nearest to a fascist demagogue you can come up with**, **there isn't much to worry about.** And indeed **there isn't, because politics now matters less than football and entertainment** – **both things which bind the young people of Europe together, and make revolutionary fervour somewhat unlikely**. So, at the risk of being accused of complacency, I'll suggest, first, that **if a country was going to fall out of the euro, it would have done so by now; second, that the eurozone will muddle through**, **because the will to do so is there; and third, that while some supranational body charged with supervising national budgets will be set up**, **it will prove far less rigid and far more elastic in its exercise of control than many suppose or indeed hope or, alternatively, fear**. This is because the EU remains a union of nation-states, and national governments will insist on retaining a great degree of autonomy. **Flesh-creeping is fun and lively journalism**, **but Armageddon is not on the menu today, next week, next year, or in the next decade**. **We have come through worse and far more dangerous times, and goodwill and common sense will let us survive present difficulties and discontents**. The notion that "we are one charismatic leader away from a complete reordering of the Continent" is Fat Boy stuff.

Mosque DDI

Mosque Aff Case Neg

Solvency

Agencies like NYPD don't homogenize Muslims- they use technology to find terrorists within those law-abiding citizens

The Associated Press, 2014

(News and editorial company. "Judge Finds Surveillance of Mosques Was Allowed." http://www.nytimes.com/2014/02/21/nyregion/judge-finds-surveillance-of-mosques-was-allowed.html?_r=0. Date Accessed- 07/13/15. Anshul Nanda.)

The New York Police Department's intelligence unit did not discriminate against Muslims in carrying out far-reaching surveillance meant to identify "budding terrorist conspiracies" at mosques in Newark and other locations in New Jersey, a federal judge ruled on Thursday.¶ In a written decision filed in United States District Court in Newark, Judge William J. Martini dismissed a civil rights lawsuit brought in 2012 by eight Muslims who said the New York Police Department's surveillance programs were unconstitutional because they focused on religion, national origin and race. The suit accused the department of spying on ordinary people at several mosques, restaurants and grade schools in New Jersey since 2002.¶ The plaintiffs, including the former principal of a grade school for Muslim girls, "have not alleged facts from which it can be plausibly inferred that they were targeted solely because of their religion," Judge Martini wrote. "The more likely explanation for the surveillance was to locate budding terrorist conspiracies."¶ The judge added, "The police could not have monitored New Jersey for Muslim terrorist activities without monitoring the Muslim community itself."¶ "The motive for the program," he added, "was not solely to discriminate against Muslims, but to find Muslim terrorists hiding among the ordinary law-abiding Muslims."¶ The ruling also singled out The Associated Press, which helped the suit with a series of articles based on confidential police documents that showed how the Police Department sought to infiltrate dozens of mosques and Muslim student groups and investigated hundreds of people in New York and elsewhere.¶ "Nowhere in the complaint do the plaintiffs allege that they suffered harm prior to the unauthorized release of documents by The Associated Press," the judge wrote. "This confirms that plaintiffs' alleged injuries flow from The Associated Press's unauthorized disclosure of the documents."¶ He added: "Thus the injury, if any existed, is not fairly traceable to the city."¶ The Center for Constitutional Rights, which represented the plaintiffs, called the decision troubling.¶ "In addition to willfully ignoring the harm that our innocent clients suffered from the N.Y.P.D.'s illegal spying program, by upholding the N.Y.P.D.'s blunderbuss Muslim surveillance practices, the court's decision gives legal sanction to the targeted discrimination of Muslims anywhere and everywhere in this country, without limitation, for no other reason than their religion," said Baher Azmy, the center's legal director.¶ New York City's Law Department had no immediate comment on Thursday. Former Mayor Michael R. Bloomberg and Raymond W. Kelly, the former police commissioner, had been staunch supporters of the surveillance programs, saying they were needed to protect the city.¶ A similar lawsuit filed in federal court in Brooklyn is pending.

Curtailing surveillance in specific areas will just cause agencies to literally surveil areas outside/around it- mosque surveillance tactics prove

Goldman et. al, 12

(Adam and Matt are editors for the Associated Press. "NYPD Defends Tactics Over Mosque Spying; Records Reveal New Details On Muslim Surveillance." http://www.huffingtonpost.com/2012/02/24/nypd-defends-tactics-over_n_1298997.html. Date Accessed- 7/13/15. Anshul Nanda)

NEW YORK -- The New York Police Department targeted Muslim mosques with tactics normally reserved for criminal organizations, according to newly obtained police documents that showed police collecting the

license plates of worshippers, monitoring them on surveillance cameras and cataloging sermons through a network of informants.¶ The documents, obtained by The Associated Press, have come to light as the NYPD fends off criticism of its monitoring of Muslim student groups and its cataloging of mosques and Muslim businesses in nearby Newark, N.J.The NYPD's spokesman, Paul Browne, forcefully defended the legality of those efforts Thursday, telling reporters that its officers may go wherever the public goes and collect intelligence, even outside city limits.¶ The new documents, prepared for Police Commissioner Raymond Kelly, show how the NYPD's roster of paid informants monitored conversations and sermons inside mosques. The records offer the first glimpse of what those informants, known informally as "mosque crawlers," gleaned from inside the houses of worship.¶ For instance, when a Danish newspaper published inflammatory cartoons of Prophet Muhammad in September 2005, Muslim communities around the world erupted in outrage. Violent mobs took to the streets in the Middle East. A Somali man even broke into the cartoonist's house in Denmark with an ax.¶ In New York, thousands of miles away, it was a different story. Muslim leaders preached peace and urged people to protest lawfully. Write letters to politicians, they said. Some advocated boycotting Danish products, burning flags and holding rallies.¶ All of that was permissible under law and protected by the First Amendment to the Constitution. All was reported to the NYPD by its mosque crawlers and made its way into police files for Kelly.¶ "Imam Shamsi Ali brought up the topic of the cartoon, condemning them. He announced a rally that was to take place on Sunday (02/05/06) near the United Nations. He asked that everyone to attend if possible and reminded everyone to keep their poise if they can make it," one report read.¶ At the Muslim Center of New York in Queens, the report said, "Mohammad Tariq Sherwani led the prayer service and urged those in attendance to participate in a demonstration at the United Nations on Sunday."¶ When one Muslim leader suggested planning a demonstration, one of the people involved in the discussion about how to get a permit was, in fact, working for the NYPD.¶ "It seems horrible to me that the NYPD is treating an entire religious community as potential terrorists," said civil rights lawyer Jethro Eisenstein, who reviewed some of the documents and is involved in a decades-old class-action lawsuit against the police department for spying on protesters and political dissidents.¶ The lawsuit is known as the Handschu case, and a court order in that case governs how the NYPD may collect intelligence.¶ Eisenstein said the documents prove the NYPD has violated those rules.¶ "This is a flat-out violation," Eisenstein said. "This is a smoking gun."¶ Browne, the NYPD spokesman, did not discuss specific investigations Thursday but told reporters that, because of the Handschu case, the NYPD operates under stricter rules than any other department in the country. He said police do not violate those rules.¶ His statements were intended to calm a controversy over a 2007 operation in which the NYPD mapped and photographed all of Newark's mosques and eavesdropped on Muslim businesses. Newark Mayor Cory Booker said he was never told about the surveillance, which he said offended him.¶ Booker and his police director accused the NYPD of misleading them by not revealing exactly what they were doing. Had they known, they said it never would have been permitted. But Browne said Newark police were told before and after the operation and knew exactly what it entailed.¶ Kelly, the police commissioner, and Mayor Michael Bloomberg have been emphatic that police only follow legitimate leads of criminal activity and do not conduct preventive surveillance in ethnic communities.¶ Former and current law enforcement officials either involved in or with direct knowledge of these programs say they did not follow leads. The officials spoke on condition of anonymity because they were not authorized to discuss the secret programs. But the documents support their claims.¶ The effort highlights one of the most difficult aspects of policing in the age of terrorism. Solving crimes isn't enough; police are expected to identify would-be terrorists and move in before they can attack.¶ There are no universally agreed upon warning signs for terrorism. Terrorists have used Internet cafes, stayed in hostels, worked out at gyms, visited travel agencies, attended student groups and prayed at mosques. So the NYPD monitored those areas. In doing so, they monitored many innocent people as they went about their daily lives.¶ Using plainclothes officers from the squad known as the Demographics Unit, police swept Muslim neighborhoods and catalogued the location of mosques. The ethnic makeup of each congregation was logged as police fanned out across the city and outside their jurisdiction, into suburban Long Island and areas of New Jersey.¶ "African American, Arab, Pakistani," police wrote beneath the photo of one mosque in Newark.¶ Investigators looked at mosques as the center of Muslim life. All their connections had to be known.¶ David Cohen, the NYPD's top intelligence officer, wanted a source inside every mosque within a 250-mile radius of New York, current and former officials said. Though the officials said they never managed to reach that goal, documents show the NYPD successfully placed informants or undercovers - sometimes both - into mosques from Westchester County, N.Y., to New Jersey.¶ The NYPD used these sources to get a sense of the sentiment of worshippers whenever an event generated headlines. The goal, former officials said, was to alert police to potential problems before they bubbled up.¶ Even when it was clear there were no links to terrorism, the mosque informants gave the NYPD the ability to "take the pulse" of the community, as Cohen and other managers put it.¶ When New York Yankees pitcher Cory Lidle and his flight instructor were killed on Oct. 11, 2006, when their small plane crashed into a Manhattan high-rise apartment, fighter planes were scrambled. Within hours the FBI and Homeland Security Department said it was an accident. Terrorism was ruled out.¶ Yet for days

after the event, the NYPD's mosque crawlers reported to police about what they heard at sermons and among worshippers.¶ (View the PDF documents on Danish cartoons, mosque targeting and summaries of plane crash.)¶ At the Brooklyn Islamic Center, a confidential informant "noted chatter among the regulars expressing relief and thanks to God that the crash was only an accident and not an act of terrorism," one report reads.¶ "The worshippers made remarks to the effect that `it better be an accident; we don't need any more heat,'" an undercover officer reported from the Al-Tawheed Islamic Center in Jersey City, N.J.¶ In some instances, the NYPD put cameras on light poles and trained them on mosques, documents show. Because the cameras were in public space, police didn't need a warrant to conduct the surveillance.¶ Police also wrote down the license plates of cars in mosque parking lots, documents show. In some instances, police in unmarked cars outfitted with electronic license plate readers would drive down the street and record the plates of everyone parked near the mosque, former officials recalled.¶ "They're viewing Muslims like they're crazy.

Multiple ways that agencies can circumvent legislation- specifically the FBI will continue surveillance regardless of what the plan does

Ackerman, 2015

(Spencer Ackerman is an editor/ reporter for the US News in New York. Full Date: June 1, 2015. "Fears NSA will seek to undermine surveillance reform; Privacy advocates are wary of covert legal acrobatics from the NSA similar to those deployed post-9/11 to circumvent congressional authority" http://www.lexisnexis.com/hottopics/lnacademic/. Date Accessed- 7/15/15. Anshul Nanda)

Privacy advocates fear the National Security Agency will attempt to weaken new restrictions on the bulk collection of Americans' phone and email records with a barrage of creative legal wrangles, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday.¶ Related: Bush-era surveillance powers expire as US prepares to roll back NSA power¶ The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret.¶ Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act.¶ Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions on bulk phone records collection by taking an expansive view of the bill's definitions, thanks to a pliant, secret surveillance court.¶ "My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]," Paul said on the Senate floor on Sunday.¶ Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform.¶ "My time on the intelligence committee has taught me to always be vigilant for secret interpretations of the law and new surveillance techniques that Congress doesn't know about," Wyden, a member of the intelligence committee, told the Guardian.¶ "Americans were rightly outraged when they learned that US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens. The American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind."¶ The USA Freedom Act is supposed to prevent what Wyden calls " secret law ". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance.¶ Yet in recent memory, the US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004.¶ Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, an internal NSA draft history records that attorneys found a different legal rationale that " essentially gave NSA the same authority to collect bulk internet metadata that it had ".¶ After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa court, that Section 215 of the Patriot Act authorized it all along - precisely the contention that the second circuit court of appeals rejected in May.¶ Despite that recent history, veteran intelligence attorneys reacted with scorn to the idea that NSA lawyers will undermine surveillance reform. Robert Litt, the senior lawyer for director of national

intelligence, James Clapper, said during a public appearance last month that creating a banned bulk surveillance program was " not going to happen ".¶ "The whole notion that NSA is just evilly determined to read the law in a fashion contrary to its intent is bullshit, of the sort that the Guardian and the left - but I repeat myself - have fallen in love with. The interpretation of 215 that supported the bulk collection program was creative but not beyond reason, and it was upheld by many judges," said the former NSA general counsel Stewart Baker, referring to Section 215 of the Patriot Act.¶ This is the section that permits US law enforcement and surveillance agencies to collect business records and expired at midnight, almost two years after the whistleblower Edward Snowden revealed to the Guardian that the Patriot Act was secretly being used to justify the collection of phone records from millions of Americans.¶ With one exception, the judges that upheld the interpretation sat on the non-adversarial Fisa court, a body that approves nearly all government surveillance requests and modifies about a quarter of them substantially. The exception was reversed by the second circuit court of appeals.¶ Baker, speaking before the Senate voted, predicted: "I don't think anyone at NSA is going to invest in looking for ways to defy congressional intent if USA Freedom is adopted."¶ The USA Freedom Act, a compromise bill, would not have an impact on the vast majority of NSA surveillance. It would not stop any overseas-focused surveillance program, no matter how broad in scope, nor would it end the NSA's dragnets of Americans' international communications authorized by a different law. Other bulk domestic surveillance programs, like the one the Drug Enforcement Agency operated, would not be impacted.¶ The rise of what activists have come to call "bulky" surveillance, like the "large collections" of Americans' electronic communications records the FBI gets to collect under the Patriot Act, continue unabated - or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday.¶ Related: FBI used Patriot Act to obtain 'large collections' of Americans' data, DoJ finds¶ That collection, recently confirmed by a largely overlooked Justice Department inspector general's report, points to a slipperiness in shuttering surveillance programs - one that creates opportunities for clever lawyers.¶ The Guardian revealed in 2013 that Barack Obama had permitted the NSA to collect domestic internet metadata in bulk until 2011. Yet even as Obama closed down that NSA program, the Justice Department inspector general confirms that by 2009, the FBI was already collecting the same "electronic communications" metadata under a different authority.¶ It is unclear as yet how the **FBI transformed that authority, passed by Congress** for the collection of "business records", into large-scale collection of Americans' email, text, instant message, internet-protocol and other records. And a similar power to for the FBI gather domestic internet metadata, obtained through non-judicial subpoenas called "National Security Letters", also exists in a different, non-expiring part of the Patriot Act.¶ Jameel Jaffer, the deputy legal director of the ACLU, expressed confidence that the second circuit court of appeals' decision last month would effectively step into the breach. The panel found that legal authorities permitting the collection of data "relevant" to an investigation cannot allow the government to gather data in bulk - setting a potentially prohibitive precedent for other bulk-collection programs.¶ "We don't know what kinds of bulk-collection programs the government still has in place, but in the past it's used authorities other than Section 215 to conduct bulk collection of internet metadata, phone records, and financial records. If similar programs are still in place, the ruling will force the government to reconsider them, and probably to end them," said Jaffer, whose organization brought the suit that the second circuit considered.¶ Julian Sanchez, a surveillance expert at the Cato Institute, was more cautious.¶ "The second circuit ruling establishes that a 'relevance' standard is not completely unlimited - it doesn't cover getting hundreds of millions of people's records, without any concrete connection to a specific inquiry - but doesn't provide much guidance beyond that as to where the line is," Sanchez said.¶ "I wouldn't be surprised if the government argued, in secret, that nearly anything short of that scale is still allowed, nor if the same Fisa court that authorized the bulk telephone program, in defiance of any common sense reading of the statutory language, went along with it."¶

Huus, 12

(Kari she spent three years as a staff writer for the Far Eastern Economic Review and is a reporter for msmbc. “ACLU: FBI 'mosque outreach' program used to spy on Muslim.” Article Published March 29,2012. http://usnews.nbcnews.com/_news/2012/03/29/10907668-aclu-fbi-mosque-outreach-program-used-to-spy-on-muslims. Date Accessed -07/20/15. //Anshul)

The FBI in San Francisco used a public relations program billed as "mosque outreach" to collect information on the religious views and practices of Muslims in Northern California and then shared the intelligence with other government agencies, according to FBI documents obtained by civil rights groups.¶ The heavily redacted documents, **released after a Freedom of Information Act lawsuit,** raise "grave constitutional concerns," said Hina Shamsi, director of the National Security Project of the American Civil Liberties Union.¶ "In San Francisco, we

have found that community outreach was being run out of the FBI's intelligence division and was part of a secret and systematic intelligence gathering program," conducted without any apparent evidence of wrongdoing," said Shamsi. "The bureau's documentation of religious leaders' and congregants' beliefs and practices violates the Privacy Act, which Congress passed to protect Americans' First Amendment rights."¶ The Privacy Act limits sharing of personal information among government agencies and the length of time it can be retained. In this case, the information shared included religious beliefs and affiliations, which the ACLU argues is entirely out of bounds.¶ Kari Huus¶ Follow Kari Huus on Twitter and Facebook.¶ The ACLU is calling for the Department of Justice's inspector general to investigate alleged violations of the Privacy Act in the San Francisco Division and determine the scope of such activity nationwide.¶ The FBI San Francisco defended its agents' actions, saying the information "was collected within the scope of an authorized law enforcement activity."¶ The ACLU of Northern California filed the FOIA lawsuit with the Asian Law Caucus and the San Francisco Bay Guardian newspaper, leading to the release of the FBI documents on Tuesday.¶ Meant to foster trust¶ The documents indicate that FBI was keeping records of conversations and activities within mosques and other Muslim organizations from 2004 through 2008, information that was provided by employees engaged in the outreach programs.¶ The announced intention of the FBI outreach programs is to foster trust between law enforcers and members of the Muslim community so they can work together to fight crime and avert terrorism.¶ An earlier ACLU report on community outreach prompted FBI national headquarters to issue a release stating that its policy requires separate operations and databases for intelligence gathering and community outreach programs.¶ A large proportion of the information was labeled "positive intelligence," which indicates that the FBI intends to keep it in its intelligence database, the ACLU report explained.¶ Many documents were marked "secret," even though they appeared to include only mundane information. Some documents were marked "disseminated outside," but did not specify the recipients.¶ Among the findings contained in the FBI documents:¶ A 2005 FBI memorandum from a meeting with a congregant at Islamic Center of Santa Cruz, documented his name and religious affiliation and detailed other worshipers' financial contributions to the center and community support for Islam.¶ The subject of a sermon and congregants' discussions about a property purchase for a new mosque were gathered by FBI agents during five visits to Seaside Mosque in 2005.¶ Documents based on four "outreach" meetings between FBI personnel and representatives of the South Bay Islamic Association note discussions about the Hajj pilgrimage and "Islam in general."¶ Documents based on FBI contacts with representatives of the Bay Area Cultural Connections — formerly the Turkish Center Musalla — describe the group's mission and activities, and the ethnicity of its members. A memo indicates the FBI searched for the cell phone number of one participant in the meeting in the LexisNexis records database and Department of Motor Vehicle records, obtaining detailed information about him, including his date of birth, Social Security number, address and home telephone number.¶ There is no indication that the subjects were informed that the information was being collected or shared with other law enforcement agencies, the ACLU said.¶ The FBI in San Francisco declined a request for an interview, but released a statement by Assistant Director Michael Kortan. In addition to stating that the information gathering abided by laws and agency rules, it indicated that it had adjusted its outreach program since the period covered by the documents.¶ "Since that time, the FBI has formalized its community relations program to emphasize a greater distinction between outreach and operational activities," Kortan said.¶ South Dakota law tackles 'shariah question'¶ Classified documents contradict FBI on post 9-11 probe of Saudis, ex-Senator says¶ US aid worker is home, but no-fly list grounds him again¶ No-fly Muslim takes case to court of public opinion¶ Outreach to 'generate goodwill'¶ "FBI San Francisco dedicated a full-time, non-agent employee to community outreach efforts in the fall of 2007," said a second statement from Stephanie Douglas, FBI special agent in charge. "The community outreach program is designed to generate goodwill and foster relationships with a wide-range of groups in the communities we serve."¶ But documents still under analysis by the ACLU indicate FBI San Francisco continued to mingle outreach and intelligence gathering through 2011, according to Shamsi.¶ The documents undermine trust for genuine outreach programs, said Farhana Khera, executive director of Muslim Advocates, a San Francisco-based nonprofit that makes policy recommendations to lawmakers and leaders.¶ "I think the recent documents further underscore how well-intentioned community leaders who talk with the FBI are instead the targets of this broad, intelligence-gathering effort," she said. "It's easy to see then how that community leader who had a conversation with an FBI agent finds himself being harassed when traveling or crossing borders."¶ "These documents are illustrating the actual experiences of American Muslims that we have been hearing for a number of years now," she added. ¶ The findings are the latest from an ACLU examination of how the FBI has conducted surveillance in the wake of 9-11 and a campaign to expose cases that they say threaten civil liberties.¶ In FBI documents obtained through other Freedom of Information lawsuits, the rights groups has highlighted systematic surveillance of Muslim student organizations and individuals and what it considers anti-Muslim bias in training materials being used by the FBI —now the subject of internal FBI investigation, according to published reports.¶ 'Count the mosques'¶ In a separate case, documents uncovered by The Associated Press revealed that the New York Police Department conducted an extensive surveillance campaign of the Muslim population there, keeping secret files on individuals, businesses, mosques and organizations. Those findings have provoked outrage from many Muslim and civil rights groups, which have called on the Obama administration to intervene.¶ Greater FBI scrutiny of Muslim communities goes back to shortly after the 9/11 attacks, when then FBI Director Robert Mueller instructed field offices across the country to "count the mosques" and set up investigative goals accordingly, according to an article by investigative reporter Michael Isikoff.¶ Rules governing FBI surveillance were relaxed in 2008 to give more leeway to FBI "assessments" — a stage of surveillance that takes place before the opening of a formal investigation. These more lenient standards, critics say, allow information gathering on individuals without probable cause.¶ Rights groups are asking the Department of Justice to

restore stricter rules on surveillance and to prohibit racial and religious profiling in all cases.¶ "What we need is for the FBI to go back to the standards set after the Hoover-era abuses.… guidelines put in place that required the FBI to engage in surveillance only if there's evidence of wrongdoing," said Khera of Muslim Advocates.¶ More content from msnbc.com and NBC News:¶ Record jackpot as Mega Millions hits $500 million¶ Cops: Suspect in Vt. teacher's death wanted to 'get a girl'¶ Passengers tell of pilot's in-flight meltdown¶ Gingrich axes third of staff, reduces travel¶ Zimmerman accused of domestic violence, fighting with police¶ Follow US News on msnbc.com on Twitter and Facebook

Alt cause- NYPD will continue surveillance even if laws pass

Goldman et. al, 2013

(Adam is a analyst for the Associated Press. "NYPD designates mosques as terrorism organizations." http://bigstory.ap.org/article/nypd-designates-mosques-terrorism-organizations. Date Accessed- 07/13/15. Anshul Nanda.)

They're terrorists. They all must be fanatics," said Abdul Akbar Mohammed, the imam for the past eight years at the Masjid Imam Ali K. Muslim in Newark. "That's not right."¶ NEW YORK (AP) — The New York Police Department has secretly labeled entire mosques as terrorist organizations, a designation that allows police to use informants to record sermons and spy on imams, often without specific evidence of criminal wrongdoing.¶ Designating an entire mosque as a terrorism enterprise means that anyone who attends prayer services there is a potential subject of an investigation and fair game for surveillance.¶ Since the 9/11 attacks, the NYPD has opened at least a dozen "terrorism enterprise investigations" into mosques, according to interviews and confidential police documents. The TEI, as it is known, is a police tool intended to help investigate terrorist cells and the like.¶ Many TEIs stretch for years, allowing surveillance to continue even though the NYPD has never criminally charged a mosque or Islamic organization with operating as a terrorism enterprise.¶ The documents show in detail how, in its hunt for terrorists, the NYPD investigated countless innocent New York Muslims and put information about them in secret police files. As a tactic, opening an enterprise investigation on a mosque is so potentially invasive that while the NYPD conducted at least a dozen, the FBI never did one, according to interviews with federal law enforcement officials.¶ The strategy has allowed the NYPD to send undercover officers into mosques and attempt to plant informants on the boards of mosques and at least one prominent Arab-American group in Brooklyn, whose executive director has worked with city officials, including Bill de Blasio, a front-runner for mayor.¶ De Blasio said Wednesday on Twitter that he was "deeply troubled NYPD has labelled entire mosques & Muslim orgs terror groups with seemingly no leads. Security AND liberty make us strong."¶ The revelations about the NYPD's massive spying operations are in documents recently obtained by The Associated Press and part of a new book, "Enemies Within: Inside the NYPD's Secret Spying Unit and bin Laden's Final Plot Against America." The book by AP reporters Matt Apuzzo and Adam Goldman is based on hundreds of previously unpublished police files and interviews with current and former NYPD, CIA and FBI officials.¶ The disclosures come as the NYPD is fighting off lawsuits accusing it of engaging in racial profiling while combating crime. Earlier this month, a judge ruled that the department's use of the stop-and-frisk tactic was unconstitutional.¶ The American Civil Liberties Union and two other groups have sued, saying the Muslim spying programs are unconstitutional and make Muslims afraid to practice their faith without police scrutiny.¶ Both Mayor Mike Bloomberg and Police Commissioner Raymond Kelly have denied those accusations. Speaking Wednesday on MSNBC's Morning Joe, Kelly reminded people that his intelligence-gathering programs began in the wake of 9/11.¶ "We follow leads wherever they take us," Kelly said. "We're not intimidated as to wherever that lead takes us. And we're doing that to protect the people of New York City."¶ ___¶ The NYPD did not limit its operations to collecting information on those who attended the mosques or led prayers. The department sought also to put people on the boards of New York's Islamic institutions to fill intelligence gaps.¶ One confidential NYPD document shows police wanted to put informants in leadership positions at mosques and other organizations, including the Arab American Association of New York in Brooklyn, a secular social-service organization.¶ Linda Sarsour, the executive director, said her group helps new immigrants adjust to life in the U.S. It was not clear whether the department was successful in its plans.¶ The document, which appears to have been created around 2009, was prepared for Kelly and distributed to the NYPD's debriefing unit, which helped identify possible informants.¶ Around that time, Kelly was handing out medals to the Arab American Association's soccer team, Brooklyn United, smiling and congratulating its players for winning the NYPD's soccer league.¶ Sarsour, a Muslim who has met with Kelly many times, said she felt betrayed.¶ "It creates mistrust in our organizations," said Sarsour, who was born and raised in Brooklyn. "It makes one wonder and question who is sitting on the boards of the institutions where we work and pray."¶ ___¶ Before the NYPD could target mosques as terrorist groups, it had to persuade a federal judge to rewrite rules governing how police can monitor speech protected by the First Amendment.¶ The rules stemmed from a 1971 lawsuit, dubbed the Handschu case after lead

plaintiff Barbara Handschu, over how the NYPD spied on protesters and liberals during the Vietnam War era.¶ David Cohen, a former CIA executive who became NYPD's deputy commissioner for intelligence in 2002, said the old rules didn't apply to fighting against terrorism.¶ Cohen told the judge that mosques could be used "to shield the work of terrorists from law enforcement scrutiny by taking advantage of restrictions on the investigation of First Amendment activity."¶ NYPD lawyers proposed a new tactic, the TEI, that allowed officers to monitor political or religious speech whenever the "facts or circumstances reasonably indicate" that groups of two or more people were involved in plotting terrorism or other violent crime.¶ The judge rewrote the Handschu rules in 2003. In the first eight months under the new rules, the NYPD's Intelligence Division opened at least 15 secret terrorism enterprise investigations, documents show. At least 10 targeted mosques.¶ Doing so allowed police, in effect, to treat anyone who attends prayer services as a potential suspect. Sermons, ordinarily protected by the First Amendment, could be monitored and recorded.¶ Among the mosques targeted as early as 2003 was the Islamic Society of Bay Ridge.¶ "I have never felt free in the United States. The documents tell me I am right," Zein Rimawi, one of the Bay Ridge mosque's leaders, said after reviewing an NYPD document describing his mosque as a terrorist enterprise.¶ Rimawi, 59, came to the U.S. decades ago from the Israeli-occupied West Bank.¶ "Ray Kelly, shame on him," he said. "I am American."¶ It was not immediately clear whether the NYPD targeted mosques outside of New York City specifically using TEIs. The AP had previously reported that Masjid Omar in Paterson, N.J., was identified as a target for surveillance in a 2006 NYPD report.¶ ___¶ The NYPD believed the tactics were necessary to keep the city safe, a view that sometimes put it at odds with the FBI.¶ In August 2003, Cohen asked the FBI to install eavesdropping equipment inside a mosque called Masjid al-Farooq, including its prayer room.¶ Al-Farooq had a long history of radical ties. Omar Abdel Rahman, the blind Egyptian sheik who was convicted of plotting to blow up New York City landmarks, once preached briefly at Al-Farooq. Invited preachers raged against Israel, the United States and the Bush administration's war on terror.¶ One of Cohen's informants said an imam from another mosque had delivered $30,000 to an al-Farooq leader, and the NYPD suspected the money was for terrorism.¶ But Amy Jo Lyons, the FBI assistant special agent in charge for counterterrorism, refused to bug the mosque. She said the federal law wouldn't permit it.¶ The NYPD made other arrangements. Cohen's informants began to carry recording devices into mosques under investigation. They hid microphones in wristwatches and the electronic key fobs used to unlock car doors.¶ Even under a TEI, a prosecutor and a judge would have to approve bugging a mosque. But the informant taping was legal because New York law allows any party to record a conversation, even without consent from the others. Like the Islamic Society of Bay Ridge, the NYPD never demonstrated in court that al-Farooq was a terrorist enterprise but that didn't stop the police from spying on the mosques for years.¶ And under the new Handschu guidelines, no one outside the NYPD could question the secret practice.¶ Martin Stolar, one of the lawyers in the Handschu case, said it's clear the NYPD used enterprise investigations to justify open-ended surveillance. The NYPD should only tape conversations about building bombs or plotting attacks, he said.¶ "Every Muslim is a potential terrorist? It is completely unacceptable," he said. "It really tarnishes all of us and tarnishes our system of values."¶ ___¶ Al-Ansar Center, a windowless Sunni mosque, opened in Brooklyn several years ago, attracting young Arabs and South Asians. NYPD officers feared the mosque was a breeding ground for terrorists, so informants kept tabs on it.¶ One NYPD report noted that members were fixing up the basement, turning it into a gym.¶ "They also want to start Jiujitsu classes," it said.¶ The NYPD was particularly alarmed about Mohammad Elshinawy, 26, an Islamic teacher at several New York mosques, including Al-Ansar. Elshinawy was a Salafist — a follower of a puritanical Islamic movement — whose father was an unindicted co-conspirator in the 1993 World Trade Center attacks, according to NYPD documents.¶ The FBI also investigated whether Elshinawy recruited people to wage violent jihad overseas. But the two agencies investigated him very differently.¶ The FBI closed the case after many months without any charges. Federal investigators never infiltrated Al-Ansar.¶ "Nobody had any information the mosque was engaged in terrorism activities," a former federal law enforcement official recalled, speaking on condition of anonymity because he wasn't authorized to discuss the investigation.¶ The NYPD wasn't convinced. A 2008 surveillance document described Elshinawy as "a young spiritual leader (who) lectures and gives speeches at dozens of venues" and noted, "He has orchestrated camping trips and paintball trips."¶ The NYPD deemed him a threat in part because "he is so highly regarded by so many young and impressionable individuals."¶ No part of Elshinawy's life was out of bounds. His mosque was the target of a TEI. The NYPD conducted surveillance at his wedding. An informant recorded the wedding, and police videotaped everyone who came and went.¶ "We have nothing on the lucky bride at this time but hopefully will learn about her at the service," one lieutenant wrote.¶ Four years later, the NYPD was still watching Elshinawy without charging him. He is now a plaintiff in the ACLU lawsuit, which was also filed by the Creating Law Enforcement Accountability & Responsibility project at CUNY School of Law and the New York Civil Liberties Union.¶ "These new NYPD spying disclosures confirm the experiences and worst fears of New York's Muslims," ACLU lawyer Hina Shamsi said. "From houses of worship to a wedding, there's no area of New York Muslim religious or personal life that the NYPD has not invaded through its bias-based surveillance policy."¶ ___¶ Online: Documents¶ TEI Discontinuance: http://apne.ws/146zqF9¶ Informant Profiles: http://apne.ws/1aNfuyH¶ Elshinawy Surveillance: http://apne.ws/15fau4D¶ Handschu Minutes: http://apne.ws/1cenpD6¶ ___¶ AP's Washington investigative team can be reached at DCinvestigations@ap.org¶ Follow Goldman and Apuzzo at http://twitter.com/adamgoldmanap¶ and http://twitter.com/mattapuzzo¶

Conservatives are hardliners on Muslims- the plan would isolate their base

Dean Obeidallah, reporter for daily beast , "For Republicans, Muslims Will Be the Gays of 2016," Daily Beast, http://www.thedailybeast.com/articles/2015/01/21/for-republicans-muslims-will-be-the-gays-of-2016.html)//GV

Bobby Jindal isn't stupid enough to believe in Muslim no-go zones. He's working the base, which is more than willing to be worked. Now that Republicans realize that the fight over gay marriage is over, they're pivoting back to the old reliable: Muslims. It's true that Muslim-bashing among Republicans is hardly new, but I think that as 2016 approaches we're going to see even more of it as candidates try to outflank one another. The latest example was LouisianaGovernor's Bobby Jindal's speech on Monday in London. Jindal told the audience that there are "no-go zones" in Europe where Muslims have in essence carved out Islamic "autonomous" zones that are ruled by Koranic law and where non-Muslims fear to tread. His point, of course, was to warn Americans that Muslims could try the same thing in the United States. Now if that concept sounds familiar it's because last week Fox News served up this same rancid red meat to its viewers. Some Fox News anchors claimed these so-called "no-go zones" existed in parts of France. And Fox News' terrorism "expert" Steve Emerson even went as far as to say that Birmingham, England, the nation's second biggest city with more than one million people, was a "totally Muslim city where non-Muslims don't go in." The backlash to these comments was swift. Even British Prime Minster David Cameron responded, "When I heard this, frankly, I choked on my porridge and I thought it must be April Fools Day. This guy is clearly a complete idiot." Fox News stirring up fear of Muslims is nothing new. In fact, in my view it's part of Fox's business model since its viewers hold the most negative views of Muslims of any cable news audience. Fox is simply giving their viewers what they want to see. But a few days ago, Fox did something truly shocking. They apologized for making the claims about Muslim-controlled "no-go zones" in Europe. In fact, they apologized not once, but four times, and admitted unequivocally that these "no-go zones" don't even exist. Yet even though the Fox retractions occurred days before Jindal delivered his speech, that didn't stop him from asserting the same baseless claims. After his speech, Jindal was asked by a CNN reporter for specifics on where exactly these "no-go zones "are located. Jindal, in what looked almost like a sketch from Saturday Night Live, hemmed and hawed, finally responding: "I think your viewers know." So what do you do if you are a Republican candidate seeking conservative votes? Simple. Bash Muslims. We are truly an easy target. For those unfamiliar with Jindal, he's no Louie Gohmert. He's an Ivy League graduate and a Rhodes scholar. Jindal's remarks were not a mistake, but rather part **of a calculated strategy to garner support from more conservative Republicans** for an expected2016 presidential run. Now, in the past, candidates trying to garner support from these right wing voters could use opposition to gay marriage to curry favor. As conservative James Kirchick noted in an article he penned for The Wall Street Journal in 2008, the Republican Party has a long history of its candidates using not just opposition to gay marriage, but also anti-gay rhetoric to attract support from the GOP Base. Kirchick went on to urge Republicans to "kiss gay-bashing goodbye." But we still saw this bigotry in the 2012 race. For example, Rick Perry ran a campaign commercial that said you know "there's something wrong with this country when gays can openly serve in the military." Polls, however, now show a majority of Americans support gay marriage. And even the Mike Huckabees of the GOP would have to admit that after the Supreme Court announced Friday that it is considering the constitutionality of same-sex marriage this term, gay marriage will likely soon be the law of the land. Bottom line: **gay marriage will probably be dead as an issue capable of rallying conservative voters.** So what do you do if you are a Republican candidate seeking conservative votes? Simple. Bash Muslims. We are truly an easy target. First, Muslims are a small percentage of our nation's population at approximately 1 to 2 percent. Second, there are horrible Muslims who do commit terror in the name of our faith, which does offer cover for anti-Muslim bigotry. Third, we still don't have many allies outside of our community that stand with us. Sure, we have some interfaith supporters. But when ant-gay comments are made, like in the case of "Duck Dynasty's" Phil Roberson in 2013, the response by the left was swift and united. But with anti-Muslim bigotry, we don't see that. We see silence from many on the left, including from most Democratic elected officials. And worse, we see some outright anti-Muslim fear mongering by so-called liberals like Bill Maher. If I'm right, what can we expect to see as the 2016 presidential race heats up? More speeches like Jindal's designed to stir up fear with no factual support. His remarks were applauded by conservative ++Larry Kudlow in The National Review. Even more comments like the ones recently made by Oklahoma State Representative John Bennett that Muslims are a "cancer" that must be cut of our country and that Muslim-Americans are not loyal to the United States but to the "constitution of Islam." Bennett received a standing ovation from the conservative audience that heard these remarks, and the Oklahoma GOP Chair even backed him up. And possibly even more comments like the one made by newly sworn in member of Congress Jody Hice who stated that Islam is not a religion and doesn't deserve First Amendment protection. Was there any backlash from GOP leaders to this remarks? Nope, in fact people Red States' Erick Erickson even spoke at one of his fundraisers and wrote he was "proud to support" Hice. This is a far cry from the 2008 presidentialrace when John McCain countered anti-Muslim remarks made by a supporter at one of his campaign rallies. My hope is that I'm wrong. But after seeing close to a thousand people over the weekend protesting a Muslim-American event in Texas that was ironically organized to counter extremism, I'm not so optimistic. The more

conservative parts of the GOP base tend to vote in higher numbers in the primaries. So don't' be surprised when you see Republican candidates trying to get their attention with this cut of red meat.

A Republican election will cause there to be an increase in Islamophobia

Thomas, 14

(Bradford is a news analyst. "DailyBeast: Republicans A Major Reason Americans Hate Muslims

Republicans, media major reasons for plummeting opinion of Islam." http://www.truthrevolt.org/news/dailybeast-republicans-major-reason-americans-hate-muslims. Date accessed- 7/20/15.// Anshul)

In a 9/11 anniversary opinion piece Thursday, the Daily Beast's Dean Obeidallah argued that one of the major reasons Americans dislike Muslims more now than in 2001 is Republican politicians.¶ In the piece, Obeidallah, a Muslim, said that he has been pondering for some time why public opinion of Muslims has plummeted over the last decade. In Oct 2001, 47 percent of Americans held a favorable view of Islam, but today that number has shrunk to just 27 percent.¶ One of the key reasons, he admits, is the "the horrible acts committed by radical Muslims." Another is Americans not seeing moderate Muslims condemning the acts—which Obeidallah blames on the media. ¶ ¶ But, he says, there's another factor, something "truly despicable" going on in America: those who "intentionally stoke the flames of hate against our community." Most high-profile of those "despicable" Americans are, of course, Republican politicians:¶ Some do it because they simply detest/fear anyone who doesn't pray or look like them. For some, Muslim bashing is their career. They make a living writing books and giving lectures about how Muslims want to destroy America.¶ And then there are the politicians, almost exclusively Republicans, who gin up hate of the "other" for political gain. The anti-sharia law measures passed in states like Florida and North Carolina are a prime example.¶ The proponents of these laws will demonize Muslims while making the case for these measures. Yet they publicly admit there are zero instances of Muslims trying to impose Islamic law in their respective states. For example, Florida State Senator Alan Hays conceded as much but argued the anti-Shaira law legislation was needed as a "preemptive measure," similar to when your parents would "have you vaccinated against different diseases."¶ Image source: a Salon article mocking Republicans for fearing the "imagined threat of Islamic law.

Obeidallah, 12

(Dean Obeidallah is an analyst for and a special for a CNN. Published on August 29, 2012" The GOP has a Muslim problem." http://www.cnn.com/2012/08/29/opinion/obeidallah-gop-muslim-problem/. Date Accessed- 07/20/15. //Anshul)

Catholic priest, a rabbi, an evangelical minister, a Sikh, a Greek Orthodox archbishop and two Mormon leaders walk into the Republican National Convention.¶ It sounds like the beginning of a joke. But the Republican Party's decision to invite representatives from all of these faiths to speak at this week's convention, but to exclude a Muslim-American imam, is anything but funny.¶ The Republican Party has a problem with Muslims. Of course, American Muslims can take some solace in the fact that we are not the only minority group that the Republican Party hardly welcomes.¶ Let's be honest, if you don't like Muslims, blacks, gays, immigrants or other minorities, which political party would make you feel most comfortable? Sure, some Republican officials are minorities, but a recent Galllup survey found that 89% of the Republican Party is white.¶ To be clear, I don't believe that most rank-and-file members of the Republican Party hate Muslims. The problem is that certain Republican leaders have stoked the flames of hate toward American Muslims, and other minorities, as a political tool to motivate people to support their cause.¶ Dean Obeidallah¶ Dean Obeidallah¶ For example, recently Rep. Michele Bachmann -- along with four other Republican House members -- asserted that the Muslim Brotherhood had infiltrated the U.S. government. Bachmann, who is in a tough re-election battle in her redrawn congressional district, even "named names" by claiming that Secretary Hillary Clinton's top aide, Huma Abedin, and Rep. Keith Ellison were

connected to the Muslim Brotherhood.¶ Although Republican Sen. John McCain publicly denounced Bachmann's baseless allegations, just a few weeks later, Republican Rep. Joe Walsh escalated the fear-mongering. Walsh, who is in a tight race with Democratic opponent Tammy Duckworth, told constituents at a town hall meeting in the Chicago suburbs that there are radical Muslims living among them who are plotting to kill them: "One thing I'm sure of is that there are people in this country -- there is a radical strain of Islam in this country -- it's not just over there -- trying to kill Americans every week." Walsh even claimed that this Muslim radical was in his district: "It's in Elk Grove. It's in Addison. It's in Elgin. It's here."¶ And let's not forget that during this year's Republican presidential primaries, Newt Gingrich and Herman Cain told voters that American Muslims want to impose Islamic law in America. It's a truly astounding task when you consider that this would require the 2.6 million Muslims in the U.S. to overpower the other 300 million Americans and implement an Islamic legal system. Obviously, this assertion is not based on facts, but to politicians desperate for votes, facts don't matter.¶ This type of rhetoric has yielded two distinct consequences. First, it can be seen in the attitudes of Republicans who have been poisoned by the anti-Muslim voices in their party. A recent poll found that 62% of Obama voters view American Muslims favorably, but only 34% of Romney voters shared that positive outlook.¶ Even more alarming is that fear-mongering by politicians can create an environment that inspires violence against the people being demonized. It sends a message that these people are "others" and not truly Americans like the rest of us.¶ For example, within a few weeks of Bachmann's comments, a suspicious fire destroyed a mosque in Missouri. And days after Walsh's warnings that Muslim terrorists were living in the Chicago suburbs, a homemade acid bomb was thrown at an Islamic school, pellet gunshots were fired at a mosque, and Muslim headstones at a cemetery were defaced with anti-Muslim graffiti, all in the Chicago area. It's impossible to know whether these hateful acts were related to the remarks, but the climate created by fear-mongering does not encourage tolerance.¶ Getting back to this week's Republican Convention: The Republican Party should be applauded for including so many faiths, especially the Sikhs, who number about 200,000 Americans and whose community was targeted by a hate-filled gunman who killed six people in a place of worship. But excluding Muslims sends a message that American Muslims are not part of the fabric of this country. That is wrong.¶ Republican National Committee Chairman Reince Priebus still has time to correct this mistake. He could invite a Muslim-American imam to be a part of this week's convention. That would send a clear message that the Republican Party is truly welcoming of all major religions practiced in the U.S.¶ It also would send a message that there is no place for hate in the GOP against any American minority group. It's now up to Preibus to show whether the Republican Party stands for inclusiveness or division.

Notes

Their solvency evidence has some things that you may be able to make an argument on –

The FBI goes to extremes to spy on the private lives of innocent Muslims – former informant Craig Monteilh's story proves

Rahel **Gebreye**, **3-4-**2015, "Former Informant: FBI Encouraged Me To Sleep With Muslim Women For Intel," Huffington Post, http://www.huffingtonpost.com/2015/03/04/fbi-informant-craig-monteilh_n_6800126.html

To Muslim mosque members in the Los Angeles area, Craig Monteilh was known as Farouk al-Aziz, a French Syrian looking to reconnect to his Islamic roots. But behind the devout facade and convincing knowledge of Islam, Monteilh was spying for the FBI, which instructed him to go as far as sleeping with Muslim women to gain information. Monteilh joined HuffPost Live to share his story and discuss how he went from a criminal to an FBI informant to a witness in a case against the Feds. Monteilh had his own brush with the law, having served time for using fraudulent checks**. His familiarity with criminals in Chino prison enticed the FBI to recruit him to root out organized crime and later seek out terrorists as part of Operation Flex**. "The FBI paid me to infiltrate mosques in Los Angeles and Orange County in Southern California, as a very broad surveillance operation to give them the personal information of Muslims," he told host Josh Zepps on Monday. That **"personal information" comprised of emails, cell phone numbers, names of known associates and where they attended mosque.** Monteilh said he even placed recording devices in the offices of imams and a local Muslim Student Union. The FBI would then gather the data and share the intel with the Office of Foreign Assets Control for the purpose of thwarting potential terror attacks. Monteilh's informant role had an intense training process, during which he learned to "pretend to be Muslim." "The FBI trained me in the tenets of Islam, in the elementary principles of Arabic, and just to blend into the community and to slowly integrate myself as a Muslim male," he said. The operation included even more extreme breaches of privacy, with Monteilh going as far as dating and having sex with Muslim women to extract intelligence. "I portrayed myself as a unmarried male, although I was married," he said. "Within the Muslim community, they would help me to get a bride, so they would introduce me to single Muslim women. I would go out on dates and things like that. … [My FBI handlers] instructed me, if I was getting good intel, to allow it to go into sexual relations." The undercover plot eventually took an ironic turn when his extreme jihadist rhetoric alienated his targets, who reported him to the FBI. In 2007, the Islamic Center of Irvine filed a restraining order against him, effectively blowing his cover. As Monteilh remembers, very few of his targets actually used similar jihadist rhetoric. The only time he heard extremist language was after some prodding and "inciting" on his part. "They'd follow my lead," he said. Looking back on his undercover operation now, Monteilh said the monthly $11,200 compensation he received "clouded his judgement," making it tough for him to question the practice. Although **he originally felt it was his "patriotic duty" to help the FBI operation**, he had a change of heart. "I began to be conflicted because I was spying on innocent people. They were not involved in criminal activity," he said. "They were not espousing terrorist rhetoric, but I was still spying on them and giving the FBI the information they wanted." Monteilh has since spoken out against the FBI's controversial informant program and even planned to testify in a class action suit against the FBI. The case was dismissed because it would risk exposing "state secrets."

Muslims, not criminals."¶

"His familiarity with criminals in Chino prison enticed the FBI to recruit him to root out organized crime and later seek out terrorists as part of Operation Flex", this can be used to argue that Monteilh was not racist, rather that Operation Flex just had a known suspect base and was targeting those who were criminals, not those who were muslim specifically.

The ""personal information" comprised of emails, cell phone numbers, names of known associates and where they attended mosque" can be used to argue that Monteilh was not just given the personal information of muslims in general, but those who were known associates of terrorists and criminals, and that's nothing to do with religion, just the person itself.

The "he originally felt it was his "patriotic duty" to help the FBI operation" can be used to argue that there was a personal incentive, not just the money or even possibly sex that motivated Craig Monteilh, but that he felt the obligation to do so for the sake of American freedom. There's no way to completely solve for informants and others who feel a certain way about something.

If the plan does not use the courts (make sure of this in cross x!!), you can run a courts cp and use this line from their own Democracy advantage card and prove that this flows neg –

First, the FBI surveillance of Muslims is destroying religious freedom

Madiha **Shahabuddin**, Chapman University Dale E. Fowler School of Law, May 20**15**, "'The More Muslim You Are, the More Trouble You Can Be': 1 How Government Surveillance of Muslim Americans Violates First Amendment Rights," Chapman Law Review, http://www.chapmanlawreview.com/wp-content/uploads/2014/09/Shahabuddin.pdf. Amanda Li.

Although the government has proffered the compelling interest of national security as a justification for its widespread network of surveillance and informants for the purpose of essentially monitoring Muslim American daily life, the means it has employed are not sufficiently narrowly tailored to survive strict scrutiny in the face of constitutional First Amendment protections of free association and speech. This has led to a significant "chilling" of religious and political expression, as well as the curtailment of actual religious activities such as mosque attendance, donations for charity, or participation in a Muslim Student Association on college campuses. Through the refining of the government's scope of surveillance, and the creation of objective, transparent criteria for individuals who do warrant such government scrutiny, Muslim Americans can be secured their fundamental rights, while still allowing law enforcement to accomplish its goal of fighting actual terrorism. Additionally, the government should not prosecute those vulnerable, and easily susceptible individuals who were unsuspectingly caught in the government "dragnet" of informant sting operations. Instead, law enforcement should allow the Muslim American community its own space to address the issue on its own terms, by offering such individuals social programs and mental health services as needed, without fear of government scrutiny or prosecution. This will not only empower Muslim Americans, a community largely marginalized post 9/11, but also allow them to mold their own destinies in this nation. It is not the place of a government based on fundamental constitutional principles of freedom to punish individuals for

mere adherence to their faith, no matter how stigmatized they are. Courts must now step in to uphold those fundamental rights that have been pushed aside out of misunderstanding and fear.

ALSO you may want to ask in cross x how there can be any global spillover in solvency with religious freedom in oppressive regimes such as Pakistan where the Taliban is not a fan of all religions or in China where communists aren't fans of any religions (given that the CCP requires that members renounce their faith), and how the plan can solve for entire mindset changes in foreign governments and just the general public. That's this card - "Fourth, International Religious Freedom and International democracy are crucial to resolve conflicts in the Middle East, China, and all other nations with religious minorities"

Farr 9" – that's in their Democracy Advantage

You can ask, in cross x, what they define Islamophobia as, and if it is something weird, nonsensical, or have no answer, the Islamophobia term bad cards may be good to read.

MOSQUES NEG – On Case

INHERENCY TAKE OUT

No Mosque Surveillance - General

MOSQUES EXCLUDED FROM SURVEILLANCE

John **Careccia 13**, Islamic Mosques: Excluded From Surveillance By Feds, 6-17-**2013,** Western Journalism, http://www.westernjournalism.com/islamic-mosques-excluded-from-surveillance-by-feds/

Since October 2011, mosques have been off-limits to FBI agents. Surveillance or undercover sting operations are not allowed without high-level approval from a special oversight body at the Justice Department dubbed the Sensitive Operations Review Committee (SORC). Who makes up this body, and under what methodology do they review requests – nobody knows. The names of the chairman, members and staff are kept secret. Why is it necessary to keep the names and titles of the people who decide whether or not to protect the rest of the country from radical Muslims, secret?

We do know the panel was set up under pressure from Islamist groups who complained about FBI stings at mosques. Just months before the panel's formation, the Council on American-Islamic Relations (CAIR) teamed up with the ACLU to sue the FBI for allegedly violating the civil rights of Muslims in Los Angeles by hiring an undercover agent to infiltrate and monitor mosques in America's second largest city. Another defeat for the politically correct imbeciles in our government. Before mosques were excluded from the otherwise wide domestic spy net the administration has cast, the FBI launched dozens of successful sting operations against homegrown radicals inside mosques, and disrupted dozens of plots against innocent American citizens across the United States.

No NYPD Muslim surveillance

No NYPD muslim surveillance

CBS 14 (CBS New York, "End of NYPD Muslim Surveillance Program Applauded", CBS New York, April 16, 2014, http://newyork.cbslocal.com/2014/04/16/end-of-nypd-muslim-surveillance-program-applauded/, 7/30/15 AV)

NEW YORK (CBSNewYork/AP) — Muslim groups and civil liberties advocates applauded the decision by NYPD officials to disband a controversial unit that tracked the daily lives of Muslims as part of efforts to detect terrorism threats, but they said there were concerns about whether other problematic practices remained in place. The NYPD said Tuesday it had disbanded the surveillance program and that detectives assigned to the unit had been transferred to other duties within the division. An ongoing review of the Demographics Unit by Police Commissioner Bill Bratton found that the same information collected by the unit could be better collected through direct contact with community groups, officials said. "This reform is a critical step forward in easing tensions between the police and the communities they serve, so that our cops and our citizens can help one another go after the real bad guys," Mayor Bill de Blasio said in a statement. The Demographics Unit was created 18 months after the 9/11 terror attacks. The program, conceived with the help of a CIA agent working with the NYPD, assembled databases on where Muslims lived, shopped, worked and prayed. Plainclothes officers infiltrated Muslim student groups, put informants in mosques, monitored sermons and cataloged Muslims in New York who adopted new, Americanized surnames. Linda Sarsour, the executive director of the Arab American Association of New York, applauded the decision but said there's still concern about the police use of informants to infiltrate mosques without specific evidence of crime. "This was definitely a part of the big puzzle that we're trying to get dismantled," Sarsour said. But, she added, "This doesn't necessarily prove to us yet that these very problematic practices are going to end." Others also voiced concerns and

said they want more assurances that the NYPD is ending the practice. “It’s a good step, but I think what we need to do now is build bridges between the NYPD and law enforcement authorities in general,” Ibrahim Hooper, spokesman for the Council on American-Islamic Relations. “We’re, of course, concerned that some of the functions might just be carried out by different parts of the NYPD,” said Glenn Katon, legal director for Muslim Advocates. New York Civil Liberties Union Executive Director Donna Lieberman said police-community relations took a blow from the NYPD unit’s broad surveillance of all Muslims, not just people suspected of wrongdoing. “The NYPD’s disbanding of a unit that targeted New York Muslims and mapped their everyday institutions and activities is a welcome first step for which we commend Commissioner Bratton,” said Lieberman. “We hope that the Demographics Unit’s discriminatory activities will not be carried out by other parts of the NYPD.” Former Police Commissioner Ray Kelly defended the surveillance tactics, saying officers observed legal guidelines while attempting to create an early warning system for terrorism. But in a deposition made public in 2012, an NYPD chief testified that the unit’s work had never generated a lead or triggered a terrorism investigation in the previous six years. In Washington, 34 members of Congress had demanded a federal investigation into the NYPD’s actions. Attorney General Eric Holder said he was disturbed by reports about the operations and the Department of Justice said it was reviewing complaints received from Muslims and their supporters. While campaigning for office last fall, de Blasio said he would end broad spying on Muslims. He said on his watch, NYPD surveillance tactics would only be authorized to follow up on specific leads and that the police force would be under the supervision of a new inspector general. Former federal prosecutor Philip Eure was named to the inspector general position last month. Bratton also met last week with Muslim community leaders to work on improved relations.

No FBI Mosque Surveillance

No FBI Mosque surveillance

Chasmar 13 (Jessica Chasmar, “Mosques off-limits by government snooping since 2011, IBD editorial claims”, the Washington Times, 6/13/13, Jessica Chasmar is a continuous news writer for The Washington Times, covering topics on culture and politics. Originally from Palm Beach Gardens, Fla., Jessica graduated from the University of Florida where she received a bachelor's degree in journalism and a master's degree in mass communication, http://www.washingtontimes.com/news/2013/jun/13/mosques-limits-government-snooping-2011-ibd-editor/, 7/30/15 AV)

An editorial posted in the Investor’s Business Daily on Wednesday had some scathing remarks for the Obama administration, after claiming that despite the NSA’s sweeping PRISM program, mosques have been off-limits by FBI surveillance since October 2011. “That’s right, the government’s sweeping surveillance of our most private communications excludes the jihad factories where homegrown terrorists are radicalized,” the editorial reads.

No Public Islamophobia View

Islamophobia isn’t inherent in America

Spencer 11 (Robert Spencer, “FIVE EASY STEPS TO END ‘ISLAMAPHOBIA’”, Frontpage Mag, 12/29/11, Robert Spencer is the director of Jihad Watch and author of the New York Times bestsellers The Politically Incorrect Guide to Islam (and the Crusades) and The Truth About Muhammad, http://www.frontpagemag.com/fpm/117562/five-easy-steps-end-islamophobia-robert-spencer, 7/31/15 AV)

Negin Farsad, an Iranian American stand-up comic from California, wears eye-catching mini dresses, curses liberally and has awkward sex talks with her mother (though hers sound more like alien encounters. Actual quote: “You had intergender flesh relations without the security of external safety product?”). Then she has more to worry about from observant Muslims than she does from "Islamophobes." Such conversations, painfully private in traditional Muslim societies, are public fodder for Farsad and three other Gen X and Gen Y Muslim comics with whom she traveled to the deep South this past summer. The tour, which later extended to Western states and included other Muslim comics, will form the backbone of “The Muslims Are Coming!,” a documentary film about Islamophobia in America that Farsad is working on with Palestinian Italian American comedian Dean Obeidallah. This is going to be the usual victimhood-mongering and deflecting of attention from the real causes of suspicion of Muslims in the U.S. Obeidallah contacted me and asked me to be interviewed for the piece, and assured me he would give me a fair hearing. But then he went on Twitter and called Pamela Geller a "Muslim-hater" -- echoing the deceptive Islamic supremacist claim that fighting for free speech and equality of rights for all people is "hate." His true agenda thus revealed, I bowed out of the interview. The documentary, which includes interviews with comics such as Jon Stewart and Louis Black and commentators including CNN’s Soledad O’Brien, explores freedom of religion and what it means to be a minority in America. Note the implication: that minorities have it so tough in America. No mention will be made, no doubt, of the far more precarious position of non-Muslim minorities in Muslim societies. Muslim American stand-up comedy is a relatively new phenomenon, the domain of second-generation immigrants who are American enough to satirize the Muslim American experience, said Obeidallah, who lives in New York City.“We’re confident enough to do this,” he said. “An immigrant would be less confident to use comedy to try to challenge perceptions of who we are. We’re confident enough in being Americans and knowing what that means, that we can push against those who are exhibiting behavior which is less than consistent with the values of this nation.” Note that in Obeidallah's world, the people who are "exhibiting behavior which is less than consistent with the values of this nation" are those fighting for freedom and Constitutional rights, not Brotherhood-related groups dedicated to bringing to the U.S. elements of a legal system that denies freedom of speech, freedom of conscience, and equality of rights for women and non-Muslims. A major factor driving Muslim Americans toward comedy was the Sept. 11, 2001, terrorist attacks. “There were no Middle Eastern comics before 9/11 that anyone knew about,” Obeidallah said. “The phenomenon really grew in the last 10 years, because of the [anti-Muslim] backlash. There was no backlash, of course. Innocent Muslims are not being victimized in the U.S. Muslims live better here than in many Muslim countries. Obeidallah -- clueless or complicit? You be the judge. I think a lot of people in our community started doing it as a form of political activism.” As they started appearing on national television, he said, “it spurred other Middle Eastern comedians to get involved.” Now, he said, there are about 10 full-time professinals and a growing number of aspiring professionals.Going to the South, where anti-mosque demonstrations and anti-immigrant sentiment has made some Muslims feel unwelcome, the comedians hoped to break through some of the cultural walls that have arisen since Sept. 11. The point was to see “how would people in the heartland take to us?” Obeidallah said. “Would we encounter angry people going, ‘Get out of here, you Muslims,’ or would they understand?” Traveling through Florida, Georgia, Alabama, Mississippi and Tennessee, they gave free performances in cafes, community centers and theaters. They set up tables in public places, with scripture-related guessing games and the opportunity for people to “Ask a Muslim” anything they wanted. “I could kind of like Muslims, but why do you guys like terrorism so much?” some asked. “What do you think of 9/11?” was another common question. How horrible! They got asked uncomfortable questions! Oh, the "Islamophobia"! On the whole, the public response was encouraging. While a few people drove by and yelled, “Go back to your country!” the one-on-one encounters tended to be positive. Oh, the horror! They encountered some rude jerks! Almost as bad as being Christians in Nigeria, eh? “Most people are more open-minded and not that concerned about Muslims,” Obeidallah said. “It’s really the fringe that’s driving that narrative.”Maysoon Zayid, one of the comics on the tour, said people were surprised to see that “I’m such a Jersey girl, I’m so accessible. . . . I think they are really surprised that I wasn’t this oppressed woman trying to convert people.” The comedians acknowledged that they were unlikely to win the hearts of the most fervent anti-Muslim types. “A show called ‘The Muslims Are Coming’ — people self-select to come see it,” Farsad said. “We’re never going to be able to touch the extreme haters. . . . We’re trying to affect the people in the middle, people with questions, the ‘persuadables.’ ” Do Negin Farsad and Dean Obeidallah really want to eradicate "Islamophobia"? As long as Islamic jihad and supremacism continue, a comedy tour will never do the trick. But here is an easy way. They can call on Muslims in the U.S. to do these things: 1. Focus their indignation on Muslims committing violent acts in the name of Islam, not on non-Muslims reporting on those acts. 2. Renounce definitively, sincerely, honestly, and in deeds, not just in comforting words, not just "terrorism," but any intention to replace the U.S. Constitution (or the constitutions of any non-Muslim state) with Sharia even by peaceful means. In line with this, clarify what is meant by their condemnations of the killing of innocent people by stating unequivocally that American and Israeli civilians are innocent people, teaching accordingly in mosques and Islamic schools, and behaving in accord with these new teachings. 3. Teach, again sincerely and honestly, in transparent and verifiable ways in mosques and Islamic schools, the imperative of Muslims coexisting peacefully as equals with non-Muslims on an indefinite basis, and act accordingly. 4. Begin comprehensive international programs in mosques all over the world to teach sincerely against the ideas of violent jihad and Islamic supremacism. 5. Actively and honestly work with Western law enforcement officials to identify and apprehend jihadists within Western Muslim communities. If Muslims do those five things, voila! "Islamophobia" will evanesce!

No Solvency

No Online Islamophobia Solvency

No online islamophobia solvency

Spence 14 (Duncan Spence, "Why online Islamophobia is difficult to stop", CBC News, 11/1/14, Duncan Spence is an author for CBC News, http://www.cbc.ca/news/why-online-islamophobia-is-difficult-to-stop-1.2810242, 7/31/15 AV)

Islamophobia has been an ongoing concern in the west since 9/11, but a number of recent incidents in Britain have given rise to a new wave of hatred that experts say is finding a breeding ground online. Part of the problem, researchers say, is that right-wing groups can post anti-Islamic comments online without fear of legal prosecution. "If they were to say, 'Black people are evil, Jamaicans are evil,' they could be prosecuted," says Fiyaz Mughal, founder of Islamophobia reporting web site TellMamaUK.org. But because religious hatred isn't covered legally in the same way that racism is, Mughal says "the extreme right are frankly getting away with really toxic stuff." Researchers believe the rise of the Islamic State in Iraq and Syria (ISIS) and incidents such as the murder of British soldier Lee Rigby and the recent sexual exploitation scandal in the town of Rotherham have contributed to a spike in online anti-Muslim sentiment in the UK. Imran Awan, deputy director of the Centre for Applied Criminology at Birmingham City University, noticed the trend when he was working on a paper regarding Islamophobia and Twitter following Rigby's death. Rigby was killed in the street in southeast London in 2013 by two Islamic extremists who have since been convicted. Awan says the anonymity of social media platforms makes them a popular venue for hate speech, and that the results of his report were "shocking, to say the least." Of the 500 tweets from 100 Twitter users Awan examined, 75 per cent were Islamophobic in nature. He cites posts such as "'Let's go out and blow up a mosque' and 'Let's get together and kill the Muslims," and says most of these were linked to far-right groups. Awan's findings echo those of Tell MAMA UK, which has compiled data on anti-Muslim attacks for three years. (MAMA stands for "Measuring Anti-Muslim Attacks.") Tell MAMA's Mughal says anti-Muslim bigotry is "felt significantly," and adds that "in our figures, we have seen a year-by-year increase." Researchers believe far-right advocates are partly responsible for a spike in online hate speech. "There's been a real increase in the far right, and in some of the material I looked at online, there were quite a lot of people with links to the English Defence League and another group called Britain First," says Awan. Both Mughal and Awan believe that right-wing groups such as Britain First and the EDL become mobilized each time there is an incident in the Muslim community. The Twitter profile of the EDL reads: "#WorkingClass movement who take to the streets against the spread of #islamism & #sharia #Nosurrender #GSTQ." Below it is a link to their Facebook page, which has over 170, 000 likes. Below that page, a caption reads, "Leading the Counter-Jihad fight. Peacefully protesting against militant Islam." EDL spokesperson Simon North dismisses accusations that his group is spreading hate, emphasizing that Muslims are often the first victims of attacks carried out by Islamic extremists. "We address things that are in the news the same way newspapers do," says North. Experts in far-right groups, however, say their tendency to spread hateful messages around high-profile cases is well established. North allows that some Islamophobic messages might emanate from the group's regional divisions. But they do not reflect the group's overall thinking, he says. "There are various nuances that get expressed by these organizations," North says. "Our driving line is set out very clearly in our mission statement." According to EDL's web site, their mission statement is to promote human rights while giving a balanced picture of Islam. Awan argues online Islamophobia should be taken seriously and says police and legislators need to make more successful prosecutions of this kind of hate speech and be more "techno-savvy when it comes to online abuse." Prosecuting online Islamophobia, however, is rare in the UK, says Vidhya Ramalingam of the European Free Initiative, which researches far-right groups. That's because groups like Britain First, which have over 400,000 Facebook likes, have a fragmented membership and do not have the traditional top-down leadership that groups

have had in the past. Online Islamophobia is also flourishing in Canada. The National Council of Canadian Muslims (NCCM) is receiving a growing number of reports. But there are now fewer means for prosecuting online hate speech in Canada. Section 13 of the Canadian Human Rights Act protected against the wilful promotion of hate online, but it was repealed by Bill C-304 in 2012. “It’s kind of hard to say what the impact is, because even when it existed, there weren’t a lot of complaints brought under it,” says Cara Zwibel of the Canadian Civil Liberties Association. Though there is a criminal code provision that protects against online hate speech, it requires the attorney general’s approval in order to lay charges — and that rarely occurs, says Zwibel. Section 319 of the Criminal Code of Canada forbids the incitement of hatred against “any section of the public distinguished by colour, race, religion, ethnic origin or sexual orientation." A judge can order online material removed from a public forum such as social media if it is severe enough, but if it is housed on a server outside of the country, this can be difficult. Ihsaan Gardee, executive director of NCCM, says without changes, anti-Muslim hate speech will continue to go unpunished online, which he says especially concerns moderate Muslims. “They worry about people perceiving them as sharing the same values these militants and these Islamic extremists are espousing.”

No Education Solvency (No mindset change)

Islamophobes don’t fuel American islamophobia

Spencer 11 (Robert Spencer, “FIVE EASY STEPS TO END ‘ISLAMAPHOBIA’”, Frontpage Mag, 12/29/11, Robert Spencer is the director of Jihad Watch and author of the New York Times bestsellers The Politically Incorrect Guide to Islam (and the Crusades) and The Truth About Muhammad, http://www.frontpagemag.com/fpm/117562/five-easy-steps-end-islamophobia-robert-spencer, 7/31/15 AV)

No comedy show, no matter how clever or winning, is going to eradicate the suspicion that many Americans have of Muslims. This is because Americans are concerned about Islam not because of the work of greasy Islamophobes, but because of Naser Abdo, the would-be second Fort Hood jihad mass murderer; and Khalid Aldawsari, the would-be jihad mass murderer in Lubbock, Texas; and Muhammad Hussain, the would-be jihad bomber in Baltimore; and Mohamed Mohamud, the would-be jihad bomber in Portland; and Faisal Shahzad, the would-be Times Square jihad mass-murderer; and Abdulhakim Mujahid Muhammad, the Arkansas military recruiting station jihad murderer; and Naveed Haq, the jihad mass murderer at the Jewish Community Center in Seattle; and Mohammed Reza Taheri-Azar, the would-be jihad mass murderer in Chapel Hill, North Carolina; Ahmed Ferhani and Mohamed Mamdouh, who hatched a jihad plot to blow up a Manhattan synagogue; and Umar Farouk Abdulmutallab, the would-be Christmas airplane jihad bomber; and many others like them who have plotted and/or committed mass murder in the name of Islam and motivated by its texts and teachings -- all in the U.S. in the last couple of years. The fact that there are other Muslims not fighting jihad is just great, but it doesn't mean that the jihad isn't happening.

No French Spillover Solvency

French leaders want mosque surveillance

Associated Press 1-16 (Associated Press, “French far right leader wants mosque surveillance”, San Diego Union Tribune, 1/16/15, http://www.sandiegouniontribune.com/news/2015/jan/16/french-far-right-leader-wants-mosque-surveillance/, 7/30/15 AV)

NANTERRE, France (AP) — French far right leader Marine Le Pen wants a tough response to last week's terrorist attacks, including surveillance of mosques and military service for children to stop youth radicalization. Le Pen's National Front party, which has long denounced what it calls the "Islamization" of France, has seen its support rise steadily in recent years. After attacks by radical French gunmen last week, she told journalists Friday that France is facing an enemy from within. She urged a global response, including "immediate" suspension of Europe's border-free travel accords, monitoring of mosques and sermons, as well as school uniforms and military service for boys and girls. Many in France's 5-million-strong Muslim community fear a backlash after the attacks by the gunmen, who claimed allegiance to al-Qaida and the Islamic State group.

No Saudi Spillover Solvency

Saudi Arabia surveilling mosques now

Toumi 6-29 (Habib Toumi, "Saudi Arabia to install surveillance cameras in major mosques", Gulf News, 6/29/15, Habib Toumi is the bureau chief of Gulf News, http://gulfnews.com/news/gulf/saudi-arabia/saudi-arabia-to-install-surveillance-cameras-in-major-mosques-1.1542550, 7/30/15 AV)

Manama: Saudi Arabia is drawing up plans to install surveillance cameras in major mosques throughout the kingdom. Cameras will be fixed within the mosques as well as outside to ensure that all angles are covered in a bid to boost security and ensure the safety of worshippers, particularly on Fridays, Saudi daily *Okaz* reported on Monday. The Ministry of Islamic Affairs is now working on identifying the mosques where the surveillance cameras will be installed in the first phase of the massive project. The major mosques in all provinces will be first on the list to be drawn up by the ministry. The decision follows two deadly attacks on two consecutive Fridays in two mosques in the Eastern Province and an attack in a mosque in Kuwait on Friday. The three attacks were carried out by suicide bombers who blew themselves up in their attempt to kill the highest number of worshippers. Two of the bombs were triggered inside mosques, while the third attack happened just outside a mosque after the bomber's attempt to enter the prayer hall was foiled.

Islamophobia term bad(?)

"Islamophobia" is a term used to incriminate outsiders

Spencer 11 (Robert Spencer, "FIVE EASY STEPS TO END 'ISLAMAPHOBIA'", Frontpage Mag, 12/29/11, Robert Spencer is the director of Jihad Watch and author of the New York Times bestsellers The Politically Incorrect Guide to Islam (and the Crusades) and The Truth About Muhammad, http://www.frontpagemag.com/fpm/117562/five-easy-steps-end-islamophobia-robert-spencer, 7/31/15 AV)

This comedy show simply doesn't address the problem of jihad terrorism and Islamic supremacism. As David Horowitz and I show in our pamphlet *Islamophobia: Thoughtcrime of the Totalitarian Future*, the term "Islamophobia" is a politically manipulative coinage designed to intimidate critics of Islamic supremacism and jihad into silence. Claire Berlinski explains how Islamic supremacists from the Muslim Brotherhood devised it for precisely that purpose: Now here's a point you might deeply consider: The neologism "Islamophobia" did not simply emerge *ex nihilo*. It was invented, deliberately, by a Muslim Brotherhood front organization, the International Institute for Islamic Thought, which is based in Northern Virginia. If that

name dimly rings a bell, it should: I've mentioned it before, and it's particularly important because it was co-founded by Anwar Ibrahim--the hero of Moderate Islam who is now trotting around the globecomparing his plight to that of Aung San Suu Kyi.Abdur-Rahman Muhammad, a former member of the IIIT who has renounced the group in disgust, was an eyewitness to the creation of the word. "This loathsome term," he writes, is nothing more than a thought-terminating cliche conceived in the bowels of Muslim think tanks for the purpose of beating down critics. And in fact, FBI statistics show that there is no "Islamophobia." In fact, many "anti-Muslim hate crimes" have been faked by Muslims, and Jews are eight times more likely than Muslims to be the victims of hate attacks. The Muslim Brotherhood is dedicated in its own words to "eliminating and destroying Western civilization from within." One easy way to do that would be to guilt-trip non-Muslims into being ashamed of resisting jihad activity and Islamic supremacism, for fear of being accused of "Islamophobia." I doubt these comics are aware of this program, but they're useful tools for it. "Muslim American comics' tneginour and documentary," by Tara Bahrampour in the Washington Post, December 27 (thanks to James): Beware, America. The Muslims are coming, and they look and act suspiciously like you. Sheesh. No one says they aren't. This is just a straw man designed to demonize opponents of jihad.

"Islamophobia" definition skewed

Goldberg 1-16 (Jeffrey Goldberg, "French Prime Minister: 'I Refuse to Use This Term *Islamophobia*'", The Atlantic, 1/16/15, Jeffrey Goldberg is a national correspondent for *The Atlantic* and a recipient of the National Magazine Award for Reporting, http://www.theatlantic.com/international/archive/2015/01/french-prime-minister-manuel-valls-on-islamophobia/384592/, 8/1/15 AV)

The prime minister of France, Manuel Valls, has emerged over the past tumultuous week as one of the West's most vocal foes of Islamism, though he's actually been talking about the threat it poses for a long while. During the course of an interview conducted before the *Charlie Hebdo* attacks, he told me—he went out of his way to tell me, in fact—that he refuses to use the term 'Islamophobia' to describe the phenomenon of anti-Muslim prejudice, because, he says, the accusation of Islamophobia is often used as a weapon by Islamism's apologists to silence their critics. Most of my conversation with Valls was focused on the fragile state of French Jewry—here is my post on his comments, which included the now-widely circulated statement that, "if 100,000 Jews leave, France will no longer be France"—and I didn't realize the importance of his comment about Islamophobia until I re-read the transcript of our interview. "It is very important to make clear to people that Islam has nothing to do with ISIS," Valls told me. "There is a prejudice in society about this, but on the other hand, I refuse to use this term 'Islamophobia,' because those who use this word are trying to invalidate any criticism at all of Islamist ideology. The charge of 'Islamophobia' is used to silence people. " Valls was not denying the existence of anti-Muslim sentiment, which is strong across much of France. In the wake of the *Charlie Hebdo* attack, miscreants have shot at Muslim community buildings, and various repulsive threats against individual Muslims have been cataloged. President Francois Hollande, who said Thursday that Muslims are the "first victims of fanaticism, fundamentalism, intolerance," might be overstating the primacy of anti-Muslim prejudice in the current hierarchy of French bigotries—after all, Hollande just found it necessary to deploy his army to defend Jewish schools from Muslim terrorists, not Muslim schools from Jewish terrorists—but anti-Muslim bigotry is a salient and seemingly permanent feature of life in France. Or to contextualize it differently: Anti-Muslim feeling appears to be more widespread than anti-Jewish feeling across much of France, but anti-Jewish feeling has been expressed recently (and not-so-recently) with far more lethality, and mainly by Muslims. It appears as if Valls came to his view on the illegitimacy of 'Islamophobia' after being influenced by a number of people, including and especially the French philosopher Pascal Bruckner and the writer (and fatwa target) Salman Rushdie. Rushdie, along with a group of mainly Muslim writers, attacked the use of the term 'Islamophobia' several years ago in an open letter: "We refuse to renounce our critical spirit out of fear of being accused of 'Islamophobia', a wretched concept that confuses criticism of Islam as a religion and stigmatization of those who believe in it." Bruckner argued that use of the word 'Islamophobia' was designed to deflect attention away from the goals of Islamists: "[I]t denies the reality of an Islamic offensive in Europe all the better to justify it; it attacks secularism by equating it with fundamentalism. Above all, however, it wants to silence all those Muslims who question the Koran, who demand equality of the sexes, who claim the right to renounce religion, and who want to practice their faith freely and without submitting to the dictates of the bearded and doctrinaire." It is difficult to construct a single term that captures the variegated expressions of a broad prejudice. 'Anti-Semitism,' of course, is a terribly flawed term to describe anti-Jewish thought or behavior, and not only because it was invented by an actual hater of Jews, Wilhelm Marr, to prettify the base hatred to which he subscribed. It's difficult to construct a single term that captures the variegated expressions of a broad prejudice. The

origins of the term 'Islamophobia' are somewhat murky. According to Bruckner, the term was first used in its current manner to excoriate the writer Kate Millett, who had called upon Iranian women living under a theocratic yoke to take off their chadors. The term seems to have come into widespread use after the U.K.-based Runnymede Trust issued a report in 1997 entitled "Islamophobia: A Challenge for Us All," and by 2001, the United Nations had recognized Islamophobia as a form of prejudice at its Durban conference on racism (this is the same conference from which the official U.S. delegation walked out, to protest the widespread trafficking in anti-Israel and anti-Jewish tropes). The Runnymede Trust defined Islamophobia as "unfounded hostility towards Muslims, and therefore fear or dislike of all or most Muslims." This corresponds, in some ways, to my colleague Conor Friedersdorf's definition of Islamophobia as the "irrational fear of mainstream Muslims." I don't think that Valls would disagree with the notion that the fear of "mainstream Muslims" is grounded in anything but prejudice. But the question he is asking (and answering) is this: Can hostility to the various related ideologies of Islamism—ideologies rooted in a particular reading of Muslim texts, theology, and history—be properly defined as Islamophobic? Michael Walzer, in the most recent issue of *Dissent*, provides one answer. He argues that it is quite rational to fear Islamism: I live with a generalized fear of every form of religious militancy. I am afraid of Hindutva zealots in India, of messianic Zionists in Israel, and of rampaging Buddhist monks in Myanmar. But I admit that I am most afraid of Islamist zealots because the Islamic world at this moment in time (not always, not forever) is especially feverish and fervent. Indeed, the politically engaged Islamist zealots can best be understood as today's crusaders. Is this an anti-Muslim position, not a fear but a phobia—and a phobia that grows out of prejudice and hostility? Consider a rough analogy (all analogies are rough): if I say that Christianity in the eleventh century was a crusading religion and that it was dangerous to Jews and Muslims, who were rightly fearful (and some of them phobic)—would that make me anti-Christian? I know that crusading fervor isn't essential to the Christian religion; it is historically contingent, and the crusading moment in Christian history came and, after two hundred years or so, went. Saladin helped bring it to an end, but it would have ended on its own. I know that many Christians opposed the Crusades; today we would call them Christian "moderates." And, of course, most eleventh-century Christians weren't interested in crusading warfare; they listened to sermons urging them to march to Jerusalem and they went home. Still, it is true without a doubt that in the eleventh century, much of the physical, material, and intellectual resources of Christendom were focused on the Crusades. Walzer doesn't understand how opposition to a misogynistic, homophobic, anti-Semitic, anti-free-speech theocratic strain of totalitarianism could make a person a "racist" (a particularly inapt term for prejudice against Muslims, who are found among all races) or "Islamophobic," or anything but a secular-minded progressive who is interested in defending the rights of women and minorities. "I frequently come across leftists who are more concerned with avoiding accusations of Islamophobia than they are with condemning Islamist zealotry," Walzer wrote. "There are perfectly legitimate criticisms that can be made not only of Islamist zealots but also of Islam itself—as of any other religion." Hussein Ibish, writing in *The National*, offered a definition of Islamophobia that makes sense to me, and I would imagine, makes sense to Valls. The key to a practicable definition of Islamophobia that can help identify truly objectionable speech, must be that it refers to living human beings and their fundamental rights. It cannot be about protecting people from being offended, or having their feelings hurt. Still less can it be about protecting abstract ideas, religious dogmas, or cultural norms from being questioned, critiqued or even lampooned. The proper metric to identify genuinely bigoted speech is whether or not the expression in question is intended or likely to have the effect of promoting fear and hatred against broad categories of people based on their identity. Would such speech make it more difficult for communities to function effectively in their own society? In other words, does the speech attack the legitimate rights and interests of identity-based communities? Does it prevent them being seen as, and treated as equal by, and with regard to, other communities? Ibish argues that *Charlie Hebdo*, against which accusations of Islamophobia continue to be leveled, does not meet his standard: While many of the images it printed over the years were offensive to Muslims and many others, and were intended to be so, did its track record really suggest that its presence on the French scene in any way compromised, challenged, or complicated the ability of the Arab and Muslim migrant communities in France to function properly in that society? Clearly, the answer is no. Prejudice against Muslims is repulsive. Criticism of Islamist doctrine, and the lampooning of religious beliefs, is not.

Off Case

T – Substantial

1NC Frontline

A. Substantially requires at least a 2% reduction --- this is the smallest percentage we could find

Word and Phrases 1960

'Substantial" means "of real worth and importance; of considerable value; valuable." Bequest to charitable institution, making 1/48 of expenditures in state, held exempt from taxation; such expenditures constituting "substantial" part of its activities. Tax Commission of Ohio v. American Humane Education Soc., 181 N.E. 557, 42 Ohio App.

B. Plan violates

American Muslim Population is only .8%

Walen 14 (Andrew Walen, "Muslim Population in US: New Poll Shows None of Us Have Any Idea", iDigital Times, 11/3/14, http://www.idigitaltimes.com/muslim-population-us-new-poll-shows-none-us-have-any-idea-392930, 7/31/15 AV)

According to the new poll, US citizens guessed the Muslim population of the US to be about 15 percent when asked "Out of every 100 people, how many do you think are Muslim?" This would mean that the US has 47.4 million Muslims. The reality is quite different, with current research putting the percentage of Muslims in the United States at about .8 percent of the population, with an estimated 2.6 million Muslims in the US as of 2010. Even higher estimates find that there are between five and eight million Muslims in the entire country.

C. THE AFFIRMATIVE MUST DEFEND AN INTERPRETATION

They cannot just quibble with our definition. They have to counter-define and defend the limits of their definition. Substantially must be given meaning

CJS 83 Corpus Juris Secundum, 1983 , 765.

"Substantially. A relative and elastic term which should be interpreted in accordance with the context in which it isused. While it must be employed with care and discrimination, it must, nevertheless, be given effect." 48

D. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Permitting minor changes like the plan permits a huge number of cases.

E. T IS A VOTER because the opportunity to prepare promotes better debating, education and fairness.

Nietzsche K

Call to action link

The inability to resist the temptation to act is a symptom of the weakness of the will

Nietzsche **1888** *The Twilight of the Idols or, How to Philosophize with a Hammer* "Preface" trans. Walter Kaufmann and R. J. Hollingdale http://scholar.googleusercontent.com/scholar?q=cache:537-EkUddDYJ:scholar.google.com/&hl=en&as_sdt=0,37

To be fair, it should be admitted, however, that on the ground out of which Christianity grew, the concept of the "spiritualization of passion" could never have been formed. After all, the first church, as is well known, fought against the "intelligent" in favor of the "poor in spirit." How could one expect from it an intelligent war against passion? The church fights passion with excision in every sense: its practice, its "cure," is castratism. It never asks: "How can one spiritualize, beautify, deify a craving?" It has at all times laid the stress of discipline on extirpation (of sensuality, of pride, of the lust to rule, of avarice, of vengefulness). But an attack on the roots of passion means an attack on the roots of life: the practice of the church is hostile to life. 2 The same means in the fight against a craving—castration, extirpation—is instinctively chosen by those who are too weak-willed, too degenerate, to be able to impose moderation on themselves; by those who are so constituted that they require La Trappe, to use a figure of speech, or (without any figure of speech) some kind of definitive declaration of hostility, a cleft between themselves and the passion. Radical means are indispensable only for the degenerate; the weakness of the will—or, to speak more definitely, the inability not to respond to a stimulus—is itself merely another form of degeneration. The radical hostility, the deadly hostility against sensuality, is always a symptom to reflect on: it entitles us to suppositions concerning the total state of one who is excessive in this manner. This hostility, this hatred, by the way, reaches its climax only when such types lack even the firmness for this radical cure, for this renunciation of their "devil." One should survey the whole history of the priests and philosophers, including the artists: the most poisonous things against the senses have been said not by the impotent, nor by ascetics, but by the impossible ascetics, by those who really were in dire need of being ascetics.

Democracy link

Democratic movements are characterized by a slave morality that requires the slave master to exist. That makes ressentiment inevitable because the slave cannot act unless there exists an opposing master.

Newman 06 (Saul Newman, 11/11/2006, "Anarchism and the politics of ressentiment," libcom.org, https://libcom.org/library/anarchism-and-the-politics-of-ressentiment-saul-newman)

Political values also grew from this poisonous root. For Nietzsche, values of equality and democracy, which form the cornerstone of radical political theory, arose out of the slave revolt in morality. They are generated by the same spirit of revenge and hatred of the powerful. Nietzsche therefore condemns political movements like liberal democracy, socialism, and indeed anarchism. He sees the democratic movement as an expression of the herd-animal morality derived from the Judeo-Christian revaluation of values.[6] Anarchism is for Nietzsche the most extreme heir to democratic values - the most rabid expression of the herd instinct. It seeks to level the differences between individuals, to abolish class distinctions, to raze hierarchies to the ground, and to equalize the

powerful and the powerless, the rich and the poor, the master and the slave. To Nietzsche this is bringing everything down to level of the lowest common denominator - to erase the pathos of distance between the master and slave, the sense of difference and superiority through which great values are created. Nietzsche sees this as the worst excess of European nihilism - the death of values and creativity. Slave morality is characterized by the attitude of ressentiment - the resentment and hatred of the powerless for the powerful. Nietzsche sees ressentiment as an entirely negative sentiment - the attitude of denying what is life-affirming, saying 'no' to what is different, what is 'outside' or 'other'. Ressentiment is characterized by an orientation to the outside, rather than the focus of noble morality, which is on the self.[7] While the master says 'I am good' and adds as an afterthought, 'therefore he is bad'; the slave says the opposite - 'He (the master) is bad, therefore I am good'. Thus the invention of values comes from a comparison or opposition to that which is outside, other, different. Nietzsche says: "... in order to come about, slave morality first has to have an opposing, external world, it needs, psychologically speaking, external stimuli in order to act all, - its action is basically a reaction."[8] This reactive stance, this inability to define anything except in opposition to something else, is the attitude of ressentiment. It is the reactive stance of the weak who define themselves in opposition to the strong. The weak need the existence of this external enemy to identify themselves as 'good'. Thus the slave takes 'imaginary revenge' upon the master, as he cannot act without the existence of the master to oppose. The man of ressentiment hates the noble with an intense spite, a deep-seated, seething hatred and jealousy. It is this ressentiment, according to Nietzsche, that has poisoned the modern consciousness, and finds its expression in ideas of equality and democracy, and in radical political philosophies, like anarchism, that advocate it. Is anarchism a political expression of ressentiment? Is it poisoned by a deep hatred of the powerful? While Nietzsche's attack on anarchism is in many respects unjustified and excessively malicious, and shows little understanding of the complexities of anarchist theory, I would nevertheless argue that Nietzsche does uncover a certain logic of ressentiment in anarchism's oppositional, Manichean thinking. It is necessary to explore this logic that inhabits anarchism - to see where it leads and to what extent it imposes conceptual limits on radical politics.

Oppression link (define history as either 9/11 or based on old European oppression)

Demanding social justice for historical injustice codifies resentment and locks subordinated groups in their subordination.

Brown, Professor of Women's Studies @ UC Santa Cruz, 19**95** [Wendy, *States of Injury: Power and Freedom in Late Modernity* pg. 66-70]

Liberalism contains from its inception a generalized incitement to what Nietzsche terms ressentiment, the moralizing revenge of the powerless,"the triumph of the weak as weak. "22 This incitement to ressentitnent inheres in two related constitutive paradoxes of liberalism: that between individual liberty and social egalitarianism, a paradox which produces failure turned to recrimination by the subordinated, and guilt turned to resentment by the "successful"; and that between the individualism that legitimates liberalism and the cultural homogeneity required by its commitment to political universality, a paradox which stimulates the articulation of politically significant differences on the one hand, and the suppression of them on the other, and which offers a form of articulation that presses against the limits of universalist discourse even while that which is being articulated seeks to be harbored withinincluded inthe terms of that universalism. Premising itself on the natural equality of human beings, liberalism makes a political promise of universal individual freedom in order to arrive at social equality, or achieve a civilized retrieval of the equality postulated in the state of nature. It is the tension between the promises of individualistic liberty and the requisites of equality that yields ressentiment in one of two directions, depending on the way in which the paradox is brokered. A strong commitment to freedom vitiates the fulfillment of the equality promise and breeds ressentiment as welfare state liberalism --- attenuations of the unmitigated license of the rich and powerful on behalf of the "disadvantaged." Conversely, a strong commitment to equality, requiring heavy state interventionism and economic redistribution, attenuates the commitment to freedom and breeds ressentiment expressed as neoconservative antistatism,

racism, charges of reverse racism, and so forth, However, it is not only the tension between freedom and equality but the prior presumption of the self-reliant and self-made capacities of liberal subjects, conjoined with their unavowed dependence on and construction by a variety of social relations and forces, that makes all liberal subjects, and not only markedly disenfranchised ones, vulnerable to ressentiment: it is their situatedness within power, their production by power, and liberal discourse's denial of this situatedness and production that cast the liberal subject into failure, the failure to make itself in the context of a discourse in which its selfmaking is assumed, indeed, is its assumed nature. This failure, which Nietzsche calls suffering, must either find a reason within itself (which redoubles the failure) or a site of external blame upon which to avenge its hurt and redistribute its pain. Here is Nietzsche's account of this moment in the production of ressentiment: For every sufferer instinctively seeks a cause for his suffering, more exactly, an agent; still more specifically, a guilty agent who is susceptible to suffering in short, some living thing upon which he can, on some pretext or other, vent his affects, actually or in effigy . . . . This ... constitutes the actual physiological cause of ressentiment, vengefulness, and the like: a desire to deaden pain by means of affects, . . . to deaden, by means of a more violent emotion of any kind, a tormenting, secret pain that is becoming unendurable, and to drive it out of consciousness at least for the moment: for that one requires an affect, as savage an affect as possible, and, in order to excite that, any pretext at all. Ressentiment in this context is a triple achievement: it produces an affect (rage, righteousness) that overwhelms the hurt; it produces a culprit responsible for the hurt; and it produces a site of revenge to displace the hurt (a place to inflict hurt as the sufferer has been hurt). Together these operations both ameliorate (in Nietzsche's term, "anaesthetize") and externalize what is otherwise "unendurable." In a culture already streaked with the pathos of ressentiment for the reasons just discussed, there are several distinctive characteristics of late modern postindustrial societies that accelerate and expand the conditions of its production. My listing will necessarily be highly schematic: First, the phenomenon William Connolly names "increased global contingency", combines with the expanding pervasiveness and complexity of domination by capital and bureaucratic state and social networks to create an unparalleled individual powerlessness over the fate and direction of one's own life, intensifying the experiences of impotence, dependence, and gratitude inherent in liberal capitalist orders and constitutive of ressentiment.24 Second, the steady desacralization of all regions of life -- what Weber called disenchantment, what Nietzsche called the death of god would seem to add yet another reversal to Nietzsche's genealogy of ressenti;nent as perpetually available to "alternation of direction." In Nietzsche's account, the ascetic priest deployed notions of "guilt, sin, sinfulness, depravity, damnation" to "direct the ressentiment of the less severely afflicted sternly back upon themselves . . . and in this way exploit[ed] the bad instincts of all sufferers for the purpose of selfdiscipline, selfsurveillance, and selfovercoming. "25 However, the desacralizing tendencies of late modernity undermine the efficacy of this deployment and turn suffering's need for exculpation back toward a site of external agency.26 Third, the increased fragmentation, if not disintegration, of all forms of association not organized until recently by the commodities marketcommunities, churches, familiesand the ubiquitousness of the classificatory, individuating schemes of disciplinary society, combine to produce an utterly unrelieved individual, one without insulation from the inevitable failure entailed in liberalism's individualistic construction27 In short, the characteristics of late modern secular society, in which individuals are buffeted and controlled by global configurations of disciplinary and capitalist power of extraordinary proportions, and are at the same time nakedly individuated, stripped of reprieve from relentless exposure and accountability for themselves, together add up to an incitement to ressentiment that might have stunned even the finest philosopher of its occasions and logics Starkly accountable yet dramatically impotent, the late modern liberal subject quite literally seethes with ressentiment. Enter politicized identity, now conceivable in part as both product of and reaction to this condition, where "reaction" acquires the meaning Nietzsche ascribed to it: namely, an effect of domination that reiterates impotence, a substitute for action, for power, for selfaffirmation that reinscribes incapacity, powerlessness, and rejection. For Nietzsche, ressentiment itself is rooted in reaction -- the substitution of reasons, norms, and ethics for deeds -- and he suggests that not only moral systems but identities themselves take their bearings in this reaction. As Tracy Strong reads this element of Nietzsche's thought: Identity ... does not consist of an active component, but is reaction to something outside; action in itself; with its inevitable self-assertive qualities, must then become something evil, since it is identified with that against which one is reacting. The will to power of slave morality must constantly reassert that which gives definition to the slave: the pain he suffers by being in the world. Hence any attempt to escape that pain will merely result in the reaffirmation of painful structures. If the "cause" of ressentitnent is suffering, its "creative deed" is the reworking of this pain into a negative form of action, the "imaginary revenge" of what Nietzsche terms "natures denied the true reaction, that of deeds."29 This revenge is achieved through the imposition of suffering "on whatever does not feel wrath and displeasure as he does"30 (accomplished especially through the production of guilt), through the establishment of suffering as the measure of social virtue, and through casting strength and good fortune ("privilege," as we say today) as self-recriminating, as its own indictment in a culture of suffering: "it is disgraceful to be fortunate, there is too much misery."31 But in its attempt to displace its suffering, identity structured by ressentiment at the same time becomes invested in its own subjection. This investment lies not only in its discovery of a site of blame for its hurt will, not only in its acquisition of recognition through its history of subjection (a recognition

predicated on injury, now righteously revalued), but also in the satisfactions of revenge, which ceaselessly reenact even as they redistribute the injuries of marginalization and subordination in a liberal discursive order that alternately denies the very possibility of these things and blames those who experience them for their own condition. Identity politics structured by ressentiment reverse without subverting this blaming structure: they do not subject to critique the sovereign subject of accountability that liberal individualism presupposes, nor the economy of inclusion and exclusion that liberal universalism establishes. Thus, politicized identity that presents itself as a selfaffirmation now appears as the opposite, as predicated on and requiring its sustained rejection by a "hostile external world."32

AT Perm

Acording to some people I've talked to, perm just isin't that much of a problem for Nietzsche K. The basic general arg is that the aff can't perm because the perm does something, that means there is no perm.

They can't engage in a revaluation of all values because they already presuppose the 1AC.

Nietzsche '5 *The Anti-Christ, Ecce Homo, Twilight of the Idols, and Other Writings* p 11 Edited by Aaron Ridley and Judith Norman. Translated by Judith Norman

Let us not underestimate the fact that we ourselves, we free spirits, already constitute a 'revaluation of all values', a living declaration of war on and victory over all old concepts of 'true' and 'untrue' . The most valuable insights are the last to be discovered; but methods are the most valuable insights. All the methods, all the presuppositions of our present scientific spirit have been regarded with the greatest contempt for thousands of years, they barred certain people from the company of 'decent' men, - these people were considered 'enemies of God', despisers of the truth, or 'possessed'. As scientific characters, they were Chandala . . . 7 We have had the whole pathos of humanity against us - its idea of what truth should be, of what serving the truth should entail: so far, every 'thou shalt' has been directed against us . . . Our objectives, our practices, our silent, cautious, distrustful nature - all of this seemed totally unworthy and despicable. - In the end, and in all fairness, people should ask themselves whether it was not really an aesthetic taste that kept humanity in the dark for so long: people demanded a picturesque effect from the truth, they demanded that the knower make a striking impression on their senses. Our modesty is what offended their taste for the longest time . . . And didn't they know it, these strutting turkey-cocks of God - -

Terror DA

Uniqueness

Terror risk is high- maintaining current surveillance is key

Inserra, 6-8-2015

David Inserra is a Research Associate for Homeland Security and Cyber Security in the Douglas and Sarah Allison Center for Foreign and National Security Policy of the Kathryn and Shelby Cullom Davis Institute for National Security and Foreign Policy, at The Heritage Foundation, 6-8-2015, "69th Islamist Terrorist Plot: Ongoing Spike in Terrorism Should Force Congress to Finally Confront the Terrorist Threat," Heritage Foundation, http://www.heritage.org/research/reports/2015/06/69th-islamist-terrorist-plot-ongoing-spike-in-terrorism-should-force-congress-to-finally-confront-the-terrorist-threat

On June 2 in Boston, Usaamah Abdullah Rahim drew a knife and attacked police officers and FBI agents, who then shot and killed him. Rahim was being watched by Boston's Joint Terrorism Task Force as he had been plotting to behead police officers as part of violent jihad. A conspirator, David Wright or Dawud Sharif Abdul Khaliq, was arrested shortly thereafter for helping Rahim to plan this attack. This plot marks the 69th publicly known Islamist terrorist plot or attack against the U.S. homeland since 9/11, and is part of a recent spike in terrorist activity. The U.S. must redouble its efforts to stop terrorists before they strike, through the use of properly applied intelligence tools. The Plot According to the criminal complaint filed against Wright, Rahim had originally planned to behead an individual outside the state of Massachusetts,[1] which, according to news reports citing anonymous government officials, was Pamela Geller, the organizer of the "draw Mohammed" cartoon contest in Garland, Texas.[2] To this end, Rahim had purchased multiple knives, each over 1 foot long, from Amazon.com. The FBI was listening in on the calls between Rahim and Wright and recorded multiple conversations regarding how these weapons would be used to behead someone. Rahim then changed his plan early on the morning of June 2. He planned to go "on vacation right here in Massachusetts…. I'm just going to, ah, go after them, those boys in blue. Cause, ah, it's the easiest target."[3] Rahim and Wright had used the phrase "going on vacation" repeatedly in their conversations as a euphemism for violent jihad. During this conversation, Rahim told Wright that he planned to attack a police officer on June 2 or June 3. Wright then offered advice on preparing a will and destroying any incriminating evidence. Based on this threat, Boston police officers and FBI agents approached Rahim to question him, which prompted him to pull out one of his knives. After being told to drop his weapon, Rahim responded with "you drop yours" and moved toward the officers, who then shot and killed him. While Rahim's brother, Ibrahim, initially claimed that Rahim was shot in the back, video surveillance was shown to community leaders and civil rights groups, who have confirmed that Rahim was not shot in the back.[4] Terrorism Not Going Away This 69th Islamist plot is also the seventh in this calendar year. Details on how exactly Rahim was radicalized are still forthcoming, but according to anonymous officials, online propaganda from ISIS and other radical Islamist groups are the source.[5] That would make this attack the 58th homegrown terrorist plot and continue the recent trend of ISIS playing an important role in radicalizing individuals in the United States. It is also the sixth plot or attack targeting law enforcement in the U.S., with a recent uptick in plots aimed at police. While the debate over the PATRIOT Act and the USA FREEDOM Act is taking a break, the terrorists are not. The result of the debate has been the reduction of U.S. intelligence and counterterrorism capabilities, meaning that the U.S. has to do even more with less when it comes to connecting the dots on terrorist plots.[6] Other legitimate intelligence tools and capabilities must be leaned on now even more. Protecting the Homeland To keep the U.S. safe, Congress must take a hard look at the U.S. counterterrorism enterprise and determine other measures that are needed to improve it. Congress should: Emphasize community outreach. Federal grant funds should be used to create robust community-outreach capabilities in higher-risk urban areas. These funds must not be used for political pork, or so broadly that they no longer target those communities at greatest risk. Such capabilities are key to building trust within these communities, and if the United States is to thwart lone-wolf terrorist attacks, it must place effective community outreach operations at the tip of the spear. Prioritize local cyber capabilities. Building cyber-investigation capabilities in the higher-risk urban areas must become a primary focus of Department of Homeland Security grants. With so much terrorism-related activity occurring on the Internet, local law enforcement must have the constitutional ability to monitor and track violent extremist activity on the Web when reasonable suspicion exists to do so. Push the FBI toward being more effectively driven by intelligence. While the FBI has made high-level changes to its mission and organizational structure, the bureau is still working on integrating intelligence and law enforcement activities. Full integration will require overcoming inter-agency cultural barriers and providing FBI intelligence personnel with resources, opportunities, and the stature they need to become a more effective and integral part of the FBI. Maintain essential counterterrorism tools. Support for important investigative tools is essential to maintaining the security of the U.S. and combating terrorist threats. Legitimate government surveillance programs are also a vital component of U.S. national security and should be allowed to continue. The need for effective counterterrorism operations does not relieve the government of its obligation to follow the law and respect individual privacy and liberty. In the American system, the government must do both equally well. Clear-Eyed Vigilance The recent spike in terrorist plots and attacks should finally awaken policymakers—all Americans, for that matter—to the seriousness of the terrorist threat. Neither fearmongering nor willful blindness serves the United States. Congress must recognize and acknowledge the nature and the scope of the Islamist terrorist threat, and take the appropriate action to confront it.

Surveillance is critical to stopping terror threats

Lewis 14 [James Andrew Lewis, Director and Senior Fellow of the Technology and Public Policy Program at the CSIS, December 2014, "Underestimating Risk in the Surveillance Debate", Center for Strategic and International Studies, http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf pg 10-11 jf]

Assertions that a collection program contributes nothing because it has not singlehandedly prevented an attack reflect an ill-informed understanding of how the United States conducts collection and analysis to prevent harmful acts against itself and its allies. Intelligence does not work as it is portrayed in films—solitary agents do not make startling discoveries that lead to dramatic, last-minute success (nor is technology consistently infallible). Intelligence is a team sport. Perfect knowledge does not exist and success is the product of the efforts of teams of dedicated individuals from many agencies, using many tools and techniques, working together to assemble fragments of data from many sources into a coherent picture. Analysts assemble this mosaic from many different sources and based on experience and intuition. Luck is still more important than anyone would like and the alternative to luck is acquiring more information. This ability to blend different sources of intelligence has improved U.S. intelligence capabilities and gives us an advantage over some opponents. Portrayals of spying in popular culture focus on a central narrative, essential for storytelling but deeply misleading. In practice, there can be many possible narratives that analysts must explore simultaneously. An analyst might decide, for example, to see if there is additional confirming information that points to which explanation deserves further investigation. Often, the contribution from collection programs comes not from what they tell us, but what they let us reject as false. In the case of the 215 program, its utility was in being able to provide information that allowed analysts to rule out some theories and suspects. This allows analysts to focus on other, more likely, scenarios. In one instance, an attack is detected and stopped before it could be executed. U.S. forces operating in Iraq discover a bomb-making factory. Biometric data found in this factory is correlated with data from other bombings to provide partial identification for several individuals who may be bomb-makers, none of whom are present in Iraq. In looking for these individuals, the United States receives information from another intelligence service that one of the bombers might be living in a neighboring Middle Eastern country. Using communications intercepts, the United States determines that the individual is working on a powerful new weapon. The United States is able to combine the communications intercept from the known bomb maker with information from other sources—battlefield data, information obtained by U.S. agents, collateral information from other nations' intelligence services—and use this to identify others in the bomber's network, understand the plans for bombing, and identify the bomber's target, a major city in the United States. This effort takes place over months and involves multiple intelligence, law enforcement, and military agencies, with more than a dozen individuals from these agencies collaborating to build up a picture of the bomb-maker and his planned attack. When the bomb-maker leaves the Middle East to carry out his attack, he is prevented from entering the United States. An analogy for how this works would be to take a 1,000-piece jigsaw puzzle, randomly select 200 pieces, and provide them to a team of analysts who, using incomplete data, must guess what the entire picture looks like. The likelihood of their success is determined by how much information they receive, how much time they have, and by experience and luck. Their guess can be tested by using a range of collection programs, including communications surveillance programs like the 215 metadata program. What is left out of this picture (and from most fictional portrayals of intelligence analysis) is the number of false leads the analysts must pursue, the number of dead ends they must walk down, and the tools they use to decide that something is a false lead or dead end. Police officers are familiar with how many leads in an investigation must be eliminated through legwork and query before an accurate picture emerges. Most leads are wrong, and much of the work is a process of elimination that eventually focuses in on the most probable threat. If real intelligence work were a film, it would be mostly boring. Where the metadata program contributes is in eliminating possible leads and suspects. This makes the critique of the 215 program like a critique of airbags in a car—you own a car for years, the airbags never deploy, so therefore they are useless and can be removed. The weakness in this argument is that discarding airbags would increase risk. How much risk would increase and whether other considerations outweigh this increased risk are fundamental problems for assessing surveillance programs. With the Section 215 program, Americans gave up a portion of their privacy in

exchange for decreased risk. Eliminating 215 collection is like subtracting a few of the random pieces of the jigsaw puzzle. It decreases the chances that the analysts will be able to deduce what is actually going on and may increase the time it takes to do this. That means there is an increase in the risk of a successful attack. How much of an increase in risk is difficult to determine.

Terrorists will use bioweapons- guarantees extinction

Cooper 13

(Joshua, 1/23/13, University of South Carolina, "Bioterrorism and the Fermi Paradox," http://people.math.sc.edu/cooper/fermi.pdf, 7/15/15, SM)

We may conclude that, when a civilization reaches its space-faring age, it∂ will more or less at the same moment (1) contain many individuals who seek to cause large-scale destruction, and (2) acquire the capacity to tinker with its own genetic chemistry. This is a perfect recipe for bioterrorism, and, given the many very natural pathways for its development and the overwhelming∂ evidence that precisely this course has been taken by humanity, it is hard to∂ see how bioterrorism does not provide a neat, if profoundly unsettling, solution∂ to Fermi's paradox. One might object that, if omnicidal **individuals** are∂ successful in releasing **highly virulent** and **deadly genetic malware** into the∂ wild, they are still unlikely to succeed in killing everyone. However, even if∂ every such mass death event results only in a high (i.e., not total) kill rate and∂ there is a large gap between each such event (so that individuals can build up∂ the requisite scientific infrastructure again**), extinction would be inevitable**∂ regardless. Some of the engineered bioweapons will be more successful than∂ others; the inter-apocalyptic eras will vary in length; and post-apocalyptic∂ environments may be so **war-torn, disease-stricken, and impoverished of genetic variation that they may culminate in true extinction events even if the initial cataclysm 'only' results in 90% death rates**, since they may cause the∂ effective population size to dip below the so-called "minimum viable population."∂ This author ran a Monte Carlo simulation using as (admittedly very∂ crude and poorly informed, though arguably conservative) estimates the following∂ Earth-like parameters: bioterrorism event mean death rate 50% and∂ standard deviation 25% (beta distribution), initial population 1010, minimum∂ viable population 4000, individual omnicidal act probability 10−7 per annum,∂ and population growth rate 2% per annum. One thousand trials yielded an∂ average post-space-age time until extinction of less than 8000 years. This is∂ essentially instantaneous on a cosmological scale, and varying the parameters∂ by quite a bit does nothing to make the survival period comparable with the∂ age of the universe.

Mass surveillance has thwarted many attacks – more transparency of the programs makes attacks very likely

Nakashima 13 [Ellen Nakashima, national security reporter for The Washington Post. She focuses on issues relating to intelligence, technology and civil liberties. "Officials: Surveillance programs foiled more than 50 terrorist plots", https://www.washingtonpost.com/world/national-security/officials-surveillance-programs-foiled-more-than-50-terrorist-plots/2013/06/18/d657cb56-d83e-11e2-9df4-895344c13c30_story.html, June 18th, 2013//Rahul]

The U.S. government's sweeping surveillance programs have disrupted more than 50 terrorist plots in the United States and abroad, including a plan to bomb the New York Stock Exchange, senior government officials testified Tuesday. The officials, appearing before a largely friendly House committee, defended the collection of telephone and Internet data by the National Security Agency as central to protecting the United States and its allies against terrorist attacks. And they said that recent disclosures about the surveillance operations have caused serious damage. "We are now faced with a situation that, because this information has been made public, we run the risk of losing these collection capabilities," said Robert S. Litt, general counsel of the Office of the Director of National Intelligence. "We're not going to know for many months whether these leaks

in fact have caused us to lose these capabilities, but if they do have that effect, there is no doubt that they will cause our national security to be affected." The hearing before the House Intelligence Committee was the third congressional session examining the leaks of classified material about two top-secret surveillance programs by Edward Snowden, 29, a former NSA contractor and onetime CIA employee. Articles based on the material in The Washington Post and Britain's Guardian newspaper have raised concerns about intrusions on civil liberties and forced the Obama administration to mount an aggressive defense of the effectiveness and privacy protections of the operations. Gen. Keith B. Alexander, the head of the NSA, told the committee that the programs had helped prevent "potential terrorist events over 50 times since 9/11." He said at least 10 of the disrupted plots involved terrorism suspects or targets in the United States. Alexander said officials do not plan to release additional information publicly, to avoid revealing sources and methods of operation, but he said the House and Senate intelligence committees will receive classified details of the thwarted plots. Newly revealed plots In testimony last week, Alexander said the surveillance programs had helped prevent an attack on the subway system in New York City and the bombing of a Danish newspaper. Sean Joyce, deputy director of the FBI, described two additional plots Tuesday that he said were stopped through the surveillance — a plan by a Kansas City, Mo., man to bomb the New York Stock Exchange and efforts by a San Diego man to send money to terrorists in Somalia. The officials said repeatedly that the operations were authorized by Congress and subject to oversight through internal mechanisms and the Foreign Intelligence Surveillance Court, whose proceedings are secret. Alexander said that more than 90 percent of the information on the foiled plots came from a program targeting the communications of foreigners, known as PRISM. The program was authorized under Section 702 of a 2008 law that amended the Foreign Intelligence Surveillance Act (FISA). The law authorizes the NSA to collect e-mails and other Internet communications to and from foreign targets overseas who are thought to be involved in terrorism or nuclear proliferation or who might provide critical foreign intelligence. No American in the country or abroad can be targeted without a warrant, and no person inside the United States can be targeted without a warrant. A second program collects all call records from U.S. phone companies. It is authorized under Section 215 of the USA Patriot Act. The records do not include the content of calls, location data, or a subscriber's name or address. That law, passed in 2001 and renewed twice since then, also amended FISA. Snowden, a high school dropout who worked at an NSA operations center in Hawaii for 15 months as a contractor, released highly classified information on both programs, claiming they represent government overreach. He has been in hiding since publicly acknowledging on June 9 that he leaked the material. Several lawmakers pressed for answers on how Snowden, a low-level systems administrator, could have had access to highly classified material such as a court order for phone records. "We need to seal this crack in the system," said Rep. C.A. Dutch Ruppersberger (Md.), the ranking Democrat on the intelligence panel. Alexander said he is working with intelligence officials to come up with a "two-person" rule to ensure that the agency can block unauthorized people from removing information from the system. But Alexander and the other witnesses focused more heavily on justifying the programs and arguing that they operate under legal guidelines. "As Americans, we value our privacy and our civil liberties," Alexander said. "As Americans, we also value our security and our safety. In the 12 years since the attacks on September 11th, we have lived in relative safety and security as a nation. That security is a direct result of the intelligence community's quiet efforts to better connect the dots and learn from the mistakes that permitted those attacks to occur on 9/11."

Bulk surveillance is crucial to detect and act on threats – many examples prove

Hines 13 [Pierre Hines is a defense council member of the Truman National Security Project, "Here's how metadata on billions of phone calls predicts terrorist attacks" http://qz.com/95719/heres-how-metadata-on-billions-of-phone-calls-predicts-terrorist-attacks, June 19th, 2013//Rahul]

Yesterday, when NSA Director General Keith Alexander testified before the House Committee on Intelligence, he declared that the NSA's surveillance programs have provided "critical leads to help prevent over 50 potential terrorist events." FBI Deputy Director Sean Boyce elaborated by describing four instances when the NSA's surveillance programs have had an impact: (1) when an intercepted email from a terrorist in Pakistan led to foiling a plan to bomb of the New York subway system; (2) when NSA's programs helped prevent a plot to bomb the New York Stock Exchange; (3) when intelligence led to the arrest of a U.S. citizen who planned to bomb the Danish Newspaper office that published cartoon depictions of the Prophet Muhammad; and (4) when the NSA's programs triggered reopening the 9/11 investigation. So what are the practical applications of internet and phone records gathered from two NSA programs? And how can "metadata" actually prevent terrorist attacks? Metadata does not give the NSA and intelligence community access to the content of internet and phone communications. Instead, metadata

is more like the transactional information cell phone customers would normally see on their billing statements—metadata can indicate when a call, email, or online chat began and how long the communication lasted. Section 215 of the Patriot Act provides the legal authority to obtain "business records" from phone companies. Meanwhile, the NSA uses Section 702 of the Foreign Intelligence Surveillance Act to authorize its PRISM program. According the figures provided by Gen. Alexander, intelligence gathered based on Section 702 authority contributed in over 90% of the 50 cases. One of major benefits of metadata is that it provides hindsight—it gives intelligence analysts a retrospective view of a sequence of events. As Deputy Director Boyce discussed, the ability to analyze previous communications allowed the FBI to reopen the 9/11 investigation and determine who was linked to that attack. It is important to recognize that terrorist attacks are not orchestrated overnight; they take months or years to plan. Therefore, if the intelligence community only catches wind of an attack halfway into the terrorists' planning cycle, or even after a terrorist attack has taken place, metadata might be the only source of information that captures the sequence of events leading up to an attack. Once a terrorist suspect has been identified or once an attack has taken place, intelligence analysts can use powerful software to sift through metadata to determine which numbers, IP addresses, or individuals are associated with the suspect. Moreover, phone numbers and IP addresses sometimes serve as a proxy for the general location of where the planning has taken place. This ability to narrow down the location of terrorists can help determine whether the intelligence community is dealing with a domestic or international threat. Even more useful than hindsight is a crystal ball that gives the intelligence community a look into the future. Simply knowing how many individuals are in a chat room, how many individuals have contacted a particular phone user, or how many individuals are on an email chain could serve as an indicator of how many terrorists are involved in a plot. Furthermore, knowing when a suspect communicates can help identify his patterns of behavior. For instance, metadata can help establish whether a suspect communicates sporadically or on a set pattern (e.g., making a call every Saturday at 2 p.m.). Any deviation from that pattern could indicate that the plan changed at a certain point; any phone number or email address used consistently and then not at all could indicate that a suspect has stopped communicating with an associate. Additionally, a rapid increase in communication could indicate that an attack is about to happen. Metadata can provide all of this information without ever exposing the content of a phone call or email. If the metadata reveals the suspect is engaged in terrorist activities, then obtaining a warrant would allow intelligence officials to actually monitor the content of the suspect's communication. In Gen. Alexander's words, "These programs have protected our country and allies . . . [t]hese programs have been approved by the administration, Congress, and the courts." Now, Americans will have to decide whether they agree.

Surveillance is necessary and has very little negative consequences on civil liberty

Boot 13 [Max Boot, Max Boot is an American author, consultant, editorialist, lecturer, and military historian, "Stay calm and let the NSA carry on", http://articles.latimes.com/2013/jun/09/opinion/la-oe-boot-nsa-surveillance-20130609, June 9th, 2015//Rahul]

After 9/11, there was a widespread expectation of many more terrorist attacks on the United States. So far that hasn't happened. We haven't escaped entirely unscathed (see Boston Marathon, bombing of), but on the whole we have been a lot safer than most security experts, including me, expected. In light of the current controversy over the National Security Agency's monitoring of telephone calls and emails, it is worthwhile to ask: Why is that? It is certainly not due to any change of heart among our enemies. Radical Islamists still want to kill American infidels. But the vast majority of the time, they fail. The Heritage Foundation estimated last year that 50 terrorist attacks on the American homeland had been foiled since 2001. Some, admittedly, failed through sheer incompetence on the part of the would-be terrorists. For instance, Faisal Shahzad, a Pakistani American jihadist, planted a car bomb in Times Square in 2010 that started smoking before exploding, thereby alerting two New Yorkers who in turn called police, who were able to defuse it. But it would be naive to adduce all of our security success to pure serendipity. Surely more attacks would have succeeded absent the ramped-up counter-terrorism efforts undertaken by the U.S. intelligence community, the military and law enforcement. And a large element of the intelligence community's success lies in its use of special intelligence — that is, communications intercepts. The CIA is notoriously deficient in human intelligence — infiltrating spies into terrorist organizations is hard to do, especially when we have so few spooks who speak Urdu,

Arabic, Persian and other relevant languages. But the NSA is the best in the world at intercepting communications. That is the most important technical advantage we have in the battle against fanatical foes who will not hesitate to sacrifice their lives to take ours. Which brings us to the current kerfuffle over two NSA monitoring programs that have been exposed by the Guardian and the Washington Post. One program apparently collects metadata on all telephone calls made in the United States. Another program provides access to all the emails, videos and other data found on the servers of major Internet firms such as Google, Apple and Microsoft. At first blush these intelligence-gathering activities raise the specter of Big Brother snooping on ordinary American citizens who might be cheating on their spouses or bad-mouthing the president. In fact, there are considerable safeguards built into both programs to ensure that doesn't happen. The phone-monitoring program does not allow the NSA to listen in on conversations without a court order. All that it can do is to collect information on the time, date and destination of phone calls. It should go without saying that it would be pretty useful to know if someone in the U.S. is calling a number in Pakistan or Yemen that is used by a terrorist organizer. As for the Internet-monitoring program, reportedly known as PRISM, it is apparently limited to "non-U.S. persons" who are abroad and thereby enjoy no constitutional protections. These are hardly rogue operations. Both programs were initiated by President George W. Bush and continued by President Obama with the full knowledge and support of Congress and continuing oversight from the federal judiciary. That's why the leaders of both the House and Senate intelligence committees, Republicans and Democrats alike, have come to the defense of these activities. It's possible that, like all government programs, these could be abused — see, for example, the IRS making life tough on tea partiers. But there is no evidence of abuse so far and plenty of evidence — in the lack of successful terrorist attacks — **that these programs have been effective in disrupting terrorist plots.** Granted there is something inherently creepy about Uncle Sam scooping up so much information about us. But Google, Facebook, Amazon, Twitter, Citibank and other companies know at least as much about us, because they use very similar data-mining programs to track our online movements. They gather that information in order to sell us products, and no one seems to be overly alarmed. The NSA is gathering that information to keep us safe from terrorist attackers. Yet somehow its actions have become a "scandal," to use a term now loosely being tossed around. The real scandal here is that the Guardian and Washington Post are compromising our national security by telling our enemies about our intelligence-gathering capabilities. Their news stories reveal, for example, that only nine Internet companies share information with the NSA. This is a virtual invitation to terrorists to use other Internet outlets for searches, email, apps and all the rest. No intelligence effort can ever keep us 100% safe, but to stop or scale back the NSA's special intelligence efforts would amount to unilateral disarmament in a war against terrorism that is far from over.

Unwarranted domestic surveillance is the most significant anti-terror tool available- allows us to infiltrate terror groups and prevent weapons proliferation- has solved 53 of 54 suppressed terror attacks in recent years

Clarke et al 2013 [Report and Recommendations of the President's Review Group on Intelligence and Surveillance Technologies, "Liberty and Security in a Changing World", https://www.whitehouse.gov/sites/default/files/docs/2013-12-12_rg_final_report.pdf, Accessed 7/3/15, AX]

According to NSA, section 702 "is the most significant tool in NSA collection arsenal for the detection, identification, and disruption of terrorist threats to the US and around the world." To cite just one example, collection under section 702 "was critical to the discovery and disruption" of a planned bomb attack in 2009 against the New York City subway system and led to the arrest and conviction of Najibullah Zazi and several of his co-conspirators. According to the Department of Justice and the Office of the Director of National Intelligence in a 2012 report to Congress: Section 702 enables the Government to collect information effectively and efficiently about foreign targets overseas and in a manner that protects the privacy and civil liberties of Americans. Through rigorous oversight, the Government is able to evaluate whether changes are needed to the procedures or guidelines, and what other steps may be appropriate to safeguard the privacy of personal information. In addition, the Department of Justice provides the joint assessments and other reports to the FISC. The FISC has been actively involved in the review of section 702 collection. Together, all of these mechanisms ensure thorough and continuous oversight of section 702 activities. . . . Section 702 is vital

to keeping the nation safe. It provides information about the plans and identities of terrorists allowing us to glimpse inside terrorist organizations and obtain information about how those groups function and receive support. In addition, it lets us collect information about the intentions and capabilities of weapons proliferators and other foreign adversaries who threaten the United States. In reauthorizing section 702 for an additional five years in 2012, the Senate Select Committee on Intelligence concluded: [T]he authorities provided [under section 702] have greatly increased the government's ability to collect information and act quickly against important foreign intelligence targets. The Committee has also found that [section 702] has been implemented with attention to protecting the privacy and civil liberties of US persons, and has been the subject of extensive oversight by the Executive branch, the FISC, as well as the Congress. . . . [The] failure to reauthorize [section 702] would "result in a loss of significant intelligence and impede the ability of the Intelligence Community to respond quickly to new threats and intelligence opportunities."147Our own review is not inconsistent with this assessment. During the course of our analysis, NSA shared with the Review Group the details of 54 counterterrorism investigations since 2007 that resulted in the prevention of terrorist attacks in diverse nations and the United States. In all but one of these cases, information obtained under section 702 contributed in some degree to the success of the investigation. Although it is difficult to assess precisely how many of these investigations would have turned out differently without the information learned through section 702, we are persuaded that section 702 does in fact play an important role in the nation's effort to prevent terrorist attacks across the globe.

Meta-data has stopped terror attacks

Schwartz 15 [Mattathias Schwartz, 1-26-2015, staff writer for the New Yorker and won the 2011 Livingston Award for international reporting "How to Catch a Terrorist," New Yorker, http://www.newyorker.com/magazine/2015/01/26/whole-haystack jf]

The N.S.A. asserts that it **uses the metadata to learn whether anyone inside the U.S. is in contact with high-priority terrorism suspects**, colloquially referred to as "known bad guys." Michael Hayden, **the former C.I.A. and N.S.A. director, has said, "We kill people based on metadata."** He then added, "But that's not what we do with *this* metadata," referring to Section 215.

Soon after Snowden's revelations, Alexander said that the **N.S.A.'s surveillance programs have stopped "fifty-four different terrorist-related activities." Most of these were "terrorist plots."** Thirteen involved the United States. **Credit for foiling these plots**, he continued, was partly due to the **metadata program, intended to "find the terrorist that walks among us."**

President Obama also quantified the benefits of the metadata program. That June, in a press conference with Angela Merkel, the German Chancellor, **Obama said, "We know of at least fifty threats that have been averted because of this information." He continued, "Lives have been saved."**

Even if terror is unlikely meta-data surveillance is worth it

Lake 2014 [Eli Lake, 2-17-2014, senior national-security correspondent for the Daily Beast, "Spy Chief: We Should've Told You We Track Your Calls," Daily Beast, http://www.thedailybeast.com/articles/2014/02/17/spy-chief-we-should-ve-told-you-we-track-your-calls.html jf]

Clapper still defends the 215 program, too. **The storage of the phone records allows NSA analysts to connect phone numbers of suspected terrorists overseas to a possible network inside the United States.** Other U.S. intelligence officials say its real value is that **it saves work** for the FBI and the NSA **in tracking down potential leads by ruling out suspicious numbers quickly.**

In the interview **Clapper said the 215 program was not a violation the rights of Americans.** "For me it was not some massive assault on civil liberties and privacy because of what we actually do and the safeguards that are put on this," he said. "**To guard against perhaps these days low probability but a very (high) impact thing if it happens**." Clapper compared the 215 program to fire insurance. "**I buy fire insurance** ever since I retired, the wife and I bought a house out here and we buy fire insurance every year. **Never had a fire. But I am not gonna quit buying my fire insurance**, same kind of thing."

Meta Data is key to damage control after terrorist attacks

Lewis 14 [James Andrew Lewis, Director and Senior Fellow of the Technology and Public Policy Program at the CSIS, December 2014, "Underestimating Risk in the Surveillance Debate", Center for Strategic and International Studies, http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf pg 9 jf]

The most controversial aspect of the surveillance program involved metadata. Metadata is information describing a telephone call, such as the number from which the call was placed, the number called, and the date, time, and length of the call. The content of the phone call (e.g., the conversation) is not collected. No locational data is collected, although commentators seem confused on this point. **Metadata analysis gave NSA the ability to identify individuals in the United States** or individuals outside the United States **who are in contact with terrorist groups.**10 In 2012, NSA looked at 288 primary telephone numbers and through "call chaining" analysis reviewed 6,000 other numbers connected to these primary numbers. The 288 people had some connection to terrorism and NSA looked at the 6,000 people with whom they talked to see if they were also involved. Metadata acquired and retained under Section 215 of the Patriot Act program could only be queried when there is "reasonable articulable suspicion" that a telephone number is associated with foreign terrorist organizations. If a query merits further investigation, which requires looking at either content of the individual unmaking the call, this requires a specific, individual court order based on probable cause. If there is one constitutional requirement that was not fully observed in the metadata program authorized under the Patriot Act, it was that search requires a warrant from a court rather than an internal approval by the executive branch

agency itself.11 This was a significant error. **The 215 program allows law enforcement and intelligence officials to determine if a terrorist event is an isolated incident or the first of a serious of attacks, and whether the attacker is a "lone wolf" or connected to a larger terrorist organization. The most important decision in the immediate aftermath of an attack is whether the incident is the first of a series. If it is** the first of a series of attacks, **additional steps must be taken without delay**, such as closing airports and other transportation hubs, putting police forces around the country on high alert, and mobilizing law enforcement agencies to locate and arrest the other attackers. **These steps are both disruptive and expensive and knowing that they are not necessary provides immediate benefit.**

Econ Impacts

A terrorist attack would crush the economy

Bandyopadhyay et al 15 -- Subhayu Bandyopadhyay is Research Officer at the Federal Reserve Bank of St. Louis and Research Fellow at IZA, Bonn, Germany. Todd Sandler is Vibhooti Shukla Professor of Economics and Political Economy at the University of Texas at Dallas. Javed Younasis Associate Professor of Economics at the American University of Sharjah, United Arab Emirates. "The Toll of Terrorism" http://www.imf.org/external/pubs/ft/fandd/2015/06/bandyopa.htm

modified for ableist language

New technology has lowered transportation costs and increased trade and capital flows across nations. But the same technology that has fostered international economic growth has also allowed terrorism to spread easily among countries whose interests are tightly interwoven. Terrorism is no longer solely a local issue. Terrorists can strike from thousands of miles away and cause vast destruction. The effects of terrorism can be terrifyingly direct. People are kidnapped or killed. Pipelines are sabotaged. Bombers strike markets, buses, and restaurants with devastating effect. But terrorism inflicts more than human casualties and material losses. It can also cause serious indirect harm to countries and economies by increasing the costs of economic transactions—for example, because of enhanced security measures to ensure the safety of employees and customers or higher insurance premiums. Terrorist attacks in Yemen on the USS Cole in 2000 and on the French tanker Limburg in 2002 seriously damaged that country's shipping industry. These attacks contributed to a 300 percent rise in insurance premiums for ships using that route and led ships to bypass Yemen entirely (Enders and Sandler, 2012). In this article we explore the economic burden of terrorism. It can take myriad forms, but we focus on three: national income losses and growth-[slowing]~~retarding~~ effects, dampened foreign direct investment, and disparate effects on international trade.

Terrorism will destroy the US econ along with those of other countries

(Dan Weil, 7-16-2015, "Celente: Terrorist Attack Would Crash World Economy," Newsmax, http://www.newsmax.com/Finance/StreetTalk/terrorist-gold-silver-HomelandSecurity/2011/07/07/id/402861)
Another terrorist attack would create a global economic disaster, says economic and political guru Gerald Celente, director of The Trends Research Institute. The wise investment strategy in such a scenario would be to buy silver and gold while selling currencies, he tells King World News. "What will another major terror strike mean should an attack hit one of the major NATO nations?" Celente says. "The effects this time will go global. Bank holidays will be called, the U.S. and other fragile economies will crumble, gold and silver will soar, and already troubled currencies will crash. Economic martial law will be declared, promised as a temporary measure. Once in place it will remain in place." And don't expect your ATM card to be of much use. "With banks closed and economic martial law in place, restrictions will be set on the amounts, times and frequencies of withdrawals (of cash). It will be essential to have a stash of cash on hand," Celente says.

Multiple shocks on econ after terror attacks—foreign direct investment, infrastructure, trade

Sandler and Ender 10

(Todd Sandler, Professor of International Relations and Economics at the University of Southern California, Walter Enders, Bidgood Chair of Economics and Finance at the University of Alabama, July 2010, http://www.utdallas.edu/~tms063000/website/Econ_Consequences_ms.pdf)

Terrorism can impose costs on a targeted country through a number of avenues. Terrorist incidents have economic consequences by diverting foreign direct investment (FDI), destroying infrastructure, redirecting public investment funds to security, or limiting trade. If a developing country loses enough FDI, which is an important source of savings, then it may also experience reduced economic growth. Just as capital may take flight from a country plagued by a civil war (see Collier et al., 2003), a sufficiently intense terrorist campaign may greatly reduce capital inflows (Enders and Sandler, 1996). Terrorism, like civil conflicts, may cause spillover costs 2 among neighboring countries as a terrorist campaign in a neighbor dissuades capital inflows, or a regional multiplier causes lost economic activity in the terrorism-ridden country to resonate throughout the region.1 In some instances, terrorism may impact specific industries as 9/11 did on airlines and tourism (Drakos, 2004; Ito and Lee, 2004). Another cost is the expensive security measures that must be instituted following large attacks – e.g., the massive homeland security outlays since 9/11 (Enders and Sandler, 2006, Chapter 10). Terrorism also raises the costs of doing business in terms of higher insurance premiums, expensive security precautions, and larger salaries to at-risk employees.

Domestic terrorism deters foreign direct investment – even small attacks crush investor confidence

Bandyopadhyay et al 15 -- Subhayu Bandyopadhyay is Research Officer at the Federal Reserve Bank of St. Louis and Research Fellow at IZA, Bonn, Germany. Todd Sandler is Vibhooti Shukla Professor of Economics and Political Economy at the University of Texas at Dallas. Javed Younasis Associate Professor of Economics at the American University of Sharjah, United Arab Emirates. "The Toll of Terrorism" http://www.imf.org/external/pubs/ft/fandd/2015/06/bandyopa.htm

Scaring off investors Increased terrorism in a particular area tends to depress the expected return on capital invested there, which shifts investment elsewhere. This reduces the stock of productive capital and the flow of productivity-enhancing technology to the affected nation. For example, from the mid-1970s through 1991, terrorist incidents reduced net foreign direct investment in Spain by 13.5 percent and in Greece by 11.9 percent (Enders and Sandler, 1996). In fact, the initial loss of productive resources as a result of terrorism may increase manyfold because potential foreign investors shift their investments to other, presumably safer, destinations. Abadie and Gardeazabal (2008) showed that a relatively small increase in the perceived risk of terrorism can cause an outsized reduction in a country's net stock of foreign direct investment and inflict significant damage on its economy. We analyzed 78 developing economies over the period 1984–2008 (Bandyopadhyay, Sandler, and Younas, 2014) and found that on average **a relatively small increase** in a country's domestic terrorist incidents per 100,000 persons **sharply reduced** net foreign direct investment. There was a similarly large reduction in net investment if the terrorist incidents originated abroad or involved foreigners or foreign assets in the attacked country. We also found that greater official aid flows can substantially offset the damage to foreign direct investment—perhaps in part because the increased aid allows recipient nations to invest in more effective counterterrorism efforts. Most countries that experienced above-average domestic or transnational terrorist incidents during 1970–2011 received less foreign direct investment or foreign aid than the average among the 122 in the sample (see table). It is difficult to assess causation, but the table suggests a troubling association between terrorism and depressed aid and foreign direct investment, both of which are crucial for developing economies. It is generally believed that there are higher risks in trading with a nation afflicted by terrorism, which cause an increase in transaction costs and tend to reduce trade. For example, after the September 11 attacks on New York City and the Washington, D.C., area, the U.S. border was temporarily closed, holding up truck traffic between the United States and Canada for an extended time. Nitsch and Schumacher (2004) analyzed a

sample of 200 countries over the period 1960–93 and found that when terrorism incidents in a pair of trading countries double in one year, trade between them falls by about 4 percent that same year. They also found that when one of two trading partners suffers at least one terrorist attack, it reduces trade between them to 91 percent of what it would be in the absence of terrorism. Blomberg and Hess (2006) estimated that terrorism and other internal and external conflicts retard trade as much as a 30 percent tariff. More specifically, they found that any trading partner that experienced terrorism experienced close to a 4 percent reduction in bilateral trade. But Egger and Gassebner (2015) found more modest trade effects. Terrorism had few to no short-term effects; it was significant over the medium term, which they defined as "more than one and a half years after an attack/incident." Abstracting from the impact of transaction costs from terrorism, Bandyopadhyay and Sandler (2014b) found that terrorism may not necessarily reduce trade, because resources can be reallocated. If terrorism disproportionately harmed one productive resource (say land) relative to another (say labor), then resources would flow to the labor-intensive sector. If a country exported labor-intensive goods, such as textiles, terrorism could actually lead to increased production and exportation. In other words, although terrorism may reduce trade in a particular product because it increases transaction costs, its ultimate impact may be either to raise or reduce overall trade. These apparently contradictory empirical and theoretical findings present rich prospects for future study. Of course terrorism has repercussions beyond human and material destruction and the economic effects discussed in this article. Terrorism also influences immigration and immigration policy. The traditional gains and losses from the international movement of labor may be magnified by national security considerations rooted in a terrorism response. For example, a recent study by Bandyopadhyay and Sandler (2014a) focused on a terrorist organization based in a developing country. It showed that the immigration policy of the developed country targeted by the terrorist group can be critical to containing transnational terrorism. Transnational terrorism targeted at well-protected developed countries tends to be more skill intensive: it takes a relatively sophisticated terrorist to plan and successfully execute such an attack. Immigration policies that attract highly skilled people to developed countries can drain the pool of highly skilled terrorist recruits and may cut down on transnational terrorism.

Retaliation Impacts

Terrorist retaliation causes nuclear war – draws in Russia and China

Robert **Ayson**, Professor of Strategic Studies and Director of the Centre for Strategic Studies: New Zealand at the Victoria University of Wellington, **2010** ("After a Terrorist Nuclear Attack: Envisaging Catalytic Effects," Studies in Conflict & Terrorism, Volume 33, Issue 7, July, Available Online to Subscribing Institutions via InformaWorld)

A terrorist nuclear attack, and even the use of nuclear weapons in response by the country attacked in the first place, would not necessarily represent the worst of the nuclear worlds imaginable. Indeed, there are reasons to wonder whether nuclear terrorism should ever be regarded as belonging in the category of truly existential threats. A contrast can be drawn here with the global catastrophe that would come from a massive nuclear exchange between two or more of the sovereign states that possess these weapons in significant numbers. Even the worst terrorism that the twenty-first century might bring would fade into insignificance alongside considerations of what a general nuclear war would have wrought in the Cold War period. And it must be admitted that as long as the major nuclear weapons states have hundreds and even thousands of nuclear weapons at their disposal, there is always the possibility of a truly awful nuclear exchange taking place precipitated entirely by state possessors themselves. But these two nuclear worlds—a non-state actor nuclear attack and a catastrophic interstate nuclear exchange—are not necessarily separable. It is just possible that some sort of terrorist attack, and especially an act of nuclear terrorism, could precipitate a chain of events leading to a massive exchange of nuclear weapons between two or more of the states that possess them. In this context, today's and tomorrow's terrorist groups might assume the place allotted during the early Cold War years to new state possessors of small nuclear arsenals who were seen as raising the risks of a catalytic nuclear war between the superpowers started by third parties. These risks were considered in the late 1950s and early 1960s as concerns grew about nuclear proliferation, the so-called n+1 problem. t may require a considerable amount of imagination to depict an especially plausible situation where an act of nuclear terrorism could lead to such a massive inter-state nuclear war. For example, in the event of a terrorist nuclear attack on the United States, it might well be wondered just how Russia and/or China could plausibly be brought into the picture, not least because they seem unlikely to be fingered as the most obvious state sponsors or encouragers of terrorist groups. They would seem far too responsible to be involved in supporting that sort of terrorist behavior that could just as easily threaten them as well. Some possibilities, however remote, do suggest themselves. For example, how might the United States react if it was thought or discovered that the fissile material used in the act of nuclear terrorism had come from Russian stocks,40 and if for some reason Moscow denied any responsibility for nuclear laxity? The correct attribution of that nuclear material to a particular country might not be a case of science fiction given the observation by Michael May et al. that while the debris resulting from a nuclear explosion would be "spread over a wide area in tiny fragments, its radioactivity makes it detectable, identifiable and collectable, and a wealth of information can be obtained from its analysis: the efficiency of the explosion, the materials used and, most important … some indication of where the nuclear material came from."41 Alternatively, if the act of nuclear terrorism came as a complete surprise, and American officials refused to believe that a terrorist group was fully responsible (or responsible at all) suspicion would shift immediately to state possessors. Ruling out Western ally countries like the United Kingdom and France, and probably Israel and India as well, authorities in Washington would be left with a very short list consisting of

North Korea, perhaps Iran if its program continues, and possibly Pakistan. But at what stage would Russia and China be definitely ruled out in this high stakes game of nuclear Cluedo? In particular, if the act of nuclear terrorism occurred against a backdrop of existing tension in Washington's relations with Russia and/or China, and at a time when threats had already been traded between these major powers, would officials and political leaders not be tempted to assume the worst? Of course, the chances of this occurring would only seem to increase if the United States was already involved in some sort of limited armed conflict with Russia and/or China, or if they were confronting each other from a distance in a proxy war, as unlikely as these developments may seem at the present time. The reverse might well apply too: should a nuclear terrorist attack occur in Russia or China during a period of heightened tension or even limited conflict with the United States, could Moscow and Beijing resist the pressures that might rise domestically to consider the United States as a possible perpetrator or encourager of the attack? Washington's early response to a terrorist nuclear attack on its own soil might also raise the possibility of an unwanted (and nuclear aided) confrontation with Russia and/or China. For example, in the noise and confusion during the immediate aftermath of the terrorist nuclear attack, the U.S. president might be expected to place the country's armed forces, including its nuclear arsenal, on a higher stage of alert. In such a tense environment, when careful planning runs up against the friction of reality, it is just possible that Moscow and/or China might mistakenly read this as a sign of U.S. intentions to use force (and possibly nuclear force) against them. In that situation, the temptations to preempt such actions might grow, although it must be admitted that any preemption would probably still meet with a devastating response.

Nuclear terrorism causes global nuclear escalation – national retaliation goes global

Morgan 9 (Dennis Ray, Professor of Foreign Studies at Hankuk University, "World on Fire: Two Scenarios of the Destruction of Human Civilization and Possible Extinction of the Human Race," Futures, Vol. 41, Issue 10, p683-693, ScienceDirect)

In a remarkable website on nuclear war, Carol Moore asks the question "Is Nuclear War Inevitable??" [10].4 In Section 1, Moore points out what most terrorists obviously already know about the nuclear tensions between powerful countries. No doubt, they've figured out that the best way to escalate these tensions into nuclear war is to set off a nuclear exchange. As Moore points out, all that militant terrorists would have to do is get their hands on one small nuclear bomb and explode it on either Moscow or Israel. Because of the Russian "dead hand" system, "where regional nuclear commanders would be given full powers should Moscow be destroyed," it is likely that any attack would be blamed on the United States" [10]. Israeli leaders and Zionist supporters have, likewise, stated for years that if Israel were to suffer a nuclear attack, whether from terrorists or a nation state, it would retaliate with the suicidal "Samson option" against all major Muslim cities in the Middle East. Furthermore, the Israeli Samson option would also include attacks on Russia and even "anti-Semitic" European cities [10]. In that case, of course, Russia would retaliate, and the U.S. would then retaliate against Russia. China would probably be involved as well, as thousands, if not tens of thousands, of nuclear warheads, many of them much more powerful than those used at Hiroshima and Nagasaki, would rain upon most of the major

cities in the Northern Hemisphere. Afterwards, for years to come, massive radioactive clouds would drift throughout the Earth in the nuclear fallout, bringing death or else radiation disease that would be genetically transmitted to future generations in a nuclear winter that could last as long as a 100 years, taking a savage toll upon the environment and fragile ecosphere as well.

Retaliation increases terrorism—more violence, easier recruitment

John A. **Nevin**, Behavior and Social Issues, 12, 109-128 (20**03**). Behaviorists for Social Responsibilit

Retaliation may reduce terrorism in several ways. Arresting terrorists takes them out of action and trying them within the criminal justice system legitimizes authority. Targeted killings of the leaders of terrorist organizations disrupt their operations and buy time while the terrorists regroup. Finally, large-scale attacks on terrorist groups and their supporters, coupled with mass arrests, reduce their numbers and may deter potential recruits to their cause. On the other hand, retaliation in any form may increase terrorism in several ways. It may incite terrorists to escalate the level of violence, increase their support in the population, and make it easier to recruit new members to their cause.

Retaliation is risky—multitude of escalation scenarios

Mallow 97

(Brittain P., 1997, The Industrial College of the Armed Forces, "Terror vs. Terror: Effects of Military Retaliation on Terrorism," http://www.au.af.mil/au/awc/awcgate/icaf/97-e-12.pdf)

Like terrorism, retaliation is a form of communication through violence. It can affect multiple audiences for many purposes: bolstering public opinion, destroying/disrupting terrorist infrastructure, and potentially deterring the choice of the terrorist tactic. Symmetry, proportionality, and discrimination in the targeting of retaliation all vary its effects on audiences. To deter terrorists and their supporters, retaliation must meet the requirements of deterrence theory: credibility, shared interest, and rationality. Examples of retaliation for terrorism indicate there are significant problems with its effectiveness as a deterrent. Its viability is diminished by the transience and fragility of credibility, the moral and legal "baggage" of retaliation itself, and the differences in values and interests between terrorists/supporters and retaliating states. Retaliation also presents substantial risks beyond its failure to deter. Force protection, dangers of escalatory violence, and risks of condemnation by the world community accompany the use of retaliation. These risks, combined with its questionable viability as a deterrent, make retaliation a difficult policy choice.

Breakdown of relations between the US and Pakistan causes conflict

Stephen **Tankel**, professor at American University and a nonresident fellow at the Carnegie Endowment for International Peace, *A Pakistan-Based Terrorist Attack on the U.S. Homeland*, August 20**11**

A successful terrorist attack of any proportion by a Pakistan-based group or groups would have significant domestic and foreign policy implications for the United States. Although the economic repercussions are unlikely to be as severe as those following 9/11, even a small attack could trigger a short-term dip in already shaky global markets. An attack also would reintroduce a sense of domestic vulnerability, particularly if it claims hundreds as opposed to tens of lives and/or the target is an iconic one. The origin of the attack—Pakistan—would cause a distraction from other pressing foreign

policy concerns. All of these issues would be magnified by the forthcoming presidential campaign season. The immediate impact on U.S.-Pakistan relations would depend on several factors—the nature and scale of the harm committed; which group(s), if any, claimed responsibility; the immediate public response by the Pakistan civilian government and military; and the level of cooperation they subsequently offered. The number of people killed is likely to be among the largest determining factors in a response, though an attack against a political or military target that causes few casualties could also have a major impact. Any indication that individuals or entities associated with the Pakistan army or ISI had foreknowledge of the strike or had in any way aided it would have severe consequences for the bilateral relationship. Even if there were no smoking gun, the involvement of a culprit with institutional ties to the state would be incredibly deleterious, as would Pakistan's failure to cooperate with U.S. authorities in the wake of the attack. Much rests on the bilateral relationship. A complete rupture is unlikely because both sides have a lot to lose. A further deterioration in relations could seriously compromise counterterrorism and nonproliferation interests, not to mention regional diplomatic initiatives, especially in Afghanistan. Pakistan's security establishment also might enact a short-term closure of corridors through which U.S. supplies pass into Afghanistan. Were a complete rupture to occur, this could lead to an indefinite closure of these corridors, an end to Pakistani support along the Durand Line, and an increased flow of insurgents across the border. The U.S. diplomatic mission to Pakistan could shrink significantly, Pakistani counterterrorism cooperation could cease, and in a worst-case scenario the threat to American

Anti-Black Terrorism Impact

Terrorists are destroying historically Black churches throughout the South in the wake of the mass murder in Charleston, South Carolina. This not only represents thousands of dollars in damages to the churches but also a resurfacing of decades of terror in the Jim Crow South.

Emma **Green**, managing editor of TheAtlantic.com, 7-1-20**15**, "Black Churches Are Burning Again in America," Atlantic, http://www.theatlantic.com/national/archive/2015/07/arson-churches-north-carolina-georgia/396881/

On Wednesday, July 1, a fire was reported at the Mount Zion African Methodist Episcopal Church in Greeleyville, South Carolina. The AP reports that an anonymous federal official said the fire did not appear to be intentionally set, but Winfred Pressley, a division operations officer at the regional Alcohol, Firearms, and Tobacco division, said that the investigation is still ongoing, as did other local investigators. Shanna Daniels, a spokesperson for the FBI, declined to comment on the case, but said that church arson "has been a hot topic over the past few days." "What's the church doing on fire?" Jeanette Dudley, **the associate pastor of God's Power Church of Christ in Macon, Georgia, got a call a little after 5 a.m. on Wednesday, June 24, she told a local TV news station**. **Her tiny church of about a dozen members had been burned, probably beyond repair**. The Bureau of Alcohol, Firearms, and Tobacco got called in, which has been the standard procedure for church fires since the late 1960s. **Investigators say they've ruled out possible causes like an electrical malfunction; most likely, this was arson. The very same night, many miles away in North Carolina, another church burned: Briar Creek Road Baptist Church, which was set on fire some time around 1 a.m. Investigators have ruled it an act of arson**, the AP reports; according to The Charlotte Observer, they haven't yet determined whether it might be a hate crime**. Two other predominantly black churches have been the target of possible arson in the past fornight: Glover Grove Missionary Baptist Church in Warrenville, South Carolina, which caught fire on Friday, and College Hill Seventh Day Adventist, which burned on Monday in Knoxville, Tennessee**. Investigators in Knoxville told a local news station they believed it was an act of vandalism, although they aren't investigating the incident as a hate crime. (There have also been at least four other cases of fires at churches in the past fortnight. At Fruitland Presbyterian Church in Gibson County, Tennessee, and the Greater Miracle Temple Apostolic Holiness Church in Tallahassee, Florida, officials suspect the blazes were caused by lightning and electrical wires, respectively, but investigations are still ongoing. A church that is not predominantly black—College Heights Baptist Church in Elyria, Ohio—was burned on Saturday morning. The fire appears to have been started in the sanctuary, and WKYC reports that the cause is still under investigation. The town's fire and police departments did not immediately return calls for

confirmation on Sunday.* And a Monday, June 29, fire at Disciples of Christ Ministries in Jackson, Mississippi, was ruled accidental.) **These fires join the murder of nine people at Charleston's Emanuel African Methodist Episcopal Church as major acts of violence perpetrated against predominantly black churches in the last fortnight. Churches are burning again in the United States, and the symbolism of that is powerful. Even though many instances of arson have happened at white churches, the crime is often association with racial violence: a highly visible attack on a core institution of the black community, often done at night, and often motivated by hate.** As my colleague David Graham noted last week, **the history of American church burnings dates to before the Civil War, but there was a major uptick in incidents of arson at black churches in the middle and late 20th century.** One of the most famous was the 1963 bombing of the 16th Street Baptist Church in Birmingham, Alabama, which killed four girls. Three decades later, cases of church arson rose sharply. In response, in 1995, President Bill Clinton also set up a church-arson investigative task force, and in 1996, Congress passed a law increasing the sentences for arsonists who target religious organizations, particularly for reasons of race or ethnicity. Between 1995 and 1999, Clinton's task force reported that it opened 827 investigations into burnings and bombings at houses of worship; it was later disbanded. In recent years, it's been harder to get a clear sense of the number of church fires across the country. The National Fire Protection Association reports that between 2007 and 2011, there were an average of 280 intentionally set fires at houses of worship in America each year, although a small percentage of those took place at other religious organizations, like funeral homes. One of the organization's staffers, Marty Ahrens, said that tracking church arson has become much more complicated since reporting standards changed in the late '90s. Sometimes, fires that are reported to the National Fire Incident Reporting System are considered "suspicious," but they can't be reported as arson until they're definitively ruled "intentional." Even then, it's difficult to determine what motivated an act of arson. "To know that something is motivated by hate, you either have to know who did it or they have to leave you a message in some way that makes it very obvious," she said. "There are an awful lot of [intentionally set fires] that are not hate crimes—they're run-of-the-mill kids doing stupid things." **The investigations in North Carolina, Georgia, South Carolina, Florida, Ohio, and Tennessee are still ongoing, and they may end up in that broad category of fires of suspicious, but ultimately unknowable, origin that Ahrens described. But no matter why they happened, these fires are a troubling reminder of the vulnerability of our sacred institutions in the days following one of the most violent attacks on a church in recent memory. It's true that a stupid kid might stumble backward into one of the most symbolically terrifying crimes possible in the United States, but that doesn't make the terror of churches burning any less powerful.**

What has the government done in response to this rise in terrorism? Nothing. Now, the aff calls to decrease domestic surveillance, making any chance of involving federal authorities to investigate who these terrorists are impossible. The burning of Black churches in the south necessitates an increase of domestic surveillance in order to prevent future horrific attacks.

Deirdre **Griswold**, 7-14-20**15**, "As Black churches burn, where are the feds?," Workers World, http://www.workers.org/articles/2015/06/29/as-black-churches-burn-where-are-the-feds/

As of June 29, six Black churches in the South have either been destroyed or suffered severe damage from fires since Charleston. At least three are confirmed to have been caused by arson, according to the Southern Poverty Law Center. The loss to the people of these communities comes to hundreds of thousands of dollars. **Worse, the torchings are a threat of further violence to a people whose painful history at the hands of white exploiters still resonates so strongly.** The first burning deemed by fire marshals to be arson destroyed the College Hills Seventh Day Adventist Church in Knoxville, Tenn., on June 22. The Knoxville fire department said the arsonist set multiple fires on the church's property. The church's van was also burned. The very next day, a fire in the sanctuary of God's Power Church of Christ in Macon, Ga., was also blamed on arson. And the day after that, a fire was deliberately set at the Briar Creek Baptist Church in Charlotte, N.C., that destroyed an education wing meant to house a summer program for children. The gymnasium and sanctuary burned, causing an estimated $250,000 in damage. That same week, three other Southern Black churches — in Tennessee, Florida and South Carolina — also suffered fires, although two may have had natural causes. Investigations are continuing. **After what happened in Charleston, S.C., there can be little doubt**

that the arson fires were set by white supremacists, whose outpourings of hate in print and on the Internet call again and again for violence against people of color, using at best flimsily disguised language and at worst the vilest and most degrading terms. One might think that mass murder of the type that happened in Charleston would immediately lead to arrests of those advocating race war against Black people. We have seen many examples in recent years of elaborate sting operations set up by the FBI and local police authorities to ensnare Black militants on charges of plotting terrorist acts — which government agents had encouraged and facilitated. But just as with the murders of the three civil rights workers in 1964 — James Chaney, Andrew Goodman and Michael Schwerner — by members of the Ku Klux Klan, the authorities have not intervened to stop such attacks, even though it is logical to assume that, in this day and age of wide surveillance, they have knowledge of them.

Although before Charleston, the FBI and NSA were not doing enough to fight right-wing terrorism, after the recent increase in attacks, the focus has shifted to fight right-wing and white supremacist extremists.

Jaeah **Lee**, 6-17-20**15**, "The Rise Of Violent Right-Wing Extremism, Explained," Mother Jones, http://www.motherjones.com/politics/2015/06/right-wing-extremism-explainer-charleston-mass-shooting-terrorism

The federal and local governments ramped up efforts to combat domestic terrorism of all kinds in the wake of the 1995 Oklahoma City bombing that killed 168 people. A few months following the 9/11 attacks, FBI official Dale Watson testified before the Senate Intelligence Committee that "right-wing groups continue to represent a serious terrorist threat." But Johnson, German, and others assert that **federal counterterrorism programs since 9/11 have focused overwhelmingly on the perceived threat from Islamic extremism**. That includes the Obama administration's "countering violent extremism" strategy, which "revolves around impeding the radicalization of violent jihadists," according to a 2014 Congressional Research Service report. **The attack in Charleston underscored "the failure of the federal government to keep closer tabs" on right-wing extremists,** argues Gerald Horne, a historian and civil rights activist at the University of Houston**. But the focus may soon increase. In February, CNN reported that DHS circulated an intelligence assessment that focused on the domestic terror threat posed by right-wing extremists**. Kurzman and Schanzer also point to **a handout from a training program sponsored by the Department of Justice, cautioning that the threat from antigovernment extremism "is real."**

As the aff calls for a decrease in surveillance of white terrorists, justifying the murder of black people and destruction of black religious sites, they ignore the unwarranted, unjust surveillance of Black and Brown people used by local police departments to further structural racism and criminalize people of color.

Malkia Amala **Cyril**, 4-1-20**15**, "Black America's State of Surveillance," The Progressive Inc., http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance

Ten years ago, on Martin Luther King Jr.'s birthday, my mother, a former Black Panther, died from complications of sickle cell anemia. Weeks before she died, the FBI came knocking at our door, demanding that my mother testify in a secret trial proceeding against other former Panthers or face arrest. My mother, unable to walk, refused. The detectives told my mother as they left that they would be watching her. They didn't get to do that. My mother died just two weeks later. My mother was not the only black person to come under the watchful eye of American law enforcement for perceived and actual dissidence. Nor is dissidence always a requirement for being subject to spying. **Files obtained during a break-in at an FBI office in 1971 revealed that African Americans, J. Edger Hoover's largest target group, didn't have to be perceived as dissident to warrant surveillance. They just had to be black. As I write this, the same philosophy is driving the increasing adoption and use of surveillance technologies by local law enforcement agencies across the United States**. Today, **media reporting on government surveillance is laser-focused on the revelations by Edward Snowden that millions of Americans were being spied on by the NSA. Yet my mother's visit from the FBI reminds me that, from the slave pass system to laws that deputized white civilians as enforcers of Jim Crow, black people and other people of color have lived for centuries with surveillance practices aimed at maintaining a racial hierarchy.** It's time for journalists to tell **a new story that does not start the clock when privileged classes learn they are targets of surveillance. We need to understand that data has historically been overused to repress dissidence, monitor perceived criminality, and perpetually maintain an impoverished underclass**. In an era of big data, the Internet has increased the speed and secrecy of data collection. Thanks to new surveillance technologies, law enforcement agencies are now able to collect massive amounts of indiscriminate data. Yet legal protections and policies have not caught up to this technological advance. Concerned advocates see mass surveillance as the problem and protecting privacy as the goal. Targeted surveillance is an obvious answer—it may be discriminatory, but it helps protect the privacy perceived as an earned privilege of the inherently innocent. The trouble is, targeted surveillance frequently includes the indiscriminate collection of the private data of people targeted by race but not involved in any crime. For targeted communities, there is little to no expectation of privacy from government or corporate surveillance. Instead, we are watched, either as criminals or as consumers. We do not expect policies to protect us. Instead, **we've birthed a complex and coded culture—from jazz to spoken dialects—in order to navigate a world in which spying, from AT&T and Walmart to public benefits programs and beat cops on the block, is as much a part of our built environment as the streets covered in our blood.** In a recent address, New York City Police Commissioner Bill Bratton made it clear: "2015 will be one of the most significant years in the history of this organization. It will be the year of technology, in which we literally will give to every member of this department technology that would've been unheard of even a few years ago." **Predictive policing, also known as "Total Information Awareness," is described as using advanced technological tools and data analysis to "preempt" crime. It utilizes trends, patterns, sequences, and affinities found in data to make determinations about when and where crimes will occur. This model is deceptive, however, because it presumes data inputs to be neutral. They aren't. In a racially discriminatory criminal justice system, surveillance technologies reproduce injustice.** Instead of reducing discrimination**, predictive policing is a face of what author Michelle Alexander calls the "New Jim Crow"—a de facto system of separate and unequal application of laws, police practices, conviction rates, sentencing terms, and conditions of confinement that operate more as a system of social control by racial hierarchy than as crime prevention or punishment.** In New York City, the predictive policing approach in use is "Broken Windows."

This approach to policing places an undue focus on quality of life crimes—like selling loose cigarettes, the kind of offense for which Eric Garner was choked to death. **Without oversight, accountability, transparency, or rights, predictive policing is just high-tech racial profiling—indiscriminate data collection that drives discriminatory policing practices**. As local law enforcement agencies increasingly adopt surveillance technologies, they use them in three primary ways: to listen in on specific conversations on and offline; to observe daily movements of individuals and groups; and to observe data trends**. Police departments like Bratton's aim to use sophisticated technologies to do all three. They will use technologies like license plate readers, which the Electronic Frontier Foundation found to be disproportionately used in communities of color and communities in the process of being gentrified. They will use facial recognition, biometric scanning software, which the FBI has now rolled out as a national system, to be adopted by local police departments for any criminal justice purpose. They intend to use body and dashboard cameras, which have been touted as an effective step toward accountability based on the results of one study, yet storage and archiving procedures, among many other issues, remain unclear. They will use Stingray cellphone interceptors. According to the ACLU, Stingray technology is an invasive cellphone surveillance device that mimics cellphone towers and sends out signals to trick cellphones in the area into transmitting their locations and identifying information. When used to track a suspect's cellphone, they also gather information about the phones of countless bystanders who happen to be nearby. The same is true of domestic drones, which are in increasing use by U.S. law enforcement to conduct routine aerial surveillance. While drones are currently unarmed, drone manufacturers are considering arming these remote-controlled aircraft with weapons like rubber bullets, tasers, and tear gas.** They will use fusion centers. Originally designed to increase interagency collaboration for the purposes of counterterrorism, these have instead become the local arm of the intelligence community. According to Electronic Frontier Foundation, there are currently seventy-eight on record. They are the clearinghouse for increasingly used "suspicious activity reports"—described as "official documentation of observed behavior reasonably indicative of pre-operational planning related to terrorism or other criminal activity." These reports and other collected data are often stored in massive databases like e-Verify and Prism. As anybody who's ever dealt with gang databases knows, it's almost impossible to get off a federal or state database, even when the data collected is incorrect or no longer true. **Predictive policing doesn't just lead to racial and religious profiling—it relies on it. Just as stop and frisk legitimized an initial, unwarranted contact between police and people of color, almost 90 percent of whom turn out to be innocent of any crime, suspicious activities reporting and the dragnet approach of fusion centers target communities of color. One review of such reports collected in Los Angeles shows approximately 75 percent were of people of color. This is the future of policing in America, and it should terrify you as much as it terrifies me**. Unfortunately, it probably doesn't, because my life is at far greater risk than the lives of white Americans, especially those reporting on the issue in the media or advocating in the halls of power**. One of the most terrifying aspects of high-tech surveillance is the invisibility of those it disproportionately impacts. The NSA and FBI have engaged local law enforcement agencies and electronic surveillance technologies to spy on Muslims living in the United States. According to FBI training materials uncovered by Wired in 2011, the bureau taught agents to treat "mainstream" Muslims as supporters of terrorism, to view charitable donations by Muslims as "a funding mechanism for combat," and to view Islam itself as a "Death Star" that must be destroyed if terrorism is to be contained**. From New York City to Chicago and beyond, local law enforcement agencies have

expanded unlawful and covert racial and religious profiling against Muslims not suspected of any crime. There is no national security reason to profile all Muslims. At the same time, almost 450,000 migrants are in detention facilities throughout the United States, including survivors of torture, asylum seekers, families with small children, and the elderly. Undocumented migrant communities enjoy few legal protections, and are therefore subject to brutal policing practices, including illegal surveillance practices. According to the Sentencing Project, of the more than 2 million people incarcerated in the United States, more than 60 percent are racial and ethnic minorities. But by far, the widest net is cast over black communities. Black people alone represent 40 percent of those incarcerated. More black men are incarcerated than were held in slavery in 1850, on the eve of the Civil War. Lest some misinterpret that statistic as evidence of greater criminality, a 2012 study confirms that black defendants are at least 30 percent more likely to be imprisoned than whites for the same crime. This is not a broken system, it is a system working perfectly as intended, to the detriment of all. The NSA could not have spied on millions of cellphones if it were not already spying on black people, Muslims, and migrants. **As surveillance technologies are increasingly adopted and integrated by law enforcement agencies today, racial disparities are being made invisible by a media environment that has failed to tell the story of surveillance in the context of structural racism. Reporters love to tell the technology story. For some, it's a sexier read. To me, freedom from repression and racism is far sexier than the newest gadget used to reinforce racial hierarchy. As civil rights protections catch up with the technological terrain, reporting needs to catch up, too. Many journalists still focus their reporting on the technological trends and not the racial hierarchies that these trends are enforcing.** Martin Luther King Jr. once said, "Everything we see is a shadow cast by that which we do not see." Journalists have an obligation to tell the stories that are hidden from view. We are living in an incredible time, when migrant activists have blocked deportation buses, and a movement for black lives has emerged, and when women, queer, and trans experiences have been placed right at the center. The decentralized power of the Internet makes that possible. But the Internet also makes possible the high-tech surveillance that threatens to drive structural racism in the twenty-first century. **We can help black lives matter by ensuring that technology is not used to cement a racial hierarchy that leaves too many people like me dead or in jail. Our communities need partners, not gatekeepers. Together, we can change the cultural terrain that makes killing black people routine. We can counter inequality by ensuring that both the technology and the police departments that use it are democratized. We can change the story on surveillance to raise the voices of those who have been left out. There are no voiceless people, only those that ain't been heard yet. Let's birth a new norm in which the technological tools of the twenty-first century create equity and justice for all—so all bodies enjoy full and equal protection, and the Jim Crow surveillance state exists no more.**

Anti-black terror at the hand of white supremacist groups is THE biggest threat to U.S. national security. It did not end with the Jim Crow South, but as we have seen in Charleston, is an ongoing concern.

Julia **Craven**, 6-24-20**15**, "White Supremacists More Dangerous Than Foreign Terrorists: Study," Huffington Post, http://www.huffingtonpost.com/2015/06/24/domestic-terrorism-charleston_n_7654720.html

Nine people were added to a long list of lives taken by domestic terrorism when Dylann Roof allegedly began shooting inside a historic black church in Charleston, South Carolina, on June 17.

At least 48 people have been killed stateside by right-wing extremists in the 14 years since since the September 11 attacks -- almost twice as many as were killed by self-identified jihadists in that time, according to a study released Wednesday by the New America Foundation, a Washington, D.C., research center. **The study found that radical anti-government groups or white supremacists were responsible for most of the terror attacks. The data counters many conventional thoughts on what terrorism is and isn't. Since Sept. 11, many Americans attribute terror attacks to Islamic extremists instead of those in the right wing. But the numbers don't back up this popular conception,** said Charles Kurzman, a professor at the University of North Carolina at Chapel Hill. Kurzman is co-authoring a study with David Schanzer of Duke University, set to be published Thursday, that asks police departments to rank the three biggest threats from violent extremism in their jurisdiction. **Law enforcement agencies reported they were more concerned about the activities of right-wing extremist groups than Islamic extremists in their jurisdictions** (about 74 percent versus 39 percent) **due to the "menacing" rhetoric used by some of these groups -- and that they were training officers to take caution when they saw signs of potentially violent individuals,** Kurzman and Schanzer found. "**Muslim extremism was taken seriously in many of these jurisdictions that we surveyed… but overall, they did not see as much of an issue with Muslim extremism as with right-wing extremism in their locations,"** Kurzman told The Huffington Post. He added that it's hard to get a definitive statistical picture of plots and acts of violent extremism since that definition tends to vary and data for incidents nationwide is hard to come by. **The accused Charleston shooter is currently being investigated under domestic terrorism charges by the Department of Justice -- a move that acknowledges the long history of anti-black terrorist attacks.** America's first federal anti-terrorism law, known as the Third Force Act or the Ku Klux Klan Act, which was passed by Congress in 1871, caused nine counties in South Carolina to be placed under martial law and led to thousands of arrests. The Supreme Court ruled the law unconstitutional in 1882. David Pilgrim, the founder and director of the Jim Crow Museum at Ferris State University, told HuffPost in February that the actions of foreign extremist groups are no better or worse than the historic violence against African-Americans by domestic actors. "There's nothing you're going to see today that's not going to have already occurred in the U.S.," he said. "**If you think of these groups that behead now -- first of all, beheading is barbaric but it's no more or less barbaric than some of the lynchings that occurred in the U.S." Pilgrim said he found it offensive that, after Sept. 11, some Americans bemoaned that terrorism had finally breached U.S. borders. "That is ignoring and trivializing -- if not just summarily dismissing -- all the people, especially the peoples of color in this country, who were lynched in this country; who had their homes bombed in this country; who were victims of race riots," he said evoking lynching victims who were often burned, castrated, shot, stabbed -- and in some cases beheaded. And while most officially acknowledged anti-black terrorism cases occurred during the eras of slavery, Reconstruction and Jim Crow, as recent news demonstrate, this type of terrorism is still an ongoing concern.**

Turns Case

Terrorism is used as a justification for increased surveillance – empirics prove and turns case

Haggerty and Gazso 20**05** (Kevin, Professor of Criminology and Sociology at the University of Alberta; Amber, Associate Professor in the Department of Sociology at York University, The Canadian Journal of Sociology / Cahiers canadiens de sociologie, Vol. 30, No. 2 (

Spring, 2005), pp. 169-187 “Seeing beyond the Ruins: Surveillance as a Response to Terrorist Threats” JSTOR; accessed 7/17/15 JH @ DDI)

A climate of fear and anxiety helped ease the passage of such laws (Davis, 2001). However, a great deal of organizational opportunism was also at work. Many of the surveillance proposals adopted in the days after the attack were recycled from earlier legislative efforts. In previous incarnations these proposals had often been legitimated as essential for the international "war on drugs" or to address other crimes, such as money laundering. The September 11 th attacks gave the authorities a new and apparently unassailable legitimation for long-standing legislative ambitions. Before the dust had settled on Manhattan, the security establishment had mobilized to expand and intensify their surveillance capabilities, justifying existing proposals as necessary tools to fight the new war against terrorism. Ultimately, the police, military and security establishment reaped an unanticipated windfall of increased funding, new technology and loosened legislative constraints by strategically invoking fears of future attacks. There are several examples of such opportunism. Since at least 1999, when Congress initially turned down their request, the U.S. Justice Department has lobbied for the development of new "secret search" provisions. Likewise, prior to the attacks, the FBI and the National Telecommunications and Information Systems Security Committee had a lengthy shopping list of desired surveillance-related measures including legal enhancements to their wiretapping capabilities, legal constraints on the public use of cryptography, and provisions for governmental agents to compel Internet service providers to provide information on their customers (Burnham, 1997). All of these proposals were recycled and implemented after the September 11th attacks now justified as integral tools in the "war on terrorism." New provisions requiring banks to exercise "due diligence" in relation to their large depositors were originally justified by the authorities as a means to counter the "war on drugs." The opportunism of many of these efforts was inadvertently revealed by an RCMP Sergeant when, during a discussion about new official antiterrorism powers to monitor financial transactions, he noted that: "We've been asking for something like this for four years. It's really our best weapon against biker gangs" [emphasis added] (Corcan, 2001). In Canada, the Federal Privacy Commissioner was particularly alarmed by the development of what he referred to as a "Big Brother database." This amounts to a detailed computerized record of information about Canadian travelers. Although justified as a means to counter terrorism, the data will be made available to other government departments for any purpose they deem appropriate. Such provisions raise the specter of informational "fishing expeditions." Indeed, the Canadian government has already indicated that this ostensible anti-terrorist database will be used to help monitor tax evaders and catch domestic criminals. It will also be used to scrutinize an individual's travel history and destinations, in an effort to try and determine whether they might be a pedophile or money launderer (Radwanski, 2002). While these are laudable goals, they also reveal how a host of other surveillance agendas have been furthered by capitalizing on the new anti-terrorism discourse.

Lone wolf terror attacks are used to justify disproportionate increases in surveillance and military operations abroad

Lennard, Senior News Analyst for Vice News, 10/27/**14** (Natasha Lennard, Brooklyn-based Senior News Analyst for Vice News, VICE News, October 27, 2014, “'Lone Wolf' Terrorist Acts Will Be Used to Justify the Surveillance State” https://news.vice.com/article/lone-wolf-terrorist-acts-will-be-used-to-justify-the-surveillance-state, accessed 7/17/15 JH @ DDI)

The phenomenon of individuals committing violent and murderous acts in the name of an ideology is nothing new in the US. The FBI's Operation Lone Wolf investigated white supremacists encouraging autonomous violent acts in the 1990s. Why, then, are we seeing pundits and politicians newly focus on the "lone wolf" category? There's no simple answer, but we can at the very least see that the old binary, distinguishing terror as the act of networked groups versus lone madman mass killings — a distinction that has tacitly undergirded post-9/11 conceptions of terrorism — doesn't serve the latest iteration of the war on terror. California Senator Dianne Feinstein, speaking on CNN's State of the Union on Sunday, suggested that "the Internet, as well as certain specific Muslim extremists, are really firing up this lone-wolf phenomenon." Whether intentionally or not, the Senate Intelligence Committee chair performed a lot of political work with that one comment. Crystallizing "lone wolves" as a key threat domestically helps legitimize the US's current military operation against the Islamic State in Iraq and Syria. With or without established connections, the Islamic State's far-reaching tentacles of online influence encouraging individuals worldwide cement the group as a threat to the homeland — which is always useful for politicians struggling to legally justify another protracted war. In this way, attributing attacks to homegrown "lone wolves" is more useful for current US political interests than attributing them to madness alone. The assumption that terror acts were always borne of connected networks

problematically buoyed domestic counter-terror efforts that saw entire communities profiled as potential threats. Which is not to say that "lone wolf terrorist" is a flawed designation for attacks by ideologically motivated individuals. In many ways it seems apt, and any challenge is welcome to the all too basic distinction that imbues group terror with motive while dismissing individual acts as madness. The "lone wolf" straddles the ill-conceived gap between madman and terrorist node. It's an intersection all too complicated for the inexpert punditry of Fox News: "They are terrorist acts, to be sure," Megyn Kelly said about Canadian gunman Michael Zehaf-Bibeau, adding "but this guy was also a nutcase." Furthermore, the assumption that terror acts were always borne of connected networks problematically buoyed domestic counter-terror efforts that saw entire communities profiled as potential threats. Under the premise that terror networks ran like arteries through US Muslim communities enabled an era of profile-driven preemptive policing that has been nothing short of racist. Entire mosques in New York were designated terrorist organizations to enable police surveillance. The NSA's meta-data collections claim justifiability on the premise that terror was locatable by tracing networks of communication. The "lone wolf" phenomenon should at least prompt the questioning of the sort of profile-based counter-terror efforts that assumed terror lurked in any network of Muslims, and that the mass hoarding of communications data was vital to national security. However, the rhetoric surrounding this type of domestic threat already bodes ill for civil liberties. If the hunt for terrorist networks has been plagued by ethnic profiling and overreaching spycraft, an established threat of "lone wolf" attacks gives a defensive imprimatur for unbounded NSA-style surveillance — anyone can wield a hatchet with ideological ire. As Chairman of the House Homeland Security Committee Michael McCaul said on This Week, finding such lone actors in advance of attacks is like "finding a needle in a haystack." And as Feinstein said the same day, "You have to be able to watch it, and you have to be able to disrupt them." As such, the era of the "lone wolf" terrorist does not only spell the end of the bunk distinction between motivated group and deranged individual. It ushers in the dawn of a new era of justification for our totalized state of surveillance and national security paranoia.

Surveillance would increase after a terrorist attack

Feaver 1/13/15

(Peter D., 1/13/15, Foreign Policy, "10 Lessons to Remember After a Terrorist Attack," Peter is a professor of political science and public policy and Bass Fellow @ Duke University, and director of the Triangle Institute for Security Studies and the Duke Program in American Grand Strategy, http://foreignpolicy.com/2015/01/13/ten-lessons-to-remember-after-a-terrorist-attack/, 7/16/15, SM)

In particular, it is striking how some of the things that were "obvious" in the days and weeks after 9/11, but then were gradually forgotten, have become obvious again:∂ Terrorists succeed when they are abetted by intelligence failures. Or, put another way, terrorists only need to get lucky once to "succeed," whereas counterterrorism has to be lucky all the time to "succeed."∂ Even robust intelligence and law enforcement may not guarantee 100 percent safety and security. By global standards — certainly by the standards of Western democracies — France has a particularly formidable counterterrorist structure. But it failed in this instance.∂ When terrorists succeed in an attack, citizens demand that the government do more to protect them — even if they have already been doing a lot. And **steps that would have seemed heavy handed before the attack, say aggressive surveillance of suspected terrorists** or visible demonstrations of presence by the security forces, **are deemed not just tolerable but necessary.** Moreover, savvy political leaders will understand that one of the benefits of a stronger official response is that it is a hedge both against dangerously stronger vigilantism and also against additional pressure from some segments of the public to do more than is wise.

Terrorism leads to crackdowns

History.com, *Reaction to 9/11,* http://www.history.com/topics/reaction-to-9-11, 2010

"Today," the French newspaper Le Monde announced on September 12, 2001, "we are all Americans." People around the world agreed: The terrorist attacks of the previous day had felt like attacks on everyone, everywhere. They provoked an unprecedented expression of shock, horror, solidarity and sympathy for the victims and their families. Citizens of 78 countries died in New York, Washington, D.C., and Pennsylvania on September 11, and people around the world

mourned lost friends and neighbors. They held candlelight vigils. They donated money and goods to the Red Cross and other rescue and relief organizations. Flowers piled up in front of American embassies. Cities and countries commemorated the attacks in a variety of ways: The Queen Mother sang the American national anthem at Buckingham Palace's Changing of the Guard, while in Brazil, Rio de Janeiro put up huge billboards that showed the city's famous Christ the Redeemer statue embracing the New York City skyline. Meanwhile, statesmen and women rushed to condemn the attacks and to offer whatever aid they could to the United States. Russian president Vladimir Putin called the strikes "a blatant challenge to humanity," while German chancellor Gerhard Schroeder declared that the events were "not only attacks on the people in the United States, our friends in America, but also against the entire civilized world, against our own freedom, against our own values, values which we share with the American people." He added, "We will not let these values be destroyed." Canadian Prime Minister Jean Chretien denounced the "cowardly and depraved assault." He tightened security along the border and arranged for hundreds of grounded airplanes to land at Canadian airports. Even leaders of countries that did not tend to get along terribly well with the American government expressed their sorrow and dismay. The Cuban foreign minister offered airspace and airports to American planes. Chinese and Iranian officials sent their condolences. And the Palestinian leader Yasser Arafat, visibly dismayed, told reporters in Gaza that the attacks were "unbelievable, unbelievable, unbelievable." "We completely condemn this very dangerous attack," he said, "and I convey my condolences to the American people, to the American president and to the American administration." But public reaction was mixed. The leader of the Islamic militant group Hamas announced that "no doubt this is a result of the injustice the U.S. practices against the weak in the world." Likewise, people in many different countries believed that the attacks were a consequence of America's cultural hegemony, political meddling in the Middle East and interventionism in world affairs. The Rio billboards hadn't been up for long before someone defaced them with the slogan "The U.S. is the enemy of peace." Some, especially in Arab countries, openly celebrated the attacks. But most people, even those who believed that the United States was partially or entirely responsible for its own misfortune, still expressed sorrow and anger at the deaths of innocent people. On September 12, the 19 ambassadors of the North Atlantic Treaty Organization (NATO) declared that the attack on the United States was an attack on all of the member nations. This statement of solidarity was mostly symbolic–NATO did not authorize any specific military action–but it was still unprecedented. It was the first time that the organization had ever invoked the mutual defense section of its charter (intended to protect vulnerable European nations from Soviet invasion during the Cold War). NATO eventually sent five airplanes to help keep an eye on American airspace. Likewise, on September 12 the United Nations Security Council called on all nations to "redouble their efforts" to thwart and prosecute terrorists. Two weeks later, it passed another resolution that urged states to "suppress the financing of terrorism" and to aid in any anti-terrorism campaigns. But these declarations of support and solidarity didn't mean that other countries gave the United States a free hand to retaliate however, and against whomever, it pleased. Allies and adversaries alike urged caution, warning that an indiscriminate or disproportionate reaction could alienate Muslims around the world. In the end, almost 30 nations pledged military support to the United States, and many more offered other kinds of cooperation. Most agreed with George Bush that, after September 11, the fight against terrorism was "the world's fight."

Moten DDI

Notes

One very interesting combination of strategies is global local and the neoliberalism PIK. Their use of the word neoliberalism posits that it is some monolithic structure that is “out there” – we should recognize that it exists in contingent relationships in our own lives.

A. USFG is the government established in the constitution

US Legal 13 "Legal Terms, Definitions, and Dictionary"
http://definitions.uslegal.com/u/united-states-federal-government/

The United States Federal Government is established by the US Constitution. The Federal Government shares sovereignty over the United Sates with the individual governments of the States of US. The Federal government has three branches: i) the legislature, which is the US Congress, ii) Executive, comprised of the President and Vice president of the US and iii) Judiciary. The US Constitution prescribes a system of separation of powers and 'checks and balances' for the smooth functioning of all the three branches of the Federal Government. The US Constitution limits the powers of the Federal Government to the powers assigned to it; all powers not expressly assigned to the Federal Government are reserved to the States or to the people.

its, adj. and pron. Pronunciation: /ɪts/

A. adj. As genitive of the pronoun, now possessive adjective.

Of or belonging to it, or that thing (Latin ejus); also refl., Of or belonging to itself, its own (Latin suus).The reflexive is often more fully its own, for which in earlier times the own, it own, were used: see own adj. and pron.

B. pron. As possessive pronoun.

[Compare his pron.2] The absolute form of prec., used when no n. follows: Its one, its ones. rare.

B. The affirmative interpretation is bad for debate

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. There are literally infinite actors of surveillance – state governments, foreign governments, schoolteachers, and security guards. They don't have to defend USFG action, but limiting critique to USFG surveillance is a necessary check on topic explosion.

C. T IS A VOTER because the opportunity to prepare promotes better debating

Model Minority C/A

CX

Why is it that blacks are denied credit?

If we win that the presentation of the 1AC was net bad, do we win the debate?

1NC

The myth of the model minority perpetuates other racial oppression – whiteness has used it as a justification to demonize blacks and Latinos.

Noy **Thrupkaew**, 3-25-**2002** "The Myth of the Model Minority," American Prospect, http://prospect.org/article/myth-model-minority AC

The Southeast Asia Resource Action Center (SEARAC), an advocacy group in Washington, estimates that more than 2.2 million Southeast Asians now live in the United States. They are the largest group of refugees in the country and the fastest-growing minority. Yet for most policy makers, the plight of the many Mali Keos has been overshadowed by the well-known success of the Asian immigrants who came before and engendered the myth of the "model minority." Indeed, conservatives have exploited this racial stereotype -- arguing that Asians fare well in the United States because of their strong "family values" and work ethic. These values, they say, and not government assistance, are what all minorities need in order to get ahead. Paradoxically, Southeast Asians -- supposedly part of the model minority -- may be suffering most from the resulting public policies. They have been left in the hands of underfunded community-assistance programs and government agencies that, in one example of well-intentioned incompetence, churn out forms in Khmer and Lao for often illiterate populations. But fueled by outrage over bad services and a fraying social safety-net, Southeast Asian immigrants have started to embrace that most American of activities, political protest -- by pushing for research on their communities, advocating for their rights, and harnessing their political power. The model-minority myth has persisted in large part because political conservatives are so attached to it. "Asian Americans have become the darlings of the right," said Frank Wu, a law professor at Howard University and the author of Yellow: Race beyond Black and White. "The model-minority myth and its depiction of Asian-American success tells a reassuring story about our society working." The flip side is also appealing to the right. Because Asian Americans' success stems from their strong families and their dedication to education and hard work, conservatives say, then the poverty of Latinos and African Americans must be explained by their own "values": They are poor because of their nonmarrying, school-skipping, and generally lazy and irresponsible behavior, which government handouts only encourage.

The myth papers over Southeast Asian poverty – that causes psychic violence against Asians.

Noy **Thrupkaew**, 3-25-**2002** "The Myth of the Model Minority," American Prospect, http://prospect.org/article/myth-model-minority AC

What most dramatically skews the data, though, is the fact that about half the population of Asian (or, more precisely, Asian-Pacific Islander) Americans is made up of the highly educated immigrants who began arriving with their families in the 1960s. The plight of refugees from Cambodia, Laos, and Vietnam, who make up less than 14 percent of Asian Americans, gets lost in the averaging. Yet these refugees, who started arriving in the United States after 1975, differ markedly from the professional-class Chinese and Indian immigrants who started coming 10 years earlier. The Southeast Asians were fleeing wartime persecution and had few resources. And those disadvantages have had devastating effects on their lives in the United States. The most recent census data available show that 47 percent of Cambodians, 66 percent of Hmong (an ethnic group that lived in the mountains of Laos), 67 percent of Laotians, and 34 percent of Vietnamese were impoverished in 1990 -- compared with 10 percent of all Americans and 14 percent of all Asian Americans. Significantly, **poverty rates among Southeast Asian Americans were much higher than those of even the "nonmodel" minorities**: 21 percent of African Americans and 23 percent of Latinos

were poor. Yet despite the clear inaccuracies created by lumping populations together, the federal government still groups Southeast Asian refugees under the overbroad category of "Asian" for research and funding purposes. "We've labored under the shadow of this model myth for so long," said KaYing Yang, SEARAC's executive director. "There's so little research on us, or we're lumped in with all other Asians, so people don't know the specific needs and contributions of our communities." To get a sense of those needs, one has to go back to the beginning of the Southeast Asian refugees' story and the circumstances that forced their migration. In 1975, the fall of Saigon sent shock waves throughout Southeast Asia, as communist insurgents toppled U.S.-supported governments in Vietnam and Cambodia. In Laos, where the CIA had trained and funded the Hmong to fight Laotian and Vietnamese communists as U.S. proxies, the communists who took over vowed to purge the country of ethnic Hmong and punish all others who had workedwith the U.S. government. The first refugees to leave Southeast Asia tended to be the most educated and urban, English-speakers with close connections to the U.S. government. One of them was a man who wishes to be identified by the pseudonym John Askulraskul. He spent two years in a Laotian re-education camp -- punishment for his ability to speak English, his having been educated, and, most of all, his status as a former employee of the United States Agency for International Development (USAID). "They tried to brainwash you, to subdue you psychologically, to work you to death on two bowls of rice a day," Askulraskul told me recently. After being released, he decided to flee the country. He, his sister, and his eldest daughter, five and a half years old, slipped into the Mekong River with a few others. Clinging to an inflated garbage bag, Askulraskul swam alongside their boat out of fear that his weight would sink it. After they arrived on the shores of Thailand, Askulraskul and his daughter were placed in a refugee camp, where they waited to be reunited with his wife and his two other daughters. It was not to be. "My wife tried to escape with two small children. But my daughters couldn't make it" -- he paused, drawing a ragged breath -- "because the boat sank." Askulraskul's wife was swept back to Laos, where she was arrested and placed in jail for a month. She succeeded in her next escape attempt, rejoining her suddenly diminished family. Eventually, with the help of his former boss at USAID, they moved to Connecticut, where Askulraskul found work helping to resettle other refugees. His wife, who had been an elementary-school teacher, took up teaching English as a second language (ESL) to Laotian refugee children. His daughter adjusted quickly and went to school without incident. Askulraskul now manages a project that provides services for at-risk Southeast Asian children and their families. "The job I am doing now is not only a job," he said. "It is part of my life and my sacrifice. My daughter is 29 now, and I know raising kids in America is not easy. I cannot save everybody, but there is still something I can do." Like others among the first wave of refugees, Askulraskul considers himself one of the lucky ones. His education, U.S. ties, and English-language ability --everything that set off the tragic chain of events that culminated in his daughters' deaths -- proved enormously helpful once he was in the United States. But the majority of refugees from Southeast Asia had no such advantages. Subsequent waves frequently hailed from rural areas and lacked both financial resources and formal schooling. Their psychological scars were even deeper than the first group's, from their longer years in squalid refugee camps or the killing fields. The ethnic Chinese who began arriving from Vietnam had faced harsh discrimination as well, and the Amerasians -- the children of Vietnamese women and U.S. soldiers -- had lived for years as pariahs. Once here, these refugees often found themselves trapped in poverty, providing low-cost labor, and receiving no health or other benefits, while their lack of schooling made decent jobs almost impossible to come by. In 1990, two-thirds of Cambodian, Laotian, and Hmong adults in America had less than a high-school education -- compared with 14 percent of whites, 25 percent of African Americans, 45 percent of Latinos, and 15 percent of the general Asian-American population. Before the welfare-reform law cut many of them off, nearly 30 percent of Southeast Asian Americans were on welfare -- the highest participation rate of any ethnic group. And having such meager incomes, they usually lived in the worst neighborhoods, with the attendant crime, gang problems, and poor schools. But shouldn't the touted Asian dedication to schooling have overcome these disadvantages, lifting the refugees' children out of poverty and keeping them off the streets? Unfortunately, it didn't. "There is still a high number of dropouts for Southeast Asians," Yang said. "And if they do graduate, there is a low number going on to higher education." Their parents' difficulty in navigating American school systems may contribute to the problem. "The parents' lack of education leads to a lack of role models and guidance. Without those things, youth can turn to delinquent behavior and in some very extreme cases, gangs, instead of devoting themselves to education," said Narin Sihavong, director of SEARAC's Successful New Americans Project, which interviewed Mali Keo. "This underscores the need for Southeast Asian school administrators or counselors who can be role models, ease the cultural barrier, and serve as a bridge to their parents." "Sometimes families have to choose between education and employment, especially when money is tight," said Porthira Chimm, a former SEARAC project director. "And unfortunately, immediate money concerns often win out." The picture that emerges -- of high welfare participation and dropout rates, low levels of education and income -- is startlingly similar to the situation of the poorest members of "nonmodel" minority groups. Southeast Asians, Latinos, and African Americans also have in common significant numbers of single-parent families. Largely as a result of the killing fields, nearly a quarter of Cambodian households are headed by single women. Other Southeast Asian families have similar stories. Sihavong's mother, for example, raised him and his five siblings on her own while his father was imprisoned in a Laotian re-education camp. No matter how "traditional" Southeast Asians may be, they share the fate of other people of color when they are denied access to good education, safe neighborhoods, and jobs that provide a living wage and benefits. But for the sake of preserving the model-minority myth, conservative policy makers have largely ignored the needs of Southeast Asian communities. One such need is for psychological care. Wartime trauma and "lack of English proficiency, acculturative stress, prejudice, discrimination, and racial hate crimes" place Southeast Asians "at risk for emotional and behavioral problems," according to the U.S. surgeon general's 2001 report on race and mental health. One random sample of Cambodian adults found that 45 percent had post-traumatic stress disorder and 51 percent suffered from depression. John Askulraskul's past reflects trauma as well, but his education, English-language ability, and U.S. connections helped level the playing field. Less fortunate refugees need literacy training and language assistance. They also need social supports like welfare and strong community-assistance groups. But misled by

the model-minority myth, many government agencies seem to be unaware that Southeast Asians require their services, and officials have done little to find these needy refugees or accommodate them. Considering that nearly two-thirds of Southeast Asians say they do not speak English very well and more than 50 percent live in linguistically isolated ethnic enclaves, the lack of outreach and translators effectively denies them many public services. The problem extends beyond antipoverty programs, as Mali Keo's story illustrates. After her husband left her, she formed a relationship with another man and had two more children. But he beat the family for years, until she asked an organization that served Cambodian refugees to help her file a restraining order. If she had known that a shelter was available, she told her interviewer, even one without Khmer-speaking counselors, she would have escaped much earlier. Where the government hasn't turned a blind eye, it has often wielded an iron fist. The welfare-reform law of 1996, which cut off welfare, SSI, and food-stamp benefits for most noncitizens -- even those who are legal permanent residents -- sent Southeast Asian communities into an uproar. Several elderly Hmong in California committed suicide, fearing that they would become burdens to their families. Meanwhile, the lack of literacy programs prevented (and still does prevent) many refugees from passing the written test that would gain them citizenship and the right to public assistance.

We advocate a counterhegemonic exposure of the myth of the model minority – challenging it is key to rupture dominant discourses and solve the aff.

Caroline **Hargreaves**, 20**10**, "How Important is Discourse to Social Change? Case: Micro-blogging Community Tumblr," London School of Economics and Political Science https://www.academia.edu/1635691/How_Important_is_Discourse_to_Social_Change_Case_Micro-blogging_Community_Tumblr

Discourse can be described as a set of values and beliefs that informs our social responses and actions, More importantly, a thorough understanding of the discursive forces that shape our social fabric presents a valuable opportunity and instrument for resistance groups to challenge dominant discourses. Foucault's famous work on the relationship between power and knowledge brings the debate to another level, where discourses serve as the meeting place of these two forces. This conception opens up possibilities to bring about change, as power in a Foucauldian perspective is ubiquitous and operates without agency, beyond traditional notions of the state and through culturally embedded factors. Foucault rejects the liberal notion that knowledge can flourish only in the absence of power (see Evans, 2005), which allows alternative discursive methods onto the scene. These can **challenge the way in which relations and structures of power are embedded in everyday life by providing alternative values and norms as well as morally validating the identities and perspectives of those oppressed by the existing relations and structures of power** (Stammers, 1999). This is why much attention should be paid (by actors seeking to challenge the status quo) towards discourse in particular in terms of locating both opportunities and constraints for social change. As argued by Hacking (1999:58) "Politics, ideology and power matter more than metaphysics to most advocates of construction. Talk of construction tends to undermine the authority of knowledge and categorization. It challenges complacent ways of doing things not by refuting or proposing better, but by 'unmasking'." This will reveal how categories of knowledge are used in power relationships and towards moulding the global society in a particular way. With reference to the discourse of human rights, Hunt (1990) argues that the Gramscian concepts of hegemony and counter-hegemony make it possible to advance a positive evaluation certain strategies within progressive politics. The 'discursive war of position' is here seen as taking practical measurements to bring about shifts and modifications in popular consciousness. In discourse specifically, Mouffe (2005:18) explains that "[e]very hegemonic order is susceptible of being challenged by counter-hegemonic practices, i.e. practices which will attempt to disarticulate the existing order so as to install other forms of hegemony." Hegemony then becomes a process that generates a question of culturally altering social consciousness, reworking what already exists and introducing elements that transcend dominant narratives of issues and movements. Without going too far into the reasons behind resisting the mainstream media logic, the main concerns are to what extent this logic can be seen as representative of the larger voice of society, locally and globally. Mass culture has been perceived to be an instrument of ideological dominance over 'social consciousness' (see Gramsci, 1971), or what Hirst (1976:386) later labeled the 'imaginary', shaping social subjects. Discourses are therefore not deliberately created narratives, but rather ideological extensions of the hegemonic forces in play on both macro- and micro levels of society. The democratic deficits inherent in a media system dominated by corporate and commercial structures are apparent alongside inequalities of access, representation and ideological power (Carroll and Hackett, 2006). At every point in history when a larger minority has felt oppressed by a smaller majority, revolutions have taken place, often manifested in large social movements. Melucci (1996:84) also takes the constructivist approach and writes that

at the core of social movements is the construction of collective identity, an interactive process that addresses the question of how a collective becomes a collective. Since our identities and cultures are ultimately shaped through cognitive perceptions and flows of information, its democratization is integral to the collective welfare and progression. Collective action therefore becomes a way of communicating a message to the rest of society. As argued by Faiclough and Wodak (1997: 258), discourse is "constitutive both in the sense that it helps to sustain and reproduce the social status quo, and in the sense that it contributes to transforming it." From the mere conception of ideas to the distribution of messages through e.g. self-mediation, policy-makers, marketing-companies, social movements and NGOs, the significance of discourse to progressive social change is clear.

2NC

Whites deny credit to blacks because they can say "look at these hardworking Asians, be like them" – alt is a better starting point

Their silence provides legitimacy to the myth of the model minority – they single out blacks and Latinx, ignores Southeast Asians who face the same problems

Link of silence is uniquely justified – the myth of the model minority reproduces itself because of its seeming facticity. Any attempt to discuss something like lack of credit without considering the myth is doomed to failure – at worst, it's a solvency takeout to the aff.

Global Local

1NC

The 1AC is an act of world ordering – images of disempowering structures produce a vision of the world that negates activism at the level of the self. The I-In-Relationship is a necessary starting point for changing larger structures

Jayan **Nayar**, Law—University of Warwick, **1999** "SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity ," 9 Transnat'l L. & Contemp. Probs. 599

Despite the fixation of the beneficiaries of ordered worlds, even the ordered "critic," with the prescribed languages, visions and possibilities of human socialities, other realities of humanity nevertheless persist. Notwithstanding the globalization of social concern and the transnationalization of professionalized critique and reformatory action, struggles against violence remain energized, persistent and located. They are waged through the bodies of lives lived in experiential locations against real instruments of terror, functioning within embodied sites of violence. Non-information and non-representation of the existence of such struggles, and non-learning of the wisdoms thus generated do not negate their truths or the vibrancy of their socialities. 51 "We" are participants in ordered worlds, not merely observers. The choice is whether we wish to recognize our own locations of ordered violence and participate in the struggle to resist their orderings, or whether we wish merely to observe violence in far-off worlds in order that our interventionary participation "out there" never destabilizes the ground upon which we stand. I suggest that we betray the spirit of transformatory struggle, despite all our expressions of support and even actions of professionalized expertise, if our own locations, within which are ordered and from which we ourselves order, remain unscrutinized. And so, what might I contribute to the present collective exercise toward a futuristic imaging of human possibilities? I am unsure. It is only from my view of the "world," after all, that I can project my visions. These visions do not go so far as to visualize any "world" in its totality; they are uncertain even with regard to worlds closer to home, worlds requiring transformatory actions all the same. Instead of fulfilling this task of imagining future therefore I simply submit the following two "poems." [*629] Changing the "I" of the World: The Essential Message of Mahatmas?" We are today bombarded by images of our "one world." We speak of the world as "shrinking" into a "global village." We are not all fooled by the implicit benign-ness of this image of "time-space" contracted--so we also speak of "global pillage." This astuteness of our perceptions, however, does not prevent us from our delusion of the "global;" the image of the "global" world persists even for many activists amongst us who struggle to "change" the world. This is recent delusion. It is a delusion which anesthetizes us from the only world which we can ever locate ourselves in and know--the worlds of "I"-in relationships. The "I" is seldom present in "emancipatory" projects to change the world. This is because the "relational I"-world and the "global"-world are negations of one another; the former negates the concept of the latter whilst the latter negates the life of the former. And concepts are more amenable to scrutiny than life. The advance in technologies of image-ing enables a distanciation of scrutiny, from the "I"-world of relationships to the "global"-world of abstractions. As we become fixated with the distant, as we consume the images of "world" as other than here and now, as we project ourselves through technological time-space into worlds apart from our here and now, as we become "global," we are relieved of the gravity of our present. We, thus, cease the activism of self (being) and take on the mantle of the "activist" (doing). This is a significant displacement. 1NC That there is suffering all over the world has indeed been made more visible by the technologies of image-ing. Yet for all its consequent fostering of "networks," images of "global" suffering have also served to disempower. By this, we mean not merely that we are filled with the sense that the forces against which the struggle for emancipations from

injustice and exploitation are waged are pervasive and, therefore, often impenetrable, but, more importantly, that it diverts our gaze away from the only true power that is in our disposal--the power of self-change in relationships of solidarities. The "world," as we perceive it today, did not exist in times past. It does not exist today. There is no such thing as the global "one world." The world can only exist in the locations and experiences revealed through and in human relationships. It is often that we think that to change the world it is necessary to change the way power is exercised in the world; so we go about the business of exposing and denouncing the many power configurations that dominate. Power indeed does lie at the core of human misery, yet we blind ourselves if we regard this power as the power out there. Power, when all the complex networks of its reach are untangled, is personal; power does not exist out there, [*630] it only exists in relationship. To say the word, power, is to describe relationship, to acknowledge power, is to acknowledge our subservience in that relationship. There can exist no power if the subservient relationship is refused--then power can only achieve its ambitions through its naked form, as violence. Changing the world therefore is a misnomer for in truth it is relationships that are to be changed. And the only relationships that we can change for sure are our own. And the constant in our relationships is ourselves--the "I" of all of us. And so, to change our relationships, we must change the "I" that is each of us. Transformations of "structures" will soon follow. This is, perhaps, the beginning of all emancipations. This is, perhaps, the essential message of Mahatmas.

World-ordering is the ordering of worlds – a civilizing mission that subdues assimilates and eradicates the other

Jayan **Nayar**, Law—University of Warwick, **1999** "SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity ," 9 Transnat'l L. & Contemp. Probs. 599

[*606] Distinguishing these two meanings of "order" provides us with radically opposed directions of analysis and orientations for future imagings of social relations. Although the rhetoric of world-order would focus on visions of some projected "world" that provides the aspiration for collective endeavors, "order" does not come to be without necessary "ordering;" the "world" of "world-order" has not come to be without the necessary ordering of many worlds. The ordering and the ordered, the world of order and the ordered world, all are inextricable parts of the past and the present of "civilization." Despite the vision of world-order founded on a notion of a universal society of humankind aspiring toward a universal common good, (first given meaning within a conceptual political-legal framework through the birth of the so-called "Westphalian" state system n14), the materialities of "ordering" were of a different complexion altogether. Contrary to the disembodied rhetoric of world-order as bloodless evolution, the new images of the world and languages of "globality" did not evolve out of a sense of "hospitality" n15 to the "other," the "stranger." Rather, the history of the creation of the post-Westphalian "world" as one world, can be seen to be most intimately connected with the rise of an expansionist and colonizing world-view and practice. Voyages of "discovery" provided the necessary reconnaissance to image this "new world." Bit by bit, piece by piece, the jigsaw of the globe was completed. With the advance of the "discoverer," the "colonizer," the "invader," the "new" territories were given meaning within the hermeneutic construct that was the new "world." [*607] The significance of this evolution of the world does not, however, lie merely in its acquiring meaning. It is not simply the "idea" of the world that was brought to prominence through acts of colonization. The construction of the "stage" of the world has also occurred, albeit amid the performance of a violent drama upon it. The idea of a single world in need of order was followed by a succession of chained and brutalized bodies of the "other." The embodied world that has been in creation from the "colonial" times to the present could not, and does not, accommodate plurality. The very idea of "one world" contains the necessary impetus for the absorption, assimilation, if not destruction, of existing worlds and the genocide of existing socialities. This violence of "order-ing" within the historical epoch of colonialism is now plainly

visible. Through "colonialism" was reshaped the material basis of exchange that determined human relationships. Put differently, the very idea of what is "human" was recast by the imposed value-systems of the "civilizing" process that was colonialism. To be human, to live, and to relate to others, thus, both lost and gained meaning. Lost were many pre-colonial and indigenous conceptions of human dignity, of subsistence, production, consumption, wealth and poverty. Gained was the advent of the human "self" as an objective "economic" agent and, with it, the universals of commodification as the basis for human relations. Following this transformation of the material political-economy of the colonized, or "ordered," colonialism entrenched the "state" as the symbolic "political" institution of "public" social relations. The effect of this "colonization of the mind" was that the "political-economic" form of social organization--the state--was universalized as common, if not "natural," resulting in a homogenization of "political" imagination and language. Thus, diversity was unified, while at the same time, unity was diversified. The particularities and inconveniences of human diversity--culture and tradition--were subordinated to the "civilized" discourse of secular myths (to which the "rule of law" is central), n16 while concurrently, humanity was formally segregated into artificial "states," enclosures of mythic solidarities and common destinies. This brief remembering of colonialism as an historic process, provides us with the most explicit lessons on the violence of the "ordering" of "worlds." From its history we see that an important feature of ordering prevails. The world of those who "order" is the destruction of the "worlds" of those ordered. So many ideologies of negation and (re)creation served to justify this "beginning"--terra nullius, the "savage" native, the "civilizing mission." n17 The [*608] "world," after all, had to be created out of all this "unworldly" miasma, all for the common good of the universal society of humankind. Although historical colonialism as a formal structure of politico-legal ordering of humanity has come and gone, the violence of colonization is very much a persistent reality. A striking feature of historical world-orderings was the confidence with which the "new world" was projected upon human imagination. Colonialism was not a tentative process. The "right" of colonization, both as a right of the colonizer and as a right thing to do by the colonizer, was passionately believed and confidently asserted. Thus, for the most part, this "right" was uncontested, this confidence unchallenged. "World-order" today is similarly asserted with confidence and rectitude. Contemporary world-orderings, consistent with those of the past, are implemented using a range of civilizational legitimization. With the advent of an ideology of "humanity," a "post-colonial" concession to human dignity demanded by the previously colonized, new languages of the civilizational project had to be conceived of and projected. "Freed" from the brutalities of the order of historical colonialism, the "ordered" now are subjected to the colonizing force of the "post-colonial," and increasingly, globalization-inspired ideologies of development and security. Visible, still, is the legitimization of "order" as coercive command through the rhetoric of "order" as evolutionary structure.

Reject the 1AC in order to politicize our own relationships with structures – this is the first step towards liberation

Nayar, Law—University of Warwick, **1999** "SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity ," 9 Transnat'l L. & Contemp. Probs. 599

So, back to the question: to what extent, for this, "our world," do we contemplate change when "we" imagine transformed "world-orders?" In addition to the familiar culprits of violent orderings, such as government, financial institutions, transnational corporations, the World Bank, the IMF, and the WTO (as significant culprits they indeed are), do we, in our contemplations of violent orders, vision our locations within corporate "educational" institutions as "professional academics" and "researchers," our locations within corporate NGOs as "professional activists," our locations within "think-tanks" and "research organizations" as "professional policy-formulators," and whatever other locations of elite "expertise" we have been "trained" to possess, as ordered sites, complicit and parasitic, within a violent "world-order"? Do we see in our critiques of world-orderings, out there, the orderings we find, right here, in our bodies, minds, relationships, expectations, fears and hopes? Would we be willing to see "our (ordered) world" dismantled in order that other worlds, wherein our "privileges" become extinguished, may flourish? These concerns are, then, I believe, the real complexities of judgment and

action. Consideration should be given, not only to those of the political-structural, so often honed in on, but also to the [*628] issue of the political-personal, which ultimately is the "unit" of "worlds" and of "orders." If "globalization," as a recent obsession of intellectual minds, has contributed anything to an understanding of the ways of the "world," I suggest, it is that we cannot escape "our" implication within the violence of "world (mis)orders." IV. A WORLD FOR TRANSFORMATION: TWO POEMS Despite the fixation of the beneficiaries of ordered worlds, even the ordered "critic," with the prescribed languages, visions and possibilities of human socialities, other realities of humanity nevertheless persist. Notwithstanding the globalization of social concern and the transnationalization of professionalized critique and reformatory action, struggles against violence remain energized, persistent and located. They are waged through the bodies of lives lived in experiential locations against real instruments of terror, functioning within embodied sites of violence. Non-information and non-representation of the existence of such struggles, and non-learning of the wisdoms thus generated do not negate their truths or the vibrancy of their socialities. n51 "We" are participants in ordered worlds, not merely observers. The choice is whether we wish to recognize our own locations of ordered violence and participate in the struggle to resist their orderings, or whether we wish merely to observe violence in far-off worlds in order that our interventionary participation "out there" never destabilizes the ground upon which we stand. I suggest that we betray the spirit of transformatory struggle, despite all our expressions of support and even actions of professionalized expertise, if our own locations, within which are ordered and from which we ourselves order, remain unscrutinized.

Link to idea of “gift” – posits cap as something external rather than as a logic that exists in us

This is could become a floating pik – the politics of brokenness is fine, but the starting point of analyzing larger institutions is problematic; neoliberalism is not external

Focusing on larger structures of power obscures our individual responsibility.

Kappeler, 95 – [Susanne, The Will to Violence, p. 10-11]

We are the war' does not mean that the responsibility for a war is shared collectively and diffusely by an entire society - which would be equivalent to exonerating warlords and politicians and profiteers or, as Ulrich Beck says, upholding the notion of `collective irresponsibility', where people are no longer held responsible for their actions, and where the conception of universal responsibility becomes the equivalent of a universal acquittal.' On the contrary, the object is precisely to analyse the specific and differential responsibility of everyone in their diverse situations. Decisions to unleash a war are indeed taken at particular levels of power by those in a position to make them and to command such collective action. We need to hold them clearly responsible for their decisions and actions without lessening theirs by any colle ctive `assumption' of responsibility. Yet our habit of focusing on the stage where the major dramas of power take place tends to obscure our sight in relation to our own sphere of competence, our own power and our own responsibility - leading to the well-known **illusion of our apparent `powerlessness'** and its accompanying phenomenon, our so-called political disillusionment. Single citizens - even more so those of other nations - have come to feel secure in their **obvious non-responsibility for such large-scale political events** as, say, the wars in Croatia and Bosnia-Hercegovina or Somalia - since the decisions for such events are always made elsewhere. Yet our insight that indeed we are not responsible for the decisions of a Serbian general or a Croatian president tends to mislead us into thinking that therefore we have no responsibility at all, not even for forming our own judgement, and thus into underrating the responsibility we do have within our own sphere of action. In particular, it seems to absolve us from having to try to see any relation between our own actions and those events, or to recognize the connections between those political decisions and our own personal decisions. It not only shows that we participate in what Beck calls `organized irresponsibility', upholding the apparent lack of connection between bureaucratically, institutionally, nationally and also individually organized separate competences. It also proves the phenomenal and unquestioned alliance of our personal thinking with the thinking of the major powermongers: **For we tend to think that we cannot `do' anything**, say, about a war, because we deem ourselves to be in the wrong situation; because we are not where the major decisions are made. Which is why many of those not yet entirely disillusioned with politics tend to engage in a form of mental deputy politics, in the style of `What would I do if I were the general, the prime minister, the president, the foreign minister or the minister of defence?' Since we seem to regard their mega spheres of action as the only worthwhile and truly effective ones, and since our political analyses tend to dwell there first of all, **any question of what I would do if I were indeed myself tends to peter out**

in the comparative insignificance of having what is perceived as `virtually no possibilities': what I could do seems petty and futile. For my own action I obviously desire the range of action of a general, a prime minister, or a General Secretary of the UN - finding expression in ever more prevalent formulations like `I want to stop this war', `I want military intervention', `I want to stop this backlash', or `I want a moral revolution." 'We are this war', however, even if we do not command the troops or participate in so-called peace talks, namely as Drakulic says, in our `non-comprehension': our **willed refusal to feel responsible for our own thinking** and for working out our own understanding, preferring innocently to drift along the ideological current of prefabricated arguments or less than innocently taking advantage of the advantages these offer. And we `are' the war in our `unconscious cruelty towards you', our tolerance of the `fact that you have a yellow form for refugees and I don't' - our readiness, in other words, to build identities, one for ourselves and one for refugees, one of our own and one for the `others'. **We share in the responsibility** for this war and its violence in the way we let them grow inside us, that is, in the way we shape `our feelings, our relationships, our values' according to the structures and the values of war and violence.

Huge offense against perm – focus tradeoff argument in first card – the idea of a global world and a large system of neoliberalism is a myth – neoliberalism exists in several contingent relationships.

Settlerism

Link

Settlerism

Link

They ignore the fact that all the wealth accumulated by the US is really based on native land – that papers over settler theft of America.

Tuck & Yang '12 (Eve, K. Wayne; Associate Professor of Educational Foundations and Coordinator of Native American Studies at the State University of New York at New Paltz, Associate Professor of Ethnic Studies at UC San Diego; Decolonization: Indigeneity, Education and Society, Vol. 1, No. 1, 2012, "Decolonization is not a metaphor", pp. 1-40)

Moves to innocence VI: Re-occupation and urban homesteading The Occupy movement for many economically marginalized people has been a welcome expression of resistance to the massive disparities in the distribution of wealth; for many Indigenous people, Occupy is another settler re-occupation on stolen land. The rhetoric of the movement relies upon problematic assumptions about social justice and is a prime example of the incommensurability between "re/occupy" and "decolonize" as political agendas. The pursuit of worker rights (and rights to work) and minoritized people's rights in a settler colonial context can appear to be anti-capitalist, but this pursuit is nonetheless largely pro-colonial. That is, the ideal of "redistribution of wealth" camouflages how much of that wealth is land, Native land. In Occupy, the "99%" is invoked as a deserving supermajority, in contrast to the unearned wealth of the "1%". It renders Indigenous peoples (a 0.9% 'super-minority') completely invisible and absorbed, just an asterisk group to be subsumed into the legion of occupiers. For example, "If U.S. land were divided like U.S. wealth" (figure 1.1) is a popular graphic that was electronically circulated on the Internet in late 2011 in connection with the Occupy movement. The image reveals inherent assumptions about land, including: land is property; land is/belongs to the United States; land should be distributed democratically. The beliefs that land can be owned by people, and that occupation is a right, reflect a profoundly settling, anthropocentric, colonial view of the world. In figure 1.1, the irony of mapping of wealth onto land seems to escape most of those who re-posted the images on their social networking sites and blogs: Land is already wealth; it is already divided; and its distribution is the greatest indicator of racial inequality17. Indeed the current wealth crisis facing the 99% spiraled with the crash in home/land ownership. Land (not money) is actually the basis for U.S. wealth. If we took away land, there would be little wealth left to redistribute.

Neoliberalism PIK

1NC

Power is exercised through specific local networks and relationships, not monolithic structures like neoliberalism. Their impact framing is wrong and counterproductive.

Bryant 9 — Levi R. Bryant, Professor of Philosophy at Collin College, holds a Ph.D. in Philosophy from Loyola University in Chicago, 2009 ("Fruit and Hubs," *Larval Subjects*—Levi R. Bryant's philosophy blog, October 2nd, https://larvalsubjects.wordpress.com/2009/10/02/fruit-and-hubs/)

Perhaps what Nick is getting at with his rejection of politics based on grand abstraction can be fleshed out through an anecdote about a young child. A while back an exasperated co-worker told me an amusing story about how her child had had a melt down the night before because she wanted fruit. The mother first tried to give her child grapes, then melons, then apple, then oranges, but with each attempt to appease the child the child's face grew a darker shade of purple, clouded with anger and frustration. The whole time the child screamed "**No! I want fruit!**" I was, of course, delighted by this anecdote because it is an exact version of Hegel's joke about the universal and the man who goes to the market trying to buy fruit. I was astonished to hear that this mistake could genuinely be made.¶ When Nick denounces grand abstractions it seems like he's gesturing at something like the error of trying to eat fruit. You can't fight capitalism, nor can you fight neoliberalism. **Asking how to turn over capitalism or how we can overcome neoliberalism is like trying to eat fruit**. The real issue is that of how **the local relations in a network** can be used to produce effects on global relations within a network. So suppose you're an oppressed worker in a corporation. Just as you can't fight capitalism and you can't eat fruit, you can't fight a corporation. Where is the corporation? It is **everywhere and nowhere**.¶ However, while you can't get at the corporation **itself**, within the corporation there are all sorts of **local networks and nodes** that you can act upon. Just as there are strawberries, grapes, apples, and so on, there are **local interactive relations** that make up the endo-consistency of the corporation in its ongoing existence. These can be **targeted**. Among these nodes there will be **hubs**, through which many axial or radiating elements are connected. For example, in the United States there are major airports like Chicago International or Dallas Fort Worth, and then all sorts of other smaller airports that radiate out from these like Lynchburg, Virginia's airport. If Chicago International Airport shuts down due to ice or a snow storm, all of these other airports are **effectively shut down as well**. Similarly, in the blogosphere, there are blogs that function as hubs that regulate flows of connection and exchanges of information throughout the rest of the internet. If these shut down, then the sites that get their traffic from these hubs become separate. New "speciations" begin to take place as a result through topological isolation and "information drift", new relations begin to come into being, and so on.¶ It seems to me that Nick is thus making two proposals. On the one hand, Nick is making the obvious observation that we need to know how these networks are **concretely organized**, where their hubs are, how interfaces among the elements in these hubs are interrelated, to strategize acting upon these networks. **Absent that sort of concrete knowledge we are like the child trying to eat fruit**. On the other hand, in proposing that "we can see that what is needed now is **not** a full-scale revolution, nor an overthrowing of an **entire** network, but rather **the piece-meal construction** of the conditions for a new system to emerge", I take it that Nick is asking how we go about producing new networks, nodes, and, perhaps most importantly hubs that act upon established networks that have become efficient at reproducing themselves over time. The point is that through this sort of **local action** the global network is acted upon. And, with any luck, a point emerges where a **tipping point** or bifurcation point is reached, leading to a **qualitative change in the object or social organization as a whole**. The worry here, however, is that what follows these tipping points is generally very difficult to calculate and predict.¶

* Nick = Nick Srnicek, Teaching Fellow in Geopolitics and Globalisation in the Department of Geography at University College London, holds a Ph.D. in International Relations from the London School of Economics

Their framing of "neoliberalism" as hegemonic inhibits political change. Their abstract analysis oversimplifies contingent social relations, which turns case.

Barnett 5 — Clive Barnett, Professor of Geography at The Open University (UK), 2005 ("The consolations of 'neoliberalism'," *Geoforum*, Volume 36, Issue 1, January)

None of these populist tendencies is simply an expression of a singular "hegemonic" project of "neoliberalization". They are effects of much longer rhythms of socio-cultural change that emanate from the bottom-up. It seems just as plausible to suppose that what we have come to recognise as "hegemonic neoliberalism" is a **muddled set of ad hoc, opportunistic accommodations** to these unstable dynamics of social change as it is to think of it as the outcome of **highly coherent** political-ideological projects. Processes of privatization, market liberalization, and de-regulation have often followed an ironic pattern in so far as they have been triggered by citizens' movements arguing from the left of the political spectrum against the rigidities of statist forms of social policy and welfare provision in the name of greater autonomy, equality, and participation (e.g. Horwitz, 1989). The political re-alignments of the last three or four decades **cannot** therefore be adequately understood in terms of **a straightforward shift from the left to the right**, from values of collectivism to values of individualism, or as a re-imposition of class power. The emergence and generalization of this populist ethos has much longer, deeper, and wider roots than those ascribed to "hegemonic neoliberalism". And it also points towards the extent to which easily the most widely resonant political rationality in the world today is not right-wing market liberalism at all, but is, rather, the polyvalent discourse of "democracy" (see Barnett and Low, 2004).¶ Recent theories of "neoliberalism" have retreated from the appreciation of the **long-term rhythms of socio-cultural change**, which Stuart Hall once developed in his influential account of Thatcherism as a variant of authoritarian populism. Instead, they favour **elite-focused analyses of state bureaucracies**, **policy networks**, and the like. One consequence of the residualization of the social is that theories of "neoliberalism" have **great difficulty** accounting for, or indeed even in **recognizing**, new forms of "individualized collective-action" (Marchetti, 2003) that have emerged in tandem with the apparent ascendancy of "neoliberal hegemony": **environmental politics** and the politics of sustainability; new forms of **consumer activism** oriented by an ethics of assistance and global solidarity; the **identity politics** of sexuality related to demands for changes in modes of health care provision, and so on (see Norris, 2002). All of these might be thought of as variants of what we might want to call bottom-up governmentality. This refers to the notion that non-state and non-corporate actors are also engaged in trying to govern various fields of activity, both by acting on the conduct and contexts of ordinary everyday life, but also by acting on the conduct of state and corporate actors as well. Rose (1999, pp. 281–284) hints at the outlines of such an analysis, at the very end of his paradigmatic account of governmentality, but investigation of this phenomenon is poorly developed at present. Instead, the trouble-free amalgamation of Foucault's ideas into the Marxist narrative of "neoliberalism" sets up **a simplistic image of the world** divided between the forces of hegemony and the spirits of subversion (see Sedgwick, 2003, pp. 11–12). And clinging to this image only makes it **all the more difficult** to acknowledge the possibility of **positive political action** that does not conform to **a romanticized picture of rebellion, contestation, or protest against domination** (see Touraine, 2001).

Vote negative to abandon the concept of "neoliberalism" – that opens up the recognition that power exists contingently.

Venugopal 14 — Rajesh Venugopal, Lecturer in International Development and Humanitarian Emergencies in the Department of International Development at the London School of Economics, holds a doctorate from the University of Oxford, 2014 ("The Antinomies of Neoliberalism," Draft Version of a Paper Under Review For Publication, March, http://personal.lse.ac.uk/venugopr/venugopalantinomiesofneoliberalism.pdf, p. 16-17)

6. Conclusions

This paper started by offering a different way of answering the question 'what is neoliberalism' based on its conceptual evolution. Through a critique that dwelt mainly on its uncoordinated and weakly grounded conceptual proliferation, and its one-sided usage by critics and non-economists, it has made four related points and claims:¶ Firstly, and most fundamentally, neoliberalism has proliferated well beyond its conceptual crib in political economy, and has as a result, become stretched to the point where widespread concerns have been raised about its viability and relevance. Secondly, this critical concern has resulted in attempts to either purify the concept with reference to its original ideational essence, or to reconceptualise it with respect to a more complex actually-existing ontology. Thirdly, the incoherence in neoliberalism goes beyond the problems evident in many overused and stretched concepts, to the extent that it is deployed in **entirely contradictory and opposite ways**. This means that it creates **analytical blind-spots** by conflating **significantly different phenomena** under a common term. Fourthly, terminological dysfunction is not an end-point in itself, but can provide important insights on what functions it does perform, and what knowledge it produces. The **morally loaded, one-sided deployment** of neoliberalism speaks to such a function. In effect, neoliberalism serves as a **rhetorical tool** and moral device for critical social scientists outside of economics to conceive of academic economics and a range of economic phenomena that are otherwise **beyond their epistemological horizons** and which they cannot otherwise grasp or evaluate. It has as a result, ended up, as Bob Jessop describes 'more as **a socially constructed term of struggle** (Kampfbegriff) that frames criticism and resistance than as a **rigorously defined concept** that can guide research in anthropology and other social sciences' (Jessop 2013:65).¶ As a result, it lives on as **a problematic signifier** that bundles together a proliferation of eclectic and **contradictory concepts**; a tableau of critical explorations of the material world [end page 16] by non-economists, clustered together by a shared signifier that thematically links them to a broader set of **morally devolved referents** about markets, economics, subjectivities, state authority, globalization or neo-colonialism.

2NC Epistemology

Epistemology is important – if their method of knowledge formation is flawed, they'll inevitably arrive at the wrong understanding of the problem.

Barnett 5 — Clive Barnett, Professor of Geography at The Open University (UK), 2005 ("The consolations of 'neoliberalism'," *Geoforum*, Volume 36, Issue 1, January)

3. There is no such thing as neoliberalism!¶ The blind-spot in theories of neoliberalism—whether neo-Marxist and Foucauldian—comes with trying to account for how top-down initiatives **'take'** in **everyday situations**. So perhaps the best thing to do is to **stop thinking of "neoliberalism" as a coherent "hegemonic" project altogether**. For all its apparent critical force, the vocabulary of "neoliberalism" and "neoliberalization" in fact provides a **double consolation** for leftist academics: it supplies us with plentiful opportunities for unveiling the real workings of hegemonic ideologies in a characteristic gesture of revelation; and in so doing, it invites us to align our own professional roles with the activities of various actors "out there", who are always framed as engaging in resistance or contestation. The conceptualization of "neoliberalism" as a "hegemonic" project does not need refining by adding a splash of Foucault. Perhaps we should try to **do without the concept of "neoliberalism" altogether**, because it might actually **compound rather than aid** in the task of figuring out how the world works and how it changes. One reason for this is that, between an overly economistic derivation of political economy and an overly statist rendition of governmentality, stories about "neoliberalism" manage to **reduce** the understanding of social relations to a residual effect of hegemonic projects and/or governmental programmes of rule (see Clarke, 2004a). Stories about "neoliberalism" pay **little attention** to the pro-active role of socio-cultural processes in

provoking changes in modes of governance, policy, and regulation. Consider the example of the restructuring of public services such as health care, education, and criminal justice in the UK over the last two or three decades. This can easily be thought of in terms of a "hegemonic" project of "neoliberalization", and certainly one dimension of this process has been a form of anti-statism that has rhetorically contrasted market provision against the rigidities of the state. But in fact these ongoing changes in the terms of public-policy debate involve a combination of different factors that add up to a much more dispersed populist reorientation in policy, politics, and culture. These factors include changing consumer expectations, involving shifts in expectations towards public entitlements which follow from the generalization of consumerism; the decline of deference, involving shifts in conventions and hierarchies of taste, trust, access, and expertise; and the refusals of the subordinated, referring to the emergence of anti-paternalist attitudes found in, for example, women's health movements or anti-psychiatry movements. They include also the development of the politics of difference, involving the emergence of discourses of institutional discrimination based on gender, sexuality, race, and disability. This has disrupted the ways in which welfare agencies think about inequality, helping to generate the emergence of contested inequalities, in which policies aimed at addressing inequalities of class and income develop an ever more expansive dynamic of expectation that public services should address other kinds of inequality as well (see Clarke, 2004b).¶ We don't need a large external impact, but over-determining neoliberalism as a "root cause" also results in violence. It's totalitarian thinking. ¶ **Achterhuis 2** — Hans Achterhuis, Professor Emeritus in Systematic Philosophy at the University of Twente (Netherlands), 2002 ("Violent Utopias," *Peace Review*, Volume 14, Issue 2, Available Online to Subscribing Institutions via InformaWorld, p. 157-158)¶ Philosophy does not have a single outlook on violence and aggression. If it did, that outlook would be extremely violent. Instead, we need multiple philosophical perspectives on the origins of violence. But even though I shall argue for plurality instead of unity in what follows, let me warn you against two possible misconceptions. First, while I'll examine the views of several different thinkers, it will not produce a definitive idea of how to theorize philosophically about the origins and effects of violence. This cannot be accomplished even for the leading philosophers of the second half of the twentieth century, much less for those before then. Instead I'll focus on a number of texts and thinkers I have collected in response to personal experiences, questions, and emotions. Over the years, they have helped me answer pressing questions I have had about the nature of violence.¶ While my academic participation in philosophical issues and debates has revealed to me the ways that violence has been thematized, my entry into these views is always personal and existential. Over the years, I've deepened my understanding of certain violent periods and episodes in the past, including the violence of the 1960s. Discussion of the latter has recently arisen again, in Germany, in response to the rise of the former stone-throwing rebel Joschka Fischer to become the German Foreign Minister. Other contemporary debates, such as over NATO's use of violent intervention to provide humanitarian relief in Kosovo, provide some perspective, as well.¶ To guard against a second misconception, let me mention that the philosophers I'll mention below have struggled to articulate the causes and functions of violence with varying degrees of success. I do not suggest that any of these theories succeeds more so than the others. Were that the case, we would be back to having a single outlook on violence, which arguably would itself be inherently violent. That paradox is the first of two important lessons I have learned in my explorations of the origins of violence; the second I shall relate in my conclusion.¶ My first important insight on violence—the need for multiple outlooks— stems from a text whose meaning emerged only a long time after I had read it. In Paul Valkenburgh's Four-Way Dialogue on the Nature of War and Peace, the fictive interlocutors include a politician, an informed citizen, a scientist, and a sociologist. This combination gave Valkenburgh an effective forum for highlighting his own views, enlightening the concerned citizen and correcting the scientist's narrow and exclusively logical reasoning. Thus the "dialogue" was staged and emphasized rhetorical flourishes. Still, this fictive set-up crystallized [end page 157] for me an appreciation for the multiple perspectives people hold on issues such as violence, war, and peace. There is no proper standpoint from which to view these issues. Different perspectives are possible and inevitable, they have no single cause or explanation, and these complementary and mutually correcting perspectives are necessary. If I possessed the rhetorical skill, I would have composed this contribution as a multiple dialogue, as well.¶ At base, each person who has—or claims to have—**a single account for violence** is proceeding in **an extremely violent manner**. Those who claim to know the origin of violence, to know the root of all evil, give themselves at the same stroke the moral right to reach back and root it out—thus providing, via a chain of reasoning with which we are all familiar, **the justification for using violence in order to drive violence from the world**. If we know where its origin lies, what could be wrong with using violence for the (sole) purpose of obtaining eternal peace and prosperity?¶ This is a violent chain of reasoning. Implicitly or explicitly, it entails the call for **a relentless struggle against the discovered origin of evil**, whether that be said to lie in a particular class, nation, or ethnic group; a particular social structure such as capitalism or socialism; or a particular condition such as poverty. Whenever or wherever such an origin is posed, violence is **already present**, for **it inevitably sets up the argument that violence is permitted in order to achieve peace**. It is a **means–ends logic**: the noble ends **sanctify the violent means**.¶ From Valkenberg I learned that we cannot think about violence as a means–ends logic, but only in the form of a dialogue between human beings. If readers sense a strong reaction on my part against monocausal theories, I readily admit that the reaction is first of all directed against myself. For it is a lesson I learned only through trial and error. Once upon a time I, too, thought that I had located the origin of violence and could thus revolutionize the world. But this, in my opinion, is the greatest temptation for the political thinker. Many political philosophers have proposed **totalitarian**

therapies based on philosophical analyses that attribute the origin of social evil to **a single root**. But single philosophical answers to the question of violence can never be more than partial. Such answers are but pieces of a dialogue.¶

2NC Perm

Acknowledging that neoliberalism is an incoherent signifier and then continuing to use it makes no sense.

Venugopal 14 — Rajesh Venugopal, Lecturer in International Development and Humanitarian Emergencies in the Department of International Development at the London School of Economics, holds a doctorate from the University of Oxford, 2014 ("The Antinomies of Neoliberalism," Draft Version of a Paper Under Review For Publication, March, http://personal.lse.ac.uk/venugopr/venugopalantinomiesofneoliberalism.pdf, p. 5-6)

Following from this is a third point that while many terminological critiques start by acknowledging that neoliberalism is already an over-stretched and ill-defined signifier, the solutions they reach for along the axes of reach versus depth are either to further **refine**, [end page 5] **complicate**, and **extend** old concepts, or to proliferate new ones. They seek to address problems in older versions of neoliberalism either by adding contingency and context to account for heterogeneity, or by seeking to unify and cohere the disparate theories into a grand, but fluid, meta-concept.¶ As a result, the criticism of neoliberalism has inadvertently served to add new, more deeply nuanced, analytically dense personalities to **an already over-burdened signifier**. Neoliberalism is now an **over-loaded and unwieldy term** that occupies a fluid and growing terrain that expands and contracts arbitrarily across several dimensions, but which increasingly **lacks firm foundations in real world referents**. The potential range of meanings has grown across numerous disciplines and theoretical enclaves, often in **entirely unconnected settings** and with **different meanings**. Nevertheless, the shared name continues to convey a **misleading impression** that they are all **comparable and mutually compatible**, anchored in some core, shared ontology, and referring to the same sorts of phenomena.

2NC FW

Debates about method are a prerequisite to constructive policy discussion—only the curriculum we establish can ensure meaningful political debate.

Kurki 8 — Milja Kurki, Lecturer in the Department of International Politics at Aberystwyth University, 2008 ("Introduction: causation and the divided discipline," *Causation in International Relations: Reclaiming Causal Analysis*, Published by Cambridge University Press, p. 8-9)

It should be noted that the approach adopted here is unashamedly theoretical and philosophical in nature. While philosophical, or meta- theoretical, discussions have often been subjected to criticism from the more empirically minded IR scholars, in my view philosophical reflection on the key concepts we use frequently, such as causation, is **fundamental** in the social sciences, IR among them. This is because, as Colin Wight puts it, 'conceptual inquiry is **a necessary prerequisite** to empirical research'.21 Without an adequate understanding of the ways in which we apply concepts, appreciation of the reasons for our conceptual choices, and recognition of the strengths and the weaknesses [end page 8] that our use of key concepts entail, we run the risk of conducting empirical studies that **we cannot justify** or that amount to **nothing more than aimless fact-finding**. Also, we risk not being able to understand how and why our accounts

might differ from those of others and, hence, are **not able to engage in constructive debate with other perspectives**. This book is motivated by the belief that IR has not become too theoretical or philosophical at the expense of empirical inquiry:22 rather it still remains **inadequately reflective towards many fundamental concepts** used in empirical analyses. While meta-theoretical, or philosophical, debate is clearly in and of itself not the sole or the central aim of Inter- national Relations scholarship, it should not be forgotten that the ways in which we 'see' and analyse the 'facts' of the world political environment around us are **closely linked** to the kinds of **underlying assumptions** we make about meta-theoretical issues, such as the nature of science and causation. Indeed, the analysis here is motivated by the belief that whenever we make factual, explanatory or normative judgements about world political environments, **important meta-theoretical filters are at work** in directing the ways in which we talk about the world around us, and these filters are **theoretically**, **linguistically**, **methodologically**, and also potentially **politically consequential**.23 It follows that philosophical investigation of key concepts such as causation should not be sidelined as 'hair-splitting' or 'meta-babble',24 but embraced—or at least engaged with—as one important aspect of the study of international relations.

2NC Ferguson

Radical critiques of neoliberalism are meaningless unless they provide a vision for a progressive policy alternative. Instead of endlessly repeating what we oppose, we need to re-center our conversations around what we want.

Ferguson 10 — James Ferguson, Susan S. and William H. Hindle Professor in the School of Humanities and Sciences and Professor in the Department of Anthropology at Stanford University, holds a Ph.D. in Social Anthropology from Harvard University, 2010 ("The Uses of Neoliberalism," *Antipode*, Volume 41, Issue Supplement 1, January)

In thinking about the rapidly expanding literature on neoliberalism, I am struck by how much of the critical scholarship on topic arrives in the end at **the very same conclusion**—a conclusion that might be expressed in its simplest form as: "neoliberalism is bad for poor and working people, therefore we must oppose it." It is not that I disagree with this conclusion. On the contrary. But I sometimes wonder **why I should bother to read one after another extended scholarly analysis** only to reach, **again and again**, such an **unsurprising conclusion**.

This problem in recent progressive scholarship strikes me as related to a parallel problem in progressive politics more broadly. For over the last couple of decades, what we call "the Left" has come to be organized, in large part, around a project of **resisting and refusing** harmful new developments in the world. This is understandable, since so many new developments have indeed been highly objectionable. But it has left us with a politics largely defined by **negation and disdain**, and centered on what I will call "**the antis**." Anti-globalization, anti-neoliberalism, anti-privatization, anti-imperialism, anti-Bush, perhaps even anti-capitalism—but **always "anti", not "pro"**. This is good enough, perhaps, if one's political goal is simply to denounce "the system" and to decry its current tendencies. And, indeed, some seem satisfied with such a politics. In my own disciplines of anthropology and African Studies, for instance, studies of state and development tend, with depressing predictability, to conclude (in tones of righteous indignation) that the rich are benefiting and the poor are getting screwed. The powerless, it seems, are getting the short end of the stick. This is **not exactly a** [end page 166] **surprising finding**, of course (isn't it precisely because they are on the losing end of things that we call them "powerless" in the

first place?). Yet this sort of work styles itself as "critique", and imagines itself to be **very "political"**.

But what if politics is really not about expressing indignation or denouncing the powerful? What if it is, instead, about **getting what you want**? Then we progressives must ask: **what do we want?** This is a quite different question (and a far more difficult question) than: what are we against? What do we want? Such a question brings us very quickly to the question of government. Denunciatory analyses often treat government as the simple expression of power or domination—the implication apparently being that it is politically objectionable that people should be governed at all. But any **realistic** sort of progressive politics that would seek a serious answer to the question "what do we want?" will have to involve an exploration of the contemporary possibilities for developing **genuinely progressive arts of government**.

Case – Undercommons

Notes

Read on case

The aff is a double turn – their politics of visibility is antithetical to the idea of the Undercommons

Vote neg so they don't make it to elims and it reduces their visibility

Also vote neg because this proves the aff doesn't meet the standard in their method card

Could run a ballot k-esque arg about how the aff is asking for recognition from capitalism rather than breaking the cycle between debate and intellectual profit (the ballot) – agreeing with the aff and voting neg distorts/complicates the linear logic of capitalism

Cards

Instead of fetishizing breaking silence we should embrace silence as a means of resisting regulation and depoliticization

Brown 1996 [Wendy Brown, Prof. Political Science, Prof. Rhetoric, Prof. Critical Theory @ UC-Berkeley, 96, "In the 'folds of our own discourse': The Pleasures and Freedoms of Silence," 3 U. Chi. L. Sch. Roundtable, 186]

But if the silences in discourses of domination are a site for insurrectionary noise, if they are the corridors we must fill with explosive counter-tales, it is also possible to make a fetish of breaking silence. Even more than a fetish, it is possible that this ostensible tool of emancipation carries its own techniques of subjugation-that it converges with non-emancipatory tendencies in contemporary culture (for example, the ubiquity of confessional discourse and rampant personalization of political life), that it establishes regulatory norms, coincides with the disciplinary power of confession, in short, feeds the powers we meant to starve. While attempting to avoid a simple reversal of feminist valorizations of breaking silence, it is this dimension of silence and its putative opposite with which this Article is concerned. In the course of this work, I want to make the case for silence not simply as an aesthetic but a political value, a means of preserving certain practices and dimensions of existence from regulatory power, from normative violence, as well as from the scorching rays of public exposure. I also want to suggest a link between, on the one hand, a certain contemporary tendency concerning the lives of public figures-the confession or extraction of every detail of private and personal life (sexual, familial, therapeutic, financial) and, on the other, a certain practice in feminist culture: the compulsive putting into public discourse of heretofore hidden or private experiences-from catalogues of sexual pleasures to litanies of sexual abuses, from chronicles of eating disorders to diaries of homebirths, lesbian mothering, and Gloria Steinam's inner revolution. In linking these two phenomena-the privatization of public life via the mechanism of public exposure of private life on the one hand, and the compulsive/compulsory cataloguing of the details of women's lives on the other-I want to highlight a modality of regulation and depoliticization specific to our age that is not simply confessional but empties private life into the public domain, and thereby also usurps public space with the relatively trivial, rendering the political personal in a fashion that leaves injurious social, political and economic powers unremarked and untouched. In short, while intended as a practice of freedom (premised on the modernist conceit that the truth shall make us free), these productions of truth not only bear the capacity to chain us to our injurious histories as well as the stations of our small lives but also to instigate the further regulation of those lives, all the while depoliticizing their conditions. My concern with what might be called compulsory feminist discursivity and the presumed evil of silences has yet another source. Notwithstanding American academic feminism's romance with Foucault, there is an oddly non or pre-Foucauldian quality to much feminist concern with censorship and silencing. In these formulations,

expression is cast either as that which makes us free, tells our truth, puts our truth into circulation,' or as that which oppresses us by putting "their" truth into circulation in the form of pornography, hate speech, harassment or simply the representation of the world from "the male point of view."4 If one side in the debate argues for more expression on our part-for example, by making our own pornography or telling our own stories-and the other argues for less on "their" part, both sides nonetheless subscribe to an expressive and repressive notion of speech, its capacity to express the truth of an individual's desire or condition, or to repress that truth. Both equate freedom with voice and visibility.' Both assume recognition to be unproblematic when we tell our own story, and assume that such recognition is the material of power and pleasure. Neither, in short, confronts the regulatory potential of speaking ourselves. I think the whole contemporary debate over censorship-whether focused on porn or rap music-is necessarily bound to an expressive-repressive model of power and freedom, which may explain why those who feel passionately about both freedom and dignity have trouble finding their way in this debate. If the choice is cast either as the free circulation of music and pictures venerating rape, racism, and misogyny, or state repression of the same, how does one choose? To inaugurate a different kind of analysis of the relationship between silence, speech, and freedom, I want to turn to two passages in Foucault's work, the first from The History of Sexuality: Discourses are not once and for all subservient to power or raised up against it, any more than silences are . . .Discourse transmits and produces power; it reinforces it, but also undermines and exposes it, renders it fragile and makes it possible to thwart it. In like manner, silence and secrecy are a shelter for power, anchoring its prohibitions; but they also loosen its hold and provide for relatively obscure areas of tolerance. Foucault here marks the ambiguity of silence in relationship to power, insisting that silence functions not only as a "shelter for power"7 but also as a shelter from it. (Foucault's example is the putative freedom of homosexual practice in a historical age when there is no discourse for or about it).8 This paradoxical capacity of silence to engage opposites with regard to power is rarely associated with Foucault's thinking due to his emphasis on discourse as power. Yet I do not think he is here reneging on this emphasis nor, in speaking of silence as a shelter from power, suggesting a pre-discursive existence to things. Critical here is the difference between what Foucault calls unitary discourses, which regulate and colonize, and those which do not perform these functions with same social pervasiveness, even as they do not escape the tendency of all discourse to establish norms by which it regulates and excludes. It is through this distinction that one can make sense of Foucault's otherwise inexplicable reference to sex in the eighteenth century as being "driven out of hiding and constrained to lead a discursive existence,"9 or his troubling example of the village simpleton whose "inconsequential" habit of molesting young girls in exchange for pennies was suddenly subjected to medical, judicial, and popular scrutiny and condemnation. ° Neither in these cases nor in others where Foucault seems to imply a "freer" because pre-discursive existence to certain practices would he appear to mean that they really occurred "outside" discourse, but rather that they had not yet been brought into the pervasive regulatory discourses of the age-science, psychiatry, medicine, law, pedagogy, and so forth." Silence, as Foucault affirms it, then, is identical neither with secrecy nor with not speaking. Rather, it signifies a relation to regulatory discourses, as well as a possible niche for the practice of freedom within those discourses. If, as Foucault insists, freedom is a practice (as opposed to an achievement, condition, or institution), then the possibility of practicing freedom inside a regulatory discourse occurs in the empty spaces of that discourse as well as in resistance to the discourse. Moreover, silence can function as speech in both ways at once, as in the following autobiographical example offered by Foucault: Maybe another feature of this appreciation of silence is related to the obligation of speaking. I lived as a child in a petit bourgeois, provincial milieu in France and the obligation of speaking, of making conversation with visitors, was for me something both very strange and very boring. I often wondered why people had to speak. 2

Academia has been militarized – the affirmative's radical strategy of visibility and calls for dialogue will be co-opted for sovereign violence

Giroux '08 [Henry A., Professorship at McMaster University in the English and Cultural Studies Department, "Against the Militarized Academy", http://www.truth-out.org/archive/component/k2/item/81138:against-the-militarized-academy]

In a post-9/11 world, with its all-embracing war on terror and a culture of fear, the increasing spread of the discourse and values of militarization throughout the social order is intensifying the shift from the promise of a liberal democracy to the reality of a militarized society. Militarization suggests more than simply a militaristic ideal - with its celebration of war as the truest measure of the health of the nation and the soldier-warrior as the most noble expression of the merging of masculinity and unquestioning patriotism - **but an intensification and expansion of the underlying values, practices, ideologies, social relations and cultural representations associated with military culture**. What appears new about **the amplified militarization of the post-9/11 world** is that it **has become normalized, serving as a powerful educational force that shapes our lives, memories and daily experiences. As an**

educational force, military power produces identities, goods, institutions, knowledge, modes of communication and affective investments - in short, it now bears down on all aspects of social life and the social order. As Michael Geyer points out, what is distinctive about the militarization of the social order is that **civil society not only "organizes itself for the production of violence,"(2) but increasingly spurs a gradual erosion of civil liberties. Military power and policies are expanded to address not only matters of defense and security, but also problems associated with the entire health and social life of the nation, which are now measured by military spending, discipline and loyalty, as well as hierarchical modes of authority.** As citizens increasingly assume the roles of informer, soldier and consumer willing to enlist in or be conscripted by the totalizing war on terror, we see the very idea of the university as a site of critical thinking, public service and socially responsible research being usurped by a manic jingoism and a market-driven fundamentalism that enshrine the entrepreneurial spirit and military aggression as means to dominate and control society. This should not surprise us, since, as William G. Martin, a professor of sociology at Binghamton University, indicates, **"universities, colleges and schools have been targeted precisely because they are charged with both socializing youth and producing knowledge of peoples and cultures beyond the borders of Anglo-America."**(3) But **rather than be lulled into complacency by the insidious spread of corporate and military power, we need to be prepared to reclaim institutions such as the university that have historically served as vital democratic spheres protecting and serving the interests of social justice and equality.** What I want to suggest is that **such a struggle is not only political, but also pedagogical in nature**. Over 17 million students pass through the hallowed halls of academe, and it is crucial that they be educated in ways that enable them to recognize creeping militarization and its effects throughout American society, particularly in terms of how these effects threaten "democratic government at home just as they menace the independence and sovereignty of other countries."(4) But **students must also recognize how such anti-democratic forces work in attempting to dismantle the university itself as a place to learn how to think critically and participate in public debate and civic engagement.**(5) In part, **this means giving them the tools to fight for the demilitarization of knowledge on college campuses - to resist complicity with the production of knowledge, information and technologies in classrooms and research labs that contribute to militarized goals and violence. Even so, there is more at stake than simply educating students to be alert to the dangers of militarization and the way in which it is redefining the very mission of higher education**. Chalmers Johnson, in his continuing critique of the threat that the politics of empire presents to democracy at home and abroad, argues that if the United States is not to degenerate into a military dictatorship, in spite of Obama's election, a grass-roots movement will have to occupy center stage in opposing militarization, government secrecy and imperial power, while reclaiming the basic principles of democracy.(6) Such a task may seem daunting, but **there is a crucial need for faculty, students, administrators and concerned citizens to develop alliances for long-term organizations and social movements to resist the growing ties among higher education**, on the one hand, and the armed forces, intelligence agencies and war industries on the other - ties that play a crucial role in reproducing mili tarized knowledge.

Critical Academia and University Professionalization have become one and the same. Rather than combat university institutionalization, critical academics only serve to support that system.

Harney and Moten '13 [Stefano Harney, Professor of Strategic Management Education at the Lee Kong Chian School of Business, Singapore Management University and a co-founder of the School for Study and Fred Moten, Helen L. Bevington Professor of Modern Poetry at Duke University, "The University and the Undercommons" The Undercommons: Fugitive Planning and Black Study]

The maroons know something about possibility. They are the condition of possibility of the production of knowledge in the university – the singularities against the writers of singularity, the writers who write, publish, travel, and speak. It is not merely a matter of the secret labor upon which such space is lifted, though of course such space is lifted from collective labor and by it. It is rather that **to be a critical academic in the university is to be against**

the university, and to be against the university is always to recognize it and be recognized by it, and to institute the negligence of that internal outside, that unassimilated underground, a negligence of it that is precisely, we must insist, the basis of the professions. And **this act of being against always already excludes the unrecognized modes of politics, the beyond of politics already in motion,** the discredited criminal para-organization, **what Robin Kelley might refer to as the infrapolitical field** (and its music). **It is not just the labor of the maroons but their prophetic organization that is negated by the idea of intellectual space in an organization called the university.** This is why **the negligence of the critical academic is always at the same time an assertion of bourgeois individualism. Such negligence is the essence of professionalization where it turns out professionalization is not the opposite of negligence but its mode of politics in the United States. It takes the form of a choice that excludes the prophetic organization of the undercommons – to be against**, to put into question the knowledge object, let us say in this case the university, **not so much without touching its foundation, as without touching one's own condition of possibility, without admitting the Undercommons and being admitted to it. From this, a general negligence of condition is the only coherent position.** Not so much an antifoundationalism or foundationalism, as both are used against each other to avoid contact with the undercommons. **This always-negligent act is what leads us to say there is no distinction between the university in the United States and professionalization. There is no point in trying to hold out the university against its professionalization. They are the same**. **Yet the maroons refuse to refuse professionalization, that is, to be against the university. The university will not recognize this indecision, and thus professionalization is shaped precisely by what it cannot acknowledge, its internal antagonism, its wayward labor, its surplus.** Against this wayward labor it sends the critical, sends its claim that what is left beyond the critical is waste. But in fact, **critical education only attempts to perfect professional education. The professions constitute themselves in an opposition to the unregulated and the ignorant without acknowledging the unregulated, ignorant, unprofessional labor that goes on not opposite them but within them. But if professional education ever slips in its labor, ever reveals its condition of possibility to the professions it supports and reconstitutes, critical education is there to pick it up, and to tell it, never mind – it was just a bad dream, the ravings, the drawings of the mad. Because critical education is precisely there to tell professional education to rethink its relationship to its opposite – by which critical education means both itself and the unregulated, against which professional education is deployed.** In other words, **critical education arrives to support any faltering negligence, to be vigilant in its negligence, to be critically engaged in its negligence. It is more than an ally of professional education, it is its attempted completion. A professional education has become a critical education.** But one should not applaud this fact. **It should be taken for what it is**, not progress in the professional schools, not cohabitation with the Universitas, but **counterinsurgency, the refounding terrorism of law, coming for the discredited, coming for those who refuse to write off or write up the undercommons.**

Case – Neolib/Cap Good

Regulated Cap

Regulated capitalism solves – deregulation produced the harms of the aff which proves that more regulation of the economy is necessary.

Melancon '11 (Glenn; 11/23/11; professor of History and Chair of the Department of Social Sciences at Southeastern Oklahoma State University; "Concentrated Power: Why We Need Regulated Capitalism" http://www.glennmelancon.com/?p=94)

Our founding fathers knew that concentrated power hurts society. They wrote a constitution that divided political power into three branches. This system has served us well for over two hundred years, protecting us from tyranny. The founders didn't foresee today's vast concentration of economic power and the destruction it could bring. We, however, can. We should have known the danger it poses to us all. Before the Great Depression the federal government let corporations grow relatively unchecked. It was a free market paradise. No minimum wage. No workers' compensation plans. No unemployment tax. No bookkeeping rules. No environmental laws. No safety regulations. If the free market myth were true, then this era should have been the greatest time in American history. It wasn't. The Great Depression and the New Deal brought this corporate paradise to end. President Franklin D. Roosevelt knew unregulated capitalism hurts average Americans. He decided to limit the power of corporations. They had to open their books to investors. Companies had to deal honestly with labor unions. They had to pay taxes. Businesses had to pay their workers better. Did the American economy crash? No. In fact regulated capitalism laid the foundation for the post war economic boom. After World War Two the federal government took an even larger role in the economy. It provided veterans with housing, education and health benefits. The federal government built the interstate highway system. It invested in aerospace, nuclear and computer technologies. Federal regulations required the automobile industry to improve safety and fuel efficiency. Industries were forced to stop polluting our air and water. The free marketeers screamed in protest. Liberals were destroying America. Socialists were punishing the successful. Capitalists would go on strike and bring the economy to a standstill. Luckily, no one listened to these Chicken Littles. The sky didn't fall. In fact regulated capitalism produced the world's largest middle class. Unfortunately, the oil crisis of the 1970s opened the door for the Chicken Littles to gain power. Slowly and methodically the corporation elite reasserted their hold on political power. The geniuses on Wall Street started selling snake oil again-Free Trade, electricity deregulation and the grand daddy of them all, banking deregulation. They told us that the "market" would regulate itself and no one would be hurt. Boy, were they wrong. American jobs moved overseas. Electricity prices went through the roof. In 2008 American families lost $11 trillion worth of assets, setting them back by four years. Now what do we do? Do we turn to the arsonist and say, "Are you an expert firefighter too?" No, we don't. Can the free market and more deregulation magically fix the current financial mess? No, it can't. We need to return to sensible regulations that check excessive corporate power. There is overwhelming bi-partisan support for this approach. Trade deals need to be fair, protecting American workers and the environment. We need affordable consumer technology to produce energy locally and allow for greater efficiency. Healthcare insurance needs to be affordable for all Americans. Stockholders need a greater say in executive pay and long-term planning. Finally, hedge funds need to disclose their secret deals that threaten us all. Change will not be easy. It never is. Chicken Little will be screaming the whole time. The sky will not fall. We're Americans. We've been in situations like this before. If we learn from our past successes and failures, we can effectively limit corporate excess and create sustained economic growth. Our founding fathers would be proud that we too learned the lesson that concentrated power hurts society and that we found a way to dilute it.

Neoliberalism does not exist – we live in an age of regulated capitalism.

Newman '12 (Rick; 12/6/12; author of three economics books; US News, "Why the Tension Between Socialism and Capitalism Will Intensify" http://www.usnews.com/news/blogs/rick-newman/2012/12/06/why-the-tension-between-socialism-and-capitalism-will-intensify)

It's encouraging that Americans spent 2012 looking up the meaning of "socialism" and "capitalism," since both concepts are largely misunderstood. This newfound knowledge is going to come in handy over the next several years, because the battle the two economic extremes may only be getting started. Merriam-Webster announced recently that "socialism" was the word with the most online lookups in 2012, with "capitalism" coming in right behind. Searches for "socialism" spiked around the time of the Supreme Court ruling on President Barack Obama's healthcare reform law, no doubt because critics derided it as the government takeover of healthcare. "Capitalism" was often the next word people looked up after investigating socialism. This year's presidential election included many bastardized references to both economic systems, which have been broadly mischaracterized for a long time. Many defenders of capitalism argue that the nation's economic system was more pure a decade ago (or two, or three), but America hasn't had pure capitalism in well over a century. And when it did have a raw form of capitalism, the consequences were often disastrous for significant chunks of the population, which is why public support grew for the kind of regulated capitalism we have now. In the 1800s, the federal government largely stayed out of the economy, with nothing like the regulatory apparatus we have now. That's one reason people like Andrew Carnegie, John Jacob Astor, John D. Rockefeller, Cornelius Vanderbilt, and J.P. Morgan built vast fortunes — often from monopolies or cartels--that still exist in various forms today. But unregulated capitalism also generated speculative bubbles, financial panics and destitution much more frequently than those things have occurred over the last 70 years. Public pressure led to a long series of reforms that morphed into the regulated free-market economy we have today. In the early 1900s, Teddy Roosevelt started to break up some of the all-powerful monopolies that enriched a few while overcharging the masses. Congress created the Federal Reserve and the income tax in 1913. A slew of regulatory agencies grew out of the Great Depression. During the 20th century, presidents of both parties signed legislation creating new agencies to oversee food, medicine, the environment and Wall Street (ahem). We still have a capitalist system centered on private ownership and prices set by the free market, but it's layered with rules meant to prevent abuses. Some Americans obviously feel there are too many rules, with a vocal set of critics claiming that Obama in particular has ushered in a system that's more like socialism than capitalism. That's hyperbole. Obama's new healthcare plan obviously will involve a lot more government involvement in the delivery of health care. But that happened because the prior system (which was itself governed by a dense thicket of insurance-company rules) failed to keep medical costs at affordable levels or make healthcare available to everybody. As in the past, public pressure for something better led to government intervention.

Empirics prove that regulated capitalism provides for the poor.

Klein '12 (Joe; 12/3/12; TIME's political columnist and author of six books; "Campaign 2012: The Report Card" http://content.time.com/time/magazine/article/0,9171,2129804,00.html)

There are sore losers in every election. But the quality of the carping is different this time. The sense that a "traditional" America is being supplanted by something foreign--an amalgam of Greece and Kenya, perhaps--seems to have only intensified since the election. The fantasy that the Obama coalition supports "socialism" was raised, mournfully, by William Bennett, who cited a 2011 Pew poll. The poll exists. Blacks, young people and liberals all copped to more positive feelings about "socialism" than "capitalism." But I wonder, What do these people think socialism is? I checked the dictionary. And socialism languishes there, just as it always has: "a system or condition of society in which the means of production are owned and controlled by the state." Is that what 49% of young people favor? I don't think so. If it is, count me on Bennett's team. That sort of socialism has been an utter failure, and regulated capitalism has been the greatest eradicator of poverty in the history of the world. But I suspect--and this would be wonderfully ironic, if true--that all those blacks and young people got their definition of socialism from Rush Limbaugh and the other wing-nut foghorns: socialism is when the government helps people out. What we've decided in this election is that most people are comfortable with a regulated free-enterprise system in which the government helps provide education and health care for everyone and financial support for those who need it most, especially the elderly. What we'll continue to

debate is how extensive those regulations and supports should be. But there is no question--except in the minds of the deluded--that any of our truly basic freedoms, especially the freedom to make money, are threatened in any significant way. In the real world, there is less drama to all this than meets the eye. Lessons have been learned. I remain optimistic that the professional politicians who lead the Republican Party will find a way to close a budget deal long before we reach a cliff, since they know they'll be blamed by a voting majority of Americans for any impasse.

Pull cards from Neolib file aff answers if necessary – this should be enough to demonstrate your claim that regulation solves

Credit Reform Working/Possible

These cards are redundant, so pick your favorite

New reforms allow consumers to see their credit scores – that makes financial decisions easier.

Stone & Dodd-Ramirez '15 (Corey, Daniel; June 2015 updated, published 4/21/15; Assistant Director at Consumer Financial Protection Bureau, Assistant Director of Financial Empowerment; CFPD, "Millions of consumers will now have access to credit scores and reports through nonprofit counselors" http://www.consumerfinance.gov/blog/millions-of-consumers-will-now-have-access-to-credit-scores-and-reports-through-nonprofit-counselors/)

Millions of consumers will now be able to receive the credit scores and credit reports that nonprofit credit counselors purchase on their behalf. Nonprofit organizations that offer credit counseling, housing counseling, and other financial counseling services buy credit reports and scores for the consumers they serve. These reports and scores help counselors engage in constructive conversations with their clients about steps the clients can take to improve their financial situation. Until now, counseling organizations have generally been prohibited by their contracts with the credit reporting agencies from giving the consumer the credit report or score that they have purchased on that consumer's behalf. For example, a nonprofit organization that purchases a credit report with a FICO credit score has typically signed a three-way agreement with one of the three large credit reporting agencies (TransUnion, Equifax, or Experian) and FICO, agreeing not to provide the report or score to any entity, including the consumer. This no-sharing policy is common in contracts signed by business users of credit reports and scores. But when applied to consumer counseling, it limits a client's ability to review the credit history provided by the counselor on their own and may make the consumer more dependent on the counselor to take steps to manage or improve her credit standing. We've heard concerns about this issue from counselors and consumers across the country. A policy change that will affect millions of consumers FICO's announcement today signals a change in this policy. FICO has reached new agreements with the three credit reporting agencies that will allow millions of consumers who receive nonprofit credit counseling, housing counseling, and other services to obtain a copy of the FICO score that these organizations have purchased. We've been working with industry to make progress on these issues and we are encouraged by this positive step. FICO has taken the additional step to create content to help these consumers understand the key factors that influence their credit scores. A step in the right direction These efforts build on our open credit score initiative, which is helping to increase consumers' access to credit scores and credit reports and empower consumers to improve their financial lives. Last year, we launched this initiative by calling on more of the nation's top credit card companies to make credit scores freely available to their customers. Today, more than a dozen major credit card issuers are providing credit scores directly and freely to consumers, and they are increasingly being joined by other types of consumer lenders as well. As part of this ongoing effort, we brought counseling organizations' concerns about restrictions on their clients' access to credit information to the attention of the credit reporting companies and FICO and urged that these restrictions be removed. However, even with the policy change on FICO credit scores, individual contracts between the credit reporting agencies and counseling organizations still prohibited the organizations from sharing the credit reports with their clients. This restriction made it harder for counselors to do their job. And it kept the consumers they serve from benefiting fully from the credit information that the counseling service organizations have paid for. We are encouraged that, as part of this ongoing effort to press forward on these issues, Experian, Trans Union, and Equifax have updated their policies. Nonprofit counselors that purchase credit reports on behalf of their consumer clients will now be able to share those reports, as well as the scores, with the consumer. Ending restrictions on sharing credit

scores and reports by consumer financial counseling organizations will empower consumers to take more control of managing their credit and help counselors to do their jobs more effectively.

New rules allow free credit scores – that particularly helps low-income communities.

CFPB '15 (Consumer Financial Protection Bureau; 2/19/15; "CFPB Reports That More Than 50 Million Credit Card Consumers Have Access to Free Credit Scores" http://www.consumerfinance.gov/newsroom/cfpb-reports-that-more-than-50-million-credit-card-consumers-have-access-to-free-credit-scores/)

WASHINGTON, D.C. – Today, the Consumer Financial Protection Bureau (CFPB) reported that more than 50 million consumers now have free and regular access to their credit scores through their monthly credit card statements or online. Last year, the CFPB launched a credit score initiative, which called on more of the nation's top credit card companies to make credit scores freely available to their customers. The Bureau also released a new consumer focus group study indicating that while consumers are accessing their credit scores and credit reports in a variety of ways, confusion about both persists. "Consumers' credit information is the foundation of their financial lives," said CFPB Director Richard Cordray. "Access to these scores provides an opportunity to engage consumers around their credit reports. Once consumers see their credit scores, they can be motivated to learn more about their credit history, check their full credit report, and take action to improve their financial lives." Consumer reporting companies collect information and provide reports on consumers that are used to decide whether to provide credit to consumers. Credit reports and scores can determine everything from consumer eligibility for credit to the rates consumers pay for credit. Because of the significance of these reports, consumer reporting companies have been a major focus for the CFPB. Recent research conducted by the Federal Reserve Bank of Philadelphia shows that when consumers became familiar with their credit reports, their credit scores often improved continuously over time. One year after the CFPB launched the credit score initiative, well more than a dozen major issuers are providing credit scores directly and freely to consumers. A few companies had begun offering access to credit scores prior to the CFPB initiative. Now, at least 50 million consumers have already had the opportunity to see their credit scores, and tens of millions of consumers will benefit by planned efforts by other major issuers this year. The CFPB is encouraging all Americans to review their credit standing and pull their free annual credit report at annualcreditreport.com. Consumer Perspective on Credit Reports and Scores To better understand consumers' perspectives on their credit reports and scores, the CFPB recently conducted focus groups with consumers from diverse backgrounds across the country. Through this research, the CFPB examined issues such as whether consumers were checking their credit scores and reports, how they were doing it, and what motivated them to check it. Key takeaways from the research include: Consumers access reports and scores multiple ways: Consumers who had seen their reports or scores accessed them from a variety of channels. Some consumers reported the presence of their score on their credit card statement, or were able to review it through their credit card company and found value in this feature. Others reported receiving their credit reports in other ways, such as a paid credit monitoring service, free online services, or as a result of a security breach or being denied credit. Consumer confusion around credit reports and scores persists: Some consumers reported being confused and frustrated about how to check credit reports and scores, what information these include, and how to improve them. Efforts by credit reporting companies to make it easier for consumers to access and interpret their reports could be a useful contribution to helping consumers access and navigate the credit reporting system. Consumers may lack information to take action to improve their credit histories: Consumers reported that they often do not feel empowered to take action to improve their credit histories and that they rarely apply credit information in their daily lives, such as using their credit reports and scores to negotiate better credit terms. Consumers who are more engaged in the financial system check their credit reports regularly: Consumers who reported feeling financially savvy and knowledgeable about their credit files, credit terms, and interest rates were more likely to say they check their reports regularly. These consumers thought that keeping aware of their credit files was helpful in achieving their financial goals.

Creating credit scores is crucial to help black and Latinx communities.

CFPB '15 (Consumer Financial Protection Bureau; 5/5/15; "CFPB Report Finds 26 Million Consumers Are Credit Invisible" http://www.consumerfinance.gov/newsroom/cfpb-report-finds-26-million-consumers-are-credit-invisible/; we don't endorse any offensive language in this card)

WASHINGTON, D.C. — Today the Consumer Financial Protection Bureau (CFPB) published a report finding that 26 million Americans are "credit invisible." This figure indicates that one in every 10 adults do not have any credit history with a nationwide consumer reporting agency. The report also found that Black consumers, Hispanic consumers, and consumers in low-income neighborhoods are more likely to have no credit history with a nationwide consumer reporting agency or not enough current credit history to produce a credit score. "Today's report sheds light on the millions of Americans who are credit invisible," said CFPB Director Richard Cordray. "A limited credit history can create real barriers for consumers looking to access the credit that is often so essential to meaningful opportunity—to get an education, start a business, or buy a house. Further, some of the most economically vulnerable consumers are more likely to be credit invisible." The three nationwide consumer reporting agencies, also called credit bureaus, generate credit reports that track a consumer's credit history. Credit reports and the three-digit credit scores that are based on those reports play an increasingly important role in the lives of American consumers. Most decisions to grant credit and set interest rates for loans are made based on information contained in credit reports. As a result, those consumers who have a limited or nonexistent credit history face greater hurdles in getting credit. Consumers' credit histories reflect how they have repaid their debts. Consumers' credit histories may contain information about bank loans, car loans, credit card bills, student loans, and mortgages. They may also contain details about the terms of consumers' credit, how much is owed to creditors, consumers' payment histories, and court judgments or liens against them. Credit history helps the consumer reporting agencies determine how likely consumers are to repay their debts. The agencies use that information to produce credit reports and scores. In broad terms, consumers with limited credit histories can be placed into two groups. The first group is consumers without a credit report, or the "credit invisibles." The second group, the "unscored," includes consumers who do not have enough credit history to generate a credit score or who have credit reports that contain "stale" or not recently reported information. The exact definition of what constitutes insufficient or stale information differs across credit scoring models, as each model uses its own proprietary definition. Today's report is designed to shed more light on the number of consumers and the characteristics of those consumers who have little to no credit record at the nationwide consumer reporting agencies. The report found that: 26 million consumers are credit invisible: About one in 10 Americans can be considered credit invisible because they do not have any credit record. About 189 million Americans have credit records that can be scored. 19 million consumers have unscored credit records: About 8 percent of the adult population has credit records that are considered unscorable based on a widely-used credit scoring model. Those records are almost evenly split between the 9.9 million that have an insufficient credit history and the 9.6 million that lack a recent credit history. Consumers in low-income neighborhoods are more likely to be credit invisible or to have an unscored record: Of the consumers who live in low-income neighborhoods, almost 30 percent are credit invisible and an additional 15 percent have records that are unscored. These percentages are notably lower in higher-income neighborhoods. For example, in upper-income neighborhoods, only 4 percent of the population is credit invisible and another 5 percent are unscorable under the widely-used model. Black and Hispanic consumers are more likely to have limited credit records: Black and Hispanic consumers are considerably more likely to be credit invisible or have unscored credit records than White or Asian consumers. About 15 percent of Black and Hispanic consumers are credit invisibles compared to 9 percent of White consumers. An additional 13 percent of Black consumers and 12 percent of Hispanic consumers have unscorable records under the widely-used model compared to 7 percent of White consumers. CFPB analysis suggests that these differences across racial and ethnic groups materialize early in the adult lives of these consumers and persist thereafter. This analysis was conducted using information from the CFPB's Consumer Credit Panel, which is a random sample of de-identified credit records purchased from one of the nationwide credit reporting agencies and is representative of the population with credit records. By comparing information in the credit panel from December 2010 with 2010 Census data, the Bureau was able to estimate the number of consumers who were credit invisible or had unscored credit records.

New mortgage rules will boost lending to rural and underserved areas.

CFPB '15 (Consumer Financial Protection Bureau; 1/29/15; CFPB, "CFPB Issues Proposal To Facilitate Access To Credit In Rural And Underserved Areas" http://www.consumerfinance.gov/newsroom/cfpb-issues-proposal-to-facilitate-access-to-credit-in-rural-and-underserved-areas/)

WASHINGTON, D.C. – The Consumer Financial Protection Bureau (CFPB) today proposed several changes to its mortgage rules to facilitate responsible lending by small creditors, particularly in rural and underserved areas. If finalized, the proposal issued today would increase the number of financial institutions able to offer certain types of mortgages in rural and underserved areas, and help small creditors adjust their business practices to comply with the new rules. "Responsible lending by community banks and credit unions did not cause the financial crisis, and our mortgage rules reflect the fact that small institutions play a vital role in many communities," said CFPB Director Richard Cordray. "Today's proposal will help consumers in rural or underserved areas access the mortgage credit they need, while still maintaining these important new consumer protections." In January 2013 and May 2013, the CFPB issued several mortgage rules, most of which took effect in January 2014. Among these rules, the Ability-to-Repay rule protects consumers from irresponsible mortgage lending by requiring that lenders generally make a reasonable and good-faith determination that prospective borrowers have the ability to repay their loans. Under the Ability-to-Repay rule, a category of loans called Qualified Mortgages prohibit certain risky loan features for consumers and are presumed to comply with ability-to-repay requirements. There are a variety of provisions in the rules that affect small creditors, as well as small creditors that operate predominantly in rural or underserved areas. For instance, a provision in the Ability-to-Repay rule extends Qualified Mortgage status to loans that small creditors hold in their own portfolios, even if consumers' debt-to-income ratio exceeds 43 percent. Small creditors in rural or underserved areas can originate Qualified Mortgages with balloon payments even though balloon payments are otherwise not allowed with Qualified Mortgages. Similarly, under the Bureau's Home Ownership and Equity Protection Act rule, small creditors that operate predominantly in rural or underserved areas can originate high-cost mortgages with balloon payments. Also, under the Bureau's Escrows rule, eligible small creditors that operate predominantly in rural or underserved areas are not required to establish escrow accounts for higher-priced mortgages. Since issuing the mortgage rules, the CFPB has continued to monitor the mortgage market and seek public feedback. In May 2013, the Bureau announced it would study whether the definitions of rural and underserved should be adjusted. In May 2014, the Bureau requested public comment regarding the origination limit for small creditor status. The proposal announced today reflects the Bureau's ongoing study of the market and extensive outreach to stakeholders including consumer advocates and industry groups. Today's proposed amendments would: Expand the definition of "small creditor": Under the proposal, the loan origination limit for small-creditor status would be raised from 500 first-lien mortgage loans to 2,000 and would exclude loans held in portfolio by the creditor and its affiliates. Include mortgage affiliates in calculation of small-creditor status: The proposal would not change the current asset limit for small-creditor status, which is set at less than $2 billion (adjusted annually) in total assets as of the end of the preceding calendar year. However, the proposal would include the assets of the creditor's mortgage-originating affiliates in calculating whether a creditor is under the limit. Expand the definition of "rural" areas: In addition to counties that are considered to be "rural" under the CFPB's current mortgage rules, the proposal would expand the definition of "rural" to include census blocks that are not in an urban area as defined by the Census Bureau. Provide grace periods for small creditor and rural or underserved creditor status: Creditors that exceeded the origination limit or asset-size limit in the preceding calendar year would be allowed to operate, in certain circumstances, as a small creditor with respect to mortgage transactions with applications received prior to April 1 of the current calendar year. The proposal would create a similar grace period for creditors that no longer operated predominantly in rural or underserved areas during the preceding calendar year. Create a one-year qualifying period for rural or underserved creditor status: The proposal would adjust the time period used in determining whether a creditor is operating predominately in rural or underserved areas, from any of the three preceding calendar years to the preceding calendar year. Provide additional implementation time for small creditors: Eligible small creditors are currently able to make balloon-payment Qualified Mortgages and balloon-payment high-cost mortgages regardless of where they operate, under a temporary exemption scheduled to expire on January 10, 2016. Today's proposal would extend that period to include balloon-payment mortgage transactions with applications received before April 1, 2016, giving creditors more time to understand how any changes will affect their status, and to adjust their business practices. The proposal would make several additional minor or technical changes to the rules. The proposed rule will be open for public comment until March 30, 2015.

2015 reforms are working to weed out discrimination in credit.

CFPB '15 (Consumer Financial Protection Bureau; 4/28/15; "We're making progress toward ensuring fair access to credit" http://www.consumerfinance.gov/blog/were-making-progress-toward-ensuring-fair-access-to-credit/)

We're releasing our third annual Fair Lending Report, which details the important strides we have taken over the last year to protect consumers from credit discrimination and increase access to credit. Our

Office of Fair Lending and Equal Opportunity continues to identify and tackle discrimination in different financial markets, such as mortgages, auto loans and credit cards. In 2014, our fair lending actions directed institutions to provide approximately $224 million in monetary relief to about 303,000 consumers. We've also ordered companies to provide non-monetary relief to consumers. Here is a look at the key supervision and enforcement priorities last year. Mortgage lending We focused on potential discrimination in mortgage lending, including redlining and underwriting disparities. This past year we worked closely with the Department of Justice and a financial institution and its settlement administrator to distribute $35 million to minority borrowers who were harmed by discrimination, in accordance with a 2013 settlement. We also looked at the integrity of mortgage information reported by mortgage lenders covered by the Home Mortgage Disclosure Act (HMDA). Auto lending Our Supervisory Highlights: Summer 2014 summarized our observations in the area of indirect auto lending and offered additional guidance to assist lenders in reducing fair lending risk and complying with Federal consumer financial law. When lenders have not followed the law, we've acted to direct institutions to provide remediation to harmed consumers. Consumer relief in the credit cards market Last June, we announced an enforcement action against a credit card company that failed to provide certain debt relief offers to consumers based on national origin, in addition to other violations. As a result, the company provided consumer relief to borrowers excluded from these debt relief offers. Helping recipients of disability income Seeking relief for harmed consumers is an important part of our work. We also strive to inform institutions about their responsibilities when serving consumers. Last year we issued a compliance bulletin to help lenders avoid imposing illegal burdens on consumers receiving disability income who apply for mortgages. By helping lenders comply with the law, we help recipients of Social Security disability income receive fair and equal access to credit. We also helped by providing information to consumers about their rights as recipients of Social Security disability income. These are just a few of the developments you can read about in our third Fair Lending Report. We look forward to continuing to advance our work to ensure a fair, equitable, and nondiscriminatory credit market, with equal opportunity for all. We want to hear from you We do our job best when we hear from you. You can submit a complaint online or by calling (855) 411-2372. You can also tell us your story, good or bad, about your experience with financial products and services. Learn more about how you can protect yourself from credit discrimination.

Mortgage changes will increase access.

Pemco '14* (*last cited date; Pemco Ltd's purpose – To provide customized scalable real estate solutions that maximize the potential value of the assets for commercial, government, and individual clients; "Credit Access Gets Boost with CFPB Change" http://pemco-limited.com/credit-access-gets-boost)

Minor changes to mortgage rules were recently finalized by the Consumer Financial Protection Bureau (CFPB) to help expand credit boxes. The changes were proposed in April 2014 and includes adjustments which would allow some non-profits to provide mortgage credit and servicing to underserved populations. Under the changes, lenders would be allowed to refund the excess amount plus interest to consumers when points and fee caps are exceeded, while still falling under the definition of Qualified Mortgage (QM). Several mortgage rules were finalized in January 2013 and became effective January 2014. While the ability to repay (ATR) rule protects borrowers by requiring lenders to make a good-faith determination as to whether prospective borrowers can repay the loan; the new rules strongly protect homeowners, including those facing the possibility of foreclosure. CFPB Director Richard Cordray said, "Our mortgage rules are protecting consumers from debt traps, runarounds, and surprises. These adjustments will maintain those strong protections, while ensuring consumers have access to credit. This includes helping nonprofits that provide working families with important pathways to affordable homeownership." See: New Mortgage May Increase Home-Ownership Rate See: How Easy Is It to Get a Mortgage? Highlights of the new finalized rules are: Non-profit servicer definition: The CFPB learned that some non-profits service loans for a fee from other non-profit lenders; they're unable to merge their servicing activities and continue to meet the CFPB small servicer exemption requirements. The alternate definition of a small servicer would allow certain 501(c)(3) non-profits to consolidate their servicing functions and still be exempt from some of the servicing rules. Non-profit Ability-to-Repay exemption

amendment: Non-profit ATR rule exemption amendment allows 501(c)(3) to continue offering interest-free, forgivable loans to low-to- moderate income borrowers, also known as "soft seconds" at a rate of more than 200 per year. Prior to the rule's change, these non-profits were only exempt from the ATR rule if they made fewer than 200 of the soft second loans per year. Refund of excess points and fees: Qualified mortgages (QMs) protect the borrower under the ATR rule and the points and fees are capped at three percent of the loan principal at the time it's made. There are a few circumstances that a lender can refund the excess amount to the borrower if it's discovered after the loan's closing that the three percent cap has been exceeded. The refund must be made within 210 days of the origination of the loan. The loan will still be considered a QM. This change to the rules will expire on January 10, 2021 and is designed to encourage lenders to expand credit access to include potential borrowers who are at or close to the points and fees limit.

The CEAC proves that working with policymakers to reform access to credit is possible.

DE '8 (Diversity Executive; 9/18/08; Talent Management = multimedia publication that provides in-depth editorial content to talent management and HR professionals; "Leading Minority Organizations, Officials, Issuers Meet to Propose Credit Card Reform" http://www.talentmgt.com/articles/leading-minority-organizations-officials-issuers-meet-to-propose-credit-card-reform)

Citizens for Equal Access to Credit (CEAC), a diverse, multicultural nonprofit coalition, joined with leading minority organizations, business groups, elected officials and credit card customers from across the nation to announce a comprehensive proposal for low limit credit card reform and a Statement of Principles regarding access to credit. The Code of Practices proposal for low limit credit providers is the product of a "Virtual Summit on Minority Access to Credit" held on Aug. 21. The summit was convened by CEAC to enable a direct dialogue between communities of interest and card issuers to discuss concerns and ideas for improving current practices. The Statement of Principles hopes to inform decision makers and the public about the sensitivities, goals and concerns of cardholders, minorities and businesses regarding credit card reform. One of the key principles in the statement is: "The Federal Government should understand, and remain sensitive to, the reality that low limit cards represent a bridge to the economic mainstream for persons from underserved and unbanked communities." The Code of Practices includes a number of important reform proposals, such as a requirement that no finance charges on account opening fees be posted to an account, provided initial payments could be applied to repay the fees. The Code also calls for clear disclosure of consumer's right to a full and immediate refund if a consumer changes their mind after receiving a credit card. "As the Federal Reserve Board and Congress move forward with their proposals, it is essential that underserved communities and minorities have a powerful voice in this process," said Dr. Juan Andrade Jr., president of the United States Hispanic Leadership Institute (USHLI). "Bringing leading minority organizations and low limit credit card customers together with providers of credit to develop a consensus proposal is a great way to provide a road map for reform that encompasses the priorities and concerns of underserved communities." Rep. Lois DeBerry of Tennessee said, "It is very important that as the Federal Reserve Board and Congress make decisions about how people gain access to credit they understand the financial realities that a great many in minority communities are facing right now and the full impact of their proposals on those communities," said. "I am very pleased that so many groups and individuals who would be directly affected by proposed changes have been able to make their voices heard about the need to protect and maintain access to credit." The groups and individuals that took part in the "Virtual Summit" had the opportunity to discuss ideas for credit reform and submit changes and recommendations to the Code. Elected officials also participated in the summit including the Hon. Pedro Marin, state representative OF Georgia; the Hon. Julio Guridy, Allentown, Pa., city councilmember and Dominican American National Roundtable board member. Other advocacy groups that were consulted included the League of United Latin American Citizens (LULAC); the Inter American Entrepreneurs Association (AIHE); Dominico-American Society; The Small Business Entrepreneurship Council (SBEC); and the Intertribal Agriculture Council (IAC).

The FHA has empirically helped low-income communities get access to credit.

HUD '12 (US Department of Housing and Urban Development; Fall 2012; "Paths to Homeownership for Low-Income and Minority Households" http://www.huduser.org/portal/periodicals/em/fall12/highlight1.html)

Making It Affordable Affordability assistance helps low-income families overcome wealth barriers and achieve favorable debt-to-income ratios that keep monthly payments low. Examples of this type of backing include down payment assistance, grants, subsidies, homeownership vouchers, forgivable loans, and soft second mortgages. Even small amounts of down payment assistance increase the probability of moving first-time buyers into homeownership.36 Although about one out of five first-time homebuyers receives such help from their families, low-income households are less likely to have this option available.37 One source of help for these households is the Federal Housing Administration (FHA), which facilitates first-time homeownership for low-wealth buyers. FHA's minimum down payment requirement is set at 3.5 percent of the contract sales price. Edward Szymanoski, HUD's associate deputy assistant secretary for economic affairs, notes that FHA's traditional role — serving creditworthy first-time homebuyers — is particularly important to families with young children, who may benefit most from early access to homeownership. "First-time buyers often lack cash to pay the down payment and closing costs charged by conventional lenders and would otherwise have to defer homeownership for many years," Szymanoski says.38 Eligible homebuyers can also obtain assistance with down payment and closing costs through the HOME Investment Partnerships (HOME) and Community Development Block Grant (CDBG) programs. Through these programs, HUD awards block grants to cities and states, who then decide how to use the funds. HOME monies are dedicated to enhancing local affordable housing strategies that increase homeownership opportunities for low-income people. One study found that nearly all HOME programs offer assistance with down payment and closing costs in addition to other types of support such as loan guarantees, write-downs of the sales price, and interest rate buy-downs.39 Between 2004 and 2008, the American Dream Downpayment Initiative (now part of HOME) helped more than 26,000 low-income, first-time homebuyers with the biggest hurdle to homeownership: down payment and closing costs, plus rehabilitation expenses. Although the program capped assistance at the larger of $10,000 or 6 percent of the purchase price, the average amount was $5,000 per household.40 A 2005 HUD study concluded that small amounts of down payment assistance like this can be very effective in helping renters become homeowners and that as little as $1,000 can lead to a 19-percent increase in the number of low-income households buying a home. While the size of the increase declines as the level of assistance rises, assistance of up to $10,000 can lead to a 34-percent increase in overall homeownership, although the effect on underserved groups is greater — a 41-percent increase in low-income homeownership.41 Some buyers are able to lower their overall investment with sweat equity through HUD's Self-Help Homeownership Opportunity Program (SHOP). National and regional nonprofits and consortia receiving SHOP grantees developed 16,957 homeownership housing units for low-income families between 1996 and 2008. The grants are used to buy land and make infrastructure improvements that cannot exceed an average cost of $15,000 per unit; additional funds for construction or rehabilitation must be leveraged. Grantees may carry out SHOP activities themselves or contract with nonprofit affiliates to develop SHOP units, select homebuyers, coordinate sweat equity and volunteer efforts, and help arrange for interim and permanent financing for homebuyers. To significantly reduce purchase prices, homebuyers are required to put in a minimum number of hours of sweat equity, including painting, carpentry, trim work, and drywall, roofing, and siding installation. Without this sweat equity contribution, total development costs would range from 0.2 to 14.7 percent higher for each housing unit, according to an unpublished study by HUD's Office of Policy Development and Research.42 Renters of HUD-assisted units may become homeowners via the Housing Choice Voucher Homeownership program, which has been responsible for nearly 15,000 homeownership closings in the past decade. This program allows participating public housing agencies to offer residents the option to apply their rental voucher subsidy toward monthly ownership expenses. After satisfactorily completing a preassistance counseling program that covers home maintenance, budgeting and money management, credit counseling and credit repair, and mortgage financing, the purchaser finds an eligible home. In its analysis, Abt Associates found that the number of public housing agencies choosing to implement this program grew from 12 pilot sites in 1999 to more than 450 in 2006. Foreclosure, delinquency, and default rates were quite low for these buyers, who were mostly single mothers with children, minorities, and people with disabilities moving into neighborhoods with higher homeownership rates and slightly lower poverty rates than the neighborhoods where they had rented.43 An alternative form of assistance to low-income homebuyers, lease-purchase, is available through HOME, CDBG, and Housing Choice Voucher Homeownership funds. An evaluation of a low-income homeownership program that preceded HOME found that 10 percent of participating families became owners by leasing to buy. This option

allowed homebuyers who needed a little more time to accrue the savings needed for a down payment or to clear up credit problems while living in the home they would eventually purchase. One locality used lease-purchase in a transitional housing program as the final step to help formerly homeless families become homeowners.[44]

Safe Harbor Advantage

TTIP i/l turn

Turn – free flowing info undermines the TTIP – external actors are concerned about US-EU internet dominance

Aaronson, 4/13/15 – Research Professor at The George Washington University's Elliott School of International Affairs and the former Minerva Chair at the National War College (Susan, World Trade Review, "Why Trade Agreements are not Setting Information Free: The Lost History and Reinvigorated Debate over Cross-Border Data Flows, Human Rights and National Security", //11)

As of July 2014, trade officials are negotiating cross-border data flows in three very different trade agreements. The US and the 28 nations of the EU are negotiating the Transatlantic Trade and Investment Partnership (T-TIP); the US and ten other nations bordering the Pacific are negotiating the Transpacific Partnership (TPP); and some 50 members of the WTO (including the 28 EU states) are negotiating the Trade in Services Agreement of the WTO (TISA).4 Although many government officials around the world want to encourage these data flows, **many states have not responded positively to US and EU efforts to facilitate the free flow of information**. Officials and citizens from these states worry about their ability to control information flows as well as their dependence on US companies to provide web services (which must comply with US rules on privacy and national security).5 They are also concerned that the US continues to dominate not only the Internet economy, but also Internet governance institutions in ways that benefit US interests.6 Meanwhile, some activists in the US and EU noted that both governments restricted information flows through its punitive approach to online copyright and hence was hypocritical (Aaronson with Townes, 2012: 9, fn 81).

1nc – at: advantage solvency

Policies have already been reformed – those solve – prefer our evidence, it postdates

Aaronson, 4/13/15 – Research Professor at The George Washington University's Elliott School of International Affairs and the former Minerva Chair at the National War College (Susan, World Trade Review, "Why Trade Agreements are not Setting Information Free: The Lost History and Reinvigorated Debate over Cross-Border Data Flows, Human Rights and National Security", //11)

US and EU trade and foreign policymakers recognized that if they wanted to include free flow of information provisions in TTIP they had to change course. First, the EU and the US set up a **working group on privacy**, which provided answers to EU questions about the reach, methods, and effectiveness of the NSA programs.68 Second, the **US Department of Commerce took steps to show that Safe Harbor was effective**, and US companies that violated these policies would be punished. The US Federal Trade Commission doubled enforcement actions against 14 companies that claimed to participate in the Safe Harbor Framework but had not renewed their certifications under the program.69 The US also reassured businesses that the US remained committed to a **voluntary**, rather than a top-down regulatory approach to privacy. The two trade giants agreed to develop an interoperable system for data protection. Specifically, they agreed to strengthen the Safe Harbor program for the exchange of personal data for commercial purposes, as they also negotiated a framework agreement which would apply to personal data transferred between the EU and the US for law enforcement purposes. The EU has insisted and US

policymakers have reportedly concurred that the US grant EU citizens the same privacy rights as US citizens.70 While the EU's approach might protect EU citizens and facilitate data exchange among the US and EU, it would do little for citizens of other nations. Nor did it clarify whether the US would view privacy regulations as legitimate exceptions to the free flow of information or address the broader issue of how to deal with the multiplicity of privacy strategies among US and EU trade partners.

Safe Harbor is beyond repair – false membership, lack of transparency, and no review process

TNS, 13 – Targeted News Service ("EU and US NGOs Respond to EU Date Safe Harbor Report: Safe Harbor Program Should be Suspended Until US Protects Online Privacy", 11/27/13, ProQuest, //11)

Director General of The European Consumer Organisation, Monique Goyens, commented:

"The European Commission's report on the 'Safe Harbour' agreement confirms the longstanding concerns of consumer groups on both sides of the Atlantic. More than a decade after its establishment, the pact is riddled with problems.

"This agreement claims to reassure EU and US consumers when their personal data is exchanged for commercial purposes, but it has now been shown to retain only a fig-leaf of credibility. In practice, it is riven with **false claims of membership**, the process is **not transparent** and many signatories' lack even a privacy policy. In the wake of all this, there has been absence of effective enforcement by regulatory authorities over the years. Recent events have highlighted the obvious imprudence of **poorly designed** data exchange agreements. The question now will be: 'is Safe Harbour beyond repair?'

"The safety of European consumers' data needs to be paramount. Data flows must have a true harbour, not just a commercial port. US authorities may need to come to understand that Safe Harbour can no longer be used as a free pass for data exchange.

"The European Commission's 13 Recommendations are a welcome address of many of the issues. Better enforcement is crucial and we're glad to see that being examined. But the ability of companies to self-certify as offering 'Safe Harbour' is **unjustifiable** and remains inexplicably **outside the review**. It is hard to see the purpose of proceeding without tackling such basic flaws and perhaps the time has come to put the Safe Harbour agreement to one side and move on.

Circumvention

Safe-Harbor will be circumvented

WSGR, 13 – Wilson Sonsini Goodrich & Rosati: the premier provider of legal services to technology, life sciences, and growth enterprises worldwide ("Cloud Providers That Adhere to U.S.-EU Safe Harbor Framework Meet EU's Data Protection Adequacy Requirements, Says U.S. Commerce Department", 5/6/13, https://www.wsgr.com/WSGR/Display.aspx?SectionName=publications/PDFSearch/wsgralert-cloud-providers.htm, //11)

While completing the required Safe Harbor application is relatively simple and quick, **it can be easy for organizations to overlook the program's compliance requirements**, including annual assessments and documentation of compliance. Given the increasing attention and focus by

customers on vendor and supply chain management in this area, increased investment in privacy and data security-related controls may yield quick returns by enabling deals to close more quickly and efficiently. Moreover, with the FTC's prosecution of a number of entities that claimed they were Safe Harbor-certified even though their certifications had lapsed, technical compliance with the Safe Harbor has taken on greater significance. A benefit of the program is that it helps encourage organizations to routinely and annually re-evaluate their privacy and data protection practices and to do so systematically. Many organizations also rely on and work with outside third parties, including law firms, to assist in these efforts. Such assistance can provide valuable benchmarking information and guidance on best practices, as well as assist with risk management.

not topical

Safe Harbor isn't topical – not national security, federal, or US persons

FPF, 13 – Future of Privacy Forum ("The US-EU Safe Harbor: An Analysis of the Framework's Effectiveness in Protecting Personal Privacy", December 2013, http://www.futureofprivacy.org/wp-content/uploads/FPF-Safe-Harbor-Report.pdf, //11)

Scrutinizing the Safe Harbor over concerns about government access misconstrues the purpose of the Safe Harbor. The Safe Harbor is intended to bring US data practices in line with the EU Data Directive. The Directive **does not apply to matters of national security** or law enforcement.173 Article 3 of the Directive states: "This Directive shall not apply to the processing of personal data…[with respect to] operations concerning public security, defen[s]e, State security (including the economic well-being of the State when the processing operation relates to State security matters) and the activities of the State in areas of criminal law." 174 Thus, the Safe Harbor always had been envisioned as protecting the **privacy of EU citizens** within **only the commercial privacy context**.175 It should come as no surprise then that the Safe Harbor specifically provides exceptions to the Safe Harbor's privacy principles "to the extent necessary to meet national security, public interest, or law enforcement requirements."176

Cybersecurity Advantage

Alt cause to failure

No incentive to protect cyber infrastructure – lack of understanding

Sales 13 – Associate Professor of Law at the Syracuse University College of Law, former professor at George Mason University School of Law (Nathan A., Northwestern University Law Review, "REGULATING CYBER-SECURITY", file:///C:/Users/Alana%20Levin/Downloads/SSRN-id2035069.pdf, //11)

The poor state of America's cyber-defenses is partly due to the fact that the analytical framework used to understand the problem is **incomplete**. The law and policy of cyber-security are under theorized. Virtually all legal scholarship approaches cyber-security from the standpoint of the criminal law or the law of armed conflict.19 Given these analytical commitments, it is inevitable that academics and lawmakers will tend to favor law enforcement and military solutions to cyber-security problems. These are important perspectives, but cyber-security scholarship need not run in such narrow channels. **An entirely new approach is needed**. Rather than conceiving of private firms merely as possible victims of cyber-crimes, or as potential targets in cyber-conflicts, we should think of them in regulatory terms.20 Many companies that operate critical infrastructure tend to underinvest in cyber-defense because of negative externalities, positive externalities, free riding, and public goods problems—the same sorts of challenges the modern administrative state encounters in a variety of other contexts.

Circumvention

NSA will circumvent cyber restrictions

Kehl 14 – policy analyst at New America's Open Technology Institute (Danielle, Open Technology Institute, "Surveillance Costs: The NSA's Impact on the Economy, Internet Freedom & Cybersecurity", July 2014, https://www.newamerica.org/downloads/Surveilance_Costs_Final.pdf, //11)

One tactic for quietly scooping up vast amounts of data is to target the infrastructure around networks and network providers, including the **undersea fiber optic cables** that carry global Internet traffic from one continent to another. Leaked documents reveal that in February 2013 the NSA successfully hacked the SEA-ME-WE-4 cable system, which originates in France and connects Europe to the Middle East and North Africa.307 Reports also suggest that the NSA has hacked fiber optic links connecting Google and Facebook data centers located outside of the United States.308 For access to messages that are encrypted, the NSA maintains an internal database through its Key Provisioning Service which has encryption keys for a wide array of commercial products. A separate unit within the agency, the Key Recovery Service, exists for the purpose of trying to obtain keys that are not already a part of the NSA's database. According to The New York Times, "How keys are acquired is shrouded in secrecy, but independent cryptographers say many are probably collected by hacking into companies' computer servers, where they are stored."309

FCC Mechanism

At: FCC expertise

FCC sucks – evolving marketplace and lack of interbureau coordination undermine transparency and expertise

GAO, 9 – United States Government Accountability Office ("FCC Management: Improvements Needed in Communication, Decision-Making Processes, and Workforce Planning", December 2009, Google Ebook, //11)

What GAO Found

FCC consists of seven bureaus, with some structured along functional lines, such as enforcement, and some structured along technical lines, such as wireless telecommunications and media. Although there have been changes in FCC's bureau structure, developments in the telecommunications industry continue to create issues that span the jurisdiction of several bureaus. However, FCC **lacks written procedures** for ensuring the interbureau collaboration and communication occurs. FCC's reliance on informal coordination has **created confusion** among the bureaus regarding who is responsible for handling certain issues. In addition, the lack of written procedures has allowed various chairmen to determine the extent to which interbureau collaboration and communication occurs. This has led to instances in which FCC's analyses lacked input from all relevant staff. Although FCC stated that is relies on its functional offices, such as its engineering and strategic planning offices, to address crosscutting issues, stakeholders have expressed concerns regarding the chairman's ability to influence these offices.

Weaknesses in FCC's processes for collecting and using information also **raise concerns regarding the transparency and informed nature** of FCC's decision-making process. FCC has five commissioners, one of which is designated chairman. FCC lacks internal policies regarding commissioner access to staff analyses during the decision-making process, and some chairmen have restricted this access. Such restrictions may undermine the group decision-making process and impact the quality of the FCC's decisions. In addition, GAO identified weaknesses in FCC's processes for collecting public input on proposed rules. Specifically, FCC rarely includes the text of a proposed rule when issuing a Notice of Proposed Rulemaking to collect public comment on a rule change, although some studies have noted that providing proposed rule text helps focus public input. Additionally, FCC has developed rules regarding contacts between external parties and FCC officials (known as ex parte contacts) that require the external party to provide FCC a summary of the new information presented for inclusion in the public record. However, several stakeholders told us that FCC's ex parte process allows vague ex parte summaries and that in some cases, ex parte contacts can occur just before a commission vote, which can limit stakeholders' ability to determine what information was provided and to rebut or discuss that information.

FCC faces challenges in ensuring it has the expertise needed to adapt to a changing marketplace. For example, a large percentage of FCC's economists and engineers are eligible to retire in 2011, and FCC faces difficulty recruiting top candidates. FCC has initiated recruitment and development programs and has begun evaluating its workforce needs. GAO previously noted that strategic workforce planning should include identifying needs, developing strategies to address these needs, and tracking progress. However, FCC's Strategic Human Capital Plan does

not establish targets for its expertise needs, making it difficult to assess the agency's progress in addressing its needs.

FCC expertise is hype – their evidence is political self-praise

Engebreston, 13 – Executive Editor of Telecompetitor, former editor-in-chief of Telephony Magazine and America's Network Magazine (Joan, "Catch-Up Talk with Blair Levin Yields Some Surprises", Telecompetitor 5/6/13, http://www.telecompetitor.com/catch-up-talk-with-blair-levin-yields-some-surprises/, //11)

***Blair Levin = former FCC chief of staff

Currently with the Aspen Institute, Blair Levin headed up the team at the FCC that three years ago created the National Broadband Plan with the goal of spurring broadband deployment. But in a speech last week, Levin said, "The FCC is becoming more of a **political institution and less an expert agency**."

Like other D.C. political institutions, he said, the commission is "increasingly caught up in a one-note narrative . . . of **self-praise** rather than focusing on providing the expertise and analytic agility necessary to adjust programs to provide bandwidth abundance to constituencies it is meant to serve."

In an interview with Telecompetitor on Friday, Levin directed further criticism at the FCC's self-praise. "I would never invest in a company that had a CEO who behaved that way," he said.

Work undone

It was up to the FCC to implement the ideas recommended in the National Broadband Plan – and the way Levin sees it, much of that work has been left undone.

One of the most important pieces of information to emerge out of the NBP was that the majority of the homes that can't get broadband are in areas served by the nation's largest price cap carriers – and that hasn't changed much, he told Telecompetitor on Friday.

Although he noted that CenturyLink is doing some upgrades, he said "AT&T is doing zero, and Verizon sold some lines to Frontier but they're not doing anything with what they held on to." (AT&T would disagree with Levin's assessment, having touted its rural network upgrade plans last fall. But it's true that those plans rely heavily on mobile broadband rather than a fixed offering.)

Levin also argued in his recent speech that the FCC essentially "punted" on "the critical issue of contribution reform." In other words, the FCC's new broadband-focused Universal Service program appears to be doomed to be funded as a percentage of carriers' long-distance voice revenues – a methodology that is becoming increasingly unsustainable as long-distance voice revenues decline.

When I asked Levin what he'd like to see happen on that front, however, he declined to offer a specific suggestion. Instead, he said the commission should pull a lot of ideas together and run a proceeding. (The FCC has avoided taking even such an apparently innocuous step – perhaps

because it would then be expected to take action and, politically, it is afraid of taking any action on that controversial issue.)

Singing a different tune?

When the NBP was released, Levin made some enemies among rural telcos because of some of the Universal Service reforms proposed in the plan. The fundamental point of contention was that in targeting to bring broadband to unserved price cap territories without increasing the size of the fund, the corollary was that rate of return carriers would have to get by on less.

Over the past three years, the FCC has implemented some of the reforms proposed in the NBP – although not exactly as the NBP proposed. And some readers might be surprised by one of the things Levin said in another recent speech.

"In those areas where the fund was already driving broadband investment, **reform has stalled progress**," he said in Madison, Wisc. on April 4. He even cited a recent survey of small rural phone companies showing that 69% of respondents have cancelled or postponed investments due to uncertainty about restructuring.

Xt: no written procedures

Lack of interagency procedures gut efficiency

GAO, 9 – United States Government Accountability Office ("FCC Management: Improvements Needed in Communication, Decision-Making Processes, and Workforce Planning", December 2009, p.16-17, Google Ebook, //11)

FCC's lack of written policies and its reliance on informal interbureau coordination to address issues that span beyond the purview of a single bureau can result in **inefficiencies**. For example, one FCC official told us that while FCC was conducting a merger review of two major media companies, the review process was delayed because of confusion regarding which bureau was responsible. Since each of the companies merging had assets regulated by different FCC bureaus, it was unclear which bureau was the designated lead and would be responsible for a specific portion of the merger review process. Although the chairman eventually designated a lead bureau, the time it took for this to happen slowed down the process, and the overall lack of coordination made the process less efficient. Our International Control and Management Evaluation Tool emphasizes the importance of internal communications, specifically noting the need for mechanisms that allow for the easy flow of information down, across, and up the organization, including communications between functional activities.

Xt: no expertise

Funding constraints complicate the hiring process – difficult to update staff and expertise

GAO, 9 – United States Government Accountability Office ("FCC Management: Improvements Needed in Communication, Decision-Making Processes, and Workforce Planning", December 2009, p.41, Google Ebook, //11)

FCC faces multiple challenges in recruiting new staff. One challenge FCC faces (similar to other federal agencies) is the inability to offer more competitive pay. Additionally, not having an approved budget and working under congressional continuing resolutions has hampered hiring efforts for engineers and economists. Competing priorities may also delay internal decisions regarding hiring. For example, OSP has not received the budgetary allocation for hiring new economists in time for the annual American Economic Association meeting for at least the past 4 years. This meeting is the primary recruiting venue for recently-graduated economists. When the FCC is not able to hire economists at the annual meeting, the agency potentially loses out on skilled employees who have been offered employment elsewhere. FCC officials told us that OSP has received permission to attend the 2010 American Economic Association meeting and hire at least one economist.

Random

Zero Days

Disclosure of zero-days undermines non-proliferation efforts and there's no spillover

Sanger 14 – chief Washington correspondent of The New York Times (David E., New York Times, "Obama Lets N.S.A. Exploit Some Internet Flaws, Officials Say", 4/12/14, http://www.nytimes.com/2014/04/13/us/politics/obama-lets-nsa-exploit-some-internet-flaws-officials-say.html?_r=0)

The N.S.A. made use of four "zero day" vulnerabilities in its attack on Iran's nuclear enrichment sites. That operation, code-named "Olympic Games," managed to damage roughly 1,000 Iranian centrifuges, and by some accounts helped drive the country to the negotiating table.

Not surprisingly, officials at the N.S.A. and at its military partner, the United States Cyber Command, warned that giving up the capability to exploit undisclosed vulnerabilities would amount to "**unilateral disarmament**" — a phrase taken from the battles over whether and how far to cut America's nuclear arsenal.

"We don't eliminate nuclear weapons until the Russians do," one senior intelligence official said recently. "You are not going to see the Chinese give up on 'zero days' just because we do." Even a senior White House official who was sympathetic to broad reforms after the N.S.A. disclosures said last month, "I can't imagine the president — any president — entirely giving up a technology that might enable him some day to take a covert action that could avoid a shooting war."

NSA DDI

CASE NEG: NSA

Privacy

No NSA abuses – checks the internal link

Lowry 2015,
Rich, Editor, the National Review, 5-27-2015, "Lowry: NSA data program faces death by bumper sticker," Salt Lake Tribune, http://www.sltrib.com/csp/mediapool/sites/sltrib/pages/printfriendly.csp?id=2557534

You can listen to orations on the NSA program for hours and be outraged by its violation of our liberties, inspired by the glories of the Fourth Amendment and prepared to mount the barricades to stop the NSA in its tracks — and still have no idea what the program actually does. That's what the opponents leave out or distort, since their case against the program becomes so much less compelling upon fleeting contact with reality. The program involves so-called metadata, information about phone calls, but not the content of the calls — things like the numbers called, the time of the call, the duration of the call. The phone companies have all this information, which the NSA acquires from them. What happens next probably won't shock you, and it shouldn't. As Rachel Brand of the Privacy and Civil Liberties Oversight Board writes, "It is stored in a database that may be searched only by a handful of trained employees, and even they may search it only after a judge has determined that there is evidence connecting a specific phone number to terrorism." The charge of domestic spying is redolent of the days when J. Edgar Hoover targeted and harassed Martin Luther King Jr. Not only is there zero evidence of any such abuse, it isn't even possible based on the NSA database alone. There are no names with the numbers. As former prosecutor Andrew C. McCarthy points out, whitepages.com has more personal identifying information. The NSA is hardly a rogue agency. Its program is overseen by a special panel of judges, and it has briefed Congress about its program for years.

Privacy violations inevitable – tech and corporations

Goldsmith, 2015
Jack the Henry L. Shattuck Professor at Harvard Law School, The Ends of Privacy, The New Rambler, Apr. 06, 2015 (reviewing Bruce Schneier, Data and Goliath: The Hidden Battles to Collect Your Data and Control Your World (2015)). Published Version http://newramblerreview.com/images/files/Jack- Goldsmith_Review-of-Bruce-Schneier.pdf

The truth is that consumers love the benefits of digital goods and are willing to give up traditionally private information in exchange for the manifold miracles that the Internet and big data bring. Apple and Android each offer more than a million apps, most of which are built upon this model, as are countless other Internet services. More generally, big data promises huge improvements in economic efficiency and productivity, and in health care and safety. Absent abuses on a scale we have not yet seen, the public's attitude toward giving away personal information in exchange for these benefits will likely persist, even if the government requires firms to make more transparent how they collect and use our data. One piece of evidence for this is that privacy-respecting search engines and email services do not capture large market shares. In general these services are not as easy to use, not as robust, and not as efficacious as their personal-data-heavy competitors. Schneier understands and discusses all this. In the end his position seems to be that we should deny ourselves some (and perhaps a lot) of the benefits big data because the costs to privacy and related values are just too high. We "have to stop the slide" away from privacy, he says, not because privacy is "profitable or efficient, but because it is moral." But as Schneier also recognizes, privacy is not a static moral concept. "Our personal definitions of privacy are both cultural and situational," he acknowledges. Consumers are voting

with their computer mice and smartphones for more digital goods in exchange for more personal data. The culture increasingly accepts the giveaway of personal information for the benefits of modern computerized life. This trend is not new. "The idea that privacy can't be invaded at all is utopian," says Professor Charles Fried of Harvard Law School. "There are amounts and kinds of information which previously were not given out and suddenly they have to be given out. People adjust their behavior and conceptions accordingly." That is Fried in the 1970 Newsweek story, responding to an earlier generation's panic about big data and data mining. The same point applies today, and will apply as well when the Internet of things makes today's data mining seem as quaint as 1970s-era computation.

The right to security trumps the right to privacy – Individual ethics prove

Himma 2007 (KENNETH EINAR , "Privacy Versus Security: Why Privacy is Not an Absolute Value or Right" *San Diego Law Review*, http://poseidon01.ssrn.com/delivery.php?ID=946099113093066103077074112016017090015022028045089092075001073099001099109106114127011017012000106100015114101076020123093078010050012092072093113078096021081008038034055090107126078091116028103066027088072124015085097094100087114086001099009078&EXT=pdf&TYPE=2)

From an intuitive standpoint, the idea that the right to privacy is an absolute right seems utterly implausible. Intuitively, it seems clear that there are other rights that are so much more important that they easily trump privacy rights in the event of a conflict. For example, if a psychologist knows that a patient is highly likely to commit a murder, then it is, at the very least, morally permissible to disclose that information about the patient in order to prevent the crime—regardless of whether such information would otherwise be protected by privacy rights. Intuitively, it seems clear that life is more important from the standpoint of morality than any of the interests protected by a moral right to privacy. Still one often hears—primarily from academics in information schools and library schools, especially in connection with the controversy regarding the USA PATRIOT Act—the claim that privacy should never be sacrificed for security, implicitly denying what I take to be the underlying rationale for the PATRIOT Act. This also seems counterintuitive because it does not seem unreasonable to believe we have a moral right to security that includes the right to life. Although this right to security is broader than the right to life, the fact that security interests include our interests in our lives implies that the right to privacy trumps even the right to life—something that seems quite implausible from an intuitive point of view. If I have to give up the most private piece of information about myself to save my life or protect myself from either grievous bodily injury or financial ruin, I would gladly do so without hesitation. There are many things I do not want you to know about me, but should you make a credible threat to my life, bodily integrity, financial security, or health, and then hook me up to a lie detector machine, I will truthfully answer any question you ask about me. I value my privacy a lot, but I value my life, bodily integrity, and financial security much more than any of the interests protected by the right to privacy.

Surveillance reinforces the equal protection of the law – key to equitable morals

Taylor 05

[In Praise of Big Brother: Why We Should Learn to Stop Worrying and Love Government Surveillance; James Stacey Taylor; Public Affairs Quarterly Vol. 19, No. 3 (Jul., 2005), pp. 227-246 Published by: University of Illinois Press on behalf of North American Philosophical Publications Stable URL: http://www.jstor.org/stable/40441413] //duff

A system of constant State surveillance would have other advantages, too. Under the current criminal justice system a wealthy defendant who is innocent of the charges that she is faced with can use her wealth to hire private investigators to demonstrate her innocence, either by finding persons who witnessed the crime of which she

is accused, or by finding persons who can provide her with a legitimate alibi. This option is not open to poorer defendants who are similarly innocent, but who cannot afford to hire private investigators. Since this is so, innocent, poor defendants are more likely than innocent, wealthy defendants to accept plea bargains, or to be convicted of crimes that they did not commit. If, however, a poor person were to be accused of a crime in a State that subjected its citizens to constant surveillance, the judge in her case would be morally justified (indeed, would be morally required) in enabling the defense to secure information that would prove her innocence, and that would have been gathered by the State's surveillance devices. A State's use of constant surveillance could thus reduce the number of persons who are wrongfully convicted. This would not only be good in itself, but it would also lead to a more equitable justice system, for the disparity in wrongful conviction rates between the wealthy (who could use their wealth to prove their innocence) and the poor could be eliminated.

Mass surveillance is less discriminatory because it targets everyone equally.

Hadjimatheou 2014

Katerina Hadjimatheou, Security Ethics Group, Politics and International Studies, University of Warwick "The Relative Moral Risks of Untargeted and Targeted Surveillance" Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1

There are good reasons to think that both the extent to which surveillance treats people like suspects and the extent to which it stigmatises those it affects increases the more targeted the measure of surveillance. As has already been established, stigmatisation occurs when individuals are marked out as suspicious. Being marked out implies being identified in some way that distinguishes one from other members of the wider community or the relevant group. Being pulled out of line for further search or questioning at an airport; being stopped and searched on a busy train platform while other passengers are left alone; having one's travel history, credit card, and other records searched before flying because one fits a profile of a potential terrorist- these are all examples of being singled out and thereby marked out for suspicion. They are all stigmatising, because they all imply that there is something suspicious about a person that justifies the intrusion. In contrast, untargeted surveillance such as blanket screening at airports, spot screening of all school lockers for drugs, and the use of speed cameras neither single people out for scrutiny nor enact or convey a suspicion that those surveilled are more likely than others to be breaking the rules. Rather, everybody engaged in the relevant activity is subject to the same measure of surveillance, indiscriminately and irrespective of any evidence suggesting particular suspiciousness. Such evidence may well emerge from the application of untargeted surveillance, and that evidence may then be used to justify singling people out for further, targeted surveillance. But untargeted surveillance itself affects all people within its range equally and thus stigmatises none in particular.

Econ

OTHER MAJOR THREATS TO TECH LEADERSHIP

Jeff **Clark 13**, Master's and doctorate's degrees in engineering from Virginia Tech, 12-3-**2013**, "Maintaining U.S. Technology Leadership," The Data Center Journal, http://www.datacenterjournal.com/maintaining-technology-leadership/

The U.S. is generally **recognized as the world leader in technology, having founded the silicon industry and hosting many top universities in science and engineering.** Each year,

however, prognostications about the nation's demise into second-tier status crop up, usually in the context of demanding more government funding of various programs, reducing corporate tax rates or beefing up education. But truly **maintaining technology leadership** involves more than just throwing more (of other people's) money at the problem: it **requires recognition of the source, purpose and goals of technological development. Competition between the U.S. and, say, China** (a likely candidate to replace the U.S. as technology leader, should the U.S. falter) **is not** necessarily **bad; like any form of competition, in the right measure it can encourage each side to improve.** Unfortunately, much of the competitive spirit in the U.S. is more a reflection of jingoism and a sense of entitlement, as though the nation has some claim to a leadership position simply because of who it is (a nation that is much, much younger than many others around the world). All in all, **the greatest threat to U.S. leadership in technology is—the U.S. The nation's overfinancialization, educational inflation and IP laws hamper innovation, but calls for greater government spending on research and development or education simply feed the problems rather than solving them.** Partly to blame is the overemphasis on growth, which is ultimately an unsustainable policy. A turnaround in any of these destructive policies, however, is unforeseeable apart from a drastic change in conditions (i.e., another crash a la the Great Recession).

Surveillance is a drop in the bucket – too many reasons why countries want data localization

Business Roundtable 12 (group of chief executive officers of major U.S. corporations formed to promote pro-business public policy)
(Promoting Economic Growth through Smart Global Information Technology Policy The Growing Threat of Local Data Server Requirements,
http://businessroundtable.org/sites/default/files/Global_IT_Policy_Paper_final.pdf)

> Several justifications have been offered for imposing local data server requirements. In some cases, local data server requirements are viewed as necessary to advance national industrial policy and support national service providers. In other cases, the stated justification is to ensure that regulatory, law enforcement or national security personnel can access data residing on the servers. In still other cases, governments assert that they are protecting personal privacy or restricting access to banned or unlawful content. Although some of these various objectives may be legitimate if they are narrowly tailored to address the genuine harm, the blanket imposition of local data server requirements can unnecessarily damage service providers and consumers alike and slow economic growth. To avoid such disruption, governments should seek to narrowly tailor their regulatory requirements to meet essential needs and should avoid ill-advised, blanket local data server requirements. Governments should also ensure that their reviews, if any, of the national security implications of foreign investments focus exclusively on genuine national security risks.

The Internet's positive influence is overhyped – the washing machine has done more for our economy

Dave **Masko**, award-winning foreign correspondent and photojournalist, **7-16**-2015, "Internet's Impact Exaggerated, Washing Machine Does More," Read Wave,
http://www.readwave.com/internet-s-impact-exaggerated-washing-machine-does-more_s85070

Story and photo by Dave Masko EUGENE, Oregon — Data collected by the Pew Internet & American Life Project finds the Internet being hyped as something great when ITs not. Still, there are many University of

Oregon students admitting to spending lots of time surfing the Internet because they are "lonely or bored." "Are you kidding, if I had a girlfriend and in love I would hardly spend my weekends surfing the Net for what… for just more mind fxxx you know; it's just a way to think you are something when you are just another loser; lost and lonely online," admits senior Brian Kelleher. In turn, Kelleher points to a recent lecture he viewed online when researching an economics assignment. "The lecture by Nobel Prize nominee Ha-Joon Chang really opened my eyes to the power of Internet 'branding' and marketing over the past 25 years the Net has existed," Kelleher explained. "Basically, Professor Chang stated that the Internet's impact is vastly exaggerated; while showing how the washing machine has done way more for our society and various cultures worldwide than the Internet because not everyone on Earth today uses views online knowledge as something of value. Frankly, Professor Chang opened my eyes as to 'why' so many of us are blind when it comes to Internet hype being just more bullxxxx." Meanwhile, this interview with Kelleher took place a few months ago when this university senior was single. "After letting go of my Internet addiction, I met a like-minded student named Carol who got me outside in the real world when not in class. You know what, I feel really alive again thanks to Carol's view that we unplug from the machine we don't really need the Net. It's great to be offline and loving life again. Carol and I even go to the laundry and use our favorite new 'machine' the washing machine," joked Kelleher who is pictured walking around campus with Carol on a bright and beautiful April 30, 2015 spring day in Eugene. In fact, Kelleher said Professor Chang's lecture raised eyebrows here at the University of Oregon's famed "Wearable Computing Lab" that was founded in 1995 at the dawn of the so-called information-era. While Kelleher thinks digital-age fans here on campus view the Internet "as revolutionizing just about everything," they took pause when Professor Chang — a famed University of Cambridge, England, economist — presented interesting views on why the washing machine helps more people worldwide than the Net ever could." Professor Chang argues that the Internet's revolutionary is pretty harmless, noting that, "Instead of reading a paper, we now read the news online. Instead of buying books at a store, we buy them on-line. What's so revolutionary? The Internet has mainly affected our leisure life. In short, the washing machine has allowed women to get into the labor market so that we have nearly doubled the work force." Moreover, Professor Chang questions all the hype about the good stuff the Internet is doing for the poor. "Charities are now working to give people in poor countries access to the Internet. But shouldn't we spend that money on providing health clinics and safe water," writes Professor Chang. While the digital revolution has helped make the shift from traditional industry, the clothes washer technology also has been revolutionary because it reduces the drudgery of scrubbing and rubbing clothing, the professor added. Professor Chang is viewed as one of the foremost thinkers on "new economics and development." His economic textbook, "23 Things They Don't Tell You About Capitalism" also details his interest in how the washing machine is way more revolutionary than the Internet. Thanks to washing machine technology, "women started having fewer children, gained more bargaining power in their relationships and enjoyed a higher status. This liberation of women has done more for democracy than the Internet," states Professor Chang's lecture. "The washing machine is a symbol of a fundamental change in how we look at women. It has changed society more than the Internet." As one of the top economics professors in the world, Professor Chang likes to challenge his students to looking at things in a different way. For instance, he notes that "people like you and me have no memory of spending two hours a day washing our clothes in cold water." This is part 8 for an occasional series titled: "Tech: Hooked Into Machine," that is being offered to book and website publishers. DAVE MASKO is award-winning foreign correspondent and photojournalist who has published prolifically in top print newspapers and magazines online. He has reported on vital issues worldwide over the past 40 years. He accepts freelance work. Contact him at dpmasko@msn.com.

Decoupling means US isn't key to the global economy

Bloomberg 10 ["Wall Street Sees World Economy Decoupling From U.S.", October 4th, 2010, http://www.bloomberg.com/news/2010-10-03/world-economy-decoupling-from-u-s-in-slowdown-returns-as-wall-street-view.html, Chetan]

The main reason for the divergence: "Direct transmission from a U.S. slowdown to other economies through exports is just not large enough to spread a U.S. demand problem globally," Goldman Sachs economists Dominic Wilson and Stacy Carlson wrote in a Sept. 22 report entitled "If the U.S. sneezes..." Limited Exposure Take the so-called BRIC countries of Brazil, Russia, India and China. While exports account for almost 20 percent of their gross domestic product, sales to the U.S. compose less than 5 percent of GDP, according to their estimates. That means even if U.S. growth slowed 2 percent, the drag on these four countries would be about 0.1 percentage point, the economists reckon. Developed economies including the U.K., Germany and Japan also have limited exposure, they

said. Economies outside the U.S. have room to grow that the U.S. doesn't, partly because of its outsized slump in house prices, Wilson and Carlson said. The drop of almost 35 percent is more than twice as large as the worst declines in the rest of the Group of 10 industrial nations, they found. The risk to the decoupling wager is a repeat of 2008, when the U.S. property bubble burst and then morphed into a global credit and banking shock that ricocheted around the world. For now, Goldman Sachs's index of U.S. financial conditions signals that bond and stock markets aren't stressed by the U.S. outlook. Weaker Dollar The break with the U.S. will be reflected in a weaker dollar, with the Chinese yuan appreciating to 6.49 per dollar in a year from 6.685 on Oct. 1, according to Goldman Sachs forecasts. The bank is also betting that yields on U.S. 10-year debt will be lower by June than equivalent yields for Germany, the U.K., Canada, Australia and Norway. U.S. notes will rise to 2.8 percent from 2.52 percent, Germany's will increase to 3 percent from 2.3 percent and Canada's will grow to 3.8 percent from 2.76 percent on Oct. 1, Goldman Sachs projects. Goldman Sachs isn't alone in making the case for decoupling. Harris at BofA Merrill Lynch said he didn't buy the argument prior to the financial crisis. Now he believes global growth is strong enough to offer a "handkerchief" to the U.S. as it suffers a "growth recession" of weak expansion and rising unemployment, he said. Giving him confidence is his calculation that the U.S. share of global GDP has shrunk to about 24 percent from 31 percent in 2000. He also notes that, unlike the U.S., many countries avoided asset bubbles, kept their banking systems sound and improved their trade and budget positions. Economic Locomotives A book published last week by the World Bank backs him up. "The Day After Tomorrow" concludes that developing nations aren't only decoupling, they also are undergoing a "switchover" that will make them such locomotives for the world economy, they can help rescue advanced nations. Among the reasons for the revolution are greater trade between emerging markets, the rise of the middle class and higher commodity prices, the book said. Investors are signaling they agree. The U.S. has fallen behind Brazil, China and India as the preferred place to invest, according to a quarterly survey conducted last month of 1,408 investors, analysts and traders who subscribe to Bloomberg. Emerging markets also attracted more money from share offerings than industrialized nations last quarter for the first time in at least a decade, Bloomberg data show. Room to Ease Indonesia, India, China and Poland are the developing economies least vulnerable to a U.S. slowdown, according to a Sept. 14 study based on trade ties by HSBC Holdings Plc economists. China, Russia and Brazil also are among nations with more room than industrial countries to ease policies if a U.S. slowdown does weigh on their growth, according to a policy- flexibility index designed by the economists, who include New York-based Pablo Goldberg. "Emerging economies kept their powder relatively dry, and are, for the most part, in a position where they could act countercyclically if needed," the HSBC group said. Links to developing countries are helping insulate some companies against U.S. weakness. Swiss watch manufacturer Swatch Group AG and tire maker Nokian Renkaat of Finland are among the European businesses that should benefit from trade with nations such as Russia and China where consumer demand is growing, according to BlackRock Inc. portfolio manager Alister Hibbert. "There's a lot of life in the global economy," Hibbert, said at a Sept. 8 presentation to reporters in London.

Democracy does not affect whether or not a state represses.

Timmerman '12(Ashley M; B.A University of Central Florida; " WHEN LEADERS REPRESS: A STUDY OF AFRICAN STATES"; http://etd.fcla.edu/CF/CFE0005428/Masters_thesis_final.pdf)

Some studies (Davenport and Inman, 2012) present evidence that contradicts this, saying that while regime type is important, it is "not universally applicable across all concepts." Davenport and Armstrong (2004) argue that the previous studies showing negative linear relationships between democracy and levels of repression are flawed. According to them, there is a negative linear relationship, but only above a particular threshold, that varies due to the measure in question. In their study, the measures include international war, civil war, and military control, among others. However, below this threshold, democracy does not affect the levels of repression. Beer and Mitchell (2006) also present evidence that suggest democracy is 5 not the deciding factor in whether or not a state will repress. Using the case of India as an example, Beer and Mitchell (2006) suggest ethnic and religious factors for the high levels of repression within a democratic state. The study accurately accounts for the election of specific political parties and the electoral participation as factors for repression, within this democratic state. This contradicts most of the previous research that suggests democracies will not repress.

Democracies start more wars- statistical analysis proves

Henderson 2 (Errol Henderson, Assistant Professor, Dept. of Political Science at the University of Florida, 2002, Democracy and War The End of an Illusion?, p. 146)

Are Democracies More Peaceful than Nondemocracies with Respect to Interstate Wars? The results indicate that democracies are more war-prone than non-democracies (whether democracy is coded dichotomously or continuously) and that democracies are more likely to initiate interstate wars. The findings are obtained from analyses that control for a host of political, economic, and cultural factors that have been implicated in the onset of interstate war, and focus explicitly on state level factors instead of simply inferring state level processes from dyadic level observations as was done in earlier studies (e.g., Oneal and Russett, 1997; Oneal and Ray, 1997). The results imply that democratic enlargement is more likely to increase the probability of war for states since democracies are more likely to become involved in—and to initiate—interstate wars.

The act of democratizing leads to war.

Chojnacki 6 (Sven, Professor @ Berlin Freie, Democratic Wars, pg. 35)

Moreover, an active policy of democratization might not only accelerate violent processes but the norms of democracy and human rights may also be a pretext for pursuing power interests by military means (ct. Shannon, 2000; Schjelset, 2001). Taking into account the -growth in military intervention capabilities, unilateral options for action on the part of powerful states, and the existing power asym- metries in the international system on the one hand, and the relevance of violent intrastate and substate conflicts for international politics in an era of interdependence on the other, there is little reason to assume that the number of military interventions will decrease in the future. A final risk to democratic peace arises through norm- and value-based demarcation processes and war-promoting patterns of argumentation vis-a-vis non-democratic systems. The more democratic states identify themselves in contrast to potential adversaries and the less

the cost--benefit argument comes to hear in the face of technological superiority, the more the risk of war increases (d. Muller, 2002a, p. 58). At the same time, it should be noted that superior military capabilities, normative orienta- tions and global liberalization pressures could be regarded as potential threats to non-democratic states and regions. This could result in the emergence of new images of what an enemy is and a 'democracy- specific security dilemma' vis-a-vis the rest of the world (MUller, 2002a, pp. 59-60). The 'clash of civilizations' envisaged by Samuel Huntington could thus evolve as a self-fulfilling prophecy as it begins to inhabit the security policies of Western democracies. A policy of democratic interventionism would not only confront democracies with incalculable security risks but might also undermine their own nonnative claims.

Solvency

FISA will circumvent

Bendix and Quirk 15 (assistant professor of political science at Keene State College; Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia)
(William Bendix and Paul J. Quirk, Secrecy and negligence: How Congress lost control of domestic surveillance, Issues in Governance Studies, March 2015, http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf)

> Even if Congress at some point enacted new restrictions on surveillance, the executive might ignore the law and continue to make policy unilaterally. The job of reviewing executive conduct would again fall to the FISA Court.56 In view of this court's history of broad deference to the executive, Congress would have a challenge to ensure that legislative policies were faithfully implemented.

Mass surveillance solves discrimination.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review, http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

More generally, broad-reach electronic mechanisms have an advantage in addressing the danger that surveillance will be unfairly concentrated on particular groups; targeting criteria, rather than reflecting rigorous efforts to identify wrongdoers, may reflect cognitive bias or group animus. Moreover, even when the criteria are optimally calculated to identify wrongdoers, they may be unfair to law-abiding people who happen to share some superficial characteristic with wrongdoers. Thus, law-abiding blacks complain that they are unfairly burdened by stop-and-frisk tactics, and law-abiding Muslims make similar complaints about anti-terrorism surveillance. Such problems are more tractable with broad-based electronic surveillance. Because it is broad-based, it distributes some of its burdens widely. This may be intrinsically fairer, and it operates as a political safeguard, making effective protest more likely in cases of abuse. Because it is electronic, the efficacy of the criteria can be more easily investigated, and their effect on law-abiding people can be more accurately documented. Thus, plaintiffs in challenges to stop-and-frisk practices analyze electronically recorded data on racial incidence and "hit rates" to argue that the criteria are biased and the effects racially skewed. Remedies in such cases typically require more extensive recording

The president of the United States should *limit the scope of its domestic surveillance under Section 702 of the Foreign Intelligence Surveillance Act to communications whose sender or recipient is a valid intelligence target and whose targets pose a tangible threat to national security.*

Executive can take action to curtail surveillance

Straw 14 (Joesph Straw-Published: Friday, January 17, 2014, 6:58 AM Updated: Saturday, January 18, 2014, 1:01 AM "Obama calls for modest constraints on NSA surveillance programs" http://www.nydailynews.com/news/politics/obama-calls-constraints-nsa-surveillance-article-1.1582758)

Regardless of how we got here," Obama said, "the task before us now is greater than simply repairing the damage done to our operations or preventing more disclosures from taking place in the future."¶ National Security Agency leaker Edward Snowden revealed last year that the government legally — but secretly — forces phone companies to turn over billions of records on Americans' calls and stores them.¶ Obama said the NSA will continue to vacuum up billions of U.S. phone call logs, but the government will set up a new, outside entity to store the data.¶ "We have to make some important decisions about how to protect ourselves and sustain our leadership in the world while upholding the civil liberties and privacy protections our ideals and our Constitution require," he said in a speech at Justice Department headquarters.¶ Among his proposals:¶ - Require the government to get approval from a judge before it searches the data, except in emergencies.¶ - Continue NSA monitoring of foreign terror suspects' email accounts, but with protections for the privacy of data on innocent Americans caught in the dragnet.¶ - Establish a panel of public advocates, who would argue before the secret Foreign Intelligence Surveillance Court to protect civil liberties in high-profile cases.¶ Obama asked Congress to approve the establishment of the advocate panel. He would pursue the remainder of his plans by executive order, he said, but welcomed Congress to make his proposals law.¶ Responding to one of Snowden's most embarrassing revelations — that the NSA has eavesdropped on the personal cell phones belonging to close allies like German Chancellor Angela Merkel — Obama said that friendly leaders' phones will not be tracked except when doing so is critical to national security.

Executive orders increase presidential power

Risen 4 [Clay, Managing editor of *Democracy: A Journal of Ideas,* M.A. from the University of Chicago "The Power of the Pen: The Not-So-Secret Weapon of Congress-wary Presidents" The American Prospect, July 16, http://www.prospect.org/cs/articles?article=the_power_of_the_pen]

In the modern era, **executive orders have gone from being a tool largely reserved for internal** White House **operations** -deciding how to format agency budgets or creating outlines for diplomatic protocol -- to **a powerful weapon in defining, and expanding, executive power**. In turn, **presidents have** increasingly **used that power to** construct and **promote social policies on** some of the country's most **controversial issues, from civil rights to labor relations to**

reproductive health.

Presidential power is critical to sustain the vital functions of American leadership

Mallaby 2K (Sebastian, Member, Washington Post's Editorial Board, Foreign Affairs, Jan/Feb)

Finally, **some** will **object** that **the weakness of the presidency** as an institution **is not the main explanation for the inadequacies of American diplomacy, even if it is a secondary one**. The ad hominem school of thought argues instead that Bill Clinton and his advisers have simply been incompetent. Others make various sociological claims that isolationism or multiculturalism lies at the root of America's diplomatic troubles. All of these arguments may have merit. **But** the **evidence cited by both camps can be better explained by the structural weakness of the presidency**. Take, for example, one celebrated error: President Clinton's declaration at the start of the Kosovo war that the Serbs need not fear NATO ground troops. This announcement almost certainly cost lives by encouraging the Serbs to believe that America was not serious about stopping ethnic cleansing. The ad hominem school sees in this example proof of Clinton's incompetence; the sociological school sees in it proof of isolationist pressure, which made the option of ground troops untenable. But a third explanation, offered privately by a top architect of the Kosovo policy, is more plausible. According to this official, the president knew that pundits and Congress would criticize whichever policy he chose. Clinton therefore preemptively took ground troops off the table, aware that his critics would then urge him on to a ground war -- and also aware that these urgings would convince Belgrade that Washington's resolve would stiffen with time, rather than weaken. The president's stand against ground troops was therefore the logical, tactical move of a leader feeling vulnerable to his critics. Other **failings of American diplomacy can** likewise **be accounted for by the advent of the nonexecutive presidency**. Several commentators, notably Samuel Huntington and Garry Wills in these pages, have attacked the arrogance of America's presumption to offer moral leadership to the world. But American leaders resort to moral rhetoric largely out of weakness. They fear that their policy will be blocked unless they generate moral momentum powerful enough to overcome domestic opponents. Likewise, critics point to the hypocrisy of the United States on the world stage. America seeks U.N. endorsement when convenient but is slow to pay its U.N. dues; America practices legal abortion at home but denies funds to organizations that do the same abroad. Again, this hypocrisy has everything to do with the weak executive. **The president has a favored policy but is powerless to make Congress follow it.** Still other critics decry American diplomacy as a rag-bag of narrow agendas: Boeing lobbies for China trade while Cuban-Americans demand sanctions on Cuba. Here, too, **presidential power is the issue. A strong presidency might see to it that America pursues its broader national interest, but a weak one cannot**. This is why Clinton signed the Helms-Burton sanctions on Cuba even though he knew that these would do disproportionate harm to U.S. relations with Canada and Europe. What if America's nonexecutive presidency is indeed at the root of its diplomatic inadequacy? First, it follows that it is too optimistic to blame America's foreign policy drift on the weak character of the current president**. The institution of the presidency itself is weak**, and we would be unwise to assume that a President Gore or Bradley or Bush will perform much better. But it also follows that it is too pessimistic to blame America's foreign policy drift on cultural forces that nobody can change, such as isolationism or multiculturalism.

Prez Powers key to check global hotspots

South China Morning Post 2K (South China Morning Post 12/11/00 ProQuest [Newspaper] "Position of Weakness)

A weak president with an unclear mandate is bad news for the rest of the world. For better or worse, the person who rules the United States influences events far beyond the shores of his own country. Both the global economy and international politics will feel the effect of political instability in the US. The first impact will be on American financial markets, which will have a ripple effect on markets and growth across the world. A weakened US presidency will also be felt in global hotspots across the world. The Middle East, the conflict between India and Pakistan, peace on the Korean peninsula, and even the way relations between China and Taiwan play out, will be influenced by the authority the next US president brings to his job.¶ There are those who would welcome a weakening of US global influence. Many Palestinians, for example, feel they would benefit from a less interventionist American policy in the Middle East. Even within the Western alliance, there are those who would probably see opportunities in a weakened US presidency. France, for example, might feel that a less assertive US might force the European Union to be more outward looking.¶ But the dangers of having a weak, insecure US presidency outweigh any benefits that it might bring. US global economic and military power cannot be wished away. A president with a shaky mandate will still command great power and influence, only he will be constrained by his domestic weakness and less certain about how to use his authority. This brings with it the risks of miscalculation and the use of US power in a way that heightens conflict. There are very few conflicts in the world today which can be solved without US influence. The rest of the world needs the United States to use its power deftly and decisively. Unfortunately, as the election saga continues, it seems increasingly unlikely that the next US president will be in a position to do so.

DA

Terror risk is high- maintaining current surveillance is key

Inserra, 6-8-2015

David Inserra is a Research Associate for Homeland Security and Cyber Security in the Douglas and Sarah Allison Center for Foreign and National Security Policy of the Kathryn and Shelby Cullom Davis Institute for National Security and Foreign Policy, at The Heritage Foundation, 6-8-2015, "69th Islamist Terrorist Plot: Ongoing Spike in Terrorism Should Force Congress to Finally Confront the Terrorist Threat," Heritage Foundation, http://www.heritage.org/research/reports/2015/06/69th-islamist-terrorist-plot-ongoing-spike-in-terrorism-should-force-congress-to-finally-confront-the-terrorist-threat

On June 2 in Boston, Usaamah Abdullah Rahim drew a knife and attacked police officers and FBI agents, who then shot and killed him. Rahim was being watched by Boston's Joint Terrorism Task Force as he had been plotting to behead police officers as part of violent jihad. A conspirator, David Wright or Dawud Sharif Abdul Khaliq, was arrested shortly thereafter for helping Rahim to plan this attack. This plot marks the 69th publicly known Islamist terrorist plot or attack against the U.S. homeland since 9/11, and is part of a recent spike in terrorist activity. The U.S. must redouble its efforts to stop terrorists before they strike, through the use of properly applied intelligence tools. The Plot According to the criminal complaint filed against Wright, Rahim had originally planned to behead an individual outside the state of Massachusetts,[1] which, according to news reports citing anonymous government officials, was Pamela Geller, the organizer of the "draw Mohammed" cartoon contest in Garland, Texas.[2] To this end, Rahim had purchased multiple knives, each over 1 foot long, from Amazon.com. The FBI was listening in on the calls between Rahim and Wright and recorded multiple conversations regarding how these weapons would be used to behead someone. Rahim then changed his plan early on the morning of June 2. He planned to go "on vacation right here in Massachusetts…. I'm just going to, ah, go after them, those boys in blue. Cause, ah, it's the easiest target."[3] Rahim and Wright had used the phrase "going on vacation" repeatedly in their conversations as a euphemism for violent jihad. During this conversation, Rahim told Wright that he planned to attack a police officer on June 2 or June 3. Wright then offered advice on preparing a will and destroying any incriminating evidence. Based on this threat, Boston police officers and FBI agents approached Rahim to question him, which prompted him to pull out one of his knives. After being told to drop his weapon, Rahim responded with "you drop yours" and moved toward the officers, who then shot and killed him. While Rahim's brother, Ibrahim, initially claimed that Rahim was shot in the back, video surveillance was shown to community leaders and civil rights groups, who have confirmed that Rahim was not shot in the back.[4] Terrorism Not Going Away This 69th Islamist plot is also the seventh in this calendar year. Details on how exactly Rahim was radicalized are still forthcoming, but according to anonymous officials, online propaganda from ISIS and other radical Islamist groups are the source.[5] That would make this attack the 58th homegrown terrorist plot and continue the recent trend of ISIS playing an important role in radicalizing individuals in the United States. It is also the sixth plot or attack targeting law enforcement in the U.S., with a recent uptick in plots aimed at police. While the debate over the PATRIOT Act and the USA FREEDOM Act is taking a break, the terrorists are not. The result of the debate has been the reduction of U.S. intelligence and counterterrorism capabilities, meaning that the U.S. has to do even more with less when it comes to connecting the dots on terrorist plots.[6] Other legitimate intelligence tools and capabilities must be leaned on now even more. Protecting the Homeland To keep the U.S. safe, Congress must take a hard look at the U.S. counterterrorism enterprise and determine other measures that are needed to improve it. Congress should: Emphasize community outreach. Federal grant funds should be used to create robust community-outreach capabilities in higher-risk urban areas. These funds must not be used for political pork, or so broadly that they no longer target those communities at greatest risk. Such capabilities are key to building trust within these communities, and if the United States is to thwart lone-wolf terrorist attacks, it must place effective community outreach operations at the tip of the spear. Prioritize local cyber capabilities. Building cyber-investigation capabilities in the higher-risk urban areas must become a primary focus of Department of Homeland Security grants. With so much terrorism-related activity occurring on the Internet, local law enforcement must have the constitutional ability to monitor and track violent extremist activity on the Web when reasonable suspicion exists to do so. Push the FBI toward being more effectively driven by intelligence. While the FBI has made high-level changes to its mission and organizational structure, the bureau is still working on integrating intelligence and law enforcement

activities. Full integration will require overcoming inter-agency cultural barriers and providing FBI intelligence personnel with resources, opportunities, and the stature they need to become a more effective and integral part of the FBI. Maintain essential counterterrorism tools. Support for important investigative tools is essential to maintaining the security of the U.S. and combating terrorist threats. Legitimate government surveillance programs are also a vital component of U.S. national security and should be allowed to continue. The need for effective counterterrorism operations does not relieve the government of its obligation to follow the law and respect individual privacy and liberty. In the American system, the government must do both equally well. Clear-Eyed Vigilance The recent spike in terrorist plots and attacks should finally awaken policymakers—all Americans, for that matter—to the seriousness of the terrorist threat. Neither fearmongering nor willful blindness serves the United States. Congress must recognize and acknowledge the nature and the scope of the Islamist terrorist threat, and take the appropriate action to confront it.

Surveillance is critical to stopping terror threats

Lewis 14 [James Andrew Lewis, Director and Senior Fellow of the Technology and Public Policy Program at the CSIS, December 2014, "Underestimating Risk in the Surveillance Debate", Center for Strategic and International Studies, http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf pg 10-11 jf]

Assertions that a collection program contributes nothing because it has not singlehandedly prevented an attack reflect an ill-informed understanding of how the United States conducts collection and analysis to prevent harmful acts against itself and its allies. Intelligence does not work as it is portrayed in films—solitary agents do not make startling discoveries that lead to dramatic, last-minute success (nor is technology consistently infallible). Intelligence is a team sport. Perfect knowledge does not exist and success is the product of the efforts of teams of dedicated individuals from many agencies, using many tools and techniques, working together to assemble fragments of data from many sources into a coherent picture. Analysts assemble this mosaic from many different sources and based on experience and intuition. Luck is still more important than anyone would like and the alternative to luck is acquiring more information. This ability to blend different sources of intelligence has improved U.S. intelligence capabilities and gives us an advantage over some opponents. Portrayals of spying in popular culture focus on a central narrative, essential for storytelling but deeply misleading. In practice, there can be many possible narratives that analysts must explore simultaneously. An analyst might decide, for example, to see if there is additional confirming information that points to which explanation deserves further investigation. Often, the contribution from collection programs comes not from what they tell us, but what they let us reject as false. In the case of the 215 program, its utility was in being able to provide information that allowed analysts to rule out some theories and suspects. This allows analysts to focus on other, more likely, scenarios. In one instance, an attack is detected and stopped before it could be executed. U.S. forces operating in Iraq discover a bomb-making factory. Biometric data found in this factory is correlated with data from other bombings to provide partial identification for several individuals who may be bomb-makers, none of whom are present in Iraq. In looking for these individuals, the United States receives information from another intelligence service that one of the bombers might be living in a neighboring Middle Eastern country. Using communications intercepts, the United States determines that the individual is working on a powerful new weapon. The United States is able to combine the communications intercept from the known bomb maker with information from other sources—battlefield data, information obtained by U.S. agents, collateral information from other nations' intelligence services—and use this to identify others in the bomber's network, understand the plans for bombing, and identify the bomber's target, a major city in the United States. This effort takes place over months and involves multiple intelligence, law enforcement, and military agencies, with more than a dozen individuals from these agencies collaborating to build up a picture of the bomb-maker and his planned attack. When the bomb-maker leaves the Middle East to carry out his attack, he is prevented from entering the United States. An analogy for how this works would be to take a 1,000-piece jigsaw puzzle, randomly select 200 pieces, and provide them

to a team of analysts who, using incomplete data, must guess what the entire picture looks like. The likelihood of their success is determined by how much information they receive, how much time they have, and by experience and luck. Their guess can be tested by using a range of collection programs, including communications surveillance programs like the 215 metadata program. What is left out of this picture (and from most fictional portrayals of intelligence analysis) is the number of false leads the analysts must pursue, the number of dead ends they must walk down, and the tools they use to decide that something is a false lead or dead end. Police officers are familiar with how many leads in an investigation must be eliminated through legwork and query before an accurate picture emerges. Most leads are wrong, and much of the work is a process of elimination that eventually focuses in on the most probable threat. If real intelligence work were a film, it would be mostly boring. Where the metadata program contributes is in eliminating possible leads and suspects. This makes the critique of the 215 program like a critique of airbags in a car—you own a car for years, the airbags never deploy, so therefore they are useless and can be removed. The weakness in this argument is that discarding airbags would increase risk. How much risk would increase and whether other considerations outweigh this increased risk are fundamental problems for assessing surveillance programs. With the Section 215 program, Americans gave up a portion of their privacy in exchange for decreased risk. Eliminating 215 collection is like subtracting a few of the random pieces of the jigsaw puzzle. It decreases the chances that the analysts will be able to deduce what is actually going on and may increase the time it takes to do this. That means there is an increase in the risk of a successful attack. How much of an increase in risk is difficult to determine.

Terrorists will use bioweapons- guarantees extinction

Cooper 13

(Joshua, 1/23/13, University of South Carolina, "Bioterrorism and the Fermi Paradox," http://people.math.sc.edu/cooper/fermi.pdf, 7/15/15, SM)

We may conclude that, when a civilization reaches its space-faring age, it∂ will more or less at the same moment (1) contain many individuals who seek to cause large-scale destruction, and (2) acquire the capacity to tinker with its own genetic chemistry. This is a perfect recipe for bioterrorism, and, given the many very natural pathways for its development and the overwhelming∂ evidence that precisely this course has been taken by humanity, it is hard to∂ see how bioterrorism does not provide a neat, if profoundly unsettling, solution∂ to Fermi's paradox. One might object that, if omnicidal **individuals** are∂ successful in releasing **highly virulent** and **deadly genetic malware** into the∂ wild, they are still unlikely to succeed in killing everyone. However, even if∂ every such mass death event results only in a high (i.e., not total) kill rate and∂ there is a large gap between each such event (so that individuals can build up∂ the requisite scientific infrastructure again**), extinction would be inevitable**∂ regardless. Some of the engineered bioweapons will be more successful than∂ others; the inter-apocalyptic eras will vary in length; and post-apocalyptic∂ environments may be so **war-torn, disease-stricken, and impoverished of genetic variation that they may culminate in true extinction events even if the initial cataclysm 'only' results in 90% death rates**, since they may cause the∂ effective population size to dip below the so-called "minimum viable population."∂ This author ran a Monte Carlo simulation using as (admittedly very∂ crude and poorly informed, though arguably conservative) estimates the following∂ Earth-like parameters: bioterrorism event mean death rate 50% and∂ standard deviation 25% (beta distribution), initial population 1010, minimum∂ viable population 4000, individual omnicidal act probability 10−7 per annum,∂ and population growth rate 2% per annum. One thousand trials yielded an∂ average post-space-age time until extinction of less than 8000 years. This is∂ essentially instantaneous on a cosmological scale, and varying the parameters∂ by quite a bit does nothing to make the survival period comparable with the∂ age of the universe.

K

The aff's criticism of state surveillance reproduces neoliberal social relations – privacy protection is undergirded by the assumption of economic individualism – that papers over the coercive functions of the market and prevents use of the state to challenge corporate power

Fuchs 11

Christian Fuchs 11, Professor of Social Media at University of Westminster, "Towards an alternative concept of privacy," Journal of Information, Communication and Ethics in Society, Vol. 9, Iss. 4, p. 232-3, fwang

Etzioni (1999) stresses that **liberal privacy** concepts typically **focus on privacy invasions by the state, but ignore privacy invasions by companies**. **The contemporary undermining of public goods by overstressing privacy rights would not be caused by the state, but rather stem**:

[...] **from the quest for profit by some private companies**. Indeed, I find that these **corporations now regularly amass detailed accounts** about many aspects of the **personal lives of millions of individuals**, profiles of the kind that until just a few years ago could be compiled only by the likes of the East German Stasi. [...] **Consumers, employees, even patients and children have little protection from marketeers, insurance companies, bankers, and corporate surveillance** (Etzioni, 1999, p. 9f).

The task of a socialist privacy conception is to go beyond the focus of privacy concepts as protection from state interference into private spheres, but to **identify those cases, where political regulation is needed for the protection of the rights of consumers and workers**.

It is time to break with the liberal tradition in privacy studies and to **think about alternatives**. The Swedish socialist philosopher Torbjörn Tännsjö (2010) stresses that **liberal privacy concepts imply "that one cannot only own self and personal things, but also means of production" and that the consequence is "a very closed society, clogged because of the idea of business secret, bank privacy, etc**." (Tännsjo¨, 2010, p. 186). Tännsjö argues that **power structures should be made transparent and not be able to hide themselves and operate secretly protected by privacy rights**. He imagines based on utopian socialist ideas an open society that is democratic and fosters equality so that (Tännsjö, 2010, pp. 191-8) in a democratic socialist society, there is, as Tännsjö indicates, no need for keeping power structures secret and therefore no need for a liberal concept of privacy. However, this does in my view not mean that in a society that is shaped by participatory democracy, all forms of privacy vanish. **There are some human acts and situations**, such as defecation (Moore, 1984), **in which humans tend to want to be alone**. Many humans would both in a capitalist and a socialist society feel embarrassed having to defecate next to others, for example by using toilets that are arranged next to each other without separating walls. So **solitude is not a pure ideology, but to a certain desire also a human need that should be guaranteed as long as it does not result in power structures that harm others**. This means that it is necessary to **question the liberal-capitalist privacy ideology, to struggle today for socialist privacy that protects workers and consumers, limits the right and possibility of keeping power structures secret and makes these structures transparent**. In a qualitatively different society, we require a qualitatively different concept of privacy, but not the end of privacy. Torbjrn Tännsjö's work is a powerful reminder that **it is necessary not to idealize privacy**, but to **think about its contradictions and its relation to private property**

The aff uses the plan as a vehicle for Internet-based democracy promotion – their narrative of backsliding and freedom of information relies on an inaccurate historical reading of the fall of the Soviet Union that makes global failure of democracy inevitable, while re-entrenching global inequality – the Internet is not a vehicle for democracy, and their rhetoric only emboldens dictators and ensures massive violence

Morozov 11

(Evgeny Morozov, contributing editor at the New Republic and the author of To Save Everything, Click Here: The Folly of Technological Solutionism, *The Net Delusion*, pgs. ix-xvii)

For anyone who wants to see democracy prevail in the most hostile and unlikely environments, the first decade of the new millennium was marked by a sense of bitter disappointment, if not utter disillusionment. **The seemingly inexorable march of freedom** that began in the late 1980s has not only come to a halt but **may have reversed its course**.¶ Expressions like "freedom recession" have begun to break out of the think-tank circuit and enter the public conversation. In a state of quiet desperation, **a growing number of Western policymakers began to con- cede** that **the Washington Consensus**—that set of dubious policies that once promised a neoliberal paradise at deep discounts—**has been superseded** by the Beijing Consensus, which boasts of delivering quick- and-dirty prosperity without having to bother with those pesky institutions of democracy.¶ The West has been slow to discover that the fight for democracy wasn't won back in 1989. For two decades it has been resting on its laurels, expecting that Starbucks, MTV, and Google will do the rest just fine. Such **a laissez-faire approach to democratization has proved rather toothless against resurgent authoritarianism**, which has masterfully adapted to this new, highly globalized world. Today's authoritarianism is of the hedonism- and consumerism-friendly variety, with Steve Jobs and Ashton Kutcher commanding far more respect than Mao or Che Guevara. No wonder the West appears at a loss. While the Soviets could be liberated by waving the magic wand of blue jeans, exquisite coffee machines, and cheap bubble gum, one can't pull the same trick on China. After all, this is where all those Western goods come from.¶ Many of the signs that promised further democratization just a few years ago never quite materialized. The so-called color revolutions that swept the former Soviet Union in the last decade produced rather ambiguous results. Ironically, it's the most authoritarian of the former Soviet republics—Russia, Azerbaijan, Kazakhstan—that found those revolutions most useful, having discovered and patched their own vulnerabilities. My own birthplace, Belarus, once singled out by Condoleezza Rice as the last outpost of tyranny in Europe, is perhaps the shrewdest of the lot; it continues its slide into a weird form of authoritarianism, where the glorification of the Soviet past by its despotic ruler is fused with a growing appreciation of fast cars, expensive holidays, and exotic cocktails by its largely carefree populace.¶ **The wars in Iraq and Afghanistan**, which were **started**, if anything, **to spread the gospel of freedom and democracy, have lost much of their initial emancipatory potential** as well, further **blurring the line between "regime change" and "democracy promotion."** Coupled with Washington's unnecessary abuses of human rights and rather frivolous interpretations of international law, these two wars gave democracy promotion such a bad name that anyone eager to defend it is considered a Dick Cheney acolyte, an insane idealist, or both.¶ It is thus easy to forget, if only for therapeutic purposes, that the West still has an obligation to stand up for democratic values, speak up about violations of human rights, and reprimand those who abuse their office and their citizens. Luckily, by the twenty-first century the case for promoting democracy no longer needs to be made; even the hardest skeptics agree that a world where Russia, China, and Iran adhere to democratic norms is a safer world.¶ That said, **there is still very little agreement on the kind of methods and policies the West needs to pursue to be most effective in promoting democracy.** As the last few decades have so aptly illustrated, good intentions are hardly enough. **Even the most noble attempts may easily backfire, entrenching authoritarianism** as a result. The images of horrific prisoner abuse at Abu Ghraib were the result, if only indirectly, of one particular approach to promoting democracy. It did not exactly work as advertised.¶ Unfortunately, as the neoconservative vision for democratizing the world got discredited, nothing viable has come to fill the vacuum. While George Bush certainly overdid it with his excessive freedom- worshiping rhetoric, his successor seems to have abandoned the rhetoric, the spirit, as well as any desire to articulate what a post-Bush "freedom agenda" might look like.¶ But there is more to **Obama's silence** than just his reasonable attempt to present himself as anti-Bush. Most likely his silence **is a sign of an extremely troubling bipartisan malaise: the growing Western fatigue with the project of promoting democracy**. **The project suffers** not just **from** bad publicity but also from **a deeply rooted intellectual crisis**. The resilience of authoritarianism in places like Belarus, China, and Iran is not for lack of trying by their Western "partners" to stir things up with an expectation of a democratic revolution. Alas, **most** such **Western initiatives flop, boosting the appeal of** many **existing dictators, who excel at playing up the threat of foreign mingling in their own affairs**. To say that there is no good blueprint for dealing with modern authoritarian- ism would be a severe understatement.¶ Lost in their own strategizing, **Western leaders are pining for** something that has guaranteed effectiveness. Many of them look back to the most impressive and most unambiguous triumph of democracy in the last few decades: **the peaceful dissolution of the Soviet Union**. Not surprisingly—and who can blame them for seeking to bolster their own self-confidence?—they tend to exaggerate their own role in precipitating its demise. As a result, many of the **Western strategies tried back then**, like smuggling in photocopiers and fax machines, facilitating the flow of

samizdat, and supporting radio broadcasts by Radio Free Europe and the Voice of America, **are given much more credit than they deserve**.¶ **Such belated Cold War triumphalism results in an egregious logical fallacy**. **Since the Soviet Union eventually fell, those strategies are presumed to have been extremely effective**– in fact, crucial to the whole endeavor. **The implications** of such a view for the future of democracy promotion **are tremendous, for they suggest that large doses of information and communications technology are lethal to** the most **repressive** of **regimes**.¶ **Much of the present excitement about the Internet, particularly the high hopes** that are **pinned on** it in terms of **opening up closed societies**, **stems from such selective and**, at times, **incorrect readings of history, rewritten to glorify the genius of Ronald Reagan and minimize the role of structural conditions** and the inherent contradictions **of the Soviet system**.¶ It's for these chiefly historical reasons that the Internet excites so many seasoned and sophisticated decision makers who should really know better. **Viewing it through the prism of the Cold War, they endow the Internet with nearly magical qualities**; for them, it's the ultimate cheat sheet that could help the West finally defeat its authoritarian adversaries. **Given that it's the only ray of light in an otherwise dark intellectual tunnel of democracy promotion, the Internet's prominence in future policy planning is assured**.¶ And at first sight it seems like a brilliant idea. It's like Radio Free Europe on steroids. And it's cheap, too: no need to pay for expensive programming, broadcasting, and, if everything else fails, propaganda. After all, Internet users can discover the truth about the horrors of their regimes, about the secret charms of democracy, and about the irresistible appeal of universal human rights on their own, by turning to search engines like Google and by following their more politically savvy friends on social networking sites like Facebook. In other words, let them tweet, and they will tweet their way to freedom. **By this logic, authoritarianism becomes unsustainable once the barriers to the free flow of information are removed**. If the Soviet Union couldn't survive a platoon of pamphleteers, how can China survive an army of bloggers?¶ It's hardly surprising, then, that the only place where the West (especially the United States) is still unabashedly eager to promote democracy is in cyberspace. The Freedom Agenda is out; the Twitter Agenda is in. It's deeply symbolic that the only major speech about freedom given by a senior member of the Obama administration was Hillary Clinton's speech on Internet freedom in January 2010. It looks like a safe bet: Even if the Internet won't bring democracy to China or Iran, it can still make the Obama administration appear to have the most technologically savvy foreign policy team in history. The best and the brightest are now also the geekiest. The Google Doctrine—the enthusiastic belief in the liberating power of technology accompanied by the irresistible urge to enlist Silicon Valley start-ups in the global fight for freedom—is of growing appeal to many policymakers. In fact, many of them are as upbeat about the revolutionary potential of the Internet as their colleagues in the corporate sector were in the late 1990s. **What could possibly go wrong here**?¶ As it turns out, **quite a lot**. Once burst, stock bubbles have few lethal consequences; **democracy bubbles**, on the other hand, could **easily lead to carnage**. **The idea that the Internet favors the oppressed** rather than the oppressor **is marred by** what I call **cyber-utopianism**: **a naïve belief in the emancipatory nature of online communication** that rests on a stubborn refusal to acknowledge its downside. It stems from the starry- eyed digital fervor of the 1990s, when former hippies, by this time ensconced in some of the most prestigious universities in the world, went on an argumentative spree to prove that the Internet could deliver what the 1960s couldn't: boost democratic participation, trigger a renaissance of moribund communities, strengthen associational life, and serve as a bridge from bowling alone to blogging together. And if it works in Seattle, it must also work in Shanghai.¶ Cyber-utopians ambitiously set out to build a new and improved United Nations, only to end up with a digital Cirque du Soleil. Even if true—and that's a gigantic "if "—their theories proved difficult to adapt to non-Western and particularly nondemocratic contexts. Democratically elected governments in North America and Western Europe may, indeed, see an Internet-driven revitalization of their public spheres as a good thing; logically, they would prefer to keep out of the digital sandbox—at least as long as nothing illegal takes place. **Authoritarian governments**, on the other hand, **have invested so much effort into suppressing any form of free expression** and free assembly **that they would never** behave in such a civilized fashion. The early theorists of the Internet's influence on politics failed to **make any space for** the state, let alone a brutal authoritarian state with no tolerance for the rule of law or **dissenting opinions**. Whatever book lay on the cyber-utopian bed- side table in the early 1990s, it was surely not Hobbes's Leviathan.¶ Failing to anticipate how authoritarian governments would respond to the Internet, **cyber-utopians did not predict how useful it would prove for propaganda purposes**, how masterfully dictators would learn to use it for surveillance, **and how sophisticated modern systems of Internet censorship would become**. Instead most cyber-utopians stuck to a populist account of how technology empowers the people, who, op- pressed by years of authoritarian rule, will inevitably rebel, mobilizing themselves through text messages, Facebook, Twitter, and whatever new tool comes along next year. (The people, it must be noted, really liked to hear such theories.) Paradoxically, **in their refusal to see the downside of the new digital environment, cyber-utopians ended up belittling the role of the Internet**, refusing to see that it penetrates and re- shapes all walks of political life, not just the ones conducive to democratization.¶ I myself was intoxicated with cyber-utopianism until recently. **This** book **is an attempt to come to terms with this ideology as well as a warning against the pernicious influence that it has had** and is likely to continue to have **on democracy promotion**. My own story is fairly typical of idealistic young people who think they are onto something that could change the world. Having watched the deterioration of democratic freedoms in my native Belarus, **I was drawn to a Western NGO that sought to promote democracy and media reform in the former Soviet bloc** with the help of the Internet. Blogs, social networks, wikis: We

had an arsenal of weapons that seemed far more potent than police batons, surveillance cameras, and handcuffs.¶ Nevertheless, after I spent a few busy years circling the former Soviet region and meeting with activists and bloggers, I lost my enthusiasm. Not only were our strategies failing, but we also noticed a significant push back from the governments we sought to challenge. They were beginning to experiment with censorship, and some went so far as to start aggressively engaging with new media themselves, paying bloggers to spread propaganda and troll social networking sites looking for new information on those in the opposition. In the meantime, the Western obsession with the Internet and the monetary support it guaranteed created numerous hazards typical of such ambitious development projects. Quite **predictably, many** of the **talented bloggers and new media entrepreneurs preferred to work for the extremely well-paid but largely ineffective Western-funded projects instead of trying to create more nimble**, sustainable, **and**, above all, **effective projects** of their own. Thus, **everything we did**—with generous funding from Washington and Brussels—**seemed to have produced the results that were the exact opposite of what my cyber-utopian self wanted**.¶ It was tempting to throw my hands up in despair and give up on the Internet altogether. But this would have been the wrong lesson to draw from these disappointing experiences. Similarly, it would be wrong for Western policymakers to simply dismiss the Internet as a lost cause and move on to bigger, more important issues. Such digital defeatism would only play into the hands of authoritarian governments, who would be extremely happy to continue using it as both a carrot (keeping their populace entertained) and a stick (punishing those who dare to challenge the official line). Rather, the lesson to be drawn is that the Internet is here to stay, it will continue growing in importance, and those concerned with democracy promotion need not only grapple with it but also come up with mechanisms and procedures to ensure that an- other tragic blunder on the scale of Abu Ghraib will never happen in cyberspace. This is not a far-fetched scenario. How hard is it to imagine a site like Facebook inadvertently disclosing the private information of activists in Iran or China, tipping off governments to secret connections between the activists and their Western funders?¶ To be truly effective, the West needs to do more than just cleanse it- self of cyber-utopian bias and adopt a more realist posture. When it comes to concrete steps to promote democracy, **cyber-utopian convictions often give rise to an equally flawed approach that I dub "Internet-centrism."** Unlike cyber-utopianism, **Internet-centrism is not a set of beliefs**; rather, **it's a philosophy of action that informs how decisions**, **including those that deal with democracy promotion, are made and how long-term strategies are crafted**. **While cyber-utopianism stipulates what has to be done, Internet-centrism stipulates how it should be done**. **Internet-centrists** like to answer every question about democratic change by first reframing it in terms of the Internet rather than the context in which that change is to occur. They **are often completely oblivious to the highly political nature of technology**, especially the Internet, **and** like to **come up with strategies that assume that the logic of the Internet**, which, in most cases, they are the only ones to perceive, **will shape every environment** than it penetrates rather than vice versa.¶ While most utopians are **Internet-centrists**, the latter are not necessarily utopians. In fact, many of them **like to think of themselves as pragmatic individuals who have abandoned grand theorizing** about utopia **in the name of achieving tangible results**. Sometimes, they are even eager to acknowledge that it takes more than bytes to foster, install, and consolidate a healthy democratic regime.¶ **Their realistic convictions**, however, **rarely make up for their flawed methodology**, **which prioritizes the tool over the environment**, and, as such, is deaf to the social, cultural, and political subtleties and indeter-minacies. **Internet-centrism is a highly disorienting drug**; it ignores context and entraps policymakers into believing that they have a useful and powerful ally on their side. **Pushed to its extreme, it leads to hubris, arrogance, and a false sense of confidence**, all bolstered by the dangerous illusion of having established effective command of the Internet. All too often, its practitioners fashion themselves as possessing full mastery of their favorite tool, treating it as a stable and finalized technology, oblivious to the numerous forces that are constantly reshaping the Internet— not all of them for the better. **Treating the Internet as a constant, they fail to see their own responsibility in preserving its freedom** and reining in the ever-powerful intermediaries, companies like Google and Facebook.¶ As the Internet takes on an even greater role in the politics of both authoritarian and democratic states, the pressure to forget the context and start with what the Internet allows will only grow. **All by itself**, however, **the Internet provides nothing certain.** In fact, as has become obvious in too many contexts, **it empowers the strong and disempowers the weak**. **It is impossible to place the Internet at the heart of the enterprise of democracy promotion without risking the success of that very enterprise**. The premise of this book is thus very simple: **To salvage the Internet's promise to aid the fight against authoritarianism**, those of us in **the West** who still care about the future of democracy **will need to ditch** both **cyber-utopianism and Internet-centrism**. Currently, **we start with a flawed set of assumptions** (cyber-utopianism) **and act on them using a flawed**, even crippled, **methodology** (Internet-centrism). The result is what I call the Net Delusion. Pushed to the extreme, **such logic is poised to have significant global consequences that may risk undermining the very project of promoting democracy.** It's a folly that the West could do without.¶ Instead, we'll need to opt for policies informed by a realistic assessment of the risks and dangers posed by the Internet, matched by a highly scrupulous and unbiased assessment of its promises, and a theory of action that is highly sensitive to the local context, that is cognizant of the complex connections between the Internet and the rest of foreign policymaking, and that originates not in what technology allows but in what a certain geopolitical environment requires.¶ In a sense, **giving in to cyber-utopianism and Internet-**

centrism is akin to agreeing to box blindfolded. Sure, **every now and then we may still strike some powerful blows** against our authoritarian adversaries, **but in general this is a poor strategy if we want to win.** The struggle against authoritarianism is too important of a battle to fight with a voluntary intellectual handicap, even if that handicap allows us to play with the latest fancy gadgets.

U.S. primacy is based on an epistemologically flawed view of other nations as "competitors" – ensures endless war and economic collapse

Foster, 5

(John Bellamy Foster, prof of sociology @ Oregon, *Monthly Review*, "Naked Imperialism," http://www.monthlyreview.org/0905jbf.htm)

The unprecedented dangers of this new global disorder are revealed in the twin cataclysms to which the world is heading at present: nuclear proliferation and hence increased chances of the outbreak of **nuclear war, and planetary ecological destruction**. These are symbolized by the Bush administration's refusal to sign the Comprehensive Test Ban Treaty to limit nuclear weapons development and by its failure to sign the Kyoto Protocol as a first step in controlling global warming. As former U.S. Secretary of Defense (in the Kennedy and Johnson administrations) Robert McNamara stated in an article entitled "Apocalypse Soon" in the May–June 2005 issue of Foreign Policy: "The United States has never endorsed the policy of 'no first use,' not during my seven years as secretary or since. We have been and remain prepared to initiate the use of nuclear weapons—by the decision of one person, the president—against either a nuclear or nonnuclear enemy whenever we believe it is in our interest to do so." **The nation with the greatest conventional military force and the willingness to use it unilaterally to enlarge its global power is also the nation with the greatest nuclear force and the readiness to use it whenever it sees fit**—setting the whole world on edge. **The nation that contributes more to carbon dioxide emissions leading to global warming than any other** (representing approximately a quarter of the world's total) **has become the greatest obstacle to addressing global warming and the world's growing environmental problems**—raising the possibility of the collapse of civilization itself if present trends continue. **The United States is seeking to exercise sovereign authority over the planet during a time of widening global crisis: economic stagnation, increasing polarization between the global rich and the global poor, weakening U.S. economic hegemony, growing nuclear threats, and deepening ecological decline. The result is a heightening of international instability**. Other potential forces are emerging in the world, such as the European Community and China, that could eventually challenge U.S. power, regionally and even globally. Third world revolutions, far from ceasing, are beginning to gain momentum again, symbolized by Venezuela's Bolivarian Revolution under Hugo Chávez. U.S. attempts to tighten its imperial grip on the Middle East and its oil have had to cope with a fierce, seemingly unstoppable, Iraqi resistance, generating conditions of imperial overstretch. **With the United States brandishing its nuclear arsenal and refusing to support international agreements on the control of such weapons, nuclear proliferation is continuing**. New nations, such as North Korea, are entering or can be expected soon to enter the "nuclear club." **Terrorist blowback from imperialist wars** in the third world **is now a well-recognized reality**, generating rising fear of further terrorist attacks in New York, London, and elsewhere. **Such vast and overlapping historical contradictions, rooted in the combined and uneven development of the global capitalist economy along with the U.S. drive for planetary domination, foreshadow what is potentially the most dangerous period in the history of imperialism.** The course on which U.S and world capitalism is now headed points to global barbarism—or worse. Yet it is important to remember that nothing in the development of human history is inevitable. There still remains an alternative path—the global struggle for a humane, egalitarian, democratic, and sustainable society.

Competitiveness discourse reproduces neoliberalism – ensures economic and environmental collapse

Bristow 9

[Gillian Bristow, (School of City & Regional Planning @ Cardiff University), "Resilient regions: re-'place'ing regional competitiveness," Cambridge Journal of Regions, Economy and Society 2010, 3, 153–167, AX]

In recent years, **regional development strategies have been subjugated to the hegemonic discourse of competitiveness**, **such that the ultimate objective for all regional development policy-makers and practitioners has become the creation of economic advantage through superior productivity performance**, or the attraction of new firms and labour (Bristow, 2005). A major consequence is the developing 'ubiquitification' of regional development strategies (Bristow, 2005; Maskell and Malmberg, 1999). **This reflects the status of competitiveness as a key discursive construct** (Jessop, 2008) **that has acquired hugely significant rhetorical power for certain interests intent on reinforcing capitalist relations** (Bristow, 2005; Fougner, 2006). Indeed, the **competitiveness hegemony is such that many policies** previously considered only indirectly relevant to unfettered economic growth **tend to be hijacked in support of competitiveness agendas** (for example Raco, 2008; also Dannestam, 2008). **This** paper **will argue**, however, that **a** particularly narrow **discourse of 'competitiveness'** has been constructed that **has** a number of **negative connotations for the 'resilience' of regions**. **Resilience is defined as the region's ability to experience positive economic success that is socially inclusive, works within environmental limits and which can ride global economic punches** (Ashby et al., 2009). As such, resilience clearly resonates with literatures on sustainability, localisation and diversification, and the developing understanding of regions as intrinsically diverse entities with evolutionary and context-specific development trajectories (Hayter, 2004). In contrast, the dominant discourse of competitiveness is 'placeless' and increasingly associated with globalised, growth-first and environmentally malign agendas (Hudson, 2005). However, this paper will argue that the relationships between competitiveness and resilience are more complex than might at first appear. Using insights from the Cultural Political Economy (CPE) approach, which focuses on understanding the construction, development and spread of hegemonic policy discourses, the paper will argue that the dominant discourse of competitiveness used in regional development policy is narrowly constructed and is thus insensitive to contingencies of place and the more nuanced role of competition within economies. This leads to problems of resilience that can be partly overcome with the development of a more contextualised approach to competitiveness. The paper is now structured as follows. It begins by examining the developing understanding of resilience in the theorising and policy discourse around regional development. It then describes the CPE approach and utilises its framework to explain both how a narrow conception of competitiveness has come to dominate regional development policy and how resilience inter-plays in subtle and complex ways with competitiveness and its emerging critique. The paper then proceeds to illustrate what resilience means for regional development firstly, with reference to the Transition Towns concept, and then by developing a typology of regional strategies to show the different characteristics of policy approaches based on competitiveness and resilience. Regional resilience Resilience is rapidly emerging as an idea whose time has come in policy discourses around localities and regions, where it is developing widespread appeal owing to the peculiarly powerful combination of transformative pressures from below, and various catalytic, crisis-induced imperatives for change from above. It features strongly in policy discourses around environmental management and sustainable development (see Hudson, 2008a), but has also more recently emerged in relation to emergency and disaster planning with, for example 'Regional Resilience Teams' established in the English regions to support and co-ordinate civil protection activities around various emergency situations such as the threat of a swine flu pandemic. The discourse of resilience is also taking hold in discussions around desirable local and regional development activities and strategies. **The recent global 'credit crunch' and the accompanying increase in livelihood insecurity has highlighted the advantages of those local and regional economies that have greater 'resilience' by virtue of being less dependent upon globally footloose activities, having greater economic diversity, and/or having a determination to prioritise and effect more significant structural change** (Ashby et al, 2009; Larkin and Cooper, 2009). Indeed, resilience features particular strongly in the 'grey' literature spawned by thinktanks, consultancies and environmental interest groups around the consequences of the global recession, catastrophic climate change and the arrival of the era of peak oil for localities and regions with all its implications for the longevity of carbon-fuelled economies, cheap, long-distance transport and global trade. **This popularly labelled**

‘triple crunch’ (New Economics Foundation, 2008) **has powerfully illuminated the potentially disastrous material consequences of the voracious growth imperative at the heart of neoliberalism and competitiveness, both in the form of resource constraints** (especially food security) **and in the inability of the current system to manage global financial and ecological sustainability**. In so doing, it appears to be galvinising previously disparate, fractured debates about the merits of the current system, and challenging public and political opinion to develop a new, global concern with frugality, egalitarianism and localism (see, for example Jackson, 2009; New Economics Foundation, 2008).

The impact is extinction – neoliberal social organization ensures extinction from resource wars, climate change, and structural violence – only accelerating beyond neoliberalism can resolve its impacts

Williams & Srnicek 13

(Alex, PhD student at the University of East London, presently at work on a thesis entitled 'Hegemony and Complexity', Nick, PhD candidate in International Relations at the London School of Economics, Co-authors of the forthcoming Folk Politics, 14 May 2013, http://criticallegalthinking.com/2013/05/14/accelerate-manifesto-for-an-accelerationist-politics/)

At the begin-ning of the second dec-ade of the Twenty-First Cen-tury, **global civilization faces a new breed of cataclysm**. These com-ing apo-ca-lypses ridicule the norms and organ-isa-tional struc-tures of the polit-ics which were forged in the birth of the nation-state, the rise of cap-it-al-ism, and a Twen-ti-eth Cen-tury of unpre-ced-en-ted wars. 2. **Most significant is the break-down of the planetary climatic system**. In time, **this threatens the continued existence of the** present global **human population**. Though this is the most crit-ical of the threats which face human-ity, **a series of** lesser but **potentially equally destabilising problems exist along-side** and inter-sect with **it**. **Terminal resource depletion, especially in water and energy** reserves, **offers the prospect of mass starvation, collapsing economic paradigms, and new hot and cold wars**. **Continued financial crisis has led governments to embrace the** para-lyz-ing **death spiral policies of austerity, privatisation of social welfare services, mass unemployment, and stagnating wages. Increasing automation in production processes** includ-ing ‘intel-lec-tual labour’ **is evidence of the secular crisis of capitalism, soon to render it incapable of maintaining current standards of living** for even the former middle classes of the global north. 3. In con-trast to these ever-accelerating cata-strophes, **today’s politics is beset by an inability to generate the** new ideas and **modes of organisation necessary to transform our societies to confront** and resolve the **coming annihilations**. While crisis gath-ers force and speed, polit-ics with-ers and retreats. In this para-lysis of the polit-ical ima-gin-ary, the future has been cancelled. 4. Since 1979, **the hegemonic global political ideology has been neoliberalism**, found in some vari-ant through-out the lead-ing eco-nomic powers. In spite of the deep struc-tural chal-lenges the new global prob-lems present to it, most imme-di-ately the credit, fin-an-cial, and fiscal crises **since 2007 – 8, neoliberal programmes have** only **evolved** in the sense of deep-en-ing. **This continuation** of the neo-lib-eral pro-ject, or neo-lib-er-al-ism 2.0, **has begun to apply another round of structural adjustments**, most sig-ni-fic-antly in the form of encour-aging

new and aggress-ive incur-sions by the private sec-tor into what remains of social demo-cratic insti-tu-tions and ser-vices. **This is in spite of the immediately negative** eco-nomic and social **effects of such policies**, and the longer term fun-da-mental bar-ri-ers posed by the new global crises.

The alternative articulates a "counter-conduct" – voting neg pushes towards a cooperative conduct *that organizes individuals around a collectively shared* commons *– affirming this conduct creates a new heuristic that de-couples government from the demand for competition and production*

Dardot & Laval 13

(Pierre Dardot, philosopher and specialist in Hegel and Marx, Christian Laval, professor of sociology at the Universite Paris Ouest Nanterre La Defense, *The New Way of the World: On Neoliberal Society*, pgs. 318-321)

This indicates to what extent we must take on board in our own way the main lesson of neo-liberalism: **the subject is always to be constructed**. **The whole question is** then **how to articulate subjectivation with resistance to power**. Now, precisely this issue is at the heart of all of Foucault's thought. However, as Jeffrey T. Nealon has recently shown, part of the North American secondary literature has, on the contrary, stressed the alleged break between Foucault's research on power and that of his last period on the history of subjectivity.55 According to the 'Foucault consensus', as Nealon aptly dubs it, the successive impasses of the initial neo-structuralism, and then of the totalizing analysis of panoptical power, led the 'last Foucault' to set aside the issue of power and concern himself exclusively with the aesthetic invention of a style of existence bereft of any political dimension. Furthermore, if we follow this de-politicizing reading of Foucault, the aestheticization of ethics anticipated the neo-liberal mutation precisely by making self-invention a new norm. In reality, far from being oblivious of one another, the issues of power and the subject were always closely articulated, even in the last work on modes of subjectivation. If one concept played a decisive role in this respect, it was 'counter-conduct', as developed in the lecture of 1 March 1978.56 This lecture was largely focused on the crisis of the pastorate. It involved identifying the specificity of the 'revolts' or **'forms of resistance of conduct'** that are the correlate of the pastoral mode of power. If such forms of resistance are said to be 'of conduct', it is because they are forms of resistance to power as conduct and, as such, **are themselves forms of conduct opposed to** this **'power-conduct'**. **The term 'conduct'** in fact **admits of two meanings**: **an activity that consists in conducting others**, or **'conduction'**; **and the way one conducts oneself under the influence of this activity of conduction**.57 **The idea of 'counter-conduct'** therefore **has the advantage of directly signifying a 'struggle against the procedures implemented for conducting others', unlike the term 'misconduct', which only refers to the passive sense of the word**.58 **Through 'counter-conduct', people seek both to escape conduction by others and to define a way of conducting themselves towards others**.¶ **What relevance might this observation have for** a reflection on **resistance to neo-liberal governmentality**? It will be said that the concept is introduced in the context of an analysis of the pastorate, not government. **Governmentality**, at least **in its** specifically **neo-liberal form**, precisely **makes conducting others through their conduct towards themselves its real goal**. **The peculiarity of** this conduct towards oneself, **conducting oneself as a personal enterprise, is that it immediately and directly induces a certain conduct towards others**: **competition with others**, regarded as so many personal enterprises. Consequently, counter-conduct as a form of resistance to this governmentality must correspond to a conduct that is indivisibly a conduct towards oneself and a conduct towards others. One cannot struggle against such an indirect mode of conduction by appealing for rebellion against an authority that supposedly operates through compulsion external to individuals. If 'politics is nothing more and nothing less than that which is born with resistance to governmentality, the first revolt, the first confrontation',59 it means that ethics and politics are absolutely inseparable.¶ To the subjectivation-subjection represented by ultra-subjectivation, we must oppose a subjectivation by forms of counter-conduct. **To neo-liberal governmentality as a specific way of conducting the conduct of others, we must** therefore **oppose a no less specific double refusal**: **a refusal to conduct oneself towards oneself as a personal enterprise and a refusal to conduct oneself towards others in accordance with the norm of competition**. As such, the double

refusal is not 'passive disobedience'.60 For, **if it is true** that the **personal enterprise's relationship to the self immediately and directly determines a certain kind of relationship to others** – **generalized competition** – **conversely, the refusal to function as a personal enterprise**, which is self-distance **and a refusal to line up in the race for performance, can only practically occur on condition of establishing cooperative relations with others, sharing and pooling**. In fact, **where would be the sense in a self-distance severed from any cooperative practice**? At worst, a cynicism tinged with contempt for those who are dupes. At best, simulation or double dealing, possibly dictated by a wholly justified concern for self-preservation, but ultimately exhausting for the subject. Certainly not a counter-conduct. All the more so in that **such a game could lead the subject, for want of anything better, to take refuge in a compensatory identity**, which at least has the advantage of some stability by contrast with the imperative of indefinite self-transcendence. **Far from threatening the neo-liberal order, fixation with identity**, whatever its nature, **looks like a fall-back position for subjects weary of themselves**, for all those who have abandoned the race or been excluded from it from the outset. **Worse, it recreates the logic of competition at the level of relations between 'little communities'**. **Far from being valuable in itself**, independently of any articulation with politics, **individual subjectivation is bound up at its very core with collective subjectivation**. In this sense, sheer aestheticization of ethics is a pure and simple abandonment of a genuinely ethical attitude. **The invention of new forms of existence can only be a collective act**, **attributable to the** multiplication and **intensification of cooperative counter-conduct**. A collective refusal to 'work more', if only local, is a good example of an attitude that can pave the way for such forms of counter-conduct. In effect, it breaks what André Gorz quite rightly called the 'structural complicity' that binds the worker to capital, in as much as 'earning money', ever more money, is the decisive goal for both. It makes an initial breach in the 'immanent constraint of the "ever more", "ever more rapidly"'.61¶ **The genealogy of neo-liberalism** attempted **in this book teaches** us that **the new global rationality is** in **no** wise an **inevitable fate shackling humanity**. Unlike Hegelian Reason, it is not the reason of human history. **It is itself wholly historical** – that is, **relative to strictly singular conditions that cannot legitimately be regarded as untranscendable.** The main thing is to understand that nothing can release us from the task of promoting a different rationality. That is why the belief that the financial crisis by itself sounds the death-knell of neo-liberal capitalism is the worst of beliefs. It is possibly a source of pleasure to those who think they are witnessing reality running ahead of their desires, without them having to move their little finger. It certainly comforts those for whom it is an opportunity to celebrate their own past 'clairvoyance'. At bottom, it is the least acceptable form of intellectual and political abdication. Neo-liberalism is not falling like a 'ripe fruit' on account of its internal contradictions; and traders will not be its undreamed-of 'gravediggers' despite themselves. Marx had already made the point powerfully: 'History does nothing'.62 **There are only human beings who act in given conditions and seek through their action to open up a future for themselves**. **It is up to us to enable a new sense of possibility** to blaze a trail. The **government** of human beings **can be aligned with horizons other than those of maximizing performance, unlimited production and generalized control**. **It can sustain itself with self-government that opens onto different relations with others than** that of **competition between 'self-enterprising actors'**. The **practices of 'communization' of knowledge, mutual aid and cooperative work can delineate the features of a different world reason. Such an alternative reason cannot be better designated than by the term reason of the commons**.

NSA Circumvention JDI

Neg

1NC "Curtail" Spec

Our interpretation is that the affirmative plan must specify the precise ways in which domestic surveillance is curtailed. This is critical for disad links as well as counterplan competition.

And the aff can't solve - Precise specification of surveillance restrictions is key to solvency – vague restrictions guarantee NSA circumvention

Bloomberg, 3/28/**2015**, "Will Congress Rein in the NSA?" http://www.bloombergview.com/articles/2014-03-28/will-congress-rein-in-the-nsa, mm

Any legislation Congress settles on should follow Obama's lead in requiring a judge's approval before spies can access U.S. calling records. It **should clarify what limitations will be placed on the government's ability to search information** collected from innocent Americans who may be in the contact chain of a suspect. It must resolve technical challenges that could impede the phone companies from sharing information quickly when needed. **And the wording of the law must be explicit and precise: The NSA makes linguistic distinctions that would challenge a medieval Scholastic**.

This is a voter for competitive equity. Plan vagueness is a gateway issue that shapes every other argument in the debate.

NSA Circumvention – Rogue Agency

Reforms fail – the NSA is a rogue agency that can't be constrained

Glenn **Greenwald**, **2014**, No Place to Hide: Edward Snowden, the NSA, and the US Surveillance State. p. 130-131, mm

In the wake of our Snowden stories, a group of senators form both parties who had long been concerned with surveillance abuses began efforts to draft legislation that would impose real limits on the NSA's powers. But these **reformers**, led by Democratic senator Ron Wyden of Oregon, **ran into an immediate roadblock**: **counter efforts by the NSA's defenders** in the Senate to write legislation **that would provide only the appearance of reform**, **while in fact retaining or even increasing the NSA's powers**. As Slate's Dave Weigel reported in November: Critics of the NSA's bulk data collection and surveillance programs have never been worried about congressional inaction. They've expected Congress to come up with something that looked like reform but actually codified and excused the practices being exposed and pilloried. That's what's always happened **– every amendment or reauthorization** to the 2001 USA Patriot Act **has built more back doors than walls**. "We will be up against a 'business-as-usual brigade' – made up of influential members of the government's intelligence leaderships, their allies in think tanks [sic] and academia, retired government officials, and sympathetic legislators," warned Oregon Sen. Ron Wyden last month. "Their endgame is ensuring that any surveillance reforms are only skin-deep…Privacy protections that don't actually protect privacy are not worth the paper they're printed on." The "fake reform" faction was led by Dianna Feinstein, the very senator who is charged with exercising primary oversight over the NSA. Feinstein has long been a devoted loyalist of the US national security industry, from her vehement support for the war on Iraq to her steadfast backing of Bush-era NSA programs. (Her husband, meanwhile, has major stakes in various military contracts). Clearly, Feinstein was a natural choice to head a committee that claims to carry out oversight over the intelligence community but has for years performed the opposite function. Thus, **for all the government's denials, the NSA has no substantial constraints on whom it can spy on and how**. **Even when such constraints nominally exist** – when American citizens are the surveillance target – **the process has become largely hollow**. **The NSA is the definitive**

rogue agency: empowered to do whatever it wants with very little control, transparency, or accountability.

NSA Circumvention – Compliance Problems

The NSA frequently circumvents the law without consequence

Ben **O'Neill**, 8/29/**2013**, Mises Daily: Austrian Economics, Freedom, and Peace, "The NSA and Its "Compliance Problems," https://mises.org/library/nsa-and-its-%E2%80%9Ccompliance-problems%E2%80%9D, mm

After a long period of fervent denials, **the NSA has** now ackn**owledged that its analysts have often exceeded their legal limits even under the widest interpretations of the Patriot Act** by the NSA itself. **An internal audit of the agency found that in a single year there were 2,776 "incidents" of unauthorised collection**, storage, access or distribution **of communications of US citizens**, with many individual incidents covering large numbers of communications. **This included violation of court orders from the Foreign Intelligence Surveillance Court.¶ Rather than referring to these as instances of lawbreaking** as what they are, **the Director of National Intelligence** has instead **referred to these legal violations as "compliance problems**" with the programs. He has made a point to stress that these kinds of problems are monitored and assessed regularly by the agency and are to be expected in such a complex program. One consequence of this view is that **there is no actual sanction for unlawful activity by the NSA.** If "compliance problems" are just an expected part of government operations then there is no sense in having any sanction for these legal breaches. **The agency** then **operates above the law,** in the sense that its agents are pre-emptively acquitted of lawbreaking, **on the grounds that some degree of non-compliance with the law is expected.¶ Even for the Foreign Intelligence Surveillance Court,** tasked with supposed judicial oversight of the agency, **attempting to hold the NSA to the rule of law has been a farce**. Chief Judge Reggie Walton explained to the press that, "[**t]he FISC is forced to rely upon the accuracy of the information that is provided to the Court**. ... **The FISC does not have the capacity to investigate issues of noncompliance**, and in that respect the FISC is in the same position as any other court when it comes to enforcing [government] compliance with its orders."

The NSA breaks the law without consequence – it operates without effective legal constraints

Ben **O'Neill**, 8/29/**2013**, Mises Daily: Austrian Economics, Freedom, and Peace, "The NSA and Its "Compliance Problems," https://mises.org/library/nsa-and-its-%E2%80%9Ccompliance-problems%E2%80%9D, mm

¶ **One of the core principles of good governance** in society **is** the idea that the authority of law ought to prevail over the brute power of people — i.e., **that society should operate under the rule of law**, not the rule of men. Aristotle wrote that "[t]he law ought to be supreme over all ..." and argued that ... where the laws are not supreme, there demagogues spring up." The principle has many important ramifications for society, but the most important is the view that government agents and agencies must be bound by the same law as their subjects.¶ ¶ **This principle is of great relevance in the present NSA scandals, especially in light of recent NSA admissions of "compliance problems" with the legal constraints that are supposed to operate on the agency**. For ordinary citizens, "compliance problems" with the law are better known as "crimes" (or possibly civil wrongs) and these lead to judgment debts, fines, and possibly even jail time, depending on the severity of the lack-of-compliance. But **for government officials such notions are irrelevant** — legal compliance problems are just something you file a report about, and send to another bureaucrat higher up in the government chain, so that he can bury it on his desk.¶ ¶ Unfortunately, this is not a new phenomenon. The notion of the rule of law is the wellspring of an endless stream of hypocrisy in the modern social-democratic welfare-warfare state. It is difficult to find anyone who does not speak highly of the principle when it is presented in abstract form, yet it is simultaneously rare to find people who really take the idea seriously when applied to concrete situations involving government wrongdoing. **In**

the case of the NSA, the principle of rule of law has been jettisoned entirely, and the agency operates without any effective legal constraints.

The NSA is non-compliant – it frequently ignores FISA restraints

Ben **O'Neill**, 8/29/**2013**, Mises Daily: Austrian Economics, Freedom, and Peace, "The NSA and Its "Compliance Problems," https://mises.org/library/nsa-and-its-%E2%80%9Ccompliance-problems%E2%80%9D, mm

The collection of metadata and communication content occurs without any probable cause to believe that that the people targeted are a threat to anyone. It also occurs in violation of the U.S. Constitution and the already very broad requirements of the Patriot Act, which requires applications for access to records to have "a statement of facts showing that there are reasonable grounds to believe that the [records] sought are relevant to an authorized investigation." In **a recently declassified** (but still heavily redacted) **opinion from the Foreign Intelligence Surveillance Court, Judge** James **Bates wrote that "[t|his court is troubled that the government's revelations regarding NSA's acquisition of Internet transactions mark the third instance in less than three years in which the government has disclosed a substantial misrepresentation regarding the scope of a major collection program**." **In an earlier ruling the court had found that legal requirements for data queries had been "frequently and systematically violated**."

NSA Circumvention – Workarounds

FISA court decisions prove the NSA constantly finds ways to circumvent the law

Nadia **Kayyali**, 8/15/**2014**, Electronic Frontier Foundation, "what you need to know about the FISA Court - and how it needs to change," https://www.eff.org/deeplinks/2014/08/what-you-need-know-about-fisa-court-and-how-it-needs-change, mm

The "heightened duty of candor" is not enough. **FISC decisions** that have been made public **are full of descriptions of the NSA not fulfilling its duties and being very slow to inform the court about it**. Judge John Bates noted: "The court is troubled that the government's revelations regarding the NSA's acquisition of Internet transactions mark the third instance in less than three years in which the government has disclosed a substantial misrepresentation regarding the scope of a major collection program," and noted "repeated inaccurate statements made in the government's submission," concluding that **the requirements had been "so frequently and systematically violated that it can fairly be said that this critical element of the overall…regime has never functioned effectively**."¶ **Judges have consistently chastised the NSA for "inaccurate" statements, misleading or incomplete filings and for having "circumvented the spirit" of laws protecting Americans' privacy**.

Text: The United States should offer to accede to a “no-spying” agreement with France and Germany, modeled on the “Five Eyes” pact.

No spying agreement solves credibility and EU relations

O’Donnell and Baker ’13 [JOHN O'DONNELL AND LUKE BAKER, Reuters, Oct 24, 2013, Germany, France demand 'no-spy' agreement with U.S.]

German Chancellor Angela Merkel demanded on Thursday that the United States strike a "no-spying" agreement with Berlin and Paris by the end of the year, saying alleged espionage against two of Washington's closest EU allies had to be stopped.¶ Speaking after talks with EU leaders that were dominated by allegations that the U.S. National Security Agency had accessed tens of thousands of French phone records and monitored Merkel's private mobile phone, the chancellor said she wanted action from President Barack Obama, not just apologetic words.¶ Germany and France would seek a "mutual understanding" with the United States on cooperation between their intelligence agencies, and other EU member states could eventually take part.¶ "That means a framework for cooperation between the relevant (intelligence) services.Germany and France have taken the initiative and other member states will join," she said.¶ In a statement issued after the first day of the summit, the EU's 28 leaders said they supported the Franco-German plan.¶ Merkel first raised the possibility of a "no-spying" agreement with Obama during a visit to Berlin in June this year, but nothing came of it. The latest revelations, part of the vast leaks made by former U.S. data analyst Edward Snowden, would appear to have renewed her determination for a pact.¶ The United States has a "no-spying" deal with Britain, Australia, New Zealand and Canada, an alliance known as "Five Eyes" that was struck in the aftermath of World War Two.¶ But there has traditionally been a reluctance to make similar arrangements with other allies, despite the close relations that the United States and Germany now enjoy.¶ Merkel said an accord with Washington was long overdue, given the shared experiences the countries face.¶ "We are in Afghanistan together. Our soldiers experience life threatening situations. They sometimes die in the same battles," she said.¶ "The friendship and partnership between the European member states, includingGermany, and the United States is not a one-way street. We depend on it. But there are good reasons that the United States also needs friends in the world."¶ COLLECTIVE ANGER¶ **As EU leaders arrived for the two-day summit there was near-universal condemnation of the alleged activities by the NSA**, particularly the monitoring of Merkel's mobile phone, a sensitive issue for a woman who grew up in East Germany, living under the Stasi police force and its feared eavesdropping.¶ Some senior German officials, and the German president of the European Parliament, have called for talks between the EU and United States on a free-trade agreement, which began in July, **to be suspended because of the spying allegations**.¶ Merkel, whose country is one of the world's leading exporters and stands to gain from any trade deal with Washington, said that was not the right path to take, saying the best way forward was to rebuild trust.¶ The series of Snowden-based leaks over the past three months have left Washington at odds with a host of important allies, from Brazil to Saudi Arabia, and there are few signs that the revelations are going to dry up anytime soon.¶

OSW Adv CP

Solves Tech Leadership

Europe has monopoly on OSW tech leadership – EWI proves

EWEA '13

(European Wind Energy Association, "The European Wind Initiative," *No date is specifically listed – but the plan in the article begins in 2013. http://www.ewea.org/fileadmin/files/library/publications/reports/EWI_2013.pdf SM)

To fight climate change, improve energy security, enhance Europe's competitiveness and maintain our technological leadership, the European wind industry — together with the European Commission and Member States — created a wind energy research and development programme covering the 2010 - 2020 period. The European Wind Initiative (EWI) has a planned budget of €6bn, more than half provided by the wind power industry. The **objectives are to: • maintain Europe's technology leadership in onshore and offshore wind power;** • make onshore wind the most competitive energy source by 2020, with offshore following by 2030; • achieve a 20% share of wind energy in EU total electricity consumption by 2020; • create 250,000 new skilled jobs in the EU by 2020. To achieve these objectives, the EWI prioritises R&D in new turbines and components, offshore technology, grid integration, resource assessment and spatial planning.

Too many alt causes to technological leadership – collapse inevitable

McCoy '10

(Alfred staff writer for Salon focusing on economic issues, "How America Will Collapse (by 2025)," 12/6/2010 http://www.salon.com/2010/12/06/america_collapse_2025/ SM)

Similarly, American leadership in technological innovation is on the wane. In 2008, the U.S. was still number two behind Japan in worldwide patent applications with 232,000, but China was closing fast at 195,000, thanks to a blistering 400 percent increase since 2000. A harbinger of further decline: in 2009 the U.S. hit rock bottom in ranking among the 40 nations surveyed by the Information Technology & Innovation Foundation when it came to "change" in "global innovation-based competitiveness" during the previous decade. Adding substance to these statistics, in October China's Defense Ministry unveiled the world's fastest supercomputer, the Tianhe-1A, so powerful, said one U.S. expert, that it "blows away the existing No. 1 machine" in America. Add to this clear evidence that the U.S. education system, that source of future scientists and innovators, has been falling behind its competitors. After leading the world for decades in 25- to 34-year-olds with university degrees, the country sank to 12th place in 2010. The World Economic Forum ranked the United States at a mediocre 52nd among 139 nations in the quality of its university math and science instruction in 2010. Nearly half of all graduate students in the sciences in the U.S. are now foreigners, most of whom will be heading home, not staying here as once would have happened. By 2025, in other words, the United States is likely to face a critical shortage of talented scientists.

Politics DA

Carney Link

Plan unpopular with Carney

Carney '13 – United States Congressman Democratic Representative of Delaware

(John, "Congressman Carney Statement On NSA Surveillance Programs," John Carney, http://johncarney.house.gov/index.php/press-releases0/470-congressman-carney-statement-on-nsa-surveillance-programs)

Since the revelations about the NSA's data collection practices came to light earlier this summer, I've been working with my colleagues to learn more about the scope of these programs. My goal has been to determine whether these programs maintain a proper balance between protecting our country from terrorist attacks and protecting our personal privacy. Here's what I've learned during this process: Close to a dozen terrorist plots on U.S. soil have been foiled due to the NSA's surveillance program. And while the government collects the phone records of calls made in the U.S., the government can only inspect these records with approval from a FISA Court judge. Even then, the government can only look at those records that are relevant to an ongoing terrorist investigation. It's also important to note that the data collected does not include the content of calls or other personal information – it's just a record of phone numbers and the dates and times of calls made. As many of my constituents have pointed out, this system asks Americans to put a lot of trust in their government. Part of the challenge is that most of the details surrounding the NSA's operations are classified, so Americans don't have the information they need to weigh the pros and cons of the program on their own. Frankly, I understand why this makes a lot of Americans uncomfortable. When the House considers the Intelligence Authorization Act this fall, I would like to see several changes made to the NSA's surveillance programs. First, we need to identify as many aspects of the program as possible that can be declassified and made available to the public. Second, we need to consider alternate ways to store and protect the data the government currently collects. Asking phone companies to keep the data instead of having the government do it is one option. Ultimately, I voted against yesterday's amendment to the Defense Appropriations bill because it would have effectively ended critical aspects of the NSA's programs instead of improving them. I do not believe that's the right approach. However, the amount of support the amendment received reflects the deep discomfort many Americans feel with the current system. I share those concerns, and feel strongly that we have to address them. Despite a series of classified briefings over the past few months, there's still uncertainty in Congress regarding the scope of the NSA's data collection efforts. We need a full debate on the House floor -- as public as our national security allows -- so my colleagues and I can assess these programs with input from our constituents. We need to make the changes that are necessary to ensure our privacy is protected while keeping our country safe. I look forward to having that debate, and making those changes, when Congress returns in the fall.

Carney has influence on the agenda – he controls the votes of the freshmen congressman

Carney '13 – United States Congressman Democratic Representative of Delaware

(John, "Delaware Rep. John Carney Deals With GOP Rule In House," John Carney, http://johncarney.house.gov/index.php/media-center/in-the-news/112-delaware-rep-john-carney-deals-with-gop-rule-in-house)

Carney's strongest relationships in Congress so far may be with other members of the Noble Nine. The group meets regularly for dinner. "You get a certain esprit de corps with just a small number," he said. Group members have come to rely on one another's counsel, said Rep. Karen Bass, D-Calif., one of the nine. Others are David Cicilline of Rhode Island, Hansen Clark of Michigan, Colleen Hanabusa of Hawaii, William Keeting of Massachusetts, Cedric Richmond of Louisiana, Terri Sewell of Alabama and Frederica Wilson of Florida. "If you look at the [House] floor, we're often sitting together," she said. "It's not because we feel alienated. More than any reason, it's because we like each other." But Carney spends a lot of time with Republican freshmen, too, partly because of his committee assignment. He's one of 14 freshmen on Financial Services, but the other 13 are Republicans. Carney has pursued relationships with Republicans such as Rep. Jim Renacci, R-Ohio, an accountant who spoke authoritatively during committee discussions of derivatives. Carney arranged a lunch meeting with Renacci to discuss what he wants to accomplish and offer help. Renacci called Carney "somebody that I know I can work with." "We can sit down and debate, and maybe not agree on everything, but come up with some conclusions that are very similar," Renacci said. "We've got to get spending reduced, we've got to get our deficit reduced. And when we talked, we both had those same thoughts and agreements." Winning a seat on Financial Services was no small feat for Carney. Because of the reduced size of all committees, Democrats were competing for only one vacancy.

McConnell Link

McConnell hates the plan – uniquely true in context of bulk collection

Rosenthal 6/2 – DC bureau covering national security and surveillance

(Max, "How Mitch McConnell Tried—and Failed—to Weaken NSA Reform," Mother Jones, http://www.motherjones.com/politics/2015/06/mitch-mcconnell-nsa-reform-freedom-act)

The USA Freedom Act, the bill that reforms the Patriot Act and stops the US government's bulk collection of phone records, finally passed the Senate on Tuesday after the chamber rejected three amendments from GOP Majority Leader Mitch McConnell (R-Ky.) aimed at weakening the bill's reforms. McConnell originally supported leaving the Patriot Act with all of its surveillance powers intact, but he faced resistance from both Democrats and Republicans, including die-hards such as Sen. Rand Paul (R-Ky.) who were happy to let bulk collection simply disappear without creating a replacement. So McConnell agreed to proceed with the USA Freedom Act, but proposed four amendments to address what he called the bill's "serious flaws." (He withdrew one of them.) Harley Geiger, chief counsel of the Center for Democracy and Technology, called McConnell's amendments "unnecessary for national security" and said that they would "erode both privacy and transparency." The Senate agreed, rejecting the three amendments that came to a vote on Tuesday afternoon. McConnell's proposed changes would have: Delayed the shutdown of bulk collection: The USA Freedom Act calls for bulk collection to shut down within six months of the law's passage. One of McConnell's amendments would have stretched that out to a full year. Kept arguments before the FISA court a one-sided affair: The FISA court reviews—and essentially always approves—requests for surveillance from government agencies. Its business is classified, and the only arguments presented are by government lawyers. The USA Freedom Act establishes a panel of experts to argue privacy concerns before the court, a move that one of McConnell's amendments would have tried to limit. Offered a potential backdoor for anti-reform efforts: Under the USA Freedom Act, bulk collection will be replaced by a "query-based" system, in which intelligence agencies would have to ask phone companies for records. That will take place six months after the bill is signed into law, but McConnell wanted to make the attorney general certify one month before the end of bulk collection that the new system would not harm national security. That may have given anti-reform lawmakers a final chance to scuttle the USA Freedom Act if the attorney general's certification didn't happen, or even raised any concerns at all. Even if the amendments had passed, McConnell faced an uphill battle in the House: House Judiciary Committee chairman Rep. Bob Goodlatte (R-Va.) and ranking member Rep. John Conyers (D-Ill.) said in a statement on Monday that "[t]he House is not likely to accept the changes proposed by Senator McConnell." Other House leaders also warned the Senate away from making changes to the bill. Geiger called the USA Freedom Act's passage "the most significant national security surveillance reform measure in the past three decades," and it may be only a matter of hours before President Barack Obama signs it into law. And while privacy advocates didn't get everything they wanted from surveillance reform, McConnell got nothing.

McConnell key to the agenda – can sway Senate votes

Boehner and McConnell 12/5/14 - Mr. Boehner (R., Ohio), is the House speaker; Mr. McConnell (R., Ky.) is currently the Senate minority leader

(John and Mitch, "Now We Can Get Congress Going," Wall Street Journal, http://www.wsj.com/articles/john-boehner-and-mitch-mcconnell-now-we-can-get-congress-going-1415232759)

Americans have entrusted Republicans with control of both the House and Senate. We are humbled by this opportunity to help struggling middle-class Americans who are clearly frustrated by an increasing lack of opportunity, the stagnation of wages, and a government that seems incapable of performing even basic tasks. Looking ahead to the next Congress, we will honor the voters' trust by focusing, first, on jobs and the economy. Among other things, that means a renewed effort to debate and vote on the many bills that passed the Republican-led House in recent years with bipartisan support, but were never even brought to a vote by the Democratic Senate majority. It also means renewing our commitment to repeal ObamaCare, which is hurting the job market along with Americans' health care. For years, the House did its job and produced a steady stream of bills that would remove barriers to job creation and lower energy costs for families. Many passed with bipartisan support—only to gather dust in a Democratic-controlled Senate that kept them from ever reaching the president's desk. Senate Republicans also offered legislation that was denied consideration despite bipartisan support and benefits for American families and jobs. These bills provide an obvious and potentially bipartisan starting point for the new Congress—and, for President Obama, a chance to begin the final years of his presidency by taking some steps toward a stronger economy. Editorial Page Editor Paul Gigot advises the President on how best to spend the next two years governing with a GOP-led Congress. Photo credit: Getty Images. These bills include measures authorizing the construction of the Keystone XL pipeline, which will mean lower energy costs for families and more jobs for American workers; the Hire More Heroes Act, legislation encouraging employers to hire more of our nation's veterans; and a proposal to restore the traditional 40-hour definition of full-time employment, removing an arbitrary and destructive government barrier to more hours and better pay created by the Affordable Care Act of 2010. We'll also consider legislation to help protect and expand America's emerging energy boom and to support innovative charter schools around the country. Enacting

such measures early in the new session will signal that the logjam in Washington has been broken and help to establish a foundation of certainty and stability that both parties can build upon. At a time of growing anxiety for the American people, with household incomes stubbornly flat and the nation facing rising threats on multiple fronts, this is vital work. Will these bills single-handedly turn around the economy? No. But taking up bipartisan bills aimed at helping the economy that have already passed the House is a sensible and obvious first step. More good ideas aimed at helping the American middle class will follow. And as we work to persuade others of their merit, we won't repeat the mistakes made when a different majority ran Congress in the first years of Barack Obama's presidency, attempting to reshape large chunks of the nation's economy with massive bills that few Americans have read and fewer understand. Editorial Page Editor Paul Gigot on why the Republican Senate victory is a rebuke of the President and his polices. Photo credit: Associated Press. Instead, we will restore an era in which committees in both the House and Senate conduct meaningful oversight of federal agencies and develop and debate legislation; and where members of the minority party in both chambers are given the opportunity to participate in the process of governing. We will oversee a legislature in which "bigger" isn't automatically equated with "better" when it comes to writing and passing bills. Our priorities in the 114th Congress will be your priorities. That means addressing head-on many of the most pressing challenges facing the country including: • The insanely complex tax code that is driving American jobs overseas; • Health costs that continue to rise under a hopelessly flawed law that Americans have never supported; • A savage global terrorist threat that seeks to wage war on every American; • An education system that denies choice to parents and denies a good education to too many children; • Excessive regulations and frivolous lawsuits that are driving up costs for families and preventing the economy from growing; • An antiquated government bureaucracy ill-equipped to serve a citizenry facing 21st-century challenges, from disease control to caring for veterans; • A national debt that has Americans stealing from their children and grandchildren, robbing them of benefits that they will never see and leaving them with burdens that will be nearly impossible to repay. January will bring the opportunity to begin anew. Republicans will return the focus to the issues at the top of your priority list. Your concerns will be our concerns. That's our pledge. The skeptics say nothing will be accomplished in the next two years. As elected servants of the people, we will make it our job to prove the skeptics wrong.

Deference DA

UQ

Courts defer to the executive all of the time – 9/11 has changed the legal game

Posner 12 – expert and professor in law and economics, and international law

(Eric A. Posner, "DEFERENCE TO THE EXECUTIVE IN THE UNITED STATES AFTER SEPTEMBER 11: CONGRESS, THE COURTS, AND THE OFFICE OF LEGAL COUNSEL", Harvard Journal of Law & Public Policy, http://www.harvard-jlpp.com/wp-content/uploads/2013/10/35_1_213_Posner.pdf)

According to the "deference thesis," legislatures, courts, and other government institutions should **defer to the executive's policy decisions during national security emergencies**.1 In this Essay, I will address two criticisms of the deference thesis. The first argument, which has been developed most powerfully by Professor Stephen Holmes, is that rules dominate standards at moments of crisis.2 An executive that is unconstrained, that is, not bound by rules, will make worse policy choices than an ex- ecutive that is bound by rules.3 This type of argument is usu- ally made in the context of urging legislatures and courts to constrain the executive during emergencies.4 Some commenta- tors, however, doubt whether it is possible for legislatures and courts to constrain the executive during emergencies.5 These doubts have led to a second argument that the executive should be bound by institutions within the executive branch such as (in the United States) the Office of Legal Counsel,6 or through the construction of new institutions that review the executive branch's actions.7 Both arguments criticize the defer- ence thesis but propose different solutions. The first argument proposes that Congress and the judiciary give the executive less deference; the second proposes that officials within the ex- ecutive branch give the President less deference. Thus, we can distinguish external constraints on the executive and internal constraints on the President. Both arguments are flawed. The external constraints argu- ment gets the normal analysis backwards: rules are better for routine, recurring situations. Although some emergencies are, in fact, routine, the type of emergency that calls for deference is not. The internal constraints argument, as normally presented, makes the fatal assumption that the President can be bound by his own agents against his own perceived interest, and relies on other questionable premises about the structure of government in the United States. I. THE DEFERENCE THESIS The deference thesis states that during emergencies the legis- lature and judiciary should defer to the executive.8 It assumes that the executive is controlled by the President, but to the ex- tent that the President could be bound by agents within the ex- ecutive, the deference thesis also holds that those agents should follow the President's orders, not the other way around. In normal times, the three branches of government share power. For example, if the executive believes that a new, dangerous drug has become available, but possession of the drug is not yet illegal, the executive may not act on its own to detain and prosecute those who deal and use the drug. The legislature must first enact a statute that outlaws the drug. The executive also depends on the legislature for financial appropriations and other forms of support. The executive also faces constraints from the courts. If the executive arrests drug dealers and seeks to imprison them, it must first obtain the approval of courts. The courts ensure that the executive does not go beyond the bounds of the new law, does not violate earlier-enacted laws that have not been superseded by the new law, and does not violate the Constitution. In emergencies, the executive often will contemplate actions that do not have clear legislative authority and might be consti- tutionally dubious. For example, after September 11, the U.S. government engaged in immigration sweeps, detained people without charges, used coercive interrogation, and engaged in warrantless wiretapping of American citizens.9 Many, if not all, of these actions would have been considered violations of the law and the U.S. Constitution if they had been undertaken against normal criminal suspects the day before the attacks. After September 11, both the legislature and the **courts gave the executive some deference**. The legislature gave explicit authori- ties to the executive that it had initially lacked;10 the courts did not block actions that they would have blocked during normal times.11 But neither body was entirely passive. Congress ob- jected to coercive interrogation and did not give the executive all the authorities that it requested.12 After a slow start, the courts also resisted some of the assertions the executive made. There is some dispute about whether this resistance was mean- ingful and caused the executive to change policy or merely re- acted to the same stimuli that caused the executive to moderate certain policies independently.13 In any event, no one disputes that the courts gave the executive a nearly **free pass over at least the first five to seven years** of the conflict with al Qaeda. The deference thesis, then, can be strong-form or weak-form. This ambiguity has had unfortunate consequences for debates about post-September 11 legal policies. Few people believe that the courts should impose exactly the same restrictions on the executive during an emergency as during normal times. Indeed, doctrine itself instructs courts to balance the security value of a course of action and its cost to civil liberties, implying that cer- tain actions might be legally justified to counter high-stakes threats but not to counter low-stakes threats.14 Nor does anyone believe that the executive should be completely unconstrained. The debate is best understood in the context of the U.S. gov- ernment's post-September 11 policies. Defenders of these poli- cies frequently invoked the deference thesis—not so much as a way of justifying any particular policy, but as a way of insisting that the executive should be given the benefit of the doubt, at least in the short term.15 The deference thesis rests on basic in- tuitions about institutional competence: that the executive can act more decisively and with greater secrecy than Congress or the courts because it is a hierarchical body and commands forces that are trained and experienced in countering security threats. The other branches lack expertise. Although they may have good ideas from time to time, and are free to volunteer them, the ability of the executive to respond to security threats would be unacceptably hampered if Congress and the courts had the power to block it to any significant degree. Secrecy is an important part of the argument. Policymaking depends on information, and information during emergencies often must be kept secret. Congress and the courts are by nature and tradition open bodies; if they were to act in secret, their value would be diminished. Meanwhile, the argument contin- ues, the fear of an out-of-control executive who would engage in abuses unless it was constrained by the other branches is exag- gerated. The President has strong electoral and other political incentives to act in the public interest (at least, in the United States). Even if the executive can conceal various "inputs" into counterterrorism policy, it cannot conceal the "output"—the ex- istence, or not, of terrorist attacks that kill civilians. Thus, it was possible for defenders of the Bush Administra- tion's counterterrorism policies to express discomfort with cer-tain policy choices, while arguing nonetheless that Congress and the courts should not try to block executive policymaking for the duration of the emergency—at least not as a matter of presumption. Critics of the Bush Administration argued that deference was not warranted—or at least not more than a lim-ited amount of deference was warranted, although again these subtleties often were lost in the debate—for a variety of rea- sons. I now turn to these arguments.

Judicial deference high now and observer effect means none of your offense applies

Deeks 10/21/13

(Ashley Deeks "Courts Can Influence National Security Without Doing a Single Thing", New Republic, http://www.newrepublic.com/article/115270/courts-influence-national-security-merely-watching)

One of the most persistent fights in the national security arena since the September 11 attacks has been about the proper allocation of power between two branches of government: the Executive and the courts. Specifically, how much authority does and should the Executive Branch have to establish and implement national security policies and how much oversight can and should courts provide over these policies? People tend to divide into one of two schools of thought when answering these questions. The first school favors extensive deference to Executive branch national security decisions and celebrates what it sees as a limited role for courts. The Executive, this school contends, is constitutionally charged with such decisions and structurally better suited than the judiciary to make them. After all, Alexander Hamilton famously remarked that housing powers in a unitary executive provides the advantages of "[d]ecision, activity, secrecy, and dispatch"—qualities our federal courts simply don't have. The other school of thought bemoans such judicial deference, even as this school admits that it occurs. Members of this school fear that this deference will undercut individual rights, leaving the Executive to maximize security over liberty again and again. This school also worries more broadly about creating an imbalance in the separation of powers: an unchecked Executive can impose draconian security measures without a reliable counter-weight. But both sides assume that the courts' role in influencing security policy is minimal. Both sides are wrong. While courts rarely intervene directly in national security disputes, they nevertheless play a significant role in shaping Executive branch security policies. Let's call this the "observer effect." Physics teaches us that observing a particle alters how it behaves. Through psychology, we know that people act differently when they are aware that someone is watching them. In the national security context, the "observer effect" can be thought of as the impact on Executive policy-setting of pending or probable court consideration of a specific national security policy. The Executive's awareness of likely judicial oversight over particular national security policies—an awareness that ebbs and flows—plays a significant role as a forcing mechanism. It drives the Executive to alter, disclose, and improve those policies before courts actually review them. Take, for example, U.S. detention policy in Afghanistan After several detainees held by the United States asked U.S courts to review their detention, the Executive changed its policies to give detainees in Afghanistan a greater ability to appeal their detention—a change made in response to the pending litigation and in an effort to avoid an adverse decision by the court. The Government went on to win the litigation. A year later, the detainees re-filed their case, claiming that new facts had come to light. Just before the government's brief was due in court, the process repeated itself, with the Obama Administration revealing another rule change that favored the petitioners. Exchanges between detainees and their personal representatives would be considered confidential, creating something akin to the attorney-client privilege. Thus we see the Executive shifting its policies in a more rights-protective direction without a court ordering it to do so. Other examples of the observer effect abound. In 2005, the Executive decided to reveal the processes by which it negotiated "diplomatic assurances" to return Guantanamo detainees to foreign countries, in an effort to fend off court decisions delaying those returns. The Government might well have won in court even without these revelations – the precedents suggested that it would have—but it hedged its bets by persuading the courts that it had in place a thorough process to ensure that the United States did not expose detainees to likely mistreatment in the receiving country. Here's another example: in the face of some adverse lower court decisions (which the Government ultimately won on appeal), the Government curtailed its own use of the "state secrets" privilege. That's a privilege the government may invoke when a lawsuit raises legal challenges that cannot be proven or defended without disclosing information that would jeopardize U.S. national security. And the Government altered the policies pursuant to which it uses secret evidence to deport aliens, due in part to critical language in court decisions, even though the Government likely would have won the cases on the merits. When should we expect to see the observer effect? In general, we should look for three things. First, there must be a triggering event. This ranges from the filing of a non-frivolous case, to some indication from a court that it may reach the merits of a case (i.e., ordering briefing on an issue, or rejecting the government's motion for summary judgment), to the court's consideration of the issue on the merits. The observer effect most clearly comes into play when a court becomes seized with a national security case after an extended period of judicial non-involvement in security issues, such as when federal courts started to consider the type of person the Executive lawfully may detain on the battlefield. The observer effect then kicks in to influence the Executive's approach to the policy being challenged in the triggering case, as well as to future (or other pre-existing) Executive policies in the vicinity of that triggering case. Second, future uncertainty plays a critical role in eliciting the observer effect. In some cases, the question for the Executive will be whether a court will conclude that it can or should exercise jurisdiction over a case. In other cases, Executive uncertainty will exist when it is not obvious what law will govern the dispute at issue, or where there is little precedent to guide the courts in resolving the dispute. It is this uncertainty that leaves the Executive with doubt about whether it will win the case, and that creates incentives for the Executive to alter its policies in anticipation of litigation or its outcome. After all, there are real advantages to the Executive in retaining the power to shape these national security policies, even under a potentially watchful eye of the courts The third factor that helps secure the observer effect's operation is the likelihood of future litigation on related issues. If a court declines to defer to the Executive in a particular case, that decision is unlikely to create an observer effect if the Executive has confidence that the factual and legal questions at issue in that case will not arise again. In contrast, when the Executive perceives that a set of policies is likely to come under sustained litigation (and thus under the potential oversight of multiple judges over time), it is more likely to concertedly review—and alter—those policies. When these three elements are present, the observer effect is likely to come into play. How does the Executive react? The Executive attempts to maximize the total value of two elements: a sufficiently security-focused policy and unilateral control over national security policymaking. To achieve this goal, the Executive often is willing to cede some ground on the first element to retain the second element.

Two conclusive cases proves courts defer to executive on NSA surveillance – a risk of national security threat means they deter

Chesney '9

(Robert - American lawyer and the Charles I. Francis Professor in Law at The University of Texas School of Law, where he serves as the Associate Dean for Academic Affairs and teaches courses relating to U.S. national security and constitutional law.[1] Chesney addresses issues involving national security and law, including matters relating to military detention, the use of force, terrorism-related prosecutions, the role of the courts in national security affairs, and the relationship between military and intelligence community activities. VIRGINIA LAW REVIEW, October 2009, "National Security Fact Deference," http://www.virginialawreview.org/sites/virginialawreview.org/files/1361.pdf SM)

Perhaps not surprisingly, no one appears to know quite what to make of this guidance despite decades of subsequent litigation involving the state secrets privilege. A recent oral argument before the Ninth Circuit in Hepting v. AT&T, a civil suit alleging that the telecommunications industry assisted the National Security Agency in conducting illegal surveillance in the United States, illustrates the point: Judge Harry Pregerson: Well, who decides whether . . . something's a

state secret or not? Deputy Solicitor General Gregory Garre: Ultimately, the courts do, Your Honor . . . . And they . . . apply the utmost deference to the assertion of the privilege and the judgments of the people whose job it is to make predictive assessments of foreign— Pregerson: Are you saying the courts are to rubberstamp the determination that the Executive makes that there's a state secret? Garre: We are not, Your Honor, and we think that the courts play an important role— Pregerson: What is our job? Garre: Your job is to determine whether or not the requirements of the privilege have been properly met. And that includes the declaration, the sworn declaration of the head of the agency asserting the privilege, and the assertion that that individual asserting it has personal knowledge of the matter [at hand]. Pregerson: So we just have to take the word of the members of the Executive Branch that tell us it's a state secret. Garre: We don't— Pregerson: [Because] that's what you're saying, isn't it? Garre: No, Your Honor, what this Court's precedents say is the court has to give the utmost deference to the assertion, and the second part of the— Pregerson: But what does "utmost deference" mean? We just bow to it? Judge Michael D. Hawkins: It doesn't mean abdication, does it? Garre: It does not mean abdication, Your Honor, but it means **the court gives great deference to the judgments of the individuals whose job it is to assess whether or not the disclosure** or nondisclosure **of** particular **information would harm national security** . . . .60 The Ninth Circuit ultimately remanded in Hepting without reaching the merits,61 but the same panel did proceed to the merits in a closely related case. In Al-Haramain Islamic Foundation v Bush, the panel began by asserting the independent nature of judicial review: We take very seriously our obligation to review the documents with a very careful, indeed a skeptical, eye, and not to accept at face value the government's claim or justification of privilege. Simply saying "military secret," "national security" or "terrorist threat" or invoking an ethereal fear that disclosure will threaten our nation is insufficient to support the privilege.62 **The court proceeded, however, to endorse a robust deference obligation:** "**we acknowledge the need to defer to the Executive on matters of foreign policy and national security and surely cannot legitimately find ourselves second guessing the Executive in this arena."**

Supreme Court can't challenge surveillance – Their own ruling proves

Kravets '13

(David, Staff Writer for Wired. "SUPREME COURT THWARTS CHALLENGE TO WARRANTLESS SURVEILLANCE," 2/26/2013, WIRED, http://www.wired.com/2013/02/scotus-surveillance-challenge/ SM)

A DIVIDED SUPREME Court halted a legal challenge Tuesday to a once-secret warrantless surveillance project that gobbles up Americans' electronic communications, a program that Congress eventually legalized in 2008 and again in 2012. The 5-4 decision (.pdf) by Justice Samuel Alito was a clear victory for the President Barack Obama administration, which like its predecessor, argued that **government wiretapping laws cannot be challenged in court**. What's more, the outcome marks the first time the Supreme Court decided any case touching on the eavesdropping program that was secretly employed in the wake of 9/11 by the President George W. Bush administration, and eventually codified into law twice by Congress. A high court majority concluded that, because the eavesdropping is done secretly, the American Civil Liberties Union, journalists and human-rights groups that sued to nullify the law have no legal standing to sue — because they have no evidence they are being targeted by the FISA Amendments Act. Some of the plaintiffs, which the court labeled "respondents," are also journalists and among other things claimed the 2008 legislation has chilled their speech and violated their Fourth

Amendment privacy rights. The act, known as §1881, authorizes the government to electronically eavesdrop on Americans' phone calls and e-mails without a probable-cause warrant so long as one of the parties to the communication is outside the United States. The communications may be intercepted "to acquire foreign intelligence information." The FISA Amendments Act generally requires the Foreign Intelligence Surveillance Court to rubber-stamp terror-related electronic surveillance requests. The government does not have to identify the target or facility to be monitored. It can begin surveillance a week before making the request, and the surveillance can continue during the appeals process if, in a rare case, the secret FISA court rejects the surveillance application. "Yet respondents have no actual knowledge of the Government's §1881a targeting practices. Instead, respondents merely speculate and make assumptions about whether their communications with their foreign contacts will be acquired under §1881a," Alito wrote. Joining Alito were Chief Justice John Roberts, and Justices Anthony Kennedy, Antonin Scalia and Clarence Thomas. In dissent, Justice Stephen Breyer said standing should have been granted. He said that the spying, "Indeed it is a s likely to take place as are most future events that commonsense inference and ordinary knowledge of human nature tell us will happen." Signing the dissent were Justices Ruth Bader Ginsburg, Elena Kagan and Sonia Sotomayor. The legislation authorizing the spying was signed into law the first time in July 2008 and the ACLU immediately brought suit. Then-senator and presidential candidate Barack Obama voted for the measure, though he said the bill was flawed and that he would push to amend it if elected. Instead, Obama, as president, simply continued the Bush administration's legal tactics aimed at crushing any judicial scrutiny of the wiretapping program. Obama signed legislation in December that extended the measure's effectiveness for another five years. The case before the justices was a review of a surprising 2011 appellate court decision that reinstated the ACLU's lawsuit, which the Obama administration asked the Supreme Court to dismiss. A majority of the justices agreed with the government's contentions (.pdf) that the ACLU and a host of other groups don't have the legal standing to bring the case because they have no evidence they or their overseas clients are being targeted. A lower court, taking the same position as the high court's majority, had ruled the ACLU, Amnesty International, Global Fund for Women, Global Rights, Human Rights Watch, International Criminal Defence Attorneys Association, The Nation magazine, PEN American Center, Service Employees International Union and other plaintiffs did not have standing to bring the case. The groups appealed to the 2nd U.S. Circuit Court of Appeals, arguing that they often work with overseas dissidents who might be targets of the National Security Agency program. Instead of speaking with those people on the phone or through e-mails, the groups asserted that they have had to make expensive overseas trips in a bid to maintain attorney-client confidentiality. "They cannot manufacture standing by incurring costs in anticipating of non-imminent harms," Alito wrote. The appeals court in 2011 agreed with the ACLU, ruling that they had standing because they had ample reason to fear the surveillance program. But even if the Supreme Court sided with the ACLU on Tuesday, **that does not necessarily mean the constitutionality of the FISA Amendments Act would have been litigated**. That's because the only issue before the high court was whether the plaintiffs had the legal standing to bring the case. Because they don't, **the case is over**.

Supreme Court will Defer – Coming legislation

Braun '14

(Stephen, staff writer for AP politics, *Cites Stephen A Baker, former NSA general counsel and specialist in national security, "NSA Phone Surveillance Could Be Headed For Supreme Court," 7/1/2014,

http://www.huffingtonpost.com/2014/01/07/nsa-surveillance-supreme-court_n_4553990.html SM)

Legal experts caution that while the opposing lawyers are girding for a landmark Supreme Court decision, it is not certain the top court will intervene. They warn that the prospect of administration and congressional changes in the next few months could complicate the two appeals rulings that are still more than a year away. And several said the fact that the judges in both cases allowed challenges to the NSA programs to go forward could lead to a spate of new lawsuits questioning other government surveillance practices. In the Washington case, U.S. District Judge Richard Leon ruled last month that the NSA phone surveillance was "almost Orwellian" and likely violated constitutional protections against unreasonable search and seizure. But in a similar lawsuit filed last month by the ACLU in New York, U.S. District Judge William H. Pauley III validated the NSA operation as an effective "counterpunch" to terrorist acts and spurned the legal group's challenge. "**It's not at all inevitable that the Supreme Court takes these cases**," said Stewart A. Baker, a former NSA general counsel and specialist in national security law who has staunchly defended NSA surveillance programs. "If both appeals courts rule for the government, I'm skeptical we'd see the court get involved at all." Baker said surveillance legislation in Congress and the Obama administration's apparent plans to alter the phone surveillance could dim the Supreme Court's interest in taking up the case. The USA Patriot Act provision under assault in both lawsuits "is going to get tinkered with for sure," Baker said, "and if you're a Supreme Court justice, why would you take a case if the law might be revised before you reach your opinion?"

Links

Unique link- judicial deference specifically on surveillance is high- NSA is a core area and the Supreme Court is crucial to clarify

Cohen '13 [ANDREW COHEN, DEC 27, 2013, The Atlantic, Is the NSA's Spying Constitutional? It Depends Which Judge You Ask, http://www.theatlantic.com/national/archive/2013/12/is-the-nsas-spying-constitutional-it-depends-which-judge-you-ask/282672/]

Judge Leon last week questioned the effectiveness of the government's program, asserting that federal officials did not "cite a single instance in which analysis of the NSA's bulk metadata collection actually stopped an imminent attack." Judge Pauley asserted the exact opposite: "The effectiveness of bulk telephony metadata collection cannot be seriously disputed."

Judge Leon peppered his lengthy opinion with expressions of great skepticism for the government's justifications. His lack of deference toward the executive branch and its intelligence operations was palpable. "I cannot imagine a more 'indiscriminate' and 'arbitrary invasion' than this systematic and high-tech collection and retention of personal data," he wrote.

Judge Pauley peppered his lengthy opinion with expressions of great respect for the government's surveillance efforts. His respect for the nation's intelligence operations was palpable. "While there have been unintentional violations of guidelines," he wrote, "those appear to stem from human error and the incredibly complex computer programs that support this vital tool."

Although the two rulings involve different plaintiffs, Judge Pauley's opinion reads as a pointed response to Judge Leon's ruling of 10 days earlier. In fact, I suspect the two rulings will soon be used side by side in law schools to illustrate how two reasonable jurists could come to completely different conclusions about the same facts and the same laws.

And that, of course, says a great deal about the nature of the NSA's program itself and its symbolic role in the conflict America faces as it teeters back and forth between privacy and security. Taken together, these two manifestos represent the best arguments either side so far has been able to muster. If you trust the government, Judge Pauley's the guy for you. If you don't, Judge Leon makes more sense.

That two judges would hold such contrasting worldviews is either alarming (if you believe the law can be evenly applied) or comforting (if you believe that each individual judge ought to be free to express his conscience). In any event, taken together, the two opinions say a lot about nature of legal analysis. The judge who gets overturned on appeal here won't necessarily be wrong—he'll just not have the votes on appeal supporting his particular view of the law and the facts. In the end, you see, there is no central truth in these great constitutional cases that rest at the core of government authority; there is just the exercise of judicial power.

Where does that leave the rest of us? The program still rolls on—unencumbered by the statutory and constitutional confusion that now reigns over it. We'll spend the bulk of 2014 watching the fight over it play out in at least two separate federal appeals courts. And then, unless there is a form of unanimity between and among those appeals courts that clearly is lacking between and among Judges Leon and Pauley, we'll see sometime in 2015 the first big terror law case in front of the Supreme Court since 2008.

Issues of national surveillance are a key issue for deference

Rosenthal 6/12/15

("Government's Secret Surveillance Court May Be About to Get a Little Less Secret The USA Freedom Act may foist some transparency on the notoriously opaque FISA court" Max J. Rosenthal a reporter at the Mother Jones DC bureau covering national security, surveillance Fri Jun. 12, 2015, https://www.google.com/webhp?sourceid=chrome-instant&ion=1&espv=2&es_th=1&ie=UTF-8#q=mother%20jones&es_th=1)

When the USA Freedom Act was passed last week, it was hailed as the first major limit on NSA surveillance powers in decades. Less talked about was the law's mandate to open a secret intelligence court to unprecedented scrutiny. The Foreign Intelligence Surveillance Court, often known as the FISA court after the 1978 law that created it, rules on government requests for surveillance of foreigners. Its 11 federal judges, appointed by the chief justice of the Supreme Court, consider the requests one at a time on a rotating basis. In closed proceedings, they have approved nearly every one of the surveillance orders that have come before the court, and their rulings are classified. Privacy advocates say those secret deliberations have created a black box that keeps the public from seeing both why the government makes key surveillance decisions and how it justifies them. But the new law passed by Congress last week may shed some new light on these matters. "The larger step that the USA Freedom Act accomplishes is that it is bringing those things out to the public," says Mark Jaycox, a legislative analyst at the Electronic Frontier Foundation, a digital privacy advocacy group. The new law mandates that FISA court rulings that create "novel and significant" changes to surveillance law be declassified—and it is up to the judges to determine if the cases reach that threshold—though only after review by the attorney

general and the director of national intelligence. While FISA court rulings have been leaked and occasionally declassified, the new law marks the first time Congress has attempted to make the court's decisions available to the public. The law also requires the court to create an advisory panel of privacy experts, known as an amicus panel. When a judge considers what she considers a "novel or significant" cases, she will call on that panel to discuss civil liberties concerns the surveillance requests brings up. Judges can also use the panel in other cases as they see fit. The USA Freedom doesn't lay out how the amicus panel will work in detail. But privacy advocates say its mere existence will be an important step. "We know we will see the order and potentially that an amicus [a privacy panel member] is going to be there arguing against it. Those things are huge to us," Jaycox says. But while the USA Freedom Act calls for important FISA court rulings will be made public, there's no guarantee they will be. For one, final say on declassification still rests with the executive branch rather than the judges themselves. And while the judges' input on the cases will still be important—if not final—says Liza Goitein, co-director of the Liberty and National Security Program at the Brennan Center for Justice, they have already shown **a "sort of reflexive deference**" to the government. While FISA court rulings have been leaked and occasionally declassified, the new law marks the first time Congress has attempted to make the court's decisions available to the public. In fact, advocates say, judges have always had the powers outlined in the new law—to bring in consultants or recommend declassifying their opinions. "This is something the FISA court could have done all along," says Amie Stepanovich, the US policy manager for privacy advocacy group Access. "They always could have chosen to be more transparent in their proceedings." Privacy advocates hope that having these pre-existing powers now written into law means that judges will actually use them, but even that isn't for certain. "I think the transparency provisions are going to be effective for the judges who are inclined to support them and are going to be ineffective for the judges who aren't," says Steve Vladeck, a professor at American University's Washington College of Law. There are other procedural moves the government could use to limit what information is made public. The court could simply issue summaries of decisions that don't include their key parts, or the executive branch could heavily redact them. "In theory, the executive branch could comply with this part of the statute by redacting 99 percent—everything but one sentence, essentially—of an opinion," Goitein says. She admits that specific tactic is unlikely—it would be an obvious and public skirting of the law's intent—but stresses that even though the law makes important progress in disclosure, there are still many loopholes that could cut down on how much the public will get to see. "I think the history strongly suggests that the intelligence establishment will take every single little bit of rope it has," she says. "And then some."

Chief Justice Roberts ensures issues of national surveillance are deferred to the executive branch

New York Times July 25th 2013

(POLITICS Roberts's Picks Reshaping Secret Surveillance Court By Charlie Savage July 25th 2013, New York Times, http://www.nytimes.com/2013/07/26/us/politics/robertss-picks-reshaping-secret-surveillance-court.html?pagewanted=all)

The recent leaks about government spying programs have focused attention on the Foreign Intelligence Surveillance Court and its role in deciding how intrusive the government can be in the name of national security. Less mentioned has been the person who has been quietly reshaping the secret court: Chief Justice John G. Roberts Jr. In making assignments to the court, Chief Justice Roberts, more than his predecessors, has chosen judges with conservative and executive branch backgrounds that critics say make the court more likely to defer to government

arguments that domestic spying programs are necessary. Ten of the court's 11 judges — all assigned by Chief Justice Roberts — were appointed to the bench by Republican presidents; six once worked for the federal government. Since the chief justice began making assignments in 2005, 86 percent of his choices have been Republican appointees, and 50 percent have been former executive branch officials. Though the two previous chief justices, Warren E. Burger and William H. Rehnquist, were conservatives like Chief Justice Roberts, their assignments to the surveillance court were more ideologically diverse, according to an analysis by The New York Times of a list of every judge who has served on the court since it was established in 1978. According to the analysis, 66 percent of their selections were Republican appointees, and 39 percent once worked for the executive branch. "Viewing this data, people with responsibility for national security ought to be very concerned about the impression and appearance, if not the reality, of bias — for favoring the executive branch in its applications for warrants and other action," said Senator Richard Blumenthal, a Connecticut Democrat and one of several lawmakers who have sought to change the way the court's judges are selected. Mr. Blumenthal, for example, has proposed that each of the chief judges of the 12 major appeals courts select a district judge for the surveillance court; the chief justice would still pick the review panel that hears rare appeals of the court's decisions, but six other Supreme Court justices would have to sign off. Another bill, introduced by Representative Adam B. Schiff of California, would give the president the power to nominate judges for the court, subject to Senate approval. Chief Justice Roberts, through a Supreme Court spokeswoman, declined to comment. The court's complexion has changed at a time when its role has been expanding beyond what Congress envisioned when it established the court as part of the Foreign Intelligence Surveillance Act. The idea then was that judges would review applications for wiretaps to make sure there was sufficient evidence that the F.B.I.'s target was a foreign terrorist or a spy. But, increasingly in recent years, the court has produced lengthy rulings interpreting the meaning of surveillance laws and constitutional rights based on procedures devised not for complex legal analysis but for up-or-down approvals of secret wiretap applications. The rulings are classified and based on theories submitted by the Justice Department without the participation of any lawyers offering contrary arguments or appealing a ruling if the government wins. The court "is becoming ever more important in American life as more and more surveillance comes under its review in this era of big data," said Timothy Edgar, a civil liberties adviser for intelligence issues in both the Bush and Obama administrations. "**If the court is seen as skewed or biased, politically or ideologically, it will lose credibility."** At a public meeting this month, Judge James Robertson, an appointee of President Bill Clinton who was assigned to the surveillance court in 2002 by Chief Justice Rehnquist and resigned from it in December 2005, offered an insider's critique of how rapidly and recently the court's role has changed. He said, for example, that during his time it was not engaged in developing a body of secret precedents interpreting what the law means. "In my experience, there weren't any opinions," he said. "You approved a warrant application or you didn't — period." The court began expanding its role when George W. Bush was president and its members were still assigned by Chief Justice Rehnquist, who died in 2005. Midway through the Bush administration, the executive branch sought and obtained the court's legal blessing to continue secret surveillance programs that had originally circumvented the FISA process. The court's power has also recently expanded in another way. In 2008, Congress passed the FISA Amendments Act to allow the National Security Agency to keep conducting a form of the Bush administration's program of surveillance without warrants on domestic soil so long as only foreigners abroad were targeted. It gave the court the power to create rules for the program, like how the government may use Americans' communications after they are picked up. "That change, in my view, turned the FISA

court into something like an administrative agency that makes rules for others to follow," Judge Robertson said. "That's not the bailiwick of judges. Judges don't make policy." For the most part, the surveillance court judges — who serve staggered seven-year terms and take turns coming to Washington for a week to handle its business — do not discuss their work, and their rulings are secret. But the documents leaked by Edward J. Snowden, a former N.S.A. contractor, have cast an unusual spotlight on them. The first of the documents disclosed by Mr. Snowden was a top-secret order to a Verizon subsidiary requiring it to turn over three months of calling records for all its customers. It was signed by Judge Roger Vinson, an appointee of President Ronald Reagan who had previously achieved prominence in 2011 when he tried to strike down the entirety of President Obama's health care law. Chief Justice Roberts assigned Judge Vinson to the surveillance court in 2006, one of 12 Republican appointees, compared with 2 Democratic ones. While the positions taken by individual judges on the court are classified, academic studies have shown that judges appointed by Republicans since Reagan have been more likely than their colleagues to rule in favor of the government in non-FISA cases over people claiming civil liberties violations. Even more important, according to some critics of the court, is the court's increasing proportion of judges who have a background in the executive branch. Senator Blumenthal, citing his own experience as a United States attorney and a state prosecutor, said judges who used to be executive branch lawyers were more likely to share a "get the bad guys" mind-set and defer to the Justice Department if executive branch officials told them that new surveillance powers were justified. Steven G. Bradbury, who led the Justice Department's Office of Legal Counsel in the second term of the Bush administration, argued that it made sense to put judges who were executive branch veterans on the court because they were already familiar with the issues. And he challenged the claim that they would be more deferential. "When it comes to highly technical national security issues, I really think there is value in a judge being a former prosecutor or a former government lawyer who understands how the executive branch works," he said, adding that such judges "will be familiar with the process and able to ask the tough questions and see where the weak points are." Either way, an executive branch background is increasingly common for the court. When Judge Vinson's term ended in May, for example, Chief Justice Roberts replaced him with Judge Michael W. Mosman, who was a federal prosecutor before becoming a judge. Other current judges include Raymond J. Dearie, a United States attorney; Reggie B. Walton, a prosecutor who also worked on drug and crime issues for the White House; and F. Dennis Saylor IV, chief of staff in the Justice Department's Criminal Division. The only Democratic appointee, Judge Mary A. McLaughlin, was also a prosecutor. Stephen Vladeck, an American University law professor, said having executive branch veterans — including what he called "law-and-order Democrats" — on the court carried advantages because they brought experience with security issues. But the downside, he argued, is that they may also be unduly accommodating to government requests. "The further the court's authority has expanded from where it was in 1978, the greater the need has been for independent-minded government skeptics on the court," he said. Chief justices have considerable leeway in choosing judges — the only requirement is that they ensure geographic diversity. In practice, according to people familiar with the court, they have been assisted in evaluating whom to select by the director of the Administrative Office of the United States Courts. The counselor to the chief justice and the surveillance court's presiding judge also sometimes play a role. Judges sometimes volunteer for consideration, while chief justices and their advisers sometimes come up with their own ideas. Generally, the people familiar with the court said, evaluations have been based on reputation, workload, willingness to undergo an intrusive background check, and experience in security issues. Judges have served an average of 15 years before being assigned to the surveillance court.

Chief Justice Roberts has dealt with a small circle. His past two choices to direct the judiciary's administrative office have been Republican-appointed judges, Thomas F. Hogan and John D. Bates, whom he also appointed to the surveillance court. Representative Steve Cohen, Democrat of Tennessee, who has filed a bill that would let Congressional leaders pick eight of the court's members, said it was time for the court to have a more diverse membership. "They all seem to have some type of a pretty conservative bent," he said. "I don't think that is what the Congress envisioned when giving the chief justice that authority. Maybe they didn't think about the ramifications of giving that much power to one person.".

Courts empirically defer instances of national security

Posner 2007

("Terror in the Balance: Security, Liberty, and the Courts", Eric A Posner, Oxford University Press, Pg. 1-2, 2007, https://www.law.upenn.edu/institutes/cerl/conferences/ethicsofsecrecy/papers/reading/PosnerVermeule.pdf)

When national emergencies strike, the executive acts, Congress acquiesces, and courts defer. When emergencies decay, judges become bolder, and soul searching begins. In retrospect, many of the executive's actions will seem unjustified, and people will blame Congress for its acquiescence and courts for their deference. Congress responds by passing new laws that constrain the executive, and courts reassert themselves by supplying relief to anyone who is still subject to emergency measures that have not yet been halted. Normal times return, and professional opinion declares that the emergency policies were anomalous and will not recur, or at least should not recur. Then, another emergency strikes, and the cycle repeats itself. One can identify roughly six periods of emergency during American history, each with its own paradigmatic instance of alleged executive overreaching.1 The undeclared war with France at the end of the eighteenth century produced the Sedition Act, which permitted Federalist authorities to lock up Republican critics of the John Adams administration. The Civil War from 1861 to 1865 produced Lincoln's suspension of habeas corpus and imposition of military rule, which included prosecutions of war critics. World War I and the Red Scare generated Espionage Act prosecutions of war critics and the harassment of immigrants and aliens.

National Surveillance implicates deference to the Executive Branch

Goitien April 17th 2015

(Appointing Democratic Judges to the FISA Court Won't Solve Its Structural Flaws Elizabeth (Liza) Goitein April 17, 2015, Brennan Center for Justice and New York Law, https://www.brennancenter.org/blog/appointing-democratic-judges-fisa-court-wont-solve-its-structural-flaws)

Chief Justice Roberts recently named two new judges to the Foreign Intelligence Surveillance Court (FISC) — Judge James P. Jones from the Western District of Virginia and Judge Thomas B. Russell from the Western District of Kentucky. Roberts has now appointed three judges to the FISC since the Snowden revelations, and all three were originally nominated to the bench by a Democratic president (Clinton). This marks a stark departure from Roberts' thirteen pre-Snowden appointments, eleven of whom were appointed by Republican presidents. The question naturally arises: does this change in composition herald a change in the FISC's approach? Roberts' track record of selecting Republican-appointed judges came under fire when Snowden's disclosures trained a public lens on the FISC's operations. Critics argued that

conservative judges would be more likely to support government requests to conduct surveillance, and less solicitous of the civil liberties implications, than their progressive counterparts. Among the legislative proposals to reform NSA surveillance were measures to revamp the FISC, including changing the appointment process to guard against ideological bias. Ideological diversity is a good idea on any court. (Full disclosure: I don't know enough about either Jones' or Russell's rulings to say whether their appointment will affect the court's ideological balance, particularly since one of the FISC judges being replaced —Mary A. McLaughlin — is herself a Clinton appointee.) But as Steve Aftergood pointed out, there's no evidence that the ideological makeup of the FISC has influenced its rulings. To the contrary: the FISC's rate of approving government applications to conduct surveillance has always "hovered near 100%" (Aftergood's words) — before and after Roberts' streak of appointing conservatives. To be sure, there are applications and there are applications. A request to target a named individual based on a showing of probable cause (for communications content) or relevance (for business records) — which is what the FISC generally was reviewing in the pre-Roberts era — is very different from a request to collect Americans' phone records in bulk on the ground that relevant records may be buried within them. The FISC judge who first endorsed this strained theory of "relevance" to justify the bulk collection of phone records in 2006 was appointed by a Republican president, as were eight of the other ten judges on the court at that time. On the other hand, that decision was based on a 2004 FISC order justifying the bulk collection of Internet metadata that was issued by a Clinton appointee. Why the bipartisan acquiescence to a legal theory that may charitably be described as far-fetched? Most judges, regardless of their ideology, are happy to defer to the executive branch in matters of national security, whether by declining to exercise jurisdiction at all or by refusing to probe factual claims. There's a stark division of opinion on whether this is a good thing, but little dispute over the fact itself. Of course, there have always been exceptions — cases in which judges have refused to bow to executive claims of superior expertise and constitutional authority. Anecdotally, such pushback appears to have become more common among regular federal judges since the Snowden disclosures. It's too soon, though, to say whether this phenomenon signals a broader change in judicial philosophy and, if so, whether it will last. In any case, there's another reason why FISC judges, regardless of ideology, are likely to rule in the government's favor. Because no opposing party is present, FISC judges who rule against government applications are not occupying the familiar role of a neutral adjudicator in a contest between adversaries. Instead, they have effectively become the government's adversary — or, at least, they may create that perception. Especially in the national security context, few judges are eager to shoulder that role. Hence the iterative back-and-forth described by FISC judges and government officials, in which FISC staff work with Justice Department lawyers to craft an application that the FISC feels it can approve. The FISC is not a "rubber stamp," as some have suggested, but it clearly sees its job as working in partnership with the executive branch to get to "yes." Needless to say, that's not the role courts are supposed to serve under our constitutional system of checks and balances. The pro-government rulings that result from these dynamics tend to perpetuate themselves. Once a FISC judge has approved a new program or a new type of surveillance, that ruling becomes the only direct precedent on which the other FISC judges may rely. There is no developed body of controlling case law, as there would be in regular federal courts, and no system to resolve differences through ascending levels of appeal. In such circumstances, the natural tendency to

rely on the only available precedent would be difficult to overcome. Finally, even if all eleven FISC judges were determined to resolve any doubt or ambiguity against the government, the law that authorizes the most intrusive NSA surveillance ties their hands. Under Section 702 of the FISA Amendments Act, which authorizes programmatic surveillance of communications between foreign targets and US persons, the court is not allowed to probe the government's certification of a foreign intelligence purpose, and it has no role in approving the selection of individual targets. Its only substantive job is to approve agency procedures for determining whether a target is "reasonably believed" to be a foreigner overseas, as well as agency procedures for "minimizing" the retention and dissemination of US person information. To be clear, less deferential rulings on these procedures would be a major step forward. After all, when the FISC approved the NSA's 2011 minimization procedures, it approved "back door searches" — in which the government, having certified (as the law requires) that it has no interest in particular, known US persons, runs searches against the data it has collected using the phone numbers and e-mail addresses of particular, known US persons. A more searching judicial review also might balk at the provision of the NSA'stargeting procedures that equates the absence of any information about a person's nationality or location with a "reasonable belief" that the person is a foreigner overseas. The fact remains that the legal framework is stacked against meaningful judicial review, relegating the FISC to the role of approving general procedures that leave a great deal of discretion to the executive branch rather than applying the law to the specific facts of a particular case. Indeed, the FISC's role is watered down to the point that it's not clear whether the court's operations even square with the requirements of Article III. (That's the subject of a report I wrote with Faiza Patel, which we've also discussed on this blog and on Lawfare.) In short**, a pro-government tilt in FISC proceedings is almost inevitable in light of the deference courts show in national security matters**, the lack of an opposing party or an established body of precedent, and the constraints of the governing statute. The political leanings of the court's judges aren't the cause of these problems, and adjusting them will not be the solution.

SCOTUS deference is ruining the legality of the three branches of government

Lightman June 19th 2013

(Spy data disclosures show anew that executive branch holds all the cards BY DAVID LIGHTMAN National political correspondent and veteran congressional reporter for McClatchy NewspapersMcClatchy Washington Bureau June 19, 2013, http://www.mcclatchydc.com/2013/06/19/194377/spy-data-disclosures-show-anew.html#Intro) WASHINGTON — Disclosures about National Security Agency cyber-spying on millions of Americans vividly illustrates how the federal government's check-and-balance system is out of balance. Despite periodic attempts to assert itself, **the legislative branch over time has settled into a secondary role to the executive branch on questions of national security**. The dominance of the executive branch in the nuclear age – when presidents claimed the need to act on a moment's notice – continued into the age of terrorism with the claimed need for vast new spy powers handed over by Congress with the Patriot Act and renewed and extended ever since. Lawmakers offered little resistance to American intervention in Libya two years ago, or to the use of American troops in central Africa and Uganda. Nor was there much demand for changes in the use of drones aimed at suspected terrorists in foreign countries, even after the administration disclosed last month that four Americans had been killed by strikes abroad. Bowing to the

president in the interest of protecting the nation has been commonplace for a century, ever since the U.S. became a major international player and had to react quickly to crises. "**Presidents assumed power and got away with it,"** said Stephen Hess, a presidential historian at Washington's Brookings Institution who worked with four presidents. Some of Congress' inability to act like a co-equal branch of government is rooted in the institution's nature. The president can act quickly and speak with one voice. Congress, divided between two parties and two chambers and featuring political factions ranging across the spectrum, cannot. The executive branch has another built-in edge: The public routinely supports the president's ability to act decisively in times of crisis. Even those who once urged more congressional advice and consent see events differently from inside the Oval Office. In 2006, for example, Denis McDonough urged a more active role for Congress, in a study for the Center for American Progress, a liberal research group. "Recent news headlines that the National Security Agency is collecting the phone records of tens of millions of Americans without the knowledge of key congressional committees underscores the need for Congress to serve as the American public's watchdog in overseeing intelligence agencies," the 2006 study said. "Congress today has been negligent, with profound implications for the safety and security of America." Now White House chief of staff to President Barack Obama, McDonough argues that safeguards have been established so Congress has a stronger role. Indeed, members of Congress have had access to information about the spy programs. But few have shown up to read the material. "It's the perfect example of Congress handing over power to the executive branch and failing to keep up with it," said Jim Harper, a former congressional counsel and now director of information policy studies at the libertarian Cato Institute. Congress thought it had given itself nearly equal billing by passing the 1973 War Powers Resolution. Approved after years of political conflict over Vietnam, it aimed to place new restrictions on presidents' military initiatives. But "every president has taken the position that it is an unconstitutional infringement by Congress on the president's authority as commander in chief," Richard Grimmett, a Congressional Research Service international specialist, said in a report. Courts have not directly addressed the issue. "The war powers act is routinely violated these days," said Jim Manley, a former top aide to Senate Majority Leader Harry Reid, D-Nev. **"In recent years Congress has tended to defer to the executive branch when it comes to national security-related issues."** This much is clear: Congress has adjusted its role in recent years so that "Congress does its best job at the front end and the back end," said Gary Schmitt, co-director of the American Enterprise Institute's Marilyn Ware Center for Security Studies. The usual pattern is that as a crisis unfolds, lawmakers often raise serious questions. If something goes awry, they try to put curbs on presidential action, which usually take a long time to approve let alone implement. When President George W. Bush was considering invading Iraq in 2002, Democrats controlling the Senate held hearings on war and its aftermath. But when the Bush administration argued that Iraq had weapons of mass destruction – a claim later proven false – Congress gave Bush broad bipartisan authority to act against Iraq and any others threatening the United States. On the back end, though, Congress got assertive. As popular support dwindled, and the war turned ugly, lawmakers raised new questions and debated withdrawal deadlines. Just as the war demonstrated Congress' limits, so has the NSA controversy. Congress has offered little apparent resistance, though it did build some safeguards into the system. A secret court must approve NSA data collection. Congressional intelligence committees routinely scrutinize the effort, as evidenced by the lack of surprise members expressed when news of the programs surfaced. So, says Schmitt, don't think about Congress' role anymore in terms of what an equal branch of government might do. Think of the reality. "Congress wrote the law, amended it and

debated it," Schmitt said. "They wanted an executive who could act decisively and in secret. It's the kind of inevitable result of us being a world power."

Yes Spillover

Surveillance is a fundamental security issue in the post-9/11 security environment- it'll spill over

Scheppele '9 [KIM LANE SCHEPPELE, "The New Judicial Deference," Laurance S. Rockefeller Professor of Sociology and Public Affairs in the Woodrow Wilson School and University Center for Human Values; Director of the Program in Law and Public Affairs, Princeton University, 2009]

As the country attacked on 9/11, the United States sprang into action¶ immediately with a twinned strategy of aggressive military action and new understandings of law. From launching wars abroad89 to developing novel¶ strategies for rendition, detention, and interrogation of suspected terrorists¶ outside the United States90 and curtailing civil liberties through widespread¶ surveillance programs at home,91 the Bush Administration, with the active¶ participation of the Office of Legal Counsel (OLC) at the Department of¶ Justice, took a generous view of its own powers in wartime. The OLC¶ developed new legal understandings to underwrite the anti-terrorism¶ campaign.92¶ Some of the new legal understandings resulted from new law. Congress¶ quickly passed the Authorization of the Use of Military Force (AUMF), giving¶ the President a green light to use "all necessary and appropriate force against¶ those nations, organizations, or persons he determines planned, authorized,¶ committed, or aided the terrorist attacks that occurred on September 11,¶ 2001."93 Shortly thereafter, Congress passed the USA PATRIOT Act with¶ nearly unprecedented speed, broadening the definitions of terrorism offenses,¶ clamping down on financial support for terrorism, increasing domestic¶ surveillance capacities of the U.S. government, and adding a toxic mix of small¶ changes in U.S. law that allowed the government to operate secretly and to¶ commandeer private resources in the anti-terrorism campaign.94

Link Magnifier – Perception

National security deference issues will be in the political spotlight – guarantees a link

Chesney 9 (Robert M., Professor, University of Texas School of Law, October, "NATIONAL SECURITY FACT DEFERENCE", 95 Va. L. Rev. 1361, Lexis Law)

Judicial involvement in national security litigation, as noted at the outset, poses unusual risks for the judiciary as an institution. Such cases are more likely than most to involve claims of special, or even exclusive, executive branch authority. They are more likely than most to involve a perception - on the part of the public, the government, or judges themselves - of unusually high stakes. They are more likely than most to be in the media spotlight and hence in view of the public in a meaningful sense. These cases are, as a result of all this, especially salient as a political matter. And therein lies the danger for the courts. Because of these elements, an inappropriate judicial intervention in national security litigation is unusually likely to generate a response from the other branches or the public at large that might harm the institutional interests of the judiciary, either by undermining its prestige and authority or perhaps even by triggering some form of concrete political response. This concern traditionally finds expression through the political question doctrine, which in its prudential aspect functions to spare judges such risks. But

just because a court determines that a case or an issue is justiciable does not mean that the institutional self-preservation concern has gone away or that a judge has lost sensitivity to it. National security fact deference provides a tempting opportunity for judges to accept the responsibility of adjudication [*1429] while simultaneously reducing the degree of interbranch conflict and hence the risk of political blowback. We cannot expect judges to attribute deference decisions to this motivation, of course, but we must account for the possibility - even the likelihood - that such concerns will play some role.

2NC Spillover

Plan changes the precedent and community doctrine that underlies all deference—independent military is key

Gilbert 98 – Lieutenant Colonel in the USAF Academy, MSBA from Boston University, JD from McGeorge School of Law, Harvard Law School (Michael H, 8 USAFA J. Leg. Stud. 197)

The federal judiciary, led by the United States Supreme Court, traditionally has avoided becoming the final reviewer of cases involving the military, particularly when the military is the defendant in a civil lawsuit. In the nineteenth century, the Supreme Court relied upon the separation of powers doctrine as the basis for refusing to review all administrative decisions by the executive branch. At the turn of the century, however, the Supreme Court began to review some executive decisions not dealing with the military when the allegation was that the official's actions exceeded statutory authority. At the same time, the Court continued to refuse to review military administrative decisions based upon the traditional separation of the military and civilian sector. The same philosophy thrives today. Courts are reluctant to enter the military house built by Congress because they consider the military a unique and separate community with special interests that transcend the usual constitutional standards. The United States Supreme Court interprets the three clauses in Article I of the Constitution (that assign Congress the authority to raise and maintain the armed forces) as the strongest indicator that the framers intended Congress to be free from interference in their conduct of military affairs pursuant to national security. Similarly, they give great weight and deference to the President in his assignment in the Constitution as Commander-in-Chief. The Court further sees that the roles of Congress and the President in this arena embody certain special factors that almost always preclude the judiciary from inserting their independent review into what are essentially matters or political questions outside of their domain and expertise. Moreover, the Court recognizes that Congress has established venues through which military members can attempt to resolve grievances n31 and that they also have established payment schemes, such as disability, for those who are physically or mentally injured during service. The fact that Congress has provided means by which aggrieved military members can seek redress and that Congress conducts hearings to consider the constitutionality of legislative options weighs heavily with the Court in granting virtually total deference to Congressional regulation of the military. Accordingly, the Supreme Court expressly recognizes the unique and special relationship between military subordinates and their superiors and their place in society, i.e., control by Congress and the executive branch.

Plan reverses strong precedent by having the Courts intervene in military policy—empirically, even the most serious constitutional challenges have been rebuffed due to blanket refusal

Gilbert 98 – Lieutenant Colonel in the USAF Academy, MSBA from Boston University, JD from McGeorge School of Law, Harvard Law School (Michael H, 8 USAFA J. Leg. Stud. 197)

Another important decision was Chappell v. Wallace, in which the Court unanimously ruled that enlisted military personnel may not sue their superior officers for damages for alleged constitutional violations suffered while in military service, specifically in this case, racial discrimination. n61 The plaintiffs argued that their superior officers assigned them to undesirable duties, threatened them, gave them low performance reports, and imposed unusually severe penalties based upon their race. The Court focused on the explicit plenary conferral to Congress to regulate the armed forces in the Constitution in finding that special factors counseled hesitation in permitting judicial relief because of the need for special regulations governing military discipline, and the concomitant need for a special and exclusive system of military justice. Noting that Congress had exercised this authority by establishing a comprehensive system of military justice, which of course addresses criminal acts rather than damages from civil wrongs as alleged in this case, the Court concluded that they would be wrong to provide enlisted members a judicial avenue by which to seek redress of wrongs committed by their superior officers. The Court further noted that many of the framers of the Constitution experienced the rigors of military life and, in drafting the Constitution, they anticipated this kind of issue by explicitly granting Congress "plenary control over the rights, duties, and responsibilities in the framework of the military establishment, including regulations, procedures and remedies related to military discipline; and Congress and the courts have acted in conformity with that view." n63 Finally, the Court admitted that they have long recognized two systems of justice, which are to some extent parallel, one for civilians and one for military personnel. By this statement, the Court concluded its creation of a military exception to the Constitution. Through a string of cases decided over several decades, each building upon the other, each accepting the dicta of the previous ones as well-established and time-honored fact and guiding principle, the Court has twisted and contorted the Constitution. To make the circle complete, the Court in Chappell relied upon the Feres doctrine and ruled that, as a matter of constitutional law, enlisted personnel may not maintain a suit for damages from alleged constitutional violations by superiors. In 1986, Chief Justice Rehnquist further cemented the great amount of deference owed to the military to the point that two justices expressed strong dissent. The dissenters criticized the Court's abdication "as principal expositor of the Constitution and protector of individual liberties in favor of credulous deference to unsupported assertions of military necessity." n66 In Goldman v. Weinberger, the Court examined whether the Air Force violated an Orthodox Jewish officer's First Amendment right to exercise his religious belief by prohibiting him through regulation from wearing his yarmulke while in uniform. The Court again emphatically supported the position of Orloff v. Willoughby in that the essence of military service "is the subordination of the desires and interests of the individual to the needs of the service," n67 and ruled that the military's need to have uniformity in dress is sufficient to warrant a regulatory prohibition against wearing religious articles outside the member's clothing. In short order, the Court affirmed the lower court's ruling that the appropriate level of scrutiny in reviewing a military regulation that clashes with the constitutional right of free exercise of religion was whether "legitimate ends are sought to be achieved." n69 Even when faced with one of the most serious challenges by a minority military member under the Constitution, the Court gave the greatest deference to the military in determining the regulations needed to ensure good order and discipline. Perhaps more interesting is the implicit basis within the Court's decision that the individual is totally subordinated to the needs of the service (reminiscent of a person in involuntary servitude). The Goldman decision, however, should not have been a surprise because it was consistent with precedent. In 1974, more than a decade before the Chief Justice penned the Goldman opinion for the Court, then Justice Rehnquist wrote the Court's opinion in Parker v. Levy, n70 which presented the Court with a suit for a habeas corpus

based upon a challenge under the First Amendment. Essentially, the Uniform Code of Military Justice (UCMJ) Articles proscribing "conduct [*216] unbecoming an officer and gentleman" and "all disorders and neglects to the prejudice of good order and discipline in the armed forces," n71 were alleged to be void for vagueness, when used to convict an Army physician (Capt. Levy) who had been critical of U.S. involvement in Vietnam. Levy was convicted by general court-martial and sentenced to three years confinement at hard labor, forfeiture of all pay and allowances, and a dismissal from the Army. Justice Rehnquist stressed that the Court has long recognized "the military is, by necessity, a specialized society separate from civilian society. We have also recognized that the military has, again by necessity, developed laws and traditions of its own during its long history." n72 He then characterized military officers as holding particular positions of responsibility and command in the armed forces that emanate from the commission the officers receive from the President. Moreover, he repeated the Court's position that, just as military society is a society apart from civilian society, "military law...is a jurisprudence separate and apart from the law which governs in our federal judicial establishment."

2NC Impact Overview Cards

Magnitude outweighs – these threats are unique

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

The terrible 9/11 attacks altered foreign affairs scholarship and magnified the importance of functionalist arguments for expansive executive power and limited judicial review. [n41] These arguments have generally focused on threats from terrorism and weapons of mass destruction. Scholars such as Eric Posner, Adrian Vermeule, and Bruce Ackerman argue that these threats are unique in history, that formalist understandings of the Constitution are inadequate to meet them, and that they require the speed, secrecy, and unity of decision-making found only in the executive branch. [n42] John Yoo, who had in the past made a comprehensive case for special deference using both formalist and functionalist methods, emphasized the importance of functional [*98] considerations after 9/11. [n43] Similar functional justifications lie at the core of Bush administration arguments against judicial review of executive policies regarding the interrogation, detention, and trial of suspected terrorists. [n44]

Timeframe outweighs – deference is essential to respond to crises

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

Returning to domestic deference standards as a baseline clarifies the ways in which foreign affairs are truly "special." The best response to the special nature of foreign affairs matters does not lie simply in adopting domestic deference on steroids. Instead, accurate analysis must also take into account the ways in which the constitutional separation of powers already accommodates the uniqueness of foreign affairs. Many of the differences between domestic and foreign affairs play

out not in legal doctrine, but in the relationship between the President and Congress. Under the hegemonic model, courts would still wind up deferring to executive branch interpretations much more often in foreign affairs matters because Congress is more likely to delegate law-making to the executive branch in those areas. [n390]

Only a risk it's good – democracy means that no matter what regulations are passed, deference will always be good

O'Connor 2 – Associate, Steptoe & Johnson LLP; B.A., University of Rochester; M.S.Sc., Syracuse University; J.D., University of Maryland School of Law (John F., Fall, 2000, "The Origins and Application of The Military Deference Doctrine", 35 Ga. L. Rev. 161, Lexis Law)

Thus, the military cases decided by the Supreme Court and the federal courts of appeals in the 1990s really were no different than the military cases of the 1980s, which in turn were no different than the military deference decisions issued by the Supreme Court from 1974-76. To the extent a constitutional challenge required a judgment as to the significance of the governmental interest involved in the legislation, courts must be exceedingly deferential to determinations by Congress and the President that they have struck the proper balance between military necessity and a respect for individual rights. The upshot of this manner of adjudication is that it remains extremely difficult for an individual litigant to argue successfully that his interest in individual rights is sufficient to overcome the considered judgment of the political branches with respect to military regulations. Unlike the Supreme Court's noninterference cases of the nineteenth and early-twentieth century, there will be a substantive review of the challenged regulations. However, so long as the American people elect leaders who are at all responsive to the desires of their constituencies, it is difficult to imagine Congress or the President approving regulations that are so oppressive to individual rights as to overcome the tremendous jurisprudential advantage afforded the political branches through the military deference doctrine. Moreover, and perhaps more properly, it is difficult to imagine military regulations oppressive enough to overcome the military deference doctrine without first triggering sufficient public opprobrium to cause Congress and the President to take corrective action before the courts are called upon to intervene.

Hegemony/Nuclear War

Deference key to heg – 5 reasons

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

1. **Flexibility** Because the world is inherently anarchic and thus unstable, flexibility is crucial. Because the meaning of international law changes with subtly shifting power dynamics, the United States must be capable of quickly altering its interpretation of laws in order to preserve its

advantage and avoid war if possible. [n295] Like Machiavelli's Prince, [n296] the U.S. government [*135] must be willing and able to bend with the shifting political winds and transgress norms if necessary. [n297] On this terrain, the executive branch appears to have clear advantages over the courts. The executive branch is more capable of altering its interpretation of the law when it suits U.S. interests. The courts must work within the confines of doctrine and stare decisis. [n298] Courts cannot weigh in on the vast majority of foreign affairs issues because they only hear the controversies that parties bring before them, and have only the power to adjudicate the issues raised. [n299] In short, courts' status as legal, rather than political, institutions limits their flexibility. Again, however, the anarchy-based argument for flexibility boils down to an argument for total discretion. How do the courts determine when and how much to cabin executive power? Jide Nzelibe has concluded that in cases involving individual rights, the courts should take into account their competence in adjudicating such issues while balancing the individual rights concerns against the need to defer to the executive branch's foreign policy requirements. [n300] But if the courts lack competence to evaluate the importance of a foreign policy need, how can they competently weigh that need against the importance of protecting individual rights? 2. **Speed** Since Curtiss-Wright, speed has been recognized as an important executive branch characteristic. The executive branch can reach a uniform interpretation of the law quickly, and the courts are, by comparison, quite slow. [n301] This is understandable in a world in which subtly-shifting alliances determine the balance of power. And in the age of terrorism, speed remains a crucial component of effective foreign policy. The ace card for defenders of special deference remains the national security emergency. How can we [*136] possibly take the risk that the courts will hobble the President's efforts to protect the United States in a time of crisis? [n302] It is important to separate the very slender category of true emergencies from the vast category of foreign relations in general. The great majority of foreign affairs controversies do not involve the President sending troops abroad or a threatened terrorist attack, and there is very little opportunity for courts to interfere with an executive response to a crisis situation. Courts typically review the legality of presidential decisions years later. [n303] Most of the "enemy combatants" detained at Guantanamo were captured within a few months of September 11, 2001, and arrived at Guantanamo in early 2002. [n304] The Supreme Court did not address the detainees' constitutional right to habeas review until 2008. [n305] The difficulty lies in situations where the courts are asked to use their equitable powers and issue injunctions or TROs before the issues have been fully adjudicated. Here it is the courts' institutional deliberativeness that is, arguably, the problem. [n306] 3. **Secrecy** Since Curtiss-Wright, secrecy has also been invoked as a rationale for deference to the executive in foreign affairs. [n307] Again, this evokes a multipolar world in which diplomacy is conducted in private by an elite cadre from the great powers. However, courts are capable of handling secrets - even more skillfully than Congress. [n308] The secrecy argument is really an argument about the potential consequences of revealing secrets to non-governmental parties and the collateral consequences that would result. [*137] 4. **Collateral Consequences** Many of the rationales for special deference - expertise, embarrassment, uniformity, and secrecy - have, at their core, the assumption that the courts' involvement in foreign affairs will risk serious collateral consequences in international relations that courts cannot anticipate, cannot fully understand, and do not have the power to adequately address. [n309] There are collateral consequences for court decisions in the domestic context as well. But the distinction drawn in foreign affairs reflects the tragic side of realism - that the world is inherently an unstable and dangerous place, an arena for clashes between great powers under constant threat of war. In an international system in which the balance of power is precarious and preserved only through delicate maneuvering by statesmen, the courts' involvement could risk provoking another great power and undermining these efforts.

But once again, this justification, taken to its logical conclusion, requires complete deference. If courts truly lack any sense of the collateral consequences of their foreign affairs decisions, they cannot competently weigh those consequences against competing constitutional values. Suppose that the U.S. government advances a novel interpretation of criminal statutes in order to prosecute a suspected terrorist whose release, the government insists, would create instability in a key U.S. ally in the Middle East. Under the collateral consequences justification, the court must always defer to the government's interpretation. This would eviscerate entirely the courts' statutory interpretation role whenever there is a claimed foreign affairs exigency. 5. **Legitimacy** Arguments for the courts' incompetence in foreign affairs also focus on legitimacy. Courts are said to lack legitimacy in this area because their ordinary power to bestow legitimacy on the other branches in the domestic context cannot function properly in the entirely political external realm. The political branches do not require the courts' blessing for their activities outside the U.S. [n310] Furthermore, the courts seem to face a dilemma: If they contravene the executive branch, the public will view this involvement with [*138] hostility, especially when national security is at stake. [n311] But if the courts side with the President, they risk being seen as mere cogs in the government's foreign policy apparatus. [n312] However, some deferentialists acknowledge that courts should adjudicate foreign affairs cases involving individual rights claims but balance the right in question against the government's asserted foreign policy needs. [n313] The difficulty with this approach is that, under the anarchy/realpolitik worldview, the government's arguments must always trump. If the courts are not competent to evaluate the importance of foreign policy necessity, then how can they weigh it against the value of individual rights? Similarly, if the courts lack legitimacy to evaluate foreign policy needs, their decisions will be perceived as lacking legitimacy whether individual rights are involved or not. Professors Ku and Yoo do not make a similar concession, at least with respect to non-citizens. They have concluded that, while the public may tolerate limited intervention to protect constitutional liberties in wartime, the public has no patience for the courts' interfering with executive prerogatives to reinforce the rights of aliens designated as enemies. [n314] But in any event, the realist model seems to leave little room for the consideration of individual liberties, even for citizens.

Impact is nuclear war

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

Nonetheless, foreign relations remain special, and courts must treat them differently in one important respect. In the twenty-first century, speed matters, and the executive branch alone possesses the ability to articulate and implement foreign policy quickly. Even non-realists will acknowledge that the international realm is much more susceptible to crisis and emergency than the domestic realm. But speed remains more important even to non-crisis foreign affairs cases. [n391] It is true that **the stable nature of American hegemony will prevent truly destabilizing events** from happening without great changes in the geopolitical situation - the sort that occur over decades. The United States will not, for some time, face the same sorts of existential threats as in the past. [n392] Nonetheless, in foreign affairs matters, it is only the executive branch that has the capacity successfully to conduct [*150] treaty negotiations, for example, which depend on adjusting positions quickly. The need for speed is particularly acute in crises. Threats from

transnational terrorist groups and loose **nuclear weapons are among the most serious problems** facing the United States today. The United States maintains a "quasi-monopoly on the international use of force," [n393] but the rapid pace of change and improvements in weapons technology mean that the executive branch must respond to emergencies long before the courts have an opportunity to weigh in. Even if a court was able to respond quickly enough, it is not clear that we would want courts to adjudicate foreign affairs crises without the deliberation and opportunities for review that are essential aspects of their institutional competence. Therefore, courts should grant a higher level of deference to executive branch determinations in deciding whether to grant a temporary restraining order or a preliminary injunction in foreign affairs matters. Under the super-strong Curtiss-Wright deference scheme, the court should accept the executive branch interpretation unless Congress has specifically addressed the matter and the issue does not fall within the President's textually-specified Article I powers.

Readiness/Cohesion

Deference key to military cohesion and readiness—judicial interference kills it

Wilkinson 96 – Chief Judge US Court of Appeals (Thomasson v. Perry, Fourth Circuit, Majority Opinion, 80 F.3d 915, 4/5, http://www.ncgala.org/cases/thomasson.htm, AD)

Aside from the Constitution itself, the need for deference also arises from the unique role that national defense plays in a democracy. Because our nation's very preservation hinges on decisions regarding war and preparation for war, the nation collectively, as expressed through its elected officials, faces "'the delicate task of balancing the rights of servicemen against the needs of the military.'" Weiss, supra (quoting Solorio v. United States, 483 U.S. 435, 447-48 (1987)). To the degree that the judiciary is permitted to circumscribe the national security options of our elected officials, it "decreases the ability of the political branches to impose their will on another [nation and at] the worst, it permits the imposition of the will of another [nation] on the United States." James M. Hirschhorn, "The Separate Community: Military Uniqueness and Servicemen's Constitutional Rights," 62 N.C. L. Rev. 177, 237-238 (1983). After all, "unless a society has the capability . . . to defend itself from the aggressions of others, constitutional protections of any sort have little meaning." Wayte v. United States, 470 U.S. 598, 612 (1985). National defense decisions not only implicate each citizen in the most profound way. Such decisions also require policy choices, which the legislature is equipped to make and the judiciary is not. "Congress, working with the Executive Branch, has developed a system of military criminal and administrative law that carefully balances the rights of individual servicemembers and the needs of the armed forces." Sam Nunn, "The Fundamental Principles of the Supreme Court's Jurisprudence in Military Cases," 29 Wake Forest L. Rev. 557, 566 (1994). While Congress and the President have access to intelligence and testimony on military readiness, the federal judiciary does not. While Congress and the members of the Executive Branch have developed a practiced expertise by virtue of their day-to-day supervision of the military, the federal judiciary has not. The judiciary has no Armed Services Committee, Foreign Relations Committee, Department of Defense, or Department of State. As the Supreme Court has noted, "the lack of competence on the part of the courts [with respect to military judgments] is marked." Rostker, supra. In fact, It is

difficult to conceive of an area of governmental activity in which the courts have less competence. The complex, subtle, and professional decisions as to the composition, training, equipping, and control of a military force are essentially professional military judgments, subject always to civilian control of the Legislative and Executive Branches. Gilligan v. Morgan, 413 U.S. 1, 10 (1973). Finally, the imprimatur of the President, the Congress, or both imparts a degree of legitimacy to military decisions that courts cannot hope to confer. Even when there is opposition to a proposed change --as when Congress abolished flogging in the 19th century or when President Truman ended the military's racial segregation in 1948, see Hirschhorn, supra -- the fact that the change emanates from the political branches minimizes both the likelihood of resistance in the military and the probability of prolonged societal division. In contrast, when courts impose military policy in the face of deep social division, the nation inherently runs the risk of long-term social discord because large segments of our population have been deprived of a democratic means of change. In the military context, such divisiveness could constitute an independent threat to national security. Parallel to the deference owed Congressional and Presidential policies is deference to the decision-making authority of military personnel who "have been charged by the Executive and Legislative Branches with carrying out our Nation's military policy." Goldman v. Weinberger, 475 U.S. 503, 508 (1986). Judicial interference with the subordinate decisions of military authorities frustrates the national security goals that the democratic branches have sought to achieve. The Supreme Court has recognized the need for deference when facing challenges to a variety of military decisions: a policy that prohibited the wearing of headgear in certain circumstances, Goldman, supra (noting that the military is "a specialized society separate from civilian society"); an Air Force regulation that required service members to obtain permission before circulating petitions on bases, Brown v. Glines, 444 U.S. 348, 357 (1980) (noting that "the military must possess substantial discretion over its internal discipline"); a base policy that prohibited certain political activity on base premises, Greer v. Spock, 424 U.S. 828, 837 (1976) (noting "the special constitutional function of the military in our national life"); and military court-martial proceedings, Schlesinger v. Councilman, 420 U.S. 738, 757 (1975) (noting that "to prepare for and perform its vital role, the military must insist upon a respect for duty and discipline without counterpart in civilian life"). The need for deference also derives from the military's experience with the particular exigencies of military life. Among these is the attainment of unit cohesion--"the subordination of personal preferences and identities in favor of the overall group mission" and "the habit of immediate compliance with military procedures and orders." Goldman, supra. Should the judiciary interfere with the intricate mix of morale and discipline that fosters unit cohesion, it is simply impossible to estimate the damage that a particular change could inflict upon national security--"there is no way to determine and correct the mistake until it has produced the substantial and sometimes irreparable cost of [military] failure." Hirschhorn, supra.

Impact

Military effectiveness is key to deter large-scale aggression and prevent conflict escalation

Spencer 3 (Jack, Senior Defense Policy Analyst @ Heritage, "Focusing Defense Resources to Meet National Security Requirements," 3/21, www.heritage.org/Research/NationalSecurity/bg1638.cfm)

Be prepared to fight with little or no warning in unanticipated places**.** The emergence of global communications, advances in technology, and the globalization of terrorism provide many opportunities for surprise attacks against the United States and its interests. Maintaining the ability to fight and win wars in diverse situations and environments can **discourage many of America's enemies from hostile acts**. Maintain adequate capability to deter aggression against America's allies. America faces enduring threats beyond terrorism, as demonstrated by North Korea's nuclear weapons program. There are nations in every region of the world that threaten America's vital interests in the near term. Assuring stability in those regions and protecting U.S. interests requires the ability to defeat any nation or group that threatens America's allies, which itself provides **effective deterrence against large-scale aggression**. This should include both conventional forces and other capabilities such as an effective ballistic missile defense and reliable nuclear forces. The Administration should take every step to strengthen its important alliances and be ready to respond forcefully and immediately to aggression against America's allies.

Ext. Readiness

Deference key to military readiness and effectiveness

Hudson 99 – Major, Judge Advocate General's Corps of United States Army, and Instructor of the Criminal Law Dept (Major Walter M, Military Law Review Volume 159, March, AD)

By granting the elected branches plenary and command power over the military, the Constitution links military control to the democratic will and the democratic process. Because the people will feel the burden of war, the elected branches can best respond to that will.223 Furthermore, in granting power to the elected branches to control the military, the Constitution acknowledges that the elected branches grant a degree of legitimacy to military policy that courts cannot. These elected branches can best reflect and respond to the societal consensus, a particularly relevant and important concern when dealing with national security.224 Of the three branches, the judiciary has the least competence to evaluate the military's formation, training, or command. It has, as one court stated, "no Armed Services Committee, Foreign Relations Committee, Department of Defense, or Department of State" nor does it have the same access to intelligence and testimony on military readiness as does Congress or the President.225 The Supreme Court has thus repeatedly cited its own lack of competence to evaluate military affairs.226 To analyze the oft-criticized judicial deference to military matters, it is important to understand the structural differences between the ability of the elected branches and the courts to determine policy. The elected branches use regulatory decision making to determine policy. Regulatory decision-making, which is the creation of administrative policy through internal-rule formation, is a far more efficient means of policy making than adjudicated decisions.227 There are several problems with adjudication as a means of rule making. Adjudication is more costly and more time consuming. Years and millions of dollars can be spent in litigating one issue that involves

one individual.228 Adjudication concerns itself with an individual remedy based upon "a small set of controverted facts'' that are highly contextual and may or may not be applicable to a larger class of individuals.229 Furthermore, adjudication sets up elaborate procedures according to its ultimate goal-to determine whether a particular individual should prevail in a particular case.23o Dissenters, in particular Justice Brennan, have asserted that the Court decides issues that are far more technically complicated than adjudicating rather straightforward rules on di~cipline.~~' Yet that argument does not address rules formation in an administrative, as opposed to an adjudicative, system. Military policy-making is, by its nature, meant to do precisely what administrative policy-making does: allocate rights, benefits, and sanctions, among large groups using consistent standards.232 What makes military policy making along administrative rule-making lines even more advantageous is that the military's primary concern is ensuring military discipline and combat effectiveness of units, rather than focusing primarily on individuals themselves. Applying consistent and predetermined norms among large groups is what administrative rule making is best equipped to do.233 Where Brennan's argument may appear to be the most persuasive is where the potential "penalties" cut into the interests that the adjudicative process is best suited to protect-namely, constitutional protections. In dealing with constitutional protections, individual rights often trump majority concerns. Discerning whether individuals should be granted these protections may not be particularly complex, on the surface.234 When viewing the grant of constitutional protections in relation to the military's goal-successful combat operations-this argument loses force. This is because "simplicity" as defined in civilian contexts often does not have the same meaning in the military context. Clausewitz, the Prussian general and author of the military classic, On War, once famously stated: "Everything in war is very simple, but the simplest thing is Clausewitz terms all the uncertainties and problems that accompany wartime operations as Friction can be defined as the "realm of uncertainty and chance, even more [is] it the realm of suffering, confusion, exhaustion, and fear"237 that accompanies military wartime operations. All these exist to a much higher degree in war, because, as Clausewitz points out, in war, not only is chance and uncertainty a con- ~tant,*~* but also one side is trying to impose its will on its opponent, which is an "animate object that reacts."239 In other words, in war, you are seeking to overcome an opponent who is reacting to (and may be anticipating) your movements, who is trying not only to defeat but to destroy you, and who may not be constrained by your own laws, customs, and behavior. It is not thus simply the lack of judicial competence in military affairs, but the effects that the lack of competence may have that is an additional "friction" in the military environment. The problem in applying a standard of review similar to the kind used for civilian society is not just that the court may err, but the ramifications of such an error given the uncertainty of conflict.240 An error in military policy making could impede military effectiveness and thereby jeopardize national security.241 These judicial decisions put the courts squarely into the political arena. Judges unwittingly become "strategists"-unelected and ill-equipped officials deciding matters of potentially ultimate importance. Judicial deference, therefore, is generally appropriate to military decision- making, and in particular, a unit commander's decision-making on extremism. Extremism's disproportionate impact on the community where it occurs is an impact that can only be magnified in a military unit. The best way to appreciate that impact is to look at the gravest danger posed by racial extremists-the violent hate crime. If the courts rely solely on the statistics that compare the few numbers of bias crimes committed in relation to total crimes, they may be misled about the effect on good order and discipline.242 The courts may not be aware of the totality of information about extremist hate crimes. The vast majority of bias-oriented crimes are crimes against persons, not property. These crimes are also more likely to involve physical assault

than non-bias crimes.243 Usually, at least four or more individuals commit them.244 The median age group is among young Loosely associated individuals, not organized extremist groups, commit most hate crimes.246 Furthermore, the most explosive element about the crimes is not necessarily the criminal act. Rather, the race or bias motivation can cause a community to polarize and even to explode.247 This impact is essential to the military's need for judicial deference to extremist policies-at both the local commander policy level and the Army policy level.

More evidence—deference key to readiness

Crittenden 3 – Judge on Supreme Court of Kentucky (Roger L, 3/5, http://162.114.92.72/opinions/2001-SC-000761-MR.pdf, AD)

As early as 1953, the Supreme Court determined that "[t]he military constitutes a specialized community governed by a separate discipline from that of the civilian .'"5 Since that time, in reviewing issues which deal with the armed forces, the Supreme Court has regularly referred to the military as a "separate community" and reviewed claims against the military differently from claims against any other governmental agency. Restrictions on constitutional rights which might have no rational basis in civilian society will survive in the military context because the unique war-making purpose of the armed forces makes such restrictions compelling ." This attitude regarding constitutional rights is based upon the need to maintain an effectively operational fighting force ." The distinct purpose of the armed forces is to protect the United States, and its interests, against the actions of foreign nation- states, through the use of force." It is because of this unique purpose that the military demands a respect for duty and a commitment to discipline that is without counterpart in civilian society." Military effectiveness in wartime, however, requires peacetime preparation . In order for soldiers, airmen and seamen to utilize those qualities necessary for success on the battlefield, with all its stress and anxiety, those qualities must be instinctive . Success in war is therefore contingent upon the development of those qualities in peacetime. The Supreme Court has stated that, "to accomplish its mission the military must foster instinctive obedience, unity, commitment and esprit de corps."° This creates a "necessity," which the Supreme Court has recognized, for training and organizational latitude when dealing with military personnel and the military infrastructure . "The inescapable demands of military discipline and obedience to orders cannot be taught on battlefields; the habit of immediate compliance with military procedures and orders must be virtually reflex with no time for debate or reflection . . . . (C)onduct in combat inevitably reflects the training that precedes combat."" The Supreme Court has long recognized that: [T]he military is, by necessity, a specialized society separate from civilian society . We have also recognized that the military has, again by necessity, developed laws and traditions of its own during its long history. The differences between the military and civilian communities result from the fact that 'it is the primary business of the armies and navies to fight or be ready to fight wars should the occasion arise .'" A soldier in the Army is not free to quit his job, cannot be fired, and is subject to military discipline and military law. The climate of "discipline and unquestioned obedience" necessary to sustain an effective fighting force is determined primarily by the professional judgments and experience of people familiar with military needs, and the Court has determined itself incapable of mastering the complexities which are considered when balancing constitutional rights against military functional necessity ."

In Chappell , the United States Supreme Court stated that "the special relationships that define military life have 'supported the military establishment's broad power to deal with its own personnel . The most obvious reason is that courts are ill- equipped to determine the impact upon discipline that any particular intrusion upon military authority might have ."'" It would be imprudent to allow soldiers to sue superior officers because discipline and effectiveness would be seriously damaged . Permitting judicial intervention into such clearly administrative and personnel decisions would destroy the legitimacy and authority of command ."

More evidence—deference key to readiness.

Ray and Turner 3 - Counselors at Law for the Coalition of American Veterans (Ronald D & Edna J, United States Court of Appeals Fourth Circuit, Mellen & Knick v. Bunting, http://firstprinciplespress.org/digital/MELLENBRIEF.PDF, AD)

However, assuming arguendo that the decision to conduct a supper prayer is not totally unreviewable, then judicial review of constitutional challenges to such military regulations is sui generis. The supreme Court has consistently recognized that military interests in discipline and morale are of paramount national importance and that activities which are likely to have adverse effects on those interests may be regulated, even though the same activities, when engaged in by civilians, would be entitled to constitutional protection. Brown v. Glines, 444 U.S. 348, 354-57 (1980); Parker v. Levy, 417 U.S. 733, 758 (1974). The reason that military personnel lack the same degree of constitutional protection afforded to civilians is a direct consequence of the fundamental distinctions between military and civilian society. "While the members of the military are not excluded from the protection granted by the First Amendment, the different character of the military community and of the military mission requires a different application of those protections."5 Moreover, the divergence between military and civilian society is greatest in areas relating to the panoply of First Amendment rights that guarantee citizens the liberties essential to a self-governing people. Unlike civilian society, a "military organization is not constructed along democratic lines and military activities cannot be governed by democratic procedures . . . [M]ilitary decisions cannot be made by vote of the interested participants." Greer v. Spock, 424 U.S. 828, 843-844 (1976) (Powell, J., concurring, quoting EMERSON, The System of Freedom of Expression 57 (1970)). To the contrary, soldiers are expected to obey the directives of their superiors without question or hesitation, even when those orders may severely compromise a soldier's personal safety or comfort. As the Court stated in In re Grimley, 137 U.S. 147 (1890): An army is not a deliberative body . . . Its law is that of obedience. No question can be left open as to the right to command in the officer, or the duty of obedience in the soldier. 137 U.S. at 153. Unswerving obedience in extreme circumstances arises not from rational discussion and conviction, but from discipline: "[The accomplishment of the military mission implies] the fundamental necessity for obedience, and the consequent necessity for imposition of discipline." Parker v. Levy, 417 U.S. at 758. Without this discipline, an effective military organization could not be maintained, and the existence of other civil liberties, and the State itself, could be jeopardized. For these reasons, the Court has recognized that the full ambit of constitutional protections is not compatible with the maintenance of a military organization, and that the special requirements of the military "may render permissible within the military that which would be constitutionally impermissible outside it." Ibid; see generally, Hirschborn, supra, 62 N.C. L.

REV. at 177. The High Court has expressly disavowed the utility of employing labels for the standards it applies in cases of this sort. Therefore, it is clear that the Plaintiffs' reliance on concepts such as "strict scrutiny" and "compelling governmental interest" has no bearing in the military context. However, the "rational basis" test most closely describes the Court's approach in practice. Cases considered by the Court include the military's criminal punishment (three years at hard labor) of an officer's spoken protest of the Vietnam War on the ground that the speech was "conduct unbecoming of an officer" (Parker v. Levy); the military's ban of political speech from military bases (Greer v. Spock); and the military's imposition of prior restraints on peti tions to Congressmen in the interest of maintaining order and discipline (Brown v. Glines). None will doubt that civilian society may not be so regulated. Yet in each of these cases, the military regulations were upheld without any judicial "balancing of interests" or "strict scrutiny" of the asserted military interests. Brown v. Glines most clearly exhibits the nature of this unique standard of review. There, Air Force regulations at issue forbade the circulation of petitions by soldiers on a military base without approval of the base commander, who was authorized to suppress the distribution of material that he judged would endanger the "'loyalty, discipline, or morale of members of the Armed Forces.'" 444 U.S. at 350. The regulation had been enforced against a soldier who had solicited signatures on petitions to congressmen, complaining about the Air Force's grooming standards. The court of appeals invalidated the regulation on the ground that it was overbroad and allowed commanders to suppress "virtually all controversial written material." 444 U.S. at 353. The high Court reversed. Although prior restraints on civilian speech may be justified only by the most certain evidence of immediate peril to the nation (see, e.g., New York Times Co. v. United States, 403 U.S. 713 (1971)), the Court in Glines engaged in no balancing, no weighing of interests. To the contrary, the Court recognized that "[l]oyalty, morale, and discipline are essential attributes of all military service," and held simply that "[s]peech likely to interfere with these vital prerequisites for military effectiveness therefore can be excluded from a military base." 444 U.S. at 357, n. 14 354 (emphasis added). The only caveat added by the Court was that the regulation of such expression must "restrict speech no more than is reasonably necessary to protect the substantial governmental interest." Id. at 355 (emphasis added). Thus, rights that are fundamental in civilian society may be curtailed in the military if their exercise is "likely to interfere" with the maintenance of good order or the instilling of discipline in military personnel. Plaintiffs' claims must be evaluated in the light of this unique standard. Not only are civilian precedents used to evaluate Free Exercise claims inapplicable because of the special nature of the military, but, in addition, the court must afford a significantly heightened degree of deference to professional military judgments concerning the need for a particular regulation promulgated to establish and maintain a disciplined and well-ordered military force. As the Court recently noted in Chappell v. Wallace, 462 U.S. 296, 301 (1983), the character of this deference was "summed up" in Orloff v. Willoughby, 345 U.S. 83 (1953): Judges are not given the task of running the Army . . . The military constitutes a specialized community governed by a separate discipline from that of the civilian. Orderly government requires that the judiciary be as scrupulous not to interfere with the legitimate Army matters as the Army must be scrupulous not to intervene in judicial matters. 343 U.S. at 93-94. This extraordinary deference is rooted partly in the express constitutional commitment of the governance of the nation's Armed Forces to the President and Congress, U.S. Const., Art. I § 8, and Art. II, § 2, Cl. 1.6

Naval Readiness

Failure to apply military deference would hurt naval readiness

McCarty 10- Recipient of the Jones Day Award for Best Researched and Summated Article (Richard T., "Note: Winter V. Nrdc: the Navy, Submarines, Active Sonar, and Whales - an Analysis of the Ninth Circuit Review and the Roberts Court Extension of the Military Deference Doctrine," 47 Hous. L. Rev. 489, Spring 10, Lexis)

a. Failure to Defer to Professional Military Judgments. Fundamentally, the Ninth Circuit failed to apply adequately the Supreme Court's well-developed military deference doctrine. [n273] The Court's historical deference to the military implies that the [*520] military should be given deference when supplying professional military judgments based upon years of military expertise. [n274] The Supreme Court chided the lower courts for failing to weigh properly the extensive testimony by experienced Naval officers. [n275] Seemingly, the circuit court ignored the Court's warning in Gilligan that federal courts should not intrude upon military judgments on training and maintaining military forces. [n276] The Ninth Circuit should have given great weight to professional estimates that the injunction threatened the effectiveness of ASW training. b. Failure to Defer to Congressional and Executive Decisions on the Military. Beyond simply giving weight to professional military judgments, the military deference doctrine also gives great weight to congressional and executive actions pertaining to the military. [n277] Drawing upon Rostker, the Ninth Circuit should have deferred to Congress's judgments on the relative importance of military operations compared to potential harm to marine mammals. [n278] By creating a military exemption to the MMPA in the wake of NRDC v. Evans, Congress provided its judgment on the importance of effective naval training. [n279] Although Congress values protection for marine mammals, it "also has determined that national security can trump marine mammal protection." [n280] In the conference report accompanying the National Defense Authorization Act for Fiscal Year 2004, [n281] [*521] Congress detailed the changes to the MMPA, explaining that they came about to address deficiencies highlighted in Evans. [n282] The conference report explains, "Such changes would ensure a credible and flexible regulatory process that properly balances the equities associated with military readiness and maritime species protection." [n283] Addressing the creation of military-specific definitions of harassment, "decisions regarding mitigation and monitoring would take into account safety, practicality of implementation, and impact on the effectiveness of a military readiness activity." [n284] Clearly, Congress weighed the equities between environmental conservation and military readiness, vested "responsibility for balancing marine mammal protection against military preparedness squarely with the political Branches," and "provided mechanisms for Congress's continuing oversight of the Secretary's exemption authority." [n285] As the Rostker Court explained, "perhaps in no other area has the Court accorded Congress greater deference" than "in the context of Congress' authority over national defense and military affairs." [n286] The Ninth Circuit should have weighed the right to an injunction against the public interest in national security, which was overtly favored by Congress and the President, representing the branches on which that burden falls.

Naval dominance is key to prevent the rise of global challengers

Stratfor 8 - the world's leading private intelligence service. ("U.S.: Naval Dominance and the Importance of Oceans," http://www.stratfor.com/analysis/u_s_naval_dominance_and_importance_oceans)

Our statement that control of the world's oceans is a cornerstone of U.S. geopolitical security and keeps any potential adversary half a world away sparked extensive comment. This is a long-standing Stratfor position, not a casual assertion, and is crucial to the way we see the world. In his 1890 classic "The Influence of Sea Power Upon History," U.S. Naval officer Alfred Thayer Mahan examines the decisive role superior sea power played in geopolitical competition and conflict from 1660 to 1783. His work has made him perhaps the foremost theorist of naval power in the United States. At the risk of oversimplification, Mahan's thesis is that control of the sea can be decisive in both peacetime and wartime, and has far-reaching military, economic and geopolitical ramifications. Mahan is required reading at Stratfor. The world has changed quite a bit since the time of Mahan, who wrote as sail was giving way to steam as the principal method of naval propulsion. Indeed, a common question from our readers has been about the applicability of the oceans to U.S. security in the 21st century, particularly in the context of globalization. In essence, readers have asked us whether oceans still matter after globalization has so reduced transit times and increased interconnectivity that transnational terrorism and cyberspace have come into existence. While aviation, the intercontinental ballistic missile, satellites and the Internet have all fundamentally altered the way the world interacts and how wars are fought, Mahan's analysis holds true. Over the course of a century, but particularly during and after World War II, the United States honed and perfected expeditionary naval operations. Washington's ability to function on the other side of the planet from home port is unparalleled and has surpassed the sea power of the British Empire that Mahan so admired. The importance of this cannot be overstated, and has broad applicability. Globalization has massively increased, not decreased seaborne commerce. As the dominant global naval power, Washington exercises a decisive influence over the principal avenue of both international trade and the flow of the world's oil (and, increasingly, natural gas). In addition to wielding this as a lever over other countries, the U.S. Navy is the guarantor of America's global supply lines. That Washington has claim to both the world's foremost navy and the world's foremost economy is no coincidence, and it is a key dynamic of the entire international system. From a military perspective, the last shooting war in the Western Hemisphere of any strategic significance for the United States was the Spanish-American War. That conflict resulted in the expulsion at the end of the 19th century of the last Eastern Hemispheric power from Washington's periphery. For more than a century now, the United States has fought its wars abroad, with the only strategic threat to the homeland being Soviet (and to a much lesser extent, Chinese) nuclear weapons. Indeed, the fundamental value of naval dominance was demonstrated in 1962. During the Cuban Missile Crisis, Washington was able to prevent the re-emergence of an outside power's beachhead in Cuba because U.S. naval dominance made the situation untenable for the Kremlin. The Russian navy was not in a position to sustain forces there in the face of concerted U.S. naval opposition. And while the notion of "invasion" in the 21st century may seem anachronistic in the U.S. perspective, the rest of the world sees things very differently. That apparent anachronism is symptomatic of fundamental U.S. geopolitical security. Across the oceans, even much of Europe still looks east over the open Northern European plain and remembers columns of Soviet armor. Nations the world over continue to struggle day in and day out with their neighbors. Pakistan, India and China continue to squabble over Kashmir, which they each consider core to their geographic security. Russia's foremost geopolitical struggle is the re-establishment of some semblance of a peripheral buffer in Europe and the Caucasus — necessary buffers, but a poor compensation for unfavorable geography. These issues — crucial geopolitical objectives — keep Eurasia divided and restrict (but obviously do not eliminate) other countries' bandwidth to deal with global issues farther afield. The ultimate consequence of this division is the prevention of the emergence of a potential challenger to the United States. By this, we mean the emergence of a country so secure in its geopolitical position that the mustering of resources necessary to project military force across the Atlantic or Pacific to meaningfully challenge the strategic security of the North American continent becomes a possibility. More simply, U.S. naval dominance allows Washington to keep the costs of projecting hostile military force across the world's oceans prohibitively high. The countries of the world are thus largely left confronting geopolitical challenges in their own backyards, unable to militarily challenge the United States in its backyard. All the

while, the U.S. Navy conducts operations daily in Eurasia's backyard. This is a secure and enviable geopolitical position.

Terrorism

Deference key to stop terrorism

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

[*142] The United States qualifies as a global hegemon. In many ways, the U.S. acts as a world government. [n341] It provides public goods for the world, such as security guarantees, the protection of sea lanes, and support for open markets. [n342] After World War II, the U.S. forged a system of military alliances and transnational economic and political institutions - such as the United Nations, NATO, the International Monetary Fund, and the World Bank - that remain in place today. The U.S. provides security for allies such as Japan and Germany by maintaining a strong military presence in Asia and Europe. [n343] Because of its overwhelming military might, the U.S. possesses what amounts to a "quasi-monopoly" on the use of force. [n344] This prevents other nations from launching wars that would tend to be truly destabilizing. Similarly, the United States provides a public good through its efforts to combat terrorism and confront - even through regime change - rogue states. [n345] The United States also provides a public good through its promulgation and enforcement of international norms. It exercises a dominant influence on the definition of international law because it is the largest "consumer" of such law and the only nation capable of enforcing it on a global scale. [n346] The U.S. was the primary driver behind the establishment of the United Nations system and the development of contemporary treaties and institutional regimes to effectuate those treaties in both public and private international law. [n347] Moreover, controlling international norms are [*143] sometimes embodied in the U.S. Constitution and domestic law rather than in treaties or customary international law. For example, whether terrorist threats will be countered effectively depends "in large part on U.S. law regarding armed conflict, from rules that define the circumstances under which the President can use force to those that define the proper treatment of enemy combatants." [n348] These public goods provided by the United States stabilize the system by legitimizing it and decreasing resistance to it. The transnational political and economic institutions created by the United States provide other countries with informal access to policymaking and tend to reduce resistance to American hegemony, encouraging others to "bandwagon" with the U.S. rather than seek to create alternative centers of power. [n349] American hegemony also coincided with the rise of globalization - the increasing integration and standardization of markets and cultures - which tends to stabilize the global system and reduce conflict. [n350]

Pres Powers

Judicial deference key to presidential powers and military decision-making

Masur 5 - Political Science Graduate from Stanford University, JD from Harvard Law School, Former Law clerk for Judge Richard Posner of the U.S. Court of Appeals for the Seventh Circuit and for Chief Judge Marilyn Hall Patel of the U.S. District Court for the Northern District of

California, and currently is a Professor at the University of Chicago Law School (Jonathan, Hastings Law Journal, 56 Hastings L.J. 441, February)

The perceived duty of courts and judges to defer to the factual assertions and judgments of executive branch actors in times of war represents the unifying principle of all modern wartime cases. "Deference" has become a shibboleth that courts believe they must invoke if their wartime rulings are to have any hope of withstanding appellate (and public) scrutiny. Even a court that eventually concludes that no deference is due the executive branch often appears compelled to recite a statement of judicial fealty to the deference principle for fear of signaling an inappropriate lack of respect for the authority of the coordinate branches in wartime. 14 Judicial deference to administrative decision-making in times of war remains inescapably and intuitively attractive. This Article should not be understood to suggest that courts should exercise anything approaching de novo review over executive decisions in military situations. Yet within wartime jurisprudence, the doctrine of judicial deference has overwhelmed the legal strictures established to constrain the operation of executive power. Courts sitting in judgment of the Executive's wartime actions have permitted the military to effectively define the constitutional scope of its own authority. [Continued] For nearly one hundred and fifty years, the judiciary's conception of the reach of the Executive's war-making powers has known few bounds. Beginning with The Prize Cases 20 in 1862, the Supreme Court has read the President's commander-in-chief power broadly to encompass nearly any necessary war-related actions, even without a formal declaration of war. 21 The Court's maxim, gleaned from Hirabayashi v. United States, that "the war power of the Government is "the power to wage war successfully,"' 22 has given rise to an understanding of presidential power that encompasses activities that do not involve the deployment of troops in the field, 23 such as the Japanese-American internment, as well as [*449] foreign policy making authority not directly tied to national security or the military. 24 In some cases, the Supreme Court has refused even to entertain cases that attempt to demarcate limitations on the President's constitutional military powers. 25 This expansive understanding of the President's wartime authority has led the Executive to argue that an entire range of military questions or executive measures are entirely beyond the court' reach as either non-justiciable or otherwise unsuitable for judicial review. Courts have accepted this argument most decisively in areas that hew closely to the actual mechanics of armed conflict, such as presidential decisions committing American forces to battle or selecting the means and mechanisms of waging war. 26 Yet the judiciary has hardly confined its [*450] deferential posture to such intimately military questions. 27 Courts have concluded that even administrative decisions implicating traditional judicial authority and significant constitutional or statutory legal structures must command substantial judicial deference. Prominent among the actions receiving such deference are detentions of American citizens who have not been charged with crimes.

Nuclear Weapons

Deference guarantees disclosure of nuclear secrets—that causes first strikes and nuclear terrorism

Green 97 – Associate at McNair Law Firm, JD Magna Cum Laude at Univ of South Carolina (Tracey Cotton, South Carolina Environmental Law Journal, 6 S.C Envtl. L.J. 137, Fall)

The deployment of nuclear weapons, however, is a DoD action for which secrecy is crucial and, thus, is classified by Executive Order. 59 According to the American policy of deterrence through mutually assured destruction (MAD), nuclear weapons are essential to an effective deterrent. 60 If DoD disclosed the location of these weapons, disclosure would reduce or destroy the deterrent. An adversary could destroy all nuclear weapons with an initial strike, leaving the country exposed to nuclear terror. 61 Additionally, terrorists would know where to strike to obtain material for nuclear blackmail. In short, secrecy regarding nuclear weapons has enormous implications for national security. While the armed services must consider the environmental effects of maintaining nuclear weapons, they cannot release any information regarding the storage of these weapons. However, some public interest groups have an agenda at odds with DoD and see NEPA's review process as a method of achieving their goals. Environmental groups generally distrust the efforts of federal agencies, and arms control groups want to hamper or stop weapons deployment. These groups sue the Army or Navy in court, requesting that the judiciary review the agency's actions, review or order the preparation of an EIS, and order the agency to conform to NEPA. 62 Through the suit, public review accompanies judicial review. In these situations, a conflict arises between the judiciary's duty to avoid interfering with national security and its duty to enforce federal law passed by Congress. 63 [*145]

Ext. Secrets Internal Link

Rejecting deference would result in releasing secret information and undermine US hegemony

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

[11]A related argument, and a justification for the one-voice rationale, is that the United States will be "embarrassed" by conflicting pronouncements from different branches of government. The risk of embarrassment plays a key role in the Curtiss-Wright homily on superior executive competence, and has been frequently mentioned in foreign affairs political question decisions since Baker v. Carr. [n282] The core of the embarrassment justification is, possibly, that U.S. diplomats will be undermined in their delicate negotiations with other nations because court decisions that conflict with executive branch policy could baffle or even offend foreign officials. [n283] But it is difficult to argue that foreign dignitaries will fail to understand how the branches of the U.S. government can reach different interpretations of the law. America's current structure of government has existed for almost 230 years. In the past, "other nations [were] asked to understand our complex constitutional system of checks and balances and we somehow managed to survive as a nation." [n284] Other justifications that have been labeled as "embarrassment" are more compelling, however. Court proceedings could increase the risk of revealing sensitive information. Perhaps more importantly, judicial decisions could have unforeseen consequences that undermine U.S. interests, make the U.S. appear weak, and ultimately disrupt the delicate balance of power in international relations. This aspect is related to realpolitik, which I address in the next subpart.

The abandonment of the military deference doctrine would force the government to tell state secrets

Chesney 9 – Professor, University of Texas School of Law (Robert M., October, "NATIONAL SECURITY FACT DEFERENCE", 95 Va. L. Rev. 1361, Lexis Law)

Not all national security fact deference claims concern retrospective judgments as in Hamdi and Lindh. The executive branch also seeks deference on national security grounds in connection with predictions. Such claims rely on familiar themes of comparative institutional competence, however, and they prompt familiar objections sounding in terms of the judiciary's checking function. The debate regarding deference in the context of the state secrets privilege provides an apt illustration. The question of deference in the context of the state secrets privilege arose in United States v. Reynolds, a 1953 Supreme Court decision in which the government argued that "only the executive is in a position to estimate the full effects of ... disclosure," and that "unless the courts are to interfere in the administration of Government, they must trust in the judgment of the appointed administrator." [n55] The plaintiffs responded that such deference would be contrary to the separation of powers, since it would leave the [*1377] executive branch unchecked. [n56] The Supreme Court, for its part, expressed sympathy for the separation of powers critique, warning that "judicial control over the evidence in a case cannot be abdicated to the caprice of executive officers." [n57] It therefore framed the question in terms of the government's obligation "to satisfy the court" that disclosure might harm security. [n58] But the Court then went on to state that "where necessity is dubious" a mere "formal claim of privilege ... will have to prevail," thus implying that judges should in fact give strong deference to the executive's claim in at least some contexts. [n59] Perhaps not surprisingly, no one appears to know quite what to make of this guidance despite decades of subsequent litigation involving the state secrets privilege. A recent oral argument before the Ninth Circuit in Hepting v. AT&T, a civil suit alleging that the telecommunications industry assisted the National Security Agency in conducting illegal surveillance in the United States, illustrates the point: Judge Harry Pregerson: Well, who decides whether ... something's a state secret or not? Deputy Solicitor General Gregory Garre: Ultimately, the courts do, Your Honor ... . And they ... apply the utmost deference to the assertion of the privilege and the judgments of the people whose job it is to make predictive assessments of foreign - Pregerson: Are you saying the courts are to rubberstamp the determination that the Executive makes that there's a state secret? Garre: We are not, Your Honor, and we think that the courts play an important role - [*1378] Pregerson: What is our job? Garre: Your job is to determine whether or not the requirements of the privilege have been properly met. And that includes the declaration, the sworn declaration of the head of the agency asserting the privilege, and the assertion that that individual asserting it has personal knowledge of the matter [at hand]. Pregerson: So we just have to take the word of the members of the Executive Branch that tell us it's a state secret. Garre: We don't - Pregerson: [Because] that's what you're saying, isn't it? Garre: No, Your Honor, what this Court's precedents say is the court has to give the utmost deference to the assertion, and the second part of the - Pregerson: But what does "utmost deference" mean? We just bow to it? Judge Michael D. Hawkins: It doesn't mean abdication, does it? Garre: It does not mean abdication, Your Honor, but it means the court gives great deference to the judgments of the individuals whose job it is to assess whether or not the disclosure or nondisclosure of particular information would harm national security ... . [n60] The Ninth Circuit ultimately remanded in Hepting without

reaching the merits, [n61] but the same panel did proceed to the merits in a closely related case. In Al-Haramain Islamic Foundation v. [*1379] Bush, the panel began by asserting the independent nature of judicial review: We take very seriously our obligation to review the documents with a very careful, indeed a skeptical, eye, and not to accept at face value the government's claim or justification of privilege. Simply saying "military secret," "national security" or "terrorist threat" or invoking an ethereal fear that disclosure will threaten our nation is insufficient to support the privilege. [n62] The court proceeded, however, to endorse a robust deference obligation: "we acknowledge the need to defer to the Executive on matters of foreign policy and national security and surely cannot legitimately find ourselves second guessing the Executive in this arena." [n63] This state of affairs has generated sharp criticism, [n64] and may yet result in legislative reforms. [n65] As things currently stand, however, deference in the state secrets scenario closely tracks the practice illustrated [*1380] in the other case studies. Courts are conscious that deference has costs in terms of reducing the judicial capacity to check the executive branch, but in some contexts they are loath to question the judgment of executive officials when push comes to shove.

Deference Good – War Powers/Stability

Judiciary intervening in war powers constrains the President – causes international instability

Nzelibe and Yoo 6 (Jide Nzelibe, Professor of Law at Northwestern and John Yoo, Professor of Law at UC Berkeley, "Rational War and Constitutional Design," The Yale Law Journal, Vol. 115, No. 9, The Most Dangerous Branch? Mayors, Governors, Presidents, and the Rule of Law: A Symposium on Executive Power (2006), pp. 2512-2541, http://www.jstor.org/stable/20455704)

D. The Dangers of judicial Intervention Faced with the prospect that congressional participation can sometimes play a salutary role in avoiding unnecessary wars, an antecedent question naturally arises. Should the courts decide if such a congressional role would be appropriate? Indeed, a recurring theme running through much of the Congress-first literature is that judicial intervention is necessary to vindicate the congressional role in initiating conflicts. But if one accepts the signaling model developed here, there are significant reasons why one ought to be wary of a judicial role in resolving war powers controversies. First, under our model of international crisis bargaining, judicial review would likely undermine the value of signals sent by the President when he seeks legislative authorization to go to war. In other words, it is the fact that the signal is both costly and discretionary that often makes it valuable. Once one understands that regime characteristics can influence the informational value of signaling, it makes sense that the President should have the maximum flexibility to choose less costly signals when dealing with rogue states or terrorist organizations. The alternative- a judicial rule that mandates costly signals in all circumstances, even when such signals have little or no informational value to the foreign adversary-would dilute the overall value of such signals. Second, judicial review would preclude the possibility of beneficial bargaining between the President and Congress by forcing warmaking into a procedural straitjacket. In this picture, judicial review would constrain the political branches to adopt only the tying hands type of signal regardless of the nature or stage of an international crisis. But the supposed restraining effect attributed to the tying hands signal can vary considerably depending on whether the democracy is deciding to initiate an international crisis or is already in the midst of an escalating crisis. Requiring legislative authorization may

make it less likely that the democracy will be willing to back out of a conflict once it starts. Thus, tying hand signals and judicial insistence that the President seek legislative authorization **will contribute to greater international instability** once a conflict has already started.

Ext. Deference k/t War Powers

Deference key to Presidential war powers

Murphy et al 3 (Walter Murphy, Professor Emeritus at Princeton University, former Professor of Jurisprudence; James E. Fleming, Professor of Law at Boston University School of Law; Sotirios A. Barber, Professor of Political Science at the University of Notre Dame; Stephen Macedo, Professor of Politics and Director of the University Center for Human Values at Princeton; Hamdi v. Rumsfeld, "American Constitutional Interpretation" 3rd edition, September 2003, http://www.princeton.edu/aci/cases-pdf/aci3.hamdi4thcir.pdf)

The importance of limitations on judicial activities during wartime may be inferred from the allocation of powers under our constitutional scheme. The war powers ... invest "the President, as Commander in Chief, with the power to wage war which Congress has declared, and to carry into effect all laws passed by Congress for the conduct of war and for the government and regulation of the Armed Forces, and all laws defining and punishing offences against the law of nations, including those which pertain to the conduct of war." These powers include the authority to detain those captured in armed struggle. These powers likewise extend to the executive's decision to deport or detain alien enemies during the duration of hostilities, and to confiscate or destroy enemy property. Article III contains nothing analogous to the specific powers of war so carefully enumerated in Articles I and II. "In accordance with this constitutional text, the Supreme Court has shown great deference to the political branches when called upon to decide cases implicating sensitive matters of foreign policy, national security, or military affairs." The reasons for this deference are not difficult to discern. Through their departments and committees, the executive and legislative branches are organized to supervise the conduct of overseas conflict in a way that the judiciary simply is not. The Constitution's allocation of the warmaking powers reflects not only the expertise and experience lodged within the executive, but also the more fundamental truth that those branches most accountable to the people should be the ones to undertake the ultimate protection and to ask the ultimate sacrifice from them. Thus the Supreme Court has lauded "[t]he operation of a healthy deference to legislative and executive judgments in the area of military affairs." Rostker v. Goldberg (1981). The deference that flows from the explicit enumeration of powers protects liberty as much as the explicit enumeration of rights. The Supreme Court has underscored this founding principle: "The ultimate purpose of this separation of powers is to protect the liberty and security of the governed." Metro. Wash. Airports Auth. v. Citizens for the Abatement of Aircraft Noise, Inc. (1991). Thus, the textual allocation of responsibilities and the textual enumeration of rights are not dichotomous, because the textual separation of powers promotes a more profound understanding of our rights. For the judicial branch to trespass upon the exercise of the warmaking powers would be an infringement of the

right to self-determination and self-governance at a time when the care of the common defense is most critical. This right of the people is no less a right because it is possessed collectively.

AT Environment

No risk of environmental destruction—the military has built-in safeguards

Green 97 –University of South Carolina, Associate with McNair Law Firm (Tracy Colton, "Providing for the Common Defense versus Promoting the General Welfare: the Conflicts Between National Security and National Environmental Policy," *South Carolina Environmental Law Journal*, 6 S.C Envtl. L.J. 137, Fall, AD)

Because the preparation of EAs and EISs has been designated as the process through which environmental factors are included in decision making by governmental agencies, DoD--like other federal agencies--must follow the mandate of NEPA to prepare and use EAs and EISs. DoD regulations provide "policy and procedures to enable DoD officials to be informed of and take into account environmental considerations when considering the authorization or approval of major DoD actions in the United States." [n48] These regulations implement DoD's policy that actions, taken for the purpose of providing a strong national defense, must cause the least harm to the environment. [n49] To achieve this goal, the regulations require DoD agencies to assess the environmental consequences of actions that could affect the quality of the environment. Recognizing the unique nature of its responsibility, however, the regulations require that "national security classification issues" be considered in the decision-making process [n50]

No impact- the DOD consults the EPA

Latham 2 – Articles Editor, 1999-2000, Boston College Environmental Affairs Law Review. (Joshua E., 000, "COMMENT: The Military Munitions Rule and Environmental Regulation of Munitions", 27 B.C. Envtl. Aff. L. Rev. 467, Lexis Law)

The Munitions Rule has groundbreaking implications for the future of environmental regulatory oversight of the military establishment. [n177] With the enactment of the FFCA, Congress took an important first-step in holding the federal government accountable for the environmental consequences of its conduct under RCRA. [n178] In enacting the FFCA, however, Congress recognized the potentially debilitating effect that EPA regulation of military munitions might have on combat readiness and the DOD's fundamental national defense mission. [n179] Congress accounted for this conundrum by mandating that the EPA first consult with the DOD and promulgate regulations specifically determining when military munitions are hazardous waste subject to RCRA oversight. [n180] Congress's mandate to the EPA was to strike a balance between the competing interests of environmental compliance and national defense. [n181] There are questions as to the Munitions Rule's legal authority and the EPA's policy rationale. This controversy has prompted public opposition to the Munitions Rule, culminating in a 1998 judicial challenge mounted by the Military Toxics Project (MTP), a national advocacy [*489] coalition. [n182] While the D.C. Circuit affirmed the legality of the Munitions Rule, the policy and the

practicality of the Munitions Rule continue to incite skepticism. [n183] There remain several inconsistencies and potential loopholes within the Munitions Rule's regulatory framework that could prove problematic and arguably are in contravention to the congressional mandate.

AT Separation of Powers

Abdication of constitutional power is worse than loss of separation of powers

Henriksen 96 – J.D Candidate, 1996, Washington College of Law of The American University

(Kelly E., Winter 1996, "Note & Comment: Gays, the Military, and Judicial Deference: When the Courts Must Reclaim Equal Protection as Their Area of Expertise", 9 Admin. L.J. Am. U. 1273, Lexis Law)

Separation of powers often is cited as a justification for judicial deference to the military; but what does the principle of separation of powers say about abdication of constitutional authority? Separation should never reach the point of abdication. Abdication of constitutional authority is as egregious under the principle of separation of powers as are overreaching and aggrandizement. When the judiciary abdicates its power of constitutional review, the legislature's power is aggrandized. Review is rendered meaningless when the rulemaker reviews the rules; and when the one [*1306] charged with making the laws is also charged with ensuring their fairness, there is neither check nor balance. [n192] Equal protection is the courts' domain. The Ninth Circuit and the Able court were correct, and perhaps prophetic, in reclaiming equal protection and constitutional analyses as the courts' area of expertise. If constitutional review is the courts' function, then equal protection is its forte. The Supreme Court must reclaim constitutional review generally, and equal protection analysis specifically, as its own. As Justice Brennan asserted in Goldman, anything less would be an abdication of its constitutional authority.

No impact to separation of powers – already exists

Knowles 9 – Acting Assistant Professor, New York University School of Law (Robert, Spring, "American Hegemony and the Foreign Affairs Constitution", 41 Ariz. St. L.J. 87, Lexis Law)

The uniqueness of foreign affairs stems in part from a void in the text that has long bedeviled constitutional analysis in this area. [n23] Article II of the Constitution specifically allocates only a handful of foreign affairs powers to the President, [n24] but Article I fails to provide Congress with all, or even most, of the remaining powers necessary to conduct foreign policy. [n25]
This [*95] void is puzzling given that one clear purpose of the Constitution was to overcome the slow, fractured, and limp foreign policy power previously vested in Congress by the Articles of Confederation.

Court Aff Fails

Court war powers decisions just strengthen the government's hand over war powers without changing policy

Scheppele 12 (Kim Lane Scheppele, Professor of Sociology and Public Affairs in the Woodrow Wilson School and University Center for Human Values; Director of the Program in Law and Public Affairs, Princeton University, "The New Judicial Deference," Boston University Law Review, Volume 92 Number 1, January 2012, http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf)

As we have seen, courts have slapped the government on the wrist and forced it to readjust its policies at the margins. But courts have not required the release of detainees, the immediate provision of evidence against them, or absolutely normal tribunals. It is much easier for governments to comply with court decisions when those court decisions do not in fact second-guess concrete decisions of the government to detain specific individuals in a crisis. In fact, **court decisions that issue a lot of smoke and noise but do little to require immediate action may appear to be upholding constitutional principles while in fact strengthening the hands of governments who can then rightly say that they are doing what the law requires.** After 9/11, then, courts have been willing to stand up to governments in times of crisis, using their substantial heft against the government's bulked-up war powers. Governments, in turn, have been willing to comply with court decisions because doing so has not really threatened the immediate actions they have already taken.

PQD DA

uq

International climate agreement and domestic ratification inevitable – the only risk of derailment is judicially enforced climate action

Borden 10-1 (Theresa, "A glboal solution to climate change: the possible impact of Bond v. United States," Harvard Environmental LAw Review, www3.law.harvard.edu/journals/elr/2013/10/01/bondvus/)

New legislation to deal with the global problem of climate change **may seem politically unrealistic** given the current inhospitable environment in Congress, but there are reasons to think that the prospect of reaching an international agreement may be **more viable now than it was in the past**. UN Secretary-General Ban Ki-Moon recently called for world leaders to meet in anticipation of the 2015 international climate meeting in Paris and the Intergovernmental Panel on Climate Change (IPCC) recently announced that humans are the dominant cause of global warming since the 1950s. Although climate change denial still exists in the U.S., **the international community generally accepts the science**. Interestingly, this could indicate that reaching an international agreement is easier than reaching a domestic agreement. Of course, Congressional action would still be necessary to ratify any treaty, but if the enumerated shortcomings of the Kyoto Protocol are addressed in the 2015 negotiations**, domestic action may be facilitated, especially if the President stands behind the agreement.**¶ But even if the legislature and the executive get behind an international climate change agreement, there is still the judiciary. The Supreme Court recently granted cert for Bond v. U.S., which challenges Congressional authority to enact a federal statute enforcing the Chemical Weapons Convention on the grounds that it intrudes on areas of police power reserved to the states. The Court found that Ms. Bond lacks standing to bring a claim that applying the chemical weapons treaty to her violated the Tenth Amendment, thus avoiding revisiting Missouri v. Holland. However, the Court did certify one question that may have implications for international climate change agreements: "Do the Constitution's structural limits on federal authority impose any constraints on the scope of Congress' authority to enact legislation to implement a valid treaty, at least in circumstances where the federal statute, as applied, goes far beyond the scope of the treaty, intrudes on traditional state prerogatives, and is concededly unnecessary to satisfy the government's treaty obligations?"¶ Although Bond may not have a direct effect on international climate change negotiations, it could provide some guidance on how to frame the scope of the treaty and the government's treaty obligations. If an international agreement is reached, the U.S. must promulgate implementing legislation that will pass not only the political process, but also judicial review — it is possible that climate change deniers will try to undermine any climate change agreement in court. Bond, along with EPA v. EME Homer City Generation,[1] will provide some insight into how the Court determines the scope of "traditional state prerogatives" and how such considerations play out in environmental regulation.¶ **Meaningful climate change regulation is inevitable**; the question is when it will come. Environmentalists must be aware of not only possible political solutions, **but also potential fallout of judicial determinations. If an international deal is brokered, it would be counterproductive to provide domestic dissenters with any fodder to challenge it.** Hopefully the Court will rule narrowly in Bond, and not make

any pronouncements that would confuse settled federal authority to regulate interstate pollution. Even if it would be preposterous for domestic dissenters to challenge federal authority on such grounds, the commerce clause challenge to the Affordable Care Act — which many commentators dismissed as irrelevant — cautions against completely ignoring the possibility.

NSA data collection ruling reverses PQD – shifts doctrine towards evaluation of political questions

Rasmus 14

Daniel, Founder and Principal Analyst at Insights, member of the Pinchot University faculty academy, Opinion: Snowden Leak about App Data Collection Leads to Question: 'What? Me Worry?', 2/13, http://www.iphonelife.com/blog/28823/snowden-leak-about-app-data-collection-leads-question-what-me-worry

The NSA, is not interested in details until the details matter. They are interested in patterns, and those patterns do not include you grilling a steak, going to a movie, or attending a school play. The complex algorithms used to sort this information are finely turned to identify potential threats and only when a potential threat is identified, does anybody look into personal information of people related to that threat (and from what I know of investigations, many threat identifications reinforce existing suspicions rather than revealing new ones). And believe them or not, the NSA is not targeting U.S. nationals unless they have clear ties to activity originating outside of the United States, or activity that will threaten the U.S. directly, or its assets or citizens in other countries. There is simply too much activity and too few people in response roles to target information that does not directly relate to the mission of the intelligence agencies.∂ What those missions are, and how they are carried out, are political and well within the purview of U.S. citizens to help shape through political action and elections.∂ In Fact, You're Probably Irrelevant∂ From a technical perspective, however, it is very difficult to form patterns with data that is "preconsidered." In other words, if an analyst decides some data isn't relevant ahead of time, then they may miss something crucial. Marketing organizations regularly look at too little data when creating what they call "customer segmentations." From many studies I've seen, the "customer segments" , sovlh sector look more like caricatures than real people because they have very limited attributes and few correlations to data that reflect the complexity of a real customer.∂ So on one hand, you have companies like Amazon, who may look scarily accurate when suggesting music or books or toys. Amazon, however, would be much less accurate in helping you select draperies or diagnosing a lawn ailment, because its data about you has sharp edges that when asked the wrong question, result in irrelevancy. We also saw this with IBM's Watson when it won Jeopardy. It could answer trivia questions, but Watson couldn't hold a conversation about its background. The same is true of the NSA; although they admittedly have huge amounts of information, they only process that information using algorithms seeking specific types of activities that imply certain types of behaviors. They are not in the business of suggesting reading to you, so they wouldn't be profiling the reading habits of all Americans (though Amazon would do that). Amazon, on the other hand, isn't looking for bomb makers so they can't suggest the latest in bomb-making materials. If the NSA gets any data from Amazon, they are looking for patterns Amazon isn't looking for and again, only acting on that data as it relates to their mission.∂ So does the NSA need to know anything about your Angry Birds scores or activities? Absolutely not. Does it mine data from some third-party advertisers? Perhaps, as implied by Rovio Entertainment CEO Mikael Hed in his statement:∂ "Our fans' trust is the most important thing for us and we take privacy extremely seriously. We do not collaborate, collude, or share data with spy agencies anywhere in the world. As the alleged surveillance might be happening

through third party advertising networks, the most important conversation to be had is how to ensure user privacy is protected while preventing the negative impact on the whole advertising industry and the countless mobile apps that rely on ad networks."∂ So Just How Worried Should You Be?∂ Should U.S. citizens be concerned about domestic spying? Perhaps. But again, that is a political question that speaks to how individuals think about their privacy, and the balance between privacy and national and personal security. To worry that an agency like the NSA is using phone information to track individual Americans not connected to suspicious foreign-related activity stretches the imagination and the credibility to those who profess it.∂ There is a huge difference between collecting data for pattern recognition and spying. If the government was constantly deploying hordes of mysterious operatives into suburban neighborhoods to pick-up people suspected of doing untoward things, however they mysteriously define "untoward," then we should be concerned. People who lived in Nazi occupied Europe and under the former Soviet Union know what domestic spying looks like, and the U.S. government doesn't behave like either of those regimes. The collection of data is only a problem if the intent is to spy on people for things other than what the U.S. government has, since 9/11, been very open about: who it is spying on and what types of activities it is trying to prevent.∂ If U.S. citizens were living under an oppressive blanket of domestic spying would two states have legalized marijuana? Would same-sex marriage be legal in many states and nationally recognized? Would the Seahawks have won the Super Bowl? The bottom line, the NSA and other agencies are too busy with their limited resources to spy on Americans just because they want to (not to say that individuals won't occasionally act beyond the bounds of propriety or authority). Even if they NSA does have your data somewhere in the big secured government cloud, the odds that anyone of any importance knows that, or that you've shown up as an output to any pattern search, is extremely minuscule. ∂ The real issue underlying this is a lack of trust not in the current state of the U.S. democracy, but some future state in which people in power redirect the mission of those holding the data. For that to happen, a majority of Americans would have to condone the election and the government would have to systematically dismantle checks-and-balances and silence the press. That we continue to have this discussion in public, that we get more data regularly, is an indication that it would be very hard to pull off a major conspiracy in the United States that involved all citizens. Something will leak. **People will get incensed and policy will change**. That we elect people, and that elected officials know their power derives from them being elected, means they want to remain elected. That is powerful leverage for the average American, and good reason not to piss off citizens by spying on them. And even if the NSA isn't really spying, that a lot of people think they are spying is probably enough to eventually make them stop gathering data. All sides will claim a victory in that, even the terrorists whom the data collection was really trying to identify. This debate is not exposing weakness in America's democracy, but rather highlighting its unique ability to **openly debate policy** in a way that ultimately reflects the values of its citizens.

The plan makes war powers a justiciable issue – this case-specific exception causes a slippery slope that breaks the entire doctrine

Miller 10 (Mathew Edwin, JD – University of Michigan Law School, Associate – Latham & Watkins LLP, "The Right Issue, the Wrong Branch: Arguments against Adjudicating Climate Change Nuisance Claims," Michigan Law Review, November, 109 Mich. L. Rev. 257, Lexis)

However, to say that cases like American Electric Power are justiciable just because plaintiffs allege a public nuisance begs the question: Why should such claims automatically be justiciable?

It **contravenes** the purpose and articulation of the political question doctrine to suggest that nuisances are categorically justiciable because political questions have historically excluded torts between private parties and have focused instead on governmental issues like gerrymandering, foreign policy, and federal employment. n70 Again, Baker demanded "discriminating" **case-by-case inquiries**, rejecting "resolution by any semantic cataloguing." n71 Similarly, the fact that other public nuisance claims have not presented political questions in the past should not preclude such a finding in the climate context. n72 Indeed, the argument for nonjusticiability rests on the notion that climate suits are unique and therefore defy classification among tort precedent. n73∂ [*271] Extending the political question doctrine to a public nuisance allegation would surpass precedent in terms of claim-category application. Yet with respect to the theory behind the doctrine, such an extension is proper because cases like American Electric Power would **push** existing nuisance law to embrace a complex, qualitatively unique phenomenon that cannot be prudentially adjudicated. n74 The Supreme Court has never held that torts cannot present political questions, so prudential constitutional principles should similarly apply to them. This Note simply argues that the facts, claims, parties, and relief demanded in this particular mode of litigation should fall under the nonjusticiability umbrella, wherever its limits may lie. n75 The following analysis of Baker invokes the American Electric Power situation specifically for the sake of convenience, but the arguments therein should be read to apply to injunctive climate nuisance claims generally.∂ [Continues to Footnore]∂ n75. This Note does not purport to suggest exactly where the line ought to be drawn in applying the political question doctrine to tort claims. A consideration of the potential **doctrinal "slippery slope"** - where courts might improperly refuse to adjudicate claims solely on the basis of complexity - is beyond the scope of the present discussion.

Erosion of the PQD crushes international coordination that's necessary to solve climate change

Tribe 10 (Laurence H., the Carl M. Loeb University Professor, Harvard Law School; Joshua D. Branson, J.D., Harvard Law School and NDT Champion, Northwestern University; and Tristan L. Duncan, Partner, Shook, Hardy & Bacon L.L.P., January 2010, "TOOHOTFORCOURTSTO HANDLE: FUEL TEMPERATURES, GLOBAL WARMING, AND THE POLITICAL QUESTION DOCTRINE," http://www.wlf.org/Upload/legalstudies/workingpaper/012910Tribe_WP.pdf)

The second argument that underlies the Courts of Appeal's holdings that climate change nuisance lawsuits present questions suitable for judicial resolution is one that seeks to minimize the importance of those lawsuits. Employing the same logic that led the Motor Fuel court astray, the Second Circuit emphasized that "[a] decision by a single federal court concerning a common law of nuisance cause of action, brought by domestic plaintiffs against domestic companies for domestic conduct, does not establish a national or international emissions policy."43 In concluding that the plaintiffs' modest ambitions insulate the claim from the political question doctrine, the court got it backwards. It is precisely courts' inability to "establish a national or international emissions policy" that renders judicial relief such a **conceptual and methodological mismatch** with climate change, since it is litigation's **inability to grapple with climate change at a systemic level** that deprives courts of "judicially manageable standards" for adjudicating climate change claims. The fact that courts are incapable, as a matter of due process, of binding anyone other than the litigants before them—even if judges were omniscient climate experts imbued with the wisdom required to trade off incommensurable values and interests—

automatically makes them institutionally ill-suited to entertain lawsuits concerning problems this irreducibly global and interconnected in scope.

But that being said, if the Second Circuit was implying that such claims are justiciable in part because they are relatively costless, it was wrong again. In the wake of the recent Copenhagen climate negotiations, **America is at a crossroads regarding its energy policy**. At Copenhagen, the world—for the first time including both the United States and China—took a tremulous first step towards a comprehensive and truly global solution to climate change.44 **By securing a modicum of international consensus**—albeit not yet with binding commitments—President Obama laid the foundation for what could eventually be a **groundbreaking congressional overhaul** of¶ American energy policy, an effort that will undoubtedly be shaped by considerations as obviously political as our energy independence from hostile and unreliable foreign regimes and that will both influence and be influenced by the delicate state of international climate negotiations.45

Against this backdrop, courts would be wise to heed the conclusion of one report that what "makes climate change such a difficult policy problem is that decisions made today can have significant, uncertain, and difficult to reverse consequences extending many years into the future."46 This observation is even more salient given that America—and the world—**stand at the precipice of major systemic climate reform**, if not in the coming year then in the coming decade. It would be **disastrous** for climate policy if, as at least one commentator has predicted,47 courts were to "**beat Congress to the punch**" and begin to concoct common law "solutions" to climate change problems before the emergence of a legislative resolution. Not only does judicial action in this field require costly and irreversible technological change on the part of defendants, but the prior existence of an ad hoc mishmash of common law regimes will frustrate legislators' attempts to design coherent and systematic market- based solutions.48 Indeed, both emissions trading regimes and carbon taxes seek to harness the fungibility of GHG emissions by creating incentives for reductions to take place where they are most efficient. But if courts were to require reductions of randomly chosen defendants—with no regard for whether they are efficient reducers— they would inhibit the effective operation of legislatively-created, market-based regimes by prematurely and artificially constricting the size of the market. And as one analyst succinctly put it before Congress, "[a]n insufficient number of participants will doom an emissions trading market."49 There is no doubt that the "Copenhagen Accord only begins the battle" against climate change, as diplomats, bureaucrats, and legislators all now begin the lengthy struggle to turn that Accord's audacious vision into concrete reality.50 But whatever one's position in the debate between emissions trading and carbon taxes, or even in the debate over the extent or indeed the reality of anthropogenic climate change, one thing is clear: legislators, armed with the best economic and scientific analysis, and with the capability of binding, or at least strongly incentivizing, all involved parties, are the only ones constitutionally entitled to fight that battle. ¶ CONCLUSION ¶ Some prognosticators opine that the political question doctrine has fallen into disrepute and that it no longer constitutes a viable basis upon which to combat unconstitutional judicial overreaching.51 No doubt the **standing doctrine** could theoretically **suffice to prevent some of the most audacious judicial sallies into the political thicket**, as it might in the climate change case, where plaintiffs assert only undifferentiated and generalized causal chains from their chosen defendants to their alleged injuries. But when courts lose sight of the important limitations that the political question doctrine independently imposes upon judicial power–even where standing problems are at low ebb, as with the Motor Fuel case–then constitutional governance, and in turn the protection of individual rights and preservation of

legal boundaries, suffer. The specter of two leading circuit courts manifestly losing their way in the equally real thicket of political question doctrine underscores the urgency, perhaps through the intervention of the Supreme Court, of restoring the checks and balances of our constitutional system by reinforcing rather than eroding the doctrine's bulwark against judicial meddling in disputes either expressly entrusted by the Constitution to the political branches or so plainly immune to coherent judicial management as to be implicitly entrusted to political processes. It is not only the climate of the globe that carries profound implications for our future; it is also the climate of the times and its implications for how we govern ourselves.

The risk is existential

Mazo 10 – PhD in Paleoclimatology from UCLA

(Jeffrey Mazo, Managing Editor, Survival and Research Fellow for Environmental Security and Science Policy at the International Institute for Strategic Studies in London, 3-2010, "Climate Conflict: How global warming threatens security and what to do about it," pg. 122)

The best estimates for global warming to the end of the century range from 2.5-4.~C above pre-industrial levels, depending on the scenario. Even in the best-case scenario, the low end of the likely range is 1.goC, and in the worst 'business as usual' projections, which actual emissions have been matching, the range of likely warming runs from 3.1--7.1°C. Even keeping emissions at constant 2000 levels (which have already been exceeded), global temperature would still be expected to reach 1.2°C (O'9""1.5°C)above pre-industrial levels by the end of the century." Without early and severe reductions in emissions, the effects of climate change in the second half of the twenty-first century are likely to be catastrophic for the stability and security of countries in the developing world - not to mention the associated human tragedy. Climate change could even undermine the strength and stability of emerging and advanced economies, beyond the knock-on effects on security of widespread state failure and collapse in developing countries.' And although they have been condemned as melodramatic and alarmist, many informed observers believe that unmitigated climate change beyond the end of the century could pose an existential threat to civilisation." What is certain is that there is no precedent in human experience for such rapid change or such climatic conditions, and even in the best case adaptation to these extremes would mean profound social, cultural and political changes.

The court never violates PQD in war powers cases

Devins 10 - Professor of Law at William and Mary

(Neal, Talk Loudly and Carry a Small Stick: The Supreme Court and Enemy Combatants, http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1024&context=facpubs)

Without question, there are very real differences between the factual contexts of Kiyemba and Bush-era cases. These differences, however, do not account for the striking gap between accounts of Kiyemba as likely inconsequential and Bush-era cases as "the most important decisions" on presidential power "ever., 20 In the pages that follow, I will argue that Kiyemba is cut from the same cloth as Bush-era enemy combatant decision making. Just as Kiyemba will be of limited

reach (at most signaling the Court's willingness to impose further limits on the government without forcing the government to meaningfully adjust its policymaking), Bush-era enemy combatant cases were modest incremental rulings. Notwithstanding claims by academics, opinion leaders, and the media, Supreme Court enemy combatant decision making did not impose significant rule of law limits on the President and Congress. Bush-era cases were certainly consequential, but they never occupied the blockbuster status that so many (on both the left and the right) attributed to them. Throughout the course of the enemy combatant dispute, **the Court has never risked its institutional capital** either by issuing a decision that the political branches would ignore, or by compelling the executive branch to pursue policies that created meaningful risks to national security. The Court, instead, took limited risks to protect its turf and assert its power to "say what the law is." That was the Court's practice during the Bush years, and it is the Court's practice today.

Not a Constitutional question—nature of executive surveillance means there is not legal guidance to follow and Congress needs to give the yes/no

Katyal and Caplan 8 – Paul and Patricia Saunders Professor of Law @ Georgetown

Neal, Richard, Class of 2007, Georgetown University Law Center, The Surprisingly Stronger Case for the Legality of the NSA Surveillance Program: The FDR Precedent, Stanford Law Review, Vol. 60, No. 4 (Feb., 2008), pp. 1023-1077

In virtually all national security disputes, there are few judicial precedents to follow for reasons well articulated by Justice Jackson in the opening lines of his famous Youngstown concurrence.278 For that reason, executive branch tradition is often a touchstone for finding the limits of presidential power. If Presidents have historically acted in a particular way-such as by putting troops on the ground without a declaration of war by Congress-that practice is often compelling precedent for the legality of such behavior by modern-day Presidents. In this sphere, the text of the Constitution offers **little guidance** and executive branch precedent can be the most authoritative guide. (As Jackson would put it in Youngstown, "the practical working of our Government" can inform the boundaries of executive power.279) For that reason, we believe the FDR precedent will offer much comfort to defenders of the NSA program. We ultimately reject the defense, but our reasons for doing so are obviously debatable. The fact remains that one of our greatest Presidents did something quite similar to what President Bush has done.∂ There are three basic reasons why we reject the FDR precedent defense of today's NSA program. None of these reasons is the one offered by Dellinger, Kris, and others who have established the "conventional wisdom" that FDR's activity was limited to presidential action within the zone of silence and did not defy Congress. After the 1934 Telecommunications Act and its interpretation in Nardone, that reading of history is too weak. Instead of trying to isolate facial differences and artificially elevate their importance, we would do better to admit the parallels and learn from them.∂ First, while executive precedent is always important, it attains the bulk of its force when it is open. Justice Frankfurter's Youngstown concurrence put the point well, that before executive precedent can become a "gloss" on Article II, it must be "a systematic, unbroken, executive practice, long pursued to the knowledge of the Congress and never before questioned."280 Therefore, the actions of a previous President, while a helpful guide, should not settle a controversy-particularly when those actions took place in secret. Those of us who are Unitary

Executivists derive much of our position from the fact that the President is publicly accountable for his actions. That visibility prompts better decisions.281 But secret activity cannot be imbued with that level of credibility since it takes place without that critical check of public accountability. For that reason, a secret precedent like FDR's, read properly, should inspire caution instead of blind allegiance. After all, the full details of this story are still being dug out of the archives decades later; it is hardly the type of precedent that the nation's political processes have blessed over a long period of time.∂ This is not the proper place to develop a full taxonomy of when executive branch precedent should be authoritative. But we think a few guidelines, at this juncture, can be offered. Some of the factors in determining whether an executive branch precedent should have force are: (a) whether it was done openly and was the subject of public debate; (b) whether it was approved-or at least not rejected-by the legislature at the time; (c) whether it was approved by other Presidents, legislatures, and analysts in subsequent time periods; and (d) whether it concerns a practice as to which the **Constitution does not offer a clear guide**. There are solid normative reasons for considering these factors, such as the democratic legitimacy inherent in open decisions by major government actors. There are also epistemic reasons as well, chief among them that executive branch precedent can often be a powerful mechanism for learning what efficacious Presidents have needed to do. Since courts, Congress, and analysts each lack full information-and since there is no consensus in values on the proper boundaries of executive power-the actions of previous Presidents can be quite revealing, particularly in understanding those areas of the Constitution where the text does not offer clear answers. For that reason, transparency cannot function as an absolute requirement before executive branch precedent has force. Some executive precedents might have weight even when they are secret. But their weight must necessarily be reduced tremendously, since a secret precedent is imbued primarily with epistemic benefits rather than ones of democratic legitimacy.∂ Second, the fact that a President-even a great one-acted in a certain way does not mean that future Presidents are justified in following his lead. FDR is perhaps the most cautionary tale of all. As every law student knows, FDR was the President who ordered the internment of tens of thousands of JapaneseAmericans in camps-individuals who had no suspicion of disloyalty apart from being Japanese-Americans. And FDR's track record with civil liberties was not limited to this episode. Rather, "Franklin Roosevelt displayed a consistent lack of leadership in the area of civil rights and liberties."282 It is a simple category mistake to assume that a President who possesses exquisite judgment in one arena carries that judgment over into other areas. That may sometimes be the case, but it is not inexorably so.∂ Third, as a matter of constitutional governance, it is exceptionally dangerous to vest a President with the power to break the laws, at least at a time when Congress can act. If the 1934 Act was such a problem, FDR should have dispatched his staff to Congress to explain why new legislation was needed to modify it. Instead, they pursed the Janus-faced strategy of seeking legislation in public and then secretly wiretapping anyway. In one sense, that decision not to put all their eggs in one basket was understandable; had the legislation failed then its failure could be seen as an implicit acknowledgment that Congress was against wiretapping (thereby complicating subsequent executive efforts to engage in the practice).283 But that is the wrong way to look at the situation. The right way is this: if legislation does not pass, that failure is a pretty good indicator that such action is contravening the nation's norms. If the President is unable to persuade Congress to authorize a measure he believes necessary to national security, there is likely to be good reason for that refusal.∂ After all, **national security is not like other spheres of law** where relevant interests are being drowned out in the political process, in contrast to laws that impact "discrete and insular minorities."284 If anything, national security is the flip-side of such spheres, for it is inherently subject to overrepresentation in the political

process as legislators posture themselves as tough. The idea that a President, even a magnificent one, can reinterpret a statute to favor security over liberty should give us pause. The proper course of action is for him to ask Congress to remedy the situation, and not for him to issue a secret memo with a strained legal interpretation to get around a statutory restriction.

Courts are avoiding political questions concerning war powers now – making surveillance a constitutional question allows exception

Jenkins 10 – Assistant Professor of Law, University of Copenhagen (member of the Centre for European Constitutionalization, in collaboration with the Centre for Advanced Security Theory); Attorney at Law

(David, "Judicial Review Under a British War Powers Act," 43 Vand. J. Transnat'l L. 611)

Nevertheless, as American experience suggests and despite understandable concerns over the role of judicial process, a statutory reform of the war prerogative in the United Kingdom would not [624] necessarily lead to undue judicial involvement in matters of war. In applying statutory requirements (at least openly worded ones subject to varying interpretations, in contrast perhaps to procedurally detailed ones leaving less room for political maneuvering), British courts would have to assess whether a war powers dispute indeed infringed discernible fundamental rights or led to a constitutional impasse - and so threatened the rule of law - in which political means of resolution had reached deadlock, were inadequate, or for some other reasons ought to give way to legal processes. 50 The latter occasion would likely be very rare in practice, thus ameliorating the risks of judicial interference in matters of war. Despite their power of judicial review, American courts have shown **remarkable self-restraint** in war powers cases. 51 They have taken the expansive language of the Constitution and the possibilities of branch conflict not as an invitation or opportunity for judicial intervention but as a warning that the **political arena** is the best place for resolution of such disputes. 52 Even the War Powers Act of 1973, setting out specific guidelines for presidential use of force without congressional pre-authorization, has not provoked a judicial change in habits of review. 53 U.S. courts clearly favor political solutions and defer to the political branches, which can better balance efficiency and accountability concerns, especially where the initiation and conduct of armed conflict is at issue. 54 The courts will assert themselves only in those extraordinary war powers cases when the rule of law is at [625] stake, and adjudication of a war powers dispute becomes both desirable and necessary for defining and maintaining outer **constitutional boundaries** for political action. 55¶ American courts have consistently based this deferential posture on the "political question doctrine," discussed in the next Part of this Article, which sets out criteria of justiciability for determining whether a particular constitutional question is indeed an issue more suitable for political or judicial resolution. 56 In war powers cases, the doctrine has most usually compelled the former conclusion. 57 This doctrine requires that a judge consider how a war powers dispute implicates operational efficiency, democratic accountability, and rule of law values. 58 He or she must then assess the institutional competency of a court to adjudicate a solution in light of those values' relative weight and the competencies of the political branches. The doctrine gives preference to the political processes in military matters, **excepting** again **cases** in which a political branch attempts to invoke war powers to infringe fundamental rights (seen in President Bush's unilateral attempt to designate, try, and imprison so-called "enemy combatants" without due process of law 59) or **when there arises a** potentially **dangerous constitutional conflict** between the other two branches (as with Congress' opposition to President Nixon's military actions in Cambodia 60). At times, these individual liberty interests and separation of powers concerns will closely coincide

and [626] heighten justiciability, as they did when President Truman attempted the unilateral executive nationalization of the steel industry during the Korean War without any statutory authority to do so. 61 In "run-of-the-mill" executive-legislative disputes over the authority to commit the nation to war or manage military operations, however, courts will accordingly abstain from review. 62 The end result, at first glance, is that the American political question doctrine appears not so different in substance from the British doctrine of justiciability, which already applies not only to review of the executive's statutory powers but also to its prerogative decisions. 63 There is no reason why these justiciability concerns would not continue to apply to cases arising under any future British war powers act. A closer look at just how and why American courts shy away from involving themselves in war powers cases is thus a good starting point for re-thinking how British courts might, would, or should one day apply a war powers act.

link – s/o climate change

Narrowing the PQD directly results in more successful climate change litigation cases

Jaffe 11(Jill Jaffe represents public utilities and agencies that provide public utility services in proceedings before the California Public Utilities Commission, including rate-setting and rulemaking proceedings, "The Political Question Doctrine: An Update in Response to Climate Change Case Law," Social Science Research Network, February 6, papers.ssrn.com/sol3/papers.cfm?abstract_id=1756484)

The district court decisions in Comer and American Electric Power demonstrate a misapplication of the political question doctrine.228 Since lower courts must hear cases properly before them, there may be issues that lower courts have dismissed under the political question doctrine where ―the Supreme Court has the luxury of simply denying review.‖229 Lower courts might use the doctrine to avoid deciding politically charged, cumbersome, and novel cases, such as the climate change nuisance cases. But, **this would be less likely to occur if the purposes of the doctrine were enumerated by the Supreme Court and if the doctrine was narrowed in scope**.230 This much-needed clarification would provide courts with guideposts upon which to apply the doctrine. Furthermore, **by narrowing the doctrine, it would be clearly inapplicable to cases which previously may have been dismissed under the prudential formulations of the doctrine.**

Broad PQD application is key to preventing climate litigation

Jaffe 11(Jill Jaffe represents public utilities and agencies that provide public utility services in proceedings before the California Public Utilities Commission, including rate-setting and rulemaking proceedings, "The Political Question Doctrine: An Update in Response to Climate Change Case Law," Social Science Research Network, February 6, papers.ssrn.com/sol3/papers.cfm?abstract_id=1756484)

In the wake of the government‘s failure to enact legislation, various private parties and states have initiated ―climate change nuisance‖ litigation for harms incurred due to climate change.5 In particular, the plaintiffs in Comer v. Murphy Oil USA filed suit against defendant energy production companies alleging that the defendants‘ emissions of greenhouse gases contributed to climate change and the intensity of hurricane Katrina.6 The plaintiffs in Comer sought monetary

damages for their property loss caused by hurricane Katrina.7 In Connecticut v. American Electric Power, the plaintiffs filed suit against electric power corporations claiming that the defendants‘ greenhouse gas emissions were contributing to climate change, causing harm to the plaintiffs‘ natural ecology, residents, and property.8 The plaintiffs sought an injunction, which would place a cap on the defendants‘ greenhouse gas emissions.9 Unfortunately, these cases were dismissed at the district court level due to a flawed application of t**he political question doctrine.10**¶ These cases exemplify the scholarly debate and discontent surrounding the current formulation of the political question doctrine, which was established in Baker v. Carr.11 Some scholars contend that the doctrine should be a prudential, or precautionary, tool that permits courts to dismiss a case when a judicial decision may impede on the province of the representative branches. Others scholars argue that the doctrine simply describes traditional Constitutional interpretation.12 Regardless of disagreement about the scope and application of the political question doctrine, scholars agree that as it stands, the doctrine is less useful in application than its lofty purpose—assuring that courts are subject to the constitutional requirement of separation of powers—suggests. Scholars also generally agree that contentious and politically charged disputes involving novel legal theories do not necessarily implicate the political question doctrine. However, **due to the broad nature of the doctrine in its current form**, it has been erroneously applied to politically charged, but judiciable, issues. This problem is illustrated by the district court decisions in both Comer and American Electric Power.13

Climate change is a PQD issue

Tribe 10 (Laurence H., the Carl M. Loeb University Professor, Harvard Law School; Joshua D. Branson, J.D., Harvard Law School and NDT Champion, Northwestern University; and Tristan L. Duncan, Partner, Shook, Hardy & Bacon L.L.P., January 2010, “TOOHOTFORCOURTSTO HANDLE: FUEL TEMPERATURES, GLOBAL WARMING, AND THE POLITICAL QUESTION DOCTRINE,” http://www.wlf.org/Upload/legalstudies/workingpaper/012910Tribe_WP.pdf)

At a deeper level, however, the two poles collapse into one. The reason emerges if one considers issues that courts are asked to address involving novel problems the Constitution’s framers, farsighted though they were, could not have anticipated with sufficient specificity to entrust their resolution to Congress or to the Executive in haec verba. A **perfect exemplar** of such problems is the nest of puzzles posed by human- induced **climate change**. When matters of that character are taken to court for resolution by judges, what marks them as “political” for purposes of the “political question doctrine” is not some problem-specific language but, rather, the demonstrable intractability of those matters to principled resolution through lawsuits. And one way to understand that intractability is to view it as itself marking the Constitution’s textual, albeit broadly couched, commitment of the questions presented to the processes we denominate “legislative” or “executive”—that is, to the pluralistic processes of legislation and treaty-making rather than to the principle-bound process of judicially resolving what Article III denominates “cases” and “controversies.” In other words, the judicial unmanageability of an issue serves as powerful evidence that the Constitution’s text reserves that issue, even if broadly and implicitly, to the political branches.5

AT Thumper

Link is unique—courts always follow PQD on national security surveillance

Katyal and Caplan 8 – Paul and Patricia Saunders Professor of Law @ Georgetown

Neal, Richard, Class of 2007, Georgetown University Law Center, The Surprisingly Stronger Case for the Legality of the NSA Surveillance Program: The FDR Precedent, Stanford Law Review, Vol. 60, No. 4 (Feb., 2008), pp. 1023-1077

This Article explains why the legal case for the recently disclosed National Security Agency surveillance program turns out to be stronger than what the Administration has advanced. In defending its action, the Administration overlooked the details surrounding one of the most important periods of presidentially imposed surveillance in wartime-President Franklin Delano Roosevelt's (FDR) wiretapping and his secret end-run around both the wiretapping prohibition enacted by Congress and decisions of the United States Supreme Court. In our view, the argument does not quite carry the day, but it is a much heftier one than those that the Administration has put forth to date to justify its NSA program. The secret history, moreover, serves as a powerful new backdrop against which to view today's controversy.∂In general, we believe that compliance with executive branch precedent is a critical element in assessing the legality of a President's actions during a time of armed conflict. In the crucible of legal questions surrounding war and peace, few judicial precedents will provide concrete answers. Instead, courts will tend to invoke the political question doctrine or other prudential canons to stay silent; and even in those cases where they reach the merits, courts will generally follow a minimalist path.1 For these and otiier reasons, the ways in which past Presidents have acted will often be a more useful guide in assessing the legality of a particular program, as Presidents face pressures on security unimaginable to any other actor outside or inside government. At the same time as Presidents realize these pressures, they are under an oath to the Constitution, and so the ways in which they balance constitutional governance and security threats can and should inform practice today. As Justice Frankfurter put it in Youngstown:∂[A] systematic, unbroken, executive practice, long pursued to the knowledge of me Congress and never before questioned, engaged in by Presidents who have also sworn to uphold me Constitution, making as it were such exercise of power part of me structure of our government, may be treated as a gloss on 'executive Power' vested in me President by [Section] 1 of Art. II.2

AT Gay Marriage thumper

Gay marriage was a test of the constitution not a PQD

David S. **Cohen and** Leonore **Carpenter**. "Five Things to Pay Attention to in Tuesday's Gay Marriage Arguments at the Supreme Court." Slate, 28 Apr. 2015. Web. 29 June 20**15**

There are two basic arguments for marriage equality. The first is that denying same-sex couples the right to marry is unconstitutional because it treats same-sex couples differently than opposite-sex couples; in other words, that the denial violates principles of equality. The second argument is that denying same-sex couples the right to marry infringes on their ability to make personal decisions about important parts of their lives; in other words, that the denial violates principles of liberty. Throughout the history of same-sex marriage litigation, both arguments have consistently been raised by proponents of same-sex marriage, but the courts have been erratic in choosing

between them. Some lower courts have favored the equality framework and others have preferred the liberty analysis. Supreme Court rulings based on these arguments would have different implications. For instance, a strongly-worded opinion based on equality would affect other aspects of anti-discrimination law, making it harder for the government to justify treating LGBT people differently in public housing, schools, and government services.

AT Obamacare Thumper

Obamacare was decided not on the political question but on the legal interpretation

Michaelson 6/25

(Dr. Jay Michaelson, author of five books and over four hundred articles on religion, sexuality, law, and contemplative practice, 06.25.15, "How Conservatism Kept Obamacare Alive", http://www.thedailybeast.com/articles/2015/06/25/how-conservatism-kept-obamacare-alive.html)

By a 6-3 decision, the Supreme Court leaves the Affordable Care Act standing. But not because they like the law. Today, the Supreme Court voted not to kill Obamacare because of a typo. More precisely, it ruled, 6-3, that the Affordable Care Act wasn't meant to kill itself: that a seemingly innocuous phrase ("established by the state") should not lead to the implosion of the entire health care system, and thus should be read in context, rather than purely literalistically. Thus, while media coverage is already calling this a "victory for the Obama administration," it really is a victory for sensible statutory construction. Which is why the case was 6-3, and the opinion was written by Chief Justice Roberts. Moreover, while conservative and liberal court-watchers are both remarking about the Roberts Court's "liberalism" that read is, at best, incomplete. First, let's remember that in other courts, this case might never have even made it to the Supreme Court in the first place. It began as an enterprising attempt by an obscure conservative policy wonk to poke holes in Obamacare, and the phrase at issue was recently revealed to be a drafting error, cut and pasted from an earlier version. So, while some may see the Chief Justice's legacy as twice saving Obamacare, one could just as easily see it as twice saving the Supreme Court. Second, and more interestingly, the King v. Burwell opinion is what real judicial conservatism—as opposed to ideological, political conservatism—looks like. This case was not, let's remember, a referendum on Obamacare's merits. It was about a quirk in the literal text of the law. Could people receive tax subsidies if they bought their insurance only on a state-run exchange, or could they qualify if they bought their insurance on a federal exchange, as well? The former reading hews literally to that phrase: "established by the state." But it does so at the expense of the entire statute, since not extending the subsidies would most likely cause the whole system to enter a "death spiral." Long-established conservative canons of judicial interpretation hold that courts should read laws as if they're meant to work—not in ways that would render them useless. Moreover, as the Chief Justice painstakingly described, there are other provisions in the ACA that only make sense if all "qualified individuals" are included, not just those in state exchanges. And as for those four words? "The meaning of that phrase may not be as clear as it appears when read out of context," the Chief Justice wrote. So, on one hand, it's a literalistic reading of one phrase. On the other, it's resolving internal contradictions and enabling the law to function. It is not a judicial innovation to choose the latter. Indeed, it is common sense—and conservative legal theory. You'll notice that the last several paragraphs have said nothing about whether it's a good idea for the government to manipulate the health care system. That's a political question, not a judicial one. (Whether it is constitutional was resolved in the earlier Obamacare case, NFIB v. Sebelius.) The judicial question is how statutes are to be interpreted. In today's polarized political environment, liberals

and conservatives alike miss this point completely. The Court is seen as voting on Obamacare, voting on gay marriage, or—in today's other major case—voting on civil rights laws. Indeed, particularly when it comes to marriage, courts get criticized for "overruling the will of the people." That is completely wrongheaded, and indeed, anti-democratic. Of course courts overrule the will of the people when that will is unconstitutional. That's the whole point of judicial review. And of course courts are not casting votes on the merits of the laws they review. (That being said, Chief Justice Roberts did spend the first part of his opinion cataloguing the state precedents to the Affordable Care Act, as if to remind political conservatives that it was originally a Republican idea. Not casting a vote is not the same as being politically oblivious.) Notably, Justice Scalia's dissent—while typically angry, invective, and coarse, at one point calling the ACA "SCOTUScare"—did not make some political argument for why Obamacare is a bad idea. He found fault with the majority's theory of judicial interpretation, arguing that courts must not "repair" bad laws, but simply review them as written. That seems odd and myopic in this case—but it's still judicial reasoning. Certainly, one might question Justice Scalia's motives; he is literalistic when it suits him, expansive when it doesn't. Just look at Hobby Lobby for a case that massively extended the plain meaning of the statute, defining corporations as people. However, even if justices are politically motivated, they are at the very least bound to do the work of judicial interpretation—as Justice Scalia did here. Not so on Fox News—or, to a lesser extent, on MSNBC. In conservative and liberal pundit-land, these decisions are mere referenda of nine people in robes. In the legal academy, this cynical view is known as "positivism"—the idea that, underneath all the rationalization, courts are just judges exercising power. It is a marginal view, as it deserves to be. No. Just as, a few months ago, the Supreme Court expanded the social safety net for pregnant women for conservative judicial reasons, it has now left the ACA standing for the same reasons. This decision is only "liberal" in the best way: It is part of the functioning of a small-"l" liberal democracy, subordinating one's personal political opinions to an institution's role in civil society. For that reason, it is conservative in the best way, as well.

Impact – turns economy

Judicial climate action tanks the economy – also kills the chemical, transportation, and airline industries

REGULATING GREENHOUSE GAS ¶EMISSIONS?, Valparaiso Law Review, www.shb.com/attorneys/SchwartzVictor/RegulatingGHGEmissions.pdf)

Through the nuanced approach discussed above, Congress can also emphasize reforms that are mindful of the fact that costs associated with implementing new regulations are borne directly by energy consumers, businesses that rely on affordable energy to survive and compete, and energy sector workers. As indicated, any isolated decision on GHG emissions will undoubtedly increase the costs of generating electricity,205 curtail energy output,206 and cause energy producers to relocate operations outside of the reach of the new "regulations."207 Unlike courts, Congress can find ways to reach these goals without infringing on the primary benefits of inexpensive energy, **which has been a driving force in America's economic success** and led to a major increase in people's standard of living and life spans for more than a century and a half.208¶As advocates for the poor and elderly have expressed over the past few years, limiting GHG emissions too much too quickly, whether through litigation, legislation, or regulation, would disproportionately impact their constituents.209 Already, American households earning between $10,000 and $30,000 are estimated to allocate twenty-three percent of their 2011 after-tax income to energy—a level more than twice the national average and a sixty-five percent increase over the past ten years.210 The Affordable Power Alliance,211 an umbrella organization of several advocacy groups, issued a report in 2010 showing that potentialEPA regulations on GHG emissions could cause gasoline and residential electricity prices to increase by fifty percent and industry electricity and natural gas prices to go up by seventy-five percent by 2030.212 EPA can consider these impacts during its notice and comment rulemaking, but courts cannot. Nor can courts consider the impact of their "regulations" on government assistance programs, such as the Low Income Home Energy Assistance Program, which would need to be increased significantly if home-heating oil prices had to incorporate costs allegedly related to global climate change.213¶Should utilities not be able to generate sufficient electricity in compliance with a court order, the brown-outs in California from a decade ago can give a glimpse as to the impact an electricity shortage could have on communities.214 During the March 2001 eight hour rolling blackouts, the average electricity shutoff period was ninety minutes, which was projected to translate into twenty hours of outage per customer if the crisis were to continue over the summer.215 This projected impact included a $4.6 billion reduction in household income for Californians, a loss of nearly 136,000 jobs, and a $21.8 billion hit to the gross state output.216 Fortunately, that crisis was avoided, in part, by the ability of energy policymakers to make adjustments. Policymakers would likely be hamstrung, though, if the brown-outs—whether more or less drastic than those projected for the summer of 2001—were caused by judicially-imposed limits that companies had to meet or be subject to massive, additional liability.¶Any such cost increases or energy shortages would have **broad ripple effects**. This is why GHG emissions have been a focal point of both national and international policymakers. If American businesses, from manufacturers to service companies, had to adjust to more expensive, less available energy, then they would be significantly disadvantaged. Already, the recent rise in energy costs has taken its toll on American companies' ability to compete internationally. **Thechemical industry**, for example, was once dominated by American businesses. But, as the Commerce Department has found, energy cost increases "have eroded the U.S. chemicals industry's competitive position,"217 with the United States' trade balance for chemicals declining from $16.8 billion in net exports in 1997 to $218 million in net exports in 2006.218 "Chemical plants are closing in the United States, as companies move their facilities and dollars to countries where natural gas is cheaper, particularly to the Middle East where natural gas prices are a fraction of prices in the United States."219 Metal, pulp, and paper

industries have had similar experiences.220¶Other sectors would be deeply affected, regardless of international competition. Consider the energy sectors themselves, as the natural gas industry alone employs over 600,000 workers directly and helps create an estimated three million other American jobs.221 The **transportation industry** would also be hit hard. Rising energy costs have been a significant factor in the recent challenges facing the **airline industry**; and for taxi cab and truck drivers whose incomes are modest, energy costs constitute a significant part of their expenses. Here, judicially-mandated reductions in GHGs could **directly determine their economic viability.222**

AT EU Advantage

Squo Solves

EU Relations High Now

David **O'Sullivan JUNE** 11**, 2015** David O'Sullivan is the EU ambassador to the U.S.

http://www.neurope.eu/blog/5-questions-with-david-osullivan-the-eus-ambassador-to-the-u-s/

The depth and breadth of the EU-US relationship. I already had a sense of the enormous scope of our relationship – recognizing the many transatlantic ties that bind Europe and the US together. But one thing is knowing about it; another is finding yourself in the midst of it all and realizing just how much work goes on between us on a daily basis. Of course, our ongoing trade talks remain one of our top agenda items, along with the close EU-US cooperation on solving the problem of Iran's nuclear proliferation and our sanctions on Russia in response to their illegal annexation of Crimea and interference in Eastern Ukraine. As a matter of fact, you will be hard-pressed to find a foreign policy hotspot where we don't at least consult with each other and often times find ourselves working hand-in-hand in close cooperation. And then you can start to look at all the other issues where on one level or the other we work together on a daily basis across the Atlantic – this ranges from research, science and space exploration to cooperation on **cyber security, counterterrorism and democracy promotion**. And relating to this, it has also struck me to what extent Americans "get the EU." We just had our Europe Day Celebration here and I was reminded of how America has steadfastly supported this unique European project of ours from the very beginning. And that US support for the EU and Americans' understanding of the need for Europe to unite is still there.

SQUO solves US commitment to NATO

Phil **Stewart 6/23** Phil Stewart is a Pentagon Correspondent and writer for Reuters

http://www.reuters.com/article/2015/06/23/us-usa-europe-defense-idUSKBN0P315620150623

The United States will pre-position tanks, artillery and other military equipment in Eastern and Central Europe, U.S. Defense Secretary Ash Carter announced on Tuesday, moving to **reassure NATO allies** unnerved by Russian involvement in Ukraine. Carter, during a trip to Tallinn, said the Baltic states — Estonia, Lithuania, Latvia — as well as Bulgaria, Romania and Poland agreed to host elements of this heavy equipment. Some of the equipment would also be located in Germany. The U.S. decision to stage heavy equipment closer to Russia's borders aims to speed deployment of rotating U.S. forces as NATO steps up exercises in Europe following Russia's annexation of Ukraine's Crimea region last year. Neighboring NATO countries, especially the former Soviet Baltic states with their Russian minorities, fear Russia could foment trouble on their territories. Moscow denies any such intention. Flanked by defense chiefs from the Baltic states, Carter quoted Obama during a visit to Estonia saying: "You lost your independence once before. With NATO, you will never lose it again." "That's because the United States and the rest of the NATO alliance are absolutely committed to defending the territorial integrity of Estonia, Latvia and Lithuania," Carter said. Under NATO's founding treaty, an attack on any member state

would constitute an attack on all parties. Russia accuses the West of violating post-Cold War arrangements by extending NATO to Russia's frontiers, something the West denies.

Estonian Defense Minister Sven Mikser welcomed the decision, on pre-positioning as did representatives from Latvia and Lithuania. Mikser said his nation was ready to host pre-positioned equipment and a rotational presence of U.S. forces. "We have reasons to believe that Russia views the Baltic region as one of NATO's most vulnerable areas, a place where NATO's resolve and commitment could be tested," Mikser said. The United States had not formally disclosed where in Europe the equipment would be stored before Tuesday but news reports about military planning triggered an angry response from Moscow ahead of Carter's trip to Europe this week. A Russian defense ministry official said stationing tanks and heavy weapons in NATO states on Russia's border would be the most aggressive U.S. act since the Cold War.

President Vladimir Putin, who denies any direct involvement in Ukraine and accuses the West of stirring tensions, announced Russia would add more than 40 intercontinental ballistic missiles to its nuclear arsenal this year. Carter has condemned Putin's return to what he considers Cold War-style rhetoric. A fact sheet provided by the U.S. military said the United States' pre-positioning would include about 250 tanks, Bradley infantry fighting vehicles and self-propelled howitzers. The amount of equipment that would be temporarily stored in each country would be enough to supply either a company, so enough for about 150 soldiers, or a battalion, or about 750 soldiers. Much of it is already in Europe, officials say. Carter said the equipment would move around as needed, to support exercises in Europe. U.S. officials say Ukraine has illustrated the importance of being able to counter "hybrid warfare", the blend of unidentified troops, propaganda and economic pressure that the West says Russia has used there. It also involves cyber warfare. Carter also announced plans on Tuesday to work with an Estonia-based NATO cyber center to help allies develop cyber defense strategies and critical infrastructure protection planning

Squo is solving U.S. German Relations

Elena **Berton 6/24** Elena is a journalist for USA Today.

http://www.usatoday.com/story/news/world/2015/06/24/france-wikileaks-hollande-reaction/29221613/

French officials may kick up a fuss publicly over allegations the United States spied on its leaders, but they are unlikely to take serious action against such eavesdropping. “These episodes highlight that dependency, highlight that powerlessness of the Europeans to really do anything more than reprimand the Americans," Jan Techau, director of Brussels-based Carnegie Europe, said Wednesday. "The Europeans rely on American security services to guarantee their security." Intelligence material from the U.S. is vital to European countries at a time when Islamic terrorism is on the rise in North Africa and the Middle East, and Russia is increasingly bellicose in Ukraine and Eastern Europe. WikiLeaks on Tuesday released documents claiming the National Security Agency in the U.S. spied on French President Francois Hollande and his two predecessors, Nicolas Sarkozy and Jacques Chirac. Obama to Hollande: You're not a spy target Michele Alliot-Marie, a former defense and foreign affairs minister under Sarkozy and Chirac, said on French TV that officials had long known the U.S. had the technical means to snoop into their conversations. "We are not naive," she said. Eric Denécé, director of the French Centre for Intelligence Studies, said the outcome from the current WikiLeaks scandal in France would likely

play out like the one in Germany. Denécé said he expected little more than angry comments from French politicians. Two years ago, NSA whistleblower Edward Snowden revealed the U.S. allegedly listened to German Chancellor Angela Merkel's cellphone calls. The disclosure led to a tense conversation between Merkel and President Obama, who denied the claims. WikiLeaks: U.S. wiretapped French presidents German prosecutors opened a probe into the allegations but dropped that investigation this month, saying it couldn't produce enough evidence to bring the case to court. "Even if Barack Obama tells Hollande, 'My dear friend, I won't listen to your calls,' we don't have any means to know it for sure," Denécé said. "If French and European top officials wanted to act, they would take far stronger positions against the U.S." But the latest WikiLeaks' release could also cause problems for German-French relations as Europe faces the possibility of a Greek exit from the eurozone. According to WikiLeaks, Hollande expressed disappointment over his recent talks with Merkel over Greece and sought to bypass her with secret meetings with minority members of her governing coalition. German government spokesman Steffen Seibert would not comment directly on Hollande's exchanges with Merkel, except to say the two leaders had not yet discussed the matter. Techau said Hollande's comments would probably not do serious damage to France's relations with Germany, unless "it turns out that German intelligence was helpful or somewhat helpful or reluctantly helpful with their American counterparts to spy on the French. That could have bigger ramifications."

Resilient

Relations resilient- spying didn't collapse them

Brown and Karnitschnig '15 [CARRIE BUDOFF BROWN AND MATTHEW KARNITSCHNIG, 6/7/15, Politico, Obama and Merkel make nice, http://www.politico.eu/article/obama-merkel-g7-alliance/]

President Barack Obama, sharing a breakfast of beer and pretzels with Chancellor Angela Merkel, declared the US-German relationship as "one of the strongest alliances the world has ever known."

By traveling here with Merkel and spending time with local Germans, Obama sought to put an end to almost two years of frosty public relations following a string of spying revelations. The visit capped an intensive effort by the two leaders to repair a relationship that grew tense after the disclosure that Washington had tapped the German chancellor's mobile phone.

"My message to the German people is simple: we are grateful for your friendship, for your leadership, we stand together as inseparable allies in Europe and around the world," Obama told a crowd of several thousand gathered in this small Bavarian village ahead of the G7 summit.

Much of the discord seemed to have been forgotten, at least on this bright sunny morning in the Bavarian Alps.

"Although it is true we sometimes we have differences of opinion from time to time, still the United States of America is our friend, our partner and indeed an essential partner with whom we cooperate closely," Merkel said. "We cooperate closely because **this is in our mutual interest**.

We cooperate because we need it. We cooperate because we want it, because we share this responsibility together.

EU-US relations resilant; no chance of breakdown

Xinhua 6/25/15. "What's after WikiLeaks Revelations of NSA Spying on Paris?" *CD*. China Daily, 25 June 2015. Web. 26 June 2015. Xinhua is the official press of the People's Republic of China(PRC)

Facing the National Assembly, **French** Prime **Minister** Manuel **Valls** **asked the U**nited **S**tates **to repair the damage that the tapping has caused. "The US must recognize** not only the **dangers** **such actions pose** to our liberties, but also do everything, **and quickly, to repair the damage it causes to the relations between allied countries and between France and the United States**," Valls said Wednesday. "**The reported spying creates a discomfort**, because there is a breach of trust. **But, it is absolutely important and vital for both countries to maintain their partnership, given that there are many sensitive issues** such as Ukraine, operations in Iraq **which** **remained** **unsolved**," Ulysse Gosset, journalist specialized in foreign politics told news channel BFMTV. To Edwy Plenel, French political journalist and editor-in-chief of news website Mediapart, which reported WikiLeaks revelations, it is "a real problem of loyalty in international relations between allies". French Foreign Minister Laurent Fabius summoned US ambassador Jane Hartley for an explanation on "Espionage Elysee" of WikiLeaks. Urging a strong answer to United States' spying on Paris, critics from the right and left wing parties called for retaliation. But, according to the ruling Socialists, a diplomatic spat is not in the air. "**In the face of threats that we face and given the historic ties linking us, we have to keep a perspective. We're not going to break diplomatic ties**," said Stephane Le Foll, the government's spokesman after a weekly cabinet meeting. Following the allegations of US spying on French interests, which had emerged for the second time in two years, Le Foll announced a senior French intelligence official would be dispatched to the United States "to verify this spying has finished." "Between allies, this is unacceptable and incomprehensible. France does not spy on its allies," he stressed. A statement from the US National Security Council said it was not targeting and would not target Hollande's communications, but did confirm that spying had taken place in the past. However, after a phone discussion between French president Francois Hollande and his American counterpart Barack Obama, Elysee seemed much calmer but hazy. "President **Obama reiterated unequivocally his firm commitment to end the practices that were allowed to happen in the past and that were unacceptable among allies**," said the statement of the Elysee, without clarifying France's reaction after the phone discussion. **But "the French intelligence officials will travel soon to Washington to deepen** the **cooperation**", according to the statement.

US-EU relations resilient, they need the military power

Ben **Knight** 13/09/**2010** Ben knight is a journalist for the Guardian and Deutsche Welle

http://www.dw.com/en/tension-in-us-eu-relations-is-real-but-not-new-experts-say/a-5988928

It's no secret that transatlantic relations have been slightly chilly in the two years of Obama's presidency. The US president ruffled feathers in Europe last May by backing out of a European summit in Madrid, and European diplomats have complained that under the Obama administration transatlantic issues have sometimes taken a backseat to US-Pacific region affairs. Henning Riecke, program director at the German Council on Foreign Relations (DGAP), argues that Obama's interest in Europe was always there, but has waned for different reasons. "In the first year of his presidency, Obama went over to Europe a few of times," he told Deutsche Welle. "It ended in a huge climax of travelling, when he went to NATO, to the London financial summit, as well as to Prague, to give his arms reduction speech. That was quite impressive. One could ask, why didn't he continue to do so? And I would argue that has something to do with his domestic agenda - the financial crisis, health reform, and so on."

But Riecke admits that the move away from Europe is part of a long-term trend. "The Americans look at partners with regard to the capabilities they have," he said. "The EU is a strong partner

economically, but when it comes to political questions - like Iran, coping with Russia, even the financial crisis, it was not easy to come to terms with the EU." But that does not necessarily mean that the US has spurned Europe. "Is this a move away from Europe and a move to new partners?" Riecke asks. "I wouldn't say so. It is clear that the partnerships with China and India are important for the US, but when it comes to doing things together - for instance in Afghanistan, the Europeans are still the first-choice partners." American soldiers in Afghanistan Europe is still the partner of choice for US military missions Perhaps it is the EU itself - as a diplomatic body - that has most hampered transatlantic relations. The EU's attempts to present itself as a unified bloc in its foreign relations are occasionally appear rather painstaking. Perhaps the US is simply tired of waiting while Europe tries to herd its diverse member states into a single strategy. Ulrike Guerot, senior research fellow at the European Council on Foreign Relations, suggests that the problem is much older and deeper than Obama's tenure. "It's only been since 1989 or 1990 that the EU has tried to professionalize, or even 'Europeanize' its foreign and security policy," she told Deutsche Welle. "Since then there has always been this effort to be taken seriously by the US. The problem is that it never managed to, and then came the Iraq war, which completely split the EU apart." In Bush's second administration, which began in 2004, the US did make clear efforts to recognize the EU as a serious player. But even then, the enduring tensions between NATO and the EU over security policy never failed to surface when actual issues arose. "Whenever the EU tried to establish its security policy, fears kept arising that it was trying to rival NATO and the US," said Guerot. Another problem is far more practical. "The EU does want to be more independent from the US in its foreign policy," said Guerot. "But it always comes up against the problem that it doesn't have the military capability to do so. That became clear in Bosnia. Whenever some kind of military intervention is needed, it can't be done without the US." This leads to persistent tensions within the EU about what should and shouldn't be done with US cooperation. The US, for its part, is also consistently in its own quandary about the EU. "On the one hand the US is always very anxious when the Europeans want to do something on their own," Guerot said. "But on the other it wants the EU to develop more independence, because the US simply doesn't want to worry about places like the Balkans and Georgia anymore." This, Guerot says, has been the central problem of US-EU relations ever since 1990, a year that marked the beginning of the decline of NATO and the start of the EU's constant struggle to assert itself. Seen from this perspective, whether Obama skips the odd EU summit or snubs a dinner party at Nicolas Sarkozy's presidential villa once in a while will not greatly affect the underlying tensions.

AT Germany Examples

Germany spies with us – no fallout from NSA tapping German phones

Eddy 4/30 (Eddy, Melissa. "Germany Is Accused of Helping N.S.A. Spy on European Allies." *The New York Times*. The New York Times, 30 Apr. 2015. Web. 24 June 2015. http://www.nytimes.com/2015/05/01/world/europe/germany-is-accused-of-helping-nsa-spy-on-european-allies.html) ʕ ⌒•ᴥ•ʔ⌒♥eve

BERLIN — Chancellor Angela Merkel's government is fending off allegations that the German secret service helped the United States to spy on European partners and companies, nearly a year after Ms. Merkel expelled the top American spy in a rare display of anger over revelations of widespread United States intelligence operations in Germany. Over the past week, the German news media has reported that the country's foreign intelligence agency, known by its German

initials, B.N.D., gathered information on European companies at the behest of the United States National Security Agency for years, citing confidential documents and government experts. The aviation giant Airbus said Thursday that it had filed a legal complaint against unknown persons over acts of criminal espionage and was seeking information from the German government in the wake of the reports. On Monday, the newspaper Bild named the aviation company as a target of the American agency. Continue reading the main story RELATED COVERAGE Obama Acknowledges Damage From NSA Eavesdropping on MerkelFEB. 9, 2015 Obama Sends Aide to Soothe German AlliesJULY 22, 2014 In Rome in March, people waved at the motorcade as President Obama went to meet Pope Francis at the Vatican.A Survey Says: Eavesdropping Hasn't Harmed Image of U.S.JULY 21, 2014 Germany Investigates Alleged NSA Merkel Phone TapJUNE 4, 2014 "We are aware that as a major player in this industry we are a target for intelligence activities. In this particular case there appears to be a reasonable suspicion of alleged industrial espionage," Airbus said in an emailed statement. "We are alarmed by this." Germans hold privacy in high regard, given their history of police states under the Nazis and, in the old East Germany, the Communist Party. In 2013, the country displayed a collective outrage over revelations that American intelligence agencies had been monitoring Ms. Merkel's cellphone conversations and German telecommunications. The German news media *have further said* that the **Merkel government knew of cooperation between the B.N.D. and the American spy services**, but withheld that information from a parliamentary committee assigned to investigate the affair. The chancellor says her office, which oversees B.N.D. operations, has cooperated fully with the lawmakers' inquiry, but one of her strongest allies, Thomas de Maizière, who was Ms. Merkel's chief of staff from 2005 to 2009, is facing allegations that he lied to Parliament about cooperation with American intelligence agencies. "I strongly reject allegations the government did not tell the truth," Steffen Seibert, Ms. Merkel's spokesman said Wednesday. Mr. Maizière, now the interior minister, has consistently denied misleading Parliament.

non-UQ -- Merkel and US have made up, no more in-fighting – our ev postdates

Davis, New York Times, 6/7 **Julie Hirschfield Davis, June 7th, 2015, "Over Beer, Obama and Merkel Mend Ties and Double Down on Russia"** http://www.nytimes.com/2015/06/08/world/europe/on-sidelines-of-g-7-meeting-obama-and-merkel-strengthen-ties.html?_r=0 PJL~KKF

KRÜN, Germany — President Obama sought to smooth over tensions with a crucial ally, bonding on Sunday with Chancellor Angela Merkel of Germany over beer, sausages and **their shared determination to confront Russia over its aggression in Ukraine**, as he declared her a "great friend and partner" during a summit meeting of world leaders Greeting Ms. Merkel with an embrace and kisses on both cheeks near Krün's picturesque town square at the foot of the Alps, Mr. Obama emphasized the ties that connect Germans and Americans despite a troubled history. **"The fact that all of us are here together today is proof that conflicts can end, and great progress is possible,"** Mr. Obama told about 800 townspeople, many of whom were wearing traditional dress. "We stand together as inseparable allies, in Europe and around the world." The meeting came at the start of the Group of 7 conference Ms. Merkel is hosting at a castle and luxury resort, where the leaders of seven major industrialized nations are meeting to discuss the global economy, climate change, terrorism and as Mr. Obama said, "standing up to Russian aggression in Ukraine." He and Ms. Merkel agreed that economic sanctions on Russia for its actions in Ukraine should not be lifted until a cease-fire accord there had been fully carried out and Moscow respected Ukraine's sovereignty. The White House intensified its criticism of President Vladimir V. Putin of Russia as Mr. Obama pressed for a firm commitment from Europe during the two-day gathering to preserve the sanctions, along with a broader statement of resolve to punish Russia for any further escalations in Ukraine. Russian-backed separatists have been clashing violently with Ukrainian forces and massing heavy weaponry near the border, prompting the White House to say that the cease-fire had been violated. The escalation apparently extended offshore on Sunday into the Sea of Azov, where a Ukrainian coast guard speedboat exploded after striking a mine near the port of Mariupol. With the European Union facing a vote this month on whether to continue the sanctions, Mr. Obama has made stiffening resolve on the issue an objective. "We think that there can be a peaceful, diplomatic resolution to this problem, but it's going to require that Europe, the United States and the trans-Atlantic partnership, as well as the world, stay vigilant and stay focused on the importance of upholding the principles of territorial integrity and sovereignty," Mr. Obama said during a meeting with the British prime minister, David Cameron. The meetings unfolded after a period of strain between Mr. Obama and Ms. Merkel. Though the two have an unusually close rapport and strong working relationship, their bond has been tested by complicated intelligence ties that have proved to be a political vulnerability for the chancellor. Those strains did not prevent her from inviting Mr. Obama to tour a historic village here before the summit meeting opened, a carefully choreographed event **showcasing their friendship**. "Although it is true we sometimes have differences of opinion today from time to time," Ms. **Merkel said, "the United**

States of America is our friend, our partner and, indeed, an essential partner." Ms. Merkel is facing harsh criticism here that she is doing the bidding of the National Security Agency, after allegations surfaced in April that Germany's foreign intelligence service was monitoring European companies and perhaps individuals at the American intelligence agency's behest. The uproar is not the first time spying has become a bone of contention between Mr. Obama and Ms. Merkel. In 2013, documents released by Edward J. Snowden, the former N.S.A. contractor, suggested that the agency had tapped Ms. Merkel's personal cellphone for a decade. That practice, once revealed, was halted by the president. And last summer, tensions grew when Ms. Merkel's government expelled the C.I.A. station chief in Germany after Berlin said it found evidence of American spies recruiting at least one German official. The N.S.A. surveillance issues have "obviously cast a very dark shadow on their personal relationship," said Julianne Smith, a former deputy national security adviser to Vice President Joseph R. Biden Jr. and now director of the Strategy and Statecraft Program at the Center for a New American Security in Washington. But there is little doubt that Mr. Obama, who tends to prioritize strategy and shared interests over personality in his relationships with world leaders, needs Ms. Merkel, and that she needs him. Ms. Merkel has been important in rallying Europe to stay united against Russia's interference in Ukraine, even as the economic sanctions designed to pressure Mr. Putin have placed political strain on her and many of her counterparts. "The commitment required by our European partners to implement and maintain these sanctions is significant," said Josh Earnest, the White House press secretary. "They have economies that are more integrated with Russia than the United States has, and so we recognize that many of the countries that we're counting on to continue to enforce these sanctions are countries who do so at some sacrifice to their own economy." The White House said Mr. Obama and Ms. Merkel also discussed their shared support for a major trans-Atlantic trade deal; the prospect of teaming up to reach an agreement on climate change by reducing global greenhouse gas emissions and countering the Sunni militant group the Islamic State. "These are the priorities in our relationship," Mr. Earnest said. During Mr. Obama's nearly 45-minute meeting with Ms. Merkel on Sunday, neither raised the issue of N.S.A. surveillance, Mr. Earnest said, while more than half of the session was taken up with talk of Russia and Ukraine. "They realize that they continue to share a common agenda on Russia, on a number of fronts," Ms. Smith said. The president "continues to reach out to her," she said, adding, "I think they still trust each other." At the same time, a year after the seven world powers banded together to kick Russia out of their group, the White House seemed determined to use the gathering to portray Mr. Putin as an international pariah. "Russia has essentially thumbed their nose at the commitments that they made" in a cease-fire agreement with Ukraine, Mr. Earnest said, indicating that Moscow was supplying, leading, training and otherwise backing separatists in Ukraine. "Russia's failure to live up to those commitments is what leads to their increasing isolation and the increasing costs being imposed on their economy." Any disputes seemed remote on Sunday as Mr. Obama and Ms. Merkel sampled local food and strolled through town greeting men wearing lederhosen and women in dirndls. The president halfheartedly asked Ms. Merkel if the meetings, which are being held at a resort nearby, could instead take place in the small alpine town's center, over beer. "It was a very fine beer," Mr. Obama said on his way out of the village. "I wish I was staying."

Non-UQ – Merkel has ended investigation against US NSA spying, forgiven Obama

World Bulletin 6/12 **June 6th, 2015, "Germany drops US spying probe over G7 friendship"** http://www.worldbulletin.net/news/160586/germany-drops-us-spying-probe-over-g7-friendship PJL~KKF

Germany's top public prosecutor closed a year-long investigation into the suspected tapping of Chancellor Angela Merkel's cell phone by U.S. spies, saying there was a lack of evidence that would stand up in court. Dropping its probe in a case that had caused strains between Germany and the United States, the prosecutor said it could not find evidence backing allegations from former National Security Agency contractor Edward Snowden that Merkel's phone was bugged. "The accusations made would not stand up in court with the means available for criminal proceedings," the federal prosecutors office in Karlsruhe said in a statement. "The vague remarks from U.S. officials about U.S. intelligence surveillance of the chancellor's cell phone - i.e. 'not any more' - are insufficient evidence". Merkel's spokesman Steffen Seibert declined to comment on the prosecutor dropping the probe. "The federal prosecutor has made his decision," he said. "Such a decision should not be commented on by the government." Federal Prosecutor Harald Range had launched the probe last June, saying there was preliminary evidence to show U.S. intelligence had tapped the phone. But he said at the time there was not enough clarity to bring charges. "The document presented in public as proof of an actual tapping of the mobile phone is not an authentic surveillance order by the NSA," he said in December. "It does not come from the NSA database. There is no proof at the moment which could lead to charges that Chancellor Merkel's phone connection data was collected or her calls tapped." Range also said neither a reporter for German news magazine Der Spiegel who presented the document, nor Germany's BND foreign intelligence agency, nor Snowden had provided further details to his office.

NSA Spying doesn't collapse relations with Europe – Hypocrisy, Expected, Cooperation beneficial, Ukraine

EUCE '14

(European Union Center of Excellence – University of North Carolina, "The NSA Leaks and Transatlantic Relations," http://europe.unc.edu/wp-content/uploads/2014/07/Brief_1407.pdf SM)

Internationally, Snowden's leaks dealt a heavy blow to the US, significantly damaging relations with many countries, such as Brazil. International opinion weighted in heavily against the indiscriminate spying apparently being carried out by the NSA, and in December 2013 the UN General Assembly approved a resolution on the 'Right to privacy in the digital age'. **The fact that the leaks did not lead to a real fallout between the US and Europe is testimony to the strength of transatlantic bonds.** Negotiations over the TTIP began despite the European Parliament's calls for them not to; data sharing was not suspended, and Europe did not grant Snowden asylum. During his state visit to the US in February 2014, Hollande strove to emphasize the importance of bilateral relations, and concerning the NSA revelations he stated: '**Mutual trust has been restored'**.13 Merkel also sought to ease the tension caused by the NSA affair, despite growing sympathy for Snowden in Germany. In other European states, such as Poland and Estonia, there was only limited fallout in the first place, seeing as relations with the US were always prioritized. It is hard to find any evidence that co-operation thus far has been meaningfully affected: it continues on a daily basis on issues such as terrorism and organized crime, but also and in broader terms on issues of international diplomacy such as Ukraine, Syria and Iran. More broadly, the EU and US continue to promote good governance and the rule of law, seeking to

enhance the structures of global governance and to promote a rules-based global order. Despite this, it may be argued that a significant rift has opened between the US and the European Parliament. From the first days of the leaks the Parliament took a strong stance, calling for suspension of agreements with the US in various areas. Later on, it invited Snowden to present evidence on the NSA program, and the session was eventually held via video link in December 2013, despite attempts by some Conservative MEPs to prevent this. In March 2014, it passed a resolution to suspend a series of data sharing agreements with the US. 14 The European Parliament's resolutions are not legally binding, but its favorable vote will be necessary to approve the TTIP agreement. While the parliament is unlikely to reject an agreement that otherwise has full European backing, its critical stance could prove to be an obstacle to ratification, as shown by the resolution adopted in March. Four sets of factors explain why the revelations only caused limited fallout. Firstly, and as noted earlier, European grievances over the NSA's bulk data collection were somewhat hypocritical: indeed it quickly became apparent from the leaks that many European intelligence agencies were also involved in large-scale data mining. Moreover, many European intelligence agencies, including Germany's and France's, were involved in more or less extensive co-operation with the NSA itself. Mass data gathering may have shocked the European and American public, but for European governments it was less surprising. This explains why the first wave of revelations passed without causing significant tension between European capitals and Washington. Secondly, while the second and third waves of leaks were far more damaging than the first in diplomatic terms, they were not completely unexpected. In fact, although shocking, it did not in retrospect seem too surprising that states would spy on each other to better understand their intentions and predict their behavior. Thirdly, European capitals' room for maneuver was relatively limited: blocking co-operation with the US on counterterrorism issues would have been a symbolic but ultimately self-defeating step. The same is true for halting the negotiations on the TTIP. In fact, it has been estimated that an ambitious agreement could boost the EU economy by 120 billion euros a year, equivalent to about 500 euros per household.15 The EU simply cannot afford to lose the opportunity to make economic gains of such importance at a time when Europe's economy is ailing. European room for maneuver was also limited by internal divisions: the leaks had revealed that the British intelligence community (and GCHQ in particular) was practically working as part of the NSA and had been carrying out extensive surveillance operations on European partners. The British position, along with the unwillingness of many states in Eastern Europe to challenge the US, meant that a common European stance was difficult. Moreover, even if Europeans had decided to take self-defeating steps to symbolically condemn US actions, **there was no reason to believe American spying would have been curtailed** or terminated. The final factor in smoothing the European reaction and easing tensions was the start of the Ukrainian crisis in February/March 2014. The crisis was a sign of growing instability in Europe's neighborhood, and a reminder of the US's enduring importance in European security. From the start of the crisis, the EU and US have striven to emphasize transatlantic unity in view of an external challenge, and therefore tried de-emphasize the fallout

from the NSA affair.

Relations good now

U.S.-EU relations remain high- NSA spying had no affect

Mix 15 (Derek, 2-3, "The United States and Europe: Current Issues", Congressional Research Service, https://www.fas.org/sgp/crs/row/RS22163.pdf)

Other analysts argue that the purported U.S. surveillance operations remain a point of friction but∂ that tensions have proven manageable and do not pose a sustained threat to the overall∂ transatlantic relationship. Those holding this view contend that much of the outrage expressed by∂ European leaders has been for domestic public consumption. They also note that while senior∂ European officials may not have been familiar with the details of U.S. surveillance activities,∂ many were well aware that their own security services conduct various surveillance operations∂ and often work closely with U.S. intelligence services to help prevent terrorist attacks and other∂ serious crimes in Europe. In addition, especially given the potential threat posed by the Islamic∂ State and returning foreign fighters, officials indicate that **cooperation between U.S. and∂ European intelligence and security services has continued uninterrupted despite any loss of trust**∂ at the political level.

AT Relations Impacts

EU collapse inevitable- Franco-German collapse proves

Johnson 13 (Paul, 6-23, "United Europe- bad idea?", Forbes, http://www.forbes.com/sites/currentevents/2013/06/05/united-europe-bad-idea/)

The consensus is that the EU leadership's countless meetings on the issue have actually made matters worse. This is partly because of the characters of those involved. The French president, Francois Hollande, and the German chancellor, Angela Merkel, don't get along. Hollande is overwhelmed by his own internal problems, particularly the evidence of corruption and rule-breaking by members of his government. Merkel is disgusted by the way Hollande runs his affairs and can barely hold her temper when they meet. Hollande's failure has stiffened Merkel's resolve to stick to her formula of spending cuts and austerity, which, she insists, is the only way to eliminate the EU's enormous deficits.∂ The result has been a breakdown in Franco-German friendship, accompanied by acrimony and mud-slinging. **This is a very serious matter, for the Franco-German axis is the essential mechanism that allows the EU to work.** Unless it functions smoothly the Union is bound, sooner or later, to **dissolve**.∂ There isn't much chance of other members bringing the French and Germans together. Spain is crippled by its floundering economy. Italy has only recently managed to form a co alition ministry and is in no position to take its eyes off its own domestic woes. The smaller states, led by Greece, are bitterly anti-German and blame Merkel for all the sacrifices their previous profligacy is now forcing them to make.∂ The Germans themselves believe that if Germany were on its own and didn't have to bail out bankrupt states like Ireland, Portugal and Greece the banking crisis would be history by now– a pretty universal view among business leaders. Disillusionment among disgruntled voters is seen in the emergence of new and often extreme political parties, which are invading the cozy consensus that has hitherto kept countries loyal to rule by Brussels. Hence, no British leader can afford to be seen as being in favor of the EU as a working system. The Liberal Democrats remain keen but are in real danger of being wiped out at the next elections. The Labour Party, in order to solve its own disagreements, is quite capable of turning on the EU. And the Conservatives are mortally threatened by the U.K. Independence Party, which is ferociously anti-EU.∂ U.S. policy ought to take note of the general air of hostility toward Brussels. Mr. Obama faces the prospect of

Britain leaving the EU and of France, Germany, Italy and Spain all weakening their links. This will have little effect on American prosperity, but it is a return to realism that Washington should welcome, if quietly. The United States is a concept that works very well, even in bad times. But that's no reason to think its structure can be superimposed with success on any other part of the world, particularly when times are terrible.

Eurozone crushes all other foreign policy issues- no other focus possible

Popescu 11 (Nicu, Nicu Popescu, was senior research fellow at ECFR from 2007 to 2011, "how the Eurozone crisis affects EU power", European Council on Foreign Relations, http://www.ecfr.eu/article/commentary_how_the_eurozone_crisis_affects_eu_power)

It is clear that the euro crisis has had and will have huge implications for EU foreign policy. A lot depends on what happens in the next months – the solution to the Greek or Italian problems, the contours of a multi-speed Europe and how messy a solution or non-solution to the euro crisis will be. Things can get worse, or they can get better. But it is already possible to take a snapshot of the foreign policy implications of the Eurozone crisis. The picture contains a push to the background of all foreign policy issues, followed by fewer foreign policy resources and a coma for EU soft power, made worse by the fact that the EU understanding of power is so unhedged. ∂1) Less time for foreign policy ∂When your house is burning, this is a bad time to be chatting or engaging neighbours. When political leaders and administrations are engaged full time in managing the economy – saving the euro, reducing public spending or stemming the tide of unemployment, **foreign policy is pushed even more to the bottom of the list of priorities.** Leaders simply have less time and desire to understand or strategise about how to react to foreign policy events – be it Putin's return to the presidency, the latest turn in the political mess of Egypt, Tunisia or Ukraine. And foreign policy issues which sometimes need not just competent diplomatic management, but also high-level political drivers, is relegated to working level – where many issues cannot be solved. Foreign policy matters are then seen like issues that need to be put aside, postponed, thrown under the carpet and get out of the way until more urgent problems are solved.∂2) Less money ∂Foreign policy is costly. Some money need to be spent on military resources and other – on assistance. Both of these types of spending buy the EU various degrees of influence, power and diplomatic weight.∂The amount of EU spending for foreign policy is the result of a trade off between moral commitments (to help those in need of humanitarian assistance, post-colonial guilt), self-interest (stabilise countries, use political influence to promote economic interests, give aid to reduce emigration) and politicians' accountability to voters. With a growing pie – politicians and decision-makers could get a decent balance between these various imperatives. But with a shrinking pie, a more egoistic narrow-mindedly voter oriented behaviour is likely to come to the forefront. This will restrain EU member states' desire to spend money internationally. The increasing number of those affected by unemployment or salary cuts might suddenly become much less altruistic internationally and put increasing pressures on elites to spend money at home. At the end of the day foreign aid recipients don't vote and a generously funded foreign policy is likely to be increasingly seen as something of a luxury.∂All this is a huge problem for all great foreign policy powers, but especially for the EU, which in the absence of hard power has relied so much on economic power, conditionality and financial aid as its main foreign policy tools. On this the EU is like an investor with a shockingly undiversified portfolio of investments, to use Nick Witney's parallel.∂The EU takes a lot of pride in the fact that it is the biggest donor in the world. But even before the acute phase of the euro-crisis the political relevance of EU aid in the emerging world was undermined by alternative sources of funding for many of the emerging

countries –from China,Russia, or their own burgeoning economies. Now the EU not only has to compete for political influence with other aid donors which is debilitating in itself, but might also face the need to reduce foreign policy funding. This is EU's foreign policy double dip: the loss of relative influence compared to the other powers (due to their rise), supplemented now with loss of foreign policy resources not just in relative, but also absolute terms.∂ A side-effect of this problem also relates to market-access related conditionality. For decades the EU used access to the EU market as a carrot which is exchanged for all kinds of concessions – economic or political (such as the human rights conditionality in EU association agreements). But now, this tools might also become problematic on two accounts. First, the 'carrot' of EU's stagnating market might become less attractive in relative terms (again not least by comparison with faster growing alternative markets). And second, the 'carrot' might be put out of sight for some external partners as a result of potential protectionist backlashes inside the EU.∂ While other powers, such as the US or Russia are also affected by the crisis, in financial dire straits they are still left with raw military power or assertive high-quality diplomacy. The EU has little hard power, fewer money, a half-baked External Action Service and a disparaged collection of divided national foreign ministries. This is roughly like the saying (from 'don't-remember-which-country', but probably China) that 'in a famine a fat man looses weight, and ∂ a thin man dies'.∂ 3) The euro-crisis of soft power∂ The third serious effect of the euro-crisis is on EU soft power, which is supposedly based on EU attractiveness as a prosperous, well-functioning model. I have argued before that 'soft power' has an element of free-riding to it. For the last twenty years the EU's main foreign policy occupation has been teaching other how to live and making them want what the EU wants. This foreign policy model was reaching its limits already before the crisis as it was hitting the limits of cultural fascination with Europe which was much more valid in Central Europe in the 90s and the Balkans, than it is in the Middle East or much of the post-Soviet space (see ECFR report on the Limits of Enlargement-lite). But now this foreign policy model is evaporating. Few, if any foreign policy partners of the EU are likely to aspire to be like Europe. The fastest growing economies in Europe in 2010 were Turkey, Belarus and Moldova. Hardly a good advertisement for EU's economic model.∂ Again, the crisis of 'soft power' is costlier for the EU than for other powers like the US, whose 'soft power' also had to suffer as a result of the crisis. The US at least retains hard power, whereas the EU had no hard power, and its 'soft power' is in a coma.

EU faces too many internal problems to combat global issues

Menon 15 (Anand, Professor of European Politics and Foreign Affairs at King's College London in the United Kingdom, "the five things that everyone should know about the European Union, http://www.socialeurope.eu/author/anand-menon/)

Rather than being the all-powerful behemoth frequently alluded to by its critics, the European Union is a fragile – indeed perhaps uniquely fragile – political system. It relies on the consent of member states without whose acquiescence decisions would neither be taken nor implemented. It remains one of the great miracles of modern day international politics that these states acquiesce in respecting and implementing decisions they may have opposed and which then take precedence over national legislation. The EU is not a normal federal system. Its central institutions are weak, whilst its constituent parts are sovereign nation states. It cannot act like the United States and call up the National Guard in the event that a member state refuses to implement European law. It rests on consensus.∂ 2. The flip side of this is that member states decisively shape what the EU can and cannot do. For all the talk of qualified majority voting, of

member states being over-ridden either by their peers or by an all powerful and power hungry European Commission, the fact is that it is in no one's interests to steamroll national governments. Even where majority voting is possible, member states prefer to seek consensus. And in the event that a national government signals that important domestic interests are at stake, a search is launched for compromise. The growing power within the EU system of the European Council – the forum within which Heads of State and Government meet to thrash out difficult decisions – bears eloquent testimony to the growing importance of national governments in EU decision making.∂ 3. Whilst member states act as a powerful check on the EU's ability to trample over their interests, other factors militate against the Union over-reaching its authority. The most obvious of these is its limited democratic authority. The experiment of assuring democratic legitimacy via the European Parliament has failed, as voters either fail to vote or register their protests in ballots cast for insurgent parties. Member states remain the basis of democratic political accountability in Europe. As European decisions impact on more and more politically salient aspects of national political and particularly economic life, a sense of disempowerment serves to drive popular dissatisfaction with European integration. ∂One would hope that the travails of recent years have hammered home the pertinence of the aphorism 'integrate in haste, repent at leisure,' but it is hard to have the requisite degree of faith in our political leaders. All of which, of course, confronts these same leaders with a significant dilemma. Whilst structurally limited, European integration remains profoundly necessary. Europe is a continent of small states with highly interdependent economies. Yet a neat solution to the paradox of stubbornly national politics coexisting with a pressing need for regional collaboration has yet to be discovered.∂ 4. Frustration at a perceived lack of control over decisions that profoundly and intimately impact on national political and economic life has played its part in stoking a surge in popular euroscepticism across the continent. So too, has the fact that European integration does not necessarily serve the interests of all its citizens. Eurosceptics and Europhiles alike make grand claims about the costs or benefits of EU membership. But these vary dramatically both between and within member states. It is not hard to understand growing resentment in southern Europe. Nor, however, is it the case that the impact of regional integration has been uniformly beneficial even in the north. Economists accept that trade liberalization may well have the effect of hastening de-industrialization. This spawns losers as well as winners. In this sense, European integration has accelerated and accentuated the impact of globalization, favouring some sections of society over others. To date, social provision at the EU has failed to compensate for this adequately. Perhaps it will do so in the future. But for the moment, there is nothing irrational about skepticism concerning the EU's impact.∂ 5. Finally, the Union remains critically unable to address many of the most pressing challenges currently confronting it. Originally created to ensure that no European power would again wield hegemony over its partners, the EU remains lumbered with an institutional system designed to that end. We can debate later whether the EU has managed to ensure peace within Europe (it always seems to me that proponents of this view tend to overlook the role of the United States and, yes, Soviet Union in ensuring Europeans did not squabble too much amongst themselves). For now, its roots in a desire effectively to manage Europe's internal problems severely hamper the Union's ability to confront a world in which many of the most pressing challenges facing it are external. Whilst Russia uses military force to redraw European territorial borders in the east, the Middle East is in flames with, as a consequence, a wave of migrants seeking safety via desperately dangerous dashes across the Mediterranean. Simultaneously, the United States seeks to refocus its attentions on Asia, leaving Europeans to deal with problems in their own near abroad.∂

NATO Bad- War

NATO increases conflict and prevents peace

Prashad 12 (Vijay, Chair of South Asian History and director of International Studies at Trinity College in Hartford, Conn, 5-15, "why Nato is bad for the world", The Progressive, http://www.progressive.org/why_nato_bad_for_world.html)

With the demise of the Soviet Union, there has been no check on NATO's expansion. The organization serves as the military arm of the Western powers (Canada, France, Germany, Italy, Japan, United Kingdom and the United States). They called themselves the G7, until they welcomed Russia into what became the G8 in 1997, when under a pliant Boris Yeltsin it seemed to have been subordinated to the U.S. agenda. (Russia has since been a less reliable member of the group.) NATO and the G8 have used their political and military power to impose their social and economic vision on the planet. Their economic agenda (neoliberalism) has tilted the social wealth of the planet toward the global 1 percent and put the interests of finance above that of social needs. This is the reason why the Global Hunger Index of 2011 finds that every year 2 million children die of chronic malnutrition (that's four children every minute). It is the reason why one-fourth of the world's children do not get enough nutrients to grow properly, including to develop their intellectual capabilities. This combination of ideological and military power has helped deliver social wealth into the hands of the global 1 percent, which now owns 40 percent of global assets. NATO's guns and the G8's political power has allowed the 1 percent to push for privatization of social resources and a general austerity for the world's peoples. It is thanks to the G8 and NATO that bankers are first in line for bailouts while the people are held at bay. **Genuine peace and justice cannot come to the world through the agenda put forward by** the G8 and **NATO**. We demand an alternative world, a world founded on the principles of social justice and the social good.

NATO pulls U.S. into other countries' affairs- makes problems worse

Bandow 12 (Doug, Senior Fellow at the Cato Institute. A former Special Assistant to President Ronald Reagan, a Senior Fellow in International Religious Persecution with the Institute on Religion and Public Policy. The author and editor of numerous books, including Foreign Follies: America's New Global Empire, The Politics of Plunder: Misgovernment in Washington, and Beyond Good Intentions: A Biblical View of Politics. I am a graduate of Florida State University and Stanford Law School, 8-13, "How Nato expansion makes America less safe", Forbes, http://www.forbes.com/sites/dougbandow/2012/08/13/how-nato-expansion-makes-america-less-safe/3/)

Admittedly, Americans are constantly tempted to intervene to "fix" foreign problems. But the U.S. has no significant interests in the region. Why put Americans' lives, prosperity, future, and very existence on the line for the irresponsible government of another nation, no matter how worthy its people might be? Washington's first priority should be to protect the lives, freedoms, and territory of its own people. War should be a last resort, not just another policy choice. Georgians deserve Americans' friendship, not America's protection. With the end of the Cold War, the U.S. can go back to being a normal country with a defense policy based on defense. That means fewer military commitments, a smaller force structure, and lower military outlays.

That means leaving rather than expanding NATO. Washington should again make peace America's principal foreign policy objective.

NATO Bad- Russian Adventurism

Strong NATO relations leads to Russian Conflict

Polina **Tikhonova 6/24**

Polina holds a Master's Degree in English Philology from the University of Oxford and a Bachelor's Degree in Journalism from the Saint Petersburg State University.

http://www.valuewalk.com/2015/06/nato-russia-nuclear-weapons/

Last week, both Russia and the West threatened each other with steps that would bring them closer to stationing their permanent forces at the bordering areas and thus give life to a serious confrontation. The agreements that used to suppress any nuclear weapons race, are now at risk. It might seem that the current confrontation between NATO and Russia is just a show off, in which every side is trying to show its people and the other side that it is not going to back down. The leaders of both sides believe that this sort of confrontation can be easily contained and brought to an end any moment. However, it seems like this kind of confrontation begins to grow too big and might soon become beyond control. Pentagon has not dismissed the reports in the media that said the United States is coming up with a plan to station heavy military equipment in the states of Eastern Europe that neighbor with Russia. Russia, in turn, claims that this kind of activity violates the agreement of demilitarization in the region. Just a week ago, Russian President Vladimir Putin announced that Russia will add 40 new intercontinental ballistic missiles to its nuclear arsenal this year. The move was widely denounced in the West. Some might even say that many top Western officials started freaking out about it. "**Some of Russia's recent actions haven't been made since Nazis**" Jens Stoltenberg, secretary general of NATO, responded to the claims and announcements made at the conference by saying that Russia is unjustifiably spreading panic. "This nuclear sabre-rattling of Russia is unjustified," he said. "It's destabilizing and it's dangerous." Lt. Gen. Stephen Wilson, the man responsible for U.S. ICBMs and nuclear bombers, said at a recent briefing in London that Russia has "annexed a country, changing international borders, raising rhetoric unlike we've heard since the cold war times…" Wilson even went as far as comparing Russia to Nazis. "Some of the actions by Russia recently we haven't seen since the 1930s, when whole countries were annexed and borders were changed by decree." However, experts that oversee global armament note that both of the sides modernize their strategic nuclear arsenals. Following their logic, Putin was just 'informing' of Russia's plans to replace its old missiles with new, able to penetrate through the anti-missile shield of NATO in Europe, missiles. However, it more seemed like a threat and a response to NATO's increased presence in Eastern Europe, including the deployment of its heavy military equipment in the Baltic states and Poland to rapidly send 5,000 troops to counter Russia threat and aggression. It must also be pointed out that strategic weapons is one of the few military areas that are more or less under control. Both sides have agreements that limit the amount of such weapons, and both sides still comply with them. Europe's safety might be ruined However, the situation around short and medium-range nuclear missiles is much more dangerous. Russia has long been warning that it would station its Iskander-M missiles in Kaliningrad to counter NATO's anti-ballistic missiles systems. Washington is already accusing Moscow of violating the Intermediate-Range Nuclear Forces Treaty (INF) and has come up with an idea of stationing nuclear missiles in Europe. It must be pointed out that if the INF treaty is cancelled, Europe will regress to the nuclear confrontation of

the 1980s. However, nobody would win from cancelling the INF treaty, but both sides constantly refer to the treaty in an attempt to threaten the other side of the confrontation. It is crystal clear that the longer the confrontation between the West and Russia goes on, the more fragile the European safety becomes. If the leaders of both sides do not stop worsening their relations, the safety and stability in Europe that was achieved with blood and great efforts during the past centuries might be ruined. NATO gets serious about countering Russia with its military

For the past 65 years, NATO has carried out hundreds of military drills, but not a single one of them were as robust as the 'Noble Jump' exercises in Poland, which were completed at the end of the past week. The military drills were the first exercises of the recently created NATO's very high readiness Spearhead Force. The need to carry out such military drills clearly indicate the tense relations between NATO and Russia, which responds to every NATO's military drills with its own exercises.

No NATO Impact

Using NATO won't prevent conflict

Bromund 15 (Ted, the Margaret Thatcher senior research fellow at The Heritage Foundation , 6-7-15, "Addressing the future of the U.S.-U.K special relationship", The Daily Signal, http://dailysignal.com/2015/06/07/assessing-the-future-of-the-us-uk-special-relationship/)

Going forward, this means slower European growth (which must translate into even less influence, less defense spending, and a faster U.S. pivot to Asia) and further and even more serious strain on the U.K.-EU relationship, as the EU seeks to move into the citadel of national finance that has until now remained largely the province of the nation states. In short, the U.S. vision was that the EU would provide greater European security and prosperity. But as the drive for political unity has overtaken economic sanity, it has done the reverse.∂Even without this pressure for deeper integration, the U.K.-EU relationship will never rest easy. The fundamental incompatibility between the EU's supranational vision of European interests and Britain's worldwide interests and political culture can to an extent be managed, but cannot be resolved. Nor is there an easy escape in a referendum on the U.K.'s membership of the EU. The outcomes of both the Alternative Vote and Scottish referendums imply that the U.K. has a bias in favor of the status quo, but it is one thing to vote for the status quo, and entirely another to rest content with it. For the U.K., apart from everything else, the EU will always symbolize not postwar renewal, as it plausibly does for Germany, but national decline, and that is simply never going to be popular.∂The U.K. has often understood its role in the EU as being the bridge between the U.S. and the EU. But the lands at either end of the bridge are moving, and the U.K. will find that role steadily more challenging as the U.S. looks more to Asia—which, the vicissitudes of the Obama administration aside, it will do—and as the EU focuses on its own internal rescue project in ways that will be fundamentally unacceptable to the U.K. The idea that the Transatlantic Trade and Investment Partnership can replace the deep and broad structures of U.S.-European cooperation that were built during the Cold War, with NATO at their head, is a fantasy, and the idea th at the U.K. can lead the EU through TTIP is more fantastic still.∂Precisely because the U.S. is so reliably friendly to the U.K., the fate of the special relationship today rests with the U.K. And the fundamental problem with the relationship is that, if it is to endure, the U.K. needs to have a domestic political culture that is expansive and optimistic—in other words, traditionally liberal, because it was liberalism that created the U.K.'s understanding of its world role. But the popular

bias in favor of the status quo, the establishment's horror at the prospect of exiting the EU, and the difficulties the U.K. faced in sustaining even the modest "austerity" of the last five years imply that the U.K.'s political culture is neither expansive nor optimistic. Simply put, the U.K. is losing its liberalism.

Nato doesn't solve Afghanistan

NATO can't solve Afghanistan- can only make it worse

Hallinan and Wofsy 6/24 (Conn and Leon, Conn Hallinan is a columnist for Foreign Policy In Focus. A retired journalism professor, he previously was an editor of People's World when it was a West Coast publication, "toward a new foreign policy", People's World, http://www.peoplesworld.org/toward-a-new-foreign-policy/, June 24, 2015)

First, our preoccupation with conflicts in the Middle East - and to a significant extent, our tensions with Russia in Eastern Europe and with China in East Asia - distract us from the most compelling crises that threaten the future of humanity. Climate change and environmental perils have to be dealt with now and demand an unprecedented level of international collective action.∂ That also holds for the resurgent danger of nuclear war.∂ Second, superpower military interventionism and far-flung acts of war have only intensified conflict, terror, and human suffering. There's no short-term solution - especially by force - to the deep-seated problems that cause chaos, violence, and misery through much of the world.∂ Third, while any hope of curbing violence and mitigating the most urgent problems depends on international cooperation, old and disastrous intrigues over spheres of influence dominate the behavior of the major powers. Our own relentless pursuit of military advantage on every continent, including through alliances and proxies like NATO, divides the world into "friend" and "foe" according to our perceived interests. That inevitably inflames aggressive imperial rivalries and overrides common interests in the 21st century.

Multilat add-on answers

Surveillance is key to multilat- and multilat fails

Walter 09 (Andrew, October 13, Dr Andrew Walter is Reader in International Relations at the London School of Economics, specializing in the political economy of international money and finance, "the mismanagement of global imbalances: why did multilateralism fail?", Department of International Relations- London school of economics, http://personal.lse.ac.uk/wyattwal/images/mismanagement.pdf)

Multilateralism failed to manage global imbalances, I suggest, for two different∂ and deeply political reasons. First, the failure reflected a persistent unwillingness among∂ all major countries, not just China, to accept the political costs of adjustment and a∂ related shift to different models of economic growth. I argue below that China is indeed∂ an outlier among the G-4 (consisting of the US, EU, Japan, and China), but only because∂ it is relatively poor, unusually open, and has opted for exchange rate targeting rather than∂ inflation targeting. It does resist external policy constraint, but in this regard it is little∂ different to other major countries. Second, **the failure reflected the complete inadequacy∂ of the existing multilateral policy surveillance framework inherited from the era of G-7∂ dominance to facilitate the negotiation of the necessary domestic and international∂ political bargains**. In order for multilateralism to

become more effective in the future, these flaws would need to be resolved, but it is difficult to see how major governments will accept the constraints on domestic policy choices that this would entail.

AT Multilateralism Link

US-EU relations not key to global multilateralism

MATTHEW **RIBAR 06/10** Matthew is an analyst for the St Andrews Foreign Affairs Review, as well as a former research assistant for the Teaching, Research, and International Policy (TRIP) Project.

http://www.internationalpolicydigest.org/2015/06/10/re-balancing-the-pivot-new-multilateral-approach-to-asia/

It's no secret that despite protests to the contrary, the Asia-Pacific region has not always been a high priority on the Obama administration's foreign policy agenda. A series of crises in other parts of the world—the rise of ISIS in the Middle East and the possibility of a destabilised, Greece-less Eurozone for instance—have consumed much of the administration's political capital. But in the midst of the Asia-Pacific's evolving maritime security issues, chiefly the contested maritime claims in the South China Sea, the region has once again become a priority. Only things are different this time around: the United States is taking a more multilateral approach to the 'pivot' to Asia. Before this point, the US 'pivot' to Asia's most noticeable feature was the transfer of military assets to the Asia-Pacific. Around 3,000 US marines have been posted to Darwin, Northern Australia. Three US navy littoral combat ships have been posted to Singapore for use in the largely littoral Southeast Asian waters. In addition to its permanent presence, the US military has been enhancing its cooperation with the armed forces of twelve Southeast Asian states through war-games and exercises. When video footage of an American P-8 Poseidon being told to 'leave immediately' was made public, the footage began with the surveillance plane lifting off from the Philippines. Clear, a significant number of military assets have been transferred and are continuing to be transferred to the Asia-Pacific region. Announcements and speeches over the past month suggest that the rebalance to Asia has shifted to a more multilateral approach which focuses more and more on alliance and institution building, rather than unilateral or bilateral actions. The best example of this is the US Secretary of Defence Ash Carter's comments on April 6th in Arizona. Carter remarked that: "[Y]ou may not expect to hear this from a Secretary of Defense, but in terms of our rebalance in the broadest sense, passing TPP is as important to me as another aircraft carrier. It would deepen our alliances and partnerships abroad and underscore our lasting commitment to the Asia-Pacific. And it would help us promote a global order that reflects both our interests and our values." Carter's point is that the United States cannot effectively rebalance towards Asia if that rebalance does not include stronger partnerships with Asian countries. This attitude is likewise supported by Carter's announcement of a new Southeast Asia Maritime Security Initiative during his speech at this years' Shangri-La Dialogue. Details on this initiative are thin. The only figure Carter mentioned was a $425 million budget and the fact that the United States would be appointing a new defence advisor to the ASEAN headquarters in Jakarta. This appointment suggests that the United States intends to implement its new initiative by way of multilateral institutions. That the initiative will be a multilateral approach also makes sense given the United States' past history of capacity building endeavours amongst South East Asian states. In the same speech, Carter noted 'we are partnering with the Philippines, Vietnam, Malaysia, and Indonesia to provide them with

additional assets for maritime security and disaster relief operations.' There is precedent aplenty for the United States to provide bilateral security assistance. The framing of the maritime security initiative announcement makes it sound like a bold new step, suggesting a break from precedent. Since it is clear that this initiative will not be purely unilateral, and since there is precedent for bilateral cooperation, one can conclude that **the bulk of the Southeast Asian Maritime Security Initiative will be multilateral**. Traditionally, the United States has laboured to create a 'hub and spokes' security architecture in the Asia-Pacific. With the new emphasis on alliance-building, it seems like the United States is moving on from that model. Carter removed all remaining doubt on the matter by saying: "To expand the reach of our alliances, we are building unprecedented 'trilateral' cooperation – in other words, we're networking our relationships. With Japan and Australia, for example, we're cooperating to strengthen maritime security in Southeast Asia and explore defence technology cooperation. And with Japan and Korea, we're building on a first-of-its-kind information-sharing arrangement that will help us collectively deter and respond to crises." When combined with the US mission to ASEAN's new staff, it seems clear that the focus has shifted to a regional security architecture which is less centred on the United States. Moreover, this approach is de-compartmentalising the United States' various interests in the Asia-Pacific: multilateral security institutions are beginning to line up with multilateral economic institutions. The new shift towards multilateralism in the 'pivot' to Asia is accompanied by negotiations for the Trans-Pacific Partnership between many of the United States' allies in the region. Such overlapping institutionalisation strengthens both of the relevant international organisations through issue linkages and repeated interactions. Nothing in this shift suggests that the United States will lessen the military facet of the rebalance, only that its multilateral engagement will grow relative to its military engagement. However, the United States is shifting to a new phase in the 'pivot' to Asia, a phase which will focus more on multilateral engagement than the previous phase. This change has been evidenced by several of Ash Carter's speeches, as well as his announcement of a new Southeast Asian Maritime Security Initiative.

Relations not key to NATO

EU irrelevant to NATO- only solves conflicts if U.S. alone takes the lead

Michta 15 (Andrew, professor of international studies at Rhodes College and an adjunct fellow at the center for strategic and international studies, "time for some straight talk on NATO", the American interest, http://www.the-american-interest.com/2015/03/01/time-for-some-straight-talk-on-nato/)

NATO only functions well when the United States firmly and unequivocally leads, **with its full attention and commitment.**♂ The fundamental problem with America's "leading from behind" on security in Europe is that it all but guarantees Europe will remain adrift, cleaved by competing interests and preferences, in the face of the Russian threat. Germany's leadership from the "Mitte", and its insistence that the conflict in Ukraine must be contained without the added risk of offering military aid to Kiev, are the key centrifugal variables preventing the emergence of a more stable European consensus on Russia. We constantly hear assurances from Berlin that NATO remains the dominant regional force, and that Russia wouldn't dare cross any significant red lines—and that in any case should a red line be crossed, Russia's armies would be defeated in short order. Perhaps it would play out just like that if Vladimir Putin was foolhardy enough to brazenly roll tanks towards Riga or Tallinn one fine morning. But given all that we have seen in Ukraine, this is not the likely scenario for anything Russia might venture in the Baltics. (Yet then again, how many predicted in the first place that Putin would take Crimea, or that he would

continue on to slice off a chunk of eastern Ukraine—all in one year?) And measuring NATO's strength today in sheer numbers of forces available in Europe is not grounds for particular optimism either. On the military side of the ledger, there has been a steady decline of NATO's European member-states' military capabilities, with only the UK and to some extent France and Poland retaining some military muscle. As for the spending targets agreed to at the Wales NATO summit the situation is even more dire, with only the United States and France fulfilling their pledges on military budgets. According to a study just released by the European Leadership Network, although Latvia, Lithuania, Norway, Poland, the Netherlands and Romania will increase their military expenditure this year, they will not meet the 2% target. Poland just pledged to do so by 2016.∂ In fact, the military capabilities of several key NATO members today are but shadows of their Cold War selves, with Germany's Bundeswehr ranking among the most severely degraded militaries in the alliance. All European NATO allies have significant deficiencies when it comes to lift, transport, logistics and most of all to sufficient numbers of trained soldiers to respond to emergencies. Add to this significantly reduced U.S. deployments in Europe and the alliance in fact lacks ready-made forces to respond quickly, despite the much advertised and discussed NATO rapid response force announced in Wales.∂ The modalities of the rapid response force debate are sobering: the several thousand NATO troops ready to be deployed in a potential crisis situation might be effective in a brewing crisis, but will quickly prove to be marginal at best in a rapidly escalating confrontation. Paradoxically, the same limited number of troops would have an incomparably greater deterrent value if permanently stationed at U.S. and NATO bases in countries along NATO's northeastern flank—a proposition consistently blocked by Germany. But in any case, the prepositioning of equipment and supplies will not suffice unless deficiencies in air and missile defenses in countries along the periphery are addressed, and this will inevitably take time.∂ Unfortunately, there is a direct link between the lack of political will in Europe to respond to hard power emergencies and the stark decline in countries' military capabilities and capacities. A number of smaller NATO members have degraded their militaries to the point where the routine training of personnel has become problematic. Some allied air forces today are so non-deployable that they are more reminiscent of glorified flight clubs, since they can only operate in their countries' skies and not much beyond.∂ It is unacceptable that with the Russian threat looming ever larger in the east, NATO's capabilities and military muscle rest on the United States, Canada, and to a much lesser extent the United Kingdom, France and Poland, with Germany both militarily marginal and politically obstructionist. And yet I suspect that unless the United States leads by example, both by articulating a new policy of permanent reinforcements and by increasing its deployments in Europe while at the same time demanding reciprocity from the largest European states, nothing∂ much will change. It is high time to return to the old principles of deterrence through permanent presence. And since the threat is being posed by a nuclear power, if NATO allies are serious about their treaty commitments, it is also time to revisit flexible response in the event of escalation for lessons that would apply in the new situation should the threat of a wider war indeed arise.∂ The point is not to debate whether Russia would defeat a fully mobilized and united NATO in an all-out military clash scenario—it would not. But Putin may decide to try to beat NATO by instead moving ahead with another Donetsk-type scenario, either in the Baltic States or elsewhere along the periphery: fomenting a crisis and stopping to test the allied response, gambling that this would expose the internal political fissures in NATO and ultimately paralyze its decision-making process. Politically NATO's consensus remains fragile, especially when it comes to moving from verbal assurances to actual physical reinforcements of it northeastern flank. The consensus will not gel unless the Obama administration leads with a clear commitment to reestablish a larger and more strategically

rational military footprint in Europe. The Cold War-era U.S. base infrastructure in Europe should be re-imagined, and both U.S. and European NATO member-states' physical assets augmented with permanent U.S. and NATO bases in the most exposed countries, specifically the Baltic States, Poland and Romania.∂ Otherwise, if the U.S. adheres to its "lead from behind Germany formula" while the latter is stuck in the "Mitte," NATO will continue to drift, and we will continue to lose precious time to refurbish the only institution with the means to bring combined Western power to bear in a crisis. And yes, that means also in war, should it come to that in Europe again.

No Russia Impact

Russian Conflict won't escalate

AFP 6/24 Agence France-Presse is an international news agency headquartered in Paris.

http://economictimes.indiatimes.com/news/defence/nato-wont-be-dragged-into-arms-race-with-russia-jens-stoltenberg/articleshow/47802046.cms

BRUSSELS: NATO Secretary General Jens Stoltenberg said Wednesday the alliance will not get dragged into an arms race with Russia but must counter Moscow's "aggressive actions" in Ukraine. "We will not be dragged into an arms race but we must keep our countries safe," Stoltenberg said ahead of a meeting of NATO defence ministers in Brussels. "There is no doubt Russia is responsible for aggressive actions in Europe," he said, citing Moscow's annexation of Crimea and its continued support for pro-Russian rebels in eastern Ukraine.

AT ISIS Impact

ISIS is losing territory- U.S. offensives working

BPR 15 (5-27, "ISIS is losing ground", Bellarmine Political Review, http://bpr.bcp.org/?p=2780)

A similar phenomenon is occurring with ISIS, as CNN reports. Though ISIS has secured unprecedented gains in land, resources, and support over the past year, it now seems to be losing ground as its fear tactics and ferocious tenacity falter. Make no mistake, ISIS will still be a name people talk about for years to come. However, over the past few months, it has lost nearly a quarter of its territory in Iraq. A coalition of Kurdish fighters, Iraqi troops, and American air squads have relentlessly fought ISIS, pushing it back from key cities like Kobani. Even though Kobani's victory came at a huge cost for the coalition forces, victories like Kobani seem to be slowly pushing back the monster that is ISIS. Furthermore, U.S. airstrikes have successfully destroyed crucial oil drilling stations in the territory of ISIS. This is crucial for the battle, because ISIS used to make an approximated $2 million every day from those oil fields and refineries. With the airstrikes, the oil exports and profits collected by ISIS have decreased by a whopping 90% in some areas, and by 70% on the whole.

Building up the threat of terrorism exploits and categorizes all Muslims and creates fear mongering that makes counter-terror efforts less effective

German 15 (Michael, Mike German is a fellow with the Brennan Center for Justice's Liberty and National Security Program. Previously he was policy counsel for national security and

privacy for the American Civil Liberties Union Washington Legislative Office. A sixteen-year veteran of federal law enforcement, German served as a special agent with the Federal Bureau of Investigation, where he specialized in domestic terrorism and covert operations, "Our Overreaction to Terrorist Attacks Like Paris Is Only Making Things Worse", Defense One, http://www.defenseone.com/ideas/2015/01/our-over-reaction-terrorist-attacks-paris-only-making-things-worse/103857/)

I am troubled by what the Paris terror attacks say about our country's continuing failure to properly understand terrorist methodologies and formulate more effective counterterrorism responses. I'm particularly troubled by the sensationalistic U.S. media coverage of them.∂ If we continue to aggrandize the violent acts of a handful of marginalized individuals into existential threats to western civilization, our over-reactions will to continue sapping our resources while empowering extremists of all sorts.∂ Anyone following the events in Europe as they unfolded would have seen familiar tropes playing out in the media. The first is that terrorism in the West is primarily, if not exclusively, a Muslim problem. Many commentators viewed the three Paris terrorists as representative of an alienated European Muslim population vulnerable to the call of terrorism. But the selfless courage displayed by the Muslim police officer they killed and the Muslim deli employee who helped save Jewish customers were more authentic examples of a larger, law-abiding and peaceful French Muslim community. No one pondered what their actions said about the nature of Islam.∂ In fact, Muslims account for only a small percentage of the terrorism in Europe over the last several years. Most politically-motivated violence there is carried out by nationalist and sectarian groups, yet the government and the media don't treat these threats the same. Anders Breivik killed 77 people in separate gun and bomb attacks in 2011, including many children. Many people in Europe share Breivik's xenophobic, ultra-nationalist, anti-Muslim ideology, but we don't hold them collectively responsible for his decision to employ violence to further those views. We don't call for a war on his beliefs; we demand his criminal prosecution.∂ A similar phenomenon occurs here in the United States, where most media outlets covered the distant Paris attacks far more closely than domestic shooting sprees by white supremacist Fraizer Glenn Miller, or anti-government extremists like Curtis Wade Holley, Eric Frein, and Jerad Miller, who assassinated four police officers in separate instances last year.∂ The Combatting Terrorism Center at West Point documented 3,053 injuries and 670 fatalities in the United States from far right violence from 1990 to 2012. A 2014 University of Maryland survey indicates U.S. law enforcement now view Sovereign Citizens as the greatest terror threat they face. Yet the federal government effectively treats these acts of politically-motivated violence as hate crimes or lone attacks rather than terrorism. This may explain why an attempted firebombing at a Colorado NAACP office building the day before the Paris attacks received little media attention.∂ I spoke with New York University adjunct professor Arun Kundnani, author of "The Muslims are Coming!: Islamophobia, Extremism, and the Domestic War on Terror," about the disparity between the way we treat different forms of political violence (we spoke before the Paris attacks):∂ The point of noting this disparity in reaction isn't to say one ideology presents more or less of a threat. All terrorism is reprehensible. But thankfully, it's also rare. Deaths attributable to terrorism here in the U.S. are a tiny fraction of the roughly 14,000 homicides committed each year, one-third of which go unsolved. Yet we devote far more resources to uncovering potential terrorists than to finding actual killers. The purpose of putting terrorist acts in context is to better understand how we might respond in a more effective manner.∂ The second prevalent theme in the early coverage of the Paris attacks was the tendency to exaggerate the capabilities of Muslim extremists. With very little information available — save a brief video

showing the execution of a wounded police officer — many counterterrorism officials and policy makers didn't hesitate to call it a "sophisticated" attack that represented a new and "more complex" threat. The FBI and DHS backed this description in a law enforcement bulletin, claiming the Paris attacks "demonstrated a greater degree of sophistication and advanced weapons handling than seen in previous coordinated small-arms attacks, such as the 2013 Westgate Mall attack" in Nairobi, Kenya. The Somali militant group al-Shabaab claimed credit for the armed assault on Westgate Mall, which killed sixty-seven people. Details regarding the attack and whether some perpetrators escaped are still mired in controversy.∂ The facts don't support the hasty conclusion that the Paris attack was as sophisticated as originally claimed. While one or both of the Kouachi brothers may have travelled to Yemen and received some training from al-Qaeda in the Arabian Peninsula, their attack on the Charlie Hebdo offices was almost derailed because they went to the wrong address. They had to ask a maintenance man for directions. They caught a lucky break by finding an employee outside the office who they forced to punch the code necessary to enter the building. After the shooting, they crashed their escape vehicle and left identification papers behind when they abandoned it.∂ Co-conspirator Amedy Coulibaly's spree appeared even less organized, shooting a police officer, a street sweeper and a jogger before storming the kosher supermarket. The weapons Coulibaly and the Kouachi's used weren't financed or provided by organized terrorist groups, but purchased from a known criminal for less than 5,000 euros, which Coulibaly obtained through a fraudulent bank loan.∂ They did succeed at killing 17 people, which is tragic. But spree shooters here in the United States racked up similar death tolls, in some cases before graduating high school, or saddled with serious mental illnesses. It doesn't take sophisticated training to pick up a gun and kill lots of unarmed people.∂ Presenting Muslim terrorists as lurking super-villains generates unwarranted public fear, which benefits governments and security officials who exploit it for their own benefit. I talked with Ben Friedman of the Cato Institute about Americans' security demands, the politics of fear, and the difference between risk and vulnerability:∂ As Friedman has argued, accurate information about the nature and probability of threats, and the cost-effectiveness of various solutions could help correct the impulse toward the overwrought fear of remote threats like terrorism. In a perfect world, the intelligence community would provide that reliable threat information to the public, so overreaction could be avoided. We don't live in that perfect world, as Friedman suggests, because the intelligence agencies are also incentivized to inflate threat assessments:∂ Threat inflation benefits intelligence officials by making it easier for them to obtain new resources and authorities. A perfect example is Director of National Intelligence James Clapper's 2014 threat assessment, in which he claimed the United States is "beset by more crises and threats" than any time in his 50-year career. He makes the same claim every year, but the idea that current threats compare to the possible global nuclear annihilation faced during the height of the Cold War is almost laughable. In fact the world is measurably safer.∂ Driving up public fear also dissuades demands for accountability for intelligence or operational failures. Indeed, as was the case in several recent terrorist events, the perpetrators of the Paris attack were well known to law enforcement and intelligence officials long before they acted. Two had only recently been released from prison after serving time for terrorism-related offenses. All three were under government surveillance, and were on the U.S. no-fly list. Yet instead of being called to the carpet to explain why the expanded intelligence authorities and aggressive counterterrorism measures adopted since 9/11 didn't work, America's European intelligence partners are demanding even greater powers.∂ Treating terrorism committed by Muslims as categorically different from other terrorism forfeits the ability to learn what responses are effective in other contexts. When a far right extremist like Tim McVeigh, Eric Rudolf or Frazier Glenn Miller

commits mass murder, government officials and media commenters rarely suggest they were extremely sophisticated, even though these three Army veterans had far better military training than anything offered in Yemen. We treat these terrorists as the common criminals they are. We don't fear their ideologies, which earn every bit of their unpopularity. We wrap up their co-conspirators using traditional law enforcement tools and we try them openly in criminal courts, where their weakness, cruelty and bankrupt ideas can be exposed for public opprobrium.∂When current and former government officials go on television or through the halls of Congress to exaggerate the impact and meaning of terrorist attacks, whether here or abroad, they only encourage more violence. Telling every anti-social misfit and petty criminal that they can achieve notoriety and influence government policy by acting out violently with whatever tools are at hand isn't an effective counterterrorism strategy.∂The terrorists' goal is to spread irrational fear and cause costly overreactions that divide society along the lines they choose. Our intelligence officials shouldn't be helping them. There will always be those that use violence to make political points. Recognizing this is a sign of weakness rather than strength will help us build a stronger and more resilient society that fear could never defeat.

AT: Russia will invade Baltic States

The U.S. and NATO have created the Russian threat- Russia won't invade the Baltic States

MacDonald 15 (Bryan, Irish writer and commentator focusing on Russia and its hinterlands and international geo-politics, 6-25, Despite NATO propaganda, Russia not planning to invade Baltic States, RT, http://rt.com/op-edge/269746-nato-russia-baltics-invasion/)

The latest US narrative on Russia is straight from the plot of a Hollywood fantasy: US superheroes versus a Russian villain. Sadly for the Baltic States, they are being used by Uncle Sam as bait.∂Here's a starter for ten question: Russia's reunification with Crimea last year was prompted by which of the following… a.) a very particular set of historical circumstances, allied to the will of the overwhelming majority of the local population. b.) Vladimir Putin's desire to launch a blitzkrieg military campaign, complete with goose-stepping Russian soldiers marching across Europe?∂If you are not a raving-mad neocon or someone who has difficulties with reality, the correct answer is a. Crimea was Russian territory for centuries and had been transferred to Ukraine as part of an administrative re-alignment at a time when both states were part of the Soviet Union. The peninsula is as Russian as Cornwall is British or Texas is American. Furthermore, not even the most myopic anti-Russia activist questions the fact that most Crimean residents wished to join the Russian Federation.∂Given what has happened in Ukraine since, it's unlikely that many people in Simferopol or Yalta would change that stance. Certainly, Crimean integration into the Russia state has been far from straightforward. Western sanctions targeted at local denizens haven't helped in that regard and neither has the lack of a physical connection with the Russian mainland.∂However, the alternative would have been far worse. Ukraine is now a failed state. Its economy has been decimated, corruption is arguably even more rampant than before the Maidan coup and a civil war rages sporadically in the east. Compared to Ukraine, Crimea is Narnia. Then again, almost every place on the planet, outside of Africa, probably looks attractive to those desperate to flee from Ukraine.∂According to elements in the Western media and the US propaganda machine, the original poser ought to be answered with option (b). Crimea's 'annexation' was the first phase of an embryonic Russian plan to sweep across Europe, gobbling up lebensraum with gay abandon. Anybody who objects to this narrative is a "Kremlin

troll," or "Putin apologist." If old Joseph McCarthy could return to earth for five minutes, he'd be doing cartwheels. Demagogic, reckless, and unsubstantiated accusations have never been as fashionable as they are today. In fact, don't be surprised if Vogue's Anna Wintour soon declares them as the trend for autumn-winter 2015.∂ Despite the relish with which lazy Western journalism and a highly-organized NATO "information campaign" lambasts "Putin's Russia" as a warmongering 'rogue' state, the facts tell another tale. During the past 15 years, the Russian army has only entered the sovereign territory of two foreign states, with Crimea counting as one of those occasions.∂ In 2008, former President Medvedev sent his forces into Georgia in response to Tbilisi's aggression against South Ossetia. After five days of fighting, Russian troops controlled much of Georgia's territory. Nevertheless, within two months, the Kremlin had withdrawn all its soldiers. This scenario doesn't sound very Hitler-esque.∂ At this time, Georgia was ruled by pro-Washington Mikhail Saakashvili, who subsequently abandoned his citizenship to obtain a Ukrainian passport. A move almost unheard of globally for a former head of state, for the precise reason that it's gravely insulting to his homeland. Saakashvili is now a wanted criminal suspect in Georgia. He remains a fugitive.∂ By contrast, since the turn of the century, the US has intervened in Yemen, Liberia, Haiti, Libya and Syria. In addition, 'Uncle Sam' has invaded Iraq and Afghanistan. A 2011 study suggests that 500,000 people have died as a result of the Iraq war. As it happens, according to the United Nations, George Bush and Tony Blair's bloodthirsty campaign of violence was illegal under international law.∂ Despite the obvious fact that Washington's military has been much busier than that of Russia so far this century, we rarely hear of "US belligerence" in the Western media. However, they are falling over themselves to decry "Russia aggression," so much so that the phrase has become something of a catchphrase du jour.∂ According to American propaganda, this alleged Russian hostility is apparently focused on the goal of subjugating Eastern Europe. Indeed, Hillary Clinton, currently the bookmaker's favorite to be the next US President, has already compared Putin to Hitler.∂ In order to sell the 'Hollywood' notion of Russia as global arch villain, the State Department needs to create targets for this imaginary Russian military jaunt around Europe. They've chosen the Baltic States - Estonia, Lithuania and Latvia. Three countries so harmless and innocuous that the only interaction most Westerners have with them is when their citizens migrate to find work. Which they do in huge numbers.∂ Unlike Crimea, which was of hugely significant strategic importance (hosting Russia's largest Black Sea base for instance), there is nothing especially interesting about any of the Baltic countries. All remain poor, to varying degrees, with Estonia the most prosperous. Lithuania has lost 32 percent of its population since 1989 and Latvia, in particular, remains riddled with corruption.∂ The leaders of Latvia and Lithuania tend to use Russia as a bogeyman to distract attention from their own graft and ineptitude. Also, the attention currently lavished upon them from Washington and Brussels could bring with it some much needed investment capital. Vilnius' opportunistic President Dalia Grybauskaitė, a former member of the Communist Party, is a master of anti-Kremlin rhetoric.∂ Estonia's President, Toomas Hendrik Ilves, is a very interesting character. An American, Ilves was once the head of the Estonia desk of Radio Free Europe, which was funded by the CIA in its early days. His Twitter account features a regularly updated stream of support for neocon positions and paranoia about a perceived 'Russian threat.'∂ Let's just imagine for a moment that Russia did invade one or all of the Baltic States. What would it do with this newly acquired territory? The Kremlin would be faced with an enraged local population and a very angry wider world. That is assuming that this imagined Russian assault didn't trigger a full-scale nuclear conflict with NATO. In which case, as the mushroom cloud envelops your nearest city, you can assume that Putin's 'dastardly plan' has failed.∂ Even if Brussels and Washington, and this is very unlikely, rolled over and accepted

Russian dominion over the Baltic countries, what then? With the greatest respect to the locals, there is little more of economic worth than fields and forests. There is no oil, no gas and no hidden deposits of rare-earth minerals.∂ Some NATO propaganda claims that Putin's government wishes to use the Estonia, Lithuania and Latvia as staging posts for a wider invasion of Europe. The main problem with this theory is that it's insane; aside from that, Russia already has a Baltic exclave, Kaliningrad. Additionally, Western media frequently runs scare stories about Russian military drills in the region. These take place on Russian territory. Now, guess what? Almost every country in the world, even neutral Switzerland, conducts armed forces training from time to time on its own soil.∂ The reality is that the Western media is feeding readers, viewers and listeners a lazy narrative driven by the US State Department and NATO for reasons known only to themselves. But one assumes it comes from a desire to ratchet up military spending in Europe allied to anger over Russia's stance on Syria. Now, the neocons have decided that Russia is the new bugaboo.∂ Meanwhile, Vladimir Putin, in the mind of the western media, is the new Saddam/Bin Laden/Joker/Riddler or whatever comic book bad guy you may fancy. If it wasn't so tragically serious, it'd be funny. However, rather than bellicose laughter, there's a danger that this particular farce could end in tears.

Radical right parties in Europe are being suppressed sufficiently now – all their claims are alarmist

Art 15

(David, Associate Professor of Political Science at Tufts University, 2/3, Ethnic and Racial Studies, 2015 Vol. 38, No. 8, 1347–1354, The containment of the radical right in Western Europe: a response to Carvalho, http://www.tandfonline.com/doi/pdf/10.1080/01419870.2015.1015932)

My first claim is that Carvalho's analysis is consistent with what one might call the general 'containment' of radical right parties in Europe over the last quarter of a century. After millions of votes and multiple cabinet positions in governments across Europe, it is still intellectually defensible to come to the conclusion that (with apologies to those who are already growing weary of overused Shakespearean lines) it has indeed been 'much ado about nothing'. I use the term containment loosely here, and choose it not to suggest that there has been a coordinated strategy to roll back the radical right in Europe or to invoke any parallels with the US Cold War foreign policy. I think of it more like the counterpoint to the 'contagion' frame that many analysts implicitly use to interpret radical right influence. By suggesting that containment has occurred, I do not mean to imply that is has not mattered. In fact, I think it has been a massively underappreciated phenomenon by both ordinary Europeans and politicians alike. It is easier, both academically and in many cases politically, for an American to take a contrarian approach to developments in Europe, and there is an interesting story to be written at some point about how American and European academics viewed the radical right through their own cultural lenses. Which leads to my second claim: in comparison to Europe, there has been no containment of radical right-wing populism in the USA. The second half of this article asks far more questions than it answers, but I submit that merely posing the question 'Why do right-wing populists have dramatically more power in the USA than in Europe?' could lead the study of the radical right in advanced industrial societies in potentially more interesting directions. The containment of the European radical right Radical right parties usually do not come close to realizing their policy desires, even when they appear ideally positioned to do so. Some of the factors that mediate their influence (size and type of the governing coalition, the policy preferences of larger coalition partners, the difficulties of populist insurgents in transitioning to government ones) have been covered elsewhere in the literature, and in this sense Carvalho provides both a necessary update and another direct challenge to many of the structural arguments in the field. The sustained look at the policymaking process itself is both an added twist and a profitable venture, although even the most motivated reader will need to pay careful attention if they want to be in a position to summarize the book's findings in the end. Part of this has to do with the inherent messiness of the subject matter, and one important contribution is the simple reminder that the policymaking process is both contingent on and mediated through national-level institutions. But there are also several theoretical concepts that go under-specified. The role of critical discourse analysis in the argument is not developed enough to make it clear how the evidence is being selected and used. The quantitative aspects are also unlikely to attract much notice from students of public opinion as there is minimal effort to engage with that literature in the book. One upside is the case selection, both for the methodological defence itself and for inclusion of three of four 'big' states

in Western Europe. Given that Europe is not simply a laboratory for social science (although it remains an excellent one) but a collection of powerful actors on the world stage, books that tackle important policy issues in France, Italy and the UK will continue to take up valuable shelf space in academic and political offices. Yet, the case selection itself actually privileges the no-impact school of the radical right from the outset. Simply put, if the radical right has been unable to have its policy preferences translated into policy outcomes in the two states in Western Europe where it has long been a powerful actor (France and Italy), then it is unlikely to have much influence anywhere. The French Front National (FN) is the most researched radical right party for a reason: it was the first to break through electorally in the 1980s, has served as a model for other parties across Europe, and has been shaping French presidential races in dramatic ways for over three decades now. At the same time, its complete isolation from the political system since the 1990s necessarily forces political scientists to craft sophisticated arguments about indirect influence. Carvalho did not quite meet the standard for carefully formed and testable propositions that Williams set in her 2006 book on the same basic subject, but anyone working in this field is sympathetic to the problem of measurement (Schain 2006). Carvalho relies heavily for co-optation of message to make a convincing case for FN influence, which is not that far removed from citing Le Pen's perpetual claim that he is the original and other politicians are the copies when it comes to national identity and immigration politics. But this can also be read as a discursive weapon of the weak in the sense that it continues to mobilize resentment and allows FN politicians to claim victory in the absence of tangible deliverables. It also has the virtue of being a non- falsifiable claim.

While radical right parties are gaining power, intelligence and surveillance are key to prevent domestic terror by these groups

Art 13

(David, Associate Professor of Political Science at Tufts University, March, Why 2013 Is Not 1933: The Radical Right in Europe, http://search.proquest.com/openview/8bd4fe23f1c2461834efab576c271b2f/1?pq-origsite=gscholar)

To many observers, Europe appears to be revisiting the 1930s. The sovereign debt crisis that exploded in 2009 and still threatens to destroy the euro has intensified the most severe economic downturn since the Great Depression. Today, as in the 1930s, orthodox economic policies have exacerbated the misery for millions of people across the continent and left them both disillusioned and enraged with the politicians who ruined their prosperity. Today, as then, many citizens not only reject their political class but also embrace extremist ideas that explicitly invoke fascism. In this view, then, a massive economic crisis has once again generated extremist politics. And while long-standing democracies appear unlikely to collapse, or European states to go to war with one another, those who view the current situation through the lens of the 1930s worry nonetheless that the political backlash will undermine many of the achievements of the postwar European order. Norms of tolerance, the quality of liberal democracy, and European integration all seem to be at stake. In challenging this common view, I do not mean to trivialize the phenomenon of contemporary right-wing extremism. The ranks of far right political parties include Holocaust deniers, as well as thugs who intimidate foreigners, antiracism activists, and politicians from other parties. There are neighborhoods in major cities and small towns across Europe in which it is not safe for ethnic minorities to live or travel. As a source of criminality and domestic terrorism, right-wing extremism is a real problem that authorities across Europe must continue to

monitor. Intelligence breakdowns in this area can have tragic consequences, as the July 2011 massacre committed by Anders Behring Breivik in Norway, and serial murders in the previous decade by a neo-Nazi cell in Germany, have demonstrated. Yet for all the attention they receive in the press, far right parties do not have the political influence one might expect. One could be for-given for believing that they were spontaneously generated by the current sovereign debt crisis, but they actually have been a feature of the party landscape in many European states since the late 1980s. During this period, some of them have attracted vote shares of close to 25 percent of the electorate, and some have been part of national governing coalitions. One may disagree with the platforms of these parties—which are alternatively referred to as far right, radical right, extreme right, and right-wing populist—but it is impossible to claim that the parties have undermined democracy to a measurable extent anywhere. More often than not, radical right parties (this is the term I choose to use) have been more consumed with keeping their various factions together and trying to appear politically competent than with designing xenophobic or otherwise exclusionary policies. And while these parties in some small countries have threatened to stymie any further attempts at European integration—the True Finns in Finland and Golden Dawn in Greece would be the primary examples—it is important to note that they either are marginal players or have been effectively marginalized in the five biggest European Union member states:

EU Surveillance Inev

5 Eyes will continue to function without NSA – infrastructure already exists and it isn't controversial in Europe

Campbell 5/28

(Duncan Campbell, a British freelance investigative journalist writing for Wired, 5/28/2015, "Torus": has one word in a Snowden leak revealed a huge expansion in surveillance?, http://www.wired.co.uk/news/archive/2015-05/28/torus-duncan-campbell-report)

Torus is a brand new kind of satellite espionage, capable of soaking up calls and messages and data from 35 satellites at once. The dishes themselves don't look too different to familiar space tracking dishes, and can be hidden inside giant white globes -- radomes. But look more closely and the power of the doughnut emerges. Specifically, a Torus dish can monitor 70 degrees of the sky, without moving. Mathematically, the dishes are a combination of a parabola with a sphere, shaped to relay multiple signals focussed from space into an array of different listening horns. Once collected all the different facets of modern communications, from Facebook to fax, are separated and sifted and filed away in giant data centres, such as NSA has recently built near Salt Lake City. Over the last eight years, we believe our research shows, western spy agencies have built six new Torus collectors in the UK, Cyprus, Oman, Australia and New Zealand. Their locations are diverse: deep in the Australian outback, in Lord of the Rings territory in New Zealand's South Island, and on the Devon coast in England. About 400 commercial communications satellites now orbit over the equator 24,000 miles above the Earth's surface, carrying data and telephone signals to remote areas, ocean cruise liners, and privileged passengers in the air. All are targets for what a leaked NSA document calls the "New Collection Posture". The agencies already have more than 200 traditional tracking dishes scattered around the planet -- we counted them all, using Google Earth and other online image sites. The online images show

that numbers of listening dishes have doubled since about 2000. The six new doughnut dishes can double this up again, and "collect-it-all", as claimed in Top Secret Snowden slides, potentially increasing snooping capacity by up to 200 satellites. THE LONG HISTORY OF TORUS But the Russians got there first, we found. The grandmother of all doughnut dishes had been built first by the former Soviet intelligence service in the final years of the Cold War, before 1990. Lurking in Ukraine wheat fields 15 kilometres from the Black Sea port of Odessa, the Ovidiopol-2 spy base may once have been the electronic jewel in the KGB's crown. Former Russian spies say they called it "the Comb". Standing 10 storeys high and 80 metres across, the Ovidiopol-2 listening antenna appears to have been equipped to track at least 20 western satellites at once. After the USSR broke up, it was handed over to the Ukraine government's foreign intelligence service (SZRU). The site is still in use, and now includes a second Torus. Meanwhile Britain's own satellite intelligence gathering is less secret than ever; the original "Five Eyes" satellite monitoring project -- ECHELON -- has become widely known after European Parliament enquiries into satellite monitoring from 1999 to 2001. After the controversies subsided, however, the stations kept getting larger. In 2004, the German foreign intelligence agency BND took over NSA's large FORNSAT site at Bad Aibling, Bavaria), but continued to allow NSA remotely to task "selectors" to the equipment operated at the site. In April this year, a German parliamentary enquiry determined that BND had improperly allowed NSA to use tens of thousands of selectors to collect intelligence on the European Commission, and other European government and commercial targets. Other reports quote claims by BND staff that some improper and potentially unlawful targeting by NSA had been detected and blocked. Our research has uncovered how mass surveillance of satellite communications has grown. There are now 232 antennas available at the sites identified, almost double the capacity before 2001.

The remaining members of five eyes won't stop is NSA is shut down – too much unchecked power internationally

Christopher 5/21

(David **Christopher**, Communications manager at OpenMedia, **5/21**/15, CSE and Five Eyes revealed to be targeting popular mobile browsers and mobile App Stores - leaving millions at risk of having their private data hacked, https://openmedia.ca/news/breaking-cse-and-five-eyes-revealed-be-targeting-popular-mobile-browsers-and-mobile-app-stores-leavi)

Canadian spy agency CSE and its Five Eyes partners planned to compromise popular mobile App Stores to implant spyware on smartphones, and targeted a popular mobile web browser used by millions globally. Accordingly to reports published this morning by CBC News and The Intercept, CSE deliberately sought security vulnerabilities, but failed to inform companies or the public – leaving the private data of millions at risk. The reports come just a day after OpenMedia released a pro-privacy action plan, crowdsourced from over 125,000 Canadians, that sets out strict new rules that would ban these kind of mass surveillance activities, place spy agencies like CSE under much tighter oversight, and ensure Canadian spy agencies comply with international human rights principles when it comes to privacy. Responding to this morning's news, OpenMedia's communications manager David Christopher had this to say: "Let's be clear about one thing: CSE claims they will safeguard Canada's security, but instead they deliberately left millions of innocent people at risk of having their private data hacked. These reckless activities weaken the Internet security Canadians rely on to conduct business and communicate online. CSE claims they don't target Canadians, but there is no way they could have excluded Canadians from spying activities. Remember, they targeted people all around the world, including anybody who

interacted with compromised devices." Christopher continued: "This news reinforces the need to rein in CSE. Canadians are clear about what's needed: if taken up, our crowdsourced privacy plan would put a stop to these abuses, end mass surveillance, place CSE under desperately-needed effective independent oversight, and ensure they respect international human rights principles. It's past time for decision-makers in Ottawa to implement these proposals and put a stop to these activities that are doing such harm to our democratic values and Canada's reputation overseas." Details revealed by CBC News and The Intercept this morning include: CSE and its partners deliberately planned to hijack links to popular App Stores, including those run by Google and Samsung, to implant spyware on smartphones. Canada and its spying partners exploited weaknesses in one of the world's most popular mobile browsers, the UC Browser. This app is hugely popular in China and India, and its popularity is growing in North America. Spy agencies did not inform citizens or businesses of the weaknesses they unearthed in devices, leaving millions of users around the world (and all of those who interact with these users) at risk of having their information hacked. Canada worked closely with it's Five Eyes intelligence alliance (the U.S., Britain, Australia and New Zealand) to find and compromise data vulnerabilities in servers used by Google and Samsung's mobile app stores.

Treaties are unlikely – failed in the past and lack of governmental support in Europe

Deutsche Welle 5/27

(Deutsche Welle, Germany's international broadcaster, 5/27/15, Merkel knew 'no spy' agreement with the NSA was a no-go, says German daily, http://www.dw.com/en/merkel-knew-no-spy-agreement-with-the-nsa-was-a-no-go-says-german-daily/a-18477795)

A German newspaper has reported that the Merkel administration exaggerated the possibility of an anti-spy deal with the US in 2013. The government has said it spoke according to what it believed to be true at the time. Germany's federal government told the public in 2013 about an upcoming "no spy" deal with the United States despite having no clear promise from the Americans that they were willing to enter into such an agreement, according to the Wednesday edition of the German daily "Süddeutsche Zeitung." The newspaper report said that Chancellor Angela Merkel and then vice-chancellor Guido Westerwelle knew since August 7 2013 that the Obama administration had agreed only to review such a possibility, yet on August 12 former Chief of the Chancellery Ronald Pofalla announced that the US had offered to create an anti-espionage deal with Germany. According to government documents obtained by the "Süddeutsche Zeitung" in collaboration with German broadcasters NDR and WDR, John Kerry appeared "willing, without making a concrete promise" to discuss the possibility with Westerwelle. Government acted "to the best of [its] knowledge" Following revelations made public by Edward Snowden in June 2013 that the NSA had spied in Germany and on German citizens, an outcry prompted a German delegation to travel to Washington on August 5 2013 to try and negotiate an agreement between the NSA and Germany's intelligence agency, the BND. Despite the lack of solid American consent, on August 14, 2013 another announcement was made, this time by Chancellor Merkel's spokesman Steffen Seibert that "there will be a no-spy deal between the BND and the NSA." As no agreement ever materialized, and allegations began to arise last month that , Seibert was forced to admit two weeks ago that the government had spoken "to the best of [its] knowledge" in the summer of 2013. The Social Democrats (SPD), rivals and coalition members to Chancellor Merkel's Christian Democrats (CDU), along with the opposition parties have accused the CDU of exaggerating the likelihood of the deal to the public ahead of the fall 2013 general election.

AT Internal Link

Empirically don't model- FREEDOM Act proves

Rampell '15 [Catherine Rampell The Washington Post, May 24, 2015, Big Brother finds home in Europe, http://lacrossetribune.com/news/opinion/catherine-rampell-big-brother-finds-home-in-europe/article_ecd5c6c8-a886-5b88-ad05-55eb8b5e06c0.html]

Over in Washington, supposedly the great innovator in "1984"-style surveillance, Sen. Rand Paul, R-Ky., just spoke for 11 hours against the reauthorization of the Patriot Act. A week earlier, the House overwhelmingly voted to limit the National Security Agency's bulk data collection, which might force the agency to shut down, at least temporarily, its most controversial surveillance programs. And earlier this month, a federal appeals court unanimously declared much of the NSA's work to be illegal.

The United States, in other words, seems to be in the process of modestly scaling back its surveillance state. But here in France — and in other European countries that have so fastidiously guarded privacy rights and so roundly condemned U.S. violations of those rights — **the surveillance state is growing**.

No model – privacy governance different in US and Euro

Bowden '13

(Caspar Bowden, Independent Privacy Researcher for the European Parliament with oversight from Alessandro Davoli – Policy Department Citizens' Rights and Constitutional Affairs for the European Parliament. Requested by European Parliament's committee on Civil Justice and Home Affairs. "The US surveillance programmes and their impact on EU citizens' fundamental rights," September 2013 http://www.europarl.europa.eu/meetdocs/2009_2014/ documents/libe/dv/briefingnote_/briefingnote_en.pdf SM)

The EU Data Protection framework in theory is categorically better than the US for privacy, but in practice it is hard to find any real-world Internet services that implement DP principles by design, conveniently and securely. Privacy governance around the world has evolved around **two competing models**. Europe made some rights of individuals inalienable and assigned responsibilities to Data Controller organizations, **whereas in the United States companies inserted waivers of rights into Terms and Conditions6 contracts** allowing exploitation of data in exhaustive ways (known as the 'Notice-and-Choice" principle). The PRISM crisis arose directly from the emerging dominance over the last decade of "free" services operated from remote warehouses full of computer servers, by companies predominantly based in US jurisdiction, that has become known as Cloud computing. To explain this relationship we must explore details of the US framework of national security law.

French surveillance is continuing to expand – independent of US signal

Ramandi 5/26

(Nabila Ramandi, French-Algerian journalist specializing in Anglo-French issues, 5/26/15, France Moves To Vastly Expand Surveillance In Wake Of Charlie Hebdo Attacks, https://hereandnow.wbur.org/2015/05/26/france-surveillance-charlie-hebdo)

In less than a week, on June 1, key sections of the Patriot Act are set to expire in the U.S., including the sections that authorize the National Security Agency's bulk collection of phone records. Congress has so far failed to reach a deal to either reauthorize or revise those sections. Although there is still time for a last-minute agreement, an Obama administration official says the government has already begun to shut down the program. Meanwhile, in France, which has long been critical of the Patriot Act, lawmakers are now moving to vastly expand government surveillance. Earlier this month, the lower house of French Parliament overwhelmingly passed a bill that would expand the government's ability to tap phones, read emails and gather other kinds of data and intelligence. This comes just a few months after the terrorist attacks on the satirical magazine Charlie Hebdo and a kosher market in Paris that left 17 people dead.

French surveillance is unaffected by US policy shift – they won't follow our lead

Beardsley 6/9

(Eleanor Beardsley, NPR French Correspondent, 6/9/15, French Government Expected To Expand Power Of Surveillance, http://www.npr.org/2015/06/09/413069544/french-government-expected-to-expand-power-of-surveillance)

ARI SHAPIRO, HOST: Government surveillance is a big topic on both sides of the Atlantic. Here in the U.S., it was recently limited by Congress. In France, Parliament is expanding the government surveillance powers. A bill that easily passed the Lower House is expected to be approved by the French Senate today. NPR's Eleanor Beardsley reports. ELEANOR BEARDSLEY, BYLINE: Prime Minister Manuel Valls introduced the surveillance bill in the wake of January's deadly terrorist attacks on the satirical magazine Charlie Hebdo and a kosher supermarket. But the prime minister reminded lawmakers the bill had already been in the works to monitor French citizens traveling to and from Syria. (SOUNDBITE OF ARCHIVED RECORDING) PRIME MINISTER MANUEL VALLS: (Through interpreter) This law is not a hasty response to an emergency. It's the result of a long and well-thought-out process. It will help protect our citizens from terrorism and guarantee public liberties by setting clear rules. There will be no more gray zones. BEARDSLEY: France has been engaged in vast surveillance since attacks in the 1980s by radical Algerian groups, says Sylvie Kauffmann, editorial director of Le Monde. SYLVIE KAUFFMANN: France was one of the first Western democracies to take very active anti-terrorism measures. But strangely enough, there was no law on intelligence services. BEARDSLEY: The new law will permit police to hide microphones in suspects' cars and houses and place antennas to monitor cell phone calls. But the most contentious point is the collection of raw data or metadata on regular citizens using black boxes attached to Internet servers. JEAN DANIEL GUYOT: (Speaking French). BEARDSLEY: Entrepreneur Jean Daniel Guyot says he'll never allow the French government to take his customer data. Guyot founded an Internet company called Captain Train that allows customers to buy train tickets across 19 European countries. He says his company has financial and travel information on millions of people. GUYOT: They want to put black boxes in the data centers. BEARDSLEY: So in your data center? GUYOT: Yes. But we can move the data in another data center in other countries. BEARDSLEY: Guyot says plenty of companies will move their servers out of France. The black boxes are supposed to be able to pick out terrorist-related patterns in the data with a special

algorithm. But Frederick Douzet with the French Institute of Advanced National Defense says no one even knows if the algorithms work. FREDERICK DOUZET: The bill was rushed through accelerated procedures. Representatives are not too familiar with these issues and have just followed the government because of the trauma of the terrorist attacks. BEARDSLEY: Douzet says mass data collection also raises concerns about civil liberties. (SOUNDBITE OF ARCHIVED RECORDING) BERNARD CAZENEUVE: (Speaking French). BEARDSLEY: Interior Minister Bernard Cazeneuve told Parliament that he doesn't understand how powerful private companies such as Facebook get away with collecting vast quantities of personal data. (SOUNDBITE OF ARCHIVED RECORDING) CAZENEUVE: (Speaking French). BEARDSLEY: "But when it comes to a government wanting to fight terrorism, all of a sudden we're Big Brother," said Cazeneuve. To placate critics, the French government will give the bill for review to the nation's constitutional court after it passes the Senate. Prime Minister Valls says he expects the measure to become law this summer. Eleanor Beardsley, NPR News, Paris.

Germany actually seeks to be free of NSA control – banning in US emboldens the German BND

Sauerbrey 6/13

(Anna Sauerbrey, lead editor of the Tagesspiegel, 6/13/15, The German Govt's Surveillance Hypocracy, http://www.nytimes.com/2015/06/11/opinion/the-german-governments-surveillance-hypocrisy.html)

The Germans have secretly helped the NSA, even as they condemned US spying in Europe OVER the last few weeks Germany has been rocked by a series of leaked government documents revealing extensive cooperation between the German foreign intelligence service and the National Security Agency, including spying on other European governments. At the same time, emails leaked to the news media have revealed that a promised"no spy" agreement, under negotiation since the revelation in 2013 of NSA surveillance on German government officials, was nowhere close to completion, contrary to explicit claims by the office of Angela Merkel, the chancellor. These revelations have fuelled a bitter debate in the Bundestag, with distinctly anti-American overtones. Yasmin Fahimi, the secretary- general of the left-of-centre Social Democratic Party, told an interviewer that a German chancellor should not be"subservient" in dealing with the United States."We should not render ourselves vassals to the United States and ignore the rights of the Bundestag." Such statements are an attempt to gain sympathies in a certain spectrum of the political left. But there is more to the anti-Americanism in the current spying affair. It is a symptom of the great delusion of German security policy in the post-9/11 era, a delusion maintained by both Merkel's right-of-centre Christian Democrats and the Social Democrats: For at least a decade, while all German governments have publicly upheld a more or less critical attitude toward American security policy, Germany has secretly cooperated with it and has privately supported much of what it has publicly condemned. Spying on friends is a poignant example. In 2013, when news broke that Merkel's cellphone had been tapped by the NSA, the chancellor reacted indignantly."Spying amongst friends that's a no-go," she said that October, and seemed to promise that Germany would never spy on its allies. And yet, as the leaked documents and a Bundestag investigation have shown, her public indignation hid an inconvenient truth: that the German intelligence service, known by its German acronym BND has helped NSA spy in Europe, in part unwittingly, but also knowingly. In fact, a 2002 memorandum of agreement founding the American-German cooperation explicitly allowed for the surveillance of European institutions, an interesting detail also brought to light by the Bundestag's investigation. It's an awkward document, not only because it shows the depth of BND cooperation, but also because

when it was signed, in 2002, the head of the chancellor's office, and thus the intelligence service, was the Social Democratic politician Frank-Walter Steinmeier, who is now the foreign minister. The hypocrisy in dealing with the spying affair is not just embarrassing; it has been an effective means to avoid change. It is telling to compare where Germany and the United States stand, two years after Edward J Snowden's leaks set off a debate about security and civil liberties, on both sides of the Atlantic. Just a few days after Snowden released his first documents, President Barack Obama stepped up and defended America's surveillance programmes. It was impossible to have"100 percent security and also then have 100 percent privacy and zero inconvenience," he said. But as the different sides in the argument have faced off in the American media and in Congress over the last two years, President Obama has shifted his position, becoming more open to reform. Things may not be where civil libertarians would like them, but with the USA Freedom Act now law, a new balance of government practice and democratic values has been struck. In contrast, in Germany, which is ostensibly anti-surveillance, the prospects for a similar reform, one that would adapt the legal basis of the intelligence agencies to the digital age, are vague at best. Merkel is clearly willing to cooperate with the NSA, but she has managed to avoid entering the debate, on either side. Her administration has managed to portray itself as the ing'nue."The Internet is new to us all" was one of her first statements in reaction to the 2013 leaks. Meanwhile, on June 1, a few weeks into the latest BND scandal, Merkel opened a"citizen dialogue" on"the good life." Sitting with 60 Germans chosen to represent different age and income groups, she said,"I want to know what is important to you, what your burdens are." Their responses covered everyday things, like pensions or the decline in grocery shops in rural areas. These worries are serious, but petty, especially in light of the nondialogue on surveillance. And yet discussing"the good life," while at the same time suffocating the public debate on Germany's security policy, is yet another variant of Angela Merkel's paternalistic way of governing. You guys take care of your jobs and kids, goes her message. Let me take care of the rest. But democracy is about the painful questions, too. It is true that the BND and the NSA are different beasts, and that a programme like the NSA's bulk phone-data collection has never existed in Germany. But in managing to avoid debate, Merkel has ensured that Germany has not faced some painful questions. Should the BND be allowed to ignore the civil liberties that Germans enjoy at home when acting abroad? How much do we want to spend on our intelligence agencies or are we willing to accept the price that comes with depending on powerful partners like the NSA? If **Germany wants to play the spy game by its own rules and not be a lackey of the NSA, it must strengthen its agencies with a lot of money**. **The German population would** most likely **support this**. Indeed, for all the concern about American snooping, **hardly any political figure in Germany questions the BND's right to exist or the need for telecommunications surveillance**. If strengthening the agencies comes with strengthening the oversight of the Parliament, Germans are likely to approve. But to really find out, Merkel must have the guts to actually start talking about it.

US-France relations resilient – spying scandal will blow over

McPartland 6/24

(Ben McPartland, political analyst for thelocal French news network, 6/24/15, Obama tells Hollande: Snooping will stop, http://www.thelocal.fr/20150624/live-us-spying-france-nsa-united-states-snowden)

So Hollande and Obama have had their chat and a brief statement from the Elysée Palace suggests everything remains cordial. "President Obama reiterated without ambiguity, his firm commitment to end the practices that may have taken place in the past and that are unacceptable between allies." The Elysée also said that French intelligence chiefs would visit their counterparts in the US in the coming months to "deepen their cooperation". 17:27 - French intelligence services 'knew of embassy spy den' According to a source in the French intelligence services who has spoken to AFP, Paris knew all about the "secret spy den" on top of the US embassy. "It's common knowledge that the monitoring system had been installed on the roof of the embassy," said the source. "Since this system is not intrusive and on US soil, there's not much France can do" This type of monitoring station "is a common practice in Anglo-Saxon intelligence services and the choice of the location of the embassy near the Elysee and several ministries is not innocent." 16:52 - "It's all just a storm in a tea cup" While there's been plenty of outcry in France about the spying revelations, most experts suggest it will all blow over in a couple of days and France and the US can get on with being best of buddies. “It’s a storm in a tea cup. Nothing will happen and it will be allowed to blow over,” Nicolas Dungan, a senior fellow at the Atlantic Council tells The Local. “Hollande has no choice but to say publicly ‘the president of the United States has no business spying on me, but he knows what is happening. “When it comes to spying, the French know exactly what the US can do and the US knows what the French can do and they probably both expect the other side do everything they can,” says Dungan.

Germany is cutting ties with Russia – stifles far-right Kremlin influence

Lüttike 14

(Markus Lüttike, analyst for DW, 4/29/14, Serious tensions in German-Russian relations, http://www.dw.com/en/serious-tensions-in-german-russian-relations/a-17601809)

From the warmth of the embrace, one would think that there were no shadows on the relations between Germany and Russia. Even if Schröder is no longer involved actively in politics, his Social Democratic party is part of the government. One of his closest political allies, Frank-Walter Steinmeier, is foreign minister - and the Ukraine crisis has changed German-Russian relations for the worse. Once, Germany was seen as Russia's most important partner in the West. "Germany was Russia's privileged contact within NATO and the EU, says Hans-Joachim Spanger of the Hessian Foundation for Peace and Conflict Research. "That gave Germany a somewhat more prominent position." But now, with a "newly activated Cold War," Spanger sees a need "for solidarity within the alliance and not for a special relationship." Germany's allies mistrust any such privilege. "The German foreign minister is making a lot of effort to maintain a moderate tone in the very shrill exchange, so that channels of communication and bridges of understanding can be maintained," says Spanger. "That's all that's left of the German special relationship." But Alexander Dynkin, director of the Institute for the Global Economy and International Relations at the Russian Academy of Sciences, is critical of Germany's role: "Germany has not exactly demonstrated its leading role in settling this crisis," he says. Normal people in Russia don't allot any privileged role to Germany compared with the rest of the West. Experts might see it a bit differently, but Dynkin says he does not see any "European activity that is independent from Washington." Agreement without effect The German government coordinator for Russian affairs, Gernot Erler, said on Tuesday that he would like to see a new round of Geneva talks with Russia: "There's plenty to talk about: why haven't the commitments which were made then been implemented?" Dynkin agrees that such talks are right in principle, but says the Geneva talks failed to develop mechanisms to ensure implementation: "Signing pretty documents without

having the instruments to impose them only highlights failures." Steinmeier between Vitaly Klitschko and Yanukovych Steinmeier, center, failed to reach a binding agreement between Vitaly Klitchko, left, and Yanukovych Dynkin remembers that Steinmeier had signed an agreement in Kyiv on February 21 "that landed in the trash not 24 hours later." That was when the foreign ministers of Germany, France and Poland got the opposition to agree with then-President Viktor Yanukovych on the way forward. Shortly afterwards, Yanukovych was overthrown.

NATO is united against Russia – ridiculous to think the US would leave Europe now

Schmitt and Myers 6/24

(Eric Schmitt and Steven Lee Myers, political correspondants for the NYT, 6/24/15, NATO forces boost efforts, with sights set on Russia, https://www.bostonglobe.com/news/world/2015/06/23/nato-returns-its-attention-old-foe-russia/IA30OdOvYUJNpzGcYap0aM/story.html)

After years of facing threats far beyond its borders, NATO is reinvigorating plans to confront a much larger and more aggressive threat from its past: Moscow. This seismic shift has been apparent in military training exercises in this former Soviet republic, which is now a NATO member and on the alliance's eastern flank, bordering Russia. On a recent day, Latvian soldiers conducted a simulated attack on dug-in enemy positions in a pine forest here as A-10 attack planes from the United States roared overhead and opened fire with 30-mm cannons. Two days before, a B-52 dropped nine dummy bombs radioed in by the Latvians on the ground — all just 180 miles from the Russian border. The symbolism of the B-52s, stalwarts of the Cold War arsenal, was lost on no one. At one time, the bombers' main mission was to deliver a nuclear knockout punch to Soviet forces, but they were put to use for the first time over this former Soviet republic to show resolve on the new front between NATO and Russia, the heir of the Soviet war machine. "If the Russians sense a window of opportunity, they will use it to their advantage," said Estonia's chief of defense, Lieutenant General Riho Terras, who recently mobilized 13,000 soldiers across his tiny country in a separate exercise. "We must make sure there's no room for miscalculation." The military drills that unfolded here, part of a series of exercises planned over the coming months to demonstrate the alliance's readiness to confront Russia, emphasize the depth of the challenge facing an alliance that for a quarter-century turned its attention to threats much farther afield. 'Putin's not going to change his position, and he's not going away. You've got to be in this for the long haul.' Michael McFaul, former US ambassador to Russia Quote Icon After years of reducing military spending and conducting expeditionary missions from the Balkans to Afghanistan to the Horn of Africa, NATO has had to reinvigorate plans that commanders and political leaders had largely consigned to the past. This week, Defense Secretary Ash Carter was scheduled to travel through several NATO capitals before sitting down Wednesday and Thursday with other defense ministers in Brussels to debate how to counter a resurgent Russia. Russia's annexation of Crimea — and its role in the war in eastern Ukraine — has already resulted in what NATO's secretary general, Jens Stoltenberg, recently called "the biggest reinforcement of NATO forces since the end of the Cold War." It has involved a marked increase in training rotations on territory of the newer NATO allies in the east, and stepped up patrols of the air and seas from the Baltic to the Black Sea intended to counter increased patrols by Russian forces around NATO's periphery. Most of those are temporary deployments. But in February, NATO announced it would set up six new command units within the Eastern allies and create a 5,000-strong rapid reaction "spearhead" force. And the Pentagon

now plans to pre-position US tanks and other weaponry in Eastern Europe for the first time, prompting unease in some quarters ahead of the NATO defense ministers' meetings, and strong protests from Moscow that coincided with an announcement by President Vladimir Putin that he was bolstering Russia's arsenal of strategic nuclear weapons. With the leaders of NATO's 28 members scheduled to gather in Warsaw for an important summit meeting next year, the alliance is already considering what other measures are needed to adjust its forces, to increase spending that had plummeted as part of a "peace dividend," and to revisit NATO's military strategy and planning. "During the Cold War we had everything there in the neighborhood we needed to respond," said Julianne Smith, a former defense and White House official who is now a senior fellow at the Center for a New American Security in Washington. "It's all atrophied. We haven't gone through the muscle movements of a conventional attack in Europe for decades."

US is moving now to deter Russian influence in Europe – prevents neo-nazi Europe takeover

Stewart and Mardiste 6/23

(PHIL STEWART AND DAVID MARDISTE, pentagon correspondents for Reuters, 6/23/15, U.S. to pre-position tanks, artillery in Baltics, eastern Europe, http://www.reuters.com/article/2015/06/23/us-usa-europe-defense-idUSKBN0P315620150623)

The United States will pre-position tanks, artillery and other military equipment in Eastern and Central Europe, U.S. Defense Secretary Ash Carter announced on Tuesday, moving to reassure NATO allies unnerved by Russian involvement in Ukraine. Carter, during a trip to Tallinn, said the Baltic states — Estonia, Lithuania, Latvia — as well as Bulgaria, Romania and Poland agreed to host elements of this heavy equipment. Some of the equipment would also be located in Germany. The U.S. decision to stage heavy equipment closer to Russia's borders aims to speed deployment of rotating U.S. forces as NATO steps up exercises in Europe following Russia's annexation of Ukraine's Crimea region last year. Neighboring NATO countries, especially the former Soviet Baltic states with their Russian minorities, fear Russia could foment trouble on their territories. Moscow denies any such intention. Flanked by defense chiefs from the Baltic states, Carter quoted Obama during a visit to Estonia saying: "You lost your independence once before. With NATO, you will never lose it again." "That's because the United States and the rest of the NATO alliance are absolutely committed to defending the territorial integrity of Estonia, Latvia and Lithuania," Carter said. Under NATO's founding treaty, an attack on any member state would constitute an attack on all parties. Russia accuses the West of violating post-Cold War arrangements by extending NATO to Russia's frontiers, something the West denies. Estonian Defense Minister Sven Mikser welcomed the decision, on pre-positioning as did representatives from Latvia and Lithuania. Mikser said his nation was ready to host pre-positioned equipment and a rotational presence of U.S. forces. "We have reasons to believe that Russia views the Baltic region as one of NATO's most vulnerable areas, a place where NATO's resolve and commitment could be tested," Mikser said. Condemnation in Moscow The United States had not formally disclosed where in Europe the equipment would be stored before Tuesday but news reports about military planning triggered an angry response from Moscow ahead of Carter's trip to Europe this week. A Russian defense ministry official said stationing tanks and heavy weapons in NATO states on Russia's border would be the most aggressive U.S. act since the Cold War. President Vladimir Putin, who denies any direct involvement in Ukraine and accuses the West of stirring tensions, announced Russia would add more than 40 intercontinental ballistic missiles to its nuclear arsenal this year. Carter has condemned Putin's return to what he considers Cold War-style rhetoric. A fact sheet provided by the U.S. military said the United States' pre-positioning

would include about 250 tanks, Bradley infantry fighting vehicles and self-propelled howitzers. The amount of equipment that would be temporarily stored in each country would be enough to supply either a company, so enough for about 150 soldiers, or a battalion, or about 750 soldiers. Much of it is already in Europe, officials say.

AT Credibility Adv

Mid East Alt Cause

Link is non-uq - Mideast policy is alt cause to credibility loss

Memoli 3/24 (Memoli, Michael. "Obama Says U.S. Credibility Requires Reevaluation of Mideast Stance." Los Angeles Times. Los Angeles Times, 24 Mar. 2015. Web. 25 June 2015. <http://www.latimes.com/world/middleeast/la-fg-us-israel-spying-20150324-story.html>.) ʕ ⊃•ᴥ•ʔ⊃ ♥eve

President Obama said Tuesday that preserving the nation's credibility internationally requires reevaluating the U.S. stance on Mideast peace talks and that recent comments by Israeli Prime Minister Benjamin Netanyahu have severely hurt chances for progress.Obama said Netanyahu's pledge on the eve of Israeli elections last week to oppose a two-state solution for Israelis and Palestinians made hope for progress "very dim." Netanyahu later backed off the comment, but Obama appeared to remain unconvinced that the prime minister is serious about negotiating with the Palestinians. "What we can't do is pretend that there's a possibility of something that's not there," Obama said during a news conference. "We can't continue to premise our public diplomacy based on something that everybody knows is not going to happen, at least in the next several years.... For the sake of our own credibility, we have to be able to be honest."

Reuters 6/23/15

Is an international news agency headquartered in Canary Wharf, London, England"U.S. Offers Troops to NATO Force Tasked With Deterring Russian Aggression | News." The Moscow Times. Reuters, 23 June 2015. Web. 23 June 2015. <http://www.themoscowtimes.com/news/article/us-offers-troops-to-nato-force-tasked-with-deterring-russian-aggression/524193.html>.

MUENSTER, Germany — The United States has said it will contribute special operations forces, intelligence and other high-end military assets to a new NATO rapid response force that aims in part to deter any future actions by Russia. U.S. Defense Secretary Ash Carter made the announcement on Monday during a trip to Germany, where he delivered an address accusing Moscow of trying to re-create a Soviet-era sphere of influence. "We do not seek a cold, let alone a hot war with Russia. We do not seek to make Russia an enemy," Carter said in an address in Berlin. "But make no mistake: We will defend our allies, the rules-based international order, and the positive future it affords us all." Russia's intervention over Ukraine has put NATO allies in eastern Europe on edge and triggered a series of military moves by the NATO alliance, including an acceleration of exercises and the creation of a Very High Readiness Joint Task Force (VJTF). Moscow denies providing troops or arms to pro-Russian separatists in eastern Ukraine. But neighboring NATO countries, especially the Baltic states of Latvia, Lithuania and Estonia, fear Russia could foment trouble on their territories. Carter, who met European members of the VJTF in Muenster, Germany before flying to Estonia, said he was preparing to discuss planned U.S. contributions to the force with NATO defense chiefs later this week in Brussels. The U.S. support would include intelligence, surveillance and reconnaissance assets — which can include drones or manned aircraft — as well as special operations forces, logistical expertise and high-end U.S.

military assets. Carter also said it would include airlift and precision joint fire capabilities, which could include anything from land-based artillery to air support or naval firepower. "We're making this commitment to the VJTF because the United States is deeply committed to the collective defense of Europe," Carter said, speaking alongside his Dutch, German and Norwegian counterparts in Muenster. Although many of the contributions announced on Monday could be drawn from within Europe, a defense official said the announcement could mean a temporary increase in U.S. forces in Europe in a crisis situation. Still, U.S. defense officials stressed that the United States was mainly providing high-end support to enable European land forces that form the bulk of the VJTF. Russian Reaction During his trip this week, Carter will climb aboard a U.S. warship in Estonia fresh from Baltic Sea drills. He could offer more details in Europe this week on plans to pre-position heavy military equipment, officials say. Moscow has decried the new steps by NATO and threatened to strengthen its own forces and to add more than 40 intercontinental ballistic missiles to its nuclear arsenal this year. U.S. officials say Ukraine has illustrated the importance of being able to counter "hybrid warfare," the blend of unidentified troops, propaganda and economic pressure that the West says Russia has used there. Moscow accuses the West of engineering the overthrow of a pro-Kremlin president last year in order to bring Kiev under its sway and try to isolate Russia. NATO's historic focus had been the conventional threats of the Cold War, which effectively ended with the collapse of the Soviet Union in 1991. But Carter said NATO "will not rely on the Cold War playbook," citing instead a combination of military and non-military tools, including sanctions. European Union foreign ministers extended economic sanctions on Russia until Jan. 31 on Monday, keeping up pressure on Moscow to help resolve the Ukraine conflict. Carter encouraged Europe to keep up the sanctions — which he called the best tool — for as long as it takes to change Russia's calculations. "The United States will not let Russia drag us back to the past," he said.

SQ solves - Obama has vowed to not spy on allies

Rubin 6/24 (Rubin, Alissa. "France Denounces Revelations of Spying by N.S.A." The New York Times. The New York Times, 24 June 2015. Web. 24 June 2015. <http://www.nytimes.com/2015/06/25/world/europe/wikileaks-us-spying-france.html?_r=0>)ʕ ⊃ •̀.•́?⊃♥eve

The administration did not disclose at the time how many foreign leaders would be removed from routine eavesdropping, but Mr. Obama said in a January 2014 speech on surveillance policy that he had put significant new curbs in place. "The leaders of our close friends and allies deserve to know that if I want to know what they think about an issue, I'll pick up the phone and call them, rather than turning to surveillance," Mr. Obama said in the speech. He added, "Given the understandable attention that this issue has received, I have made clear to the intelligence community that unless there is a compelling national security purpose, we will not monitor the communications of heads of state and government of our close friends and allies."

SQ restrictions and security needs solve foreign relations

The Hindu 1/19 ("U.S. Will Continue to Spy on Foreign Govts: Obama." *The Hindu*. 18 Jan. 2014. Web. 24 June 2015. <http://www.thehindu.com/news/international/world/us-will-continue-to-spy-on-foreign-govts-obama/article5592931.ece>.)ʕ ⊃ •̀.•́?⊃♥eve

The United States will continue to spy on foreign governments, President Barack Obama has said even as he assured Chancellor Angela Merkel that he would not allow the surveillance mechanism to harm their bilateral relations. Seen as the first step to win back trust of its allies,

Mr. Obama defended the controversial spying programme as necessary to safeguard the security of America and its allies, including Germany. "Our intelligence agencies, like German intelligence agencies, and every intelligence agency out there, will continue to be interested in the government intentions of countries around the world. That's not going to change," Mr. Obama said. "There is no point in having intelligence agencies if you are restricted to the things which you can read in the *New York Times* or in the Spiegel," he said in an interview to the German network ZDF. Seeking damage control in the wake of global public outrage over the widespread snooping revealed by whistleblower Edward Snowden, Mr. Obama announced on Friday restrictions on NSA's intelligence gathering capabilities to put an end to the surveillance of "foreign leaders of friendly nations" but ruled out scrapping the controversial programme altogether. In that major policy speech, Mr. Obama had asked to balance between civil liberties of Americans and people across the globe and meeting the US security and intelligence needs. The speech aimed at allaying global public outrage over the widespread eavesdropping revealed by whistleblower Edward Snowden, which showed that US collected massive amounts of electronic data from communications of private individuals around the world, and has spied on foreign leaders including Ms. Merkel. The U.S. President, however said he would not allow the surveillance to harm his relationship of "friendship and trust" with Ms. Merkel. "I don't need and I don't want to harm that relationship by surveillance mechanism that has somehow impeded the kind of communication and trust we have," Mr. Obama said. "As long as I am the president of the US, the chancellor and Germany will not have to worry about this," Mr. Obama said. In a latest revelation reported by the Guardian newspaper and Britain's Channel 4 News based on documents leaked by Mr. Snowden, NSA has collected and stored almost 200 million mobile text messages every day across the globe. However, Mr. Obama in a presidential decree has ordered that telephone and Internet surveillance will be carried out abroad only if US security threats are involved and to extend US rules on privacy protection to foreign citizens. He had also ordered restrictions on the use of the metadata — information on the telephone numbers, time and duration of calls — collected by the intelligence services.

Trust Resilient

Allies trust Obama and want to cooperate on privacy

Bevins 6/16 ("Why Did Brazil's President Change Her Tune on Spying?" Foreign Policy Why Did Brazils President Change Her Tune on Spying Comments. Web. 24 June 2015. <http://foreignpolicy.com/2015/06/16/brazil-nsa-spying-surveillance-economy-dilma-rousseff-barack-obama/>)ʕ ⌒•ᴥ•ʔ⌒♥eve

"The American government's posture did change. The [U.S.] president made it clear in his last conversation with Rousseff in Panama that if he wanted to know something about Brazil or the president, he will call her and not use other means," he said. "And we have to trust in the word of the head of state." "She communicated that it was central that she couldn't [again] be surprised by revelations that the U.S. is spying Brazil," he added, noting that Obama may not have been able to apologize or make public promises due to internal political concerns. The Obama administration has been pushing a modest intelligence reform agenda in Washington. Earlier this month, Congress passed the USA Freedom Act, which reversed some of the more invasive provisions of the 2001 Patriot Act. But experts on U.S.-Latin America relations note that the White House has not publicly mentioned anything about the NSA changing the way it deals with

citizens of foreign countries. Nevertheless, many believe that the reconciliation with Brazil could provide an opportunity to work more productively with the region's largest power.

Ally spying is mutual – no collapse in relations or credibility

Martinez 13 ("Allies Spy on Allies Because Friends Today May Not Be Friends Tomorrow - CNN.com." CNN. Cable News Network. Web. 25 June 2015. <http://www.cnn.com/2013/10/30/us/spying-on-allies-everybody-does-it/>.) ʕ ⊃•̤̮•ʔ⊃♥eve

To those who study or even practiced espionage, U.S. spying on allies is hardly new. Friendly nations spy on one another, if only for this reality: a friend today may not be a friend tomorrow, experts say. "Even among friends, a lot of espionage takes place, and some of that espionage is targeted against threats to national security," said Charles Kupchan, international affairs professor at Georgetown University and a senior fellow at the Council on Foreign Relations. "Then there is more mundane day-to-day intelligence gathering, which is focusing on intelligence that would be relevant to American statecraft: who is likely to be the next foreign minister, what's Germany's position on negotiations with Iran?" Kupchan said. The mutual spying is "common knowledge" among practitioners and scholars, sometimes confirmed years later with a disclosure, Kupchan said. "It's been going on for centuries," he said. Embassies can be an arm of such espionage. Countries allow the missions to exchange information formally but they're used to gather intelligence covertly, too, said Peter Earnest, who worked for the CIA for 36 years, including about 25 years in the agency's clandestine service. "I think there's a degree of hypocrisy among the Europeans to say, 'Oh, my gosh, the Americans are spying!' Well, so are they," said Earnest, the founding executive director of the International Spy Museum in Washington. EU delegation meeting at White House over NSA spying concerns The former spy was referring to the uproar across Europe in the wake of news accounts that the U.S. National Security Administration has been spying on the continent: on German Chancellor Angela Merkel's official cellphone; on millions of France's phone calls; and on millions of Spain's phone calls and its politicians and officials. The NSA also has eavesdropped on the Mexican government and hacked the public e-mail account of former President Felipe Calderon and his presidency's e-mail domain that also was used by Cabinet members, according to German news magazine Der Spiegel. Most of the news accounts are relying on documents provided by former NSA contractor Edward Snowden. Glaring spotlight on intelligence committee "It's the leak that keeps on giving on damage," Earnest said. "I'm glad I'm not in the community right now. It must be a nightmare." He retired from the Central Intelligence Agency in 1994. In describing the espionage among friends, Earnest referred to a famous quote by 19th century British statesman Henry Temple, or Lord Palmerston, who stated in Parliament: "We have no eternal allies and we have no perpetual enemies. Our interests are eternal and perpetual, and those interests it is our duty to follow." "The fact is, we do collect a lot of intelligence, without speaking about any particular target or group of targets," Cheney told CNN. "That intelligence capability is enormously important to the United States, to our conduct of foreign policy, to the defense matters, to economic matters. And I'm a strong supporter of it." Europe falls out of love with Obama over NSA spying claims On the matter of national economies, experts agreed that intelligence agencies also examine an ally's commerce and industry. "If the French were to be gathering intelligence in the United States, it's not that they were anticipating an American invasion in Normandy. It's to gather intelligence on American politics, maybe to do a little industrial espionage," Kupchan said. "It's standard fare for intelligence agencies to do these type of things. That's why they're there. That's their raison d'etre." One U.S. analyst had a blunt message for friends in Europe and elsewhere.

No Uniq

NATO strong and cohesive

Mukhopadhyay, 6/18/2015

Sounak. "NATO To Implement 'Biggest' Military Reinforcement In Europe Since Cold War." International Business Times. N.p., 18 June 2015. Web. 24 June 2015. <http://www.ibtimes.com/nato-implement-biggest-military-reinforcement-europe-cold-war-1973611>.

NATO is undertaking the biggest military reinforcement in Europe since the Cold War. The announcement comes after NATO Secretary-General Jens Stoltenberg's charge that Russia has been using "force to change borders, to annex Crimea and to destabilize eastern Ukraine." Stoltenberg attended the first deployment exercise of the Alliance's Spearhead Force in western Poland Thursday. Top NATO military commanders as well as Polish Deputy Prime Minister and Minister of Defense Tomasz Siemoniak were also present at the event. Stoltenberg met Polish President-elect Andrzej Duda as well. "This is a strong expression that NATO stands ready to protect and defend Poland and all allies against any threat," Stoltenberg said, "Troops from nine different countries working together as one - this is really the strength of NATO." He appreciated the dedication and professionalism of the troops and said that he was "impressed" by what he had seen. The event was also attended by defense ministers from Norway, Germany and the Netherlands. Stoltenberg met with Norwegian Defense Minister Ine Eriksen Søreide, German Defense Minister Ursula von der Leyen and Dutch Defense Minister Jeannine Hennis-Plasschaert. Iran's Press TV reported that Siemoniak had resorted to anti-Russian rhetoric Thursday. He asked NATO for an expansion of its military presence in the region. According to Brig. Gen. Kees Matthijssen, nine countries deployed 2,100 troops within four days. The brigade commander of the interim VJTF said there were nine trains, 30 military convoys, 440 vehicles, 17 flights and more than 100 containers. Stoltenberg earlier had a meeting in Warsaw with Polish President Bronislaw Komorowski. He praised Komorowski's commitment and leadership to develop a strong military force. Poland is going to spend 2 percent of GDP on defense in 2015. It will also host the Warsaw Summit in July 2016.

Russia has used "hybrid war" tactics to mask its operations there.Survey Points to Challenges NATO Faces Over RussiaJUNE 10, 2015 The symbolism of the B-52s, stalwarts of the Cold War arsenal, was lost on no one. The bombers' main mission once was to deliver a nuclear knockout punch to Soviet forces, but they were put to use for the first time over Latvia to show resolve on the new front between NATO and Russia, the heir of the Soviet war machine. Photo Lithuanian and American soldiers at the start of the exercise, intended to show resolve on the new front between NATO and Russia. Credit Bryan Denton for The New York Times "If the Russians sense a window of opportunity, they will use it to their advantage," said Estonia's chief of defense, Lt. Gen. Riho Terras, who recently mobilized 13,000 soldiers across his tiny country in a separate exercise. "We must make sure there's no room for miscalculation." The military drills that unfolded here, part of a series of exercises planned over coming months to demonstrate the alliance's readiness to confront Russia, emphasized the depth of the challenge facing an alliance that for a quarter of a century turned its attention to threats much farther afield. After years of reducing military spending and conducting expeditionary missions beyond NATO's border, from the Balkans to Afghanistan to the Horn of Africa, the alliance has had to reinvigorate plans that commanders and political leaders had largely consigned to the past. This week, Defense Secretary Ashton B. Carter is traveling through several NATO capitals before sitting down on Wednesday and Thursday with other defense ministers in Brussels to debate how to counter a resurgent Russia. On Tuesday in Tallinn, Estonia, Mr. Carter confirmed plans to position heavy American tanks and other weaponry in the Baltics and Eastern Europe for the first time. The plan has prompted unease in some quarters ahead of the NATO defense ministers' meetings, and strong protests from Moscow that coincided with an announcement by President Vladimir V. Putin that he was bolstering Russia's arsenal of strategic nuclear weapons. Revising Strategies Russia's annexation of Crimea, and its role in the war in eastern Ukraine, has already resulted in what NATO's secretary general, Jens Stoltenberg, recently called "the biggest reinforcement of NATO forces since the end of the Cold War." It has involved a marked increase in training rotations on territory of the newer NATO allies in the east, and increased patrols of the air and seas from the Baltic to the Black Sea intended to counter an increase of patrols by Russian forces around NATO's periphery. Most of those are temporary deployments. But in February, NATO announced that it would set up six new command units within the Eastern allies and create a 5,000-strong rapid reaction "spearhead" force. With the leaders of NATO's 28 members scheduled to gather in Warsaw for an important summit meeting next year, the alliance is now considering what other measures are needed to adjust its forces, to increase spending that had plummeted as part of a "peace dividend," and to revisit NATO's military strategy and planning. "During the Cold War, we had everything there in the neighborhood we needed to respond," said Julianne Smith, a former defense and White House official who is now a senior fellow at the Center for a New American Security in Washington. "It's all atrophied. We haven't gone through the muscle movements of a conventional attack in Europe for decades." NATO's steps, and its deliberations over future ones, have exposed internal tensions within the alliance over the extent of the threat Mr. Putin's Russia poses. That, in turn, has colored the debate over how vigorously the allies should prepare. Some view the threat as imminent, while others view Russia as less a threat than the instability, the flood of migrants and the rise of extremism emanating from North Africa. A recent poll suggested that residents in some member nations were far from committed to the notion of going to war to protect the other NATO allies — let alone Ukraine. Continue reading the main story 200 MILES Baltic Sea ESTONIA Adazi LATVIA Moscow LITHUANIA Rukla RUSSIA BELARUS POLAND UKRAINE SLOVAKIA MOLDOVA HUNGARY ROMANIA CRIMEA Black Sea By The New York Times NATO's response to the events in Ukraine has required a shift in strategic thinking as profound as the one that accompanied the collapse of the Soviet Union, when the alliance's main adversary suddenly no longer existed. For years, the Russia that emerged from the Soviet ruins seemed destined to be a partner if not an ally, something Mr. Putin himself did not rule out when he first came to office in 2000. "I don't think we're in the Cold War again — yet," said James G. Stavridis, the retired admiral and NATO military commander, now dean of the Fletcher School of Law and Diplomacy at Tufts University, who served on a destroyer as a "thorough seagoing cold warrior" when the Soviet Union collapsed in 1991. He added, however, "I can kind of see it from here." While some do not rule out a conventional confrontation — something Mr. Putin himself rejected as "insane" — others point to the potential threats shrouded in subterfuge and subversion, much like Russia's annexation of Crimea in March 2014 and its continuing support for ethnic Russians in the war in eastern Ukraine, which has claimed more than 6,000 lives. A confidential assessment of the risk of Russia destabilizing the Baltic States is expected to be presented at the NATO meetings this week. But the potential for such an attack has implicitly been the focus of much of the training and planning going on in places like this. In private and in public, some officials and commanders argue that much more is needed to reverse two decades of policy, particularly to shore up an eastern flank that to many, especially here in the Baltics, feels gravely exposed to a Russian attack. Poland's defense minister, Tomasz Siemoniak, said that NATO had to undertake a "strategic adaptation" that accounted for the fact that Russia's hostility toward the alliance was "a change in climate and not a summer storm." It is time, he said, to consider significant deployments of heavy weapons in Eastern Europe, brushing aside the worry that such a move would provoke Russia. "I think the caution expressed by some of our European allies is excessive," Mr. Siemoniak said in a speech at the Center for Strategic and International Studies in Washington in May. Some believe that stoking divisions among the allies is simply another of the tactics that

Mr. Putin has employed. Lt. Gen. Ben Hodges, the commander of United States Army forces in Europe, said in an interview, “I am sure they want to create doubts in the minds of some members of the alliance that the other 27 members won’t be there for them.” The rising tensions between NATO and Russia coincide with a sharp decline in the United States military presence in Europe: to 64,000 troops now, including just 27,000 soldiers, from more than 400,000 at the height of the Cold War. Other nations’ militaries have shrunk, too. Britain now has a smaller army than during the Crimean War in the mid-19th century. The notion of a more robust NATO has encountered inertia that has built over the last two decades. The “peace dividend” that followed the collapse of the Soviet Union could prove hard to reverse, said David Ochmanek, a former senior Pentagon official who is a senior analyst at the RAND Corporation. NATO’s militaries drew down so precipitously that it has become a regular challenge for members to maintain military spending at 2 percent of gross domestic product, a level considered minimal for effective defense. Photo Lithuanian troops dig in defensive positions during the annual Saber Strike training exercise in the Baltics and Poland that ended Friday. Credit Bryan Denton for The New York Times At the same time, few of the NATO allies are looking to increase military spending significantly. “Nobody in any military establishment is looking for more bills to pay right now,” Mr. Ochmanek said. A Message of Solidarity Even before the annexation of Crimea, NATO had watched Russia warily. “NATO has reduced defense spending over a long period of time, especially European NATO allies,” Mr. Stoltenberg said in an interview in Washington in May. “Russia has increased substantially. So they have modernized their forces. They have increased their capacity. And they are exercising more. And they are also now starting to use nuclear rhetoric, nuclear exercises and nuclear operations as part of their nuclear posture. This is destabilizing.” While American officials say that exercises like the one at this former Soviet tank base are mainly to allow NATO and Baltic States to hone their training together, they are also intended to send a strong message of solidarity. More than 6,000 troops from 14 allied nations — three times the number of soldiers that joined the same exercise two years ago, before Russia’s invasion of Crimea and eastern Ukraine — conducted the annual Saber Strike training exercise in the Baltics and Poland that ended Friday. On a brilliant, sunny day this month, 150 Latvian infantry members fought across a sandy pine barren to seize locations defended by Atropians, a fictional foe played by Gurkha soldiers of the British Army. Both sides traded simulated artillery and rocket fire, before the Latvians dashed from the woods and used smoke screens as cover to seize their targets. The A-10 attack planes roared overhead. But what really snapped back the necks of Baltic and other European observers was the B-52 bomber, on call for any additional strikes. Latvia’s defense chief, Lt. Gen. Raimonds Graube, looked up admiringly at the warplanes and dismissed any suggestion that a NATO exercise with B-52s might provoke the Russians, as some European officials have complained. “Our soldiers must be ready to train on an international level,” he said. For a United States military that has spent nearly two decades fighting insurgencies in places like Iraq and Afghanistan, the tensions with Russia have young soldiers, many born after the Soviet Union collapsed, learning new skills and brushing up on an old adversary. “It’s not lost on me or my soldiers where we’re operating,” said Lt. Col. Chad Chalfont, an Army battalion commander training at a former Soviet base in Rukla, Lithuania. Colonel Chalfont, whose father served as an Air Force officer in an underground nuclear missile silo during the Cold War, said American and Lithuanian troops drilled together on mundane but critical tasks like talking on the same radio frequency. Lithuanian infantry troops also learn more complex skills, like operating together with American battle tanks for the first time in dense pine forests. The threat to the Baltic nations, at least in theory, is acute. For the Pentagon, Mr. Ochmanek of RAND has run war games trying to anticipate how to defend the Baltics in particular, the most immediate concern for the alliance. “It’s not realistic to think they could defend themselves against a determined Russian attack,” he said. There is a hope that deterrence will suffice to prevent Russia from moving, but many fear that Mr. Putin’s government could seek to undermine the allies by subterfuge, as Russia did in Crimea and is doing in Ukraine. Photo Lithuanian soldiers placed trip wires and flares in the woods surrounding the defensive positions they shared with American troops before the next day's attack by German soldiers in the exercise. Credit Bryan Denton for The New York Times More likely than any ground attack from Russian troops, NATO officials say, would be some kind of cyberstrike or information warfare assault, two of the critical components of a hybrid warfare style that is central to a new Russian military strategy unveiled in 2013 by Russia’s chief of the general staff, Gen. Valery V. Gerasimov. The doctrine explicitly acknowledged the use of “military means of a concealed character, including carrying out actions of informational conflict and the actions of special operations forces.” For those on NATO’s front lines, the doctrine appears all too real. This month, unknown hackers targeted the website of the Lithuanian Army leadership, posting false information about NATO exercises in the Baltics and Poland, a Lithuanian Defense Ministry spokesman said. Lithuanian officials said the false messages included a report that the NATO exercise was a pretext for a possible annexation of the Russian region of Kaliningrad, which lies between Lithuania and Poland. All of this is on NATO’s mind as it takes interim measures to deal with the threat. Asked what steps his military would take if Russian “little green men” tried to sneak across his border, General Terras, Estonia’s chief of defense, said bluntly, “We will shoot them.” Feeling Vulnerable Bravado aside, Baltic commanders and civilian leaders said they were scrambling to improve and enlarge their militaries and other security forces. These countries are overcoming the years when Russia was not considered an enemy, but was still eyed warily. When Baltic nations joined NATO more than a decade ago, they were encouraged to develop niche specialties rather than territorial defense, which was no longer thought necessary. Latvia, for instance, developed capabilities like explosive demolition experts and ground spotters to call in strikes — all skills that filled needs in NATO missions outside Europe, such as Afghanistan. Now, with standing forces of about 5,000 to 10,000 troops, the Baltics feel vulnerable despite being members of NATO. They have no tanks, no air forces to speak of, and only patrol craft and minesweepers to ply coastal waters. Each country is now rushing to correct this shortfall. The Estonians have a “defense league” that is made up of about 30,000 civilians and includes farmers, carpenters, lawyers and other professions. They engage in basic infantry training once a month, receive arms from the government, and in the event of an invasion would be called to active duty to be commanded by professional soldiers. Juozas Olekas, Lithuania’s defense minister, said in an interview that the government was developing a more comprehensive self-defense plan coordinating across several government agencies. The army will soon add some 3,000 new conscripts. In Latvia, Defense Minister Raimonds Vejonis said that with the Baltics’ bitter history under Soviet occupation, the public and the government were only too aware of Mr. Putin’s attempts to use propaganda and military might in Ukraine to intimidate NATO’s smallest members. “We will stay united because if we don’t, NATO will die,” said Mr. Vejonis, who will become Latvia’s president in July. Not all of the NATO allies are as ardent. While there has been striking unanimity against Russia’s actions in Ukraine — separately, the European Union extended its sanctions against Russia this week — divisions remain. “There’s a hope this is all a bump in the road and with a little bit of tweaking we can get back to the status quo,” the former American ambassador to Russia, Michael McFaul, said in a telephone interview. “In my view, that’s naïve. Putin’s not going to change his position, and he’s not going away. You’ve got to be in this for the long haul.”

Cred Bad

Credibility is a false justification for interventionist policies

Larison 14 (Larison, Daniel. "The "Credibility" Scam." The American Conservative. 11 Aug. 2014. Web. 26 June 2015. <http://www.theamericanconservative.com/larison/the-credibility-scam/>.)ʕ ⌐•ᴥ•ʔ⌐♥eve

The strange thing is that "credibility" hawks' warnings continue to be taken seriously when, as Friedman says, they haven't ever been right. The fact that they've never been right should tell us that there is something inherently wrong with the concept they keep using. Considering how many times U.S. "credibility" has supposedly been shattered or ruined, it is remarkable how many dozens of eager would-be clients and long-standing allies still line up with Washington and fully expect the U.S. to protect them and/or do as they wish. Warning about "credibility" is a giveaway that the person issuing the warning has run out of persuasive arguments and has nothing else left. Friedman sums it up this way: A good rule of thumb for foreign policy is that if someone tells you our credibility depends doing something, it's probably a bad idea. This true not only because "credibility" hawks are always invoking credibility in order to justify more aggressive policies in places of little or no importance to the U.S., but because the reliance on the "credibility" argument is confirmation that these policies can't be defended on the merits. The arguments for deeper U.S. involvement in conflicts that are at best tangentially related to U.S. vital interests are not compelling ones, which is why the "credibility" argument is used so often in these debates. "You may not agree with doing X, but you don't want to risk encouraging a North Korean invasion, do you?" At its core, the "credibility" argument is a sort of extortion: if you don't agree to do what the hawks prefer in one place, your actual allies somewhere else are supposedly going to get hurt. This should alert us to the weakness of the policy arguments, but instead many Americans allow themselves to be tricked into letting "credibility" concerns overrule all of their objections."Credibility" hawks also have the bad habit of exaggerating the significance of the commitment that the U.S. made in the past to pretend that the supposed "credibility" gap is far greater than it is. Consider the infamous "red line" over Syrian chemical weapons. It's true that Obama shouldn't have drawn this line, but he did so in such a vague, almost meaningless way that he had not really committed the U.S. to any particular course of action. It was Syria hawks that latched onto the "red line" and declared that it was a promise to intervene militarily. Similarly, the U.S. had made no commitments to defend Ukraine, but by pretending that the U.S. was ignoring its commitments in the Budapest memorandum "credibility" hawks insisted on taking a harder line in the crisis so that real American security commitments elsewhere wouldn't be undermined. That's how it often works: the "credibility" hawks insist on adding major new commitments that the U.S. never even contemplated having before, and then declare the entire alliance system and security of the planet at risk unless the rest of us agree with whatever reckless and unnecessary scheme they have devised. The "credibility" argument is nothing more than a scam, and we are the marks.

Credibility is counterproductive and contingent on allies- not U.S. policy

Walt 12 (Walt, Stephen. "Why Are U.S. Leaders so Obsessed with Credibility?" Foreign Policy Why Are US Leaders so Obsessed with Credibility Comments. 11 Sept. 2012. Web. 26 June

2015. <http://foreignpolicy.com/2012/09/11/why-are-u-s-leaders-so-obsessed-with-credibility/>.)ʕ ⊃•ᴥ•ʔ⊃♥eve

I call this error the "credibility fetish." U.S. leaders have continued to believe that our security depends on convincing both allies and adversaries that we are steadfast, loyal, reliable, etc., and that our security guarantees are iron-clad. It is a formula that reinforces diplomatic rigidity, because it requires us to keep doing things to keep allies happy and issuing threats (or in some cases, taking actions) to convince foes that we are serious. And while it might have made some degree of sense during the Cold War, it is increasingly counterproductive today. Stolid constancy and loyalty to pre-existing alliance relationship are not the self-evident virtues they once were. We should not be surprised that erstwhile allies put their own interest ahead of ours and act accordingly. Where it is to our long-term advantage, we should do the same."What might this mean in practice? As I've noted repeatedly, it means beginning by recognizing that the United States is both very powerful and very secure, and that there's hardly anything that could happen in the international system that would alter the global balance of power overnight. The balance is shifting, to be sure, but these adjustments will take place over the course of decades. Weaker states who would like U.S. protection need it a lot more than we need them, which means our "credibility" is more their problem than ours. Which in turn means that if other states want our help, they should be willing to do a lot to convince us to provide it.Instead of obsessing about our own "credibility," in short, and bending over backwards to convince the Japanese, South Koreans, Singaporeans, Afghans, Israelis, Saudis, and others that we will do whatever it takes to protect them, we ought to be asking them what they are going to do for themselves, and also for us. And instead of spending all our time trying to scare the bejeezus out of countries like Iran (which merely reinforces their interest in getting some sort of deterrent), we ought to be reminding them over and over that we have a lot to offer and are open to better relations, even if the clerical regime remains in power and maybe even if — horrors! — it retains possession of the full nuclear fuel cycle (under IAEA safeguards). If nothing else, adopting a less confrontational posture is bound to complicate their own calculations.This is not an argument for Bush-style unilateralism, or for a retreat to Fortress America. Rather, it is a call for greater imagination and flexibility in how we deal with friends and foes alike. I'm not saying that we should strive for zero credibility, of course; I'm merely saying that we'd be better off if other states understood that our credibility was more conditional. In other words, allies need to be reminded that our help is conditional on their compliance with our interests (at least to some degree) and adversaries should also be reminded that our opposition is equally conditional on what they do. In both cases we also need to recognize that we are rarely going to get other states to do everything we want. Above all, it is a call to recognize that our geopolitical position, military power, and underlying economic strength give us the luxury of being agile in precisely the way that Freeman depicts.

Despite spying scandals EU wants unified approach to Russia

Yan et al. 15 (Yan, Holly, Catherine Schoichet, and Michael Pearson. "Obama, Merkel Pledge Alliance on Ukraine - CNN.com." CNN. Cable News Network, 9 Feb. 2015. Web. 27 June 2015. <http://www.cnn.com/2015/02/09/europe/ukraine-conflict/>.)ʕ ⊃•ᴥ•ʔ⊃♥eve

Both Obama and Merkel stressed the importance of working together. "There may be some areas where there are tactical disagreements. There may not be. But the broad principle that we have to stand up for ... the principle of territorial integrity and sovereignty is one where we are completely unified," he said. Western leaders cannot stand idly by "and simply allow the borders of Europe to be redrawn at the barrel of a gun," Obama said. Merkel said the strong alliance

between Europe and the United States would thrive despite any differences. Russia's incursions on Ukraine's borders, she said, are too dangerous for Europe to tolerate. "I can only say that if we give up on this principle of territorial integrity of countries, then we will not be able to maintain the peaceful order of Europe that we've been able to achieve," she said.

US and EU working to diplomatically deescalate Russia

VOA News ("Obama, Merkel Opt for Diplomacy in Ukraine Crisis." VOA News. 9 Feb. 2015. Web. 27 June 2015. <http://www.voanews.com/content/german-chancellor-to-hold-talks-monday-with-obama-on-ukraine/2634472.html>.)ʕ ⌒•ᴥ•?⌒♥eve

Merkel came to the White House Monday for talks with Obama on a wide range of issues. Topping their agenda are the fighting in Ukraine and the international coalition against the Islamic State group.

The two leaders said the U.S. and Europe stand united to find a diplomatic solution to end the crisis in Ukraine and the resulting stand-off it triggered between Russia and Western allies.Obama also said Monday his administration is looking at all options in handling the crisis in Ukraine, but he has not yet decided whether the United States will provide arms. “The possibility of lethal defensive weapons is one of those options that is being examined, but I have not made a decision about that yet," he said. He said there is no "specific point" at which lethal defensive weapons would be "appropriate." But he said he had instructed key advisors to examine the plausibility of supplying Kyiv with weaponry, in the event that diplomacy fails to bring peace. Ukraine leaders insist that such hardware is necessary to offset recent rebel military gains and end the uprising near the Russian border.Merkel opposes arming Ukraine forces for fear of escalating tensions with Moscow, already at their highest point since the end of the Cold War. However, she added that no matter what Obama decides, "the alliance between the United States and Europe will continue to stand, will continue to be solid."

The U.S. and German leaders said they would "continue to encourage a diplomatic solution" and agreed that sanctions against Russia need to remain "fully in force" as long as it "continues on its current course."

U.S. and EU working together on Russia sanctions

Mason&Kelly 14 (Mason, Jeff, and Lidia Kelly. "U.S., EU to Work Together on Tougher Russia Sanctions." Reuters. Thomson Reuters, 27 Mar. 2014. Web. 27 June 2015. <http://www.reuters.com/article/2014/03/27/us-ukraine-crisis-idUSBREA2P0VB20140327>.)ʕ ⌒ •ᴥ•?⌒♥eve

The United States and the European Union agreed on Wednesday to work together to prepare possible tougher economic sanctions in response to Russia's behavior in Ukraine, including on the energy sector, and to make Europe less dependent on Russian gas. U.S. President Barack Obama said after a summit with top EU officials that Russian President Vladimir Putin had miscalculated if he thought he could divide the West or count on its indifference over his annexation of Crimea. Leaders of the Group of Seven major industrial powers decided this week to hold off on sanctions targeting Moscow's economy unless Putin took further action to destabilize Ukraine or other former Soviet republics. "If Russia continues on its current course, however, the isolation will deepen, sanctions will increase and there will be more consequences for the Russian economy," Obama told a joint news conference with European Council President Herman Van Rompuy and European Commission President Jose Manuel Barroso. In the keynote address of his European

trip, Obama later told an audience of 2,000 young people that the West would prevail if it remained united, not by military action but by the power of its values to attract ordinary Ukrainians. Russia would not be "dislodged from Crimea or deterred from further escalation by military force. But with time, so long as we remain united, the Russian people will recognize that they cannot achieve security, prosperity, and the status they seek through brute force," he said. In the speech in a Brussels concert hall, which resembled a point-by-point rebuttal of Putin's March 18 Kremlin speech announcing the annexation of Crimea, Obama voiced respect for a strong Russia but said "that does not mean that Russia can run roughshod over its neighbors". He also said NATO would step up its presence in new east European member states bordering on Russia and Ukraine to provide reassurance that the alliance's mutual defense guarantee would protect them. Russian forces in Crimea captured the last Ukrainian navy ship after firing warning shots and stun grenades, completing Moscow's takeover of military installations in the Black Sea peninsula. Kiev has ordered its forces to withdraw.

G7 nations focused on deescalating Russia through sanctions

Crone 6/9 (Crone, Jack. "The Hills Are Alive with the Sound of Merkel: Angela Looks like She's about to Burst into Song for Obama as World Leaders Celebrate G7 Deal." Mail Online. Associated Newspapers, 9 June 2015. Web. 28 June 2015. <http://www.dailymail.co.uk/news/article-3115473/The-hills-alive-sound-Munich-Angela-Merkel-looks-like-s-burst-song-Obama-world-leaders-celebrate-G7-deal.html>.) ʕ ⌒•ᴥ•ʔ⌒♥eve

And despite their sometimes-rocky relationship, the chancellor even won a laugh from David Cameron as she strolled with him and Canadian Prime Minister Stephen Harper before the hilltop summit. Today the Group of Seven (G7) industrial nations focused mainly on the international security threat posed by ISIS, 'Russian aggression' in Ukraine and climate change. Speaking on the issue of Russia, Ms Merkel, who was recently voted the world's most powerful woman, said Europe 'could toughen the sanctions if the situation requires us to do so.' The leaders want Russia and Ukraine to comply with a February 12 ceasefire agreed in the Belarus capital Minsk that largely halted fighting in eastern Ukraine between pro-Russian separatists and Ukrainian government forces.Speaking in a press conference, President Obama added: 'As we've seen again in recent days, Russian forces continue to operate in eastern Ukraine, violating Ukraine's sovereignty and territorial integrity. 'Russia is in deep recession. So Russia's actions in Ukraine are hurting Russia and hurting the Russian people. And the G7 is making it clear that if necessary we stand ready to impose additional significant sanctions against Russia.'Speaking on the same matter, Mr Cameron said the world should remember that the Ukrainians are 'the victims, not the aggressors', adding: 'Existing sanctions must remain in place until the Minsk agreements are fully implemented.'

No Internal Link

No loss of relations from spying - foreign leaders were aware of the spying

Calamur 13 (Calamur, Krishnadev. "4 Things To Know About Spying On Allies." NPR. NPR, 1 Oct. 2013. Web. 25 June 2015. <http://www.npr.org/sections/parallels/2013/10/28/241384089/four-things-to-know-about-spying-on-allies>.) ʕ ⌒•ᴥ•ʔ⌒♥eve

Spying on adversaries is common — as is spying on your allies. As Charles Kupchan, a professor of International Affairs at Georgetown University and a senior fellow on the Council on Foreign Relations, told NPR's Audie Cornish last week: "Everybody spies on everybody, including friends on friends." But there are some exceptions. Since World War II, the U.S. and Britain have shared sensitive intelligence. Three other countries belong to this so-called "five eyes" alliance: Australia, Canada and New Zealand. They *probably* don't spy on each other's leaders, but their citizens are fair game. "In fact," writes Max Boot in Commentary, "this intelligence sharing allows them to do an end-run around prohibitions on domestic surveillance: the Brits can spy on our citizens, we can spy on theirs, and then we can share the results." 2. Why are so many people angry? Two reasons: the scope of the spying and its scale. Foreign leaders likely knew the NSA was spying on citizens in their countries, but they are less tolerant of the fact that they were targets themselves. "What's very important about this particular scandal is that they see our collection as going beyond the pale," Tim Naftali, a senior research fellow at the New America Foundation, tells NPR's Renee Montagne. "We have somehow crossed a boundary that they understood existed and where we've gone they don't accept anymore." But Boot has a different view. "Much of their anger is faked for public consumption," he writes. "The only outrage is that anyone is outraged." So much of this is going to be done in secret and one thing that we should expect — or should hope for — is that Congress will play a role and we will see a change in the leadership of the NSA — because a signal has to be sent abroad to our allies that we take seriously their concerns about the ambit of NSA collection." But Kupchan notes there will be "very little" damage even if the U.S. stops spying on its allies. "And that's because in the end of the day, friends do not mean harm to friends," he says. "The United States would have somewhat less information in its diplomatic quiver, but we could certainly live if there were to be an agreement with our friends to cut this out."

Escalation Inev

Russian escalation is inevitable, Putin reacts irrationally --Ukraine crisis proves

Blodget 1/21 (Blodget, Henry., editor-in-chief of Business Insider,. "UKRAINE OFFICIAL: Putin Is Escalating And Emotional - And Hasn't Spoken To President Poroshenko For 11 Days." Business Insider. Business Insider, Inc, 21 Jan. 2015. Web. 24 June 2015. <http://www.businessinsider.com/ukraine-official-putin-is-escalating-the-conflict-2015-1#ixzz3e0BwNLJI>) ʕ ⊃•ᴥ•ʔ⊃♥eve

On a closed session at the World Economic Forum in Davos, Switzerland, a high-ranking Ukrainian official just shared the Ukrainian government's current view of its conflict with Russia: Fighting has resumed after a three-week ceasefire. The administration sees signs that Putin is escalating his forces, albeit in a limited way. The administration does not currently see Putin amassing force for a major invasion.. The official applauded support from China. The Ukrainian government believes time is working against Putin. The combination of economic sanctions, plunging oil prices, and the backlash against Putin's aggression is putting Putin in an increasingly isolated position. Putin is responding by escalating his forces. The Ukrainian government says it does not know what Putin wants. The administration believes that even Putin does not know what he wants. Putin's tone changes on every phone call with Ukrainian President Petro Poroshenko, the official said. The last time Putin spoke with President Poroshenko was 11 days ago.

Unified Front Not Key

No I/L uniq or risk of mpx. U.S. Providing military support and creating unity in Europe to deter Russian aggression.

Baldor 6/23/15

Baldor, Lolita C. National Security/Pentagon Reporter Associated Press Washington, D.C**.**"US to Put Military Equipment in 6 European Countries, including Balkans, to Reassure Allies." US

News. U.S.News & World Report, 23 June 2015. Web. 23 June 2015. <http://www.usnews.com/news/politics/articles/2015/06/23/carter-us-to-put-military-equipment-in-6-european-countries?page=2>.

TALLINN, Estonia (AP) — The U.S. will spread about 250 tanks, armored vehicles and other military equipment across six former Soviet bloc nations to help reassure NATO allies facing threats from Russia and terrorist groups, Defense Secretary Ash Carter announced Tuesday. Carter's announcement, made as he stood with defense chiefs from Estonia, Latvia and Lithuania, comes a day after he announced that the U.S. would have other weapons, aircraft and forces, including commandos, ready as needed for NATO's new rapid reaction force, to help Europe defend against potential Russian aggression from the east and the Islamic State and other violent extremists from the south. The defense chiefs standing with Carter all spoke bluntly about the threat they perceive from Russia, and **the latest military plans provide a show of solidarity across the region and in NATO.** Estonia Defense Minister Sven Mikser said the Baltic leaders aren't trying to restart the Cold War arms race or match Russian President Vladimir Putin "tank for tank," but the additional military presences will be a deterrent to Russia and could change the calculous. "In global terms Russia is no match conventionally to U.S. or to NATO, but here in our corner of the world, Putin believes that he enjoys regional superiority," Mikser said, adding that Estonia is eager and ready to accept the equipment immediately. Each set of equipment would be enough to outfit a military company or battalion, and would go on at least a temporary basis to Bulgaria, Estonia, Latvia, Lithuania, Poland, and Romania. Carter said the equipment could be moved around the region for training and military exercises, and would include Bradley fighting vehicles and self-propelled howitzer artillery guns. Germany will be participating in the expanded military effort, but already has U.S. equipment. "We intend to move those equipment sets around as exercises move around," Carter told a news conference. "They're not static. Their purpose is to enable richer training and more mobility to forces in Europe." He said the U.S. presence will be "persistent" but "agile," and he said the troops will be able to stay at a higher state of readiness. But while the stated goal of the move is that American forces moving in and out of Europe will be better able to do training, it also would allow NATO nations to more quickly respond to any military crisis in the region. Later in the day, Russia was also on the minds of U.S. sailors and Marines aboard the USS San Antonio, which just finished up a major annual international military exercise on the Baltic Sea called BALTOPS. The exercise, which involved some 60 ships from 17 NATO nations, is part of the stepped-up campaign to increase military training and activities in the region as a deterrent to Russia. Troops quizzed Carter on U.S. relations with Russia and questioned whether the U.S. might put a greater maritime presence in the region. The U.S. military "is highly, highly visible here in Europe, it's reassuring for them to see you," he said, "because of what you stand for." The U.S., said Carter, is also going to work with NATO's cyber center, located in Estonia, to help allies develop cyber defense strategies and other protections against computer-based attacks. Russian hackers have become particularly adept, including breaking into U.S. State Department computers. The countries for the equipment storage were chosen based on their proximity to training ranges, to reduce the time and cost of transporting it for exercises. The two-pronged U.S. plan — with the placement of equipment in Europe and the commitment of resources for NATO's very high readiness task force —

underscore America's commitment to helping allies counter growing threats on Europe's eastern and southern fronts.Rankings & Advice News U.S. News Home NEWS Facebook Twitter News, Opinion & Analysis News Ken Walsh's Washington Newsgram Washington Whispers At the Edge Data Mine The Run 2016 Opinion National Issues Special Reports Cartoons Photos The Report US to put military equipment in 6 European countries, including Balkans, to reassure allies The Associated Press The US Secretary of Defense Ashton Carter, left, and Estonian Defense Minister Sven Mikser attend a joint press conference after a meeting in Tallinn, Estonia, Tuesday, June 23, 2015 . (AP Photo) Associated Press June 23, 2015 | 12:44 p.m. EDT + More U.S. and NATO allies have criticized Russia for its increasingly aggressive actions, including the annexation of Crimea and its backing of separatist troops on Ukraine's eastern border. Under the plan to commit troops and resources if needed during a crisis, the U.S. could see a temporary increase in American troops in Europe, although many could be reassigned from bases already in the region. No U.S. troops or equipment will move immediately. Carter said the U.S., if requested and approved, would be willing to provide intelligence and surveillance capabilities, special operations forces, logistics, transport aircraft, and a range of weapons support that could include bombers, fighters and ship-based missiles. It would not provide a large ground force.

No I/L link, US sending strong deterrence signals

Kube 6/23/15

Courtney Q. chief Pentagon correspondent for NBC News. "U.S. Sending Armored Combat Brigade to Europe Amid Russia Tension." NBC News. National Broadcasting Corporation, 23 June 2015. Web. 24 June 2015. <http://www.nbcnews.com/storyline/ukraine-crisis/u-s-sending-armored-combat-brigade-europe-amid-russia-tension-n380191>.

At a news conference in Estonia, Carter said six countries — including Estonia, Romania and Poland — have agreed to temporarily host the armored brigade. "While we do not seek cold let alone 'hot war' with Russia, we will defend our allies, the rule-based international order and the positive future it affords us all," Carter told reporters, emphasizing that the move is not permanent and does not include troops. Defense officials told NBC News the forward deployment of the armored brigade will allow the U.S. to conduct more frequent training exercises in the region and send a strong signal to Russian President Vladimir Putin that the U.S. stands firmly with NATO in defense of the Baltic nations. There will be no U.S. military forces permanently deployed with the weapons, according to senior military officials. U.S. troops will be deployed as needed for joint exercises. Image: Defense Secretary Ashton Carter Gives Briefing On Sexual Assault Annual Report U.S. Secretary of Defense Ashton Carter speaks at a press briefing on the Sexual Assault Annual Report in the Pentagon Briefing Room on May 1, 2015 in Arlington, Virginia. Olivier Douliery / Getty Images U.S. officials added this is an effort to provide **a** "credible deterrence" to Russian aggression not an effort to reignited the Cold War with Russia. Senior military officials said the brigade will consist of 250 armored track vehicles, including tanks, Bradley fighting vehicles and artillery. There was no indication the U.S. was preparing to provide defensive weapons to Ukraine, where the government continues to fight Russian-backed rebels in the country's southeast. The violence continues in the region despite a ceasefire agreement reached in February. NATO Secretary-General Jens Stoltenberg told reporters Monday meeting that this was not a return to the Cold War. "We are not in a Cold War situation, but we are not in a strategic partnership with Russia either," he told a

news conference. "Therefore, we are facing something which is in between the historic experience of the Cold War and what we strive to establish, a strategic partnership with Russia after the Cold War."

No I/L or Impact, NATO strong and refuses arms race with Russia

Croft 6/24/15

The head of NATO said on Wednesday the alliance would not be forced into a new arms race with Russia but that what he called Moscow's aggression in Ukraine had compelled it to strengthen its defenses. The United States announced plans this week to station tanks and heavy weapons in NATO member states on Russia's border, shortly after President Vladimir Putin said Moscow would add 40 missiles to its nuclear arsenal. "We will not be dragged into an arms race, but we must keep our countries safe," NATO Secretary-General Jens Stoltenberg told reporters at the start of a meeting of alliance defense ministers. A Russian official last week accused NATO of pushing Russia into an arms race by stepping up its military activity around its borders, not least in the formerly Soviet Baltic States. U.S. Defense Secretary Ash Carter, attending his first NATO ministerial meeting, said on Tuesday the Baltic states - Estonia, Lithuania, Latvia - as well as Bulgaria, Romania and Poland had agreed to host the U.S. arms and heavy equipment. It was one of a range of steps the United States and NATO are taking to reinforce allies in eastern Europe after Moscow's annexation of Ukraine's Crimea region last year and what NATO says is Russia's military support for separatists in eastern Ukraine. Stoltenberg said the U.S. decision to store heavy weaponry in eastern Europe was a defensive measure and rejected suggestions that it could be a provocative step. "This is ... a prudent and a necessary response to what we have seen from Russia over a long period of time," he said. "What Russia has done in Ukraine is not defensive. To annex a part of another country is not defensive ... that is an act of aggression," he said. "They are also using now nuclear rhetoric and more nuclear exercises as part of their defense posturing. All of this creates a new security environment," he said. Asked if NATO and Russia were heading for a new Cold War, British Defense Secretary Michael Fallon told reporters: "There is sabre-rattling designed to provoke and intimidate but it is important also that the alliance ... continues to commit to the collective will to defend all its members." Ministers are expected to agree to further increase the size of NATO's rapid response force to 40,000 personnel. They decided in February to more than double it to 30,000 soldiers, airmen and sailors from 13,000. Within this force, NATO is to create a 5,000-strong "spearhead" force, part of which could move within 48 hours.

Russia and G7/NATO ALREADY aren't working together – impx should have happened already

Mulrine, Christian Science Monitor staff writer, 6/9

Anna Mulrine, June 6th, 2015, "NATO and Russia aren't talking to each other. Cold war lessons forgotten?" http://www.csmonitor.com/World/Europe/2015/0609/NATO-and-Russia-aren-t-talking-to-each-other.-Cold-war-lessons-forgotten-video PJL~KKF

WASHINGTON; AND MOSCOW — Knowing your enemy doesn't just win the war. Sometimes, it also can be critical to keeping the peace. Such was the case in 1983, during a massive NATO drill to test the alliance's capabilities to respond to a Soviet invasion of western Europe. Unknown to its planners, however, "Able Archer," which envisaged using nuclear weapons to halt the enemy advance, looked to Soviet eyes exactly the way Soviet intelligence had predicted a US nuclear "first strike" would unfold.

Though many of the details of how war was averted remain undisclosed, experts on both sides say the world came to the very brink of nuclear Armageddon through a chain of preventable misunderstandings. It was one of several cold war close calls that convinced Moscow and Washington to step up military contacts and establish formal, as well as informal, channels of communication that might make all the difference in an emergency. Those old tales are taking on urgent new relevance as the crisis over Ukraine drives East-West tensions to levels unseen since the cold war. Military machines on both sides are engaged in nearly non-stop war games aimed at displaying their readiness

to their jittery publics, and scary near-misses between warplanes are multiplying as Russia's Air Force tries to return to its Soviet-era pattern of global patrolling. All this is happening at a time when dialogue, even at the highest levels, is almost nonexistent. "Not just communications, but other mechanisms that used to exist are simply not working anymore," says Viktor Baranets, a former Russian defense ministry spokesman. "I don't want to sound alarmist, but judging by the rapid pace of events and growing aggressiveness on all sides, we may be moving toward disaster. It's like we're all priming a bomb, but no one knows when or how it will explode. Gradually, we are moving from cold to hot war." 'We should be having these conversations' The disconnect between the Russian and American militaries is in part a natural result of the end of the cold war Most of the old coping mechanisms were scrapped after they became unnecessary 25 years ago. That has left fighter pilots and ship captains today without the experience of their cold war predecessors, who were steeled by regular encounters with the enemy. But as NATO and Russia broke off relations last year amid the escalating spat over Ukraine, communications at lower echelons virtually ended. Last month NATO announced that it would set up a cold war-style "hotline" with the General Staff in Moscow. But that came even as NATO kicked out dozens of Russians formerly stationed at its Brussels headquarters. Pentagon officials say the US decision, alongside NATO, to slash military relations with Russia was the right thing to do "in light of Russia's aggressive actions in Ukraine." Virtually all bilateral engagements were shut down, including military exercises, bilateral meetings, port visits, and planning conferences. They say they continue to maintain "open lines of communication with Russia." But some experts worry that the hotline may prove far too little as tensions spiral, snap war drills become larger and more frequent on both sides, and genuine efforts to see the other guy's point of view dwindle. Army Chief of Staff Gen. Raymond Odierno says the fall-off in communications is indeed of concern. "I'm a big believer in no matter how big your disagreements are, it's important that you continue to have discussions," he says. "In my mind, when you're not talking, relationships can deteriorate faster because you can misinterpret – you don't quite understand exactly what's being said, and you don't have the opportunity to discuss the most difficult issues," he told defense reporters on May 28. "I believe we should be having these conversations, but we're not." Nuclear troubles Strategic nuclear weapons are still subject to strict controls. Five years ago Russia and the US signed the New START treaty, which holds the two sides to defined numbers of warheads and delivery systems. The treaty has its own apparatus for mutual verification and consultation. But the late-cold-war treaty that banned all medium-range nuclear missiles in Europe is under new strains, with the US accusing Russia of violations and some Russian politicians openly calling for the accord to be scrapped altogether. Russia is also warning that it might deploy nuclear-capable Iskander missiles to its western enclave of Kaliningrad and the newly-annexed territory of Crimea, which could add a nuclear dimension to the standoff. In the worst case, there is still the "red phone" – not actually a phone, but a priority connection – between the White House and the Kremlin, established in the wake of the 1962 Cuban Missile Crisis. But that's not enough to offset the shift in attitudes. "Relations are changing in the worst possible direction. We're in a propaganda war, and the realization has dawned that we are not friends," says Viktor Kremeniuk, a veteran Russian America-watcher and author of a new book, "Lessons from the Cold War." "If something should happen in an area not covered by a specific, preexisting agreement, it's not clear how it would be handled," he says. "Basically, the normal channels of diplomacy are all we've got now." Growing risk of accident An air-to-air encounter turned bad is one of the nightmares that plague officials on both sides. Pentagon officials point to an April 2014 incident, in which a Russian fighter plane buzzed a US reconnaissance aircraft and "put the lives of its crew in jeopardy." "During the cold war, it was routine anytime our reconnaissance aircraft was looking at them, or them at us, that we would be flying in formation in a very predictable way," says Christopher Harmer, a retired naval officer who served as former deputy director of future operations at the US Navy's Fifth Fleet. That tight formation flying helped keep miscalculations to a minimum, Mr. Harmer says. But the sort of "reckless" flying demonstrated by the Russian fighter jet represents a shift in tactics. There is little chance it was the act of a show-off pilot, he adds. "Russian pilots don't do rogue." The US Navy complains of similar close and "provocative" Russian approaches toward its ships in the Black Sea, including an incident last week involving the guided missile destroyer USS Ross. Russian media accounts of the same event stress the defensive actions of Russian military forces in the face of US "aggressive" moves. Odierno says that he has endeavored to arrange meetings to discuss rules of engagement. "I've actually tried to meet to meet with my Russian counterpart on two separate occasions, and both times they've refused to do that in neutral settings So it's concerning," because the lack of communication "definitely increases the danger of miscalculations" between the two countries, he says. "It's depressing to find ourselves back in this situation. Trust is ebbing, tensions are spiking, there's the constant feeling that something could go badly wrong," says Andrei Baklitsky, an expert with the independent PIR Center in Moscow, a think tank specializing in nuclear security issues. "We need to work out a new set of rules. The way we've been doing things for the past 25 years isn't working in this new situation, so people really need to start talking."

Alt causes -- The key to stopping Russia is to solve the ideological clashes between Eastern and Western politics, or at least to pacify these concerns of misperception

Economist 2/14/15 February 14, 2015, "Russia's aggression in Ukraine is part of a broader, and more dangerous, confrontation with the West" http://www.economist.com/news/briefing/21643220-russias-aggression-ukraine-part-broader-and-more-dangerous-confrontation PJL~KKF

THE pens were on the table in Minsk, Belarus's capital, for the leaders of France, Germany, Russia and Ukraine to sign a deal to end a year-long war fuelled by Russia and fought by its proxies. But on February 12th, after all-night talks, they were put away. "No good news," said Petro Poroshenko, Ukraine's president. Instead there will be a ceasefire from February 15th. A tentative agreement has been reached to withdraw heavy weaponry. But Russia looks sure to be able to keep open its border with Ukraine and sustain the flow of arms and people. The siege of Debaltseve, a strategic transport hub held by Ukrainian forces, continues. Russia is holding military exercises on its side of the border. Crimea was not even mentioned. Meanwhile the IMF has said it will lend Ukraine $17.5 billion to prop up its economy. But Mr Putin seems to be relying on a familiar Russian tactic of exhausting his negotiating counterparts and taking two steps forward, one step back. He is counting on time and endurance to bring the collapse and division of Ukraine and a revision of the post-cold war world order. Nearly a quarter-century after the collapse of the Soviet Union, the West faces a greater threat from the East than at any point during the cold war. Even during the Cuban missile crisis of 1962, Soviet leaders were constrained by the Politburo and memories of the second world war. Now, according to Russia's chief propagandist, Dmitry Kiselev, even a decision about the use of nuclear arms "will be taken personally by Mr Putin, who has the undoubted support of the Russian people". Bluff or not, this reflects the Russian elite's perception of the West as a threat to the very existence of the Russian state. **In this view Russia did not start the war in Ukraine, but responded to Western aggression.** The Maidan uprising and ousting of Viktor Yanukovych as Ukraine's president were engineered by American special services to move NATO closer to Russia's borders. Once Mr Yanukovych had gone, American envoys offered Ukraine's interim government $25 billion to place missile defences on the Russian border, in order to shift the balance of nuclear power towards America. Russia had no choice but to act. Even without Ukraine, Mr Putin has said, America would have found some other excuse to contain Russia. Ukraine, therefore, was not the cause of Russia's conflict with the West, but its consequence. Mr Putin's purpose is not to rebuild the Soviet empire—he knows this is impossible—but to protect Russia's sovereignty. By this he means its values, the most important of which is a monopoly on state power. **Behind Russia's confrontation with the West lies a clash of ideas.** On one side are human rights, an accountable bureaucracy and democratic elections; on the other an unconstrained state that can sacrifice its citizens' interests to further its destiny or satisfy its rulers' greed. Both under communism and before it, the Russian state acquired religious attributes. It is this sacred state which is under threat. Mr Putin sits at its apex. "No Putin—no Russia," a deputy chief of staff said recently. His former KGB colleagues—the Committee of State Security—are its guardians, servants and priests, and entitled to its riches. Theirs is not a job, but an elite and hereditary calling. Expropriating a private firm's assets to benefit a state firm is therefore not an act of corruption. When thousands of Ukrainians took to the streets demanding a Western-European way of life, the Kremlin saw this as a threat to its model of governance. Alexander Prokhanov, a nationalist writer who backs Russia's war in Ukraine, compares European civilisation to a magnet attracting Ukraine and Russia. Destabilising Ukraine is not enough to counter that force: the magnet itself must be neutralised. Russia feels threatened not by any individual European state, but by the European Union and NATO, which it regards as expansionist. It sees them as "occupied" by America, which seeks to exploit Western values to gain influence over the rest of the world. America "wants to freeze the order established after the Soviet collapse and remain an absolute leader, thinking it can do whatever it likes, while others can do only what is in that leader's interests," Mr Putin said recently. "Maybe some want to live in a semi-occupied state, but we do not." Russia has taken to arguing that it is not fighting Ukraine, but America in Ukraine. The Ukrainian army is just a foreign legion of NATO, and American soldiers are killing Russian proxies

in the Donbas. Anti-Americanism is not only the reason for war and the main pillar of state power, but also an ideology that Russia is trying to export to Europe, as it once exported communism. Anti-Westernism has been dressed not in communist clothes, but in imperial and even clerical ones (see article). "We see how many Euro-Atlantic countries are in effect turning away from their roots, including their Christian values," said Mr Putin in 2013. Russia, by contrast, "has always been a state civilisation held together by the Russian people, the Russian language, Russian culture and the Russian Orthodox church." The Donbas rebels are fighting not only the Ukrainian army, but against a corrupt Western way of life in order to defend Russia's distinct world view.

Russia is currently pursuing peace with Ukraine

Tejas, 6/6/15 **Aditya Tejas, International Business Times, June 6th, 2015, "Putin Blames Ukraine For Stalling Peace Deal, Says Russia Wants Peace"** http://www.ibtimes.com/putin-blames-ukraine-stalling-peace-deal-says-russia-wants-peace-1955346 PJL~KKF

Russian President Vladimir Putin said on Saturday that Moscow supports the Minsk peace agreements ratified in February in Ukraine, but blamed Kiev for stalling the truce efforts. "Russia is interested in and will strive to ensure the full and unconditional implementation of the Minsk Agreements," Putin told the Italian newspaper Corriere della Sera on Saturday, according to Reuters. He called the deal between the two countries "right, just and feasible." An uneasy ceasefire saw hostilities between warring factions in eastern Ukraine cool off for a few months, but a spate of fighting in recent weeks has thrown the peace accord into uncertainty. An unknown number of fighters were killed on Wednesday when clashes broke out between Ukrainian troops and pro-Russia rebel forces in the Donetsk region. Putin blamed the fresh hostilities on Kiev, saying that separatist forces had fulfilled their promise of withdrawing heavy weapons from the fight. "It is time to begin implementing the Minsk Agreements," Putin reportedly told the paper. He called on Kiev to undertake constitutional reforms – as part of the agreement – that would allow the rebel breakaway regions in the country's east to become autonomous, and implement municipal elections and amnesty. "The problem is that the current Kiev authorities don't even want to sit down to talks with them. And there is nothing we can do about it," he reportedly said. "Only our European and American partners can influence this situation." He also dismissed the worries of the European countries regarding Moscow as unfounded. "As for some countries' concerns about Russia's possible aggressive actions, I think that only an insane person and only in a dream can imagine that Russia would suddenly attack NATO," he said. Radio Free Europe reported, citing Corriere della Sera. "I think some countries are simply taking advantage of people's fears with regard to Russia," he added. "Let me tell you something - there is no need to fear Russia." He called Kiev's economic severance from the rebel territories a humanitarian crisis and urged the European Union to provide more financial relief to the region. "Since we are talking about what can or must be done, and by whom, I believe that the European Union could surely provide greater financial assistance to Ukraine," he reportedly said. Moscow has maintained that Kiev has instigated the conflict, and that there are no Russian troops, except private forces, fighting in the country. It has defended the right of the breakaway regions, including the self-proclaimed Donetsk People's Republic, to secede from Ukraine.

NATO focused on deterring Russian nuclear aggression and U.S. wont engage in arms race anyway.

Dyer, 6/25/15

Geoff. "Nuclear Deterrent on Nato Agenda amid Rise in Russian Rhetoric." Financial Times. N.p., 25 June 2015. Web. <http%3A%2F%2Fwww.ft.com%2Fintl%2Fcms%2Fs%2F0%2Faa11ac16-1a8f-11e5-a130-2e7db721f996.html%23axzz3dwvRW8n6>.

Nato is reviewing its nuclear policy in response to what western officials believe is irresponsible rhetoric from Russia about the potential use of nuclear weapons. Defense ministers discussed strengthening the military alliance's nuclear deterrent for the first time since the end of the cold war on the margins of a summit in Brussels on Wednesday and are expected to have more formal talks at a meeting in October. US officials insist there are no plans to place new nuclear weapons in Europe, which would politically contentious within alliance members, but Nato officials say they need to re-examine the response to potential nuclear threats by Russia. "We will not be dragged into an arms race," Jens Stoltenberg, Nato secretary-general, said at the start of the

meeting. However, he warned that in addition to its military interventions in Crimea and eastern Ukraine, Russia was "also now using nuclear rhetoric and more nuclear exercises as part of their defence posturing". The renewed discussion within Nato about nuclear weapons underlines the shift in the alliance's priorities over the past 18 months from the war in Afghanistan to its core mission of self-defence against Russia. Any effort to beef up Nato's nuclear rhetoric would leave Barack Obama in an uncomfortable position after the US president came to office pledging to make nuclear disarmament one of his administration's main priorities. Vladimir Putin, Russia's president, said last week he planned to add 40 missiles to Russia's arsenal of intercontinental ballistic missiles. In recent months, Russia has increased flights of nuclear-enabled bombers across Nato territory and has added nuclear elements to some recent exercises. The Obama administration accused Russia last year of violating the Intermediate-range Nuclear Forces (INF) treaty, a cold war-era arms control accord, by testing a banned ground-launched cruise missile. Some Nato officials have suggested there could be a need to revive some military exercises with a nuclear component to understand how the alliance would respond. "There is very real concern about the way in which Russia publicly bandies around nuclear stuff. So there are quite a lot of deliberations in the alliance about nuclear but it is being done very slowly and deliberately. We need to do due diligence on where we are," a Nato diplomat said. US defence secretary Ashton Carter, who is on a week-long visit to Europe, has been critical of Mr Putin's comments about nuclear weapons. "What's odd about it is the level of rhetoric," he said while in Estonia. "That's what's so out of tune with the times and the way responsible world leaders have conducted themselves with respect to talking about what are very fearsome weapons." Douglas Lute, the US ambassador to Nato, said there was no discussion in Washington about redeploying land-based cruise missiles to Europe. But he said there was "a general assessment under way in Washington and a parallel assessment here in Nato to look at all the possible implications of what Russia says about its nuclear weapons". "Faced with today's Russia, which still has more than 5,000 nuclear warheads and which still positions itself as anti-western and which defines Nato as a concrete threat, nuclear strategy must be discussed and substantiated again," said Karl-Heinz Kamp, a German security analyst in a report for the Nato defence college. Nato shifts strategy in Europe to deal with Russia threat ZAGAN, POLAND - JUNE 18: Lithuanian soldiers participate in the NATO Noble Jump military exercises of the VJTF forces on June 18, 2015 in Zagan, Poland. The VJTF, the Very High Readiness Joint Task Force, is NATO's response to Russia's annexation of Crimea and the conflict in eastern Ukraine. Troops from Germany, Norway, Belgium, Poland, Czech Republic, Lithuania and Holland were among those taking part today. (Photo by Sean Gallup/Getty Images) The US is to store tanks and weapons across eastern Europe to deter Russia as US defence secretary Ashton Carter accused Vladimir Putin of wanting to "turn back the clock" in Europe. Continue reading The type of scenario that defence officials are examining is an attempt by Russia to take control of a slice of territory in one of the Baltic nations. If Nato then attempted to retake the territory by attacking Russian air defences in the area, Russia might at that stage accuse the alliance of escalating the conflict and threaten to use intermediate nuclear missiles. Elbridge Colby, a nuclear expert at the Center for a New American Security, said that in a conflict on Nato's eastern flank "Putin might assume that he could force the alliance to back down". He added: "Nato does not need a total nuclear rethink. But it needs to be realistic about how it would respond and willing to show Putin that he would not get away with it."

US Russia war will not escalate

Lynch 6/23/15

David. A senior writer with Bloomberg News in Washington, D.C., focusing on the intersection of politics and economics. "NATO Maneuvers to Keep Cool War With Russia From Becoming Hot." Bloomberg.com. Bloomberg, 23 June 2015. Web. 23 June 2015. <http://www.bloomberg.com/news/articles/2015-06-23/nato-maneuvers-to-keep-cool-war-with-russia-from-becoming-hot>

Spooked by Russian President Vladimir Putin's takeover of Crimea last year, NATO is working to deter a similar move elsewhere. U.S. Defense Secretary Ashton Carter, in the midst of a week-long trip to Europe, is reassuring nervous allies that the trans-Atlantic alliance would ride to the rescue if Russia attacked. The three tiny Baltic nations, Russia's neighbors and parts of the former Soviet Union before they joined the North Atlantic Treaty Organization in 2004, are especially anxious. "We have reasons to believe that Russia views the Baltic region as one of NATO's most vulnerable areas, a place where NATO's resolve can be tested," said Sven Mikser, Estonia's defense minister. On Tuesday, Carter tried to meet the test, saying that the U.S. is moving about 250 tanks, howitzers and Bradley Fighting Vehicles to Estonia, population 1.3 million, and five other alliance nations as a show of force. "While we don't seek a cold war, let alone a hot war, with Russia, we will defend our allies," he told reporters in Tallinn, the Estonian capital. Still, the U.S. defense chief confronts doubts about both NATO's capability and its willingness to act. His campaign of deterrence, while reminiscent of the Cold War, is playing out

on a vastly different political, military and economic landscape. The Cold War's tidy us-versus-them face-off has been replaced by a web of commercial and cooperative ties among Russia, the United States and European nations. Russia provides almost a third of the European Union's natural gas needs and is Europe's third-largest trading partner. NATO Doubts Those ties have contributed to doubts about NATO's willingness to fight for its newest members. Majorities of the public in Germany, France and Italy oppose defending NATO allies on Russia's periphery if they come under attack, according to a June 10 Pew Research Center survey. "Nobody's going to war with Russia over Estonia," said Leon Aron, a Russia specialist at the American Enterprise Institute in Washington. Doubts about NATO's will to act are matched by concerns about its ability to fight. The alliance is fielding a new rapid reaction force that's intended to reach trouble spots within 48 hours -- far faster than the minimum 30 days needed before the Ukraine crisis. Even that quicker tempo, however, may not be fast enough. A repeat of the murky circumstances that governed the opening phase of the Ukraine crisis -- operations by armed units with no insignia, coupled with stage-managed pleas for help by local ethnic Russians -- could present NATO with a difficult choice. Faster Decisions Carter said allied officials later this week will discuss ways to ensure that the "speed of decision-making" matches military needs. That hasn't always been the case. In 2003, it took a month after a U.S. request to NATO for Patriot air defense missile batteries to arrive in Turkey. "It's pretty clear they would not be there in time," said Terrence Kelly of the Rand Corp., a nonprofit policy research organization, who's participated in Baltic war games. "Our research clearly indicates that Russia could get to the Baltic Sea very, very quickly." Some doubt that the Russian threat will materialize. Ukraine, with a special, emotional importance to Russian culture, wasn't a member of NATO, and the deep reservoir of public support from ethnic Russians in Crimea would be difficult to replicate in Estonia, Latvia or Lithuania. Facing West "The Russian speakers in these countries have been living in the West for a long time," said Sean Kay, a former Defense Department consultant and director of the international studies program at Ohio Wesleyan University. "It's not the Donbass," he said, referring to the disputed eastern region of Ukraine. "They're citizens of the European Union." U.S. officials see the Russian leader's support for pro-Russian separatists in Ukraine as only part of a broader campaign to split the Western alliance -- what Rand analysts labeled a "cool war" in a March 25 study. "Weakening, if not destroying NATO, is one of Putin's key national security objectives," said Kelly, director of the strategy, doctrine and resources program for the Rand Arroyo Center, funded by the U.S. Army. Prepositioning equipment for one armored combat brigade spread among Estonia, Latvia, Lithuania, Bulgaria, Romania and Poland -- the allies closest to Russian soil -- is intended as a signal to Putin. No one expects Russian armored formations and thousands of soldiers to pour across the borders. The fear is a repeat of the deft propaganda and irregular militias that Russia has employed to devastating effect in eastern Ukraine. Virtual Warfare Or Russia could launch an offensive across virtual borders using cybertools that didn't exist in the Cold War. In 2007, during a dispute between Estonia and Russia over the relocation of a Soviet war memorial from the center of Tallinn, "denial of service attacks" crashed Estonian government websites. Carter on Tuesday toured an Estonian cybersecurity research center housed in a handsome stone building that served in the 19th century as a barracks for the Russian czar's army. Since Russia used such "hybrid warfare" to swallow the Crimean peninsula in March 2014, allied military forces have staged a near-continuous series of military exercises to demonstrate resolve while political leaders have vowed to counter any further Moscow moves. "The United States and the rest of the NATO alliance are absolutely committed to defending the territorial integrity of Estonia, Latvia and Lithuania, just as we're committed to defending all of our allies," Carter said. Military Imbalance If today's Russian

threat differs from that of the Cold War, Europe's military balance also has evolved. The U.S. remains in the midst of a long drawdown of its European forces despite the Ukraine crisis. The U.S. has about 65,000 troops in Europe today compared with an early-1990s peak of more than 300,000. Repeated headquarters staff cuts have made U.S. European Command the smallest combatant command in the U.S. military. In April, the U.S. Army announced the withdrawal of 24 Apache and 30 Blackhawk helicopters from Germany. U.S. forces in Europe "have been sized over the last two decades for a Russia that we were looking to make a partner," Air Force General Philip Breedlove, commander of U.S. European Command and Supreme Allied Commander in Europe, told the Senate Armed Services Committee in April. Russia's military, too, pales in comparison to its Soviet predecessor. From a 1986 peak of 4.3 million men under arms, the Russian military has shrunk to fewer than 1 million in uniform, according to a March 31, 2014, Congressional Research Service study. Uphill Battle Putin has launched a multiyear program to expand and modernize his military, but "mismanagement, changes in plans, corruption, manning issues, and economic constraints have complicated this restructuring," the report concluded. The military balance may not matter as much as perceptions in rival capitals, though**. Putin already has misjudged the consequences of seizing Crimea, and and allied officials want to make sure he doesn't miscalculate again. "NATO collectively is far superior to Russia today," said Mikser, the Estonian defense chief.** "In global terms, Russia is no match literally to the U.S., to NATO**.** But here in this, our corner of the world, Putin believes he enjoys superiority, regional superiority. That makes us vulnerable." Increased Exercises Over the past year, the U.S. has taken several steps to shore up its deterrent. Under the $1 billion European Reassurance Initiative, the Pentagon has increased the frequency of European exercises. It's flown A-10 attack aircraft to bases in Romania and funded improvements to railheads and landing strips that would be needed in the event of trouble along NATO's eastern or southern flanks. The prepositioning of enough equipment for 5,000 soldiers announced Tuesday is a further warning. But it may not be enough. "That will end up being an initial step," said retired Admiral James Stavridis, a former supreme allied commander and now dean of the Fletcher School of Law and Diplomacy at Tufts University in Medford, Massachusetts. "The Baltics' desire to have a small permanent presence of U.S. troops -- companies or battalions -- will continue to grow. I think we'll end up in that position in another year or so."

No impact, Strained US-Russian relations have not escalated, sanctions prove.

AFP 2/7/2015

AFP is a global news agency delivering fast, in-depth coverage of the events shaping our world from wars and conflicts to politics

Moscow (AFP) - President Vladimir Putin on Saturday said Russia is not at war and does not want war with anyone, but sharply criticised Western sanctions over Ukraine. "There's no war, thank God. But there is definitely an attempt to curb our development," Putin told a trade union conference, cited by TASS news agency. He criticised sanctions imposed on Russia by the West over Ukraine saying "they definitely can't be effective against a country like ours, although they cause certain damage and we have to realise this... We must raise our level of sovereignty, including in our economy." Putin complained of an attempt to "freeze the existing world order that has become established over the last decades after the fall of the Soviet Union, with a single leader who wants to stay that way," apparently talking about the United States. "Such a world order will never suit Russia," he said. "If somebody likes it or wants to live in conditions of semi-

occupation (then go ahead), but we won't do this." "But we don't plan to fight a war with anyone. We plan to cooperate with everyone."

U.S. Defense Secretary Ashton Carter confirmed Tuesday that the U.S. will deploy one armored combat brigade to Europe, bolstering joint training exercises with NATO partners in an effort to deter Russian aggression in eastern Europe. Carter said the armored brigade will include tanks, artillery and armored vehicles.

No arms race with Russia and NATO well prepared for any war.

Reuters. 6/24/15

"NATO: There Will Be No Arms Race with Russia." Reuters. Thomson Reuters, 24 June 2015. Web. 24 June 2015. <http://www.reuters.com/video/2015/06/24/nato-there-will-be-no-arms-race-with-rus?videoId=364712486>.

As NATO Defense ministers arrive in Brussels -- NATO Secretary Jens Stoltenberg says the alliance would not be forced into a new arms race with Russia -- but will fortify its defenses. (SOUNDBITE) (English) NATO SECRETARY-GENERAL, JENS STOLTENBERG, SAYING: "We will not be dragged into an arms race. But we must keep our countries safe." The NATO meeting comes after the U.S. announced plans this week to station tanks and heavy weapons in NATO member states on Russia's border -- this came shortly after President Vladimir Putin said Moscow would add 40 missiles to its nuclear arsenal. After the meeting, Stoltenberg said members agreed to bolster its rapid response team. (SOUNDBITE) (English) NATO SECRETARY-GENERAL, JENS STOLTENBERG, SAYING: "First we decided to increase further the strength and capability of the NATO response force, including its air, maritime and special operations components. Altogether, the enhanced NATO response force will consist of up to 40,000 personnel. This represents a substantial increase from the previous level of 13,000." The meetings come as Russian soldiers are carrying out large scale military drills-- which started on June 22nd and will continue until the 26th.

Climate Agreement will happen, G7 proves

Neuhauser, Alan. "We Continue to Make Progress toward a Strong Global Climate Agreement This Year in Paris," Obama Said in a Press Conference Monday in Germany. US News. U.S.News & World Report, 31 Mar. 2015. Web. 24 June 2015.

Six months ahead of a landmark **U.N. climate summit in Paris**, **the** Group of Seven of the world's largest advanced economies, or **G7, reaffirmed their commitment** Monday to **keeping the globe's average temperature from rising past 2 degrees Celsius**, widely **seen as the benchmark for averting catastrophic global warming**. The countries' plans for cutting heat-trapping carbon emissions, released over the past year, come nowhere close to achieving that target. Yet in pledging to reduce greenhouse gases while also expanding their economies, **world leaders once again signaled their view that environmental action and economic growth – once widely seen as inherently at odds – are now inextricably linked by the consequences of climate change.** "**Urgent and concrete action is needed to address climate change," the G7 leaders said in a joint statement** released Monday at the end of their two-day 2015 summit in Germany. **There is "strong determination" to adopt an agreement, one "that is ambitious, robust, inclusive and reflects evolving circumstances**." . **We continue to make progress toward a strong global climate agreement this year in Paris**," **Obama said** in a press conference Monday in Germany. "**All the G7 countries have now put forward our post-2020 targets for reducing carbon emissions, and we'll continue to urge other significant emitters to do so** as well." **The G7 declaration did call for "binding rules" that would "enhance transparency and accountability" as nations work toward achieving their carbon-reduction targets**.

U.S. leadership makes climate agreement a for sure deal

Neuhauser, Alan. "We Continue to Make Progress toward a Strong Global Climate Agreement This Year in Paris," Obama Said in a Press Conference Monday in Germany. US News. U.S.News & World Report, 31 Mar. 2015. Web. 24 June 2015.

Environmental groups and Democratic lawmakers, however, roundly welcomed the State Department's submission, known by negotiators as "Intended Nationally Determined Contributions." "**The president has again demonstrated leadership in addressing the threat posed by climate change**," Sen. Barbara Boxer, D-Calif., said in a statement. "Today's announcement confirms that **the United States is doing its part to reduce dangerous carbon**

pollution, and this effort will continue to bring other countries along the path to a strong agreement in Paris." Natural Resources Defense Council president Rhea Suh said she agreed, declaring **the commitment "sends a powerful message to the world**." A report published earlier this month by DBL Ventures, a venture capital firm that supports clean energy projects, found states that generate the greatest share of electricity from renewable sources like wind and solar experience lower energy prices than states with the smallest share of green power.

France won't allow the climate talk to fail

King, Ed. "France Ready to Step in If UN Climate Talks Fail, Say Top Diplomat." *Guardian Environment Network*. The Guardian, 28 May **2015**. Web. 24 June 2015.

France will produce its own text for a global climate change agreement if countries taking part in UN negotiations fail to cut the current 90-page documentdown to size. The host of this year's UN summit, where an emissions cutting pact between nearly 200 countries is set to be finalised, wants a shorter document by the end of the summer. "**We have to get a simpler text by June or the latest by the end of August to work with it**," France's top climate diplomat Laurence Tubiana told RTCC, speaking at the Carbon Expo event in Barcelona. "**If this does not proceed from the normal process of course that will rely on the presidency of the COP in the summer to produce a new document. "We don't want that so we will push and press for everyone to deliver a shorter text by the end of August – really defining what needs to be decided in Paris, what will be decided after and what are the core principles in the agreement**." Tubiana said France wants the main elements of the deal ready by October to ensure there were "no surprises" that could stymie the process. Laurence Tubiana talks about the need for a simpler text for climate negotiations. The last time the UN attempted to secure a global climate solution ended in farce just under six years ago at a summit in Copenhagen, with a small group of major emitters stitching together a hurried voluntary deal after negotiations over a huge set of proposals stalled. Advertisement Three sessions of negotiations have been allocated for envoys to slim down the text between now and December, with the first starting next month in Bonn. Decisions this UN forum need to be decided by consensus, meaning it only takes a small group of countries to block suggested additions to agreements. Tubiana admitted the demand for an early resolution to the negotiating text added a level of pressure on countries that could slow talks further, but insisted **it was essential work sped up. "A logical result of this is countries are beginning to be tougher – because they don't want to show their cards – and that's what will happen at this summit, to show this is time to really agree on a compromise," she said. "Nuances and positions are very diverse, so it's difficult to align everybody, and there are strong views from different views, but I'm confident because countries want to agree in Paris**." Since UN climate talks started in 1991 greenhouse gas emissions have swelled to record levels. Scientists now say the world has under 30 years before dangerous levels of warming, causing droughts, floods and rising sea levels are guaranteed. France will ensure that plans to help countries adapt to future climate extremes are an integral part of any deal, Tubiana stressed,

acknowledging that on current form emission cuts will not limit warming to the internationally agreed 2C above pre-industrial levels ceiling. **The role of Paris will be to "accelerate" the trajectory of carbon reductions, she stressed, and also to allow the most climate vulnerable countries a chance to make their case for greater ambition**

Talks fail in Squo

Recent talks have shown climate talks fail in status quo

McGarrity, John. "UN Climate Talks Fail to Clear Obstacles to Paris Deal."*UN Climate Talks Fail to Clear Obstacles to Paris Deal*. China Dialogue, 11 June **2015**. Web. 24 June 2015.

The latest round of UN climate talks have made slow progress on refining a negotiating text for the Paris summit in December, **the focal point for efforts to agree curbs on greenhouse gas emissions in developed and developing countries**. **Despite** two **weeks of talks** at an interim meeting in the German city of Bonn, most of t**he contradictory proposals** that littered the previous 90-page document **remain, meaning that the next few rounds of talks in August and October will have to shoulder the burden of distilling a negotiating text** by December. France's climate ambassador Laurence Tubiana said that the tough, painstaking work of refining the document could still deliver real benefits in time for Paris. "It's like having a baby, sometimes you don't know exactly when the baby will be born," she told a press conference. Tubiana added: "**Everyone is feeling the frustration**, but we should not be frustrated or disappointed because these are really necessary conditions for Paris." Familiar disputes blocked progress at the mainly technical meeting in Bonn, which was being held around 500km away from this week's G7 summit in Bavaria. G7 leaders announced a long-term, but non-binding, decarbonisation targetand increased insurance for countries most vulnerable to climate change. But in Bonn **rich nations failed to give greater clarity on how rich economies will deploy US$100 billion of climate finance a year from 2020. Major rifts also remained on the legal basis of a future agreement, and the extent that large fast-developing economies such as China and India will be accountable for planned curbs on GHG emissions.**

No impact- General

No evidence supports warming causes extinction

Bastasch 15, Michael. "IPCC Runs from Claims That Global Warming Will Cause Mass Extinctions." IPCC No Longer Claims That Global Warming Causes Mass Extinction. The DC, 24 Mar. 2014. Web. 24 June 2015.

But Der Spiegel reports that the IPCC is shying away from such claims and gives **no concrete numbers for how many plant and animal species could be at risk if global temperatures increased**. While the IPCC does say that the pace of global warming is making it hard for some species to adapt, **the lack of basic data makes it impossible for there to be any hard evidence to back up this claim. Zoologists actually fear that the focus on global warming has drawn attention away from issues that actually cause extinctions, like destruction of natural habitats**. "**Monoculture, over-fertilization or soil destruction destroy more species than several degrees temperature rise ever** assets," University of Rostock zoologist Ragnar Kinzelbach told Der Spiegel. The UN's final climate report that will include its analysis on extinctions is set to be released in late March. Scientists and government representatives from around the world are meeting this week in Japan to hammer out a summary for policymakers on the UN's key findings.

Warming doesn't lead to extinction

Barrett 6 – Professor of International Policy @ Johns Hopkins Scott, Professor and Director of International Policy, School of Advanced International Studies, Johns Hopkins University, 2006, "CATASTROPHE: The Problem of Averting Global Catastrophe," Chicago Journal of International Law, Lexis

Less dramatic changes are more likely. Abrupt transformations in climate would probably cause few deaths. Many scientists have remarked that climate change would increase the spread of disease, 74 and seasonal weather changes are associated with outbreaks of many diseases, including meningococcal meningitis in sub-Saharan Africa and rotavirus in the US. Moreover, stronger El Nino events have been linked to the prevalence of cholera in Bangladesh, the spread of Rift Valley fever in East Africa, and malaria incidences on the Indian subcontinent. However, while the spread of disease is influenced by the weather, the connection between global climate change and the spread of disease has not yet been established. 75 One point is clear: as Rees notes, "Not even the most drastic conceivable climate shifts could directly destroy all humanity." 76

Impacts are inevitable, Temperature rises regardless

Climate Change Inevitable in 21st Century - News Release." Climate Change Inevitable in 21st Century - News Release. UCAR, University Corporation for Atmospheric Research, 17 Mar. 2005. Web. 24 June 2015.

BOULDER—**Even if all greenhouse gases had been stabilized** in the year 2000, **we would still be committed to a warmer Earth and greater sea level rise in the present century**, according to a new study by a team of climate modelers at the National Center for Atmospheric Research (NCAR). The findings are published in this week's issue of the journal *Science*. **The** modeling **study quantifies the relative rates of sea level rise and global temperature increase that we are already committed to in the 21st century. Even if no more greenhouse gases were added to the atmosphere, globally averaged surface air temperatures would rise about a half degree Celsius (one degree Fahrenheit) and global sea levels would rise another 11 centimeters (4 inches) from thermal expansion alone by 2100**. "**Many people don't realize we are committed right now to a significant amount of global warming and sea level rise because of the greenhouse gases we have already put into the atmosphere**," says lead author Gerald Meehl. "**Even if we stabilize greenhouse gas concentrations, the climate will continue to warm**, and there will be proportionately even more sea level rise. The longer we wait, the more climate change we are committed to in the future."

And, consensus of experts agree no impact to warming

Hsu '10

Jeremy, Live Science Staff, July 19, pg. http://www.livescience.com/culture/can-humans-survive-extinction-doomsday-100719.html

His views deviate sharply from those of most experts, who don't view climate change as the end for humans. Even the worst-case scenarios discussed by the Intergovernmental Panel on Climate Change don't foresee human extinction. "The scenarios that the mainstream climate community are advancing are not end-of-humanity, catastrophic scenarios," said Roger Pielke Jr., a climate policy analyst at the University of Colorado at Boulder. Humans have the technological tools to begin tackling climate change, if not quite enough yet to solve the problem, Pielke said. He added that doom-mongering did little to encourage people to take action. "My view of politics is that the long-term, high-risk scenarios are really difficult to use to motivate short-term, incremental action," Pielke explained. "The rhetoric of fear and alarm that some people tend toward is counterproductive." Searching for

solutions One technological solution to climate change already exists through carbon capture and storage, according to Wallace Broecker, a geochemist and renowned climate scientist at Columbia University's Lamont-Doherty Earth Observatory in New York City. But Broecker remained skeptical that governments or industry would commit the resources needed to slow the rise of carbon dioxide (CO_2) levels, and predicted that more drastic geoengineering might become necessary to stabilize the planet. "The rise in CO_2 isn't going to kill many people, and it's not going to kill humanity," Broecker said. "But it's going to change the entire wild ecology of the planet, melt a lot of ice, acidify the ocean, change the availability of water and change crop yields, so we're essentially doing an experiment whose result remains uncertain."

Relations being solved in Squo

US working on relations in light of new leaks.

Irish, John. "Obama Reassures France after "unacceptable" NSA Spying."*Reuters US Edition*. Reuters, **24 June 2015**. Web. 24 June 2015.

U.S. President Barack **Obama reaffirmed** in a phone call **with his French counterpart** Francois Hollande **on** Wednesday **Washington's commitment to end spying practices** deemed "unacceptable" by its allies. The presidents' conversation, announced by Hollande's office, came after transparency lobby group WikiLeaks revealed on Tuesday that U.S. National Security Agency (NSA) had spied on the last three French presidents. **The latest revelations of espionage among Western allies came after it emerged that the** U.S. National Security Agency (**NSA) had spied** on Germany and that Germany's own BND intelligence agency had cooperated with the NSA to spy on officials and companies elsewhere in Europe. "**President Obama reiterated unequivocally his firm commitment ... to end the practices that may have happened in the past and that are considered unacceptable among allies**," the French president's office said. Hollande had earlier held an emergency meeting of his ministers and army commanders and the U.S. ambassador was summoned to the foreign ministry. "France will not tolerate actions that threaten its security and the protection of its interests," an earlier statement from the president's office said, adding it was not the first time allegations of U.S. spying on French interests had surfaced. **A senior French intelligence official will travel to the United States to discuss the matter and strengthen cooperation between the two countries**, Hollande's office said. "We have to verify that this spying has finished," Stephane Le Foll, government spokesman, told reporters, adding that ministers had been told to be careful when speaking on their mobile phones.

Deal not key

Even if talks succeed their impacts are still going to happen

Geman, Ben. "Why a Global-Warming Pact Won't Stop Global Warming." *Www.nationaljournal.com*. The National Journal, 7 Aug**. 2014**. Web. 26 June 2015

Don't expect too much from the global climate-change accord that's expected to emerge from high-stakes international talks in Paris next year. A new MIT **study concludes that even if negotiators reach a deal at the United Nations conference, it** probably **won't be enough to limit global temperature increases to** 2 degrees Celsius above pre-industrial levels. That's **the level** many **scientists say**

would help stave off some of **the most dangerous and disruptive effects of climate change**. **Here's the** study's **bottom line on what to expect** from the so-called Conference of the Parties 21 **in Paris**: "Based on our expectations for the architecture of a COP-21 agreement, and our predictions about the national contributions likely to come forth under it, our analysis concludes **that these international efforts will indeed bend the curve of global emissions. However**, o**ur results also show that these efforts will not put the globe on a path consistent with** commonly stated **long-term climate goals**," states the paper by economics professor Henry Jacoby and Y-H Henry Chen, who both work with MIT's Joint Program on the Science and Policy of Global Change. **The 2°C ceiling has been highly optimistic** for a while, as global greenhouse-gas emissions continue to soar. In a major report last year, the United Nations Intergovernmental Panel on Climate Change modeled the impact of a series of possible emissions trajectories. **Runaway emissions growth could further boost temperatures**, at the high end of the estimates**, by** up to **4.8 °C** by 2100, the IPCC estimated.

Paris won't solve; 2 degree rise is inevitable

Doyle, Alister**, and** Bruce **Wallace**. "U.N. Climate Deal in Paris May Be Graveyard for 2C Goal." *Reuters.com*. Reuters, 1 June **2015**. Web. 26 June 2015

The U.N.'s Paris climate conference, **designed** to reach a plan **for curbing global warming, may instead become the graveyard for its** defining **goal**: **to stop temperatures rising more than 2 degrees Celsius** above pre-industrial levels. Achieving the 2C (3.6 Fahrenheit) target has been the driving force for climate negotiators and scientists, who say it is the limit beyond which the world will suffer ever worsening floods, droughts, storms and rising seas**. But six months before world leaders convene in Paris, prospects are fading for a deal that would keep average temperatures below the ceiling. Greenhouse gas emissions have reached record highs in recent years. And proposed cuts in carbon emissions from 2020 and promises to deepen them in subsequent reviews - offered by governments wary of the economic cost of shifting from fossil fuels - are unlikely to be enough for the 2C goal**. "**Paris will be a funeral without a corpse**," said David Victor, a professor of international relations at the University of California, San Diego, **who predicts the 2C goal will slip away despite** insistence by many governments **that is still alive. "It's just not feasible**," said Oliver Geden, of the German Institute for International and Security Affairs. "Two degrees is a focal point for the climate debate but it doesn't seem to be a focal point for political action." But as officials meet in the German city of Bonn from June 1-11 to lay more groundwork for the Paris summit, the United Nations says 2C is still within reach. Christiana Figueres, **the U.N.'s top climate change official, acknowledges that national plans for emissions curb**s - the building blocks for the Paris accord - **won't be enough for 2C.**

UN talks fail regardless

Irish, John. "U.N. Climate Efforts Not Good Enough: French Minister." *Reuters*. Thomson Reuters, 01 June **2015**. Web. 26 June 2015

Efforts spearheaded by the United Nations to reach a global deal to fight climate change are "inadequate", a French minister said on Monday **in a sign of growing frustration before Paris** hosts a major meeting later this year. Governments will try on Monday to streamline an 89-page draft text of a U.N. deal to fight climate change due to be agreed in the French capital in December, hoping to avoid the acrimony of the last failed attempt. "**The U.N. negotiations are totally inadequate for the climate emergency we are facing**," Environment Minister Segolene Royal said in an interview published in Le Monde. "**In private everybody is saying it ... but the weight of the process means it is carrying on as if there was no problem."** The 190-nation talks among delegates in the German city of Bonn from June 1-11 will try to narrow down vastly differing options, ranging from promises to slash greenhouse gas emissions to zero by 2050 to vague pledges to curb rising emissions. "**This gap between UN procedure and the climate emergency is starting to pose a real problem and exasperating the countries that are the biggest victims of climate change,**" she said. Foreign Minister Laurent Fabius, who is presiding December's talks, told Reuters on May 26 a deal in Paris was within reach, but that the hurdles remained and getting a consensus between 196 parties was very difficult. Royal, a senior French

Socialist known for being outspoken, blamed negotiators for past failures. "Bonn must obey the political instructions of heads of state and governments. Otherwise, the negotiators, who have been there for 15 years, if not 20 years, will just continue going through the motions," she said

Climate agreement is important, but not key—much more needs to be done afterward

Pisani-Ferry 6/23(Jean Pisani-Ferry, 6-23-2015, [Jean Pisani-Ferry teaches at the Hertie School of Governance in Berlin and serves as commissioner-general for Policy Planning in Paris. He is a former director of Bruegel, the Brussels-based economic think tank] "Four Roadblocks to a Global Climate Agreement," No Publication, http://english.caixin.com/2015-06-23/100821714.html)

Summing up, we are making progress, but slowly and partially. Success in Paris is indispensable in view of the mounting evidence that the climate is deteriorating faster than expected, but the international community must avoid the temptation of declaring victory and departing the field. If successful, the conference will only help put mankind on a better track. Many more conferences and many more efforts will be needed to reach the goal of preserving the climate.

More than one international agreement is needed

Chong 4/8(Howie Chong, 4-8-2015, [former president of Sierra Club Canada and am the founder of Carbonzero, one of Canada's most trusted providers of carbon offsets.] "What if the Paris Climate Talks fail?," http://www.howiechong.com/journal/2015/4/what-if-paris-fails)

If countries are serious about reducing emissions and stopping climate change, they should not be reliant on a single international agreement. They should be building bilateral and multilateral agreements with their friends and allies. President Obama has made great strides in this direction. Along with China, the White House has announced bilateral agreements with its southern neighbour as well as agreements with India, another rising economic power. We should have more smaller emissions reduction agreements. There should be a NAFTA agreement, and ASEAN agreement, an APEC agreement. The more webs of agreements we can can enmesh countries into, the more difficult it will be for them to escape their responsibility. If nations come to an agreement in Paris this December, being enmeshed in a web of bilateral and multilateral reduction agreements would make it more difficult for any particular country to back out of their commitments. If Paris fails, we at least mare left a network of global commitments upon which the world community can fall back. In both outcomes, such a structure would make emissions reductions policies more resilient to domestic political pressure.

Failure

Climate agreement will fail for three reasons—national targets, the US senate, and countries resisting emissions reductions

Taraska 6/1(Gwynne Taraska, 6-1-2015,[Gwynne Taraska is a Senior Policy Advisor at the Center for American Progress, where she works on climate and energy policy.] "The Paradox of Paris: How a Successful Climate Agreement Could Have Inadequate and Nonobligatory Emissions Reduction Targets," name, https://www.americanprogress.org/issues/green/news/2015/06/03/114333/the-paradox-of-paris-

how-a-successful-climate-agreement-could-have-inadequate-and-nonobligatory-emissions-reduction-targets/)

The parties to the U.N. Framework Convention on Climate Change, or UNFCCC, are meeting in Bonn, Germany, June 1 through June 11 to continue negotiating a new international climate agreement. They will reconvene in Paris in December to finalize it. A key aspect of the eventual agreement—which will apply to both developed and developing countries—will be a set of national targets to reduce greenhouse gas emissions. With little time remaining to avoid the worst consequences of climate change, there is tremendous pressure on negotiators to usher in an era of effective international climate cooperation. Yet as the contours of the agreement come into focus, it is increasingly apparent that the emissions reduction targets—which will be nationally determined rather than internationally negotiated—will be collectively insufficient to curtail dangerous climate change. It also is becoming clear that the agreement will not legally require countries to meet the targets. Paradoxically, these results would not entail the failure of the agreement. An insufficient set of national targets is compatible with a successful overall outcome in Paris, and a nonbinding set of national targets may actually be necessary for it. An inadequate first wave of emissions reduction targets but a potentially effective climate regime Over the past year, world leaders have shown a new political will to address climate change. The United States, for example, announced an aggressive but achievable emissions reduction target—26 percent to 28 percent below 2005 levels by 2025—and is working to implement the Clean Power Plan, which will dramatically reduce emissions from the power sector. China, to take another example, committed to peak carbon emissions by around 2030 in a historic announcement this past November. There has been significant progress on climate finance as well, with 33 countries pledging more than $10 billion to the nascent Green Climate Fund, which will help developing countries adapt to climate change and transition to pathways of low-carbon growth. Despite these developments, which have provided momentum toward a strong agreement in Paris, it is anticipated that the national emissions reduction targets submitted to the UNFCCC this year will be collectively inadequate to deliver climate safety. The Paris agreement, however, can still be successful. This is because the parties have the opportunity to ensure that the national emissions reduction targets—which have end dates of 2025 or 2030—are only a first wave in a succession of increasingly ambitious national targets to rein in global warming. Time, of course, is dwindling. According to the latest report from the Intergovernmental Panel on Climate Change, limiting warming to 2 degrees Celsius over preindustrial levels—which is the U.N.-agreed target—would entail a 40 percent to 70 percent reduction in emissions from 2010 levels by midcentury and net-zero emissions by 2100. To facilitate a new climate regime that is effective, the Paris agreement should set frequent cycles for improving national targets. It also should establish frequent and thorough reviews of national progress. These are among the issues set for discussion in Bonn—and in the run-up to Paris—that will help determine the ultimate success of the final agreement. French Foreign Minister Laurent Fabius, who will preside over the Paris meeting, has referred to the agreement not as a destination but as a "springboard." It is within the power of the parties to make it a springboard to adequate climate action, rather than one to the failure of the UNFCCC. A legally binding agreement, potentially with nonbinding national emissions reduction targets Miguel Arias Cañete, EU Commissioner for Climate Action and Energy, has joined Foreign Minister Fabius in his effort to manage expectations of what the first wave of national targets can achieve. Despite this pragmatism, however, the European Union has been publicly idealistic on the issue of whether the national targets should be legally binding. It is generally held that the core agreement will be binding under international law, but the European

Union maintains that the national targets should be legally binding as well. Although well intentioned, this is a potentially self-defeating position. An agreement with legally obligatory targets for emissions reductions could threaten the participation of some of the world's major emitters. It also is possible that such an agreement would encourage conservative rather than ambitious targets. In the case of the United States, an agreement with legally binding targets would likely require the consent of a supermajority in the Senate, which is doubtful in the current political environment. Given this conspicuous legislative reality, there has been little need for other countries to publicly oppose legally binding targets as the Paris meeting approaches. Both India and China, however, have a record of resisting emissions reduction targets that are obligatory under international law.

If the agreement goes into US congress it will not pass, putting the US out of the deal

The Guardian 6/1(Associated Press In Bonn, 6-1-2015, "Climate deal must avoid US Congress approval, French minister says," Guardian, http://www.theguardian.com/world/2015/jun/01/un-climate-talks-deal-us-congress)

The global climate agreement being negotiated this year must be worded in such a way that it doesn't require approval by the US Congress, the French foreign minister said on Monday. Laurent Fabius told African delegates at UN climate talks in Bonn that "we know the politics in the US. Whether we like it or not, if it comes to the Congress, they will refuse." If negotiators follow his plan, that would exclude an international treaty that has legally binding limits on greenhouse gas emissions — something some countries still insist on but which would have no chance of being ratified by the Republican-controlled Congress. "We must find a formula which is valuable for everybody and valuable for the US without going to the Congress," said Fabius, who will host the UN climate summit in Paris in December where the new agreement is supposed to be adopted. Those pushing for a legally binding deal in Paris include the European Union and small island nations who fear being wiped out by rising seas.

The goal of the talks are NOT to reach an agreement on climate change

Newton 6/10(Steven Newton, 6-10-2015, [Programs and Policy Director for the National Center for Science Education]"Climate Conference Cacophony, or How Good Intentions Go Bad When the Process Is Rigged to Fail," Huffington Post, http://www.huffingtonpost.com/steven-newton/climate-conference-cacophony-or-how-good-intentions-go-bad-when-the-process-is-rigged-to-fail_b_7555056.html)

Recently delegates from around the world gathered in Bonn, Germany, for a UN conference to discuss how the nations of the world can reach a "new, universal agreement on climate change." This agreement is meant to outline how nations will work together to reduce greenhouse gases and limit, to the degree still possible, the worst effects of global climate change. These are good, laudable goals. But as you may suspect, there is a catch. The major goal of the Bonn conference is editing a document negotiated in February by over 190 nations. The hope is that this document can form that basis of a planned agreement in Paris this December, establishing a successor to the 1992 Kyoto Protocol. But before all that can happen, the agreement needs a bit of work. This current Bonn editing session will be followed by another one in September, then another in October. They apparently think this is going to need a lot of editing. The reason this will need so much editing is the flawed process that created it. According to NPR, ...to build trust and goodwill negotiators could throw in any proposed text they wanted. The result is 90 pages long--a jumbled patchwork of ideas... How bad it is? You can read it all yourself here (PDF). But consider these short snippets to get an idea of the document's epic incoherence: Apparently "triangular cooperation schemes" are a thing now (can hexagonal schemes be far behind?). It goes on: Had enough? It goes on like this for ninety more pages. Having read these pages myself (a sacrifice so you can save your brain cells from the experience, gentle reader), I think

it's safe to say that if you wanted to obfuscate the urgency of climate change and befuddle the well-intentioned with meaningless lawyerese, if your goal was to delay action on climate change with the pretense of meaningful agreement, then you could not have done better than this. French Ecology minister Ségolène Royal agreed with this sentiment, noting, "the weight of UN negotiations is such that we carry on as if nothing was wrong." She also called the talks "completely inadequate." Something is deeply broken in the process that creates such a document. But some will argue that the process has to be this way, that the purposefully opaque rhetoric of lawyerese is a necessary vice. Some may argue this, but to me it is clearer that what we need is a different way of creating such agreements. And certainly a different process than inviting 190 countries to edit the same Google Doc, apparently all at the same time, in a mad, chaotic scrum. Such processes may seem like radical democracy, but their product is instead mere cacophony, in which no country's interests are served. What is really missing is genuine decisive leadership. But today that elusive quality seems as rare as rain in California or cool temperatures in India.

Even if all points are completed, developed countries will still not comply

Telesur 6/11(Telesur, 6-11-2015, "What Elephant? Bonn Climate Talks Fail to Tackle Big Questions," No Publication, http://www.telesurtv.net/english/news/What-Elephant-Bonn-Climate-Talks-Fail-to-Tackle-Big-Questions-20150611-0031.html)

Climate change talks limped to an unsatisfactory end Thursday, leaving developing countries and environmental justice groups left worried that time is running out. The Bonn talks, held from June 1-11, were the first formal negotiations to work over the draft text that has been prepared in view of December's Paris Climate Summit, an event that will represent several critical deadlines. Among them is developing a new agreement 'with legal force' to apply to all countries from 2020 onward over action on catastrophic global warming. RELATED: Earth Emergency Despite the urgency of the event - only two preparatory sessions remain before Paris in December - several elephants in the room were roundly ignored, namely fixing a global goal for reducing greenhouse gases. "We haven't seen as much progress as we would have liked," said Elina Bardem, chief of the European Commission delegation, which advocates tough emissions-reducing targets. "It is not something that we can play with indefinitely." And as days tick down to Paris, a further concern is that this procrastination will lead to failure to form a binding agreement, representing a get-out-of-jail-free card for the rich, countries. "We are worried that the Paris agreement will lead to the 'Great Escape' of developed countries in meeting their commitments and their historical responsibility," said Meena Raman of Third World Network in Malaysia Thursday. "From what we have witnessed in the process, developed countries especially from the 'Umbrella Group' (that includes the US, Canada, Japan, Australia and New Zealand) are shaping an agreement that will be weak on targets for developed countries emission reductions and inconsistent with science and equity. They are also pushing for more loopholes and market mechanisms so their actual reductions will be even less. Equally worrying is the reluctance to have any commitment on finance and technology transfer targets to enable developing countries to undertake strong climate action and adaptation."

Empirically proven that multilateral negotiations are unsuccessful—2 decades of failure

Hale, Held, and Young 13(THOMAS HALE, DAVID HELD, and KEVIN YOUNG, 5-24-2013, [Thomas Hale is a Postdoctoral Research Fellow at the Blavatnik School of Government, Oxford University.] "Gridlock: the growing breakdown of global cooperation," openDemocracy, https://www.opendemocracy.net/thomas-hale-david-held-kevin-young/gridlock-growing-breakdown-of-global-cooperation)

The Doha round of trade negotiations is deadlocked, despite eight successful multilateral trade rounds before it. Climate negotiators have met for two decades without finding a way to stem global emissions. The UN is paralyzed in the face of growing insecurities across the world, the latest dramatic example being Syria. Each of these phenomena could be treated as if it was independent, and an explanation sought for the peculiarities of its causes. Yet, such a perspective would fail to show what they, along with numerous other instances of breakdown in international negotiations, have in common. Global cooperation is gridlocked across a range of issue areas. The reasons for this are not the result of any single underlying causal structure, but rather of several underlying dynamics that work together. Global cooperation today is failing not simply because it is very difficult to solve many global problems – indeed it is – but because previous phases of global cooperation have been incredibly successful, producing unintended consequences that have overwhelmed the problem-solving capacities of the very institutions that created them. It is hard to see how this situation can be unravelled, given failures of contemporary global leadership, the weaknesses of NGOs in converting popular campaigns into institutional change and reform, and the domestic political landscapes of the most powerful countries.

The approach countries take to solving climate change is fundamentally flawed

Heritage Foundation 13(About The, 1-24-2013, "Climate Change: How the U.S. Should Lead," Heritage Foundation, http://www.heritage.org/research/reports/2013/01/climate-change-how-the-us-should-lead)

The past four years have seen successive annual U.N. conferences (Copenhagen in 2009, Cancun in 2010, Durban in 2011, and Doha in 2012) frantically trying to reach agreement among nearly 200 countries on a successor to the Kyoto Protocol. In essence, these conferences have succeeded only in wresting vague pledges from developed countries to reduce emissions, contribute funds to help developing countries adapt to climate change, and meet again to try to negotiate a binding treaty by 2015. The problem is that the basic approach is unworkable. International negotiations have centered on placing the economic burden of addressing climate change on a few dozen developed countries while asking nothing from more than 150 developing countries. But the primary source of greenhouse gas emissions is increasingly the developing world. Any approach to effectively address increasing emissions of greenhouse gases must capture emissions from developed and developing countries. This notion was the central feature of the 1997 Byrd–Hagel Resolution, which unanimously passed the Senate, establishing conditions for the U.S. becoming a signatory to the Kyoto Protocol and remains the primary reason why the U.S. never ratified that treaty. But developing countries, primarily India and China, have made it quite clear that they have no appetite to slow economic growth or curb use of conventional fuels to control emissions. For this reason, Canada, Japan, and Russia refused to sign onto a new agreement committing them to emissions reductions unless major developing country emitters were also included. Until and unless this issue is resolved, the U.S. would be foolish to consider unilateral restrictions on the U.S. economy that, in the end, would be merely symbolic without significant effect on global emissions reductions.

An agreed goal of reducing emissions is not enough—there has to be a tech revolution

Wolf 6/23(Martin Wolf, 6-23-2015,[associate editor and chief economics commentator at the Financial Times.] "A moonshot to save a warming planet," Financial Times, http://www.ft.com/cms/s/0/ffc2b8ae-166f-11e5-b07f-00144feabdc0.html#axzz3e0DuHSaz)

The need, then, is to generate a technological revolution. The paper (named after the successful mission to the moon of the 1960s) argues that this will require rapid technological advances. Progress is happening, notably the collapse in the price of photovoltaic panels. But this is not enough. The sun provides 5,000 times more energy than humans demand from industrial sources. But we do not know how to exploit enough of it. Martin Wolf 1 Despite the evident need, publicly-funded research and development on renewable energy is under 2 per cent of all publicly-funded R&D. At just $6bn a year, worldwide, it is dwarfed by the $101bn spent on subsidies for renewable production and the amazing total of $550bn spent on subsidising fossil fuel production and consumption. This is a grotesque picture. Far more money needs to go to publicly funded research. The public sector has long played a vital role in funding scientific and technological breakthroughs. In this case, that role is particularly important, given the agreed goal of reducing emissions and the fact that the energy sector spends relatively little on R&D. The envisaged programme would have a single purpose: "To develop renewable energy supplies that are cheaper than those from fossil fuels." The authors suggest that to do this, research should focus on electricity generation, storage and smart grids. The suggested programme would amount to $15bn a year, still a mere 0.02 per cent of world output. That is indeed a minimal amount, given the goal's importance.

Climate agreement moving too slow—there's too much on the agenda

Harrabin 6/10(Roger Harrabin, 6-10-2015,[BBC environment analyst] "UN climate conference: Silence over emissions targets," BBC News, http://www.bbc.com/news/science-environment-33089496)

Nations have jointly promised to keep the global temperature rise below the 2C danger threshold. They are informing the UN how they will each cut their domestic emissions of greenhouse gases. But key countries are refusing to discuss whether the sum of these cuts will do the job. The EU, supported by African nations, wants to make countries face up to the fact that their collective cuts won't keep the climate within the 2C threshold. But China, India and Brazil are insisting that the national contributions should not be discussed at the UN until the main summit in Paris in December, by which time it will be too late for countries to negotiate any

increase in ambition. 'Too slow' The Chinese chief negotiator, Su Wei, said talks about the procedure for a new UN climate regime were going so slowly there was no time to discuss whether the emissions cuts added up. "It has taken us 10 days here discussing procedural matters and we have made hardly any progress," he told the BBC. "We cannot add any more items to the agenda to be discussed before Paris." Delegates from around the world have been meeting in Bonn. Other nations blame China for orchestrating moves to slow progress in Bonn. Tasneep Essop from the World Wildlife Fund said the situation was "bizarre". "The aim of this process is to stabilise the climate, yet delegates are being prevented from even talking about it," he told the BBC. "We want a full science-based review of all the countries' intended contributions so the world's public can see whether politicians are keeping their promises. It is clear already that countries need to do more."

The Kyoto Protocol proves that climate agreements do not work

Harvey 6/2(Fiona Harvey, 6-2-2015,[Fiona Harvey is an award-winning environment journalist for the Guardian. Prior to this, she worked for the Financial Times for more than a decade. She has reported on every major environmental issue, from as far afield as the Arctic and the Amazon, and her wide range of interviewees include Ban Ki-moon, Tony Blair, Al Gore and Jeff Immelt] "Everything you need to know about the Paris climate summit and UN talks," Guardian, http://www.theguardian.com/environment/2015/jun/02/everything-you-need-to-know-about-the-paris-climate-summit-and-un-talks) In 1992, governments met in Rio de Janeiro and forged the United Nations Framework Convention on Climate Change. That agreement, still in force, bound governments to take action to avoid dangerous climate change, but did not specify what actions. Over the following five years, governments wrangled over what each should do, and what should be the role of developed countries versus poorer nations. Those years of argument produced, in 1997, the Kyoto protocol. That pact required worldwide cuts in emissions of about 5%, compared with 1990 levels, by 2012, and each developed country was allotted a target on emissions reductions. But developing countries, including China, South Korea, Mexico and other rapidly emerging economies, were given no targets and allowed to increase their emissions at will. Al Gore, then US vice president, signed up to the protocol, but it was quickly apparent that it would never be ratified by the US Congress. Legally, the protocol could not come into force until countries representing 55% of global emissions had ratified it. With the US – then the world's biggest emitter – on the outside, that was not going to happen. So for most of the following decade, the Kyoto protocol remained in abeyance and global climate change negotiations ground to a near-halt. But in late 2004, Russia decided to pass the treaty – unexpectedly, and as part of a move to have its application for World Trade Organisation membership accepted by the European Union. That made up the weight needed, and the protocol finally came into force.

Corporations prove that climate agreement will never work

Williams 6/8 (Bychris Williams, 6-8-2015,[author of Ecology and Socialism: Solutions to Capitalist Ecological Crisis] "Why U.N. Climate Talks Continue to Fail," No Publication, https://indypendent.org/2014/09/12/why-un-climate-talks-continue-fail)

An important part of the answer certainly lies with the economic and political power wielded by energy corporations that have a direct stake in selling more fossil fuels. As we now know from a 2014 Intergovernmental Panel on Climate Change report, 80 percent of known fossil fuel reserves fuels must stay in the ground in order to have any chance of remaining under the critical threshold of 2 degrees Celsius of average warming. That is equivalent to writing off $20 trillion in assets from the largest corporations on the planet. RUNAWAY GLOBAL WARMING The earth has warmed by 0.8 Celsius (1.4 F) since the beginning of the Industrial Revolution. Climate scientists expect the world to continue warming in the 21st century. The question is, how much? The idea that those reserves, which are the basis for the stock market valuation of oil companies, could become "stranded" led ExxonMobil to declare in a report to shareholders, "the scenario where governments restrict hydrocarbon production in a way to reduce [greenhouse gas] emissions 80 percent during the outlook period [to 2040] is highly unlikely." Instead, a top company executive explained, "all of ExxonMobil's current hydrocarbon reserves will be needed, along with substantial future industry investments, to address global energy needs." The profit-maximizing imperative of corporate titans like ExxonMobil, Chevron, British Petroleum and Shell is only part of the story. Economic

competition between corporations is replicated on the international stage by economic and political rivalry among nation states. In a world run along capitalist lines, every country is engaged in geopolitical maneuvering for economic and political advantage. As the ecological situation has become both more dire and more clearly tied to the countries that have the most geopolitical power and the biggest stake in fossil fuel production and consumption, so those powers have become ever more unwilling and unable to take serious action. The problem is compounded by intensifying competition for resources and international markets as new competitor states, such as China and India, emerge on the world stage. As evidence, one only needs to look at the recently concluded U.S.-Africa Summit, which revolved almost exclusively around how the U.S. government needed to do more to support U.S. corporations entering and exploiting African countries for natural resources, energy production, labor and consumer markets. "We kind of gave Africa to the Europeans first and to the Chinese later, but today it's wide open for us," commented General Electric CEO Jeffrey Immelt.

The agreement will fall short—everyone says so

Friedman 14(Lisa Friedman,Climatewire, 8-21-2014, "Global Climate Deal May Fail to Restrain Global Warming," No Publication, http://www.scientificamerican.com/article/global-climate-deal-may-fail-to-restrain-global-warming/)

A growing number of leaders are openly acknowledging that a 2015 international agreement to avert catastrophic global warming will surely fall short of what's needed to achieve that goal. But another consensus is also forming among top U.S. experts: that shortfall is OK, as long as the deal puts all major climate polluters on a serious, upward and transparent path to cutting greenhouse gases. "The big question the public is going to ask is: Are all the major emitters participating? And are they doing enough to help solve this challenge?'" said Peter Ogden, director of international climate and energy policy at the Center for American Progress and a former chief of staff to U.S. Special Envoy for Climate Change Todd Stern. The new agreement to be signed in Paris, to take effect in 2020, will essentially replace the 1997 Kyoto Protocol. Unlike Kyoto, the Paris deal will demand action from everyone, and not just from wealthy industrialized countries. But in order to make that palatable for governments, negotiators are moving away from a traditional top-down approach in which scientists dictate what is needed to save the planet and countries are allotted targets accordingly. Instead, consensus has built around a more voluntary approach in which governments figure out how much they can cut and offer it up as a pledge. Those "intended nationally determined contributions" are due early next year. In interviews with former negotiators and longtime observers of the U.N. climate negotiations, not one person expressed confidence that the sum of countries' targets will be enough to keep rising global temperatures below the internationally agreed 2-degree-Celsius "guardrail" between dangerous and extremely dangerous warming. "If that were the case, it would be a stunning surprise. I don't think anyone expects that," said Joy Hyvarien, executive director of the U.K.-based Foundation for International Law and Development (FIELD). Recently, the Massachusetts Institute of Technology used a sophisticated climate model to come to the same result.

Water Wars

Empirics prove no water wars and not key to foreign policy

Selby 13

[Jan, Senior Lecturer in International Relations and Director of the Sussex Centre for Conflict and Security Research, "No water wars on the horizon," October 04, 2013, http://www.abo.net/oilportal/topic/view.do?contentId=2148541]

Does anything similar apply in the case of water? The answer has to be a resounding no. To start with, while water is of course biologically indispensable, the paradoxical truth is that oil is in other respects more important for modern economically developed societies than water. By way of illustration, in 1991 Israel experienced a significant drought to which it responded by reducing

total water consumption by a third – with negligible impacts on economic growth or stability (indeed, this was a boom period in Israel). By contrast an equivalent cut in oil supplies would have had far-reaching social and economic consequences. Within industrialized or post-industrial societies, water demand is much more elastic than demand for oil, at least over the short term. Secondly – and here the differences with oil are most keen – water is a renewable, relatively plentiful, and relatively well-distributed resource. The total volume of world water resources is on the order of 1,385 million square kilometers, and while only 2.5 percent of this is fresh water, it is nonetheless the case that fresh water can be created from saline water as well as reused and recycled ad infinitum. Wastewater is now routinely recycled for agricultural and even human consumption. Sea water is very often desalinated (including in the Gulf states, where oil helps power the process; and in Israel, which has the economic might to desalinate whatever it needs). And states in water- scarce parts of the world increasingly rely on "virtual water" imported in the form of food staples (indeed, Israel, Egypt, and many other Middle Eastern states are as dependent on rain falling over the American prairies as they are on that from the Nile or Jordan Rivers). There are multiple ways in which states and societies can adapt to water scarcity. Some undoubtedly fail to adapt, or are prevented from adapting – but the primary reasons for this are economic and political, not the natural distribution of resources. Third, water does not and could not conceivably generate equivalent revenues to oil. It is sometimes suggested that water might become a new "blue gold," but this is misleading. The extraordinary revenues accrued from oil are products of the industry's complexity and concentration, combined with the economic and infrastructural dependency of our "hydro-carbon societies" and the international oil trade. But none of these factors apply in the case of water. Most of the world's water supplies are accessed and consumed within the boundaries of the same state, limiting the capacity of local elites and providers to generate windfall profits from water supplies. Indeed, water is arguably of declining, not rising, economic and political importance. Most water is still used for agricultural production, but agriculture accounts for ever-smaller proportions of most countries' national products, exports and employment. Unlike oil, water is not an important source of economic or political power. A regional strategic resource It follows from this that water is not a strategic resource to the same extent as oil. For some states water is, of course, an important foreign policy concern, especially in circumstances where these states are dependent on large trans-boundary rivers flowing through arid regions (Egypt on the Nile, and Syria and Iraq on the Tigris-Euphrates). But such cases are exceptions to the general rule. Moreover, water is a strategic good only on a regional level, never more widely. While the U.S. has direct interests in the stability of Middle Eastern oil production and supplies, it has no equivalent interest in relation to water. Given these fundamental differences, it should be no surprise that there exists very little evidence of water causing or even contributing to armed conflict. Even in the most water-scarce regions of the Middle East, water is simply not important enough, as a source of revenues or security, for state elites to warrant going to war over it. Water is sometimes a subject of hostile rhetoric – as with Egyptian President Morsi's pre-coup threats against Ethiopia over the construction of its Grand Renaissance Dam – but there is little evidence of such rhetoric being followed through. The 1967 Arab-Israeli war, sometimes described as a "water war," was nothing of the sort. Equally, the water dimensions of the Israeli-Palestinian conflict, often described as intractable, could fade away quickly if the broader conflict were resolved: in strictly economic terms, Israel could quite feasibly grant the Palestinians a much larger share of shared water resources. The only recorded Middle Eastern water war occurred 4500 years ago, between two Mesopotamian city states. None of this exactly suggests that water is on the verge of becoming the "new oil." Cooperation Indeed, the current academic consensus is that water is more associated with cooperation than conflict. This does not

mean that water is a subject of harmony. Trans-boundary water "cooperation" can obscure and even perpetuate stark inequalities of water supply. Moreover, localized violence over access to springs, pastures or pipelines occurs in many areas of the Middle East and beyond, especially within peripheral rural areas. Sometimes this is violence is inter communal, but more often it involves states. In central Sudan, Khartoum- backed militias have repeatedly employed violence to displace people from areas of rain-fed agricultural land that have been marked out for agro-industrial development. On a very different scale, in the West Bank the Israeli military authorities continue to restrict Palestinian water development and access to supplies in areas marked out for strategic and settlement purposes. But such cases hardly amount to evidence of "water wars." It seems unlikely that this will change in any significant way. Water may become an increasingly important site or source of violence in peripheral agricultural regions, but these conflicts are likely to be small-scale and localized rather than inter-state, and quite different from those associated with oil. Indeed, given our ever-increasing oil dependency, combined with pressures on remaining reserves, the major source of conflict in the Middle East is likely to remain disturbingly familiar. The main "new" source of conflict will probably be the same as the old one: oil.

Warming Inevitable/Can't Solve—1NC

Can't solve warming

Hamilton 10 – Professor of Public Ethics @ ANU

Clive Hamilton, Professor of Public Ethics in Australia, 2010, "Requiem for a Species: Why We Resist the Truth About Climate Change," pg 27-28

> The conclusion that, **even if we act promptly and resolutely**, the world is on a path to reach 650 ppm is almost too frightening to accept. That level of greenhouse gases in the atmosphere will be associated with warming of about 4°C by the end of the century, well above the temperature associated with tipping points that would trigger further warming.58 So it seems that even with the most optimistic set of assumptions—the ending of deforestation, a halving of emissions associated with food production, global emissions peaking in 2020 and then falling by 3 per cent a year for a few decades—**we have no chance** of preventing emissions rising well above a number of critical tipping points that will spark uncontrollable climate change. The Earth's climate would enter a chaotic era lasting thousands of years before natural processes eventually establish some sort of equilibrium. Whether human beings would still be a force on the planet, or even survive, is a moot point. One thing seems certain: there will be far fewer of us. These conclusions arc alarming, co say the least, but they are not alarmist. Rather than choosing or interpreting numbers to make the situation appear worse than it could be, following Kevin Anderson and Alice Bows 1 have chosen numbers that err on the conservative side, which is to say numbers that reflect a more buoyant assessment of the possibilities. A more neutral assessment of how the global community is likely to respond would give an even bleaker assessment of our future. For example, the analysis excludes non-CO2, emissions from aviation and shipping. Including them makes the task significantly harder, particularly as aviation emissions have been growing rapidly and are expected to continue to do so as there is no foreseeable alternative to severely restricting the number of flights.v' And any realistic assessment of the prospects for international agreement would have global emissions peaking closer to 2030 rather than 2020. The **last chance to reverse the trajectory of global emissions** by 2020 **was forfeited** at the Copenhagen climate conference in December 2009. As a consequence, a global response proportionate to the problem was deferred for several years.

Warming Inevitable/Can't Solve—Studies Confirm

Warming inevitable even if we cut emissions to zero—multiple studies confirm

Gillett et al 10—director @ the Canadian Centre for Climate Modelling and Analysis

Nathan, "Ongoing climate change following a complete cessation of carbon dioxide emissions". *Nature Geoscience*

> Several recent studies have demonstrated that CO2-induced 17 global mean temperature change is irreversible on human 18 timescales1 5. We find that not only is this climate change 19 irreversible, but that for some climate variables, such as Antarctic 20 temperature and North African rainfall, CO2-induced climate 21 changes are simulated to continue to worsen for many centuries 22 **even after a complete cessation of emissions.** Although it is 23 also well known that a large committed thermosteric sea level 24 rise is expected even after a cessation of emissions in 2100, 25 our finding of a strong delayed high-latitude Southern Ocean 26 warming at intermediate depths suggests that this effect may be 27 compounded by ice shelf collapse, grounding line retreat, and ensuing accelerated ice discharge in marine-based sectors of the 28 Antarctic ice sheet, precipitating a sea level rise of several metres. 29 Quantitative results presented here are subject to uncertainties 30 associated with the climate sensitivity, the rate of ocean heat 31 uptake and the rate of carbon uptake in CanESM1, but our 32 findings of Northern Hemisphere cooling, Southern Hemisphere 33 warming, a southward shift of the intertropical convergence zone, 34 and delayed and ongoing ocean warming at intermediate depths 35 following a cessation of emissions are likely to be robust. Geo- 36 engineering by stratospheric aerosol injection has been proposed 37 as a response measure in the event of a rapid melting of the 38 West Antarctic ice sheet24. Our results indicate that if such a 39 melting were driven by ocean warming at intermediate depths, as 40 is thought likely, a geoengineering response would be ineffective 41 for several centuries owing to the long delay associated with 42 subsurface ocean warming.

No Warming—Solar Variations

Solar variations outweigh – they are exclude by the IPCC

-cooling coming

Morner 11 – PhD in Paleogeophysics

Nils-Axel Mörne, former head of the Paleogeophysics and Geodynamics department at Stockholm University, "ARCTIC ENVIRONMENT BY THE MIDDLE OF THIS CENTURY," Energy & Environment, Vol 22, No. 3

> Later, I use the Solar Irradiance curve of Bard et al. (2000), noting that this curve, in fact, rather should be labelled "a Solar Wind Curve" as it is constructed from the variations in cosmogenic nuclides controlled by the variations in shielding capacity of the Earth's geomagnetic field as given in Figure 4 (cf. Mörner, 2010). Along this curve (Figure 6) I have marked the changes recorded between Gulf Stream stages 2 (above) and 4 (below) situations as given in Figure 2 (cf. Mörner, 2010). In the middle of this century (at about 2040-2050), we should, by cycle extrapolation, have a Future Solar Minimum when the past Gulf Stream situation should repeat; i.e. we would have a new stage 4 situation with "Little Ice Age" conditions in Europe and in the Arctic (Figure 7). This is in sharp contrast to the scenarios of IPCC (2001) and ACIA (2004), which predict a unidirectional continued warming leading to the opening of the Arctic basin within this century. Their prediction is based on **modelling excluding the effects of**

the Sun, however. Personally, I am convinced that we need to have "the Sun in the centre" (Mörner, 2006a, 2006b), and doing so, we are indeed facing a new Solar Minimum in the middle of this century. Whether this minimum will be as the past three once were (Figure 6), or it will be affected by anthropogenic factors, is another question. The date of the New Solar Minimum has been assigned at around 2040 by Mörner et al. (2003), at 2030-2040 by Harrara (2010), at 2042 ±11 by Abdassamatov (2010) and at 2030-2040 by Scafetta (2010), implying a fairly congruent picture despite somewhat different ways of transferring past signals into future predictions. The onset of the associated cooling has been given at 2010 by Easterbrook (2010) and Herrara (2010), and at "approximately 2014" by Abdassamatov (2010). Easterbrook (2010) backs up his claim that the cooling has already commenced by geological observations facts. At any rate, from a Solar-Terrestrial point of view, we will, by the middle of this century, be in a New Solar Minimum and in a New Little Ice Age (Figure 7). This conclusion is completely opposite to the scenarios presented by IPCC (2001, 2007) as illustrated in Figure 3. With "the Sun in the centre", no other conclusion can be drawn, however.

Biodiversity

Abrupt changes in climate don't cause mass biodiversity loss—history proves

Singer and Avery 7—distinguished research and environmental science professors @ George Mason and Virginia

Fred, Distinguished Research Professor at George Mason University and Professor Emeritus of environmental science at the University of Virginia, Dennis, director of the Center for Global Food Issues at the Hudson Institute, Unstoppable Global Warming: Every 1,500 years, pg. 16

We know that species can adapt to abrupt global warming because the climate shifts in the 1500-year cycle have often been abrupt. Moreover, **the world's species have already survived at least six hundred such warmings and coolings in the past million years**. The major effect of global warming will be more biodiversity in our forests, as more trees, plants, birds, and animals extend their ranges. This is already happening. Some biologists claim that a further warming of 0.8 degrees Celsius will destroy thousands of species. However, the Earth warmed much more than that during the Holocene Climate Optimum, which occurred 8,000 to 5,000 years ago, and no known species were driven extinct by the temperature increase.

Sea Level Rise

Predictions of sea level rise are inaccurate

Taylor 11 – senior fellow for environmental policy @ the Heartland Institute

(James, "SINKING UNDER THEIR FALSE SEA-LEVEL PREDICTIONS, ALARMISTS CHANGE THE DATA' [http://sppiblog.org/news/sinking-under-their-false-sea-level-predictions-alarmists-change-the-data] May 17)

Faced with the embarrassing fact that sea level is not rising nearly as much as alarmist computer models predict, the University of Colorado's NASA-funded Sea Level Research Group has announced it will begin adding a scientifically unjustified 0.3 millimeters per year to its Global Mean Sea Level Time Series. **Human civilization readily adapted to the seven inches of sea-level rise that occurred during the twentieth century**. Alarmists, however, claim global warming will cause sea level to rise much more rapidly during the

coming century. The United Nations Intergovernmental Panel on Climate Change (IPCC) gives a mean estimate of 15 inches of sea-level rise during the twenty-first century. High-profile alarmists often predict three feet. Some even predict 20 feet. Satellite measurements show global sea level has risen merely 0.83 inches during the first decade of the twenty-first century (**a pace of eight inches for the century**) and has barely risen at all since 2006. **This puts alarmists in the embarrassing position of defending predictions that are not coming true in the real world.**

Warming just as likely causes decreased flooding

Lomborg 7

Bjorn, Adjunct Professor at the Copenhagen Business School and a former director of the Environmental Assessment Institute in Copenhagen, Cool It, pg. 82

When studying US rivers, we can see increasing precipitation causing increasing stream flows, but if we check when the increase happens, it turns out that it happens mostly during the fall, when there is generally lower flow and little risk of flooding, whereas it happens rarely in the spring and with high flows. Likewise, in Europe, a study of the two major rivers, the Oder and the Elbe (which flooded Prague and Dresden in 2002), showed that over the past centuries summer floods show no trend and winter floods have actually decreased. **This is well correlated with the historical evidence, which shows much greater flood risks in the colder climates of the Little Ice Age.** With much snow and a late thaw, ice jams typically blocked a swollen river, producing high water levels, followed by floods and bursting dikes. This pattern was the main cause of flooding on the lower Rhine during the Little Ice Age, with almost all the dike bursts in the Netherlands being due to ice jams. **These floods have decreased sharply in the twentieth century, on account of warming.** Likewise, an analysis of the river Werra in Germany shows the highest flood risk was in the 1700s. Along the river Vitvava in the Czech Republic, floods have decreased over the past century.

Food Prices 1NC

Food prices are rising – the only solution is increased production

The Press Association 8

UN warns of rising food prices, 6/25/08,
http://ukpress.google.com/article/ALeqM5gw3QAJkWm_FVBknySwRjlxsD_Z4g

The head of the UN's food agency has warned that food prices will remain high and called for a boost in production. Food and Agriculture Organisation director general Jacques Diouf said prices are expected to remain high due to climate change, continued demand for bioenergy, low food stocks and greater demand in emerging countries such as China, India, Indonesia and Brazil. Mr Diouf said the problem will not be solved without increasing food production, and he called on world leaders meeting in Japan next month to address this issue.

Co2 key to increased ag production

Steward 9—geologist

(H Leighton, "Plants need more CO2, not less" [http://plantsneedco2.org/default.aspx/act/newsletter.aspx/category/In+The+News/menuitemid/312/MenuGroup/NewsAndMedia/NewsLetterID/26/startrow/4.htm] December 4)

Congress and federal regulators are poised to make a misguided and reckless decision that will stifle our economy recovery and spur long- term damage to plant and animal life on earth. In the coming months, the Environmental Protection Agency will hold hearings to justify the movement to brand carbon dioxide (CO_2) as a pollutant. Congress will also consider cap-and-trade legislation that, if enacted, could also regulate CO_2 as pollution. Why is it such a catastrophic decision? Because there is not a single piece of evidence that CO_2 is a pollutant. In fact, **lower levels of carbon dioxide actually inhibit plant growth and food production.** What we see happening in Washington right now is the replacement of politics for science in conversations about CO_2. For plants, CO_2 is the greatest, naturally occurring air-borne fertilizer that exists. Even schoolchildren learn in elementary science class that plants need carbon dioxide to grow. During photosynthesis, plants use this CO_2 fertilizer as their food and they "breathe out" oxygen into the air so humans can inhale it, and in turn exhale CO_2. This mutually beneficial and reinforcing cycle is one of the most basic elements of life on earth. An article appeared recently in the Environment and Energy Daily that claimed a "modeled" nitrogen deficiency will occur as CO_2 rises. Well, CO_2 has already risen over 37%, 105 parts per million, and where is the real world nitrogen deficiency?Why are Earth's forests lush if the added growth that has already occurred, due to big bursts of CO_2, has depleted the nitrogen supply? The nitrogen supply of pristine ecosystems has been resupplied through natural processes for eons. Computer models, manipulated to produce desired results, can generate catastrophic, front page, forecasts. We encourage our government's scientists to step back from their models and observe what is and what has happened in the real world, as well as in actual plant experiments. Doesn't anyone recognize the good news that is staring them in the face? It simply defies imagination, let alone science, that the United Nations has now backed an arbitrary limit on atmospheric carbon dioxide levels. The chairman of the politically charged Intergovernmental Panel on Climate Change (IPCC) said he supports efforts to reduce carbon dioxide to 10% below current levels. In the context of today's political conversations, this recommendation may sound like an acceptable position to save the environment. But the scientific reality of such a step is quite the opposite**. Lowering carbon dioxide in our atmosphere will have catastrophic affects on our food supply.** Higher concentrations of carbon dioxide support plant life and helps plants thrive. If our food supply is reduced, the hunger crisis in many parts of the world will worsen. **Not only would lowering CO_2 levels be wrong, one can make the argument that even higher levels would be desirable. Greenhouse operators routinely increase CO_2 to about three times the current level in earth's atmospher**e in order to encourage plant growth. We know CO_2 is vital for plants, but what about the argument that it is a dominant contributor to the greenhouse effect? Again, science does not support this argument. CO_2 is not even close to being the most important of the greenhouse gases. Most of the greenhouse effect is due to water vapor, which is more than 30 times as abundant in the atmosphere as CO_2. As further evidence, we find that as the post-war industrial boom began to put significant volumes of CO_2 into the atmosphere, global temperatures did not rise. Since 1945, there have been about 40 years of cooling trend and only 20-plus years of warming. While the warming is significant, it followed an unusually high period of solar activity. Temperature did rise steeply in the 1920's and in the 1930's in the U.S. and 1934 was the warmest year of the 20th century. The rate of warming then was also higher than in the 1980's and 1990's, even though CO_2 levels were lower. Many in the scientific community reject reducing atmospheric CO_2 to 350 parts per million, as Dr. Pachauri of the U.N. wishes. Thousands of peer-reviewed experiments have demonstrated CO_2' s ability to "green" the earth dramatically. Nonetheless, Dr. Pachauri and those who prefer to debate science with politics are sticking to their old story and clinging to their inadequate climate models and their headline-grabbing catastrophic forces. Do Americans want to see their government spend trillions of dollars removing CO_2 that will not lower the Earth's temperature but absolutely will risk harming ecologies, economies and mankind itself?

High food prices threaten global economic collapse

Fickler 8

MARTIN FACKLER June 15, 2008
http://www.nytimes.com/2008/06/15/business/worldbusiness/15ministers.html "Surging Oil and Food Prices Threaten the World Economy, Finance Ministers Warn"

> The global economy faces a one-two punch from slowing growth and soaring fuel and food prices, finance ministers from the world's richest nations warned Saturday, though they stopped short of offering concrete solutions. Finance ministers from the Group of 8 industrialized nations wrapped up a two-day meeting in Japan that was dominated by talk of rising petroleum prices, which have set off street protests across the world. In a statement, the ministers said higher prices of oil and other commodities threatened the world economy at a time when it was still reeling from the collapse of the housing market in the United States.

Economic decline risks nuclear war

Mead 92

[Walter Russel Mead, Senior Fellow in American FoPo @ the Council on Foreign Relations, World Policy Institute, 1992]

> Hundreds of millions, billions, of people have pinned their hopes on the international market . They and their leaders have embraced market principles and drawn closer to the west because they believe the system can work for them? But what if it can't? What if the global economy stagnates or even shrinks? In that case, we will face a new period of international conflict: North against South, rich against poor. Russia, China India, these countries with their billions of people and their nuclear weapons will pose a much greater danger to the world than Germany and Japan did in the 30s.

CO2 Key to Ag

CO2 in the last century has helped increase agricultural productivity

Spencer 11—former senior scientist @ NASA

Roy Spencer, Ph.D. Meteorology, Former Senior Scientist for Climate Studies, NASA, 1/4/11, Popular Science, http://www.climatechangedispatch.com/temperate-facts/co2-and-gw-primers/co2-is-not-pollution?start=1

> "Many chemicals are absolutely necessary for humans to live, for instance oxygen. Just as necessary, human metabolism produces by-products that are exhaled, like carbon dioxide and water vapor. So, the production of carbon dioxide is necessary, on the most basic level, for humans to survive. The carbon dioxide that is emitted as part of a wide variety of natural processes is, in turn, necessary for vegetation to live. It turns out that most vegetation is somewhat 'starved' for carbon dioxide, as experiments have shown that a wide variety of plants grow faster, and are more drought tolerant, in the presence of doubled carbon dioxide concentrations. Fertilization of the global atmosphere with the extra CO2 that mankind's activities have emitted in the last century is believed to have helped increase agricultural productivity. In short, carbon dioxide is a natural part of our environment, necessary for life, both as 'food' and as a by-product."

CO2 Key To Bio-D

Co2 is key to global biodiversity and is the only way to counter the effects of global warming

Idso 3

Sherwood (President of the Center for the Study of Carbon Dioxide and Global Change and former professor at Arizona State University), Craig, and Keith Idso, The Specter of Species Extinction, http://www.marshall.org/pdf/materials/150.pdf

> So what could we logically expect to happen to the biosphere in a world of both rising air temperature and atmospheric CO2 concentration? We could expect that earth's plants would extend the current cold-limited boundaries of their ranges both poleward in latitude and upward in elevation, but that the heat-limited boundaries of the vast majority of them would remain pretty much as they are now, i.e., unchanged. Hence, the sizes of the ranges occupied by most of earth's plants would increase. We additionally hypothesize that many of the animals that depend upon those plants for food and shelter would exhibit analogous behavior. Hence, with respect to both plants *and* animals, we would anticipate that nearly everywhere on earth, local biodiversity or species richness would increase in a world of rising air temperature and atmospheric CO2 concentration, as the expanding ranges of the planet's plants and animals overlapped those of their neighbors to an ever-increasing degree. The implications of these observations are clear: if the planet continues to warm, even at what climate alarmists call "unprecedented rates," we need not worry about earth's plants and animals being unable to migrate to cooler regions of the globe fast enough to avoid extinction, as long as the air's CO2 content continues to rise at its current rate. So obvious is this conclusion, in fact, that Cowling (1999) has bluntly stated that "maybe we should be less concerned about rising CO2 and rising temperatures and more worried about the possibility that future atmospheric CO2 will suddenly stop increasing, while global temperatures continue rising."

Food Prices Bad – Hunger

Higher food prices kill billions

Tampa Tribune 96

(January 20, LN)

> "Even if they are merely blips, higher international prices can hurt poor countries that import a significant portion of their food," he said. "Rising prices can also quickly put food out of reach of the 1.1 billion people in the developing world who live on a dollar a day or less." He also said many people in low-income countries already spend more than half of their income on food.

This outweighs all – we must stop hunger, even if it leads to extinction

LaFollette 2K3

(Hugh, http://www.stpt.usf.edu/hhl/papers/World.Hunger.htm)

> Those who claim the relatively affluent have this strong obligation must, among other things, show why Hardin's projections are either morally irrelevant or mistaken. A hearty few take the former tack: they claim we have a strong obligation to aid the starving even if we would eventually become malnourished**.** On this view, to survive on lifeboat earth, knowing that others were tossed overboard into the sea of starvation, would signify an indignity and callousness worse than extinction (Watson 1977).

It would be morally preferable to die struggling to create a decent life for all than to continue to live at the expense of the starving.

AT: Loladze

Loladze is wrong – high co2 levels allow for plants to use nitrogen efficiently

Idso 2

Sherwood (President of the Center for the Study of Carbon Dioxide and Global Change and former professor at Arizona State University), Craig, and Keith Idso, "Has the Historical Rise in the Air's CO2 Content Negatively Impacted Human Health?" Volume 5, Number 44: 30 October 2002

Loladze's thesis is based on the assumption that certain essential micronutrients should be present in plants at concentrations that are greater than, or at least equal to, their current concentrations. By this thinking, any concentration reductions from those of the present are deemed to be bad. This premise, however, is far too simplistic; for it is not the amount of those elements, but how they are used, that defines their utility or value to the plant and/or human body. A case in point from the plant world is the commonly - but not universally - observed decrease in foliage nitrogen concentration that occurs in vegetation growing in air enriched with CO_2. Originally thought to be a negative response, this acclimation phenomenon has gradually come to be realized to be a positive reaction to atmospheric CO_2 enrichment. Not requiring as much nitrogen to maintain their photosynthetic machinery in top working condition when growing in air enriched with CO_2, plants need not acquire as much nitrogen as they do in CO_2-deficient air (such as that of the present) and, therefore, they need not expend the extra energy required to do so, growing bigger and better all the while. And that is why it is openly acknowledged that atmospheric CO_2 enrichment greatly enhances plant nitrogen use efficiency.

AT: Warming Collapses Ag

Lower temperatures crush agriculture – history proves

Dunn 7

J.R., "Resisting Global Warming Panic," 1/31/2k7, American Thinker, http://www.americanthinker.com/2007/01/resisting_global_warming_panic.html

The climate closed down. Rains ruined crops and washed away entire seacoast towns. Far to the north, the great colonies of Iceland and Greenland faltered and began to fade away. Famine returned to Europe, and with it the plague, in one of the greatest mass deaths ever witnessed by humanity. The bright centuries were replaced by the dance of death and a dank and morbid religiosity. The focus of culture shifted to the warm Mediterranean. It remained cold, within certain broad limits, for six hundred years. The chill only lifted in the 1850s, when our current warming actually began.

We look back to a world that was a far more pleasant place at the turn of the last millennium, with a milder climate, plentiful food, a healthy populace. A picture, needless to say, at some variance with the Greens' prediction of coming universal disaster. It also undermines one of one of the basic environmentalist tenets - that nature is in delicate balance that can destroyed by a hard look from any given capitalist, and that any such change leads inevitably to catastrophe. The LCO suggests that a warmer world may well be more desirable than the one we have now. To go a step further, my research implied that the planet is in fact meant to be somewhat warmer than it is today, that the life-forms we see around us are in fact adapted to a warmer climate. The earth is, after all, stuck within a three-million-year glacial epoch whose origin and cause remain a mystery. (We're now in a brief "interglacial" - a warming period! - that began only 12,000 years ago and could end tomorrow.)

AT Democracy Adv

DPT Bad

Democratic peace theory justifies violent interventions to promote US interests—covert operations expose the flaws and tautology of DPT research

Barkawi 15 - Deputy Head of Research Department London School of Economics and Political Science

Tarak, Scientific Decay, International Studies Quarterly (2015) 1–3

As a dissenting referee for Michael Poznansky's (2015) article "Stasis or Decay? Reconciling Covert War and the Democratic Peace," the editors invited me to convert my report into a published response. Poznansky defends the Democratic Peace against the inconvenient fact that the United States has intervened, on multiple occasions, to subvert and even overthrow democratically elected regimes. I consider Poznansky's attempt to protect demo- cratic-peace theory from this historical record fundamen- tally misguided. Poznansky winds up reinscribing the very ideological categories that American leaders used to jus- tify often brutal and bloody anti-democratic projects as somehow "pro-democracy". Rather than supporting dem- ocratic-peace theory, Poznansky's article instead calls attention to the Cold War ideology and **American excep- tionalism that underwrites it**.∂ The Democratic Peace and Covert Operations∂ The first and most important thing to say about "Stasis or Decay? Reconciling Covert War and the Democratic Peace" presents little genuinely new evidence about covert opera- tions, the Democratic Peace, and the Cold War. Instead, the article develops auxiliary hypotheses that aim to deal with the challenge posed to democratic-peace theory by covert operations against elected regimes (see, for exam- ple, Doyle 1983:334–337; Barkawi 2001; Downes and Lilley 2010). In doing so, it highlights the **degenerative** character of the research program—how democratic-peace theory no longer creates or explains novel facts (Lakatos 1970:116– 119). As Poznansky writes, his theory helps "existing theories of the democratic peace account for covert inter- vention." (2015:3) He does so by arguing that US policy- makers covertly intervened against elected governments when they expected "democracy" to decay and "commu- nists" to take over. He holds that covert interventions reflect, rather than falsify, the causal logics of democratic-peace theory, so long as scholars take expectations of the future trajectory of democracy into account.∂ In essence, Poznansky has written a "get out of jail free card" for the Democratic Peace. If, before they conduct an operation against an elected government, US policymak ers reason that their actions ultimately further democracy, then political scientists can rest assured that these actions do not invalidate the Democratic Peace. Putting the mat- ter in this way makes evident the circularity between the mindsets of officials and the categories of democratic- peace theory. This circularity invites critical reflection.∂ To make his argument, Poznansky distinguishes between being anti-communist and being pro-democratic. Critics claim, in my view, correctly, that, during most of the Cold War, US policymakers cared more about com- batting communism than promoting democracy in the Third World. Poznansky argues that anti-communism and promoting democracy amount to the same thing, both in an objective sense and in the minds of US policymakers at the time (2015:3, 5). That a social scientific journal article could so unreflectively make such a world-historical claim alerts us to the constitutive relations between power and knowledge, including scientific knowledge. But this is a topic neither Poznansky nor our discipline much want to discuss. The consequence, as here, is scholarship com- plicit with US power in the world, past and present, and with its violent interventions into the affairs of others.∂

Poznansky does not mince words: “Empirical evidence” shows that “[c]ommunism as an ideology” was both threatening “geopolitically” and “inherently anti-demo- cratic” (2015:5). Said another way, the Cold War hawks were right! Intervening to stop communism anywhere was an inherently pro-democratic act. When US officials helped overthrow the popularly elected Mossadegh, they were not “working against democracy” but rather worried that “Iran’s experiment with democracy would soon be over” (Poznansky 2015:6). Similarly, in Chile, US officials believed that the election of Allende meant the end of democracy (2015:8). For those officials, as for Poznansky, communists, socialists, and other leftists were, in world- historical terms, anti-democratic, even if they were elected. That US officials believed things like this is well known to any student of the Cold War. The really inter- esting question is why such Cold War truisms would be of particular scientific interest at the current moment or treated as critical tests of empirical laws.∂ The definition of democracy lies at the crux of the anti-communism/pro-democracy issue, as Mark Laffey and I noted over a decade ago (1999:407–409). US Cold War ideology considered communism inherently anti- democratic; it equated anti-communism with the protec- tion and promotion of democracy. When Laffey and I argued that the United States often deployed its power against democracy in the Third World, we had in mind a different conception of democracy: as a project of popu- lar rule (1999:414; cf. Poznansky 2015:5). We made this argument in order to identify the multiple, diverse, and co-constitutive relations between democracy and war in world politics. Democratic-peace theory defines these rela- tions out via biases lodged in its core categories and its statistical indicators. Poznansky, along with US Cold War officials and the democratic-peace research program, sim- ply equates “democracy” with “liberal capitalist democ- racy” without acknowledgment of the essentially contested nature of this concept. From such an obviously ideological, facile standpoint, US Cold War policies like overthrowing elected governments, militarily supporting regimes arrayed against their own populations, or vio- lently opposing popular movements and insurgencies can be classified as defending or promoting democracy.∂ That Poznansky and I have different definitions of democracy is not that interesting. However, Poznansky passes off US Cold War ideology as objective fact; namely, that communism—very broadly defined (for example, Allende, Arbenz, Mossadegh)—was intrinsically anti- democratic. Poznansky quotes US officials, such as Kis- singer, expressing their concern for democracy in Iran and Chile, even as their actions helped birth murderous, long-lived dictatorships. To claim that an election in Chile constituted a threat to the US reiterates a well- rehearsed strain of anti-communist ideology. Yet Poznan- sky argues that the US perception that an “Allende vic- tory” amounted to a “negation of democracy” had an “objective basis” (Poznansky 2015:3, 8). He reasons that US policymakers observed how some communist parties curtailed electoral democracy in other countries, as in Czechoslovakia in 1948. They worried as a world-historical matter about the future trajectory of democracy if com- munists took over. This is the position taken by Cold Warriors like Jeane Kirkpatrick in her polemic “Dictator- ships and Double Standards” (1979). Of course, those who supported Mossadegh and Allende saw matters dif- ferently: For them, the United States helped put an end to popular political projects. Poznansky invites this sort of rehashing of Cold War arguments because he allies his scientific reasoning with a long-dominant ideology and its interpretation of history. The fact that he so easily does so reflects how the categories of democratic-peace theory already profoundly naturalize Cold War ideology.∂ Setting aside those categories makes visible an irony at the heart of Poznansky’s argument. He claims that covert operations fail to invalidate the causal mechanisms sus- taining the peace among democracies. Yet those opera- tions most certainly subverted democracy domestically in the United States. The Executive Branch hid such secret operations from US citizens and their legislative represen- tatives. US Cold War covert

operations involved executive overreach in respect of budget and war powers, matters of central concern to liberal democratic theory. These operations also closely intertwined with the use of intelli- gence agencies to monitor, and subvert, domestic politi- cal activity (Halperin, Berman, Borosage, and Markwick 1976).∂If one took seriously the questions raised by covert operations and intelligence agencies for democracy, war, and peace, topics such as these might warrant consider- able interest. Poznansky instead investigates two uncon- troversial hypotheses. First, that the United States proved more likely to intervene when it thought a country of strategic concern might go communist. Second, that it intervened first to covertly strengthen its perceived allies in the country, and later with covert force in pursuit of regime change. That the United States did so in various cases—and that its officials believed they were acting on behalf of the free world, democracy, and the American Way—is a matter of straightforward historical record. The mystifying brew of liberalism and empiricism that is dem- ocratic-peace theory obscures the decisive fact that in the covert operations under consideration, US officials sub- verted democracy both at home and abroad.∂In the twentieth century, dominant versions of US identity came to equate the fate of the American project with that of democracy in general (Campbell 1992). US officials and politicians, and the experts who advised them, took for granted the worldwide role of the United States. They planned their policies and rationalized their actions within that ideological frame. As a result, anyone trying to replicate Poznansky's work will find numerous confirmations of his hypotheses. Whether invading, cov- ertly waging war, or subverting democracy in other peo- ple's countries, US officials regularly expressed their genuine concern for the survival of democracy—if not the fate of civilization itself.∂Power, Knowledge, and the "Science" of the Democratic Peace∂Circularity between power and knowledge undergirds Poznansky's article. The Democratic Peace, as a scientific claim about the world, retrospectively **justifies US Cold War policies**. Interventions in the Third World were really about promoting democracy, and not about supporting dictatorial regimes out of paranoid anti-communism. At the same time, those Cold War interventions—which we should, by rights, see as challenging the Democratic Peace—reappear as validating that claim. Overthrowing elected leaders with the wrong ideology, or repressing popular movements abroad, is actually pro-democracy and ultimately sustains the peace between democracies, objectively speaking. Here we catch a whiff of how Poz- nansky's article, and the research program of which it is a part, participates in US power and **reproduces its logics of intervention** in the present. This sort of scholarship perpetuates the nearly complete failure of our discipline to confront its own implication in the US security state in and beyond the Cold War (cf. Asad 1973; Amadae 2003; Oren 2003).∂The purpose of science should be to stand outside of ideology, to critique it, not to ratify it (Weber 1946 [1919]). Consider Poznansky's closing lines about the present-day worldwide construct through which the US legitimates intervention, the War on Terror. He writes: "the prospects for a democratic peace in the Middle East will hinge in large part on whether moderate elements within these countries successfully keep anti-democratic Islamists out of power and forestall the belief that their countries have stepped out onto the slippery slope of democratic decay" (2015:10). Having reproduced Cold War ideology in stark simplicity—anti-communism equals pro-democracy—Poznansky does the same for the War on Terror. We have the whole panoply here: US friends (moderate Islamists), US enemies (anti-democratic Isla- mists), and the idea that any Islamist regime is inherently susceptible to authoritarianism. This think tank-level analysis wishes away the popular (that is, democratic) power of US opponents, whether or not they formally elect parties and governments. It disappears from inquiry their democratic projects and any relations those projects might have with peace, war, or the prospects for popular rule. It identifies the analyst with the US project in the world and with its enmities.∂That the chief findings of liberal

and empiricist IR reflect the worldview of the US security state in no way confirms the hypotheses of democratic-peace theory. They indicate instead the co-constitutive character of power/knowledge relations and the need for a reckoning with the multifaceted ways in which US power has shaped, and continues to shape, the discipline (Lowen 1997; Cumings 1999:173–204; Gilman 2003; Isaac 2007; Stampnitzky 2013).

Democracy Backsliding

Authoritarian governments are bringing democratic backsliding

Kulantzick 11

(Joshua Kulantzick, an American journalist from Baltimore, Maryland, United States. He is a Fellow for Southeast Asia at the Council on Foreign Relations, May 19, 2011, "The Great Democracy Meltdown", http://www.newrepublic.com/article/world/magazine/88632/failing-democracy-venezuela-arab-spring)

As the revolt that started this past winter in Tunisia spread to Egypt, Libya, and beyond, dissidents the world over were looking to the Middle East for inspiration. In China, online activists inspired by the Arab Spring called for a "jasmine revolution." In Singapore, one of the quietest countries in the world, opposition members called for an "orchid evolution" in the run-up to this month's national elections. Perhaps as a result, those watching from the West have been positively triumphalist in their predictions. The Middle East uprisings could herald "the greatest advance for human rights and freedom since the end of the cold war," argued British Foreign Secretary William Hague. Indeed, at no point since the end of the cold war—when Francis Fukuyama penned his famous essay The End of History, positing that liberal democracy was the ultimate destination for every country—has there been so much optimism about the march of global freedom. If only things were so simple. The truth is that the Arab Spring is something of a smokescreen for what is taking place in the world as a whole. Around the globe, it is democratic meltdowns, not democratic revolutions, that are now the norm. (And even countries like Egypt and Tunisia, while certainly freer today than they were a year ago, are hardly guaranteed to replace their autocrats with real democracies.) In its most recent annual survey, the monitoring group Freedom House found that global freedom plummeted for the fifth year in a row, the longest continuous decline in nearly 40 years. It pointed out that most authoritarian nations had become even more repressive, that the decline in freedom was most pronounced among the "middle ground" of nations—countries that have begun democratizing but are not solid and stable democracies—and that the number of electoral democracies currently stands at its lowest point since 1995. Meanwhile, another recent survey, compiled by Germany's Bertelsmann Foundation, spoke of a "gradual qualitative erosion" of democracy and concluded that the number of "highly defective democracies"—democracies so flawed that they are close to being failed states, autocracies, or both—had doubled between 2006 and 2010. The number of anecdotal examples is overwhelming. From Russia to Venezuela to Thailand to the Philippines, countries that once appeared to be developing into democracies today seem headed in the other direction. So many countries now remain stuck somewhere between authoritarianism and democracy, report Marc Plattner and Larry Diamond, co-editors of the Journal of Democracy, that "it no longer seems plausible to regard [this condition] simply as a temporary stage in the process of democratic

transition." Or as an activist from Burma—long one of the world's most repressive countries—told me after moving to Thailand and watching that country's democratic system disintegrate, "The other countries were supposed to change Burma. ... Now it seems like they are becoming like Burma." Twenty or even ten years ago, the possibility of a global democratic recession seemed impossible. It was widely assumed that, as states grew wealthier, they would develop larger middle classes. And these middle classes, according to democracy theorists like Samuel Huntington, would push for ever-greater social, political, and economic freedoms. Human progress, which constantly marched forward, would spread democracy everywhere. For a time, this rosy line of thinking seemed warranted. In 1990, dictators still ruled most of Africa, Eastern Europe, and Asia; by 2005, democracies had emerged across these continents, and some of the most powerful developing nations, including South Africa and Brazil, had become solid democracies. In 2005, for the first time in history, more than half the world's people lived under democratic systems. Then, something odd and unexpected began to happen. It started when some of the leaders who had emerged in these countries seemed to morph into elected autocrats once they got into office. In Venezuela, Hugo Chávez is now essentially an elected dictator. In Ecuador, elected President Rafael Correa, who has displayed a strong authoritarian streak, recently won legislation that would grant him expansive new powers. In Kyrgyzstan, Kurmanbek Bakiyev, who led the 2005 Tulip Revolution, soon proved himself nearly as authoritarian as his predecessor. And, in Russia, Vladimir Putin used the power he won in elections to essentially dismantle the country's democracy. But it wasn't just leaders who were driving these changes. In some cases, the people themselves seemed to acquiesce in their countries' slide away from free and open government. In one study by the Program on International Policy Attitudes, only 16 percent of Russians said it was "very important" that their nation be governed democratically. The regular Afrobarometer survey of the African continent has found declining levels of support for democracy in many key countries. And in Guatemala, Paraguay, Colombia, Peru, Honduras, and Nicaragua, either a minority or only a small majority of people think democracy is preferable to any other type of government. Even in East Asia, one of the most democratic regions of the world, polls show rising dissatisfaction with democracy. In fact, several countries in the region have developed what Yu-tzung Chang, Yunhan Zhu, and Chong-min Park, who studied data from the regular Asian Barometer surveys, have termed "authoritarian nostalgia." "Few of the region's former authoritarian regimes have been thoroughly discredited," they write, noting that the region's average score for commitment to democracy, judged by a range of responses to surveys, has recently fallen. But what about the middle class? Even if large segments of the population were uninterested in liberal democracy, weren't members of the middle class supposed to act as agents of democratization, as Huntington had envisioned? Actually, the story has turned out to be quite a bit more complicated. In country after country, a familiar pattern has repeated itself: The middle class has indeed reacted negatively to populist leaders who appeared to be sliding into authoritarianism; but rather than work to defeat these leaders at the ballot box or strengthen the institutions that could hold them in check, they have ended up supporting military coups or other undemocratic measures. Thailand offers a clear example of this phenomenon. In 2001, Thaksin Shinawatra, a former telecommunications tycoon turned populist, was elected with the largest mandate in Thai history, mostly from the poor, who, as in many developing nations, still constitute a majority of the population. Over the next five years, Thaksin enacted several policies that clearly benefited the poor, including national health insurance, but he also began to strangle Thailand's institutions, threatening reporters, unleashing a "war on drugs" that led to unexplained shootings of political opponents, and silencing the bureaucracy. In 2005, when the charismatic prime minister won another free election with an even larger mandate, the middle class revolted,

demonstrating in the streets until they paralyzed Bangkok. Finally, in September 2006, the Thai military stepped in, ousting Thaksin. When I traveled around Bangkok following the coup, young, middle-class Thais, who a generation ago had fought against military rulers, were engaged in a love-in with the troops, snapping photos of soldiers posted throughout Bangkok like they were celebrities. The middle class in Thailand had plenty of company. In 2001, urban Filipinos poured into the streets to topple President Joseph Estrada, a former actor who rose to power on his appeal to the poor, and then allegedly used his office to rake in vast sums of money from underworld gambling tycoons. In Honduras in 2009, middle-class opponents of populist President Manuel Zelaya began to protest his plans to extend his power by altering the constitution. When the military removed him in June of that year, the intervention was welcomed by many members of the urban middle class. An analysis of military coups in developing nations over the past two decades, conducted by my colleague David Silverman, found that, in nearly half of the cases—drawn from Africa, Latin America, Asia, and the Middle East—middle-class men and women either agitated in advance for the coup, or, after the takeover, expressed their support in polls or prominent press coverage. Even as domestic politics in many developing nations has become less friendly to democratization, the international system too has changed, further weakening democratic hopes. The rising strength of authoritarian powers, principally China but also Russia, Saudi Arabia, and other states, has helped forestall democratization. Moscow and Beijing were clearly rattled by the "color revolutions" of the early and mid-2000s, and they developed a number of responses. First, they tried to delegitimize the revolts by arguing that they were not genuine popular movements but actually Western attempts at regime change. Then, in nations like Cambodia, Ukraine, Georgia, Kyrgyzstan, and Moldova, Moscow and Beijing intervened directly in attempts to reverse democratic gains. The Kremlin's youth group, Nashi, known for its aggressive tactics against democracy activists, launched branches in other Central Asian nations. In Kyrgyzstan, Russian advisers helped a series of leaders emulate the Kremlin's model of political control. In part because of this Russian influence, "[p]arliamentary democracy in Kyrgyzstan has been hobbled," according to the International Crisis Group. China and Russia even created new "NGOs" that were supposedly focused on democracy promotion. But these organizations actually offered expertise and funding to foreign leaders to help them forestall new color revolutions. In Ukraine, an organization called the "Russian Press Club," run by an adviser to Putin, posed as an NGO and helped facilitate Russia's involvement in Ukrainian elections.

Democracy is in a recession –laundry list of countries

Posner 14

(Eric Posner, professor at the University of Chicago Law School, is author of The Twilight of International Human Rights Law, December 22, 2014, "The Year of the Dictator", http://www.slate.com/articles/news_and_politics/view_from_chicago/2014/12/democracy_is_stagnating_kenya_cuba_egypt_turkey_russia_show_resurgence_of.html)

Last week, the Kenyan Parliament enacted a new counterterrorism bill amid scuffles and protests. Opponents argued that, by restricting liberties, the main effect of the bill was to increase presidential power rather than to counter terrorism. The U.S. State Department complained that the bill restricts freedom of speech and freedom of assembly. This bill came on the heels of another government action to deregister hundreds of nongovernmental organizations that had criticized the government. Kenya's president, Uhuru Kenyatta, is not (yet) a dictator, but Kenya is less free than it was 10 years ago. And Kenya is not alone. There has been a surge of authoritarianism around the world, reversing decades of progress toward democracy. Back in

1989, Francis Fukuyama proclaimed "the end of history" with the collapse of communism. Fukuyama meant that the death of communism left liberal democracy as the only legitimate political system. It was only a matter of time before democracy would spread around the world. The engine of democracy may have run out of steam. While Fukuyama's theory was based on his reading of Hegel, the German philosopher who believed that history unfolded according to an inherent logic in the direction of freedom, his argument was related to a long-standing debate among political scientists about the relationship between economic growth, or "modernization," and democracy. Data on these variables showed that while poorer countries cycled between democratic and authoritarian systems, and authoritarian governments in rich countries like Singapore often endured, countries that became wealthy and then established a democracy never seemed to revert to authoritarianism. So democracy seemed to work as a ratchet that would engage if a country achieved a certain level of wealth, and if revolution or reform brought about democratic institutions. Even if Fukuyama (and Hegel) were wrong about the logic of history, there was good reason to believe that, given enough time and economic growth, democracy would spread. Fukuyama's argument received a huge amount of attention because it played into the heady sense of victory after the end of the Cold War. But democracy had been spreading since the early 19th century. And while it has endured some ups and downs, the trend is unmistakable. As the accompanying graph shows, since 1972, the fraction of "free countries" has increased from 29 percent to 45 percent. (The source of the data is the think tank Freedom House; for clarity I have omitted countries that Freedom House defines as "partly free.") But the graph also shows that stagnation set in about 10 to 15 years ago. No one knows why. It might be a random fluctuation in an irreversible trend, as Fukuyama's argument suggests, but it also may indicate that the engine of democracy has run out of steam. As we look around us, we can see some evidence for the latter interpretation. Probably the most striking examples are the advance of authoritarianism in two relatively wealthy and modern-seeming democracies, Turkey and Hungary. In those countries, a charismatic leader has used his control of the government to crack down on criticism in the media and squelch dissent from political opposition. Turkish President Recep Tayyip Erdogan has jailed political opponents and harassed the media. Hungarian Prime Minister Viktor Orban says he wants to create an illiberal state modeled on Russia and Turkey. Russia, which lumbered toward democracy in the 1990s, has become an increasingly authoritarian place. Vladimir Putin has skillfully consolidated the power of the government without resorting to communist-era totalitarianism. He has undermined the independence of the media, harassed and stymied his critics, and manipulated elections. While the collapse of oil prices spells trouble for the Russian economy, Putin remains popular. Russians seem to like having a strong leader, even if that means that the media are controlled and political opposition is muted. China's authoritarian system is increasingly admired throughout the developing world. The government has managed to maintain order (the country is enviably safe) despite wrenching economic and social change. Since the size of China's economy surpassed that of the United States earlier this year, it will become increasingly hard to maintain that democracy is necessary to economic development. In many poor countries, where ending soul-crushing poverty takes precedence over Western-style political freedoms, governments have taken note. Another warning to democrats is the collapse of the Arab Spring. Back in 2010, when the Arab Spring began, it was possible to think that democracy would finally make headway in a region that has long resisted it. It didn't. President Abdel Fattah El-Sisi's consolidation of power in Egypt, with the help of liberals who feared Islamic rule by the Muslim Brotherhood, shows vividly that people can prefer the stability of authoritarianism to the chaos of democracy. A last example is Cuba. Cuba is a full-fledged dictatorship, one that jails and tortures dissidents, muzzles the press,

and refuses to hold elections. It is tempting to think that the normalization of relations with Cuba will bring democracy to that country. But that has not happened with Russia, China, and countless other authoritarian countries that the United States trades with. President Raúl Castro has made clear that he plans to maintain Cuba's authoritarian system while working on economic reform, along the lines of the China model. The cheering from Venezuela and other parts of Latin America expresses the relief felt by leftist authoritarians who see that if the United States can tolerate an undemocratic Cuba, it will have no grounds for criticizing authoritarianism in their countries. This is as it should be. The opening to Cuba is best understood as long-overdue recognition by the United States that economic sanctions can do little to improve political freedoms in foreign countries.

Democracy Evolving

American democracy isn't doomed it's just evolving

O'Hehir 14

(Andrew O'Hehir, senior writer for Salon, May 17 2014, "Was American Democracy Always Doomed?", http://www.alternet.org/civil-liberties/was-american-democracy-always-doomed)

In the glory days of the anti-globalization movement, circa the "Battle in Seattle" of 1999, there was an oft-repeated street scene some of you will remember. A group of protesters would seize an intersection or a block for a little while, likely because the police were otherwise occupied or couldn't be bothered or didn't want to bust heads while the cameras were watching. The ragtag band would haul out the drums and noisemakers, climb the lampposts and newspaper boxes with colorful banners, and send out an exuberant chant: "This is what democracy looks like!" (Contrary to what you may have heard, smashing the Starbucks windows was not required, and not all that common.) It's easy to snark all over that from this historical distance: If democracy looks like a noisy street party involving white people with dreadlocks dressed as sea turtles, count me out! But the philosophy behind that radical-activist moment was not nearly as naive as it might look from here, and much of the problem lies in that troublesome noun: democracy. In those post-Communist, pre-9/11 days, the era of the "end of history," democracy in its liberal-capitalist formulation was assumed to be the natural fulfillment of human society. It was the essential nutrient-rich medium for the growth of all good things: Pizza Hut, parliamentary elections, knockoff designer clothes and broadband Internet, not to mention all the wonderful gizmos that were about to be invented. Even anti-capitalist protesters were compelled to embrace the rhetoric of democracy, if only to suggest (as Gandhi did about "Western civilization") that it was a great idea but we hadn't gotten there yet. A decade and a half later, democracy remains officially unopposed on the world stage, yet it faces an unexpected existential crisis. Since the collapse of the Soviet Union, American-style liberal-capitalist democracy has presented itself to the world as "the only legitimate form of expression or decision-making power" and "the necessary first condition of freedom." (I'm quoting an anarchist critique by Moxie Marlinspike and Windy Hart, which is well worth reading.) But it has abruptly and spectacularly stopped working as advertised: The broken American political system has become a global laughingstock, and numerous other Western countries that modeled their systems on ours are in chronic crisis mode. This is what democracy looks like: grotesque inequality, delusional Tea Party obstructionism, a vast secret national-security state, overseas wars we're never even told about and a total inability to address the global climate crisis, a failure for which our descendants will never forgive us, and never should. Maybe I'll take the turtle costumes after all. The aura of

democratic legitimacy is fading fast in an era when financial and political capital are increasingly consolidated in a few thousand people, a fact we already knew but whose implications French insta-celebrity Thomas Piketty and the political scientists Martin Gilens and Benjamin Page (of the "oligarchy study") have forcefully driven home. Libertarian thinker Bryan Caplan sees the same pattern, as Michael Lindrecently wrote in Salon, but thinks it's a good thing. In America, democracy offers the choice between one political party that has embraced a combination of corporate bootlicking, poorly veiled racism, anti-government paranoia and a wholesale rejection of science, and another whose cosmopolitan veneer sits atop secret drone warfare, Wall Street cronyism and the all-seeing Panopticon of high-tech surveillance. You don't have to conclude that noted climate-change expert Marco Rubio and Establishment mega-hawk Hillary Clinton are interchangeable or identical to conclude that it isn't much of a choice. Most critiques of democracy as it currently exists, certainly those from the liberal left, assume that democracy can and should be fixed and that it's just a matter of switching off the cat videos and doing the work. They remain inside the conceptual and ideological frame mentioned above, the idea that democracy is the only legitimate expression of politics. This has the force of religious doctrine, and in fact is far stronger than any religious doctrines to be found in the Western world. Our democracy may be stunted or corrupted or deformed by bad forces of money and power, these arguments go, but it self-evidently remains the ideal form of government, and it is our responsibility to redeem it. If only we can build a third party around Ralph Nader (that went well!), if only we can ring enough doorbells for Dennis Kucinich, if only we can persuade Elizabeth Warren to run against Hillary – you've heard all this before. There are many versions of this strategy, some more plausible than others, but they all rest on the faith that the promised land of real democracy is out there somewhere beyond the horizon, waiting for us to reach it. As the Italian political scientist Mario Tronti has noted, this faith in a golden future, with its implicit apology for the current state of affairs, may sound oddly familiar to those whose cultural memories extend back to the Cold War. It's exactly what defenders of the Soviet "experiment" said over and over. Yes, "actually existing socialism" had its limitations, most of which resulted from imperialist meddling and ideological backwardness, but one day our grandchildren, or their grandchildren, would finish the task of building a communist society. That was hogwash, Tronti says, and so is the insistence that we should judge democracy based on some imaginary potential rather than what it is in practice. "This theoretical-practical knot that is democracy," he writes, "can now be judged by its results." What we see around us "should not be read as a 'false' democracy in the face of which there is or should be a 'true' democracy, but as the coming-true of the ideal, or conceptual, form of democracy." In other words, we have to consider the possibility that the current state of American politics, with its bizarre combination of poisoned, polarized and artificially overheated debate along with total paralysis on every substantive issue and widespread apathy and discontent, is what we get after 200-odd years. It's not a detour in the history of Jeffersonian democracy but something closer to a natural outcome. We also must consider that our version of a democratic system is not, in fact, designed to reflect the will of the people (a dubious concept to begin with) but to manipulate and channel it in acceptable directions.

Democracy in America is constantly evolving –empirics prove
(this is cut heavily)

Belrolzheimer 13

(Alan Berolzheimer, Ph.D, Flow of History Project Historian, 2013, "Continuity and Change in American Democracy, 1861 to the Present", http://www.flowofhistory.org/themes/american_republic/back_essay.php)

American democracy is not static; it is constantly evolving. From the rhetoric and ideals of founding documents like the Declaration of Independence, the Constitution, and the Bill of Rights, to contemporary debates about the war in Iraq, domestic surveillance in the "war on terror," the consequences of Hurricane Katrina, or the economic impact of Wal-Mart, the meanings of democracy in the United States and the dynamics of its exercise have been ever shifting. Undoubtedly, by nearly any measure the degree of freedom that Americans as a whole have achieved and enjoy today—including the ability to participate in politics and government and to choose their leaders—is fabulous. And yet, to say that "rule by the people" in America is the most effective, efficient, or humane form of government to be found anywhere in the world oversimplifies and obscures important historical truths that contribute to a fuller, more complex picture. The Civil War was obviously a watershed in the evolution of democracy in the U.S. that was as revolutionary as the Revolution itself. The victory of the North, the destruction of slavery, and the preservation of the Union within the framework of the 13th, 14th, and 15th Amendments to the Constitution undermined the structure of one system of democracy and inaugurated another. While the premise of full civil and political equality regardless of race represented progress, the new system of democracy itself was fundamentally flawed by the exclusion of women, and it proved to be easily distorted by violence, nativism, and concentrated wealth. Woman suffrage was the next major watershed in 1920, and the Civil Rights Act of 1964 and Voting Rights Act of 1965 finally accomplished in the political arena what the 14th and 15th Amendments did not. But a funny thing happened along the way as access to the franchise and real political power expanded over the course of the 20th century: Political participation consistently declined, at least on the national level. Historians note that at the turn of the century, politics was a very popular activity and a focal point of community life throughout the country. In the 1896 presidential election, 80% of eligible voters voted. In 2004, only 66% of eligible voters were registered, and only 58% of the eligible population voted in the presidential election. (Interestingly, the percentages for whites and blacks in 2004 are nearly identical; Asian Americans voted in considerably fewer numbers. Among all racial groups, the percentages of people registered and voting increased as a function of income.)1 Many factors help to explain this decline, prominent among them the rising influence of money and mass media. Some historians, myself included, would argue that a new conception of democracy accompanied the expansion of the franchise in the 20th century: The citizen as consumer. All of these post-Civil War developments suggest ways to understand the dynamics of democracy in modern American history, and they are relevant to considering the state and meanings of democracy today. For African Americans, the post-Civil War era began with the exhilaration of emancipation, freedom, and great expectations. Inevitably, with slavery abolished, the South in ruins, an entire economic and social system destroyed, and the pressing need for everyone to somehow still procure the means of fulfilling their basic needs, it would be a time of tremendous upheaval and transition. The story of Reconstruction—usually defined as the period from the end of the war until the withdrawal of federal troops from the South in 1877—is fascinating and convoluted, involving many layers of conflicting interests and goals among the key players: blacks and whites, radical reformers and radical traditionalists, Northerners and Southerners, presidents and legislators, owners and laborers, missionaries and generals. The constitutional amendments of the time created the legal framework for full citizenship and voting rights for the former slaves.

Missionaries and reformers offered aid in the form of teachers, nurses, food and clothing. The army on the ground offered a measure of protection from reprisal and manipulation at the hand of disgruntled Confederates. Most important, African Americans embraced their new freedom and acted upon it, by reconstituting their families, clamoring for education, practicing their religions openly, seeking their own livelihoods, demanding their rights to land, and organizing to participate in politics and hold elective office. But while real gains were made, a variety of powerful obstacles prevented African Americans from taking their rightful place in American society. Reconstruction turned out to be, in the words of Eric Foner, "America's unfinished revolution."2 In the end, African-American aspirations were largely thwarted by a potent combination of fierce resistance to black autonomy by most white Southerners and their determination to restore a society grounded in white supremacy by whatever means necessary, the widespread belief in the inferiority of black people among Northern whites, prevailing attitudes about work, dependency, and private property, and the lack of political will in the North to support black aspirations at the expense of preserving white privilege and getting on with the business of industrial capitalism. Democracy in the post-Civil War South thus became democracy for whites only, as they successfully reconstituted a society based on the ideology of white supremacy and black subservience, enforced by intimidation, raw violence, and the law of Jim Crow. From the 1870s onward, the de facto but intricately developed rules of racial power and etiquette gradually became a formal system of segregation and disenfranchisement. A series of decisions by a conservative Supreme Court holding an ungenerous view of government responsibility to protect the rights of African Americans, culminating in the separate-but-equal doctrine of Plessy v. Ferguson in 1896, severely weakened the impact of the Reconstruction amendments. Beginning in 1890 with Mississippi, every Southern state revised its constitution to impose restrictions on suffrage that effectively eliminated the black vote (and diminished the electoral fortunes of poor whites, as well), and within a decade the deed was legally accomplished throughout the region. At the same time, Southern legislatures enacted the Jim Crow laws that forced African Americans to use separate facilities in the public sphere, from train cars and theaters to rest rooms and drinking fountains. The Jim Crow regime would persist into the middle of the 20th century. On the economic front, prejudice, discrimination, and intimidation by whites for the most part excluded blacks from all but the most unskilled jobs in mining, milling, lumbering, and manufacturing, while debt peonage through sharecropping remained the predominant condition of Southern blacks in the King Cotton economy. Undergirding the social, economic, and political relations of white supremacy, white-on-black violence was an ever-present threat that circumscribed the lives of African Americans in the South. Lynching—which claimed the lives of roughly 5,000 Americans, mostly black, between 1882 and 1950, peaking at around 200 annually in the 1890s3—and race riots, sometimes premeditated—n which white mobs marauded through black communities burning homes and businesses, destroying property, and murdering innocent victims at will (Wilmington, NC in 1898, Atlanta in 1906, East St. Louis in 1917, Chicago in 1919, Tulsa in 1921, Rosewood, FL in 1923, were only the worst, and not just in the South)—were the most extreme manifestations of what can fairly be called a culture of violence intended to ensure that African Americans understood their subservient place in the social order and would stay there, at the risk of their lives. Ironically, the Jim Crow regime coincided with a sustained burst of reform energy that swept the nation from the late 19th century through World War One, which historians call the Progressive Era. The juxtaposition of these long historical episodes, one predominating in the South and one in the North and West, reveals the deepest contradictions in American democracy at the beginning of the modern era. The various strands of Progressive reform were responses by middle-class, educated, and professional

Americans to the rapid pace of industrialization, immigration, and urbanization that characterized the period. These trends raised fears about the unchecked power of concentrated wealth, intensified class conflict between workers and employers, abundant opportunities for political corruption, alien cultural mores about alcohol and sex, and how the nation would be able to assimilate tens of millions of these immigrants and their children into the American mainstream and turn them into loyal citizens. From the viewpoint of the Progressives and their allies in other social groups, these were all threats pointed straight at the heart of American democracy. The significant social, economic, and political reforms that emerged during this period included federal regulation of business, professionalization of municipal administration, widespread construction of playgrounds and kindergartens, introduction of electoral measures such as the referendum and the direct election of U.S. senators, and further attempts to suppress the consumption of alcohol which culminated with national Prohibition in 1919. Evaluating the effects of these myriad solutions on the institutions and practice of democracy is complicated and difficult to summarize—except to say that in some ways individuals became more empowered to influence public affairs and the conditions of their lives, and in some ways they became less empowered. Taken as a whole, the reforms implemented during the Progressive Era struck a balance between promoting equity and social justice on some levels, and imposing control over the behavior of groups defined as "other" by Middle America on other levels. Progressivism also had a racial dimension. In the South, advances in education, public health, workplace safety, and civic efficiency primarily benefited white people. Furthermore, the disfranchisement of African Americans significantly reduced the potential constituency of advocates for progressive change in the region, and helped create the political reality of a one-party state in the region (Democrats). Later in the 20th century, the strength of that one-party rule constrained further progressive reform, again along racial lines, in the shaping of the Social Security program during President Roosevelt's New Deal and the enactment of civil rights legislation during the Kennedy and Johnson presidencies. In the North and West, while African Americans were not necessarily formally excluded from taking advantage of economic and political reforms, white prejudice and racism were still the norm, and blacks were viewed by many Progressives as alien "others," just like Chinese, Japanese, and immigrants from southern and eastern Europe. Exclusion from many jobs, as well as segregated housing, schooling, and recreational facilities such as beaches were also the norm outside the South, and as noted above, race riots instigated by whites were a common occurrence in Northern cities during the first quarter of the 20th century. The question of why events and historical forces converged in the 1950s and 1960s to produce changes that had been elusive for a century will be considered during the Flow of History book groups in fall 2006. Clearly, democracy is an imperfect institution, and the contours of American democracy throughout our nation's history have been fundamentally shaped by other ideological imperatives, by the power of wealth, by the complex social relations of power that constitute any social structure at a given point in time, and by individuals' desire and willingness to take positive action to influence or control the conditions of their lives. During the 20th century, politics was not the only arena in which the meaning of democracy in America became transformed. The expansion of a certain kind of economic democracy was equally important. The maturation of the industrial monster that so concerned turn-of-the-century Progressives produced material affluence of historic proportions, made possible continually rising standards of living, and significantly widened the opportunity for American families of all stripes and backgrounds to achieve adequacy. Indeed, new levels and modes of consumption and comfort redefined the very meaning of adequacy, and along with it the meaning of citizenship. By mid-century—at the very time a key set of democratic assumptions was finally undergoing radical change in the political sphere—

access to a specific configuration of consumer goods and experiences had become widely understood as the birthright of every American, a principal benefit of American democracy. The so-called "American standard of living" was an ideological as well as a material construct. The concept, and the apparent reality, smoothed over various fault lines of social and economic difference that otherwise fractured the national body politic, including race. It was a compelling basis for imagining a unified national community, a participatory national democracy: The consumer fulfilling the functions of citizenship, citizenship essentially grounded in the right to be a consumer. Thus, the period of American history since the middle of the 20th century can be seen as characterized by yet another system of democracy, in which the political and economic variables have been jumbled up and rearranged in comparison with previous eras. And it is a system that continues to be shaped by factors of race and class, not to mention gender, region, and others. What are the relationships between the political, economic, and social dimensions of this incarnation of American democracy? How do they reflect aspects of continuity and change? Has it been superseded by another set of arrangements or priorities or ideologies? What does "democracy" mean today and to what extent do individuals or groups have the power to make or influence decisions that affect their lives? These questions make excellent topics for discussion.

Democracy is evolving to “voice-centered” not “vote-centered”

Farrell 2/19

(DAVID FARRELL, professor of politics at University College Dublin. He was also the research director of the Irish constitutional convention, 19 FEBRUARY 2015, “Democratic Decline or Democratic Evolution?”, http://www.policy-network.net/pno_detail.aspx?ID=4843&title=Democratic-decline-or-democratic-evolution)

The way that people engage in politics is changing, but it is a mistake to necessarily equate this with democratic decline There is a sense of doom in the air. Contemporary accounts of the state of our systems of representative democracy paint a bleak picture. And it does appear pretty bleak: election turnout in decline; levels of partisan attachment plummeting as those who do vote chop and change between parties that they find it increasingly difficult to distinguish between; political parties losing their members and becoming ever more reliant on state resources to stay afloat and a brood of new populist parties emerging that seek to attack the status quo. The late Peter Mair sums it up perfectly in his last book, Ruling the Void, when he describes the “mutual withdrawal” of citizens and politicians from the representative process, resulting in the death of political parties and a form of democracy that is “hollowed out”. It cannot be denied that these indicators are worrying, but is there a risk of reading too much into them? Are scholars like Mair being too pessimistic? Consider the following points. First, were things really better in the halcyon ‘old days’? Were the male-dominated parliaments of the 1950s better merely because more people (among those over 21) voted? Were the 1960s and 1970s better because more citizens participated in street protests (though, if so, surely this was already a sign that parties were failing to channel citizen demands even then)? Were democracies such as Ireland’s of the 1950s really more citizen-oriented in an age when the clergy set the terms of public debate and politicians kowtowed to Church doctrine? In short – and to mix metaphors – when looking back to a golden age there is a risk of doing so through rose-tinted glasses. Second, political parties undoubtedly are different but are they necessarily any weaker for it? Many of the indicators used to argue the case that parties are ‘in decline’ harken back to a form of party organisation: the famed ‘mass party’ model, when parties had large memberships and were well embedded in society. Clearly this is less so today; parties are shedding members and societal links. But are they unique in this

regard? Consider what is happening to church attendance, trade union membership, and sports clubs. Citizens are finding new ways – increasingly of a virtual nature – to engage with each other. And even if that includes not being a party member, that does not weaken the hold that parties continue to have over the electoral and policy process – as my colleagues and I demonstrate in our 2011 study, Political Parties and Democratic Linkage. Third, the new ways that citizens, particularly the younger generation, are finding to engage with each other also affects how they engage with the political process. As Russell Dalton shows convincingly in his study of The Good Citizen, political participation is evolving beyond elections as younger generations seek new ways to engage critically with the political process as 'engaged citizens'. More of them are active in civil society groups, in protests or boycott campaigns, or are interested in more deliberative forms of engagement. This may mean they are withdrawing from the electoral process (as shown by turnout trends among younger citizens), but they are not withdrawing from the political process. Perhaps they are just engaging with it differently. Fourth, this newer way of engaging with the political process coincides with reforms that are ongoing to our political systems as institutions evolve in a more citizen-orientated direction.This is shown, for instance, by: more elections for more offices (eg mayors, regional assemblies); one-member-one-vote ballots within parties; freedom of information moves to service an 'open government' agenda; and the increasing use of 'mini-publics' to allow citizens a voice in everything from allocation of council budgets, to planning or infrastructural decisions, right through to debates over constitutional reform. To use a phrase common to deliberative theorists, all this speaks to an evolution of democracies from being 'vote-centred' to becoming 'voice-centred'. That democracies are undergoing important changes is not in dispute, but as Michael Saward observes in his noted study on The Representative Claim, all of this does not "necessarily add up to a picture that is less democratic. It can, rather, be differently democratic." It seems more a case of democratic evolution than democratic decline.

AT Cyber Security

Cyber Security
CS→Worse Privacy

Cyber Security Bills open backdoors and make privacy issues worse
Fang, 6/11/2015

[Lee, journalist for ThinkProgress, The Nation, and The Intercept; The Intercept; "PATRIOT ACT REFORM CURBED NSA; CYBERSECURITY BILL WOULD EMPOWER IT", https://firstlook.org/theintercept/2015/06/11/one-week-patriot-act-reform-mitch-mcconnell-moves-sneak-nsa-expansion/]

Though touted as a measure strictly to enhance cybersecurity through information sharing, privacy advocates say **CISA is actually about cyber surveillance**. The bill provides liability protection for businesses that voluntarily share "cyber-threat" data with the government. Big business has lobbied for CISA because companies see it as a way to shift some anti-hacking defenses onto the government, which would save them money. But critics say **CISA would not** have **prevent**ed **the high-profile hacks its supporters cite as evidence of the need for action**. And Burr's version of the bill creates a back-door channel for the government, including the NSA, to vacuum up huge new tracts of consumer data. "Last week, the Senate made history when it passed the USA Freedom Act, taking a major step forward for Americans' privacy," said Robyn Greene, Open Technology Institute's policy counsel in a statement. "Passing CISA would be like taking two steps back. CISA is essentially a cyber-surveillance bill that would empower the NSA and FBI by giving them access to vast new troves of Americans' information, and let them use that information for investigations that have nothing at all to do with cybersecurity." As we noted earlier this year, CISA's vague definition of a cybersecurity threat that triggers information sharing with the government includes "an imminent threat of death, serious bodily harm, or serious economic harm," or information that is potentially related to threats relating to weapons of mass destruction, threats to minors, identity theft, espionage, protection of trade secrets, and other possible offenses. The Center for Democracy & Technology also criticized McConnell's move, noting that by attaching CISA to the defense authorization bill, he was moving to close debate and force it through Congress. The bill as currently written, CDT warned, risks "turning the cybersecurity program it creates into a back door wiretap by authorizing sharing and use of cyber threat indicators for law enforcement purposes that have nothing to do with cybersecurity."

No Cyber Threat

Cyber Terror threat exaggerated – no physical harm or death thus far
Singer, '12

[Peter, director of the Center for 21st Century Security and Intelligence and a senior fellow in Foreign Policy at Brookings, Brookings Institute, http://www.brookings.edu/research/articles/2012/11/cyber-terror-singer]

We have let our fears obscure how terrorists really use the Internet. About 31,300. That is roughly the number of magazine and journal articles written so far that discuss the phenomenon of cyber

terrorism. **Zero. That is the number of people that who been hurt or killed by cyber terrorism** at the time this went to press. In many ways, cyber terrorism is like the Discovery Channel's "Shark Week," when we obsess about shark attacks despite the fact that you are roughly 15,000 times more likely to be hurt or killed in an accident involving a toilet. But by looking at how terror groups actually use the Internet, rather than fixating on nightmare scenarios, we can properly prioritize and focus our efforts. Part of **the problem is the way we talk about the issue**. The FBI defines cyber terrorism as a "premeditated, politically motivated attack against information, computer systems, computer programs and data which results in violence against non-combatant targets by subnational groups or clandestine agents." A key word there is "violence," yet many discussions sweep all sorts of nonviolent online mischief into the "terror" bin. Various reports lump together everything from Defense Secretary Leon Panetta's recent statements that a terror group might launch a "digital Pearl Harbor" to Stuxnet-like sabotage (ahem, committed by state forces) to hacktivism, WikiLeaks and credit card fraud. As one congressional staffer put it, the way we use a term like cyber terrorism "has as much clarity as cybersecurity — that is, none at all."

CS→Info Overload

Cyber Reform leads to information overload, 87% agree it won't solve

Castillo, 5/10/2015

[Andrea, program manager for the Technology Policy Program at the Mercatus Center at George Mason University, Reason, "The Cyber Terror Bogeyman", http://reason.com/archives/2015/05/10/why-cisa-wont-improve-cybersecurity]

Even if we could remove CISA's sketchy non-cybersecurity provisions and turn the federal government into a godly font of efficiency, CISA would fail to improve cybersecurity because information sharing just doesn't work like CISA advocates imagine it does. As security researcher Robert Graham points out, these kinds of programs devolve into a kind of overwhelming "false positive sharing system." Seasoned hackers know how to easily evade detection, so mostly false alarms are triggered. **Innocent parties' online activities are thus more likely to be hoovered up and analyzed than capable cybercriminals' signatures. And by the time analysts can sort through the terabytes, they may find that sharing that information can do little to prevent an attack anyway. One survey of information security professionals found 87 percent did not believe CISA will significantly reduce security breaches**. Insufficient "information sharing" is only one small issue among many larger problems plaguing network security. Industry studies find that external attacks only constitute 37 percent of reported root causes; system glitches and human error respectively make up 29 percent and 35 percent of the remainder. These kinds of vulnerabilities can be patched through user education, strong authentication, and proactive system testing and improvement—not backwards-looking information sharing. CISA's sole emphasis on this small component of network security could instill a dangerous complacency among those who feel following the feds' lead absolves the need to proactively anticipate threats and continually improve security practices. If enough people believe that their cybersecurity is "taken care of" because the government will alert them to any threats, CISA will serve to ultimately weaken cybersecurity by causing users and operators to neglect critical factors arguably more imperative for robust cybersecurity. CISA actually bucks the usual liberty/security trade-off, because it threatens our civil liberties without meaningfully

improving cybersecurity—and could potentially even weaken it. We should dump this Trojan and focus on developing bottom-up, collaborative security practices that will actually work.

AT I-Freedom Adv

IF Not Key to Heg

The US will remain the financial hegemon because of interdependency – a fragmenting crisis is required to break that – internet freedom not key

Danzman and Winecoff 13 (Sarah Bauerle Danzman and W. Kindred Winecoff, Why U.S. Financial Hegemony Will Endure, Symposium Magazine, an innovative digital publication that provides a central address for academics to talk with the broader public, and with each other across disciplines, October 7th, 2013)

The difference between these two approaches is significant. When we conceptualize the international financial system as a network, we see that the U.S. has become more central since 2007, not less. Rather than shift from West-to-East, **global financial actors have responded to crisis by reorganizing around American capital to a remarkable extent**. This is partially due to proactive responses to the crisis by policymakers such as the Federal Reserve, but it is also the result of factors outside the U.S. Above all, American capital markets remain attractive because complex networks contain strong path dependencies, which reinforce the core position of prominent countries while keeping potential challengers in the periphery. That is to say, policymakers and market players were limited in the decisions they could take because of factors that had already been locked in. As a result, the structure of the global financial system keeps the U.S. at the core and will continue to do so unless the entire network is fragmented, as it was during the 1930s when Great Britain lost its dominance. Some who do see continuing U.S. financial resiliency contend that American power serves to the disadvantage of smaller countries. Indeed, they are correct that when a crisis occurs in the core – where the U.S. remains — the effects are felt throughout the system. But they miss the fact that American prominence also provides important stabilization mechanisms that can contain crises. To explain this, we need to look at what network scientists call "topology," which refers to the organization of the components of a network, whether we are looking at a computer system or a financial system. Once we view the international financial system in this context, we see that it is robust when facing crises in peripheral countries, but fragile when facing crises occrring in the core. This explains why the U.S. subprime crisis destabilized the global economy, while upheavals such as the 1990s East Asian crisis did not. Even the euro zone crisis has remained localized, to this point. A network perspective also explains how policy interventions by the U.S. prevented the collapse of the global system, thus ensuring that U.S. centrality persists. Finally, a network model should make us more cautious about promoting policies meant to erode U.S. financial hegemony. In fact, American centrality contained crises in peripheral countries from spreading globally, and the U.S. government demonstrated both the capacity and the willingness to pursue monetary and fiscal policies to moderate crises emanating from its own banking system. Returning to a world in which the structure of global financial relationships devolves outside the U.S. would therefore reintroduce a type of systemic risk not seen since the 1930s.

Retrenchment Inev

Yes retrenchment – decline means no US intervention, Heg does not check

MacDonald and Parent 11 (Paul K. MacDonald, Assistant Professor, Political Science, Willians College and Joseph M. Parent, Assistant Professor, Political Science, University of Miami, "Resurrecting Retrenchment: The Grand Strategic Consequences of U.S. Decline," POLICY BRIEF, Belfer Center for Science and International Affairs, Harvard University, 5--, http://belfercenter.ksg.harvard.edu/files/macdonald-parent-may-2011-is-%20brief.pdf)

To date, there has been no comprehensive study of great power retrenchment and no study that defends retrenchment as a probable or practical policy. Using historical data on gross domestic product, we identify eighteen cases of "acute relative decline" since 1870. Acute relative decline happens when a great power loses an ordinal ranking in global share of economic production, and this shift endures for five or more years. A comparison of these periods yields the following findings: Retrenchment is the most common response to decline. Great powers suffering from acute decline, such as the United Kingdom, used retrenchment to shore up their fading power in eleven to fifteen of the eighteen cases that we studied (61–83 percent). The rate of decline is the most important factor for explaining and predicting the magnitude of retrenchment. The faster a state falls, the more drastic the retrenchment policy it is likely to employ. The rate of decline is also the most important factor for explaining and predicting the forms that retrenchment takes. The faster a state falls, the more likely it is to renounce risky commitments, increase reliance on other states, cut military spending, and avoid starting or escalating international disputes. In more detail, secondary findings include the following: Democracy does not appear to inhibit retrenchment. Declining states are approximately equally likely to retrench regardless of regime type. Wars are infrequent during ordinal transitions. War broke out close to the transition point in between one and four of the eighteen cases (6–22 percent). Retrenching states rebound with some regularity. Six of the fifteen retrenching states (40 percent) managed to recapture their former rank. No state that failed to retrench can boast similar results. Declining great powers cut their military personnel and budgets significantly faster than other great powers. Over a five-year period, the average nondeclining state increased military personnel 2.1 percent—as compared with a 0.8 percent decrease in declining states. Likewise, the average nondeclining state increased military spending 8.4 percent—compared with 2.2 percent among declining states. Swift declines cause greater alliance agreements. Over a five-year period, the average great power signs 1.75 new alliance agreements—great powers undergoing large declines sign an average of 3.6 such agreements. Declining great powers are less likely to enter or escalate disputes. Compared to average great powers, they are 26 percent less likely to initiate an interstate dispute, 25 percent less likely to be embroiled in a dispute, and markedly less likely to escalate those disputes to high levels. IMPLICATIONS FOR POLICYMAKERS From the analysis above, three main implications follow for U.S. policy. First, we are likely to see retrenchment in U.S. foreign policy. With a declining share of relative power, the United States is ripe to shift burdens to allies, cut military expenditures, and stay out of international disputes. This will not be without risks and costs, but retrenchment is likely to be peaceful and is preferable to nonretrenchment. In short, U.S. policymakers should resist calls to maintain a sizable overseas posture because they fear that a more moderate policy might harm U.S. prestige or credibility with American allies. A humble foreign policy and more modest overseas presence can be as (if not more) effective in restoring U.S. credibility and reassuring allies. Second, any potential U.S.-Sino power transition is likely to be easier on the United States than pessimists have advertised. If the United States acts like a typical retrenching state, the future looks promising. Several regional allies—foremost India and Japan—appear capable of assuming responsibilities formerly shouldered by the United States, and a forward defense is no longer as valuable as it once was. There remains ample room for cuts in U.S. defense spending. And as China grows it will find, as the United States did, that increased relative power brings with it widening divisions at home and fewer friends overseas. In brief, policymakers should reject arguments that a reduction in U.S. overseas deployments will embolden a hostile and expansionist China. Sizable forward deployments in Asia are just as likely to trap the United States in unnecessary clashes as they are to deter potential aggression. Third, the United States must reconsider when, where, and how it will use its more modest resources in

the future. A sensible policy of retrenchment must be properly prepared for—policymakers should not hastily slash budgets and renounce commitments. A gradual and controlled policy of reprioritizing goals, renouncing commitments, and shifting burdens will bring greater returns than an improvised or imposed retreat. To this end, policymakers need to engage in a frank and serious debate about the purposes of U.S. overseas assets. Our position is that the primary role of the U.S. military should be to deter and fight conventional wars against potential great power adversaries, rather than engage in limited operations against insurgents and other nonstate threats. This suggests that U.S. deployments in Iraq and Afghanistan should be pared down; that the United States should resist calls to involve itself in internal conflicts or civil wars, such as those in Libya and elsewhere in North Africa; and that the Asia-Pacific region should have strategic priority over Europe and the greater Middle East. Regardless of whether one accepts these particular proposals, the United States must make tough choices about which regions and threats should have claim to increasingly scarce resources. CONCLUSION Retrenchment is probable and pragmatic. Great powers may not be prudent, but they tend to become so when their power ebbs. Regardless of regime type, declining states routinely renounce risky commitments, redistribute alliance burdens, pare back military outlays, and avoid ensnarement in and escalation of costly conflicts. Husbanding resources is simply sensible. In the competitive game of power politics, states must unsentimentally realign means with ends or be punished for their profligacy. Attempts to maintain policies advanced when U.S. relative power was greater are outdated, unfounded, and imprudent. Retrenchment policies—greater burden sharing with allies, less military spending, and less involvement in militarized disputes—hold the most promise for arresting and reversing decline

Global IF Decline Inev

East Asian Internet freedom declining – aff can't solve

Cook, 5/29/15

[Sarah, Senior Research Analyst, East Asia; The Diplomat; "China and the East Asian Internet"; https://freedomhouse.org/article/china-and-east-asian-internet#.VYtZfWCpqlI]

Internet freedom in East Asia is exemplified by a key paradox – even as access expands exponentially and social-media tools open new avenues for information sharing, freedom of expression and user privacy online are declining. Governments in the region are taking increasing measures to regulate not only the spread of internationally recognized harmful content, but also citizen communications on topics of vital social, political, religious, and security relevance. Leading the region's most robust such campaign is the ruling Communist Party of China. These countervailing trends – part of a similar global trajectory – are especially evident and important in North and Southeast Asia, home to approximately one-third of the world's Internet users and several of its leading economies. While restrictions are perhaps expected in authoritarian contexts, they have also appeared in the region's democratic and semi-democratic countries. Seven out of the 11 East Asian countries assessed in the latest edition of Freedom on the Net, Freedom House's annual index of Internet freedom around the world, declined compared to the previous year: China, Indonesia, the Philippines, Singapore, South Korea, Thailand, and Vietnam. Only two – Myanmar and Malaysia – improved, while Japan and Cambodia's performance remained consistent. One central dynamic driving this decline and threatening Internet freedom across the region has been the passage of new laws or regulations that increase censorship or establish provisions that could be employed to punish users for their online writings. In many cases, the new rules specifically target Internet communications. For example, Thailand's new

ruling junta issued Order 97 in July, prohibiting online media from publishing information critical of the regime. Meanwhile, Thai police were quoted as warning that "liking" an anti-military message on Facebook would be considered a crime. In Vietnam, Decree No. 72, which came into effect in September 2013, extends existing restrictions on sharing news articles from blogs to social networks. That same month, in China, a new judicial interpretation increased the criminalization of online speech based on an arbitrary threshold that posts with 500 shares or 5,000 views would be considered a more severe offense. Read more from The Diplomat.

Laundry List of Alt Causes to iFreedom Reduction

Gatusso et al 6/3/2015

[James L., Alden Abbott, Curtis Dubay, David Inserra, Paul Rosenzweig, Michael Sargent, Brett D. Schaefer; "Saving Internet Freedom";
http://www.heritage.org/research/reports/2015/06/saving-internet-freedom]

It has become virtually impossible to imagine a world without an Internet. Instant access to information—from stock quotes to sports scores to the answers to bar bets—is taken for granted. Getting and staying in touch with friends and business partners has become easier, as individuals connect almost effortlessly with friends around the globe, and from long ago, on social networks. This instant and ubiquitous communication and information has also transformed political dialogue—helping to upend dictatorships abroad, and energizing political debate at home. The common product of these transformations has been more opportunity for freedom—political freedom in the public square, economic freedom in the marketplace, and social freedom in the community. But these changes are not universally welcomed. The disruptive force of the Internet is a threat to those who have enjoyed unchallenged political power and economic rents from the status quo ante. This has led to attempts by governments around the world to limit its use, and forestall the changes that it makes possible. The trend is disturbing. In its 2014 survey of the state of Internet freedom around the globe, Freedom House records the fourth straight year of declining freedom on the Net. From 2013 to 2014, Freedom House found 41 countries passing or proposing online-speech restrictions and arrests related to online political speech in 38 countries.[4] Moreover, it reports continued widespread blocking and filtering of online content by governments, as well as government-sponsored cyberattacks against other countries' governments and businesses. Infringements on the Internet are not limited to the world's dictatorships. The European Union, for example, recently required search engines, upon request, to remove links to categories of personal information, such as prior bankruptcies, which courts deem no longer relevant or lack a compelling public interest meriting disclosure—in effect forcing search engines, such as Google, to censor content.[5] The United States has largely escaped such direct infringements of political rights and freedom of speech on the Web. But Americans face threats of different kinds, ranging from foreign governments trying to impose global-governance rules to domestic regulators trying to limit the economic freedom to innovate and serve digital consumers. This report examines seven areas of particular concern: Federal "network-neutrality" regulations. Rules adopted by the Federal Communications Commission (FCC) in February 2015 ban Internet access providers from prioritizing the content that is sent through their networks. This ban limits the ability of Internet service providers (ISPs) to innovate, which limits economic freedom, to the detriment of the Internet and its users. In addition to activities clearly prohibited, the new rule also gives the FCC vast discretion. As a result, critical decisions about what practices will be allowed on the Net will be left to the subjective judgment of five unelected FCC commissioners. Global Internet governance. Many nations, such as China and Russia, have made no secret of

their desire to limit speech on the Internet. Even some democratic nations have supported limiting freedoms online. With the U.S. government's decision to end its oversight of the Internet Corporation for Assigned Names and Numbers (ICANN), the private, nonprofit organization that manages name and number assignments on the Internet, these countries see a chance to fill the vacuum, and to use ICANN's Internet governance role to limit expression on the Web. Regulatory barriers to online commerce. The Internet is a true disruptive force in commerce, challenging inefficient ways of business. Often, these challenges conflict with anti-consumer laws that protect middlemen and others with a stake in older, costlier ways of doing business. These harmful laws have eroded in many cases, but have not been erased from the statute books. Internet taxation. Sales and other taxation also create regulatory barriers to online commerce. Some politicians and state tax collectors are pushing Congress to pass legislation that would allow state governments to force retailers located in other states to collect their sales taxes. They say they want to equalize the tax burdens between so-called brick-and-mortar retailers and their online counterparts. But instead of eliminating differences, the proposal would create new disparities and impose new burdens, as sellers struggle to deal with the tax laws of some 10,000 jurisdictions and 46 state tax authorities. Intellectual property. The freedom to create without fear that one's creation will be appropriated by others is fundamental. At the same time, overly restrictive laws limiting the use of intellectual property erodes other freedoms, not least freedom of expression. The challenge to lawmakers is to balance these two opposing values, to protect intellectual property without undue limits on its fair use or on third parties.

Snowden revelations prove –NSA spying has minimal impact on tech industry

MENN 13 (Menn, Joseph. "How The NSA Revelations May Actually Be Helping The US Tech Industry." Business Insider. Business Insider, Inc, 15 Sept. 2013. Web. 2 July 2015. <http://www.businessinsider.com/how-the-nsa-revelations-may-actually-be-help-the-us-tech-industry-2013-9>.)ʕ ⌒•ᴥ•ʔ⌒♥eve

Google employees told Reuters that the company has seen no significant impact on its business, and a person briefed on Microsoft's business in Europe likewise said that company has had no issues. At Amazon, which was not named in Snowden's documents but is seen as a likely victim because it is a top provider of cloud computing services, a spokeswoman said global demand "has never been greater." There are multiple theories for why the business impact of the Snowden leaks has been so minimal. One is that cloud customers have few good alternatives, since U.S. companies have most of the market and switching costs money. Perhaps more convincing, Amazon, Microsoft and some others offer data centers in Europe with encryption that prevents significant hurdles to snooping by anyone including the service providers themselves and the U.S. agencies. Encryption, however, comes with drawbacks, making using the cloud more cumbersome. On Thursday, Brazil's president called for laws that would require local data centers for the likes of Google and Facebook. But former senior Google engineer Bill Coughran, now a partner at Sequoia Capital, said that even in the worst-case scenario, those companies would simply spend extra to manage more Balkanized systems. Another possibility is that tech-buying companies elsewhere believe that their own governments have scanning procedures that are every bit as invasive as the American programs.

Link Turn

TURN - NSA spying unifies the tech industry

Lomas 14 (Lomas, Natasha. "Zuckerberg: Snowden NSA Revelations Have Brought The Tech Industry Closer." TechCrunch. 24 Feb. 2014. Web. 2 July 2015. <http://techcrunch.com/2014/02/24/zuck-on-snowden/>.) ʕ ⌒•ᴥ•ʔ⌒♥eve

Zuckerberg played down the potential impact that fear of government surveillance might have on Internet.org's mission — and indeed argued the reverse, saying that he thought it might make the goal easier because of a new spirit of collaboration in a post-Snowden tech world. "The NSA issues have industry working together better than ever before," he said, adding: "Historically we've had issues working with some of our competitors aligning on policy issues that even help the whole industry – Internet policy issues – but now it's such an important thing, because of how extreme some of the NSA revelations were, I do feel that a lot of the industry is a lot more aligned." Zuckerberg did not name any names, in terms of who exactly used to be hostile to his overtures and is now less so, but one likely candidate here is (presumably) Google. In further comments on the NSA issue, Zuckerberg added that the agreement, secured from the U.S. government, for Facebook to be able to share "everything the government's

asking of us" — in terms of requests for user data — has also been "helpful" to dissipating people's fears about the extent of government data-mining of Facebook.

AT TPD Adv

No Econ Impact

Even massive economic decline has zero chance of war

Robert **Jervis 11**, Professor in the Department of Political Science and School of International and Public Affairs at Columbia University, December 2011, "Force in Our Times," Survival, Vol. 25, No. 4, p. 403-425

> Even if war is still seen as evil, the security community could be dissolved if severe conflicts of interest were to arise. Could the more peaceful world generate new interests that would bring the members of the community into sharp disputes? 45 A zero-sum sense of status would be one example, perhaps linked to a steep rise in nationalism. More likely would be a worsening of the current economic difficulties, which could itself produce greater nationalism, undermine democracy and bring back old-fashioned beggar-my-neighbor economic policies. While these dangers are real, **it is hard to believe that the conflicts could be great enough** to lead the members of the community to contemplate fighting each other. It is not so much that economic interdependence has proceeded to the point where it could not be reversed – states that were more internally interdependent than anything seen internationally have fought bloody civil wars. Rather it is that **even if the more extreme versions of free trade and economic liberalism become discredited**, it is hard to see how without building on a preexisting high level of political conflict leaders and mass opinion would come to believe that their countries could prosper by impoverishing or even attacking others. Is it possible that problems will not only become severe, but that people will entertain the thought that they have to be solved by war? While a pessimist could note that this argument does not appear as outlandish as it did before the financial crisis, an optimist could reply (correctly, in my view) that the very fact that we have seen **such a sharp economic down-turn** without **anyone** suggesting that force of arms is the solution shows that **even if bad times bring about greater economic conflict, it will not make war thinkable.**

Circumvention

Reforms fail – the NSA is a rogue agency that can't be constrained

Glenn **Greenwald**, **2014**, No Place to Hide: Edward Snowden, the NSA, and the US Surveillance State. p. 130-131, mm

In the wake of our Snowden stories, a group of senators form both parties who had long been concerned with surveillance abuses began efforts to draft legislation that would impose real limits on the NSA's powers. But these **reformers**, led by Democratic senator Ron Wyden of Oregon, **ran into an immediate roadblock**: **counter efforts by the NSA's defenders** in the Senate to write legislation **that would provide only the appearance of reform, while in fact retaining or even increasing the NSA's powers**. As Slate's Dave Weigel reported in November: Critics of the NSA's bulk data collection and surveillance programs have never been worried about congressional inaction. They've expected Congress to come up with something that looked like reform but actually codified and excused the practices being exposed and pilloried. That's what's always happened **– every amendment or reauthorization** to the 2001 USA Patriot Act **has built more back doors than walls**. "We will be up against a 'business-as-usual brigade' – made up of

influential members of the government's intelligence leaderships, their allies in think tanks [sic] and academia, retired government officials, and sympathetic legislators," warned Oregon Sen. Ron Wyden last month. "Their endgame is ensuring that any surveillance reforms are only skin-deep…Privacy protections that don't actually protect privacy are not worth the paper they're printed on." The "fake reform" faction was led by Dianna Feinstein, the very senator who is charged with exercising primary oversight over the NSA. Feinstein has long been a devoted loyalist of the US national security industry, from her vehement support for the war on Iraq to her steadfast backing of Bush-era NSA programs. (Her husband, meanwhile, has major stakes in various military contracts). Clearly, Feinstein was a natural choice to head a committee that claims to carry out oversight over the intelligence community but has for years performed the opposite function. Thus, **for all the government's denials, the NSA has no substantial constraints on whom it can spy on and how**. **Even when such constraints nominally exist** – when American citizens are the surveillance target – **the process has become largely hollow**. **The NSA is the definitive rogue agency: empowered to do whatever it wants with very little control, transparency, or accountability**.

Circumvention

NSA is notorious for circumvention – will find way to continue programs
Ackerman 6/1/2015

[Spencer, national security editor for Guardian US. A former senior writer for Wired, he won the 2012 National Magazine Award for Digital Reporting; The Guardian; "Fears NSA will seek to undermine surveillance reform"; http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law]

Yet **in recent memory, the US government permitted the NSA to circumvent** the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004. Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, an internal NSA draft history records that attorneys found a different legal rationale that "essentially gave NSA the same authority to collect bulk internet metadata that it had". After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa court, that Section 215 of the Patriot Act authorized it all along – precisely the contention that the second circuit court of appeals rejected in May.

No Courts Modeling

Zero risk the plan meaningfully increases privacy rights:

A) Deference and circumvention inevitable – the best they can achieve is inconsistent application of precedent.

Treats court as monolith…snowden

Posner and Vermeule, 10 - *professor of law at the University of Chicago AND **professor of law at Harvard (Eric and Adrian, The Executive Unbound, p. 52-54)

THE COURTS

We now turn from Congress to the courts, the other main hope of liberal legalism. In both economic and security crises, courts are marginal participants. Here **two Schmittian themes are relevant: that courts come too late to the crisis to make a real difference in many cases, and that courts have pragmatic and *political incentives* to defer to the executive**, whatever the nominal standard of review. The largest problem, underlying these mechanisms, is that ***courts possess legal authority but not robust political legitimacy***. Legality and legitimacy diverge in crisis conditions, and the divergence causes courts to assume a restrained role. We take up these points in turn.

The Timing of Review

A basic feature of judicial review in most Anglo-American legal systems is that courts rely upon the initiative of private parties to bring suits, which the courts then adjudicate as "cases and controversies" rather than as abstract legal questions. This means that **there is always a time lag, of greater or lesser duration, between the adoption of controversial government measures and the issuance of judicial opinions on their legal validity ensures that courts are *less likely to set precedents while crises are hot,* precedents** that ***will be warped by the emotions of the day* or by the political power of aroused majorities**.70

Delayed review has severe costs, however. For one thing, courts often face a fait accompli. Although it is sometimes possible to strangle new programs in the crib, once those measures are up and running, it is all the more difficult for courts to order that they be abolished. This may be because new measures create new constituencies or otherwise entrench themselves, creating a ratchet effect, but the simpler hypothesis is just that officials and the public believe that the measures have worked well enough. Most simply, returning to the pre-emergency status quo by judicial order seems unthinkable; doing so would just re-create the conditions that led the legislature and executive to take emergency measures in the first place.

For another thing, **even if courts could overturn or restrict emergency measures, by the time their review occurs, those measures will by their nature already have worked, or not**. **If they have worked,** or at least if there is a widespread sense that the crisis has passed, **then the legislators and public may not much care whether the courts invalidate the emergency measures after the fact**. By the time the courts issue a final pronouncement on any constitutional challenges to the EESA, the program will either have increased liquidity and stabilized financial markets, or not. In either case, **the legal challenges will interest constitutional lawyers, but will *lack practical significance***.

Intensity of Review

Another dimension of review is intensity rather than timing. At the level of constitutional law, **the overall record is that courts tend to defer heavily to the executive in times of crisis, only reasserting themselves once the public sense of imminent threat has passed**. As we will discuss in chapter 3, federal courts deciding administrative cases after 9/11 have tended to defer to the government's assertion of security interests, although more large number work is necessary to understand the precise contours of the phenomenon. Schmitt occasionally argued that the

administrative state would actually increase the power of judges, insofar as liberal legislatures would attempt to compensate for broad delegations to the executive by creating broad rights of judicial review; consider the Administrative Procedure Act (APA), which postdates Schmitt's claim. It is entirely consistent with the broader tenor of Schmitt's thought, however, to observe that **the very political forces that constrain legislatures to enact broad delegations in times of crisis also hamper judges**, including judges applying APA-style review. **While their nominal power of review may be vast, the judges cannot exercise it to the full in times of crisis.**

Legality and Legitimacy

At a higher level of abstraction, **the basic problem underlying judicial review of emergency measures is the divergence between the courts' legal powers and their political legitimacy in times of perceived crisis**. **As Schmitt pointed out, emergency measures can be "exceptional" in the sense that although illegal**, or of dubious legality, **they may nonetheless be politically legitimate**, if they respond to the public's sense of the necessities of the situation.71 Domesticating this point and applying it to the practical operation of the administrative state, courts reviewing emergency measures may be on strong legal ground, but will tend to lack the political legitimacy needed to invalidate emergency legislation or the executive's emergency regulations. Anticipating this, courts pull in their horns.

When the public sense of crisis passes, legality and legitimacy will once again pull in tandem; courts then have more freedom to invalidate emergency measures, but it is less important whether or not they do so, as the emergency measure will in large part have already worked, or not. **The precedents set after the sense of crisis has passed may be calmer and more deliberative**, and thus of higher epistemic quality—this is the claim of the common lawyers, which resembles an application of the Madisonian vision to the courts—**but the public will *not take much notice of those precedents*, and they will have *little sticking power when the next crisis rolls around*.**

A) Obama will disregard the Court. He is on record

Pyle 12—Professor of constitutional law and civil liberties @ Mount Holyoke College [Christopher H. Pyle, "Barack Obama and Civil Liberties," Presidential Studies Quarterly, Volume 42, Issue 4, December 2012, Pg. 867–880]

Preventive Detention

But this is not the only double standard that Obama's attorney general has endorsed. Like his predecessors, **Holder has chosen to deny some prisoners any trials at all**, either because the government lacks sufficient evidence to guarantee their convictions or because what "evidence" it does have is fatally tainted by torture and would deeply embarrass the United States if revealed in open court. At one point, **the president** considered asking Congress to pass a preventive detention law. Then he **decided to institute the policy** himself **and *defy the courts to overrule him*, thereby forcing judges to assume primary blame for** any **crimes** against the United States **committed by prisoners following a court-ordered release** (Serwer 2009).

According to Holder, courts and commissions are "essential tools in our fight against terrorism" (Holder 2009). ***If they will not serve that end, the administration will disregard them*. The *a*ttorney *g*eneral** also **assured senators that if any of the defendants are acquitted, the administration will still keep them behind bars. It is difficult to imagine a greater contempt** for the rule of **law than this refusal to abide by the judgment of a court.** Indeed, it is grounds for Holder's disbarment.

As a senator, Barack Obama denounced President Bush's detentions on the ground that a "perfectly innocent individual could be held and could not rebut the Government's case and has no way of proving his innocence" (Greenwald 2012). But, three years into his presidency, Obama signed just such a law. **The N**ational **D**efense **A**uthorization **A**ct of 2012 **authorized the military to** round up and **detain, indefinitely and without trial**, American citizens suspected of giving "material support" to alleged terrorists. **The law was patently unconstitutional, and has been so ruled by a court** (Hedges v. Obama 2012), **but** President **Obama's** only **objection was that its detention provisions were unnecessary, because he already had such powers as commander in chief**. He even said, when signing the law, that "my administration will not authorize the indefinite military detention without trial of American citizens," but again, that remains policy, not law (Obama 2011). At the moment, the administration is detaining 40 innocent foreign citizens at Guantanamo whom the Bush administration cleared for release five years ago (Worthington 2012b).

Thus, **Obama's "accomplishments**" in the administration of justice "**are slight**," as the president admitted in Oslo, **and not deserving of a Nobel Prize**. **What little he has done has more to do with appearances than substance**. Torture was an embarrassment, so he ordered it stopped, at least for the moment. Guantanamo remains an embarrassment, so he ordered it closed. He failed in that endeavor, but that was essentially a cosmetic directive to begin with, because a new and larger offshore prison was being built at Bagram Air Base in Afghanistan—one where habeas petitions could be more easily resisted. The president also decided that kidnapping can continue, if not in Europe, then in Ethiopia, Somalia, and Kenya, where it is less visible, and therefore less embarrassing (Scahill 2011). Meanwhile, his lawyers have labored mightily to shield kidnappers and torturers from civil suits and to run out the statute of limitations on criminal prosecutions. Most importantly, kidnapping and torture remain options, should al-Qaeda strike again. **By talking out of both sides of his mouth simultaneously, Obama keeps hope alive for liberals and libertarians who believe in equal justice under law, while reassuring conservatives that America's justice will continue to be laced with revenge**.

It is probably **naïve to expect much more** of an elected official. ***Few presidents willingly give up power or seek to leave their office "weaker" than they found it*. Few now have what it takes to stand up to the national security state** or to those in Congress and the corporations that profit from it. Moreover, were the president to revive the torture policy, there would be insufficient opposition in Congress to stop him. The Democrats are too busy stimulating the economies of their constituents and too timid to defend the rule of law. The Republicans are similarly preoccupied, but actually favor torture, provided it can be camouflaged with euphemisms like "enhanced interrogation techniques" (Editorial 2011b).

B) Lower courts block

Wietse **Buijs**, lecturer in the section of Jurisprudence at the Erasmus School of Law (ESL) in Rotterdam, "WHY IT WASN'T A GREAT VICTORY AFTER ALL", Amsterdam Law Forum, Vol. 4, No. 1, pp. 93-100, 20**12**, Feb (BJN)

The accumulation of the turf war came, as I discussed in the beginning in this paragraph, in 2008 with Boumediene. **The Court held in a narrow 5-4 decision that the detainees had a right to a writ of habeas** corpus under the Constitution and that the MCA was an unconstitutional suspension of that right. Because of the fact that the United States have complete and utter control and jurisdiction, and thereby 'de facto' sovereignty over GITMO, detainees held there have the right to protection under the Constitution. On these grounds **Boumediene should have been 'a great victory**.'19 **It was** meant as **a *definitive* answer from the Supreme Court on how to interpret the Constitution** in detainee cases. **It looked like a definitive case, except for the fact that it was not.** Boumediene of course was sent for remand to the Court of Appeals of the D.C. Circuit Court. It is this Court that would turn out to be the Court in control of the detainee cases. The DTA and the MCA both appointed the D.C. Circuit Court as the only Court allowed to review any of the detainee cases. But **contrary to the slim, progressive left wing majority in the Supreme Court** (only in the instance of Boumediene by the way), **the D.C. Circuit Judges were and are mostly conservative**. And in some cases extremely conservative. It is fair to say that **these judges *weren't really keen on implementing the new precedent***. **Some judges were not even very subtle in their criticism towards the Supreme Court**. Senior D.C. Circuit judge Randolph even held public speeches called 'The Guantanamo mess' referring to the Boumediene precedent.20 **So after Boumediene most detainees sought their way**, again, **to the Courts in order to obtain a release order** for their detention. But they eventually would reach the D.C. Circuit Court of Appeals in their appeal. **The Court of Appeals for their part refused to release a detainee in *every single detainee case that reached it***. **In their quest to overturn the Boumediene precedent they used a remarkable method, they used another Supreme Court ruling against the Boumediene precedent**. As faith would have it, it was a case that was decided on the same day as Boumediene. Munaf v. Geren was a case where the court unanimously concluded that habeas corpus extends to U.S. citizens held overseas by American forces subject to an American chain of command, even if acting as part of a multinational coalition. It did not differ much from the view set out in Boumediene. But the Court also found that habeas corpus provided the petitioners with no relief holding that "Habeas corpus does not require the United States to shelter such fugitives from the criminal justice system of the sovereign with authority to prosecute them."21 So the Boumediene case, dividing the Court 5-4, gave GITMO detainees, for the first time, a constitutional right to go to court to challenge their detention. But the unanimous Munaf decision, which had nothing in it explicitly about GITMO, held that federal courts could not control the U.S. military's decision, in Iraq, to hand over to the Iraqi government American citizens who had allegedly committed crimes in that country. **What the judges so cleverly did was use the broad interpretation of the Munaf decision to increase the executive power of the, by now Obama, Administration and diminish the precedent set out in the Boumediene case. *The Circuit Court flatly ordered the District judges not to 'second-guess' the Executive's call*** on what to do with detainees, even those who had won

release orders. ***So the result of this decision was that the Circuit Court of Appeals in no case approved an actual release***. **The logical step to take for the numerous defence lawyers of the detainees was to appeal to the Supreme Court** for its consideration in these matters. And so they did. Just last year alone **eight cases**, for the most part consolidated cases regarding more than one detainee, **reached the Court asking a writ of certiorari**.22 ***All eight were dismissed.*** The Supreme Court did in all instances discuss the case but, in majority at least, did not see the need to grant certiorari. In consideration of the reason why the Court sees no need for further review of these cases, the Justices provide no definitive answer. There is certainly a great need to further explain the Court's view in both Boumediene and Munaf, notwithstanding the fact that the D.C. Circuit Court has created a remarkable way of interpreting both precedents. It seems that a major reason or perhaps **the only reason that the Supreme Court did not grant certiorari to any of the detainee cases is that there was, and still is, no majority for a coherent decision to be found**. During Obama's first term in office, two justices retired. Justices Souter and Stevens were replaced by Sotomayor and Kagan. As both Justices Souter and Stevens were fairly liberal justices and so are Sotomayor and Kagan, no change in balance in detainee matters would have been expected, except for the fact that justice Kagan was a Solicitor General of the United States prior to her appointment to the bench. As a Solicitor General she was directly involved in some of the cases she now had to judge. The consequence of course was that she had to recuse herself on all those cases. With justice Kagan out of the picture in detainee cases, the 5-4 split in Boumediene in favour of detainee rights would then be a 4-4 stalemate. In case of a 4-4 split, no decision is made and the initial ruling by the D.C. Circuit Court of Appeals stands, therefore the Supreme Court grants no certiorari in any of the detainee cases. Because of that, ***the D.C. Circuit Court of Appeals is in control over all detainee matters***, a control that, for the moment, translates in ever diminishing rights for the persons held in indefinite detention.

Turn—legitimacy—Noncompliance undermines the Court's legitimacy and makes the plan worthless

Pushaw 4—Professor of law @ Pepperdine University [Robert J. Pushaw, Jr., "Defending Deference: A Response to Professors Epstein and Wells," Missouri Law Review, Vol. 69, 2004]

Civil libertarians have urged the Court to exercise the same sort of **judicial review over war powers** as it does in purely domestic cases—i.e., independently interpreting and applying the law of the Constitution, despite the contrary view of the political branches and regardless of the political repercussions.54 This proposed solution ignores the **institutional differences**, **embedded in the Constitution**, that **have always led federal judges to review warmaking under special standards**. Most obviously, **the President can act with a speed, decisiveness, and access to info**rmation (often highly confidential) **that cannot be matched** by Congress, which must garner a majority of hundreds of legislators representing multiple interests.55 Moreover, **the judiciary by design acts far more slowly** than either political branch. A court

must wait for parties to initiate a suit, oversee the litigation process, and render a deliberative judgment that applies the law to the pertinent facts.56 Hence, **by the time federal judges** (particularly those on the Supreme Court) **decide a case, the action taken by the executive is several years old**. Sometimes, **this delay is long enough that the crisis has passed and the Court's detached perspective has been restored**.57 **At other times**, however, **the war rages, the President's action is set in stone, and he will ignore any judicial orders that he conform his conduct to constitutional norms**.58 **In such critical situations, issuing a judgment simply weakens the Court** as an institution, **as Chief Justice Taney learned the hard way**.59

Professor Wells understands the foregoing institutional differences and thus does not naively demand that the Court exercise regular judicial review to safeguard individual constitutional rights, come hell or high water. Nonetheless, she remains troubled by cases in which the Court's examination of executive action is so cursory as to amount to an abdication of its responsibilities—and a stamp of constitutional approval for the President's actions.60 Therefore, she proposes a compromise: requiring the President to establish a reasonable basis for the measures he has taken in response to a genuine risk to national security.61 In this way, federal judges would ensure accountability not by substituting their judgments for those of executive officials (as hap-pens with normal judicial review), but rather by forcing them to adequately justify their decisions.62

This proposal intelligently blends a concern for individual rights with pragmatism. **Civil libertarians often overlook the basic point that constitutional rights are not absolute, but rather may be infringed if the government has a compelling reason for doing so** and employs the least restrictive means to achieve that interest.63 Obviously, **national security is a compelling governmental interest**.64 Professor Wells's crucial insight is that courts should not allow the President simply to assert that "national security" necessitated his actions; rather, he must concretely demonstrate that his policies were a reasonable and narrowly tailored response to a particular risk that had been assessed accurately.65

Although this approach is plausible in theory, I am not sure it would work well in practice. Presumably, **the President almost always will be able to set forth plausible justifications for his actions, often based on a wide array of factors**—**including highly sensitive intel**ligence **that he does not wish to dis-close**.66 Moreover, **if the President's response seems unduly harsh, he will likely cite the wisdom of erring on the side of caution**. If the Court disagrees, it will have to find that those proffered reasons are pretextual and that the President overreacted emotionally instead of rationally evaluating and responding to the true risks involved. But are judges competent to make such determinations? And even if they are, would they be willing to impugn the President's integrity and judgment? If so, what effect might such a judicial decision have on America's foreign relations? These questions are worth pondering before concluding that "hard look" review would be an improvement over the Court's established approach.

Moreover, **such** searching **scrutiny will be useless in situations where the President has made a wartime decision that he will not change**, **even if judicially ordered to do so**. For instance, **assume that the Court in Korematsu** had applied "hard look" review and **found that** President **Roosevelt had wildly exaggerated** the sabotage and espionage **risks** posed by

Japanese-Americans and had imprisoned them based on unfounded fears and prejudice (as appears to have been the case). **If the Court accordingly** had **struck down FDR's order** to relocate them, **he would** likely **have disobeyed it.**

Professor Wells could reply that this result would have been better than what happened, which was that the Court engaged in "pretend" review and stained its reputation by upholding the constitutionality of the President's odious and unwarranted racial discrimination. I would agree. But I submit that **the solution in such** unique **situations** (i.e., **where a politically strong President has made a final decision and will defy any contrary court judgment**) **is not judicial review in any form**—**ordinary, deferential, or hard look**. Rather, **the Court should simply declare the matter to be a political question and dismiss the case**. Although such Bickelian manipulation of the political question doctrine might be legally unprincipled and morally craven, 67 at least it would avoid giving the President political cover by blessing his unconstitutional conduct and instead would force him to shoulder full responsibility. SQUO Solves

Bulk Collection Good

Experts say USA FREEDOM ACT is sufficient to solve for government abuse

Schanzer, 5/28/15

[Peter, associate professor of the practice at Duke University's Sanford School of Public Policy and director of the Triangle Center on Terrorism and Homeland Security., Duke University, "News Tip: Patriot Act Reforms Sufficient to Protect Privacy, Prohibit Governmental Abuse, Expert Says", https://today.duke.edu/2015/05/tip-patriotact]

If Congress does not act, only three provisions of the Patriot Act will expire on Sunday, and the vast majority of the law will remain in effect. The current debate is about Section 215 of the Patriot Act that provides the legal basis for the telephone metadata program run by the National Security Agency. • Quotes: "I am in favor of allowing this program to continue with the significant reforms included in the USA Freedom Act, which passed the House with a large bipartisan majority," says David Schanzer, an associate professor of the practice at Duke University's Sanford School of Public Policy and director of the Triangle Center on Terrorism and Homeland Security. "Even though the intelligence agencies cannot point to a specific terrorist attack that has been disrupted based on information from this program, I side with the many intelligence and senior national security officials who **believe it is an important counterterrorism tool." "The reforms will prohibit the government from taking possession of huge volumes of Americans' telephone records and require a judicial warrant for the government to gain access to specific chains of metadata. These changes are sufficient to protect privacy and protect against governmental abuse**." "The most likely scenario for this week is for the Senate to take up the USA Freedom Act, a step supported by 57 of the necessary 60 senators last week. If the bill does get to the floor, Sen. Rand Paul and other opponents of the NSA program can slow its progress, but probably cannot defeat it. Legal authority for the program may lapse briefly into next week, but this would not cause any significant problems."

No alternative for Bulk Data Collection – USA FREEDOM ACT reforms solve

Sanger, 1/15/2015

[David E., chief Washington reporter for NYT, NYT, "Report Finds No Substitute for Mass Data Collection", http://www.nytimes.com/2015/01/16/us/politics/report-finds-no-alternative-to-bulk-collection-of-phone-data.html]

WASHINGTON — A federal study released on Thursday concluded that **there was no effective alternative to the government's "bulk collection" of basic information about every telephone call made in the United States,** a practice that civil rights advocates call overly intrusive. Last year, after the former intelligence contractor Edward J. Snowden revealed details of the government's vast data-collection enterprise, President Obama asked intelligence agencies to assess whether there was a way to get at the communications of terrorism suspects without sweeping up records of all calls made and received inside the United States, including their length and other identifying information. On Thursday, the National Academy of Sciences, in a detailed report that brought together communications and cybersecurity experts and former senior intelligence officials, said that "no software-based technique can fully replace the bulk collection of signals intelligence." But it also concluded that there were ways to "control the usage of

collected data" and to make sure that once it is in the government's hands, there are stronger privacy protections. The findings came a year after Mr. Obama announced modest reforms to practices of the National Security Agency that had been revealed by Mr. Snowden, including doing away with a huge government-run database of phone records and instead relying on separate databases managed by phone companies. Eventually, those records will be held only by providers like AT&T and Verizon. But the change has not happened yet, as officials try to figure out how they would search, with court orders, information they do not have on their own computer systems. Government officials have been clear that the transition will take considerable time. Mr. Obama's hope was that technology would solve the problem — that new search technologies would make it possible to "target" the collection of the phone data, which does not include the conversations themselves. But the researchers could not find a way. "From a technological standpoint, **curtailing bulk data collection means analysts will be deprived of** some **information**," said Robert F. Sproull, the chairman of the committee that examined the problem and a former director of Oracle's Sun Labs. But, he said, that "does not necessarily mean that current bulk collection must continue." Since the uproar over Mr. Snowden's revelations and the program's effect on Americans' privacy, the politics of mass data collection have shifted. Terrorist attacks like the ones that killed 17 people in Paris last week, along with the rise of the Islamic State, have led to calls for more vigilance by intelligence agencies, swinging the pendulum back. Britain is now talking about expanding surveillance, and both its government and Mr. Obama's law enforcement agencies have protested moves by Apple, Microsoft and other technology companies to prevent snooping by routinely encrypting many types of mobile and computer communications. David Cameron, the British prime minister, was expected to raise those issues in detail in a visit with Mr. Obama on Thursday and Friday. The American Civil Liberties Union, a strong critic of the N.S.A. program, said in a statement from Neema Singh Guliani, the group's legislative counsel, that "it would be a mistake to read the National Academy's report as supporting a policy of continued bulk collection." She added that the report did not contradict findings of groups that have concluded that "the domestic bulk call record program has not helped stop an act of terrorism." But she noted that the report "does importantly acknowledge that there are additional steps that the intelligence community can take to increase transparency, improve oversight, and limit the use of information collected." The report examined ways intelligence agencies could narrow searches to foreign research institutes, companies or government facilities, using generic situations that were clearly thin covers for events now unfolding in places like Libya and Syria. But it found all the approaches ultimately unsatisfactory. **"The 'needle in the haystack' metaphor is relevant here," it concluded. "If the needle is not in the smaller haystack, no amount of smarter searching will help." "There is no doubt that bulk collection of signals intelligence leaves many uncomfortable," the report said. "Various courts have indeed questioned whether such collection is constitutional." But in the end, the committee concluded, the United States should focus on putting limits on how the data is viewed and used — and by whom — rather than limiting how much of it is collected.**

NSA Wake

A/T Democracy Advantage

1NC F/L

Court action over congressional action undermines democracy

Kochan, 200**6** (Donald J., Assistant Professor of Law, Chapman University School of Law, "SOVEREIGNTY AND THE AMERICAN COURTS AT THE COCKTAIL PARTY OF INTERNATIONAL LAW: THE DANGERS OF DOMESTIC JUDICIAL INVOCATIONS OF FOREIGN AND INTERNATIONAL LAW," Fordham International Law Journal, February, 29 Fordham Int'l L.J. 507)

Related to sovereignty and the rule of law are democracy concerns. **Lawmaking** power, **in democracies, lies with the lawmakers** as **selected** and directed **by the people**. n166 **Judges do not fit that role** in the United States. n167 Many scholars have [*547] noted the tendency of international law to erode sovereignty, to the detriment of democratic lawmaking. n168 Thus, **resort to international** or foreign **laws is uniquely** un-American and **un-democratic**. It runs completely afoul of the observations by Alexis de Tocqueville regarding the primacy of the "sovereignty of the people" in the United States n169: At the present day the principle of the sovereignty of the people has acquired in the United States all the practical development that the imagination can conceive. It is unencumbered by those fictions that are thrown over it in other countries, and it appears in every possible form, according to the exigency of the occasion. Sometimes the laws are made by the people in a body, as at Athens; and sometimes its representatives, chosen by universal suffrage, transact business in its name and under its immediate supervision. n170 Tocqueville continues to describe how U.S. democracy looks internally for the source of its laws - not outside, as some today advocate. He articulates positively that laws foreign to the U.S. system are non-controlling: In some countries a power exists which, though it is in a degree foreign to the social body, directs it, and forces it to pursue a certain track. ... But nothing of the kind is to be seen in the United States; there society governs itself for itself. All power centers in its bosom, and scarcely an individual is to be met with who would venture to conceive or, still less, to express the idea of seeking it elsewhere. The nation participates in the making of its laws by the choice of its legislators, and in the execution of them by the choice of the agents of the executive government; it may almost be said to govern itself, so feeble and restricted is the share left to the [*548] administration, so little do the authorities forget their popular origin and the power from which they emanate. The people reign in the American political world ... . They are the cause and the aim of all things; everything comes from them, and everything is absorbed in them. n171 These historical references underscore the idea that **democracy demands** that **the people be** the **masters** of their own domain. Judicial **injection of foreign and supposed international law violates this** principle **and denigrates** the **reverence many have** had **for the uniqueness of the U.S. system**. Federal **judges are** largely **unaccountable** to democratic controls. n172 Thus, the allowance **for judges to adopt** or import **foreign laws presents them with un-democratic lawmaking power**. The foundation of democratic governance lies in the people's ability, responsibility, and power to create law or control the mechanisms by which law is created. n173 Democratic control is lost when sources outside the domestic political processes serve as the bases of decision. Kenneth Anderson accurately opines that the **government** in the United States **receives** its **consent from the people** and should be constrained by their expressed judgment as to what laws should and should not exist: **Without fidelity to** the principle of democratic, **self-governing provenance** over substantive content in the utilization of constitutional adjudicatory materials, **a court becomes** merely **a purveyor of its own view of best policy.** Yet **this is** not solely an issue of an unconstrained Court. It is, more importantly, **a violation of the compact between government and governed**, free people who choose to give up a measure of their liberties [*549] in return for the benefits of government - a particular pact with a particular community, in which the materials used in the countermajoritarian act of judging them nonetheless have, in some fashion, even indirectly, democratic provenance and consent. n174 As such, recent cases discussed herein demonstrate an antidemocratic trend. n175 Some have characterized such imposition as judicial activism and arrogance against accepted lawmaking processes. n176

US supreme court decisions aren't modeled – the US doesn't engage in international judicial dialogue

Harvard Law Review, 200**1** ("The International Judicial Dialogue: When Domestic Constitutional Courts Join the Conversation," May, 114 Harv. L. Rev. 2049)

The Canadian court's citation in Burns to Justice Breyer's dissent, rather than to any other recent U.S. state or federal court decision regarding the death row phenomenon, n124 suggests that Justice Breyer's willingness to look to outside jurisprudence renders his opinions more influential in foreign and supranational jurisdictions. Conversely, the U.S. Supreme Court's failure to engage in the international judicial dialogue may cause other nations to be less willing to rely on its rulings. The cases discussed in this Part illustrate how the dialogue among domestic and supranational courts has contributed to the formation of legal norms for death penalty cases, and it seems likely that the international judicial conversation will similarly influence the development of other international norms. Cases such as Burns raise the question whether the U.S. Supreme Court's reluctance to engage in dialogue with its foreign counterparts will reduce its ability to shape the conversation about legal norms. Many constitutional courts have been eager to engage in the international judicial dialogue and to take advantage of the opportunity to influence the development of international law, but the U.S. Supreme Court has remained reticent. If taking part in the dialogue allows a court to influence the development of international law, it may seem surprising that the U.S. Supreme Court would be so reluctant to join the conversation. But perhaps the willingness (or unwillingness) of constitutional courts to look to foreign or supranational jurisprudence is explained in part by the way that particular courts view their domestic constitutions. The U.S. Supreme Court seems to regard the [*2073] U.S. Constitution as a document with a uniquely American character, and thus, a document that should not be informed by outside jurisprudence. Courts that have joined the international judicial dialogue, by contrast, seem to perceive their constitutions as documents that "speak to," and listen to, the entire international community.

Restraining authority is insufficient to solve liberal democratic modeling – they can't solve US inability to effectively govern

Fukuyama, 20**14** (Francis, senior fellow at Stanford University's Freeman Spogli Institute for International Studies, "At the 'end of history' still stands democracy," Wall Street Journal, June 6, http://www.wsj.com/articles/at-the-end-of-history-still-stands-democracy-1402080661)

The biggest single problem in societies aspiring to be democratic has been their failure to provide the substance of what people want from government: personal security, shared economic growth and the basic public services (especially education, health care and infrastructure) that are needed to achieve individual opportunity. Proponents of democracy focus, for understandable reasons, on limiting the powers of tyrannical or predatory states. But they don't spend as much time thinking about how to govern effectively. They are, in Woodrow Wilson's phrase, more interested in "controlling than in energizing government." This was the failure of the 2004 Orange Revolution in Ukraine, which toppled Viktor Yanukovych for the first time. The leaders who came to power through those protests—Viktor Yushchenko and Yulia Tymoshenko—wasted their energy on internal squabbling and shady deals. Had an effective democratic administration come to power, cleaning up corruption in Kiev and making the state's institutions more trustworthy, the government might have established its legitimacy across Ukraine, including the Russian-speaking east, long before Mr. Putin was strong enough to interfere. Instead, the democratic forces discredited themselves and paved the way for Mr. Yanukovych's return in 2010, thus setting the stage for the tense, bloody standoff of recent months. India has been held back by a similar gap in performance when compared with authoritarian China. It is very impressive that India has held together as a democracy since its founding in 1947. But Indian democracy, like sausage-making, doesn't look very appealing on closer inspection. The system is rife with corruption and patronage; 34% of the winners of India's recent elections have criminal indictments pending against them, according to India's Association for Democratic Reforms, including serious charges like murder, kidnapping and sexual assault. The rule of law exists in India, but it is so slow and ineffective that many plaintiffs die before their cases come to trial. The Indian Supreme Court has a backlog of more than 60,000 cases, according to the Hindustan Times. Compared with autocratic China, the world's largest democracy has been completely hamstrung in its ability to provide modern infrastructure or basic services such as clean water, electricity or basic education to its population. In some Indian states, 50% of schoolteachers fail to show up for work, according to the economist and activist Jean Drèze. Narendra Modi, a Hindu nationalist with a troubling past of tolerating anti-Muslim violence, has just been elected prime minister by an impressive majority in the hope that he will somehow cut through all the blather of routine Indian politics and actually get something done. Americans, more than other people, often fail to understand the need for effective government, focusing instead on

the constraint of authority. In 2003, the George W. Bush administration seemed to believe that democratic government and a market-oriented economy would spontaneously emerge in Iraq once the U.S. had eliminated Saddam Hussein's dictatorship. It didn't understand that these arise from the interaction of complex institutions—political parties, courts, property rights, shared national identity—that have evolved in developed democracies over many decades, even centuries. The inability to govern effectively extends, unfortunately, to the U.S. itself. Our Madisonian Constitution, deliberately designed to prevent tyranny by multiplying checks and balances at all levels of government, has become a vetocracy. In the polarized—indeed poisonous—political atmosphere of today's Washington, the government has proved unable to move either forward or backward effectively. Contrary to the hysterics on either side, the U.S. faces a very serious long-term fiscal problem that is nonetheless solvable through sensible political compromises. But Congress hasn't passed a budget, according to its own rules, in several years, and last fall, the GOP shut down the entire government because it couldn't agree on paying for past debts. Though the U.S. economy remains a source of miraculous innovation, American government is hardly a source of inspiration around the world at the present moment. Twenty-five years later, the most serious threat to the end-of-history hypothesis isn't that there is a higher, better model out there that will someday supersede liberal democracy; neither Islamist theocracy nor Chinese capitalism cuts it. Once societies get on the up escalator of industrialization, their social structure begins to change in ways that increase demands for political participation. If political elites accommodate these demands, we arrive at some version of democracy.

No Solvency – Liberal democracy is inherently and structurally unstable

McGinnis, 20**14** (John O., George C. Dix Professor in Constitutional Law at Northwestern University, "Endless history: The tension in liberal democracy," Library of Law and Liberty, June 11, http://www.libertylawsite.org/2014/06/11/endless-history-the-tension-in-liberal-democracy/)

Fukuyama's defense of his own work is thoughtful, but his original thesis suffers from a problem that is playing out now all over the world. There are inherent tensions in liberal democracy that ensure that history continues. By protecting liberties, liberalism prioritizes individuals, while democracy necessarily prioritizes a collective right—the right of a people to govern themselves and impose obligations and indeed trench on the liberties of others. In a constitutional republic such as ours, we try to resolve that tension by permitting democracy for ordinary politics while enshrining rights that are beyond majority control. But even here with a constitution that has lasted for two hundred years the mixture is unstable. Just consider current conflict between campaign finance regulation and the First Amendment. Around the world the conflict is truly combustible. Fukuyama acknowledges that some nations that looked in the 1990s as if they were moving to liberal democracies are backsliding today, but he does not discuss how this problem reflects in large measure the basic tension within liberal democracy itself. Take Thailand, one of his examples. There one party wins elections apparently by giving out huge subsidies to supporters—subsides that are not restrained by conceptions of limited government. Or take another example—Turkey—where Prime Minister Erdogan believes that his stalwart religiously inspired majority support permits him to shut down Twitter and engage in other fundamentally illiberal acts. I think we underestimate, too, how much democratic support another autocratic discussed by Fukuyama- Vladimir Putin–enjoys. As my friend Mark Movsesian suggests. Putin sadly does reflect the preferences of Russian people, who do not generally accept our WEIRD (Western,Educated, Industrialized, Rich, Democratic (as defined in liberal democracy)) values. They by and large support his illiberal policies. More generally, the tension between democracy and liberalism will continue to generate new kinds of regimes– new syntheses of the contradictions between liberalism and democracy– depending on culture, religious affiliation and geopolitical position. In his retrospective article, Fukuyuma could also have discussed old Europe more, where democracy has led to economic illiberalism and, consequently, stagnation. As one politician says of the failure of European economic reform, we all know what to do, but we do not know how to be reelected once we do it. Interestingly, Fukuyama complains that democracy in the United States is not working well, specifically that gridlock has led to

insufficiently energetic government. But gridlock writ large and our slower-moving politics—the product of bicameralism, the separation of powers, and federalism—protects liberty as much as the provisions of the Bill of Rights. Fukuyama's unhappiness with America as well as with democratic autocracies, like Russia, shows that his thesis has a Goldilocks quality: the world is moving to liberal democracy, but only if the mixture creates the right temperature for both liberalism and democracy. Given their inherent tensions the right mixture is no mean feat to achieve and even if achieved, there is no stable stopping point, as his contemporary examples of backsliding illustrate. History will continue as long as does the conflict between liberalism and democracy, between markets and the state.

Democracy doesn't prevent war

Goldstein, '11 (Joshua, is professor emeritus of international relations at American University and author of Winning the War on War: The Decline of Armed

Conflict Worldwide, Sept/Oct 2011, "Think Again: War. World peace could be closer than you think", *Foreign Policy*)

"A More Democratic World Will Be a More Peaceful One." Not necessarily. The well-worn observation that real democracies almost never fight each other is historically correct, but it's also true that democracies have always been perfectly willing to fight nondemocracies. In fact, democracy can heighten conflict by **amplifying ethnic and nationalist forces, pushing leaders to appease belligerent sentiment** in order **to stay in** power. Thomas Paine and Immanuel Kant both believed that selfish autocrats caused wars, whereas the common people, who bear the costs, would be loath to fight. But try telling that to the leaders of authoritarian China, who are struggling to hold in check, not inflame, a popular undercurrent of nationalism against Japanese and American historical enemies. Public opinion in tentatively democratic Egypt is far more hostile toward Israel than the authoritarian government of Hosni Mubarak ever was (though being hostile and actually going to war are quite different things). Why then do democracies limit their wars to non-democracies rather than fight each other? Nobody really knows As the University of Chicago's Charles Lipson once quipped about the notion of a democratic peace, "We know it works in practice. Now we have to see if it works in theory!" The best explanation is that of political scientists 9/29/2011 Think Again: War - By Joshua S. Goldst… foreignpolicy.com/…/think_again_war?… 6/9Bruce Russett and John Oneal, who argue that three elements -- democracy, economic interdependence (especially trade), and the growth of international organizations -- are mutually supportive of each other and of peace within the community of democratic countries. Democratic leaders, then, **see themselves as having less to lose in going to war with autocracies.**

A/T Illiberal Democracy

Illiberalism is declining

Moller, 2008 (Jorgen, European University Institute "A Critical Note on 'The Rise of Illiberal Democracy'," Australian Journal of Political Science, Vol. 43, No. 3, September)

In Table 1, **I** have **extended Zakaria's analysis** both back in time (to 1990) and into the present (to 2005). What can we say about the dynamics of what Zakaria terms 'democratizing states' (i.e. roughly the countries belonging to the Freedom House's class 'partly free')? We see that **the number of** what Zakaria terms '**democratizing states' has been** rather **stable**, oscillating only between a low of 65 and a high of 76 in the period of 1991–2005.3 **The number** of democratizing states **doing better on 'political rights' than 'civil liberties'** (Zakaria's 'illiberal democracies') **has not been** very **stable** in the same period, however. In absolute terms, the number has oscillated between 36 (1998) and 12 (2005). In relative terms (i.e. as a proportion of all democratizing states) the oscillation is also very large, from a high of 51 per cent in 1994 to a low of 18 per cent in 2005. Two points can be made with regard to these trends. First, they underline that the illiberal species of democracy (which is really a species of hybrid regime, using Zakaria's conceptualization) is not a stable political regime form over the period – no dysfunctional equilibrium seems to exist in this 'grey zone' between democracy and autocracy. Second, it turns out that the '**illiberalness'** of the said countries **has not been on the rise** since Zakaria vented his warning;

rather, **it has clearly been on the wane**. In 2004 and 2005, countries that do better on 'civil liberties' (the liberal attribute) even outnumber those doing better on 'political rights' (the electoral attribute). This drop in 'illiberal democracies' kicked in as early as 2002 and, thus, **it seems to be** a bit of **an overstatement when Zakaria**, having duly noted that the number is decreasing, **remarks that** '[s]till, as of this writing close to half of the '**democratizing' countries** in the world **are illiberal** democracies' (Zakaria 2003, 99). On one account Zakaria was right, though. The 'illiberal democracies' did grow as a proportion of all 'democratizing states' in the period leading up to the publication of his 1997 article. But does this conclusion hold if, instead, we use the alternative conceptualization; that is, the typology of political regime forms? Table 2 shows that the '**illiberal democracies' as a proportion of** all '**electoral democracies' was**, in fact, a **very stable** one during the period 1990–97. With the sole exception of 1991 (i.e. the ultimate year of political change due to the breakdown of communism) it lay relatively close to 25 per cent. In plain English, when the electoral and illiberal attributes are kept conceptually independent of each other, we do not really find any rise of 'illiberal democracy' over the period. Furthermore, the figures show the same tendency as evinced in the prior extension of Zakaria's analysis; that the relative frequency has been decreasing fast since the late 1990s. The situation at the temporal end-point of the analysis, in 2005, is so striking that it is worth describing in detail. **A mere seven** (out of 192!) **countries are** classified as '**illiberal** democracies' in 2005; namely, El Salvador, India, Indonesia, Jamaica, Lesotho, Peru and Senegal. And all of these countries combined 'political rights' scores of 2 with 'civil liberties' scores of 3 (i.e. they were only marginally more electoral than liberal). At the same time, three countries could be classified as 'liberal autocracies'; namely, Serbia and Montenegro; Trinidad and Tobago; and Ukraine. In this troika, the obverse mix of scores obtains, i.e. a score of 3 on 'political rights' were combined with a score of 2 on 'civil liberties'. In a nutshell, then, the statuses of the empirical referents on the two dimensions correlate almost perfectly,4 and even the countries that do, in fact, diverge do so only minimally. Hence, the conclusion of the taxonomic exercise is that the countries almost always travel in the same direction on both of the two dimensions and that this co-variation has increased, not decreased, over time. Conclusion: The Future of Freedom The descriptive point I wish to make in this note is a simple one. If we trust that the Freedom House ratings measure what they are supposed to measure, then there is no increasing gap between 'illiberal' and 'liberal' democracies, and there has not really been one during the past one-and-a-half decades. The two strands (i.e. the electoral and the liberal component) of liberal democracy are not coming apart; doing better with respect to one attribute normally means doing better with respect to the other as well. Even the modest gap between the two that did exist in the 1990s, and which spurred the inductive observations and corresponding theoretical conclusions of Zakaria, has, more or less, been wiped out in the 2000s. This should be comforting news for those worried about the future of freedom in a democratic age. Also, it paves the way for a prescriptive conclusion that contrasts, head on, with that of Zakaria. **Zakaria favours** a '**liberal democracy**-itinerary' **that starts out with constitutional liberalism** and then moves only towards free elections. However, as Thomas Carothers (2007) has argued recently, **the underlying premise** – that autocrats will favour the development of the rule of law – **is faulty**. Recall Lord Acton's dictum: that power tends to corrupt, and absolute power corrupts absolutely. Hence the basic premise of liberal democratic theory – that laws, not men, should rule. This requires that the exercise of power is based on political institutions rather than the personal authority of an omnipotent president. Differently said, the 'law-abiding autocrat' is virtually an oxymoron and it is very difficult to imagine a country moving towards constitutional liberalism in the absence of some kind of elections to check the power holder(s). That theoretical lesson is supported by the empirical data presented in this short note.

US Can’t Promote Constitutionalism

The US can’t promote constitutional liberalism, only participatory democracy can

Kupchan, 19**98** (Charles A., Professor of International Relations at Georgetown University and a Senior Fellow at the Council on Foreign Relations, “Restoring Democracy’s Good Name,” Foreign Affairs, Volume 77, Issue 3, May/June)

Zakaria concludes by appearing to pull back from his insistence that liberalism must precede democracy, instead acknowledging that the two may go hand in hand. He sensibly urges American policymakers to promote both liberalization and democratization. Nevertheless, the central thrust of Zakaria's analysis is clear: the United States should stop pushing the ballot box until states are liberal enough to make good use of it. To recast U.S. policy accordingly would be misguided and dangerous. Constitutional liberalism cannot be imposed upon a society that lacks the requisite political values and habits. Instead, **participatory democracy is essential to nurturing** the dignity and **autonomy of the individual, which is** in turn **the foundation of constitutional liberalism**. Were the United States to stop promoting democracy, it would find the world not just less democratic but also less liberal -- and in the long run less peaceful. Bringing about the "democratic **peace" may require** the spread of **liberalism**, as Zakaria argues, **but** it is **the initial spread of democracy** itself, **even in its illiberal forms**, that **will** eventually **get us there**.

Majoritarian Gov't = Prerequisite to Liberal Democracy

Majoritarian government is a prerequisite to democratic values – their causality is backwards

Kupchan, 19**98** (Charles A., Professor of International Relations at Georgetown University and a Senior Fellow at the Council on Foreign Relations, "Restoring Democracy's Good Name," Foreign Affairs, Volume 77, Issue 3, May/June)

Although on target in his observation that illiberal democracy is on the rise, Zakaria misses the mark in explaining why and in prescribing what to do about it. He misconstrues how liberal democracy evolves by relying too heavily on the Anglo-Saxon experience. Classical liberalism -- the notion that the individual's autonomy is sacrosanct -- was born and bred in Britain and the United States. When democracy -- narrowly defined as the selection of governments through free and fair elections -- took root in these countries, their political cultures, practices, and institutions were already imbued with the spirit of constitutional liberalism. Zakaria is right that liberalism preceded democracy -- but only in the Anglo-Saxon West. The current wave of democratization is taking place in regions that have little or no experience in constitutional liberalism. Many countries in East Asia and the former Soviet bloc, for example, have a long history of paternalism and social norms that privilege the group over the individual. Without a tradition of liberal protection, the introduction of democracy is critical to instilling respect for individual rights and values of accountability and responsibility. **Participatory democracy helps bring** about the **incremental changes in political culture necessary for liberal governance. Constitutional liberalism**, after all, **rests not just on formal institutions, but on** the **political attitudes** and habits that bring them to life. Furthermore, the **abuses** of power **that accompany illiberal democracy** often **create demand for** the **institutions** and practices **that check** centralized **power**. In many of today's democratizing states, **illiberal democracy may be a way station along the road to the** more benign forms of **governance** that **Zakaria** justifiably **prefers**.

Kupchan, 19**98** (Charles A., Professor of International Relations at Georgetown University and a Senior Fellow at the Council on Foreign Relations, "Restoring Democracy's Good Name," Foreign Affairs, Volume 77, Issue 3, May/June)

Zakaria attempts to rebut the claim that democracy can foster liberalism by arguing that "democracy does not seem to bring constitutional liberalism," and that "to date few illiberal democracies have matured into liberal democracies." Not so. In fact, many of **today's liberal democracies passed through** lengthy **illiberal periods**. Germany had to make several passes at democracy before getting it right -- the Wilhelmine and inter-war variants were far from liberal. Even after the United States exported constitutional liberalism to Germany after World War II, it took time for it to take hold. Japan has long held democratic elections but has only recently strengthened multiparty governance, the quality and scope of public debate, and other attributes of liberal systems. A number of Latin American states have moved -- admittedly in fits and starts -- from illiberal to liberal democracy. Mexico, for example, has been democratic for decades, during which time its commitment to constitutional liberalism has gradually deepened. **Democracy** may produce adverse side effects during its early, transitional years, but over time it **helps instill habits of transparency**, tolerance, **and accountability conducive to** stable and **liberal governance**. Zakaria's misconception that liberal democracy takes root only when constitutional liberalism precedes democratic rule leads him to misinterpret the political transformations now taking place in many parts of the world. East Asian states are relatively wealthy and stable, according to Zakaria, because they have followed the Western itinerary and moved from "autocracy to liberalizing autocracy, and, in some cases, toward liberalizing semi-democracy." Most East Asian states, however, are far more democratic than they are liberal. In Zakaria's own terms, constitutional liberalism "seeks to protect an individual's autonomy against coercion, whatever the source." But in making the case for East Asian liberalism, Zakaria points primarily to the existence of free markets, contract law, and property rights. East Asians might enjoy the wealth that has accompanied these economic freedoms as well as the moderating influence of a growing middle class, but they certainly do not enjoy the civil liberties commonly associated with liberal governance. Even in the economic realm, states assert control over the market -- one of

the main causes of the recent financial crises in East Asia. Civic freedoms have of late been expanding, especially in South Korea and Taiwan. But **democracy has served as a beachhead for liberal values and practices, not vice versa**.

A/T Zakaria

Zakaria is wrong – falsely draws causal inferences from illiberal democracy to warfare

Kagan, 2003 (Robert, contributing editor for the New Republic, "Why democracy must remain America's goal abroad," The New Republic, June 26, http://www.travelbrochuregraphics.com/extra/the_ungreat_washed.htm)

Zakaria also employs other means of smearing democracy. Often he blames democracies for problems for which they bear no responsibility. In order to demonstrate that democracies are incompetent at stimulating economic growth, he cites the case of Indonesia. "Since it embraced democracy," Zakaria observes, "Indonesia's gross domestic product has contracted by almost 50 percent, wiping out a generation of economic progress and pushing more than 20 million people below the poverty line." This is a rather appalling distortion. Indonesia's economy collapsed not after Indonesia "embraced" democracy but before, during the last two years of the Suharto dictatorship and as a result of the Asian financial crisis of 1997-1998. Per capita GDP dropped from $1,100 in 1997 to $487 in 1998, the year Suharto fell. Indonesia's first parliamentary elections were held a year later, in June 1999, by which time the economy had already collapsed and the 50 percent contraction to which Zakaria refers had already taken place. This tendency to blame democracy for problems for which it cannot justly be blamed permeates Zakaria's book. He blames democratization for the ethnic warfare in Yugoslavia as it broke up in the early 1990s, arguing that "the introduction of democracy" there "actually fomented nationalism, ethnic conflict and even war," and that this proves his general point, which is that "democratizing societies display a disturbingly common tendency toward" violent behavior. But does Zakaria believe that ethnic conflict would have been avoided after the breakup of Yugoslavia had Serbia been in the hands of an unelected dictator? No, he shies away from making such an absurd claim. He admits that dictatorships are "hardly innocent" of fomenting ethnic conflict. Indeed they are not. Nor does the history of the Balkans, filled as it is with ethnic violence over the centuries, lend support to Zakaria's assertion that somehow it was "the introduction of democracy" that was responsible for sparking ethnic warfare in the 1990s. Nor would any sensible person hold democratization responsible for ethnic conflict in parts of Africa, where tribal warfare has thrived in all political climates.

A/T Zakaria – A/T Fundamentalism

Liberal states generate nationalism too

Gould-Davies, 1998 (Nigel, Lecturer in Politics at Hertford College, Oxford University, "Restoring Democracy's Good Name," Foreign Affairs, Volume 77, Issue 3, May/June)

Zakaria argues that the introduction of democracy in divided societies can foment "nationalism, ethnic conflict, and even war." But the fact **that** populist **nationalism** and ethnocentrism **can be inflamed** and put to violent uses by leaders of limited accountability **does not mean** that **democracy** itself **invokes these** malign **forces**. In most instances, nationalism exerts its influence through public expression, not democratic voice. To say otherwise is to confuse the passions of the masses with the power of majorities. Indeed, **nationalism has** often **been manipulated** from above **as a strategy for averting**, not responding to, **democratization**. Moreover, since the propagation of nationalist sentiments requires a degree of freedom of speech and assembly, it may in fact be **liberalization rather than democratization** that **makes states more dangerous**. Such a conclusion is supported by the argument that **an imperfect "marketplace of ideas" fosters** the spread of **nationalist myths**. The expansion of liberal **freedoms, not democratic accountability, makes possible** the **articulation of identity** and difference **for invidious ends**.

Majoritarian influences empirically solve radicalism

Kagan, 2003 (Robert, contributing editor for the New Republic, "Why democracy must remain America's goal abroad," The New Republic, June 26, http://www.travelbrochuregraphics.com/extra/the_ungreat_washed.htm)

Zakaria also **blames democracy for** unleashing Islamic **radicalism** and religious conflicts that, he claims, had been kept under control by "liberal autocrats." He cites Indonesia as one such case. Suharto's "strongman" rule was "far more tolerant and secular" than the democracy that followed his overthrow in 1998, and whose "newly open political system has ... thrown up Islamic fundamentalists." **This is** another **historical distortion**. It is true that in the first decades after independence, secularism was part of the Indonesian social compact. But as Jacques Bertrand, the prominent expert on Indonesia, explained in a recent article in Pacific Affairs, the roots of religious conflict in Indonesia can be traced back to the 1980s and 1990s, when Suharto, worried about his increasingly precarious control of the country, deliberately "shifted to Islamic groups for political support." Zakaria himself notes that in Pakistan it was the military dictator Zia ul-Haq who embarked on an "Islamization" program that fostered the militant fundamentalism we know today, and with the funding provided by another dictatorship, the Saudi Arabian monarchy. In an offhanded remark Zakaria even claims that democracy was responsible for the perpetuation of slavery in the United States. "Slavery and segregation were entrenched in the American South through the democratic system," he argues, because "the majority of southern voters defended it passionately." This is a marvelous inversion of history. **Slavery**, in fact, **was perpetuated not by democracy--**slaveholders and their supporters in the South represented a minority of voters in the nation--**but** precisely **by** all **the undemocratic elements of the American** system of **government** that **Zakaria** now **celebrates** and wishes to recover: by one undemocratic clause in the Constitution that counted a nonvoting slave as three-fifths of a voter so as to give Southern states a disproportionate influence in Congress, and by another clause in the Constitution that gave each state two senators regardless of their population, which was also partly designed to give disproportionate weight to the slaveholding South; by **an undemocratic Supreme Court** that consistently **upheld the "liberal" principle that** the slaveholders' human "**property" could not be taken** away by the government, even in non-slave states; and by a Senate, already weighted undemocratically in the South's favor, in which the slave states were capable of thwarting the will of the non-slave-state majority by means of the filibuster and other undemocratic practices. Southern Senators employed those same practices to block civil rights legislation during the century that followed the Civil War.

US JI Doesn't Spillover

US supreme court decisions aren't modeled – the US doesn't engage in international judicial dialogue

Harvard Law Review, 200**1** ("The International Judicial Dialogue: When Domestic Constitutional Courts Join the Conversation," May, 114 Harv. L. Rev. 2049)

The Canadian court's citation in Burns to Justice Breyer's dissent, rather than to any other recent U.S. state or federal court decision regarding the death row phenomenon, n124 suggests that Justice Breyer's willingness to look to outside jurisprudence renders his opinions more influential in foreign and supranational jurisdictions. Conversely, the U.S. Supreme Court's failure to engage in the international judicial dialogue may cause other nations to be less willing to rely on its rulings. The cases discussed in this Part illustrate how the dialogue among domestic and supranational courts has contributed to the formation of legal norms for death penalty cases, and it seems likely that the international judicial conversation will similarly influence the development of other international norms. Cases such as Burns raise the question whether the U.S. Supreme Court's reluctance to engage in dialogue with its foreign counterparts will reduce its ability to shape the conversation about legal norms. Many constitutional courts have been eager to engage in the international judicial dialogue and to take advantage of the opportunity to influence the development of international law, but the U.S. Supreme Court has remained reticent. If taking part in the dialogue allows a court to influence the development of international law, it may seem surprising that the U.S. Supreme Court would be so reluctant to join the conversation. But perhaps the willingness (or unwillingness) of constitutional courts to look to foreign or supranational jurisprudence is explained in part by the way that particular courts view their domestic constitutions. The U.S. Supreme Court seems to regard the [*2073] U.S. Constitution as a document with a uniquely American character, and thus, a document that should not be informed by outside jurisprudence. Courts that have joined the international judicial dialogue, by contrast, seem to perceive their constitutions as documents that "speak to," and listen to, the entire international community.

Foreign models can't effectively produce judicial reform

Chodosh 03 (Hiram, Professor of Law, Director of the Frederick K. Cox International Law Center, Case Western Reserve University School of Law, 38 Tex. Int'l L.J. 587, lexis)

Exposure to foreign systems is helpful but seldom sufficient for effective reform design. Reform models are more likely to be successful if they are not merely copied or transplanted into the system. The argument that transplants are easy and common (though based on substantial historical evidence) profoundly undervalues the relationship between law and external social objectives. 103 Furthermore, reforms conceived as blunt negations of [*606] the status quo are not likely to be successful. 104 Reform proposals based on foreign systems or in reaction to (or as a negation of) recent domestic experience require careful adaptation to local circumstances and conditions. However, most communities are not familiar with the tools of adaptation and tend to think of foreign models as package deals to accept or reject (but rarely to alter), and alterations tend to graft one institution onto another without comprehensive consideration of the system as a whole. 105

Judicial independence alone can't produce effective constitutionalism

Prempeh 06 (Kwasi, Associate Professor of Law, Seton Hall University School of Law, March, 80 Tul. L. Rev. 1239, lexis)

Judicial review is commonly presumed to be a check on the power and conduct of politicians. However, as Alexander Bickel has reminded us, "judicial review means not only that the Court may strike down a legislative action as unconstitutional but also that it may validate it as within constitutionally granted powers and as not violating constitutional limitations." 312 Thus, judicial review "performs not only a checking function but also a legitimating [function]." 313 Therefore the mere grant of judicial review power, even under conditions of judicial independence, offers no assurance that it will be employed to aid the cause of constitutionalism. In the end, the fate of constitutionalism will depend crucially on the philosophic attitudes, background assumptions, and outlook that judges bring to the task of interpreting the constitutional text.

A/T Independence Key to Democracy

Judicial independence makes judges less accountable—this is a recipe for corruption and judicial incompetence

Krotoszynski 06 (Ronald, Professor of Law and Alumni Faculty Fellow, Washington & Lee University School of Law, May, 104 Mich. L. Rev. 1321, lexis)

The final chapter of Judges in Contemporary Democracy addresses the problem of judicial misconduct and judicial discipline. A serious accountability problem arises because the independence necessary to secure the rule of law also insulates corrupt or incompetent judges from appropriate discipline (up to, and including, removal from office). If one secures effective judicial accountability, it almost certainly comes at the price of judicial independence. President Rodriguez Iglesias suggests that judicial independence is crucial to securing the rule of law (pp. 282-84). At the same time, however, some form of judicial accountability must exist to counter judicial malfeasance and misbehavior. "The need to guarantee the judge's independence is difficult to reconcile with the adoption of a proper system of judicial responsibility" (p. 284). Making judges directly accountable to political institutions risks the politicization of the judicial task and ultimately the rule of law itself; leaving judges free to police themselves, on the other hand, risks "corporate solidarity" and a failure to address conduct that undermines the legitimacy of the judiciary (pp. 284-85). "The problem is that the need for judicial independence is hard to reconcile with the creation of a system for assuring responsibility" (p. 302).

Judicial independence ensures an insulated judiciary—this is antithetical to democracy

Re 99 (Edward, Chief Judge Emeritus of the United States Court of International Trade and Distinguished Professor of Law, St. John's University School of Law, Summer, 14 St. John's J.L. Comm. 79, lexis)

Judicial independence was meticulously established by the framers of the Constitution and jealously guarded by all concerned with the administration of justice. 2 Past mechanisms designed to protect that independence, however, may have created the appearance of an insulated, privileged branch of government. Quite apart from legal considerations, the presence of such a class of persons, however small or exceptional, is an anachronism in a modern democracy. Comparatively recent congressional efforts to provide accountability for Federal judges, without infringing on the bounds of necessary judicial independence, culminated in the enactment of the Judicial Councils Reform and Judicial Conduct and Disability Act of 1980. 3

A/T Liberal Democracy Stable

Liberal democracy is inherently and structurally unstable

McGinnis, 20**14** (John O., George C. Dix Professor in Constitutional Law at Northwestern University, "Endless history: The tension in liberal democracy," Library of Law and Liberty, June 11, http://www.libertylawsite.org/2014/06/11/endless-history-the-tension-in-liberal-democracy/)

Fukuyama's defense of his own work is thoughtful, but his original thesis suffers from a problem that is playing out now all over the world. There are inherent tensions in liberal democracy that ensure that history continues. By protecting liberties, liberalism prioritizes individuals, while democracy necessarily prioritizes a collective right—the right of a people to govern themselves and impose obligations and indeed trench on the liberties of others. In a constitutional republic such as ours, we try to resolve that tension by permitting democracy for ordinary politics while enshrining rights that are beyond majority control. But even here with a constitution that has lasted for two hundred years the mixture is unstable. Just consider current conflict between campaign finance regulation and the First Amendment. Around the world the conflict is truly combustible. Fukuyama acknowledges that some nations that looked in the 1990s as if they were moving to liberal democracies are backsliding today, but he does not discuss how this problem reflects in large measure the

basic tension within liberal democracy itself. Take Thailand, one of his examples. There one party wins elections apparently by giving out huge subsidies to supporters—subsides that are not restrained by conceptions of limited government. Or take another example—Turkey—where Prime Minister Erdogan believes that his stalwart religiously inspired majority support permits him to shut down Twitter and engage in other fundamentally illiberal acts. I think we underestimate, too, how much democratic support another autocratic discussed by Fukuyama- Vladimir Putin–enjoys. As my friend Mark Movsesian suggests. Putin sadly does reflect the preferences of Russian people, who do not generally accept our WEIRD (Western,Educated, Industrialized, Rich, Democratic (as defined in liberal democracy)) values. They by and large support his illiberal policies. More generally, the tension between democracy and liberalism will continue to generate new kinds of regimes– new syntheses of the contradictions between liberalism and democracy– depending on culture, religious affiliation and geopolitical position. In his retrospective article, Fukuyuma could also have discussed old Europe more, where democracy has led to economic illiberalism and, consequently, stagnation. As one politician says of the failure of European economic reform, we all know what to do, but we do not know how to be reelected once we do it. Interestingly, Fukuyama complains that democracy in the United States is not working well, specifically that gridlock has led to insufficiently energetic government. But gridlock writ large and our slower-moving politics—the product of bicameralism, the separation of powers, and federalism—protects liberty as much as the provisions of the Bill of Rights. Fukuyama's unhappiness with America as well as with democratic autocracies, like Russia, shows that his thesis has a Goldilocks quality: the world is moving to liberal democracy, but only if the mixture creates the right temperature for both liberalism and democracy. Given their inherent tensions the right mixture is no mean feat to achieve and even if achieved, there is no stable stopping point, as his contemporary examples of backsliding illustrate. History will continue as long as does the conflict between liberalism and democracy, between markets and the state.

A/T Legitimacy Advantage

1NC F/L

Turn – limiting deference undermines effective foreign policy and causes terrorism

Yoo, 20**15** (John, law professor at the University of California, Berkeley, and a visiting scholar at the American Enterprise Institute, "Will Congress Reject Today's Dangerous NSA Ruling by Reauthorizing the Patriot Act?" http://www.nationalreview.com/article/418072/will-congress-reject-todays-dangerous-nsa-ruling-reauthorizing-patriot-act-john-yoo)

A federal appeals court in New York today grievously erred in blocking the National Security Agency's collection of telephone metadata — the calling records, but not the conversations — to detect terrorist attacks. Stripped of its flawed reasoning, the decision shows the blindness of the Left (one that also afflicts some libertarians) to the dire threat of foreign terrorism. Luckily, the decision will be of little import, because Congress will decide shortly whether to reauthorize or modify the NSA program, which will effectively overrule today's ruling even before it reaches the Supreme Court. In ACLU v. Clapper, the Second Circuit Court of Appeals showed its weak grip on reality. In the same week that two men attempted a Charlie Hebdo–like attack in Dallas, the Court indulged in libertarian fantasies of a Big Brother state. In the very introduction to the court's opinion, Judge Gerard Lynch compared electronic surveillance in the wake of the 9/11 attacks to President Richard Nixon's abuse of the NSA and the CIA to pursue the Democratic party and his other political enemies. RELATED: Republicans and the Patriot Act The substance of the opinion begins: "In the early 1970s, in a climate not altogether unlike today's, the intelligence-gathering and surveillance activities of the NSA, the FBI, and the CIA came under public scrutiny." After rehearsing the evils of the Nixon abuses and the investigation of the Church Committee, which set back the intelligence agencies for years, the Court declares: "We are faced today with a controversy similar" to those of the 1970s. ACLU v. Clapper reveals a fundamental and dangerous misunderstanding of the challenges facing the nation today. There were no serious foreign terrorist attacks against the United States in the 1950s through the '70s; the only true threat came from the Soviet Union and its allies. Nixon's abuses came not from his efforts to protect the U.S. in the Cold War, but from his direction of intelligence assets against domestic political opponents. Only someone who has drunk the left-wing Kool-Aid could find equivalence between Watergate and the 9/11 attacks, after which presidents of both parties have ordered electronic-surveillance that has helped prevent another catastrophic terrorist attack on U.S. soil. RELATED: Mike Lee: It's Time to Put an End to the NSA's Bulk Collection of Americans' Metadata The court's comparison looks even worse when one considers Congress's support for the NSA's broad collection of metadata. Like every president before him, Nixon had engaged in electronic surveillance on his own authority. I happen to think that presidents have that power as part of their commander-in-chief authority in wartime, even though it also contains the potential for abuse. After the revelation of the Nixon-era scandals, Congress passed the Foreign Intelligence Surveillance Act in 1978, which requires the government to seek a warrant from a special federal court when it wants to eavesdrop for national-security reasons. Congress passed the Patriot Act in the first few weeks after the 9/11 attacks. Section 215 of the Act specifically expanded FISA to allow the government to seek a warrant to force the production of "any tangible things," including "books, records, papers, documents, and other items." To get the warrant, the government must show "there are reasonable grounds" that the records are "relevant" to a terrorism investigation. In the interests of full disclosure, I worked on the bill (as well as on NSA programs) while an official in the Bush Justice Department from 2001 to 2003. It is difficult to conclude that telephone metadata does not fall within the plain meaning of the statute, as I argued in the Harvard Journal of Law and Public Policy last year. Not only did Congress enact this expansion of FISA in the wake of the 9/11 attacks, it has reenacted and even strengthened it several times since. Most recently, Congress reauthorized Section 215 in 2011, well after the New York Times and other newspapers leaked the existence of the NSA's broad electronic-surveillance programs. To avoid the clear meaning of the law, the Second Circuit pulls a fast one familiar to any fan of Justice Scalia's sharp critiques of sloppy interpretation. The Court finds a bit of legislative history that did not appear in the statute's plain text. It quotes a statement on the floor of the Senate that the Patriot Act would provide the government with the same tools to fight terrorism that it had to fight drug dealers and the mafia, in particular broad grand-jury subpoenas for business records. During the 2006 reauthorization of Section 215, then-senator Jon Kyl of Arizona declared that "it was time to apply to terrorism many of the same kinds of techniques in law enforcement authorities that we already deemed very useful in investigating other kinds of crimes. Our idea was, if it is good enough to investigate money laundering or drug dealing, for example, we sure ought to use those same kinds of techniques to fight terrorists." From this single quote, the Court overturns the plain meaning of Section 215 to narrow the government only to those powers it already has in domestic crimes (which of course do not include the collection of telephone metadata into a database). The Court's reliance on this single snippet would be almost laughably weak if the subject were not so serious. The quote comes, after all, from Jon Kyl, one of the staunchest defenders of the national security, who wanted not to limit Section 215, but merely to illustrate its uses. And it was uttered in 2006 as a description of what Congress thought it had done in 2001, not as a limitation of the statute in 2006 — or 2011, for that matter. The Second Circuit's use of this single quote is a perfect example of why the selective use of legislative history in court rulings has been critiqued as "akin to looking over a crowd and picking out your friends." Finally, the Court displays a deep misunderstanding of the challenges of counterterrorism policy, which Congress understands far better. As Judge Richard Posner has recognized, an intelligence search "is

a search for the needle in a haystack." Rather than pursue suspects who have already committed a crime and whose identity is already known, intelligence agencies must search for clues among millions of potentially innocent connections, communications, and links. "The intelligence services," Posner writes, "must cast a wide net with a fine mesh to catch the clues that may enable the next attack to be prevented." Our government can detect terrorists by examining phone and e-mail communications, as well as evidence of joint travel, shared assets, common histories or families, meetings, and so on. If our intelligence agents locate a lead, they must quickly follow its many possible links to identify cells and the broader network of terrorists. A database of call data would allow a fast search for possible links in the most important place — the United States, where terrorists can inflict the most damage. Most of the calling records may well be innocent (just as most of the financial records of a suspected white-collar criminal may also be innocent), but the more complete the database, the better our intelligence agencies can pursue a lead into the U.S. I admit that there are serious legal issues surrounding the NSA metadata program. The least serious is whether Congress has approved the NSA program — it clearly has, several times, by giving the government the broadest authority to collect "any tangible things" relevant to terrorism investigations. The more important question is whether our society should strike this balance of security and liberty. That fundamental question falls to Congress and the president, which have far superior knowledge and competence in dealing with foreign national-security threats and better reflect the wishes of the American people. The courts will have a role when legal challenges arise under the Fourth Amendment, but they have usually displayed deference to the president and Congress when they agree on national-security questions. Judicial modesty was sorely lacking in the court's decision today. Luckily, the elected branches of government will have ample opportunity to overrule the Second Circuit. Congress was already scheduled to reauthorize Section 215 in the next three weeks; otherwise, the law will sunset in June. The Senate may favor a bill that simply reauthorizes the Patriot Act, which should give it the chance to make clear it rejects the Court's ruling. The House might require that telecom companies hold the database, which would still amount to a rejection of the Second Circuit's decision. Or the decision could embolden critics of electronic surveillance, who were otherwise going to lose the debate, into gumming up the works and allowing the law to expire. In that worst possible result, our judges would bear responsibility for disarming our nation at a time when foreign threats are on the rise and attacks in the U.S. are in the offing.

Turn – Soft power causes complacency and internal divisions that decrease hegemony.

Michael et al, 20**14** (Bryane, senior research fellow, SKOLKOVO Institute for Emerging Market Studies, Christopher Hartwell, Head of Global Markets and Institutional Research, SKOLKOVO Institute for Emerging Market Studies, and Bulat Nureev, Deputy director at the SKOLKOVO Institute for Emerging Market Studies, "Soft Power: A Double-Edged Sword?" BRICS, No. 5, http://bricsmagazine.com/en/articles/soft-power-a-double-edged-sword)

While digital density may show how soft power is spread, the reality of soft power and its exercise is a complex issue. In much of the research, and especially in the popular press, soft power is shown as an unmitigated good: a country wants to have soft power, it should acquire soft power, and it improves its standing in the world through the exercise of soft power. However, it is possible that soft power may hurt, as well as help, a country, especially if its acquisition obscures the need to cultivate hard power as well. Additionally, soft power could lull a country's leaders into a false sense of security. While being respected abroad may help to smooth over some difficulties, it can also lead to complacency. As the English adages have it, countries should not believe their own press, or rest on their laurels. This reality has been observed both in the trends in our data, as well as in the real-life example of Ukraine. Soft power, like all power, has its good and bad sides Ukraine illustrates the paradoxes and prospects of soft power. It ranks in our top 20, compiled just before the recent unrest. Its soft power has made it attractive to both the EU and Russia, but has also made it the cynosure of all eyes, leading to a internal struggle for the rewards of that power. BRICS economies – and those learning from them, like Ukraine – must learn how to manage the risks as well as the returns that soft power provides, both at home and abroad. Ukraine has seen an increase in international soft power since its independence in 1991, carefully balancing Russian and European Union interests but drawing on its location, large population, and large foreign émigré base to give the country a voice in international affairs larger than its GDP alone may warrant. Even as the country itself has endured political and economic stagnation, the reputation of Ukraine as a bridge between East and West has survived. Successes such as the peaceful separation from the Soviet Union, coupled with ultimately successful negotiations to denuclearize the country, have also raised Ukraine's visibility in the world. For example, Ukraine was the first former Soviet republic to co-host the UEFA European

Championship, along with the more westernized Poland. Yet, while Ukraine's soft power has been directed externally and raised the country's standing in the eyes of the world, a successive run of Ukrainian leaders could not translate this international standing into tangible successes within the country. Like countries further east that have been plagued with political instability, Ukraine has seen itself undergo two political revolutions, the first leaving it even worse off economically than before. In terms of its economy, the country has stagnated due to corruption, lack of structural reforms, and a reliance on Soviet-era heavy manufacturing – all issues which have led to discontent and a disconnect with the country's image abroad. The current turmoil in the country, which appears to be split along geographic lines, also appears to be a result of the source of Ukraine's soft power. The same balancing act between the EU and Russia which gave Ukraine its soft power internationally looks ready to tear the country apart. Like all investments, those in soft power have both risks and returns, but in Ukraine's case the reality of the country has diverged from its image abroad. Unfortunately, in such a situation, reality always wins.

Soft power doesn't affect hegemony – leaders can't translate soft power into policymaking

Ford, 20**12** (Christopher A., Senior fellow at Hudson Institute in Washington DC, "Soft on 'Soft Power,'" SAIS Review of International Affairs, Vol. 32, No. 1, Winter-Spring)

The problem here is twofold, and does not necessarily entail any criticism of the idea that in some meaningful sense, a nation's aggregate impact in the world is significantly dependent upon economic, cultural, moral, and political factors. Rather, the problem lies with the assumptions that "soft power" per se can be relied upon by U.S. policymakers to advance their agenda and that the United States enjoys a "soft power" advantage in perhaps the world's most important bilateral relationship, that with the People's Republic of China. Given Washington's finite political capital, high-level attention, budget dollars, and the degree to which either assumption proves faulty, the current U.S. focus on "soft power" approaches, may be a mistaken priority. The concept of "soft power" as a sort of aggregate measurement of a country's overall socio-political clout in the world retains some utility as an analytical tool. Billions of people worldwide recognize iconic American brands such as McDonald's and Coca-Cola, watch movies made in Hollywood, and the United States remains the world's largest economy in an age of profound globalization. Such pervasive contact with the non-American world surely counts for something in assessing the United States' impact in global affairs. It is less clear, however, what to make of "soft power" from the perspective of a U.S. policymaker, whose natural inclination will presumably be to ask what he or she can do with all this "power." It is one thing, after all, to posit that the appeal of American values, the model offered by its political system, the broad presence of its brands overseas, and its pop cultural exports help in some vague and very general way predispose foreign publics toward things of which U.S. policymakers approve (e.g., consumerist democracy) and ultimately lead to a greater convergence of interests in world affairs. It is quite another to hold out reliance upon "soft power" as a means by which an American policymaker can accomplish any specific policy objective. In this sense, it is far from clear that "soft power" always deserves to be spoken of in the same breath as "hard power" when discussing forms of power that can actually be used for articulated ends. Diplomatic engagement, of course, can be so used, as influence and persuasion is its express purpose. Foreign aid is frequently and more or less plausibly alleged to form a critical element of the United States' "ability to influence the world," and an essential component of its "soft power."11 Just how effective these tools are can of course be debated, but there is little doubt that they are tools that [End Page 93] can be purposefully used by policymakers. Yet, not all supposed aspects of "soft power" can be so directed. This problem has received too little attention. To what extent is "soft power" actually something that our national leadership can use to influence other countries or shape the international environment? This question is, central to distinguishing "soft power" from mere impact. If one considers "soft power" analogous to and at least partially substitutable for the "hard power" of military force, its ability to be used is inescapably important. Many things about the United States may have great impact on others, but unless our national leadership can shape or steer that impact, it is difficult to describe it as a tool of national power. The distinction is important because when viewed through this prism of usability, much of what is considered the United States' "soft power" fails the test. Indeed, in a developed democracy such as our own, some of the most important and dynamic aspects of society frequently associated with our strengths, including the media, business, financial and cultural sectors, are conspicuous because they cannot be purposefully "steered" by the U. S. government in a significant way.

Deference Good – Readiness

Deference is key to readiness – turns the hege advantage

Wilkinson, 1996 (Chief Judge, U.S. Court of Appeals, Fourth Circuit, Thomasson v. Perry, Majority Opinion, 80 F.3d 915, 4/5, http://www.ncgala.org/cases/thomasson.htm)

Aside from the Constitution itself, the need for deference also arises from the unique role that national defense plays in a democracy. Because our nation's very preservation hinges on decisions regarding war and preparation for war, the nation collectively, as expressed through its elected officials, faces "'the delicate task of balancing the rights of servicemen against the needs of the military.'" Weiss, supra (quoting Solorio v. United States, 483 U.S. 435, 447-48 (1987)). To the degree that the judiciary is permitted to circumscribe the national security options of our elected officials, it "decreases the ability of the political branches to impose their will on another [nation and at] the worst, it permits the imposition of the will of another [nation] on the United States." James M. Hirschhorn, "The Separate Community: Military Uniqueness and Servicemen's Constitutional Rights," 62 N.C. L. Rev. 177, 237-238 (1983). After all, "unless a society has the capability . . . to defend itself from the aggressions of others, constitutional protections of any sort have little meaning." Wayte v. United States, 470 U.S. 598, 612 (1985). National defense decisions not only implicate each citizen in the most profound way. Such decisions also require policy choices, which the legislature is equipped to make and the judiciary is not. "Congress, working with the Executive Branch, has developed a system of military criminal and administrative law that carefully balances the rights of individual servicemembers and the needs of the armed forces." Sam Nunn, "The Fundamental Principles of the Supreme Court's Jurisprudence in Military Cases," 29 Wake Forest L. Rev. 557, 566 (1994). While Congress and the President have access to intelligence and testimony on military readiness, the federal judiciary does not. While Congress and the members of the Executive Branch have developed a practiced expertise by virtue of their day-to-day supervision of the military, the federal judiciary has not. The judiciary has no Armed Services Committee, Foreign Relations Committee, Department of Defense, or Department of State. As the Supreme Court has noted, "the lack of competence on the part of the courts [with respect to military judgments] is marked." Rostker, supra. In fact, It is difficult to conceive of an area of governmental activity in which the courts have less competence. The complex, subtle, and professional decisions as to the composition, training, equipping, and control of a military force are essentially professional military judgments, subject always to civilian control of the Legislative and Executive Branches. Gilligan v. Morgan, 413 U.S. 1, 10 (1973). Finally, the imprimatur of the President, the Congress, or both imparts a degree of legitimacy to military decisions that courts cannot hope to confer. Even when there is opposition to a proposed change --as when Congress abolished flogging in the 19th century or when President Truman ended the military's racial segregation in 1948, see Hirschhorn, supra --the fact that the change emanates from the political branches minimizes both the likelihood of resistance in the military and the probability of prolonged societal division. In contrast, when courts impose military policy in the face of deep social division, the nation inherently runs the risk of long-term social discord because large segments of our population have been deprived of a democratic means of change. In the military context, such divisiveness could constitute an independent threat to national security. Parallel to the deference owed Congressional and Presidential policies is deference to the decision-making authority of military personnel who "have been charged by the Executive and Legislative Branches with carrying out our Nation's military policy." Goldman v. Weinberger, 475 U.S. 503, 508 (1986). Judicial interference with the subordinate decisions of military authorities frustrates the national security goals that the democratic branches have sought to achieve. The Supreme Court has recognized the need for deference when facing challenges to a variety of military decisions: a policy that prohibited the wearing of headgear in certain circumstances, Goldman, supra (noting that the military is "a specialized society separate from civilian society"); an Air Force regulation that required service members to obtain permission before circulating petitions on bases, Brown v. Glines, 444 U.S. 348, 357 (1980) (noting that "the military must possess substantial discretion over its internal discipline"); a base policy that prohibited certain political activity on base premises, Greer v. Spock, 424 U.S. 828, 837 (1976) (noting "the special constitutional function of the military in our national life"); and military court-martial proceedings, Schlesinger v. Councilman, 420 U.S. 738, 757 (1975) (noting that "to prepare for and perform its vital role, the military must insist upon a respect for duty and discipline without counterpart in civilian life"). The need for deference also derives from the military's experience with the particular exigencies of military life. Among these is the attainment of unit cohesion--"the subordination of personal preferences and identities in favor of the overall group mission" and "the habit of immediate compliance with military procedures and orders." Goldman, supra.

Should the judiciary interfere with the intricate mix of morale and discipline that fosters unit cohesion, it is simply impossible to estimate the damage that a particular change could inflict upon national security--"there is no way to determine and correct the mistake until it has produced the substantial and sometimes irreparable cost of [military] failure." Hirschhorn, supra.

Deference is key to readiness.

Hudson, 1999 (Major Walter M, Judge Advocate General's Corps of the United States Army and Instructor of the Criminal Law Department, Military Law Review Volume 159, March, l/n)

By granting the elected branches plenary and command power over the military, the Constitution links military control to the democratic will and the democratic process. Because the people will feel the burden of war, the elected branches can best respond to that will.223 Furthermore, in granting power to the elected branches to control the military, the Constitution acknowledges that the elected branches grant a degree of legitimacy to military policy that courts cannot. These elected branches can best reflect and respond to the societal consensus, a particularly relevant and important concern when dealing with national security.224 Of the three branches, the judiciary has the least competence to evaluate the military's formation, training, or command. It has, as one court stated, "no Armed Services Committee, Foreign Relations Committee, Department of Defense, or Department of State" nor does it have the same access to intelligence and testimony on military readiness as does Congress or the President.225 The Supreme Court has thus repeatedly cited its own lack of competence to evaluate military affairs.226 To analyze the oft-criticized judicial deference to military matters, it is important to understand the structural differences between the ability of the elected branches and the courts to determine policy. The elected branches use regulatory decision making to determine policy. Regulatory decision-making, which is the creation of administrative policy through internal-rule formation, is a far more efficient means of policy making than adjudicated decisions.227 There are several problems with adjudication as a means of rule making. Adjudication is more costly and more time consuming. Years and millions of dollars can be spent in litigating one issue that involves one individual.228 Adjudication concerns itself with an individual remedy based upon "a small set of controverted facts'' that are highly contextual and may or may not be applicable to a larger class of individuals.229 Furthermore, adjudication sets up elaborate procedures according to its ultimate goal-to determine whether a particular individual should prevail in a particular case.23o Dissenters, in particular Justice Brennan, have asserted that the Court decides issues that are far more technically complicated than adjudicating rather straightforward rules on di~cipline.~~' Yet that argument does not address rules formation in an administrative, as opposed to an adjudicative, system. Military policy-making is, by its nature, meant to do precisely what administrative policy-making does: allocate rights, benefits, and sanctions, among large groups using consistent standards.232 What makes military policy making along administrative rule-making lines even more advantageous is that the military's primary concern is ensuring military discipline and combat effectiveness of units, rather than focusing primarily on individuals themselves. Applying consistent and predetermined norms among large groups is what administrative rule making is best equipped to do.233 Where Brennan's argument may appear to be the most persuasive is where the potential "penalties" cut into the interests that the adjudicative process is best suited to protect-namely, constitutional protections. In dealing with constitutional protections, individual rights often trump majority concerns. Discerning whether individuals should be granted these protections may not be particularly complex, on the surface.234 When viewing the grant of constitutional protections in relation to the military's goal-successful combat operations-this argument loses force. This is because "simplicity" as defined in civilian contexts often does not have the same meaning in the military context. Clausewitz, the Prussian general and author of the military classic, On War, once famously stated: "Everything in war is very simple, but the simplest thing is Clausewitz terms all the uncertainties and problems that accompany wartime operations as Friction can be defined as the "realm of uncertainty and chance, even more [is] it the realm of suffering, confusion, exhaustion, and fear"237 that accompanies military wartime operations. All these exist to a much higher degree in war, because, as Clausewitz points out, in war, not only is chance and uncertainty a con- ~tant,*~* but also one side is trying to impose its will on its opponent, which is an "animate object that reacts."239 In other words, in war, you are seeking to overcome an opponent who is reacting to (and may be anticipating) your movements, who is trying not only to defeat but to destroy you, and who may not be constrained by your own laws, customs, and behavior. It is not thus simply the lack of judicial competence in military affairs, but the effects that the lack of competence may have that is an additional "friction" in the military environment. The problem in applying a standard of review similar to the kind used for civilian society is not just that the court may err, but the ramifications of such an error given the uncertainty of conflict.240 An error in military policy making could impede military effectiveness and thereby jeopardize national security.241 These judicial decisions put the courts squarely into the political arena. Judges unwittingly become "strategists"-unelected and ill-equipped officials deciding matters of potentially ultimate importance. Judicial deference, therefore, is generally appropriate to military decision- making, and in particular, a unit

commander's decision-making on extremism. Extremism's disproportionate impact on the community where it occurs is an impact that can only be magnified in a military unit. The best way to appreciate that impact is to look at the gravest danger posed by racial extremists-the violent hate crime. If the courts rely solely on the statistics that compare the few numbers of bias crimes committed in relation to total crimes, they may be misled about the effect on good order and discipline.242 The courts may not be aware of the totality of information about extremist hate crimes. The vast majority of bias-oriented crimes are crimes against persons, not property. These crimes are also more likely to involve physical assault than non-bias crimes.243 Usually, at least four or more individuals commit them.244 The median age group is among young Loosely associated individuals, not organized extremist groups, commit most hate crimes.246 Furthermore, the most explosive element about the crimes is not necessarily the criminal act. Rather, the race or bias motivation can cause a community to polarize and even to explode.247 This impact is essential to the military's need for judicial deference to extremist policies-at both the local commander policy level and the Army policy level.

Soft Power Bad – Blowback

Turn – soft power still causes blowback because of cultural associations

Gray, 20**11**(Colin S., Professor of International Politics and Strategic Studies at the University of Reading, England, "Hard Power and Soft Power," Strategic Studies Institute, http://www.strategicstudiesinstitute.army.mil/pdffiles/PUB1059.pdf)

The seeming validity and attractiveness of soft power lead to easy exaggeration of its potency. Soft power is admitted by all to defy metric analysis, but this is not a fatal weakness. Indeed, the instruments of hard power that do lend themselves readily to metric assessment can also be unjustifiably seductive. But the metrics of tactical calculation need not be strategically revealing. It is important to win battles, but victory in war is a considerably different matter than the simple accumulation of tactical successes. Thus, the burden of proof remains on soft power: (1) What is this concept of soft power? (2) Where does it come from and who or what controls it? and (3) Prudently assessed and anticipated, what is the quantity and quality of its potential influence? Let us now consider answers to these questions. 7. Soft power lends itself too easily to mischaracterization as the (generally unavailable) alternative to military and economic power. The first of the three questions posed above all but invites a misleading answer. Nye plausibly offers the co-option of people rather than their coercion as the defining principle of soft power.38 The source of possible misunderstanding is the fact that merely by conjuring an alternative species of power, an obvious but unjustified sense of equivalence between the binary elements is produced. Moreover, such an elementary shortlist implies a fitness for comparison, an impression that the two options are like-for-like in their consequences, though not in their methods. By conceptually corralling a country's potentially attractive co-optive assets under the umbrella of soft power, one is near certain to devalue the significance of an enabling context. Power of all kinds depends upon context for its value, but especially so for the soft variety. For power to be influential, those who are to be influenced have a decisive vote. But the effects of contemporary warfare do not allow recipients the luxury of a vote. They are coerced. On the other hand, the willingness to be coopted by American soft power varies hugely among recipients. In fact, there are many contexts wherein the total of American soft power would add up in the negative, not the positive. When soft power capabilities are strong in their values and cultural trappings, there is always the danger that they will incite resentment, hostility, and a potent "blowback." In those cases, American soft power would indeed be strong, but in a counterproductive direction. These conclusions imply no criticism of American soft power per se. The problem would lie in the belief that soft power is a reliable instrument of policy that could complement or in some instances replace military force.

Soft power causes resentment; doesn't increase influence

Joffe, 200**6** (Josef, publisher-editor of the German weekly Die Zeit, "The perils of soft power," NYT, May 14, http://www.nytimes.com/2006/05/14/magazine/14wwln_lede.html?ei=5090&en=4680e76f268e503d&ex=1305259200&partner=rssuserland&emc=rss&pagewanted=print&_r=0)

In recent years, a number of American thinkers, led by Joseph S. Nye Jr. of Harvard, have argued that the United States should rely more on what he calls its "soft power" — the contagious appeal of its ideas, its culture and its way of life — and so rely less on the "hard power" of its stealth bombers and aircraft carriers. There is one problem with this argument: soft power does not

necessarily increase the world's love for America. It is still power, and it can still make enemies. America's soft power isn't just pop and schlock; its cultural clout is both high and low. It is grunge and Google, Madonna and MoMA, Hollywood and Harvard. If two-thirds of the movie marquees carry an American title in Europe (even in France), dominance is even greater when it comes to translated books. The figure for Germany in 2003 was 419 versus 3,732; that is, for every German book translated into English, nine English-language books were translated into German. It used to be the other way around. A hundred years ago, Humboldt University in Berlin was the model for the rest of the world. Tokyo, Johns Hopkins, Stanford and the University of Chicago were founded in conscious imitation of the German university and its novel fusion of teaching and research. Today Europe's universities have lost their luster, and as they talk reform, they talk American. Indeed, America is one huge global "demonstration effect," as the sociologists call it. The Soviet Union's cultural presence in Prague, Budapest and Warsaw vanished into thin air the moment the last Russian soldier departed. American culture, however, needs no gun to travel. There may be little or no relationship between America's ubiquity and its actual influence. Hundreds of millions of people around the world wear, listen, eat, drink, watch and dance American, but they do not identify these accouterments of their daily lives with America. A Yankees cap is the epitome of things American, but it hardly signifies knowledge of, let alone affection for, the team from New York or America as such. The same is true for American films, foods or songs. Of the 250 top-grossing movies around the world, only four are foreign-made: "The Full Monty" (U.K.), "Life Is Beautiful" (Italy) and "Spirited Away" and "Howl's Moving Castle" (Japan); the rest are American, including a number of co-productions. But these American products shape images, not sympathies, and there is little, if any, relationship between artifact and affection. If the relationship is not neutral, it is one of repulsion rather than attraction — the dark side of the "soft power" coin. The European student movement of the late 1960's took its cue from the Berkeley free-speech movement of 1964, the inspiration for all post-1964 Western student revolts. But it quickly turned anti-American; America was reviled while it was copied. Now shift forward to the Cannes Film Festival of 2004, where hundreds of protesters denounced America's intervention in Iraq until the police dispersed them. The makers of the movie "Shrek 2" had placed large bags of green Shrek ears along the Croisette, the main drag along the beach. As the demonstrators scattered, many of them put on free Shrek ears. "They were attracted," noted an observer in this magazine, "by the ears' goofiness and sheer recognizability." And so the enormous pull of American imagery went hand in hand with the country's, or at least its government's, condemnation. Between Vietnam and Iraq, America's cultural presence has expanded into ubiquity, and so has the resentment of America's soft power. In some cases, like the French one, these feelings harden into governmental policy. And so the French have passed the Toubon law, which prohibits on pain of penalty the use of English words — make that D.J. into a disque-tourneur. In 1993, the French coaxed the European Union into adding a "cultural exception" clause to its commercial treaties exempting cultural products, high or low, from normal free-trade rules. Other European nations impose informal quotas on American TV fare.

No Solve Soft Power

Soft Power fails – others view the US cumulatively and individual policies can't change views

Gray, 20**11**(Colin S., Professor of International Politics and Strategic Studies at the University of Reading, England, "Hard Power and Soft Power," Strategic Studies Institute, http://www.strategicstudiesinstitute.army.mil/pdffiles/PUB1059.pdf)

The second question above asked about the provenance and ownership of soft power. Nye correctly notes that "soft power does not belong to the government in the same degree that hard power does." He proceeds sensibly to contrast the armed forces along with plainly national economic assets with the "soft power resources [that] are separate from American government and only partly responsive to its purposes." 39 Nye cites as a prominent example of this disjunction in responsiveness the fact that "[i]n the Vietnam era . . . American government policy and popular culture worked at cross-purposes."40 Although soft power can be employed purposefully as an instrument of national policy, such power is notably unpredictable in its potential influence, producing net benefit or harm. Bluntly stated, America is what it is, and there are many in the world who do not like what it is. The U.S. Government will have the ability to project American values in the hope, if not quite confident expectation, that "the American way" will be found attractive in alien parts of the world. Our hopes would seem to be achievement of the following: (1) love and respect of American ideals and artifacts (civilization); (2) love and respect of America; and (3) willingness to cooperate with American policy today and tomorrow. Admittedly, this agenda is reductionist, but the cause and desired effects are accurate enough. Culture is as culture does and speaks and produces. The soft power of values culturally expressed that others might find attractive is always at risk to negation by the evidence of national deeds that appear to contradict our cultural persona. Moreover, no contemporary U.S.

government owns all of America's soft power—a considerable understatement. Nor do contemporary Americans and their institutions own all of their country's soft power. America today is the product of America's many yesterdays, and the worldwide target audiences for American soft power respond to the whole of the America that they have perceived, including facts, legends, and myths.41 Obviously, what they understand about America may well be substantially untrue, certainly it will be incomplete. At a minimum, foreigners must react to an American soft power that is filtered by their local cultural interpretation. America is a future- oriented country, ever remaking itself and believing that, with the grace of God, history moves forward progressively toward an ever-better tomorrow. This optimistic American futurism both contrasts with foreigners' cultural pessimism—their golden ages may lie in the past, not the future—which prevails in much of the world and is liable to mislead Americans as to the reception our soft power story will have.42 Many people indeed, probably most people, in the world beyond the United States have a fairly settled view of America, American purposes, and Americans. This locally held view derives from their whole experience of exposure to things American as well as from the features of their own "cultural thoughtways" and history that shape their interpretation of American-authored words and deeds, past and present.43

Innovation sustainable from multiple sources

AreaDevelopmentOnline, 2010 ("The Recovery act: transforming the American economy through innovation," August 25, http://www.areadevelopment.com/StudiesResearchPapers/8-25-2010/recovery-act-transforming-american-economy3694.shtml)

The American **R**ecovery and **R**einvestment **A**ct **is one of the single largest investments in the U.S. economy** in the country's history. **The act's $787 billion** of funding **aims to improve** a number of sectors, including **transportation, clean energy, and information** and communications technology. The act's three-fold approach — to rescue the economy, to put the country on a path to recovery, and to reinvest in the country's long-term economic future — is already stimulating the economy. This August report from the Offices of the President and Vice President provides an update on the progress of recovery. **The act's transportation investments focus on renewables**. The government has invested more than $2 billion in advanced battery and electric drive component manufacturing. In 2009, there were only two advanced vehicle battery plants in the country. By 2012, there will be 30. The Advanced Vehicles Manufacturing program gives another $2.4 billion to Fisker, Nissan, and Tesla to build electric car factories in Delaware, Tennessee, and California, respectively. Section 1603 grants are boosting wind and solar energy capacity. More than $3 billion in grants have been extended to more than 100 wind projects in 30 states. The program also supports more than 200 megawatts of solar projects that are already delivering power to consumers. To improve information technologies, the government granted $4.4 billion to the Department of Commerce and $2.5 billion to the Department of Agriculture to improve broadband connectivity in rural areas. **Millions of Americans will have improved access to broadband due to those funds.**

Constitutional protection doesn't solve privacy

Schlanger, 2015 (Margo, Henry M. Butzel Professor of Law, University of Michigan, "Intelligence legalism and the national security agency's civil liberties gap," 6 Harvard National Security Journal 112)

Consider, first, the Constitution, as interpreted by the courts. Those who answer charges of surveillance overreach by emphasizing the constitutionality of the contested conduct—which is to say, nearly every federal official who has defended the NSA in recent months—are essentially arguing that constitutional law sets not individual rights minima, but rather, perhaps even definitionally, the right civil liberties policy. If this were correct, optimal policy could be implemented by a robust compliance infrastructure. The best civil liberties path might, for example, be simply to augment judicial review, perhaps by cutting through the large variety of litigation barriers (including doctrines of ripeness, finality, standing, justiciability, state secrets, and limits on inferred private rights of action) that often impede judicial supervision. The problem is that to assume, as this view does, that "constitutional" and "good" are the same is to mistake the role of constitutional law.267 The distance between "constitutional" and "good" is a matter of both method and purpose. Methodologically, many of the constitutional considerations—precedent, text, framers' intent, and so on— are irrelevant to policy evaluation. Courts may well also "lack the institutional capacity to easily grasp the privacy implications of new technologies they encounter," as Orin Kerr has argued at length.268 But even when courts include policy analysis in their decision-making, constitutional decisions at least purport to be more about "can" than about "should." That is why Fourth Amendment caselaw, notwithstanding its policy-heavy reasonableness inquiry, is formulated to give the government a good deal of leeway269—both for mistakes270 and for differences of opinion.271 Indeed, it is only to be expected that courts are likely to err on the side of nonintervention in constitutional cases. The remedial rigor that is at least the symbolic entailment of a right must on the margin discourage rights declaration 272 ; declaring something to be a "right" ups the stakes considerably, discouraging partial solutions. So while constitutional law and court enforcement of it sometimes

advance individual liberty with respect to particular issue or in some cases, there is likely to be considerable distance between optimal policy and the constitutional floor. To quote one summary, again by Orin Kerr, "we should not expect the Fourth Amendment alone to provide adequate protections against invasions of privacy made possible by law enforcement use of new technologies. . . . Additional privacy protections are needed to fill the gap between the protections that a reasonable person might want and what the Fourth Amendment actually provides."273

No impact to US competitiveness- it's all hype

Krugman '11 [Paul, Nobel Prize-winning economist, professor of Economics and International Affairs at Princeton University, received his B.A. from Yale University in 1974 and his Ph.D. from MIT in 1977. He has taught at Yale, MIT and Stanford. At MIT he became the Ford International Professor of Economics, "The Competition Myth," 1-24-11, http://www.nytimes.com/2011/01/24/opinion/24krugman.html?_r=0]

Meet the new buzzword, same as the old buzzword. In advance of the State of the Union, President Obama has telegraphed his main theme: competitiveness. The President's Economic Recovery Advisory Board has been renamed the President's Council on Jobs and Competitiveness. And in his Saturday radio address, the president declared that "We can out-compete any other nation on Earth." This may be smart politics. Arguably, Mr. Obama has enlisted an old cliché on behalf of a good cause, as a way to sell a much-needed increase in public investment to a public thoroughly indoctrinated in the view that government spending is a bad thing.¶ But let's not kid ourselves: talking about "competitiveness" as a goal is fundamentally misleading. At best, it's a misdiagnosis of our problems. At worst, it could lead to policies based on the false idea that what's good for corporations is good for America.¶ About that misdiagnosis: What sense does it make to view our current woes as stemming from lack of competitiveness?¶ It's true that we'd have more jobs if we exported more and imported less. But the same is true of Europe and Japan, which also have depressed economies. And we can't all export more while importing less, unless we can find another planet to sell to. Yes, we could demand that China shrink its trade surplus — but if confronting China is what Mr. Obama is proposing, he should say that plainly.¶ Furthermore, while America is running a trade deficit, this deficit is smaller than it was before the Great Recession began. It would help if we could make it smaller still. But ultimately, we're in a mess because we had a financial crisis, not because American companies have lost their ability to compete with foreign rivals.¶ But isn't it at least somewhat useful to think of our nation as if it were America Inc., competing in the global marketplace? No.¶ Consider: A corporate leader who increases profits by slashing his work force is thought to be successful. Well, that's more or less what has happened in America recently: employment is way down, but profits are hitting new records. Who, exactly, considers this economic success?¶ Still, you might say that talk of competitiveness helps Mr. Obama quiet claims that he's anti-business. That's fine, as long as he realizes that the interests of nominally "American" corporations and the interests of the nation, which were never the same, are now less aligned than ever before.¶ Take the case of General Electric, whose chief executive, Jeffrey Immelt, has just been appointed to head that renamed advisory board. I have nothing against either G.E. or Mr. Immelt. But with fewer than half its workers based in the United States and less than half its revenues coming from U.S. operations, G.E.'s fortunes have very little to do with U.S. prosperity.¶ By the way, some have praised Mr. Immelt's appointment on the grounds that at least he represents a company that actually makes things, rather than being yet another financial wheeler-dealer. Sorry to burst this bubble, but these days G.E. derives more revenue from its financial operations than it does from manufacturing — indeed, GE Capital, which received a government guarantee for its debt, was a major beneficiary of the Wall Street bailout.¶ So what does the administration's embrace of the rhetoric of competitiveness mean for economic policy?¶ The favorable interpretation, as I said, is that it's just packaging for an economic strategy centered on public investment, investment that's actually about creating jobs now while promoting longer-term growth. The unfavorable interpretation is that Mr. Obama and his advisers really believe that the economy is ailing because they've been too tough on business, and that what America needs now is corporate tax cuts and across-the-board deregulation.¶ My guess is that we're mainly talking about packaging here. And if the president does propose a serious increase in spending on infrastructure and education, I'll be pleased.¶ But even if he proposes good policies, the fact that Mr. Obama feels the need to wrap these policies in bad metaphors is a sad commentary on the state of our discourse.¶ The financial crisis of 2008 was a teachable moment, an object lesson in what can go wrong if you trust a market economy to regulate itself. Nor should we forget that highly regulated economies, like Germany, did a much better job than we did at sustaining employment after the crisis hit. For whatever reason, however, the teachable moment came and went with nothing learned.¶ Mr. Obama himself may do all right: his approval rating is up, the economy is showing signs of life, and his chances of re-election look pretty good. But the ideology that brought economic disaster in 2008 is back on top — and seems likely to stay there until it brings disaster again.

Tech high

Tech innovation sustainable

One India, 20**10** ("US to compete with India, china in R&D," September 15, http://news.oneindia.in/2010/09/15/us-to-compete-india-china-in-development.html)

Washington, Sep 15: President Barack **Obama** said his administration **had made the largest investment in research and development so that the US can compete with China, India and Germany**. In an appearance at a private home, he said what his administration had "tried to do to lay this foundation for long-term economic growth is to put our investments in those things that are really going to make us more competitive over the long term." "So we have made the largest investment in research and development, in basic research and science, in our history, because that's going to determine whether we can compete with China and India and Germany over the long term," he said. **Today people around the world "still want to be the U**nited **S**tates of America," he said, "as we still have a huge competitive edge and we've got the best workers in the world. And we've got the most dynamic economy in the world. **We've got the best universities, the best entrepreneurs in the world**." he added.

Competitiveness Wrong

Competitiveness theory wrong

Bhide, 9 [Amar, Glaubinger Professor of Business at Columbia University, editor of Capitalism and Society, member of the Council on Foreign Relations, and author of The Origin and Evolution of New Businesses, " The Venturesome Economy: How Innovation Sustains

Prosperity in a More Connected World," Journal of Applied Corporate Finance • Volume 21 Number 1, Winter 2009]

The techno-nationalist claim that U.S. prosperity requires that the country "maintain its scientific and technological lead" is particularly dubious: the argument fails to recognize that the development of scientific knowledge or cutting-edge technology is not a zero-sum competition. The results of scientific research are available at no charge to anyone anywhere in the world. Most arguments for the public funding of scientific research are in fact based on the unwillingness of private investors to undertake research that cannot yield a profit. Cutting-edge technology (as opposed to scientific research) has commercial value because it can be patented; but patent owners generally don't charge higher fees to foreign licensors. The then tiny Japanese company Sony was one of the first licensors of Bell Labs' transistor patent. Sony paid all of $50,000—and only after first obtaining special permission from the Japanese Ministry of Finance—for the license that started it on the road to becoming a household name in consumer electronics. Moreover, if patent holders choose not to grant licenses but to exploit their inventions on their own, this does not mean that the country of origin secures most of the benefit at the expense of other countries. Suppose IBM chooses to exploit internally, instead of licensing, a breakthrough from its China Research Laboratory (employing 150 research staff in Beijing). This does not help China and hurt everyone else. Rather, as I discuss at length later, the benefits go to IBM's stockholders, to employees who make or market the product that embodies the invention, and—above all—to customers, who secure the lion's share of the benefit from most innovations. These stockholders, employees, and customers, who number in the tens of millions, are located all over the world. In a world where breakthrough ideas easily cross national borders, the origin of ideas is **inconsequential**. Contrary to Thomas Friedman's assertion, it does not matter that Google's search algorithm was invented in California. After all, a Briton invented the protocols of the World Wide Web—in a lab in Switzerland. A Swede and a Dane in Tallinn, Estonia, started Skype, the leading provider of peer-to-peer Internet telephony. How did the foreign origins of these innovations harm the U.S. economy?

Competitiveness not key to heg

Brooks and Wohlforth '8 - Brooks is Assistant Professor AND*** William C. Wohlforth is Professor in the Department of Government at Dartmouth College [Stephen G., "World out of Balance, International Relations and the Challenge of American Primacy," p. 32-35]

American primacy is also rooted in the county's position as the world's leading technological power. The United States remains dominant globally in overall R&D investments, high-technology production, commercial first decade of this century. As we noted in chapter 1, this was partly the result of an Iraq-induced doubt about the utility of material predominance, a doubt redolent of the post-Vietnam mood. In retrospect, many assessments of U.S. economic and technological prowess from the 1990s were overly optimistic; by the next decade important potential vulnerabilities were evident. In particular, chronically imbalanced domestic finances and accelerating public debt convinced some analysts that the United States once again confronted a **competitiveness crisis**.23 If concerns continue to mount, this will count as the **fourth such crisis since 1945**; the first three occurred during the 1950s (Sputnik), the 1970s (Vietnam and stagflation), and the 1980s (the Soviet threat and Japan's challenge). **None of these crises**, however, shifted the international system's structure: multipolarity did not return in the 1960s, 1970s, or early 1990s, and **each scare over competitiveness ended with** the American position of **primacy** retained or strengthened.24 Our review of the evidence of U.S. predominance is not meant to suggest that the United States lacks vulnerabilities or causes for concern. In fact, it confronts a number of significant vulnerabilities; of course, this is also true of the other major powers.25 The point is that adverse trends for the United States will not cause a polarity shift in the near future. If we take a long view of U.S. competitiveness and the prospects for relative declines in economic and technological dominance, one takeaway stands out: **relative power shifts slowly**. The United States has accounted for a quarter to a third of global output for over a century. No other economy will match its combination of wealth, size, technological capacity, and productivity in the foreseeable future (tables 2.2 and 2.3). The depth, scale, and projected longevity of the U.S. lead in each critical dimension of power are noteworthy. But what truly distinguishes the current distribution of capabilities is American dominance in all of them simultaneously. The chief lesson of Kennedy's 500-year survey of leading powers is that nothing remotely similar ever occurred in the historical experience innovation, and higher education (table 2.3). Despite the weight of this evidence, elite perceptions of U.S. power had shifted toward pessimism by the middle of the that informs modern international relations theory. The implication is both simple and underappreciated: the counterbalancing constraint is inoperative and will remain so until the distribution of capabilities changes fundamentally. The next section explains why.

Terrorism DA

1NC Link

Plan causes WMD terrorism – fourth amendment restrictions prevent effective intelligence and make stopping attacks impossible

Yoo, 20**14** (John, Emanuel S. Heller Professor of Law, University of California, Berkeley Law School; Visiting Scholar, American Enterprise Institute, "THE LEGALITY OF THE NATIONAL SECURITY AGENCY'S BULK DATA SURVEILLANCE PROGRAMS," Harvard Journal of Law & Public Policy, Vol. 37, No. 3, June 1)

The real problem with FISA, and even the Patriot Act, as they existed before the 2008 Amendments, is that they remained rooted in a law enforcement approach to electronic surveillance. They tied the government's counterterrorism efforts to individualized suspicion. Searches and wiretaps had to target a specific individual already believed to be involved in harmful activity. But detecting al Qaeda members who have no previous criminal record in the United States, and who are undeterred by the possibility of criminal sanctions, requires the use of more sweeping methods. To prevent attacks successfully, the government has to devote surveillance resources where there is a reasonable chance that terrorists will appear or communicate, even if their specific identities remain unknown. What if the government knew that there was a fifty percent chance that terrorists would use a certain communications pipeline, such as e-mail provided by a popular Pakistani ISP, but that most of the communications on that channel would not be linked to terrorism? An approach based on individualized suspicion would prevent computers from searching through that channel for the keywords or names that might suggest terrorist communications because there are no specific al Qaeda suspects and thus no probable cause. Searching for terrorists depends on playing the probabilities rather than individualized suspicion, just as roadblocks or airport screenings do. The private owner of any website has detailed access to information about the individuals who visit the site that he can exploit for his own commercial purposes, such as selling lists of names to spammers or gathering market data on individuals or groups. Is the government's effort to find violent terrorists a less legitimate use of such data? Individualized suspicion dictates the focus of law enforcement, but war demands that our armed forces defend the country with a broader perspective. Armies do not meet a "probable cause" requirement when they attack a position, fire on enemy troops, or intercept enemy communications. The purpose of the criminal justice system is to hold a specific person responsible for a discrete crime that has already happened. But focusing on individualized suspicion does not make sense when the purpose of intelligence is to take action, such as killing or capturing members of an enemy group, to prevent future harm to the nation from a foreign threat. FISA should be regarded as a safe harbor that allows the fruits of an authorized search to be used for prosecution. Using FISA sacrifices speed and breadth of information in favor of individualized suspicion, but it provides a path for using evidence in a civilian criminal prosecution. If the President chooses to rely on his constitutional authority alone to conduct warrantless searches, then he should generally use the information only for military purposes. The primary objective of the NSA program is to "detect and prevent" possible al Qaeda attacks on the United States, whether another attack like September 11; a bomb in apartment buildings, bridges, or transportation hubs such as airports; or a nuclear, biological, or chemical attack. These are not hypotheticals; they are all al Qaeda plots, some of which U.S. intelligence and law enforcement agencies have already stopped. A President will want to use information gathered by the NSA to deploy military, intelligence, and law enforcement personnel to stop the next attack. The price to pay for speed, however, is foregoing any future criminal prosecution. If the President wants to use the NSA to engage in warrantless searches, he cannot use its fruits in an ordinary criminal prosecution. Al Qaeda has launched a variety of efforts to attack the United States, and it intends to continue them. The primary way to stop those attacks is to find and stop al Qaeda operatives, and the best way to find them is to intercept their electronic communications. Properly understood, the Constitution does not subject the government to unreasonable burdens in carrying out its highest duty of protecting the nation from attack.

War on Terror Link

Metadata key to stop terrorism – tracks terror cells

Yoo, 20**14** (John, Emanuel S. Heller Professor of Law, University of California, Berkeley LawSchool; Visiting Scholar, American Enterprise Institute, "THE LEGALITY OF THE NATIONAL SECURITY AGENCY'S BULK DATA SURVEILLANCE PROGRAMS," Harvard Journal of Law & Public Policy, Vol. 37, No. 3, June 1)

Meanwhile, the data collected is potentially of enormous use in frustrating al Qaeda plots. If U.S. agents are pointed to members of an al Qaeda sleeper cell by a domestic phone number found in a captured al Qaeda leader's cell phone, call pattern analysis would allow the NSA quickly to determine the extent of the network and its activities. The NSA, for example, could track the sleeper cell as it periodically changed phone numbers. This could give a quick, initial, database-generated glimpse of the possible size and activity level of the cell in an environment where time is of the essence. A critic might respond that there is a difference between a pen register that captures the phone numbers called by a single person and a database that captures all of the phone numbers called by everyone in the United States. The Supreme Court, however, has never held that obtaining billing records would somehow violate privacy merely because of a large number of such records.

National Security Precedent Link

Plan would overturn fourth amendment deference to national security

Yoo, 20**14** (John, Emanuel S. Heller Professor of Law, University of California, Berkeley LawSchool; Visiting Scholar, American Enterprise Institute, "THE LEGALITY OF THE NATIONAL SECURITY AGENCY'S BULK DATA SURVEILLANCE PROGRAMS," Harvard Journal of Law & Public Policy, Vol. 37, No. 3, June 1)

Even if constitutional privacy interests were thought to extend to telephone metadata or to foreign e-mails, the Fourth Amendment's warrant requirement still would not apply because the NSA searches seek to prevent military attacks, not garden-variety criminal activity.84 As observed earlier, every lower court to examine the question has found that when the government conducts a search of a foreign power or its agents, it need not meet the requirements that apply to criminal law enforcement. Though, admittedly, the Supreme Court has never ruled on the question, it has suggested in dicta that roadblocks and dragnets to stop a terrorist bombing in an American city would not need to meet the warrant requirement's demand for individualized suspicion.85 This approach is fully consistent with the Supreme Court's recent Fourth Amendment cases. Not all searches require a warrant. Rather, as the Court found in a 1995 case upholding random drug testing of high school athletes, "[a]s the text of the Fourth Amendment indicates, the ultimate measure of the constitutionality of a governmental search is 'reasonableness.'"86 When a passenger enters an airport, government employees search his belongings and subject him to an x-ray— undoubtedly a search—without a warrant. When travelers enter the country, customs and immigration officials can search their baggage and sometimes their persons without a warrant.87 Of course, when law enforcement undertakes a search to discover evidence of criminal wrongdoing, reasonableness generally requires a judicial warrant. But when the government's conduct is not focused on law enforcement, a warrant is unnecessary. A warrantless search can be constitutional, the Court has said, "'when special needs, beyond the normal need for law enforcement, make the warrant and probable-cause requirement impracticable.'"88 A search must be "reasonable" under the circumstances. What does "reasonable" mean? The Court has upheld warrantless searches to reduce deaths on the nation's highways, to maintain safety among railway workers, and to ensure that government officials were not using drugs.89 In these cases, the "'importance of the governmental interests'" outweighed the "'nature and quality of the intrusion on the individual's Fourth Amendment interests.'"90 It is hard to imagine that any of these situations are more important than protecting the nation from a direct foreign attack in wartime. "It is obvious and unarguable," the Supreme Court has observed several times, "that no governmental interest is more compelling than the security of the Nation."91 It is the duty of the President to respond to

attacks on the territory and people of the United States, and Congress confirmed the President's authority to use force after September 11. The extraordinary circumstances of war require that the government seek specific information relevant to possible attacks on Americans, sometimes in situations where obtaining a warrant is not practical.92 Before the September 11 attacks, the Supreme Court observed that the Fourth Amendment's warrant requirement would probably not apply to the special circumstances created by a potential terrorist attack. "[T]he Fourth Amendment would almost certainly permit an appropriately tailored roadblock set up to thwart an imminent terrorist attack or to catch a dangerous criminal who is likely to flee by way of a particular route."93 To be sure, this case, City of Indianapolis v. Edmond, challenged the constitutionality of a highway checkpoint program that searched cars for illegal drugs rather than for terrorists. And in Edmond, the Court found that the checkpoints vio- lated the Fourth Amendment protection against search and seizure because the police were searching for drugs for the purpose of "crime control" and "the ordinary enterprise of investigating crimes." 94 But the Court still observed that some warrantless searches were acceptable in the emergency situation of a possible terrorist attack, in which the "need for such measures to ensure public safety can be particularly acute."95 If the Supreme Court has found that searches for border and airport control present special needs that do not call for a warrant, a court would be hard pressed to deny that searches to find foreign terrorists bent on attacking the United States fall within the same category.

National Security Power – Impact

Plan restricts national security power and causes terrorism

Yoo, 20**14** (John, Emanuel S. Heller Professor of Law, University of California, Berkeley LawSchool; Visiting Scholar, American Enterprise Institute, "THE LEGALITY OF THE NATIONAL SECURITY AGENCY'S BULK DATA SURVEILLANCE PROGRAMS," Harvard Journal of Law & Public Policy, Vol. 37, No. 3, June 1)

If national security searches do not require a warrant, it might be asked why FISA is even necessary. FISA offers the executive branch a deal. If a President complies with the process of obtaining a FISA warrant, courts will likely agree that the search was reasonable and will admit its fruits as evidence in a criminal case. FISA does not create the power to authorize national security searches. Rather, it describes a safe harbor that deems searches obtained with a warrant reasonable under the Fourth Amendment. If a President proceeds with a search under his own authority rather than under FISA or under ordinary criminal procedure, he takes his chances. A court might refuse to admit evidence in any future proceeding that had been obtained without a warrant, or even allow the target to sue the government for damages.96 Then again, it might not. FISA ultimately cannot limit the President's powers to protect national security through surveillance if those powers stem from his unique Article II responsibilities. Intercepting enemy communications has long been part of waging war; indeed, it is critical to the successful use of force.97 The U.S. military cannot at- tack or defend to good effect unless it knows where to aim. America has a long history of conducting intelligence operations to obtain information on the enemy. General Washington used spies extensively during the Revolutionary War and as President established a secret fund for spying that existed until the creation of the CIA.98 President Lincoln personally hired spies during the Civil War, a practice the Supreme Court upheld.99 In both World Wars I and II, Presidents ordered the interception of electronic communications leaving the United States. 100 Some of America's greatest wartime intelligence successes have involved signals intelligence (SIGINT), most notably the breaking of Japanese diplomatic and naval codes during World War II, which allowed the U.S. Navy to anticipate the attack on Midway Island.101 SIGINT is even more important in this war than in those of the last century. Al Qaeda has launched a variety of efforts to attack the United States, and it intends to continue them.102 The primary way to stop those attacks is to find and stop al Qaeda operatives who have infiltrated the United States. The best way to find them is to intercept their electronic communications entering or leaving the country. The need for executive authority over electronic intelligence gathering becomes apparent when we consider the facts of the war against al Qaeda. In the hours and days after September 11, members of the government thought that al Qaeda would try to crash other airliners or use a weapon of mass destruction in a major east coast city, probably Washington, D.C. Combat air patrols began flying above New York and Washington. Suppose a plane was hijacked and would not respond to air traffic controllers. It would be reasonable for U.S. antiterrorism personnel to intercept any radio or cell phone calls to or from the airliner, to

discover the hijackers' intentions, what was happening on the plane, and ultimately whether it would be necessary for the fighters to shoot down the plane. Under the civil libertarian approach to privacy, the government could not monitor the suspected hijackers' phone or radio calls unless they received a judicial warrant first—the calls, after all, are electronic communications within the United States. A warrant would be hard to obtain because it is unlikely that the government would then know the identities of all the hijackers, who might be U.S. citizens or permanent resident aliens. But because the United States is in a state of war, the military can intercept the communications of the plane to see if it poses a threat, and target the enemy if necessary, without a judicial warrant because the purpose is not arrest and trial, but to prevent an attack. This comports far better with the principle of reasonableness that guides the Fourth Amendment. As Commander-in-Chief, the President has the constitutional power and the responsibility to wage war in response to a direct attack against the United States.103 In the Civil War, President Lincoln undertook several actions—raising an army, withdrawing money from the treasury, launching a blockade—on his own authority in response to the Confederate attack on Fort Sumter, moves that Congress and the Supreme Court later approved.104 During World War II, the Supreme Court similarly recognized that once war began, the President's authority as Commanderin-Chief and Chief Executive gave him the tools necessary to wage war effectively.105 In the wake of the September 11 attacks, Congress agreed that "the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States," which recognizes the President's authority to use force to respond to al Qaeda, and any powers necessary and proper to that end.106 Even legal scholars who argue against this historical practice concede that once the United States has been attacked, the President can respond immediately with force. The ability to collect intelligence is intrinsic to the use of military force. It is inconceivable that the Constitution would vest in the President the powers of Commander-in-Chief and Chief Executive and give him the responsibility to protect the nation from attack, but then disable him from gathering intelligence on how to use the military most effectively to defeat the enemy. Every evidence of the Framers' understanding of the Constitution is that the government would have every ability to meet a foreign danger. As James Madison wrote in The Federalist, "[s]ecurity against foreign danger is one of the primitive objects of civil society."107 Therefore, the "powers requisite for attaining it must be effectually confided to the federal councils."108 After World War II, the Supreme Court declared that a "grant of war power includes all that is necessary and proper for carrying these powers into execution."109 Covert operations and electronic surveillance are clearly part of this authority.

A/T No Need for Database

Database storage is key to effectiveness of the program

Margulies, 20**14** (Peter, Professor of Law, roger Williams University School of Law, "Dynamic surveillance: evolving procedures in metadata and foreign content collections after snowden," Hastings Law Journal, December, 66 Hastings L.J. 1)

The utility of the metadata program has been the subject of vigorous debate, with the government initially insisting that the program was "essential" and critics suggesting that the government's claims were inflated. n66 The fog of rhetoric on both sides obscures common ground. The program cannot claim exclusive credit for stopping a terrorist plot, n67 and in most investigations other alternatives could have provided (or actually did provide) information that identified the plotters. However, the most careful and comprehensive critics concede that the program has provided early information in investigations, allowed law enforcement to rule out suspects, and hedged against the persistent problem of disparate agencies failing to "connect the dots." n68 The single court to squarely address this question has agreed that the program is helpful because it allows the government to effectively, [*15] reliably, and expeditiously trace connections between known and unknown terrorists. n69 Having a large database enhances the comprehensiveness of the government's search for connections. As the district court noted in ACLU v. Clapper, "without all the data points, the Government cannot be certain it connected the pertinent ones." n70 Having a single large database avoids the waste of time entailed in chasing down leads with different telecommunications providers. n71 Promulgating a single set of rules for that database ensures that data will be deleted only when the government, taking both security and privacy into account, is confident that the data is irrelevant. For an illustration of the benefits and limits of the metadata program,

consider the case of Najibullah Zazi, who had plotted in 2009 to bomb New York City subways. n72 Pursuant to the metadata program, the NSA provided the Federal Bureau of Investigation ("FBI") with information "early in the investigation" showing Zazi's telephone calls. n73 The NSA also provided the FBI with "additional leads" throughout the investigation. n74 Moreover, the NSA used section 215 to ascertain the unknown telephone number of one of Zazi's New York accomplices, Adis Medunjanin. n75 While this information may well have been available from other sources, n76 the metadata program is what provided the facts. The metadata program also plays an important role in allocating government counterterrorism resources. For example, as Ryan Goodman suggests, the comprehensive nature of the section 215 program allows the government to rule out foreign connections to plots, such as the Boston Marathon bombing. n77 While this capability may not be as eye- [*16] catching as the ability to ferret out a pending plot, it can help law enforcement and national security officials allocate resources in the long and short term. In the long term, the metadata program gives officials a view from 20,000 feet on the links to international terrorist groups within the United States. If queries show a relatively small presence, officials can focus their efforts narrowly, and devote more resources to foreign threats. The metadata program reduces the guesswork involved in allocation decisions, and solidifies the factual foundation for these complex determinations. In the near term, the metadata program can inform allocation of resources in the chaotic period immediately following an attack. During the Boston Marathon bombing investigation, for example, section 215 collection helped to confirm early on that the Tsarnaev brothers acted without foreign assistance. n78 That confirmation curbed counterproductive speculation, and focused resources on the Tsarnaev brothers' roles. n79 The metadata program also provides for efficiency in tracing contacts. In some investigations, speed may turn out to be less important because law enforcement officials are gathering information and monitoring a subject over time. However, as Director of the FBI James Comey testified to Congress in January 2014, the "agility" produced by the metadata program may turn out to be quite useful in a fast-moving investigation. Comey put it simply: that agility, which permits law enforcement to accomplish "in minutes what would otherwise take ... hours," is "not material except when it matters most." n80 Finally, the metadata program is a useful hedge if agencies fail to share information that could allow them to connect the dots in a counterterrorism investigation. This failure was the most salient problem with the actions of law enforcement and security officials prior to the September 11 attacks. n81 Although the situation has improved, n82 deficits in cooperation will inevitably occur whenever agencies seek to coexist. n83

Clear Statement CP

1NC

The United States Supreme Court should hold in *American Civil Liberties Union v. Clapper* that the collection of metadata by or for the use of the National Security Agency is an unconstitutional because it does not evince an unmistakably clear intent to abrogate the implied Fourth Amendment right to privacy in the United States Constitution.

Clear statement rule solve enforcement of constitutional rights

Meagher, 20**14** (Dan, Associate Professor, School of Law, Deakin University, "The Principle of Legality as Clear Statement Rule: Significance and Problems," The Sydney Law Review, September, 36 Sydney L. Rev. 413)

These clear statement rules are said to provide an attractive alternative to strong (counter-majoritarian) judicial review when legislation engages constitutional or other important legal rights and values. n28 The rules are 'an [*417] expression of the [Supreme] Court's constitutional values, a way for the Court to conduct an illuminating discourse with the legislature about our nation's public values, but without obstructing or intruding into the political system'. n29 And '[b]y developing ... a thick description of its interpretive practice, the Court [can] provide Congress with more certain guidelines as to how it should expect to see its statutes interpreted'. n30 This gives the legislature clear and prior notice as to those rights and values that the courts will protect if interpretively possible and the manner in which they will do so. Scalia J has noted in this regard that '[w]hat is of paramount importance is that Congress be able to legislate against a background of clear interpretive rules, so that it may know the effect of the language it adopts'. n31 This can promote rule of law values by requiring greater clarity in the drafting of statutes that engage constitutional rights and values and transparency in the way they will be interpreted by the courts. In doing so, it is said that such rules ... provide significant protection for constitutional norms because they raise the costs of statutory provisions invading such norms. Ultimately, such rules may even be democracy-enhancing by focusing the political process on the values enshrined in the Constitution. n32 However, clear statement rules are not without normative (indeed constitutional) controversy. As will be detailed below, they amount to mandatory rules of interpretation developed by the courts that are imposed on the legislature. In this regard, Larry Alexander and Saikrishna Prakash argue that 'such rules of interpretation are constitutionally problematic': We doubt that the judicial power -- the power to decide cases -- gives the federal judiciary the power to dictate interpretive rules to Congress. The courts cannot dictate (or constrain) how Congress must express itself. n33 And notwithstanding the 'weighty precedential pedigrees' n34 of most clear statement rules, they are controversial for they 'reflect judicially articulated policies that are sometimes enforced very vigorously ... and thus do affect the allocation of power, rights, and property in [American] society'. n35 To this end, Alexander and Prakash say they 'should be recognized for what they are: attempts to drag statutes away from their actual meaning and towards the substantive preferences of those who create the rules of interpretation'. n36 Which, in the case of clear statement rules, are the senior members of the judiciary. n37

Democracy Net Benefit

CP solves the aff and preserves representative democracy

Frickey and Eskridge, 19**92** (Philip P., Faegre & Benson Professor of Law, University of Minnesota, and William N. Eskridge Jr., Professor of Law, Georgetown University Law Center, "Quasi-Constitutional Law: Clear Statement Rules As Constitutional Lawmaking," http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=2860&context=facpubs)

In a representative democracy such as ours, most important political decisions should be made by the political branches, primarily Congress and secondarily the Executive.8 3 Judicial review in a democracy is exceptional and should be deployed by unelected judges only when there is a clear inconsistency between a statute or regulation and the Constitution.1 4 Indeed, we have learned over time that certain constitutional values-most notably the structural rather than individual rights values-are either unenforceable by the Court because they involve essentially nonjusticiable political questions or will be underenforced by the Court."'5 These unenforced or underenforced constitutional norms include the nondelegation doctrine,186 federalism limitations on the national government, 187 and separation of powers."' While a Court that seeks to avoid antidemocratic constitutional activism might refuse to invalidate federal statutes because of their infringement of these constitutional norms, such a Court might also seek other ways to protect those norms. One way to articulate and protect underenforced constitutional norms is through interpretive presumptions, clear statement rules, and super-strong clear statement rules-canons of statutory construction.189 The canons, especially the "tough" ones, can protect important constitutional values against accidental or undeliberated infringement by requiring Congress to address those values specifically and directly. Protecting underenforced constitutional norms through super-strong clear statement rules makes sense: it is not ultimately undemocratic, because Congress can override the norm through a statutory clear statement; such rules still provide significant protection for constitutional norms, because they raise the costs of statutory provisions invading such norms; and ultimately such rules may even be democracy-enhancing by focusing the political process on the values enshrined in the Constitution.

Solvency – Generic

Clear statement rules set constitutional precedent and restrict congressional power

Young, 2004 (Ernest A., Judge Benjamin Harrison Powell Professor of Law, University of Texas at Austin, "The Rehnquist Court's Two Federalisms," Texas Law Review, November, 83 Tex. L. Rev. 1)

Resistance norms likewise function well in areas in which the relevant constitutional principles are designed primarily to be self-enforcing, through the political processes at work in the coordinate branches of government. Certain kinds of soft limits - particularly clear statement canons of statutory construction - function effectively by increasing the political costs of particular kinds of government action. Requiring Congress to state its purpose with special clarity both imposes an additional drafting hurdle and may serve to mobilize opposition by highlighting the proposed intrusion on state authority. n618 Clear statement rules in this sense embody both the soft and process-based dimensions of federalism doctrines discussed in Part II. It thus seems best to justify the Court's state-protective clear statement canons not through fictional attributions of congressional intent - that is, by assuming that Congress generally intends to protect state autonomy - but as doctrinal innovations by courts designed to protect state autonomy. n619 We should also forthrightly acknowledge that these clear-statement doctrines are constitutional in nature; as Larry Sager has demonstrated, the fact that a norm is "under-enforced" - that is, enforced through something short of a strong invalidation norm - does not mean the norm lacks grounding in the Constitution. n620 And I have argued elsewhere that these sorts of innovations ought not to be dismissed simply because they cannot be grounded directly in [*127] text or history. n621 Rather, they should be assessed by how well they implement the commitments to state autonomy that are embodied in the Constitution. On those criteria, the strong autonomy model would embrace a broad range of "soft" rules because of their attention to autonomy values and their responsiveness to the institutional limitations courts confront in enforcing federalism.

Solvency – A/T Plan Key to Precedent

CP is key to set precedent – constitutional restrictions of congressional power are unenforceable, clear statement rules promote constitutional values without interfering with congress

Frickey and Eskridge, 1992 (Philip P., Faegre & Benson Professor of Law, University of Minnesota, and William N. Eskridge Jr., Professor of Law, Georgetown University Law Center, "Quasi-Constitutional Law: Clear Statement Rules As Constitutional Lawmaking," http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=2860&context=facpubs)

A further theme of this study is that the current Court emphasizes a different array of clear statement rules than did the Court in the 1970s. The current Court is less inclined to protect individual rights through cautious statutory interpretation than the Court was a decade ago, and more inclined to protect constitutional structures through cautious interpretation. Moreover, consistent with its interest in textualism as its dominant interpretive methodology, the current Court emphasizes clear statement rules much more than presumptions. Indeed, the most striking innovation of the recent Court has been its creation of a series of new "super-strong clear statement rules" protecting constitutional structures, especially structures associated with federalism. These super-strong clear statement rules are remarkable. On the one hand, they require a clearer, more explicit statement from Congress in the text of the statute, without reference to legislative history, than prior clear statement rules have required. This would suggest that such rules are protecting particularly important constitutional values. But, on the other hand, the super-strong clear statement rules the Court has actually adopted protect constitutional values that are virtually never enforced through constitutional interpretation. That is, the Court in the 1980s has tended to create the strongest clear statement rules to confine Congress's power in areas in which Congress has the constitutional power to do virtually anything. What the Court is doing is creating a domain of "quasi-constitutional law" in certain areas: Judicial review does not prevent Congress from legislating, but judicial interpretation of the resulting legislation requires an extraordinarily specific statement on the face of the statute for Congress to limit the states or the executive department. That the Court's super-strong clear statement rules are new does not mean they are undesirable, of course. In fact, a good case can be made for such quasi-constitutional law: structural constitutional protections, especially those of federalism, are underenforced constitutional norms. They are essentially unenforceable by the Court as a direct limitation upon Congress's power, and are best left to the political process. But the Court may have a legitimate role in forcing the political process to pay attention to the constitutional values at stake, and super-strong clear statement rules are a practical way for the Court to focus legislative attention on these values.

Solvency – A/T Congress Overturns

Congress won't overturn the CP

Frickey and Eskridge, 1992 (Philip P., Faegre & Benson Professor of Law, University of Minnesota, and William N. Eskridge Jr., Professor of Law, Georgetown University Law Center, "Quasi-Constitutional Law: Clear Statement Rules As Constitutional Lawmaking," http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=2860&context=facpubs)

As the Dellmuth example illustrates, the countermajoritarian nature of the Court's super-strong clear statement rules is not necessarily mitigated by the possibility of a congressional override. Even when Congress thinks it is overriding the Court, the Court has frustrated Congress's expectations in cases like Dellmuth.1 6 More important, it is sometimes as difficult to override a Supreme Court statutory decision as it is to override a constitutional one. Thus, in the current period of divided government, with the

President and the Court aligned on issues of civil rights against the preferences of Congress, an override of a Supreme Court statutory decision requires the same supermajorities in Congress that a constitutional amendment requires. 11 Even when the President is not opposed to an override, powerful interest groups-including the ones that won the Supreme Court case-will be, and the legislative process offers numerous opportunities for determined minorities to thwart override efforts.

I find this argument highly dubious – the CP creates substantive rights and imposes high costs on congress for overturning

Meagher, 20**14** (Dan, Associate Professor, School of Law, Deakin University, "The Principle of Legality as Clear Statement Rule: Significance and Problems," The Sydney Law Review, September, 36 Sydney L. Rev. 413)

In an age of statutes, clear statement rules in the United States and the principle of legality in Australia provide for fundamental rights strong protection against statutory modification. They do so by 'announcing a rule of law: in the absence of clear statutory text speaking to the precise issue, judges must interpret the statute a certain way'. n190 The principle of legality is a strong Australian species of clear statement rule that is applied when legislation engages common law rights, freedoms and principles. The courts are looking for a clear indication that the legislature has directed its attention to the rights and freedoms in question and has consciously decided upon abrogation or curtailment. The significance of this is the construction and protection of a quasi-constitutional common law bill of rights that is now used as 'a baseline of acceptable law and conduct' n191 for the political arms of government.

Congress CP

1NC

The United States Congress should prohibit the collection of metadata by or for the use of the National Security Agency citing the fact that such data collection is a violation of the Fourth Amendment to the United States Constitution.

Congress solves best – they have the necessary expertise to regulate privacy

Yoo, 20**13** (John, Emanuel Heller professor of law at the University of California at Berkeley, "The flaw in the fourth amendment NSA ruling," National Review, December 17, http://www.nationalreview.com/corner/366567/flaw-fourth-amendment-nsa-ruling-john-yoo)

Judge Leon cannot claim that the reasoning of Smith does not cover the telephone metadata at issue here, because the data collected are exactly the same as the kind held unprotected in Smith. Leon's decision instead argues that technology has changed so much that Smith is no longer good law. But that is not Judge Leon's decision to make; that is up to the Supreme Court. Judge Leon concludes that the ability to collect and analyze the data, and the extent of its collection, was unlike anything in existence at the time of Smith. Again, that was not for Judge Leon to decide, but for the Supreme Court. In fact, I do not think that this is fundamentally the job of judges. It may be time to reconceive the rules of search and seizure in light of new Internet technologies — but that is the responsibility of our elected representatives. Only they can determine what society's "reasonable expectation of privacy" is in Internet and telephone communications. Judges are the last people to fairly claim they have their fingers on the pulse of the American people. Only our elected representatives can properly balance existing privacy rights (if any), against the need for information to protect the nation from terrorist attack. Judges are far too insulated and lack the expertise to make effective judgments on national-security and foreign affairs. The president and Congress must take up their duty and work out the rules to govern surveillance to protect the nation's security, and when they don't, it is left up to the branch least capable of doing so, the judiciary.

Counterplan is key to the effectiveness of constitutional protections and to overall legitimacy

West, 2007 (Robin, professor of law at the Georgetown University Law Center, "Constitutional fidelity and democratic legitimacy," July, American Constitution Society for Law and Policy, http://www.acslaw.org/files/Robin%20West%20Vanderbilt%20Paper%207-2007.pdf)

There is, a second problem with the conventional account, however, that an increasing number of "popular constitutionalists" have begun to elaborate. The problem is one of "underenforcement" of constitutional guarantees. To summarize a large and growing body of scholarship, the suggestion is that **there may be constitutional values**, arguments, and even entire constitutional clauses that **are slighted by the conventional allocation of labor**. Some constitutional provisions, including some that go to liberty and equality, might be best understood as aimed at protecting all citizens or even majorities of citizens, against empowered minorities with entrenched power, rather than the other way around. If that's right, then **those provisions might best be** explicated, interpreted, recognized, and **enforced through** representative, **legislative**, political, majoritarian **decision-making**. Part of the Fourteenth Amendment, furthermore, might be of this nature: the Privileges and Immunities Clause, the Citizenship Clause, perhaps even the Equal Protection Clause, might all be best understood as imposing upon the Congress various duties to affirmatively act so as to protect the positive rights, liberties, and the privileges and immunities of all citizens against various sorts of dangers.3 **The Court**, for both institutional and jurisprudential reasons, might **be constitutively incapable of seeing some meanings that are clearly there**: **Court**s, by design, are best situated to respond to constitutional clauses protecting the rights of minorities or individuals against overly intrusive state action, and **are not well situated to protect the citizenry generally against a failure of the state to ac**t. If so, we are not enjoying the fruits of even our enumerated text, much less the unenumerated one. The conventional allocation of labor might have cramped our understanding of the Constitution's meaning, and specifically, our understanding of the moral content, and meaning, of the

Reconstruction Amendments. For these and other reasons, a number of scholars have argued some measure of a re-shuffling of the allocation of labor suggested by the conventional understanding. I. Our Political Constitution So, let me turn to the less conventional answer to the question posed above: would the quality and legitimacy of representative politics be enhanced by greater constitutional fidelity on the part of our elected representatives? Contra the conventional view, perhaps the answer is yes: the democratic "**legitimacy" of our politics might be enhanced by legislative** as well as popular fidelity to constitutionalism. **The quality of our politics might be enhanced**, and **the more progressive and egalitarian interpretations of various clauses of the Constitution**, notably the Reconstruction Amendments, might **likewise be realized, were they subjected to legislative** rather than judicial **interpretation** and enforcement. That, at any rate, is the suggestion now being urged by various popular and legislative constitutionalists. To put my cards on the table, I think it's an important and serious claim. **Were conscientious legislators to take the Constitution seriousl**y, it might enhance the quality of political deliberation, and **it might result in a more egalitarian**, as well as more robust and meaningful, **set of constitutional commitments**. We should consider not only the possible understandings of the Constitution that a future Court might embrace, but more ambitiously, perhaps, the possible understandings of constitutionalism that might one day guide serious legislative politics. The "legislated constitution," or the political constitution, or popular constitutionalism, remain unexplored possibilities for progressive politics, worthy of serious consideration.

Popular Constitutionalism Net Benefit

The counterplan alone is key to restore popular constitutionalism – any perm won't fully invalidate judicial supremacy, the CP is key to restore global democracy and civic engagement

Kramer, 200**4** (Larry D., Russell D. Niles Professor of Law, New York University School of Law, "Popular Constitutionalism, circa 2004," July, 92 Calif. L. Rev. 959)

Whatever else one might think, this plainly represents a profound change in attitude from what was historically the case. Neither the Founding generation nor their children nor their children's children, right on down to our grandparents' generation, were so submissive about their place as republican citizens. They would not have accepted - they did not accept - being told that a lawyerly elite had charge of the Constitution, and they would have been incredulous if told (as we are often told today) that the main reason to worry about who becomes President is that the winner will control judicial appointments. Something would have gone terribly wrong, they believed, **if an unelected judiciary were being given that kind of importance** and deference. Even if such a country could still be called "democratic," it **would no longer be the kind of democracy Americans** had **fought** and died **to create**. Madison thought he was being snide, after all, when he had Anti-republican say that the people "should think of nothing but obedience, leaving the care of their liberties to their wiser rulers." n171 What changed to make this sarcastic caricature not just respectable, not just real, but prevalent? [*1010] Somehow, Americans have been pacified, lulled into believing that the meaning of their Constitution is something beyond their compass, something that should be left to others. Somehow, constitutional history has been recast as a story of judicial triumphalism. **A judicial monopoly on constitutional interpretation is depicted as inexorable and inevitable**, as something that was meant to be and that saved us from ourselves. The historical voice of judicial authority is privileged while opposition to the Court's self-aggrandizing tendencies is ignored, muted, or discredited. How and why we reached this pass is a complicated story, though I alluded to a few of the causes above. Some factors are internal to constitutional law - such as the historical anomaly of the Warren Court, which instilled in many liberals a naive faith in the judiciary; and the swiftness with which the Court returned to conservatism, which has left many of these same liberals tongue-tied for fear of seeming hypocritical. n172 Other factors reflect broader and more long-term intellectual trends, like the heightened skepticism of democracy occasioned by fascism and other variants of twentieth-century totalitarianism and the emergence of interest group and rational choice theory. There are perhaps deeper causes, too. The twentieth century ended with a spectacular surge of democracy, the greatest by far since the end of the eighteenth. In simple numbers of people getting their first taste of self-government, t**he spread of democratic sentiments across the globe dwarfed the tiny American and French Revolutions.** As remarkable as this late-century embrace of democratic institutions, however, was the late-century swell of cynicism in the places where democracy is oldest and that have seen its benefits best. Signs of the phenomenon are all around us. **Voter turnout** in the United States **continues to drop**, despite occasional bounces. In Europe, splinter parties with extremist agendas and depressingly thin commitments to democracy have made hair-raising gains. Scandals abound, even

as politicians become cleaner under the ceaseless glare of public scrutiny. On both continents, **the electorate willingly embraces extravagantly implausible amateur politicians**, while polls report persistently rising levels of mistrust in leadership and skepticism about the ability of politics to make life better. **The willingness to surrender constitutions to courts** - another phenomenon that is occurring worldwide - can and perhaps **should be seen as a symptom of this larger trend.** Whatever the reasons for the change, it would be foolish and shortsighted to assume that it is permanent. For now, so far as most Americans are concerned, the stakes may remain obscure and esoteric. But if history teaches anything, it is that this will change if the Court persists on its current path. The intellectual case against judicial supremacy and in favor of [*1011] popular constitutionalism is, as we have seen, already being built - has already been built. **The question is whether the Justices are listening**. Actually, whether the Justices are listening ultimately matters less than whether anyone else is. For **the choice between popular constitutionalism and judicial supremacy** - between what Sanford Levinson has called a "protestant" and a "catholic" Constitution n173 - **is necessarily** and unavoidably **one for the** American **people** to make. The Constitution does not make the choice for us. Neither does history or tradition or law. We may choose as a matter of what Levinson calls "constitutional faith" to surrender control to the Court, to make it our platonic guardian for defining constitutional values. Or we may choose to keep this responsibility, even while leaving the Court as our agent to make decisions. Either way, we decide. n174

This depoliticization causes extinction

Boggs 19**97**(Carl, Professor of Political Sience – National University, Theory & Society 26, December, p. 773-4)

The decline of the public sphere in late twentieth-century America poses a series of great dilemmas and challenges. Many ideological currents scrutinized here ^ localism, metaphysics, spontaneism, post- modernism, Deep Ecology – intersect with and reinforce each other. While these currents have deep origins in popular movements of the 1960s and 1970s, they remain very much alive in the 1990s. Despite their different outlooks and trajectories, they all share one thing in common: a **depoliticized expression of struggles** to combat and overcome alienation. The false sense of empowerment that comes with such mesmerizing impulses **is accompanied by a loss of public engagement**, an erosion of citizenship **and a depleted capacity of individuals** in large groups **to work for social change**. As this ideological quagmire worsens, **urgent problems** that are destroying the fabric of American society **will go unsolved** – perhaps even unrecognized – **only to fester** more **ominously into the future**. And **such problems** (**ecological crisis**, poverty, urban decay, spread of **infectious diseases**, technological displacement of workers) **cannot be understood outside the** larger social and **global context** of internationalized markets, finance, and communications. Paradoxically, the widespread retreat from politics, often inspired by localist sentiment, comes at a time when agendas that ignore or side- step these global realities will, more than ever, be reduced to impotence. In his commentary on the state of citizenship today, Wolin refers to the increasing sublimation and dilution of politics, as larger numbers of people turn away from public concerns toward private ones. By diluting the life of common involvements, we negate the very idea of politics as a source of public ideals and visions.74 In the meantime, **the fate of the world hangs in the balance**. The unyielding truth is that, even as the ethos of anti-politics becomes more compelling and even fashionable in the United States, it is the vagaries of political power that will continue to decide the fate of human societies. This last point demands further elaboration. The **shrinkage of politics hardly means** that **corporate colonization will be less of a reality**, that social hierarchies will somehow disappear, **or that gigantic state and military structures will lose their hold** over people's lives. Far from it: **the space abdicated by a broad citizenry**, well-informed and ready to participate at many levels, **can** in fact **be filled by authoritarian and reactionary elites** – an already familiar dynamic in many lesser- developed countries. The fragmentation and chaos of a Hobbesian world, not very far removed from the rampant individualism, social Darwinism, and civic violence that have been so much a part of the American landscape, could be the prelude to a powerful Leviathan designed to impose order in the face of disunity and atomized retreat. In this way the eclipse of

politics might set the stage for a reassertion of politics in more virulent guise – or it might help further rationalize the existing power structure. In either case, the state would likely become what Hobbes anticipated: the embodiment of those universal, collective interests that had vanished from civil society.75

A/T Perm Do Both

The perm doesn't solve – CP requires taking control of constitutional interpretation away from the courts, including the supreme court undermines this

Kramer, 2004 (Larry D., Russell D. Niles Professor of Law, New York University School of Law, "Popular Constitutionalism, circa 2004," July, 92 Calif. L. Rev. 959)

From the perspective of American history, and I mean the full sweep of that history, **the circumstances of constitutional law** today **look** downright **unnatural**. For while there may always have been champions of the aristocratic sensibility alongside the democratic one, there never was much doubt about the democratic principle's dominance, as reflected in the evolving practices of popular constitutionalism. Until now, that is. Earlier generations of Americans did sometimes let their guard down, giving those who worry excessively about democracy an opportunity to assert themselves and relieve their anxieties. **These overanxious souls** invariably **grasped the opportunity**, too, seeking as best they could **to extend their control over politics**, whether by concentrating power at the national level (like the Federalists of the 1790s) **or turning for help to the Supreme Court** (like conservatives during the Lochner era). Yet once the threat had become clear and Americans understood what was at stake, they always reasserted their right and their responsibility to say finally what the [*1009] Constitution means, disdaining the nervous paternalism of those who would define their fundamental values for them. Are Americans today willing to do the same? **Are we prepared to insist on our right to control the meaning of the Constitution**? I wonder. **This is** not a matter of liberal versus conservative politics. It is a m**atter of choosing complacently to accept the Court's word as final** regardless of the issue, regardless of what the Justices say, and regardless of the Court's political complexion. Why else has the appointment process come to matter so much? n169 Liberals fight hard to block conservative nominations because they believe and are ready to accept that once in office these Justices should have the power to decide matters once and for all. Senator Patrick Leahy, former Democratic chairman of the Senate Judiciary Committee and an active critic of the Rehnquist Court, takes great pains to purge his speeches of any hint of challenging the Court's authority. "As a member of the bar of the Court, as a U.S. Senator, as an American," he says, "I, of course, respect the decisions of the Supreme Court as ... the ultimate interpretation of our Constitution, whether I agree or disagree." n170 And **in that** "of course" **lies the crux of today's reigning sensibility**. Nor do conservatives differ in this respect, as evidenced by their own passivity toward the Court's authority and their matching obsession on the matter of appointments.

Solvency – Generic

Congress is key to restore democracy and give legitimacy to constitutional rights

Williams, 2004 (Norman R., Assistant Professor of Law, Willamette University, "BOOK REVIEW: The People's Constitution," October, 57 Stan. L. Rev. 257)

Larry Kramer is upset, and he thinks you should be upset, too. And, if Kramer is right, we should be upset, for what Kramer describes in this probing and elegant work is nothing less than a constitutional coup d'etat. According to Kramer, the federal judiciary has usurped the role of we the People in guarding our constitutional commitments. Worse still, we have accepted that, once the federal courts have spoken, the judiciary's word on the matter is final - that we the People are obligated to accede to the judiciary's interpretation of the Constitution, no matter how erroneous we think that interpretation may be. Kramer is scathing: we no longer live in a democracy in which the People decide for themselves the meaning of the Constitution; we live in an aristocracy in which a cabal of unelected judges decides for the rest of us what the Constitution means (p. 247). We have succumbed, it seems, to the rule by Platonic jurists of which Judge Learned Hand warned us. n1 [*258] This is not some blunderbuss attack on the federal judiciary or the power of judicial review. Nor is it a reprise of the much hashed-over debate surrounding the so-called countermajoritarian dilemma. In fact, Kramer endorses the power of judicial review, agreeing that the federal courts should have the power to set aside legislation or executive action that is inconsistent with the judiciary's understanding of the Constitution. In this respect, Kramer's criticism of current

constitutional practice differs from that of Mark Tushnet, who has called for the wholesale repudiation of the power of judicial review. n2 Nevertheless, Kramer's analysis of our current constitutional order and the federal courts' place in it is just as biting as Tushnet's. Drawing on an earlier foreword in the Harvard Law Review, n3 Kramer focuses his attack on the doctrine of judicial supremacy - the notion that the judiciary's understanding of the Constitution is supreme over those of Congress, the President, and the People. Kramer subscribes instead to a view called "departmentalism," which holds that each branch must decide for itself what the Constitution means. If there is a disagreement between two or more branches, it is for the People to resolve which view is the correct one.

A/T Courts Good – Countermajoritarian

Courts aren't effectively countermajoritarian – they fear the majority and don't provide checks

Kramer, 2004 (Larry D., Russell D. Niles Professor of Law, New York University School of Law, "Popular Constitutionalism, circa 2004," July, 92 Calif. L. Rev. 959)

The Supreme Court has, in a few instances, expressly recognized a need for this kind of construction via the political question doctrine. But as Whittington convincingly demonstrates, the Court has silently watched as a much larger number of problems were resolved in and through politics. Whittington describes some of these in detail, such as defining the terms of judicial independence in the Chase impeachment and resolving the constitutionality of protective tariffs in the fight over nullification. n32 Yet Whittington's list of relevant constructions covers a broader range of subjects, most with somewhat lower political profiles. These encompass the creation of organic political structures (e.g., cabinet departments, the size [*969] of the Supreme Court, congressional committees), the distribution of important political powers (e.g., embargoes, the scope of the President's veto, congressional subpoena and contempt powers), the definition of certain individual or collective rights (e.g., secession, the draft), the structure of politics (e.g., the cap on the size of the House of Representatives, use of the Australian ballot, the requirement of winner-take-all districts), the allocation and exercise of legislative jurisdiction (e.g., annexation of new territory, home rule in the District of Columbia, extension of coastal national waters), and numerous issues of international governance (e.g., entry into NATO and the United Nations, executive agreements, recognition of foreign powers). n33 The overall picture is consistent with, and indeed tends to substantiate, Lawrence Sager's suggestion that judges have "singled out comparatively few encounters between the state and its citizens as matters of serious judicial concern." n34 These political resolutions may not be conventionally thought of as "law" (because they were not dictated by courts), yet they rest on interpretations and constructions of the Constitution that have proved as or more durable than judicial precedent. n35 Another group of scholars argues that the judiciary's authority and control over constitutional law is limited even with respect to all those matters conventionally thought to present controversies of a type addressed by courts. This group includes writers who insist that "in our political system the executive and legislative branches necessarily share with the judiciary a major role in interpreting the Constitution." n36 According to Louis Fisher, among the most prolific writers associated with this idea, n37 "the historical record proves overwhelmingly" that "the Court is neither final nor infallible. Judicial decisions rest undisturbed only to the extent that Congress, the President, and the general public find the decisions [*970] convincing, reasonable, and acceptable. Otherwise, the debate on constitutional principles will continue." n38 A model of law that rests on a simple one-to-one correspondence between what the Court says and what affected actors do is misleading. Not only do Congress, the President, the states, and other relevant players find room to act in, around, and between judicial decisions, but the Court often finds that it must work in partnership with these nonjudicial actors to give shape to constitutional values in the first place. n39 A particularly rich strand in this line of scholarship explores the Supreme Court's strategic interactions with other political actors and finds that the Justices "rarely oppose strong majorities and almost never do so for any length of time." n40 Mr. Dooley's familiar adage about the Court's attention to election results may be somewhat overstated, n41 but a sizeable body of empirical work supports the view that the judiciary is seldom far out-of-step with legislative majorities at the national level and that when there is a divergence it rarely lasts. n42 Lawyers hate this sort of stuff. Witness the ill will provoked by Gerald Rosenberg's concededly provocative book, The Hollow Hope, which argued that even celebrated cases like Brown, Roe v. Wade, n43 and Miranda v. Arizona n44 were either [*971] inconsequential or ineffective as engines of social change. n45 But the data are numerous and consistent, and there is now a general consensus among social scientists that courts have not been a strong or consistent countermajoritarian force in American politics. No similar consensus yet exists about why this should be so, n46 but that it is so seems hard to deny.

A/T Courts Key to Check Congress

Relying on the courts as a check on congress guarantees repressive legislation – the CP reorients the legislative process

West, 2007 (Robin, professor of law at the Georgetown University Law Center, "Constitutional fidelity and democratic legitimacy," July, American Constitution Society for Law and Policy, http://www.acslaw.org/files/Robin%20West%20Vanderbilt%20Paper%207-2007.pdf)

The legislated branch, according to this conventional answer, constitutionally speaking, can behave irresponsibly, because the judiciary is charged with the obligation of aligning law with constitutional mandate. So, according to the conventional answer, if Congress, responding to and representing passion, whimsy, woes, fears or fury, decides to give the President the power to lock up American citizens without recourse to trials, or to allow him to direct military interrogators to ignore the Geneva Conventions, or they decide to prolong Terry Schiavo's life, or to outlaw contraception, or to mandate the Lord's Prayer in public schools—oh well, so goes the conventional answer, that's just Congress being Congress. The Court's job is to apply sweet judicial reason, Constitutional constraints, and its understanding of liberty, equality and so forth to all of this, and to right the apple cart. The Court will ensure, through the exercise of reason that the the product of Congressional action aligns with constitutionalism. Congress, in other words, acts and the Court reasons. The result is constitutional fidelity and democratic legitimacy both. We need not worry, then, if our politics are constitutionally irresponsible. The Constitution, after all, is law, which the Court ascertains and applies. This conventional answer, as Bradley Thayer predicted a hundred years ago,1 increasingly seems to be not only misguided, but even destructive, and for at least two reasons. First, it rests on a debased, denuded view of politics, and therefore, to the considerable degree that constitutional ideas really do matter, it actually debases politics. Politics, and not just adjudication, ought to be reasoned, deliberate, intelligent, forward-looking, respectful of the past, and mindful of equality and liberty. Legislators ought to possess and exercise precisely the virtues we ask of judges. Our politics, and not just our law, should be ennobling; it should be as Aristotle thought it was: the highest form of ethical decision-making by and over the affairs of civic equals. The division of labor on the conventional account virtually guarantees it won't be. The greater and wider and stronger the moral context, or richness, of the Constitution's grand phrases, furthermore, the worse the problem becomes. Dworkin's mythical judge Hercules,2 deciding cases by the light of omniscience and perfect moral knowledge, is just the limiting case, he casts in sharp relief, albeit unintentionally, precisely what is wrong with the conventional answer he was created to justify. Hercules, as Dworkin has described him, has the virtues of the quintessential Aristotlean political actor: he is wise, philosophically astute, mindful of history, and dedicated above all else to promoting liberty and equality. But—he's a judge. By contrast, the Dworkinian legislator, as Dworkin tells us again and again, just does whatever he wants. Dworkin's judge is truly political in the highest sense. The legislator, by contrast, is infantile. There is a problem when our most enduring, most conventional account of constitutionalism effectively casts our politics as a sandlot brawl.

A/T Key to Stable Interpretation

CP solves predictability – congress values it as much as the courts

Kramer, 2004 (Larry D., Russell D. Niles Professor of Law, New York University School of Law, "Popular Constitutionalism, circa 2004," July, 92 Calif. L. Rev. 959)

A second point, equally obvious, is also equally important to emphasize: we cannot ask how much stability different institutional arrangements will provide in the abstract. As Mark Tushnet notes, "the question for institutional design is not what principles govern the institutions, but what practices they engage in." n103 Proponents of judicial supremacy on settlement grounds have been notoriously inattentive to what we know about how political institutions actually handle constitutional questions, content to argue from stereotypes and theoretical possibilities. Yet experience suggests that if there is a "settlement gap" between a world with judicial supremacy and a world without it, that gap is likely to be small. [*988] This is so for a number of reasons. Nonjudicial actors also value stability and predictability and work hard to produce it. n104 More important, the structure of American politics - including not just the formal Constitution, but also subconstitutional devices like the filibuster and congressional committee system - tends to reinforce these natural incentives by requiring large coalitions to bring about change. n105 "The difficulty of getting laws passed unless they have really strong support," Tushnet offers, "means that making our fundamental law depend on what Congress enacts would almost certainly be no more unstable than making it depend on what five Justices say." n106 Partly for this

reason, moreover, it would never be the case (as the argument is sometimes caricatured) that everything would be up for grabs all the time. Issues might come and go; things that were once settled might again become controversial. But at any given time, the vast majority of constitutional law would be stable and settled.

A/T Judicial Independence Good

Judicial independence is bad – congressional interpretation is better

Kramer, 200**4** (Larry D., Russell D. Niles Professor of Law, New York University School of Law, "Popular Constitutionalism, circa 2004," July, 92 Calif. L. Rev. 959)

Consider, for example, the argument that judges can reason about questions of principle "better" because institutional independence insulates them from the sort of grubby self-interest that distorts the thinking of ordinary citizens and politicians. Even granting the very questionable proposition that judges are meaningfully insulated from self interest (as opposed to experiencing it in a different form), the argument that this is a good thing "flies in the face of other epistemic precepts" - for example, "that decisions about rights are best taken by those who have a sufficient stake in the matter to decide responsibly." n124 And how do we resolve that disagreement? Yet without concurrence on the necessary or proper circumstances for reaching correct results, any argument that judges are more likely to do so either lacks foundation or begs the question: Without an epistemology - and an epistemology which is to some extent less controversial (or at any rate differently controversial) than the knowledge claims it covers - there cannot be a theory of expertise. Thus the epistemic inadequacy of moral realism is far-reaching: in practical matters, it deprives realists of almost everything that they might want to say or argue for in the name of objectivity. n125 It does not follow that we must reject judicial supremacy. Uncertainty about which answers or processes are best does not automatically point us toward any other institution to resolve disagreements either. Perhaps backers of judicial supremacy need to be less confident about their argument, but incertitude is not the same thing as incapacity. We still must decide who should decide, and one could still choose the judiciary because one believes (all things considered) that the judicial process still offers the best solution. Waldron recognizes this but suggests two reasons for lodging final interpretive authority elsewhere. First, Waldron says, the unavoidable existence of disagreement and uncertainty about outcomes means that any argument based on "rights-instrumentalism" - the notion that this or that decision-making procedure is likely to produce more correct results - will never rest on anything other than faith and will be decided less on the basis of hard evidence than a priori postulates about how different actors behave. n126 The turn to judges, for example, relies on and reflects a fairly profound skepticism about the ability of politicians and ordinary citizens to handle constitutional questions: a belief that, at its most cynical, sounds something like "legislative and electoral politics is entirely a matter of self-interest, [*996] and ... representatives and voters never raise their minds above the sordid question, "What's in it for me?"" n127 Yet the assumption that ordinary citizens cannot be trusted to understand or respect the principles that animate constitutional rights stands at odds with the assumption we make about why they are entitled to those rights in the first place - which is that human individuals are thinking agents, "endowed with an ability to deliberate morally, to see things from others' points of view, and to transcend a preoccupation with [their] own particular or sectional interests." n128 This being so, Waldron reasons, should we not rather resolve our uncertainty about rights in favor of individual participation? How can we say we are offering someone the respect he or she is owed as an active, thinking person entitled to rights if, at the same time, we ignore what he or she has to say about the matter? Not that individuals will always make correct choices, either for themselves or (collectively) for others. But insofar as uncertainty will always remain about which choices are in fact correct, the affected individuals should themselves be the ones to decide. This might be true even were we certain that "a nine man junta clad in black robes and surrounded by law clerks" n129 would generally do a better job. But surely it seems right where we can have no basis for such confidence. This position, Waldron explains: Embodies a conviction that these issues of principle are ours to deal with, so that even if they must be dealt with by some institution which comprises fewer than all of us, it should nevertheless be an institution that is diverse and plural and which, through something like electoral accountability, embodies the spirit of self-government, a body which can discern the manifest footprints of our own original consent. n130

A/T Judicial Review Good

Judicial review undermines deliberative democracy and empowers social elites

Aronson, 20**10** (Ori, S.J.D. Candidate, Harvard Law School, and Sacher Research Fellow, Hebrew University of Jerusalem, "INFERIORIZING JUDICIAL REVIEW: POPULAR

CONSTITUTIONALISM IN TRIAL COURTS," University of Michigan Journal of Law Reform, Summer, 43 U. Mich. J.L. Reform 971)

(1) Anti-democratic. The oldest critique in the "new wave" of critiques of judicial review is that which emerged anew with Alexander Bickel's Least Dangerous Branch, n5 namely, that judicial review is countermajoritarian, and thus in its very essence is at odds with democracy. The well-known argument is that allowing non-elected and unremoveable judges and justices to overrule procedurally valid decisions of periodically elected bodies (namely Congress) undermines the very bedrock of democratic rule - majoritarian decision-making by elected representatives who are institutionally accountable to popular will. This is a "difficulty" with any constitutional regime, n6 but it is most severe in constitutional regimes like that of the United States, in which the Constitution is relatively old and practically unamendable. Under a rule of judicial review, the will of current majorities - as exhibited through legislative acts of elected representatives - is being overruled by an unelected minority, which at best follows the dictates of past generations, and at worst applies its own set of beliefs and mores. [*976] Democracy - understood as government through the aggregated will of current majorities - is therefore undermined by the combined will of current minorities and past generations. (2) Not professionally adequate. A second difficulty with judicial review is that even if one supports a constitutional regime, in the sense that current majorities should be bound by the value and procedure determinations of past majorities (or, often, past super-majorities), then judges are not necessarily, and to some necessarily not, the best equipped agents of constitutional interpretation and application. n7 While judges, bound by their professional ethos, focus on interpreting texts, adhering to or distinguishing earlier precedents, and cloaking their ideological standpoints, legislators regularly drive to the heart of moral disagreements and openly engage with the policy implications of their determinations. Because constitutional interpretation calls for moral and political deliberation, legislatures may be more suited for the job, and therefore also more legitimate. n8 (3) Inhibits Deliberation. A third theme of the attack on judicial review concerns the effects of judicial review on the strength of the democratic culture and on such values as participation, deliberation, and public engagement in the political process. According to this argument, leaving the final interpretation and application of the Constitution to the courts numbs the public forums that are both functionally and democratically more suited to conduct moral deliberation and to produce legitimate political determinations: most notably, elected legislatures and their originating processes - party politics and electoral campaigns. n9 Rather than "fight it out" in the forums of public deliberation, both constituents and representatives often defer to the stylized, alienated, paternalistic, and assumedly conclusive determinations of a professional judiciary in a wide variety of deeply contested issues of value. This loss of participation and public deliberation harms democratic legitimacy, erodes public attentiveness to injustices and rights-violations and to popular capabilities to address them, undermines the shared experience of a political community, marginalizes "have-nots," and [*977] empowers "haves" and legal repeat-players. For deliberative visions of democracy, judicial review may be an inhibiting force. n10 (4) Elitist. A fourth kind of critique of judicial review aims at the socially elitist nature of the practice. Judicial review is typically practiced by usually affluent, usually white, usually male, judges who enjoy - at least since they were exempted from circuit duties and granted the power of certiorari - an institutionalized aloofness. Judges and, more so, justices, who normally belong to an elite class within their society, hold themselves capable of providing the national constituency with a definitive interpretation of their founding tenets. This practice legitimates and preserves an existing social order: it legitimates the political structure by wielding a rhetoric of rights. n11 While this critique is applicable to many judicial practices, it may be argued that judicial review is the most extreme case of judicial anti-populism. Judicial review lets judges have their way with the essentials that define the polity - the constitution - which is arguably the field where popular energy may be most obviously and directly exerted. n12

Rights Bad

Rights focus stifles more radical challenges and diminishes welfare for rights holders

Schlanger, 20**15** (Margo, Henry M. Butzel Professor of Law, University of Michigan, "Intelligence legalism and the national security agency's civil liberties gap," 6 Harvard National Security Journal 112)

Theorists and observers in a variety of fields have developed the broad critique that law and its concomitant rights orientation may have the counterintuitive impact of decreasing the welfare of the purported rights holders—or, in a more modest version of the point, may ameliorate some prevalent set of harms but undermine more ambitious efforts. Focusing particularly on litigation, they argue that it is inherently a timid enterprise, and yet it crowds out other more muscular approaches.317 Even with respect to out-of-court rights orientation, or "legalization," scholars have offered the insight that formalizing/legalistic approaches can come with real costs to their intended beneficiaries, depending on the context. 318 The issue is whether, in a particular institutional setting, these possibilities have materialized. In this Section, I examine two pathways by which intelligence legalism tends to impair the prospects of a softer civil-liberties protective policy. 1. Intelligence Legalism Crowds Out Interest Balancing This Article demonstrates the high salience of rights in this realm. Several related mechanisms convert that high salience into a devaluation of interests: First, rights occupy the "liberty" field because of the practical issue of attention bandwidth, which potentially applies both to agencies and advocates. After all, even large organizations have limited capacity.319 NSA compliance is such an enormous task that little room remains for more conceptual weighing of interests and options. Recall that of the dozen-plus offices I described in Part II, just two—the Civil Liberties and Privacy Office at the NSA, and the Privacy and Civil Liberties Oversight Board—are currently playing a policy rather than strictly a compliance role. They are also, not coincidentally, the two newest and two smallest of the offices listed. I think, though, that this bandwidth issue is driven by a more conceptual, less practical, factor: that rights talk hides the necessity of policy judgments and, by its purity, diverts attention from that messier field. Morton Horwitz explains the point: A . . . troubling aspect of rights discourse is that its focus on fundamental, inherent, inalienable or natural rights is a way of obscuring or distorting the reality of the social construction of rights and duties. It shifts discussion away from the always disputable issue of what is or is not socially desirable. Rights discourse . . . wishes us to believe instead that the recognition of rights is not a question of social choice at all, as if in the normative and constitutional realm rights have the same force as the law of gravity.320 Mary Dudziak makes a similar claim in her recent discussion of law and drone warfare, "In this context, law . . . does not aid judgment, but diverts our attention from morality, diplomacy, humanity, and responsibility in the use of force, and especially from the bloody mess left on the ground."321 Even in Fourth Amendment jurisprudence, an area of constitutional doctrine explicitly imbued with policy considerations, we talk about rights as if they are somehow scientific, to be deduced rather than debated. The discussion that must accompany policy claims pales in prestige and importance by comparison. And from the perspective of their beneficiaries, judicially enforceable rights, with their promise of supremacy over competing interests, are shiny and magnetic. This is why the assertion of rights can be such a powerful organizing tool322—even if those rights don't turn out to change much on the ground. As Rich Ford has written, "Rights are a secular religion for many Americans."323 Or to quote Alan Freeman's classic article about civil rights, "Rights consciousness can offer sustenance to a political movement, however alienated, indeterminate or reified rights may be."324 It is the purity, the apparent apolitical nature, of rights that makes them nearly the only coin available. By comparison with judicially enforceable rights, other methods of advancing individual liberty look feeble, contingent, jury-rigged. An accusation of illegality becomes the required first bid for any policy discussion, and a refutation of that accusation ends play. This dynamic is very much in evidence in the response to the PCLOB's 702 report, described above. Rights discourse stunts needed policy discourse.325

Judicial Review Bad

Judicial review legitimates surveillance – makes systemic reform more difficult

Schlanger, 20**15** (Margo, Henry M. Butzel Professor of Law, University of Michigan, "Intelligence legalism and the national security agency's civil liberties gap," 6 Harvard National Security Journal 112)

In addition, judicial review legitimates the American surveillance system; that is why reference to court supervision is surveillance proponents' first recourse when they want to suggest that everything is fine. It is, for example, a rare speech by a government official that fails to make reference to the FISA Court and its ratification of the government's surveillance programs. Below are passages, chosen essentially at random, from a speech by President Obama on the topic of signals intelligence reform326: • "I ordered that our programs be reviewed by my national security team and our lawyers . . . . We increased oversight and auditing, including new structures aimed at compliance. Improved rules were proposed by the government and approved by the Foreign Intelligence Surveillance Court." • "[T]he Foreign Intelligence Surveillance Court . . . provides judicial review of some of our most sensitive intelligence activities." In language like the above, court involvement is offered as evidence of both legality and appropriateness; indeed, the two are conceptually merged. My point is not that FISA Court legitimation is phony. In fact, judicial review has real effects on the system—we know from the recently declassified documents that FISA Court review disciplines the surveillance system, holding it at least to the government's own representations.327 Yet the oversight gain carries with it a legitimation cost; the existence of judicial review makes political change more difficult. Scholars, particularly critical legal studies scholars, have made this point in a large number of other contexts. For example, Alan Freeman argued that civil rights law—and law more generally—exists "largely to legitimize the existing social structure."328 The polity at large is soothed, and the effect is felt even by rights beneficiaries, who frame and tame their aspirations to suit the inherently limited scope of potential judicial interventions. Freeman described his view that American civil rights litigation has amounted to a "process of containing and stabilizing the aspirations of the oppressed through tokenism and formal gestures which actually enhance the material lives of few."329 He wrote: Rights are granted to, or bestowed upon, the powerless by the powerful. They are ultimately within the control of those with authority to interpret or rewrite the sacred texts from which they derive. To enjoy them, one must respect the forms and norms laid down by those in power. One must especially avoid excesses in behavior or demands.330 The point is not, for Freeman (and the plentiful literature he adduced), that law accomplishes nothing for its purported beneficiaries. If that were true, it could not legitimate: "[I]f law is to serve its legitimation function, [the] ultimate constraints [that come from politics] must yield up just enough autonomy to the legal system to make its operations credible for those whose allegiance it seeks as well as those whose self-interest it rationalizes."331 But gains from rights may—and in the surveillance situation clearly do—make gains from politics less available. To sum up this Part, neither the Constitution nor FISA aims to optimally balance security and liberty—and frequently analyzed difficulties in congressional intelligence oversight mean that new statutes are unlikely to fill that gap. Likewise the existing foundational Executive Order, 12,333, is at the very least out-of-date. Accordingly intelligence legalism, and its compliance mindset, cannot achieve optimal policy. Its concomitant empowerment of lawyers is real and important, but does not deputize a procivil liberties force. Indeed, legalism actually both crowds out the consideration of policy and interests (as opposed to law and rights), and legitimates the surveillance state, making it less susceptible to policy reform. Are there, then, non-legalistic reforms that could play a productive part? I turn next to this issue.

NSA UNT

Solvency Frontline 1/

Zero Solvency:

- Localization already in place
- No Forum for International Harmonization
- Competing Interest Overwhelm "signals"

Susan Ariel **Aaronson '12** (Research Professor at the Elliott School of International Affairs, George Washington University22 December, "Can trade policy set information free?" http://www.voxeu.org/article/trade-agreements-global-internet-governance)

Although the internet is creating a virtuous circle of expanding global growth, opportunity, and information flows (Lendle et al. 2012), policymakers and market actors are taking steps that undermine access to information, reduce freedom of expression and splinter the internet (Herald 2012). **Almost every country** has adopted policies to protect privacy, enforce intellectual property rights, protect national security, or thwart cyber-theft, hacking, and spam. While these actions may be necessary to achieve important policy goals, these policies may distort cross-border information flows and trade. Meanwhile, US, Canadian and European firms provide much of the infrastructure as well as censorware or blocking services to their home governments and repressive states such as Iran, Russia, and China (Heacock 2011, Horwitz 2011, Ungeleider 2011). As a result, although the internet has become a platform for trade, trade itself and trade policies have served both to enhance and undermine both internet freedom and an open internet. Trade agreements as internet governance Trade agreements and policies have become an important source of rules governing cross-border information flows: Policymakers recognise that when we travel the information superhighway, we are often trading – and internet usage can dramatically expand trade 1 . The internet is not only a tool of empowerment for the world's people, but a major source of wealth for US, EU, and Canadian business. Moreover, internet commerce will grow substantially in the future as much of the world's population is not yet online (OECD 2008, Internet World Stats 2012). US, European and Canadian policymakers want to both protect their firms' competitiveness and increase market share. US, European and Canadian governments understand that while some domestic laws can have global reach, domestic laws on copyright, piracy, and internet security do not have global legitimacy and force. Hence, they recognise they must find common ground on internationally accepted rules governing cross-border data flows In theory, the WTO should be an appropriate venue for such discussions. WTO members agreed not to place tariffs on data flows. In addition, the WTO's dispute settlement body has settled two trade disputes related to internet issues: internet gambling and China's state trading rights on audiovisual products and services (WTO 2007, WTO 2012). However, the member states have not found common ground on how to reduce new trade barriers to information flows 3 . In 2011, several nations stopped a US and EU proposal that members agree not to block internet service providers or impede the free flow of information online 4 . Moreover, the members of the WTO have made little progress on adding new regulatory issues such as privacy and cyber security that challenge internet policymakers 5 . However, many new online activities will require cooperative global regulation on issues that transcend market access – the traditional turf of the WTO. These issues will require policymakers to think less about ensuring that their model of regulation is adopted globally but more about achieving interoperability among different governance approaches (see Burri and Cottier 2012). Alas, policymakers are not consistently collaborating to achieve interoperability. Trade giants and the internet In a recent policy brief (Aaronson and Townes 2012), Miles Townes and I examined how the US, the EU, and Canada use trade policies to govern the internet at home and across borders. We found the three trade giants use bilateral and regional trade agreements to encourage ecommerce, reduce online barriers to trade, and to develop shared policies in a world where technology is rapidly changing and where governments compete to disseminate their regulatory approaches (Coppock and Maclay 2002). Policymakers also use export controls, trade bans or targeted sanctions to protect internet users in other countries or to prevent officials of other countries from using internet related technologies in ways that undermine the rights of individuals abroad. Finally, policymakers may use trade agreements to challenge other governments' online rules and policies as trade barriers. We discuss how these policies, agreements, bans and strategies could affect internet openness, internet governance, and internet freedom The US is actively pushing for binding

provisions in trade agreements that advance the free flow of information while challenging other nations privacy and server location policies as trade barriers. However, the US provisions are incomplete. Hence, we recommended that as trade agreements have long addressed governance, the US and other governments negotiating binding provisions to encourage cross-border information flows should also include language related to the regulatory context in which the internet functions; free expression, fair use, rule of law, and due process. Moreover, the US and other nations should coordinate policies to promote the free flow of information with policies to advance internet freedom. Policymakers may need to develop principles for the proper role of government in balancing Internet freedom and stability at the domestic and global levels. Finally, governments may also need to develop shared principles for steps governments may take when countries do not live up to these principles (a responsibility to protect the open internet). Internet openness We also believe that the US, EU and Canada should also show their commitment to internet openness by annually reporting when and why they blocked specific applications or technologies and/or limited content (or asked intermediaries to limit access) to sites or domains. With this information, policymakers may get better understanding of how to achieve a flexible and effective balance of internet stability and internet openness. Is censorship a barrier to trade? Policymakers don't know if censorship is also a barrier to trade. The US and EU have issued reports describing other countries' internet policies – regarding privacy, censorship, server location and security policies – as potential barriers to trade. However, none of the three governments has yet challenged internet restrictions as a barrier to trade. We recommended that trade policymakers ask the WTO secretariat to analyse if domestic policies that restrict information – short of exceptions for national security or public morals – are also barriers to cross-border information flows which can be challenged in a trade dispute. Moreover, policymakers should develop strategies to quantify how such policies affect trade flows. Conclusions Without deliberate intent, domestic and trade policies may gradually fracture a unified, global internet. Given that countries have different priorities for privacy, free speech, and national security, the international harmonisation of strategies to advance the open internet is unlikely.

Solvency Frontline 2/

Turn: Terrorism

A. Terrorist threats are immanent: only counter-intelligence avoids catastrophic attacks.

James Jay **Carafano** et al **'15** (Ph.D., Charles "Cully" Stimson, Steven P. Bucci, Ph.D.,John Malcolm and Paul Rosenzweig, May 21, Backgrounder #3018 on National Security and Defense, Heritage Foundation, Section 215 of the PATRIOT Act and Metadata Collection: Responsible Options for the Way Forward" http://www.heritage.org/research/reports/2015/05/section-215-of-the-patriot-act-and-metadata-collection-responsible-options-for-the-way-forward

The Real and Growing Threat of Terrorism Any debate about America's counterterrorism capabilities must be conducted in the context of the actual terrorist threat the U.S. faces. Since 9/11, The Heritage Foundation has tracked Islamist terrorist plots and attacks, which now, after the recent shooting in Garland, Texas, total 68.[1] This figure, however, does not consider foiled plots of which the public is unaware. Recently, there has been a dramatic uptick in terrorism: The shooting in Garland is the sixth Islamist terrorist plot or attack in the past five months. Add to that number the surge of Americans seeking to support or join ISIS and al-Qaeda affiliates, and one fact becomes clear: The U.S. is facing the most concentrated period of terrorist activity in the homeland since 9/11. Of course, it is no coincidence that this spike in terrorism parallels the spread of the Islamic State and other radical groups across Syria, Iraq, and other parts of the Middle East. More than 150 American passport holders have traveled to Syria, or attempted to travel there, to join the fighting, along with more than 20,000 fighters from more than 90 countries.[2] Many of these individuals with American passports are believed to have joined ISIS or the Nusra Front, an affiliate of al-Qaeda in Syria. Both the Nusra Front and ISIS espouse an anti-Western Islamist ideology that calls for terrorist attacks against the United States. For example, in July 2012, the leader of ISIS, self-proclaimed caliph Abu Bakr Baghdadi, threatened to launch attacks against the U.S. homeland. Baghdadi warned Americans, "You will soon witness how attacks will resound in the heart of your land, because our war with you has now started."[3] Toward this end, al-Qaeda formed a unit of veteran terrorists to recruit some of the Western foreign fighters in Syria and train them to conduct terrorist attacks in their home countries. This unit, dubbed the Khorasan group by U.S. officials, is embedded in the Nusra Front and is particularly interested in recruiting fighters who hold American passports.[4] These terrorist organizations have undertaken a significant effort to reach out to individuals across the world in order to radicalize and recruit them. In recent testimony before the Senate Appropriations Committee, FBI Director James Comey stated that: The threats posed by foreign fighters, including those recruited from the U.S., traveling to join the Islamic State of Iraq and the Levant (ISIL) and from homegrown violent extremists are extremely dynamic. These threats remain the biggest priorities and challenges for the FBI, the U.S. Intelligence Community, and our foreign, state, and local partners. ISIL is relentless and ruthless in its pursuits to terrorize individuals in Syria and Iraq, including Westerners. We are concerned about the possibility of individuals in the U.S. being radicalized and recruited via the Internet and social media to join ISIL in Syria and Iraq and then return to the U.S. to commit terrorist acts. ISIL's widespread reach through the Internet and social media is most concerning as the group has proven dangerously competent at employing such tools for its nefarious strategy.[5] In the past several weeks, Director Comey has increased the intensity of his warnings, stating that "hundreds, maybe thousands" of individuals across the U.S. are being contacted by ISIS to attack the U.S. homeland.[6] Secretary of Homeland Security Jeh Johnson has echoed these warnings, saying that lone-wolf terrorists inspired by ISIS could strike at any moment."[7] The 2015 Worldwide Threat Assessment of the U.S. Intelligence Community states that: Attacks by lone actors are among the most difficult to warn about because they offer few or no signatures. If ISIL were to substantially increase the priority it places on attacking the West rather than fighting to maintain and expand territorial control, then the group's access to radicalized Westerners who have fought in Syria and Iraq would provide a pool of operatives who potentially have access to the United States and other Western countries.[8] On the same note, the Director of the National Counterterrorism Center also stated in his testimony to the Senate Select Committee on Intelligence this February that there has been a recent "uptick in terror attacks in the West." This increase in attacks "underscores the threat of emboldened Homegrown Violent Extremists and, how the rapid succession of these attacks may motivate some to attempt to replicate these tactics with little-to-no warning."[9] These statements and assessments, together with the explicit and public statements of intent by multiple terrorist groups and the recent surge in terrorist plots and attacks against the U.S. homeland, demonstrate that the threat of terrorism is on the rise. Fortunately, the U.S. has improved its ability to foil these attacks, largely due to intelligence capabilities that include but are not limited to the bulk telephone metadata program under Section 215 of the PATRIOT Act.

B. Extinction:

Alexander '3 (Terrorism myths and realities," The Washington Times, August 27, http://www.washingtontimes.com/news/2003/aug/27/20030827-084256-8999r/print/)

Last week's brutal suicide bombings in Baghdad and Jerusalem have once again illustrated dramatically that the international community failed, thus far at least, to understand the magnitude and implications of the terrorist threats to the very survival of civilization itself. Even the United States and Israel have for decades tended to regard terrorism as a mere tactical nuisance or irritant rather than a critical strategic challenge to their national security concerns. It is not surprising, therefore, that on September 11, 2001, Americans were stunned by the unprecedented tragedy of 19 al Qaeda terrorists striking a devastating blow at the center of the nation's commercial and military powers. Likewise, Israel and its citizens, despite the collapse of the Oslo Agreements of 1993 and numerous acts of terrorism triggered by the second intifada that began almost three years ago, are still "shocked" by each suicide attack at a time of intensive diplomatic efforts to revive the moribund peace process through the now revoked cease-fire arrangements (hudna). Why are the United States and Israel, as well as scores of other countries affected by the universal nightmare of modern terrorism surprised by new terrorist "surprises"? There are many reasons, including misunderstanding of the manifold specific factors that contribute to terrorism's expansion, such as lack of a universal definition of terrorism, the religionization of politics, double standards of morality, weak punishment of terrorists, and the exploitation of the media by terrorist propaganda and psychological warfare. Unlike their historical counterparts, contemporary terrorists have introduced a new scale of violence in terms of conventional and unconventional threats and impact. The internationalization and brutalization of current and future terrorism make it clear we have entered an Age of Super Terrorism (e.g. biological, chemical, radiological, nuclear and cyber) with its serious implications concerning national, regional and global security concerns. Two myths in particular must be debunked immediately if an effective counterterrorism "best practices" strategy can be developed (e.g., strengthening international cooperation). The first illusion is that terrorism can be greatly reduced, if not eliminated completely, provided the root causes of conflicts -- political, social and economic -- are addressed. The conventional illusion is that terrorism must be justified by oppressed people seeking to achieve their goals and consequently the argument advanced by "freedom fighters" anywhere, "give me liberty and I will give you death," should be tolerated if not glorified. This traditional rationalization of "sacred" violence often conceals that the real purpose of terrorist groups is to gain political power through the barrel of the gun, in violation of fundamental human rights of the noncombatant segment of societies. For instance, Palestinians religious movements (e.g., Hamas, Islamic Jihad) and secular entities (such as Fatah's Tanzim and Aqsa Martyr Brigades)) wish not only to resolve national grievances (such as Jewish settlements, right of return, Jerusalem) but primarily to destroy the Jewish state. Similarly, Osama bin Laden's international network not only opposes the presence of American military in the Arabian Peninsula and Iraq, but its stated objective is to "unite all Muslims and establish a government that follows the rule of the Caliphs." The second myth is that strong action against terrorist infrastructure (leaders, recruitment, funding, propaganda, training, weapons, operational command and control) will only increase terrorism. The argument here is that law-enforcement efforts and military retaliation inevitably will fuel more brutal acts of violent revenge. Clearly, if this perception continues to prevail, particularly in democratic societies, there is the danger it will paralyze governments and thereby encourage further terrorist attacks. In sum, past experience provides useful lessons for a realistic future strategy. The prudent application of force has been demonstrated to be an effective tool for short- and long-term deterrence of terrorism. For example, Israel's targeted killing of Mohammed Sider, the Hebron commander of the Islamic Jihad, defused a "ticking bomb." The assassination of Ismail Abu Shanab -- a top Hamas leader in the Gaza Strip who was directly responsible for several suicide bombings including the latest bus attack in Jerusalem -- disrupted potential terrorist operations. Similarly, the U.S. military operation in Iraq eliminated Saddam Hussein's regime as a state sponsor of terror. Thus, it behooves those countries victimized by terrorism to understand a cardinal message communicated by Winston Churchill to the House of Commons on May 13, 1940: "Victory at all costs, victory in spite of terror, victory however long and hard the road may be: For without victory, there is no survival."

Solvency Frontline 4/

Turn: Cyberwar- China will perceive the plan as weakness- leading to catastrophic cyber attacks.

Dan **Blumenthal '13** (Asia, Foreign and Defense Policy Analyst, February 28, Foreign Policy, "The great cyber smackdown: How to win a cyberwar with China,")

The Internet is now a battlefield. China is not only militarizing cyberspace — it is also deploying its cyberwarriors against the United States and other countries to conduct corporate espionage, hack think tanks, and engage in retaliatory harassment of news organizations. These attacks are another dimension of the ongoing strategic competition between the United States and China — a competition playing out in the waters of the East and South China seas, in Iran and Syria, across the Taiwan Strait, and in outer space. With a number of recent high-profile attacks in cyberspace traced to the Chinese government, the cybercompetition seems particularly pressing. It is time for Washington to develop a clear, concerted strategy to deter cyberwar, theft of intellectual property, espionage, and digital harassment. Simply put, the United States must make China pay for conducting these activities, in addition to defending cybernetworks and critical infrastructure such as power stations and cell towers. The U.S. government needs to go on the offensive and enact a set of diplomatic, security, and legal measures designed to impose serious costs on China for its flagrant violations of the law and to deter a conflict in the cybersphere. Fashioning an adequate response to this challenge requires understanding that China places clear value on the cyber military capability. During the wars of the last two decades, China was terrified by the U.S. military's joint, highly networked capabilities. The People's Liberation Army (PLA) began paying attention to the role of command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) assets in the conduct of war. But the PLA also concluded that the seeds of weakness were planted within this new way of war that allowed the United States to find, fix, and kill targets quickly and precisely — an overdependence on information networks. Consider what might happen in a broader U.S.-China conflict. The PLA could conduct major efforts to disable critical U.S. military information systems (it already demonstrates these capabilities for purposes of deterrence). Even more ominously, PLA cyberwarriors could turn their attention to strategic attacks on critical infrastructure in America. This may be a highly risky option, but the PLA may view cyber-escalation as justified if, for example, the United States struck military targets on Chinese soil. China is, of course, using attacks in cyberspace to achieve other strategic goals as well, from stealing trade secrets to advance its wish for a more innovative economy to harassing organizations and individuals who criticize its officials or policies. Barack Obama's administration has begun to fight back. On Feb. 20, the White House announced enhanced efforts to fight the theft of American trade secrets through several initiatives: building a program of cooperative diplomacy with like-minded nations to press leaders of "countries of concern," enhancing domestic investigation and prosecution of theft, promoting intelligence sharing, and improving current legislation that would enable these initiatives. These largely defensive measures are important but should be paired with more initiatives that start to play offense. Offensive measures may be gaining some steam. The U.S. Justice Department, in creating the National Security Cyber Specialists' Network (NSCS) last year, recognizes the need for such an approach. The NSCS — consisting of almost 100 prosecutors from U.S. attorneys' offices working in partnership with cyber-experts from the Justice Department's National Security Division and the Criminal Division's Computer Crime and Intellectual Property Section — is tasked with "exploring investigations and prosecutions as viable options for deterrence and disruption" of cyberattacks, including indictments of governments or individuals working on the government's behalf. It's a good first step, but Congress could also consider passing laws forbidding individuals and entities from doing business in the United States if there is clear evidence of involvement in cyberattacks. Congress could also create a cyberattack exception to the Foreign Sovereign Immunities Act, which currently precludes civil suits against a foreign government or entity acting on its behalf in the cyber-realm. There is precedent: In the case of terrorism, Congress enacted an exception to immunity for states and their agents that sponsor terrorism, allowing individuals to sue them. Enterprising companies and intelligence personnel are already able to trace attacks with an increasing degree of accuracy. For example, the U.S. security company Mandiant traced numerous incidents going back several years to the Shanghai-based Unit 61398 of the PLA, which was first identified publicly by the Project 2049 Institute, a Virginia-based think tank. Scholars Jeremy and Ariel Rabkin have identified another way to initiate nongovernmental legal action: rekindling the 19th-century legal practice of issuing "letters of marque" — the act of commissioning privateers to attack enemy ships on behalf of the state — to selectively and cautiously legitimize retaliation by private U.S. actors against hacking and cyber-espionage. This would allow the U.S. government to effectively employ its own cybermilitia. Creating new laws or using current ones would force the Chinese government and the entities that support its cyberstrategy to consider the reputational and financial costs of their actions. Of course, if the United States retaliates by committing similar acts of harassment and

hacking, it risks Chinese legal action. But America has a key advantage in that its legal system is respected and trusted; China's is not. Diplomatic action should bolster these efforts. The Obama administration's suggestions for pressuring China and other countries are a good start, but U.S. diplomacy must be tougher. In presenting Chinese leaders with overwhelming evidence of cyber-misdeeds (but without giving away too many details), Washington should communicate how it could respond. To control escalation, the administration should explain what it views as proportionate reprisals to different kinds of attacks. (For instance, an attack on critical infrastructure that led to deaths would merit a different response than harassment of the New York Times.) As the administration's report suggests, the United States is not the only victim and should engage in cooperative diplomacy. The United States should set up a center for cyberdefense that would bring together the best minds from allied countries to develop countermeasures and conduct offensive activities. One such center could be Taiwan, as its understanding of Chinese language, culture, business networks, and political landscape make it invaluable in the fight against cyberattacks. Of course, centers could be placed elsewhere and still utilize Taiwan's knowledge, but even the threat of placing a cyberdefense center just across the strait would be very embarrassing for China's leaders, as Taiwan is viewed as a renegade province. The point is not to be gratuitously provocative, but rather to demonstrate that the United States options that China would not favor. The U.S. military's cyber-efforts presumably already include it own probes, penetrations, and demonstrations of capability. While the leaks claiming the U.S. government's involvement in the Stuxnet operation — the computer worm that disabled centrifuges in the Iranian nuclear program — may have damaged U.S. national security, at least China knows that Washington is quite capable of carrying out strategic cyberattacks. To enhance deterrence, the U.S. government needs to demonstrate these sorts of capabilities more regularly, perhaps through cyber-exercises modeled after military exercises. For example, the U.S. military could set up an allied public training exercise in which it conducted cyberattacks against a "Country X" to disable its military infrastructure such as radars, satellites, and computer-based command-and-control systems. To use the tools at America's disposal in the fight for cybersecurity will require a high degree of interagency coordination, a much-maligned process. But Washington has made all the levers of power work together previously. The successful use of unified legal, law enforcement, financial, intelligence, and military deterrence against the Kim regime of North Korea during a short period of George W. Bush's administration met the strategic goals of imposing serious costs on a dangerous government. China is not North Korea — it is far more responsible and less totalitarian. But America must target those acting irresponsibly in cyberspace. By taking the offensive, the United States can start to impose, rather than simply incur, costs in this element of strategic competition with China. Sitting by idly, however, presents a much greater likelihood that China's dangerous cyberstrategy could spark a wider conflict.

Terrorism Turn- Ext: 702 Key

702 crucial to signals intelligence- empirically prevents major attacks.

James Jay **Carafano** et al **'15** (Ph.D., Charles "Cully" Stimson, Steven P. Bucci, Ph.D.,John Malcolm and Paul Rosenzweig, May 21, Backgrounder #3018 on National Security and Defense, Heritage Foundation, Section 215 of the PATRIOT Act and Metadata Collection: Responsible Options for the Way Forward" http://www.heritage.org/research/reports/2015/05/section-215-of-the-patriot-act-and-metadata-collection-responsible-options-for-the-way-forward

The Way Forward The United States is in a state of armed conflict against al-Qaeda, the Afghan Taliban, ISIS, and associated forces. It must therefore rely on all lawful tools of national security, including but not limited to robust signals intelligence. As the 9/11 Commission Report made crystal clear, one of the key failures of the United States before the 9/11 attacks was the government's inability to "connect the dots" between known or suspected terrorists. The artificial "wall" between domestic law enforcement and U.S. intelligence agencies, enacted during the 1990s, proved to be America's Achilles' heel. Some analysts believe that had America had a Section 215–type program in place before 9/11, U.S. intelligence, along with domestic law enforcement, would have been able to connect the dots and prevent at least some of the hijackers from launching their devastating attack.[14] In fact, according to a report by the House Permanent Select Committee on Intelligence, using the authorities under Section 215 of the PATRIOT Act and Section 702 of the FISA has contributed to thwarting 54 total international terrorist plots in 20 countries.[15] Thirteen of those plots were directed inside the United States. As Americans, we cherish our constitutional rights, including our right to privacy. Numerous court decisions have held that data, in the hands of third-party providers, are not protected by the Fourth Amendment of the Constitution.[16] There is a case pending before the Court of Appeals for the District of Columbia Circuit in which the issue before the court is whether Section 215 violates the Fourth Amendment; that court has not yet issued its opinion.[17] As Section 215 expires at the end of May 2015, policymakers are faced with the following quandary: How do they protect Americans from a determined enemy while respecting this nation's healthy distrust of government surveillance? First, given the increasing nature of the threat and the unique nature of this enemy, it would be unwise to completely abandon the use of telephone metadata in helping to disrupt future terrorist plots and/or gain intelligence about known or suspected foreign terrorists. Second, Senator Mitch McConnell (R–KY) has proposed a straight extension of Section 215 to the year 2020. However, that approach does not address the Second Circuit's ruling that the statute as written does not authorize the bulk metadata collection program and would likely result in the federal district court judge who now has the case enjoining the government from continuing the program. In view of ISIS and al-Qaeda's renewed determination to strike the American homeland, there are three major policy options that Congress should consider. Policy Option No. 1. The first option would be to amend Section 215 specifically to allow the NSA to collect bulk telephone metadata and query that data pursuant to FISC court orders; codify the existing program as it has been modified by the Administration but add in cell phone data as well; and fold in the transparency, privacy, and civil liberties contained within the USA Freedom Act, discussed in detail below. Such an amendment would put the program on stronger statutory grounds and address the Second Circuit's holding. There are technical and business practice arguments in favor of this, but it would not address the concerns of many that the government was maintaining a database of telephony metadata. While this approach offers the simplest method to query and analyze the metadata, as it is housed in one place, this approach currently suffers from lack of transparency, lack of civil liberties protections, and privacy concerns. In 2014, the National Research Council appointed a committee of experts to assess "the feasibility of creating software that would allow the U.S. intelligence community more easily to conduct targeted information acquisition rather than bulk collection"[18] as called for in Section 5(d) of Presidential Policy Directive 28. Committee members and experts included people from Oracle, Microsoft, Google, and other industry and academic experts. After a thorough review, these experts found that there is currently no technologically feasible alternative to the current metadata bulk collection platform. It is safe to assume that the commercial IT world is already working to find a way to provide the tools to do just that sort of analysis. Today, only by keeping all the data together and making appropriate inquiries of the data can the dots be connected, but in the immediate future, other options should become available. Policy Option No. 2. The chief concern among policymakers who are skeptical of government surveillance, and in particular Section 215, is that it is the government that holds the telephony metadata. Such policymakers have also noted that there are not enough privacy protections built into the existing program. One solution to the first concern would be to establish and require that a private, third-party entity house the telephony metadata, including cell phone metadata. The metadata would be collected in bulk but housed by a private third party. Court orders from the FISC would authorize select employees of the private entity, with appropriate security clearances, to query the database. Just as in policy option number one, the Congress could add transparency, civil liberties, and privacy protections to the FISC and program, as discussed below. This alternative would take time to develop and has gained little traction on either side of the debate. Policy Option No. 3. The third policy option is the House-passed USA FREEDOM Act—legislation that reauthorizes Section 215 and reforms it to

end government bulk collection of telephone metadata by the NSA. Instead, the metadata resides with the telephone carriers, where the government will have access to it subject to a court order by the FISC. The USA FREEDOM Act replaces bulk collection with a program called a "Call Detail Record." Under this new program, whenever the NSA feels it has reasonable, articulable suspicion that a phone number is associated with international terrorism, it can seek an order to access information about that number from the FISC. If the FISC gives the order, the NSA will submit one or several queries to the telecom companies for historical and real-time data on the number in question. At that time, both historical and real-time data related to the suspicious number will flow into the NSA, as well as data on the two generations of numbers surrounding it (referred to as "hops"). This information will flow on a 24/7 basis for 180 days, double the amount of time that a FISC order currently authorizes. At the end of 180 days, the NSA can seek renewal for another 180-day time period. Ending the bulk collection of telephone metadata by the government, or even housing it in a private third-party entity, may encumber the ability of the intelligence community to analyze all the data in real time across a known pool of data. Such a change will inevitably slow down investigators, but as the technology changes, this should be rectified. That said, numerous intelligence community leaders have said that while it is far from ideal, they could live with such a system, understanding that America is accepting some risk by doing so. Section 102 provides for emergency authority for the Attorney General to require emergency production of tangible things absent a court order as long as he or she informs a FISC judge and subsequently makes an application to the court within seven days after taking this action. The USA FREEDOM Act also establishes several civil liberties protections for the existing program as it relates to the telephone metadata program. Section 401 of the Act requires the presiding judges of the FISC to designate not fewer than five individuals to be eligible to serve as amicus curiae—friends of the court. Those designated shall be experts in privacy and civil liberties, intelligence collection, and communications technology and be eligible for a security clearance. The amicus curiae serve to assist the court in the consideration of any novel or significant interpretation of the law. Section 402 of the Act also mandates the Director of National Intelligence, in consultation with the Attorney General, to conduct a declassification review of each decision, order, or opinion by the FISC and, to the extent practicable, make those decisions, orders, or opinions publicly available. The USA FREEDOM Act also contains other reforms, including prohibiting bulk collection utilizing FISA pen register and the "trap and trace" procedures in Section 201. The Act is the only legislative vehicle that has passed a chamber of Congress. It is not perfect and could be improved. For example, there should be a uniform period of time for carriers to maintain the telephone metadata. Another could be designating a specific format in which the carriers must maintain the data to allow more expeditious analysis once the data is appropriately obtained. The USA FREEDOM Act strikes a balance between maintaining our national security capabilities and protecting privacy and civil liberties, and this should always be the goal. Conclusion The threat of international terrorism is real and on the rise. The United States remains in a state of armed conflict against non-state actors: al-Qaeda, the Afghan Taliban, ISIS, and associated forces. Winning this armed conflict requires a coordinated, sophisticated, and comprehensive strategy that harnesses all aspects of America's national power. For decades, over many armed conflicts, the United States has relied on and utilized the fruits of lawful signals intelligence to disrupt, degrade, detect, and ultimately defeat the enemies of the United States. Today, because of stunning advances in technology, we have the ability to search through billions of anonymous bits of telephone call data and draw connections among known and suspected foreign terrorists about whom we otherwise might never have known. Those connections and the connections made possible by other aspects of national power enable those who defend our freedoms to keep us safe. In crafting the best policies with respect to mining telephone metadata, Congress has a solemn duty to abide by the Constitution, particularly our Fourth Amendment right to be secure in our persons, houses, papers, and effects against "unreasonable searches and seizures." At the same time, Congress has to recognize that telephone metadata is not a subscriber's personal property: It is owned by the telephone companies as part of their business records. Yet the data is sensitive, and American citizens expect that their phone records, even if they do not own them, are private information. Congress must find a way to balance these two interests, because allowing the capacity to query third-party telephone metadata—signals intelligence—to expire is unwise and dangerous, especially during a time of armed conflict. The three options contained in this paper are all considered viable options by some. None will make everyone happy, but now it is time for Congress to make a choice.

Economy Frontline 1/

Companies are circumventing localization now:

- foreign lobbying
- legislative reform
- foreign data centers

Jonah Force **Hill '14** (technology and international affairs consultant based in San Francisco and a Fellow of the Global Governance Futures program, "THE GROWTH OF DATA LOCALIZATION POST-SNOWDEN: ANALYSIS AND RECOMMENDATIONS FOR U.S. POLICYMAKERS AND BUSINESS LEADERS")

In an attempt to stem the data localization trend, U.S. firms and trade associations have launched a multi-pronged campaign to regain the trust of foreign governments and customers. Intense lobbying efforts are underway to reform U.S. surveillance laws,18 which have been viewed as overly permissive with regard to governmental collection of data, and to highlight the many ways that localization could harm economic competitiveness and growth.19 Domestically, Microsoft20 and Google, joined by Apple, Facebook and other firms, successfully sued the U.S. government in order to gain legal authority to provide the public greater detail on the information the U.S. government collects from them.21 Google's Eric Schmidt, Facebook's Mark Zuckerberg, Netflix's Reed Hastings, and the leaders of Dropbox, Palantir, and other top tech executives met with President Barack Obama in March 2014, to discuss potential surveillance reforms.22 **IBM is reportedly spending more than a billion dollars to build 15 new data centers overseas in an effort to preempt formalized localization rules.**23 Salesforce.com, a major cloud services provider, has announced similar plans.

Economy resilient

Donald **Kohn 15**, Senior Fellow in Economic Studies at Brookings, 1/30/15, U.S. Monetary Policy: Moving Toward the Exit in an Interconnected Global Economy, www.brookings.edu/research/speeches/2015/01/30-us-monetary-policy-global-economy-kohn

The global financial authorities have made **major strides in making their systems more resilient** to unexpected developments, in particular with **higher capital and greater liquidity** for banks and bank holding companies. In several jurisdictions, banks have been **stress tested** with scenarios that included rising rates. Moreover, we've seen several episodes in which volatility and risk spreads have risen, including the summer of 2013 during the so-called taper tantrum, and in the past few months amid mounting uncertainty about global economic prospects, plunging oil prices, growing political and economic tensions in the euro area, and strong monetary policy responses. Although there's been some fallout from these financial market developments, **none has threatened financial stability.**

Economy Frontline 2/

Economic decline doesn't cause war.

Ferguson '6 (Niall, Professor of History – Harvard University, Foreign Affairs, 85(5), September / October, Lexis)

Nor can economic crises explain the bloodshed. What may be the most familiar causal chain in modern historiography links the Great Depression to the rise of fascism and the outbreak of World War II. But that simple story leaves too much out. Nazi Germany started the war in Europe only after its economy had recovered. Not all the countries affected by the Great Depression were taken over by fascist regimes, nor did all such regimes start wars of aggression. In fact, no general relationship between economics and conflict is discernible for the century as a whole. Some wars came after periods of growth, others were the causes rather than the consequences of economic catastrophe, and some severe economic crises were not followed by wars.

Economy Frontline 3/

Zero risk of Internet Collapse.

JOHN C. **DVORAK '7** (columnist for PCMag.com, May 1, "Will the Internet Collapse?" http://www.pcmag.com/article2/0,2817,2124376,00.asp

When is the Internet going to collapse? The answer is NEVER. The Internet is amazing for no other reason than that it hasn't simply collapsed, never to be rebooted. Over a decade ago, many pundits were predicting an all-out catastrophic failure, and back then the load was nothing compared with what it is today. So how much more can this network take? Let's look at the basic changes that have occurred since the Net became chat-worthy around 1990. First of all, only a few people were on the Net back in 1990, since it was essentially a carrier for e-mail (spam free!), newsgroups, gopher, and FTP. These capabilities remain. But the e-mail load has grown to phenomenal proportions and become burdened with megatons of spam. In one year, the amount of spam can exceed a decade's worth, say 1990 to 2000, of all Internet traffic. It's actually the astonishing overall growth of the Internet that is amazing. In 1990, the total U.S. backbone throughput of the Internet was 1 terabyte, and in 1991 it doubled to 2TB. Throughput continued to double until 1996, when it jumped to 1,500TB. After that huge jump, it returned to doubling, reaching 80,000 to 140,000TB in 2002. This ridiculous growth rate has continued as more and more services are added to the burden. The jump in 1996 is attributable to the one-two punch of the universal popularization of the Web and the introduction of the MP3 standard and subsequent music file sharing. More recently, the emergence of inane video clips (YouTube and the rest) as universal entertainment has continued to slam the Net with overhead, as has large video file sharing via BitTorrent and other systems. Then VoIP came along, and IPTV is next. All the while, e-mail numbers are in the trillions of messages, and spam has never been more plentiful and bloated. Add blogging, vlogging, and twittering and it just gets worse. According to some expensive studies, the growth rate has begun to slow down to something like 50 percent per year. But that's growth on top of huge numbers. Petabytes. So when does this thing just grind to a halt or blow up To date, we have to admit that the structure of the Net is robust, to say the least. This is impressive, considering the fact that experts were predicting a collapse in the 1990s. Robust or not, this Internet is a transportation system. It transports data. All transportation systems eventually need upgrading, repair, basic changes, or reinvention. But what needs to be done here? This, to me, has come to be the big question. Does anything at all need to be done, or do we run it into the ground and then fix it later? Is this like a jalopy leaking oil and water about to blow, or an organic perpetual-motion machine that fixes itself somehow? Many believe that the Net has never collapsed because it does tend to fix itself. A decade ago we were going to run out of IP addresses—remember? It righted itself, with rotating addresses and subnets. Many of the Net's improvements are self-improvements. Only spam, viruses, and spyware represent incurable diseases that could kill the organism. I have to conclude that the worst-case scenario for the Net is an outage here or there, if anywhere. After all, the phone system, a more machine-intensive system, never really imploded after years and years of growth, did it? While it has outages, it's actually more reliable than the power grid it sits on. Why should the Internet be any different now that it is essentially run by phone companies who know how to keep networks up? And let's be real here. The Net is being improved daily, with newer routers and better gear being constantly hot-swapped all over the world. This is not the same Internet we had in 1990, nor is it what we had in 2000. While phone companies seem to enjoy nickel-and-diming their customers to death with various petty scams and charges, they could easily charge one flat fee and spend their efforts on quality-of-service issues and improving overall network speed and throughput. That will never happen, and phone companies will forever be loathed. But when all is said and done, it's because of them that the Internet will never collapse. That's the good news. The bad news is they now own the Internet—literally—and they'll continue to play the nickel-and-dime game with us.

Economy Ext: 2NC: Resilience

Global economic governance institutions guarantee resiliency

Daniel W. **Drezner '12**, Professor, The Fletcher School of Law and Diplomacy, Tufts University, October 2012, "The Irony of Global Economic Governance: The System Worked," http://www.globaleconomicgovernance.org/wp-content/uploads/IR-Colloquium-MT12-Week-5_The-Irony-of-Global-Economic-Governance.pdf

Prior to 2008, numerous foreign policy analysts had predicted a looming crisis in global economic governance. Analysts only reinforced this perception since the financial crisis, declaring that we live in a "G-Zero" world. This paper takes a closer look at the global response to the financial crisis. It reveals a more optimistic picture. Despite initial shocks that were actually more severe than the 1929 financial crisis, global economic governance structures responded quickly and robustly. Whether one measures results by economic outcomes, policy outputs, or institutional flexibility, **g**lobal **e**conomic **g**overnance has displayed surprising resiliency since 2008. Multilateral economic institutions performed well in crisis situations to reinforce open economic policies, especially in contrast to the 1930s. While there are areas where governance has either faltered or failed, on the whole, the system has worked. Misperceptions about global economic governance persist because the Great Recession has disproportionately affected the core economies – and because the efficiency of past periods of global economic governance has been badly overestimated. Why the system has worked better than expected remains an open question. The rest of this paper explores the possible role that the distribution of power, the robustness of international regimes, and the resilience of economic ideas might have played.

Trade Frontline 1/

Turn: Preferential Trade agreements increase the likelihood of conflict by antagonizing excluded nations. Best evidence concludes.

Timothy M **Peterson '15** (Department of Political Science, University of South Carolina, "Insiders versus Outsiders: Preferential Trade Agreements, Trade Distortions, and Militarized Conflict," Journal of Conflict Resolution, Vol. 59(4).)

States entering into preferential trade agreements (PTAs) stand to gain considerably from the reduction or elimination of trade barriers with members. However, since pioneering work by Viner (1950), scholars have noted that gains from preferential liberalization could accrue at the expense of third parties from whom trade is diverted rather than from the creation of trade that would not otherwise exist. Given the potential for some PTAs to reshape trade patterns to the advantage of members, it stands to reason that states excluded from such an agreement might view it as a threat. This perception could, in turn, spark political tension between members and excluded states. Despite the potential for some PTAs to provoke threat perception among states left out of the agreement, there has been little study of the potentially aggravating impact of PTAs on the political relationships of members vis-a`-vis nonmembers. Rather, numerous studies emphasize that PTAs can reduce conflict propensity between members benefiting from trade integration (e.g., Mansfield, Pevehouse, and Bearce 1999/2000; Mansfield and Pevehouse 2000; but see Hafner-Burton and Montgomery 2012). A focus on the peace within PTAs is not surprising, given that trade agreements have proliferated relatively recently, during a period in which militarized conflict between states has been rare. However, regionalism is flourishing, as multilateral liberalization falters (as evidenced, e.g., by the stalling of the Doha round World Trade Organization [WTO] negotiations). Recent years have witnessed the relative decline of US hegemony, which arguably facilitated a global liberal trade regime in the post–World War II period (e.g., Gilpin 1987; Gowa 1986; Keohane 1984; Kindleberger 1973; Krasner 1976; Mansfield 1998). Simultaneously, China, along with other developing states, has begun pursuing PTAs, as its economic and military power grows. These developments suggest a need to examine the potentially competitive nature of (at least some) PTAs, and the consequential possibility of conflict between members and nonmembers thereof. At a minimum, exclusive PTAs could reduce the degree to which members and nonmembers enjoy this era of reduced hostilities. At worst, discriminatory trade agreements could engender zero-sum trade policies and rising inter-bloc conflict in the coming years. In this article, I argue that PTAs promote member versus nonmember conflict when they reduce—at least in relative terms—the exports of nonmembers, leading these states to perceive a threat to their economic security. Accordingly, I examine altered trade patterns associated with PTAs as a predictor of conflict between dyads wherein one state belongs to a PTA excluding the other state. I introduce a new technique to estimate this phenomenon using a triadic extension of the gravity model of trade. Using estimates of the degree to which one dyadic state's exports are affected by the other's membership in an exclusive PTA, I find that trade distortions resulting in relatively lower exports for the non-PTA member are associated with a higher probability that a dyad experiences a militarized interstate dispute (MID) or fatal MID.1 However, I also find that this effect becomes less consistent as dyadic trade becomes more important to each state's economy. As dyadic trade increases, so too Peterson 699 does the variation in the degree to which a PTA outsider harmed by trade distortions tolerates this discriminatory behavior by the PTA insider. This point is particularly salient for foreign policy makers because it suggests that retaliation against perceived threats, for example, through the imposition of import barriers or the formation of a competing bloc, could amplify the risk of hostilities. I proceed with a discussion of the research linking PTAs to economic and political competition. Then, I explore the consequences for dyadic peace of distorted trade patterns associated with PTAs, introducing a triadic extension of the gravity model of trade to estimate the influence of exclusive PTAs on trade. Next, I describe my research design and present a statistical analysis of the link between PTAs, reshaped trade patterns, and militarized conflict between 1961 and 2000. I conclude with a discussion of the relevance of my findings for scholars and policy makers alike amid the accelerating proliferation of PTAs.

Globalization unsustainable- 7 Warrants: speed, extension, resources, ecology, population, inequality, systemic market vulnerability.

Sandra **Bhatasara '11** (Lecturer & Member of the Faculty of Social Studies Research Working Committee University of Zimbabwe, "From Globalization to Global Sustainability: Perspectives on Transitions," Journal of Global Citizenship & Equity Education, Volume 1 Number 1)

This paper presents a transition perspective to sustainable globalization. In my view, globalization is not entirely bad. Globalization presents various opportunities in different domains. However, we cannot deny the fact that the current nature of globalization, in terms of the speed, extensiveness and impacts on the earth system is unsustainable. The argument that globalization should be steered towards sustainability is undeniable yet the daunting question is how can that be done? The complexity of globalization and sustainability defy simplistic explanations, thus one should take an interactive perspective on transition by looking at some key scenarios in global governance, global trade, multinational corporations, markets and information systems. However, one ought to acknowledge that transitions should be viewed in long term perspectives. Specific targets, indicators for transition and importance vary. There is no guarantee that transitions to sustainable globalization will be smooth thus, a number of challenges can be seen such as lack of institutional mechanisms, resources, political and ideological resistance among others. In this regard, the imperatives for understanding the necessity for transitions, the possible scenarios and challenges will be understood by subjecting relevant literature to critical scrutiny using the Critical Discourse Analysis approach. This paper should be considered as a "think piece". Globalization, sustainability and transitions are too complex to be considered only from literature reviews. However, on the basis of the literature I have reviewed, it has been possible to derive some scenarios and conclusions on the transition to sustainable globalization. Review and Definitions of Concepts Globalization has a plurality of definitions, some of them proffered by the internalization, liberalization, universalization, westernization, modernization and deterritorialization approaches. This paper is concerned with transition to sustainable globalization which stems from the fact that the current nature of globalization is unsustainable hence the definition proffered here. Globalization refers to the unsustainable, accelerated integration, at the global level, of economic growth, environmental problems, human development, cultural dynamics and political engagements. Sustainability is a difficult concept to define for various reasons. It is normative and there is no global consensus on what should be sustained. Some people argue for sustaining production systems whilst others argue for sustaining consumption patterns. At the same time, there are others who call for sustaining environmental quality, economic and social capital (Kemp and Loorbach, 2003). Borrowing from the World Commission on Environment and Development (1987), the issue of sustainability is related to development or growth that meets the present needs without endangering the ability of future generations to meet their needs. Sustainability should be about equal opportunities to utilize resources intra-generationally and inter-generationally. Sustainability should also be based on the ethical principles of equity in distribution of income, wealth and control of resources. The National Research Council (1999), defines sustainability transition as meeting the needs of a stabilizing future world population while reducing hunger, poverty and maintaining the planet's life support systems. The definitions by the World Commission on Environment and Development and the National Research Council capture the three pillars of sustainability, which are economy, society and ecology on which transitions to sustainability should focus. Grosskurth and Rotmans (2004), argue that one important denominator of these definitions is an implied balance of economic, ecological and social developments. The concept of sustainable development has received criticism from various angles, one example being that it is considered as vague. Some scholars argue that the concept lacks definitional clarity thus it is prone to manipulation. However, the lack of clarity can be a strength in the sense it allows for a multiplicity of contextual interpretations which are absent in classical development discourses. At the same time, sustainability in most cases is interpreted in economic terms to mean sustainable economic development. Bensimon and Benatar (2006), for example argue that sustainable development should not be considered in economic terms, but should reflect other important aspects that are needed for a decent human life as well (e.g. education, a healthy living environment and democracy). As noted by Huynen (2008), they propose an alternate concept the "development of sustainability" instead of sustainable development. Transition is also a highly contested concept, invoking various views from different scholars. According to Rotmans (2000), referring to the ICIS-MERIT (International Center for Integrated Assessment and Sustainable Development–Maastricht University Economic and Social Research Institute for Innovation and Technology) Report, transition is a gradual process of societal change in which society or an important sub-system of society structurally changes. Kemp and Loorbach, (2003) noted that transition is a result of an interplay of developments that sustain and reinforce each other thus transitions are not caused by a single variable and are non-linear in nature. Thus, borrowing from Martens and Rotmans (2002), in this paper, transitions refer to possible policies, strategies, paths or projects that can be undertaken towards the development of sustainability in a globalizing world. A Case for Transitions to Sustainable Globalization The phenomenon of globalization raises a number of questions or even quarrels and one of the most imperative questions is on sustainability. Here I present why we need transitions to sustainability in a globalizing world. Supporters of globalization often associate it with unending

prosperity and peace yet there are built in contradictions that make globalization unsustainable. Globalization supporters address the question of sustainability in a token fashion, if at all. The rapid growth of global markets and corporate capital is evident; however this growth raises the issue of sustainability. Huynen (2008) noted that "today it is acknowledged that achieving sustainable development on a global scale is one of the greatest challenges for the 21st century" (p. 3). In addition, a number of scholars converge on the idea that the current nature of globalization is threatening the earth's capacity to sustain life. Nagarajan (2006) noted that some global indicators of change in the Earth's landscape are distinct signs of human domination of the planet. These are increased atmospheric carbon dioxide, substantial modification of the planet's land surface, increased use of finite fresh water supply, vastly modified nitrogen cycles, overexploitation or depleted fisheries and mass extinction of species (Nagarajan, 2006). Global warming, the thinning of the ozone layer, pollution, loss of biodiversity, depletion of natural resources, widespread desertification and deforestation are occurring within the context of globalization. These environmental problems restrict the set of options at the disposal of future generations to meet their needs thus sustainability becomes problematic. Furthermore, massive population movement and urbanization are also causing an ecological crisis. Ecological degradation reduces land productivity, threatens human health and worsens the conditions of the poor. In this regard, globalization is unsustainable. Globalization may improve the material and social wellbeing of poor people but may be economically, socially, politically and ecologically unsustainable. The volatility of global markets is evident and history may repeat itself. The crash of the Argentine economy, the financial crisis in Asia in 1997 and the 2008 worldwide financial crisis are clear indicators of how financial contagion can produce economic depression. The volatility of global financial markets is systemic and there is nothing that is fully regulating it. Electronic trading makes it impossible to regulate global financial markets and international financial institutions such as the International Monetary Fund (IMF) are unable to do so. The myth of free trade is causing instability and socio-economic exclusion of the poor. According to Baum (2001), the current forms of globalization are making the world a safe place for unfettered market liberalism and the consequent growth of inequities. The developed countries use protectionist policies and subsidies on agricultural and cultural products whilst reducing protection over manufacturing industries. This is leading to the marginalization of the less developed countries in the form of low trade. In addition, there are myopic ideas of economic growth with prosperity. What is happening is not economic growth but, growth of specialization of production in countries such as India and China. The question is who will consume all the innovation and products? Another reason, globalization is economically unsustainable is because of labour requirements and the devaluation of labour. The question is who will provide labour for the entire world? Globalization is socio-culturally unsustainable because it is exclusionary and uneven. Two thirds of humanity is living in endemic poverty yet high growth rates are being witnessed. There is poverty among plenty or growth with poverty. The trickle down effect that proponents of globalization talk about has remained elusive. International and intra national income inequalities have widened. Globalization is distorting and swallowing local and national cultural values. Globalization is destroying subsistence economies of the poor, social security and moral geographies of poor nations. The principles of sustainability are therefore distorted. McMichael, Smith and Corvalan (2000) noted that it is because of unmanaged "transition" to development that is generalized to all countries in the form of unsustainable production patterns and wasteful consumption of rich nations that a new system is urgently required. Financial assistance to the poor nations by the developed nations is reducing the poor nations to super exploited neo-colonies relegated to the roles of primary commodity producers entirely dependent and subordinate to the powers of multinational corporations. Globalization creates a risky and speculative or spoiled dependency. The nation state is said to have been incapacitated by liberalization. On another note, immigration policies of the developed countries are exclusionary. They regulate the free movement of skilled labour yet they advocate free, unregulated trade. Globalization supposes integration yet there are no equal opportunities between the rich and the poor. This inequality negatively affects the economic performance of the poor countries. Global inequalities may also give rise to nationalistic reactions, resentment and terrorism thus upsetting peace and political stability.

Turn: Free trade benefits are more than reversed by increasing the wealth gap.

Josh **Bivens** April 22, '**15** (Economic Policy Institute, "No, the TPP Won't Be Good for the Middle Class," http://www.epi.org/blog/no-the-tpp-wont-be-good-for-the-middle-class/)

President Obama has been vociferously defending the Trans-Pacific Partnership (TPP) recently. He insists that it will be good for the American middle class and that TPP's critics arguing otherwise are wrong. But in this case he's wrong and the TPP critics are right: there is no indication at all that the TPP will be good for the American middle class. I tried to take this on in very wonky terms in this long-ish report here, and in this post I'll try to boil it down a bit. The basic argument for why the TPP is likely to be a bad deal for the middle class is pretty simple. For one, even a genuine "free trade agreement" that was passed with no other complementary policies would actually not be good for the American middle class, even if it did generate gains to total national income. For another, the TPP (like nearly all trade agreements the U.S. signs) is not a "free trade agreement"—instead it's a treaty that will specify just who will be protected from international competition and who will not. And the strongest and most comprehensive protections offered are by far those for U.S. corporate interests. Finally, there are international economic agreements that the United States could be negotiating to help the American middle class. They would look nothing like the TPP. Even genuine "free trade" would likely be hard on the American middle class Most (not all, but most) of the countries that would be included in the TPP are poorer and more labor-abundant than the United States. Standard trade theory has a clear prediction of what happens when the United States expands trade with such countries: total national income rises in both countries but so much income is redistributed upwards within the United States that most workers are made worse off. This is sometimes called "the curse of Stolper-Samuelson", after the theory that first predicted it. And there is plenty of evidence to suggest that it's not just a theory, but a pretty good explanation for (part of) the dismal performance of wages for most American workers in recent decades and the rise in inequality. And the scale of the wage-losses are much, much larger than commonly realized—it's not just those workers who lose their jobs to imports. Instead, the majority of American workers (those without a 4-year college degree) see wage declines as a result of reduced trading costs. The intuition is simply that while waitresses and landscapers might not lose their jobs to imports, their wages are hurt by having to compete with trade-displaced apparel and steel workers. All of this evidence means that the burden of proof is awfully high for those claiming that a simple trade agreement that reduces trading costs and expands imports and exports will be affirmatively good for the American middle class. What exactly will this treaty do that will turn the predictions and evidence about past global integration completely on their head? The standard argument from those supporting trade agreements who are genuinely concerned about the middle class (and to be clear—I do believe the President is genuinely concerned about the middle class) is that these agreements generate gains to total national income, and that these gains then could be channeled through subsequent policy maneuvers to those on the losing end. Maybe, but the net national gains from lowering trade costs tend to be wildly overestimated. In short, even "free trade" tends to redistribute a lot more (about 5 or 6 times as much) income as it generates.

Trade Frontline 4/

Total Defense: Free trade theory doesn't apply to current deals. IPR protection guts any benefit.

Josh **Bivens** April 22, '**15** (Economic Policy Institute, "No, the TPP Won't Be Good for the Middle Class," http://www.epi.org/blog/no-the-tpp-wont-be-good-for-the-middle-class/)

Given that complementary policies to re-re-distribute the income redistributed away from typical American workers are a necessary condition to make the middle class better off from "free trade", one is compelled to ask just what are the subsequent policy maneuvers that the current Congress will likely undertake to compensate those on the losing end? Yes, there has been some talk about beefing up Trade Adjustment Assistance (TAA), but this is compensation that is too small by an order of magnitude (see the conclusion in this report for the right comparison). TPP isn't even about free trade—it's about who will and won't face fierce global competition. And guess who won't? And as has been well-documented by now, much of what the U.S. policymaking class champions under the rubric of "free trade" is nothing of the sort. For example, the biggest winners from trade agreements have traditionally been U.S. corporations that rely on enforcing intellectual property monopolies for their profits—pharmaceutical and software companies, for example. These companies have been successful in getting U.S. negotiators to make enforcing their intellectual property monopolies in our trading partners' economies the price of admission to preferential access to the U.S. market. It is not just an irritating bit of chutzpah to label agreements with provisions like this as "free trade agreements" (though it certainly is that), these provisions actually affirmatively make the distributional outcomes even more regressive than simple "free trade" would already make them. Further, between these provisions and the intentional failure to include a strong provision to stop currency management undertaken by our trading partners, the TPP will even manage to substantially blunt any beneficial impact the treaty might have had in expanding access to foreign markets for most U.S. exporters. Because foreign consumers will have to pay more now for US exports covered by intellectual property monopolies and will hence have less income left over to buy other U.S. exports, and because foreign governments will remain free to keep their own currencies artificially competitive relative to the U.S. dollar, U.S. exporters of manufactured goods are likely to see not much improvement at all in their market share in trading partner economies. What would a good international agreement for the middle class look like? Simply put, nothing at all like the TPP.

Trade Frontline 5/

Alt Causality: US dumping is the key barrier to global free trade.

Daniel J. **Ikenson '13** (director of Cato's Herbert A. Stiefel Center for Trade Policy Studies, Forbes on January 16, "Protectionist Antidumping Regime Is a Pox on America's Glass House,")

Other candidates come to mind when contemplating the world's worst international trade scofflaw, but the United States makes a strong case for itself. A recent Commerce Department determination that foreign companies like Samsung, LG, and Electrolux engaged in "targeted dumping" by reducing prices on their washing machines for Black Friday sales confirms that the United States is actively seeking that ignominious distinction. U.S. policies have been the subject of more World Trade Organization disputes (119, followed by the EU with 73, then China with 30) and have been found to violate WTO rules more frequently than any other government's policies. No government is more likely to be out of compliance with a final WTO Dispute Settlement Body (DSB) ruling — or for a longer period — than the U.S. government. To this day, the United States remains out of compliance in cases involving U.S. subsidies to cotton farmers, restrictions on Antigua's provision of gambling services, country of origin labeling requirements on meat products, the so-called Byrd Amendment, a variety of antidumping measures, and several other issues, some of which were adjudicated more than a decade ago. In some of these cases, U.S. trade partners have either retaliated, or been authorized to retaliate, against U.S. exporters or asset holders, yet the non-compliance continues as though the United States considers itself above the rules. Despite all the official high-minded rhetoric about the pitfalls of protectionism and the importance of minding the trade rules, the U.S. government is a serial transgressor. Nowhere is this tendency to break the rules more prevalent than it is with respect to the Commerce Department's administration of the antidumping law. Nearly 38 percent (45 of 119) of the WTO cases in which U.S. policies have been challenged concern U.S. violations of the WTO Antidumping Agreement. The epidemic of targeted dumping findings — such as the one concerning washing machines, if the U.S. International Trade Commission renders an affirmative injury finding next week — will more than likely produce new WTO cases. The antidumping law is purported to exist to protect American companies and their workers from the effects of foreign competitors selling their products in the United States at "unfairly low" prices. Why price competition — encouraged as it is between domestic rivals — suddenly becomes unfair or worth thwarting when foreigners are offering the lower prices is a question without a satisfactory answer. The public is under the false impression that trade is a contest between Team America and the foreign team, and that they should cheer when our government erects barriers to defend us against foreign commercial success. The persistence of that mindset shields U.S. antidumping policy from the scrutiny it deserves. Instead, the law has become a mechanism through which domestic companies — with the assistance of creative lawyers and a captured government agency that is committed to keeping America safe from imports — can saddle their competition (both foreign and domestic) with higher costs, control supply, increase their own prices, and reap higher profits. Nevermind that this "success" comes at the expense of consumers and firms in downstream industries that require access to the restricted product. While President Obama urges U.S. companies to become more competitive at home and abroad, the U.S. antidumping law kneecaps these very same enterprises by making their industrial inputs and intermediate goods scarce and more expensive — as described and documented in this paper. It also inspires retaliatory protectionism abroad. In general terms, dumping is defined as the sale of a product in a foreign market at a lower price than the price obtained by the same producer in his home market. Dumping is measured by comparing a foreign producer's U.S. and home market prices over a specific period of time. For each comparison, the difference between the U.S. price and the home market price is considered the unit margin of dumping. A positive dumping margin results when the U.S. price is lower than the home market price and a negative dumping margin is the result when the U.S. price exceeds the home market price. The antidumping duty ultimately imposed is, in theory, equal to the weighted average dumping margin calculated for all U.S. sales expressed as a percentage of U.S. sales value. Under the WTO Antidumping Agreement (ADA), governments are permitted to have antidumping laws and to apply antidumping duties to redress dumping that is found to be a cause of material injury to the domestic industry producing the same or similar products. Although the ADA is deferential to national governments when it comes to the details of implementing their antidumping laws, it does articulate certain minimum standards intended to limit the scope for abuse, such as reaching affirmative findings of dumping when no dumping has occurred or manufacturing punitively high antidumping duty rates, for example. But this seemingly mechanical exercise of comparing prices and calculating margins is rife with subjective interference and methodological sleights of hand. Under the U.S. antidumping law, the Commerce Department maintains considerable discretion when it comes to determining the existence and measuring the magnitude of dumping. Which sales should be included in calculating average prices? What product models should be collapsed together and treated as a single model for purposes of calculating average prices? What expenses should be subtracted from gross prices before net prices are compared between markets? Is there evidence of targeted dumping? Those are just a few of the many kinds of consequential, results-changing decisions the Commerce Department renders during the course of an antidumping proceeding. That broad discretion has been abused over the years, as confirmed by the hundreds of U.S. court rulings that have found the Commerce Department acting illegally or otherwise beyond it authority. Just as U.S. antidumping administration has so frequently

run afoul of the U.S. law, it has also been found on dozens of occasions to violate U.S. obligations under the WTO Antidumping Agreement. In 12 of the 45 cases in which ADA violations were alleged by U.S. trade partners, the methodological trick known as "zeroing" was at least one of the subjects of controversy. Ultimately, this issue is the motivation behind the Commerce Department's shenanigans in the case involving imported washing machines, targeted dumping, and Black Friday sales. " Despite all the official high-minded rhetoric about the pitfalls of protectionism and the importance of minding the trade rules, the U.S. government is a serial transgressor." To appreciate the affront to fairness and mathematical integrity that zeroing represents, recall that antidumping duty rates are determined by calculating a weighted average dumping margin, which derives from individual dumping margins calculated for multiple comparisons. Some of those comparisons produce positive dumping margins (whenever the U.S. price is lower than the home market price) and some yield negative dumping margins (whenever the U.S. price is higher than the home market price). Zeroing refers to the practice of assigning those negative dumping margins a value of " 0″ before calculating the weighted average dumping margin, which has the effect of increasing the weighted average dumping margin and the applied antidumping duty rate. Analysis from the Cato Institute found that zeroing, in a sample of 18 actual antidumping case records reviewed, artificially inflated antidumping duties by 44 percent. Here's how it works in practice. Let's say a foreign widget producer makes two sales in the United States. He sells one widget at a net price of $1.00 and the other at a net price of $3.00. In his home market, he sells the same widgets for $2.00. Is he dumping? There is a dumping margin of $1.00 on the first sale ($2.00 — $1.00 = $1.00) and a dumping margin of minus (-)$1.00 on the second sale ($2.00 — $3.00 = -$1.00). The weighted average dumping margin is 0 and thus there is no dumping. But when the Commerce Department engages in zeroing, it treats the -$1.00 dumping margin as equal to $0.00, denying its impact on the overall weighted average dumping margin. By zeroing, the Commerce Department would find a total dumping margin of $1.00 and express it over the total value of all U.S. sales ($4.00), which would yield an antidumping duty rate of 25 percent. Magic! Zeroing has been found by the WTO Appellate Body — on numerous occasions and under multiple comparison methodologies — to violate Article 2.4 of the ADA because it precludes consideration of the impact of all export sales in determining the existence and magnitude of dumping, and thus precludes a fair comparison. After many years of appeals and foot-dragging, the United States finally changed its policy to comply, grudgingly, with the jurisprudence that has shut the door on zeroing under all circumstances, using all comparison methodologies…with the possibility of one tiny exception. (This article describes the evolution of the zeroing jurisprudence and provides a detailed analysis of this "tiny exception.") Article 2.4.2 of the Antidumping Agreement states that the existence of margins of dumping during the investigation phase "shall normally be established" by comparing prices on an average-to-average or transaction-to-transaction basis, but may be conducted on a home market average-to-individual export transactions basis: [I]f the authorities find a pattern of export prices which differ significantly among different purchasers, regions or time periods, and if an explanation is provided as to why such differences cannot be taken into account appropriately by the use of a weighted average-to-weighted average or transaction-to-transaction comparsion. The justification for the exception under Article 2.4.2 is, presumably, that that comparison methodology allows the authorities to home in on targeted dumping, which may be revealed by patterns of price differences among purchasers, regions or time periods. Some have argued that zeroing must be permissible under the exceptional method because otherwise its prohibition would yield results identical to those obtained under the weighted average-to-weighted average method. This "mathematical equivalence" argument, as it is called, holds that there would be no practical reason for the exception to exist if zeroing were precluded, and that would then violate the rules of effective treaty interpretation by rendering the exception inutile. And, finally, this takes us back to Commerce Department's determination that foreign washing machine manufacturers are engaging in targeted dumping. The Commerce Department is attempting to operationalize the mathematical equivalence argument by making this tiny, rarely-ever-used exception the new rule so that it has license to engage in zeroing and inflate antidumping duty rates on behalf of certain domestic producers. But it is carelessly and defiantly overplaying its hand. For starters, the standards that Commerce is trying to establish for finding a "pattern of export prices which differ significantly among different purchasers, regions or time periods" have no statistical rigor, no theoretical underpinnings, and no relation whatsoever to unmasking, isolating, or measuring targeted dumping. Two arbitrary benchmarks must be met to find targeted dumping. First, at least 33 percent by volume of the sales to an allegedly targeted group must be at prices that are less than one standard deviation below the average price to all other groups. Why 33 percent? Why one standard deviation? Neither figure is supported by statistics literature or law. Second, at least 5 percent of the volume of sales to the allegedly targeted group must be at prices that are lower than the average price of the lowest-priced non-targeted group by a margin (a gap) that is greater than the average gap between the average prices of all the non-targeted groups. The idea here is that the allegedly targeted group should be uniquely identifiable as having received significantly lower prices. The problem again, though, is the arbitrary nature of the 5 percent threshold. Seems way too low anyway. With those benchmarks satisfied, the Commerce Department considers itself free to measure dumping by using the weighted average-to-transaction methodology for all sales, and to engage in zeroing for all sales. Beyond these obvious shortcomings is the fact that if the application of zeroing to all sales to inflate dumping margins is automatically triggered by the idenfication of any customer or any region (however infinitesimally small petitioners wish to define it) or any time period (ranging anywhere from one day to one year) that meets the benchmarks for a targeted dumping analysis without need of any plausible explanation as to why the particular group would be targeted, then every single petitioner in every subsequent case will pour over the numbers and run their own statistical analyses to identify just one group, any group, however imaginatively defined, that satisfies those benchmarks. Black Friday sales are an obvious candidate for a targeted group. This whole enterprise is an absurdity that other governments should and will find offensive. In addition to the shortcomings identified above is the fact that the Commerce Department's statistical tests are not even doing what the Commerce Department thinks they're doing. By comparing average prices instead of actual prices, the standard deviations it uses as benchmarks are significantly tighter because the range of prices, which produce the standard deviations, has been squeezed tighter by averaging them first. So, beyond all of the theoretical objections are these practical misapplications that, at the very least, should be remanded back to Commerce by the courts. The Commerce Department's sloppiness appears to be the product of a brute force effort to clear any annoying obstacles in its drive to recuscitate zeroing as the default practice of the U.S. antidumping authorities. Finally, even if the exceptional method is permitted in any given case, that doesn't grant license for zeroing as Commerce conceives of it. There should be no question that that approach will

run afoul of the Appellate Body's interpretation of what is permitted under the exceptional method. The AB has ruled on numerous occasions that fealty to Article 2.4.2 cannot come at the expense of fealty to the fair comparison language of Article 2.4, and zeroing all sales clearly commits that error. Unmasking and measuring the extent of targeted dumping does not necessitate resort to the exceptional method for all sales. In fact, measuring targeted dumping can be achieved by resorting to the exceptional method and allowing zeroing for only the targeted groups, while using the normal, average-to-average method without zeroing for all other comparisons. This invalidates the "mathematical equivalence" argument. But the Commerce Department will no doubt have to revise its targeted dumping tests first. The United States is definitely one of the world's biggest trade scofflaws and the antidumping regime.

Trade Frontline 6/

They can't reverse the burden of current US non-compliance with WTO.

Skyes 14 (Alan O., Robert A. Kindler Professor of Law at New York University School of Law, "An Economic Perspective on As Such/Facial versus As Applied Challenges in the WTO and U.S. Constitutional Systems," Journal of Legal Analysis, March 5, Winter 2013 5 (2))

Suppose that in the event of (at least any inefficient) harm to a potential claimant, the claimant will have an as applied challenge and a remedy that is fully and accurately compensatory, in the sense that it restores the welfare of the claimant to its level before the occurrence of the harm. Assume further that no third parties are affected by the potential respondent's conduct. Under these assumptions, as such challenges are simply unnecessary and can easily prove counterproductive. The potential complainant by assumption is insulated from harm, the respondent will internalize costs of inefficient harm to the complainant, and the respondent will be induced to act efficiently.48 If a claimant can bring an as such challenge nevertheless, it will simply impose unnecessary costs on the respondent, and a claimant may even pursue a challenge strategically to try and extract surplus. Putting aside third party externalities, these observations suggest that as such challenges are undesirable if claimants can bring successful as applied challenges following inefficient harm and receive full compensation (ignoring litigation cost complications for the moment). Conversely, inadequacy of the ex post remedy is a necessary condition for as such challenges to become desirable from an economic standpoint although, as shall be seen, it is by no means sufficient. An injured party's remedies may prove inadequate for three types of reasons. First, the substantive law at issue may afford no remedy for inefficient harms. For example, imagine a system of tort law under which no injury is compensable unless it is intentionally inflicted. Under these circumstances, the incentive for injurers to take economically worthwhile precautions against accidental harm will be lost, even if the remedy for intentionally inflicted harms is fully compensatory. Although inefficiencies in the substantive law represent an important class of problems in many fields, they afford little basis for choosing between as such and as applied challenges. If the underlying substantive law fails to condemn inefficient behavior (or prevents efficient behavior), it seems unlikely that either type of challenge can promote efficiency. Accordingly, I will assume that the underlying substantive law is efficient, in the sense that it at least allows a claim for relief whenever the complainant suffers inefficient harm. A second possible reason for inadequate remedies is legal error in ex postadjudication. The complainant with a meritorious as applied challenge may be denied relief by mistake. I will not dwell on this possibility either, however, because it seems unlikely to afford a compelling case for as such challenges. Indeed, for reasons that are developed later, a pre-enforcement as such challenge may be more likely to result in error than a post-enforcement as applied challenge. The third reason why remedies may prove inadequate is simply that they may fail to afford full and accurate compensation for harm suffered. With particular reference to the WTO and the U.S. Constitutional systems, serious concerns arise in this regard. Under WTO law, a violator incurs no formal sanction until a complaining member has brought a case, received a favorable adjudication, and the violator has exhausted a "reasonable period of time" to bring its behavior into compliance.49 The practical result is that a violator can break the rules for a period of years before any formal sanction is triggered, and indeed can avoid any formal sanction completely by curing the violation within the "reasonable period." Commentators sometimes refer to this system as the "three-year free pass." In addition, it may be doubted that the formal remedy for WTO violations after the expiration of the "reasonable period"—trade sanctions imposed by the complainant—can compensate complainants even for the prospective harm suffered due to the ongoing violation.50 Small countries, for example, cannot use trade sanctions to improve their terms of trade, and often complain that retaliatory measures amount to "shooting themselves in the foot." Larger countries with the ability to improve their terms of trade through sanctions may also be undercompensated for prospective harm because of the principle that trade sanctions must be "equivalent" to the harm caused by the violation, a vague standard administered in somewhat unclear fashion by WTO arbitrators. If the arbitrators allow only the level of retaliation that restores the complainant's terms of trade, for example, then the complainant is undercompensated because of the decline in trade volume due to the violation.51 In the U.S.

Constitutional system, remedies are also limited in many cases. Depending on the particular constitutional violation in question, damages for past harm suffered may not be available at all, and the remedy may be limited to an order directing the government to desist from the conduct in question going forward (such as an order declaring that the enforcement of a statute against the plaintiff was unconstitutional). Likewise, some violations may involve conduct that irreparably alters the future course of affairs, such as restrictions on speech or voting that affect the outcome of an election. Measures to restore the status quo ante may as a practical matter prove infeasible.

Trade Ext: 2NC PTA Turn 1/

Their attempt to increase trade through TPP-style preferential agreements increases the risk of miscalculation and war. The SQ is safer because bi-lateral trade focus empirically reduces the perception of discrimination.

Timothy M **Peterson '15** (Department of Political Science, University of South Carolina, "Insiders versus Outsiders: Preferential Trade Agreements, Trade Distortions, and Militarized Conflict," Journal of Conflict Resolution, Vol. 59(4).)

Conclusion The results of my statistical analyses suggest that trade distortions provoke hostility between PTA members and nonmembers. However, this effect becomes less consistent as dyadic trade increases. The results of this study demonstrate that economic agreements can be used as a form of discrimination, benefiting insiders at the expense of outsiders. Outsiders suffering from trade distortions potentially could respond with hostility to a perceived economic attack. My findings are critical for scholars and policy makers to consider, given the tension caused by mere negotiations toward PTAs such as the TPP. If China were to perceive economic disadvantage following from successful implementation of the TPP, it could accelerate its pursuit of rival PTAs such as the RCEP. Escalation of such behavior has the potential to cause a conflict spiral. Although all-out war between the United States and China seems unlikely in an era of nuclear deterrence, the pursuit of rival spheres of influence could escalate into a situation not unlike the Cold War. Importantly, however, my results suggest that the negative implications of PTA-distorted trade can be mitigated by continued reliance on dyadic trade. This point is particularly important for policy makers, suggesting that further restriction of trade as retaliation against perceived distortion could be counterproductive to the goal of avoiding conflict. Future research can benefit from examining additional consequences of PTAinduced trade distortions. The perception of threat from such distortions could lead states to increase their own levels of protectionism and may promote the use of sanctions. Finally, it is important to note that division into rival blocs is not the only possible outcome of preferential liberalization. States left out of agreements could lobby to expand the scope of integration in an inclusive manner.33 Accordingly, future research can benefit from uncovering conditions that might preclude states from engaging in discriminatory trade practices,34 which, although welfare enhancing for members, could provoke costly conflict with nonmembers in spite of predictions that the highly interdependent global economy promotes enduring peace.

Trade Ext: 2NC PTA Turn 2/

Our Turn outweighs the case- 3 warrants:

- Their literature is biased to ignore conflict
- The Prisoner's Dilemma creates an incentive for exclusive PTAs
- Domino Effect outweighs solvency

Timothy M **Peterson '15** (Department of Political Science, University of South Carolina, "Insiders versus Outsiders: Preferential Trade Agreements, Trade Distortions, and Militarized Conflict," Journal of Conflict Resolution, Vol. 59(4))

The potential for preferential trade liberalization to enable discrimination by members against nonmembers is discussed by Viner (1950) in his seminal study of the ''customs union issue.'' Specifically, Viner notes that preferential reduction in trade barriers can lead to a perverse form of trade; instead of replacing inefficiently produced domestic commodities with efficiently produced foreign ones, PTAs can lead states to discriminate in favor of insiders, importing from relatively less efficient member states rather than relatively more efficient third parties. In other words, PTAs may be trade diverting rather than trade creating. Economists witnessing early PTAs feared that political relationships could be harmed by these discriminatory agreements. Bhagwati (1991, 64) quotes a statement by John Maynard Keynes suggesting that preferential liberalization is intrinsically adversarial: The separate blocs and all the friction and loss of friendship they must bring with them are expedients to which one may be driven in a hostile world where trade has ceased over wide areas to be cooperative and peaceful and where are forgotten the healthy rules of mutual advantage and equal treatment. But it is crazy to prefer that. Keynes is describing a classic example of a prisoner's dilemma: while all states' welfare would be improved by multilateral liberalization, smaller groups of states face incentives to enact preferential liberalization that benefits them at the expense of outsiders. Because there exists no global authority to prevent states from joining PTAs,2 states may be inclined to do so not simply because they seek to gain an advantage over outsiders (although this motivation is probably quite common),3 but because they fear falling behind if others form agreements from which they are excluded. Once a PTA is formed, cooperation between states could break down throughout the system. Baldwin (1996; see also Mansfield 1998) suggests the 700 Journal of Conflict Resolution 59(4) potential for **a ''domino effect''** in which the formation of one PTA causes outsiders to pursue rival agreements in order to offset the economic harm associated with exclusion. Economists tend to examine the political consequences of PTAs only indirectly; however, they devote considerable attention to the question of whether PTAs are truly welfare enhancing, given the potential for discrimination against more efficient nonmember states (e.g., Lipsey 1957; Wonnacott 1996; Panagariya and Krishna 2002). Additionally, a large literature examines whether PTAs are ''stumbling blocks'' or ''building blocks'' to wider, multilateral liberalization (e.g., Bhagwati 1991; Levy 1997; Baldwin and Seghezza 2008). Studies in the early 1990s warned that regionalism could provoke tariff wars and even precipitate the collapse of international trade (e.g., Bhagwati 1991, 1992; Krugman 1991). However, later studies advocate a more sanguine view of regionalism, concluding that contemporary PTAs tend to be trade creating rather than diverting and that preferential liberalization is enacted by interests favoring multilateral liberalization as a politically viable first step in this direction amid opposition by domestic interests harmed by free trade (Oye 1992; Eichengreen and Frankel 1995; Mansfield and Milner 1999). Yet, other work suggests that PTA-induced discrimination could vary. For example, Kono (2007) suggests that PTAs could facilitate wider liberalization in the specific case where members' intra- and extra-PTA comparative advantages are similar, but have the opposite effect—leading to higher external protectionism—when members' comparative advantages differ for insiders versus outsiders. Given the potential for at least some PTAs to be discriminatory, it follows that foreign policy makers perceiving harm from an exclusive trade agreement might protest what they view as an economic alliance against them. However, these political consequences of discriminatory trade practices have been largely unexplored. Instead, research tends to focus on political benefits—including reduced conflict propensity—gained by states sharing membership in a trade agreement (e.g., Mansfield, Pevehouse, and Bearce, 1999/2000; Mansfield and Pevehouse 2000; Bearce and Omori 2005).4 The generally optimistic view of PTAs could follow from a focus at the agreement or region level of analysis, **which obscures the reality** that many states are enmeshed in a **complex network of partially overlapping trade agreements**. In the next

section, I explore the consequence of PTA involvement from the perspective of a dyad, each state within which also trades with third parties. I outline the conditions under which reshaped trade patterns following from one state's participation in an exclusive PTA can elicit a perception by the nonmember that the trade agreement is threatening to that nonmember's economic security.

NSA DDI

On-Case Answers

Answers to Privacy Rights
1NC – FRONTLINE PRIVACY

1. The NSA is not a rogue agency, there has been no abuse of surveillance.

Lowry 2015,
Rich, Editor, the National Review, 5-27-2015, "Lowry: NSA data program faces death by bumper sticker," Salt Lake Tribune, http://www.sltrib.com/csp/mediapool/sites/sltrib/pages/printfriendly.csp?id=2557534

You can listen to orations on the NSA program for hours and be outraged by its violation of our liberties, inspired by the glories of the Fourth Amendment and prepared to mount the barricades to stop the NSA in its tracks — and still have no idea what the program actually does. That's what the opponents leave out or distort, since their case against the program becomes so much less compelling upon fleeting contact with reality. The program involves so-called metadata, information about phone calls, but not the content of the calls — things like the numbers called, the time of the call, the duration of the call. The phone companies have all this information, which the NSA acquires from them. What happens next probably won't shock you, and it shouldn't. As Rachel Brand of the Privacy and Civil Liberties Oversight Board writes, "It is stored in a database that may be searched only by a handful of trained employees, and even they may search it only after a judge has determined that there is evidence connecting a specific phone number to terrorism." The charge of domestic spying is redolent of the days when J. Edgar Hoover targeted and harassed Martin Luther King Jr. Not only is there zero evidence of any such abuse, it isn't even possible based on the NSA database alone. There are no names with the numbers. As former prosecutor Andrew C. McCarthy points out, whitepages.com has more personal identifying information. The NSA is hardly a rogue agency. Its program is overseen by a special panel of judges, and it has briefed Congress about its program for years.

2. Privacy invasions are inevitable. They will continue to grow, Moore's law proves.

Seemann, 2015,
Michael Seemann studied Applied Cultural Studies in Lünebur, Now he blogs at mspr0.de and writes for various media like Rolling Stone, TIME online, SPEX, Spiegel Online, c't and the DU magazine " Digital Tailspin Ten Rules for the Internet After Snowden" The Network Notebooks series March 2015 http://networkcultures.org/wp-content/uploads/2015/03/NN09_Digital_Tailspin_SP.pdf

That the NSA was eavesdropping on satellite phone connections worldwide was known as early as 2000. Its global network of radio stations and radar domes was called 'Echelon'. The European Parliament called for an investigation, but when the enquiry commission submitted its report on September 5, 2001, it was overshadowed by the events of 9/11 a few days later. Apart from Echelon leaving deep traces in the collective memory of nerd culture, virtually nothing happened – this was a scandal that was to remain without political consequence. Even 'post-Snowden', no political, technical, or legal solutions to surveillance are forthcoming. On the contrary, surveillance will likely keep on spreading, parallel to the datafication of the world. What was

monitored at the time of Echelon was the same as it is today: everything. Only before, 'everything' was less extensive by several orders of magnitude. What can be put under surveillance will be put under surveillance, i.e. the digitized areas of life. These areas are subject to Moore's Law, meaning that their capacities will double every 18 to 24 months. The digital tailspin has only just begun. And it will continue to sink into every nook and cranny of daily life, leaving no corner undigitized. So when in ten years' time the latest eavesdropping operations of intelligence are revealed, we might hear of brain scanners, or of sensors tapping into our bloodstreams. Either way, people will shrug it off, or maybe not even that, as their thoughts on the issue will be publicly available anyway.

3. Privacy is not absolute, corporations and big data make violations of privary inevitable.

Goldsmith, 2015

Jack the Henry L. Shattuck Professor at Harvard Law School, The Ends of Privacy, The New Rambler, Apr. 06, 2015 (reviewing Bruce Schneier, Data and Goliath: The Hidden Battles to Collect Your Data and Control Your World (2015)). Published Version http://newramblerreview.com/images/files/Jack- Goldsmith_Review-of-Bruce-Schneier.pdf

The truth is that consumers love the benefits of digital goods and are willing to give up traditionally private information in exchange for the manifold miracles that the Internet and big data bring. Apple and Android each offer more than a million apps, most of which are built upon this model, as are countless other Internet services. More generally, big data promises huge improvements in economic efficiency and productivity, and in health care and safety. Absent abuses on a scale we have not yet seen, the public's attitude toward giving away personal information in exchange for these benefits will likely persist, even if the government requires firms to make more transparent how they collect and use our data. One piece of evidence for this is that privacy-respecting search engines and email services do not capture large market shares. In general these services are not as easy to use, not as robust, and not as efficacious as their personal-data-heavy competitors.

Schneier understands and discusses all this. In the end his position seems to be that we should deny ourselves some (and perhaps a lot) of the benefits big data because the costs to privacy and related values are just too high. We "have to stop the slide" away from privacy, he says, not because privacy is "profitable or efficient, but because it is moral." But as Schneier also recognizes, privacy is not a static moral concept. "Our personal definitions of privacy are both cultural and situational," he acknowledges. Consumers are voting with their computer mice and smartphones for more digital goods in exchange for more personal data. The culture increasingly accepts the giveaway of personal information for the benefits of modern computerized life.

This trend is not new. "The idea that privacy can't be invaded at all is utopian," says Professor Charles Fried of Harvard Law School. "There are amounts and kinds of information which previously were not given out and suddenly they have to be given out. People adjust their behavior and conceptions accordingly." That is Fried in the 1970 Newsweek story, responding to an earlier generation's panic about big data and data mining. The same point applies today, and will apply as well when the Internet of things makes today's data mining seem as quaint as 1970s-era computation.

4. Weigh consequences — especially when responding to terrorism.

Isaac 2

Jeffrey C. Isaac, James H. Rudy Professor of Political Science and Director of the Center for the Study of Democracy and Public Life at Indiana University-Bloomington, 2002 ("Ends, Means, and Politics," *Dissent*, Volume 49, Issue 2, Spring, Available Online to Subscribing Institutions via EBSCOhost, p. 35-37)

As writers such as Niccolo Machiavelli, Max Weber, Reinhold Niebuhr, and Hannah Arendt have taught, an unyielding concern with moral goodness **undercuts political responsibility**. The concern may be morally laudable, reflecting a kind of personal integrity, but it suffers from three fatal flaws: (1) It fails to see that the purity of one's intention **does not ensure** the achievement of what one intends. Abjuring violence or refusing to make common cause with morally compromised parties may seem like the right thing; but if such tactics entail impotence, then it is hard to view them as serving any moral good beyond the clean conscience of their supporters; (2) it fails to see that in a world of **real violence and injustice**, moral purity is not simply a form of powerlessness; it is often a form of **complicity in injustice**. [end page 35] This is why, from the standpoint of politics—as opposed to religion—pacifism is always a potentially immoral stand. In categorically repudiating violence, it refuses in principle to oppose certain violent injustices with any effect; and (3) it fails to see that politics is as much about **unintended consequences** as it is about intentions; **it is the effects of action, rather than the motives of action, that is most significant**. Just as the alignment with "good" may engender impotence, **it is often the pursuit of "good" that generates evil**. This is the lesson of communism in the twentieth century: it is **not enough** that one's goals be sincere or idealistic; it is **equally important**, **always**, to ask about **the effects of pursuing these goals** and to judge these effects in **pragmatic and historically contextualized** ways. Moral absolutism **inhibits this judgment**. It **alienates** those who are not true believers. It promotes **arrogance**. And it **undermines political effectiveness**.

5. The Constitution is not a suicide pact. If mass surveillance is good policy, it is justified.

Posner 2006

Richard A. Posner, Senior Lecturer in Law at the University of Chicago, Judge on the United States Court of Appeals for the Seventh Circuit in Chicago, was named the most cited legal scholar of the 20th century by *The Journal of Legal Studies*, 2006 "Wire Trap," *New Republic*, February 6th, Available Online at http://www.newrepublic.com/article/104859/wire-trap

The revelation by The New York Times that the National Security Agency (NSA) is conducting a secret program of electronic surveillance outside the framework of the Foreign Intelligence Surveillance Act (FISA) has sparked a hot debate in the press and in the blogosphere. But there is something odd about the debate: It is aridly legal. Civil libertarians contend that the program is

illegal, even unconstitutional; some want President Bush impeached for breaking the law. The administration and its defenders have responded that the program is perfectly legal; if it does violate FISA (the administration denies that it does), then, to that extent, the law is unconstitutional. This legal debate is complex, even esoteric. But, apart from a handful of not very impressive anecdotes (did the NSA program really prevent the Brooklyn Bridge from being destroyed by blowtorches?), there has been little discussion of the program's concrete value as a counter-terrorism measure or of the inroads it has or has not made on liberty or privacy.

Not only are these questions more important to most people than the legal questions; they are fundamental to those questions. Lawyers who are busily debating legality without first trying to assess the consequences of the program have put the cart before the horse. Law in the United States is not a Platonic abstraction but a flexible tool of social policy. In analyzing all but the simplest legal questions, one is well advised to begin by asking what social policies are at stake. Suppose the NSA program is vital to the nation's defense, and its impingements on civil liberties are slight. That would not prove the program's legality, because not every good thing is legal; law and policy are not perfectly aligned. But a conviction that the program had great merit would shape and hone the legal inquiry. We would search harder for grounds to affirm its legality, and, if our search were to fail, at least we would know how to change the law--or how to change the program to make it comply with the law--without destroying its effectiveness. Similarly, if the program's contribution to national security were negligible--as we learn, also from the Times, that some FBI personnel are indiscreetly whispering--and it is undermining our civil liberties, this would push the legal analysis in the opposite direction.

Ronald Dworkin, the distinguished legal philosopher and constitutional theorist, wrote in The New York Review of Books in the aftermath of the September 11 attacks that "we cannot allow our Constitution and our shared sense of decency to become a suicide pact." He would doubtless have said the same thing about FISA. If you approach legal issues in that spirit rather than in the spirit of ruat caelum fiat iusticia (let the heavens fall so long as justice is done), you will want to know how close to suicide a particular legal interpretation will bring you before you decide whether to embrace it. The legal critics of the surveillance program have not done this, and the defenders have for the most part been content to play on the critics' turf.

6. Surveillance increases democratic accountability and makes discriminatory bias impossible.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review,
http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

Broad-based surveillance distributes its burdens widely, which may be fairer.

For democratic accountability, panopticon-style surveillance has an underappreciated advantage. It may more easily accommodate transparency. Electronic surveillance is governed by fully specified algorithms. Thus, disclosure of the algorithms gives a full picture of the practices. By

contrast, when government agents are told to scan for suspicious behavior, we know very little about what criteria they are using. Even if we require the agents to articulate their criteria, they may be unable to do so comprehensively. The concern is not just about good faith, but also about unconscious predisposition. Psychologists have provided extensive evidence of pervasive, unconscious bias based on race and other social stereotypes and stigma. Algorithm-governed electronic surveillance has no such bias.

No Abuse of Surveillance

The NSA is well-regulated and constrained by judicial oversight.

Cohen, 2015

Michael A. Cohen, 15, fellow at The Century Foundation. Previously, Michael served in the U.S. Department of State as chief speechwriter for U.S. Representative to the United Nations Bill Richardson and Undersecretary of State Stuart Eizenstat. , 6-3-2015, "NSA Surveillance Debate Drowned Out on Both Sides by Fear Tactics," World Politics Review, http://www.worldpoliticsreview.com/articles/15905/nsa-surveillance-debate-drowned-out-on-both-sides-by-fear-tacticsa

The arguments of NSA opponents have, for two years, relied on hypothetical, trumped-up fears of the government ransacking our private information. These concerns have been raised even though, from all appearances, the NSA's domestic surveillance activities are reasonably well-regulated and constrained by judicial oversight. NSA opponents like to point out that a recent court decision determined that the bulk records collection program was illegal, which ignores the many other court decisions that accepted its legality. More important, it ignores the decisions of the secret FISA Court, which ordered the NSA not to scrap collection programs that were determined to be operating unconstitutionally, but rather to make changes to them to get them in line with constitutional constraints.

There's no evidence of abuse of surveillance powers.

Simon, 2013,

David Simon, producer of HBO's The Wire, 7/3/13, "We are shocked, shocked...," http://davidsimon.com/we-are-shocked-shocked/

I know it's big and scary that the government wants a data base of all phone calls. And it's scary that they're paying attention to the internet. And it's scary that your cell phones have GPS installed. And it's scary, too, that the little box that lets you go through the short toll lane on I-95 lets someone, somewhere know that you are on the move. Privacy is in decline around the world, largely because technology and big data have matured to the point where it is easy to create a net that monitors many daily interactions. Sometimes the data is valuable for commerce — witness those facebook ads for Italian shoes that my wife must endure — and sometimes for law enforcement and national security. But be honest, most of us are grudging participants in this

dynamic. We want the cell phones. We like the internet. We don't want to sit in the slow lane at the Harbor Tunnel toll plaza.

The question is not should the resulting data exist. It does. And it forever will, to a greater and greater extent. And therefore, the present-day question can't seriously be this: Should law enforcement in the legitimate pursuit of criminal activity pretend that such data does not exist. The question is more fundamental: Is government accessing the data for the legitimate public safety needs of the society, or are they accessing it in ways that abuse individual liberties and violate personal privacy — and in a manner that is unsupervised.

And to that, the Guardian and those who are wailing jeremiads about this pretend-discovery of U.S. big data collection are noticeably silent. We don't know of any actual abuse. No known illegal wiretaps, no indications of FISA-court approved intercepts of innocent Americans that occurred because weak probable cause was acceptable. Mark you, that stuff may be happening. As happens the case with all law enforcement capability, it will certainly happen at some point, if it hasn't already. Any data asset that can be properly and legally invoked, can also be misused — particularly without careful oversight. But that of course has always been the case with electronic surveillance of any kind.

Privacy Losses are Inevitable

Privacy is eroding now because of technological innovation.

Stalder, 2009

Felix. Department of Sociology, Queens University "Privacy is not the Antidote to Surveillance." Surveillance & Society 1.1 (2009): 120-124.

The standard answer to these problems the call for our privacy to be protected. Privacy, though, is a notoriously vague concept. Europeans have developed on of the most stringent approaches where privacy is understood as 'informational self-determination'. This, basically, means that an individual should be able to determine the extent to which data about her or him is being collected in any given context. Following this definition, privacy is a kind of bubble that surrounds each person, and the dimensions of this bubble are determined by one's ability to control who enters it and who doesn't. Privacy is a personal space; space under the exclusive control of the individual. Privacy, in a way, is the informational equivalent to the (bourgeois, if you will) notion of "my home is my castle." As appealing and seemingly intuitive as this concept is, it plainly doesn't work. Everyone agrees that our privacy has been eroding for a very long time – hence the notion of the "surveillance society" – and there is absolutely no indication that the trend is going to slow down, let alone reverse. Even in the most literal sense, the walls of our castles are being pierced by more and more connections to the outside world. It started with the telephone, the TV and the Internet, but imagine when your fridge begins to communicate with your palm pilot, updating the shopping list as you run out of milk, and perhaps even sending a

notice to the grocer for home delivery. Or maybe the stove will alert the fire department because you didn't turn off the hot plate before rushing out one morning.6

A less futuristic example of this connectivity would be smoke detectors that are connected to alarm response systems. Outside the home, it becomes even more difficult to avoid entering into relationships that produce electronic, personal data. Only the most zealous will opt for standing in line to pay cash at the toll both every day, if they can just breeze through an electronic gate instead. This problem is made even more complicated by the fact that there are certain cases in which we want "them" to have our data. Complete absence from databanks is neither practical nor desirable. For example, it can be a matter of life and death to have instant access to comprehensive and up-to-date health-related information about the people who are being brought into the emergency room unconscious. This information needs to be too detailed and needs to be updated too often – for example to include all prescriptiondrugs a person is currently using – to be issued on, say, a smartcard held by the individual, hence giving him or her full control over who accesses it. To make matters worse, with privacy being by definition personal, every single person will have a different notion about what privacy means. Data one person might allow to be collected might be deeply personal for someone else. This makes it very difficult to collectively agree on the legitimate boundaries of the privacy bubble.

Corporations Violate Privacy

Privacy can't be restored – technological and corporate invasions happen all the time.

Lewis 2014

James Andrew Lewis is a senior fellow and director of the Strategic Technologies Program at the Center for Strategic and International Studies. Previously, US Departments of State and Commerce as a Foreign Service officer and as a member of the Senior Executive Service. *"Underestimating Risk in the Surveillance Debate"* - Center For Strategic & International Studies - Strategic Technologies Program – December - http://csis.org/publication/underestimating-risk-surveillance-debate

On average, there are 16 tracking programs on every website.4 This means that when you visit a website, it collects and reports back to 16 companies on what you've looked at and what you have done. These programs are invisible to the user. They collect IP address, operating system and browser data, the name of the visiting computer, what you looked at, and how long you stayed. This data can be made even more valuable when it is matched with other data collections. Everything a consumer does online is tracked and collected. There is a thriving and largely invisible market in aggregating data on individuals and then selling it for commercial purposes. Data brokers collect utility bills, addresses, education, arrest records (arrests, not just convictions). All of this data is recorded, stored, and made available for sale. Social networking sites sell user data in some anonymized form so that every tweet or social media entry can be used to calculate market trends and refine advertising strategies. What can be predicted from this social media data is amazing—unemployment trends, disease outbreaks, consumption patterns for different groups, consumer preferences, and political trends. It is often more accurate than polling because it reflects peoples' actual behavior rather than the answer they think an interviewer wants to hear. Ironically, while the ability of U.S. agencies to use this commercial data is greatly

restricted by law and policy, the same restrictions do not apply to foreign governments. The development of the Internet would have been very different and less dynamic if these business models had not been developed. They provide incentives and financial returns to develop or improve Internet services. There is an implicit bargain where you give up privacy in exchange for services, but in bargains between service providers and consumers, one side holds most of the cards and there is little transparency. But the data-driven models of the Internet mean that it is an illusion to think that there is privacy online or that NSA is the only entity harvesting personal data.

Corporation commit much worse privacy violations.

Lowry 15,
Rich, Editor, the National Review, 5-27-2015, "Lowry: NSA data program faces death by bumper sticker," Salt Lake Tribune,
http://www.sltrib.com/csp/mediapool/sites/sltrib/pages/printfriendly.csp?id=2557534

In the context of all that is known about us by private companies, the NSA is a piker. Take the retailer Target, for example. According to The New York Times, it collects your "demographic information like your age, whether you are married and have kids, which part of town you live in, how long it takes you to drive to the store, your estimated salary, whether you've moved recently, what credit cards you carry in your wallet and what Web sites you visit." Of course, the Fourth Amendment applies to the government, not private entities like Target. The amendment protects against unreasonable searches and seizures of our "persons, houses, papers, and effects." If the NSA were breaking into homes and seizing metadata that people had carefully hidden away from prying eyes, it would be in flagrant violation of the Fourth Amendment. But no one is in possession of his or her own metadata. Even if the NSA didn't exist, metadata would be controlled by someone else, the phone companies. The Supreme Court has held that you don't have an expectation of privacy for such information in the possession of a third party. One frightening way to look at mail delivery is that agents of the state examine and handle the correspondence of countless of millions of Americans. They aren't violating anyone's Fourth Amendment rights, though, because no one expects the outside of their envelopes to be private.

Security Consequences before Privacy

Terrorism and fear chill speech and democracy more than surveillance.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review,
http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

With low crime rates and small risks of terrorism in the United States, privacy advocates do not feel compelled to address the potential chilling effect on speech and conduct that arises from fear

of private lawlessness, but we do not have to look far to see examples of such an effect abroad and to recognize that its magnitude depends on the effectiveness of public law enforcement. To the extent that law enforcement is enhanced by surveillance, we ought to recognize the possibility of a warming effect that strengthens people's confidence that they can act and speak without fear of private aggression.

Security is more important than privacy because if people aren't secure the right to privacy is meaningless.

Himma, 2007

Kenneth Einar, Associate Professor of Philosophy, Seattle Pacific University. "Privacy versus security: Why privacy is not an absolute value or right." San Diego L. Rev. 44 (2007): 857.

The last argument I wish to make in this essay will be brief because it is extremely well known and has been made in a variety of academic and nonacademic contexts. The basic point here is that no right not involving security can be meaningfully exercised in the absence of efficacious protection of security. The right to property means nothing if the law fails to protect against threats to life and bodily security. Likewise, the right to privacy has little value if one feels constrained to remain in one's home because it is so unsafe to venture away that one significantly risks death or grievous bodily injury. This is not merely a matter of describing common subjective preferences; this is rather an objective fact about privacy and security interests. If security interests are not adequately protected, citizens will simply not have much by way of privacy interests to protect. While it is true, of course, that people have privacy interests in what goes on inside the confines of their home, they also have legitimate privacy interests in a variety of public contexts that cannot be meaningfully exercised if one is afraid to venture out into those contexts because of significant threats to individual and collective security-such as would be the case if terrorist attacks became highly probable in those contexts. It is true, of course, that to say that X is a prerequisite for exercising a particular right Y does not obviously entail that X is morally more important than Y, but this is a reasonable conclusion to draw. If it is true that Y is meaningless in the absence of X, then it seems clear that X deserves, as a moral matter, more stringent protection than Y does. Since privacy interests lack significance in the absence of adequate protection of security interests, it seems reasonable to infer that security interests deserve, as a moral matter, more stringent protection than privacy interests.

Security Trumps Constitution

The counter-terror benefits of mass surveillance outweigh privacy and the Constitution.

Posner 5 —

Richard A. Posner, Senior Lecturer in Law at the University of Chicago, Judge on the United States Court of Appeals for the Seventh Circuit in Chicago, was named the most cited legal scholar of the 20th century by *The Journal of Legal Studies*, 2013 "Our Domestic Intelligence

Crisis," *Washington Post*, December 21st, http://www.washingtonpost.com/wp-dyn/content/article/2005/12/20/AR2005122001053.html

These programs are criticized as grave threats to civil liberties. They are not. Their significance is in flagging the existence of gaps in our defenses against terrorism. The Defense Department is rushing to fill those gaps, though there may be better ways. The collection, mainly through electronic means, of vast amounts of personal data is said to invade privacy. But machine collection and processing of data cannot, as such, invade privacy. Because of their volume, the data are first sifted by computers, which search for names, addresses, phone numbers, etc., that may have intelligence value. This initial sifting, far from invading privacy (a computer is not a sentient being), keeps most private data from being read by any intelligence officer. The data that make the cut are those that contain clues to possible threats to national security. The only valid ground for forbidding human inspection of such data is fear that they might be used to blackmail or otherwise intimidate the administration's political enemies. That danger is more remote than at any previous period of U.S. history. Because of increased political partisanship, advances in communications technology and more numerous and competitive media, American government has become a sieve. No secrets concerning matters that would interest the public can be kept for long. And the public would be far more interested to learn that public officials were using private information about American citizens for base political ends than to learn that we have been rough with terrorist suspects – a matter that was quickly exposed despite efforts at concealment. The Foreign Intelligence Surveillance Act makes it difficult to conduct surveillance of U.S. citizens and lawful permanent residents unless they are suspected of being involved in terrorist or other hostile activities. That is too restrictive. Innocent people, such as unwitting neighbors of terrorists, may, without knowing it, have valuable counterterrorist information. Collecting such information is of a piece with data-mining projects such as Able Danger.

The goal of national security intelligence is to prevent a terrorist attack, not just punish the attacker after it occurs, and the information that enables the detection of an impending attack may be scattered around the world in tiny bits. A much wider, finer-meshed net must be cast than when investigating a specific crime. Many of the relevant bits may be in the e-mails, phone conversations or banking records of U.S. citizens, some innocent, some not so innocent. The government is entitled to those data, but just for the limited purpose of protecting national security.The Pentagon's rush to fill gaps in domestic intelligence reflects the disarray in this vital yet neglected area of national security. The principal domestic intelligence agency is the FBI, but it is primarily a criminal investigation agency that has been struggling, so far with limited success, to transform itself. It is having trouble keeping its eye on the ball; an FBI official is quoted as having told the Senate that environmental and animal rights militants pose the biggest terrorist threats in the United States. If only that were so. Most other nations, such as Britain, Canada, France, Germany and Israel, many with longer histories of fighting terrorism than the United States, have a domestic intelligence agency that is separate from its national police force, its counterpart to the FBI. We do not. We also have no official with sole and comprehensive responsibility for domestic intelligence. It is no surprise that gaps in domestic intelligence are being filled by ad hoc initiatives.We must do better. The terrorist menace, far from receding, grows every day. This is not only because al Qaeda likes to space its attacks, often by many years, but also because weapons of mass destruction are becoming ever more accessible to terrorist groups and individuals.

Answers to Privacy Rights First

Privacy rights are not absolute, security and preserving life is more important.

Himma, 2007

Kenneth Einar, Associate Professor of Philosophy, Seattle Pacific University. "Privacy versus security: Why privacy is not an absolute value or right." San Diego L. Rev. 44 (2007): 857.

From an intuitive standpoint, the idea that the right to privacy is an absolute right seems utterly implausible. Intuitively, it seems clear that there are other rights that are so much more important that they easily trump privacy rights in the event of a conflict. For example, if a psychologist knows that a patient is highly likely to commit a murder, then it is, at the very least, morally permissible to disclose that information about the patient in order to prevent the crime-regardless of whether such information would otherwise be protected by privacy rights. Intuitively, it seems clear that life is more important from the standpoint of morality than any of the interests protected by a moral right to privacy. Still one often hears-primarily from academics in information schools and library schools, especially in connection with the controversy regarding the USA PATRIOT Act-the claim that privacy should never be sacrificed for security, implicitly denying what I take to be the underlying rationale for the PATRIOT Act. This also seems counterintuitive because it does not seem unreasonable to believe we have a moral right to security that includes the right to life. Although this right to security is broader than the right to life, the fact that security interests include our interests in our lives implies that the right to privacy trumps even the right to life-something that seems quite implausible from an intuitive point of view. If I have to give up the most private piece of information about myself to save my life or protect myself from either grievous bodily injury or financial ruin, I would gladly do so without hesitation. There are many things I do not want you to know about me, but should you make a credible threat to my life, bodily integrity, financial security, or health, and then hook me up to a lie detector machine, I will truthfully answer any question you ask about me. I value my privacy a lot, but I value my life, bodily integrity, and financial security much more than any of the interests protected by the right to privacy.

Privacy rights Fail

Their understanding of privacy rights as personal will fail because its impossible in modern society.

Stalder, 2009,

Felix. Department of Sociology, Queens University "Privacy is not the Antidote to Surveillance." Surveillance & Society 1.1 (2009): 120-124.

So rather than fight those connections – some of which are clearly beneficial, some of which are somewhat ambiguous, and some are clearly disconcerting – we have to reconceptualize what

these connections do. Rather than seeing them as acts of individual transgression (X has invaded Y's privacy) we have to see them part of a new landscape of social power. Rather than continuing on the defensive, by trying to maintain an ever-weakening illusion of privacy, we have to shift to the offensive and start demanding accountability of those whose power is enhanced by the new connections. In a democracy, political power is, at least ideally, tamed by making the government accountable to those who are governed, not by carving out areas in which the law doesn't apply. It is, in this perspective, perhaps no co-incidence that many of the strongest privacy advocates (at least in the US) lean politically towards libertarianism, a movement which includes on its fringe white militias which try to set up zones liberated from the US government. In our democracies, extensive institutional mechanisms have been put into to place to create and maintain accountability, and to punish those who abuse their power. We need to develop and instate similar mechanisms for the handling of personal information – a technique as crucial to power as the ability to exercise physical violence – in order to limit the concentration of power inherent in situations that involve unchecked surveillance. The current notion of privacy, which frames the issue as a personal one, won't help us accomplish that.9 However, notions of institutionalized accountability will, because they acknowledge surveillance as a structural problem of political power. It's time to update our strategies for resistance and develop approaches adequate to the actual situation rather than sticking to appealing but inadequate ideas that will keep locking us into unsustainable positions.

There should not be a universal ethical rule against surveillance, the context matters.

Stoddart, 2014

Eric. School of Divinity, University of St Andrews "Challenging 'Just Surveillance Theory': A Response to Kevin Macnish's 'Just Surveillance? Towards a Normative Theory of Surveillance'." Surveillance & Society 12.1 (2014): 158-163.

I am sorry to say that I find Macnish's aim of a normative ethics of surveillance to be an unnecessary goal. I could be persuaded that a radically revised model of practical reasoning based on the Just War Tradition might have saliency for investigative strategies involving surveillance technologies. However, 'surveillance' is much too all-encompassing a term to be the subject of its own ethics. There can be no 'ethics of surveillance' but there may be norms appropriate for particular contexts of surveillance. This means examining specific domains in which surveillance is deployed, along with other strategies, to address concerns or challenges. For example, the ethics of surveillance in elderly care or the ethics of surveillance in education are valuable discussions to be had. My point is that it ought to be the ethics of elderly care that is foregrounded within which we would be seek to understand the ethical deployment of surveillance mechanisms.

Surveillance doesn't Violate 4th Amendment

NSA programs don't violate the Fourth Amendment because they information has been given to a third-party.

Herman & Yoo, 2014

Yoo, John, law professor at the University of California, Berkeley, and a visiting scholar at the American Enterprise Institute and Arthur Herman. senior fellow at Hudson Institute. "A Defense of Bulk Surveillance." National Review 65 (2014): 31-33.

Considering the millions of phone numbers making billions of phone calls that year and every year, these levels of surveillance can hardly be considered a major intrusive system. But what about the program's constitutionality and alleged violation of the Fourth Amendment? The Fourth Amendment does not protect some vague and undefined right to privacy. Instead, it declares: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause." The Constitution protects only the privacy of the "person," the home, and "papers and effects," which are usually located in the home. It does not reach information or things that we voluntarily give up to the government or to third parties outside of the home or our persons. The Fourth Amendment also does not make such information absolutely immune—it is still subject to search if the government is acting reasonably or has a warrant. These basic principles allow the government to search through massive databases of call and e-mail records when doing so is a reasonable measure to protect the nation's security, which is its highest duty.

A2 Surveillance hurts Freedom

Surveillance doesn't harm freedom or autonomy, because they aren't reliant on digital communication.

Sagar, 2015

Rahul, associate professor of political science at Yale-NUS College and the Lee Kuan Yew School of Public Policy at the National University of Singapore. He was previously assistant professor in the Department of Politics at Princeton University., "Against Moral Absolutism: Surveillance and Disclosure After Snowden," Ethics & International Affairs / Volume 29 / Issue 02 / 2015, pp 145-159.

The second harm Greenwald sees surveillance posing is personal in nature. Surveillance is said to undermine the very essence of human freedom because the "range of choices people consider when they believe that others are watching is . . . far more limited than what they might do when acting in a private realm."16 Internet-based surveillance is viewed as especially damaging in this respect because this is "where virtually everything is done" in our day, making it the place "where we develop and express our very personality and sense of self." Hence, "to permit surveillance to take root on the Internet would mean subjecting virtually all forms of human interaction, planning, and even thought itself to comprehensive state examination."17

This claim too seems overstated in two respects. First, it exaggerates the extent to which our self-development hinges upon electronic communication channels and other related activities that leave electronic traces. The arrival of the Internet certainly opens new vistas, but it does not entirely close earlier ones. A person who fears what her browsing habits might communicate to the authorities can obtain texts offline. Similarly, an individual who fears transmitting materials electronically can do so in person, as Snowden did when communicating with Greenwald. There are costs to communicating in such "old-fashioned" ways, but these costs are neither new nor prohibitive. Second, a substantial part of our self-development takes place in public. We become who we are through personal, social, and intellectual engagements, but these engagements do not always have to be premised on anonymity. Not everyone wants to hide all the time, which is why public engagement—through social media or blogs, for instance—is such a central aspect of the contemporary Internet.

Surveillance doesn't destroy freedom, we're doing fine.

Seemann, 2015,

Michael Seemann studied Applied Cultural Studies in Lünebur, Now he blogs at mspr0.de and writes for various media like Rolling Stone, TIME online, SPEX, Spiegel Online, c't and the DU magazine " Digital Tailspin Ten Rules for the Internet After Snowden" The Network Notebooks series March 2015 http://networkcultures.org/wp-content/uploads/2015/03/NN09_Digital_Tailspin_SP.pdf

Our digital lives have been monitored, not just occasionally or recently, but continuously for the past ten years. That means that if total surveillance were as much a risk to personal freedom and individuality as digital rights activists have been suggesting for a long time, no one in the Western hemisphere would be able to feel free or individualistic any more. In other words, the question of whether we can live with total surveillance has already been answered in a way that is by no means hypothetical, but decidedly empirical: yes, we can, and we have been doing so for more than ten years.

The claims about authoritarianism are hyperbolic and paranoid. All law enforcement practice might be used improperly, but accountability checks the worst practices.

Simon, 2014,

William H. Simon, Arthur Levitt Professor of Law at Columbia University, 10-20-2014, "Rethinking Privacy," Boston Review, http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

The third trope of the paranoid style is the slippery slope argument. The idea is that an innocuous step in a feared direction will inexorably lead to further steps that end in catastrophe. As The Music Man (1962) puts it in explaining why a pool table will lead to moral collapse in River City, Iowa, "medicinal wine from a teaspoon, then beer from a bottle." In this spirit, Daniel Solove in Nothing to Hide (2011) explains why broad surveillance is a threat even when limited to detection of unlawful activity. First, surveillance will sometimes lead to mistaken conclusions

that will harm innocent people. Second, since "everyone violates the law sometimes" (think of moderate speeding on the highway), surveillance will lead to over-enforcement of low-stakes laws (presumably by lowering the costs of enforcement), or perhaps the use of threats of enforcement of minor misconduct to force people to give up rights (as for example, where police threaten to bring unrelated charges in order to induce a witness or co-conspirator to cooperate in the prosecution of another). And finally, even if we authorize broad surveillance for legitimate purposes, officials will use the authorization as an excuse to extend their activities in illegitimate ways. Yet, slippery slope arguments can be made against virtually any kind of law enforcement. Most law enforcement infringes privacy. ("Murder is the most private act a man can commit," William Faulkner wrote.) And most law enforcement powers have the potential for abuse. What we can reasonably ask is, first, that the practices are calibrated effectively to identify wrongdoers; second, that the burden they put on law-abiding people is fairly distributed; and third, that officials are accountable for the lawfulness of their conduct both in designing and in implementing the practices.

A2: chilling effect

Surveillance does not eliminate dissent, empirical examples demonstrate the opposite.

Sagar, **2015**

Rahul, associate professor of political science at Yale-NUS College and the Lee Kuan Yew School of Public Policy at the National University of Singapore. He was previously assistant professor in the Department of Politics at Princeton University., "Against Moral Absolutism: Surveillance and Disclosure After Snowden," Ethics & International Affairs / Volume 29 / Issue 02 / 2015, pp 145-159.

Greenwald identifies two major harms. The first is political in nature. Mass surveillance is said to stifle dissent because "a citizenry that is aware of always being watched quickly becomes a compliant and fearful one." Compliance occurs because, anticipating being shamed or condemned for nonconformist behavior, individuals who know they are being watched "think only in line with what is expected and demanded."13 Even targeted forms of surveillance are not to be trusted, Greenwald argues, because the "indifference or support of those who think themselves exempt invariably allows for the misuse of power to spread far beyond its original application."14

These claims strike me as overblown. The more extreme claim, that surveillance furthers thought control, is neither logical nor supported by the facts. It is logically flawed because accusing someone of trying to control your mind proves that they have not succeeded in doing so. On a more practical level, the fate met by states that have tried to perfect mass control—the Soviet Union and the German Democratic Republic, for example—suggests that surveillance cannot eliminate dissent. It is also not clear that surveillance can undermine dissident movements as easily as Greenwald posits. The United States' record, he writes, "is suffused with examples of groups and individuals being placed under government surveillance by virtue of their dissenting

views and activism—Martin Luther King, Jr., the civil rights movement, antiwar activists, environmentalists."15 These cases are certainly troubling, but it hardly needs pointing out that surveillance did not prevent the end of segregation, retreat from Vietnam, and the rise of environmental consciousness. This record suggests that dissident movements that have public opinion on their side are not easily intimidated by state surveillance (a point reinforced by the Arab Spring).

Surveillance may make it harder for individuals to associate with movements on the far ends of the political spectrum. But why must a liberal democracy refrain from monitoring extremist groups such as neo-Nazis and anarchists? There is the danger that officials could label as "extreme" legitimate movements seeking to challenge the prevailing order. Yet the possibility that surveillance programs could expand beyond their original ambit does not constitute a good reason to end surveillance altogether. A more proportionate response is to see that surveillance powers are subject to oversight.

Answers to Surveillance is Tyranny

The argument that NSA surveillance enables tyranny is wrong. The data exists inevitably and if you are concerned about the risk of a tyrant taking over, there are much bigger issues than privacy to be concerned about.

Etzioni, Professor of International Relations at the George Washington University, **2014**
Amitai Etzioni , Intelligence and National Security (2014): NSA: National Security vs. Individual Rights, Intelligence and National Security, DOI: 10.1080/02684527.2013.867221

Part VI: The Coming Tyrant?

A common claim among civil libertarians is that, even if little harm is presently being inflicted by government surveillance programs, the infrastructure is in place for a less-benevolent leader to violate the people's rights and set us on the path to tyranny. For example, it has been argued that PRISM 'will amount to a "turnkey" system that, in the wrong hands, could transform the country into a totalitarian state virtually overnight. Every person who values personal freedom, human rights and the rule of law must recoil against such a possibility, regardless of their political preference'.177 And Senator Rand Paul (R-KY) has been 'careful to point out that he is concerned about the possible abuses of some future, Hitler-like president'.178 A few things might be said in response.

First, all of the data that the government is collecting is already being archived (at least for short periods – as discussed above) by private corporations and other entities. It is not the case that PRISM or other such programs entail the collection of new data that was not previously available.

Second, if one is truly concerned that a tyrant might take over the United States, one obviously faces a much greater and all-encompassing threat than a diminution of privacy. And the response has to be similarly expansive. One can join civic bodies that seek to shore up democracies, or work with various reform movements and public education drives, or ally with groups that

prepare to retreat to the mountains, store ammunition and essential foods, and plan to fight the tyrannical forces. But it makes no sense to oppose limited measures to enhance security on these grounds.

Surveillance Protects Rights

Private abuse of digital information is worse and only surveillance can stop that.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review, http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

The critics' preoccupation with the dangers of state oppression often leads them to overlook the dangers of private abuse of surveillance. They have a surprisingly difficult time coming up with actual examples of serious harm from government surveillance abuse. Instead, they tend to talk about the "chilling effect" from awareness of surveillance.

By contrast, there have been many examples of serious harm from private abuse of personal information gained from digital sources. At least one person has committed suicide as a consequence of the Internet publication of video showing him engaged in sexual activity. Many people have been humiliated by the public release of a private recording of intimate conduct, and blackmail based on threats of such disclosure has emerged as a common practice. Some of this private abuse is and should be illegal. But the legal prohibitions can only be enforced if the government has some of the surveillance capacities that critics decry. Illicit recording and distribution can only be restrained if the wrongdoers can be identified and their actions effectively restrained. Less compromising critics would deny government these capacities.

Mass Surveillance Decreases Discrimination

Mass surveillance is less discriminatory because it targets everyone equally.

Hadjimatheou 2014
Katerina Hadjimatheou, Security Ethics Group, Politics and International Studies, University of Warwick "The Relative Moral Risks of Untargeted and Targeted Surveillance" Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1

There are good reasons to think that both the extent to which surveillance treats people like suspects and the extent to which it stigmatises those it affects increases the more targeted the measure of surveillance. As has already been established, stigmatisation occurs when individuals are marked out as suspicious. Being marked out implies being identified in some way that distinguishes one from other members of the wider community or the relevant group. Being pulled out of line for further search or questioning at an airport; being stopped and searched on a busy train platform while other passengers are left alone; having one's travel history, credit card, and other records searched before flying because one fits a profile of a potential terrorist-these are all examples of being singled out and thereby marked out for suspicion. They are all stigmatising,

because they all imply that there is something suspicious about a person that justifies the intrusion.

In contrast, untargeted surveillance such as blanket screening at airports, spot screening of all school lockers for drugs, and the use of speed cameras neither single people out for scrutiny nor enact or convey a suspicion that those surveilled are more likely than others to be breaking the rules. Rather, everybody engaged in the relevant activity is subject to the same measure of surveillance, indiscriminately and irrespective of any evidence suggesting particular suspiciousness. Such evidence may well emerge from the application of untargeted surveillance, and that evidence may then be used to justify singling people out for further, targeted surveillance. But untargeted surveillance itself affects all people within its range equally and thus stigmatises none in particular.

Mass surveillance solves discrimination.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review,
http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

More generally, broad-reach electronic mechanisms have an advantage in addressing the danger that surveillance will be unfairly concentrated on particular groups; targeting criteria, rather than reflecting rigorous efforts to identify wrongdoers, may reflect cognitive bias or group animus. Moreover, even when the criteria are optimally calculated to identify wrongdoers, they may be unfair to law-abiding people who happen to share some superficial characteristic with wrongdoers. Thus, law-abiding blacks complain that they are unfairly burdened by stop-and-frisk tactics, and law-abiding Muslims make similar complaints about anti-terrorism surveillance.

Such problems are more tractable with broad-based electronic surveillance. Because it is broad-based, it distributes some of its burdens widely. This may be intrinsically fairer, and it operates as a political safeguard, making effective protest more likely in cases of abuse. Because it is electronic, the efficacy of the criteria can be more easily investigated, and their effect on law-abiding people can be more accurately documented. Thus, plaintiffs in challenges to stop-and-frisk practices analyze electronically recorded data on racial incidence and "hit rates" to argue that the criteria are biased and the effects racially skewed. Remedies in such cases typically require more extensive recording.

Answers to Economy Advantage

1NC FRONTLINE – ECONOMY ADVANTAGE [1/4]

1. The aff can't solve foreign business intrests - non-domestic customers won't be protected by the plan.

Mackinnon 2014

Rebecca Mackinnon Director of the Ranking Digital Rights project at the New America Foundation, 5-19-2014, "Saving Privacy," No Publication, http://bostonreview.net/forum/saving-privacy/rebecca-mackinnon-response-saving-privacy

While Internet companies are essential to the U.S. economy, not all of their work is done domestically. Their future business success depends on overseas markets, but access to those markets depends in turn on the trust of non-American users and customers. This creates a challenge for legal reform. If the consequences of insufficiently accountable NSA surveillance only concerned Americans, then Hundt's law-based solution—combined with commitments by companies and the U.S. government to support encryption and the right of Internet users to be anonymous—would probably do the trick. But U.S. companies have global "constituencies," a term I prefer to "users" for reasons I explain in my 2012 book Consent of the Networked. NSA surveillance—and surveillance by most other governments via corporate-run platforms and networks—affects people around the world who have no leverage over U.S. lawmakers. At the same time, other countries can place before U.S. companies obstacles that American laws are powerless to overturn. So while legal reform in the United States is necessary, we also need parallel processes across the democratic world. The Freedom Online Coalition, a group of twenty-two democracies, has begun to take positive steps in this regard, and the international human rights community is pushing for such reforms.

2. The benefits of cloud computing are too valuable to corporations to pass up, NSA spying doesn't matter.

Perez, 2013

Juan Carlos Perez Assistant News Editor, 12-5-2013, "Why CIOs stick with cloud computing despite NSA snooping scandal," PCWorld, http://www.pcworld.com/article/2069681/why-cios-stick-with-cloud-computing-despite-nsa-snooping-scandal.html

Stealthy monitoring of computer systems and communications by governments currently doesn't rank among the top IT security concerns for many IT leaders. "Every CIO will tell you we worry every minute of every day about security, privacy, redundancy, operational continuity, disaster recovery and the like," said Michael Heim, Whirlpool's corporate vice president and global CIO. "We're probably the most paranoid guys on the planet." Jacques Marzin, director of Disic, France's interministerial IT and communications directorate, said the NSA scandal confirmed the known risks associated with the use of public cloud services. "We are of course concerned about any third party access to our data although we have limited usage of public clouds," he said. However, having everything behind the firewall also carries risks. CIOs worry about the cost and complexity of running servers on their own premises and the potential loss of competitiveness if rivals are taking advantage of the benefits of cloud computing. "At the end of the day, the capabilities and economics around the cloud computing model are so compelling that when you artificially try to not take advantage of them you impact your ability to compete, because others will take advantage of them," Heim said. Whirlpool recently decided to move about 30,000 employees from an on premises IBM Lotus Notes system to the Google Apps public cloud email

and collaboration suite. ”We believe we have a very good plan in place to make sure we’re just as compliant and secure, if not more so, than we were before,” Heim said.

3. Fears of tech industry losses due to the NSA scandal were overblown.

Henderson, 2015

Nicole Henderson, 4-10-2015, "Impact of NSA Surveillance on US Cloud Providers Not as Bad as We Thought: Forrester," Data Center Knowledge, http://www.datacenterknowledge.com/archives/2015/04/10/impact-of-nsa-surveillance-on-us-cloud-providers-not-as-bad-as-we-thought-forrester/

It’s been two years since Edward Snowden leaked details of the NSA’s PRISM surveillance program, and although analysts predicted an exodus from US-based cloud and hosting services in response to the revelations, it hasn’t exactly worked out that way, a new report finds. Forrester released a new report last week that suggests concerns around international customers severing ties with US-based hosting and cloud companies “were overblown.” “Lost revenue from spending on cloud services and platforms comes to just over $500 million between 2014 and 2016. While significant, these impacts are far less than speculated, as more companies reported taking control of security and encryption instead of walking away from US providers,” Forrester’s principal analyst serving security and risk professionals Edward Ferrara said in a blog post.

4. The cloud industry is growing despite NSA spying.

Finley, 2014

Klint Finley, writer with Wired Business, 2-27-2014, "Amazon’s Cloud Keeps Growing Despite Fears of NSA Spying," WIRED, http://www.wired.com/2014/02/amazon-cloud-size/

When former government contractor Edward Snowden revealed that the NSA was conducting digital surveillance on a massive scale, many feared for the future of cloud computing. The Information Technology and Innovation Foundation estimated that Snowden’s revelations could cost U.S. cloud companies $22 billion to $35 billion in foreign business over the next three years, and countless pundits predicted that American businesses would flee the cloud as well. People would prefer to run software and store data on their own computers, the argument went, rather than host their operations atop outside services potentially compromised by the NSA. But it looks like the cloud industry is still growing. And in very big way. The world’s largest cloud computing services — services where you can run software and store data without buying your own hardware — are run by Amazon, and according to a new study from independent researcher Huan Liu, Amazon’s operation grew by a whopping 62 percent over the past two years. What’s more, the study shows that growth has been steady since June 2013, when the Snowden revelations first hit the news. In fact, there’s been a surge since December of last year.

5. Multiple factors generate internet fragmentation, not just surveillance: dominance of international bodies and cyber crime.

Patrick, 2014

Stewart, Senior Fellow and Director, Program on International Institutions and Global Governance, Council on Foreign Relations, "The Obama Administration Must Act Fast to Prevent the Internet's Fragmentation," The Internationalist, 2-26-2014, http://blogs.cfr.org/patrick/2014/02/26/the-obama-administration-must-act-fast-to-prevent-the-internets-fragmentation/

Since the dawn of the digital age, the United States had consistently supported an open, decentralized, and secure cyber domain that remains largely in private hands. Even before the Snowden disclosures, that vision was under threat, thanks to disagreements among governments on three fundamental issues. First, some world leaders are questioning whether the ITU(International Telecommunications Union) ought to play a more active role in regulating cyberspace. To the degree that the Internet is "governed," the primary regulatory body remains ICANN (the Internet Corporation for Assigned Names and Numbers), an independent, nonprofit corporation based in Los Angeles. The outsized role of ICANN—and the widespread perception of U.S. (and broader Western) control over the Internet—has long been a sore point for authoritarian states, as well as many developing countries, which would prefer to move cyber governance to the intergovernmental ITU. A second threat to the open Internet has been a surge in cyber crime—and disagreement over how to hold sovereign jurisdictions accountable for criminality emanating from their territories. Estimates of the magnitude of cyber crime range from large to astronomical. In 2012, NSA director general Keith Alexander put the annual global cost at $1 trillion. Most cyber crime is undertaken by nonstate actors against private sector targets for motives of financial gain. But national authorities have also been involved in economic espionage, both directly and through proxies. The most infamous case involves a unit of China's People's Liberation Army, which allegedly has been at the forefront of Chinese hacking efforts to steal industrial secrets and technology from leading U.S. companies.

6. Economic collapse doesn't cause war

Drezner 2012,

Daniel is a professor in the Fletcher School of Law and Diplomacy at Tufts. ("The Irony of Global Economic Governance: The System Worked", October 2012, http://www.globaleconomicgovernance.org/wp-content/uploads/IR-Colloquium-MT12-Week-5_The-Irony-of-Global-Economic-Governance.pdf)

The final outcome addresses a dog that hasn't barked: the effect of the Great Recession on cross-border conflict and violence. During the initial stages of the crisis, multiple analysts asserted that the financial crisis would lead states to increase their use of force as a tool for staying in power.37 Whether through greater internal repression, diversionary wars, arms races, or a ratcheting up of great power conflict, there were genuine concerns that the global economic downturn would lead to an increase in conflict. Violence in the Middle East, border disputes in the South China Sea,

and even the disruptions of the Occupy movement fuel impressions of surge in global public disorder.

The aggregate data suggests otherwise, however. The Institute for Economics and Peace has constructed a "Global Peace Index" annually since 2007. A key conclusion they draw from the 2012 report is that "The average level of peacefulness in 2012 is approximately the same as it was in 2007."38 Interstate violence in particular has declined since the start of the financial crisis – as have military expenditures in most sampled countries. Other studies confirm that the Great Recession has not triggered any increase in violent conflict; the secular decline in violence that started with the end of the Cold War has not been reversed.39 Rogers Brubaker concludes, "the crisis has not to date generated the surge in protectionist nationalism or ethnic exclusion that might have been expected."40

None of these data suggest that the global economy is operating swimmingly. Growth remains unbalanced and fragile, and has clearly slowed in 2012. Transnational capital flows remain depressed compared to pre-crisis levels, primarily due to a drying up of cross-border interbank lending in Europe. Currency volatility remains an ongoing concern. Compared to the aftermath of other postwar recessions, growth in output, investment, and employment in the developed world have all lagged behind. But the Great Recession is not like other postwar recessions in either scope or kind; expecting a standard "V"-shaped recovery was unreasonable. One financial analyst characterized the post-2008 global economy as in a state of "contained depression."41 The key word is "contained," however. Given the severity, reach and depth of the 2008 financial crisis, the proper comparison is with Great Depression. And by that standard, the outcome variables look impressive. As Carmen Reinhart and Kenneth Rogoff concluded in This Time is Different: "that its macroeconomic outcome has been only the most severe global recession since World War II – and not even worse – must be regarded as fortunate."42

Turn - NSA Spying helps Cybersecurity Sector
