keep a job, and a newcomer from Western Samoa trying to reunite with relatives living abroad all present unique challenges. Add in factors such as gender, sexual orientation, age, and disability, and the problems become even more complex. n45 Angela Harris echoes this observation by pointing out how some feminist legal theory assumes "a unitary, 'essential' women's experience [that] can be isolated and described independently of race, class, sexual orientation, and other realities of experience." n460 The same might be said of the "people," which, like the "working class," may be too broad. Other categorizations--such as "low-income workers," "immigrants", and the "poor", for example--may be too narrow to have the social weight to fundamentally transform society. In practice, progressive lawyers orient to the politically advanced among these various "communities." In so doing, then, we need to acknowledge that we are organizing on the basis of political ideology, and not simply geography, identity or class. Building the strongest possible mass movement, therefore, requires an orientation not only towards certain "subordinated" communities, but to the politically advanced generally. Otherwise, we may be undermining activism writ large. This is not to denigrate autonomous community efforts. As I have mentioned, subordinated communities of course have the right to self-determination, i.e. to organize separately. But the point is not simply to organize groups of people who experience a particular oppression, but rather to identify those who have the social power to transform society. Arguing that these agents are the collective, multi-racial working class, Smith explains: The Marxist definition of the working class has little in common with those of sociologists. Neither income level nor self-definition are [sic] what determine social class. Although income levels obviously bear some relationship to class, some workers earn the same or higher salaries than some people who fall into the category of middle class. And many people who consider themselves "middle [*192] class" are in fact workers. Nor is class defined by categories such as white and blue collar. For Marx the working class is defined by its relationship to the means of production. Broadly speaking, those who do not control the means of production and are forced to sell their labor power to capitalists are workers. n461 The practical consequence of this very well may be that we redefine who we represent as clients and consider activism or potential activism outside subordinated communities, for example union activity and alternative political-party building, as part of our work.¶ 3. From Movementism to Political Organization¶ Dogged as our work is in the activist realm, any effort at fundamental social transformation is doomed without effective political leadership. Such leadership, in turn, requires work not often associated with "activism," such as, for example, theoretical study. n462 "Movementism," n463 by which I mean the conviction that building a mass movement is the answer to oppression and exploitation, has its limitations. Even though activism itself is perhaps the best school for political education, we have an enormous amount to learn from our predecessors. In the final analysis, fundamental social transformation will only come about if there are political organizations clear enough, motivated enough, experienced enough, large enough, embedded enough and agile enough to respond to the twists and turns endemic in any struggle for power. "The problem," as Bellow astutely observed, "is not our analytic weaknesses, but the opportunistic, strategic, and political character of our subject." n464 Such opportunities typically occur when there is a confluence of three factors: a social crisis; a socio-economic elite that finds itself divided over how to overcome it; and a powerful mass movement from below. As I understand the nature of social change, successful social transformations occur when there is a fourth element: political organization.¶ Conclusion¶ Client activism is not a monolithic, mechanical object. Most of the time, it is neither the gathering mass movement many of us wish for, nor the inert, atomized few in need of external, professional motivation. Rather, activism is a phenomenon in constant ebb and flow, a [*193] mercurial, fluid complex shaped by an unremitting diversity of factors. The key through the maze of lawyering advice and precaution is therefore to take a hard, sober look at the overarching state of activism. Are our clients in fact active or are they not? How many are and who are they? What is the nature of this period? Economically? Politically? Culturally? What are the defining issues? What political and organizing trends can be discerned? With which organizations are our clients active, if any? What demands are they articulating, and how are they articulating them?¶ This is a complex evaluation, one requiring the formulation, development and constant assessment and reassessment of an overarching political perspective. My aim in this Article is to begin to theorize the various approaches to this evaluation. In essence, I am arguing for the elaboration of a systematic macropolitical analysis in progressive lawyering theory. Here, my purpose is not to present a comprehensive set of political considerations, but rather to develop a framework for, and to investigate the limitations of, present considerations in three areas: strategic aims; prevailing social conditions; and methods of activism. Consciously or not, admittedly or not, informed and systematic or not, progressive lawyers undertake their work with certain assumptions, perspectives and biases. Progressive lawyering theory would be a much more effective and concrete guide to action--to defining the lawyer's role in fostering activism--if it would elaborate on these considerations and transform implicit and perhaps delimited assumptions and approaches into explicit and hopefully broader choices.¶ Over the past four decades, there has been remarkable continuity and consistency in progressive lawyers' use of litigation, legislation, direct services, education and organizing to stimulate and support client activism. The theoretical "breaks" to which Buchanan has referred n465 have not been so much about the practice of lawyering itself, but rather about unarticulated shifts in ultimate goals, societal analyses, and activist priorities, each necessitated by changes in the social, economic, and political context. That simply is another way of stating the obvious: that progressive lawyers change their practices to adapt to changing circumstances. The recurrent problem in progressive lawyering theory is that many commentators have tended to generalize these practice changes to apply across social circumstances. In so doing, they displace and often replace more fundamental differences over strategic goals, interpretation of social contexts, and organizing priorities with debates over the mechanics of lawyering practice.¶ The argument is turned on its head: we often assume or tend to [*194] assume agreement over the meanings and underlying conceptual frameworks relating to "fundamental social change," current political analysis, and "community organizing," and debate lawyering strategy and tactics; but instead we should be elaborating and clarifying these threshold political considerations as a prerequisite to using what we ultimately agree to be a broad and flexible set of lawyering tools. In effect, the various approaches to lawyering have become the currency by which scholars have debated politics and activism. The irony is that our disagreements are less about lawyering approaches per se, I believe, than they are about our ultimate political objectives, our analyses of contemporary opportunities, and our views of the optimal paths from the latter to the former. The myriad lawyering descriptions and prescriptions progressive lawyering theory offers are of limited use unless they are anchored in these primary considerations. How do we decide if we should subscribe to "rebellious" and not traditional "public interest" lawyering, for example, or "collaborative" over "critical" lawyering, if we do not interrogate these questions and instead rush too quickly into practical questions? The differences among these approaches matter precisely because they have different political goals, are based on different political analyses, and employ different political activist strategies.¶ Activist lawyers already engage in these analyses--necessarily so. To foster client activism, they must read prevailing social conditions and strategize with their clients about the political next step, often with an eye toward a long-term goal. But I don't think we necessarily engage in these analyses as consciously, or with as full a picture of the history and dynamics involved or options available, as we could. Often this is because there simply isn't time to engage these questions. Or perhaps not wanting to dominate our clients, we squelch our own political analysis and agenda to allow for organic, indigenous leadership from below. But if we are truly collaborative--and when we feel strongly enough about certain political issues--we engage on issues and argue them out. In either event, we undertake an unsystematic engagement of these fundamental issues at our peril.¶ If we adhere to the belief that only organized, politicized masses of people can alter or replace exploitative and oppressive institutions and bring about lasting fundamental social change, then, as progressive lawyers, we need to be clear about which legal tactics can bring about such a sustained effort in each historical moment. Without concrete and comprehensive diagnoses of ultimate political goals, social and economic contexts, and organizing priorities, progressive legal practice will fail to live up to its potential.

Becomings K

(This is pretty suspect tbh – the first two cards could just be a case thing, that might be preferable)

The aff overdetermines whiteness and blackness as a linguistic problem – the child shouting "look" assumes racism as something created by this call, but this paralyzes us from acting in response to how language shapes these biological phenotypes - they address the symptom not the cause

Saldnha 6 (Aran, Dep of Geography @ U of Minnesota, "Reontologising race: the machinic geography of phenotype" pg. 11-12 Environment and Planning D: Society and Space 2006, volume 24, pages 1066-24)

The relationality between blackness and whiteness in Fanon **will** to many readers **be reminiscent of the relationalities of language**. Signifiers, in the legacy of Ferdinand de Saussure, can only mean by way of a *formal* system or arbitrary differences. After the 'linguistic turn' associated with the poststructuralists Roland Barthes, Jacques Derrida, Julia Kristeva, Jacques Lacan, and the 'archaeological' Foucault, society has been widely considered to operate in the same way that Saussurian signs do. **In a social system of differences, dominance is achieved through the fearful discursive exclusion of 'the Other'. But since identity is never given, the future of the system is inherently political. Politics is then about the formation of heterogeneous coalitions amongst the disenfranchised to wrestle signifiers from the dominant**. **This conception of the social as structured through negativity and floating signifiers is very influential**, more or less informing important theorists of the left such as Butler, Gilroy, Homi Bhabha, Stuart Hall, Ernesto Laclau, Chantal Mouffe, Edward Said, Gayatri Spivak, and Slavoj ZiZek.

These theorists might retort to the phenomenologist of race that it isn't phenotype at all, but the white boy's reiterated interjection ''Look!'' that determines the differentiation of bodies. Fanon is 'interpellated' as black subject by the use of racist language, while the boy reproduces himself as white. **They** both **have little choice but to be produced by discourse. But what does 'produced' mean?** Surely not that there was no Frantz Fanon prior to this boy's interjection. **It means**, for these theorists, **that the interjection makes phenotype matter, that without language there would not be any difference**. **Language** (or culture at large) **is a screen which** *mediates* **between consciousness and the obscure matter of the body. Whenever language** (the language of science, for example) **claims to grasp materiality 'itself', it in fact hits against the wall of its own mediations.** In this mediation model of language, **materiality is forever unknown and there is no intermingling possible between the two realms**. In *Bodies That Matter,* Butler writes: "The body posited as prior to the sign, is always *posited* or *signified* as *prior.* This signification produces as an *effect* of its own procedure the very body that it nevertheless and simultaneously claims to discover as that which *precedes* its own action'' (1993, page 30). **Butler's well-known argument is that there is no anatomy or phenotype unless invoked by signification, by discourses of gender and race**. **It is beyond dispute that no body is untouched by signification. The question is,** rather, **how signification comes to have any effect at all, if not through the materiality of signs, bodies, and spaces**. The statement *''Tiens, un negre''* requires a larynx, the proximity of a Negro, a comprehension of French, and being within earshot to hear it. For sure, Butler repeatedly states that there is a 'materiality' to signs, but she refuses to extend this statement to bodies or things. **The physical body of skin, blood, and bones remains other, a 'constitutive outside' that is** *expelled by* **discourse** *(''signified* as *prior*''), **but has no rhythms and volume of its own**. Thus, a Butlerian critique can rightly question the 'naturalness' of a bedrock of phenotype posited by, and justifying, racial discourse (Butler, 1997). But such critique halts abruptly at the deep gorge between racist discourse (which it attacks) and phenotypical matter (about which it will not say anything). Is not pheno- type itself shaped by cultural practice? Does phenotype ever resist its 'performance'? By not allowing anything from across the gorge to enter her critique, **Butler ultimately remains complicit with what she attacks: the metaphysical positing of an inert exteriority to language. Can it not be possible to think and write about physical bodies** *without* **positing them as primary, pure, fixed, bounded, and self-transparent?**

Bodies need to be appreciated as productive in their own right, just like words or money or architecture. Fanon's **phenotype is not at all 'performed' or 'constituted'** by the boy's exclamation. **Phenotype is constituted instead by genetic endowments, environmental conditions, exercise, hormones, diet, disease, ageing**, etc. **What language does to phenotype**—phenotype *itself*— **is** *charge* **it, circumscribe what it is capable of doing in particular spaces.** There was certainly real phenotypical difference before the exclamation, but it had no effect on the situation (yet). The

exclamation brings out a latency, a latency Fanon knew was there, but had perhaps forgotten, looking absent- mindedly for a seat. After the exclamation, Fanon's options are limited. Now, his **phenotype demands active management.** Now, his phenotype is alive, chaining him to the histories and geographies of race and colonialism.

Yancy's demands of race as a social problem leaves the arena open for other justifications – rather than approaching it as a concept of language we need to focus on the problem of identity and difference itself

Saldnha 6 (Aran, Dep of Geography @ U of Minnesota, "Reontologising race: the machinic geography of phenotype" pg. 9-10 Environment and Planning D: Society and Space 2006, volume 24, pages 1067-24)

In contemporary theory, **race tends to be conceived as a problem of language**. **We read that race is an ideology, a narrative, a discourse. Race then refers to** the **cultural *representation*** of people, **not to people** themselves. It could be said that **race tends to be approached as an *epistemological* problem**: how is race known? Why was it invented? Some argue that we should simply stop thinking in terms of race. In this paper I would like to argue this might not be a good idea. Race will be approached ***ontologically,*** as a real process demanding particular concepts and commitments. Not so much representations, but bodies and physical events will be foregrounded. For instance, **the phenotype of humans can be shown to play an active part in the event called race.** When understood as immanent process, it becomes clear that, though contingent, **race cannot be transcended, only understood and rearranged**. Whether there is any physical basis for the concept of race has of course been hotly contested for many decades. In cultural studies, postcolonial theory, cultural anthropology, and most human geography, **it is common to treat race as a discursive construct. Many** in American critical race theory, such as Howard Winant and Naomi Zack, **opt** instead **for a** more **realist approach, granting that there *are* phenotypical differences but that their social force depends on culture, economics, and the law**. In this paper I chiefly follow poststructuralist philosophy not American left-wing pragmatism, but **I** do so in order to **take issue with the epistemological bias in much of the humanities inspired by poststructuralism**. Despite coming from a different intellectual trajectory, therefore, I would locate this intervention closer to the realist approach. The paper presents a number of entries into the argument. This theoretical eclecticism demonstrates that **the materiality of race can be conceptualised from a number of perspectives, making the reconceptualisation very much due**. First, Frantz Fanon's phenomenology of race is revisited, and I argue against Judith Butler's linguistic take on embodiment. Then the deontologisation of race in authors such as Paul Gilroy is scrutinised. Not asking properly what race ***is,*** Gilroy believes too easily in the possibility of its transcendence. In the fourth section, the refusal to engage with phenotype is with Bruno Latour shown to follow from a wider anxiety in the social sciences about matter. Nevertheless, in many places, as in the feminism of Elizabeth Grosz, **materiality is again treated positively**. As discussed in the fifth section, the openness of the human organism is also affirmed in anthropology—as well as in biology, from Darwin onwards. In particular, biology influenced by complexity theory and its philosophical underpinning by Gilles Deleuze and Michel Serres can help in imagining the biocultural emergence and evolution of race relations. The last two sections follow Deleuze and Guattari and use their term *machine assemblage* to capture race's reality of unmediated connections. **Far from being an arbitrary classification system imposed *upon* bodies, race is a nonnecessary and irreducible effect of the ways those bodies themselves interact with each other and their physical environment. The spatiality of race is not one of grids or self/other dialectics, but one of *viscosity,* bodies gradually becoming sticky and clustering into aggregates. Battling against racism is then not a question of denying race, but of cultivating its energies against the stickiness of racial segregation. Crucial in this process is that social scientists critically engage with race's biological aspect. For if they insist that race is but a 'social construction', they might leave the discursive arena open for** (closet) **racists to reinstate biological justifications for white privilege.**

These distinctions are generated between self and other by the idea of a static being over the molecularity of becoming. This is the true root of all conflict and subordination in human society. This same mentality exists between humans and animals maintaining our position as always the other and always different rather than something to become. This ethical exclusion and upholds structures of racism, sexism, and hierarchy.

Vint in 2005(Sherryl, Assistant Professor of English at Brock University, Science Fiction Studies, Vol. 32, No. 2,*Becoming Other: Animals, Kinship and Butler's "Clay's Ark",* July 2005)

Much recent political and philosophical thought has been focused on the figure of the animal in Western history, particularly the way in which the animal has been used to delineate the shifting boundaries of what it means to be human. Within science fiction, the cyborg has been a privileged figure for rethinking politics since Donna Haraway published "A Cyborg Manifesto" in 1984. While much attention has been paid to the android and other machine-human hybrids that help us rethink what it means to be human, we often overlook how Haraway calls for us to rethink our relationship not only to machines but also to animals, arguing that new meanings for human animality are part of our struggle to find new ways of theorizing political responsibility and new myths to help us escape from "the maze of dualism in which we have explained our bodies and our tools to ourselves" (181). Haraway notes that the cyborg is a figure of biopolitics; Giorgio Agamben's recent work on ethics in Homo Sacer (1998) and The Open (2004) also places the analysis of biopower at the center of ethical and political theory for the twenty-first century. Agamben argues that the centrality of biopolitics is inextricably connected to the boundary constructed between the human and the animal, and that "in our culture, the decisive political conflict, which governs every other conflict, is that between the animality and the humanity of man" (The Open 80). In making this argument, Agamben draws upon a long tradition within philosophy that defines the human through an opposition to the animal, creating the animal as a category solely to allow what is "unique" or "essential" about humans to emerge. Jacques Derrida has also recently focused on this question of the animal in his scholarship, investigating the tradition running from Descartes through Heidegger to Levinas and Lacan of establishing what it means to be human and what it means to be ethical through the expulsion of what is called animal. Derrida focuses on the singularity of the word "animal," a word that creates a strict boundary between human and "all the living things that man does not recognize as his fellows, his neighbors, or his brothers" ("Animal that I Am" 402), a word that ignores the differences among all creatures within the category of non-human. Derrida also notes that thinking through the animal as a boundary-making term is essential for understanding the decentered subject and our concepts of democracy, legal and human rights, and morality, all of which are "less clear, less homogenous, and less of a given than we believe or claim to believe" and need to be "rethought, radicalized, and considered as a thing of the future" ("Eating Well"108). Agamben, Derrida, and Haraway thus each call for a rethinking of the human subject's relationship to its animal other as part of a transformation of ethics and politics. Their scholarship also makes clear that the category of the animal is important to our philosophical heritage precisely for the ways in which This content downloaded from 128.223.223.251 on Tue, 23 Dec 2014 20:22:57 PMAll use subject to JSTOR Terms and Conditions282 SCIENCE FICTION STUDIES, VOLUME 32 (2005) it informs various discriminatory hierarchies established among humans to designate the Other and thereby used to exclude certain humans from the realm of ethics. Science fiction, also, has a history of theorizing otherness and of making literal what is figurative in other discourses. Octavia Butler's work is well known for its complex exploration of difference; she continually places her characters in situations that explore the anxieties humans feel when coping with difference and our seemingly inevitable desire to respond to that difference with hierarchy and discrimination. Although Butler frequently shows characters who can respond positively to difference in order to survive in her futures, she as frequently shows that living with such difference is not easy. This paper situates Butler's novel Clay's Ark (1984) within the discourse

on biopolitics and the human/animal boundary to demonstrate her exploration of difference. Understanding how the concept "animal" has been deployed over time in philosophical discourse will show how hierarchy and prejudice continue to function within human cultures. The persistence of this boundary as absolute marks a persistence of its exclusionary and hierarchical logic. Butler explores not only examples of racist and sexist stratifications in the futures she imagines, but also the structural constraints that produce such societies. Her work thereby works to challenge racism and sexism as well as the binary logic and Manichean thinking that provide support for racist and sexist discourses.

In place of this, we affirm an ethic of becoming:

Via the logic of becoming, we can eliminate the stasis imposed by the idea of being. This opens us up to a new ideal of the self encompassing things outside of the current boundary. This eliminates the harmful binaries of the squo.

Vint in 2005(Sherryl, Assistant Professor of English at Brock University, Science Fiction Studies, Vol. 32, No. 2, Becoming Other: Animals, Kinship and Butler's "Clay's Ark", July 2005)

Deleuze and Guattari further note that the power of the majority is expressed precisely "over those who do not [have it]" (291). Expressed in these terms, then, the majority is the position of the white, the male, and ultimately of the human over and against the animal. The majority "assumes as pregiven the right and power of man" (291). This status of the majority aligns Deleuze and Guattari's position with Agamben's analysis that the "the decisive political conflict, which governs every other conflict" is the boundary between human and animal (The Open 80). To reconfigure what it means to be a human subject, to transform the social and political order, we need becomings, not molar human/animal. The PATTERNIST series suggests a very similar analysis in its trajectory from the least animalized to the most animalized of its disenfranchised subjects and in its insistence that the structure of prejudice must change as much as its content to make a better future. The category of animal and all the exclusions it represents must be changed if we are to become open to difference and a new order. The tension between the becoming animal of the infected people and the being animal of abject humans such as the car family further emphasizes the need to break down the logic of the species boundary. Most of the people taken by Eli seem to This content downloaded from 128.223.223.251 on Tue, 23 Dec 2014 20:22:57 PMAll use subject to JSTOR Terms and ConditionsBECOMING OTHER 295 prefer the life they can have within the farm community; Lupe says she was "alone" on the outside, but that on the farm she is "part of something, and it feels good" (85). Ingraham was once like the car family, but now is something more: "Take away the gang and give him something better and he turns into a person. A man" (85). What we call "human" or "person," "man" in this context, is something that Ingraham can discover only through becoming animal. Ingraham's example reinforces why Deleuze and Guattari argue that it is necessary to become animal, to break out of the channeled lines of desire that have produced the current, limited configuration of the human. Within the Western philosophical tradition, the species boundary has been used most frequently

to demarcate the lines of ethics. Humans are those to whom we owe an ethical duty, whom we recognize as kin in Derrida's terms, and animals are those outside this logic, able to be sacrificed as food, used as resource. In the Past sections of the novel, when Eli struggles to hold on to his humanity, he invokes this idea that ethics marks the species line. Eli insists, "We're changed, but we have ethics. We aren't animals" (39). Eli equates ethics with his humanity. In an argument over the ethics of kidnapping people to grow the colony, another character, Lorene, gleefully comments, "this is the kind of thing you always read about men doing to women-kidnapping them, then the women getting to like the idea. I think I'm going to enjoy reversing things" (108). Eli harshly reminds her that the man she is about to kidnap might die, that he has a family he is being taken away from. He refuses to ignore the wider context of what they are doing and what it means to the people they are doing it to, arguing "We've lost part of our humanity. We can't lose more without even realizing it" (109). Consistent with the gap between molar being and molecular becoming represented by the difference between Keira and Rane, simply reversing the power structures to privilege those who used to be excluded is not sufficient. Instead, the structures themselves must be changed. The exchange between Eli and Lorene suggests that keeping one's humanity means keeping a sense of the Other as person, as someone to whom we owe an ethical duty. But, to remain ethical, one must keep the sense of the boundary alive, maintaining an ethical duty only toward other humans while acknowledg- ing that there is a line beyond which no ethical duty is owed. Eli fights against putting unchanged humans on the other side of this line, but he doesn't challenge the existence of the line. There are, however, two important things to note here that undermine Eli's attempt to construct this boundary as stable. First, the situation that Lorene takes glee in subverting is one that commonly occurs among humans; she is just reversing the gender. Thus, the notion of ethics as particularly human is already undermined because we often fail to see kinship with different humans, fail to recognize our ethical duty. Second, Eli's insistence that they hold on to their humanity by not putting unchanged humans into the category of prey or animal reveals that this sort of category, this sort of sacrifice or reduction of the other, is precisely a human invention. In holding on to what he calls his humanity, Eli ironically preserves as much bad as good. The ethics that have been established on the ground of the excluded animal require a category of beings outside ethics. Rethinking identity and animality demands a new vision of ethics as well as a new vision of the human. Derrida has explored the necessary connection between ethics and the category of the animal in his essay "The Animal that Therefore I Am" (2002). He notes a dishonesty or bad faith that lies at the heart of how we establish our subjectivity on the ground of the excluded animal and thereby refuse the status of ethics to our interactions with animals. He points out that within the philosophical tradition of talking about the animal, philosophers proceed "as if they themselves had never been looked at, and especially not naked by an animal that addressed them" (383). Derrida claims that this tradition is founded on a disavowal: as it is not possible that they lack the experience of being looked at, we must conclude that they cannot admit it into their philosophy. This disavowal that animals can look back, Derrida goes on, "institutes what is proper to man, the relation to itself of a humanity that is above all careful to guard, and jealous of, what is proper to it" (383). Thus, what it means to be ethical, to retain one's humanity in the old configuration that unites the human with the ethical, is paradoxically also to retain the space of exclusion. Derrida further suggests that literary or poetic traditions of discourse do "admit taking upon themselves the address of an animal that addresses them" (383) but claims that he can find no example of a subject who does this as "theoretical, philosophical, or juridical man, or even as

citizen" (383). Thus, to be a citizen, to be a majority in Deleuze and Guattari's terms, is precisely to exclude the voice and gaze of the other, of the animal. Science fiction such as Butler's Clay's Ark can perhaps bridge the gap between a literary tradition that admits the address of animals and a philosophical and cultural discourse that addresses what is proper to human as subject and citizen. Looked at in this light, we can see something more positive and less conventional in Eli's defense of the need to retain ethics even in a transformed state, something beyond reaffirming the boundary marked by animal/human even if its location has perhaps been shifted. The more radical implication, however, is that the ethics, too, must become other. The changed people of Clay's Ark never forget that the unchanged can "look back" at them. Their own subjectivity is not constructed on disavowal of the subjectivity of others. Derrida suggests that a similar transformation is required of contemporary humans, who need to develop a changed relationship to compassion as a consequence of our changed material relationship with animals, a material change that has increased the degree to which we exploit them in laboratory experiments and factory farms, among other locations. Such a change is required, Derrida argues, "in order to awaken us to our responsibilities and our obligations with respect to the living in general" ("The Animal" 395). Derrida's notion of a responsibility toward life in general is very similar to what Agamben has called "bare life" in his analysis of homo sacer: that is, an ethical responsibility toward living beings as such, not merely an ethical responsibility toward beings given a recognized place within the grid of juridico-political power. Both Agamben and Derrida recognize that rethinking the category of the animal is essential to revisioning ethics.

*** Case ***

The 1AC is a failed movement – flipping the gaze only leads to fixity, essentialism, and eventually alienation. By defining whiteness as a universal idea, Yancy causes additional instances of the problem, and the totalizing idea alienates those people of color without the same experience of whiteness.

(Duncan '12, Keeping Hold of Ariadne's Thread: A Critical Review of George Yancy's Look, a White!,Taine Duncan, University of Central Arkansas, NEWSLETTER ON PHILOSOPHY

AND THE BLACK EXPERIENCE, APA Fall 2012) //LS

However, in the introduction I find two possible issues with Yancy's project that emerge. First, if this is really an activity of "flipping" the gaze, wouldn't similar issues of fixity, essentialism, and what he later calls missilic consciousness attend the reversal? Yancy recognizes this issue from the start of Look, a White! and he responds by explaining that essentializing whiteness is descriptive of the phenomenological experience of whiteness—he reiterates "Look, a white!" (14). He explains that not describing a universal whiteness allows for self-perceived exceptional whites to escape responsibility. I understand this problem. It is similar to an issue faced by feminist theorists who must explain patriarchy in order to undo it. By defining patriarchy and differentiating it from feminism, feminists have seen that sometimes the difference that they are attempting to account for is occluded. Sometimes women themselves feel alienated from the project because of the perceived essentialism. And this brings up the second potential problem with the onset of Yancy's project: the risk of alienating the insights of the individual Black subjects on which this exposure of whiteness stands. Yancy recognizes that "it is true that not all people of color have the same understanding of the operations of whiteness, at all levels of its complex expression" (8). He contends, however, that "this does not negate the fact that people of color undergo raced experiences vis-à-vis whiteness that lead to specific insights that render whiteness visible" (8). Again, I am sympathetic to this position from the analogous issues in feminist theory. But, I do not feel that Yancy addresses the complexity of this issue enough to demonstrate his recognition and understanding of the messiness of this issue. In fact, I was somewhat troubled by his later reference to Christine E. Sleeter's account of students of color dropping her course due to frustration (60). Yancy uses this example to demonstrate the frustration of the power of the unexamined white collective in the classroom. However,

since Sleeter's class was explicitly about cultural diversity, this would appear to be the perfect place for students of color to address these frustrations. What kept these students out? How can I ensure that my own students do not feel similarly threatened in my own "Gender, Race, and Class" course? Potential alienation needs further examination, especially in relation to the explicit project of reforming the academy that Yancy has laid out for himself in this book.

Yancy's "countergazing" at sexuality and gender fails – creates the potential for misinterpretation– rather than seeing the countergaze as interrogation, the subject of countergazing interprets it as reinforcing existing norms

(Duncan '12, Keeping Hold of Ariadne's Thread: A Critical Review of George Yancy's Look, a White!,Taine Duncan, University of Central Arkansas, NEWSLETTER ON PHILOSOPHY

AND THE BLACK EXPERIENCE, APA Fall 2012) //LS

Yancy references Some Like It Hot and Tootsie, two comedic films which deploy cross-dressing as a performance of countergazing at sexuality and gender (110). In these cases, the cross-dressing was the subversive element, whereas in White Chicks the subversive angle seems to come from "whiting up," while the drag seems to be merely for comedic purposes. **This worries me** that the film's potential sexism and heteronormativity might reinforce sexist assumptions that would impact women of color as well as white women, diminishing the effective critique of whiteness as such. Here, again, Yancy might be served by an exploration of the intersections of gender, race, and sexuality to diffuse any confusion about White Chicks as an effective exposé of whiteness.

The aff is a uphill battle – The question of convincing those who are assured of their invulnerability in whiteness is near impossible and the 1AC offers no answer

(Duncan '12, Keeping Hold of Ariadne's Thread: A Critical Review of George Yancy's Look, a White!,Taine Duncan, University of Central Arkansas, NEWSLETTER ON PHILOSOPHY

AND THE BLACK EXPERIENCE, APA Fall 2012) //LS

I found this argument persuasive and illuminating, but I had the same difficulty with Yancy's

extension of the argument as I did with Butler's original. **How do we reach and convince those who are assured of their autonomy and invulnerability?** In other words, this notion of autonomy so attendant to white privilege is difficult to argue against for those who actively resist being vulnerable: men who see vulnerability as emasculating; women who see their empowerment at risk; tea partiers who see it as irresponsible social weakness; even students with learning disabilities who have been taught it as an effective defense mechanism. How do you get these groups to open up to the dangerous and fearless classroom both for their own good and for the social good of challenging hegemonic white privilege? This is the quintessential problem of democratically liberationist theories, so I do not expect Yancy to have the final answer. However, his critique is so sophisticated, and his pedagogical insights so compelling, I would love to see him theorize on these ideas more.

Yancy traps whiteness in a double bind – claiming that whiteness defines the other through socio-cultural history and yet is free from socio-cultural history when defining itself

(Lake '12, Look, a White! Philosophical Essays on Whiteness, A Review on George Yancy, Temple University Press, 2012, pp. 207. Tim Lake, Wabash College, NEWSLETTER ON PHILOSOPHY AND THE BLACK EXPERIENCE, APA Fall 2012) //LS

Yancy dodges the problem of biological essentialism but lands in the trap of cultural determinism. Well, not quite. He argues that what is problematic is the way that whites learn to perform and perpetuate certain racial logics—e.g., racial spatial logics (Blacks are to be kept at a distance), racial affective logics (Blacks are harmful), and racial judgmental logics (Blacks are inferior)—that do not mark whiteness as racist or detrimental to white children (22). It is the refusal to be seen, the anonymity of individual whites as the normative mode for being human, that sets the context and informs the content of white identity formation. But whites are visible to Blacks and other nonwhites through their whiteness (Yancy's expansive term for racist acts, white supremacy ideology, and white privileging socio-historical structures, etc). Moreover, the fact that Blacks exist at all is owing to whiteness' relative equivocation of their humanity.

For Yancy, whiteness and Blackness are necessarily relational. Put another way, whites create Blacks so as to make their whiteness possible. So what appeared to be cultural determinism is really identity formation cloaked in a set of socio-historical practices and supremacist discourse charged by muddy reasoning: "You are not because I am not." The translation here is that racialized nonwhites assume the default status of non-normatively human and whites, who are not racialized, assume the default status of normatively human. According to Yancy, "whiteness gains its ontological purchase through the construction and degradation of nonwhiteness." He continues, "Thus, to 'authenticate' their whiteness, they must enact a form of white solipsism whereby the nonwhite is erased and devalued, reduced to a form of nonbeing" (116-117). You (Blacks) are not human vis-à-vis race because I am (whites) not racial vis-à-vis human. While Yancy is aware of the relational character of any self- conception (e.g., whites call Black bodies into existence as a means of crafting their own identity), **he doesn't give it sufficient attention** for understanding the myth of the autonomous white subject. He argues that part of what it means to be white is to grant to oneself the power to name and define the range of possibilities for Others while, yet, remaining self-defined and unrestricted. And, **yet, this is so despite the** fact of the **relational character of whiteness to the Other**. But how exactly is this so? Whites understand themselves as "completely autonomous agents, free from the power of white racist effective history." Yancy argues, "whites see themselves, even if unconsciously, as raceless, as abstract minds, spectral beings, as constituting the transcendental norm" (161). Yancy appeals to the work of feminist philosophers elsewhere but doesn't enlist them in exploring the implication of conceptualizations of autonomy for white identity formation. Here, he can be helped by Catronia Mackenzie and Natalie Stoljar's edited book, Relational Autonomy: Feminist Perspectives on Autonomy, Agency, and the Social Self (Oxford, 2000). Particularly insightful are Stoljar's "Autonomy and the Feminist Intuition" and Diana Tietjens Meyers' "Intersectional Identity and the Authentic Self?: Opposites Attract."

Far from leading to activism, interrogating the "lie of whiteness" only breeds silence and retreat from white activists – even if the aff movement has good intentions, it can't gain steam

(Roediger '12, I Am Not George Yancy, David Roediger, University of Illinois, NEWSLETTER ON PHILOSOPHY AND THE BLACK EXPERIENCE, APA Fall 2012) //LS

James Baldwin insists that misery among whites is a key to any honest interrogation of what he calls the "lie of whiteness." White writers, myself decidedly included, seldom succeed in probing this misery—my Freudian slip in the first draft of this response rendered "misery" as "mystery"—much. I used to think that an understandable hesitancy to be taken as possibly conflating the miseries whites experience with the miseries white supremacy deals out to people it racializes produce reticence surrounding the issue. But the simultaneity of racial learning with the learning of the fault lines in families, the repression of sexuality, and the illusion of security may also reinforce silences and incuriosity. My one other reservation regarding "I Am Not Trayvon Martin" flags an issue in Look, a White! that I want to mention, but not much pursue in the depth it deserves here. As much as the speaker in the video frames matters within her admiration of the movements to free Troy Davis and to secure justice in the Martin murder case, the hard truths she articulates can sound like they are delivered from above the fray of social movements. When I recently played the clip for students in San Diego, some in the audience worried, across racial lines, that white activists, having just gotten involved in anti-racist work, would feel denounced as racists and would retreat from involvement. I am much in favor of hard truths. But the point

that the academic elucidation of a critique and the effective introducing of it into movement practice differ seems worth pondering.

[…]

I do lecture frequently on whiteness visiting in other cities. When I do, the sorts of direct expressions of doubt and opposition from the audience that Yancy recounts rarely surface during the lecture, the Q and A that follows, or talks with faculty and students over meals. Opposition is generally expressed via email, anonymously, rarely, and after the fact. Tears are very occasional, most recently when I argued against the idea of "white culture" and a Missouri **student cried, "If I can't be white, what can I be?"**

The aff overdetermines whiteness and blackness as a linguistic problem – the child shouting "look" assumes racism as something created by this call, but this paralyzes us from acting in response to how language shapes these biological phenotypes - they address the symptom not the cause

Saldnha 6 (Aran, Dep of Geography @ U of Minnesota, "Reontologising race: the machinic geography of phenotype" pg. 11-12 Environment and Planning D: Society and Space 2006, volume 24, pages 1075-24)

The relationality between blackness and whiteness in Fanon **will** to many readers **be reminiscent of the relationalities of language**. Signifiers, in the legacy of Ferdinand de Saussure, can only mean by way of a *formal* system or arbitrary differences. After the 'linguistic turn' associated with the poststructuralists Roland Barthes, Jacques Derrida, Julia Kristeva, Jacques Lacan, and the 'archaeological' Foucault, society has been widely considered to operate in the same way that Saussurian signs do. **In a social system of differences, dominance is achieved through the fearful discursive exclusion of 'the Other'. But since identity is never given, the future of the system is inherently political. Politics is then about the formation of heterogeneous coalitions amongst the disenfranchised to wrestle signifiers from the dominant**. **This conception of the social as structured through negativity and floating signifiers is very influential**, more or less informing important theorists of the left such as Butler, Gilroy, Homi Bhabha, Stuart Hall, Ernesto Laclau, Chantal Mouffe, Edward Said, Gayatri Spivak, and Slavoj ZiZek.

These theorists might retort to the phenomenologist of race that it isn't phenotype at all, but the white boy's reiterated interjection ''Look!'' that determines the differentiation of bodies. Fanon is 'interpellated' as black subject by the use of racist language, while the boy reproduces himself as white. **They** both **have little choice but to be produced by discourse. But what does 'produced' mean?** Surely not that there was no Frantz Fanon prior to this boy's interjection. **It means**, for these theorists, **that the interjection makes phenotype matter, that without language there would not be any difference**. **Language** (or culture at large) **is a screen which** *mediates* **between consciousness and the obscure matter of the body. Whenever language** (the language of science, for example) **claims to grasp materiality 'itself', it in fact hits against the wall of its own mediations.** In this mediation model of language, **materiality is forever unknown and there is no intermingling possible between the two realms**. In *Bodies That Matter,* Butler writes: "The body posited as prior to the sign, is always *posited* or *signified* as *prior.* This signification produces as an *effect* of its own procedure the very body that it nevertheless and simultaneously claims to discover as that which *precedes* its own action'' (1993, page 30). **Butler's well-known argument is that there is no anatomy or phenotype unless invoked by signification, by discourses of gender and race**. **It is beyond dispute that no body is untouched by signification. The question is,** rather, **how signification comes to have any effect at all, if not through the materiality of signs, bodies, and spaces**. The statement *''Tiens, un negre''* requires a larynx, the proximity of a Negro, a comprehension of French, and being within earshot to hear it. For sure, Butler repeatedly states that there is a 'materiality' to signs, but she refuses to extend this statement to bodies or things. **The physical body of skin, blood, and bones remains other, a 'constitutive outside' that is** *expelled by* **discourse** *(''signified* as *prior*''), **but has no rhythms and volume of its own**. Thus, a Butlerian critique can rightly question the 'naturalness' of a bedrock of phenotype posited by, and justifying, racial discourse (Butler, 1997). But such critique halts abruptly at the deep gorge between racist discourse (which it attacks) and phenotypical matter (about which it will not say anything). Is not pheno- type itself shaped by cultural practice? Does phenotype ever resist its 'performance'? By not allowing anything from across the gorge to enter her critique, **Butler ultimately remains complicit with what she attacks: the metaphysical positing of an inert exteriority to language. Can it not be possible to think and write about physical bodies** *without* **positing them as primary, pure, fixed, bounded, and self-transparent?**

Bodies need to be appreciated as productive in their own right, just like words or money or architecture. Fanon's **phenotype is not at all 'performed' or 'constituted'** by the boy's exclamation. **Phenotype is constituted instead**

by genetic endowments, environmental conditions, exercise, hormones, diet, disease, ageing, etc. **What language does to phenotype**—phenotype *itself*— **is** *charge* **it, circumscribe what it is capable of doing in particular spaces.** There was certainly real phenotypical difference before the exclamation, but it had no effect on the situation (yet). The exclamation brings out a latency, a latency Fanon knew was there, but had perhaps forgotten, looking absent- mindedly for a seat. After the exclamation, Fanon's options are limited. Now, his **phenotype demands active management.** Now, his phenotype is alive, chaining him to the histories and geographies of race and colonialism.

Yancy's demands of race as a social problem leaves the arena open for other justifications – rather than approaching it as a concept of language we need to focus on the problem of identity and difference itself

Saldnha 6 (Aran, Dep of Geography @ U of Minnesota, "Reontologising race: the machinic geography of phenotype" pg. 9-10 Environment and Planning D: Society and Space 2006, volume 24, pages 1076-24)

In contemporary theory, **race tends to be conceived as a problem of language**. **We read that race is an ideology, a narrative, a discourse. Race then refers to** the **cultural *representation*** of people, **not to people** themselves. It could be said that **race tends to be approached as an *epistemological* problem**: how is race known? Why was it invented? Some argue that we should simply stop thinking in terms of race. In this paper I would like to argue this might not be a good idea. Race will be approached ***ontologically,*** as a real process demanding particular concepts and commitments. Not so much representations, but bodies and physical events will be foregrounded. For instance, **the phenotype of humans can be shown to play an active part in the event called race.** When understood as immanent process, it becomes clear that, though contingent, **race cannot be transcended, only understood and rearranged**. Whether there is any physical basis for the concept of race has of course been hotly contested for many decades. In cultural studies, postcolonial theory, cultural anthropology, and most human geography, **it is common to treat race as a discursive construct. Many** in American critical race theory, such as Howard Winant and Naomi Zack, **opt** instead **for a** more **realist approach, granting that there *are* phenotypical differences but that their social force depends on culture, economics, and the law**. In this paper I chiefly follow poststructuralist philosophy not American left-wing pragmatism, but **I** do so in order to **take issue with the epistemological bias in much of the humanities inspired by poststructuralism**. Despite coming from a different intellectual trajectory, therefore, I would locate this intervention closer to the realist approach. The paper presents a number of entries into the argument. This theoretical eclecticism demonstrates that **the materiality of race can be conceptualised from a number of perspectives, making the reconceptualisation very much due**. First, Frantz Fanon's phenomenology of race is revisited, and I argue against Judith Butler's linguistic take on embodiment. Then the deontologisation of race in authors such as Paul Gilroy is scrutinised. Not asking properly what race ***is,*** Gilroy believes too easily in the possibility of its transcendence. In the fourth section, the refusal to engage with phenotype is with Bruno Latour shown to follow from a wider anxiety in the social sciences about matter. Nevertheless, in many places, as in the feminism of Elizabeth Grosz, **materiality is again treated positively**. As discussed in the fifth section, the openness of the human organism is also affirmed in anthropology—as well as in biology, from Darwin onwards. In particular, biology influenced by complexity theory and its philosophical underpinning by Gilles Deleuze and Michel Serres can help in imagining the biocultural emergence and evolution of race relations. The last two sections follow Deleuze and Guattari and use their term *machine assemblage* to capture race's reality of unmediated connections. **Far from being an arbitrary classification system imposed** *upon* **bodies, race is a nonnecessary and irreducible effect of the ways those bodies themselves interact with each other and their physical environment. The spatiality of race is not one of grids or self/other dialectics, but one of** *viscosity,* **bodies gradually becoming sticky and clustering into aggregates**. **Battling against racism is then not a question of denying race, but of cultivating its energies against the stickiness of racial segregation. Crucial in this process is that social scientists critically engage with race's biological aspect. For if they insist that race is but a 'social construction', they might leave the discursive arena open for** (closet) **racists to reinstate biological justifications for white privilege.**

Gilroy

The premise of the K is flawed, civil society can be reformed through social and political mobilization to rearticulate racialized discourses

Paul **GILROY** Anthony Giddens Prf. of Social Theory @ London School of Economics **'9** *Race and the Right to be Human* p. 12-4

There are a number of ways in which strategies premised upon emotional communication, psychological identification and the formation of moral communities might open up possibilities for change achieved through social and political mobilization. Indeed the dissemination and refinement of an idea of the human which was not compatible with racial hierarchy might already have been one result of

precisely that kind of sentimental contact across the colour line. The case of Anne Frank provides a second example of the consequences of this kind of connection.¶ These days, the urge peremptorily to dismiss the prospect of any authentic human connection across those carefully selected and supposedly impermeable lines of absolute and always singular "identity": class, culture, colour, gender and sexuality, can serve its own dubious psychological and political purposes. That depressing pseudo-political gesture supplies an alibi for narcissistic quiescence and resignation to the world as it is. Timid and selfish responses are justified in the names of complexity and ambivalence. Exploring a different genealogy for Human Rights requires us to consider more hopeful possibilities.¶ The structure of sentimental feeling articulated by Harriet Beecher Stowe was instrumental in the formation of a trans-national moral collectivity and in winning recognition of the suffering humanity of the slave whom it was no longer possible to dismiss as a brute. Through her voice and chosen genre, distinctive patterns of "heteropathic" identification appear to have leaked not only into Europe but further afield as well. Uncle Tom's Cabin helped to compose a cosmopolitan chapter in the moral history of our world. Is all of that potential for political action and pedagogy to be damned now because campus anti-humanism doesn't approve of the dubious aesthetic and moral registers in which an un-exotic otherness was initially made intelligible?¶ The scale of the historical and interpretative problems posed by the case of Uncle Tom's Cabin can only be glimpsed here. George Bullen, keeper of books at the British Museum compiled a bibliographic note included in the repackaged 1879 edition. He revealed that almost three decades after publication, Stowe's novel had been translated into¶ ¶ numerous languages including Dutch, Bengali, Farsi, Japanese, Magyar and Mandarin. Fourteen editions had been sold in the German language during the first year of publication and a year later, seventeen editions in French and a further six in Portuguese had also appeared. In Russia, the book had been recommended as a primer in the struggle against serfdom and was duly banned. The first book to sell more than a million copies in the US, the publication of Stowe's novel was a world historic event. Though it cemented deeply problematic conceptions of slave passivity, redemptive suffering and indeed of racial type, it was also instrumental in spreading notions of black dignity and ontological depth as well as the anti-racist variety of universal humanism that interests me. This combination merits recognition as a potent factor in the circulation of a version of human rights that racial hierarchy could not qualify or interrupt.¶ The example of Stowe draws attention to issues which would reappear through the nineteenth century as part of struggles to defend indigenous peoples, to improve the moral and juridical standards of colonial government and to reform the immorality and brutality of Europe's imperial order. This activity was not always altruistically motivated.¶ How those themes developed in the period after slavery is evident from the para-academic work of campaigners like Harriet Colenso, Ida B. Wells, Roger Casement and E.D. Morel. The constellation of writings produced by these critical commentators on racism, justice and humanity needs to be reconstructed in far greater detail than is possible here. They can nonetheless be seen to comprise a tradition of reflection on and opposition to racial hierarchy that, even now, has the power, not only to disturb and amend the official genealogy provided for Human Rights but also to re-work it entirely around the tropes of racial difference.

Exclusion in civil society is not constitutive but contingent, so that blackness is not the anti-human but it is considered the infrahuman, this means that we can reform civil society to remove exclusion

Paul **GILROY** Anthony Giddens Prf. of Social Theory @ London School of Economics **'9** *Race and the Right to be Human* p. 15

Allied with parallel insights drawn from struggles against colonial power, these interventions contribute to a counterhistory of the contemporary conundrum of rights and their tactical deployment. This neglected work remains significant because debate in this field is increasingly reduced to an unproductive quarrel between jurists who are confident that the world can be transformed by a

better set of rules and sceptics who can identify the limits of rights talk, but are almost always disinterested in racism and its metaphysical capacities.¶ Thinkers like Wells and Morel were alive to what we now call a deconstructive approach. They identified problems with rights-talk and saw the way that racial difference mediated the relationship of that lofty rhetoric to brutal reality. They grasped the limits of rights-oriented institutional life empirically and saw how rights-claims entered into the battle to extend citizenship. But, their vivid sense of the power of racism meant that the luxury of any casual anti-humanism could not be entertained. They wished to sustain the human in human rights and to differentiate their own universalistic aspirations from the race-coded and exclusionary humanisms which spoke grandly about all humanity but made whiteness into the prerequisite for recognition. Their alternative required keeping the critique of race and racism dynamic and demanding nothing less than the opening of both national- and world-citizenship to formerly infrahuman beings like the negro. ¶ Grimké, Wells and the rest appealed against racism and injustice in humanity's name. Their commentaries might even represent the quickening of the new humanism of which Frantz Fanon would speak years later. The movement these commentators created and mobilized persisted further into the twentieth century when new causes and opportunities were found that could repeat and amplify its critique of racialized political cultures and terroristic governmental administration.

Haiti, Liberia, and Ethiopia prove this

Paul **GILROY** Anthony Giddens Prf. of Social Theory @ London School of Economics **'9** *Race and the Right to be Human* p. 15

Three sovereign states: Haiti, Liberia and Ethiopia triangulated the modern world of black politics. The Caribbean republic was forged by a successful eighteenth-century uprising. In the nineteenth century, the West African country grew out of the slaves' embattled return as colonisers to the continent from which their foreparents had been stolen away. The returnees were determined to demonstrate that they could build and govern a national state and thus vindicate their contested humanity and historicality. The third state, Ethiopia, was an ancient power distinguished by its biblical pedigree. During the early twentieth century, its independence and territorial integrity were made into objects of pan-African consciousness by wars with the invading Italians. The country's pre-eminent position in the political imagination of African and African-descended peoples derives from the conflict with Mussolini's Fascism and from the globalization of black solidarity in which it resulted. Here too, issues of human rights would become relevant14.¶ Ethiopia had not only maintained its beleaguered independence for centuries, it had also joined The League of Nations where the new Emperor pleaded for support against the Italian invaders. That war is remembered now primarily for marking the start of humanitarian action by the international committee of the Red Cross (ICRC) and for the invaders' deployment of chemical weapons in violation of Italy's treaty obligations. Mustard gas was used against civilian populations judged to be a verminous part of the natural rather than the historical world15.¶ For the wider public born into the era of the newsreel and the radio broadcast, these modern horrors dramatised the political and economic dynamics of racism and imperialism. Emperor Selassie was identified as a potent symbol of hope, freedom and resistance¶ ¶ 16¶ ¶ against colonial domination. Under his guidance, Ethiopia would be a founding member of the United Nations and of the organisation of African Unity. He was one of the first political thinkers inclined to try and imagine a postcolonial future for the whole continent.¶ After their accession to power in 1933, the Nazi regime's anti-Jewish policies were also discussed by the League of Nations. A plenary session of its assembly was addressed by one Antoine Frangulis—a contemporary of Raphael Lemkin--who spoke there as a representative of the Haitian government. He unsuccessfully proposed the establishment of an international convention on Human Rights under the League's auspices and argued that a generalization of rights held in common by all people would be the best possible way to address the vulnerable predicament of Germany's Jews16.¶ The proposal was not accepted. The US were

said to be opposed to anything that might affect the integrity of their system of racial segregation while the British and French governments were alert to the implications of this change of policy for the administration of their imperial territories17.

Fischer

The logic of politics of revenge are flawed, we must hold on to a universal notion of freedom to critique Western political and racial domination (possible alt card? Meh.)

Sibylle **FISCHER** Spanish and Portuguese, Comparative Literature @ NYU (Center for Latin American and Caribbean Studies) **'10**"History and Catastrophe" *small axe* 33

That is what we did. But it was difficult not to hear uncanny echoes of an age-old rhetoric of modernity, liberty, and liberation in government declarations during those days; difficult, too, not to see that that rhetoric would be supplemented by policies in plain disregard of the enlightened principles that were supposedly being defended. Extraordinary renditions had not yet become official policy, the category of enemy combatant not yet resignified to sidestep the Geneva Convention, but I remember a feeling of foreboding that cast a long shadow over the proceedings of the colloquium. There was a catastrophe unfolding in front of our eyes, and the discussion of Western historiographic discourses and their shortcomings seemed ultimately inadequate.

"Hegel and Haiti" could have been understood simply as an argument against Western political and racial domination and its pitiful intellectual consequences, an admirable instance of committed scholarship that works by inciting our imaginative capacity rather than merely deconstructing existing discourses. "Universal History" picks up from there and tries to pro-vide us with a theoretical ground on which the critique of Eurocentrism is more than just a complaint about equal representation and recognition. The importance of the Haitian Revolu-tion does not lie in that it "avenges the New World." The terror of drones must not be justified by the terror of suicide bombs. If "Universal History" lacks the straightforward rhetorical power of "Hegel and Haiti," this is because it seeks to show that we can—and must—hold on to a universal notion of freedom, and that doing so does not mean a return to the false universalism of much Western political philosophy. There are not many problems harder than this one.

"Universal History" takes a combative approach. On the one hand, it is directed against relativistic beliefs in plural modernities and plural truths, the pieties of multiculturalist politics of recognition, and against the high-minded certainties of Western emancipatory discourses. On the other hand, it is an argument against a politics of revenge, the eye-for-an-eye logic of jihad and drone bombs, against the defense of torture of prisoners in the interest of national security and Islamist defenses of suicide bombings. In fact, a muted but noticeable subtext runs through "Universal History" that keeps linking the slave insurrection to Islamic jihad. There is for instance a hypothetical discussion of a "jihadist" Boukman,6 an offhand reference to tales of redemption, "Hegelian, Marxist, Muslim, or otherwise," and an invocation of the Western revolutionary slogan "Liberty or Death" as a parallel to the calls for Islamic jihad (143). If "Hegel and Haiti" is a striking vignette about blindness and insight in the stories the West tells about itself, "Universal History" tries to reconstitute a ground on which the juxtaposition of Hegel and Haiti acquires significance for the moral and political catastrophe we are facing today. Under the title of "Universal History" the Haitian Revolution acquires emblematic meaning.

Sibylle **FISCHER** Spanish and Portuguese, Comparative Literature @ NYU (Center for Latin American and Caribbean Studies) **'10**"History and Catastrophe" *small axe* 33

"This raw, free, and vulnerable state"¶ There is another aspect to Buck-Morss's argument that I find more difficult, and this has to do with the subjective dimension of the essay. Let me cite one of the key passages at some length here:¶ The definition of universal history that begins to emerge here is this: . . . human universality emerges in the historical event at the point of rupture. It is in the discontinuities of history that people whose culture has been strained to the breaking point give expression to a humanity that goes beyond cultural limits. And it is in our empathetic identification with this raw, free, and vulnerable state, that we have a chance of understanding what they say. Common humanity exists in spite of culture and its differences. A person's non-identity with the collective allows for subterranean solidarities that have a chance of appealing to universal, moral sentiment, the source today of enthusiasm and hope. It is not through culture, but through the threat of culture's betrayal that consciousness of a common humanity comes to be. (133)¶ At first sight, this passage is simply as a response to the pieties of a multicultural politics of recognition: culture divides us, and when absolutist claims are made in the name of culture, all is lost. "Osama bin Laden meets Jean-Jacques Dessalines, and Vladimir Lenin meets George W. Bush" (143). Perhaps. But Buck-Morss's argument actually tries to provide us with an alternative. Discussing the controversial issue of the survival of African belief and ritual in New World slavery cultures, she says, "I do not mean to imply that in the New World nothing remained of the original intent [of African religious and social elements]. But it is inconceiv-able, from a human point of view, that these brutally enslaved and expatriated persons carried their rituals and gods with them in slave-ship holds like so much checked baggage" (128–29).¶ Now, I think we have good reasons to think, for instance, that Vodou is a profoundly modern ritual, a thorough reworking of African belief and ritual under the pressures of slavery and forced Christianization. I think Buck-Morss is quite right when she insists that a profound change in meaning took place when elements of African religions and social life were reem-ployed in the context of the slave plantation. But it is one thing to recognize the rupture of the Middle Passage and the radically syncretic nature of the cultures that developed on the other side of the Atlantic, and another to imagine humans as blank slates. Do we ever really encounter a human being in a state that could be described as "raw, free, and vulnerable"? Is this image of a human evacuated of all cultural meaning and stripped of all social ties not rather always a metaphysical fantasy? Like primitive accumulation in Marx's thought, the raw subject needs to be assumed for theoretical reasons, but cannot actually be seen. Cultural rupture is a systemic event, something that affects culture over time. There are striking resonances here¶ with the imaginary subject of classical liberalism: an abstract human subject, unmarked by gender, race, and culture, which then becomes the subject of certain entitlements.¶ There are other considerations. Assuming that the brutality of slave transportation and plantation labor did indeed wrest humans out of their social and cultural networks in this most radical sense, can we really call that person *free*? Again, one might say, there are resonances of classical liberalism here. What kind of concept of freedom would this radical uprooting generate? Is it really a freedom that can become the foundation of a universal history? We might recall here Hannah Arendt's powerful analysis of the predicament of Jews in Nazi Germany. Why did the German state bother to strip Jews of their citizenship before hoard-ing them into camps? Arendt's answer is profoundly pessimistic: when the people of Europe encountered those miserable beings who had indeed "lost all other qualities and specific relationships—except that they were still human," they "found nothing sacred in the abstract nakedness of being human."8 German authorities clearly assumed, rightly, that abjectness did not necessarily produce empathy.¶ There is a deeply troubling, though rarely discussed, moment in John Locke's *Second Treatise of Government* that is particularly pertinent here, as it provides us with an example of how slavery functions within a foundational account of inalienable human liberty. Having introduced the conventional argument that prisoners taken in a just war can be enslaved because they have "forfeited" their lives (a tale Locke knew did not correspond to the reality of the Atlantic slave trade),[9] he continues as follows: "Having quitted reason, which God hath given to be the rule betwixt man and man, and the common bond whereby human kind is united into one fellowship and society . . . ; and so revolting from his own kind to that of beasts, by making force . . . to be his rule of right, he renders himself liable to be destroyed by the injured person, and the rest of mankind, . . . as any other wild beast, or noxious brute, with whom mankind can have neither society nor security."[10] What is remarkable here is not that¶ Locke, the theorist of liberty, justifies slavery. Practically all natural lawyers before him did so. Rather, it is the tinge of what Lacan called *jouissance*, an almost gleeful fantasy of legitimate cruelty that follows once the human being has been stripped of all his or her human bonds.¶ There was no need for Locke to engage in sadistic fantasy. His argument did not require

it, and predecessors such as Grotius or Suarez did not do this. But neither did they insist that the enslaved had to loose all social and cultural ties. It seems as if the fantasy of the loss of all human ties—this "abstract nakedness of being human"—opens a space where we can imagine the unimaginable.

Solvency

*If you aren't reading the transphobia K, read one of the Lamble cards (the last two) in the Visuality and Identity file under queer pessimism in the prison links on the solvency flow as a reason why reforms can't solve – talks about how it renders sexual violence invisible both inside and outside the system because the problem is "solved for" by the government (might have to retag the card) – turns aff solvency

1. No solvency – jails are local and short-term facilities, prisons are long-term facilities - can't have spillover from local level to federal level

Bureau of Justice Statistics No Date ("What is the Difference Between Jails and Prisons?" Part of the US Department of Justice, http://www.bjs.gov/index.cfm?ty=qa&iid=322)

Jails are locally-operated, short term facilities that hold inmates awaiting trial or sentencing or both, and inmates sentenced to a term of less than 1 year, typically misdemeanants. Prisons are long term facilities run by the state or the federal government and typically hold felons and inmates with sentences of more than 1 year. Definitions may vary by state.

2. No solvency- the nature of prison is inherently sexually violent. The affirmative focuses on sexual violence while refusing to face the other issues of sexual violence that occurs inside of prisons. This turns case as the affirmative leaves these other forms to be ignored and increase while the world feels good about how they solved for sexual violence in prisons.

Arkels, **2015** Gabriel. Professor of Legal Skills at Northeastern University School of Law. Regulating Prison Sexual Violence. Northeastern University Law Journal. Vol. 7 No. 1. 71-130.

In this article, I argue that a fundamental tension arises in efforts to curb carceral sexual violence. Preventing sexual violence requires an expansion of bodily autonomy for prisoners, in that to be free from sexual violence one must have at least the ability to prevent certain nonconsensual acts upon the body. Also, sexual self-determination, including not only the freedom to say "no," but also to say "yes," is an integral part of preventing sexual violence.5 And as many women-of-color feminists and critical theorists have established, freedom from sexual violence requires redistribution of wealth and power6 and an end to gender, racial, class, sexuality, nationality, and disability-based subordination.7 However, imprisonment demands major infringements on the bodily autonomy and self-determination of prisoners that courts, regulators, and legislatures frequently hesitate to curtail. For example, carceral agencies routinely require their staff and contractors to perform strip searches, body cavity searches, and nonconsensual medical interventions on prisoners: acts that have much in common with other forms of sexual violence. Carceral agencies and their staff control the movements, activities, clothing, sexual expression, basic hygiene, nutrition, and virtually every other aspect of the biological and social lives of prisoners.8 As Alice Ristroph argues, incarceration is inherently a sexual punishment, because of the extent of corporal control that carceral systems exert over prisoners.9 Incarceration cannot be fully desexualized.10 Carceral mechanisms also aggravate inequitable distribution of wealth and power, as well as subordination on the basis of race, gender, class, disability, nationality, religion, and sexuality.11 A reluctance to frankly confront the tension between protection of autonomy and maintenance of control has diminished possibilities for meaningfully and transparently addressing carceral sexual violence. In this article, I begin that frank confrontation.

3. No reason officers would listen – just because strip searches out in the open won't be legal doesn't mean they will stop behind closed doors. It's the aff burden to prove that guards would follow this policy

4. Plan can't solve – alt causes and reforms make issues worse through the system of incarceration. If not through sexual violence, then those who are targeted will be forced into solitary confinement – can't work within the system

Lamble 2011 (S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. Lamble currently teaches at Birkbeck Law School, University of London and is a founding member of the Bent Bars Project, a collective which coordinates a letter writing program for queer, trans and gender-non-conforming prisoners in Britain, "Transforming Carceral Logics: 10 Reasons to transform the prison industrial complex through queer/trans analysis and action," *Captive Genders* pg 243)

Prisons are harmful, violent, and damaging places, especially for queer, trans, and gender-non-conforming folks. Prisons are violent institutions. People in prison and detention experience brutal human rights abuses, including physical assault, psychological abuse, rape, harassment, and medical neglect. Aside from these violations, the act of putting people in cages is a form of violence in itself. Such violence leads to extremely high rates of self-harm and suicide, both in prison and following release.35 These problems are neither exceptional nor occasional; violence is endemic to prisons It is important to bear in mind that prison violence stems largely from the institutional structure of incarceration rather than from something supposedly inherent to prisoners themselves. Against the popular myth that prisons are filled with violent and dangerous people, the vast majority of people are held in prison for non-violent crimes, especially drug offenses and crimes of poverty.36 For the small number of people who pose a genuine risk to themselves or others, prisons often make those risks worse. In other words, prisons are dangerous not because of who is locked inside, but instead prisons both require and foster violence as part of their punitive function. For this reason, reform efforts may reduce, but cannot ultimately eliminate, prison violence. The high number of deaths in state custody speaks to the devastating consequences of imprisonment. Between 1995 and 2007, the British prison-monitoring group Inquest documented more than 2,500 deaths in police and prison custody.37 Homicide and suicide rates in Canadian prisons are nearly eight times the rate found in non-institutional settings.38 In the United States between 2001 and 2006, there were 18,550 adult deaths in state prisons,39 and between 2003 and 2005, there were an additional 2,002 arrest-related deaths.40 It is extremely rare for state officials to be held accountable for these deaths. For example, among the deaths that Inquest has documented in Britain, not one police or prison officer to date has been held criminally responsible

5. Prohibitions on consensual relation ships also lead to sexual violence in prisons.

Arkels, **2015** Gabriel. Professor of Legal Skills at Northeastern University School of Law. Regulating Prison Sexual Violence. Northeastern University Law Journal. Vol. 7 No. 1. 71-130.

The enforcement of prohibitions on consensual sex often involves physical and sexual violence. Detecting sex requires extensive surveillance, which may involve viewing the naked body or even touching or penetrating the body through searches or medical exams. Punishing people for consensual sex also often involves direct intrusion on the body, including forcibly removing people from where they are and placing them in solitary confinement. "In both jails and in the prison I was in, sexual contact was punishable by time in the hole."135 Loss of good time credits, another common punishment for consensual sex, forces people to remain in prison for longer periods of time. Lin Elliot said, "Even in states—such as here in Washington— where there are no laws against homosexuality, consensual sex between prisoners is against prison rules and can result in severe punishment—even loss of 'good time,' thereby extending a person's sentence."136 Placement in solitary confinement, as well as longer terms of confinement in prison, in turn make people more

vulnerable to other forms of sexual violence, including rape. Other penalties for consensual sex include forced labor, and forced separation from one's lover.137 Punishments are not always equal: they can be worse for trans people and for HIV positive people.13 Prohibitions on consensual sex perpetrate homophobia and transphobia, which can increase the level of sexual and other violence targeting people perceived as trans or queer. While trans and queer people are far from the only people having sex in prison, they are often assumed to be having sex and get punished for it.139 Historically, concerns about sexuality in prison have focused at least as much on homosexuality as on sexual assault.140 Courts continue to accept stopping or discouraging homosexuality and homosexual relationships as "legitimate penological objectives."141 Because prisons tend to conflate queer and trans identity, consensual sex in prison, and sexual assault, prison officials have at times interpreted measures against rape to express zero tolerance for queer and trans people.142 Some prison officials expressed confusion about the PREA regulation stating that prisons may not treat consensual sex the same as sexual assault.143 This confusion speaks to the deeper issue—that prison officials still see queer sex as the problem, not sexual assault— or they see the two as indistinguishable and identically bad. Jason Lydon, a formerly incarcerated gay man and founder of Black and Pink, explains, "[u]nfortunately, it is against the rules, and in many states against the law, for prisoners to have sex with each other (and in some places prisoners even get in trouble for masturbating). The Prison Rape Elimination Act (PREA) has also increased guard harassment of prisoners in romantic relationships with each other. Black and Pink has gotten reports of prisoners getting disciplinary tickets for simply holding hands."144 Martin Morales, in her pro se complaint challenging Vermont prohibitions on consensual sex in prison, identified a host of problems that the prohibitions caused, including "sexual assaults within the incarceration system…homophobia…hatred…and bigotry."145 Citing Romer v. Evans, she explained that these prohibitions are rooted in anti-LGBT prejudice.146 As another author explains, teaching homophobic, transphobic, and sexist sexual shame can make people more vulnerable to abuse in relationships. "If that little girl has learned that her queer longings and desires are sinful … and dirty, and that she should expect to be beaten and raped by the upstanding citizens … then how will she know when the things her lover does to her are abusive? If that non-gender-conforming child has never been allowed to name hir own body, and learned everyone but hirself has the right to name, manipulate, and modify hir body, then how will ze know when a touch is invasive?"147 Others have also pointed out that prohibitions on consensual sex keep prisoners from learning positive relationship skills. Paul Wright says, "If most prisoners are going to be getting out, how are you helping to make them better people from when they came in? […] If you accept the fact that relationships are a normal part of human existence, what are you doing to normalize that?"148 Derrick Corley, a writer and prisoner in New York, said, "If it is true that healthy people have healthy relationships, and, if these relationships are systematically denied prisoners, then how can we be expected to eventually live in society as normal, law-abiding, productive people?" The focus on preventing consensual sex can lead prison officials to put prisoners in unnecessarily dangerous situations. A prisoner named Steven said, "They will put you in a 12 X 8 cell with a homophobe and expect you to get along with your cellmate. Heaven forbid they put you in a cell with another bisexual, transgender, or gay individual because they will automatically assume that ya'll are having sex. What do they care if we have consensual sex?"150 A stud151 in a women's state prison agrees: "If you want to have a relationship with somebody or cell up with them that should be your business. This would create a much safer environment for everybody."152 The prohibitions on consensual sex can also deter prisoners from coming forward about sexual assault, for fear that they will be punished for having sex. That is exactly what happened to one of my former clients, who was disciplined for having sex when she told a staff member that another prisoner had raped her. Brenda V. Smith points out that if prisons permitted consensual sexual expression, they could improve in several ways. For example, they could "appropriately identify[] acts that are consensual as opposed to coerced … to more accurately report information to the Bureau of Justice Statistics and meet the data collection requirements of the [Prison Rape Elimination] Act."153 This shift in focus would also lead

officials to devote their limited resources to focus on preventing, investigating, and responding to sexual violence, rather than consensual sex.154 She acknowledges that "recognizing and granting inmates a degree of sexual expression may enhance inmate safety by decreasing prison rape" and agrees with those described above that it would also "help prisoners learn healthy and responsible sexual behavior prior to reentering the community."1

Framing (if reading extinction impacts)

Our interpretation is that you should weigh the impacts based on three factors: probability, magnitude, and time frame. Hold magnitude in a high regard – it determines the severity of the situation and is a useful skill and one that policymakers use.

Moral obligation hurts political responsibility and allows for injustices and violence to occur

Jeffrey **Isaac 2002**, professor of political sicence and director of the center for the study of democracy and public life at Indiana University, "Ends, Means, and Politics," *Dissent*

As writers such as Niccolo Machiavelli, Max Weber, Reinhold Niebuhr, and Hannah Arendt have taught, an unyielding concern with moral goodness undercuts political responsibility. The concern may be morally laudable, reflecting a kind of personal integrity, but it suffers from three fatal flaws: (1) It fails to see that the purity of one's intention does not ensure the achievement of what one intends. Abjuring violence or refusing to make common cause with morally compromised parties may seem like the right thing; but if such tactics entail impotence, then it is hard to view them as serving any moral good beyond the clean conscience of their supporters; (2) it fails to see that in a world of real violence and injustice, moral purity is not simply a form of powerlessness; it is often a form of complicity in injustice. This is why, from the standpoint of politics— as opposed to religion—pacifism is always a potentially immoral stand. In categorically repudiating violence, it refuses in principle to oppose certain violent injustices with any effect; and (3) it fails to see that politics is as much about unintended consequences as it is about intentions; it is the effects of action, rather than the motives of action, that is most significant. Just as the alignment with "good" may engender impotence, it is often the pursuit of "good" that generates evil. This is the lesson of communism in the twentieth century: it is not enough that one's goals be sincere or idealistic; it is equally important, always, to ask about the effects of pursuing these goals and to judge these effects in pragmatic and historically contextualized ways. Moral absolutism inhibits this judgment. It alienates those who are not true believers. It promotes arrogance. And it undermines political effectiveness.

Case Extensions

Solvency

1. No solvency – the aff's plan only changes the blanket policy of jails, which can't solve for two reasons:

a. Jails are local while prisons are federal – the USFG can't tell jails what to do nor do they have a means of enforcing what happens in jail. No spillover claims – spillover would be the opposite – beginning with the prison/federal level and then spilling over to the local level of jails

b. Prisons are the long-term facilities – not changing anything in prison systems means the aff can't solve for other structural systems

2. Turn – the aff only focuses on one scenario of sexual violence in prisons – this delegitimizes other instances that happen within prisons – Arkels. The plan creates the idea that a "good job" has been done and shifts focus onto the next issue, rendering other cases of violence within prison systems invisible even though the nature of the prison system is sexually violent based on alternative causes like medical searches.

3. There is no proof or reason as to why guards would listen – the violence would no longer take place in the open, but could still happen behind closed doors – this is arguably worse because there is no acknowledgement of there being a problem. Instead, it becomes invisible because of the idea that the issue has been "solved for"

4. No solvency – reforms worsen the system and allow guards to continue abusing prisoners in other ways like through solitary confinement – Lamble 11. Prison systems also exacerbate existing acts of violence performed by those who were put in prison for violent crimes, making these systems inherently dangerous.

5. Alt causes to sexual violence – Arkels indicates that sexual violence happens often between prisoners because the victim is too scared to come forward out of fear of being punished for having sex, especially trans and queers who are the primary targets of these prohibitions.

6. (If they read Miller 2k and y'all are running a kritik): Miller flows neg – all Miller does is criticize the current system, but that is tied to the basis of the system itself – creating blanket policies does nothing to change the groundings of sexual violence within prisons that is connected to a specific mindset.

7. Can't solve for trans who have not had surgery – they are not classified with their gender identity in prison – increases their risk of sexual violence even with the plan

NCLR 2000 (National Center for Lesbian Rights, 2000, "Transsexual Prisoners," http://www.transgenderlaw.org/resources/prisoners.htm)

Do transgender prisoners have a right to be housed in a facility consistent with their gender identity?♂ Transsexual people who have not had genital surgery are generally classified according to their birth sex for purposes of prison housing, regardless of how long they may have lived as a member of the other gender, and regardless of how much other medical treatment they may have undergone[1] -- a situation which puts male-to-female transsexual women at great risk of sexual violence. Transsexual people

who have had genital surgery are generally classified and housed according to their reassigned sex.♂ One mechanism that is sometimes used to protect transsexual women who are at risk of violence due to being housed in male prisons is to separate them from other prisoners. This is referred to as "administrative segregation." On the positive side, placing a transgender or transsexual woman in administrative segregation may provide her with greater protection than being housed in the general population. On the negative side, however, administrative segregation also results in exclusion from recreation, educational and occupational opportunities, and associational rights.[2]

8. *Alt causes – non-consensual medical procedures are part of normal prison policy that sexually violate the prisoners. The affirmative makes no move to combat this unique form of violence that involves penetrating the body.*

Arkels, **2015** Gabriel. Professor of Legal Skills at Northeastern University School of Law. Regulating Prison Sexual Violence. Northeastern University Law Journal. Vol. 7 No. 1. 71-130.

Prisoners retain a limited right to refuse treatment, but state interests significantly constrain this right.74 For example, if certainsubstantive and procedural thresholds are met, medical professionalsmay medicate detained people with psychiatric disabilities against theirwill.75 Courts have held that nonconsensual treatment with insulin for diabetes,76 nonconsensual testing for AIDS,77 nonconsensual vaccination for Hepatitis A,78 and nonconsensual artificial nutrition and hydration79 do not violate prisoners' constitutional rights. As Iwill discuss further below, courts have also found some nonconsensual gynecological and rectal exams to be lawful. However, nonconsensual treatment may not always be permitted, particularly where the prisoner objects based on sincerely held religious beliefs.80 Deliberate denial of necessary medical care can also be unlawful.81In or out of prison, people often do give full, free, knowing consent to medical interventions. In some situations, providingmedical care to someone who cannot consent—someone who is,for example, unconscious—may be appropriate. Here, I am only considering those situations where a person could have consentedbut did not, or where a person could not consent and no legitimatemedical need supported the intervention. I don't argue that everynonconsensual medical intervention is a form of sexual violence;while nonconsensual medical interventions may always be violent,the violence is not necessarily always sexual. I focus on those nonconsensual medical interventions that involve stripping someoneor forcing someone to strip; touching or penetrating the genitals, anus, breasts, or reproductive organs; or harming a person's capacityfor sexual pleasure, sexual acts, or reproduction. Like searches, the physical acts of nonconsensual medicalinterventions are often indistinguishable from other forms of sexualviolence. Mandatory medical exams are widely imposed in prisonsand jails, including gynecological exams.82 "[Women prisoners] haveexperienced sexual violence in their private lives, in their domesticlives, in their intimate lives. And then they go to prison where theirbodies are handled by so-called doctors who are sticking things intotheir vaginas and their anuses and it feels exactly like the sexualabuse that they have already experienced."83 One imprisoned womandescribes her physical pain and the doctor's denial of her experienceduring an exam as follows: "[He] is the biggest man with the biggesthands... [H]e tried to force his way into my cervix and he kept tellinme it wasn't painful while I was crying and tears were streamingdown my face."84Some prisoners experience nonconsensual vaginal and analexams as sexual violence. Michann Meadows sued over a doctor nonconsensuallypenetrating her vagina.85 She cried out during the examand demanded that the doctor stop "jiggling [his] fingers in and outof [her]."86 He refused to stop and pushed his fingers inside of her even harder, claiming that he needed to do what he was doing to "get around her uterus."87 The exam caused her pain and bleeding.88 Afterward, a nurse gave Meadows a menstrual pad and privately advised her to file a complaint against the doctor for his conduct.89 In her complaint, Meadows said she felt sexually violated.90 Jessie Hill sued over a doctor non-consensually penetrating his anus and rectum.91 Guards took Hill to a prison doctor after he complained of rectal pain.92 He told the doctor that he consented only to a visual examination and specifically told the doctor not to stick anything in his rectum.93 The doctor stuck his finger in Hill's rectum over his protests.94 When Hill called for the guards to help him, they laughed at him instead.95 Hill said that he experienced the penetration as rape.96 Also like searches, nonconsensual medical interventionsinfringe on the same interests in bodily integrity, privacy, dignity,self-determination, and autonomy as in sexual violence more broadly,and can cause similar types of harm.97 Forced exams to investigatesexual violence, which typically involve penetration of the mouth,vagina, and/or anus and come on the heels of other sexual violence,can be particularly harmful. "Almost all interviewees in a recent studyof survivors of sexual

abuse said they were re-traumatized by themedical examination procedures…. [B]ecause there is an underlyingassumption that they are not to be believed, material evidence mustbe collected from their bodies as they are objectified and invaded,penetrated a second time by medical intervention."98 A prisoner in a California women's facility said, "Ninety-nine percent of the womenhave been abused or raped. To have a man take us into an office thesize of a closet . . . stripped down . . . rough and hurts us . . . it takesus right back to the beginning."99Other forms of nonconsensual medical interventions,such as sterilization, also violently control people's sexuality andreproduction.100 As one Black trans man subjected to a hysterectomyin a California prison said, "I felt coerced. I didn't understand theprocedure….I never planned on having children but I would have likedthe option to be mine."101 The history of nonconsensual sterilizationIn prisons—including psychiatric institutions—is extensive. Thesepractices have tended to target disabled people, low-income people,indigenous people, queer people, gender nonconforming people,Black people, immigrants, and sexually active women.102 Whilethese practices have often targeted people with a uterus, they havecertainly not spared people with testicles. Nonconsensual castrationhas been used as a punishment for alleged sexual violence, atreatment for homosexuality, and a part of medical experimentation.103Nonconsensual sterilization practices are not over. Justice Now recently documented extensive practices of nonconsensualsterilization in California women's prisons, which seemed to targetnon-trans women of color and trans men of color.104 Like other formsof sexual violence, these nonconsensual sterilizations invade people's

Framing

Extend our interpretation – weigh impacts based on: magnitude, time frame, and probability – hold magnitude in high regards as it is how policymakers make their decisions and becomes a portable skill in life.

Claims of "moral obligation" hurt responsibility for those events and allow the cycles of violence and injustice to continue – Isaac 02. This fits the idea of "the road to Hell is paved with good intentions" – communism in the 20th century proves as morality inhibits judgment and undermines political capability.

T USFG

1NC

1. The affirmative is not topical because the overt search of body cavities and strip searches of inmates are not classified as "undercover activity". We draw this conclusion because the only card in the 1ac that makes the affirmative topical, the Marx 98, specifically says that body cavity searches, strip searches, and other prison-type searches are only domestic surveillance if they are direct quote "undercover tactics". Our interpretation is that in order for those actions to be domestic surveillance they need to be conducted by domestic surveillance agencies, such as the TSA, FBI, ICE, DEA, etc.

USFG includes three branches

Black's Law 90 Black's Law Dictionary, 1990 p. 695 "government"

> In the United States, government consists of the executive, legislative, and judicial branches in addition to administrative agencies. In a broader sense, includes the federal government and all its agencies and bureaus, state and county governments, and city and township governments.

2. Violation: The aff violates our interpretation because jail surveillance is not conducted by any USFG domestic surveillance agency.

Jails are under local jurisdiction, while prisons are at the federal level

Bureau of Justice Statistics No Date ("What is the Difference Between Jails and Prisons?" Part of the US Department of Justice, http://www.bjs.gov/index.cfm?ty=qa&iid=322)

Jails are locally-operated, short term facilities that hold inmates awaiting trial or sentencing or both, and inmates sentenced to a term of less than 1 year, typically misdemeanants. Prisons are long term facilities run by the state or the federal government and typically hold felons and inmates with sentences of more than 1 year. Definitions may vary by state.

Police are the responsibility of the State Governments only.

Brian **Darling**, Brian Darling is Sr. Vice President for Third Dimension Strategies, a strategic communications public relations firm in Washington, D.C. Darling served as Sr. Communications Director and Counsel for Senator Rand Paul (R-KY) from 2012-15. Before his tenure with Sen. Paul, Darling served in three different capacities with The Heritage Foundation. **"**Firefighters, Teachers and Police - Not a Federal Responsibility", Jun 18, 20**12**,

The left wants us to believe that paying for teachers, **firefighters and police is a federal responsibility**. Not so. **Such services have traditionally been the responsibility of state and local governments.** In Federalist 45, James Madison wrote that the powers of the federal government are "few and defined." Madison argued that state power extends to issues that "concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the State." **Nowhere in the Constitution is the federal government given the explicit power** to supplant the traditional **powers** of the states. Article 1, Section 8 of the Constitution enumerates powers granted to the federal government. Nowhere does it list the power to "bail out the states who come up short in paying for firefighters, police and teachers." Furthermore, when the feds "give" lesser governments money to pay for local responsibilities, they often attach conditions to funding that may be unconstitutional. **The 10th Amendment states "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."** The educating of children, the **protection of the populace from crime** and the suppression of fires **are clearly powers reserved to the states**.

3. Standards: The affirmative explodes the topic because they talk about actions that are not conducted by surveillance agencies. There are multiple agencies within the USFG that deal with domestic surveillance, such as the FBI, DEA, TSA, and others. The amount of domestic surveillance these agencies, conduct, such as the bulk gathering of metadata, stingray, drones, wire-tapping, and many other methods and instances. This leads to a variety of different affs available to the affirmative. Exploding the topic leads to no topic specific education, kills neg ground, and decreases fairness.

a. A topical version of the Aff would be an aff that only deals with federal prisons instead of local jails. Federal prisons are owned by the USFG, so they would be topical under the resolution. CHOOSE 1

1b. A topical version of the aff would be one that deals with TSA border surveillance and the infringements of personal privacy/ the bodies of people that they commit.

1. **Topicality is key to topic specific education. This is the most important impact within the debate round because we cannot actually solve for the issues of the 1ac.**

4. Voting issue: Topicality is a voting issue because it is key to fair educational debate.

More jail vs prison

A jail is in a county or city while a prison is federal – prefer legal definitions

Margo **Schlanger 2003**, preparation for a Harvard law seminar, "Differences between jails and prisons," *Prison Readings Part A,* pg 42

A jail is paradigmatically a county or city facility that houses pretrial defendants who are∂ unable to make bail, misdemeanant offenders, relatively short-term felony offenders (the term varies∂ by state – most often, it's under a year, but it can be far more), and short and long-term offenders∂ awaiting transfer to a state prison. A prison, by contrast, is a state (or federal) facility that houses∂ long-term felony offenders. Many observers of American corrections assume away jails, or at best,∂ assume that jails are just like prisons. Both assumptions warp understanding. There are many areas∂ of difference, but this essay will focus on four – size, population flow, political setting, and∂ demography.

T Surveillance

1NC Search isn't Surveillance

1. Interpretation – Surveillance is to closely watch a person, place or thing for the purpose of investigation and is distinct from a Search which intrudes on an expectation of privacy.

Hutchins, 2007, Mark, Alameda County District Attorney's Office "Police Surveillance" http://le.alcoda.org/publications/files/SURVEILLANCE.pdf

Before we begin, a word about terminology. As used in this article, the term "surveillance" means to "closely watch" a person, place, or thing for the purpose of obtaining information in a criminal investigation.5 It also includes recording the things that officers see or hear, and gaining access to public and private places from which they can make their observations. It does not include wiretapping and bugging which, because of their highly-intrusive nature, are subject to more restrictive rules.6 THE TEST: "Plausible vantage point" Surveillance becomes a "search"—which requires a warrant—if it reveals sights or sounds that the suspect reasonably believed would be private.7 As the court explained in People v. Arno, "[T]he test of validity of the surveillance [turns upon] whether that which is perceived or heard is that which is conducted with a reasonable expectation of privacy."8 Thus, a warrant is unnecessary if the suspect knew, or should have known, there was a reasonable possibility that officers or others might have seen or heard him.9 In the words of the Supreme Court, "What a person knowingly exposes to the public, even in his own home or office, is not a subject of Fourth Amendment protection."10

2. Violation - Prison body cavity searches are not surveillance.

Anthony Kennedy, Supreme Court Justice 2012, Anthony, Opinion of the Majority, 4/2/12, https://www.law.cornell.edu/supremecourt/text/10-945

The Court's opinion in Bell v. Wolfish, 441 U. S. 520 (1979) , is the starting point for understanding how this framework applies to Fourth Amendment challenges. That case addressed a rule requiring pretrial detainees in any correctional facility run by the Federal Bureau of Prisons "to expose their body cavities for visual inspection as a part of a strip search conducted after every contact visit with a person from

outside the institution." Id., at 558. Inmates at the federal Metropolitan Correctional Center in New York City argued there was no security justification for these searches. Officers searched guests before they entered the visiting room, and the inmates were under constant surveillance during the visit. Id., at 577–578 (Marshall, J., dissenting). There had been but one instance in which an inmate attempted to sneak contraband back into the facility. See id., at 559 (majority opinion). The Court nonetheless upheld the search policy. It deferred to the judgment of correctional officials that the inspections served not only to discover but also to deter the smuggling of weapons, drugs, and other prohibited items inside. Id., at 558. The Court explained that there is no mechanical way to determine whether intrusions on an inmate's privacy are reasonable. Id., at 559. The need for a particular search must be balanced against the resulting invasion of personal rights. Ibid.

Prefer our interpretation

A. Brightline – our interepretation creates a clear and precise limit on the types of affirmatives that are topical, their interpretation opens up to anything the government does that might be icky.

B. Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Including searches adds an entirely different legal regime with different laws, judicial standards, and other issues for THOUSANDS of different crimes.

Topicality is a Voting Issue.

Limits cards

There are five kinds of prison searches alone that the aff's interpretation allows for that ours does not – proof that the aff explodes the limits

Prisoners' Legal Service 2002 (Prisoners' Legal Service Inc., 2002, "Searches of Prisoners," www.plsqld.com/files/pamphlets/**Searches**%20of%20**prisoners**.doc)

There are five types of searches that can be performed on prisoners in certain circumstances. These range from the least intrusive scanning search to the extremely intrusive strip search and body search: ∂ Scanning search∂ A search by electronic or other means that does not require a person to remove their general clothes (except perhaps a coat or shoes) or to be touched by a person. For example: a hand-held scanner, passing through an "arch" type metal detector or using a sniffer dog.∂ General search∂ A search to reveal the contents of the person's outer garments, general clothes (dress, skirt, shirt or trousers) or hand luggage without touching the person or the luggage. During a general search a person may be required to open their hands or mouth for visual inspection or to shake their hair vigorously. ∂ Personal search∂ A search during which light pressure may be momentarily applied to a prisoner over their general clothes (dress, skirt, shirt or trousers) without direct contact being made with genital or anal areas or a female prisoner's breasts. Basically a "frisk" type search.∂ Strip search∂ A search in which a prisoner removes all garments during the search, but direct contact cannot be made with the prisoner.∂ The searching officer may require the prisoner to hold their arms in the air or to stand with legs apart and bend forward to enable a visual examination to be made.∂ Strip search guidelines∂ Prison laws, regulations and policies contain a number of guidelines. These include:∂ Only prison officers of the same gender as the prisoner can carry out a strip search; ∂ There must be at least two prison

officers present, but no more than are reasonably necessary to carry out the search;∂ Before carrying out a strip search the prison officer must tell the prisoner that they will be required to remove clothing during the search and tell the prisoner why it is necessary to remove the clothing;∂ The officer must, if reasonably practicable, give the prisoner the opportunity to remain partly clothed during the search, for example, by allowing the prisoner to dress their upper body before being required to remove clothing from their lower body;∂ A prison officer carrying out the search must ensure, as far as reasonably practicable, that the way in which the search is conducted causes minimal embarrassment to the prisoner;∂ A searching officer must take reasonable care to protect the prisoner's dignity, must carry out the search as quickly as reasonably practicable and must allow the prisoner to dress as soon as the search is finished. ∂ Body search∂ A search of a prisoner's body includes an examination of an orifice or cavity of the prisoner's body. This type of search can only be performed by a doctor. Some prison doctors refuse to perform these searches.

Four overarching categories of searches that are not surveillance

NMA No Date (Norwegian Medical Association, unknown date, "What types of searches are performed on prisoners?" https://nettkurs.legeforeningen.no/mod/lesson/view.php?id=1457&pageid=7624)

Most searches performed by prison staff are not body searches. Furthermore, the term "body search" itself has different meanings and implications which are often confused by the general public and sometimes even by medical staff.∂ Generally speaking, three categories of searches performed on prisoners can be distinguished, by increasing degree of thoroughness:∂ pat-down searches of the clothed body, or "frisking";∂ searches involving the removal of clothing – "strip searches" – usually performed in two steps (first the upper and then the lower body) but without examining body cavities;∂ squat searches, which sometimes accompany strip searches;∂ body-cavity searches (visual inspection and manual probing).

Prisons DDI

T Surveillance Covert

1NC

Interpretation – surveillance must be covert

Baker 5 – MA, CPP, CPO

(Brian, "Surveillance: Concepts and Practices for Fraud, Security and Crime Investigation," http://www.ifpo.org/wp-content/uploads/2013/08/surveillance.pdf)

Surveillance is defined as **covert** observations of places and persons for the purpose of obtaining information (Dempsey, 2003). The term covert infers that the operative conducting the surveillance is **discreet and secretive**. Surveillance that maintains a concealed, hidden, undetected nature clearly has the greatest chance of success because the subject of the surveillance will act or perform naturally. Remaining undetected during covert surveillance work often involves physical fatigue, mental stress, and very challenging situations. Physical discomfort is an unfortunate reality for investigators, which varies from stinging perspiration in summer to hard shivers during the winter.

Violation – the aff curtails surveillance that is not covert

Reasons to prefer –

a) Limits—allowing the ending of public surveillance explodes the limits of the topic by allowing affirmatives that deal with programs that have known surveillance like detention facilities

b) Ground—covert surveillance key to neg ground like terrorism and politics disads

Voting issue for competitive equity

2nc Covert Extensions

Surveillance must be covert

IJ 98

(Info Justice, OPERATIONS, SURVEILLANCE AND STAKEOUT PART 1, http://www.infojustice.com/samples/12%20Operations,%20Surveillance%20And%20Stakeout%20Part%201.html)

Surveillance is defined as the systematic observation of persons, places, or things to obtain information. Surveillance is carried out **without** the knowledge of those under surveillance and is concerned primarily with people.

Even the broadest definition doesn't include information provided with consent

Pounder 9 – PhD, Director, Amberhawk Training and Amberhawk Associates

(Chris, "NINE PRINCIPLES FOR ASSESSING WHETHER PRIVACY IS PROTECTED IN A SURVEILLANCE SOCIETY," Scholar)

This paper uses the term "surveillance" in its widest sense to include data sharing and the revealing of identity information in the **absence of consent** of the individual concerned. It argues that the current debate about the nature of a "surveillance society" needs a new structural framework that allows the benefits of surveillance and the risks to individual privacy to be properly balanced.

T – Domestic Surveillance

1NC

1. Domestic surveillance is information gathering on US persons

IT Law Wiki 15 IT Law Wiki 2015 http://itlaw.wikia.com/wiki/Domestic_surveillance

Definition Edit

Domestic surveillance is the acquisition of nonpublic information concerning United States persons.

2. That means citizens, corporations, or legal resident aliens – the aff violates because the United States jails noncitizens

Jackson et al 9 Brian A. Jackson, Darcy Noricks, and Benjamin W. Goldsmith, RAND Corporation

The Challenge of Domestic Intelligence in a Free Society RAND 2009 BRIAN A. JACKSON, EDITOR

http://www.rand.org/content/dam/rand/pubs/monographs/2009/RAND_MG804.pdf

3 Federal law and executive order define a U.S. person as "a citizen of the United States, an alien lawfully admitted for permanent residence, an unincorporated association with a substantial number of members who are citizens of the U.S. or are aliens lawfully admitted for permanent residence, or a corporation that is incorporated in the U.S." (NSA, undated). Although this definition would therefore allow information to be gathered on U.S. persons located abroad, our objective was to examine the creation of a domestic intelligence organization that would focus on—and whose activities would center around—individuals and organizations located inside the United States . Though such an agency might receive information about U.S. persons that was collected abroad by other intelligence agencies, it would not collect that information itself.

3. Body cavity searches are not data collection

Marx 5 (Gary T. Marx is Professor Emeritus from M.I.T. He has worked in the areas of race and ethnicity, collective behavior and social movements, law and society and surveillance studies. Marx was named the American Sociological Association's Jensen Lecturer for 1989-1990. He received the Distinguished Scholar Award from its section on Crime, Law and Deviance, the Silver Gavel Award from the American Bar Association, the Bruce C. Smith Award for research achievement, the W.E.B. Dubois medal, the Lifetime Achievement Award from the Society for the Study of Social Problems, and the inaugural Outstanding Achievement Award from the Surveillance Studies Network. In 1992 he was the inaugural Stice Memorial Lecturer in residence at the University of Washington and he has been a UC Irvine Chancellor's Distinguished Fellow, the A.D. Carlson Visiting Distinguished Professor in the Social Sciences at West Virginia University, and the Hixon-Riggs Visiting Professor of Science, Technology and Society at Harvey Mudd College. Major works in progress are books on new forms of surveillance and social control across borders. He received his Ph.D. from the University of California at Berkeley, "Soft Surveillance: Mandatory Voluntarism and the Collection of Personal Data", University of Pennsylvania press, Dissent, Volume 52, Number 4, Fall 2005 (whole No. 221), http://muse.jhu.edu/journals/dissent/v052/52.4.marx.pdf, p.36-37) //RL

IN TRURO, MASSACHUSETTS, at the end of 2004, police politely asked all male residents to provide a DNA sample to match with DNA material found at the scene of an unsolved murder. Residents were approached in a non-threatening manner and asked to help solve the crime. **This tactic** of rounding up all the usual suspects and then some is still rare in the United States for historical, legal, and logistical reasons, but it **is becoming more common**. The Truro case illustrates **expanding trends in surveillance and social control**. There is increased reliance on "soft" means for collecting personal information. In criminal justice contexts these means involve some or all of the following: persuasion to gain voluntary compliance, universality or at least increased inclusiveness, and emphasis on the needs of the community relative to the rights of the individual. As with other new forms of surveillance and detection, the process of gathering the DNA information is quick and painless, involving a mouth swab, and is generally not felt to be invasive. This makes such requests seem harmless relative to the experience of having blood drawn, having an observer watch while a urine drug sample is produced, or being patted down or undergoing a more probing physical search. **In contrast, more traditional police methods, such as an arrest, a custodial interrogation, a search, a subpoena, or traffic stop, are "hard**." They involve coercion and threat to gain involuntary compliance. **They may also involve a crossing of intimate personal borders, as with a strip or body-cavity search.** In principle such means are restricted by law and policy to persons there are reasons to suspect, and thus they implicitly recognize the liberty of the individual relative to the needs of the community. Yet the culture of social control is changing. Hard forms of control are not receding, but soft forms are expanding. I note several forms of this, from requesting volunteers based on appeals to good citizenship or patriotism to using disingenuous communication to profiling based on lifestyle and consumption to utilizing hidden or low-visibility, information collection techniques

3. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE. Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Unlimits the topic to surveillance of literally anything because they make the “domestic” and “surveillance” limits meaningless.

4. T IS A VOTER because preparation fosters good debate

2NC Not US Persons

Tens of thousands of US prisoners are noncitizens

USDOJ 14 (E. Ann Carson, PhD, US Department of Justice Bureau of Justice Statistics Statistician, “Prisoners in 2013”, USDOJBOJ, September 30th, 2014, http://www.bjs.gov/content/pub/pdf/p13.pdf) //RL

Fewer youth held in the custody of adult prisons in 2013¶ States held 1,200 youth (inmates age 17 or younger) in adult¶ prison facilities at yearend 2013, a 69% decrease from 2000,¶ when NPS began asking states for data on these inmates¶ (figure 2). Prisoners age 17 or younger comprised less than a¶ tenth of a percent of inmates held in state prison facilities in¶ 2013 (0.09%). The majority of these inmates (96%) were males,¶ and 23% (275 inmates) were held in Florida and New York¶ (table 18). Other states with large counts of prisoners age 17 or¶ younger held in adult facilities include Georgia (92 inmates),¶ Connecticut (88), Michigan (73), Texas (69), and Illinois and¶ North Carolina (68 inmates each).¶ The BOP does not house inmates age 17 or younger in its¶ general prison population. Instead, these prisoners are held in¶ separate contract facilities, and some are under the jurisdiction¶ of U.S. probation but in the custody of the BOP. The number of¶ youth in BOP contract facilities has only been captured from¶ 2005 forward but has decreased 58% over this period. Similar¶ to the youngest inmates in the state prison population, federal¶ prisoners age 17 or younger comprise a small fraction of the¶ total BOP population (0.04%).¶ **At yearend 2013, the BOP had custody of 25,800 inmates¶ it identified as noncitizens, 35% of the total number of¶ reported noncitizens held in prisons.** Because some states¶ define noncitizens as those born outside the U.S. regardless¶ of current citizenship status, caution should be used in¶ making comparisons across jurisdictions. Texas, Florida,¶ Arizona, and New York reported the largest populations of¶ noncitizen inmates in custody on December 31, 2013. Of those¶ prisoners identified by the states and BOP as noncitizens,¶ 4% (3,400 inmates) were females.

T – Its

1NC

1. Federal means the national government, not the states

DGP 98 (Dictionary of Government and Politics 1998, Ed. P.H. Collin, p. 116)

federal ['federal] adjective (a) referring to a system of government in which a group of states are linked together in a federation; a federal constitution = constitution (such as that in Germany) which provides for a series of semi-autonomous states joined together in a national federation (b) referring especially to the federal government of the United States; federal court or federal laws = court or laws of the USA, as opposed to state courts or state laws.

2. Violation – state and local prisons house most of the incarcerated people in America and the federal government doesn't have jurisdiction over them – at best, the aff is FXT

Piecora 14 (JURIST Guest Columnist Christina Piecora, St. John's University School of Law, Class of 2015, is the author of the first article in a twelve-part series from the staffers of the Journal of Civil Rights and Economic Development, "Female Inmates and Sexual Assault", JURIST.ORG, http://jurist.org/dateline/2014/09/christina-piecora-female-inmates.php) //RL

Another reason for the high incidence of prison sexual assault is the limited oversight of state prisons. Recently the federal government made history by passing the Prison Rape Elimination Act (PREA). The PREA implemented national standards for the detection, prevention and punishment of prison rape. However, **the PREA standards only apply federally. Thus, because state and local facilities confine the majority of inmates, most inmates are not protected by the PREA standards.**

3. Limits – allowing state and locality affs justifies tangential topicality and makes the topic mammoth –take a stand at camp to save the negative research burden because there's no way we can prepare for that limits explosion – that's a voter for fairness and education

5. FXT – a plan must be topical in and of itself; the affirmative cannot pick and choose a possible consequence of the plan's action – this is a central standard of debate and is a voter for fairness because the negative cannot rebut an effects link chain

6. T IS A VOTER because preparation fosters better debate

2NC

State prisons house the majority of America's incarcerated population and specifically have some of its worst sexual assault problems – either the aff doesn't solve or it's extra-topical

Piecora 14 (JURIST Guest Columnist Christina Piecora, St. John's University School of Law, Class of 2015, is the author of the first article in a twelve-part series from the staffers of the Journal of Civil Rights and Economic Development, "Female Inmates and Sexual Assault", JURIST.ORG, http://jurist.org/dateline/2014/09/christina-piecora-female-inmates.php) //RL

Males are the perpetrators in 98 percent of staff-on-inmate sexual assault (PDF] of female inmates. Forty-one percent of guards in the average state female correctional center are male, a job that entitles them to perform strip searches and have access to prisoners in their most vulnerable states. Therefore, although women comprise only 7 percent of the state prison population, they comprise 46 percent of sexual abuse victims. Male prison officials not only use force and violence to commit sexual assault against female prisoners but also use their positions to coerce, threaten and intimidate inmates into sexual activity. Thousands of documented accounts exist of prison staff demanding sex in exchange for drugs, favors and access to educational programs. Similarly, prison officials often use threats of going to the parole board with false reports of bad behavior, planting drugs on prisoners or withholding basic necessities such as feminine hygiene products or visitation with children if inmates do not perform sexual acts. While these acts are repugnant, prison officials are not the only perpetrators of sexual assault against female inmates.¶ The rate of inmate-on-inmate sexual victimization [PDF] is at least 3 times higher for females (13.7%) than males (4.2%). This has been attributed to the fact that a majority of prison officials do not view female-on-female sexual assault as "true rape," making them less likely to reprimand inmates. Furthermore, as the female prison population has grown at a dramatic rate, states have been unable to keep up. Therefore, female prison facilities tend to be overcrowded and poorly designed, making them difficult to police.¶ In addition to cross-gender supervision and poorly designed facilities, prison sexual assault against females is prevalent because little punishment exists to deter perpetrators. Victims are often blocked from bringing charges against prison staff who were either complacent or the culprits in their attacks by the Prison Litigation Reform Act (PLRA). The PLRA requires prisoners to exhaust all administrative remedies before they are allowed to file suit in federal court to challenge prison abuses. For victims this means that they must report their abuse to the very people committing or facilitating that abuse. Thus, inmates who complained of staff sexual misconduct were punished 46.3 percent of the time.¶ Additionally, victims must meet an incredibly high burden of proof to substantiate a constitutional claim. The Eighth Amendment establishes the right to be free from cruel and unusual punishment. However, for victims to establish a violation of their Eighth Amendment rights they must prove that the prison official had a "seriously culpable state of mind" by satisfying the subjective deliberate indifference test. The test requires that the prison official must (1) "both be aware of facts from which the inference could be drawn that a substantial risk of serious harm exists" and (2) "also draw the inference." For victims, the difficulty lies in proving

that prison administrators were aware of the risk and ignored it. In applying the test courts have severely limited the liability of prison officials.

Queer Pessimism

1NC

Prison reforms continue the violent policing of gender and sexuality by the state while neglecting to bring the failings of the system to the forefront of their work. The law does not treat everyone equally and it never will absent the destruction of the state.

Ware 11 (Ware, Wesley [Wesley Ware is the founder of BreakOUT!, a project of the Juvenile Justice Project of Louisiana (JJPL) that fights for justice for lesbian, gay, bisexual, transgender, and queer/questioning youth in the juvenile justice system and the author of the recently released report, Locked Up & Out: Lesbian, Gay, Bisexual, and Transgender Youth in Louisiana's Juvenile Justice System. Wes serves on the Advisory Board for the Equity Project, a national initiative to bring fairness and equity to LGBT youth in juvenile delinquency courts. At JJPL, he coordinated the investigation for a class-action lawsuit on behalf of youth detained in an abusive youth jail in New Orleans and monitors the conditions of three state-run youth prisons in Louisiana.]. 2011 "Rounding Up the Homosexuals: The Impact of Juvenile Court on Queer and Trans/Gender-Non-Conforming Youth" in "Captive Genders: Trans Embodiment and the Prison Industrial Complex" Pg. 77 (Eds. Smith & Stanley) 2011 AK press. Accessed: 7/17/2015. http://theloon2013.wikispaces.com/file/view/Stanley-Eric-Captive-Genders-Trans-Embodiment-and-Prison-Industrial-Complex.pdf)//ALepow

However, with the juvenile justice system's intent to provide "treatment" to young people, many queer/trans youth inherit the ideology that they are "wrong" or in need of "curing," as evidenced by their stories. As sexual and gender transgressions have been deemed both illegal and pathological, queer and trans youth, who are some of the most vulnerable to "treatments," are not only subjected to incarceration but also to harassment by staff, conversion therapy, and physical violence.6 Moreover, with the juvenile justice system often housed under the direct authority of state correctional systems and composed of youth referred directly from state police departments, it should not be surprising that young people locked up in the state juvenile system, 80 percent of whom are black in Louisiana,7 are often actually destroyed by the very system that was created to intervene. Worse than just providing damaging outcomes for youth once they are incarcerated, this rehabilitative system funnels queer and trans/gendernon-conforming youth into the front doors of the system. Non-accepting parents and guardians can refer their children to family court for arbitrary and subjective behaviors, such as being "ungovernable."8 Police can bring youth in for status offenses, offenses for which adults cannot be charged, which often become contributing factors to the criminalization of youth. Charges can range from truancy to curfew violations to running away from home. Like in the adult criminal justice system, queer and trans youth can be profiled by the police and brought in for survival crimes like prostitution or theft. Youth may be referred for self-defense arising from conflict with hostile family members or public displays of affection in schools that selectively enforce policies only against queer and trans youth. Although youths' rights were greatly expanded in 1967 when the Supreme Court decided that the juvenile system was not operating according to its original intent,9 youth continue to struggle in the courts with fewer protections than adults. Defense lawyers for youth, who are sometimes the only advocates young people have in court, have at times confused their role, advocating for what they believe to be the "best interest" of the youth rather than defending their client's "expressed interest." Juvenile court judges with little accountability have similarly expanded their role with the intent to provide services, through incarceration, to every youth that comes through their courtrooms. In this effort to rehabilitate "deviant" children and without the right to a jury trial for delinquent offenses, the issue of guilt versus innocence can fall to the wayside. Further aggravated by the public's fear of youth sexuality and

our desire to control 80 young people and their bodies, juvenile court presents a unique opportunity to destroy the lives of queer and trans/gender-non-conforming youth. The agenda of juvenile court then, for queer and trans youth at least, often becomes to "rehabilitate" youth into fitting heteronormative and gendertypical molds. Guised under the "best interest of the child," the goal often becomes to "protect" the child—or perhaps society—from gender-variant or non-heterosexual behavior. While not as explicit as the sumptuary laws (laws requiring people to wear at least three items of gender-appropriate clothing) or sodomy laws of the past that led to the Compton's Riots and Stonewall Rebellion, the policing of sexuality and state regulation of gender has continued to exist in practice—perhaps nowhere more than in juvenile courts. In many ways, the system still mirrors the adult criminal justice system, whose roots can be traced to slavery, the commodification of bodies as free labor, institutionalized racism, and state regulation of low-income people of color, immigrants, and anyone deemed otherwise "deviant" or a threat to the political norm. Combined with the Puritan beliefs that helped spark the creation of juvenile courts, it becomes clear that, borrowing the words of Audre Lorde, queer and trans youth of color "were never meant to survive." In fact, one youth in a Louisiana youth prison responded to the number of queer and trans youth incarcerated by stating, "I'm afraid they're rounding up the homosexuals." Once locked up, queer and trans youth experience the same horrors that their adult counterparts in the system do, but magnified by a system designed to control, regulate, and pathologize their very existence. In Louisiana's youth prisons, queer and trans youth have been subjected to "sexual-identity confusion counseling," accused of using "gender identity issues" to detract from their rehabilitation, and disciplined for expressing any gender-non-conforming behaviors or actions. Youth are put on lockdown for having hair that is too long or wearing state-issued clothing that is too tight. They are instructed how to walk, talk, and act in their dorms and are prohibited from communicating with other queer youth lest they become too "flamboyant" and cause a disturbance. They are excessively punished for consensual same-sex behavior and spend much of their time in protective custody or in isolation cells. In meetings with representatives from the Juvenile Justice Project of Louisiana, directors of youth jails have referred to non-heterosexual identities as "symptoms" and have conflated youth adjudicated for sex offenses with youth who are queer. In addition, 81 when advocates asked what the biggest problem was at a youth prison in Baker, Louisiana, guards replied, "the lesbians." Even more troubling, unlike the adult criminal justice system where individuals either "ride out their time" or work toward "good time" or parole, youths' privileges in prison and eventual release dates are often determined by their successful completion of their rehabilitative programming, including relationships with peers and staff. Thus, youth who are seen as "deviant" or "mentally ill," or who otherwise do not conform to the rules set forth by the prison, often spend longer amounts of time incarcerated and are denied their opportunity for early release. For queer and trans/gender-non-conforming youth, this means longer prison terms. In fact, in the last four years of advocacy on behalf of queer and trans youth in prison in Louisiana at the Juvenile Justice Project of Louisiana, not one openly queer or trans youth has been recommended for an early release by the Office of Juvenile Justice. While protections afforded to youth in the juvenile justice system like a greater right to confidentiality are extremely important for youth, they can also be another strike against queer and trans youth seeking to access resources or support networks while inside. Like queer and trans adults in

the criminal justice system who have difficulty receiving information that "promotes homosexuality," youth are unable to access affirming information during a particularly formative time in their lives, which can already be plagued with confusion and questioning. The right to confidentiality for youth in prison can result in their being prohibited from communicating with pen pals or seeking services from community organizations. Other rights are afforded to adults but not to minors, such as accessing legal counsel to challenge the conditions of their confinement. Youth under 18 must rely on their guardians to assist with filing a civil complaint, despite the fact that many queer and trans youth have had difficulty with their families prior to their incarceration—and that those family members may have contributed to their entering into the system in the first place. This barrier also holds true for transgender youth who are minors and seeking healthcare or hormones. These youth may need the approval from a guardian or judge in order to access these services—or approval from a guardian in order to file a civil complaint to request them. Meanwhile, as state institutions are placing queer and trans/gendernon-conforming youth behind bars and effectively silencing their voices, prominent gay activists are fighting for inclusion in the very systems that criminalize youth of color (such as increased sentencing for hate crimes) 82 under the banner of "we're just like everybody else." A far stray from the radicalism of the early gay rights movement, mainstream "gay issues" have become focused on the right to marry and "don't ask, don't tell" policies in the military, despite the fact that queer youth of color have consistently ranked these at the bottom of their list of priorities of issues that impact their lives.10 Likewise, the public "face of gay" as white, middle-class men has become a further detriment to queer and trans youth in prison, particularly in the South where queer youth of color are often not "out," and individuals, like in all areas of the country, have difficulty discussing the two issues at the center: race and sexuality.11 As a result of the invisibility of so many incarcerated queer and trans youth, especially youth of color, juvenile justice stakeholders in the South often mistake queer and trans youth to be white, vulnerable youth usually charged with a sex offense, if they acknowledge them at all. As a result, they assume that any concern for these youth to be coming from white advocates who believe that queer and trans youth have been funneled into a system made for "poor black children;" in other words, into a system that is "OK for some children, but not for others." We must be clear about why we do this work—it is not because some children belong locked away at night and others do not—it is because no child should be behind bars. Further, the data tells us that queer and trans youth in detention are equally distributed across race and ethnicity, and comprise 15 percent of youth in detention centers. So far, the data has been consistent among youth in different regions in the United States, including the rural South.12 Since queer and trans youth are overrepresented in nearly all popular feeders into the juvenile justice system—homelessness, difficulty in school, substance abuse, and difficulty with mental health13—the same societal ills, which disproportionately affect youth of color—it should not be surprising that they may be overrepresented in youth prisons and jails as well. Since incarcerated youth have so few opportunities to speak out, it is critically important for individuals and organizations doing this work to keep a political analysis of the failings of the system at the forefront of the work—particularly the inherent racial disparities in the system—while highlighting the voices of those youth who are most affected and providing vehicles through which they can share their stories. Despite the targeting and subsequent silencing of queer and trans/ gender-non-conforming

youth in youth prisons and jails across Louisiana, young people have developed creative acts of resistance and mechanisms 83 for self-preservation and survival. By failing to recognize the ways that young people demonstrate their own agency and affirm each other, we risk perpetuating the idea of vulnerable youth with little agency; victims rather than survivors and active resisters of a brutal system. Perhaps the most resilient of all youth in prison in Louisiana, incarcerated queer and trans youth have documented their grievances, over and over again, keeping impeccable paper trails of abuse and discrimination for their lawyers and advocates. When confronted by the guards who waged wars against them, one self-identified gay youth let it be known, "You messin' with the wrong punk." Although prohibited from even speaking publicly with other queer youth in prison, queer and trans youth have formed community across three youth prisons in the state, whispered through fences, and passed messages through sympathetic staff. They have made matching bracelets and necklaces for one another, gotten each other's initials tattooed on their bodies, and written letters to each other's mothers. They have supported each other by alerting advocates when one of them was on lockdown or in trouble and unable to call**.** Trans-feminine youth have gone to lockdown instead of cutting their hair and used their bed sheets to design curtains for their cells once they got there. They have smuggled in Kool-Aid to dye their hair, secretly shaved their legs, colored their fingernails with markers, and used crayons for eye shadow. When a lawyer asked her trans-masculine client to dress more "feminine" for court, knowing that the judge was increasingly hostile toward gender-non-conforming youth, her client drew the line at the skirt, fearlessly and proudly demanding that she receive her sentence in baggy pants instead. Queer and trans/gender-non-conforming youth have made us question the very purpose of the juvenile justice system and holding them behind bars in jails and prisons made for kids. By listening to their voices it becomes apparent that until we dismantle state systems designed to criminalize and police young people and variant expressions of gender and sexuality, none of us will be free. And to my younger client recently released from a youth prison, yes, the world is more beautiful now. Welcome home.

Violence against queerness results in the annihilation of identity—this is a form of soul murder

Yep, Lovaas, and Elia 03 Professors, San Francisco University (Gust, Karen, and John, Journal of Homosexual Studies, Vol. 45, No. 2/3/4, pp. 18,)

These are the internal injuries that individuals inflict upon themselves. Very early in life children learn from interpersonal contacts and mediated messages that deviations from the heteronormative standard, such as homosexuality, are anxiety-ridden, guilt-producing, fear-inducing, shame-invoking, hate-deserving, psychologically blemishing, and physically threatening. Internalized homophobia, in the form of self-hatred and self-destructive thoughts and behavioral patterns, becomes firmly implanted in the lives and psyches of individuals in heteronormative society. Exemplifying the feelings and experiences of many people who do not fit in the heteronormative mandate, Kevin Jennings (1994) tells us his personal story: I was born in 1963. . . . [I] realized in grade school that I was gay. I felt absolutely alone. I had no one to talk to, didn't know any openly gay people, and saw few representations of gays in the media of the 1970s. I imagined gay people were a tiny, tiny minority, who had been and would always be despised for their "perversion." Not once in high school did I ever learn a single thing about homosexuality or gay people. I couldn't imagine a happy life as a gay man. So I withdrew from my peers and used alcohol and drugs to try to dull the pain of my isolation. Eventually, at age seventeen I tried to kill myself, like one out of every three gay teens. I saw nothing in my past, my present, or (it seemed) my future suggesting that things would ever get any better. (pp. 13-14) Heteronormativity is so powerful that its regulation and enforcement are carried out by the individuals themselves through socially endorsed and culturally accepted forms of soul murder. Soul murder is a term that I borrow from the child abuse and neglect literature to highlight the torment of heteronormativity (Yep, 2002). Shengold (1999) defines soul murder as the "apparently willful abuse and neglect of children by adults that are of sufficient intensity and frequency to be traumatic . . . [so that] the children's subsequent emotional development has been profoundly and predominantly negatively affected" (p. 1). Further explaining this concept, Shengold (1989) writes, "soul murder is neither a diagnosis nor a condition. It is a dramatic term for circumstances that eventuate in crime–the deliberate attempt to eradicate or compromise the separate identity of another person" (p. 2, my emphasis). Isn't the incessant policing and enforcement, either deliberately or unconsciously, by self and others, of the heteronormative mandate a widespread form of soul murder?

The alternative is to burn this world to the ground—we must rage against systems of normativity

Mary Nardini Gang 09 (Mary Nardini Gang [The Mary Nardini Gang are criminal queers from Milwaukee, Wisconsin.]. "Toward the Queerest Insurrection." Queer Jihad, 2009. http://zinelibrary.info/files/QueerestImposed.pdf)//ALepow

Some will read "queer" as synonymous with "gay and lesbian" or "LGBT". This reading falls short. While those who would fit within the con- structions of "L", "G", "B" or "T" could fall with- in the discursive limits of queer, queer is not a stable area to inhabit. Queer is not merely another identity that can be tacked onto a list of neat social categories, nor the quantitative sum of our identities. Rather, it is the qualitative position of opposition to presentations of stability - an identity that problematizes the manageable limits of identity. Queer is a territory of tension, defined against the dominant narrative of white-hetero-monogamous-patriarchy, but also by an affinity with all who are marginalized, otherized and oppressed. Queer is the abnormal, the strange, the dangerous. Queer involves our sexuality and our gender, but so much more. It is our desire and fantasies and more still. Queer is the cohesion of everything in conflict with the heterosexual capitalist world. Queer is a total rejection of the regime of the Normal. As queers we understand Normalcy. Normal, is the tyranny of our condition; reproduced in all of our relationships. Normalcy is violently reiterated in every minute of every day. We understand this Normalcy as the Totality. The Totality being the interconnection and overlap- ping of all oppression and misery. The Totality is the state. It is capitalism. It is civilization and empire. The totality is fence-post crucifixion. It is rape and murder at the hands of police. It is "Str8 Acting" and "No Fatties or Femmes". It is Queer Eye for the Straight Guy. It is the brutal lessons taught to those who can't achieve Normal. It is every way we've limited ourselves or learned to hate our bodies. We understand Normalcy all too well. When we speak of social war, we do so because purist class analysis is not enough for us. What does a marxist economic worldview mean to a survivor of bashing? To a sex work- er? To a homeless, teenage runaway? How can class analysis, alone as paradigm for a revolution, promise liberation to those of us journeying beyond our assigned genders and sexualities? The Proletariat as revolutionary subject marginalizes all whose lives don't fit in the model of heterosexual-worker. We must create space wherein it is possible for desire to flourish. This space, of course, requires conflict with this social order. To de- sire, in a world structured to confine desire, is a tension we live daily. We must understand this tension so that we can become powerful through it - we must understand it so that it can tear our confinement apart. This terrain, born in rupture, must challenge oppression in its entirety. This of course, means total negation of this world. We must become bodies in revolt. We need to delve into and indulge in power. We can learn the strength of our bodies in struggle for space for our desires. In desire we'll find the power to destroy not only what destroys us, but also those who aspire to turn us into a gay mimicry of that which destroys us. We must be in

conflict with regimes of the normal. This means to be at war with everything. If we desire a world without restraint, we must tear this one to the ground. We must live be- yond measure and love and desire in ways most devastating. We must come to understand the feeling of social war. We can learn to be a threat, we can become the queerest of insurrections.

Our discursive record of violence done against prisoners produces an epistemology that haunts the neoliberal-carceral state's legalistic discourse of "freedom" and "justice" even beyond a court decision – any legalistic attempt to bracket our discussion is the same political move that allows the law to possess and legitimize the violence of the carceral state.

Dillon 13 (Stephen, "Fugitive Life: Race, Gender, and the Rise of the Neoliberal-Carceral State," May 2013, Stephen Dillon, assistant professor of Queer Studies, holds a B.A. from the University of Iowa and a Ph.D. in American Studies with a minor in Critical Feminist and Sexuality Studies from the University of Minnesota.//RJ)

Many accounts of sexual violence committed against women in prison concern exceptional cases where a guard violated the law or other inmates perpetrate the violation. In this the case, **sexual violence was performed by the state in the name of the safety of the state**. As the captain put it, the state simply has the right to sexually assault those in their custody. Whether the cavity search is authorized by the consent of the prisoner or not, **consent is not available to the captive who is always already subject to the systems of violence and force available to the prison.** As Angela Davis observes, **if strip searches and cavity searches were performed by men** in plain clothes **on the street,** there would be no question that an act of sexual violence was taking place.515 Yet, **the body of the prisoner is ontologically a threat to the state and the public, and thus violence performed on the captive body preempts the violence the prisoner is perpetually waiting to unleash**. Simply, a rape is not a rape—it is safety and security. This particular act of state violence did not occur because prisoners are "juridical non-people" as Dylan Rodríguez would have it.516 Instead, sexual violence was authorized and performed by the law and through the law. The women were even given the non-choice of signing a legal document authorizing the terror that was coming regardless of their forced consent. Torres and Rosenberg were viewed as legal subjects who could authorize their own violation. For example, when Amnesty International wrote the FBP about the assault, the Associate Director responded: Regarding the particular search conducted of Ms. Torres and Susan Rosenberg prior to their transfer to Lexington, our careful review indicates that the search was not punitive nor outside of agency policy. This very isolated occurrence involved a search that was performed in a professional manner by a qualified physician's assistant.517 The sexual assault was the law, policy, and procedure of the prison. It was professional and part of the larger system of the prison's humane care of the prisoner. Like the unimaginable violence at Guantánamo, the women at Lexington were not beyond the safety of the law—they were **possessed by it.** Rosenberg countered state violence and terror: "I found a new way to survive by reading and writing and thinking with purpose."518 Her lawyer told her to write down the forms of violation, pain, and horror that were too numerous to catalogue during their visits, were so unimaginable they could not be conveyed by speech, or were simply unspeakable. Rosenberg's lawyer framed this process as building an archive that would contradict the state's account of Lexington and thus

would produce a different conception of the truth. Rosenberg writes: "Write it down, for the record. I half believed that keeping a record was a futile effort, and she half believed it would be of use in fighting for justice, but that sentence became a signal between us, a way to reference acts of violence too difficult to discuss."519 **The "record" in this formulation was a legal account that could potentially contest the state in court, but it was also an alternative record of events that could live on in places and times beyond the state's determination of what is real and true.** In this way, **writing became a way of producing an epistemology that haunts the neoliberal-carceral state's discourses of freedom, equality, and justice.** Writing became a way to document the violence of the law—violence the law itself could not register.

The Prison industrial Complex operates far beyond the walls of the prison to capture queerness. And it isn't broken its working well – endless cycles of reform make a façade of freedom while simultaneously reproducing the cycle of anti-queer violence that happens within it.

Stanley 11 – (Eric A., Ph.D. in History of Consciousness, UC Santa Cruz, UC President's Postdoctoral Fellow at UCSD edited by Eric A. Stanley and Nat Smith, *Captive Genders: Trans Embodiment and the Prison Industrial Complex*)

Trans/gender-non-conforming and queer people, along with many others, are born into webs of surveillance. The gendering scan of other children at an early age ("Are you a boy or a girl?") places many in the panopticon long before they enter a prison. For those who do trespass the gender binary or heteronormativity, physical violence, isolation, detention, or parental disappointment become some of the first punishments. As has been well documented, many trans and queer youth are routinely harassed at school and kicked out of home at young ages, while others leave in hopes of escaping the mental and physical violence that they experience at schools and in their houses. Many trans/queer youth learn how to survive in a hostile world. Often the informal economy becomes the only option for them to make money. Selling drugs, sex work, shoplifting, and scamming are among the few avenues that might ensure they have something to eat and a place to sleep at night. Routinely turned away from shelters because of their gender presentation, abused in residential living situations or foster care, and even harassed in "gay neighborhoods" (as they are assumed to drive down property values or scare off business), they are reminded that they are alone. Habitually picked up for truancy, loitering, or soliciting, many trans/queer people spend their youth shuttling between the anonymity of the streets and the hyper-surveillance of the juvenile justice system. With case managers too overloaded to care, or too transphobic to want to care, they slip through the holes left by others. Picked up—locked up—placed in a home—escape—survive—picked up again. The cycle builds a cage, and the hope for anything else disappears with the crushing reality that their identities form the parameters of possibility.10 With few options and aging-out of what little resources there are for "youth," many trans/queer adults are in no better a situation. Employers routinely don't hire "queeny" gay men, trans women who "cannot pass," butches who seem "too hard," or anyone else who is read to be "bad for business." Along with the barriers to employment, most jobs that are open to folks who have been homeless or incarcerated are minimum-wage and thus provide little more than continuing poverty and fleeting stability. Back to where they began—on the streets, hustling to make it, now older—they are often given even longer sentences. While this cycle of poverty and incarceration speaks to more current experiences, the discursive drives building their motors are

nothing new. Inheriting a long history of being made suspect, trans/queer people, via the medicalization of trans identities and homosexuality, have been and continue to be institutionalized, forcibly medicated, sterilized, operated on, shocked, and made into objects of study and experimentation. Similarly, the historical illegality of gender trespassing and of queerness have taught many trans/queer folks that their lives will be intimately bound with the legal system. More recently, the HIV/AIDS pandemic has turned the surveillance technologies inward. One's blood and RNA replication became another site of susceptibility that continues to imprison people through charges of bio-terrorism, under AIDS-phobic laws. Living through these forms of domination are also moments of devastating resistance where people working together are building joy, tearing down the walls of normative culture, and opening space for a more beautiful, more lively, safer place for all. Captive Genders remembers these radical histories and movements as evidence that our legacies are fiercely imaginative and that our collective abilities can, and have, offered freedom even in the most destitute of times.11 In the face of the overwhelming violence of the PIC, abolition—and specifically a trans/queer abolition—is one example of this vital defiance. An abolitionist politic does not believe that the prison system is "broken" and in need of reform; indeed, it is, according to its own logic, working quite well. Abolition necessarily moves us away from attempting to "fix" the PIC and helps us imagine an entirely different world—one that is not built upon the historical and contemporary legacies of the racial and gendered brutality that maintain the power of the PIC. What this means is that abolition is not a response to the belief that the PIC is so horrible that reform would not be enough. Although we do believe that the PIC is horrible and that reform is not enough, abolition radically restages our conversations and our ways of living and understanding as to undo our reliance on the PIC and its cultural logics. For us, abolition is not simply a reaction to the PIC but a political commitment that makes the PIC impossible. To this end, the time of abolition is both yet to come and already here. In other words, while we hold on to abolition as a politics for doing anti-PIC work, we also acknowledge there are countless ways that abolition has been and continues to be here now. As a project dedicated to radical deconstruction, abolition must also include at its center a reworking of gender and sexuality that displaces both heterosexuality and gender normativity as measures of worth.12

The law has been historically used to criminalize queer, Trans*, and gender non-conforming bodies. Reforms are unable to solve for the underlying hetero and cis normative roots of the prison industrial complex and merely result in the continuation of an unethical system

Lamble 11 (Lamble, S. [S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. Lamble currently teaches at Birkbeck Law School, University of London and is a founding member of the Bent Bars Project, a collective which coordinates a letter writing program for queer, Trans and gender-non-conforming prisoners in Britain.]. 2011 "Transforming Carceral Logics: 10 Reasons to Dismantle the Prison Industrial Complex Through Queer/Trans Analysis and Action" in "Captive Genders: Trans Embodiment and the Prison Industrial Complex" Pg. 235 (Eds. Smith & Stanley) 2011 AK press. Accessed: 7/17/2015. http://theloon2013.wikispaces.com/file/view/Stanley-Eric-Captive-Genders-Trans-Embodiment-and-Prison-Industrial-Complex.pdf)//ALepow

1. Queer, trans, and gender-non-conforming people have been historically subject to oppressive laws, gender policing, and criminal punishment—a legacy that continues today despite ongoing legal reforms. Law enforcement officials (including police, courts, immigration officers, prison guards, and other state agents) have a long history of targeting, punishing, and criminalizing sexual dissidents and gender-non-conforming people.12 While many overtly homophobic and transphobic laws have been recently overturned in Canada, the United States, and Britain, the criminalization

and punishment of queer and trans people extends well beyond formal legislation.13 State officials enable or participate in violence against queer, trans, and gender-non-conforming communities by (a) ignoring everyday violence against queer and trans people; (b) selectively enforcing laws and policies in transphobic and homophobic ways; (c) using discretion to over-police and enact harsher penalties against queer and trans people; and (d) engaging in acts of violence, harassment, sexual assault, and discrimination against queer and trans people.14 While some police departments are increasingly putting on a "gay-positive" public face, the problem of state violence against queer and trans people nonetheless persists and has been well documented by numerous police- and prison-monitoring groups.15 This ongoing legacy of violence should make queer and trans people both cautious of the state's power to criminalize our lives and wary of the state's claim to protect us from harm. Although some people believe that we can train transphobia out of law enforcement agents or eliminate homophobic discrimination by hiring more LGBT prison guards, police, and immigration officials, such perspectives wrongly assume that discrimination is a "flaw" in the system, rather than intrinsic to the system itself. Efforts to make prison and police institutions more "gay-friendly" perpetuate the myth that such systems are in place to protect us. But as the uneven history of criminalization trends in Canada, the United States, and Britain so clearly demonstrate (that is, the way that the system targets some people and not others), the prison industrial complex is less about protecting the public from violence and more about controlling, labeling, disciplining, Captive Genders 240 and in some cases killing particular groups of people—especially those who potentially disrupt the social, economic, and political status quo.16 While the state might stop harassing, assaulting, and criminalizing some people within queer and trans communities (namely those upwardly mobile, racially privileged, and property-owning folks), the criminal system will continue to target those within our communities who are deemed economically unproductive, politically threatening, or socially undesirable. As people who have historically been (and continue to be) targeted by this unjust system, queer, trans, and gender-non-conforming communities must move away from efforts to make the prison industrial complex more "LGBT-friendly" and instead fight the underlying logic of the system itself.

Attempts to reform prisons will always fail because prisons require and foster violence as part of their punitive function—prisons are sites of physical, social, and civil death, and a continuation of the system is a continuation of these issues

Lamble 11 (Lamble, S. [S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. Lamble currently teaches at Birkbeck Law School, University of London and is a founding member of the Bent Bars Project, a collective which coordinates a letter writing program for queer, Trans and gender-non-conforming prisoners in Britain.]. 2011 "Transforming Carceral Logics: 10 Reasons to Dismantle the Prison Industrial Complex Through Queer/Trans Analysis and Action" in "Captive Genders: Trans Embodiment and the Prison Industrial Complex" Pg. 235 (Eds. 4. Prisons are harmful, violent, and damaging places, especially for queer, trans, and gender-non-conforming folks. Prisons are violent institutions. People in prison and detention experience brutal human rights abuses, including physical assault, psychological abuse, rape, harassment, and medical neglect. Aside from these violations, the act of putting people in cages is a form of violence in itself. Such violence leads to extremely high rates of self-harm and suicide, both in prison and following release.35 These problems are neither exceptional nor occasional; violence is endemic to prisons. It is important to bear in mind that prison violence stems largely from the institutional structure of incarceration rather than from something supposedly inherent to prisoners themselves. Against the popular myth that prisons are filled with violent and dangerous people, the vast majority of people are held in prison for non-violent crimes, especially drug offenses and crimes of poverty.36 For the small number of people who pose a genuine risk to themselves or others, prisons often make those risks worse. In other words, prisons are dangerous not because of who is locked inside, but instead prisons both require and foster violence as part of their punitive function. For this reason, reform efforts may reduce, but cannot ultimately eliminate, prison violence. The high number of deaths in state custody speaks to the devastating consequences of imprisonment. Between 1995 and 2007, the British prison-monitoring group Inquest documented more than 2,500 deaths in police and prison custody.37 Homicide and suicide rates in Canadian prisons are nearly eight times the rate found in non-institutional settings.38 In the United States between 2001 and 2006, there were 18,550 adult deaths in state prisons,39 and between 2003 and 2005, there were an additional 2,002 arrest-related deaths.40 It is extremely rare for state officials to be held accountable for these deaths. For example, among the deaths that Inquest has documented in Britain, not one police or prison officer to date has been held criminally responsible.41 Deaths in custody are symptomatic of the daily violence and harm that prisoners endure. Queer, trans, and gender-non-conforming people are subject to these harms in specific ways: • High risk of assault and abuse: Queer, trans, and gender-non-conforming people are subject to widespread sexual assault, abuse, and other gross human rights violations, not only from other prisoners, but from prison staff as well.42 Captive Genders 244 • Denial of healthcare: Many prisoners must fight to even see a doctor, let alone get adequate medical care. Trans people in particular are regularly denied basic medical needs, especially surgery and hormones. Many prisons have no guidelines for the care of trans and gender-variant persons, and even where guidelines exist, they are insufficient or not followed.43 Inadequate policy and practice on HIV/AIDS and Hep C prevention is another major health problem in prison, where transmission rates are exceptionally high.44 These risks increase dramatically for trans people, who already experience high rates of HIV/AIDS.45 This combination of high transmission risks, poor healthcare provision, inadequate sexual health policies, and long-term health effects of imprisonment (including shorter life expectancies), mean that prison is a serious health hazard for queer and trans people. • Subject to solitary confinement and strip-searching: Trans and gender-non-conforming prisoners are regularly placed in solitary confinement as a “solution” to the problem of sex-segregated prisons. Even when used for safety purposes, “protective custody” constitutes a form of punishment, as it usually means reduced access to recreational and educational programs, and increased psychological stress as a result of isolation. Trans and gendernon-conforming people are also frequently subject to humiliating, degrading, abusive, and overtly transphobic

strip-searches.46 • High risk of self-harm and suicide: Queer and trans people, especially youth, have higher rates of suicide attempts and self-harm. Such risks increase in prison and are heightened in segregation, particularly when prisoners are isolated from queer and trans supports.47 These risks are not limited to incarceration but continue after release. A study in Britain for example, found that men who leave prison were eight times more likely to commit suicide than the general population, and women released from prison were thirty-six times more likely to commit suicide.48 The prison system is literally killing, damaging, and harming people from our communities. Whether we consider physical death caused by self-harm, medical neglect, and state violence; social death caused by subsequent unemployment, homelessness, and stigmatization; or civil death experienced through political disenfranchisement and exclusion from citizenship rights, the violence of imprisonment is undeniable

Gender and sexual norms are at the very heart of the prison industrial complex—a reform of the system can never solve the institutional necessity of prisons to reinforce, perpetuate, and entrench these norms

Lamble 11 (Lamble, S. [S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. Lamble currently teaches at Birkbeck Law School, University of London and is a founding member of the Bent Bars Project, a collective which coordinates a letter writing program for queer, Trans and gender-non-conforming prisoners in Britain.]. 2011 "Transforming Carceral Logics: 10 Reasons to Dismantle the Prison Industrial Complex Through Queer/Trans Analysis and Action" in "Captive Genders: Trans Embodiment and the Prison Industrial Complex" Pg. 235 (Eds. Smith & Stanley) 2011 AK press. Accessed: 7/17/2015. http://theloon2013.wikispaces.com/file/view/Stanley-Eric-Captive-Genders-Trans-Embodiment-and-Prison-Industrial-Complex.pdf)//ALepow

3. Prisons reinforce oppressive gender and sexual norms. Prisons reinforce gender and sexual norms in three key ways: First, sex-segregated prisons restrict people's right to determine and express their Captive Genders 242 own gender identity and sexuality. Because most prisons divide people according to their perceived genitals rather than their self-expressed gender identity, prisoners who don't identify as "male" or "female" or who are gender-non-conforming are often sent to segregation or forced to share a cell with prisoners of a different gender, often with little regard for their safety. In Britain, even trans people who have obtained a Gender Recognition Certificate (a state document that legally recognizes a person's self-defined gender) have been held in prisons with people of a different gender.27 By segregating institutions along sex/gender lines, prisons work to make invisible, isolate, and stigmatize those bodies and gender identity expressions that defy imposed gender binaries.28 Second, gender segregation in prisons plays a key role in "correctional" efforts to modify prisoner behavior in accordance with gender norms. Historically, women's prisons were designed to transform "fallen" women into better wives, mothers, homemakers, and domestic servants, whereas men's prisons were designed to transform males into disciplined individuals, productive workers, and masculine citizens.29 These gendered goals persist today, particularly in the division of prison labor. For example, when a new mixed-gender prison was built in Peterborough, England in 2005, all parts of the institution were duplicated to provide separate male and female areas, except for the single kitchen, where women were expected to do all the cooking.30 The current trend toward so-called "gender responsive" prisons is likewise framed as a measure to address the specific needs of female prisoners, but usually works to discipline, enforce, and regulate gender norms.31 Moreover, gender-

responsive prison reforms are increasingly used to justify building new prisons (without closing existing ones), thereby furthering prison expansion.32 Third, sexual violence plays a key role in maintaining order and control within prisons, a tactic that relies on oppressive sexual and gender norms.33 Sexual violence in prison, including harassment, rape, and assault, is shockingly widespread and often institutionally condoned. According to Stop Prisoner Rape, 1 in 5 males and 1 in 4 females face sexual assault in US prisons.34 To call attention to the enforcement of gender/ sexual norms in prison is not to suggest that prison culture is uniform across or within institutions, or that prisoners are more sexist, homophobic, or transphobic than non-prisoners. Rather, prisons as institutions tend to reinforce, perpetuate, and entrench gender/sex hierarchies and create environments in which sexual violence flourishes.

2NC Alt Extensions

Queerness can never exist within civil society—it is always forced to assimilate into normativity

Mary Nardini Gang 09 (Mary Nardini Gang [The Mary Nardini Gang are criminal queers from Milwaukee, Wisconsin.]. "Toward the Queerest Insurrection." Queer Jihad, 2009. http://zinelibrary.info/files/QueerestImposed.pdf)//ALepow

In the discourse of queer, we are talking about a space of struggle against this totality - against normalcy. By "queer", we mean "social war". And when we speak of queer as a **conflict with all domination**, we mean it. See, we've always been the other, the alien, the criminal. The story of queers in this civilization has always been the narrative of the sexual deviant, the constitutional psychopathic inferior, the traitor, the freak, the moral imbecile. We've been excluded at the border, from labor, from familial ties. We've been forced into concentration camps, into sex slavery, into prisons. The normal, the straight, the american family has always **constructed itself in opposition to the queer**. Straight is not queer. White is not of color. Healthy does not have HIV. Man is not woman. The discourses of heterosexuality, whiteness and capitalism reproduce themselves into a model of power. **For the rest of us, there is death**. In his work, Jean Genet1 asserts that the life of a queer, is one of **exile** - that all of **the totality of this world is constructed to marginalize and exploit us.** He posits the queer as the criminal. He glorifies homosexuality2 and criminality as the most beautiful and lovely forms of conflict with the bourgeois world. He writes of the secret worlds of rebellion and joy inhabited by criminals and queers. Quoth Genet, "Excluded by my birth and tastes from the social order, I was not aware of its diversity. Nothing in the world was irrelevant: the stars on a general's sleeve, Now they don't critique marriage, military or the state. Rather we have campaigns for queer assimilation into each. Their politics is advocacy for such grievous institutions, rather than the annihilation of them all. "Gays can kill poor people around the world as well as straight people!" "Gays can hold the reigns of the state and capital as well straight people!" "We are just like you". Assimilationists want nothing less than to construct the homosexual as normal - white, monogamous, wealthy, 2.5 children, SUVs with a white picket fence. This construction, of course, reproduces the stability of heterosexuality,

whiteness, patriarchy, the gender binary, and capitalism itself. If we genuinely want to make ruins of this totality, we need to make a break. **We don't need inclusion** into marriage, the military and the state. **We need to end them**. No more gay politicians, CEOs and cops. We need to swiftly and immediately articulate a wide gulf between the politics of assimilation and the struggle for liberation. simultaneously struggled against capitalism, racism and patriarchy and empire. **This is our history.**

Overkill is more than death—it is an attempt to rid the world of all queerness

Stanley 11 (Stanley, Eric [Eric Stanley is the President's Postdoctoral Fellow in the departments of Communication and Critical Gender Studies at the University of California.]. 2011. "Near Life, Queer Death: Overkill and Ontological Capture," Social Text 29.2 107)//ALepow

"He was my son—my daughter. It didn't matter which. He was a sweet kid," Lauryn Paige's mother, trying to reconcile at once her child's murder and her child's gender, stated outside an Austin, Texas, courthouse. 24 Lauryn was an eighteen-year-old transwoman who was brutally stabbed to death. According to Dixie, Lauryn's best friend, it was a "regular night." The two women had spent the beginning of the evening "working it" as sex workers. After Dixie and Lauryn had made about $200 each they decided to call it quits and return to Dixie's house, where both lived. On the walk home, Gamaliel Mireles Coria and Frank Santos picked them up in their white conversion van. "Before we got into the van the very first thing I told them was that we were transsexuals," said Dixie in 9 an interview. 25 After a night of driving around, partying in the van, Dixie got dropped off at her house. She pleaded for Lauryn to come in with her, but Lauryn said, "Girl, let me finish him," so the van took off with Lauryn still inside. 26 Santos was then dropped off, leaving Lauryn and Coria alone in the van. According to the autopsy report, Travis County medical examiner Dr. Roberto Bayardo cataloged at least fourteen blows to Lauryn's head and more than sixty knife wounds to her body. The knife wounds were so deep that they almost decapitated her—a clear sign of overkill. Overkill is a term used to indicate such excessive violence that it pushes a body beyond death. Overkill is often determined by the postmortem removal of body parts, as with the partial decapitation in the case of Lauryn Paige and the dissection of Rashawn Brazell. The temporality of violence, the biological time when the heart stops pushing and pulling blood, yet the killing is not finished, suggests the aim is not simply the end of a specific life, but the ending of all queer life. This is the time of queer death, when the utility of violence gives way to the pleasure in the other's mortality. If queers, along with others, approximate nothing, then the task of ending, of killing, that which is nothing must go beyond normative times of life and death. In other words, if Lauryn was dead after the first few stab wounds to the throat, then what do the remaining fifty wounds signify? The legal theory that is offered to nullify the practice of overkill often functions under the name of the trans- or gay-panic defense. Both of these defense strategies argue that the murderer became so enraged after the "discovery" of either genitalia or someone's sexuality they were forced to protect themselves from the threat of queerness. Estanislao Martinez of Fresno, California, used the trans-panic defense and received a four-year prison sentence after admittedly stabbing J. Robles, a Latina transwoman, at least twenty times with a pair of scissors. Importantly, this defense is often used, as in the cases of Robles and Paige, after the murderer has engaged in some kind of sex with the victim. The logic of the trans-panic defense as an explanation for overkill, in its gory semiotics, offers us a way of understanding queers as the nothing of Mbembe's query. Overkill names the technologies necessary to do away with that which is already gone. Queers then are the specters of life whose threat is so unimaginable that one is "forced," not simply to murder, but to push them backward out of time, out of History, and into that which comes before. 27 In thinking the overkill of Paige and Brazell, I return

to Mbembe's query, "But what does it mean to do violence to what is nothing?"28 This question in its elegant brutality repeats with each case I offer. By resituating this question in the positive, the "something" that is more often than not translated as the human is made to appear. Of interest here, the category of the human assumes generality, yet can only be activated through the 10 specificity of historical and politically located intersection. To this end, the human, the "something" of this query, within the context of the liberal democracy, names rights-bearing subjects, or those who can stand as subjects before the law. The human, then, makes the nothing not only possible but necessary. Following this logic, the work of death, of the death that is already nothing, not quite human, binds the categorical (mis)recognition of humanity. The human, then, resides in the space of life and under the domain of rights, whereas the queer inhabits the place of compromised personhood and the zone of death. As perpetual and axiomatic threat to the human, the queer is the negated double of the subject of liberal democracy. Understanding the nothing as the unavoidable shadow of the human serves to counter the arguments that suggest overkill and antiqueer violence at large are a pathological break and that the severe nature of these killings signals something extreme. In contrast, overkill is precisely not outside of, but is that which constitutes liberal democracy as such. Overkill then is the proper expression to the riddle of the queer nothingness. Put another way, the spectacular material-semiotics of overkill should not be read as (only) individual pathology; these vicious acts must indict the very social worlds of which they are ambassadors. Overkill is what it means, what it must mean, to do violence to what is nothing.

TO be queer means to live in opposition to civil society and to live an everyday death-in-waiting

Stanley 11 (Stanley, Eric [Eric Stanley is the President's Postdoctoral Fellow in the departments of Communication and Critical Gender Studies at the University of California.]. 2011. "Near Life, Queer Death: Overkill and Ontological Capture," Social Text 29.2 107)//ALepow

"Dirty faggot!" Or simply, "Look, a Gay!" These words launch a bottle from a passing car window, the target my awaiting body. In other moments they articulate the sterilizing glares and violent fantasies that desire, and threaten to enact, my corporal undoing. Besieged, I feel in the fleshiness of the everyday like a kind of near life or a death-in-waiting. Catastrophically, this imminent threat constitutes for the queer that which is the sign of vitality itself. What then becomes of the possibility of queer life, if queerness is produced always and only through the negativity of forced death and at the threshold of obliteration? Or as Achille Mbembe has provocatively asked, in the making of a kind of corporality that is constituted in the social as empty of meaning beyond the anonymity of bone, "But what does it mean to do violence to what is nothing?"1 In another time and place, " 'Dirty nigger!' Or simply, 'Look, a Negro!' " ("Sale nègre! ou simplement: Tiens, un nègre!") opened Frantz Fanon's chapter 5 of Black Skin, White Masks, "The Lived Experience of the Black" ("L'expérience vécue du Noir"), infamously mistranslated as "The Fact of Blackness."2 I start with "Dirty faggot!" against a logic of Near Life, Queer Death Overkill and Ontological Capture Eric Stanley 2 flattened substitution and toward a political commitment to non-mimetic friction. After all, the racialized phenomenology of blackness under colonization that Fanon illustrates may be productive to read against and with a continuum of antiqueer violence in the United States. The scopic and the work of the visual must figure with such a

reading of race, gender, and sexuality. It is argued, and rightfully so, that the instability of queerness obscures it from the epidermalization that anchors (most) bodies of color in the fields of the visual. When thinking about the difference between anti-Semitism and racism, which for Fanon was a question of the visuality of oppression, he similarly suggests, "the Jew can be unknown in his Jewishness."3 Here it may be useful to reread Fanon through an understanding of passing and the visual that reminds us that Jews can sometimes not be unknown in their Jewishness. Similarly I ask why antiqueer violence, more often than not, is correctly levied against queers. In other words, the productive discourse that wishes to suggest that queer bodies are no different might miss moments of signification where queer bodies do in fact signify differently. This is not to suggest that there is an always locatable, transhistorical queer body, but the fiercely flexible semiotics of queerness might help us build a way of knowing antiqueer violence that can provisionally withstand the weight of generality. 4 Indeed, not all who might identify under the name queer experience the same relationship to violence. For sure, the overwhelming numbers of trans/queer people who are murdered in the United States are of color. 5 Similarly, trans/gender nonconforming people, people living with HIV/ AIDS and/or other ability issues, undocumented and imprisoned trans/ queer people, sex workers, and working-class queers, among others, experience a disproportionate amount of structural violence. In turn, this structural violence more often than not predisposes them to a greater amount of interpersonal violence. Yet many lesbian, gay, bisexual, and transgender (LGBT) folks in the United States who have access to normative power may in their daily lives know very little about either structural or personal violence. The long history and magnified present of gay assimilation illustrates these varying degrees of possibility and power available to some at the expense of others. In contrast, I am marking queer as the horizon where identity crumbles and vitality is worked otherwise. To this end, queer might be a productive placeholder to name a nonidentity where force is made to live. This is not to suggest that the negativity of queer and methodologies of violence define the end of queer worlding or that the parameters of opposition are sedimented as such. 6 On the contrary, the very fact that queers do endure is evidence, as Fred Moten has beautifully argued about the history of blackness in relation to slavery, that "objects can and do resist."7 I start here, in reference to Fanon's text, because he continues to offer us among the most compelling analyses of structural abjection, (non)rec- 3 ognition, and psychic/corporal violence. "Look, a Negro!" violently freezes Fanon in a timeless place as a black object, overdetermined from without, as a signifier with no meaning of its own making. In a similar way, the "dirty faggot" of my opening places queerness in the anonymity of history and shocks it into the embodied practice of feeling queer in a particular place, body, and time. This meditation will attempt to understand how the queer approximates the cutting violence that marks the edges of subjectivity itself. Race and gender figure the contours of my thinking on the work of violence in the gathering up of queer remains. Here the force of violence that interests me is not introduced after the formation of something that might be called queer. I am using the term queer to precisely index the collision of difference and violence. In other words, queer is being summoned to labor as the moment when bodies, non-normative sexuality/genders, and force materialize the im/possibility of subjectivity. Against an identity that assumes a prior unity, queer disrupts this coherence and also might function as a collective of negativity, void of a subject but named as object, retroactively visible through the hope of a radical politics to come.

Stanley 11 (Stanley, Eric [Eric Stanley is the President's Postdoctoral Fellow in the departments of Communication and Critical Gender Studies at the University of California.]. 2011. "Near Life, Queer Death: Overkill and Ontological Capture," Social Text 29.2 107)//ALepow

The queer, here Rashawn Brazell, Lauryn Paige, or Scotty Joe Weaver, is forced to embody to the point of obliteration the movement between abject nothingness at one end—a generality that enables queers to be 12 killed so easily and frequently—and at the other end, the approximation of a terrorizing threat as a symbol of shattering difference, monstrosity, and irreconcilable contradiction. This fetishistic structure allows one to believe that queers are an inescapable threat and at the same time know that they are nothing. According to Lum Weaver, Scotty Joe's older brother, Gaines had always had "issues" with Scotty Joe's homosexuality. As in the majority of interpersonal antiqueer violence, the attackers knew, and in this case even lived with, their target. The murder of Weaver must be read as a form of intimate violence not only because of the relationship the murderers had to Weaver, but also, and maybe more important, because of the technologies of vivisection that were deployed. As Kelsay, Gaines, and Porter had, according to testimony, at least a week to plan the murder, it seems logical that, during that time in rural Alabama, they could have produced a gun that would have made the murder much less gruesome. However, the three decided to cut and rip Weaver to pieces using raw force. The psychic distance that may be produced through the scope of a hunting rifle, and the possible dissociation it might provide, is the opposite of blood squirting from your former roommate's chest and the bodily strength it takes to lunge a knife into the flesh and bone of a human body. The penetrative violence, the moments when Gaines was thrusting his knife into Weaver's body, stages a kind of terrorizing sexualized intimacy. If Weaver was at once so easy to kill, and at the same time so monstrous that he had to be killed, this intimate overkill might also help us to understand why antiqueer violence tends to take this form. Weaver was, after all, the roommate and "best friend" of one of his killers. However, at the same time, robbing him would not be enough, killing him would not be enough, the horror of Weaver's queerness forced his killers to mutilate, decapitate, and burn his body. This tender hostility of ravaging love and tactile brutality may be an opening for the task of facing the question scribed on the bathroom wall, "What if it feels good to kill or mutilate homos?" The disavowal of the queer threat through a murderous pleasure signals a much more complicated structure of desire and destruction. This complex structure of phobia and fetishism, not unlike the pleasure and pain Kelsay might have experienced as she helped slaughter her "best friend," asks us to consider antiqueer violence outside the explanatory apparatus that situates all antiqueer violence on the side of pure hate, intolerance, or prejudice. Affective Remains Weaver's body, bound in gasoline-soaked fibers, partially decapitated, charred, and pummeled beyond death, as remainder of a queer life, rep- resents what kind of sociality is (not)lived before such a death. There has been in the recent past an important and understandable drive in critical and artistic production to articulate the various forms of vitality that congeal below the surface or outside the orbit of the fully realized promise of personhood. This desire is at least in part a wish for a way of understanding what Audre Lorde has called, in her exacting ability to place us at the scene, "the deaths we are forced to live."31 Among the most productive and fraught expressions of this compromised vitality is Giorgio Agamben's offering of "bare life." For Agamben, bare life signals a kind of stripped-down sociality, skillfully articulated via his reading of the Nuremburg Laws enabled through a legal state of exception. The state of exception that placed absolute power in the hands of Hitler, as the necessary temporal precondition for

bare life, seems for some not an exception at all. The liberation of the camps that brought with it the dismantling of or at least radical change in Germany's juridical system, including the Nuremburg Laws (but surely did not end anti-Semitism), left untouched the "Nazi version" of Paragraph 175, the clause criminalizing homosexuality. To this end, as hundreds of thousands of those who survived the camps were swept to freedom, "homosexual" survivors were forced to serve their remaining sentences in prison. Death through freedom, as it were, requires a different formulation, or at least a different way to think about proximity and vitality. 32 If for Agamben bare life expresses a kind of stripped-down sociality or a liminal space at the cusp of death, then near life names the figuration and feeling of nonexistence, as Fanon suggests, which comes before the question of life might be posed. Near life is a kind of ontocorporal (non) sociality that necessarily throws into crisis the category of life by orientation and iteration. This might better comprehend not only the incomprehensible murders of Brazell, Paige, and Weaver, but also the terror of the dark cell inhabited by the queer survivor of the Holocaust who perished under "liberation."33 Struggling with the phenomenology of black life under colonization, Fanon opens up critical ground for understanding a kind of near life that is made through violence to exist as nonexistence. For Fanon, violence is bound to the question of recognition (which is also the im/possibility of subjectivity) that apprehends the relationship between relentless structural violence and instances of personal attacks evidenced by the traumatic afterlives left in their wake. For Fanon, the Hegelian master/slave dialectic, as theoretical instrument for thinking about recognition, must be reconsidered through the experience of blackness in the French colonies. For Fanon, Hegel positions the terms of the dialectic (master/slave) outside history and thus does not account for the work of the psyche and the historicity of domination like racialized colonization and the epidermal- ization of that power. In other words, for Fanon, when the encounter is staged and the drama of negation unfolds, Hegel assumes a pure battle. Moreover, by understanding the dialectic singularly through the question of self-consciousness, Hegel, for Fanon, misrecognizes the battle as always and only for recognition. Informed by Alexandre Kojève and Jean-Paul Sartre, Fanon makes visible the absent figure of Enlightenment assumed by the Hegelian dialectic. For Fanon, colonization is not a system of recognition but a state of raw force and total war. The dialect cannot in the instance of colonization swing forward and offer the self-consciousness of its promise. According to Fanon, "For Hegel there is reciprocity; here the master laughs at the consciousness of the slave. What he wants from the slave is not recognition but work."34 Hegel's dialectic that, through labor, offers the possibility of self-consciousness, for the colonized is frozen in a state of domination and nonreciprocity. 35 What is at stake for Fanon, which is also why this articulation is helpful for thinking near life, is not only the bodily terror of force; ontological sovereignty also falls into peril under foundational violence. This state of total war, not unlike the attacks that left Brazell, Paige, and Weaver dead, is at once from without—the everyday cultural, legal, economic practices— and at the same time from within, by a consciousness that itself has been occupied by domination. For Fanon, the white imago holds captive the ontology of the colonized. The self/Other apparatus is dismantled, thus leaving the colonized as an "object in the midst of other objects," embodied as a "feeling of nonexistence."36 While thinking alongside Fanon on the question of racialized difference, violence, and ontology, how might we comprehend a phenomenology of antiqueer violence expressed as "nonexistence"? It is not that we can take the specific structuring of blackness in the French colonies and assume it would function the same today, under U.S. regimes of antiqueer violence. However, if both desire and antiqueer violence are embrocated by the histories of colonization, then such a reading might help to make more capacious our understanding of antiqueer

violence today as well as afford a rereading of sexuality in Fanon's texts. Indeed, Fanon's intervention offers a space of nonexistence, neither master nor slave, written through the vicious work of epistemic force imprisoned in the cold cell of ontological capture. This space of nonexistence, or near life, forged in the territory of inescapable violence, allows us to understand the murders of queers against the logics of aberration. This structure of antiqueer violence as irreducible antagonism crystallizes the ontocorporal, discursive, and material inscriptions that render specific bodies in specific times as the place of the nothing. The figuration 15 of near life should be understood not as the antihuman but as that which emerges in the place of the question of humanity. In other words, this is not simply an oppositional category equally embodied by anyone or anything. This line of limitless inhabitation, phantasmatically understood outside the intersections of power, often articulated as "equality," leads us back toward rights discourse that seeks to further extend (momentarily) the badge of personhood. The nothing, or those made to live the death of a near life, is a break whose structure is produced by, and not remedied through, legal intervention or state mobilizations. For those who are overkilled yet not quite alive, what form might redress take, if any at all?

Prison Abolition K

1NC

The prison is not safe. The system has constructed the criminal - ideological and physical cages have entrapped bodies into an economy based on punishment - prisons are a form of nonaccountability and gender role enforcement. Status quo politics which justify the necessity of the prison keep the ablest, anti-black, and anti-queer politics the prison system is founded upon intact.

Rasheed and Stanley 14 (Kameelah Janan, Brooklyn-based conceptual artist working primarily with photography, installation, and texts. She is Arts Editor for Spook Magazine and Eric Stanley, Ph.D. in History of Consciousness, UC Santa Cruz, UC President's Postdoctoral Fellow at UCSD, "The Carceral State," http://thenewinquiry.com/features/the-carceral-state/#more-58702)

California gets called "progressive" despite operating one of the world's largest prison systems. "Abolition is not simply a reaction to the [prison-industrial complex] but a **political commitment** that makes the PIC impossible" writes Eric A. Stanley in the introduction to Captive Genders: Trans Embodiment and the Prison Industrial Complex. Nourishing these possibilities to create a future in which incarceration and policing are not normalized features of our society has been at the core of Stanley's academic writing and activist work. A president postdoctoral fellow in the departments of communication and critical gender studies at the University of California, San Diego, Stanley works at the intersections of radical trans/queer politics and prison abolition. Stanley has directed the films Homotopia (2006) and Criminal Queers (2013) along with Chris Vargas. Stanley talks to the New Inquiry about California's incarceration culture and those who resist it, how language shapes our imagining of a post-incarceration world and the importance of queering our conversations around the prison--industrial complex. What is unique about the Californian narrative of incarceration and policing? How has the history of California been shaped by the prison-industrial complex? California is in many ways emblematic of our current moment of U.S. empire. Our stage of late liberalism allows California to proclaim itself both the most "progressive" state while simultaneously producing among the most brutal carceral practices. We can look to California and the California Department of Corrections and Rehabilitation (CDCR) as a cautionary tale of how even well-meaning prison reform almost always produces more violence, rather than stopping it. To understand how "progressive California" became the way we talk about the operators of one of the largest prison systems in the world, we could look to the recent Proposition 47, the "Safe Neighborhoods and Schools Act," for an example. It is championed by many state prison-reform groups because it claims it will help pull some people out of prisons and jails through resentencing of what the legislation calls "nonserious nonviolent" inmates. And it might! At first glance, this seems like something that all of us fighting against the prison-industrial complex (PIC) could support. We know that decarceration is one strategy in the long vision that is abolition. However, written into the proposition is a provision that would mandate all the "savings" from releasing people be placed into a fund that would increase police presence in schools and mandate harsher truancy discipline. What looks like a victory in our struggle would actually build up rather than dismantle the PIC. As a response to the infamous overcrowding of California's prisons, this is something we know would reimprison 10,000 people, even if 10,000 people are released. Overcrowding is not a malfunction of the prison-industrial complex, it's how it's designed. For a more exacting account of California's carceral topography, I would defer to Ruthie Gilmore's amazing book,Golden Gulag: Prisons, Surplus, Crisis, and Opposition in Globalizing California. There, Ruthie helps us understand how labor and land are central to California's prison growth but often overlooked. While it seems obvious that capitalism is a big part of the story of imprisonment, Golden Gulag helps push against the understanding that it is only important at the level of a defendant's ability to fight charges. Identifying a structuring logic of the prison-industrial complex, Ruthie suggests her book is about "class war," and it is. I am interested in "exacting accounts." I think about the prison-industrial complex especially in considering who collects and distributes information about it, and the specificity required in describing what it is. How does this enumeration, calculation, and collecting further serve the prison-industrial complex? As example we might look at the National Crime Victim Survey, a database funneled through the Bureau of Justice, is currently the only space where national "biased" violence is aggregated. While having some important information, the database is little more than a misrecognition of the forms of structural abandonment and direct attack many people face everyday. Some have argued that if the reporting or vectors could be corrected we would have a more accurate representation of who is targeted for these kinds of harm. But I want us to undo the argument that more information or research necessarily produces more liberation. We have elaborate data on incarceration rates for black people in the U.S., and we know that this research has done nothing to curtail the reality that the prison-industrial complex functions as antiblackness. Even if statistics show how the prison-industrial complex is constitutively anti-trans and anti-black, they don't halt it. I think you're right. We've always known this information, but that information

by itself is not liberatory. Beyond the information we have about the functioning of the PIC, I am also interested in the information we have about movements challenging the PIC. I think it is easy to conflate the myriad of struggles against the PIC and this conflation can obscure the work of distinct activist organizations. I spent a little over a year with Critical Resistance, where I learned about the distinction between a prison-reform movement and a prison-abolition movement. For those who conceptualize prison reform in terms of more rehabilitation programs or the ending of mandatory minimums, how does your work for prison abolition differ from prison reform? What's the difference between asserting that the prison system is broken versus the assertion that is working as it is designed to function? While usually suspicious of the work of binary oppositions, I think the distinction between reform and abolition is vital. When they become confused, we end up with people arguing that Prop 47 is going to "solve the problem of mass incarceration." If we say that the prison system is working as designed, that is, as a set of antiblack, ableist, and gender-normative practices used to constrict, and at times liquidate, people and communities under the empty signifiers of "justice" and "safety," then we can more adequately assess what something like Prop 47 will actually do: Trade a few of the prison system's current hostages for an expansion into schools. We often arrive at the idea that the system is "broken" not because we have such a strong attachment to the state, but because we have a scarcity of language around the intensity of its violence. One of the ways its common sense remains entrenched is in our collective inability to articulate the enormity of our current conditions. Instead we—myself included—most often use language that is readily available, helping sabotage our own chances of living otherwise. In concrete terms, what does it mean to continue believing that the prison system is "broken"? If we believe that the prison system is broken, then we must also believe in its ability to be fixed. Here we can see how the PIC keeps functioning through the rehearsal of the "broken system" narrative. As Angela Davis and many others have argued, it is precisely through reform that the prison-industrial complex expands. We can see the materiality of this expansion through the mandatory increase in police in schools through Proposition 47. I was born and raised in California and I know this proposition would affect my old students and family members so let's talk about Prop 47. It is on the November 4 ballot. If it is approved by the state's voters, it would reduce the classification of most "nonserious and nonviolent property and drug crimes" from a felony to a misdemeanor. How do you respond to people who say this reform, however small, is better than nothing at all? In abolitionist work we sometimes talk about nonreformist reforms to think about the distance between people getting their immediate needs met, or their conditions made less unlivable, and the political worlds we want. Under our regime of racial capitalism, perhaps all we can inhabit is a set of shifting contradictions. Given this, one of the questions we try to continually ask is, "Will this reform be something we have to fight against in five years?" For me, this is how I determine if the compromise is too dangerous. In the case of California's Proposition 47, I'm not convinced it will actually lead to the release of people and will instead further involve schools as punitive practices. Focusing our efforts only on, and in the name of "nonviolent and nonserious" incarcerated people can also work to reaffirm the assumed serious and inescapable violence of those still inside. Are we willing to always allow the state to decide what constitutes the limits of "violence"? Under Proposition 47, someone who defrauds an entire community out of their homes may be considered "nonviolent," while someone who blocks their own home from being foreclosed could remain imprisoned as a violent offender. I want to talk more about the abolitionist vision and the construction of the "violent" and "nonviolent" offenders, as well as accountability. A tiring critique of prison abolition that can make even a self-identified radical sound like a mouthpiece for the right is that if we abolish the PIC, we will all be subject to greater risks of harm. In response to this assertion, it is important to note at least two related points. First, the most dangerous, violent people in our society are not in prison, but are running our military, government, prisons, and banks. Secondly, what we have now, even for people who have caused harm, is a form of nonaccountability where the survivors of a violation are often harmed again through the desires of a district attorney whose only interest is conviction rates. Anyone who has been deposed or been through a trial can attest to this. Abolition is not simply about letting everyone out of prison, as our critics like to suggest, although that would be an important component. It is forged in the work of daring to ask what **true accountability, justice, and safety might look** and feel like and what are the ways we might build our world now so violence in all its forms is decreased, rather than something that we only attend to post-infraction. I am interested in how we move toward abolition. Who are the people challenging the normalization of incarceration? Can you talk to us about local movements around prison abolition? And beyond California, what work is being done? I have to first give a shout-out to the Transgender, Gender Variant Intersex Justice Project based here in San Francisco. TGIJP is an organization by and for formerly incarcerated trans women of color, held down by Miss Major, Janetta Johnson, and others. I think what is unique about TGIJP is that unlike some antiprison organizations that tokenize currently or formerly incarcerated people, they center them in

every aspect of their work. TGIJP is also working hard on re-entry for trans women as abolitionist work. When people are released, especially those with felonies, the issues that found them in the prison industrial complex are dramatically compounded. With almost no resources, people get released into situations that are hyper-policed, and more often than not people get swept back up in the system. I would also point people toward Californians for a Responsible Budget (CURP), a statewide coalition of people and organizations fighting jail and prison expansion all over the state. As you know, there are also chapters of Critical Resistance in Los Angeles and Oakland that continue to push toward abolition in a culture where compromise is often the most we can expect. I'm also excited by all the work being done in less formal ways, by collectives of people like Black and Pink-San Diego, a prison letter-writing group, and Gay Shame, which I have organized with for the past 12 years. With Gay Shame, we keep trying to show the ways the prison industrial complex is ever-expanding and how LGBT people are at times complicit in its proliferation. As the banner at our last action read, we are pro-sex, anti-prison, queers for abolition. In Captive Genders, you write that this prison abolition work and trans/queer liberation must be grown together. How are these movements mutually dependent? In the past few decades, we have seen the mainstream LGBT movement fight hard to become part of the same systems of domination that have already destroyed so much. Most visibly, this fight toward inclusion resides in the legalization of gay marriage, military service, and the expansion of hate crimes legislation on both the state and federal level. When I was writing the introduction to Captive Genders, I wanted to help (with many others) redirect resources and organizing toward abolitionist work, and also remember the histories of trans and queer people, particularly low-income and/or of color, who have always fought against policing and incarceration. In other words, I wanted to mark both the unique moment of the organizing and analysis that Captive Genders gathers up, and also the ways we are in a genealogy of struggle that will continue beyond us. I have also been involved in various abolitionist projects over the past decade that did not necessarily foreground trans/queer politics. I think in similar ways I wanted to push trans/queer organizing to center abolition, I wanted to push antiprison organizing to include a trans/queer analysis that understood the specific ways trans/queer people of color have been and continue to be targets of the prison industrial complex. Both Nat [Smith] and I began the project knowing that we wanted it to be an explicitly abolitionist text. As it was the first book that centered the ways trans/queer people experience the PIC, we wanted to foreground a radical analysis. We also had a commitment to making space for currently and formerly incarcerated people while not wanting to rehearse the somewhat false division between theory and practice. In the introduction to Captive Genders, you write that "among the most volatile points of contact between state violence and one's body is the domain of gender." You've also written about how prisons are gendering institutions as well as queer spaces. How does this happen simultaneously? What are some examples of this resistance to gender normativity within prisons? Binary genders (male/female) are not something that pre-exist any institution (like prisons) but are produced and reproduced in their moment of interaction. In other words, the imagined stability of only two genders is part of **the work of prisons**. Not only are prisons gender segregated, but quotidian practice inside mandates the group fantasy of gender normativity. This is a bit of a different argument than suggesting that we only pay attention to the ways prisons treat trans/queer and gender nonconforming people, although we also need to do that. Yet even against the relentless force of punitive gender normativity, people still find ways to resist and embody, although perhaps protracted, gender self-determination in these spaces of suspended death. These usually take the form of what might look like small moments of resistance, but are the daily material that allow some people to survive the unsurvivable. For example, I have a friend who was inside a "women's prison" and she sewed boxer shorts out of sheets for her butch and trans masculine friends because they could not legally obtain them as they were not regulation in "women's prisons." People also find ways to do their hair, get or make cosmetics and other things that help them express whatever gender they are feeling. Resistance also comes in the ways people inside are in leadership positions of many "outside" organizations, like Sylvia Rivera Law Project and Justice Now and California Coalition for Women Prisoners (CCWP). We know the prison-industrial complex exists along a continuum, from the ways that people are policed and criminalized, to the point of trial and incarceration, to the moment of reentry. How does the prison industrial complex affect the lives of queer/trans folks living outside the physical site of the prison? When people first started using the term "prison industrial complex" it was an attempt to think about all the ways the prison as a force exists far beyond its walls. While we want to be vigilant in our attention to the condition of those inside, we always want to be aware of the various ways people are policed, criminalized and constricted that may seem **less obvious**. Through this expanded understanding of the PIC we must look at psychiatric imprisonment, public housing, shelters, Native boarding schools, drug treatment and diversion programs, juvenile facilities, ICE detention centers (and more) as all central to our work as abolitionists. In an essay called "Near Life, Queer Death," you

address the privatizing of violence. In thinking about the landscape of Californian incarceration, in ways does the "privatization [of] the enormity of antiqueer violence" collude with the privatization of the enormity of mass incarceration and policing in California? I would perhaps think about the different ways privatization is working in each of these scenes. Much antiprison organizing for the past 15 to 20 years has centered around critiquing the ways private prisons produce wealth through the business of captivity. I remember organizing in the 1990s at Cabrillo Community College in Santa Cruz where I was a student because our cafeteria contracted with Sodexho Marriott, which then had stakes in CCA, a private prison firm. That work was and continues to be necessary, but only as a way to open up conversations beyond the private-prisons argument. If we end there, it can seem as if we think prisons run by the state are "better" and that prisons are only troublesome if they produce surplus value. Again, this is where an abolitionist analysis becomes necessary to push us through the private prisons argument and toward a more general critique. In "Near Life, Queer Death," I was trying to think about how structural violence (like racist and anti-trans violence) is rewritten as individual acts against specific people. The legal system is one of the primary ways the systemic is transformed into the discrete or personal. This happens, in part, through the substitution of the idea that justice has been done with a conviction by the state. We might look at the recent attack against Sasha, an agender youth who was riding a bus in Alameda when their skirt was lit on fire by another 16-year-old. Sasha sustained second and third degree burns in yet another attack against a gender-nonconforming person. Seeking an easy conviction, the district attorney decided to charge the defendant as an adult and forced them to take a plea deal, which could now place them in prison for seven years. Sasha and their family asked the DA to not charge the person as an adult and also asked for restorative justice for the defendant and not prison time. Against the desires of the survivor, the DA refused and sought the conviction by way of a plea. The histories and futures of anti-trans violence become substituted with the "justice" of another conviction, while all those involved are left as collateral damage.

The prison industrial complex is a deathscape which renders the queer and black body as subjects of violent surveillance and control

Gossett 14 (Che, Lambda Literary Writer Retreat Fellow, black genderqueer and femme activist and writer, "We will not rest in peace AIDS activism, black radicalism, queer and/or trans resistance," *Queer Necropolitics*, Edited by Jim Haritaworn, Adi Kuntsman, and Silvia Posocco, Q Routledge, https://books.google.com/books?id=f0XIAgAAQBAJ&pg=PA1990&lpg=PA1990&dq=We+will+not+rest+in+peace+AIDS+activism,+black+radicalism,+queer+and/or+trans+resistance&source=bl&ots=SkTCNVY17c&sig=V5eGwagOhVKQcDMXM0GvE6O7olE&hl=en&sa=X&ved=0CCcQ6AEwAWoVChMIwtvF0f35xgIVQqA-Ch3VsAw3#v=onepage&q=the%20prison%20industrial%20complex%20is%20already&f=false)

16). The vast landscape of the prison industrial complex (PIC) can thus be described more generally as an example of what Mbembe calls a 'deathscape'—'new and unique forms of social existence in which vast populations are subjected to conditions of life conferring upon them the status of living dead' (Mbeinbe 2003: 40). The prison industrial complex is an always already anti-black, violently antiqueer and anti-transgender enterprise that perpetuates what Saidiya Hartman names the afterlife of slavery' (Hartman 2008: 6). It institutionalizes forms of restricted life: following 're-entry', a formerly incarcerated person loses access to public housing, benefits and federal educational loans and faces chronic joblessness due to stigma. Incarceration has been historically employed as a means of maintaining an anti-black and white supremacist sociopolitical and racial capitalist order—from antebellum 'black codes' that criminalized vagrancy (Dru Stanley 125—126) post-'emancipation', to more recent attempts to extinguish the spirit and destroy the momentum of black liberationist movements in the United States (ranging from surveillance and sabotage of the Revolutionary

Action Movement, to COINTELPRO, to the current renewed targeting of Assata Shakur). Journalist Shane Bauer (2012) has documented how in California. the mere possession of black radical literature results in being criminalized as gang related and put in solitary housing units (SHU—a form of torture from which exit is uncertain. whose administration is often based on whether one informs on other incarcerated people (Bauer 2012: 1—4). Prisons thus continue the logic of COINTELPRO, which aimed to neutralize and eliminate black freedom movement(s). The prison industrial complex is at once a manifestation of a disciplinary and of a control society. The prison is one of the central and proliferating oppressive technologies through which bio- and necropolitical violence and the apparatuses of surveillance that reinforce it are naturalized. The insidious morphology of the carceral is such that even as it is dismantled via lobbying for decriminalization and decarceration. on the one hand, it proliferates via extended modes of surveillance and control—ankle bracelets, probation and parole—on the other. ('arceral violence is maintained in various penal registers and forms. In the post-9/1 1 age of the Patriot Act. which expanded surveillance and police militarization (implemented during the continuing war on drugs), we are witnessing the violence of what I propose to describe as penal securitocracy. The call for the abolition of the prison industrial complex requires the complete dismantling of spaces of confinement and detention—what Foucault termed the 'carceral continuum' (Foucault 1977: 297, 303)—ranging from the torturous sensory deprivation of solitary confinement that is the signature of the supermax prison, to the coercive containment that characterizes psychiatric institutionalization. The criminalization of HIV is one site in which anti-blackness, AIDS phobia. queer phobia and carceral violence converge. While recent research, particularly in public health, has begun to address the impact of mass incarceration on AIDS treatment and prevention. inside/outside AIDS activism and the struggle for HIV decriminalization in relation to queer and/or trans prison abolition politics have so far been neglected. As I will illustrate next, we have much to learn from this and I will turn to the insightful history of this struggle in the following section.

Reformism has made things worse. We must focus on a method of abolition that requires starving the prison industrial complex to death. Only then can we develop better alternatives to the system

Lamble 11 (S., Professor at the University of London, Birkbeck College of Law , "TRANSFORMING CARCERAL LOGICS: 10 Reasons to Dismantle the Prison Industrial Complex Through Queer/Trans Analysis and Action," Captive Genders: Trans Embodiment and the Prison Industrial Complex, AK Press)

Prison abolition is not a call to suddenly fling open the prison doors without enacting alternatives. Nor is it an appeal to a utopian ideal. Abolition is a broad-based, practical vision for building models today that practice how we want to live in the future. Practicing alternatives requires different **starting points**, questions, and assumptions than those underlying the current system. The existing criminal justice model poses two main questions in the face of social harm: Who did it? How can we punish them? (And increasingly, how can we make money from it?). Creating safe and healthy communities requires a different set of questions: Who was harmed? How can we facilitate healing? How can we prevent such harm in the future?97 Developing alternatives with these latter goals in mind prioritizes the needs of people who have been harmed and emphasizes more holistic, prevention-oriented responses to violence. Such frameworks not only reduce the need for prisons, but also work to strengthen communities by reducing oppression and building community capacity more broadly. Abolitionist strategies differ from reformist tactics by working to reduce, rather than strengthen, the power of the prison industrial complex. 98 Prison reforms, however well-intentioned, have tended to extend the life and scope of prisons. So-called "gender-responsive" prisons are a prime example; reforms intended to address the needs of women have led to increased punishment and imprisonment of women, not less. By contrast, abolitionist strategies embrace tactics that undermine the prison system rather than feed it. There are many different approaches to abolition, some of which are outlined in the classic "Instead of

Prisons Handbook."99 To highlight a few: Starve the system. Abolition means starving the prison industrial complex to death—depriving it of financial resources, human resources, access to fear-mongering, and other sustaining rhetoric. 100 Enacting a moratorium on prison expansion is one key strategy; this means preventing governments and private companies from building any new prisons, jails, or immigration detention spaces; prohibiting increases in police and prison budgets; and boycotting companies that make a profit from imprisonment. Starving the prison system means fighting new laws that increase prison time or create new criminal offenses (for example, hate crimes laws and mandatory minimum sentences), and redirecting money and resources into community-based alternatives. • Stop using cages. Prisons are just one of the many cages that harm our communities. Racism, colonialism, capitalism, and ableism are other kinds of cages, which both sustain the prison system and give it force. Dismantling the prison industrial complex means working to eliminate all cages that foster violence and oppression. Taking this broad approach is especially important when developing alternatives, since some strategies (like electronic tagging or surveillance cameras) simply replace old cages with new ones. Getting people out of cages and preventing people from being put in those cages—even one person at a time—is a key abolitionist strategy. • Develop effective alternatives. Dismantling the prison industrial complex is impossible without developing alternative community protocols for addressing violence and harm. Creating abolitionist alternatives means encouraging non-punitive responses to harm, enacting community-based mechanisms of social accountability, and prioritizing prevention. Such alternatives include restorative/ transformative justice initiatives, community-based restitution projects, social and economic support networks, affordable housing, community education projects, youth-led recreational programs, free accessible healthcare services, empowerment-based mental health, addiction and harm reduction programs, quality employment opportunities, anti-poverty measures, and support for self-determination struggles.101 • Practice everyday abolition. Prison abolition is not simply an end goal but also an everyday practice. Being abolitionist is about changing the ways we interact with others on an ongoing basis and changing harmful patterns in our daily lives. Abolitionist practice mean questioning punitive impulses in our intimate relationships, rethinking the ways that we deal with personal conflicts, and reducing harms that occur in our homes, workplaces, neighborhoods, and schools. In this way, "living abolition" is part of the daily practice of creating a world without cages.

2NC Alt Extensions

The prison system is the culmination of the web of surveillance queer bodies are placed into at birth. The only way to break free from this web is to engage in a vital defiance to the prison industrial complex that is centered around displacing heteronormativity as a measure of worth

Stanley 11 (Edited by Eric A. Stanley and Nat Smith, Ph.D. in History of Consciousness, UC Santa Cruz, UC President's Postdoctoral Fellow at UCSD , Captive Genders: Trans Embodiment and the Prison Industrial Complex, AK Press)

Trans/gender-non-conforming and queer people, along with many others, are born into webs of surveillance. The gendering scan of other children at an early age ("Are you a boy or a girl?") places many in the panopticon long before they enter a prison. For those who do trespass the

gender binary or heteronormativity, physical violence, isolation, detention, or parental disappointment become some of the first punishments. As has been well documented, many trans and queer youth are routinely harassed at school and kicked out of home at young ages, while others leave in hopes of escaping the mental and physical violence that they experience at schools and in their houses. Many trans/queer youth learn how to survive in a hostile world. Often the informal economy becomes the only option for them to make money. Selling drugs, sex work, shoplifting, and scamming are among the few avenues that might ensure they have something to eat and a place to sleep at night. Routinely turned away from shelters because of their gender presentation, abused in residential living situations or foster care, and even harassed in "gay neighborhoods" (as they are assumed to drive down property values or scare off business), they are reminded that they are alone. Habitually picked up for truancy, loitering, or soliciting, many trans/queer people spend their youth shuttling between the anonymity of the streets and the hyper-surveillance of the juvenile justice system. With case managers too overloaded to care, or too transphobic to want to care, they slip through the holes left by others. Picked up—locked up—placed in a home—escape—survive—picked up again. The cycle builds a cage, and the hope for anything else disappears with the crushing reality that their identities form the parameters of possibility.10 With few options and aging-out of what little resources there are for "youth," many trans/queer adults are in no better a situation. Employers routinely don't hire "queeny" gay men, trans women who "cannot pass," butches who seem "too hard," or anyone else who is read to be "bad for business." Along with the barriers to employment, most jobs that are open to folks who have been homeless or incarcerated are minimum-wage and thus provide little more than continuing poverty and fleeting stability. Back to where they began—on the streets, hustling to make it, now older—they are often given even longer sentences. While this cycle of poverty and incarceration speaks to more current experiences, the discursive drives building their motors are nothing new. Inheriting a long history of being made suspect, trans/queer people, via the medicalization of trans identities and homosexuality, have been and continue to be institutionalized, forcibly medicated, sterilized, operated on, shocked, and made into objects of study and experimentation. Similarly, the historical illegality of gender trespassing and of queerness have taught many trans/queer folks that their lives will be intimately bound with the legal system. More recently, the HIV/AIDS pandemic has turned the surveillance technologies inward. One's blood and RNA replication became another site of susceptibility that continues to imprison people through charges of bio-terrorism, under AIDS-phobic laws. Living through these forms of domination are also moments of devastating resistance where people working together are **building joy**, tearing down the walls of normative culture, and opening space for a more beautiful, more lively, safer place for all. Captive Genders remembers these radical histories and movements as evidence that our legacies are fiercely imaginative and that our collective abilities can, and have, offered freedom even in the most destitute of times.11 In the face of the overwhelming violence of the PIC, abolition—and specifically a trans/queer abolition—is one example of this **vital defiance**. An abolitionist politic does not believe that the prison system is "broken" and in need of reform; indeed, it is, according to its own logic, working quite well. Abolition necessarily moves us away from attempting to "fix" the PIC and helps us **imagine an entirely different world**—one that is not built upon the historical and contemporary legacies of the racial and gendered brutality that maintain the power of the PIC. What this means is that abolition is not a response to the belief that the PIC is so horrible that reform would not be enough. Although we do believe that the PIC is horrible and that reform is not enough, abolition radically restages our conversations and our ways of living and understanding as to undo our reliance on the PIC and its cultural logics. For us, abolition is not simply a reaction to the PIC but a political commitment that makes the PIC impossible. To this end, the time of abolition is both yet to come and already here. In other words, while we hold on to abolition as a politics for doing anti-PIC work, we also acknowledge there are countless ways that abolition has been and continues to be here now. As a project dedicated to radical deconstruction, abolition must also include at its **center** a reworking of gender

and sexuality that displaces both **heterosexuality and gender normativity** as measures of worth.12

AT Perm

The perm fails—the queer body will never be safe in the prison and focusing on small reforms sacrifices a broader political vision that addresses anti-queer violence

Stanley 11 (Edited by Eric A. Stanley and Nat Smith, Ph.D. in History of Consciousness, UC Santa Cruz, UC President's Postdoctoral Fellow at UCSD , Captive Genders: Trans Embodiment and the Prison Industrial Complex, AK Press)

The violence that transgender people-significantly low-income transgender people of color-face in prisons, jails, and detention centers and the cycles of poverty and criminalization that leads so many of us to imprisonment is a key place to work for broad-based social and political transformation. There is no way that trans gender people can ever be "safe" in prisons as long as prisons exist and, as scholar Fred Moten has written, as long as we live in a society that could even have prisons. Building a trans and queer abolitionist movement means building power among people facing multiple systems of oppression in order to imagine a world beyond mass devastation, violence, and inequity that occurs within and between communities. We must resist the trap of being compartmentalized into "issues" and "priorities" and sacrificing a broader political vision and movement to react to the crisis of the here and now. This is the logic that allows many white and middle-class gay and lesbian folks to think that marriage is the most important and pressing LGBT issue, without being invested in the real goal of ending racism and capitalism. Struggling against trans imprisonment is one of many key places to radicalize queer and trans politics, expand anti-prison politics, and join in a larger movement for racial, economic, gender1; and social justice to end all forms of militarization, criminalization, and warfare

Cap/Neolib

Capitalism is the root cause of police brutality and the state of the prison system

Chris **Hedges**, **07-09**-15 [Hedges is a senior fellow at The Nation Institute in New York City. He has taught at Columbia University, New York University, Princeton University and The University of Toronto. He currently teaches prisoners at a maximum-security prison in New Jersey. He holds a B.A. in English literature from Colgate University and a Master of Divinity degree from Harvard University. He was awarded an honorary doctorate from Starr King School for the Ministry in Berkeley, Calif.] "Corporate Capitalism Is the Foundation of Police Brutality and the Prison State" Online: "http://www.occupy.com/article/corporate-capitalism-foundation-police-brutality-and-prison-state"

Our national conversation on race and crime is based on a fiction. It is the fiction that the organs of internal security, especially the judiciary and the police, can be adjusted, modernized or professionalized to make possible a post-racial America. We discuss issues of race while ignoring the economic, bureaucratic and political systems of exploitation — all of it legal and built into the ruling apparatus — that are the true engines of racism and white supremacy. No discussion of race is possible without a discussion of capitalism and class. And until that discussion takes place, despite all the proposed reforms to the criminal justice system, the state will continue to murder and imprison poor people of color with impunity. More training, body cameras, community policing, the hiring of more minorities as police officers, a better probation service and more equitable fines will not blunt the indiscriminate use of lethal force or reduce the mass incarceration that destroys the lives of the poor. Our capitalist system callously discards surplus labor, especially poor people of color, employing lethal force and the largest prison system in the world to keep them under control. This is by design. And until this predatory system of capitalism is destroyed, the poor, especially people of color, will continue to be gunned down by police in the streets, as they have for decades, and disproportionately locked in prison cages. "The strength of The New Jim Crow by Michelle Alexander is that, by equating mass incarceration with Jim Crow, it makes it rhetorically impossible to defend it," said Naomi Murakawa, author of The First Civil Right: How Liberals Built Prison America, when we met recently in Princeton, N.J. "But, on the other hand, there is no 'new' Jim Crow, there is just capitalist white supremacy in a state of constant self-preservation." "We should talk about what we are empowering police to do, not how they are doing it, not whether they are being nice when they carry out arrests," she said. "Reforms are oriented to making violence appear respectable and courteous. But being arrested once can devastate someone's life. This is the violence we are not talking about. It does not matter if you are arrested politely. Combating racism is not about combating bad ideas in the head or hateful feelings. This idea is the perfect formula to preserve material distributions in their exact configuration."

Neoliberalism is the root cause of the putrescent prison system

Stephen **Dillon**, May **2013**, Stephen Dillon, assistant professor of Queer Studies, holds a B.A. from the University of Iowa and a Ph.D. in American Studies with a minor in Critical Feminist and Sexuality Studies from the University of Minnesota. *Fugitive Life: Race, Gender, and the Rise of the Neoliberal-Carceral State,* Online: "https://conservancy.umn.edu/bitstream/handle/11299/153053/Dillon_umn_0130E_13833.pdf?sequence=1" Pgs. 3-4

Davis situated her imprisonment within the mutually constitutive relationship between racism, incarceration, and a changing economic landscape. According to Davis, prisons were filled with poor people of color and were thus a technology used to contain resistant and surplus populations

within a new formation of global capitalism. This insight forms a type of consensus within current scholarship on the prison system. For example, Ruth Wilson Gilmore writes, "As a class, convicts are deindustrialized cities' working or workless poor."9 Similarly, Loïc Wacquant argues that as social welfare policies were downsized in the 1970s and1980s, the "invisible hand of the deregulated labor market became wedded to the iron fist of the prison."10 According to Wacquant, the penal system functions as a apparatus to manage social insecurity and the social disorders created by deindustrialization, deregulation, and privatization.11 In the late 1970s and early 1980s, criminalization became the strategy of choice in dealing with the globalization of capital and the resistance it engendered.12Scholars in the last two decades have made clear the ways that the social state of the mid-twentieth century turned into a penal state by the mid-1980s. Yet, a young imprisoned black woman first documented this process more than forty years ago. And Davis was not the only one. As the prison and neoliberalism emerged as new modes of governance in the post-civil rights era, thousands of activists and prisoners reckoned with the changes occurring around them. Bettina Aptheker wrote, "It should be perfectly clear that thousands upon thousands of people currently in jail and prison have broken no laws whatsoever."13 She went on to argue that the prison had become a mechanism "through which the ruling powers seek to maintain their physical and psychological control, or the threat of control, over millions of working people, especially young people, and most especially black and brown young people."14 In this way, policing and penal technologies manage populations who are "actually or potentially disruptive" of the economic and social order.15

The prison system was a lie for the freedom of the individual, it was used as a means of control within the neoliberal system

Stephen **Dillon**, May **2013**, Stephen Dillon, assistant professor of Queer Studies, holds a B.A. from the University of Iowa and a Ph.D. in American Studies with a minor in Critical Feminist and Sexuality Studies from the University of Minnesota. *Fugitive Life: Race, Gender, and the Rise of the Neoliberal-Carceral State,* Online: "https://conservancy.umn.edu/bitstream/handle/11299/153053/Dillon_umn_0130E_13833.pdf?sequence=1" Pgs. 6-7

This turn to cultural-politics allows me to reperiodize the emergence of neoliberalism and mass incarceration. For example, the imprisoned writings of Angela Davis and Assata Shakur trace the market politics of the 1970s to the power of the market under chattel-slavery. Their writings and others allow me to document alternative genealogies for the emergence of neoliberalism in order to argue that the market's collusion with the carceral arose prior to the late 1970s and early 1980s. Neoliberalism did not become connected to the prison in the 1980s as Wacquant and others argue. Like the prison's constitutive relationship to race, mass incarceration was imagined as central to the rule of the free market long before deindustrialization, deregulation, privatization, and finance became new mechanisms of population management and governmentality. Indeed, the earliest writings of neoliberal economists in the 1940s, '50s and '60s advocated the containment of racialized and gendered populations considered surplus or potentially rebellious to the rule of the free market. At the same time, law and order politicians like Barry Goldwater and Richard Nixon argued that police and prisons were necessary to the freedom of the liberal individual and the deregulated labor market. While neoliberal economists argued that the free market needed the prison, law and order politicians argued that the prison would protect the free market and an emergent neoliberal social order. In other words, in the earliest articulations of what law and order and neoliberalism would be—before a wave of new laws and policy changes took hold in

the 1980s—neoliberalism was imagined as a carceral project and law and order envisioned as a neoliberal project.

The prison was created by and for neoliberalism in order to control the chaos that reigned from the fruits of it's putrid mouth. America is no different, America has become the carceral apparatus

Stephen **Dillon**, May **2013**, Stephen Dillon, assistant professor of Queer Studies, holds a B.A. from the University of Iowa and a Ph.D. in American Studies with a minor in Critical Feminist and Sexuality Studies from the University of Minnesota. *Fugitive Life: Race, Gender, and the Rise of the Neoliberal-Carceral State,* Online: "https://conservancy.umn.edu/bitstream/handle/11299/153053/Dillon_umn_0130E_13833.pdf?sequence=1" Pgs. 9-11

For Baldwin, hope that the United States had progressed beyond the time of slavery was only a fantasy. The present told a different story. The horrors of slavery were not an "intolerable sight" nor an "unbearable memory" to the American people; instead, slavery's visual economy and policing technologies composed a lesson about what was happening to Davis and countless others. The stillness of time meant the present and past were not aberrations to the radical alterity of the future, but rather, were anticipatory reflections of what lay ahead. Instead of imagining the civil rights victories of the mid-1960s as central to a teleological story of American progress, many 1970s activists worked to theorize, visualize, and comprehend the new forms of governance that would emerge in the aftermath of segregation, the Vietnam War, and the Keynesian welfare state. This anticipatory logic embedded in their cultural-politics theorized the relationship between the prison and the market before neoliberalism and mass incarceration became actual policies. For example, many of the contributors of If They Come in the Morning argued that the dismantling of the Keynesian welfare state and a wave of deindustrialization produced a massive surge of poverty and unemployment. Law and order policies then criminalized the forms of disorder produced by the neoliberal economic production of poverty. In effect, poor people of color were trapped between the abandonment of a crumbling welfare state and the power of an encroaching penal state. Many prisoners and activists argued that the free world started to feel like a prison. As Zayd Shakur wrote in 1970, "Prisons are really an extension of our communities. We have people who are forced at gunpoint to live behind concrete and steel. Other of us, in what we ordinarily 10 think of as the community, live at gunpoint again in almost the same conditions…It's the same system—America is the prison."19 Shakur's conception of "prison" undoes normative conceptions of space by exceeding the walls of the prison proper. Within the post-civil rights landscape, a changing economic system became co-extensive with an emerging carceral apparatus. An assemblage of race, gender, capital, policing, and penal technologies produced a symbiosis between the de-industrialized landscape of the late twentieth century urban United States and the gendered racisms of an emerging prison industrial complex. And as feminist color activists argued, diffuse structural networks of racism and sexism mimicked the steel bars of a cage. In this way, 1970s activists argued that the intimacy between the market and the prison was much deeper than has been articulated by scholars in the last two decades. Finally, as I argue throughout the project, neoliberalism and the prison have been central to the making and remaking of race, gender, and sexuality. The prison has routinely been theorized as intensely racialized, yet its relationship to gender and sexuality has only begun to be explored. On the other hand, the market is often theorized as connected to race, gender, and sexuality but not of them—in other words, the market is frequently isolated and abstracted from these categories. Fugitive

Life demonstrates that like the prison, the market does not only rely on race, gender, and sexuality, but is a racialized and gendered technology in and of itself. I provide an alternative narrative to the emergence of neoliberalism and mass incarceration by narrating both through the gender and sexual politics of post-civil rights activists. In this way, I document the centrality of race, gender, and sexuality to the organization, operation, and formation of the neoliberal-carceral state. Throughout Fugitive Life, I argue that this process had particular, profound, and too often unexplored consequences for queer women, women of color, and poor women. For many activists and scholars, mass incarceration signals a profound crisis for men of color (which it does), but its effects on women and gender non-conforming people have too often been subsumed under the visibility of the violence against men of color inside and beyond the prison. To that end, Fugitive Life focuses mostly on the activism and cultural products of people who identified as women. I center race, gender, and sexuality as I explore the writings of Davis and others, and the ways they theorized the prison and market in the making and remaking of state power; subjectivity; knowledge; space and time; and the reorganization of life itself.

Deference DA

Legal precedent means the Supreme Court will defer to prison guards – specifically on sexual assault cases - empirics prove

Hill 14 (Tasha, J.D., 2014, University of California, Los Angeles School of Law, "SEXUAL ABUSE IN CALIFORNIA PRISONS: How the California Rape Shield Fails the Most Vulnerable Populations", UCLA Women's Law Journal, 21(2), peer reviewed, https://escholarship.org/uc/item/5sw7f149) //RL

In addition to the exclusionary rape shield law, there are multiple legal and institutional impediments to a prisoner's ability to obtain a judgment against an abuser or rapist. For example, **prison law, including federal legislation such as the Prison Litigation Reform Act and Supreme Court jurisprudence, is designed to defer to prison officials**.119 Public apathy is another hurdle; some people feel that we ought not be too concerned about prison rape, that we have more pressing social issues, or that offenders are getting their "just desserts."120 However, as the Supreme Court has clearly stated, "rape is never the sentence for a crime."121

According to a Boston Globe survey in 1994, fifty percent of those polled agreed with the statement, 'society accepts prison rape as part of the price criminals pay for wrongdoing.'"); Child Molester Sues Over Rape in Eastern Washington Jail, KOMOnews, August 14, 2014, comments, available at http://www.komonews.com/news/local/Child-molester-sues-over-rape-in-Eastern-Wash-jail-271260261.html ("He got exactly what he deserved."; I would have done him a few more times than(sic) cut his head off."; "He deserved every second of what was done to him.") 121 Farmer v. Brennan, 511 U.S. 825, 834 (1994).

2014] Sexual Abuse in California Prisons 111

The challenge faced by abused prisoners in the face of judicial deference to prison officials (in administering the prisons) is quite high. The Prison Litigation Reform Act,122 passed in 1996, added an exhaustion requirement to inmate complaints, including complaints against staff and other inmates. Inmates must exhaust all administrative remedies before bringing a case to court.123 Prison administrators and legislatures are able to create complex administrative procedures often involving very short time frames and complicated paperwork to deter inmate actions. Once an inmate misses a deadline, for any reason at all, including an extended hospital stay, illiteracy, or deliberate interference from prison guards, her claim for relief is dead.124 Complaints of sexual assault, therefore, rarely reach a court,125 for the above legal reasons as well as other factors, including a very real fear of reprisal from inmate or staff perpetrators, a code of silence amongst fellow inmates, embarrassment, and general distrust of prison staff.126

When allegations by inmates are made against prison staff, the inmate is generally perceived to be not credible,127 **whereas the**

guard's account is generally held to be true.128 Once it becomes

that 7.6 percent of male inmates reported sexual victimization by staff). 128 See, e.g., Hum. Rts. Watch, Nowhere to Hide: Retaliation Against

Women in Michigan State Prisons (July 1998), available at http://www.hrw.

org/legacy/reports98/women/.

known that an inmate has been sexually abused, the likelihood that

she will be abused again goes up dramatically as she is marked as

a victim by predators in the facility, be they inmate or staff.129 Additionally, in smaller jurisdictions where the correctional facility is a major employer, a company town mentality may predominate, with local prosecutors reluctant to pursue claims in which the defendant is a corrections officer who may also be a neighbor, relative or friend.130

Despite the fact that 46% of substantiated sexual assault incidents involve staff assaulting inmates,131 **corrections officers are rarely criminally prosecuted or sued for sexual assault**.132 In fact, rapes in prison are charged and prosecuted at a lower rate than in the general community, despite the high rate of prison rape.133 For example, in Los Angeles, a ten-year veteran Deputy District Attorney in the sex crimes unit said she had never heard of a single sexual assault case coming out of a prison or jail in California.134

Most prisons are under state, not federal jurisdiction

Piecora 14 (JURIST Guest Columnist Christina Piecora, St. John's University School of Law, Class of 2015, is the author of the first article in a twelve-part series from the staffers of the Journal of Civil Rights and Economic Development, "Female Inmates and Sexual Assault", JURIST.ORG, http://jurist.org/dateline/2014/09/christina-piecora-female-inmates.php) //RL

Males are the perpetrators in 98 percent of staff-on-inmate sexual assault (PDF] of female inmates. Forty-one percent of guards in the average state female correctional center are male, a job that entitles them to perform strip searches and have access to prisoners in their most vulnerable states. Therefore, although women comprise only 7 percent of the state prison population, they comprise 46 percent of sexual abuse victims. Male prison officials not only use force and violence to commit sexual assault against female prisoners but also use their positions to coerce, threaten and intimidate inmates into sexual activity. Thousands of documented accounts exist of prison staff demanding sex in exchange for drugs, favors and access to educational programs. Similarly, prison officials often use threats of going to the parole board with false reports of bad behavior, planting drugs on prisoners or withholding basic necessities such as feminine hygiene products or visitation with children if inmates do not perform sexual acts. While these acts are repugnant, prison officials are not the only perpetrators of sexual assault against female inmates.¶ The rate of inmate-on-inmate sexual victimization [PDF] is at least 3 times higher for females (13.7%) than males (4.2%). This has been attributed to the fact that a majority of prison officials do not view female-on-female sexual assault as "true rape," making them less likely to reprimand inmates. Furthermore, as the female prison population has grown at

a dramatic rate, states have been unable to keep up. Therefore, female prison facilities tend to be overcrowded and poorly designed, making them difficult to police.¶ In addition to cross-gender supervision and poorly designed facilities, prison sexual assault against females is prevalent because little punishment exists to deter perpetrators. Victims are often blocked from bringing charges against prison staff who were either complacent or the culprits in their attacks by the Prison Litigation Reform Act (PLRA). The PLRA requires prisoners to exhaust all administrative remedies before they are allowed to file suit in federal court to challenge prison abuses. For victims this means that they must report their abuse to the very people committing or facilitating that abuse. Thus, inmates who complained of staff sexual misconduct were punished 46.3 percent of the time.¶ Additionally, victims must meet an incredibly high burden of proof to substantiate a constitutional claim. The Eighth Amendment establishes the right to be free from cruel and unusual punishment. However, for victims to establish a violation of their Eighth Amendment rights they must prove that the prison official had a "seriously culpable state of mind" by satisfying the subjective deliberate indifference test. The test requires that the prison official must (1) "both be aware of facts from which the inference could be drawn that a substantial risk of serious harm exists" and (2) "also draw the inference." For victims, the difficulty lies in proving that prison administrators were aware of the risk and ignored it. In applying the test courts have severely limited the liability of prison officials.

Case

No Enforcement/Legal Redress

No enforcement in prisons—sexual violence allowed to continue

Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW*, http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 44-48//SRawal

In the United States, **sexual abuse by guards in women's prisons is so notorious and widespread that it has been described as "an institutionalized component of punishment behind prison walls."**1 **Women in prisons2 across the United States are subjected to diverse and systematic forms of sexual abuse: vaginal and anal rape; forced oral sex and forced digital penetration; quid pro quo coercion of sex for drugs, favors, or protection; abusive pat searches and strip searches; observation by male guards while naked or toileting; groping; verbal harassment; and sexual threats**.3 Guards and prisoners openly joke about prisoner "girlfriends" and guard "boyfriends." Women prisoners become pregnant when the only men they have had contact with are guards and prison employees; often they are sent to solitary conªnement—known as "the hole"—as punishment for having sexual contact with guards or for getting pregnant.**4 Such open and obvious abuses would seem relatively easy for a prison administration to detect and prevent if it chose to do so**. **Prisons owe an afªrmative legal duty to protect their inmates against abuse.5 Congress and forty-four states have criminalized all sexual contact between guards and prisoners, regardless of consen**t.6 **Nonetheless, within women's prisons guards routinely commit serious sexual offenses against the women in their custody**. **Government administrators know that such abuse is occurring**7 and acknowledge their duty to prevent it.8 However, **they have generally neglected to do much about it**, as **most prisons have failed to adopt institutional and employment policies that effectively prevent or reduce custodial sexual abuse**.9 In most workplaces, an employee who had sex on the job would be ªred. In prison, **a report of custodial sexual abuse is more likely to result in punishment or retaliation against the prisoner than in disciplinary consequences for the guard.**10 **One might expect the law to furnish incentives for prisons to control such unlawful acts by their employees,** as it does for other civil defendants**. It does not**.11 Instead, as I demonstrate in this Article, a network of prison law rules—the Prison Litigation Reform Act of 1995 ("PLRA"),12 governmental immunities, and constitutional deference— work together to confer near-complete immunity against prisoners' claims. In the United States, both male and female prisoners are stereotyped as black;13 more than two thirds of women in U.S. prisons are African American or Latina.14 In this Article, I consider how the gendered racialization of women prisoners informs legal and institutional indifference to their treatment in prison. Like black women under slavery,15 **women in contemporary prisons are subjected to institutionalized sexual abuse, while the law refuses to protect them or provide redress.**

No enforcement of prison reform laws- video-taping strip searches and inadequate mental health services prove

Trounstine 14

Jean Trounstine, author/editor of five published books and many articles, professor at Middlesex Community College in Massachusetts, and a prison activist, 9-10-2014, "Videotaping Strip Searches in Jail Is Not Reform," *Truthout*, http://www.truth-out.org/opinion/item/26098-videotaping-strip-searches-in-jail-is-not-reform#//SRawal

Much has been written about Sheriff Michael J. Ashe of Hampden County as a heralded criminal justice reformer. Most recently the Massachusetts Attorney General candidate, Warren Tolman, claimed support of Ashe with these words,"Sheriff Ash**e has been a leader in the Commonwealth on finding ways to rehabilitate, treat mental illness and be proactive in instituting criminal justice reforms."** Even Judge Michael Ponser, the judge who ruled that Sheriff's Ashe's deplorable policy of **videotaping strip-searches in the women's prison in Chicopee was "unconstitutional**," also noted that Ashe has a good reputation running the county's jails in the Conclusion to his Decision. But Debra Baggett**, the plaintiff** in the class-action case for 178 former and current detainees at the Chicopee jail **has much to say about the place where 274 strip searches were videotaped**. The lawsuit was filed by the law offices of Howard Friedman in 2011 against Sheriff Michael J. Ashe and Assistant Superintendent Patricia Murphy of the Western Massachusetts Regional Correctional Center in Chicopee and it contended that the searches violated the Fourth Amendment which protects citizens from unreasonable searches and seizures. **These tapes, began in** mid-September **2008,** and according to the suit, **68 percent of them show "some or all of the women's genitals, buttocks, or breasts."** Per Friedman's law office website, "From September 15, 2008 to May 20, 2010, **males held the camera for about 70% of the strip searches."** And the gender of the camera holder is not irrelevant in spite of the fact that men were supposed to have their backs to the prisoners during the videotaping. As the judge pointed out, "If you're going to videotape something, it's awfully hard not to view it." **The jail contended that these videotapes were used for safety reasons and to document a "potentially dangerous move"** from general population to the segregation unit. But as David Milton, an attorney for the women, said of the jail, in a telephone interview, "No one couldn't identify a single place in the country that videotaped strip searches." Baggett, who is now living in Alabama, said that to her, **the policies at Chicopee certainly didn't look so progressive**. She explained that "Seg" or the **Segregation Unit was "multi-function;" in other words, it was used to isolate women with behavioral issues and supposedly to prevent those with mental health issues from suicide.** Baggett said to me, imagine being a woman who had just lost her daughter or someone who had been raped a few hours before her arrest—both cases which occurred during her jail stay in Seg—and imagine how distraught you might be. Then imagine a jail that decides to handle such women with strip searches after they have been transferred from general population to Seg. From Think Progress, These searches required a woman to "run her fingers through her hair, remove dentures if she wore them, raise both arms, lift her breasts, lift her stomach for visual inspection if she had a large mid-section, and remove any tampon or pad if she were menstruating. She was then required to turn around, bend over, spread her buttocks, and cough." Then imagine being videotaped during those searches. **Videotaped, because the jail contended this was a necessity to stop possible infractions.** In two phone interviews, Baggett was very open about the fact that **a "Mental Health person was almost non-existent**" in her experience in Seg. **She never once saw a psychiatrist** while she was there**. She said that medication for her mental health issues was taken away when she entered WCC and she had a severe withdrawal from being without it that led to restraints and pepper spray. She said this kind of treatment exacerbated the issues that she suffered from.**

Abuses will continue- prisoners can't effectively access legal redress

Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW,* http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 70-73//SRawal

With few, if any, exceptions, prisoners' civil claims against correctional authorities for toleration of sexual abuse have succeeded only when a large number of women testify to widespread abuses, and some guard witnesses break ranks to corroborate the prisoners' accounts that severe custodial sexual abuse was both widespread and publicly known within the prison.199 When prison administrators seek to restrict male guards' access to women prisoners in order to protect the prisoners against sexual abuse, courts generally have upheld these institutional policies against guards' employment discrimination claims,200 at least at the appellate level.201 However, **when a prisoner brings civil claims on her own behalf, they are generally screened out or rejected.**202 Indeed, **one commentator argues that juries are so reluctant to award any damages to prisoners that they will not on basis that prisoner was "not credible" because she had formed a "plan" to get a transfer by reporting sexual activity with corrections officers; the court** found some of this activity not to have happened because it was uncorroborated,

and **stated that other activity "could only reasonably be described as consensual**" because the prisoner "never tried to caught [the guards] off, scream, or yell"). 70 Harvard Civil Rights-Civil Liberties Law Review [Vol. 42 do so unless they believe the defendant has acted with such malice that punitive damages are appropriate.203 Even when prisoners are able to prove that they have been raped, juries may tend to "lowball prisoners' nonwage damages as an expression of disregard for them."204 For example, in Morris v. Eversley, 205 a jury convicted a guard of sexually assaulting a female prisoner based on DNA evidence. **A civil jury awarded the prisoner only $500 in compensatory damages and $7,500 in punitive damages.2**06 The district court judge found the verdict generally inadequate, and ordered a new trial. The new jury awarded $1,000 for compensatory damages and $15,000 for punitive damages. The judge, apparently frustrated by this paltry award, wrote: I was baf°ed that the ªrst jury awarded such low amounts, and yet **the second jury did not award much more**. **It is hard to imagine that Morris could be made whole for the damages she suffered, including the loss of her dignity, by a mere $500 or $1,000 in compensatory damages**. . . . **[A] prisoner**, even a former prisoner, **is unable to recover a fair measure of damages**.207 **Such inadequate jury awards re°ect the discredited prejudicial racial and gender stereotypes by which low-status women, especially black women, prostitutes, and prisoners, are viewed as less likely to be harmed by sexual assault**. Outside of the prison context, damage awards for sexual assault are typically much higher**. A recent survey of civil actions for sexual assault resolved in state appellate courts between 2001 and 2004 found that damage awards in sexual assault cases outside prison can range from nothing to well over one million dollars**. But in cases involving institutional liability, "a signiªcant number of cases award compensatory damages of $100,000 to $200,000." Ellen M. Bublick, Tort Suits Filed by Rape and Sexual Assault Victims in Civil As Bublick observes, "[i]nadequate damage awards may be a particular issue when the victim and the assailant are acquaintances or partners," as they are by deªnition in cases of custodial sexual abuse 1. **The Prison Litigation Reform Act The Prison Litigation Reform Act209 ("PLRA") was expressly designed to deter prisoner lawsuits**. It was introduced in 1995 to respond to congressional concern about the dramatic increase in prisoner litigation between 1980 and the mid-1990s—an increase that, as commentators have noted, coincided with a dramatic increase in the incarcerated population in the United States.210 **The PLRA was not intentionally designed to block lawsuits for custodial sexual abuse; rather, it was designed to address the perceived problem of jailhouse lawyers who brought frivolous lawsuits**. In 1995, during the Senate debate over the bill, Senator Bob Dole cited a notorious prisoner lawsuit in which a prisoner complained that the prison served chunky, rather than creamy, peanut butter.211 Numerous other frivolous suits, such as claims arising from an unsatisfactory prison haircut and a desire for a particular brand of sneakers, were also used during the PLRA debates as examples of the pressing need for special barriers to prisoner litigation.212 During the congressional debates, Senator Joe Biden pointed out that the PLRA would erect "too many roadblocks to meritorious prison lawsuits."213 He urged Congress not to "lose sight of the fact that some of these lawsuits have merit—some prisoners' rights are violated."214 Senator Biden pointed out that hundreds of women prisoners had been sexually abused by dozens of guards, openly and for years, in Washington, D.C., prisons. He noted that this practice changed only after their class action was successful.215 Despite Senator Biden's warnings, no amendment was adopted to protect the right of prisoners to sue in the event of sexual abuse by guards. The PLRA is a status-based law that excludes almost all prisoner claims from the courts.216 Like historical doctrines designed to deter rape average sentence given to Black women's assailants is two years. The average sentence given to white women's assailants is ten years." Crenshaw, Sexual Harassment, supra note 44, at 1471. complainants, black witnesses, and married women from bringing white men to court, the PLRA establishes unique hurdles that are nearly impossible for prisoner plaintiffs to overcome. The most damaging hurdle imposed by the PLRA is its grievanceexhaustion requirement.217 Like the marital privacy doctrine that excluded wives' claims from the courts in order to protect "family government,"218 this provision values the peace of mind of those in power over the safety of those who are in their custody. **The grievance-exhaustion provision requires inmates to exhaust internal prison grievance procedures before they may bring their claims to an outside authority, even if the procedures are complex, inefªcient, unfair, or incapable of offering a remedy for the prisoner's claim.219 If the prisoner has failed to do so, the litigation is dismissed**. **Thus a prison is virtually insulated from prisoner litigation to the extent that its grievance process is complex and time-consuming, its deadlines for ªling a grievance are brief,220 and the threat of retaliation deters prisoners from using the process at all**. In practice the grievance-exhaustion requirement "invites technical mistakes resulting in inadvertent noncompliance with the exhaustion requirement, and bar[s] litigants from court because of their ignorance and uncounselled procedural errors."221 Unreasonably quick grievance deadlines evoke the "fresh complaint" requirements of traditional rape doctrine.222 In New York, for example, the Department of Corrections imposes a fourteen-day limit for ªling any prisoner grievance, unless the grievance authority determines that "mitigating circumstances" justify the delay.223 If a **prisoner is in a "consensual" sexual relationship with a guard, she is unlikely to express a grievance until well after the guard becomes threatening or abusive, thus missing the deadline**.224 If she misses the grievance deadline, her litigation is dismissed**. Furthermore, prison grievance procedures offer no prospective relief to protect the prisoner before she is raped**. If a guard has merely threatened to assault the prisoner, offered a quid pro quo for sex, or groped her— or if she did not think to preserve a DNA sample during her rape—the grievance process will do nothing.225 Even though ªling a grievance is futile in such circumstances, **the PLRA still requires the prisoner to report the abuse to her**

abuser's colleagues through an often-humiliating disciplinary procedure[226] **that is likely to result in retaliation**. In addition to its grievance-exhaustion requirement, **the PLRA further hinders prisoner litigation by prohibiting any prisoner lawsuit "without a prior showing of physical injury**."[227] Some courts have raised this barrier even further by requiring that the physical injury be at least as serious as an injury that would meet the Eighth Amendment's "de minimis harm" requirement.[228] **Presumably, vaginal or anal rape would suf[a]ce**.[229] On its face, however, **the physical injury requirement appears to bar prisoner claims for sexual abuse if no physical injury results**.[230] For example, the text of this provision appears to bar claims that a prisoner was forced to perform or submit to oral sex, was digitally penetrated, or was coerced into sexual compliance through threats or inducements without a beating.

Won't Solve – Precedent

Legal precedents are ineffective; debate is never-ending

Pierre **Schlag**, **1985**, "Rules and Standards,"
https://lawweb.colorado.edu/profiles/pubpdfs/schlag/schlagUCLALR.pdf

Every student of law has at some point encountered the "bright line rule" and the "flexible standard." In one torts casebook, for instance, Oliver Wendell Holmes and Benjamin Cardozo find themselves on opposite sides of a railroad crossing dispute. They disagree about what standard of conduct should define the obligations of a driver who comes to an unguarded railroad crossing. Holmes offers a rule: The driver must stop and look. Cardozo rejects the rule and instead offers a standard: The driver must act with reasonable caution. Which is the preferable approach? Holmes suggests that the requirements of due care at railroad crossings are clear and, therefore, it is appropriate to crystallize these obligations into a simple rule of law. Cardozo counters with scenarios in which it would be neither wise nor prudent for a driver to stop and look. Holmes might well have answered that Cardozo's scenarios are exceptions and that exceptions prove the rule. Indeed, Holmes might have parried by suggesting that the definition of a standard of conduct by means of a legal rule is predictable and certain, whereas standards and juries are not. This dispute could go on for quite some time. But let's leave the substance of this dispute behind and consider some observations about its form. First, disputes that pit a rule against a standard are extremely common in legal discourse. Indeed, the battles of legal adversaries (whether they be judges, lawyers, or legal academics) are often joined so that one side is arguing for a rule while the other is promoting a standard. And this is true regardless of whether the disputes are petty squabbles heard in traffic court or cutting edge controversies that grace the pages of elite law reviews. As members of the legal community, we are forever involved in making arguments for or against rules or standards. This brings us to a second observation: The arguments we make for or against rules or standards tend to be pretty much the same regardless of the specific issue involved. The arguments are patterned and stereotyped; the substantive context in which the arguments arise hardly seems to influence their basic character. The arguments are drearily predictable, almost routine; they could easily be canned for immediate consumption in a Gilbert's of legal reasoning. But if we accept these two observations, the implications are far from dreary or routine. On the contrary, it follows that much of legal discourse (including the very fanciest law-talk) might be nothing more than the unilluminating invocation of "canned" pro and con arguments about rules and standards. This prospect is neither dreary nor routine; it is, however, somewhat humbling. Lest undue humility get the upper hand, there are two major ways of avoiding this vexing embarrassment. First, we can argue that the two observations above are wrong. Unfortunately, I happen to think that they are in some sense correct-and part of this Article is devoted to supporting this contention. Second, we can argue that even if the observations are correct, there is more wisdom or rationality or sense (or other good

stuff) to the rules v. standards dispute than first meets the eye. In other words, even if rules v. standards disputes are stereotyped, almost caricatured, forms of argument, there may be more substance to these arguments about form than we might have guessed. But I don't think so: Ultimately, all the more promising conventional ways of understanding the rules v. standards dispute will turn out to be located within the bounds of that dispute. The conventional forms of legal thought allow us no place outside of the rules v. standards dichotomy from where we can make sense of the dispute. In the end, no explanation (or all explanations) of the rules v. standards dispute is left standing. The attempt to tie form to substance is just so much form.

Reasonable suspicion doesn't solve

The reasonable suspicion scope has just expanded- Arizona v Johnson

Searles 15

Steven Searles, Daily Kos member "Black Lives Matter: Reasonable Suspicion, Racial Disparity & the Roberts' Court", *DAILY KOS*, http://www.dailykos.com/story/2015/03/17/1371248/-Black-Lives-Matter-Reasonable-Suspicion-Racial-Disparity-the-Roberts-Court#, 03/17/15//SRawal

The standard merely to stop and detain someone, however, is far easier to meet. That standard is referred to as "Reasonable Suspicion." I know, that sounds pretty vague. Reasonable suspicion of what? And what constitutes a reasonable versus an unreasonable suspicion on the part of a police officer. The Supreme Court of the Unite States ("SCOTUS") first established the basis of the reasonable suspicion standard in the 1968 case of Terry v. Ohio. In the view of the Terry majority, a police officer may stop and detain an individual he or she suspects may have committed (or is about to commit) a punishable crime without violating the Fourth Amendment provide that "in justifying the particular intrusion the police officer must be able to point to specific and articulable facts which, taken together with rational inferences from those facts, reasonably warrant [stopping and detaining a person]." This reasonable suspicion must not be based on an "inchoate hunch" but must be based on what a reasonable police officer would do. Subsequent case law by SCOTUS established that this suspicion must be associated with a specific individual in Ybarra v. Illinois, where a patron of a tavern was detained and searched by police even though the police merely had a warrant to search the building and no independent foundation for suspecting the defendant of any crime. However, to fully understand how the current Roberts' Court views the issue, we must look at its decision Arizona v. Johnson where it expanded the scope of the reasonable suspicion standard in Terry in a case involving an passenger in a vehicle stopped by police for a minor traffic offense. The defendant was only a passenger, but this did not stop the court from concluding he could be detained and frisked. The police, all of whom were members of a "gang task force" began to question the defendant, and he answered all their questions, including telling the officer who made the stop that he lived in a town "associated with the Crips gang and had previously been imprisoned for one year for burglary. When a female police officer demanded he exit the vehicle for further questioning about his possible gang involvement, the defendant willingly complied. (As an aside, this was probably a smart move on his part, all things considered, since police around the country have shown a marked intolerance, and a tendency to resort to force, when a person shows any sign of non-compliance with their demands.) The police officer contended that his answers to her questions gave her a reason to reasonably suspect he was armed with a weapon, and she frisked him moments after he exited the car. She found a gun on him and he was convicted of unlawful possession. He appealed his conviction on the basis that the police had no just cause to search him. The state of Arizona argued that his own "admissions" following questioning about matters unrelated to the initial traffic stop authorized the cops to pull him out of the car and frisk him based on their reasonable suspicion he was armed. The state appellate court overturned his conviction, holding that that the police officer had no "reason to believe the defendant was engaged in criminal activity" and thus the officer did not have reasonable suspicion to detain and frisk the defendant.

Reasonable suspicion disproportionately affects sex workers and trans people

Ludwig 14

Mike Ludwig, a Truthout reporter, ""Walking While Woman" and the Fight to Stop Violent Policing of Gender Identity", *TRUTHOUT*, http://www.truth-out.org/news/item/23551-walking-while-woman-and-the-fight-to-stop-violent-policing-of-gender-identity, 06/07/14//SRawal

For years, community groups across the country have been challenging police departments to stop their officers from criminalizing and profiling transgender women for being who they are in public. Vague prostitution statues in cities across the country allow police wide discretion in determining "reasonable suspicion" and "probable cause" for searching and arresting suspected sex workers, and transgender women often find themselves in handcuffs for simply "walking while trans" or "walking while woman." A 2005 Amnesty International review of police brutality and profiling directed toward LGBTQ people in the United States found "a strong pattern of police unfairly profiling transgender women as sex workers." Police, advocates say, often target transgender women for arrest based on how they look. In Jackson Heights, police routinely picked up transgender women and later justified the arrests because the women were carrying condoms, according to Make the Road New York. Andrea Ritchie, an anti-profiling advocate and attorney who represents transgender clients who have been allegedly profiled and abused by officers of the New York Police Department, told Truthout that the use of condoms as evidence of prostitution is a good example of "reasonable suspicion" becoming blatant discrimination. "When was the last time you were arrested for carrying condoms?" she asks.

People are invasively searched without reasonable suspicion

Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, "Restoring a National Consensus: The Need to End Racial Profiling in America", http://www.civilrights.org/publications/reports/racial-profiling2011/racial_profiling2011.pdf, March 2011//SRawal

The 2009 experience of Elvis Ware, a 36 year-old African-American veteran of Operation Desert Storm, is illustrative of the humiliation and stress experienced by a person who has been a victim of racial profiling. In 2009, police in Detroit, Michigan, conducted a stopand-frisk of Ware. While in a public parking lot, one officer "shoved his bare hand down Ware's pants and squeezed his genitals and then attempted to stick a bare finger into Ware's anus." Other young men of African descent report that the same two officers who stopped Ware conducted similar outrageous and inappropriate searches on them without warrants, probable cause, or reasonable suspicion. In accepting a settlement from the city of Detroit that included monetary damages, Ware said, "I not only wanted justice for myself, but I wanted it for others who were treated this way…. If, by coming forward, I prevent just one person from having to go through this, I have succeeded."115 Ware's humiliation is not unique. Texas State Judge Gillberto Hinajosa, the subject of immigration-related profiling on many occasions, has stated that Southern Texas "feels like occupied territory … It does not feel like we're in the United States of America."116 Such alienation is a common consequence of being profiled. Exposure to racial profiling has behavioral as well as emotional consequences. Many minorities who are entirely innocent of any wrongdoing choose to drive in certain automobiles and on certain routes, or to dress in certain clothes, to avoid drawing the attention of police who might otherwise profile and stop them.117 Or they choose to live in areas where they will not stand out as much, thereby reinforcing patterns of residential segregation.118

Reasonable suspicion means nothing- racial profiling proves

Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, "Restoring a National Consensus: The Need to End Racial Profiling in America", http://www.civilrights.org/publications/reports/racial-profiling2011/racial_profiling2011.pdf, March 2011//SRawal

Another example of racial profiling in the stop-and-frisk context is provided by Jackson, Tennessee. In Jackson, police conduct what they term "field interviews" in which they stop, interview, and may photograph pedestrians and bystanders when an officer has "reasonable suspicion to believe a crime has occurred [or] is about to occur or is investigating a crime." A review of "field cards" generated by the field interviews indicates that 70 percent were for African Americans. The population of Jackson is only 42 percent African American. One African-American college student reported that police in Jackson stopped him on the street while he was walking to his grandmother's house. They then followed him onto the porch of her home where they conducted field interviews of him and five other African-American visitors, and threatened to arrest them if they did not cooperate.40 The use of racial profiling in connection with entry into the U.S. in the counterterrorism and immigration contexts is discussed later in this report, but the practice has long been commonplace in the war on drugs at the nation's border crossings and airports. For example, drug courier profiles used by the U.S. Customs Service regularly include race as a factor in guiding law enforcement discretion.41 The case of Curtis Blackwell, a long haul trucker, who tried to cross from Mexico into the U.S. at a border crossing in Lordsburg, New Mexico, is illustrative. On August 15, 2008, Blackwell, an African American, was driving his truck across the border when he was stopped and searched by officers of the New Mexico State Police. The officers accused Blackwell of being under the influence of alcohol or narcotics, despite the fact that he passed every sobriety and drug test administered. His truck was impounded for 24 hours until it was allowed entry into the U.S. Evidence suggests other African-American truckers entering the U.S. from Mexico at this point of entry have also been detained without reasonable suspicion.42 In October 2003, in another case involving an African American who may have "fit" the drug courier profile, state police troopers at Boston's Logan Airport stopped attorney King Downing as he talked on his cell phone. According to Downing, police demanded to see his identification and travel documents. Downing knew he was under no obligation to provide the documents and declined to do so. Police first ordered him to leave the airport, but then stopped him from leaving, surrounded him with officers, and placed him under arrest. At that point, Downing agreed to provide his identification and travel documents. After a 40-minute detention, he was released. Four years later, in a lawsuit brought by Downing, a jury found the police had unlawfully detained him without reasonable suspicion.43

Legal precedents ultimately fail due to debate

Pierre **Schlag**, **1985**, "Rules and Standards,"
https://lawweb.colorado.edu/profiles/pubpdfs/schlag/schlagUCLALR.pdf

A conclusion in a law review article is usually a tidy summation of what has transpired during the course of the reading. The virtue of a conclusion is that it ties together all the various strands of the article and synthesizes the various parts into a sensible bit of legal wisdom, complete, finished, and, in appearance at least, unassailable. There is something comical about this ritual. For if we are convinced of anything, it is that there are no conclusions, that things go on, and that everything will always be revised. A conclusion here would be particularly ironic. After all, this Article is about a dialectic I claim is omnipresent, yet bereft of any synthesis. What to say? Here are a couple of possibilities: The mainstream message is that much of our legal argumentation seems to track a dialectic that is incapable of resolution. The steps in this argumentation are patterned and predictable. We cannot be sure whether the argumentation reflects anything of substance or not. Therefore, it behooves us to be on our guard when we find ourselves making

these arguments and to consider whether they truly do reflect concerns of substance or not. The danger of the dialectic is that we may think we are discovering something about substance, when in fact we are only discovering something about form. A less mainstream conclusion might go like this. Much of legal argument tracks the dialectic. This dialectic cannot be anchored in matters of substance. Indeed, the very attempt to explain this aspect of form in terms of substance succeeds in doing quite the reverse: It puts us on the road to explaining substance by means of form. The short of it is that much of legal argumentation is simply an exercise in the formalistic mechanics of a dialectic which doesn't go anywhere. The point of further study ought to be to ascertain why and how it is that we allow such silly games to have such serious consequences.

No legal weight behind precedents

Neil **Duxbury**, 10-28-**2005**, "The Authority of Precedent: Two Problems," https://www.mcgill.ca/files/legal-theory-workshop/Neil-Duxbury-McGill-paper.pdf

The proposition that laws bind, while unlikely to startle anybody, is one which legal philosophers rightly accord serious attention. The binding force of legal rules, the classical legal positivist claims, is attributable to the fact that they are backed by sanctions emanating from a habitually-obeyed authoritative source. Hans Kelsen repeatedly emphasized in process of developing his so-called Pure Theory of Law that these rules or norms are not moral norms: morality merely condones conduct conforming to, and disapproves of conduct contravening, its norms, whereas law is a coercive order which seeks to attach sanctions to behavior which opposes its norms. In this respect, he noted 'the Pure Theory of Law continues in the tradition of nineteenth-century positivist legal theory' – the theory according to which, in the words of John Austin, '[t]he binding virtue of a law lies in the sanction annexed to it.' It is well known that this theory of law as coercive orders was dismantled by H. L. A. Hart in The Concept of Law. Yet, before the theory had come under Hart's scrutiny, at least one of its shortcomings was starkly highlighted by the doctrine of stare decisis. As any law student knows, stare decisis is the idea that precedents ought to be adhered to when, in later cases, the material facts are the same. The doctrine brings with it numerous difficulties – not least that of determining which cases are materially alike. But the difficulty which stare decisis posed for classical legal positivism was very specific. Though a decision of a court must (unless successfully appealed) be accepted by the litigants, and though it may establish a precedent which is more generally binding on the citizenry, it is not immediately clear what it means to say – even though we often do say – that the decision binds future courts. Cross and Harris, in Precedent in English Law, observe that '[t]he peculiar feature of the English doctrine of precedent is its strongly coercive nature.' English judges, unlike their counterparts in many other jurisdictions, 'must have regard to' the previous decisions of higher courts, and 'are sometimes obliged to follow a previous case although they have what would otherwise be good reasons for not doing so.' As a piece of doctrinal description, this statement is unremarkable. But from the perspective of classical legal positivism, it poses a serious difficulty. For what does it mean to say that precedents bind? The answer seems to be that precedents bind because judges consider themselves to be bound by them.

No punishment for not following precedent

Neil **Duxbury**, 10-28-**2005**, "The Authority of Precedent: Two Problems," https://www.mcgill.ca/files/legal-theory-workshop/Neil-Duxbury-McGill-paper.pdf

Yet if precedents bind, must there not be an identifiable sanction applicable to a judge who refuses to respect stare decisis? 'If a judge persistently and vociferously declined to follow cases by which he was bound', Cross and Harris reply, it is possible that steps would be taken to remove him from his office, but it would be a mistake to think in terms of such drastic sanctions for the judge's obligation to act according to the rules of precedent. Those rules are rules of practice, and, if it is thought to be desirable to speak of a sanction for the obligation to comply with them, it is sufficient to say that non-compliance might excite adverse comment from other judges. Needless to say, there are not many examples of such comment in the law reports because the obligation to follow a practice derives its force from the fact that the practice is followed with a high degree of uniformity. The idea of the doctrine of precedent creating an occasion for judicial lawbreaking is treated by Cross and Harris with near bewilderment. The question of what ought to be done about a judge who flagrantly abuses the doctrine does not tax them for the simple reason that judges do not behave thus. Although a formal sanction could be applied to a judge for eschewing precedent, the likelihood of this occurring is remote because concerns about reputation and fear of informal criticism motivate judges to treat precedents as binding upon them. There is nothing naïve about Cross and Harris's assessment. The 'rules' of precedent are prudential rules; judges apply them so as to maintain a system of case-law rather than fear breaking them in case they are punished. Where judges do not wish to follow a precedent it is commonly assumed that they will either distinguish the precedent from the present case or, when permissible, overrule the precedent on the basis of an especially compelling reason or set of reasons. Neither judges nor jurists pay much attention to the question of what should happen to the judge who is manifestly disrespectful towards and neglectful of precedent, probably because that judge rarely if ever exists outside fictional literature. For the classical legal positivist, however, the idea that precedents bind future decision makers is intelligible only if there is stipulated a sanction which will be prima facie applicable to those decision makers when they ignore precedents.

Aff doesn't solve strip street searches and police inevitably will commit searches even if it's against the law. It's not the law, it's the police that needs reform

Police State USA [Writer, editor, political activist and liberty advocate. PSUSA has been exposing the police state since 2010 and never runs out of material.] 12-28-**13**

"Officer who forced dozens of anal cavity searches for fun gets only 2 years in prison" Online: "http://www.policestateusa.com/2013/milwaukee-cavity-search-spree/"

MILWAUKEE, WI –A disgusting scandal involving police officers performing illegal anal cavity searches with the intent to "degrade and humiliate" dozens and dozens of victims has come to an apparent conclusion, which some feel amounts to little more than a slap on the wrists for those involved. Between February 2010 and February 2012, a small group of Milwaukee officers took part in a string of serial assaults on subjects pulled off the streets. In many cases, the officers demanded the subjects produce the drugs they assumed were being hidden somewhere on their person. When they were not satisfied with the cooperation from the subjects, an officer would jam his hand into the subject's underpants, touch his genitals, and

insert a finger into his anus on the side of the road. Some of the complaints stated that drugs were planted during these searches. At least one complainant was a juvenile, and one stated that he was fingered so hard that his anus bled afterwards. The group's ringleader was Milwaukee Officer Michael Vagnini, assisted primarily by three other officers; Jeffrey Dollhopf, Brian Kozelek and Jacob Knight. Although 7 officers and one supervisor were originally suspended, the four officers mentioned above were the men the district attorney felt had enough involvement to pursue legal actions against. Officer Vagnini was the the one who directly performed the searches with his hand; the others were present and assisted with detaining the victims, holding them down, provided Vagnini cover while molested them, and then failed to report the crimes to superiors in the department. A Pattern of Abuse For two years the complaints piled up from the victims, with the knowledge of department superiors, including Milwaukee Police Chief Ed Flynn. The chief stated that the department had been aware of the behavior of his officers for "a couple of years," but waited to investigate until the department recognized a pattern. One complainant said he notified the department of Vagnini's abusive tactics as early as 2008. Vagnini and his cohorts were assigned to Milwaukee's District 5, and regularly pulled over drivers on a pretense of not wearing a seatbelt or of having darkly tinted windows, followed by searches without a legal reason, according to prosecutors. Finally, in October 2012, city officials felt charged the officers, and the public began to become aware of the stories. One case was described by the Milwaukee Journal-Sentinel: In one case, a man had gone to check on his aunt's house in the 3500 block of N. 10th St. When he came outside, his vehicle was surrounded by squad cars. Vagnini put his bare hand down the man's pants, touched his scrotum and inserted fingers into his anus, the complaint says. When the man pulled away, Vagnini put him in a choke hold that caused him to slobber onto Vagnini's arm. Vagnini repeatedly told him to "stop resisting" as he pulled back so hard on his neck his feet almost left the ground, the man said. Two other officers held his arms and one put a gun to his head, the complaint says. Vagnini claimed he found crack cocaine inside the man's anus, but the man insisted it "was not on him prior to the search," the complaint says. "When I got the cuffs on, he patted me down," he told WISN-12 News. "But he rushed his hand. He rushed his hand up my butt." Another complaint describes a man being fingered so forcefully that his anus bled. From JSonline: In another search, Vagnini conducted a traffic stop near N. 12th and W. Locust streets, the complaint says. Vagnini handcuffed the driver and asked him for "the drugs." The defendant denied having drugs but actually had hidden drugs inside his anal cavity, according to the complaint. Vagnini put the suspect in a chokehold from behind, released him and then stuck his gloved hand inside the defendant's underwear, "shoving his fingers deeply into the defendant's butt crack and possibly into the defendant's anus," the complaint says. The man was screaming, and as a result of Vagnini's actions the man was bleeding from the anal area for several days, the complaint says. And the stories kept coming forward. Robert Mann, 55, contends that Police Officer Michael Vagnini stopped him as he was walking near N. 31st St. and Atkinson Ave. in June 2011 and without probable cause, pulled down Mann's pants and put his hand in Mann's rectum "in an unsafe, unhygienic, and intentionally humiliating fashion." No drugs were recovered from Mann. [A] juveinile, identified as K.F., was 15 when he was riding in a friend's car that was stopped by police on N. 26th St. in December 2011. According to the suit, he was ordered out of the car before Vagnini reached into the teen's pants, touching his genitalia and his anus while Police Officer Jacob Knight watched. In July 2009, Chavies Hoskin, 28, was stopped while driving on N. 13th St. Vagnini reached into Hoskin's pants and pulled a bag of cocaine from Hoskin's anal area, while Sgt. Jason Mucha and Officer Thomas Maglio watched. Hoskin was charged with the delivery of cocaine. His suit contends that the officers lied in reports, and that Vagnini also falsely testified under oath about how and where he found the cocaine. The Milwaukee Journal Sentinel analyzed the cases of at least 13 victims as of August 2013. Keon Canada was pulled over five times during the summer of 2011 and subjected to butt-cheek searches four times, and that officers opened the front of his pants another time. No drugs were found during any of the stops. A plaintiff identified only as R.P. contends he was twice subjected to improper searches of his anal areas by former officer Michael Vagnini without probable cause, and the during one of stops Vagnini took his watch, despite another officer's warning "you can't do that." R.P. said that when he went to the District Five station immediately following the incident to reclaim his watch and file a complaint, he was denied a complaint form and his watch and warned that police would report him to the FBI. Someone identified only as M.C.claims he was stopped and illegally searched three times in 24 hours during the summer of 2011. No drugs were found. In December 2011 and January 2012, M.C. contends he was again stopped by Vagnini and other officers and on both occasions was struck in the face by Vagnini before being pulled out of a car, held on the ground and subjected to a forceful penetration of his anus. The suit lists three stops of Walter Coleman and buttock searches by Vagnini, including one where Vagnini first put on rubber gloves. In most of the cases, victims said Vagnini used his his bare hands or would pull their underwear up tight, as if doing a wedgie, then use the underwear as a shield between his hand and the anal area. The lawsuit says during the gloved incident, Coleman asked Vagnini if he had a search warrant, and the officer laughed. James Ashford claims he was subjected to six illegal searches over a six month period starting in the summer of 2011. At one point, he, his mother and other relatives met with a District Five lieutenant to complain that Ashford was being harassed. According to the lawsuit, the lieutenant told Ashford he should stay out of certain neighborhoods, and never acknowledged that the officers' actions, including the warrant-less, public rectal searches, were inappropriate, or that the officers would be investigated or disciplined. The Charges After the long official silence, Police Chief Ed Flynn made public condemnations of the charged officers. "Quite frankly, I'm disgusted by the willful actions by some of the officers in our Police Department. And I'm appalled by the willful inaction of some other officers in our police department in failing to stop egregious conduct," said Flynn. In October 2012, the following charges were levied: against Michael Vagnini, 25 charges including a sexual assault charge; against Jeffrey Dollhopf, 3 felony counts of misconduct in public office, 1 felony count of false imprisonment, 1 count of being a party to an illegal cavity search, and 1 count of being a party to an illegal strip search; against Jacob Knight, 1 count of misconduct in public office and 1 count of being a party to the crime of an illegal cavity search; against Brian Kozelek, 2 count of misconduct in public office, 1 count of false imprisonment, and 1 count of

being a party to the crime of an illegal strip search. "Everybody involved has been on the force long enough to know better. There's no way you can justify it as some kind of inadvertent mistake. The allegations are proven beyond a reasonable doubt and show inexcusable conduct," Chief Flynn stated in a press conference. Wisconsin law prohibits police officers from ever being involved in body cavity searches, regardless of probable cause. This kind of abuse is delegated to professionals like doctors and nurses, according to Wisconsin Statute § 968.255 (3). And they may be only performed after a search warrant has been obtained. Not only were the searches illegal according to the Wisconsin legislature, they clearly should be classified as rape according to the DOJ. Rape is: "The penetration, no matter how slight, of the vagina or anus with any body part or object, or oral penetration by a sex organ of another person, without the consent of the victim." – U.S. Department of Justice This seemed to be acknowledged by the prosecution. "I know Michael Vagnini understood the sexual undertones of what was going on," Assistant District Attorney Miriam Falk said. "It was intended to degrade and humiliate them, and that's what makes it a sexual assault." She said while Vagnini may not obtained sexual gratification from penetrating his victims' anuses, the victims felt violated nonetheless. Yet as part of a plea deal, prosecutors agreed to drop the sexual assault charges since Vagnini agreed to plead no contest to four felony charges and four misdemeanors. Vagnini will no longer have to register as a sex offender. In fact, all of the perpetrators were given plea deals and given light sentences. Officer Jeffrey Dollhopf, 42, will face a $300 fine and and was ordered to 100 hours of community service for his involvement in the assaults. Since he pleaded no contest to disorderly conduct as a party to the crime, most of his charges were wiped out. As part of his deal, he agreed to resign from the department. He spent one full year on paid leave from the department. Officer Brian Kozelek, 34, was given a similar deal. After a full year of paid vacation, he now faces a $300 fine and a mere 20 hours community service. He also agreed to voluntarily resign his position at the department. Officer Jacob Knight, 32, will actually face a small amount of jail time. He was sentenced to 20 days in the House of Correction, a $300 fine and 60 hours of community service after an extended amount of paid time off. As for Officer Michael Vagnini, his record of molesting innocent people, illegal detainment, illegal searches, penetrating orifices for fun, framing people with false evidence and ruining their lives has come to a close. After terrorizing his community for years in a most disgusting and egregious way, he will face just over 2 years behind bars — 26 months. Faith Restored? Do these sentences restore faith in the justice system and the Milwaukee Police Department, as some claim? Attorney Jonathan Safran, representing some of the victims, said he's "tired of the excuses" about training and supervision. "… The concern is that it goes beyond just these officers. We have allegations of a number of other officers in a number of other districts doing some of the same kinds of things." Of the sentencing of Officer Knight, Safran said, "I'm not sure if it's strong enough." Vagnini's own lawyer said Vagnini's aggressive tactics were no secret within the department and the court system, saying the whole system encouraged and rewarded his crime fighting tactics to get drugs off the streets. "He's left holding the bag for everybody," Michael Steinle told the court, citing Vagnini's dedication to fighting crime. If what the defense and prosecuting attorneys say is true, the corruption in Milwaukee may go a lot deeper than just the 4 officers who have been officially charged. A deeper cleaning of the department may be in order, and only the Milwaukee mayor can see that it happens. His contact information is provided below. One of the ironies of this story is that sadistic, violent freaks who physically abuse the public are given lighter sentences than many of the very people whose lives were ruined and were dragged into cages for the crime of possessing arbitrary plants and substances, harming no one but themselves. And why should twisted individuals get lighter sentences for these acts due to their wearing a badge and a uniform? If a gang of strange men approaches a person, accosts them, threatens them with violence, detains them against their will, and penetrates their orifices with parts of their bodies, that should be considered rape or sexual assault, and those involved should be considered accomplices. That's what would happen to a normal person without a badge. "Official misconduct" is only the tip of the iceberg for these monsters. It should be noted that even if a few corrupt cops are no longer a part of the police force, the very same oppressive and unjust drug laws remain in place for future cops to abuse and destroy innocent, non-violent lives with. There's a lot to be disturbed with after reading this case, and the problems will not go away without serious overhaul of the department, the laws, and the legal system itself.

Reformism Bad

Reformism fails in the context of the criminal justice system—it's better to just start anew

David **Bliven**, 12-11-**14** [Attorney David Bliven graduated with honors from Syracuse University in 1993 with a B.A. in Sociology. He went on to serve as a judicial intern and statistician with the NYS Commission on City Court Judicial Reallocation with the Office of the Deputy Chief Administrative Judge. David Bliven then attended law school at New York Law School, where he graduated in 1997 with honors and ranked within the top 15% of his class.] "Radical ways to reform policing" Online: "http://socialistworker.org/2014/12/11/radical-ways-to-reform-policing"

I WAS listening to the news the other day and heard that former New York City Mayor Rudolph Giuliani--who I prefer to call something that is unprintable in a family newspaper--see the

documentary Giuliani Time if you want to know why--advocated the implementation of body cameras for police officers. I distinctly recall being called a "bleeding-heart liberal" by my law school professor for advocating the same thing. Had Rudy become a progressive, or just lost his mind? My initial instinct was to say that "anything Giuliani is for, I'm against." But not so fast. This seemingly progressive talk is coming from many quarters, in an effort to placate the budding movement for fundamental reform of the criminal injustice system. Many politicians are calling for "retraining," "community policing" and "racial sensitivity programs" for police officers. While implementing such reforms would certainly be something (along the lines of slightly better than nothing), they're akin to polishing a turd, putting lipstick on a pig or applying make-up to Rudolph Giuliani. The criminal system of injustice is rotten to the core, and like rotten food, one shouldn't stick it back in the fridge hoping it gets better, or trim off the edges of mold thinking it's still good enough to eat. One should just chuck the system in the trash, and start anew.

T— “curtail”

1. Interpretation: curtail does not mean to abolish

Goldberg 83 Steven Goldberg, Associate Professor of Law, Georgetown University Law Center;

Washington Law Review APRIL, 1983 58 Wash. L. Rev. 343 SYMPOSIUM ON ENERGY ISSUES IN THE PACIFIC NORTHWEST: UNCONSCIONABILITY IN A COMMERCIAL SETTING: THE ASSESSMENT OF RISK IN A CONTRACT TO BUILD NUCLEAR REACTORS. lexis

> Indeed, thorough interpretation will require a court to examine the hell-or-high-water clause carefully in the context of the entire contract. The clause does not, for example, speak of "termination" of the projects even though that term is used elsewhere in the agreement. n11 Indeed, the clause, rather than speaking of "termination" or "cancellation," speaks only of "reduction or curtailment . . . in whole or in part." n12 These words might cover the ending of the projects, but it is worth noting that as basic a source as Black's Law Dictionary defines curtail as "to shorten, abridge, diminish, lessen, or reduce; and . . . has no such meaning as abolish." n13

2. Violation: The plan abolishes the blanket policy of strip searching all arrestees upon entering jail facilities in the US.

3. The affirmative interpretation is bad for debate—

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big.

4. T IS A VOTER— because the opportunity to prepare promotes better debating

Neoliberalism K

The aff is symptom reduction at best—strip searches are a by-product of the “investments” that prisons make in the prisoner. Prisoners will continue to be exploited by the prison industrial complex even post-plan.

Lawston 08

(Jodie Michelle Lawston**,** Chair and Professor of Women's Studies at Cal State San Marcos. Her research interests center on the issues of women’s incarceration, immigrant detention, political and social activism, and most recently, women’s health.

"Introduction: Women, The Criminal Justice System, And Incarceration: Processes Of Power, Silence, And Resistance," Nwsa Journal, http://www.jstor.org/stable/pdf/40071269.pdf) AC

The combination of the warehousing of "women on the margins" who have endured gender-specific physical, sexual, and emotional abuse prior to prison, with the gender-specific physical, sexual, emotional and health related abuses that occur in prisons across the nation, is a raw illustration of the power of a patriarchal prison system that only serves to punish, oppress, and silence women. Notwithstanding, it would be erroneous to assume that the prison system is a separate, unique space in society where sadistic oppression is unleashed. **The prison system is a microcosm of society at large** (Lawston, forthcoming). Prisons are unique sites of condensed and concentrated forms of oppression that originated in the historical and contemporary processes of social, racial, economic and political injustice (Lawston forthcoming 2009). Although prisoners are out of sight, they play a critical role in the organization of our society. Foucault's concept of the political technology of the body crystallizes the relationship between the body and the state that is particularly suggestive for our understanding of prisons:

[T]he body is also directly involved in a political field; power relations have an immediate hold upon it; they invest it, mark it, train it, torture it, force it to carry out tasks, to perform ceremonies, to emit signs. This political investment of the body is bound up, in accordance with complex reciprocal relations, with its economic use; it is largely as a force of production that the body is invested with relations of power and domination; but on the other hand, its constitution as labour power is possible only if it is caught up in a system of subjection . . . the body becomes a useful force only if it is both a productive body and a subjected body (1979, 25-26).

The U.S. prison system exemplifies Foucault's insights rather poignantly. In this passage, Foucault explains how the relations of power continuously deploy an array of technologies that render bodies productive in the service of capital. Foucault's historical materialist formulation of the subjectivation and subjection of the body by the state demonstrates how incarcerated bodies become meaningful because the technologies of the prison system mark them, discipline them, and correct them. For example, the images of orange jumpsuits, prisonershuffling in shackles, and inmates peering from behind iron bars are images that are widely disseminated in society. Additionally, people in mainstream society joke about "the strip search." Foucault asserts that the body is forced to perform ceremonies and to emit signs. Stripping a person's body naked, compelling that person to bend over in a prone and entirely exposed position, is in fact a state ritual that symbolizes complete subjection of the prisoner's body to the vigilant eye of the state.

Foucault's use of the word "investment" is particularly provocative. Parading prisoners in bright orange jumpsuits, shackling them, and **stripsearching them** are actions that **represent an investment**. **Society reaps a profit from these incarcerated bodies**, both economically and symbolically. It is not only that the privatization of the prison system produces millions of dollars in profit for corporations like the Correction Corporation of America (CCA) and Wackenhut (Gilmore 2007), but also the laughably low wages of prison labor produces millions of dollars of profit for corporations like Starbucks, Victoria's Secret, and Dell. Equally important, according to Foucault's formulation, every prisoner that is incarcerated is a stern warning to anyone who may think of speaking out and rebelling against social, economic, and political oppression.

Criminal justice and prison systems that operate under the neoliberal system will inevitably target black and brown bodies because of the way neoliberalism has historically marginalized and subjugated economically disadvantaged communities.

Wacquant 10

(Loı̈c Wacquant, Professor of Sociology and Research Associate at the Earl Warren Legal Institute, University of California, Berkeley, where he is also affiliated with the Program in Medical Anthropology and the Center for Urban Ethnography, and

Researcher at the 'Centre de sociologie européenne' in Paris. He has been a member of the Harvard Society of Fellows, a MacArthur Prize Fellow, and has won numerous grants including the Fletcher Foundation Fellowship and the Lewis Coser Award of the American Sociological Association, June 2010

"Crafting the Neoliberal State: Workfare, Prisonfare, and Social Insecurity"

http://disciplinas.stoa.usp.br/pluginfile.php/264179/mod_resource/content/1/Wacquant_Crafting%20the%20neoliberal%20state.pdf) AC

In the third place, ''devices for normalization'' anchored in the carceral institution have not spread throughout the society, in the manner of capillaries irrigating the entire body social. Rather, the widening of the penal dragnet under neoliberalism has been remarkably discriminating: in spite of conspicuous bursts of corporate crime (epitomized by the Savings and Loans scandal of the late 1980s and the folding of Enron a decade later), it has affected essentially the denizens of the lower regions of social and physical space. Indeed, the fact that the social and ethnoracial selectivity of the prison has been maintained, nay reinforced, as it vastly enlarged its intake demonstrates 11 This is particularly glaring in the country's second largest carceral system (after the Federal Bureau of Prisons), the California Department of Corrections, in which grotesque overcrowding (the state packs 170,000 convicts in 33 prisons designed to hold 85,000) and systemic bureaucratic dysfunction combine to make a mockery of any pretense at ''rehabilitation'' (Petersilia, 2008). Crafting the Neoliberal State 205 that penalization is not an all-encompassing master logic that blindly traverses the social order to bend and bind its various constituents. On the contrary: it is a skewed technique proceeding along sharp gradients of class, ethnicity, and place, and it operates to divide populations and to differentiate categories according to established conceptions of moral worth. At the dawn of the twenty-first century, America's urban (sub)proletariat lives in a ''punitive society,'' but its middle and upper classes certainly do not. Similarly, efforts to import and adapt U.S.-style slogans and methods of law enforcement—such as zero tolerance policing, mandatory minimum sentencing, or boot camps for juveniles—in Europe have been trained on lower-class and immigrant offenders relegated in the defamed neighborhoods at the center of the panic over ''ghettoization'' that has swept across the continent over the past decade (Wacquant, 2009b).

The impact is extinction – neoliberal social organization ensures extinction from resource wars, climate change, and structural violence – only accelerating beyond neoliberalism can resolve its impacts

Williams & Srnicek 13

(Alex, PhD student at the University of East London, presently at work on a thesis entitled 'Hegemony and Complexity', Nick, PhD candidate in International Relations at the London School of Economics, Co-authors of the forthcoming Folk Politics, 14 May 2013, http://criticallegalthinking.com/2013/05/14/accelerate-manifesto-for-an-accelerationist-politics/)

At the begin-ning of the second dec-ade of the Twenty-First Cen-tury, **global civilization faces a new breed of cataclysm**. These com-ing apo-ca-lypses ridicule the norms and organ-isa-tional struc-tures of the polit-ics which were forged in the birth of the nation-state, the rise of cap-it-al-ism, and a Twen-ti-eth Cen-tury of unpre-ced-en-ted wars. 2. **Most significant is the break-down of the planetary climatic system**. In time, **this threatens the continued existence of the** present global **human population**. Though this is the most crit-ical of the threats which face human-ity, **a series of** lesser but **potentially equally destabilising problems exist along-side** and inter-sect with **it**. **Terminal resource depletion, especially in water and energy** reserves, **offers the prospect of mass starvation, collapsing economic paradigms, and new hot and cold wars**. **Continued financial crisis has led governments to embrace the** para-lyz-ing **death spiral policies of austerity, privatisation of social welfare services, mass unemployment, and stagnating wages. Increasing automation in production processes** includ-ing 'intel-lec-tual labour' **is evidence of the secular crisis of capitalism, soon to render it incapable of maintaining current standards of living** for even the former middle classes of the global north. 3. In con-trast to these ever-accelerating cata-strophes, **today's politics is beset by an inability to generate the** new ideas and **modes of**

organisation necessary to transform our societies to confront and resolve the **coming annihilations**. While crisis gath-ers force and speed, polit-ics with-ers and retreats. In this para-lysis of the polit-ical ima-gin-ary, the future has been cancelled. 4. Since 1979, **the hegemonic global political ideology has been neoliberalism**, found in some vari-ant through-out the lead-ing eco-nomic powers. In spite of the deep struc-tural chal-lenges the new global prob-lems present to it, most imme-di-ately the credit, fin-an-cial, and fiscal crises **since 2007 – 8, neoliberal programmes have** only **evolved** in the sense of deep-en-ing. **This continuation** of the neo-lib-eral pro-ject, or neo-lib-er-al-ism 2.0, **has begun to apply another round of structural adjustments**, most sig-ni-fic-antly in the form of encour-aging new and aggress-ive incur-sions by the private sec-tor into what remains of social demo-cratic insti-tu-tions and ser-vices. **This is in spite of the immediately negative** eco-nomic and social **effects of such policies**, and the longer term fun-da-mental bar-ri-ers posed by the new global crises.

The alternative articulates a "counter-conduct" – voting neg pushes towards a cooperative conduct *that organizes individuals around a collectively shared* commons *– affirming this conduct creates a new heuristic that de-couples government from the demand for competition and production*

Dardot & Laval 13

(Pierre Dardot, philosopher and specialist in Hegel and Marx, Christian Laval, professor of sociology at the Universite Paris Ouest Nanterre La Defense, *The New Way of the World: On Neoliberal Society*, pgs. 318-321)

This indicates to what extent we must take on board in our own way the main lesson of neo-liberalism: **the subject is always to be constructed**. **The whole question is** then **how to articulate subjectivation with resistance to power**. Now, precisely this issue is at the heart of all of Foucault's thought. However, as Jeffrey T. Nealon has recently shown, part of the North American secondary literature has, on the contrary, stressed the alleged break between Foucault's research on power and that of his last period on the history of subjectivity.55 According to the 'Foucault consensus', as Nealon aptly dubs it, the successive impasses of the initial neo-structuralism, and then of the totalizing analysis of panoptical power, led the 'last Foucault' to set aside the issue of power and concern himself exclusively with the aesthetic invention of a style of existence bereft of any political dimension. Furthermore, if we follow this de-politicizing reading of Foucault, the aestheticization of ethics anticipated the neo-liberal mutation precisely by making self-invention a new norm. In reality, far from being oblivious of one another, the issues of power and the subject were always closely articulated, even in the last work on modes of subjectivation. If one concept played a decisive role in this respect, it was 'counter-conduct', as developed in the lecture of 1 March 1978.56 This lecture was largely focused on the crisis of the pastorate. It involved identifying the specificity of the 'revolts' or **'forms of resistance of conduct'** that are the correlate of the pastoral mode of power. If such forms of resistance are said to be 'of conduct', it is because they are forms of resistance to power as conduct and, as such, **are themselves forms of conduct opposed to** this **'power-conduct'**. **The term 'conduct'** in fact **admits of two meanings**: **an activity that consists in conducting others**, or **'conduction'**; **and the way one conducts oneself under the influence of this activity of conduction**.57 **The idea of 'counter-conduct'** therefore **has the advantage of directly signifying a 'struggle against the procedures implemented for conducting others', unlike the term 'misconduct', which only refers to the passive sense of the word**.58 **Through 'counter-conduct', people seek both to escape conduction by others and to define a way of conducting themselves towards others**.¶ **What relevance might this observation have for** a reflection on **resistance to neo-liberal governmentality**? It will be said that the concept is introduced in the context of an analysis of the pastorate, not government. **Governmentality**, at least **in its** specifically **neo-liberal form**, precisely **makes conducting others through their conduct towards themselves its real goal**. **The peculiarity of** this conduct towards oneself, **conducting oneself as a personal enterprise, is that it immediately and directly induces a certain conduct towards others**: **competition with others**, regarded as so many personal enterprises. Consequently, counter-conduct as a form of resistance to this governmentality must correspond to a conduct that is indivisibly a conduct towards oneself and a conduct towards others. One cannot struggle against such an indirect mode of conduction by appealing for rebellion against an authority that supposedly operates through compulsion external to individuals. If 'politics is nothing more and nothing less than that which is born with resistance to governmentality, the first revolt, the first confrontation',59 it means that ethics and politics are absolutely inseparable.¶ To the subjectivation-subjection represented by ultra-subjectivation, we must oppose a subjectivation by forms of counter-conduct. **To neo-liberal governmentality as a specific way of conducting the conduct of others, we must** therefore **oppose a no less specific double refusal**: **a refusal to conduct oneself towards oneself as a personal enterprise and a refusal to conduct oneself towards others in accordance with the norm of competition**. As such, the double refusal is not 'passive disobedience'.60 For, **if it is true** that the **personal enterprise's**

relationship to the self immediately and directly determines a certain kind of relationship to others – **generalized competition** – **conversely, the refusal to function as a personal enterprise**, which is self-distance **and a refusal to line up in the race for performance, can only practically occur on condition of establishing cooperative relations with others, sharing and pooling**. In fact, **where would be the sense in a self-distance severed from any cooperative practice**? At worst, a cynicism tinged with contempt for those who are dupes. At best, simulation or double dealing, possibly dictated by a wholly justified concern for self-preservation, but ultimately exhausting for the subject. Certainly not a counter-conduct. All the more so in that **such a game could lead the subject, for want of anything better, to take refuge in a compensatory identity**, which at least has the advantage of some stability by contrast with the imperative of indefinite self-transcendence. **Far from threatening the neo-liberal order, fixation with identity**, whatever its nature, **looks like a fall-back position for subjects weary of themselves**, for all those who have abandoned the race or been excluded from it from the outset. **Worse, it recreates the logic of competition at the level of relations between 'little communities'**. **Far from being valuable in itself**, independently of any articulation with politics, **individual subjectivation is bound up at its very core with collective subjectivation**. In this sense, sheer aestheticization of ethics is a pure and simple abandonment of a genuinely ethical attitude. **The invention of new forms of existence can only be a collective act**, **attributable to the** multiplication and **intensification of cooperative counter-conduct**. A collective refusal to 'work more', if only local, is a good example of an attitude that can pave the way for such forms of counter-conduct. In effect, it breaks what André Gorz quite rightly called the 'structural complicity' that binds the worker to capital, in as much as 'earning money', ever more money, is the decisive goal for both. It makes an initial breach in the 'immanent constraint of the "ever more", "ever more rapidly"'.61¶ **The genealogy of neo-liberalism** attempted **in this book teaches** us that **the new global rationality is** in **no** wise an **inevitable fate shackling humanity**. Unlike Hegelian Reason, it is not the reason of human history. **It is itself wholly historical** – that is, **relative to strictly singular conditions that cannot legitimately be regarded as untranscendable**. The main thing is to understand that nothing can release us from the task of promoting a different rationality. That is why the belief that the financial crisis by itself sounds the death-knell of neo-liberal capitalism is the worst of beliefs. It is possibly a source of pleasure to those who think they are witnessing reality running ahead of their desires, without them having to move their little finger. It certainly comforts those for whom it is an opportunity to celebrate their own past 'clairvoyance'. At bottom, it is the least acceptable form of intellectual and political abdication. Neo-liberalism is not falling like a 'ripe fruit' on account of its internal contradictions; and traders will not be its undreamed-of 'gravediggers' despite themselves. Marx had already made the point powerfully: 'History does nothing'.62 **There are only human beings who act in given conditions and seek through their action to open up a future for themselves**. **It is up to us to enable a new sense of possibility** to blaze a trail. The **government** of human beings **can be aligned with horizons other than those of maximizing performance, unlimited production and generalized control**. **It can sustain itself with self-government that opens onto different relations with others than** that of **competition between 'self-enterprising actors'**. The **practices of 'communization' of knowledge, mutual aid and cooperative work can delineate the features of a different world reason. Such an alternative reason cannot be better designated than by the term reason of the commons**.

Case

Harms

Absent strip searches, prisons would turn to significantly less effective detection measures such as body scanners. that makes drug smuggling even easier and leads to increased instances of prisoner deaths

Taelor **Bentley**, a Law Street Media Fellow, 6-24**-2015,**

"How Do We Solve the Drug Overdose Problem in California Prisons?," Law Street (TM), http://lawstreetmedia.com/news/solve-drug-overdose-problem-california-prisons/

Officials have hopes that these new methods will lead to a decrease in the death rate. But despite officers' opinions that the efforts are discouraging drug smuggling, reports show that might not

be the case, and that instead these policies just create problems for visitors. There have been more than 6,000 scans on visitors and employees at eleven different prisons and no drugs were found. Mohamed Shehk, an Oakland-based spokesman for Critical Resistance, stated, "The statistics — $8 million, 6,000 scans and nothing to show for it — show that these are intended to intimidate and criminalize people who are going to see their loved ones inside."

More than 150 California inmates have died due to drug overdoses since 2006, with a high of 24 deaths in 2013. Sharing needles, which often leads to the spread of Hepatitis C infections, killed 69 inmates in 2013 alone. Corrections Secretary Jeffrey Beard is determined to change this high rate and is modeling California's new procedures after those that were successful in the Pennsylvania Corrections Department, which he led for a decade. Pennsylvania's annual rate of drug or alcohol deaths per 100,000 inmates is one, while California's is eight per 100,000 inmates.

Increased drug activity leads to more prison violence— turns case

*Washington Times, **1-27**-2010*

"Drugs inside prison walls" http://www.washingtontimes.com/news/2010/jan/27/drugs-inside-prison-walls/?page=all

"The imagination and creativity of people under lock and key boggles the mind," said Dr. H. Westley Clark, director of the federal Center for Substance Abuse Treatment, who suggested that the cost of creating drug-free prisons nationwide would be prohibitive.

Corrections officials say much of the prison drug trade is controlled by gangs — and one result is sky-high prices. Hawaii's Deputy Director of Corrections Tommy Johnson says the going price for heroin behind bars is sometimes 10 times the street price.

In California, gang-related drug activity is the No. 1 cause of prison violence, according to Mike Ruff, a corrections department special agent.

"Something that appears to be a riot between different gangs is not necessarily because they're rivals — it's more because of a drug deal gone bad," he said. "All of the gangs are actively involved in narcotics."

Mr. Ruff cited some of the gangs' favored smuggling tactics — drugs passed from a visiting wife or girlfriend via a seemingly passionate kiss and drugs secreted in legal documents that are supposed to be exempt from thorough searches in prison mailrooms.

Alt causes to high instances prison rape

Flyn L. **Flesher 2007**

("Cross-Gender Supervision in Prison and the Constitutional Right of Prisoners to Remain Free from Rape"

https://www.wcl.american.edu/endsilence/documents/CrossGenderSupervisioninPrisonsandtheConstitutionalRightofPrisonerstoRemainFreeFromRape.pdf)

Multiple factors increase the frequency of rape in women's prisons. Poor training of prison guards and abandonment of rehabilitation goals also increase the frequency of prison rape,42 as do failures to investigate and prosecute prison rape.43 Overcrowding of prisons and an inability to sufficiently staff prisons to oversee large populations serve to exacerbate the problem.4 4 Professor of Correctional Law James Robertson has noted that "the very layout of many prisons renders their architecture an accessory to rape" by making detection of sexual attacks difficult.

Solvency

Current policies aimed at protecting prisoners from sexual abuse aren't enforced— means that aff won't solve either

Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW*, http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 44-48//SRawal

In the United States, **sexual abuse by guards in women's prisons is so notorious and widespread that it has been described as "an institutionalized component of punishment behind prison walls.**"1 **Women in prisons2 across the United States are subjected to diverse and systematic forms of sexual abuse: vaginal and anal rape; forced oral sex and forced digital penetration; quid pro quo coercion of sex for drugs, favors, or protection; abusive pat searches and strip searches; observation by male guards while naked or toileting; groping; verbal harassment; and sexual threats**.3 Guards and prisoners openly joke about prisoner "girlfriends" and guard "boyfriends." Women prisoners become pregnant when the only men they have had contact with are guards and prison employees; often they are sent to solitary conªnement—known as "the hole"—as punishment for having sexual contact with guards or for getting pregnant.**4 Such open and obvious abuses would seem relatively easy for a prison administration to detect and prevent if it chose to do so. Prisons owe an afªrmative legal duty to protect their inmates against abuse.5 Congress and forty-four states have criminalized all sexual contact between guards and prisoners, regardless of consen**t.6 **Nonetheless, within women's prisons guards routinely commit serious sexual offenses against the women in their custody. Government administrators know that such abuse is occurring**7 and acknowledge their duty to prevent it.8 However, **they have generally neglected to do much about it**, as **most prisons have failed to adopt institutional and employment policies that effectively prevent or reduce custodial sexual abuse**.9 In most workplaces, an employee who had sex on the job would be ªred. In prison, **a report of custodial sexual abuse is more likely to result in punishment or retaliation against the prisoner than in disciplinary consequences for the guard.**10 **One might expect the law to furnish incentives for prisons to control such unlawful acts by their employees,** as it does for other civil defendants**. It does not**.11 Instead, as I demonstrate in this Article, a network of prison law rules—the Prison Litigation Reform Act of 1995 ("PLRA"),12 governmental immunities, and constitutional deference— work together to confer near-complete immunity against prisoners' claims. In the United States, both male and female prisoners are stereotyped as black;13 more than two thirds of women in U.S. prisons are African American or Latina.14 In this Article, I consider how the gendered racialization of women prisoners informs legal and institutional indifference to their treatment in prison. Like black women under slavery,15 **women in contemporary prisons are subjected to institutionalized sexual abuse, while the law refuses to protect them or provide redress.**

Their Miller 2k evidence assumes that such there aren't policies in place to prevent sexual abuse but our more recent evidence indicates that there are a series of measures in place aimed at doing so. However, these measures are rarely enforced. Means plan won't solve either.

Plan is hands-off approach to sexual violence that fails to solve

Buchanan 10

(Kim Shayo Buchanan, Associate Professor of Law and Gender Studies at USC Gould School of Law)

"Our Prisons, Ourselves: Race, Gender and the Rule of Law on JSTOR," Yale Law & Policy Review

http://www.jstor.org/stable/41308525) AC

Although the survey data do not explain the variation in sexual victimization rates among institutions, such differences may reflect differences in institutional practices. Two recent national commissions have documented the institutional measures required to prevent sexual and physical violence. These measures are well known to many correctional administrators.96 Some preventive measures, such as reducing prison overcrowding and rethinking architectural design,97 are outside the immediate control of prison administrators and require governmental cooperation. But correctional officials know that sexual abuse can be greatly reduced by improved practices of institutional governance, including: the use of reliable, objective security classification measures so that prisoners are housed with other inmates who are about as dangerous as they are;98 direct supervision of inmates by guards;99 prevention of physical violence;100 zero tolerance policies for sexual violence;101 immediate and thorough investigation of every allegation of sexual abuse;102 the use of modern surveillance technology;103 and internal and external monitoring.104 To the extent that prison administrators and staff maintain a hands-off approach to sexual violence in their institutions, they are electing a mode of institutional governance that they know falls short of institutional best practices.

Abuses will continue- prisoners can't effectively access legal redress

Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW*, http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 70-73//SRawal

With few, if any, exceptions, prisoners' civil claims against correctional authorities for toleration of sexual abuse have succeeded only when a large number of women testify to widespread abuses, and some guard witnesses break ranks to corroborate the prisoners' accounts that severe custodial sexual abuse was both widespread and publicly known within the prison.199 When prison administrators seek to restrict male guards' access to women prisoners in order to protect the prisoners against sexual abuse, courts generally have upheld these institutional policies against guards' employment discrimination claims,200 at least at the appellate level.201 However, **when a prisoner brings civil claims on her own behalf, they are generally screened out or rejected.**202 Indeed, **one commentator argues that juries are so reluctant to award any damages to prisoners that they will not on basis that prisoner was "not credible" because she had formed a "plan" to get a transfer by reporting sexual activity with corrections officers; the court** found some of this activity not to have happened because it was uncorroborated, and **stated that other activity "could only reasonably be described as consensual**" because the prisoner "never tried to caught [the guards] off, scream, or yell"). 70 Harvard Civil Rights-Civil Liberties Law Review [Vol. 42 do so unless they believe the defendant has acted with such malice that punitive damages are appropriate.203 Even when prisoners are able to prove that they have been raped, juries may tend to "lowball prisoners' nonwage damages as an expression of disregard for them."204 For example, in Morris v. Eversley, 205 a jury convicted a guard of sexually assaulting a female prisoner based on DNA evidence. **A civil jury awarded the prisoner only $500 in compensatory damages and $7,500 in punitive damages.2**06 The district court judge found the verdict generally inadequate, and ordered a new trial. The new jury awarded $1,000 for compensatory damages and $15,000 for punitive damages. The judge, apparently

frustrated by this paltry award, wrote: I was baf°ed that the ªrst jury awarded such low amounts, and yet **the second jury did not award much more**. **It is hard to imagine that Morris could be made whole for the damages she suffered, including the loss of her dignity, by a mere $500 or $1,000 in compensatory damages**. . . . **[A] prisoner**, even a former prisoner, **is unable to recover a fair measure of damages**.207 **Such inadequate jury awards re°ect the discredited prejudicial racial and gender stereotypes by which low-status women, especially black women, prostitutes, and prisoners, are viewed as less likely to be harmed by sexual assault**. Outside of the prison context, damage awards for sexual assault are typically much higher**. A recent survey of civil actions for sexual assault resolved in state appellate courts between 2001 and 2004 found that damage awards in sexual assault cases outside prison can range from nothing to well over one million dollars**. But in cases involving institutional liability, "a signiªcant number of cases award compensatory damages of $100,000 to $200,000." Ellen M. Bublick, Tort Suits Filed by Rape and Sexual Assault Victims in Civil As Bublick observes, "[i]nadequate damage awards may be a particular issue when the victim and the assailant are acquaintances or partners," as they are by deªnition in cases of custodial sexual abuse 1. **The Prison Litigation Reform Act The Prison Litigation Reform Act209 ("PLRA") was expressly designed to deter prisoner lawsuits**. It was introduced in 1995 to respond to congressional concern about the dramatic increase in prisoner litigation between 1980 and the mid-1990s—an increase that, as commentators have noted, coincided with a dramatic increase in the incarcerated population in the United States.210 **The PLRA was not intentionally designed to block lawsuits for custodial sexual abuse; rather, it was designed to address the perceived problem of jailhouse lawyers who brought frivolous lawsuits**. In 1995, during the Senate debate over the bill, Senator Bob Dole cited a notorious prisoner lawsuit in which a prisoner complained that the prison served chunky, rather than creamy, peanut butter.211 Numerous other frivolous suits, such as claims arising from an unsatisfactory prison haircut and a desire for a particular brand of sneakers, were also used during the PLRA debates as examples of the pressing need for special barriers to prisoner litigation.212 During the congressional debates, Senator Joe Biden pointed out that the PLRA would erect "too many roadblocks to meritorious prison lawsuits."213 He urged Congress not to "lose sight of the fact that some of these lawsuits have merit—some prisoners' rights are violated."214 Senator Biden pointed out that hundreds of women prisoners had been sexually abused by dozens of guards, openly and for years, in Washington, D.C., prisons. He noted that this practice changed only after their class action was successful.215 Despite Senator Biden's warnings, no amendment was adopted to protect the right of prisoners to sue in the event of sexual abuse by guards. The PLRA is a status-based law that excludes almost all prisoner claims from the courts.216 Like historical doctrines designed to deter rape average sentence given to Black women's assailants is two years. The average sentence given to white women's assailants is ten years." Crenshaw, Sexual Harassment, supra note 44, at 1471. complainants, black witnesses, and married women from bringing white men to court, the PLRA establishes unique hurdles that are nearly impossible for prisoner plaintiffs to overcome. The most damaging hurdle imposed by the PLRA is its grievanceexhaustion requirement.217 Like the marital privacy doctrine that excluded wives' claims from the courts in order to protect "family government,"218 this provision values the peace of mind of those in power over the safety of those who are in their custody. **The grievance-exhaustion provision requires inmates to exhaust internal prison grievance procedures before they may bring their claims to an outside authority, even if the procedures are complex, inefªcient, unfair, or incapable of offering a remedy for the prisoner's claim.219 If the prisoner has failed to do so, the litigation is dismissed**. **Thus a prison is virtually insulated from prisoner litigation to the extent that its grievance process is complex and time-consuming, its deadlines for ªling a grievance are brief,220 and the threat of retaliation deters prisoners from using the process at all**. In practice the grievance-exhaustion requirement "invites technical mistakes resulting in inadvertent noncompliance with the exhaustion requirement, and bar[s] litigants from court because of their ignorance and uncounselled procedural errors."221 Unreasonably quick grievance deadlines evoke the "fresh complaint" requirements of traditional rape doctrine.222 In New York, for example, the Department of Corrections imposes a fourteen-day limit for ªling any prisoner grievance, unless the grievance authority determines that "mitigating circumstances" justify the delay.223 If a **prisoner is in a "consensual" sexual relationship with a guard, she is unlikely to express a grievance until well after the guard becomes threatening or abusive, thus missing the deadline**.224 If she misses the grievance deadline, her litigation is dismissed**. Furthermore, prison grievance procedures offer no prospective relief to protect the prisoner before she is raped**. If a guard has merely threatened to assault the prisoner, offered a quid pro quo for sex, or groped her— or if she did not think to preserve a DNA sample during her rape—the grievance process will do nothing.225 Even though ªling a grievance is futile in such circumstances, **the PLRA still requires the prisoner to report the abuse to her abuser's colleagues through an often-humiliating disciplinary procedure**226 **that is likely to result in retaliation**. In addition to its grievance-exhaustion requirement, **the PLRA further hinders prisoner litigation by prohibiting any prisoner lawsuit "without a prior showing of physical injury**."227 Some courts have raised this barrier even further by requiring that the physical injury be at least as serious as an injury that would meet the Eighth Amendment's "de minimis harm" requirement.228 **Presumably, vaginal or anal rape would sufªce**.229 On its face, however, **the physical injury requirement appears to bar prisoner claims for sexual abuse if**

no physical injury results.230 For example, the text of this provision appears to bar claims that a prisoner was forced to perform or submit to oral sex, was digitally penetrated, or was coerced into sexual compliance through threats or inducements without a beating.

Other Cards

Neolib

Neoliberalism is the reason why women of color are disproportionately affected by the war on drugs.

Lawston 08

(Jodie Michelle Lawston**,** Chair and Professor of Women's Studies at Cal State San Marcos. Her research interests center on the issues of women's incarceration, immigrant detention, political and social activism, and most recently, women's health.

"Introduction: Women, The Criminal Justice System, And Incarceration: Processes Of Power, Silence, And Resistance," Nwsa Journal, http://www.jstor.org/stable/pdf/40071269.pdf) AC

The majority of women in prison are incarcerated for nonviolent drug or property offenses, with drug offenses being the largest source of growth for the women's prison and jail population. Of course, it is precisely the war on drugs that is responsible for the astounding increase in the numbers of women, like Jan, who are confined. While the war on drugs has disproportionately impacted communities of color, Mauer, Potler and Wolf (1999, 2) argue that "the set of law enforcement and sentencing policies and practices that have been enshrined under this approach have had a dramatic and disproportionate impact on women." Women drug offenders, particularly those of color, are now far likelier to be arrested, convicted, and incarcerated than they were prior to the war on drugs (Diaz Cotto 2007; Sudbury 2005; Johnson 2003; Bloom and Chesney-Lind 2000; Owen 1998; Chesney-Lind 1997). A 1995 study by the Sentencing Project found that from 1986 to 1991, the number of black female drug offenders sentenced to state prisons increased by 828 percent, the number of Latina drug offenders increased by 328 percent, and the number of white female drug offenders increased by 241 percent (Mauer and Huling 1995). The reasons for the drug war's disproportionate impact on women include the following: women are more likely than men to commit drug offenses, **they often become involved in the drug economy out of economic necessity** or due to coercion or force from a male partner, they lack any information that would help them in the adjudication process because they occupy the lower rungs on the drug trafficking ladder, **they do not have the economic capital to hire a competent attorney**, or they refuse, because of loyalty or fear, to testify against their male partners who are engaged in drug trafficking (Diaz Cotto 2007; Johnson 2003). Because mandatory drug sentences "fail to consider extenuating circumstances pertinent to women's lives"(Johnson 2003, 47), women involved in any way in the drug trade are prosecuted to the full extent of the law. In this issue, both Traci Schlesinger and Marylee Reynolds explore the gendered impact of the drug war and mandatory sentences. Moreover, Marylee Reynolds maps out the ways in which the drug war has gone global, due to U.S. imperialistic pressure and cultural influence. As Reynolds argues, Canada and countries in Latin America and Western Europe have enacted drug and mandatory sentencing laws that not only disproportionatelyaffect women, but increase reliance on incarceration.

Mass incarceration is a response to high levels of social insecurity created by the competitive nature of neoliberalism

Wacquant 10

Prize Fellow, and has won numerous grants including the Fletcher Foundation Fellowship and the Lewis Coser Award of the American Sociological Association, June 2010

"Crafting the Neoliberal State: Workfare, Prisonfare, and Social Insecurity"

http://disciplinas.stoa.usp.br/pluginfile.php/264179/mod_resource/content/1/Wacquant_Crafting%20the%20neoliberal%20state.pdf) AC

First, the fast and furious bend toward penalization observed at the fin de sie`cle is not a response to criminal insecurity but to social insecurity. To be more precise, the currents of social anxiety that roil advanced society are rooted in objective social insecurity among the postindustrial working class, whose material conditions have deteriorated with the diffusion of unstable and underpaid wage labor shorn of the usual social ''benefits,'' and subjective insecurity among the middle classes, whose prospects for smooth reproduction or upward mobility have dimmed as competition for valued social positions has intensified and the state has reduced its provision of public goods. Garland's notion that ''high rates of crime have become a normal social fact—a routine part of modern consciousness, an everyday risk to be assessed and managed'' by ''the population at large,'' and especially by the middle class, is belied by victimization studies. Official statistics show that law breaking in the United States declined or stagnated for 20 years after the mid-1970s before falling precipitously in the 1990s, while exposure to violent offenses varied widely by location in social and physical space (Wacquant, 2009b:144–147). Relatedly, European countries sport crime rates similar to or higher than that of the United States (except for the two specific categories of assault and homicide, which compose but a tiny fraction of all offenses), and yet they have responded quite differently to criminal activity, with rates of incarceration one-fifth to one-tenth the American rate even as they have risen.

There is an alternative— countries that have resisted the spread of neoliberalism have also successfully avoided creating a prison-industrial complex like that of the United States.

Wacquant 10

(Loı¨c Wacquant, Professor of Sociology and Research Associate at the Earl Warren Legal Institute, University of California, Berkeley, where he is also affiliated with the Program in Medical Anthropology and the Center for Urban Ethnography, and Researcher at the 'Centre de sociologie européenne' in Paris. "Crafting the Neoliberal State: Workfare, Prisonfare, and Social Insecurity"

http://disciplinas.stoa.usp.br/pluginfile.php/264179/mod_resource/content/1/Wacquant_Crafting%20the%20neoliberal%20state.pdf) AC

Finally, neoliberalism correlates closely with the international diffusion of punitive policies in both the welfare and the criminal domains. It is not by accident that the advanced countries that have imported, first, workfare measures designed to buttress the discipline of desocialized wage work and, then, variants of U.S.-style criminal justice measures are the Commonwealth nations that also pursued aggressive policies of economic deregulation inspired by the ''free-market'' nostrums come from the United States, whereas the countries that remained committed to a strong regulatory state curbing social insecurity have best resisted the sirens of ''zero tolerance'' policing and ''prison works.''16 Similarly, societies of the Second world, such as Brazil, Argentina, and South Africa, which adopted super-punitive penal planks inspired by U.S. developments in the 1990s and saw their prison populations soar as a result, did so not because they had at long last reached the stage of ''late modernity,'' but because they have taken the route of market deregulation and state retrenchment.17 But to discern these multilevel connections between the upsurge of the punitive Leviathan and the spread of neoliberalism, it is necessary to develop a precise and broad conception of the latter. Instead of discarding neoliberalism, as Garland (2001:77) does, on account of it being ''rather too specific'' a phenomenon to account for penal escalation, we must expand our conception of it, and move from an economic to a fully sociological understanding of the

Phenomenon.

Queer Pessimism

Use of court rulings perpetuates heteronormativity— judges assume only male guards would potentially assault female inmates

Miller 1

(Teresa A. Miller, Associate Professor of Law, University at Buffalo School of Law, 1-20-2001, "Keeping The Government'S Hands Off Our Bodies: Mapping A Feminist Legal Theory Approach To Privacy In Cross-Gender Prison Searches," Buffalo Criminal Law Review, http://www.jstor.org/stable/10.1525/nclr.2001.4.2.861?Search=yes&resultItemClick=true&searchText=strip&searchText=searches&searchText=prison&searchUri=%2Faction%2FdoBasicSearch%3FQuery%3Dstrip%2Bsearches%2Bprison%26amp%3Bacc%3Don%26amp%3Bwc%3Don%26amp%3Bfc%3Doff%26amp%3Bgroup%3Dnone **)** AC

Failing to consider how sexuality complicates the privacy analysis in cross-gender search cases provides a powerful example of how courts fail to contextualize privacy. Judges construct a doctrine that overlooks the needs of—and consequently under-protects—lesbian, bisexual, and transgendered women.36 A heterosexual presumption lurks within the doctrine of cross-gender searches. Judges limit their privacy analysis of surveillance in prisoners' living quarters—where they may be observed naked while showering, toileting, and undressing—to searches conducted by guards of the opposite sex. When judges place limits on cross-gender surveillance of naked prisoners by guards of the opposite sex, they assume that its is degrading to be view unclothed by a stranger of the opposite sex only.37This presumes that the relevant actors are heterosexual and precludes the application of a privacy analysis in situations where guards gaze upon the naked bodies of same-sex prisoners or intrusively touch their bodies.38 This assumption was recently acknowledged by the Seventh Circuit Court of Appeals on two occasions.39 However, because prisons are sites of complex and transitional sexualities, judges must factor sexual orientation into their gender analysis if they are to interpret privacy in a manner that deals realistically with the contours of life in prison. Until they do, gender stereotypes within the doctrine of cross-gender searches will remain a shaky foundation upon which to support women's privacy.

The heternormative, hypermasculinized nature of prisons and their policies ignores the sexual violence faced by queer bodies and ensures that it continues even post-plan

Buchanan 10

(Kim Shayo Buchanan, Associate Professor of Law and Gender Studies at USC Gould School of Law)

"Our Prisons, Ourselves: Race, Gender and the Rule of Law on JSTOR," Yale Law & Policy Review

http://www.jstor.org/stable/41308525) AC

The dominant pop-cultural narrative portrays prison rape as "what happens to white boys unfortunate enough to wind up behind bars despite the odds."44 Comedians and other public figures publicly joke that high-profile white-collar criminals, such as Bernie Madoff and Kenneth Lay, will be anally raped when they go to prison.45 In 2004, the Attorney General of California, Bill Lockyer, sparked a controversy when he declared: "I would love to personally escort [Kenneth] Lay to an 8-by-io cell that he could share with a tattooed dude who says, 'Hi, my name is Spike, honey.'"46 Such jokes imply, none too subtly, that prison rape is part of the punishment for criminal wrongdoing. At the same time, they send a message to the listener: If **you don't want to get raped, you better obey the law.** In mainstream cultural narratives about prison rape, whether in comedy, dramatic film, or in the news, the "prison rapist" is often, though not invariably, black, and the victim is almost always white.47 News articles, for example, present the threat of rape in coded - yet somehow thrilling - racial terms. Recent news articles invite the reader to indulge a light frisson of horror (or excitement) at the prospect of prison rape by "heavily tattooed gang members with shaved heads and a penchant for beating and raping wimps who haven't thrown a punch since that haymaker in primary school."48 "You," the imagined reader, are addressed as a vulnerable, nonviolent, and essentially law-abiding citizen, but you find yourself arrested for "petty fraud or drunk driving."49 You are told that you're "about to meet" the real criminals: the "seriously hard-core dudes at county jail."50 The Los Angeles Times asks its imagined reader: "Could you defend yourself? Or would you be victimized and face years of therapy?"

In this Part, I address several misconceptions arising from the pop-culture narrative of prison rape. First, in men's prisons, rape is less common than the mainstream narrative suggests. Nonetheless, the myth that prison rape is ubiquitous and interracial pervades pop culture and influences public policy in ways that reveal the race and gender dynamics of the outside world. Moreover, the perpetrators are not always the perverted criminals or tattooed gang members of popular stereotype: All recent surveys that asked about sexual abuse by nonprisoners found that correctional staff abuse prisoners far more often than prisoners do. Furthermore, the main targets of prison rape are not straightidentified, middle-class drunk drivers and white-collar criminals. The victims of prison rape are usually targeted for being unmasculine: They tend to be gay, bisexual, transgendered, young, small, weak, or effeminate. Recent victimization survey data also suggest that victims of rape in prison may be disproportionately nonwhite.

Finally, prison sexual abuse is not inevitable. Correctional authorities recognize that it can be prevented through alternative, lawful strategies of institutional governance. Although the mainstream narrative implies that prison rape is ubiquitous,52 it is almost wholly preventable: The prevalence of sexual abuse varies widely among institutions. The 2007 National Inmate Survey (NIS), conducted by the Bureau of Justice Statistics (BJS), found that approximately one-third of jails had sexual victimization rates "indistinguishable from zero."53 The BJS' 2008- 2009 NIS found sixteen men's and four women's facilities where inmates reported no incidents of sexual victimization.54 Inother jails and prisons, by contrast, the NIS found that from 13% to nearly 16% of inmates reported sexual victimization.55 The NIS and other recent victimization surveys indicate overall prevalence rates of about 4%.56 This risk of rape is not distributed equally across the prison population. Once a man is sexually assaulted, he becomes a target for further sexual abuse.57 According to the 2008-09 NIS, prior sexual abuse was the single inmate characteristic most predictive of further sexual victimization by either inmates or staff.58 Both fellow prisoners and staff tend to **treat victims as though they deserve abuse for having failed as men.**59 Anthropologists Mark Fleisher and Jessie Krienert found that **inmates believe that only "weak" men worry about rape**60 - although it seems plausible that "strong" prisoners might hesitate to admit to any such fear. A prisoner's conformity to conventional norms of manliness greatly decreases the likelihood that he will be targeted for sexual assault: Nonstraight sexual orientation and prior sexual abuse are the two characteristics most predictive of sexual abuse by either inmates or staff.61 Thus straight-identified men - especially the middle-class, middle-aged white-collar criminals of the pop-cultural narrative - are not the primary targets of sexual abuse in prison. Prisoners are more often targeted for being unmasculine: small, weak, young, disabled, naive, pretty, effeminate, or womanish.62 Correctional officers, courts, prisoners, advocates, and survey data agree: Gay, bisexual, transgender, and effeminate prisoners face greatly elevated risks of sexual abuse.63 The 2007 NIS found that 18.5% of gay inmates and 9.8% of men of "other" sexual orientation reported having been sexually abused in jail in the past six months, compared to 2.7% of straight-identified men.64 In a recent survey of a statewide probability sample of inmates in California prisons, criminologist Valerie Jenness, a criminologist at the University of California, Irvine, and her colleagues found that 67% of GBT inmates reported sexual victimization in prison, compared to 2% of straight men.

The 'heterosexual defense' of institutions sweeps sexual violence against queer bodies under the rug and effectively marginalizes them

Buchanan 10

(Kim Shayo Buchanan, Associate Professor of Law and Gender Studies at USC Gould School of Law)

"Our Prisons, Ourselves: Race, Gender and the Rule of Law on JSTOR," Yale Law & Policy Review

http://www.jstor.org/stable/41308525) AC

In Section II.A, I demonstrate that guards and prison administrators routinely ignore constitutional, statutory, and institutional rules that nominally prohibit sexual harassment and abuse. Instead, they enforce norms of masculinity in their most extreme and brutal forms. Guards and administrators often require the prisoner to "be a man" by fighting off his assailants. If the prisoner is unable to protect himself, he is often told that he does not deserve their protection because he is "gay." This practice requires prisoners to prove their manhood by fighting, on pain of rape.

In Section II.B, I describe the heterosexual defense in Title VII jurisprudence. Many federal courts depart from ordinary statutory and doctrinal rules to enforce norms of masculinity similar to those enforced in prison. In spite of Supreme Court doctrine that would seem to preclude such reasoning, these courts often find that severe, pervasive, and unwelcome male-male sexual talk and touching by straight-identified men is permissible under Title VII on the basis that it is not "because of sex." Either the conduct is not sexual because the harasser says he is straight, or, because the harasser thinks the targeted man is (or seems) gay, the harassment occurred because of "sexual orientation," not sex. This heterosexual defense**, which contradicts the courts' doctrinal approach to man-woman sexual harassment**, effectively authorizes straight men to sexually harass gay or effeminate men, while prohibiting gay men's same-sex sexual harassment as a Title VII violation.

Prison violence highlights detriments of heteronormativity and rape culture that are usually glossed over outside of prison walls

Buchanan 10

"Our Prisons, Ourselves: Race, Gender and the Rule of Law on JSTOR," Yale Law & Policy Review

http://www.jstor.org/stable/41308525) AC

This pattern of male-male sexual harassment is not limited to the Title VII workplace. It is seen in many other settings, such as policing,206 the military,207 fraternities and sports teams,208 school bullying,209 and other hierarchical, largely male contexts, including men's prisons.210 These "hypermasculine" environments share certain institutional features, which, sociologists have found, greatly increase the likelihood that men will sexually harass and assault others211**: organizational tolerance for sexual harassment and a rigid, widely shared hypermasculine sex-role ethos by which violence is manly, danger is exciting**, some women deserve to be raped, and "effeminate" men deserve to be ridiculed.212 Similarly, many young men who are "at an age of establishing their own sexual identities" engage in antigay sexual harassment when they are in hypermasculine environments where such behavior is tolerated.213 As we have seen, this happens among the millions of mostly young men held in prison as well.214 **In a hypermasculine environment, the straight-identified same-sex harasser conforms to conventional gender norms that equate masculinity with dominance**, as long as he denies any sexual gratification from the sexual talk and touching he inflicts on the other man.215 In the outside world, of course, most people agree that homosocial "horseplay" or hazing goes too far if it escalates to rape - although it sometimes does.216 Nonetheless, the gender dynamics of same-sex sexual harassment are shared between prison and the outside world. The perpetrators are usually straight-identified217 and target their victims for being (or seeming) unmanly, disabled, transgender, or gay.218 But, unlike in some prisons, sexual assault is non-normative in the cultural mainstream.

Cultural anthropologists Mark Fleisher and Jessie Krienert contend that prisoners participate in a "cultural logic" in which, they claim, social norms and behavior are "radically different from free-society standards."219 Free society, they say, views sexual violence as an "abhorrent, unjustifiable act[]."220 In "inmate culture," they report, it is presumed that that a victim could prevent rape if he or she really wanted to; that victims may report sexual assault "to garner attention" or "to falsely blame" an alleged assailant; that victims may be to blame for having incurred financial debts to the assailant; or that victims may have "sexually enticed" the assailant "by flirting and then fail[ing] to fulfill a silent promise of a sexual affair."221 This "inmate culture," they point out, presumes that "if rape occurs, fault lies with the victim."222 But these beliefs are not deviant. They are traditional. Prisoners share these beliefs with guards and many other denizens of the law-abiding world. They are some of the classic "rape myths" that gave rise to the feminist movement for rape law reform and to the continuing critique of the laws of rape and sexual harassment in the outside world.223 Outside as in prison, jurors and other fact-finders tend to assume that any man who reports sexual abuse must be gay, because "a man who is not gay will never consent to sex with another man."224 Like unchaste women, gay men have transgressed gender norms. Like unchaste women, gay men are often presumed to consent to sex with any and all men, regardless of the circumstances or the degree of violence used.225 Like unchaste women, "men who are sexually assaulted may be accused of having 'wanted it' and confronted with the incorrect belief that men cannot be assaulted against their will."226 In prison as outside, "the raped man becomes subject to many of the stereotype surrounding the rape of women - he is lying, must have asked for it, probably enjoyed it, and so on."227 Thus employers and authority figures may excuse antigay sexual harassment on the basis that gay men deserve to be abused. For example, when boys who are out as gay seek protection from school officials who bear a legal responsibility to protect them, these officialsometimes refuse to do so, laugh at the victim,228 and blame the battering and harassment on the young man for being gay.229 In one case, a thirteen-year-old middle-school student was attacked in front of twenty students in a science classroom. Two boys "held [him] down and performed a mock rape on [him], exclaiming that [he] should enjoy it."230 The principal told the victim and his parents that they should "expect" such behavior because "he is 'openly' gay."231 When the beatings and harassment intensified in high school, a school administrator "laughed and told [him] that [he] deserved such treatment because he is gay."232 In another case, a school official just laughed when a gay student reported that other students had beaten him up and threatened to lynch him.233 The principal refused to protect the young man, telling him to "keep quiet about his sexual orientation" and "stop acting like a fag,"234 instead. Thus, as Don Sabo and his coauthors point out, "[t]he prison code is very familiar to men in the United States because it is similar to the male code that reigns outside of prison."235 In the outside world as in prison, sexual harassment masculinizes the harasser and feminizes the target, regardless of their sex. Men who are sexually harassed or assaulted often experience the violence as emasculating.237 Harassers aggrandize their own masculinity as "sexual aggressiveness and conquest" and degrade their victims as feminine by enforcing their "sexual vulnerability and availability."238 Gay-baiting is an important means of imposing gender conformity among men in the outside

world: **"Heterosexuality is an especially rigid norm, and much policing is done by labeling one who deviates from the norm as being 'gay'** or a 'fag/"239 Like prisoners, free "men who transgress gender norms by exhibiting insufficient masculinity are maligned as gay," regardless of their actual sexual orientation.240 Same-sex harassers often "explicitly question the target's sex, thereby expressing their disdain for persons who diverge from appropriate standards of masculinity [T]argets are ostracized and ridiculed by harassers who object to their failure to conform, in appearance and demeanor, to prescribed gender roles."241 Men are targeted for being gay, or they are "presumed to be homosexual when they are the subject of explicit sexual advances."242 Outside as inside, to be gay is to have failed as a man; failure to act like a "real man" raises suspicions of gayness regardless of the man's actual desires.243 Meanwhile, straight men's sexual harassment of less manly men conforms to widely held gender values that, among other things, "instruct males that masculinity must be aggressively acquired by controlling people and resources."244 A manly man is aggressively heterosexual and is "expected to be the initiator of sexual relations."245 He should be able to use violence to defend himself when necessary. He can protect himself and others; he does not need to seek protection. The classification of prison rapists as "straight" may seem dissonant in light of contemporary understandings of sexual identity. But, until recent decades, many Americans viewed the man who penetrates another man as the straight one. As Elizabeth Kramer observes: Turn-of-the-century Americans considered only men who behaved in an effeminate manner and were the passive partner in sexual intercourse to be homosexual. "Normal" men were able to engage in sexual intercourse with effeminate men, often called "fairies," without risk of being identified as homosexual so long as they played only the active role in sex. In fact, using a "fairy" sexually became an effective means to enhance one's masculinity. Similarly, . . . male rapists of men were not seen as gay because they chose to assault men, but were rather perceived as more masculine.246 Today, despite the advances of gay liberation, many men who have sex with men do not consider themselves to be gay. Many of them see penetration as a manly act and being penetrated as "gay."247 In his recent study of men's samesex racial preferences in online dating, Russell Robinson found that, even among gay-identified men in the outside world, bottoms (those being penetrated) are stigmatized, while tops are framed as real men - and black men are stereotyped as tops.248 Thus even today, many free men, like prisoners, associate "gayness" with effeminacy and straightness with masculinity, regardless of sexual orientation. The most significant difference between prison masculinities and the masculinities enacted in hypermasculine environments on the outside - such as the military, police and firefighters, fraternities, men's sports and other maledominated places of work and play - is that these free masculinities are socially affirmed.249 Prison masculinities, by contrast, are stigmatized.250 Nonetheless, **hypermasculine cultures both inside and outside prison call upon men to use violence to establish a straight, masculine identity**. Dominant prisoners who penetrate other men present themselves - and are seen by many others in prison - as "dispassionate, and their partners [a] re merely receptacles to ensure sexual gratification."251 Twentieth-century prison sex researchers accepted this reasoning, asserting that prison rapists "experienced no sexual pleasure whatsoever. Instead, the prisoner rapes to prove he has power - power to dominate his prey."252 Free men, too, use violence as an important, though by no means the only, method to express masculinity. Men serving in the police or military, as well as pop-culture action heroes, routinely engage in socially approved violence. For example, as Helen Rogan has observed, in the military as elsewhere in social life, "'combat' is a synonym for 'power,'"253 and Kenneth Karst has noted that both serve as markers of manhood and full citizenship.254 Violence is also a normative means by which heterosexual men are expected to resist sexual advances by other men. In the free world as inside, a real man is expected to "fight off' his attacker.255 Police, employers, parents, and principals often refuse to help harassed men and boys on the basis that, if they are gay, they do not deserve protection, and if they are straight, they should fight.256 As one shop-floor supervisor put it: "[I]f [the plaintiff] were a 'real man,' he would address the matter in a manner other than by filing a sexual harassment complaint."257 Some courts have accommodated this cultural convention through the rightly excoriated "homosexual panic" defense.258 Because the Supreme Court's Title VII jurisprudence, discussed below, has expressly left room for socially approved intermale "roughhousing,"259 the allegedly unmanly targets of sexualized workplace hazing are often unprotected against severe, pervasive, and unwelcome sexual talk and touching by straight-identified men.260 They have to "take it like a man."261 A

real man should fight.

Alts (from Visuality/Identity Generic File)

The alternative is to burn this world to the ground—we must rage against systems of normativity

Mary Nardini Gang 09 (Mary Nardini Gang [The Mary Nardini Gang are criminal queers from Milwaukee, Wisconsin.]. “Toward the Queerest Insurrection.” Queer Jihad, 2009. http://zinelibrary.info/files/QueerestImposed.pdf)//ALepow

Some will read “queer” as synonymous with “gay and lesbian” or “LGBT”. This reading falls short. While those who would fit within the con- structions of “L”, “G”, “B” or “T” could fall with- in the discursive limits of queer, queer is not a stable area to inhabit. Queer is not merely another identity that can be tacked onto a list of neat social categories, nor the quantitative sum of our identities. Rather, it is the qualitative position of opposition to presentations of stability - an identity that problematizes the manageable limits of identity. Queer is a territory of tension, defined against the dominant narrative of white-hetero-monogamous-patriarchy, but also by an affinity with all who are marginalized, otherized and oppressed. Queer is the abnormal, the strange, the dangerous. Queer involves our sexuality and our gender, but so much more. It is our desire and

fantasies and more still. Queer is the cohesion of everything in conflict with the heterosexual capitalist world. **Queer is a total rejection of the regime of the Normal.** As queers we understand Normalcy. **Normal, is the tyranny of our condition; reproduced in all of our relationships**. Normalcy is violently reiterated in every minute of every day. **We understand this Normalcy as the Totality**. The Totality being the interconnection and overlap- ping of all oppression and misery. **The Totality is the state.** It is capitalism. It is civilization and empire. The totality is fence-post crucifixion. It is rape and murder at the hands of police. It is "Str8 Acting" and "No Fatties or Femmes". It is Queer Eye for the Straight Guy. It is the brutal lessons taught to those who can't achieve Normal. It is every way we've limited ourselves or learned to hate our bodies. We understand Normalcy all too well. When we speak of social war, we do so because purist class analysis is not enough for us. What does a marxist economic worldview mean to a survivor of bashing? To a sex work- er? To a homeless, teenage runaway? How can class analysis, alone as paradigm for a revolution, promise liberation to those of us journeying beyond our assigned genders and sexualities? The Proletariat as revolutionary subject marginalizes all whose lives don't fit in the model of heterosexual-worker. **We must create space wherein it is possible for desire to flourish. This space, of course, requires conflict with this social order.** To de- sire, in a world structured to confine desire, is a tension we live daily. We must understand this tension so that we can become powerful through it - we must understand it so that it can tear our confinement apart. This terrain, born in rupture, **must challenge oppression in its entirety**. This of course, means total negation of this world. We must become bodies in revolt. We need to delve into and indulge in power. We can learn the strength of our bodies in struggle for space for our desires. In desire we'll find the power to destroy not only what destroys us, but also those who aspire to turn us into a gay mimicry of that which destroys us. **We must be in conflict with regimes of the normal. This means to be at war with everything. If we desire a world without restraint, we must tear this one to the ground.** We must live be- yond measure and love and desire in ways most devastating. We must come to understand the feeling of social war. We can learn to be a threat, we can become the queerest of insurrections.

Queerness can never exist within civil society—it is always forced to assimilate into normativity

Mary Nardini Gang 09 (Mary Nardini Gang [The Mary Nardini Gang are criminal queers from Milwaukee, Wisconsin.]. "Toward the Queerest Insurrection." Queer Jihad, 2009. http://zinelibrary.info/files/QueerestImposed.pdf)//ALepow

In the discourse of queer, we are talking about a space of struggle against this totality - against normalcy. By "queer", we mean "social war". And when we speak of queer as a **conflict with all domination**, we mean it. See, we've always been the other, the alien, the criminal. The story of queers in this civilization has always been the narrative of the sexual deviant, the constitutional psychopathic inferior, the traitor, the freak, the moral imbecile. We've been excluded at the border, from labor, from familial ties. We've been forced into concentration camps, into sex slavery, into prisons. The normal, the straight, the american family has always **constructed itself in opposition to the queer**. Straight is not queer. White is not of color. Healthy does not have HIV. Man is not woman. The discourses of heterosexuality, whiteness and capitalism reproduce themselves into a model of power. **For the rest of us, there is death**. In his work, Jean Genet1 asserts that the life of a queer, is one of **exile** - that all of **the totality of this world is constructed to marginalize and exploit us**. He posits the queer as the criminal. He glorifies homosexuality2 and criminality as the most beautiful and lovely forms of conflict with the bourgeois world. He writes of the secret worlds of rebellion and joy inhabited by criminals and queers. Quoth Genet, "Excluded by my birth and tastes from the social order, I was not aware of its diversity. Nothing in the world was irrelevant: the stars

on a general's sleeve, Now they don't critique marriage, military or the state. Rather we have campaigns for queer assimilation into each. Their politics is advocacy for such grievous institutions, rather than the annihilation of them all. "Gays can kill poor people around the world as well as straight people!" "Gays can hold the reigns of the state and capital as well straight people!" "We are just like you". Assimilationists want nothing less than to construct the homosexual as normal - white, monogamous, wealthy, 2.5 children, SUVs with a white picket fence. This construction, of course, reproduces the stability of heterosexuality, whiteness, patriarchy, the gender binary, and capitalism itself. If we genuinely want to make ruins of this totality, we need to make a break. **We don't need inclusion** into marriage, the military and the state. **We need to end them**. No more gay politicians, CEOs and cops. We need to swiftly and immediately articulate a wide gulf between the politics of assimilation and the struggle for liberation. simultaneously struggled against capitalism, racism and patriarchy and empire. **This is our history**.

The kritik is a prerequisite

O'Donnell'04

(3-1-2004, Ian O'Donnell, Professor of Criminology @ University College Dublin, Ireland, former Director of the Irish Penal Reform Trust, Oxford University Press "PRISON RAPE IN CONTEXT on JSTOR," http://www.jstor.org/stable/23638614)

Wordey (2002: 107-15) made a number of suggestions for prevention, including single cell accommodation, improved training of staff and supervision by staff, separation of potential victims and predators. Knowles (1999: 280) advocated separation by race, a simplistic approach that ignores the problem of intra-racial sexual violence. **Lockwood** (1980: 142) saw the only real solution in the eradication of subcultural violence outside prisons, considering prison-specific approaches as, at best, symptom reduction.

Prison Reform CP

Poor pay and lack of training increases likelihood of corruption

Erin **Fuchs**, 6-22-**2015**

"America's prison guards are the 'ugly stepchildren' of the criminal justice system ," Business Insider, http://www.businessinsider.com/why-are-prison-guards-corrupt-2015-6

Poor pay and low hiring standards in America's prisons make guards more susceptible to corruption than others in the justice system, experts have told Business Insider.

America's correction officers do tough and dangerous jobs with little compensation, recognition, or hope for advancement.

Guards make significantly less money than police officers and generally have significantly less training. New York state correction officers have eight weeks of formal training, while state police in New York have an intensive, 26-week course.

Many go into corrections as a last resort.

"It's been referred to as the bottom rung in the career ladder in criminal justice. This is considered dirty work," criminal justice professor Chris Menton told Business Insider for a previous article.

CP is politically popular

Newt **Gingrich and** Van **Jones,** 12-5**-2014**

"It's time to reform our failed prison system," CNN, http://www.cnn.com/2014/12/05/opinion/gingrich-jones-prison-system/

Newt has talked about the need for "confidence-building measures" between the President and Republicans in Congress. The idea is that we should work on easier things first, so that we can work on harder things next.
Transforming our nation's failed prison system looks like it could be easier now than anyone expected. Leaders in both parties agree on the need and direction for reform.
They recognize that locking up millions of people for very long periods of time at ballooning costs is not a wise response to nonviolent crime. Warehousing nonviolent offenders for years behind bars has been an economic, moral and human catastrophe.

The United States has 5% of the world's population, but 25% of its incarcerated population. During the past four decades, the rate of incarceration in the U.S. has more than quadrupled, costing us more than $80 billion a year. There are now roughly 2.3 million people in prison or in jail, which is nearly one in every 100 Americans.

Today in a Florida prison, a 19-year-old man is serving a 15-year mandatory minimum sentence for drug possession. His incarceration will cost taxpayers $60,000 a year. He will receive no job training, no education and no drug treatment. He will leave prison beaten down. He'll carry the stigma and the barriers that come with being a felon, making it difficult for him to find a job and more likely that he will end up back in prison.

As a corrections system, this makes no sense. We must rethink our approach from the ground up. And for federal crimes, **we can start by building on bipartisan reforms that are spreading across the country at the state level**.

In the true spirit of federalism, **states have led the way in passing reforms that protect public safety, more effectively punish and correct nonviolent offenders, save taxpayers money and ensure hardened and violent criminals remain behind bars.**

In Georgia, Gov. Nathan Deal has implemented a bold overhaul of the state's criminal justice system, slashing prison spending and reducing harsh penalties for nonviolent offenses. The result has been a 20% reduction over five years in the number of African-American men incarcerated.

In Texas, Gov. Rick Perry has been so successful at using probation, parole and sentencing reform to both reduce the prison population while also reducing crime that people have termed his approach the "Texas Model."

Out west, California recently passed one of the most transformational examples of bipartisan criminal justice reform. Proposition 47, the "Safe Neighborhood and Schools Act," was a sensible measure to reduce incarceration for nonviolent crimes and to increase investments in crime prevention, treatment and education.

The initiative changed six low-level offenses, including simple drug possession, from felonies to misdemeanors, and will save California hundreds of millions of dollars each year in prison spending that wasn't working, reinvesting those savings into mental health and drug treatment, K-12 schools and victim services.

While there is a lot to learn from the policy reforms brought about by Prop 47, there may be even more to learn from its politics.

The initiative had the support of crime survivors, victims groups, business groups and 1,500 clergy across the state. Everyone from rapper Jay Z and the ACLU to Sen. Rand Paul and Grover Norquist lined up behind the measure. (We both endorsed it, too.) Conservative California businessman B. Wayne Hughes Jr. was the single largest individual donor to the effort, giving more than $1.25 million.

Because of its broad-based support, Proposition 47 passed by a huge margin of 59-41 percent. It even won in some conservative strongholds, such as Orange County and Riverside County.

California isn't the only place where criminal justice reform did well on the ballot. Deal, and senators such as John Cornyn and Cory Booker were re-elected by big margins, campaigning in part on their criminal justice reform efforts. And in New Jersey, voters passed a state constitutional amendment reforming the bail system that was championed by both Republican Gov. Chris Christie and the Drug Policy Alliance.

Eliminate Cross Gender Supervision CP

CP Text: The USFG should eliminate cross-gender supervision policies in all federal prisons.

CP solves better— empirics prove

Flyn L. **Flesher 2007**

("Cross-Gender Supervision in Prison and the Constitutional Right of Prisoners to Remain Free from Rape"

https://www.wcl.american.edu/endsilence/documents/CrossGenderSupervisioninPrisonsandtheConstitutionalRightofPrisonerstoRemainFreeFromRape.pdf)

Ending or limiting cross-gender supervision policies would assuredly have a "ripple effect" on prison populations,1 8 1 but that effect would be a highly positive one. Such elimination or limitation would allow female prisoners to live free from fears of sexual violence at the hands of male guards. The only negative effect of ending or limiting cross-gender supervision policies is that it could lead to a drop in the number of jobs available to women in the prison system if legislatures chose to abandon such policies in both female and male prison facilities.8 2 Nevertheless, the government's duty to protect prisoners' Eighth Amendment rights surely outweighs any obligation it may have to preserve jobs for female prison guards. Finally, easy, obvious alternatives exist to cross-gender supervision policies that accommodate female prisoners' rights to remain free from rape.'83 For example, prisons could accommodate these rights and still satisfy security concerns by instituting policies that substantially limit the access of male prison guards to female prisoners to include only distant supervision. 4 Prisons could also choose only to hire guards of the same sex as the prisoners. 85 The fact that some prisons have adopted such policies in the past serves as evidence that these policies are both obvious and relatively easy to implement.

In Helling v. McKinney, the Supreme Court held that a prisoner could sue for an injunction under the Eighth Amendment to prevent injuries before they happened."8 6 The Court refused to distinguish between current harms suffered by prisoners and harms that prisoners would suffer in the future if they did not receive relief."8 7 Before granting injunctive relief to a prisoner, he must show not only that his present conditions of confinement create a risk but that the risk is "so grave that it violates contemporary standards of decency to expose anyone unwillingly to such a risk. In other words, the prisoner must show that the risk of which he complains is not one that today's society chooses to tolerate.'" Plaintiffs can easily satisfy this part of the analysis since rape is without question an unspeakable crime of violence that society does not tolerate.'8 9 The primary hurdle for a female inmate requesting such an injunction would be proving the causal link between cross-gender supervision policies and the risk of rape at the hands of male prison guards. The Tenth Circuit in Hovater v. Robinson expressed a fear that holding prison administrators responsible for harms resulting from cross-gender supervision would imply that all male guards pose a danger to the bodily integrity of all female inmates. 9 ' While the proposition that all men would inevitably sexually assault female inmates if given the chance is clearly false, leaving male guards alone with female inmates is sufficiently dangerous to warrant an injunction against such practices. Some studies from the 1990s address this causal link and reach the conclusion that the risk is severe, but they fail to provide rigorous statistical evidence supporting this conclusion. ' In at least one class action suit, the plaintiffs showed the risks of psychological and other harms inherent in cross-gender supervision through expert testimony. 192 Similar expert testimony could prove fruitful for plaintiffs attempting to show the risk of rape inherent in such supervision. In some class action suits, plaintiffs have met their burden of proof through the testimony of numerous prison inmates regarding rapes at the hands of guards.193 Such testimony would also bolster plaintiffs' claims when seeking an injunction against cross-gender supervision policies.

Finally, statistical evidence bolsters the claims of female inmates seeking injunctions against cross-gender supervision. First, although it is by no means dispositive, one should note that ninety-nine percent of those arrested or convicted of rape are male,'" and male staff are reportedly the perpetrators of "the overwhelming majority of complaints of sexual abuse by female inmates against staff."1'95 These statistics at the very least imply that same-sex supervision policies pose a lesser risk than cross-gender supervision policies. Second, pursuant to the Prison Rape Elimination Act of 2003, the Bureau of Justice Statistics of the United States Department of Justice must provide a "comprehensive statistical review and analysis of the incidence and effects of prison rape.'"96 Although the first report under this statute sheds little light on the causes of prison rape, 97 future reports may provide more information that plaintiffs could use to show the effects of cross-gender supervision on the frequency of prison rape. Assuming that a plaintiff or class of plaintiffs meets the burden of proving that cross-gender supervision policies lead inevitably (or at least are a substantial factor that leads to) the rape of female inmates, correct application of current federal law necessitates granting relief to plaintiffs. Upon

making such a finding, courts must reach the conclusion that cross-gender supervision policies either are a violation of prisoners' rights to remain free from rape by public officials or are policies that create an atmosphere tolerant of such violations. If so, then the plaintiff has a cognizable civil claim under 42 U.S.C. § 1983, under which she can request an injunction.'98 When addressing the plaintiffs § 1983 claim, the court must subject the policies either to strict scrutiny or to the Turner standard of review. As stated in the previous section, such policies cannot withstand either level of scrutiny.

Elections DA

Correctional industry and unions opposed to plan
Deborah **Sontag**, 5-12-20**15**

"Push to End Prison Rapes Loses Earlier Momentum," New York Times, http://www.nytimes.com/2015/05/13/us/push-to-end-prison-rapes-loses-earlier-momentum.html?_r=0

“I am encouraged by what several states have done, discouraged by most and dismayed by states like Texas,” said Judge Reggie B. Walton of United States District Court for the District of Columbia, who was appointed chairman of the now-disbanded commission by Mr. Bush.

Some commissioners fault the Justice Department for failing to promote the standards vigorously. Others blame the correctional industry and unions for resisting practices long known to curb “state-sanctioned abuse,” as one put it. All lament that Congress has sought to weaken the modest penalties for noncompliance, and that five governors joined Mr. Perry last year in snubbing the standards.

“**There’s a whole kind of backlash**, which is very depressing,” said Jamie Fellner, a former commissioner who is senior counsel for the United States program of Human Rights Watch. “It’s 12 years since the law passed. I mean, really. We’re still dealing with all these officials saying, ‘Trust us. We’ll take care of it’?”

Case

Harms

Strip searches key to ensure security
Will **Kryder**, 5-3-**2005**

"Why the Supreme Court Thinks Strip Searches Are Constitutional," The Atlantic, http://www.theatlantic.com/national/archive/2012/04/why-the-supreme-court-thinks-strip-searches-are-constitutional/255648/

As Harcourt wrote after the decision, "Notice, of course, the difference -- or paradox -- with last week's Supreme Court arguments about economic liberty and the health care mandate. The American ideal of a hands-off government seems to apply only in the context of economic liberty." Justice Kennedy's opinion in*Florence* concluded, "Courts must defer to the judgment of correctional officials that the inspections served not only to discover but also to deter the smuggling of weapons, drugs, and other prohibited items."

And why would correctional officials have reason to suspect a worst-case scenario, even with the most innocuous infractions? "One of the terrorists involved in the September 11 attacks was stopped and ticketed for speeding just two days before hijacking Flight 93."

Prisons Case Neg

Notes

If the aff overturns either *Bell v. Wolfish* or *Florence v. Board of Chosen Freeholders*, that's incoherent—both of those decisions were in the context of strip searches, not body cavity searches. They're distinct (see cards in the file).

Case

Body Cavity Searches Rare in FEDERAL Prisons—No Spillover/T Substantial

Body cavity searches are extremely rare in federal prisons

Richards 15 Jonathan Richards, former inmate, FederalPrisons.Org (a prisoner lobby group) March 2015 **Federal Prison**: A Comprehensive Survival Guide FOURTH EDITION http://federal-prison.org/view-free-sample/

In extreme cases where there is strong evidence indicating that an inmate poses a serious security threat and is in possession of contraband, a manual body cavity search may be performed. This procedure involves the probing of bodily orifices using fingers and instruments. There are strict rules regarding manual body cavity searches, and it is **extremely unlikely** that you will be subject to such a search.

Circumvention

Prison officials circumvent—the plan has no enforcement or implementation power

Rosenberg 08

(Gerald N., published September 15, 2008, University of Chicago Press, The Hollow Hope: Can Courts Bring About Social Change? Second Edition, Associate Professor of Political Science and Lecturer in Law at UChicago, pgs 308-309)

Lack of Implementation Power. The third constraint that must be overcome come **is the courts' lack of implementation powers.** As Bronstein points out, implementation and enforcement of prison reform decrees rests "primarily in the hands of prison officials" (Bronstein 1977, 44) who, like other professionals, do not like having their professional competence challenged. When courts issue orders requiring prison reform, many administrators see them as doing just that. The problem, of course, is not only that prison officials "often continue to fight for the status quo" (Bronstein 1977, 44), but also that courts lack the tools to insure implementation. Although this is not unusual, the less visible nature of prisons as compared to other governmental agencies which have been the targets of litigation makes implementation even more problematic. Since prison access is regulated for safety reasons, information on conditions and the progress of implementation is difficult to obtain. As Jacobs points out, "even under the best of circumstances," the court "must depend upon the institution's staff for information as to whether a decree is being followed" (Jacobs 1980, 452). The staff, of course, may be uncooperative. Indeed, when California corrections administrators were asked, in a survey, if they could "comply with court orders through changes which meet the letter of the court order, but not its spirit, and thereby frustrate the intent of the court," a whopping 87 percent said yes (Project 1973, 530). **As one administrator put it in a follow-up interview, "we can usually get around anything"** (Project 1973, 531). Administrators simply play an indispensable role in the success of prison reform. As the assistant attorney general in charge of corrections in Washington state put it, "the key to relief will be commitment by defendants to comply with the letter and the spirit of the order" (Collins 1984, 342). The necessity of support from prison administrators, and their ability to withhold that support, makes overcoming the implementation constraint particularly problematic." There is also a related issue of staff support below the top administrative level. Since it is the staff who will actually carry out any reform decree, their attitude is vitally important. Yet the staff, operating in a potentially dangerous environment, may have little interest or incentive in reforming their procedures, , **especially if the**

reforms are perceived as lessening their authority. A New York study found that the typical corrections officer "opposes prison reform as a threat to ~~his~~ physical security" (New York State 1974, 17). The California correctional administrators' survey just referred to, found "many administrators" stating that the "greatest administrative challenge regarding the effect of change on the staff was having to `sell' the staff on every new policy" (Project 1973, 502). Indeed, the survey found that "staff morale is the operational factor which consistently shows the greatest negative effect" of court-ordered reform (Project 1973, 575).

{DON'T READ THIS WITH PREA STUFF BELOW} Prison reform fails because prisons are secret—PREA reforms prove

Moody 11

(Stan, 4/4/11, MoodyReport, "Prison Rape Reform makes for Strange Cell-Fellows," Stan has a BS from University of Maine, did his post graduate study @ the George Washington University School of Law, https://moodyreport.wordpress.com/2011/04/04/prison-rape-reform-makes-for-strange-cell-fellows/, 8/2/15, SM)

New Prison Rape Standards:∂ Agreed by the various parties is that the Prison Rape Elimination Act that institutes reforms on April 4, 2011, has no enforcement mechanism and is light on criminal penalties. **At fault is the shroud of secrecy that encases the prison system,** discouraging reporting of rape and encouraging further abuse of victims. Pat Nolan, vice president of Prison Fellowship, points out that in a culture that does not welcome transparency, **rules providing no outside enforcement simply continue policies of secrecy and cover-up**.∂ "The prisons have been monitoring themselves; now we see what's happening," Nolan was quoted in the article as saying. "We need those outside eyes checking on what they're doing and holding them accountable for stopping this." Costs of such safeguards as electronic surveillance fail to factor in moneys spent on settling legal claims as rapes come to light.

Historically there have been ineffective responses to violations of court orders—prison officials are able to get away with basically everything

Ekland-Olson and Martin 88

(Sheldon, Steve, 1998, Law and Society Review, "Organizational Compliance with Court-Ordered Reform," http://www.jstor.org/stable/pdf/3053440.pdf, 8/3/15, SM)

C. **Ineffective Responses to Violations of Court Orders**∂ During the early phases of the Ruiz litigation, TDC officials∂ were repeatedly charged with violations of protective orders∂ designed to limit harassment of inmates involved in the suit. By∂ July 1976 officials at one prison unit had been subjected to three∂ court hearings at which evidence indicated repeated violations of∂ court orders. These violations ranged from rather petty harassments∂ (including not issuing underwear to inmates; restricting access∂ to the law library to early morning hours in uncomfortable∂ quarters; and subjecting the inmate-plaintiffs to numerous strip∂ searches, including digital rectal exams, when such searches were∂ not normally conducted), to more severe charges of brutality (including∂ the use of Mace on inmates securely locked in their cells).∂ After one hearing, Judge Justice found for the inmate-plaintiffs∂ on a number of very specific charges and issued a thirty-point∂ set of orders regarding the handling of legal correspondence, cell∂ searches, rectal searches, the use of Mace, and triple celling when∂ open cells were available. On appeal, the state's attorneys did not∂ question the factual findings, and the Fifth Circuit found that the∂ named plaintiffs had been subjected to "intimidation, coercion,∂ punishment and discrimination" (Ruiz v. Estelle, 550 F.2d 238 (5th∂ Cir. 1977)).∂ Some seven months after this hearing, prison officials once∂ again found themselves charged with similar violations. This time∂ they agreed to remedy the problem by removing illegitimate disciplinary∂ charges from the affected inmates' records. They also∂ agreed that the officers involved would be reprimanded. However,∂ the only disciplinary action taken was initiated at the insistence of∂ the plaintiffs' attorneys and consisted of a written reprimand from∂ Estelle to an assistant warden, which read in part, "I realize there∂ was no more intent on your part than mine to violate any of the∂ court's Order, I know we will renew efforts to see such violation∂ does not occur again. Consider us both reprimanded by this document"∂

(correspondence from W. J. Estelle to D. Christian, July 1,∂ 1976). Rather than subjecting themselves to harsh criticism for repeated∂ violations of court orders, **the warden and assistant warden∂ most directly involved seemed to enhance their standing with∂ high-level administrators**. The warden was promoted to assistant∂ director and named warden of the year. The assistant warden was∂ promoted to warden shortly thereafter. The newly appointed warden∂ would be the subject of repeated accusations of brutality as evidence∂ was gathered in the Ruiz trial in later years.

Prison officials will circumvent—courts have no ability to ensure compliance

Garvock 05

(Heather L., Eastern Michigan University Digital Commons, "The Courts and the Politics of Prison Reform," Heather practices in the United States District Court for the Eastern District of Michigan and the United States Court of Appeals for the Sixth Circuit, JD from Wayne State University, http://commons.emich.edu/cgi/viewcontent.cgi?article=1046&context=honors, 7/26/15, SM)

The adjudication process also leaves little room of judges to review the implementation and impact of their decisions (Horowitz 51). The ability and capacity for judges to monitor how or if their orders are complied with is limited. Further complicating the issue of compliance is the fact that judges measure compliance by whether their orders are obeyed, not whether the person who is responsible for implementing the order has the ability to implement the order (Horowitz 51). Courts are especially limited in their ability to monitor the unintended consequences of compliance with their decisions. Even if a judge recognizes the unintended consequences of their decision, that judge has no way of returning to the issue unless a plaintiff files another case (Horowitz 52).

Courts cannot unilaterally implement prison reform—prison officials only create a façade of compliance without actually changing prison practices

Sturm 90

(Susan, 1990, University of Pennsylvania Law Review, "Resolving the Remedial Dilemma: Strategies of Judicial Intervention in Prisons," Susan has a BA from Brown and a JD from Yale, she is the George M. Jaffin Professor of Law and Social Responsibility @ Columbia Law School, http://scholarship.law.upenn.edu/cgi/viewcontent.cgi?article=3801&context=penn_law_review, 8/3/15, SM)

2. The Director and the Limits of Assuming Control∂ The director attempts to achieve compliance by assuming direct∂ control over aspects of remedial formulation and prison management.3∂ 59 However, the court cannot unilaterally implement administrative∂ reform, and it lacks the capacity to use administrative control∂ to alter organizational behavior structures. The court functions∂ outside the prison system's hierarchy and has little direct contact∂ with or control over many of those whose cooperation is necessary to∂ achieve compliance. The court's power to hire and fire, or otherwise∂ to exercise direct administrative control, lies at the margins of the∂ boundaries of the court's legitimate authority and is subject to legal∂ challenge. The director's range of activity is defined by the scope of∂ the legal violation, further limiting its potential to influence the conduct∂ of prison officials.3 60∂ The director's assumption of control challenges the strong commitment∂ to autonomy that pervades the prison system.3 6 ' By∂ attempting to assume control, the court creates incentives to chal-lenge the its authority and resist its intervention. Prison officials∂ exploit the court's desire to achieve compliance by creating the∂ appearance of compliance without actually changing prison practices.3∂ 6 2 Alternatively, these officials may respond to judicial oversight∂ by formalizing their contact with the court, hardening their∂ commitment to their positions, and challenging the court's activities∂ on appeal.3 63 This response delays the implementation process, is∂ likely to halt the momentum of the reform effort, and may lead the∂ court to reduce its involvement and defer to those in the prison.∂ By assuming direct responsibility

for compliance, the director∂ also enables prison officials to disclaim responsibility for initiating∂ reform and to minimize their involvement in the reforms undertaken∂ by the court .∂ 3 ' The judge's political independence enables her to∂ initiate reforms that would be politically risky for insiders to initiate∂ directly. However, risk-averse officials have incentives to distance∂ themselves publicly from reform initiatives and may refuse to take∂ the steps necessary to ensure success. Those hostile to court intervention∂ may abdicate responsibility for developing new techniques∂ and approaches to maintain order within judicially-defined boundaries,∂ and may even attempt to undermine the court's compliance∂ efforts. Any resulting disruption can be blamed on the court and∂ used to prove the illegitimacy of the court's role. The predictable∂ public controversy is likely to divert attention from the underlying∂ prison conditions and undercut the public pressure to undertake∂ change.∂ The director also fails to motivate non-parties, such as the legislature∂ and the parole board, to assume responsibility for their role in∂ perpetuating the prison problems. The director's assumption of∂ control challenges the authority of the state and thus creates incentives for outsiders to resist cooperation.

New PREA Regulations Solve Most Rape Concerns

Their 1AC Miller evidence says,

male correctional officers had sex with female prisoners including vaginal, anal and oral rape

and

]¶ **Body searches and surveillance of naked female prisoners in particular have been tied to sexual misconduct and rape at the hands of male guards.**

BUT

New PREA regulations prohibit crossgender strip and body cavity searches and implements training

NCDSV 12

(8/8/12, National Center on Domestic and Sexual Violence, "Implementing The Prison Rape Elimination Act: A Toolkit for Jails," http://www.ncdsv.org/images/TMG-CIPP_ImplementingThePREAToolkitForJails_8-8-2012.pdf, 7/26/15, SM)

Limits to Cross-Gender Viewing and Searches Standard 115.15 provides extensive guidance regarding the conduct of searches. **Cross-gender strip and visual body cavity searches are prohibited** except in exigent circumstances9 or when performed by medical practitioners. The standard also places a prohibition on cross-gender pat-down searches of female inmates (absent exigent circumstances). This prohibition does not take effect until August 20, 2015, for jails with a rated capacity of more than 50 inmates or until August 20, 2017, for jails with a rated capacity of 50 or fewer inmates**. In addition, facilities cannot search or physically examine a transgender or intersex inmate solely to determine the inmate's genital status.** The agency must also train staff to conduct pat-down searches of cross-gender, transgender, and intersex inmates in a professional and respectful manner. The standard also requires jails to implement policies and procedures that allow inmates to shower, change clothes, and perform bodily functions without staff members of the opposite gender viewing them, absent exigent circumstances or instances when the viewing is incidental to routine cell checks. These policies and procedures also require staff members of the opposite gender to announce their presence when entering an inmate housing unit. DOJ provides further guidance for this standard by noting that the prohibition against staff viewing inmates of the opposite sex includes staff members that monitor cameras (p. 40). The DOJ also notes that the ban on cross-gender searches does not, in and of itself, create or establish a bona fide occupational qualification (BFOQ) that could result in employment discrimination on the basis of sex (pp. 54-55). The DOJ addresses many concerns related to the housing and treatment of transgender and intersex inmates (pp. 55-59).

PREA regulations mandate documentation and special training for strip searches

ACLU 14

(1/30/14, ACLU, "End the Abuse: Protecting LGBTI Prisoners from Sexual Assault Regulations," https://www.aclu.org/files/assets/prea/012014-ACLU-PREA-Regulations.pdf, 7/26/15, SM)

The final PREA regulations are codified at 28 C.F.R. 115. The full text and summary of changes was published in the Federal Register at 77 FR 37105. This is also available online here: https://www.federalregister.gov/ articles/2012/06/20/2012-12427/national-standards-toprevent-detect-and-respond-to-prison-rape. The regulations are organized with definitions at the beginning, 28 C.F.R. 115.5, 28 C.F.R. 115.6, and then separated by the standards for different types of facilities, prisons (28 C.F.R. 115.11 et seq.), lockups (28 C.F.R. 115.111 et seq.), community confinement facilities (28 C.F.R. 115.211 et seq.), and juvenile detention facilities (28 C.F.R. 115.311 et seq.). The full text of key LGBTI provisions is below. CROSS-GENDER SEARCHES §§ 115.15, 115.115, 115.215, 115.315 Limits to crossgender viewing and searches. a. The facility shall not conduct cross-gender strip searches or cross-gender visual body cavity searches (meaning a search of the anal or genital opening) except in exigent circumstances or when performed by medical practitioners. b. As of August 20, 2015, or August 21, 2017 for a facility whose rated capacity does not exceed 50 inmates, the facility shall not permit cross-gender pat-down searches of female inmates, absent exigent circumstances. Facilities shall not restrict female inmates' access to regularly available programming or other out-of-cell opportunities in order to comply with this provision. c. **The facility shall document all cross-gender strip searches and cross-gender visual body cavity searches, and shall document all cross-gender patdown searches of female inmates**. d. The facility shall implement policies and procedures that enable inmates to shower, perform bodily functions, and change clothing without nonmedical staff of the opposite gender viewing their breasts, buttocks, or genitalia, except in exigent circumstances or when such viewing is incidental to routine cell checks. Such policies and procedures shall require staff of the opposite gender to announce their presence when entering an inmate housing unit. e. The facility shall not search or physically examine a transgender or intersex inmate for the sole purpose of determining the inmate's genital status. If the inmate's genital status is unknown, it may be determined during conversations with the inmate, by reviewing medical records, or, if necessary, by learning that information as part of a broader medical examination conducted in private by a medical practitioner. f. The agency shall train security staff in how to conduct cross-gender pat-down searches, and searches of transgender and intersex inmates, in a professional and respectful manner, and in the least intrusive manner possible, consistent with security needs. TRAINING §§ 115.31, 115.231, 115.331 Employee training a. The agency shall train all employees who may have contact with inmates on: … 9. How to communicate effectively and professionally with inmates, including lesbian, gay, bisexual, transgender, intersex, or gender nonconforming inmates;

PREA coordinator and review team ensure compliance with sexual harassment prevention standards

ACLU 14

(1/30/14, ACLU, "End the Abuse: Protecting LGBTI Prisoners from Sexual Assault Regulations," https://www.aclu.org/files/assets/prea/012014-ACLU-PREA-Regulations.pdf, 7/26/15, SM)

AUDITS & OVERSIGHT §§ 115.11, 115.111, 115.211, 115.311 Zero tolerance of sexual abuse and sexual harassment; PREA coordinator. a. An agency shall have a written policy mandating zero tolerance toward all forms of sexual abuse and sexual harassment and outlining the agency's approach to preventing, detecting, and responding to such conduct. b. An agency shall employ or designate an upper-level, agency-wide PREA coordinator with sufficient time and authority to develop, implement, and oversee agency efforts to comply with the PREA standards in all of its facilities. c. Where an agency operates more than one facility, each facility shall designate a PREA compliance manager with sufficient time and authority to coordinate the facility's efforts to comply with the PREA standards. §§ 115.86, 115.186, 115.286, 115.386 Sexual abuse incident reviews. a. The facility shall conduct a sexual abuse incident review at the conclusion of every sexual abuse investigation, including where the allegation has not been substantiated, unless the allegation has been determined to be unfounded. b. Such review shall ordinarily occur within 30 days of the conclusion of the investigation. c. The review team shall include upper-level management officials, with input from line supervisors, investigators, and medical or mental health practitioners. d. The review team shall: 1. Consider whether

the allegation or investigation indicates a need to change policy or practice to better prevent, detect, or respond to sexual abuse; 2. Consider whether the incident or allegation was motivated by race; ethnicity; gender identity; lesbian, gay, bisexual, transgender, or intersex identification, status, or perceived status; or gang affiliation; or was motivated or otherwise caused by other group dynamics at the facility; 3. Examine the area in the facility where the incident allegedly occurred to assess whether physical barriers in the area may enable abuse; 4. Assess the adequacy of staffing levels in that area during different shifts; 5 . Assess whether monitoring technology should be deployed or augmented to supplement supervision by staff; and 6. Prepare a report of its findings, including but not necessarily limited to determinations made pursuant to paragraphs (d)(1) through (d)(5) of this section, and any recommendations for improvement and submit such report to the facility head and PREA compliance manager. e. The facility shall implement the recommendations for improvement, or shall document its reasons for not doing so.

Body Cavity Searches Necessary

Even if they can be intrusive, body cavity searches are still necessary for security purposes—even Justice Breyer, dissenter in the Florence case, agrees

Totenberg 12

(Nina, 4/2/12, NPR, "Supreme Court OKs Strip Searches For Minor Offenses," recipient of the American Judicature Society's award honoring her work in journalism and law, winner of the Carr Van Anda Award from the Scripps School of Journalism, http://www.npr.org/2012/04/02/149866209/high-court-supports-strip-searches-for-minor-offenders, 7/20/15, SM)

The Dissent The dissenters, led by Justice Stephen Breyer, argued that when a detainee is brought in on a minor charge that involves neither violence nor drugs, correctional officials should have to cite some reason to justify a strip search, as opposed to a less invasive screening with a metal detector or even an inspection of a detainee in his or her underwear. There are some 700,000 arrests for such minor offenses each year, and most of those arrested are brought before a judge and released pending resolution of their case. But an undetermined number have found themselves behind bars because there is no judge on duty, because of a bureaucratic snafu, or an error — as in this case. Breyer noted that people have been detained and strip-searched for offenses as minor as driving with an inoperable headlight, having outstanding parking tickets, violating a dog leash law, and riding a bike without an audible bell. None of these people could have anticipated being arrested, he said, and none would likely have hidden weapons inside their body cavities. **But Kennedy said that given the number of total arrests each year — 13 million — it would be unworkable for correctional officials to exempt one class of prisoner from strip searches.** Indeed, he added, **even people detained for minor offenses can turn out to be "the most devious and dangerous criminals**." He cited, for instance, the case of Timothy McVeigh, the Oklahoma City bomber, who was detained initially for driving without a license plate.

Random body cavity searches are necessary to find contraband, and there's no way to determine when searches are "reasonable"

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

The difficulties of operating a detention center must not be underestimated by the courts. Turner v. Safley, 482 U. S. 78, 84–85 (1987). Jails (in the stricter sense of the term, excluding prison facilities) admit more than 13 million inmates a year. See, e.g., Dept. of Justice, Bureau of Justice Statistics, T. Minton, Jail Inmates at Midyear 2010—Statistical Tables 2 (2011). The largest facilities process hundreds of people every day; smaller jails may be crowded on weekend nights, after a large police operation, or because of detainees arriving from other jurisdictions. **Maintaining safety and order at these institutions requires the expertise of correctional officials, who must have substantial discretion to devise reasonable solutions to the problems they face**. The Court has confirmed the

importance of deference to correctional officials and explained that a regulation impinging on an inmate's constitutional rights must be upheld "if it is reasonably related to legitimate penological interests." Turner, supra, at 89; see Overton v. Bazzetta, 539 U. S. 126, 131–132 (2003). But see Johnson v. California, 543 U. S. 499, 510–511 (2005) (applying strict scrutiny to racial classifications). The Court's opinion in Bell v. Wolfish, 441 U. S. 520 (1979), is the starting point for understanding how this framework applies to Fourth Amendment challenges. That case addressed a rule requiring pretrial detainees in any correctional facility run by the Federal Bureau of Prisons "to expose their body cavities for visual inspection as a part of a strip search conducted after every contact visit with a person from outside the institution." Id., at 558. Inmates at the federal Metropolitan Correctional Center in New York City argued there was no security justification for these searches. Officers searched guests before they entered the visiting room, and the inmates were under constant surveillance during the visit. Id., at 577–578 (Marshall, J., dissenting). There had been but one instance in which an inmate attempted to sneak contraband back into the facility. See id., at 559 (majority opinion). The Court nonetheless upheld the search policy. It deferred to the judgment of correctional officials that the inspections served not only to discover but also to deter the smuggling of weapons, drugs, and other prohibited items inside. Id., at 558. The Court explained that **there is no mechanical way to determine whether intrusions on an inmate's privacy are reasonable.** Id., at 559. The need for a particular search must be balanced against the resulting invasion of personal rights. Ibid. Policies designed to keep contraband out of jails and prisons have been upheld in cases decided since Bell. In Block v. Rutherford, 468 U. S. 576 (1984), for example, the Court concluded that the Los Angeles County Jail could ban all contact visits because of the threat they posed: "They open the institution to the introduction of drugs, weapons, and other contraband. Visitors can easily conceal guns, knives, drugs, or other contraband in countless ways and pass them to an inmate unnoticed by even the most vigilant observers. And these items can readily be slipped from the clothing of an innocent child, or transferred by other visitors permitted close contact with inmates." Id., at 586. There were "many justifications" for imposing a general ban rather than trying to carve out exceptions for certain detainees. Id., at 587. Among other problems, it would be "a difficult if not impossible task" to identify "inmates who have propensities for violence, escape, or drug smuggling." Ibid. This was made "even more difficult by the brevity of detention and the constantly changing nature of the inmate population." Ibid. The Court has also recognized that deterring the possession of contraband depends in part on the ability to conduct searches without predictable exceptions. In Hudson v. Palmer, 468 U. S. 517 (1984), it addressed the question of whether prison officials could perform random searches of inmate lockers and cells even without reason to suspect a particular individual of concealing a prohibited item. Id., at 522–523. The Court upheld the constitutionality of the practice, recognizing that "'[f]or one to advocate that prison searches must be conducted only pursuant to an enunciated general policy or when suspicion is directed at a particular inmate is to ignore the realities of prison operation.'" Id., at 529 (quoting Marrero v. Commonwealth, 222 Va. 754, 757, 284 S. E. 2d 809, 811 (1981)). Inmates would adapt to any pattern or loopholes they discovered in the search protocol and then undermine the security of the institution. 468 U. S., at 529. These cases establish that correctional officials must be permitted to devise reasonable search policies to detect and deter the possession of contraband in their facilities. See Bell, 441 U. S., at 546 ("[M]aintaining institutional security and preserving internal order and discipline are essential goals that may require limitation or retraction of retained constitutional rights of both convicted prisoners and pretrial detainees"). The task of determining whether a policy is reasonably related to legitimate security inter- ests is "peculiarly within the province and professional expertise of corrections officials." Id., at 548. This Court has repeated the admonition that, "'in the absence of substantial evidence in the record to indicate that the officials have exaggerated their response to these considerations **courts should ordinarily defer to their expert judgment in such matters.**'" Block, supra, at 584–585; Bell, supra, at 548.

Strip searches are critical for safety, disease and injury treatment

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

Correctional officials have a significant interest in conducting a thorough search as a standard part of the intake process. The admission of inmates creates numerous risks for facility staff, for the existing detainee population, and for a new detainee himself or herself. The danger of introducing lice or contagious infections, for example, is well documented. See, e.g., Deger & Quick, The Enduring Menace of MRSA: Incidence, Treatment, and Prevention in a County Jail, 15 J. Correctional Health Care 174, 174– 175, 177–178 (2009); Bick, Infection Control in Jails and Prisons, 45 Healthcare Epidemiology 1047, 1049 (2007). The Federal Bureau of Prisons recommends that staff

screen new detainees for these conditions. See Clinical Practice Guidelines, Management of Methicillin-Resistant Staphylococcus aureus (MRSA) Infections 2 (2011); Clinical Practice Guidelines, Lice and Scabies Protocol 1 (2011). Persons just arrested may have wounds or other injuries requiring immediate medical attention. It may be difficult to identify and treat these problems until detainees remove their clothes for a visual inspection. See Prison and Jail Administration: Practice and Theory 142 (P. Carlson & G. Garrett eds., 2d ed. 2008) (hereinafter Carlson & Garrett).

Strip searches find possible gang threats—reasonable basis to justify inspection for tattoos and other signs of gang affiliation

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

Jails and prisons also face grave threats posed by the increasing number of gang members who go through the intake process. See Brief for Policemen's Benevolent Association, Local 249, et al. as Amici Curiae 14 (hereinafter PBA Brief); New Jersey Comm'n of Investigation, Gangland Behind Bars: How and Why Organized Criminal Street Gangs Thrive in New Jersey's Prisons . . . And What Can Be Done About It 10–11 (2009). "Gang rivalries spawn a climate of tension, violence, and coercion." Carlson & Garrett 462. The groups recruit new members by force, engage in assaults against staff, and give other inmates a reason to arm themselves. Ibid. Fights among feuding gangs can be deadly, and the officers who must maintain order are put in harm's way. PBA Brief 17. These considerations provide a reasonable basis to justify a visual inspection for certain tattoos and other signs of gang affiliation as part of the intake process. The identification and isolation of gang members before they are admitted protects everyone in the facility. Cf. Fraise v. Terhune, 283 F. 3d 506, 509–510 (CA3 2002) (Alito, J.) (describing a statewide policy authorizing the identification and isolation of gang members in prison).

thBody cavity searches key to find weapons, drugs, and alcohol

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

Detecting contraband concealed by new detainees, furthermore, is a most serious responsibility. Weapons, drugs, and alcohol all disrupt the safe operation of a jail. Cf. Hudson, 468 U. S., at 528 (recognizing "the constant fight against the proliferation of knives and guns, illicit drugs, and other contraband**"). Correctional officers have had to confront arrestees concealing knives, scissors, razor blades, glass shards, and other prohibited items on their person, including in their body cavities**. See Bull, 595 F. 3d, at 967, 969; Brief for New Jersey County Jail Wardens Association as Amicus Curiae 17–18 (hereinafter New Jersey Wardens Brief). They have also found crack, heroin, and marijuana. Brief for City and County of San Francisco et al. as Amici Curiae 9–11 (hereinafter San Francisco Brief). The use of drugs can embolden inmates in aggression toward officers or each other; and, even apart from their use, the trade in these substances can lead to violent confrontations. See PBA Brief 11.

Inmates commit over 10,000 assaults every year—even everyday items can be used as weapons or tools

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

There are many other kinds of contraband. The textbook definition of the term covers any unauthorized item. See Prisons: Today and Tomorrow 237 (J. Pollock ed. 1997) ("Contraband is any item that is possessed in violation of prison rules. Contraband obviously includes drugs or weapons, but it can also be money, cigarettes, or even some types of clothing"). Everyday items can undermine security if introduced into a detention facility: "Lighters and matches are fire and arson risks or potential weapons. Cell phones are used to orchestrate violence and criminality both within and without jailhouse walls. Pills and medications enhance suicide risks. Chewing gum can block locking devices; hairpins can open handcuffs; wigs can conceal drugs and weapons." New Jersey Wardens Brief 8–9. Something as simple as an overlooked pen can pose a significant danger**. Inmates commit more than 10,000 assaults on correctional staff every year and many more among themselves**. See Dept. of Justice, Bureau of Justice Statistics, J. Stephan & J. Karberg, Census of State and Federal Correctional Facilities, 2000, p. v (2003).

Even inmates serving time for minor offenses are a threat—gangs can coerce them into bringing contraband into the prison

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

Contraband creates additional problems because scarce items, including currency, have value in a jail's culture and underground economy. Correctional officials inform us "[t]he competition . . . for such goods begets violence, extortion, and disorder." New Jersey Wardens Brief 2. Gangs exacerbate the problem. They "orchestrate thefts, commit assaults, and approach inmates in packs to take the contraband from the weak." Id., at 9–10. This puts the entire facility, including detainees being held for a brief term for a minor offense, at risk. Gangs do coerce inmates who have access to the outside world, such as people serving their time on the weekends, to sneak things into the jail. Id., at 10; see, e.g., Pugmire, Vegas Suspect Has Term to Serve, Los Angeles Times, Sept. 23, 2005, p. B1 ("Weekend-only jail sentences are a common punishment for people convicted of nonviolent drug crimes . . ."). These inmates, who might be thought to pose the least risk, have been caught smuggling prohibited items into jail. See New Jersey Wardens Brief 10. Concealing contraband often takes little time and effort. It might be done as an officer approaches a suspect's car or during a brief commotion in a group holding cell. Something small might be tucked or taped under an armpit, behind an ear, between the buttocks, in the instep of a foot, or inside the mouth or some other body cavity.

Banning blanket strip searches will increase amount of contraband—interactions between inmates

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

Even if people arrested for a minor offense do not themselves wish to introduce contraband into a jail, they may be coerced into doing so by others. See New Jersey Wardens Brief 16; cf. Block, 468 U. S., at 587 ("It is not unreasonable to assume, for instance, that low security risk detainees would be enlisted to help obtain contraband or weapons by

their fellow inmates who are denied contact visits"). This could happen any time detainees are held in the same area, including in a van on the way to the station or in the holding cell of the jail. If, for example, a person arrested and detained for unpaid traffic citations is not subject to the same search as others, this will be well known to other detainees with jail experience. A hardened criminal or gang member can, in just a few minutes, approach the person and coerce him into hiding the fruits of a crime, a weapon, or some other contraband. As an expert in this case explained, "**the interaction and mingling between misdemeanants and felons will only increase the amount of contraband in the facility if the jail can only conduct admission searches on felons**." App. 381a. Exempting people arrested for minor offenses from a standard search protocol thus may put them at greater risk and result in more contraband being brought into the detention facility. This is a substantial reason not to mandate the exception petitioner seeks as a matter of constitutional law.

Body Cavity Searches Effective

People detained for minor offenses have historically tried to smuggle contraband into prisons

Supreme Court 12

(4/2/12, Supreme Court of the United States, "FLORENCE v. BOARD OF CHOSEN FREEHOLDERS OF COUNTY OF BURLINGTON ET AL. CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT," http://i.cdn.turner.com/cnn/2012/images/04/02/10-945.pdf, 7/20/15, SM)

People detained for minor offenses can turn out to be the most devious and dangerous criminals. Cf. Clements v. Logan, 454 U. S. 1304, 1305 (1981) (Rehnquist, J., in chambers) (deputy at a detention center shot by misdemeanant who had not been strip searched). Hours after the Oklahoma City bombing, Timothy McVeigh was stopped by a state trooper who noticed he was driving without a license plate. Johnston, Suspect Won't Answer Any Questions, N. Y. Times, Apr. 25, 1995, p. A1. Police stopped serial killer Joel Rifkin for the same reason. McQuiston, Confession Used to Portray Rifkin as Methodical Killer, N. Y. Times, Apr. 26, 1994, p. B6. One of the terrorists involved in the September 11 attacks was stopped and ticketed for speeding just two days before hijacking Flight 93. The Terrorists: Hijacker Got a Speeding Ticket, N. Y. Times, Jan. 8, 2002, p. A12. Reasonable correctional officials could conclude **these uncertainties mean they must conduct the same thorough search of everyone who will be admitted to their facilities**. Experience shows that people arrested for minor offenses have tried to smuggle prohibited items into jail, sometimes by using their rectal cavities or genitals for the concealment. They may have some of the same incentives as a serious criminal to hide contraband. A detainee might risk carrying cash, cigarettes, or a penknife to survive in jail. Others may make a quick decision to hide unlawful substances to avoid getting in more trouble at the time of their arrest. This record has concrete examples. Officers at the Atlantic County Correctional Facility, for example, discovered that a man arrested for driving under the influence had "2 dime bags of weed, 1 pack of rolling papers, 20 matches, and 5 sleeping pills" taped under his scrotum. Brief for Atlantic County et al. as Amici Curiae 36 (internal quotation marks omitted). A person booked on a misdemeanor charge of disorderly conduct in Washington State managed to hide a lighter, tobacco, tattoo needles, and other prohibited items in his rectal cavity. See United States Brief 25, n. 15. San Francisco officials have discovered contraband hidden in body cavities of people arrested for trespassing, public nuisance, and shoplifting. San Francisco Brief 3. There have been similar incidents at jails throughout the country. See United States Brief 25, n. 15.

Body cavities are effective—73 instances of contraband found in a 5 year period in one county jail

Ha 11

(Daphne, 2011, Fordham Law Review, "Blanket Policies for Strip Searching Pretrial Detainees: An Interdisciplinary Argument for Reasonableness," associate in litigation and complex commercial litigation @ Dechert LLP, a global specialist law firm, http://ir.lawnet.fordham.edu/cgi/viewcontent.cgi?article=4723&context=flr, 7/23/15, SM)

As previously discussed, in Bull, the Ninth Circuit joined the circuit split created by the Eleventh Circuit.265 Jail administrators in Bull said that "based on their experience, 'the greatest opportunity for the introduction of drugs and weapons into the jail occurs at the point when an arrestee is received into the jail.'"266 They also produced evidence that strip searches at the county jail uncovered seventy-three instances of illegal drugs and drug paraphernalia in arrestees' body cavities between April 2000 and April 2005.267 Drugs, drug paraphernalia, and weapons were found in body cavities even in cases involving minor non-violent offenses like public drunkenness and public nuisance.268

Deterrence

The presence of strip searches deter inmates from smuggling contraband in body cavities

Volokh 10

(Eugene, 2/9/10, The Volokh Conspiracy, "Ninth Circuit Upholds Jail's Routine Strip Search / Visual Body Cavity Search Policy," professor of free speech law, copyright law, criminal law @ UCLA School of Law, clerked for Justice Sandra Day O'Connor on the Supreme Court and for Judge Alex Kozinski on the US Court of Appeals for the Ninth Circuit, http://volokh.com/2010/02/09/ninth-circuit-upholds-jails-routine-strip-search-visual-body-cavity-search-policy/, 7/20/15, SM)

Admittedly, this practice instinctively gives us the most pause. However, assuming for present purposes that inmates, both convicted prisoners and pretrial detainees, retain some Fourth Amendment rights upon commitment to a corrections facility, we nonetheless conclude that these searches do not violate that Amendment. The Fourth Amendment prohibits only unreasonable searches, and under the circumstances, we do not believe that these searches are unreasonable. The test of reasonableness under the Fourth Amendment is not capable of precise definition or mechanical application. In each case it requires a balancing of the need for the particular search against the invasion of personal rights that the search entails. Courts must consider the scope of the particular intrusion, the manner in which it is conducted, the justification for initiating it, and the place in which it is conducted. A detention facility is a unique place fraught with serious security dangers. Smuggling of money, drugs, weapons, and other contraband is all too common an occurrence. And inmate attempts to secrete these items into the facility by concealing them in body cavities are documented in this record, and in other cases. **That there has been only one instance where an MCC inmate was discovered attempting to smuggle contraband into the institution on his person may be more a testament to the effectiveness of this search technique as a deterrent than to any lack of interest on the part of the inmates to secrete and import such items when the opportunity arises**. We do not underestimate the degree to which these searches may invade the personal privacy of inmates. Nor do we doubt, as the District Court noted, that on occasion a security guard may conduct the search in an abusive fashion. Such abuse cannot be condoned. The searches must be conducted in a reasonable manner. But we deal here with the question whether visual body-cavity inspections as contemplated by the MCC rules can ever be conducted on less than probable cause. Balancing the significant and legitimate security interests of the institution against the privacy interests of the inmates, we conclude that they can. (I realize that the dissent argues, focusing on the last two sentences of this excerpt, that Bell "set the justification for strip searches at something less than probable cause, but declined to explicitly specify the level of suspicion." But I don't think that's right, given the entire passage, which expressly upheld a blanket policy with no requirement of individualized suspicion and no categorical exemption of certain supposedly safer classes of inmates.)

Courts Bad

Issues of prison management should be dealt with by corrections officials, not the court—Supreme Court case proves

(Donald B., Tony West, Leondra R. Kruger, Nicole A. Saharsky, Barba L. Herwig, and Edward Hemmelfarb, Supreme Court, "Albert W. Florence, Petitioner v. Board of Chosen Freeholders of the County of Burlington, et al, on Writ of Certiorari to the United States Court of Appeals for the Third Circuit: Brief for the United States as Amicus Curiae Supporting Respondents," Verrilli is the Solicitor General Counsel of Record, http://www.americanbar.org/content/dam/aba/publishing/previewbriefs/Other_Brief_Updates/10-945_respondentamcuusa.authcheckdam.pdf, 7/22/15, SM)

The Court in Wolfish emphasized that "wide-ranging deference" must be afforded to corrections officials. 441 U.S. at 547. The preservation of institutional security, the Court explained, is "[c]entral to all other corrections goals," and judgments about how to achieve that goal "are peculiarly within the province and professional expertise of corrections officials." Id. at 546, 548 (citation omitted). 4. Since Wolfish, this Court has repeatedly affirmed that **courts should play a "very limited role** * * *** in the administration of detention facilities**." Block v. Rutherford, 468 U.S. 576, 584 (1984). "[P]rison officials," and not the courts, "are to remain the primary arbiters of the problems that arise in prison management." Shaw v. Murphy, 532 U.S. 223, 230 (2001). Courts should "afford[] considerable deference to the determinations of prison administrators" as they "deal with the difficult and delicate problems of prison management." Thornburgh v. Abbott, 490 U.S. 401, 407-408 (1989).

Plan Can't Solve All Transphobia

There are a myriad of transphobic instances in prisons that the aff cannot solve—rape by other inmates, hormone denial, verbal harassment, sexual coercion

Sontag 15

(Deborah, NYT, "Transgender Woman Cites Attacks and Abuse in Men's Prison," investigative reporter for NYT, http://www.nytimes.com/2015/04/06/us/ashley-diamond-transgender-inmate-cites-attacks-and-abuse-in-mens-prison.html, 7/25/15, SM)

ROME, Ga. — Before she fell on hard times and got into trouble with the law, Ashley Diamond had a wardrobe of wigs named after her favorite divas. "Darling, hand me Aretha" or Mariah or Madonna, she would say to her younger sister when they glammed up to go out on the town. Ms. Diamond, 36, had lived openly and outspokenly as a transgender woman since adolescence, much of that time defying the norms in this conservative Southern city. But on the day she arrived at a Georgia prison intake center in 2012, the deliberate defeminizing of Ms. Diamond began. Ordered to strip alongside male inmates, she froze but ultimately removed her long hair and the Hannah Montana pajamas in which she had been taken into custody, she said. She hugged her rounded breasts protectively. Looking back, she said, it seemed an apt rite of initiation into what became three years of degrading and abusive treatment, starting with the state's denial of the hormones she says she had taken for 17 years. But on Friday, Ms. Diamond and, through her, all transgender inmates won the unexpected support of the Justice Department, which intervened on her behalf in the federal lawsuit she filed against Georgia corrections officials in February. "During intake, I kept saying: 'Hello? I'm trans? I'm a woman?' " Ms. Diamond recounted in a phone conversation from prison a few weeks ago. "But to them I was gay. I was what they called a 'sissy.' So finally I was like: 'O.K., I'm a sissy. Do you have a place where sissies can go and be O.K.?' " They did not provide one, she said. A first-time inmate at 33 whose major offense was burglary, Ms. Diamond was sent to a series of high-security lockups for violent male prisoners. She has been raped at least seven times by inmates, her lawsuit asserts, with a detailed accounting of each. She has been mocked by prison officials as a "he-she thing" and thrown into solitary confinement for "pretending to be a woman." She has undergone drastic physical changes without hormones. And, in desperation, she has tried to castrate and to kill herself several times. "My biggest concern is that she survives to get out of prison,

which I worry about every day," said Stephen Sloan, a counselor who treated her at Baldwin State Prison and whose pleas that Ms. Diamond be restarted on hormones were ignored. In her lawsuit, Ms. Diamond asks the court to direct prison officials to provide her hormone therapy, to allow her to express her female identity through "grooming, pronoun use and dress," and to provide her safer housing. She also seeks broader changes in policy and practice. And the Justice Department, in its support, declared hormone therapy to be necessary medical care, saying Georgia, and other states, must treat "gender dysphoria" like any other health condition and provide "individual assessment and care." Georgia's Department of Corrections has declined to comment about the case. As a matter of policy, it also denied The New York Times's request to interview Ms. Diamond in person at Georgia State Prison, where she was moved a few weeks ago in apparent retaliation for her lawsuit, she claims. Georgia State had more sexual assaults between 2009 and 2014 than all but one other state prison. Since her arrival there, Ms. Diamond has survived an attempted rape in a stairwell, dealt with inmates exposing themselves and masturbating in front of her, and faced relentless sexual coercion, she said last week in an emergency motion seeking an immediate transfer to a safer institution. Though Ms. Diamond believes she is championing a cause larger than herself, she has expressed increasing despair. She sobbed continually during a recent visit from her lawyer, and in the phone interview, she said: "Every day I struggle with trying to stay alive and not wanting to die. Sometimes I think being a martyr would be better than having to live with all this." Last year, Ms. Diamond smuggled video snippets out of prison, and a friend posted them on YouTube. In them, her head wrapped in a white turban, she struck a lighter and more defiant tone, hoping that recent television portrayals of transgender characters might generate concern for her plight. "While it seems like the whole world is obsessed with 'Orange Is the New Black,' I'm living it," she said.

Transgender individuals face sexual and verbal harassment in prisons—the aff cannot solve for all instances of transphobia

John and Stipe 15

(Elton, Michael, 4/14/15, The Guardian, "The silence on abuse of transgender inmates in US prisons is deafening," http://www.theguardian.com/commentisfree/2015/apr/14/silence-abuse-transgender-inmates--us-prisons-is-deafening, 7/24/15, SM)

Ashley Diamond, a transgender inmate who was denied medically necessary hormones by the Georgia correctional system, was raped seven times, called a "he-she thing", and thrown into solitary confinement for "pretending" to be a woman. Last week, the United States Justice Department weighed in on her lawsuit and found that Georgia's "freeze-frame" policy – which denied trans inmates the chance to begin or expand hormone treatment in prison – constituted "cruel and unusual punishment" and violated the United States Constitution. This horrific treatment illustrates the broader policy changes we desperately need to ensure that no one in a correction setting - or any setting, for that matter - is denied their human or civil rights because of their gender identity or sexual orientation. Today, transgender women in male prisons are 13 times more likely than the general prison population to be sexually assaulted while incarcerated. Nearly two-thirds of trans inmates report sexual assault. And more often than not, assaults go unreported in part because the perpetrators are prison guards, wardens and staff. This is a disgrace. Sadly, it's not the first time we've heard of prisoners being mistreated because of their sexual orientation. Until recently, HIV-positive prisoners in South Carolina who were convicted for minor offenses were segregated and held alongside inmates on death row. The Elton John AIDS Foundation was proud to support the ACLU's legal action that ended this despicable policy. The silence from Georgia prison officials on transgender abuse is deafening. A new policy that initiates individualized assessments of gender dysphoria will improve medical care for trans people, but it does nothing for the verbal and physical abuse that women like Ashley Diamond regularly face in correctional facilities. The Justice Department was right to take a stand in favor of the rights of transgender prisoners to medical hormone treatment. Now, it's time for the DOJ to take a stand against the brutality and sexual assault that transgender prisoners face in our correctional facilities. There is a troubling lack of awareness in correctional facilities about the nuances of gender identity and the well-being of trans women inmates in male prisons. Too often, prisons chip away at the very identity of these women by using male pronouns, confiscating their bras and – as in Ashley's case – denying medically necessary hormone therapy (she'd been undergoing hers for nearly 20 years). We must understand the effects these practices have and put a stop to them.

Trans individuals in prison are still being housed in the wrong facilities—that makes rape more likely

Hess 15

(Amanda, 1/6/15, Slate, "Protecting Trans Prisoners," http://www.slate.com/articles/double_x/doublex/2015/01/leslieann_manning_lawsuit_a_transgender_woman_sues_the_sullivan_correctional.1.html, 7/24/15, SM)

In 1991, a young trans woman named Dee Farmer sued Indiana correctional officers after she was placed in a men's prison, and raped there. It's now been more than 20 years since the Supreme Court heard Farmer's case and unanimously decided that the officers' "deliberate indifference" to her safety violated the Eighth Amendment, which prohibits cruel and unusual punishment. And more than a decade has passed since Congress unanimously passed the Prison Rape Elimination Act, which outlines special steps that prisons must take to prevent sexual assault against their most vulnerable residents. And yet, in prisons from Oregon to Georgia, Texas to Pennsylvania, trans women like Manning are still reporting brutal rapes at the hands of other inmates and prison guards. A 2009 study of sexual assault in California state prisons found that **trans inmates are 13 times more likely to be sexually assaulted than other prisoners**. As many as 50 percent of trans people in California facilities report being raped while incarcerated. And while trans people make up a small percentage of the U.S. population—the Williams Institute at the UCLA School of Law estimates that there are 700,000 trans people in the country—the dynamics of discrimination place them at a high risk of ending up incarcerated. A 2011 survey undertaken by the National Center for Transgender Equality found that 21 percent of trans women in its sample reported being locked up in their lifetimes. PREA was meant to eliminate prison rape by increasing officer and video supervision of facilities, limiting intimate cross-gender searches, training officers around sexual assault issues, and forcing facilities to take special care of vulnerable prisoners like Manning. But at this point, it remains a largely symbolic act. Though it was passed in 2003, it wasn't implemented until 2012, and facilities weren't subjected to audits until August of 2013. States that fail to comply with PREA risk losing 5 percent of federal grants from the Department of Justice, but the penalty only applies to state-run facilities; though technically covered by PREA, municipal and county jails don't risk losing any funds if they don't shape up. Nevertheless, Texas Sen. John Cornyn is pushing for legislation that would gut PREA's authority to leverage financial penalties on the states even further, an initiative that's supported by both prison industry lobbyists and, surprisingly, by anti-rape advocacy group RAINN, which believes the penalty can end up denying services to inmates. And several states, including Idaho, Texas, and Arizona, have already publicly refused to comply with PREA at all, happily surrendering their chunk of federal funding in exchange for the freedom to craft their own policies—or to simply ignore the problem. For those not willing to part with their funding, some federal guidelines for preventing prison rape are vague by design. PREA tells prisons or jails that when they decide where to house trans inmates, "an agency may not simply assign the inmate to a facility based on genital status," but must make the decision on "a case-by-case basis" to "ensure the inmate's health and safety." The determination must also take into account "the inmate's own views regarding his or her own safety." The case-by-case rule ostensibly acknowledges that trans prisoners don't all have the same safety needs, and that facilities don't all operate the same way. But Chase Strangio, a staff attorney with the ACLU, says that the lack of specifics on these "individualized" assessments can also allow facilities to justify their decisions however they choose. And right now, Strangio says, "it's hard to imagine that there's any meaningful assessment going on." Though some local jails, like Washington, D.C.'s, have begun housing trans women with other women, the vast majority of trans women are still being housed in men's facilities—a decision made based on their sex at birth—and not in women's prisons, in accordance with their gender identity. Susan Hazeldean, director of Cornell University Law School's LGBT Clinic and one of Manning's lawyers, says that in New York state prisons, housing assignments for trans prisoners typically go like so: "It says 'male' on your birth certificate, so we're just going to throw you in this men's prison, and good luck to you."

Strip search ≠ body cavity searches

Strip searches are distinct from body cavity searches—they can't solve their advantages

Cornell Law 08

(3/25/08, Cornell University Law School, "New York Court of Appeals: The People and c., Respondent, v. Azim Hall, Appellant," https://www.law.cornell.edu/nyctap/I08_0048.htm, 7/21/15, SM)

There are three **distinct** and increasingly intrusive types of bodily examinations undertaken by law enforcement after certain arrests and **it is critical to differentiate between these categories of searches**. A "strip search" requires the arrestee to disrobe so that a police officer can **visually** inspect the person's body. The second type of examination — a "visual body cavity inspection" — occurs when a police officer looks at the arrestee's anal or genital cavities, usually by asking the arrestee to bend over; however, the officer does not touch the arrestee's body cavity. In contrast, a "manual body cavity search" includes some degree of touching or probing of a body cavity that causes a physical intrusion beyond the body's surface.2

Body cavity searches involve touching and probing, whereas a strip search is only visual inspection

Washington State Legislature 01

(2/1/01, Washington State Legislature, "Searches and Seizures," http://apps.leg.wa.gov/rcw/default.aspx?cite=10.79&full=true, 7/21/15, SM)

10.79.070 Strip, body cavity searches — Definitions. Unless the context clearly requires otherwise, the definitions in this section apply throughout RCW 10.79.060 through 10.79.110. (1) "Strip search" means having a person remove or arrange some or all of his or her clothing so as to permit an inspection of the genitals, buttocks, anus, or undergarments of the person or breasts of a female person. (2) "Body cavity search" means the touching or probing of a person's body cavity, whether or not there is actual penetration of the body cavity. (3) "Body cavity" means the stomach or rectum of a person and the vagina of a female person. (4) "Law enforcement agency" and "law enforcement officer" include local departments of corrections created pursuant to *RCW 70.48.090(3) and employees thereof. [1983 1st ex.s. c 42 § 2.] Notes: *Reviser's note: RCW 70.48.090 was amended by 2007 c 13 § 1, changing subsection (3) to subsection (4). Effective date -- Severability -- 1983 1st ex.s. c 42: See notes following RCW 10.79.060. 10.79.080 Strip, body cavity searches — Warrant, authorization, report. (1) No person may be subjected to a body cavity search by or at the direction of a law enforcement agency unless a search warrant is issued pursuant to superior court criminal rules. (2) No law enforcement officer may seek a warrant for a body cavity search without first obtaining specific authorization for the body cavity search from the ranking shift supervisor of the law enforcement authority. Authorization for the body cavity search may be obtained electronically: PROVIDED, That such electronic authorization shall be reduced to writing by the law enforcement officer seeking the authorization and signed by the ranking supervisor as soon as possible thereafter. (3) Before any body cavity search is authorized or conducted, a thorough pat-down search, a thorough electronic metal-detector search, and a thorough clothing search, where appropriate, must be used to search for and seize any evidence of a crime, contraband, fruits of crime, things otherwise criminally possessed, weapons, or other things by means of which a crime has been committed or reasonably appears about to be committed. No body cavity search shall be authorized or conducted unless these other methods do not satisfy the safety, security, or evidentiary concerns of the law enforcement agency. (4) A law enforcement officer requesting a body cavity search shall prepare and sign a report regarding the body cavity search. The report shall include: (a) A copy of the written authorization required under subsection (2) of this section; (b) A copy of the warrant and any supporting documents required under subsection (1) of this section; (c) The name and sex of all persons conducting or observing the search; (d) The time, date, place, and description of the search; and (e) A statement of the results of the search and a list of any items removed from the person as a result of the search. The report shall be retained as part of the law enforcement agency's records. [1983 1st ex.s. c 42 § 3.] Notes: Effective date -- Severability -- 1983 1st ex.s. c 42: See notes following RCW 10.79.060. 10.79.090 Strip, body cavity searches — Medical care not precluded. Nothing in RCW 10.79.080 or this section may be construed as precluding or preventing the administration of medical care to persons requiring immediate medical care or requesting medical care. [1983 1st ex.s. c 42 § 4.] Notes: Effective date -- Severability -- 1983 1st ex.s. c 42: See notes following RCW 10.79.060. 10.79.100 Strip, body cavity searches — Standards for conducting. (1) **Persons conducting a strip search shall not touch the person being searched except as reasonably necessary to effectuate the strip search of the person.**

Strip searches are visual, body-cavity searches are physical

APT 12

Strip searches refer to the removal of some or all of a person's clothing in order to permit a **visual inspection** of all parts of the body, **without physical contact**. Procedures may vary but prisoners are usually required to take off their clothes and to provide an unobstructed view of possible hiding places. They may be asked to open their mouth, and to bend and cough. Men may be asked to lift their penis and testicles, while women may have to spread their legs for inspection of the genital area. Body-cavity searches (or invasive or intimate searches) are a **physical examination of body orifices** (such as vagina or anus). This type of search includes rectal and pelvic examination, and is physically and psychologically the most intrusive method.

Body cavities and strip searches are distinct—only strip searches involve manipulation and undressing

Providence Police Department 4/5/15 ("Strip Searches and Body Cavity Searches," Headquarters, Chief of Police Colonel Hugh T/. Clements, Jr., signed by Commissioner Departments of Public Safety, //rck)

DISCUSSION For the purpose of this General Order, the following definitions shall apply:

Strip Search - Any search of an individual which requires the manipulation and/or removal of some or all of the individual's clothing in order to permit a visual inspection of undergarments and/or any and all skin surfaces, including but not limited to the genital area, buttocks, anus, and female breasts. Body Cavity Search - Any search of the body cavities of an individual, including, in some instances, internal organs such as the stomach cavity.

Current policies aimed at protecting prisoners from sexual abuse aren't enforced— means that aff won't solve either

Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW,* http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 44-48//SRawal

In the United States, **sexual abuse by guards in women's prisons is so notorious and widespread that it has been described as "an institutionalized component of punishment behind prison walls.**"1 **Women in prisons2 across the United States are subjected to diverse and systematic forms of sexual abuse: vaginal and anal rape; forced oral sex and forced digital penetration; quid pro quo coercion of sex for drugs, favors, or protection; abusive pat searches and strip searches; observation by male guards while naked or toileting; groping; verbal harassment; and sexual threats**.3 Guards and prisoners openly joke about prisoner "girlfriends" and guard "boyfriends." Women prisoners become pregnant when the only men they have had contact with are guards and prison employees; often they are sent to solitary conªnement—known as "the hole"—as punishment for having sexual contact with guards or for getting pregnant.**4 Such open and obvious abuses would seem relatively easy for a prison administration to detect and prevent if it chose to do so**. **Prisons owe an afªrmative legal duty to protect their inmates against abuse.5 Congress and forty-four states have criminalized all sexual contact between guards and prisoners, regardless of consen**t.6 **Nonetheless, within women's prisons guards routinely commit serious sexual offenses against the women in their custody**. **Government administrators know that such abuse is occurring**7 and acknowledge their duty to prevent it.8 However, **they have generally neglected to do much about it**, as **most prisons have failed to adopt institutional and employment policies that effectively prevent or reduce custodial sexual abuse**.9 In most workplaces, an employee who had sex on the job would be ªred. In prison, **a report of custodial sexual abuse is more likely to result in punishment or retaliation against the prisoner than in disciplinary consequences for the guard.**10 **One might expect the law to furnish incentives for prisons to control such unlawful acts by their employees,** as it does for other civil defendants**. It does not**.11 Instead, as I demonstrate in this Article, a network of prison law rules—the Prison Litigation Reform Act of 1995 ("PLRA"),12 governmental immunities, and constitutional deference— work together to confer near-complete immunity against prisoners' claims. In the United States, both male and female prisoners are stereotyped as black;13 more than two thirds of women in U.S. prisons are African American or Latina.14 In this Article, I consider how the gendered racialization of women prisoners informs legal and institutional indifference to their treatment in prison. Like black women under slavery,15 **women in contemporary prisons are**

subjected to institutionalized sexual abuse, while the law refuses to protect them or provide redress.

Off-Case

T–Its

A. Interpretation: Its means belonging to

Oxford English Dictionary, 2013
http://www.oed.com/view/Entry/100354?redirectedFrom=its#eid

its, adj. and pron. Pronunciation: /ɪts/ A. adj. As genitive of the pronoun, now possessive adjective. Of or belonging to it, or that thing (Latin ejus); also refl., Of or belonging to itself, its own (Latin suus).The reflexive is often more fully its own, for which in earlier times the own, it own, were used: see own adj. and pron. B. pron. As possessive pronoun. [Compare his pron.2] The absolute form of prec., used when no n. follows: Its one, its ones. rare.

USFG is the national government

Oran's 2K Oran's Dictionary of the Law 2K Daniel Oran and Mark Toski, eds ebook p. 193

Federal

1.A federal union is two or more states uniting into one strong central government with many powers left to the states.

2. The U.S. federal government is the national, as opposed to state, government. 3. For the various federal agencies that are not listed here or by name, look under their initials at the start of the letter.

B. Violation: the plan curtails surveillance in LOCAL jails, not federal prisons—jails are run by the county, prisons are operated by the federal government

Criminal Law Lawyer Source 08

(12/8/08, Criminal Law Lawyer Source, "Difference between Prison and Jail," http://www.criminal-law-lawyer-source.com/terms/jail-prison-difference.html, 7/21/15, SM)

Jails are locally operated places of incarceration — usually **the county runs the jail**. There are about 3,600 jails in the U.S. **Prisons are operated by** the state government, or by **the federal government** (the federal Bureau of Prisons). Since jails are within the county where the individual was arrested, the jail isn't very far away. A state or federal prison could be very far away from a convicted person's home and family. There are only about 100 federal prisons, detention centers, and correctional institutions in the U.S.

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Including surveillance of jails explodes the topic because it allows affs that curtail local surveillance instead of federal surveillance.

C. T IS A VOTER because the opportunity to prepare promotes better debating

Additional cards

Jails are run by local jurisdictions, prisons are run by the federal government

Economist 14

(3/13/14, Economist, "America's prison population: Who, what, where, and why," http://www.economist.com/blogs/democracyinamerica/2014/03/americas-prison-population, 7/24/15, SM)

THE United States not only incarcerates a lot of people, it also has a bewildering array of places to put them. There are, of course, jails and prisons: jails are usually run by local jurisdictions (cities or counties) and house either convicted criminals serving short sentences or people awaiting trial. Prisons, or penitentiaries, are run by states or the federal government, and house convicts serving longer sentences. But there are also juvenile-detention facilities, military prisons, immigration-detention and civil-commitment centres (used for court-ordered treatment of the mentally ill; they can be inpatient or outpatient) as well as jails and prisons in Indian and overseas territories, most of which are administered by different government entities. This keeps data on the overall size of America's incarcerated population, as well as information about their crimes, quite fragmented.

T-Substantial

A. Interpretation: Substantial is 2%

Word and Phrases 1960

> 'Substantial" means "of real worth and importance; of considerable value; valuable." Bequest to charitable institution, making 1/48 of expenditures in state, held exempt from taxation; such expenditures constituting "substantial" part of its activities. Tax Commission of Ohio v. American Humane Education Soc., 181 N.E. 557, 42 Ohio App.

B. Violation—there are 102 federal prisons out of 7,442 correctional facilities—that's 1.3%

Wagner and Sakala 14

(Peter, Leah, Prison Policy Initiative, "Mass Incarceration: The Whole Pie," http://www.prisonpolicy.org/reports/pie.html, 8/1/15, SM)

On the other hand, piecing together the available information offers some clarity. This briefing presents the first graphic we're aware of that aggregates the disparate systems of confinement in this country, which hold more than 2.4 million people in 1,719 state prisons, 102 federal prisons, 2,259 juvenile correctional facilities, 3,283 local jails, and 79 Indian Country jails as well as in military prisons, immigration detention facilities, civil commitment centers, and prisons in the U.S. territories.

The affirmative should have to defend changes that affect a substantial number of facilities, not just a hundred federal prisons.

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Including affs that curtail surveillance ONLY applying to a hundred prisons allows for small, squirrely affs—that kills negative ground.

At best they're effects T and that's a voter:

makes them unpredictable—the aff could take an infinite number of steps to reach the topical action

justifies vague plan texts—that kills negative ground and explodes the research burden

explodes limits—the negative would have to prepare for a large number of aff cases that would only be topical through solvency

C. T IS A VOTER because the opportunity to prepare promotes better debating

Queer Pessimism K

1NC

The Prison industrial Complex operates far beyond the walls of the prison to capture queerness. And it isn't broken its working well – endless cycles of reform make a façade of freedom while simultaneously reproducing the cycle of anti-queer violence that happens within it.

Stanley 11 – (Eric A., Ph.D. in History of Consciousness, UC Santa Cruz, UC President's Postdoctoral Fellow at UCSD edited by Eric A. Stanley and Nat Smith, *Captive Genders: Trans Embodiment and the Prison Industrial Complex*)

Trans/gender-non-conforming and queer people, along with many others, are born into webs of surveillance. The gendering scan of other children at an early age ("Are you a boy or a girl?") places many in the panopticon long before they enter a prison. For those who do trespass the gender binary or heteronormativity, physical violence, isolation, detention, or parental disappointment become some of the first punishments. As has been well documented, many trans and queer youth are routinely harassed at school and kicked out of home at young ages, while others leave in hopes of escaping the mental and physical violence that they experience at schools and in their houses. Many trans/queer youth learn how to survive in a hostile world. Often the informal economy becomes the only option for them to make money. Selling drugs, sex work, shoplifting, and scamming are among the few avenues that might ensure they have something to eat and a place to sleep at night. Routinely turned away from shelters because of their gender presentation, abused in residential living situations or foster care, and even harassed in "gay neighborhoods" (as they are assumed to drive down property values or scare off business), they are reminded that they are alone. Habitually picked up for truancy, loitering, or soliciting, many trans/queer people spend their youth shuttling between the anonymity of the streets and the hyper-surveillance of the juvenile justice system. With case managers too overloaded to care, or too

transphobic to want to care, they slip through the holes left by others. Picked up—locked up—placed in a home—escape—survive—picked up again. The cycle builds a cage, and the hope for anything else disappears with the crushing reality that their identities form the parameters of possibility.10 With few options and aging-out of what little resources there are for "youth," many trans/queer adults are in no better a situation. Employers routinely don't hire "queeny" gay men, trans women who "cannot pass," butches who seem "too hard," or anyone else who is read to be "bad for business." Along with the barriers to employment, most jobs that are open to folks who have been homeless or incarcerated are minimum-wage and thus provide little more than continuing poverty and fleeting stability. Back to where they began—on the streets, hustling to make it, now older—they are often given even longer sentences. While this cycle of poverty and incarceration speaks to more current experiences, the discursive drives building their motors are nothing new. Inheriting a long history of being made suspect, trans/queer people, via the medicalization of trans identities and homosexuality, have been and continue to be institutionalized, forcibly medicated, sterilized, operated on, shocked, and made into objects of study and experimentation. Similarly, the historical illegality of gender trespassing and of queerness have taught many trans/queer folks that their lives will be intimately bound with the legal system. More recently, the HIV/AIDS pandemic has turned the surveillance technologies inward. One's blood and RNA replication became another site of susceptibility that continues to imprison people through charges of bio-terrorism, under AIDS-phobic laws. Living through these forms of domination are also moments of devastating resistance where people working together are building joy, tearing down the walls of normative culture, and opening space for a more beautiful, more lively, safer place for all. Captive Genders remembers these radical histories and movements as evidence that our legacies are fiercely imaginative and that our collective abilities can, and have, offered freedom even in the most destitute of times.11 In the face of the overwhelming violence of the PIC, abolition—and specifically a trans/queer abolition—is one example of this vital defiance. An abolitionist politic does not believe that the prison system is "broken" and in need of reform; indeed, it is, according to its own logic, working quite well. Abolition necessarily moves us away from attempting to "fix" the PIC and helps us imagine an entirely different world—one that is not built upon the historical and contemporary legacies of the racial and gendered brutality that maintain the power of the PIC. What this means is that abolition is not a response to the belief that the PIC is so horrible that reform would not be enough. Although we do believe that the PIC is horrible and that reform is not enough, abolition radically restages our conversations and our ways of living and understanding as to undo our reliance on the PIC and its cultural logics. For us, abolition is not simply a reaction to the PIC but a political commitment that makes the PIC impossible. To this end, the time of abolition is both yet to come and already here. In other words, while we hold on to abolition as a politics for doing anti-PIC work, we also acknowledge there are countless ways that abolition has been and continues to be here now. As a project dedicated to radical deconstruction, abolition must also include at its center a reworking of gender and sexuality that displaces both heterosexuality and gender normativity as measures of worth.12

Violence against queerness results in the annihilation of identity—this is a form of soul murder

Yep, Lovaas, and Elia 03 Professors, San Francisco University (Gust, Karen, and John, Journal of Homosexual Studies, Vol. 45, No. 2/3/4, pp. 18,)

These are the internal injuries that individuals inflict upon themselves. Very early in life children learn from interpersonal contacts and mediated messages that deviations from the heteronormative standard, such as homosexuality, are anxiety-ridden, guilt-producing, fear-inducing, shame-invoking, hate-deserving, psychologically

blemishing, and physically threatening. Internalized homophobia, in the form of self-hatred and self-destructive thoughts and behavioral patterns, becomes firmly implanted in the lives and psyches of individuals in heteronormative society. Exemplifying the feelings and experiences of many people who do not fit in the heteronormative mandate, Kevin Jennings (1994) tells us his personal story: I was born in 1963. . . . [I] realized in grade school that I was gay. I felt absolutely alone. I had no one to talk to, didn't know any openly gay people, and saw few representations of gays in the media of the 1970s. I imagined gay people were a tiny, tiny minority, who had been and would always be despised for their "perversion." Not once in high school did I ever learn a single thing about homosexuality or gay people. I couldn't imagine a happy life as a gay man. So I withdrew from my peers and used alcohol and drugs to try to dull the pain of my isolation. Eventually, at age seventeen I tried to kill myself, like one out of every three gay teens. I saw nothing in my past, my present, or (it seemed) my future suggesting that things would ever get any better. (pp. 13-14) Heteronormativity is so powerful that its regulation and enforcement are carried out by the individuals themselves through socially endorsed and culturally accepted forms of soul murder. Soul murder is a term that I borrow from the child abuse and neglect literature to highlight the torment of heteronormativity (Yep, 2002). Shengold (1999) defines soul murder as the "apparently willful abuse and neglect of children by adults that are of sufficient intensity and frequency to be traumatic . . . [so that] the children's subsequent emotional development has been profoundly and predominantly negatively affected" (p. 1). Further explaining this concept, Shengold (1989) writes, "soul murder is neither a diagnosis nor a condition. It is a dramatic term for circumstances that eventuate in crime–the deliberate attempt to eradicate or compromise the separate identity of another person" (p. 2, my emphasis). Isn't the incessant policing and enforcement, either deliberately or unconsciously, by self and others, of the heteronormative mandate a widespread form of soul murder?

The alternative is to burn this world to the ground—we must rage against systems of normativity

Mary Nardini Gang 09 (Mary Nardini Gang [The Mary Nardini Gang are criminal queers from Milwaukee, Wisconsin.]. "Toward the Queerest Insurrection." Queer Jihad, 2009. http://zinelibrary.info/files/QueerestImposed.pdf)//ALepow

Some will read "queer" as synonymous with "gay and lesbian" or "LGBT". This reading falls short. While those who would fit within the con- structions of "L", "G", "B" or "T" could fall with- in the discursive limits of queer, queer is not a stable area to inhabit. Queer is not merely another identity that can be tacked onto a list of neat social categories, nor the quantitative sum of our identities. Rather, it is the qualitative position of opposition to presentations of stability - an identity that problematizes the manageable limits of identity. Queer is a territory of tension, defined against the dominant narrative of white-hetero-monogamous-patriarchy, but also by an affinity with all who are marginalized, otherized and oppressed. Queer is the abnormal, the strange, the dangerous. Queer involves our sexuality and our gender, but so much more. It is our desire and fantasies and more still. Queer is the cohesion of everything in conflict with the heterosexual capitalist world. Queer is a total rejection of the regime of the Normal. As queers we understand Normalcy. Normal, is the tyranny of our condition; reproduced in all of our relationships. Normalcy is violently reiterated in every minute of every day. We understand this Normalcy as the Totality. The Totality being the interconnection and overlap- ping of all oppression and misery. The Totality is the state. It is capitalism. It is civilization and empire. The totality is fence-post crucifixion. It is rape and murder at the hands of police. It is "Str8 Acting" and "No Fatties or Femmes". It is Queer Eye for the Straight Guy. It is the brutal lessons taught to those who can't achieve Normal. It is every way we've limited ourselves or learned to hate our bodies. We understand Normalcy all too well. When we speak of social war, we do so because purist class analysis is not

enough for us. What does a marxist economic worldview mean to a survivor of bashing? To a sex work- er? To a homeless, teenage runaway? How can class analysis, alone as paradigm for a revolution, promise liberation to those of us journeying beyond our assigned genders and sexualities? The Proletariat as revolutionary subject marginalizes all whose lives don't fit in the model of heterosexual-worker. We must create space wherein it is possible for desire to flourish. This space, of course, requires conflict with this social order. To de- sire, in a world structured to confine desire, is a tension we live daily. We must understand this tension so that we can become powerful through it - we must understand it so that it can tear our confinement apart. This terrain, born in rupture, must challenge oppression in its entirety. This of course, means total negation of this world. We must become bodies in revolt. We need to delve into and indulge in power. We can learn the strength of our bodies in struggle for space for our desires. In desire we'll find the power to destroy not only what destroys us, but also those who aspire to turn us into a gay mimicry of that which destroys us. We must be in conflict with regimes of the normal. This means to be at war with everything. If we desire a world without restraint, we must tear this one to the ground. We must live be- yond measure and love and desire in ways most devastating. We must come to understand the feeling of social war. We can learn to be a threat, we can become the queerest of insurrections.

Links

Our discursive record of violence done against prisoners produces an epistemology that haunts the neoliberal-carceral state's legalistic discourse of "freedom" and "justice" even beyond a court decision – any legalistic attempt to bracket our discussion is the same political move that allows the law to possess and legitimize the violence of the carceral state.

Dillon 13 (Stephen, "Fugitive Life: Race, Gender, and the Rise of the Neoliberal-Carceral State," May 2013, Stephen Dillon, assistant professor of Queer Studies, holds a B.A. from the University of Iowa and a Ph.D. in American Studies with a minor in Critical Feminist and Sexuality Studies from the University of Minnesota.//RJ)

Many accounts of sexual violence committed against women in prison concern exceptional cases where a guard violated the law or other inmates perpetrate the violation. In this the case, **sexual violence was performed by the state in the name of the safety of the state**. As the captain put it, the state simply has the right to sexually assault those in their custody. Whether the cavity search is authorized by the consent of the prisoner or not, **consent is not available to the captive who is always already subject to the systems of violence and force available to the prison.** As Angela Davis observes, **if strip searches and cavity searches were performed by men** in plain clothes **on the street,** there would be no question that an act of sexual violence was taking place.515 Yet, **the body of the prisoner is ontologically a threat to the state and the public, and thus violence performed on the captive body preempts the violence the prisoner is perpetually waiting to unleash**. Simply, a rape is not a rape—it is safety and security. This particular act of state violence did not occur because prisoners are "juridical non-people" as Dylan Rodríguez would have it.516 Instead, sexual violence was authorized and performed by the

law and through the law. The women were even given the non-choice of signing a legal document authorizing the terror that was coming regardless of their forced consent. Torres and Rosenberg were viewed as legal subjects who could authorize their own violation. For example, when Amnesty International wrote the FBP about the assault, the Associate Director responded: Regarding the particular search conducted of Ms. Torres and Susan Rosenberg prior to their transfer to Lexington, our careful review indicates that the search was not punitive nor outside of agency policy. This very isolated occurrence involved a search that was performed in a professional manner by a qualified physician's assistant.517 The sexual assault was the law, policy, and procedure of the prison. It was professional and part of the larger system of the prison's humane care of the prisoner. Like the unimaginable violence at Guantánamo, the women at Lexington were not beyond the safety of the law—they were **possessed by it.** Rosenberg countered state violence and terror: "I found a new way to survive by reading and writing and thinking with purpose."518 Her lawyer told her to write down the forms of violation, pain, and horror that were too numerous to catalogue during their visits, were so unimaginable they could not be conveyed by speech, or were simply unspeakable. Rosenberg's lawyer framed this process as building an archive that would contradict the state's account of Lexington and thus would produce a different conception of the truth. Rosenberg writes: "Write it down, for the record. I half believed that keeping a record was a futile effort, and she half believed it would be of use in fighting for justice, but that sentence became a signal between us, a way to reference acts of violence too difficult to discuss."519 **The "record" in this formulation was a legal account that could potentially contest the state in court, but it was also an alternative record of events that could live on in places and times beyond the state's determination of what is real and true.** In this way, **writing became a way of producing an epistemology that haunts the neoliberal-carceral state's discourses of freedom, equality, and justice.** Writing became a way to document the violence of the law—violence the law itself could not register.

Prison reforms continue the violent policing of gender and sexuality by the state while neglecting to bring the failings of the system to the forefront of their work. The law does not treat everyone equally and it never will absent the destruction of the state.

Ware 11 (Ware, Wesley [Wesley Ware is the founder of BreakOUT!, a project of the Juvenile Justice Project of Louisiana (JJPL) that fights for justice for lesbian, gay, bisexual, transgender, and queer/questioning youth in the juvenile justice system and the author of the recently released report, Locked Up & Out: Lesbian, Gay, Bisexual, and Transgender Youth in Louisiana's Juvenile Justice System. Wes serves on the Advisory Board for the Equity Project, a national initiative to bring fairness and equity to LGBT youth in juvenile delinquency courts. At JJPL, he coordinated the investigation for a class-action lawsuit on behalf of youth detained in an abusive youth jail in New Orleans and monitors the conditions of three state-run youth prisons in Louisiana.]. 2011 "Rounding Up the Homosexuals: The Impact of Juvenile Court on Queer and Trans/Gender-Non-Conforming Youth" in "Captive Genders: Trans Embodiment and the Prison Industrial Complex" Pg. 77 (Eds. Smith & Stanley) 2011 AK press. Accessed: 7/17/2015. http://theloon2013.wikispaces.com/file/view/Stanley-Eric-Captive-Genders-Trans-Embodiment-and-Prison-Industrial-Complex.pdf)//ALepow

However, with the juvenile justice system's intent to provide "treatment" to young people, many queer/trans youth inherit the ideology that they are "wrong" or in need of "curing," as evidenced by their stories. As sexual and gender transgressions have been deemed both illegal and pathological, queer and trans youth, who are some of the most vulnerable to "treatments," are not only subjected to incarceration but also to harassment by staff, conversion therapy, and physical

violence.[6] Moreover, with the juvenile justice system often housed under the direct authority of state correctional systems and composed of youth referred directly from state police departments, it should not be surprising that young people locked up in the state juvenile system, 80 percent of whom are black in Louisiana,[7] are often actually destroyed by the very system that was created to intervene. Worse than just providing damaging outcomes for youth once they are incarcerated, this rehabilitative system funnels queer and trans/gendernon-conforming youth into the front doors of the system. Non-accepting parents and guardians can refer their children to family court for arbitrary and subjective behaviors, such as being "ungovernable."[8] Police can bring youth in for status offenses, offenses for which adults cannot be charged, which often become contributing factors to the criminalization of youth. Charges can range from truancy to curfew violations to running away from home. Like in the adult criminal justice system, queer and trans youth can be profiled by the police and brought in for survival crimes like prostitution or theft. Youth may be referred for self-defense arising from conflict with hostile family members or public displays of affection in schools that selectively enforce policies only against queer and trans youth. Although youths' rights were greatly expanded in 1967 when the Supreme Court decided that the juvenile system was not operating according to its original intent,[9] youth continue to struggle in the courts with fewer protections than adults. Defense lawyers for youth, who are sometimes the only advocates young people have in court, have at times confused their role, advocating for what they believe to be the "best interest" of the youth rather than defending their client's "expressed interest." Juvenile court judges with little accountability have similarly expanded their role with the intent to provide services, through incarceration, to every youth that comes through their courtrooms. In this effort to rehabilitate "deviant" children and without the right to a jury trial for delinquent offenses, the issue of guilt versus innocence can fall to the wayside. Further aggravated by the public's fear of youth sexuality and our desire to control 80 young people and their bodies, juvenile court presents a unique opportunity to destroy the lives of queer and trans/gender-non-conforming youth. The agenda of juvenile court then, for queer and trans youth at least, often becomes to "rehabilitate" youth into fitting heteronormative and gendertypical molds. Guised under the "best interest of the child," the goal often becomes to "protect" the child—or perhaps society—from gender-variant or non-heterosexual behavior. While not as explicit as the sumptuary laws (laws requiring people to wear at least three items of gender-appropriate clothing) or sodomy laws of the past that led to the Compton's Riots and Stonewall Rebellion, the policing of sexuality and state regulation of gender has continued to exist in practice—perhaps nowhere more than in juvenile courts. In many ways, the system still mirrors the adult criminal justice system, whose roots can be traced to slavery, the commodification of bodies as free labor, institutionalized racism, and state regulation of low-income people of color, immigrants, and anyone deemed otherwise "deviant" or a threat to the political norm. Combined with the Puritan beliefs that helped spark the creation of juvenile courts, it becomes clear that, borrowing the words of Audre Lorde, queer and trans youth of color "were never meant to survive." In fact, one youth in a Louisiana youth prison responded to the number of queer and trans youth incarcerated by stating, "I'm afraid they're rounding up the homosexuals." Once locked up, queer and trans youth experience

the same horrors that their adult counterparts in the system do, but magnified by a system designed to control, regulate, and pathologize their very existence. In Louisiana's youth prisons, queer and trans youth have been subjected to "sexual-identity confusion counseling," accused of using "gender identity issues" to detract from their rehabilitation, and disciplined for expressing any gender-non-conforming behaviors or actions. Youth are put on lockdown for having hair that is too long or wearing state-issued clothing that is too tight. They are instructed how to walk, talk, and act in their dorms and are prohibited from communicating with other queer youth lest they become too "flamboyant" and cause a disturbance. They are excessively punished for consensual same-sex behavior and spend much of their time in protective custody or in isolation cells. In meetings with representatives from the Juvenile Justice Project of Louisiana, directors of youth jails have referred to non-heterosexual identities as "symptoms" and have conflated youth adjudicated for sex offenses with youth who are queer. In addition, 81 when advocates asked what the biggest problem was at a youth prison in Baker, Louisiana, guards replied, "the lesbians." Even more troubling, unlike the adult criminal justice system where individuals either "ride out their time" or work toward "good time" or parole, youths' privileges in prison and eventual release dates are often determined by their successful completion of their rehabilitative programming, including relationships with peers and staff. Thus, youth who are seen as "deviant" or "mentally ill," or who otherwise do not conform to the rules set forth by the prison, often spend longer amounts of time incarcerated and are denied their opportunity for early release. For queer and trans/gender-non-conforming youth, this means longer prison terms. In fact, in the last four years of advocacy on behalf of queer and trans youth in prison in Louisiana at the Juvenile Justice Project of Louisiana, not one openly queer or trans youth has been recommended for an early release by the Office of Juvenile Justice. While protections afforded to youth in the juvenile justice system like a greater right to confidentiality are extremely important for youth, they can also be another strike against queer and trans youth seeking to access resources or support networks while inside. Like queer and trans adults in the criminal justice system who have difficulty receiving information that "promotes homosexuality," youth are unable to access affirming information during a particularly formative time in their lives, which can already be plagued with confusion and questioning. The right to confidentiality for youth in prison can result in their being prohibited from communicating with pen pals or seeking services from community organizations. Other rights are afforded to adults but not to minors, such as accessing legal counsel to challenge the conditions of their confinement. Youth under 18 must rely on their guardians to assist with filing a civil complaint, despite the fact that many queer and trans youth have had difficulty with their families prior to their incarceration—and that those family members may have contributed to their entering into the system in the first place. This barrier also holds true for transgender youth who are minors and seeking healthcare or hormones. These youth may need the approval from a guardian or judge in order to access these services—or approval from a guardian in order to file a civil complaint to request them. Meanwhile, as state institutions are placing queer and trans/gendernon-conforming youth behind bars and effectively silencing their voices, prominent gay activists are fighting for inclusion in the very systems that criminalize youth of color (such as increased sentencing

for hate crimes) 82 under the banner of "we're just like everybody else." A far stray from the radicalism of the early gay rights movement, mainstream "gay issues" have become focused on the right to marry and "don't ask, don't tell" policies in the military, despite the fact that queer youth of color have consistently ranked these at the bottom of their list of priorities of issues that impact their lives.10 Likewise, the public "face of gay" as white, middle-class men has become a further detriment to queer and trans youth in prison, particularly in the South where queer youth of color are often not "out," and individuals, like in all areas of the country, have difficulty discussing the two issues at the center: race and sexuality.11 As a result of the invisibility of so many incarcerated queer and trans youth, especially youth of color, juvenile justice stakeholders in the South often mistake queer and trans youth to be white, vulnerable youth usually charged with a sex offense, if they acknowledge them at all. As a result, they assume that any concern for these youth to be coming from white advocates who believe that queer and trans youth have been funneled into a system made for "poor black children;" in other words, into a system that is "OK for some children, but not for others." We must be clear about why we do this work—it is not because some children belong locked away at night and others do not—it is because no child should be behind bars. Further, the data tells us that queer and trans youth in detention are equally distributed across race and ethnicity, and comprise 15 percent of youth in detention centers. So far, the data has been consistent among youth in different regions in the United States, including the rural South.12 Since queer and trans youth are overrepresented in nearly all popular feeders into the juvenile justice system—homelessness, difficulty in school, substance abuse, and difficulty with mental health13—the same societal ills, which disproportionately affect youth of color—it should not be surprising that they may be overrepresented in youth prisons and jails as well. Since incarcerated youth have so few opportunities to speak out, it is critically important for individuals and organizations doing this work to keep a political analysis of the failings of the system at the forefront of the work—particularly the inherent racial disparities in the system—while highlighting the voices of those youth who are most affected and providing vehicles through which they can share their stories. Despite the targeting and subsequent silencing of queer and trans/ gender-non-conforming youth in youth prisons and jails across Louisiana, young people have developed creative acts of resistance and mechanisms 83 for self-preservation and survival. By failing to recognize the ways that young people demonstrate their own agency and affirm each other, we risk perpetuating the idea of vulnerable youth with little agency; victims rather than survivors and active resisters of a brutal system. Perhaps the most resilient of all youth in prison in Louisiana, incarcerated queer and trans youth have documented their grievances, over and over again, keeping impeccable paper trails of abuse and discrimination for their lawyers and advocates. When confronted by the guards who waged wars against them, one self-identified gay youth let it be known, "You messin' with the wrong punk." Although prohibited from even speaking publicly with other queer youth in prison, queer and trans youth have formed community across three youth prisons in the state, whispered through fences, and passed messages through sympathetic staff. They have made matching bracelets and necklaces for one another, gotten each other's initials tattooed on their bodies, and written letters to each other's mothers. They have supported each other by alerting advocates when one of them was on lockdown or in trouble and unable to call. Trans-feminine youth have gone to lockdown instead of cutting their hair and used their bed sheets to design curtains for their cells once they got there. They have smuggled in Kool-Aid to dye their hair, secretly shaved their legs, colored their fingernails with markers, and used crayons for eye shadow. When a lawyer asked her trans-masculine client to dress more "feminine" for court, knowing that the judge was increasingly hostile toward gender-non-conforming youth, her client drew the line at the skirt, fearlessly and proudly demanding that she receive her sentence in baggy pants instead. Queer and trans/gender-non-conforming youth have made us question the very purpose of the juvenile justice system and holding them behind bars in jails and prisons made for kids. By listening to their voices it becomes apparent that until we dismantle state systems designed to criminalize and police young people and

variant expressions of gender and sexuality, none of us will be free. And to my younger client recently released from a youth prison, yes, the world is more beautiful now. Welcome home.

The law has been historically used to criminalize queer, Trans, and gender non-conforming bodies. Reforms are unable to solve for the underlying hetero and cis normative roots of the prison industrial complex and merely result in the continuation of an unethical system*

Lamble 11 (Lamble, S. [S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. 1. Queer, trans, and gender-non-conforming people have been historically subject to oppressive laws, gender policing, and criminal punishment—a legacy that continues today despite ongoing legal reforms. Law enforcement officials (including police, courts, immigration officers, prison guards, and other state agents) have a long history of targeting, punishing, and criminalizing sexual dissidents and gender-non-conforming people.12 While many overtly homophobic and transphobic laws have been recently overturned in Canada, the United States, and Britain, the criminalization and punishment of queer and trans people extends well beyond formal legislation.13 State officials enable or participate in violence against queer, trans, and gender-non-conforming communities by (a) ignoring everyday violence against queer and trans people; (b) selectively enforcing laws and policies in transphobic and homophobic ways; (c) using discretion to over-police and enact harsher penalties against queer and trans people; and (d) engaging in acts of violence, harassment, sexual assault, and discrimination against queer and trans people.14 While some police departments are increasingly putting on a "gay-positive" public face, the problem of state violence against queer and trans people nonetheless persists and has been well documented by numerous police- and prison-monitoring groups.15 This ongoing legacy of violence should make queer and trans people both cautious of the state's power to criminalize our lives and wary of the state's claim to protect us from harm. Although some people believe that we can train transphobia out of law enforcement agents or eliminate homophobic discrimination by hiring more LGBT prison guards, police, and immigration officials, such perspectives wrongly assume that discrimination is a "flaw" in the system, rather than intrinsic to the system itself. Efforts to make prison and police institutions more "gay-friendly" perpetuate the myth that such systems are in place to protect us. But as the uneven history of criminalization trends in Canada, the United States, and Britain so clearly demonstrate (that is, the way that the system targets some people and not others), the prison industrial complex is less about protecting the public from violence and more about controlling, labeling, disciplining, Captive Genders 240 and in some cases killing particular groups of people—especially those who potentially disrupt the social, economic, and

political status quo.16 While the state might stop harassing, assaulting, and criminalizing some people within queer and trans communities (namely those upwardly mobile, racially privileged, and property-owning folks), the criminal system will continue to target those within our communities who are deemed economically unproductive, politically threatening, or socially undesirable. As people who have historically been (and continue to be) targeted by this unjust system, queer, trans, and gender-non-conforming communities must move away from efforts to make the prison industrial complex more "LGBT-friendly" and instead fight the underlying logic of the system itself.

Attempts to reform prisons will always fail because prisons require and foster violence as part of their punitive function—prisons are sites of physical, social, and civil death, and a continuation of the system is a continuation of these issues

Lamble 11 (Lamble, S. [S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. 4. Prisons are harmful, violent, and damaging places, especially for queer, trans, and gender-non-conforming folks. Prisons are violent institutions. People in prison and detention experience brutal human rights abuses, including physical assault, psychological abuse, rape, harassment, and medical neglect. Aside from these violations, the act of putting people in cages is a form of violence in itself. Such violence leads to extremely high rates of self-harm and suicide, both in prison and following release.35 These problems are neither exceptional nor occasional; violence is endemic to prisons. It is important to bear in mind that prison violence stems largely from the institutional structure of incarceration rather than from something supposedly inherent to prisoners themselves. Against the popular myth that prisons are filled with violent and dangerous people, the vast majority of people are held in prison for non-violent crimes, especially drug offenses and crimes of poverty.36 For the small number of people who pose a genuine risk to themselves or others, prisons often make those risks worse. In other words, prisons are dangerous not because of who is locked inside, but instead prisons both require and foster violence as part of their punitive function. For this reason, reform efforts may reduce, but cannot ultimately eliminate, prison violence. The high number of deaths in state custody speaks to the devastating consequences of imprisonment. Between 1995 and 2007, the British prison-monitoring group Inquest documented more than 2,500 deaths in police and prison custody.37 Homicide and suicide rates in Canadian prisons are nearly eight times the rate found in non-institutional settings.38 In the United States between 2001 and 2006, there were 18,550 adult deaths in state prisons,39 and between 2003 and 2005, there were an additional 2,002 arrest-related deaths.40 It is extremely rare for state officials to be held accountable for these deaths. For example, among the deaths that Inquest has documented in Britain, not one police or prison officer to date has been held criminally responsible.41 Deaths in custody are symptomatic of the daily violence and harm that prisoners endure. Queer, trans, and gender-non-conforming people are subject to these harms in specific ways: • High risk of assault and abuse: Queer, trans, and gender-non-conforming people are subject to widespread sexual assault, abuse, and other gross human rights

violations, not only from other prisoners, but from prison staff as well.42 Captive Genders 244 • Denial of healthcare: Many prisoners must fight to even see a doctor, let alone get adequate medical care. Trans people in particular are regularly denied basic medical needs, especially surgery and hormones. Many prisons have no guidelines for the care of trans and gender-variant persons, and even where guidelines exist, they are insufficient or not followed.43 Inadequate policy and practice on HIV/AIDS and Hep C prevention is another major health problem in prison, where transmission rates are exceptionally high.44 These risks increase dramatically for trans people, who already experience high rates of HIV/AIDS.45 This combination of high transmission risks, poor healthcare provision, inadequate sexual health policies, and long-term health effects of imprisonment (including shorter life expectancies), mean that prison is a serious health hazard for queer and trans people. • Subject to solitary confinement and strip-searching: Trans and gender-non-conforming prisoners are regularly placed in solitary confinement as a "solution" to the problem of sex-segregated prisons. Even when used for safety purposes, "protective custody" constitutes a form of punishment, as it usually means reduced access to recreational and educational programs, and increased psychological stress as a result of isolation. Trans and gendernon-conforming people are also frequently subject to humiliating, degrading, abusive, and overtly transphobic strip-searches.46 • High risk of self-harm and suicide: Queer and trans people, especially youth, have higher rates of suicide attempts and self-harm. Such risks increase in prison and are heightened in segregation, particularly when prisoners are isolated from queer and trans supports.47 These risks are not limited to incarceration but continue after release. A study in Britain for example, found that men who leave prison were eight times more likely to commit suicide than the general population, and women released from prison were thirty-six times more likely to commit suicide.48 The prison system is literally killing, damaging, and harming people from our communities. Whether we consider physical death caused by self-harm, medical neglect, and state violence; social death caused by subsequent unemployment, homelessness, and stigmatization; or civil death experienced through political disenfranchisement and exclusion from citizenship rights, the violence of imprisonment is undeniable

Gender and sexual norms are at the very heart of the prison industrial complex—a reform of the system can never solve the institutional necessity of prisons to reinforce, perpetuate, and entrench these norms

Lamble 11 (Lamble, S. [S. Lamble has been involved in social justice, antipoverty and prisoner solidarity work in Ontario, Canada and London, England. Lamble currently teaches at Birkbeck Law School, University of London and is a founding member of the Bent Bars Project, a collective which coordinates a letter writing program for queer, Trans and gender-non-conforming prisoners in Britain.]. 2011 "Transforming Carceral Logics: 10 Reasons to Dismantle the Prison Industrial Complex Through Queer/Trans Analysis and Action" in "Captive Genders: Trans Embodiment and the Prison Industrial Complex" Pg. 235 (Eds. 3. Prisons reinforce oppressive gender and sexual norms. Prisons reinforce gender and sexual norms in three key ways: First, sex-segregated prisons restrict people's right to determine

and express their Captive Genders 242 own gender identity and sexuality. Because most prisons divide people according to their perceived genitals rather than their self-expressed gender identity, prisoners who don't identify as "male" or "female" or who are gender-non-conforming are often sent to segregation or forced to share a cell with prisoners of a different gender, often with little regard for their safety. In Britain, even trans people who have obtained a Gender Recognition Certificate (a state document that legally recognizes a person's self-defined gender) have been held in prisons with people of a different gender.27 By segregating institutions along sex/gender lines, prisons work to make invisible, isolate, and stigmatize those bodies and gender identity expressions that defy imposed gender binaries.28 Second, gender segregation in prisons plays a key role in "correctional" efforts to modify prisoner behavior in accordance with gender norms. Historically, women's prisons were designed to transform "fallen" women into better wives, mothers, homemakers, and domestic servants, whereas men's prisons were designed to transform males into disciplined individuals, productive workers, and masculine citizens.29 These gendered goals persist today, particularly in the division of prison labor. For example, when a new mixed-gender prison was built in Peterborough, England in 2005, all parts of the institution were duplicated to provide separate male and female areas, except for the single kitchen, where women were expected to do all the cooking.30 The current trend toward so-called "gender responsive" prisons is likewise framed as a measure to address the specific needs of female prisoners, but usually works to discipline, enforce, and regulate gender norms.31 Moreover, gender-responsive prison reforms are increasingly used to justify building new prisons (without closing existing ones), thereby furthering prison expansion.32 Third, sexual violence plays a key role in maintaining order and control within prisons, a tactic that relies on oppressive sexual and gender norms.33 Sexual violence in prison, including harassment, rape, and assault, is shockingly widespread and often institutionally condoned. According to Stop Prisoner Rape, 1 in 5 males and 1 in 4 females face sexual assault in US prisons.34 To call attention to the enforcement of gender/ sexual norms in prison is not to suggest that prison culture is uniform across or within institutions, or that prisoners are more sexist, homophobic, or transphobic than non-prisoners. Rather, prisons as institutions tend to reinforce, perpetuate, and entrench gender/sex hierarchies and create environments in which sexual violence flourishes.

Reasonable Suspicion Standard CP

Notes

Reasonable suspicion=officials have to have reasonable suspicion that the prisoner is carrying contraband

It would probably be defined by the following:

- Inmate's previous history with contraband

- Inmate's conduct inside the prison
- Nature of offense
- Circumstances surrounding arrest
- Criminal record
- Evidence of major offense
- Detection of suspicious objects beneath clothing

1NC

Text: The Supreme Court of the United States should rule that a blanket policy of strip searching all arrestees admitted to a jail facility without a standard of reasonable suspicion is unconstitutional on that grounds that it violates the Fourth Amendment of the United States Constitution.

The reasonable suspicion standard strikes the proper balance between security and privacy—their 1AC author

Laufer 12 (Laufer, Amanda [Amanda Laufer is a J.D. Candidate, 2012, Seton Hall University School of Law; B.A., 2009, Cornell University.]. 2/13/2012, "The Pendulum Continues to Swing in the Wrong Direction and the Fourth Amendment Moves Closer to the Edge of the Pit: The Ramifications of Florence v. Board of Chosen Freeholders," Seton Hall Law Review Vol. 42: 383, accessed: 7/13/2015. http://scholarship.shu.edu/cgi/viewcontent.cgi?article=1423&context=shlr)//ALepow

Based on the various lower courts' approaches, it is evident that there is a significant level of confusion over the constitutionality of strip searches of individuals arrested for minor offenses. The circuit courts are irreconcilably divided over whether the Fourth Amendment permits suspicion-less strip searches of individuals arrested for minor offenses. Recognizing the constitutional import of Florence's suit, the Supreme Court granted certiorari in Florence v. Board of Chosen Freeholders on April 4, 2011.256 The Court heard oral arguments on October 12, 2011.257 Thereafter, the Court will likely set a uniform standard to evaluate Fourth Amendment challenges to strip-search policies of arrestees of minor offenses in detention facilities outside of the post-contact visit context.258 In ruling on this issue, the Court should reverse the Third Circuit and adopt the approach that the majority of circuit courts take: it is unreasonable and unconstitutional for a correctional facility to strip search a person arrested for a minor offense **unless authorities have "reasonable suspicion" that the individual is concealing a weapon or other contraband**. **The Supreme Court should adopt the "reasonable suspicion" approach because it strikes the proper balance between a jail's legitimate justifications for strip searches and the severe intrusion into the privacy interests of individuals** arrested for minor offenses. Since the Supreme Court has been silent on the issue for over thirty years, and the record is well developed in this case, it appears that Florence is an ideal vehicle to resolve this conflict among the circuits. The problem for the plaintiffs, however, is the current composition of the Supreme Court. The jurisprudence of the Fourth Amendment varies depending on who is on the bench.259 The current Supreme Court, under Chief Justice John G. Roberts's leadership, is the most conservative Court in decades.260 In his book, The Evolution of the Fourth Amendment, Thomas McInnis explains that the Roberts Court has ruled on ten cases involving the Fourth Amendment in the past three terms.261 McInnis found several commonalities in these cases, namely the use of the reasonableness approach and victories for the government.262 Accordingly, individuals who challenge the government's action in Fourth Amendment cases "will have a high hurdle to overcome, because the presumption exists among at least five members of the Court that the governmental interest in law enforcement . . . will usually trump the individual's interest in privacy."263 Arguably, four of the six most conservative justices out of the forty-four who have been on the bench since 1937 are currently serving, including Chief Justice Roberts, Justice Alito, Justice Scalia, and Justice Thomas.264 McInnis further explained that Chief Justice Roberts and Justices Alito and Thomas are all consistent conservative voices who are not likely to use the Fourth Amendment to narrow the government's power to search and seizure. Their votes, along with Justice Scalia's, provide a solid bloc of four votes which will usually support the government's power to search and seize. 265 In addition to this conservative force, Justice Kennedy, the swing Justice sitting on the Roberts Court, is considered to be one of the ten most conservative justices on the bench since 1937.266 McInnis notes that "[t]he direction of the Court's Fourth Amendment jurisprudence when there are close cases will temporarily hinge on the votes of Justice Kennedy."267 In the cases in which the Court split last term, Justice Kennedy sided with the conservatives in nine out twelve cases.268 Furthermore, the additions of neither Justice Kagan nor Justice Sotomayor are likely to affect the ideological balance of the Court, as both Justices replaced other liberals, namely Justice Stevens and Justice Souter.269 Although the plaintiff class in Florence could not have waited to petition the Court until the ideology shifted towards a more liberal approach, based on the strong conservative leanings of the Roberts Court it is unlikely that the Court

will rule in plaintiffs' favor. As previously noted, the plaintiffs may have been better off bringing their claims in state court.270 Nonetheless, since the Supreme Court has already granted certiorari on the case, only time will tell whether the ideologies of the Roberts Court hold true. VII. CONCLUSION In Florence, The Third Circuit erred in upholding a blanket stripsearch policy of all arrestees charged with minor offenses upon their admission to both BJC and ECCF. In 1979, the Supreme Court, in Bell v. Wolfish, examined a policy at MCC mandating strip searches of all inmates after contact visits. The Court articulated a balancing test that became the central inquiry in analyzing the constitutionality of strip searches. In Bell, the Court held that the strip-search policy could be conducted on less than probable cause because the security interests of the facility outweighed the privacy interests of the inmates. Due to the ambiguity of the Court's decision in Bell, lower courts did not have much guidance on how to apply the holding to strip-search policies in contexts outside of post-contact visits. Nonetheless, over the past thirty years, the overwhelming majority of circuit and district court decisions used Bell as a guidepost and adopted the reasonable suspicion standard in evaluating the constitutionality of strip-search policies in the booking context.

The reasonable suspicion standard can still detect contraband but significantly decreases the number of people searched—solves their impacts

Liptak 12

(Adam, 4/2/12, NYT, "Supreme Court Ruling Allows Strip Searches for Any Arrest," Adam is the Supreme Court correspondent for the NYT, http://www.nytimes.com/2012/04/03/us/justices-approve-strip-searches-for-any-offense.html, 7/24/15, SM)

Justice Kennedy said one person arrested for disorderly conduct in Washington State "managed to hide a lighter, tobacco, tattoo needles and other prohibited items in his rectal cavity." Officials in San Francisco, he added, "have discovered contraband hidden in body cavities of people arrested for trespassing, public nuisance and shoplifting." Justice Breyer wrote that there was very little empirical support for the idea that strip searches detect contraband that would not have been found had jail officials used less intrusive means, **particularly if strip searches were allowed when officials had a reasonable suspicion** that they would find something. For instance, in a study of 23,000 people admitted to a correctional facility in Orange County, N.Y., using that standard, there was at most one instance of contraband detected that would not otherwise have been found, Judge Breyer wrote. Justices Ruth Bader Ginsburg, Sonia Sotomayor and Elena Kagan joined Justice Breyer's dissent.

The Supreme Court's failure to uphold the reasonable suspicion standard causes the 1AC's impacts—their 1AC author

Keeton and Eren 15 (Vincent Andre and Colleen, "Strip Searching in the Age of Colorblind Racism: The Disparate Impact of Florence vs. Board of Chosen Freeholders of the Country of Burlington," CUNY Law School, http://crimworkshop.ws.gc.cuny.edu/files/2014/09/Keeton-Eren-Florence-v-Board-of-Chosen2.pdf, Keeton is a professor of criminal justice and criminology at City University of New York and Eren has a pHd from City University of New York Graduate Center and is currently an assistant professor at CUNY Laguardia, her work focuses primarily on issues of criminal justice // EMS).

In 2012 the Supreme Court of the United States decided Florence v. Board of Chosen Freeholders of the County of Burlington. The Court held that full strip searches, including cavity searches, are permissible regardless of the existence of basic reasonable suspicion that the arrestee is in possession of contraband that typically accompanies search jurisprudence. The Court further held that full strip searches are constitutionally permissible even for arrests for minor offenses irrespective of the circumstances surrounding the arrest. With Florence the Court has sanctioned the overreach of state power and extended to law enforcement and corrections officers the unfettered discretion to conduct graphically invasive suspicion-less strip searches. The Court's dereliction of duty is enough to concern all citizens. However, this phenomenal lapse in judicial oversight's impact will not be felt equally in the age of what Bonilla Silva has termed color blind racism. We argue, it will inevitably subject minorities, particularly blacks and Hispanics, to the blanket authority of law enforcement to harass and

humiliate based on a perfunctory arrest predicated on the slightest of infractions. Between 2004 and 2011 in NYC alone the NYPD conducted 4.4 million Terry stops of which blacks and Hispanics constituted a shocking 84%. If we naturally extend this practice of targeting minorities nationwide it becomes clear that the Court has given implicit approval to law enforcement to wage war on the civil rights of minority citizens. This paper will analyze the rationale and policy implications particularly for people of color in light of Florence. We will also propose policies to counterbalance the projected collateral consequences. INTRODUCTION According to the U.S. Supreme Court (hereinafter "Court" or "the Court"), "a prisoner is not wholly stripped of his constitutional protections when imprisoned for crime."1 Despite this admonition, the Court has historically exercised a deferential policy when it comes to jails and prisons. Though the incarcerated have theoretically retained basic constitutional rights, the Court has been more willing in the correctional setting, to leave the governance of jails and prisons to administrators.2 Prior to the 1960s, this high degree of deference and discretion given to correctional facilities typically resulted in gross abuses of the constitutional rights of the incarcerated.3 Since the 1960s, the Court has become more willing to intervene in correctional settings4 , but still shows an expansive degree of deference and largely allows jails and prisons to operate with autonomy.5 Nowhere is this unwillingness to intervene in the scope of operational policy of correctional facilities more obvious than in strip search policy. In this area the court has been particularly willing to defer to the administrative staff of correctional facilities while turning a deaf ear to the pleas of the arrested and incarcerated for relief, from Bell v. Wolfish (1979)6 wherein the Court deferred to the expertise of correctional facilities in their blanket rule of conducting a visual search of the body cavities of every inmate having contact with an individual from outside the facility, 7 to the Court's most recent pronouncement in Florence v. Board of Freeholders (2012) 8 wherein the Court held that severity of offense and the reasonable suspicion standard does not exempt any arrestee from the blanket rule that all arrestees are subject to a policy of strip searches prior to exposure to general population. 9 The Court's decision in Florence, which grants immense discretionary power to the administrators of correctional facilities and further diminishes the reasonable suspicion standard and privacy interests of individual arrestees and the incarcerated, 10 will have disastrous consequences and embolden law enforcement particularly in their interactions with people of color. This paper, while reviewing the history of the precedential Supreme Court cases in this area, will also focus on the policy implications of the Courts holding in Florence on the minority communities within the context of a society which has entered a socio-historical period characterized by color-blind racism. To date, this element has been largely missing from discussion of Florence. While acknowledging that security in correctional facilities must be maintained, and that some deference in this pursuit is necessary, this paper will argue that **the Court's failure to uphold a reasonable suspicion standard of possession** in the correctional setting **will disproportionately impact communities of color**. Part I of this paper will analyze the Court's most important case-law in this area leading to Florence including Bell v. Wolfish (1976)11, Block v. Rutherford (1984)12, Hudson v. Palmer (1984)13 and Turner v. Safley (1987)14. Part II will review the procedural and factual history of Florence and discuss the Court's rationale. Part III will analyze Florence in the context of the larger Criminal Justice system within the theoretical context of colorblind racism, and describe the past and future impact of strip searches to be had on racial minorities. This section will argue that a general policy of strip searching disadvantages minorities due to their overrepresentation at every stage of the criminal justice process. Part IV will be a discussion of policy recommendations. This section will make several claims, including that not only should personal privacy trump the use of invasive strip searches except in cases of reasonable suspicion, but the Court must not retreat to a position of deferential acquiescence when exercising judicial oversight of correctional institutions. Rather**, the Court must vigilantly uphold the reasonable suspicion standard to ensure the proper balance between institutional security concerns and individual privacy interests**. Additionally, we make policy recommendations for law enforcement agencies in the event to mitigate the negative collateral consequences of the Florence ruling.

Absent a reasonable suspicion standard, strip searches are conducted discriminately—their 1AC author

Gleiberman 13 (Gleiberman, Nina [Nina Gleiberman J.D. Candidate, 2014, University of Maryland Francis King Carey School of Law.]. 2013. "Florence v. Board of Chosen Freeholders: Maintaining Jail Security While Stripping Detainees of Their Constitutional Rights," Maryland Law Review Endnotes Vol. 72:81, accessed: 7/17/2015. http://digitalcommons.law.umaryland.edu/cgi/viewcontent.cgi?article=1027&context=endnotes

In Florence, the Supreme Court granted correctional facilities nearly unlimited power to create and implement regulations. Although the Court's decision resolved a significant circuit split, the decision will likely lead to abuse in the correctional system. In the past, "[t]he Supreme Court has repeatedly granted considerable deference to corrections officials in reviewing of jail administration policies." 163 **In the absence of a reasonable suspicion standard for strip searches**, however, such searches are conducted in an indiscriminate manner, not only in the context of detainees searched during intake procedures at correctional institutions, but also in the context of school searches and gender-based searches.164 In addition, the Supreme Court's practice of deferring to correctional officials has been overly broad and poorly defined, causing confusion among lower courts and resulting in a circuit split.165 Even though the Court's decision may increase the effectiveness of safety procedures at correctional facilities, the Florence decision will ultimately result in the erosion of

constitutional protections afforded to detainees. One of "[t]he most remarkable aspect[s] of the [Florence] ruling was the Court's [heavy] reliance on the expertise of corrections officials, without any scrutiny of their [judgment] in developing a prison's strip search policy." 166 With unlimited deference, correctional facilities are likely to implement "more invasive policies, which will decrease the incentive for prisoners to bring . . . constitutional challenges" to their treatment.167 The post-Bell cases focused on whether detainees have any privacy rights under the Fourth Amendment, and the Supreme Court has strictly limited the scope of the Fourth Amendment as it applies in correctional facilities. 168 In Hudson, Justice Stevens in a concurring and a dissenting opinion, argued that the Court's policy of deference encouraged it to "overlook[] the purpose of a written Constitution." 169 **The Court's decision in Florence abrogated the reasonable suspicion standard for conducting strip searches, thus turning a blind eye to the Fourth Amendment rights of detainees.**

The reasonable suspicion standard would ensure that arrestees in prison for minor charges are not subjected to strip searches

Ha 11

(Daphne, 2011, Fordham Law Review, "Blanket Policies for Strip Searching Pretrial Detainees: An Interdisciplinary Argument for Reasonableness," associate in litigation and complex commercial litigation @ Dechert LLP, a global specialist law firm, http://ir.lawnet.fordham.edu/cgi/viewcontent.cgi?article=4723&context=flr, 7/23/15, SM)

The justification for a strip search must be strong in order to outweigh the high scope of intrusion involved.335 Thus, a law enforcement officer should only strip search a detainee suspected of concealing contraband, such as after a drug- or weapon-related arrest, or when a detainee's criminal record includes recent drug or weapons possession. Strip searches cannot be allowed on individuals arrested for traffic offenses or for non-violent misdemeanors that do not involve drugs. Such a policy would ensure that arrestees like Mary Bull, Leigh Fleming, and Charli Johnson are not subjected to traumatizing strip searches after being arrested for minor charges like disturbing the peace, and when they lack criminal records suggesting they are likely to smuggle contraband.336

New requirements for body cavity searches under reasonable suspicion solve all their offense

Washington Department of Corrections 14 ("Body Cavity Search," 10/27, //rck)

A body cavity search must be authorized by both the Superintendent and the Chief Medical Officer/designee when they have determined: [4-4193] 1. With reasonable suspicion, that the offender is concealing contraband internally, [4-4193] 2. That the concealment constitutes an imminent threat to life or security, [4-4193] 3. That all other means, including a dry cell search, have been exhausted or are inappropriate, and [4-4193] 4. From a medical perspective, the search can be done safely and in a clinically appropriate manner and setting. To assist in establishing reasonable suspicion, non-invasive and minimally invasive procedures (e.g., blood tests, x-rays) may be ordered by a duly licensed practitioner, without offender consent, to help determine the presence and risk of contraband. C. The Superintendent will ensure the establishment of reasonable suspicion, reviewing all documentation before authorizing a body cavity search, and will document the review and approval on DOC 21-998 Body Cavity Search Authorization. D. The Chief Medical Officer/designee will review all relevant clinical and other information to determine that doing a body cavity search is safe from a medical perspective and to specify any clinical requirements for doing such a search. E. The Chief Medical Officer/designee's approval can be given verbally and will be documented by signature on DOC 21-998 Body Cavity Search Authorization within one business day after verbal approval. 1. In an emergency situation, if the Chief Medical Officer cannot be contacted, the Facility Medical Director (FMD)/designee will act in place of the Chief Medical Officer. II. Body Cavity Search Procedure A. A Unit Supervisor, Shift Commander, or Shift Sergeant will monitor the body cavity search procedure to ensure an effective search, procedural compliance, and proper documentation of the event. B. All participants in a body cavity

search process will be the same gender as the offender. C. A strip search of the offender must be conducted before beginning the body cavity search process per DOC 420.310 Searches of Offenders. D. The body cavity search process will be video recorded, except for the actual search of the body cavity,starting with all events leading to the search. The video recorder will remain on through the entire search process. The video recording should begin with an opening statement by one of the assigned custody escorts, made out of the presence of the offender, indicating: 1. Date and time, 2. Name and DOC number of the offender, 3. Names of all employees/contract staff involved, and 4. Special instructions.

Their evidence doesn't assume recent mandates of reasonable suspicion—authorization, same sex searches

Law Enforcement Legal Update 7/5/15 (Robert C. Phillips, Deputy District Attorney (Ret.) "Searches with Less Than Probable Cause," http://www.legalupdateonline.com/4th/650, //rck)

No strip search or visual body cavity search may be conducted without prior written authorization of the supervising officer on duty, with such authorization specifying the articulable facts and circumstances upon which the reasonable suspicion determination was made by the supervisor. An arrest for the misdemeanor offense of being under the influence of a controlled substance, per H&S § 11550, does not justify a later visual body cavity search at the jail prior to being taken into the general jail population, despite this statute to the contrary, absent any specific articulable facts amounting to a reasonable suspicion that the arrestee does in fact possess a controlled substance. P.C. § 4030(h): No person (nor a minor, prior to a disposition hearing) arrested for an infraction or a misdemeanor offense shall be subjected to a "physical body cavity search" except under the authority of a search warrant issued by a magistrate specifically authorizing the physical body cavity search. Touching Prohibited P.C. § 4030(j): Persons conducting a "strip search" or a "visual body cavity search" shall not touch the breasts, buttocks, or genitalia of the person being searched. Physical Body Cavity Searches P.C. § 4030(k): "Physical body cavity searches" may be conducted only: Under sanitary conditions. Only by a physician, nurse practitioner, registered nurse, licensed vocational nurse or emergency medical technician Level II, licensed to practice in this state. Sex of Searchers P.C. § 4030(l): All persons conducting or otherwise present for a "strip search," or a "visual" or "physical body cavity search," except for physicians or licensed medical personnel, shall be of the same sex as the person being searched.

Reasonable suspicion standard is crucial to solve disease and assaults

AELE Monthly Law Journal 13 (Jail & Prisoner Law Section, February 2013, "An Update on Jail Strip Searches of General Population Detainees," http://www.aele.org/law/2013all02/2013-02MLJ301.pdf //rck)

Factors that often make it difficult to single out particular detainees for enhanced scrutiny represented by a strip search include the brevity of many individual's confinement, the constantly changing composition of the inmate population, and the unknown existence, perhaps even among those arrested for minor offenses to be violent, attempt to escape, or to smuggle in drugs. Correctional officials must be allowed, the majority believed, to create reasonable search policies to both detect and deter contraband. They found that the strip searches conducted at the two county jails complained of were reasonable and not an exaggerated response to security concerns. In addition to detecting contraband, strip searches can also aid in detecting health problems ranging from lice to contagious infections, some of which can be deadly and/or difficult to treat and contain. Strip searches can also detect gang tattoos and insignia. Further, even the introduction of objects that are benign in the outside world, such as money, cigarettes, matches, lighters, and objects that be used in suicide attempts, can create security concerns in the jail environment. The Justices pointed out that inmates nationwide stage over 10,000 assaults on correctional personnel every year, and many more on each other, often using such everyday objects as ball point pens.

Reasonable suspicion outlines clear mandates that sufficiently solve the aff

AELE Monthly Law Journal 13 (Jail & Prisoner Law Section, February 2013, "An Update on Jail Strip Searches of General Population Detainees," http://www.aele.org/law/2013all02/2013-02MLJ301.pdf //rck)

1. Except in extreme emergencies, strip and body cavity searches should only be performed by staff of the same sex as the prisoner. 2. Officers or staff of the opposite sex should not be allowed in the room where the search is being conducted except in the case of some compelling need such as a disturbance, security, an unruly prisoner, etc. 3. The room where the search is conducted should be shielded from outside observation. Consider also the use of translucent screens or 'modesty panels' to ensure some degree of privacy. 4. Any body cavity search that involves actual manual probing of body cavities should normally be done only by qualified medical personnel except in the most urgent circumstances. A prisoner simply showing that he/she could have been secured and not allowed movement while someone was called can blow the argument that you might make that 'nobody was around' out of the water. 5. Staff should always inquire to see if the prisoner has any medical problem or condition that might affect or be affected by the search. Imagine the humiliation of a female 307 prisoner who is menstruating, a male prisoner with a prostate problem, a person with hemorrhoids, etc. Any search that is needed when such a condition exists must take the condition into consideration. 6. Any time a strip or body cavity search is performed, a written record should be made of the fact and the reason(s) for it. Some departments have started or are seriously considering videotaping the search for their own protection. Videotaping is certainly not necessary, but if you consider it take care that the entire process is recorded with no selective editing. The tapes must be carefully stored and access limited. Do not, as one Midwestern city did, allow the tapes to be accessible to other employees for entertainment! 7. There should be a written policy that states when and under what circumstances body cavity and strip searches may be performed and who is authorized to order or approve them. 8. When such searches are being conducted, all employees must conduct themselves in a professional manner. This means no jokes, snide remarks or comments. 9. All prisoners must be made aware of the circumstances under which such searches can and will be done. Ideally as with many other things, if time and circumstances permit, give the prisoner a copy of the regulations (they may be in some kind of prisoner handbook, etc.) and have him/her sign an acknowledgement of receiving it. Keep it on file. Why? It helps to sweep away any argument they may make about an expectation of privacy when you show that they were put on notice right up front. 10. All staff must be trained in how to conduct such searches and the circumstances under which they may be done. Keep records of this activity so you can avoid a policy or procedure claim based on an allegation of failure to train or supervise. 11. Be consistent. If you have a policy that all prisoners who are housed in maximum security are to be strip-searched after visits, that's what it means. If you do not follow your own policy, you may face an argument that your use of these searches is arbitrary and not related to any legitimate governmental purpose. 12. Careful records must be kept of incidents that occur in the facility concerning contraband and/or weapons. A history of incidents and types can be very important in showing the justification for intrusive search policies. 13. Always try to have a witness present when any such search is done. 14. There should be some management oversight, on a periodic basis, to make sure that the standard procedures are followed.

Eighth Amendment CP

Solvency

Body cavity searches could be prohibited via the 8th amendment

James 82

(David C., June 1982, Columbia Law Review, "Constitutional Limitations on Body Searches in Prisons," http://www.jstor.org/stable/pdf/1122214.pdf, 7/20/15, SM)

Cruel and Unusual Punishment A number of courts have analyzed prisoner searches under the eighth amendment's prohibition of cruel and unusual punishment.**41 Since the crueland-unusual-punishments clause is the only provision in the Bill of Rights that pertains on its face to prisoners,42 its protections seem an obvious possible limitation on intrusive searches**.

Its applicability to body cavity searches seems especially apt given its recent broad interpretation by the Supreme Court in Estelle v. Gamble: 43 "[T]he Amendment proscribes more than physically barbarous punishments. . . . [It] embodies 'broad and idealistic concepts of dignity, civilized standards, humanity and decency . . .. 44 Clearly, intrusive body searches implicate "concepts of dignity, civilized standards, humanity and decency" and hence would seem to lie within this ambit of eighth amendment coverage. Courts have, however, seldom applied the cruel-and-unusual punishments clause as broadly as the language in Gamble would suggest. Most eighth amendment decisions have, like Gamble itself, addressed the physical conditions of confinement45 more than the psychological effects of those conditions.46 The circuit court in Wolfish for example, which could hardly be accused of insensitivity to prisoners' rights, believed that "[a]n institution's obligation under the eighth amendment is at an end if it furnishes sentenced prisoners with adequate food, clothing, shelter, sanitation, medical care, and personal safety." 47 Nevertheless, even if bodily privacy interests do not fall generically within the purview of the eighth amendment, it seems clear that a particular body search may be "cruel" or "unusual" if conducted in an abusive or otherwise unreasonable manner.48 For example, a valid claim for relief under the eighth amendment has been found where a strip search was unnecessarily prolonged, or the prisoner was left without clothing for an extended period of time.49

The Eighth Amendment solves better than the Fourth Amendment—only amendment that applies to prisoners

Court of Appeals 94

(11/17/94, United States Court of Appeals, Fifth Circuit, "Keith David ELLIOTT, Plaintiff-Appellant, v. Bruce N. LYNN, Secretary, Louisiana Department of Corrections, Defendant-Appellee," http://openjurist.org/38/f3d/188/elliott-v-n-lynn, 7/25/15, SM)

GARWOOD, Circuit Judge, concurring specially: 20 I would hold that the Eighth Amendment, not the Fourth Amendment, is the standard by which a prison inmate's protection against searches by prison authorities is to be measured. In Hudson v. Palmer, 468 U.S. 517, 104 S.Ct. 3194, 82 L.Ed.2d 393 (1984), the Court stated: 21 **"A right of privacy in traditional Fourth Amendment terms is fundamentally incompatible with the close and continual surveillance of inmates and their cells required to ensure institutional security and internal order**." Id. at 527, 104 S.Ct. at 3201 (footnote omitted). 22 "Our holding that respondent does not have a reasonable expectation of privacy enabling him to invoke the protections of the Fourth Amendment does not mean that he is without a remedy for calculated harassment unrelated to prison needs.... The Eighth Amendment always stands as a protection against 'cruel and unusual punishments.' " Id. at 529, 104 S.Ct. at 3202. 23 The majority would restrict Hudson to searches of prison cells. That was the setting in which Hudson arose, but its language is not so limited. **Nor is it logical to fracture the Fourth Amendment in this bizarre manner, so that convicted inmates' protection against certain prison searches is measured by the Fourth Amendment while their protection against other such searches is measured by the Eighth Amendment**. See also Whitley v. Albers, 475 U.S. 312, 106 S.Ct. 1078, 89 L.Ed.2d 251 (1986) (Eighth Amendment applied to inmate shot in quelling of prison riot); Brothers v. Klevenhagen, 28 F.3d 452, 457 (5th Cir.1984) (Fourth Amendment inapplicable to seizure claim of pre-trial detainee); Valencia v. Wiggins, 981 F.2d 1440, 1443-45 (5th Cir.), cert. denied, --- U.S. ----, 113 S.Ct. 2998, 125 L.Ed.2d 691 (1993) (same). 24

History proves that the Eighth Amendment has been used to making sweeping, effective changes—also spills over to local level

Clear et al 14

(Todd, George Cole, Michael Reisig, Carolyn Petrosino, published January 1, 2014, American Corrections in Brief, page 288-289)

The Eighth Amendment Amendment Vill: Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted. The Constitution's prohibition of cruel and unusual punishments has been tied to prisoners' need for decent

treatment and minimal health standards. The courts have applied three principal tests under the Eighth Amendment to determine whether condi- tions are unconstitutional: [I] whether the punishment shocks the general conscience of a civilized society, (2) whether the punishment is unnecessarily cruel, and (3) whether the punishment goes beyond legitimate penal aims. Table 11.3 summarizes some of the major Eighth Amendment cases. Federal courts have ruled that although some aspects of prison life may be accept- able, the combination of various factors—the totality of conditions—may determine that living conditions in the institution constitute cruel and unusual punishment. When courts have found brutality, unsanitary facilities, overcrowding, and inadequate food, judges have used the Eighth Amendment to order sweeping changes and even, in some cases, to take over the administration of entire prisons or correctional systems. Several dramatic cases demonstrate this point. In Georgia, for example, prison con- ditions were shown to he so had that judges demanded change throughout the state." In Ruiz v. Estelle (1980), described more fully in "Focus on Correctional Policy," the court ordered the Texas prison system to address unconstitutional conditions. Judicial supervision of the system continued for a decade. However, the Supreme Court has indicated that unless extreme conditions are found, courts must defer to correctional officials and legislators. Yet the federal courts have intervened in states where institutional conditions or specific aspects of their operation violate the Eighth Amendment. The determination of cruel and unusual took an unexpected turn in a recent controversial decision handed down by a federal judge. The state of Massachusetts was ordered by U.S. District Court Chief Judge Mark L. Wolf to provide an unusual medical procedure for convicted murderer Robert Kosilek. Kosilek, a transsexual, was diagnosed as suffering from a gender identity disorder and thus required sex-reassignment surgery. The court determined that the state's refusal to provide the surgery was a violation of the Eight Amendment's cruel and unusual punishment clause.

The Supreme Court has indicated that the Eighth Amendment could be used to rule aspects of prisons unconstitutional

Jackson 98

(Karoline E., 7/1/98, Indiana Law Journal, "The Legitimacy of Cross-Gender Searches and Surveillance in Prisons: Defining an Appropriate and Uniform Review," partner in the Litigation Department of Barnes & Thomburg LLP, JD from Indiana University School of Law, http://www.repository.law.indiana.edu/cgi/viewcontent.cgi?article=1942&context=ilj, 7/25/15, SM)

B. The Eighth Amendment The Eighth Amendment prohibits cruel and unusual punishment.3 Unlike other constitutional rights that prisoners may possess, the protection afforded by the Eighth Amendment is not limited by the fact of incarceration. The Eighth Amendment exists for the express protection of persons convicted of criminal activity.34 "It is obduracy and wantonness, not inadvertence or error in good faith, that characterize the conduct prohibited by the Cruel and Unusual Punishments Clause . . . ."" In determining "wantonness" the Supreme Court has applied differing standards of review to prisoners' Eighth Amendment claims depending on the facts of the case. If the inmate alleged excessive use of force by prison guards or officials, the Court has employed a "malice" standard.36 This requires the inmate to prove that the force was applied "maliciously and sadistically for the very purpose of causing harm."" If, however, the inmate alleged that the conditions of confinement amounted to cruel and unusual punishment, the Court has employed a "deliberate indifference" standard. Here the prisoner must be able to show that prison officials were deliberately indifferent to the effect that the conditions would have on the inmates. 8 It is unclear what standard should be used to analyze inmates' claims that allege an Eighth Amendment violation due to a cross-gender search, since the Supreme Court has not yet addressed this specific issue. If the search is seen as a condition of confinement, then an inmate would only have to show deliberate indifference on the part of prison officials.39 However, it is possible that courts could view the concerns surrounding cross-gender searches as more appropriately reviewed under the higher malice standard, even though the facts do not fall within the excessive-use-of-force cases.4 " With this approach inmates face the tougher burden of establishing malice on the part of the officials or guards. Although the Supreme Court has not spoken directly to the issue of crossgender searches, it has stated that "[t]he Amendment embodies 'broad and idealistic concepts of dignity, civilized standards, humanity, and decency.'"" The Court has concluded that **the Eighth Amendment is offended when punishments are "incompatible with 'the evolving standards of decency that mark the progress of a maturing society.**'"42 This view indicates that the psychological effects of the conditions of confinement are implicated in Eighth Amendment reviews.43 However, inmates must be able to present sufficient evidence of psychological pain to establish a cognizable Eighth Amendment claim.'

The Eighth Amendment has been used in the past to rule body cavity searches against trans individuals unconstitutional

Columbia Human Rights Law Review 09

(Columbia Human Rights Law Review, "Chapter 25: Your Right To Be Free From Illegal Body Searches," http://www3.law.columbia.edu/hrlr/jlm/Chapter_25.pdf, 7/26/15, SM)

In regard to body searches, the Eighth Amendment is most often triggered by the manner in which the searches are conducted and, at times, by the purpose of the searches. In Meriwether v. Faulkner, the prisoner had a sex change operation and claimed that guards made her strip to harass her and to see her unusual physical features.109 She also claimed that there were no security reasons to search her.110 **The court said that such searches might violate the Eighth Amendment.** In addition, in McRorie v. Shimoda, the court sustained an Eighth Amendment claim against a prison guard who rammed his baton into the anus of a prisoner during a strip search.111

Fourth Amendment Doesn't Apply

The Fourth Amendment doesn't apply to those in prisons—they have no expectation of privacy

Goring 84

(Darlene C., Fall 1984, Journal of Criminal Law and Criminology, "Fourth Amendment—Prison Cells: IS there a Right to Privacy?" http://scholarlycommons.law.northwestern.edu/cgi/viewcontent.cgi?article=6436&context=jclc, 7/20/15, SM)

The fourth amendment protects individual rights to privacy, but its protection is not available to all members of society under all circumstances.8 Most notably, the fourth amendment is not available to pretrial detainees or convicted prisoners to prevent searches or seizures within their prison cells.9 The Supreme Court laid the foundation for this restriction of prisoners' fourth amendment rights in Lanza v. New York 10 when **the Court held that a prison is not an area protected by the Constitutio**n. 1 The Lanza decision noted that because of the continual surveillance of inmates, a prison does not meet the expectation of privacy inherent in a home or an office.12 Although the Court in Lanza was not required to decide the applicability of the fourth amendment to prison inmates, it stated that to give prisoners fourth amendment immunity from search or seizure of their personal property is "at best a novel argument."' 3 The Supreme Court in Katz v. United States14 and Smith v. Maryland'5 established that the applicability of the fourth amendment is contingent upon whether the individual can claim that a "legitimate expectation of privacy" has been invaded by government actions. 16 Justice Harlan's concurrence in Katz stated that the test of reasonableness for prison searches is "whether a prisoner's expectation of privacy in his prison cell is the kind of expectation that 'society is prepared to recognize as "reasonable."' "17 The Supreme Court has determined the reasonableness of prison searches in several different ways. Prior to its decision in Bell v. Wolfish, 18 the Supreme Court applied a case-by-case test of reasonableness to searches conducted by state employees to determine whether they violated the fourth amendment.' 9 The Court decided the reasonableness of each search by balancing the need for the particular search against the personal rights that the search invaded.20 The Court in Bell, however, rejected the case-by-case reasonableness test. Instead, the Court determined the reasonableness of the contested searches in a categorical fashion. The Court argued that "when an institutional restriction infringes a specific constitutional guarantee. . . the practice must be evaluated in the light of the central objective of prison administration, safeguarding institutional security." 2 1 The Court found that shakedown searches of prison cells help maintain security and preserve internal order and discipline. 22 Relying on the categorical determination that prison searches fulfill the government's objectives regarding prison security, the Supreme Court in Bell held that the shakedown searches of pretrial detainees are reasonable. 23 The Court in Bell also acknowledged the plausibility of the argument that "**a person confined in a detention facility has no reasonable expectation of privacy with respect to his room or cell and that therefore the fourth amendment provides no protection for such a person**." 24

Security of the prison mandates a curtailment of an individual's privacy rights

Verrilli et al 11

(Donald B., Tony West, Leondra R. Kruger, Nicole A. Saharsky, Barba L. Herwig, and Edward Hemmelfarb, Supreme Court, "Albert W. Florence, Petitioner v. Board of Chosen Freeholders of the County of Burlington, et al, on Writ of Certiorari to the United States Court of Appeals for the Third Circuit: Brief for the United States as Amicus Curiae Supporting Respondents," Verrilli is the Solicitor General Counsel of Record, http://www.americanbar.org/content/dam/aba/publishing/previewbriefs/Other_Brief_Updates/10-945_respondentamcuusa.authcheckdam.pdf, 7/22/15, SM)

The court of appeals explained that the touchstone of the Fourth Amendment is reasonableness, a standard that requires "a balancing of the need for the particular search against the invasion of personal rights that the search entails." Pet. App. 8a (quoting Wolfish, 441 U.S. at 559). The court recognized that an individual's "privacy is greatly curtailed" when he is incarcerated in a correctional facility, where "'curtailment of certain rights is necessary, as a practical matter, to accommodate a myriad of institutional needs and objectives * * * [,] chief among which is internal security.'" Ibid. (quoting Hudson v. Palmer, 468 U.S. 517, 524 (1984)). The court acknowledged that a visual body-cavity inspection constitutes a "significant intrusion on an individual's privacy," but it also **determined that** the searches at issue were "similar to or less intrusive than those in" Wolfish and were conducted "in a similar manner and place as those in" Wolfish. Id. at 19a-20a (citation omitted). Turning to the jails' justification for the searches, the court of appeals observed that "'[**d]etention facilities are unique place[s] fraught with serious security dangers,**'" Pet. App. 20a (quoting Wolfish, 441 U.S. at 559; second set of brackets in original), and that New Jersey jails, "like most correctional facilities, face serious problems caused by the presence of gangs," ibid. Noting that the "[p]revention of the entry of illegal weapons and drugs is vital to the protection of inmates and prison personnel alike," the court concluded that the jails' interest in preventing smuggling during intake is "as strong as the interest in preventing smuggling after the contact visits at issue in" Wolfish. Id. at 21a. The court of appeals disagreed with petitioner's assertion that arrestees are unlikely to be smuggling con- traband, explaining that "it is not always the case" that arrests are unanticipated and that detainees may "induce or recruit others to subject themselves to arrest * * * to smuggle weapons or other contraband into the facility," especially if certain classes of arrestees may not be strip-searched. Pet. App. 23a. It also rejected petitioner's contention that "jails have little interest in strip searching arrestees charged with non-indictable offenses," explaining that Wolfish "explicitly rejected any distinction in security risk based on the reason for the detention." Id. at 21a. Finally, the court rejected the suggestion that prison administrators could address smuggling through alternative means. The court emphasized that corrections officials must be afforded great deference in ensuring institutional security. Id. at 26a. It further noted that, in any event, the proposed alternatives, such as metal detectors, would not be as effective as the challenged searches in uncovering weapons, drugs, and other contraband. Id. at 27a-28a.4 Judge Pollak dissented. Pet. App. 29a-32a. SUMMARY OF ARGUMENT The Fourth Amendment permits prison and jail officials to conduct visual body-cavity inspections of all detainees who will join the general inmate population. A. The Fourth Amendment protects individuals against unreasonable searches and seizures. Whether a search is reasonable depends on a balance of the individual's privacy interests and the government's justification for the search. In the prison and jail context, privacy rights are necessarily diminished, and corrections offi- cials are afforded wide latitude to ensure the safety and security of their facilities. Consistent with those principles, this Court has upheld a federal detention facility's practice of conducting suspicionless visual body-cavity inspections of all inmates after contact visits with outsiders. Bell v. Wolfish, 441 U.S. 520 (1979). The Court explained that, **without underestimating the degree to which the searches invaded inmates' privacy interests, the institution's compelling interest in preventing smuggling of weapons, drugs, and other contraband outweighed privacy concerns.**

Incarceration limits constitutional rights—includes the Fourth Amendment

(Donald B., Tony West, Leondra R. Kruger, Nicole A. Saharsky, Barba L. Herwig, and Edward Hemmelfarb, Supreme Court, "Albert W. Florence, Petitioner v. Board of Chosen Freeholders of the County of Burlington, et al, on Writ of Certiorari to the United States Court of Appeals for the

Third Circuit: Brief for the United States as Amicus Curiae Supporting Respondents," Verrilli is the Solicitor General Counsel of Record, http://www.americanbar.org/content/dam/aba/publishing/previewbriefs/Other_Brief_Updates/10-945_respondentamcuusa.authcheckdam.pdf, 7/22/15, SM)

2. Incarceration necessarily imposes limits on inmates' constitutional rights, including Fourth Amendment rights. While "[p]rison walls do not form a barrier separating prison inmates from the protections of the Constitution," Turner v. Safley, 482 U.S. 78, 84 (1987), this Court has recognized that "imprisonment carries with it the circumscription or loss of many significant rights," Hudson v. Palmer, 468 U.S. 517, 524 (1984). That "principle applies equally to pretrial detainees and convicted prisoners." Wolfish, 441 U.S. at 546. A detainee retains only those rights "that are not inconsistent with his status as a prisoner or with the legitimate penological objectives of the corrections system." Pell v. Procunier, 417 U.S. 817, 822 (1974). Internal security is "chief" among those objectives. Hudson, 468 U.S. at 424. This Court has thus recognized that "maintaining institutional security and preserving internal order and discipline are essential goals that may require limitation or retraction of the retained constitutional rights of both convicted prisoners and pretrial detainees." Wolfish, 441 U.S. at 546. In the Fourth Amendment context, the Court has made clear that "prisoners have no legitimate expectation of privacy" as against certain practices, such as random searches of their cells. Hudson, 468 U.S. at 530; see id. at 526-527 (explaining that "[t]he recognition of privacy rights for prisoners in their individual cells simply cannot be reconciled with the concept of incarceration and the needs and objectives of penal institutions," including ensuring the safety of personnel, visitors, and inmates, and preventing the introduction of drugs, weapons, and other contraband into the prison). But the Court has also "assum[ed] * * * that inmates, both convicted prisoners and pretrial detainees, retain some Fourth Amendment rights upon commitment to a corrections facility." Wolfish, 441 U.S. at 558. An assessment of the reasonableness of inmate searches therefore must account for the unique nature of incarceration and the legitimate security needs of correctional facilities.

Fourth Amendment rights and surveillance of inmates are incompatible—inmates don't get a right to privacy

Johnson 11

(Aaron, 12/1/11, Duke Journal of Constitutional Law & Public Policy Sidebar, "CRYING WOLFISH: THE UPCOMING CHALLENGE TO BLANKET STRIP-SEARCH POLICIES IN FLORENCE V. BOARD OF CHOSEN FREEHOLDERS," JD from George Washington University Law School, associate @ Lewis Roca Rothgerber, a national law firm, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=1077&context=djclpp_sidebar, 7/23/15, SM)

B. The Respondent Jails' Arguments The Respondent Jails offer three reasons why the Court should affirm the Third Circuit and uphold policies requiring strip searches of all arrestees. First, recent Supreme Court jurisprudence holds that the Fourth Amendment does not apply to intake searches of arrestees,89 or applies in only a minimal way.90 Whether the Fourth Amendment applies to a particular expectation of privacy hinges on whether "society is prepared to recognize [that expectation] as reasonable,"91 and recent cases have opined that "a right of privacy . . . is fundamentally incompatible with the close and continued surveillance of inmates and their cells."92 Thus, because it cannot comport with security interests, no right to privacy exists within detention facilities. The Jails backed off this claim during oral arguments, however, by conceding that there should be some level of suspicion to justify a manual body-cavity search.94 This concession implies that inmates retain minimal privacy interests, rather than no privacy interests.

NB—Fourth Amendment Bad

Fourth Amendment standards are too fixed by the judiciary without deference to law enforcement personnel

Court of Appeals 98

(United States Court of Appeals, Seventh Circuit, "Jane PECKHAM, Plaintiff-Appellant, v. WISCONSIN DEPARTMENT OF CORRECTIONS, Patrick J. Fiedler, Terri Landwehr,

Kristine Krenke, and Bradley Gehring, Defendants-Appellees," http://caselaw.findlaw.com/us-7th-circuit/1097326.html, 7/25/15, SM)

Id. at 146. Johnson holds that the eighth rather than the fourth amendment supplies the framework by which to analyze claims that guards needlessly or maliciously examine prisoners' bodies. Yet in this case, three years later, the plaintiff neither asks us to reexamine Johnson nor makes a claim under the eighth amendment. Instead of rejecting plaintiff's claim with a citation to Johnson, my colleagues gainsay that case. They write: "does a prison inmate enjoy any protection at all under the Fourth Amendment against unreasonable searches and seizures? . [W]e think the answer is 'yes,' but we hasten to add that given the considerable deference prison officials enjoy to run their institutions it is difficult to conjure up too many real-life scenarios where prison strip searches of inmates could be said to be unreasonable under the Fourth Amendment." 141 F.3d at 697 (footnote omitted). **This passage is unnecessary, unreasoned, and self-contradictory**. The passage is unnecessary because the majority goes on to say that nothing the prison did violated Peckham's rights "regardless of how one views the Fourth Amendment in this context" (141 F.3d at 697). The lack of need to contradict Johnson renders the passage dictum. The passage is unreasoned because the majority does not say why the answer is "yes." This court is always willing to reexamine its precedents in the light of new arguments, but my colleagues present none. Neither did the parties, who ignored Johnson, so the majority's assertion is uninformed by an adversarial presentation. Nor is Johnson in tension with decisions of a superior tribunal. **Never has the Supreme Court held or even intimated that persons convicted of crime retain any privacy rights** against their captors. Lists of the rights that survive imprisonment, see Hudson, 468 U.S. at 523-24, 104 S.Ct. at 3198-99, and Wolff v. McDonnell, 418 U.S. 539, 556, 94 S.Ct. 2963, 2974-75, 41 L.Ed.2d 935 (1974), **conspicuously omit privacy, and for good reason**. Rights of seclusion and secrecy vanish at the jailhouse door. A right of privacy in traditional Fourth Amendment terms is fundamentally incompatible with the close and continual surveillance of inmates and their cells required to ensure institutional security and internal order. We are satisfied that society would insist that the prisoner's expectation of privacy always yield to what must be considered the paramount interest in institutional security. We believe that it is accepted by our society that "[l]oss of freedom of choice and privacy are inherent incidents of confinement." Hudson, 468 U.S. at 527-28, 104 S.Ct. at 3201 (footnote and citation omitted; brackets in original). This is why Hudson and Johnson held that **objections to visual inspections had to be analyzed under the cruel and unusual punishments clause of the eighth amendment**. This is a topic on which the majority and dissent in Johnson were in accord; the judges disagreed about how the eighth amendment affects monitoring by guards of the opposite sex but agreed on the irrelevance of the fourth amendment. Finally, the passage is self-contradictory because it asserts both that prison searches are governed by the fourth amendment and that prison officials retain "considerable deference" to determine the scope of searches. (My colleagues must mean "discretion" rather than "deference", but the idea is clear.) Yet **standards under the fourth amendment are objective, fixed by the judiciary without deference to law enforcement personnel**. See, e.g., Ornelas v. United States, 517 U.S. 690, 116 S.Ct. 1657, 134 L.Ed.2d 911 (1996); Graham v. Connor, 490 U.S. 386, 109 S.Ct. 1865, 104 L.Ed.2d 443 (1989). A principal reason why both Hudson and Johnson held that claims of this kind must be analyzed under the eighth amendment is that **the cruel and unusual punishments clause builds in deference to prison administrators through a combination of objective and subjective elements**. See also Farmer v. Brennan, 511 U.S. 825, 114 S.Ct. 1970, 128 L.Ed.2d 811 (1994). If the only way to use the fourth amendment in strip-search cases is to make it functionally identical to the cruel and unusual punishments clause, then what's the point? Far better to leave the fourth amendment out of the analysis and avoid watering down the role of courts in specifying objective standards. Maybe my colleagues have been led to include this unfortunate passage because they think it evident that the fourth amendment governs throughout the United States. That's undeniable, so of course the fourth amendment "applies" inside the nation's prisons. Sparks v. Stutler, 71 F.3d 259 (7th Cir.1995), so holds when concluding that the fourth amendment interest in bodily integrity recognized by Winston v. Lee, 470 U.S. 753, 105 S.Ct. 1611, 84 L.Ed.2d 662 (1985)-which means that surgical invasions of a person's body in search of evidence must be objectively reasonable-does not vanish with conviction and imprisonment. What Hudson and Johnson hold is that convicts lack any reasonable expectation of privacy that may be asserted against their custodians and that searches of cells and other places where contraband may be hidden, including the space under one's clothing, need not be justified by any particular quantum of suspicion. That principle should not be impugned.

Fourth Amendment jurisprudence is informed by traditional notions of sex and gender—perpetuates the objectification and subordination of female bodies

Capers 14

(I. Bennett, 7/16/14, UC Davis School of Law, Law Review, "Unsexing the Fourth Amendment," Professor of Law @ Brooklyn Law School, JD from Columbia University School of Law, http://lawreview.law.ucdavis.edu/issues/48/3/Articles/48-3_Capers.pdf, 7/25/15, SM)

It is hard to overstate the significance of Mapp v. Ohio,4 which made the exclusionary rule binding on the states5 and has rightfully been called the "most important search-and-seizure decision in history."6 It is also hard to overstate the significance of United States v. Mendenhall,7 which introduced the Fourth Amendment's "free to leave" test.8 In doing so, Mendenhall cast most police-citizen encounters as consensual and thus outside the purview of the Fourth Amendment.9 But there is an aspect of these cases, indeed, of a whole slew of cases, that to date has gone entirely unremarked upon. These cases reveal our concern with traditional notions of sex and gender. More specifically, both cases reveal our concern with what I term "sexy searches," those searches that courts and other decision-makers assume run the risk of sexual impropriety.10 In Mapp, the officers reached into "Miss Mapp's" bosom.11 In Mendenhall, the male DEA agents, rather than searching Sylvia Mendenhall themselves, sought help outside of the DEA, summoning a female "policewoman" to conduct the search.12 In fact, traditional notions of sex and gender inform much of Fourth Amendment practice and jurisprudence. These notions matter with respect to Terry stop and frisks — those limited detentions and pat downs that officers engage in when they have articulable, reasonable suspicion that someone may be engaged in criminal activity, and that the person may be armed and dangerous. They matter with respect to more thorough searches incident to arrest, and how we monitor prisoners. Beyond the criminal arena, they dictate who conducts searches of students in public schools, and even which TSA employee searches which passenger. All of this ties in to the first goal of this Article to show traditional notions of sex and gender inform much of what is considered "reasonable" under the Fourth Amendment. The second goal is normative: to ask what we should make of this reliance on traditional notions of sex and gender? A Fourth Amendment preference for same- gender searches may comport with notions of modesty and societal norms. But at what cost to the Fourth Amendment? And, at what cost to true equality? Look beneath the surface, and a preference for same-gender searches — as reflected in Fourth Amendment decisions and government policies — sends troubling expressive messages. This preference suggests that sexual attraction, as a normative matter, lies in opposite gender touching, not same-gender touching. It communicates that we must shield women's bodies in particular from prying eyes and hands. The effect is a curious one, proscribing heterosexual touching while eroticizing women's bodies and their purported unavailability.13 In recent years, scholars such as Laura Rosenbury and Jennifer Rothman, Melissa Murray, Katherine Franke, Deb Tuerkheimer, and Margo Kaplan have observed that much of the law is sex-negative.14 What an examination of our Fourth Amendment preference for same-gender searches adds is this gloss: it is complicated. Sex is both below the surface, and also front and center. Sexy searches (again, those searches that courts and other decision-makers assume run the risk of sexual impropriety) are fiercely policed, yet, in a way that reveals a preoccupation with the spectacle of sex and that tantalizes with its very forbidden-ness. Our purported concern for modesty, examined more closely, reveals itself as a mechanism for both regulating and eroticizing heterosexual attraction, while closeting other attractions.15 Our concern for privacy, upon closer inspection, reveals itself to be a polite way of perpetuating the objectification and subordination of female bodies, with hierarchy and protection and paternalism embedded in its predicate — that one sex needs greater protection. Our claim of gender parity — the claim that same-gender searches treat the sexes equally — upon closer inspection reveals itself to be a rhetorical strategy as bankrupt as the defense offered to justify separate but equal segregation in the context of race. This Article proceeds as follows. Part I first provides a fuller discussion of Mapp and Mendenhall, two cases where the reliance on traditional notions of sex and gender, and fear of sexy searches, is implicit. Part I then provides an overview of the many areas of Fourth Amendment law and practice where we explicitly worry about sexy searches. Against that backdrop, Part II examines the use of sex and gender to inform Fourth Amendment decisions about the reasonableness of various searches. My argument here is three-fold: that a preference for same-gender searches relies on stereotypes about men as predators and women as vulnerable victims and erases sexual difference; that this preference undermines our anti-discrimination principles; and that this preference reifies and, indeed, over-determines gender difference, and in doing so functions as a type of state-imposed sexual discipline. Part III turns to the related issue of segregated restrooms, or what critical theorist Jacques Lacan aptly called "urinary segregation."16 Part IV then turns to an issue that I suspect informs much thinking about cross-gender searches: race. Finally, Part V argues that it is time to unsex the Fourth Amendment, and sketches out an alternative.

Decisions that uphold Fourth Amendment rights don't matter—no enforcement and never put into practice

Balko 15

(Radley, 5/16/15, The Washington Post, "The Supreme Court's Fourth Amendment irrelevance," https://www.washingtonpost.com/news/the-watch/wp/2015/05/16/the-supreme-courts-fourth-amendment-irrelevance/, 7/26/15, SM)

He makes a convincing argument. But I think there's another factor we need to consider: In the real world, **the decisions that uphold Fourth Amendment rights often don't matter**. That's **because the rulings are generally difficult to enforce.** The exclusionary rule is meant to help deter violations, but it only protects the guilty. And it's far from clear that it's an effective deterrent. For innocent people, an illegal search usually doesn't inflict enough damage to make a lawsuit worthwhile. And even when it does significant damage, the various immunities offered to law enforcement officials and the government entities that employ them make it difficult to even get a case in front of a jury. And once you're there, juries are inclined to side with police officers. Even if you somehow manage to win an award of damages, that money will almost always be paid by the taxpayers who fund the government that employs the offending law enforcement officers, not the officers themselves. So there's no real deterrent here, either. A couple of recent stories illustrate these problems in action. First, we have a report in the Chicago Tribune looking at the use of DUI checkpoints in various counties across Illinois. The Supreme Court upheld DUI checkpoints in the 1990 case Michigan v. Sitz, finding that the value of preventing drunk driving outweighed the Fourth Amendment violations of randomly stopping motorists to see if they're intoxicated. (The court relied on an inflated, misleading statistic about DUI deaths to reach this conclusion, but that's another matter.) The court didn't really consider whether checkpoints were actually all that effective at catching drunk drivers. (The Michigan Supreme Court ruled that they were not — the U.S. Supreme Court ruled that their actual empirical effectiveness isn't the right test.) The court has struck down checkpoints for most other reasons, including to check for narcotics, expired licenses and other crimes and violations. The court found that so long as drunk driving is the primary stated reason for the checkpoint, the police can go ahead and issue other citations, should they find them. You can probably guess what has happened since. Police departments across the country have been using the roadblocks to generate revenue from traffic offenses. They'll claim that drunk driving is the "primary purpose," but it's clear from what transpires at the checkpoints that this isn't the case. The Tribune report is only the latest of countless media outlets across the country to document this, although this time we have the added wrinkle that local police agencies are also getting hefty federal grants to run these checkpoints. The Tribune reports: The implicit theory is that local police departments certainly would not keep taking public money to pay for safety programs that don't work. Except apparently they do keep taking money for this tradition, and have modest results to show for it. If you are a white driver in a white neighborhood, Chicago police almost never stop you, although the city's minority drivers have been found to be the least likely population to be driving drunk. Thanks to the statistical sleuths at the Chicago Tribune studying Illinois Department of Transportation data, we now know that police departments across Lake County also have staged hundreds of checkpoints, spent millions and have caught … almost no one. During the five years in question, Waukegan police spent $478,000 to nab 890 DUIs at the local checkpoints. That's just 12 percent of the 7,672 citations issued at those pit stops. The vast bulk of those citations are for burned out taillights, insurance lapses, unbuckled seat belts and license violations. Further, it means Waukegan police spent $537 to ring up each DUI arrest. By comparison, Gurnee spent much less, but also got a much quieter bang for the bucks. Gurnee spent $56,000 for 42 DUI arrests, which constituted 4 percent of the 935 total citations. None of the 200-plus jurisdictions studied statewide came off as models of efficiency in the statistics, but Lake County was particularly pale. The report goes on like that. Vernon Hills? It spent $2,356 for a goose egg. No DUIs, although officers there did issue four citations for other violations . . . Lake County Sheriff's Department, $7,044 for 7 DUI arrests which was 6 percent of 123 citations. South Barrington, $16,299 for 10 DUIs and 290 citations (3 percent). Fox Lake, $11,995 for 4 DUI nabs among 212 citations (2 percent). Lake Zurich, $50,988.58 for 76 DUI arrests, 11 percent of 807 citations. Grayslake/Hainesville, $37,367 for 36 DUI arrests, 7 percent of 501 tickets. Nobody did particularly well. Sobriety checkpoints have become the most intrusive and expensive-to-run minor violation gotchas in the state. This is precisely what the Supreme Court said that police departments couldn't do — use checkpoints to generate revenue. Yet report after report has shown that this is exactly how they're used. The problem is that unless a group like the ACLU files a class action suit, no driver written up for an expired license has the time, money, or interest in filing a lawsuit. It's also far from clear such a suit would be successful. So long as the local police department claims the primary purpose of the checkpoint is to catch drunk drivers, it's difficult to argue otherwise. The Supreme Court is generally reluctant to question the stated intentions of government officials, particularly in law enforcement. And so police agencies across the country continue to violate the intent of the court's ruling in 1990. And most of them do it with funding from the federal government. The other story involves an incident between the U.S. Customs and Border Protection and a young woman who, oddly enough, had aspirations of becoming an officer for that very agency. Jacob Sullum at Reason has the details: Cooke was driving from Norfolk to her boyfriend's house in Ogdensburg, the northern border of which is the St. Lawrence River. If you cross the river, you are in Canada, but Cooke was not crossing the river. She nevertheless became subject to the arbitrary orders of CBP agents by driving through one of the country's many internal immigration checkpoints . . . After presenting her driver's license, Cooke, who surely learned in college that police (and even CBP agents!) need "reasonable suspicion" to detain someone, asks why she was pulled over. "You guys have no reason to be holding me," she says. A male agent who identifies himself as a supervisor has no explanation for the detention, but he says Cooke will have to wait for a drug-sniffing dog to inspect her car. "Well, they'd better be here soon, because if not, I'm calling 911, and this can all be figured

out," Cooke says. "You guys are holding me here against my will." Eventually the female agent who first interacted with Cooke says she seemed nervous—an all-purpose excuse for detaining someone, since people tend to be nervous when confronted by armed government officials. "Why do you want to get in my trunk when you have no right to?" Cooke asks. That question also reflects a potentially disquieting familiarity with Supreme Court decisions related to traffic stops. Just last month, the Court ruled that, in the absence of reasonable suspicion, police may not extend a traffic stop for the purpose of walking a drug-sniffing dog around the vehicle. But the Court also has said that if a dog alerts to a car (or, same thing, a cop claims that the dog alerted), that is enough by itself to supply probable cause for a search, even though there are lots of reasons (including a handler's deliberate or subconscious cues) why a dog might alert to a car that contains no contraband. "If they're not here within 20 minutes, I'm gone," Cooke says. "You can leave," the male agent says. "You can walk down the road right now….Your car's not going anywhere….I'll spike the tires." Cooke and the agent eventually get into an argument about where she's supposed to stand, which ends with her on the ground writhing in pain after getting shot with a stun gun. As Sullum points out, this case is especially relevant because not only did the agents violate Cooke's Fourth Amendment rights, but also Cooke told them they were violating their rights at the time. Not only did they go ahead and detain her anyway, but also it seems likely that her insistence on asserting her rights is what got her shot with a stun gun. There's often a heightened contempt among cops for people who know and assert their rights. The more you cite Supreme Court cases to assert your right during an interaction with law enforcement, the more likely you are to wind up with your face on the pavement. (That contempt doesn't just come from cops — Sullum notes the quote from a local resident interviewed by a local paper about the Cooke incident: "If you have nothing to hide, why be a jerk? Just cooperate.") This seems perverse. **Not only do Supreme Court rulings not prevent law enforcement officials from violating our rights, but also any attempt to use the rulings to defend your rights makes it more likely that you'll get a violent reaction from law enforcement**. Cooke has a better chance of winning a lawsuit than any of those Illinois drivers hit with traffic fines at a DUI checkpoint, but her lawsuit is far from a sure thing. And again, even if she wins, it's unlikely that the agents in question will suffer any consequence. In fact, if those agents are disciplined, it will most likely be because Cooke recorded her interaction with them and was able to generate some media coverage, not because the government agency that employs them was proactively enforcing the Fourth Amendment. (As Sullum points out, the only legal action currently under consideration at present is against Cooke.) **When it comes to the Fourth Amendment, the law as it's laid out in Supreme Court opinions is often quite a bit different than the law on the ground.**

Fourth Amendment decisions fail, four reasons—too flexible, not effective, abuse, can't be enforced

Poulin 91

(Anne Bowen, January 1991, Chicago-Kent Law Review, "The Fourth Amendment: Elusive Standards, Elusive Review," Professor of Law @ Villanova University School of Law, JD from University of Maine School of Law, http://scholarship.kentlaw.iit.edu/cgi/viewcontent.cgi?article=2817&context=cklawreview, 7/26/15, SM)

The Court of Appeals for the Seventh Circuit reasons that the present framework of analysis, based on defined standards, rests on artificial distinctions and requires inappropriate pigeonholing. 7 Its new approach, concludes the court, offers precision of analysis and of fourth amendment protection. 8 Unfortunately, the new approach assaults fourth amendment protection. Claiming to seek precision, the court threatens to implement standards that reduce the effective protection against unreasonable searches and seizures. The standards adopted in Chaidez and Liaguno **are so flexible that the protection they afford will be too elusive to be effective**. Standards as flexible as those adopted in Chaidez and Liaguno present a number of problems that reduce the effectiveness of fourth amendment protection. **First, they can be expected to reduce the consistency of results. Second, such flexible standard provide a less effective guide to the "on-the-street" conduct of the police. Third, they create increased likelihood of injury to individual rights through error and abuse. Fourth and last, more flexible standards are difficult to supervise.** Judicial supervision of fourth amendment rights has always been problematic. Increasing the flexibility of the governing standards compounds the difficulty. At the same time, standard of review in fourth amendment cases is being relaxed. 9 Even under the prevailing standard of review, and certainly under a relaxed standard, the court may not ensure that such flexible standards are enforced. The court's action is particularly troublesome because it diminishes fourth amendment protection against investigative detentions less intrusive than arrests. The police-individual encounters falling in this category have a significant impact on daily life and affect the individual's sense of personal security from arbitrary government intrusion. Yet the mechanisms adopted by the Seventh Circuit for

monitoring fourth amendment intrusions are less likely than the traditional approach to be effective means of supervising such encounters.

Fourth Amendment is vague, contradictory, and shifting

Harvard Law Review 07

(April 2007, Harvard Law Review, "The Fourth Amendment's Third Way," http://www.jstor.org/stable/pdf/40042626.pdf, 7/26/15, SM)

I. Introduction: Searching for Content Scholars agree on very little concerning the Fourth Amendment, but one of the few propositions that nearly everyone accepts is the almost incomparable incoherence of its doctrine. Professor Lloyd Weinreb calls the jurisprudence **"shifting, vague, and anything but transparent**."1 Professor Akhil Amar criticizes it as "**a vast jumble of judicial pronouncements that is not merely complex and contradictory, but often perverse**."2 Professor Anthony Amsterdam politely observes that "[f**]or clarity and consistency, the law of the fourth amendment is not the Supreme Court's most successful product**."3 This Note confronts a "fundamental question about the fourth amendment" that lies beneath all of its doctrinal puzzles, namely, "what method should be used to identify the range of law enforcement practices that it governs and the abuses of those practices that it restrains."4 It does so, in particular, by examining the relationship between the Fourth Amendment and state law. This Note argues that the Amendment should be interpreted as dynamically incorporating state law, and it explains how this interpretive method injects substantive legal content into the vague constitutional text and reconciles the tension between the Amendment's two clauses.5 It contends that the dynamic incorporation method is pragmatically and normatively superior to the major alternatives while remaining justified by constitutional theory.

Hollow Hope DA

1NC

Even if the courts rule progressive, they will not and cannot enact actual social change – they will leave loopholes and lower institutions will refuse to comply – legal history analysis proves – litigation is a hollow hope

Rosenberg 5 (Dr. Gerald Rosenberg, Associate Professor of Political Science and Lecturer in Law, University of Chicago, B.A., Dartmouth College, 1976; M.A., Oxford University, 1979; J.D., 1983, University of Michigan; Ph.D., 1985, Yale University, "Courting Disaster: Looking for Change in All the Wrong Places", 54 Drake Law Review 795 (2005), http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2922&context=journal_articles) //RL

III. THE ILLUSION OF PROGRESS¶ An obvious response to the discussion of the historic role of the Court¶ as a protector of privilege is that history is not destiny. Merely because the¶ Court has acted in defense of privilege for most of its history does not¶ mean it is destined to always so act. Indeed, many people believe the role¶ of the Court fundamentally changed in the post-World War II era. The¶ Court, many claim, became a great defender of the relatively¶ disadvantaged.¶ **While history may not determine the future, structural constraints¶ limit it.** 86 That is, it is more likely than not that the Court will consistently,¶ over time, support conservative outcomes. This is the case for four main¶ reasons. First, the appointment process means that federal judges, and¶ particularly Supreme Court Justices, must be broadly acceptable.¶ Presidents are unlikely to nominate radical Progressives and the Senate is¶ even less likely to confirm such nominees. This is because Progressives¶ lack the political support that would make their appointments broadly¶ acceptable. Second, the Constitution is a conservative document. It¶ protects private control over the allocation and distribution of resources. It¶ does not provide for basic Progressive rights such as employment, health¶ care,

decent housing, adequate levels of welfare, or clean air. Third, the¶ Court is constrained from pushing too far ahead of the positions of the¶ other branches because it needs their support to implement its decisions¶ and is susceptible to sanctions. Fourth, the Court lacks the power to¶ implement its decisions. Thus, even if it overcomes the first three¶ constraints and issues an opinion that furthers the Progressive agenda, that¶ decision is unlikely to be implemented. This point is illustrated with brief¶ discussion of three important cases.¶ 86.¶ argument.¶ See ROSENBERG, supra note 4, at 9-41 for further development of this¶ [Vol. 54¶ HeinOnline -- 54 Drake L. Rev. 808 2005-2006¶ Courting Disaster¶ **A. The Victory That Wasn't: Brown v. Board of Education 87**¶ Brown v. Board of Education may be the most well-known and¶ widely celebrated case in Supreme Court history. 88 In declaring that racial¶ segregation of public schools was unconstitutional, the Court repudiated its¶ prior, pro-segregation approach to the Constitution. This was clearly for¶ the good but the question for Progressives is whether Brown made a¶ difference in ending race-based segregation in public schools in particular,¶ and racial discrimination more broadly. The answer is no.¶ **On the most straight-forward level, public schools remained¶ segregated after Brown. A decade after Brown virtually nothing had¶ changed for African-American students living in the eleven states of the¶ former Confederacy that required race-based school segregation by law.**¶ For example, in the 1963-1964 school year, barely one in one hundred¶ (1.2%) of these African-American children was educated in a nonsegregated¶ school. 89 That means that for nearly ninety-nine of every one¶ hundred African-American children in the South a decade after Brown, the¶ finding of a constitutional right changed nothing.90 Change did come to the¶ South, but that occurred only after the Congress acted-providing¶ monetary incentives for desegregation and threatening to cut off federal¶ funds if segregation was maintained. 91¶ More subtly, **there is little or no evidence that supports the claims¶ that Brown gave civil rights salience, pressed political elites to act, pricked¶ the consciences of whites, legitimated the grievances of blacks, or inspired¶ the activists of the civil rights movement**. What Brown did do was energize¶ civil rights opponents and channel resources away from building the civil¶ rights movement.92 In the wake of Brown, resistance to ending segregation¶ increased in all areas, not merely in education but also in voting,¶ transportation, and the use of public places. Brown "unleashed a wave of¶ 87. Brown v. Bd. Of Educ., 349 U.S. 294 (1954).¶ 88. For an extensive exploration of Brown's lack of efficacy, see ROSENBERG,¶ supra note 4, at 42-169.¶ 89. Gerald Rosenberg, Substituting Symbol for Substance: What Did Brown¶ Really Accomplish?, PS: POLITICAL SCIENCE & POLITIcs 205,205, Apr. 2004, at 205.¶ 90. Id.¶ 91. Id. at 205-06.¶ 92. Id. at 207.¶ 2006]¶ HeinOnline -- 54 Drake L. Rev. 809 2005-2006¶ Drake Law Review¶ **racism that reached hysterical proportions**."93 By stiffening resistance to¶ civil rights and raising fears before the activist phase of the civil rights¶ movement was in place, Brown may actually have delayed the achievement¶ of civil rights.¶ Litigation may also have delayed the achievement of civil rights by¶ channeling resources toward litigation and away from political organizing.¶ Progressive reformers always have scarce resources. There was great¶ hostility over both fundraising and tactics between the NAACP and the¶ groups that led the activist wing of the civil rights movement. As Martin¶ Luther King, Jr. complained: "to accumulate resources for legal actions¶ imposes intolerable hardships on the already overburdened. '¶ " 94¶ In sum, Brown's constitutional mandate that racial segregation in¶ public schools end confronted a culture opposed to that change. The¶ American judicial system, constrained by the need for both elite and¶ popular support, was unable to overcome this opposition.¶ B. **The Decision That Didn't: Roe v. Wade** 95¶ In many ways Roe fared better than Brown. That is, the number of¶ legal abortions increased in the years following Roe-though at a slower¶ rate-both numerically and percentage-wise, than in the years immediately¶ preceding the decision. But they did so unevenly, with abortion services¶ widely available in some states and virtually unobtainable in others. What¶ explains both the increase in the number of legal abortions and the uneven¶ availability of the constitutional right Roe proclaimed?¶ The number of legal abortions increased after Roe because there was¶ public support for legal access to abortion, and demand for the service. A¶ national abortion repeal movement was flourishing with widespread¶ support among relevant professional elites and rapidly growing public¶ support. By the eve of the Court's decisions, eighteen states had reformed¶ their restrictive abortion laws to some degree. Indeed, in 1972, the year¶ before the decision, there were nearly 600,000 legal abortions performed in¶ the U.S.96 To the extent that Roe increased women's access to legal¶ 93. Roe v. Wade, 410 U.S. 113 (1973). For an extensive exploration of Roe's¶ mixed record of efficacy, see

ROSENBERG, supra note 4, at 175-201.¶ 96. ROSENBERG, supra note 4, at 180 tbl.6.1.¶ [Vol. 54¶ HeinOnline -- 54 Drake L. Rev. 810 2005-2006¶ Courting Disaster¶ abortion it did so because a grass-roots political movement had won many¶ legislative victories and had dramatically influenced both elite and public¶ opinion.¶ On the other hand**, Roe faced the same problem as Brown-the¶ existing institutions necessary to implement the decisions (hospitals in the¶ case of abortion) refused to do so**. Indeed, the overwhelming majority of¶ both public and private, short-term, non-Catholic hospitals, have never¶ performed an abortion.97 Like public schools and desegregation, the¶ existing institutions ignored the law. **Constitutional rights were protected¶ under law, but denied in practice.** However, in Doe v. Bolton,98 the¶ companion case to Roe, the Court struck down Georgia's requirement that¶ all abortions be performed in accredited hospitals. 99 This allowed market¶ forces to meet the demand for abortion services by opening abortion¶ clinics. Pro-choice activists, feminists, and doctors, who wanted to expand¶ their practices, were relatively free to respond to the demand. Clinics could¶ and did open to implement the decision.¶ **The problem with market mechanisms is that they implement rights¶ unevenly. This is principally because they are dependent on local beliefs¶ and culture**. In places where political leaders or large segments of the¶ population oppose abortion, it is less likely that such clinics will open.¶ Thus, the availability of abortion services varies widely across the country.¶ Considering that the Court has held that women have a fundamental¶ constitutional right to obtain abortions, the drawbacks to the market¶ mechanism as a way to implement constitutional rights are important. The¶ availability of a market mechanism can help implement Court decisions,¶ but cannot guarantee them.¶ In addition to only providing limited access to legal abortion, Roe,¶ like Brown, appears to have strengthened the losers in the case-the antiabortion¶ forces-and weakened the winners. The fledgling anti-abortion¶ movement grew enormously after Roe and the pro-choice movement that¶ had been able to change laws in eighteen states collapsed. One of the¶ results of the collapse was the lack of pressure on local institutions to¶ provide abortion services. This history suggests that if Roe is overturned¶ there may be a massive mobilization of pro-choice forces. While at least¶ some states may prohibit abortion, these are likely to be states where,¶ under Roe, abortion services are virtually impossible to obtain.¶ 97. Id. at 190.¶ 98. Doe v. Bolton, 410 U.S. 179 (1973).¶ 99. Id. at 194.¶ 2006]¶ HeinOnline -- 54 Drake L. Rev. 811 2005-2006¶ Drake Law Review¶ In sum, the finding of a constitutional right to terminate a pregnancy¶ has not guaranteed access to abortion for women. It derailed the prochoice¶ movement and energized its opponents. As the executive director¶ of a Missoula, Montana, abortion clinic destroyed by arson in 1993 put it:¶ "It does no good to have the [abortion] procedure be legal if women can't¶ get it."'°¶ C. The Opinion That Backfired: Goodridge v. Department of Public¶ Health1 01¶ Goodridge, perhaps more than any other modern case, highlights the¶ folly of Progressives turning to litigation in the face of legislative hostility.¶ In Goodridge, the Supreme Judicial Court of Massachusetts held that the¶ state could not deny marriage licenses to same-sex couples. 0 This decision¶ followed an earlier decision of the Hawaii Supreme Court that the state's¶ refusal to recognize same-sex marriages, absent a compelling justification,¶ violated the state constitution's guarantee of equal protection of the laws,103¶ and a decision of the Vermont Supreme Court that essentially forced the¶ Vermont legislature to enact civil unions. 1°4¶ The result of these judicial victories has been nothing short of¶ disastrous for the right to same-sex marriage. **The people of Hawaii¶ effectively overturned their court's decision by constitutional amendment.¶** Then, in 1996, the U.S. Congress passed the so-called Defense of Marriage¶ Act denying all the federal benefits of marriage to same-sex couples.10 5¶ Many states followed suit, and as of the 2004 election, at least thirty-nine¶ states had adopted measures designed to prevent the recognition of samesex¶ marriage. 106 Even worse, there was a movement to limit marriage to¶ heterosexual couples by amending both the federal and state constitutions.¶ While a federal amendment has yet to be passed by Congress, every¶ constitutional amendment presented to state voters has been approved-in¶ 100. Gerald N. Rosenberg, The Real World of Constitutional Rights: The¶ Supreme Court and the Implementation of the Abortion Decisions, in CONTEMPLATING¶ COURTS 390, 417 (Lee Epstein ed., 1995) (quotation and emphasis omitted).¶ 101. Goodridge v. Dep't of Pub. Health, 798 N.E.2d 941 (Mass. 2003). For an¶ extensive exploration of the impact of the attempt to win the right to same-sex¶ marriage through litigation, see GERALD N. ROSENBERG, THE HOLLOW HOPE (2d. ed.¶ forthcoming 2007).¶ 102. Goodridge, 798 N.E.2d at 948.¶ 103. Baehr v. Lewin, 852 P.2d 44, 67-68 (Haw. 1993).¶ 104. Baker v. State, 744 A.2d 864, 867 (Vt. 1999).¶ 105. 28 U.S.C. § 1738C (2000).¶ 106. See, e.g., ALA. CODE § 30-1-19 (LexisNexis Supp. 2005).¶ [Vol. 54¶ HeinOnline -- 54 Drake L. Rev. 812 2005-2006¶ Courting Disaster¶ almost all cases by lopsided majorities. As 2004 came to a close, more than¶ one-third of all states, representing close to one-quarter of the American¶ population, had banned same-sex marriage by constitutional amendment.¶ With several constitutional amendments on ballots in 2006, and perhaps in¶

2008, more states are likely to join the list.¶ What happened? The answer is simple. Same-sex marriage¶ proponents had not built a successful movement that could persuade their¶ fellow citizens to support their cause and pressure political leaders to¶ change the law. Without such a movement behind them, winning these¶ court cases sparked an enormous backlash. They confused a judicial¶ pronouncement of rights with the attainment of those rights. The battle for¶ same-sex marriage would have been better served if they had never¶ brought litigation, or had lost their cases. Now, they must either convince¶ majorities in more than one-third of the states to remove the constitutional¶ prohibitions on same-sex marriage that have just been added or hope that¶ the U.S. Supreme Court will strike down prohibitions on same-sex¶ marriage as unconstitutional. This is a daunting task-one that ought not¶ to have been faced.¶ IV. **WHEN WILL THEY EVER LEARN**? RETURNING TO PAST¶ UNDERSTANDINGS¶ **The sad story of the turn to litigation by same-sex marriage¶ proponents illustrates the current Progressive failure to understand that¶ successful social change requires building social movements**. From Brown¶ to Roe to Goodridge the Progressive agenda was hijacked by a group of¶ elite, well-educated and comparatively wealthy lawyers who uncritically¶ believed that rights trump politics and that successfully arguing before¶ judges is equivalent to building and sustaining political movements.¶ **Litigation is an elite, class-based strategy for change. 107 It is premised on¶ the notion that it is easier to persuade similarly educated and wealthy¶ lawyers who happen to be judges of certain liberal principles than to¶ organize everyday citizens. That might be true but without broad citizen¶ support change will not occur.**¶ Litigation substitutes symbols for substance. The collapse of the pro-¶ 107. As Alexis de Tocqueville noted more than a century and a half ago,¶ lawyers are elitist by training. He wrote: "hidden at the bottom of a lawyer's soul one¶ finds some of the tastes and habits of an aristocracy.... [American lawyers] conceive a¶ great distaste for the behavior of the multitude and secretly scorn the government of¶ the people." ALEXIS DE TOCQUEVILLE, DEMOCRACY IN AMERICA 243 (J.P. Mayer &¶ Max Lerner eds., George Lawrence trans., Harper & Row 1966) (1848).¶ 20061¶ HeinOnline -- 54 Drake L. Rev. 813 2005-2006¶ Drake Law Review¶ choice movement after Roe is a perfect illustration as it remains the case¶ that for many women abortion services are difficult to find. Similarly, the¶ growing re-segregation of the nation's public schools is occurring at a time¶ when Brown has achieved almost mythical, symbolic status. The danger of¶ celebrating a symbol is that it can lead to a sense of self-satisfaction and¶ insensitivity to actual practice. Seen in this light, Brown is "little more than¶ an ornament, or golden cupola, built upon the roof of a structure found¶ rotting and infested, assuring the gentlefolk who only pass by without¶ entering that all is well inside. '10 8 Celebrating legal symbols encourages us¶ to look to legal solutions for political and cultural problems. Without¶ political support, court decisions will not produce social change. To¶ valorize lawyers and courts encourages reformers to litigate for social¶ change. But if political support is lacking, the effect of this vision is to limit¶ change by deflecting claims for reform away from substantive political¶ battles, where success is possible, to harmless legal ones where it is not. In¶ this way, courts play a deeply conservative ideological function in defense¶ of the status quo. When social reformers succumb to the "lure of¶ litigation" they forget that deep-seated social conflicts cannot be resolved¶ through litigation.¶ Today, there is some hope that Progressives may be turning away¶ from litigation as a strategy for change. The cause, alas, is not a re-learning¶ of historical lessons and an understanding of the limitations on courts and¶ the need for political mobilization. Rather, it is a realization that the¶ current Supreme Court is unlikely to promote progressive principles. If¶ this were the only effect of a conservative Court it would be a good thing.¶ The problem, of course, is that even if courts are limited in their ability to¶ help Progressives, they have more room to do damage. Courts are not¶ symmetrically constrained from furthering both progressive and¶ conservative change. This is because typically Progressives are asking¶ courts to require change while Conservatives are supporting the status quo.¶ Further, it is easier to dismantle Progressive programs than to create them.¶ For example, with Justice Alito replacing Justice O'Connor, affirmative¶ action plans may be found to be unconstitutional. We are now in a position¶ where courts can be an obstacle to change.¶ None of this means that law is irrelevant or that courts can never¶ further the goals of the relatively disadvantaged. For the civil rights¶ 108. Michael E. Tigar, The Supreme Court 1969 Term-Foreword: Waiver of¶ Constitutional Rights: Disquiet in the Citadel, 84 HARV. L. REV. 1, 7 (1970). Tigar¶ wrote these words specifically about the Warren Court's criminal rights decisions but¶ they are more generally applicable.¶ [Vol. 54¶ HeinOnline -- 54 Drake L. Rev. 814 2005-2006¶ Courting Disaster¶ movement, for example, courts played an important role in keeping the sitin¶ movement going, ending the Montgomery bus boycott by providing the¶ boycotters with leverage, furthering school desegregation by threatening to¶ cut off federal funds under Title VI, and upholding affirmative action¶ programs. But in each case courts were effective because a political¶ movement was supporting change. The analysis does mean that courts¶ acting alone, as in Brown or Goodridge, are structurally constrained from¶ furthering the goals of the relatively disadvantaged.¶ **As Progressives look to**

the future, they must understand that¶ American courts are not all-powerful institutions. They were designed with¶ severe limitations and placed in a political system of divided powers. To¶ rely on litigation rather than political mobilization, as difficult as it may be,¶ misunderstands both the limits of courts and the lessons of history. It¶ substitutes symbols for substance and clouds our vision with a naive and¶ romantic belief in the triumph of rights over politics. And **while romance¶ and even naivete have their charms, they are no substitute for substantive¶ change.**

Historically, the Supreme Court has not been very successful on prison reform

Rosenberg 08

(Gerald N., published September 15, 2008, University of Chicago Press, The Hollow Hope: Can Courts Bring About Social Change? Second Edition, Associate Professor of Political Science and Lecturer in Law at UChicago, Kindle Location 4219)

Changes in Prisons The results of prison litigation are not entirely clear. While one school of thought believes that the "collective result of this litigation has been nothing less than the achievement of a legal revolution within a decade" (Orland 1975, 11), the key question is whether this "legal revolution" translated into a revolution in prison conditions. The careful scholar will want to know what changes occurred and whether they can be credited to the courts. In the material that follows I suggest that change varied and that the presence of the constraints and the conditions best explains why litigation worked in some places and not in others. Overall, the consensus view is that, while some changes have been made, serious problems remain. Although litigation has sometimes succeeded in eliminating the "most severe overcrowding and the most painful and onerous conditions," the contribution of the courts has been "strictly limited" to "only" those achievements (Angelos and Jacobs 1985, 112). Improvements in prisoner health have been reported (Brakel 1986, 64), as has the lessening of the likelihood of "arbitrary abuse" (Turner 1979, 640), but prison overcrowding crowding continues to be a serious problem.6 One study of four prison reform cases concluded that while "the court orders eliminated the worst abuses and ameliorated the harshest conditions," they failed to deal with "underlying issues and problems" and "were directed more toward symptoms than causes" (Harris and Spiller 1976, 25, 26).7 As James Jacobs puts it, "there seems to be no agreement on which side is winning" (Jacobs 1980, 430).6 There are also the issues of prison construction and the expenditure of funds for the corrections system. Here, the essential argument is that courts have put prison reform on the political agenda and forced states to expend resources to correct constitutionally deficient conditions. The executive director of the American Civil Liberties Union's (ACLU) National Prison Project has argued that prison litigation "exposes the sordid conditions in our prisons to public scrutiny" (Bronstein 1984b, 324).' And Justice Brennan, writing in 1981, stated that "the courts have emerged as a critical force behind efforts to ameliorate inhumane conditions." He found it "clear that judicial intervention has been responsible, not only for remedying some of the worst abuses by direct order, but also for 'forcing' the legislative branch of government to reevaluate correction policies and to appropriate funds for upgrading penal systems" (Rhodes v. Chapman 1981, 359). Scholars who have closely examined the link between judicial action and prison construction are less sanguine (Finn 1984; Hopper 1985; Peirce 1987). Even ACLU prison litigator Bronstein has noted that "**most prison construction is not in response to law suits" but rather "in response to a real need, or at least a perceived need**" (Bronstein 1984a, 346). Similarly, studies of the effect of judicial action on expenditures have also found mixed results (Harriman and Straussman 1983; Taggart 1989). A recent study found that "judicial intervention does not ensure a budgetary response" and concluded that "spending is shaped in large measure by forces much more compelling and forceful than a single discrete event such as a court order" (Taggart 1989, 267, 268; cf. Feeley 1989). Finally, there is the issue of prison violence. Although court-ordered reform form is aimed in general at improving the treatment of prisoners, and specifically at reducing arbitrary use of force, there is some evidence suggesting that **such reform leads to an increase in prison violence**, at least in the short run. 10 Additional factors such as "changes in society" (Project 1973, 494), growing prison populations, and younger, less tractable inmates, have had an effect (Brakel 1986, 6). But overall, as a former Texas prison guard put it, "while prisoners in many institutions now have enhanced civil rights . . . they live in a lawless society at the mercy of aggressive inmates and cliques" (Marquart and Crouch 1985, 584). And by 1986, Brakel concluded that the "contemporary wisdom in corrections is that despite more than a decade of close scrutiny and mandated reforms, many prisons are less safe than they were in the pre-reform days" (Brakel 1986, 6). In sum, then, it appears that change has been uneven. Many of the worst conditions have been improved to at least minimal standards, but problems still abound. The task that remains is to explain why the change has been so uneven-why there was some change, but only some.

Courts lack implementation powers, especially in the context of prison reform

Rosenberg 08

(Gerald N., published September 15, 2008, University of Chicago Press, The Hollow Hope: Can Courts Bring About Social Change? Second Edition, Associate Professor of Political Science and Lecturer in Law at UChicago, pgs 308-309)

Lack of Implementation Power. The third constraint that must be overcome come **is the courts' lack of implementation powers.** As Bronstein points out, implementation and enforcement of prison reform decrees rests "primarily in the hands of prison officials" (Bronstein 1977, 44) who, like other professionals, do not like having their professional competence challenged. When courts issue orders requiring prison reform, many administrators see them as doing just that. The problem, of course, is not only that prison officials "often continue to fight for the status quo" (Bronstein 1977, 44), but also that courts lack the tools to insure implementation. Although this is not unusual, the less visible nature of prisons as compared to other governmental agencies which have been the targets of litigation makes implementation even more problematic. Since prison access is regulated for safety reasons, information on conditions and the progress of implementation is difficult to obtain. As Jacobs points out, "even under the best of circumstances," the court "must depend upon the institution's staff for information as to whether a decree is being followed" (Jacobs 1980, 452). The staff, of course, may be uncooperative. Indeed, when California corrections administrators were asked, in a survey, if they could "comply with court orders through changes which meet the letter of the court order, but not its spirit, and thereby frustrate the intent of the court," a whopping 87 percent said yes (Project 1973, 530). **As one administrator put it in a follow-up interview, "we can usually get around anything"** (Project 1973, 531). Administrators simply play an indispensable role in the success of prison reform. As the assistant attorney general in charge of corrections in Washington state put it, "the key to relief will be commitment by defendants to comply with the letter and the spirit of the order" (Collins 1984, 342). The necessity of support from prison administrators, and their ability to withhold that support, makes overcoming the implementation constraint particularly problematic." There is also a related issue of staff support below the top administrative level. Since it is the staff who will actually carry out any reform decree, their attitude is vitally important. Yet the staff, operating in a potentially dangerous environment, may have little interest or incentive in reforming their procedures, , **especially if the reforms are perceived as lessening their authority**. A New York study found that the typical corrections officer "opposes prison reform as a threat to ~~his~~ physical security" (New York State 1974, 17). The California correctional administrators' survey just referred to, found "many administrators" stating that the "greatest administrative challenge regarding the effect of change on the staff was having to `sell' the staff on every new policy" (Project 1973, 502). Indeed, the survey found that "staff morale is the operational factor which consistently shows the greatest negative effect" of court-ordered reform (Project 1973, 575).

2NC—Prison Specific

Courts can't produce significant prison reform—prison officials won't change without political influence

Rosenberg 08

(Gerald N., published September 15, 2008, University of Chicago Press, The Hollow Hope: Can Courts Bring About Social Change? Second Edition, Associate Professor of Political Science and Lecturer in Law at UChicago, pgs 308-309)

The second constraint on courts' ability to produce significant social reform is the need for political support. Prison re- form issues are "essentially political" (Bronstein 1977, 27, 44), and prison reform is

"highly dependent upon the political processes" (Resnick i984, 348). When political leaders are willing to act, this constraint can be over- come. When they do nothing, or oppose court decisions, little change occurs. The reasons for this are relatively straightforward. First, **unless prison officials are pushed by political leaders there is "little incentive" for them to "take the risks inherent in changing the current structure"** (Note 1979, 1067). Without the support of political leaders, prison officials lack the resources to make many changes and risk their jobs in trying. Ameliorating conditions, improving services, hiring more guards, and building more prisons all cost money, and that money can come only from the legislature and the executive branch. Thus, overcoming the lack of political support was a trickier problem, and one that reformers have not been able to solve uniformly.

Courts are generalist institutions—don't have specialties in prison reform

Garvock 05

(Heather L., Eastern Michigan University Digital Commons, "The Courts and the Politics of Prison Reform," Heather practices in the United States District Court for the Eastern District of Michigan and the United States Court of Appeals for the Sixth Circuit, JD from Wayne State University, http://commons.emich.edu/cgi/viewcontent.cgi?article=1046&context=honors, 7/26/15, SM)

However, Horowitz is quick to caution that there are also disadvantages of going to the courts, and he speaks at length about these disadvantages. He begins by arguing that the **courts are generalist institutions that are not geared toward making specialist decisions and policies**. Judges receive training in the law and the judicial process, but beyond that, they do not have a specialty. (Horowitz 25). Yet judges are required to not only process large amounts of specialized information, but they also must determine which specialized information is more accurate since judges will often hear conflicting testimony from expert witnesses who have a bias to one side or the other (Horowitz 26).

Interpreting population has the ability to distort the decision—can fail to comply or make cosmetic changes to give the appearance of compliance

Garvock 05

(Heather L., Eastern Michigan University Digital Commons, "The Courts and the Politics of Prison Reform," Heather practices in the United States District Court for the Eastern District of Michigan and the United States Court of Appeals for the Sixth Circuit, JD from Wayne State University, http://commons.emich.edu/cgi/viewcontent.cgi?article=1046&context=honors, 7/26/15, SM)

A better understanding of how Rosenberg's constraints work can be derived from the Model of Judicial Implementation and Impact outlined by Bradley Canon and Charles Johnson. Canon and Johnson explain that when a court makes a decision there are different "populations" that work at different levels of the implementation process. The population at the top is the decision maker or the court that issuing the order. Just below the decision maker is the interpreting population. Consisting primarily of judges in the lower courts, the members of the interpreting population are responsible for interpreting the decision of the higher courts and explaining what the decision means to a given case. It is up to the implementing population to carry out the decision as interpreted by a judge or other member of the implementing population. At the bottom of this model is the consuming population, which is the group for which the policy is intended to impact (Canon and Johnson 16 – 21). **At each level, the populations have the ability to distort the decision that was made by the decision maker.** Judges, as members of the interpreting population, may simply refuse to apply the decision of a higher court, avoid taking cases that would require them to apply the decisions of higher courts on procedural grounds, or use their power to interpret the meaning of the decision of a higher court as it applies to the case before them and thereby limit the application of the decision (Canon and Johnson 38 – 42). Members of the implementing population, which can include members of the

bureaucracy and the legislature, also interpret judicial decisions, and as such they may interpret a judicial decision as not applying to them. There are also times when **members of the implementing population fail to make organizational changes to comply with the decision or they make "cosmetic" changes to give the appearance of conformity with the order** (Canon and Johnson 61 – 72). The efficacy of a court decision is also affected by those who are directly impacted by decision (the consuming population) in that if members of the consuming population are unclear how a right or restriction defined by a court applies to them, then their reactions to the court order may be inconsistent with the courts' intentions (Canon and Johnson 104 – 105).

Supreme Court's attitude has been deference to prison officials—can't reverse that perception

Garvock 05

(Heather L., Eastern Michigan University Digital Commons, "The Courts and the Politics of Prison Reform," Heather practices in the United States District Court for the Eastern District of Michigan and the United States Court of Appeals for the Sixth Circuit, JD from Wayne State University, http://commons.emich.edu/cgi/viewcontent.cgi?article=1046&context=honors, 7/26/15, SM)

History of the Court Ordered Prison Reform Throughout most of the country's history, the courts used the hands – off doctrine to avoid hearing suits brought by prisoners. The Supreme Court defended the hand – off doctrine in three different ways. First, the Supreme Court wanted to avoid the separation of powers issues that their involvement could cause since the executive branch is responsible for the administration of prisons. Secondly, judges acknowledged that they were not penology experts and consequently they were not in a good position to make penal policy. Thirdly, there was fear about how judicial intervention would affect the administration of prisons (Palmer and Palmer 260). The hands of doctrine fostered a culture of extreme deference to prison officials in which prison officials were often allowed to literally get away with murder.

2NC—General

Courts don't solve—inability to hear cases about the underlying issue and decreasing public support

Rosenberg 08 (Gerald N. Rosenberg, Associate Professor of Political Science and Lecturer in Law at UChicago, The Hollow Hope 2nd edition published 2008 , Kindle location 231)

The view of courts as unable to produce significant social reform has a distinguished pedigree reaching back to the founders. Premised on the institutional structure of the American political system and the procedures and belief systems created by American law, it suggests that the conditions required for courts to produce significant social reform will seldom exist. Unpacked, packed, the Constrained Court view maintains that courts will generally not be effective producers of significant social reform for three reasons: the limited nature of constitutional rights, the lack of judicial independence, and the judiciary's inability to develop appropriate policies and its lack of powers of implementation. The Limited Nature of Rights The Constitution, and the set of beliefs that surround it, is not unbounded. Certain rights are enshrined in it and others are rejected. In economic terms, private control over the allocation and distribution of resources, the use of property, is protected (Miller 1968). "Rights" to certain minimums, mums, or equal shares of basic goods, are not. Further, judicial discretion is bound by the norms and expectations of the legal culture. These two parameters, believers in the Constrained Court view suggest, present a problem for litigators pressing the courts for significant social reform because most such litigation is based on constitutional claims that rights are being denied.; An individual or group comes into a court claiming it is being denied some benefit, fit, or protection from arbitrary and discriminatory

action, and that it is entitled to this benefit or that protection. Proponents of the Constrained Court view suggest that this has four important consequences for social reformers. First, they argue, it limits the sorts of claims that can be made, for not all social reform goals can be plausibly presented in the name of constitutional rights. For example, there are no constitutional rights to decent housing, adequate levels of welfare, or clean air, while there are constitutional rights to minimal governmental interference in the use of one's property. This may mean that "practically significant but legally irrelevant policy matters may remain beyond the purview of the court" (Note 1977, 436). Further, as Gordon (1984, 111) suggests, "the legal forms we use set limits on what we can imagine as practical outcomes." Thus, the nature of rights in the U.S. legal system, embedded in the Constitution, may constrain the courts in producing significant social reform by preventing them from hearing many claims. A second consequence from the Constrained Court perspective is that, even where claims can be made, social reformers must often argue for the establishment of a new right, or the extension of a generally accepted right to a new situation. In welfare rights litigation, for example, the Court was asked to find a constitutional right to welfare (Krislov 1973). This need to push the courts to read the Constitution in an expansive or "liberal" way creates two main difficulties. Underlying these difficulties is judicial awareness of the need for predictability in the law and the politically exposed nature of judges whose decisions go beyond the positions of electorally accountable officials. First, the Constitution, lawyers, judges, and legal academics form a dominant legal culture that at any given time accepts some rights and not others and sets limits on the interpretation and expansion of rights. Judicial discretion is bound by the beliefs and norms of this legal culture, and decisions that stray too far from them are likely to be reversed and severely criticized. Put simply, courts, and the judges that compose them, even if sympathetic to social reform form plaintiffs, may be unwilling to risk crossing this nebulous yet real boundary.' Second, and perhaps more important, is the role of precedent and what Justice Traynor calls the "continuity scripts of the law" (Traynor 1977, 11). Traynor, a justice of the California Supreme Court for twenty-five years, Chief Justice from 1964 to 1970, and known as a judge open to new ideas, wrote of the "very caution of the judicial process" (1977, 7). Arguing that "a judge must plod rather than soar," Traynor saw that the "greatest judges" proceed "at the pace of a tortoise that steadily makes advances though it carries the past on its back" (1977, 7, 6). Constrained by precedent and the beliefs of the dominant legal culture, judges, the Constrained Court view asserts, are not likely to act as crusaders. Third, supporters of the Constrained Court view note, as Scheingold (1974) points out, that to claim a right in court is to accept the procedures and obligations of the legal system. These procedures are designed, in part, to make it difficult for courts to hear certain kinds of cases. As the Council for Public Interest Law (CPIL) puts it, doctrines of standing and of class actions, the so-called political question doctrine, the need to have a live controversy, and other technical doctrines can "deter courts from deciding cases on the merits" (CPIL 1976, 355) and can result in social reform groups being unable to present their best arguments, or even have their day in court. Once in court, however, the legal process tends to dissipate significant social reform by making ing appropriate remedies unlikely. This can occur, McCann (1986, 200) points out, because policy-based litigation aimed at significant social reform is usually "disaggregate(di ... into discrete conflicts among limited actors over specific individual entitlements." Remedial decrees, it has been noted, "must not confuse what is socially or judicially desirable with what is legally required" (Special Project 1978, 855). Thus, litigation seldom deals with "underlying issues and problems" and is "directed more toward symptoms than causes" (Harris and Spiller 1976, 26). Finally, it has long been argued that framing issues in legally sound ways robs them of "political and purposive appeal" (Handler 1978, 33). In the narrow sense, the technical nature of legal argument can denude issues of emotional, widespread appeal. More broadly, there is the danger that litigation by the few will replace political action by the many and reduce the democratic nature of the American polity. James Bradley Thayer, writing in 1901, was concerned that reliance on litigation would sap the democratic process of its vitality. He warned that the "tendency of a common and easy resort" to the courts, especially in asking them to invalidate acts of the democratically accountable branches, would "dwarf the political capacity of the people" (Thayer 1901, 107). This view was echoed more recently by McCann, who found that litigation-prone activists' "legal rights approach to expanding democracy has significantly narrowed their conception of political action itself" (McCann 1986, 26). Expanding the point, McCann argued that "legal tactics not only absorb scarce resources that could be used for popular mobilization ... [but also] make it difficult to develop broadly based, multiissue grassroots roots associations of

sustained citizen allegiance" (McCann 1986, 200). For these reasons, the Constrained Court view suggests that the nature of rights in the U.S. constrains courts from being effective producers of significant social reform. Thus, Constraint I: The bounded nature of constitutional rights prevents courts from hearing or effectively acting on many significant social reform claims, and lessens the chances of popular mobilization.

Courts don't solve—lack of enforcement power

Rosenberg 08 (Gerald N. Rosenberg, Associate Professor of Political Science and Lecturer in Law at UChicago, The Hollow Hope 2nd edition published 2008 , Kindle location 266)

For courts, or any other institution, to effectively produce significant social reform, they must have the ability to develop appropriate policies and the power to implement them. This, in turn, requires a host of tools that courts, according to proponents of the Constrained Court view, lack. In particular, successful implementation requires enforcement powers. Court decisions, requiring people to act, are not self-executing. But as Hamilton pointed out two centuries ago in The Federalist Papers (1787-88), courts lack such powers. Indeed, it is for this reason more than any other that Hamilton emphasized the courts' character as the least dangerous branch. Assuaging fears that the federal courts would be a political threat, Hamilton argued in Federalist 78 that the judiciary "has no influence over either the sword or the purse; no direction either of the strength or of the wealth of the society; and can take no active resolution whatever. It may truly be said to have neither FORCE nor WILL, but merely judgment; and must ultimately depend upon the aid of the executive arm even for the efficacy of its judgments" (The Federalist Papers 1961, 465). Unlike Congress and the executive branch, Hamilton argued, the federal courts were utterly dependent on the support of the other branches and elite actors. In other words, for Court orders to be carried out, political elites, electorally accountable, must support them and act to implement them. Proponents of the Constrained Court view point to historical recognition of this structural "fact" of American political life by early Chief Justices John Jay and John Marshall, both of whom were acutely aware of the Court's limits.12 President Jackson recognized these limits, too, when he reputedly remarked about a decision with which he did not agree, "John Marshall has made his decision, now let him enforce it." More recently, the unwillingness of state authorities to follow court orders, and the need to send federal troops to Little Rock, Arkansas, to carry them out, makes the same point. Without elite support port (the federal government in this case), the Court's orders would have been frustrated. While it is clear that courts can stymie change (Paul 1960), though ultimately not prevent it (Dahl 1957; Nagel 1965; Rosenberg 1985), the Constitution, in the eyes of the Constrained Court view, appears to leave the courts few tools to insure that their decisions are carried out. If the separation of powers, and the placing of the power to enforce court decisions in the executive branch, leaves courts practically powerless to insure that their decisions are supported by elected and administrative officials, then they are heavily dependent on popular support to implement their decisions. If American citizens are aware of Court decisions, and feel duty-bound to carry them out, then Court orders will be implemented. However, proponents of the Constrained Court view point out that survey data suggest that the American public is consistently uninformed of even major Supreme Court decisions and thus not in a position to support them (Adamany 1973; Daniels 1973; Dolbeare 1967; Goldman and Jahnige 1976). If the public or political elites are not ready or willing to make changes, the most elegant legal reasoning will be for naught. This constraint may be particularly powerful with issues of significant social reform. It is likely that as courts deal with issues involving contested values, as issues of significant social reform do almost by definition, they will generate opposition. In turn, opposition may induce a withdrawal of the elite and public support crucial for implementation. Thus, proponents of the Constrained Court view suggest that the contested nature of issues of significant social reform makes it unlikely that the popular support necessary for implementation mentation will be forthcoming.

Comprehensive reform can never happen—correcting the problem at hand always is forefronted

Garvock 05

(Heather L., Eastern Michigan University Digital Commons, "The Courts and the Politics of Prison Reform," Heather practices in the United States District Court for the Eastern District of Michigan and the United States Court of Appeals for the Sixth Circuit, JD from Wayne State University, http://commons.emich.edu/cgi/viewcontent.cgi?article=1046&context=honors, 7/26/15, SM)

Horowitz also argues that the adjudication process also limits the courts effectiveness in several ways. Judicial decisions focus on creating a remedy for the right that was violated in a particular case (Horowitz 34**). The larger implications of a decisions, alternatives, and considerations of what makes good public policy take a back seat to correcting the problem at hand.** Furthermore, the facts of a given case are limits for judges and they prevent judges from implementing comprehensive reform with a single decision. These limits tend to force judicial policy to be made one small piece at a time (Horowitz 35). Horowitz also points out that the method of fact - finding makes the finding of social fact difficult - social fact being defined as "patterns of behavior on which policy must be based" (45). In the adversarial system, there are two parties, each making their best case before a judge who spends the hearing acting as mediator between these two extreme sides. At the end of the hearing the judge must make a decision after hearing two extreme sides of a story. The adversarial system is more adept at finding historical or adjudicated facts than finding what the larger implications of a policy will have, in part because there is no voice that presents a moderate or centrist point of view in the adjudication process (Horowitz 47).

Courts have no ability to ensure compliance

Garvock 05

(Heather L., Eastern Michigan University Digital Commons, "The Courts and the Politics of Prison Reform," Heather practices in the United States District Court for the Eastern District of Michigan and the United States Court of Appeals for the Sixth Circuit, JD from Wayne State University, http://commons.emich.edu/cgi/viewcontent.cgi?article=1046&context=honors, 7/26/15, SM)

The adjudication process also leaves little room of judges to review the implementation and impact of their decisions (Horowitz 51). The ability and capacity for judges to monitor how or if their orders are complied with is limited. Further complicating the issue of compliance is the fact that judges measure compliance by whether their orders are obeyed, not whether the person who is responsible for implementing the order has the ability to implement the order (Horowitz 51). Courts are especially limited in their ability to monitor the unintended consequences of compliance with their decisions. Even if a judge recognizes the unintended consequences of their decision, that judge has no way of returning to the issue unless a plaintiff files another case (Horowitz 52).

Court Stripping DA

Courts involving in national security issues leads to blowback

Chesney 9 (Robert, Prefessor at UT, "National Security Fact Deference," //rck)

This leaves the matter of secrecy. Secrecy relates to the collateral consequences inquiry in the sense that failure to maintain secrecy with respect to national security information can have extralitigation consequences for government operations—as well as for individuals or even society as a whole—ranging from the innocuous to the disastrous. Without a doubt this is a significant concern. But, again, it is not clear that deference is required in order

to address it. Preservation of secrecy is precisely the reason that the state secrets privilege exists, of course, and it also is the motive for the Classified Information Procedures Act, which establishes a process through which judges work with the parties to develop unclassified substitutes for evidence that must be withheld on secrecy grounds.222 3. Institutional Self-Preservation Judicial involvement in national security litigation, as noted at the outset, poses unusual risks for the judiciary as an institution. Such cases are more likely than most to involve claims of special, or even exclusive, executive branch authority. They are more likely than most to involve a perception—on the part of the public, the government, or judges themselves—of unusually high stakes. They are more likely than most to be in the media spotlight and hence in view of the public in a meaningful sense. These cases are, as a result of all this, especially salient as a political matter. And therein lies the danger for the courts. Because of these elements, an inappropriate judicial intervention in national security litigation is unusually likely to generate a response from the other branches or the public at large that might harm the institutional interests of the judiciary, either by undermining its prestige and authority or perhaps even by triggering some form of concrete political response. This concern traditionally finds expression through the political question doctrine, which in its prudential aspect functions to spare judges such risks. But just because a court determines that a case or an issue is justiciable does not mean that the institutional self-preservation concern has gone away or that a judge has lost sensitivity to it. National security fact deference provides a tempting opportunity for judges to accept the responsibility of adjudication while simultaneously reducing the degree of interbranch conflict and hence the risk of political blowback. We cannot expect judges to attribute deference decisions to this motivation, of course, but we must account for the possibility—even the likelihood—that such concerns will play some role.

When Congress is bypassed, they backlash and strip courts of their jurisdiction

Donald S. **Dobkin**, 20**07** (Donald S. Dobkin is a lawyer with a Master's degree in law from Northwestern University), "Court Stripping and Limitations on Judicial Review of Immigration Cases," http://cdm16501.contentdm.oclc.org/cdm/ref/collection/federal/id/30

Congressional "court stripping," or the attempt to take jurisdiction away from courts to review matters of all types, is not new. Jurisdiction-stripping proposals were advanced in Congress as early as 1830. Between 1953 and 1968, over sixty bills were introduced into Congress to restrict federal court jurisdiction over particular topics. The 1970s and 1980s saw efforts to strip the courts of jurisdiction in busing, abortion, and school-prayer cases. Sen. Jesse Helms once proposed a bill to strip the federal courts of jurisdiction to review school-prayer cases. Barry Goldwater, upon learning of the Helms bill, dismissed the proposal as the equivalent of "outlawing the Supreme Court." Congress has for years attempted to strip courts of their jurisdiction to review actions of federal law-enforcement agencies and state courts in order to reverse decisions they do not like, punish judges, or even avoid future rulings they may not like. Federal courts, which have been essential in expanding and preserving individual rights, are now being barraged by congressional attempts to strip the courts of their power to review. Congress's decisions about the courts' jurisdiction, including appellate jurisdiction, have considerable effects on their caseloads, although not always in ways that might have been anticipated. Nowhere has this trend been more apparent than in Congress's legislation in the immigration area. With the enactment of the Antiterrorism and Effective Death Penalty Act of 1996 (AEDPA) and the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), a Republican Congress and the Clinton administration fundamentally altered judicial review of immigration matters. Despite this legislation restricting judicial review, the caseload at the U.S. Court of Appeals has

risen markedly, so much so that immigration cases now comprise 18 percent of the federal appellate civil docket.

Court Stripping leads to the collapse of the judicial system

Michael J. **Gerhardt**, Summer 20**05**, " The Constitutional Limits to Court Stripping," http://law.lclark.edu/live/files/9695-gerhardtpdf

Referring to the Court's decision in Martin v. Hunter's Lessee, Justice Oliver Wendell Holmes remarked, "I do not think the United States would come to an end if we [judges] lost our power to declare an Act of Congress void. I do think the Union would be imperiled if we could not make that declaration as to the laws of the several States." Without the authority to review state court judgments on federal law recognized in Martin (and ever since), there would be no means by which to ensure uniformity and finality in the application of federal law across the United States. This would be particularly disastrous for constitutional law. Federal rights, for instance, would cease to mean the same thing in every state. States could dilute or refuse to recognize these rights without any fear of reversal; they would have no incentive to follow the same constitutional law. Indeed, many state court judges are subject to majoritarian pressure to rule against federal rights, particularly those whose enforcement would result in a diminishment of state sovereignty. The Fourteenth Amendment would amount to nothing if Congress were to leave to state courts alone the discretion to recognize and vindicate the rights guaranteed by the Fourteenth Amendment. Judicial review within the federal courts is indispensable to the uniform, resolute, and final application of federal rights protected by the Fourteenth Amendment. However, this Act, limiting jurisdiction over the Defense of Marriage Act, allows the highest courts in each of the fifty states to become the courts of last resort within the federal judicial system for interpreting, enforcing, and adjudicating certain claims under the Fifth and Fourteenth Amendments. The Act allows different state courts to reach different conclusions regarding the viability of various claims differently, without any possibility of review in a higher tribunal to resolve conflicts among the states. Thus, the Act precludes any finality and uniformity across the nation in the enforcement and interpretation of the affected rights. An equally troubling aspect of this Act is its implications for the future of judicial review. The Constitution does not allow Congress to vest jurisdiction in courts to enforce a law, but prohibit it from considering the constitutionality of the law that it is enforcing. The Task Force of the Courts Initiative of the Constitution Project unanimously concluded that "the Constitution's structure would be compromised if Congress could enact a law and immunize that law from constitutional judicial review." For instance, it would be unconstitutional for a legislature to assign the courts to enforce a criminal statute but preclude them from deciding the constitutionality of the law. It would be equally unlawful to immunize any piece of federal legislation from judicial review. If Congress could immunize its laws from the Court's power of judicial review, then Congress could use this power to insulate every piece of federal legislation from Supreme Court review. If Congress could immunize all federal laws from federal judicial review, it would eviscerate the Court's power to say what the law is with respect to the constitutionality of those laws. And, if Congress had the power to immunize all of its laws from judicial review, it is unclear why it then could not also immunize all or some state laws from judicial review by the Supreme Court. The end result would be the destruction of the Supreme Court's power of judicial review. In addition, courts must have the authority to enjoin ongoing violations of constitutional law. For example, Congress may not preclude courts from enjoining laws that violate the First Amendment's guarantee of freedom of speech. If an Article III court concludes that a federal law violates constitutional law, it would shirk its duty if it failed

to declare the inconsistency between the law and the Constitution and proceed accordingly. Proposals to exclude all federal jurisdiction would, if enacted, open the door to another, equally disastrous constitutional result—allowing Congress to command the federal courts on how they should resolve constitutional questions. In United States v. Klein, the Supreme Court declared that it seems to us that it is not an exercise of the acknowledged power of Congress to make exceptions and prescribe regulations to the appellate power . . . . What is this but to prescribe a rule for the decision of a cause in a particular way? . . . Can we do so without allowing that the legislature may prescribe rules of decision to the Judicial Department or the government in cases pending before it? We think not. . . . We must think that Congress has inadvertently passed the limit which separates the legislature from the judicial power.

Bypassing Congress through the courts leads to Court Stripping, which ravages the legal system

Ronald **Weich**, October 20**01**, "Upsetting Checks and Balances," https://www.aclu.org/sites/default/files/FilesPDFs/ACF47C9.pdf

As a practical matter, court-stripping may be self-defeating. Such legislation is typically motivated by congressional anger toward the content of certain court rulings. But removing future jurisdiction over the issue may simply serve to lock in "bad" precedent – a conundrum even some critics of so-called activist judging have acknowledged. Former Judge Bork notes that: Some state courts would inevitably consider themselves bound by the federal precedents; others, no longer subject to review, might not. The best that Congress could hope for would be lack of uniformity. This is a far cry from amending the Constitution or even overruling a case. While it may seem preferable to some to lack uniformity on a particular issue rather than to have a repugnant uniform rule, the government could not easily bear many such cases and certainly could not long endure a complete lack of uniformity in federal law. Thus there are practical limitations on excessive use of the Exceptions Clause. More troublesome is that court-stripping defeats the spirit of the Constitution. The Framers took care to create an independent judiciary to safeguard individual liberty. Removing important issues from the purview of the courts, especially those concerning the rights of unpopular minorities, is a direct assault on these constitutional protections. By the same token, Congress does great harm to the integrity of the federal judiciary when it leaves issues before the courts, but attempts to manipulate how judges may remedy violations of constitutional or statutory rights. Even scholars who believe that the Constitution allows significant congressional control of federal jurisdiction generally agree it would be unwise to invoke it over any significant category of federal law or use it to achieve a desired substantive outcome. Thus Professor Gerald Gunther, writing at the time Congress was considering court-stripping bills in the early 1980s regarding abortion, busing and school prayer, concluded "I would urge the conscientious legislator to vote against the recent jurisdiction-stripping devices because they are unwise and violate the 'spirit' of the Constitution, even though they are, in my view, within the sheer legal authority of Congress." Put another way, "[w]hat may be conceivable in theory would be devastating in practice to the real world system of checks and balances that has enabled our constitutional system to function for 200 years."

Congress can strip courts of authority; even Supreme Court agrees

Martin J. **Katz**, Summer 20**09**, " GUANTANAMO, BOUMEDIENE, AND JURISDICTION-STRIPPING**:** THE IMPERIAL PRESIDENT MEETS THE IMPERIAL COURT," http://www.law.du.edu/documents/directory/publications/Jurisd_Strip_2009_0202.pdf

A. Stripping Jurisdiction from Lower Federal Courts: The first question in the jurisdiction-stripping debate is whether Congress can restrict the jurisdiction of the lower federal courts (district courts and circuit courts) to hear a particular type of case. This question assumes that only the lower federal courts are closed - that the Supreme Court's original and appellate jurisdiction remains intact. Proponents of allowing this form of jurisdiction-stripping point to the text of Article III, which gives Congress the power to "ordain and establish" lower federal courts. The argument is that (1) the Ordain and Establish Clause gave Congress discretion over whether to create lower federal courts, and (2) if Congress could decline to create lower federal courts, then Congress can limit such courts' jurisdiction. Most commentators today seem to accept the basic idea that the Ordain and Establish Clause permits Congress to restrict or even eliminate the jurisdiction of the lower federal courts. Some of these commentators have also suggested that there might be limits on this power. For example, nearly all commentators have suggested that the "ordain and establish" power is limited by substantive provisions elsewhere in the Constitution, such as the Equal Protection Clause; so Congress could not, for example, preclude jurisdiction only over cases brought by African Americans or Catholics. [n19] Also, as noted above, most of the commentators who believe Congress has the power to limit lower federal court jurisdiction assume that some alternative court would remain open to hear the cases in question - an assumption which is likely incorrect in a case like Boumediene. But subject to these two potential limits, [n21] the "traditional view" is that Congress can exercise its "ordain and establish" power to close lower federal courts. The courts, too, [n23] seem largely to accept the "traditional view" - that Congress has the power to restrict lower federal court jurisdiction. The Supreme Court has, on at least five occasions, suggested that Congress can limit lower federal court jurisdiction pursuant to the Ordain and Establish Clause. However, none of these cases appears to have tested the potential [*384] limits on the exercise of this power. As I will discuss below, Boumediene suggests such a limit. B. Stripping the Supreme Court's Appellate Jurisdiction: The second question in the jurisdiction-stripping debate is whether Congress can strip the Supreme Court of its appellate jurisdiction. This question assumes that the lower federal courts, as well as the Supreme Court's original jurisdiction, remain open. The idea that Congress can strip the Supreme Court of its appellate jurisdiction flows primarily from the text of Article III, which gives Congress the power to make "Exceptions, and ... Regulations" to the Supreme Court's appellate jurisdiction. At least some commentators have gone beyond this simple textual argument to suggest a structural purpose underlying this textual provision: that the Framers included this language to provide [*385] Congress with a means to check the power of the Supreme Court. Most commentators accept the idea that the Exceptions Clause permits Congress to exercise such control over the Supreme Court's appellate jurisdiction. However, some notable commentators have suggested that there might be some limits on this power. For example, Professor Hart argued that Congress cannot use this power to destroy the "essential functions" of the Supreme Court, which include maintaining the supremacy and uniformity of federal law. Others have suggested that, at least in certain types of cases, Congress cannot use its Exceptions Clause power in a way that would foreclose all avenues to the Supreme Court. As with the issue of lower court jurisdiction-stripping, the Supreme Court has only occasionally weighed in on the issue of Supreme Court appellate jurisdiction-stripping. The Court has said several times that Congress can use its Exceptions Clause [*386] power to restrict the Court's appellate jurisdiction. However, in repeated dicta, the Court appears to have endorsed one limit on this power: Congress may need to leave open some avenue by which certain types of cases can be litigated in federal court (and possibly the Supreme Court). But the Court never actually struck down a law limiting its appellate jurisdiction on these grounds - until Boumediene.

Court stripping works retroactively, preventing enforcement of laws

Tom **Wicker**, 4-24-19**81**, " In The Nation: Court Stripping," http://www.nytimes.com/1981/04/24/opinion/in-the-nation-court-stripping.html

…The "Court-stripping plan" of the Mssrs. Helms, Crane et al actually goes further. Eliminating the Supreme Court's jurisdiction over whole classes of cases would mean that the Court could not even enforce rulings already made in those areas. Thus, Court-stripping would work retroactively, not just on future cases. This is not an idle threat. No one should discount Jesse Helms's power. Even in the last Congress, the Senate passed

his stripping bill on school prayer; it missed coming to the House floor by only 32 votes (on a petition to discharge it from the Judiciary Committee). In the new, more conservative Congress, and with the tacit support - so far at least - of President Reagan, that particular bill's chances of passage are ominous. So, probably, are those of stripping bills on school busing and abortion. But won't the Supreme Court itself declare such measures unconstitutional? Probably, but if by the time they reach the Court Mr. Reagan has appointed one or two new "conservative" justices, who can tell? And in the meantime, severe damage could be done to what people have thought were constitutional rights. Court-strippers make a constitutional argument, of sorts, based on Article III, Section 2, which makes Supreme Court jurisdiction subject to "such exceptions ... as the Congress shall make." They say the framers adopted this language precisely for situations where the Court might have "usurped" power or misinterpreted the Constitution. If so, nobody explained that intention in the Federalist papers or other writings of the time. Most constitutionalists, including many conservatives, believe the provision was intended for lesser "housekeeping" purposes and deny that it gives Congress authority to prevent the Court from making constitutional interpretations. Representative Robert Kastenmeier of the House Judiciary Committee points out that "to do so would make (members of Congress) the sole judges of what the Constitution is." And former Solicitor General Robert Bork of the Yale Law School says the exceptions clause would have been an "odd way for the framers to have provided for Congressional revision of Court decisions," since it would "create chaos." It would do so by leaving state court decisions on constitutional matters unreviewed by the Supreme Court. Thus, if the states ruled variously on, say, abortion, American citizens in one state could have constitutional rights not enforced in another. And any time Congress didn't like Supreme Court rulings in some area - on gun legislation, for example - it could strip the Court of jurisdiction in that field. In fact, of course, the motivation for Court-stripping is political, not constitutional. Strippers like Mr. Helms and Mr. Crane want to prohibit abortion and school busing and overturn a 17-yearold ruling of the Court on school prayer. But they fear they do not have the votes to pass a constitutional amendment on any of those issues. So they are attempting to muscle their way through a back door Congress has never before been willing to open - not when the same disingenuous arguments were made for Court-stripping during the era of McCarthyism, or when they were put forward after the landmark school desegregation case of 1954. True conservatives should be first among those opposed to this radical power grab.

Court stripping sends a signal that undermines global democracy—lack of respect for federal courts

Gerhardt 05

(Michael, Lewis & Clark Law Review, "The Constitutional Limits to Court-Stripping," http://law.lclark.edu/live/files/9695-gerhardtpdf, 7/27/15, SM)

V. CONSTITUTIONAL STRUCTURE FURTHER BARS CONGRESS FROM∂ ELIMINATING FEDERAL JURISDICTION OVER CLAIMS AGAINST∂ FEDERAL OFFICIALS∂ Another aspect of federalism, to which I have alluded, is that it is not just∂ concerned with protecting the states from federal encroachments. It also∂ protects the federal government and officials from state encroachments. In a∂ classic decision in Tarble's Case,∂ 38 the Supreme Court held that the∂ Constitution precluded state judges from adjudicating federal officials' compliance with state habeas laws. The prospect of state judges exercising∂ authority over federal officials is not consistent with the structure of the∂ Constitution. They could then direct, or impede, the exercise of federal power.∂ The Act, however, allows state courts to do this. By stripping all federal∂ jurisdiction over certain claims against federal officials, the Act leaves only∂ state courts with jurisdiction over claims brought against those officials. It∂ further leaves only to the state courts enforcement of the provisions of the Bill∂ pertaining to federal officials.39 The popular will might lead state judges to be∂ disposed to be hostile to federal claims or federal officials. Hostility to the∂ federal claims poses problems with the Fifth Amendment, while hostility to∂ federal officials poses serious federalism difficulties.∂ Beyond the constitutional defects with the Act,40 it may not be good∂ policy. **It may send the wrong signals to the American people and to people∂ around the world**. It expresses hostility to our Article III courts, in spite of their∂ special function in upholding constitutional rights and enforcing and∂ interpreting federal law**. If a branch of our government demonstrates a lack of∂ respect for federal courts, our citizens and citizens in other countries may have∂ a hard time figuring out why they should do otherwise**. Rejecting proposals to∂ exclude all federal jurisdiction or inferior court jurisdiction for some∂ constitutional claims extends an admirable tradition within Congress and∂ reminds the world of our hard-won, justifiable confidence in the special role∂ performed by Article III courts throughout our history in vindicating the rule of∂ law.

Democracy checks genocide

Mcdoom, Omar Shahabudin, 9-1-20**14**, London School of Economics, UK"Dartmouth Get It," Political Geography, Vol. 42 pg. 34-45 //MV

Second, scholars have argued regime type matters because autocracies and democracies impose different constraints on the exercise of the state's massive power (Harff, 2003, Horowitz, 1976 and Rummel, 1995). Institutionalist and normative causal logics exist. In the institutionalist explanation, autocracies are better able to commit genocide because effective power is often concentrated in a single institution (e.g. the Presidency), whereas in democracies it is often diffused across multiple institutions. In the normative explanation, democracies are less likely to commit genocide because they generally respect human rights and value tolerance, whereas autocracies, especially totalitarian regimes, generally do not. Weaker constraints give the ruling elite stronger control of the state's power. Lastly, scholarship has highlighted elite strategy because the decision to commit genocide often results from the calculation of the privileged few who control the state's power (B. A. Valentino, 2004). Genocide has for instance been considered a survival strategy or a calculated response to a threat posed to the ruling elite's control of the state's power (Figueiredo & Weingast, 1999). Extreme threats generate extreme responses. Together, these three ideas point to the importance of elite control of the state's power. This control matters not only at the national level, but at the local level too. For in localities where the extremist elite's control is weak, resistance to the pressure for violence will be high.

Court stripping kills the Court's reputation, credibility, and legitimacy

Martin 06

(Andrew D., Institutional Games and the US Supreme Court, published by the University of Virginia Press, Andrew is a professor of political science and statistics @ the University of Michigan, faculty associate at the Center for Political Studies in the Institute for Social Search, p. 12)

I begin with the benefits. Assuming that Congress does not respond adversely to a statutory interpretation decision, the Court accrues a policy benefit: it is able to read its policy preferences into law and, perhaps, fundamentally change the course of public policy. But that impact may only be transitory, because it is possible that future presidents and Congresses will amend the statue in question, thus overriding the Court's interpretation. In so doing, the other actors may render the Court's decision meaningless. In contrast, owing to the difficulty of altering them both in the short and long terms, constitutional decisions are less permeable. Accordingly, they have greater policy value to the justices because they also have a prescriptive benefit that statutory decisions do not. When the Court finds a constitutional basis, its decision does not merely hold for the particular law under analysis but also is binding on all future action. Constitutional decisions set the parameters with which the contemporaneous Congress and president—as well as their successors—must comply. ∂ But the large policy payoff in the constitutional cases. What does the ability of the President and Congress to attack through overrides or other means constitutional court decisions imply in terms of the cost of the justices bear? If an attack succeeds and the court does not back down, it effectively removes the court from the policy game and may seriously or, even **irrevocably harm its reputation, credibility, and legitimacy**. Indeed, such an attack would effectively remove the court from policy making, thus incurring an infinite cost. With no constitutional prescription for judicial review, this power is vulnerable, and would be severely damaged if congress and the president were effective in attack on the Court. But even if the attack is unsuccessful, the integrity of the court may be damaged, for the assault may compromise its ability to make future constitutional decisions and, thus, more long-lasting policy. One does not have to peer as far back as Scott v. Sandford to find examples; Bush v. Gore (2000, U.S.) may provide one. To be sure, the new President and Congress did not attack the decision, but other members of government did of course, unsuccessfully at least in terms of the ruling's impact. Yet, there seems little doubt that the critics (not to mention the decision itself) caused some major damage to the reputation of the court, the effects of which the justices may feel in the not-so-distant future.

Legitimacy is key for rule of law and implementation—that turns case

Schapiro 13

(Robert A., 8/5/13, CS Monitor, "Objection! Americans' opinion of Supreme Court can't keep dropping," http://www.csmonitor.com/Commentary/Opinion/2013/0805/Objection!-Americans-opinion-of-Supreme-Court-can-t-keep-dropping)

Public confidence in the judiciary provides a critical foundation for a society committed to the rule of law. As America's unelected justices confront controversial questions, the legitimacy of their decisions depends on public support for the institution. The court must rely on other government officials, including elected leaders and law enforcement officers, to implement its rulings. Examples around the world suggest that obedience to judicial decisions may well depend on the level of respect that the courts enjoy.

Rule of law and strong judiciaries solve war, terror, failed states, econ, effective power projection

Feldman 8

(Noah, 9/25/08, NYT, "When Judges Make Foreign Policy," http://www.nytimes.com/2008/09/28/magazine/28law-t.html, 7/28/15, SM)

Looking at today's problem through the lens of our great constitutional experiment, it emerges that there is no single, enduring answer to which way the Constitution should be oriented, inward or outward. The truth is that we have had an inward- and outward-looking Constitution by turns, depending on the needs of the country and of the world. Neither the text of the Constitution, nor the history of its interpretation, nor the deep values embedded in it justify one answer rather than the other. In the face of such ambiguity, the right question is not simply in what direction does our Constitution look, but where do we need the Constitution to look right now? Answering this requires the Supreme Court to think in terms not only of principle but also of policy: to weigh national and international interests; and to exercise fine judgment about how our Constitution functions and is perceived at home and abroad. The conservative and liberal approaches to legitimacy and the rule of law need to be supplemented with a healthy dose of real-world pragmatism. In effect, the fact that the Constitution affects our relations with the world requires the justices to have a foreign policy of their own. On the surface, it seems as if such inevitably political judgments are not the proper province of the court. If assessments of the state of the world are called for, shouldn't the court defer to the decisions of the elected president and Congress? Aren't judgments about the direction of our country the exclusive preserve of the political branches? Indeed, the Supreme Court does need to be limited to its proper role. But when it comes to our engagement with the world, that role involves taking a stand, not stepping aside. The reason for this is straightforward: **the court is in charge of interpreting the Constitution, and the Constitution plays a major role in shaping our engagement with the rest of the world**. The court therefore has no choice about whether to involve itself in the question of which direction the Constitution will face; it is now unavoidably involved. Even choosing to defer to the other branches of government amounts to a substantive stand on the question. That said, when the court exercises its own independent political judgment, it still does so in a distinctively legal way. For one thing, the court can act only through deciding the cases that happen to come before it, and the court is limited to using the facts and circumstances of those cases to shape a broader constitutional vision. The court also speaks in the idiom of law — which is to say, of regular rules that apply to everyone across the board. It cannot declare, for instance, that only this or that detainee has rights. It must hold that the same rights extend to every detainee who is similarly situated. This, too, is an effective constraint on the way the court exercises its policy judgment. Indeed, it is this very regularity that gives its decisions legitimacy as the product of judicial logic and reasoning. Why We Need More Law, More Than Ever So what do we need the Constitution to do for us now? The answer, I think, is that the Constitution must be read to help us remember that while the war on terror continues, we are also still in the midst of a period of rapid globalization. An enduring lesson of the Bush years is the extreme difficulty and cost of doing things by ourselves. We need to build and rebuild alliances — and law has historically been one of our best tools for doing so. In our present precarious situation, it would be a terrible mistake to abandon our historic position of leadership in the global spread of the rule of law. Our leadership matters for reasons both universal and national. Seen from the perspective of the world, the fragmentation of power after the cold war creates **new dangers** of disorder that need to be mitigated by the sense of regularity and predictability that only the rule of law can provide. Terrorists need to be deterred. Failed states need to be brought under the umbrella of international organizations so they can govern themselves. And economic interdependence demands coordination, so that the collapse of one does not become the collapse

of all. From a national perspective, our interest is less in the inherent value of advancing individual rights than in claiming that our allies are obligated to help us by virtue of legal commitments they have made. The Bush administration's lawyers often insisted that law was a tool of the weak, and that therefore as a strong nation we had no need to engage it. But this notion of "lawfare" as a threat to the United States is based on a misunderstanding of the very essence of how law operates. Law comes into being and is sustained not because the weak demand it but because it is a tool of the powerful — as it has been for the United States since World War II at least. The reason those with power prefer law to brute force is that it regularizes and legitimates the exercise of authority. It is easier and cheaper to get the compliance of weaker people or states by promising them rules and a fair hearing than by threatening them constantly with force. After all, if those wielding power really objected to the rule of law, they could abolish it, the way dictators and juntas have often done the world over.

Prisons Michigan 7

AT CASE

AT solvency

Even if the aff abolishes prisons, it doesn't solve the myriad of ways black people are oppressed---it's better to reject reform entirely

Shirley 14 - has been involved in a range of (anti) prison related groups for about eight years. Most recently he's been involved with a project that corresponds with prisoners and solicits and disseminates their news and analysis across North Carolina's prison system, co-authored the book Dixie Be Damned: 300 Years of Insurrection in the American South

(Neal, "Abolition and Dystopia," http://maskmagazine.com/the-alien-issue/struggle/a-few-notes-on-abolition-and-dystopia)//BB

A century and a half ago, a huge social struggle was waged over the question of slavery on this continent. Slave uprisings and mass escapes were increasingly common, and conflicts internal to the ruling class over what kinds of colonial and industrial expansion should take place added to the tension. The American Civil War was a product of the state intervening in this struggle, and it resulted in **new regimes** of bondage and control. ∂ The loophole in the 13th amendment, which abolished slavery "except as a punishment for crime whereof the party shall have been duly convicted," made this abundantly clear, and the politics of Reconstruction even more so. While occupying the former Confederacy, the Union Army itself enforced labor contracts by which Black people were often made to work for their former masters. Former slaves were evicted from lands they had taken over, industrial projects increased in number and scope, and the wage labor and convict lease systems favored by northern capitalists solved the labor problem created by the absence of slavery. Bondage was not destroyed by slavery's abolition – it was democratized.∂ Today, we witness an unprecedented renewal of the discourse of "abolition," now with the idealistic gaze firmly set upon the massive prison-industrial complex that has come to define our lives, in particular those of young men of color. This rhetorical framework, by which "radical" reforms, activism, and technological development will replace prisons and even policing, has emerged not just in the usual mish-mash of liberal and leftist scenes, but in the **very heart of the capitalist State** . Fueled by the financial collapse of 2008 and subsequent budget crises, everyone from Democratic hopefuls to right-wing judges can be heard sounding the call: We need to shrink prisons, move away from "mass incarceration," and develop "alternatives" to prison. All of a sudden, the president and his opposition all sound an awful lot like Angela Davis.∂ The vanguard of this political development is also a technological one: emergent technologies in population analytics, biometrics, genetic mapping, and computing systems suddenly make prison abolition a real possibility for 21st century state and capitalism. Take the booming technology of ankle bracelets, for example. ∂ North Carolina has tripled the use of electronic monitors since 2011. California has placed 7,500 people on GPS ankle bracelets as part of a realignment program aimed to reduce prison populations. SuperCom, an Israeli-based Smart ID and electronic monitor producer, announced in early July 2014 that they were jumping full force into the US market, predicting this will be a $6 billion-a-year global industry by 2018. The praise singers of electronic monitoring are also re-surfacing. In late June 2014, high-profile blogger Dylan Matthews posted a story on Vox Media, headlined "Prisons are terrible and there's finally a way to get rid of them." He enthusiastically argued that the most "promising" alternative "fits on an ankle."∂ The techno-utopian vision here is boundless. One pair of enthusiasts even drafted a document, "Beyond the Bars," that envisions a world where "advanced risk modeling, geospatial analytics, smartphone

technology, and principles from the study of human behavior" allow for a smartwatch to control the movement of entire populations. ∂Maybe this sounds like conspiracy theorist nonsense – like a scene from Hollywood's renewed obsession with dystopian settings – but think about all the developments we've already accepted into daily life that could make this totalizing reality possible: metal detectors at public schools, drug tests at public housing, breathalyzer machines in our cars, police body cameras, mass data collection via cell phones, GPS, halfway houses, community policing substations and permanent police checkpoints at the entrances to certain neighborhoods, city planning courses at universities, DNA mapping...The list is pretty endless, and it doesn't take a paranoid wingnut to start to understand how prisons might actually be abolished. Instead of prison being a discrete, physical place, a "state of exception" from normal life that houses only a small minority of the population, prison would become a nameless normality, something a plurality if not majority of people are interacting with, in some version, every day. Like slavery, imprisonment **would not be destroyed** – it would be **democratized**.∂ None of this goes to say that we shouldn't destroy prisons. Prison and police are the absolute enemy of all liberatory efforts in the 21st century, by desire and necessity. But we would do well not to fall into the same limitations as did slavery's critics in the antebellum United States. However broad its proponents may declare their concerns to be, prison abolitionism, in its name, scope, and vision, is primarily limited to **reforming one aspect** of domination and oppression in this society, not destroying that form of control. And it **offers the state a crucial escape route** through already existent strategies and technologies of profit, punishment, and control.∂We would do better to **reject every reform** and technological solution offered by the economy, **confront rather than accept** the gradualism of activist policy makers, and participate uncompromisingly in **active revolt** wherever it occurs. Developing our own communities of care and solidarity as we rebel against the world around us, offers the only real "alternative to prison." As a discourse, "abolition" has immediate appeal, but the fruit it will most likely bear can already be seen in the reflection of a body camera or heard in the **quiet beeping of an ankle bracelet**.

Back-end mechanisms ensure surveillance continues

Salins and Simpson, 13--Loyola University Chicago School of Law (Lauren Salins and Shepard Simpson, "Efforts to Fix a Broken System: Brown v. Plata and the Prison Overcrowding Epidemic", Loyola University Chicago Law Journal, Lexis)//emchen

C. A Glance at Proactive Reform There are two general ways in which states can proactively, instead of reactively, implement prison reform: "front-end" and "back-end" mechanisms. 253 Front-end mechanisms focus on how to keep non-violent, low-risk offenders from entering the prison system, while back-end efforts focus on how to effectively manage the rehabilitation of prior offenders and prevent them from returning to the system. 254 Front-end efforts **include the diversion** of low risk offenders by increasing reliance on **community service sanctions**, **electronic monitoring, and day reporting centers**, while reducing reliance on requirements such as pre-trial detention, three strikes laws, and habitual offender laws. 255 Back-end mechanisms involve parole eligibility, which is commonly affected by truth-in-sentencing laws, sentence or good-time credit programs, and infirmity-based release. 256

The plan fails—releasing some but not all prisoners leads to a good-bad prisoner mentality which only allows the prison nation to continue

Schenwar, 14—Truthout's editor-in-chief, board of advisors on Waging Non-Violence (Maya, excerpt from the book Locked Down, Locked Out: Why Prison Doesn't Work and How We Can

Do Better, published by Berrett-Koehler, "What if We Abolished Prisons: Can decarceration work?", Alternet, www.alternet.org/books/what-if-we-abolished-prisons)//emchen

Decarceration Nation Lillie Branch-Kennedy of Richmond, Virginia, didn't encounter the matrix of the criminal punishment system by choice. "I wish from the bottom of my heart that I never had to learn firsthand about **America's world record for mass incarceration**, and about Virginia's criminal system that targets and ensnares young black men," says Lillie, who founded the Resource Information Help for the Disadvantaged (RIHD), an advocacy group for Virginia prisoners and their families. Sixty-one percent of state prisoners are black; for every white person incarcerated in Virginia, six black people are behind bars. That number includes Lillie's son Donald. In 2001, Donald—who was attending Virginia State on a scholarship but had recently begun "running with the wrong crowd"—was arrested as an accessory to a robbery. For a crime that would ordinarily carry a sentence of 3 to 8 years, Donald was sentenced to **127**. As the summer before his junior year of college wound to an end, instead of returning to school, Donald was bussed off to prison: Wallens Ridge, a supermax in the Appalachian mountains, a steep eight-hour drive from Lillie's home. With her son caged in twenty-three-hour-a-day lockdown and her life pinned to the commute to see him, Lillie couldn't ignore the system. So she decided to take it on. In addition to coordinating transportation for prisoners' family members (providing monthly van trips to four Virginia state prisons), Lillie steered RIHD toward decarceration advocacy, traveling the state to rally family members against various manifestations of the prison-industrial complex, from "ban the box" campaigns (eliminating criminal background questions from initial employment forms) to ending mandatory-minimum sentencing to bringing back parole, which has been abolished in Virginia since 1995. Lillie's not timid about her commitment to broad-scale decarceration; she rejects a recent Virginia bill aimed at reinstating parole for people convicted of nonviolent crimes only, which entrenches a sort of "good prisoner vs. bad prisoner" mentality. "It's **unfair and discriminatory**," she says. Lillie knows that **no single group can triumph over the prison nation**—and RIHD isn't going it alone. It's part of a growing coalition of local campaigns called Nation Inside, which is sweeping the country by way of ground-level activism, Facebook, Twitter, email, blogs, "storybanks," petitions, and a multifaceted website where new efforts are continually sprouting up.

The plan can't solve the tens of millions of people subject to civil rights violations beyond the prison cell

Chin, 12— Professor of Law, University of California, Davis, School of Law (Gabriel J., 2012, "THE NEW CIVIL DEATH: RETHINKING PUNISHMENT IN THE ERA OF MASS CONVICTION", *University of Pennsylvania Law Review*)//emchen

Therefore, in addition to any incarceration or fine, you are subject to legal restrictions and limitations on your **civil rights**, conduct, employment, residence, and relationships. For the **rest of your life**, the United States and any State or locality where you travel or reside may impose, at any time, additional restrictions and limitations **they deem warranted**. Their power to do so is limited only by their reasonable discretion. They may also require you to pay the expense of these restrictions and limitations. For many people convicted of crimes, the most severe and longlasting effect of conviction is not imprisonment or fine. Rather, it is being subjected to collateral consequences involving the actual or potential loss of civil rights, parental rights, public benefits, and employment opportunities. The **magnitude** of the problem is greater than ever. The commonly used term "mass incarceration" implies that the most typical tool of the criminal justice system is imprisonment. Indeed, there are two million people in American prisons and

jails, a huge number, but one which is dwarfed by the **six-and-a-half million** or so on probation or parole and the **tens of millions** in free society with criminal records. 11 The vast majority of people who have been convicted of crimes are not currently in prison. However, because of their criminal records, they remain subject to **governmental regulation** of various aspects of their lives and concomitant imposition of benefits and burdens. People convicted of crimes are not subject to just one collateral consequence, or even a handful. Instead, hundreds and sometimes thousands of such consequences apply under federal and state constitutional provisions, statutes, administrative regulations, and ordinances.12

The affirmative is circumvented—empirics—and states and local systems of governance can fill in

Chin, 12— Professor of Law, University of California, Davis, School of Law (Gabriel J., 2012, "THE NEW CIVIL DEATH: RETHINKING PUNISHMENT IN THE ERA OF MASS CONVICTION", *University of Pennsylvania Law Review*)//emchen

Borrowing from its English forebears, the United States once had a form of punishment called civil death. Civil death extinguished most civil rights of a person convicted of a crime and largely put that person **outside the law's protection**. Civil death as an institution faded away in the middle of the twentieth century. Policymakers recognized that almost all convicted persons eventually rejoin society, and therefore, it was wise and fair to allow them to participate in society with some measure of equality. This Article proposes that civil death has **surreptitiously reemerged**. It no longer exists under that name, but effectually a new civil death is meted out to persons convicted of crimes in the form of a substantial and permanent change in legal status, operationalized by a network of collateral consequences. A person convicted of a crime, whether misdemeanor or felony,1 may be subject to disenfranchisement2 (or deportation if a noncitizen3), criminal registration and community notification requirements,4 and the ineligibility to live, work, or be present in a particular location.5 Some are not allowed to live outside of civil confinement at all.6 In addition, the person may be subject to occupational debarment7 or ineligibility to establish or maintain family relations.8 While the entire array of collateral consequences may not apply to any given person, the State is always able to add new disabilities or to extend existing limitations. As a practical matter, every criminal sentence contains the following unwritten term: The law regards you as having a "shattered character."9 Therefore, in addition to any incarceration or fine, you are subject to legal restrictions and limitations on your civil rights, conduct, employment, residence, and relationships. For the rest of your life, the United States and any State or locality where you travel or reside may impose, at any time, additional restrictions and limitations they deem warranted. Their power to do so is **limited only by their reasonable discretion**. They may also require you to pay the expense of these restrictions and limitations. For many people convicted of crimes, the most severe and longlasting effect of conviction is not imprisonment or fine. Rather, it is being subjected to collateral consequences involving the actual or potential loss of civil rights, parental rights, public benefits, and employment opportunities. The magnitude of the problem is greater than ever. The commonly used term "mass incarceration" implies that the most typical tool of the criminal justice system is imprisonment. Indeed, there are two million people in American prisons and jails, a huge number, but one which is dwarfed by the six-and-a-half million or so on probation or parole10 and the tens of millions in free society with criminal records. 11 The vast majority of people who have been convicted of crimes are not currently in prison. However, because of their criminal records, they remain subject to governmental regulation of various aspects of their lives and concomitant imposition of benefits and burdens. People convicted of crimes are not subject to just one collateral consequence, or even a handful. Instead, hundreds and sometimes thousands of such consequences apply under federal and state constitutional provisions, statutes, administrative regulations, and ordinances.12

Even if the federal government does not directly facilitate collateral punishments, society would still impose them—they're legal under the Constitution

Chin, 12— Professor of Law, University of California, Davis, School of Law (Gabriel J., 2012, "THE NEW CIVIL DEATH: RETHINKING PUNISHMENT IN THE ERA OF MASS CONVICTION", *University of Pennsylvania Law Review*)//emchen

As one Ohio court recognized in 1848, "[D]isabilities . . . imposed upon the convict" are "part of the punishment, and in many cases the most important part."13 As practically important as collateral consequences are, in a line of cases examining individual restrictions, the Court has held they are subject to extremely limited constitutional regulation. 14 Because collateral

consequences are deemed to be something other than criminal sanctions, they can generally be applied without notice from the court or defense counsel at the time of a guilty plea. 15 Moreover, new ones can be imposed retroactively after plea bargains have been made and sentences fully satisfied.16 There is a little-noticed but significant countertradition. In Weems v. United States17 and Trop v. Dulles,18 the Supreme Court found punishments cruel and unusual under the Eighth Amendment in part because of burdensome and systematic collateral consequences.19 In addition, alongside cases holding that particular collateral consequences were not punishment, other Supreme Court decisions have shaped the right to jury trial, right to counsel, and other aspects of criminal procedure in light of the fact that collateral consequences are at stake in criminal judgments. The Court's cases, then, simultaneously suggest that individual **collateral** consequences are not punishment, but that systematic loss of legal status in the form of actual or potential subjection to an interlocking system of collateral consequences is punishment. This paradox can be reconciled by understanding the degradation of a convict's legal status to be a unitary punishment, the **new civil death**. Exclusively at issue in this Article are legal consequences imposed by state action, not social stigma or status in the sense of reputation or esteem. To illustrate, that some may choose not to hire or marry a person with a criminal record is **not a collateral consequence** of conviction or a part of civil death as used here; however, **legal prohibitions** on hiring or marriage of convicted persons would be.20 In addition, the wisdom, fairness, efficiency, and justice of the new civil death are important topics, but ones beyond the scope of this Article.21 Instead, the primary goal is to show that civil death both exists and is **constitutionally significant**. This Article proceeds in three parts. Part I describes the historical punishment of civil death, its decline, and its revival in the form of a system of collateral consequences imposed by positive law based on criminal conviction. Part I also describes the lenient judicial regulation of these restrictions, which has generally found individual collateral consequences to be "civil" and "regulatory" and thus **not subject to constitutional** limits applicable to criminal punishment. Part II proposes that civil death should be constitutionally cognizable by showing that the systematic loss of legal status, subjecting an individual to numerous collateral consequences, has historically been treated as criminal punishment. In addition, the Supreme Court has frequently recognized the role of criminal convictions in imposing collateral consequences and shaped criminal procedure to account for this reality. Part III proposes a reconciliation of the Court's holdings, showing that while the Court has held that individual collateral consequences are not punishment, it has nevertheless held that systematic loss of legal status is. It also describes some of the implications of understanding a civil death loss of legal status to be an inherent element of criminal, not civil, punishment, or at least that such a loss ought to be a subject of constitutional concern.

AT solvency – cap alt caus / cap k link

Capitalism is the root cause of racism—it's how racism was originally codified into law—turns the case

Heitzeg, 15—Professor of Sociology and Critical Studies of Race and Ethnicity at St. Catherine University (Nancy A., "On the Occasion of the 50th Anniversary of the Civil Rights Act of 1964: Persistent White Supremacy, Relentless Anti-Blackness, and the Limits of the Law", Hamline Journal of Public Law & Policy, Lexis)//emchen

For this reason, in combination with the excessive over-representation of African Americans in the criminal justice system and the prison industrial complex, this analysis will largely focus on the ways in which **the law has been a tool for the oppression** of African Americans via the furtherance of white supremacy and anti-blackness in both law and practice. While race has never reflected any biological reality, it is indeed a powerful social and political construct. In the U.S. and elsewhere, it has served to delineate "whiteness" as the "unraced" norm -- the "unmarked marker" -- while hierarchically devaluing "other" racial/ethnic categories with Blackness always as the antithesis. 13 The socio-political construction of race coincides with the age of exploration, the rise of "scientific" classification schemes, and perhaps most significantly capitalism. In the United States, the solidification of racial hierarchies cannot be disentangled from the [*58] capitalist demands for "unfree" labor and expanded private property. By the late 1600s, race had been a marker for either free citizens or slave property, and colonial laws had reified this decades before the Revolutionary War. 14 The question of slavery was at the center of debates in the creation of the United States and is referenced no less than ten times. 15 By the time of the Constitutional Convention of 1787, the racial lines defining slave and free had already been rigidly drawn -- white was "free" and black was "slave" -- and the result according to Douglass was this: "assume the Constitution to be what we have briefly attempted to prove it to be, radically and essentially pro-slavery". 16 The Three-Fifths Clause, the restriction on future bans of the slave trade and limits on the possibility of emancipation through escape were all clear indications of the **significance of slavery** to the Founders. The legal enouncement of slavery in the Constitution is one of the first of many "racial sacrifice covenants" to come, where the interests of Blacks **were sacrificed for the nation**. 17 The social and constitutional construction of white as free and Black as slave has on-going political and economic ramifications. According to Harris, whiteness not only allows access to property, may be conceived of per se as "whiteness as property". 18 These property rights produce both tangible and intangible value to those who possess it; whiteness as property includes the right to profit and to exclude, even the perceived right to **kill in defense** of the borders of whiteness. 19 As Harris notes: The concept of whiteness was premised on white supremacy rather than mere difference. "White" was defined and constructed in ways that increased its value by reinforcing its exclusivity. Indeed, just as [*59] whiteness as property embraced the right to exclude, whiteness as a theoretical construct evolved for the very purpose of racial exclusion. Thus, the concept of whiteness is built on both exclusion and racial subjugation. This fact was particularly evident during the period of the most rigid racial exclusion, as whiteness signified racial privilege and took the form of status property. 20 Conversely, Blackness is defined as outside of the margins of humanity as chattel rather than persons, and defined outside of the margins of civil society. Frank Wilderson, in "The Prison Slave as Hegemonys (Silent) Scandal," describes it like this: "Blackness in America generates no categories for the chromosome of history, and no data for the categories of immigration or sovereignty. It is an experience without analog -- a past without a heritage." 21 Directly condemned by the Constitution in ways that other once excluded groups (American Indians, women, immigrants, LGBTQ) were not, Blackness as marked by slavery-- as property not person - **creates an outsider status** that makes future inclusion a daunting challenge. 22 Any doubts as to the centrality of white supremacy built on anti-blackness were erased in the case of Scot v. Sanford (1857), where a majority of the Supreme Court denied the citizenship claims of Dred Scott and went further to declare that The Missouri Compromise requirement of balance between free and slave states in the expanding United States was a violation of the due process rights of slave holders. 23 Referring to the legal status of African Americans, Justice Taney's opinion for the majority makes it painfully clear, [*60] They are not included, and were not intended to be

included, under the word 'citizens' in the Constitution, and can therefore claim none of the rights and privileges which that instrument provides for and secures to citizens of the United States. On the contrary, they were at that time considered as a subordinate and inferior class of beings, who had been subjugated by the dominant race, and, whether emancipated or not, yet remained subject to their authority, and had no rights or privileges but such as those who held the power and the Government **might choose to grant them**.. 24

AT solvency – courts fail

Courts can't solve – Jim Crow and Supreme Court rulings prove

Butler '13 (Butler, Paul D. Law Professor at Georgetown University Law School. Lawyer. Former Prosecutor. "Authentication Required." The Yale Law Journal. Yale Law School, 2013. Web. <http://site.ebrary.com.proxy.lib.umich.edu/lib/umich/reader.action?docID=10493931>.)

The two decisions diffuse the dissent that might be expected by the existence of a permanent racially defined underclass because they provide an "amusementpark version of social change." 121 In The Racial Origins of Modern Criminal Procedure, 122 Professor Michael Klarman links the development of constitutional criminal procedure to an effort by the Supreme Court to advance racial justice in the South in the era before World War II. He examines four landmark cases in which the Supreme Court held that convictions obtained in mob-dominated trials violated the Fourteenth Amendment right to due process of law, established a right to counsel in capital cases, invalidated a conviction because blacks had been intentionally excluded from the jury, and declared that the right to due process made confessions based on torture inadmissible.123 According to Klarman, "none of these rulings had a very significant direct impact on Jim Crow justice. For example, few blacks sat on southern juries as a result of Norris v. Alabama, and black defendants continued to be tortured into confessing, notwithstanding Brown v. Mississippi."124 Klarman diverges from the critique of rights, however, in his hopeful analysis of the indirect effects of the cases. He advances the possibility that these cases were "more important for their intangible effects: convincing blacks that the racial status quo was not impervious to change; educating them about their rights providing a rallying point around which to organize a protest movement; and perhaps even instructing oblivious whites as to the egregious nature of Jim Crow conditions."125 Finally, Professor William Stuntz noticed certain "perverse"126 effects of criminal procedure: as rights have expanded, things have gotten worse for accused persons. Specifically, "underfunding, overcriminalization, and oversentencing have increased as criminal procedure has expanded."127 The problem is that actors in the criminal justice system can respond to judicial declarations of rights "in ways other than obeying them."128 States reacted to Warren Court criminal procedure holdings by making the substantive criminal law more punitive, to compensate for the rights provided to accused persons. The result was that criminal cases were focused on procedure. Stuntz believes that this caused American criminal justice to "unravel."129 Rather than focus on procedural rights, the Warren Court should have used "the federal Bill of Rights . . . to advance some coherent vision of fair and equal criminal justice."130 Stuntz's critique is not so much a critique of rights as a critique of the Court's reliance on procedural rights specifically. 131 One lesson we might garner from these three commentators is that procedural rights may be especially prone to legitimate the status quo, because "fair" process masks unjust substantive outcomes and makes those outcomes seem more legitimate. In contrast, a right to a minimum wage, while it may legitimate unequal distribution of wealth, substantively improves the condition of the least well-off in material ways.

1nc squo solves – Clinton

Hillary solves the case

Brekhus 4/29 (Brekhus, Keith. Master's Degree in Sociology from the University of Missouri He holds a Master's Degree in Sociology from the University of Missouri. "Hillary Clinton Comes Out Swinging For Reform, Wants To End "Era Of Mass Incarceration"." PoliticusUSA. The Associated Press, 29 Apr. 2015. Web. <http://www.politicususa.com/2015/04/29/hillary-clinton-swinging-reform-era-mass-incarceration.html>.)

During the speech, the Democratic candidate for president spoke about Baltimore and the emergence of clear national pattern, "For yet again, the family of a young black man is grieving a life cut short. Yet again, the streets of American city are marred by violence. By shattered glass, by shouts of anger, and by shows of force. Yet again, a community is reeling. Its fault lines laid bare, and its bonds of trust and respect frayed. Yet again, brave police officers have been attacked in the line of duty. What we have seen in Baltimore should, indeed I think does, tear at our soul. From Ferguson to Staten Island to Baltimore, the patterns have become unmistakable and

undeniable." Clinton provided something of a sneak preview of her speech at a Tuesday night fundraiser in New York City. She told donors that criminal justice reform was needed, and that the nation needed to end its policy of mass incarceration for non-violent drug offenders. Her comments were greeted with enthusiastic applause. She shared her thoughts with the audience, stating: It's heartbreaking. The tragic death of another young African American man. The injuries to police officers. The burning of people's homes and small businesses. We have to restore order and security. But then we have to take a hard look as to what we need to do to reform our system. In Clinton's Wednesday address, she outlined a detailed list of reforms including requiring police officers to wear body cameras, shifting to a treatment rather than an incarceration approach to drug offenders, and increasing funding for mental health programs. Clinton also discussed racial disparities in the current justice system, where African-Americans are disproportionately searched, arrested, and convicted. She also to pointed out that when convicted, black defendants are sentenced to longer prisons sentences on average than whites convicted of the same crimes. Hillary Clinton's willingness to address the deep injustices embedded inside America's criminal justice system is refreshing, particularly against the backdrop of the Baltimore riots. Historically, the easiest path for a politician to take during civil unrest is to court "backlash voters" by talking the tough language of the"law and order" reactionary. Fortunately, rather than exploiting people's base fears to drum up votes, Clinton is opting to take the issue of criminal justice reform head on. By calling for meaningful changes to how the police departments and the courts in America operate, Hillary Clinton is signaling that she intends to shake up the law enforcement Status quo. That call for change is long overdue, and it is refreshing that a major presidential candidate intends to add her voice to the growing chorus demanding criminal justice reform.

1nc squo solves – SAFE

Federal prison reform is coming in the status quo- SAFE justice act takes out all of their offense

Jones, fellow at MIT, 6/25 [Van, fellow at the MIT media lab, political commentator, founder of the Ella Baker Center for Human Rights, which promotes criminal justice reform; Color of Change, which works for racial fairness through its one million members; Green for All, which lifts people out of poverty through green job training and job creation, and; Dream Corps Unlimited/Rebuild the Dream, which promotes innovative policy solutions, also an attorney, CNN, (2015). Opinion: Getting smart about justice - CNN.com. [online] Available at: http://www.cnn.com/2015/06/25/opinions/jones-criminal-justice-reform/ [Accessed 6 Jul. 2015]./VL

Over the past 40 years, the United States has fought the drug war in the worst way possible -- by jailing those who simply needed help with their addiction or mental illness. Meanwhile, we have targeted and disproportionately sentenced black and brown Americans, as well as those from poorer neighborhoods. And we have created a system that costs too much, imprisons too many, and does too little to truly keep us safe. Now, nearly 25% of the entire world's prison population is behind bars right here in the land of the free. The federal prison population in particular has skyrocketed, soaring more than 800% since 1980. With all this in mind, there are three reasons we should all be excited about the SAFE Justice Act. First, the act will safely and smartly reduce our prison population over time. It will refocus our prison system on those who are an immediate threat to others, not people caught in a police sweep with a small amount of marijuana. The act will also reform mandatory minimums to help snag big traffickers -- but without condemning

nonviolent offenders to long prison sentences. Instead, it will expand the use of alternative sentencing like probation, drug courts, and medical treatment for addiction or mental illness. And finally, it will help people get their lives back on track when they get home. It does all this in smart, sensible ways that have already been piloted and proven at the state level. Both red and blue states have shown that you can lower prison populations, reduce costs, and cut crime by instituting evidence-based alternatives to sentencing, giving judges more discretion, and allowing targeted releases of those who are unlikely to offend again. In short, the SAFE Justice Act will bring those who pose no danger back to their families by taking the best of state policy and implementing it at the federal level. That is how our system should work. Second, the act offers a chance at comprehensive justice reform legislation. The reality is that our system of mass incarceration is simply too interconnected and complex to fix piecemeal. It makes little sense, for example, to send people home from prison without changing the way the "felon" label marks them for life -- preventing them from voting, getting jobs, or even having roofs over their heads. Reforming re-entry into the community without revising mandatory minimums for nonviolent drug crimes leaves too many in jail for far too long -- far longer than other advanced nations. Reinvent prisons without transforming policing and sentencing, and you simply replace one generation of the needlessly jailed with another. There are a number of good bills that have been introduced in the Senate that do in fact accomplish pieces of what the SAFE Justice Act does. But to reform an interlocking and tightly woven system, we need comprehensive fixes like this one. Finally, the SAFE Justice Act presents a chance for bipartisan justice reform. Both parties created this mess. Both parties must fix it. Richard Nixon may have declared the war on drugs, and Ronald Reagan may have turned it into a war on the impoverished, but Bill Clinton also helped create today's mass incarceration nightmare. Republicans control both houses of Congress, meaning nothing will move without bipartisan support. Indeed, in the real world, there is no functional difference between holding out for justice reform with no Republicans involved and opposing reform altogether. It is time to come together, because suffering families do not have the luxury of waiting for ideological purity. In states across the nation, leaders have taken a deep breath, stepped across the aisle, implemented serious reforms -- and it has worked. In fact, a range of existing justice reform legislation in the U.S. Senate has bipartisan co-sponsors. Criminal justice is one of the few issues where right and left agree, most recently demonstrated by a huge Bipartisan Summit on Criminal Justice Reform in Washington. That potential is coming together in a big way. Can such promise be fulfilled? I believe there is nobody more trusted to fix the prison system than Bobby Scott. And there is nobody more committed to cheaper, more effective government than Jim Sensenbrenner. If these two men can work together, then so can everyone else.

Solves the aff- this is the largest reform bill in history

Lind 6/25 [Dara, The House may be ready for major, bipartisan criminal justice reforms. [online] Vox. Available at: http://www.vox.com/2015/6/25/8846673/safe-justice-act [Accessed 7 Jul. 2015]./VL

The Safe Justice Act is a collection of dozens of different reforms. Most of them aren't terribly big on their own, but many of them overlap. That makes it really hard to estimate exactly how much the federal prison population would shrink if the bill became law. But its effect would be bigger than anything that's been introduced in Congress so far. Many of the reforms would cut sentences for drug crimes — which reflects a growing consensus that nonviolent drug offenses aren't as bad as violent crimes. Drug prisoners are about half of all federal prisoners (unlike in

states, where violent crime is the biggest cause of incarceration). That means that many of the Safe Justice Act's biggest reforms would target the largest slice of the federal population.

Will pass- incredible amount of bipartisan support from both groups and politicians

Erbentraut 6/26 [Joseph, The Huffington Post, (2015). Bipartisan Criminal Justice Reform Bill Could Cut Crime, Reduce Recidivism And Save Money. [online] Available at: http://www.huffingtonpost.com/2015/06/26/safe-justice-act-criminal-justice-reform_n_7665430.html [Accessed 7 Jul. 2015]./VL

The legislation, titled the Safe, Accountable, Fair, Effective (SAFE) Justice Act, is the outcome of the congressmen's work leading the House Judiciary Committee's Over-criminalization Task Force, which heard testimony from criminal justice experts over the past year and a half, according to a joint news release issued by Scott and Sensenbrenner's offices. The bill, H.R.2944, would apply at the federal level lessons from successful state efforts to reduce recidivism and decrease the number of non-violent inmates in prisons. The bill already boasts 20 additional co-sponsors, including 10 Republicans and 10 Democrats. "We cannot allow our criminal justice system to remain on its current trajectory," Sensenbrenner said in a statement. "It's not only fiscally unsustainable, but morally irresponsible." The comprehensive legislation proposes a broad set of reforms to the U.S. justice system, including increasing the use of sentencing alternatives such as probation for lower-level, non-violent offenders; encouraging judicial districts to operate mental health, veteran and other problem-solving courts; and prioritizing prison space for violent and "career" criminals by expanding the release of geriatric and terminally ill offenders. In addition, the bill would expand earned-time policies to more inmates who participate in programs to reduce their recidivism risk; introduce mental health and de-escalation training programs for prison staff; and require performance-based contracting for halfway houses, among a number of other reforms. The legislation has the support of groups including the NAACP, the Police Foundation, the American Civil Liberties Union, the American Conservative Union and Families Against Mandatory Minimums.

2nc squo solves – SAFE Will Pass

Will pass- top shelf

Harper 6/27 [Casey, The Daily Caller. 2015. 'Congress Set To Take On Criminal Justice Reform This Year'. Accessed July 8 2015. http://dailycaller.com/2015/06/27/congress-set-to-take-on-criminal-justice-reform-this-year//VL

Mark Holden, general counsel and senior vice president at Koch Industries, told The Daily Caller News Foundation Friday that although it's still up in the air, in his conversations congressmen tell him they're optimistic it could pass this year. He agrees, hoping to "strike while the iron is hot." A key provision in the bill would make it more difficult for agencies to create regulations with criminal penalties, and those regulations would sunset after five years if not renewed. "That's the problem," Holden told TheDCNF. "We've decided we want to make criminal a lot of things that aren't criminal, and it's a huge cost, human, societal, fiscal, all around, so yeah I think if that could happen that would be great for everybody. That's a major part of the bill, the reversal of this trend of overcriminalization particularly by regulatory agencies." The bill is expected to significantly shrink the prison population, partially by treating drug criminals much differently than violent and sex criminals. Some drug criminals would have opportunities to have their sentences reduced by going through programs set up for them. "The federal system is really a

dinosaur in the way that it relies almost entirely on prison, and lots of it, to address drug crime," Molly Gill, government affairs counsel for Families Against Mandatory Minimums, told TheDCNF. "The states are much more innovative and recognize that prison is both an expensive and ineffective solution to drug crime." The bill has bipartisan support from 10 Republican original sponsors and 10 Democrat original sponsors, as well as groups as diverse as Koch and the American Civil Liberties Union. "I think there are some great bills in the Senate. but there has been a bunch of them and there isn't one in the way that this one feels like it's a vehicle where they can get all of these different organizations and all of their networks and all of their money and partnerships that exist outside of the house to push this as a vehicle," Matt Haney, director of policy for the criminal justice reform group Cut50, told TheDCNF. Growing discontentment with the criminal justice system has been fueled by a plethora of police brutality cases, a growing resentment toward the drug war, and the financial strain put on states that can no longer afford to house their burgeoning prison populations. "I live in the district where Freddie Gray lived," Rep. Elijah Cummings said in a press conference Thursday. "I live within a few blocks of where he died, and…our country is better than this. What we are doing absolutely no sense. I don't know that the stars will align this way, the way I've got these folks in the room…I don't know whether they will align this way in my lifetime, at least my political lifetime, so lets take advantage of this."

Will pass- assumes gridlock and conservative leadership

Lind 6/25 [Dara, The House may be ready for major, bipartisan criminal justice reforms. [online] Vox. Available at: http://www.vox.com/2015/6/25/8846673/safe-justice-act [Accessed 7 Jul. 2015]./VL

In the year 2015, it is extremely hard to get any sort of bill through Congress. And Sensenbrenner, Scott, and their fellow reformers have a narrow window before the presidential campaign saps Congress of any will to act it has left. So the barriers are pretty high. But this isn't, in itself, supposed to be a polarizing bill. The presence of Sensenbrenner and other old-school Republicans reflects that. And this is something that both houses of Congress have been debating for some time. If House leadership decides to snatch up the Safe Justice Act and bring it to the floor quickly, it might give the Senate enough time to act. Maybe they'll be interested in the provisions that would make it a little harder for the federal government to treat regulatory violations as crimes; that's a pet cause of conservatives, even those who aren't otherwise committed to reforming criminal justice). Still, House leadership might not be interested. But this is the broadest bill that's been introduced during the current wave of criminal justice reform, and it's a marker of just how much consensus there is among reformers in both parties when it comes to reducing federal incarceration.

Will pass: Bipartisan and especially supported by conservatives

Gingrich, Former House Speaker, and Nolan 6/25 [NEWT GINGRICH [Speaker of the House 95-99, House Minority Whip 89-95], PAT NOLAN: How to fix the federal prison system. [online] The Washingtion Times. Available at: http://www.washingtontimes.com/news/2015/jun/25/newt-gingrich-pat-nolan-how-to-fix-the-federal-pri/?page=all [Accessed 5 Jul. 2015]./VL

Of all the hot-button issues that divided conservatives and liberals over the past generation, few sparked more heated debate than crime and punishment. In the past decade, however, that has changed. In a remarkable political turnaround, criminal justice reform has emerged as a rare area

of bipartisan agreement in an otherwise sharply divided Congress. We are delighted that both parties are working together to find solutions to the crisis in our justice system. And we are particularly proud that conservatives have taken a leadership role in the effort. On Thursday, Rep. Jim Sensenbrenner, Wisconsin Republican, and Rep. Bobby Scott, Virginia Democrat, introduced the Safe, Accountable, Fair and Effective Justice Act of 2015 (SAFE), a bill that reforms the criminal justice system from top to bottom. The bill applies lessons learned in the states, and combines many of the best features of congressional proposals on justice reform from the last few years. These reforms come none too soon. Our federal prisons are in crisis, and expanding at a rapid pace. Between 1980 and 2013, the federal incarceration rate jumped 518 percent as we sent more people to prison and kept them there longer.

Even "tough-on-crime/old-school" conservatives support it

Lind 6/25 [Dara, The House may be ready for major, bipartisan criminal justice reforms. [online] Vox. Available at: http://www.vox.com/2015/6/25/8846673/safe-justice-act [Accessed 7 Jul. 2015]./VL

The bipartisan movement for criminal justice reform has been growing and gaining momentum for nearly a decade, with dozens of states cutting prison sentences and adopting "data-driven" rehabilitation policies. Now a group of members of the House of Representatives is trying to get Congress to follow the states' lead, with a bill called the Safe Justice Act — which bundles together a lot of relatively small reforms into a package that could reduce the federal prison population significantly. Over the past couple of years, momentum on criminal justice reform has been in the Senate, which has considered bills such as the Smarter Sentencing Act (to cut congressionally mandated minimum sentences) and the Corrections Act (to allow some inmates to earn time off their sentences while in prison). The Safe Justice Act is bigger than either of those bills — it includes variations on both of them, as well as a lot of other things — but it's also a little more politically cautious. And criminal justice reformers on both the left and the right are extremely excited about it. While Senate efforts at criminal justice reform have exposed a generational split in the Republican Party, in which young reformers like Senators Mike Lee and Rand Paul face off against old-school, tough-on-crime conservatives like Senators Chuck Grassley and Jeff Sessions, the House's bill was written by one of those old-school Republicans — Rep. James Sensenbrenner of Wisconsin — as well as Rep. Bobby Scott (D-VA). Sensenbrenner and Scott think of the Safe Justice Act as a federal version of the criminal justice reform bills that have been taken up in state after state over the past several years, many of them under the mottos of "justice reinvestment" and "smart on crime." In their minds, they're building on what's worked in the states and are in line with reformers' emphasis on "data-driven" and "evidence-based" criminal justice policymaking.

2nc squo solves – SAFE Solvency

Solves the aff- empirics/research

Bobby Scott Media Center 6/25 [2015, Safe, Accountable, Fair, and Effective (SAFE) Justice Act of 2015, Two-page Summary. Accessed 8 July 2015. http://bobbyscott.house.gov/media-center/press-releases/sensenbrenner-scott-introduce-bipartisan-state-tested-criminal-justice/VL

The SAFE Justice Act, like the comprehensive corrections reforms enacted in many states, draws from the large and growing body of research about what works to reduce recidivism, including the following principles:

To deter offending, use swift and certain responses – Research demonstrates that delayed, unpredictable, and severe responses are less effective than swift, certain, and fair sanctions. Swift and certain responses—both punishments and rewards—are more effective because they help offenders see the response as a direct consequence of their behavior and because offenders heavily discount uncertain and distant responses.

States that have implemented swift and certain responses include Washington, Georgia, and West Virginia.

Earned time policies can reduce recidivism – Research demonstrates that rewards and incentives can work to change offending behavior and reduce recidivism. The benefits of earned time policies for inmates and earned compliance credits for offenders under probation or post-release supervision include lower costs (through accelerated release) and lower recidivism (by shifting correctional resources to those offenders who continue to violate rules and break laws).

States that have built earned time into their prison systems include Kentucky, Maryland, and Louisiana. States that have built earned time into their supervision systems include South Dakota, Mississippi, and Arkansas.

For drug offenders, sentence strategically – The most vicious, predatory and high-level drug offenders warrant prison cells to avert the harm they cause to individuals and communities, but research shows that long terms of incarceration for the vast majority of mid-level couriers, distributors and dealers has little impact on public safety. While imprisonment may temporarily disrupt a drug market, the "replacement effect"—whereby new recruits quickly replace those imprisoned for mid-level roles—negates the impact of incarceration on drug price, availability, or related crime. Instead, prison time should be focused on violent or kingpin drug traffickers who are controlling the marketplace.

States that have recalibrated their drug sentencing systems to differentiate higher-level from lower-level offenders include South Dakota, Georgia, and South Carolina.

Focus on high-risk offenders – For many lower-level offenders, especially those whose criminal conduct is driven largely by substance abuse, alternatives like drug and mental health courts,

treatment programs, and intensive supervision both hold offenders accountable and work better to reduce recidivism. In fact, research suggests that for many lower-risk and less serious offenders a prison sentence may actually be responsible for an increase in recidivism by encouraging anti-social ties and breaking bonds at home.

Solves the aff- mandatory minimums and reforms drug laws

Lind 6/25 [Dara, The House may be ready for major, bipartisan criminal justice reforms. [online] Vox. Available at: http://www.vox.com/2015/6/25/8846673/safe-justice-act [Accessed 6 Jul. 2015]./VL

Most changes to prison sentences in Congress have focused on cutting mandatory minimum sentences, which force judges to sentence people to five, 10, or 20 years for certain drug crimes. But across-the-board cuts to mandatory minimums have been met with serious resistance from old-school Republicans, including Senate Judiciary Chair Chuck Grassley (R-IA). The House's solution, via the Safe Justice Act, isn't to reduce the mandatory minimums themselves — but to narrow the range of people who they apply to. Instead of someone who's convicted of trafficking a certain amount of cocaine being automatically sentenced to 10 years, for example, he'd only trigger the 10-year minimum if he were also a leader or organizer of an organization of five or more people. And even then, the bill says that judges can override the mandatory minimum if the defendant doesn't have much of a criminal history, or has a serious drug problem. The bill would also make it possible for more people to be sentenced to probation instead of getting sent to prison. It would allow drug offenders to get probation if they'd been convicted of low-level drug crimes before. It would encourage judges to give probation to first-time low-level offenders. And it would encourage districts to start up drug courts and other "problem-solving courts"; some states have found these are better ways to treat some addicts than prison is. This gives judges a lot more authority to determine how much prison time someone actually needs to serve, given the particulars of his case — or whether he needs something else entirely. Prisoners could get 33 percent off their prison terms for participating in programming Current prisoners whose sentences would have been affected by the bill's front-end reforms could apply to get their sentences reduced that way. But the Safe Justice Act would also give them another way to reduce their sentences: by getting time off for rehabilitation. Under the bill, every federal prisoner would get an individual case plan, based on what particular prison education, work, substance abuse, or other programs are the best fit for his needs. For every month a prisoner follows the case plan, he'd get 10 days off his prison sentence — meaning a prisoner with a perfect behavior record could get his sentence reduced by a third. (Prisoners serving time for homicide, terrorism, or sex crimes aren't eligible for time off, but that's a very small slice of the federal prison population.) The logic is that prisoners who want to rehabilitate themselves, and whose good behavior shows they're succeeding, shouldn't be forced to spend extra time in prison just for prison's sake. The bill goes even further when it comes to probation — which affects many more people than prison. For every month of perfect behavior on probation, the offender would get 30 days off the end of his sentence — essentially cutting the probation term in half. If the offender violated probation, on the other hand, there would be a set of gradually escalating punishments, instead of an automatic ticket back to prison.

Solves the aff and avoids the violent offenders DA

Romero, Executive Director of the ACLU, and Holden, general counsel of Koch Industries, 7/7 [Anthony and Mark, POLITICO Magazine. 2015. 'A New Beginning

For Criminal Justice Reform'. Accessed July 8 2015. http://www.politico.com/magazine/story/2015/07/a-new-beginning-for-criminal-justice-reform-119822.html./VL

First, it begins the process of reversing over-criminalization and the over-federalization of the criminal code. The act forces the federal government to disclose the creation of new criminal offenses — a common-sense action that would clarify just how large the criminal code is and how fast it has grown. It also empowers the victims of federal over-criminalization to seek redress via the Office of the Inspector General. It also contains various reforms to protect against wrongful conviction, reduce pre-trial detentions, and eliminate federal criminal penalties in state jurisdictions, including penalties for actions such as drug possession. Second, it would reform sentencing. Today, mandatory minimums force too many people to plea to lengthy prison sentences — punishments that may not fit the crime. The act seeks to undo this broken system by encouraging judges to offer probation to low-level offenders, while increasing pre-judgment probation. It also would restrict mandatory minimums to specific categories of people — such as high-level members of drug-trafficking organizations rather than street dealers — as originally intended by Congress. Third, it would reduce recidivism. Too often, the criminal justice system's flaws turn federal prisons into revolving doors for repeat offenders. The legislation proposes to address this problem with a number of reforms, including shorter sentences for people who participate in specific educational and vocational programs. These reforms can ensure that people who leave federal prison are better equipped to rejoin their communities and contribute to society. Fourth, it would increase transparency. The bill would require that federal agencies issue regular reports on recidivism rates, prison populations and other key statistics. It also would require that cost analyses be presented to judges prior to sentencing to help them make prudent decisions.

STATES CP

1nc

All 50 states and localities should model New York, New Jersey, and California's decarceration programs:

-----Modify mandatory minimum and truth-in sentencing laws

-----Reform Laws with racially disparate impacts

-----Increase alternatives for juvenile sentencing

-----Reclassify low-level felonies to misdemeanors

-----Remove post-incarceration collateral consequences

Porter, Director of Advocacy at the Innocence Project, '15 [Nicole, former director of the Texas ACLU's Prison & Jail Accountability Project, February 2015, 'The State of Sentencing 2014.' Pg. 13. Accessed 6 July 2015. http://www.sentencingproject.org/detail/publication.cfm?publication_id=583&id=106/VL

During 2014, lawmakers enacted a number of legislative changes to improve criminal justice policy. While the pace has accelerated in recent years, most of these measures will have only a modest impact on the scale of incarceration. It will take more far-reaching measures to markedly reduce the nation's rate of incarceration, which is far above that in other western nations. Given the limited impact of incarceration on crime, there is potential for significant reductions in state prison population. A recent analysis by The Sentencing Project documented prison population declines of 25% in three states -- New York, New Jersey, and California – and found that crime declines in these states generally mirrored or exceeded national declines. Individual circumstances vary by state, but lawmakers should be guided by reforms demonstrated to substantially reduce state prison populations.

The declining prison populations of California, New York, and New Jersey were not simply the result of falling crime rates; rather, prisons were downsized through a mix of policy and practice changes designed to reduce admissions to prison and lengths of stay. Key reforms that contributed to these prison population declines included:

• California's dramatic prison population reduction was primarily driven by the state's effort to comply with a court order to deal with prison overcrowding, including enacting legislative reforms for the state's Realignment plan.

• New York's changes in policy and practice that largely affected enforcement and sentencing for drug offenses in New York City.

• New Jersey officials downsized the state's prison population through a mix of front-end reforms that lowered the number of admissions and back-end reforms that increased rates of parole and reduced parole revocations.

The reality that states have authorized law changes with the intent of lowering prison populations offers a continued opening to address the nation's scale of incarceration. Revising the policy and

practice that has resulted in the largest prison population in the world offers an opportunity to broaden approaches to public safety. These include:

Mandatory sentences and truth-in-sentencing laws that limit parole have not only put more individuals in costly prison cells for longer stretches but have also reduced the discretion of officials to release them on parole. In 2014, several states changed statutory penalties for certain offenses: California reclassified six low level drug and property offenses, eliminating prison as a sentencing option; Florida lawmakers eliminated the mandatory minimum for simple possession of certain illegal prescription drug offenses, and Mississippi legislators modified truth-in-sentencing requirements for persons with violent offenses.

Lawmakers can use their capacity to address sentencing policies known to result in racial disparities. During 2014, California lawmakers targeted statutory penalties found to have a racially disparate impact by equalizing quantity triggers for intent-to-sell powder and crack cocaine offenses. In recent years lawmakers in Missouri, Ohio, and South Carolina have enacted similar measures. Statutory remedies to address racial disparity should also include those such as the Illinois law that repealed a 20 year old statute that required the automatic transfer of 15 and 16 year olds accused of certain drug offenses within 1,000 feet of a school or public housing. The law was found to be racially biased, unnecessary, and unfair, resulting in youth of color comprising 99% of those automatically transferred to adult court.

Officials have worked to reduce the number of juveniles in secure detention by increasing reliance on alternatives like non-secure shelters for youth who can't safely return home, evening reporting centers, and expanded used of evidence-based treatment programs. During 2014, lawmakers in Hawaii and Kentucky enacted comprehensive juvenile justice reforms that included reducing out-of-home placements and prioritizing therapeutic interventions.

In many instances persons with prior criminal records experience stigma long after their conviction. Collateral consequences of a criminal conviction include bans on voting, employment, and housing. During 2014 several states adopted policies to address these issues, including California and Missouri modifying the implementation of the federal felony drug ban. A salient collateral consequence reform was included in California's Proposition 47, a measure that allows for the retroactive reclassification of felony offenses to misdemeanors, removing the civil sanctions associated with felony convictions.

2nc states key

States incarcerate the most inmates in the US

Mitchell, Policy Analyst, and Leachman, Director of State Fiscal Research, '14 [Michael [State Policy Fellow for the Washington State Budget & Policy Center] and Michael [policy analyst for nine years at the Oregon Center for Public Policy (OCPP), community organizer in Chicago] 10/28/14, Center on Budget and Policy Priorities, 'Changing Priorities: State Criminal Justice Reforms And Investments In Education | Center On Budget And Policy Priorities'. Accessed July 7 2015. http://www.cbpp.org/research/changing-priorities-state-criminal-justice-reforms-and-investments-in-education.

State corrections systems incarcerate the vast majority of prisoners in the United States. State prisons account for 87 percent of the total prisoner population, with the remaining 13 percent under federal jurisdiction.[2] When one considers the broader population of incarcerated people --

that is, including inmates in local jails either awaiting sentence or serving a term of less than one year -- state prisons account for just under 60 percent of all people behind bars at any given point in time.[3]

State and local reform solves better than the aff does

Guo '15 [Jeff, Reporter, 2/23/15, 'John Legend Is Right: Prisons Are Disproportionately Black. The Worst States Are Some Of The Whitest.'. Washington Post. Accessed July 7 2015. http://www.washingtonpost.com/blogs/govbeat/wp/2015/02/23/john-legend-is-right-prisons-are-disproportionately-black-the-worst-states-are-some-of-the-whitest/.

The American prison system is largely the domain of the states. At any given time, far more people are in state prison or local jails than in federal prison. According to the 2010 Census, only about 11 percent of people behind bars were in federal lockup. (This includes people in detention awaiting trial.) At the federal level, only about 7 percent of convicted prisoners were guilty of a violent crime, while over half are there on drug charges. At the state level, the proportions are reversed. Just over half of people are locked up for violent crimes, while 19 percent are there for property crimes — theft, fraud, etc. — and 16 percent for drug crimes. (These numbers are from a Bureau of Justice Statistics report, which goes on to break down the populations by race.) To put it in perspective, that is still about 46 percent of state prisoners who are behind bars for non-violent crimes. With many states struggling with overcrowding in their prisons, governors across the country are looking for ways to lower their incarceration rates, starting with the large populations of non-violent offenders.

The number of people in state and local jails vastly outnumbers federal prison

The Economist 6/20 [The right choices. [online] Available at: http://www.economist.com/news/briefing/21654578-americas-bloated-prison-system-has-stopped-growing-now-it-must-shrink-right-choices [Accessed 6 Jul. 2015]./VL

No country in the world imprisons as many people as America does, or for so long. Across the array of state and federal prisons, local jails and immigration detention centres, some 2.3m people are locked up at any one time. America, with less than 5% of the world's population, accounts for around 25% of the world's prisoners. The system is particularly punishing towards black people and Hispanics, who are imprisoned at six times and twice the rates of whites respectively. A third of young black men can expect to be incarcerated at some point in their lives. The system is riddled with drugs, abuse and violence. Its cost to the American taxpayer is about $34,000 per inmate per year; the total bill is around $80 billion. Things were not always this way. In 1970 America's state and federal prisons together held just under 200,000 inmates. In 2013, the latest year for which figures are available, the number of people in federal prisons, which hold only people convicted of federal crimes such as drug-smuggling or fraud, was itself more than 200,000 (see chart). There were almost 1.4m more inmates in state prisons; and there were over 700,000 people locked up in jails, some of them serving short sentences, the majority of them awaiting trial. Most of the inmates were men, but at 113 per 100,000 the incarceration rate of black women is higher than the overall incarceration rate in France or Germany. Prison conditions are often poor; many of those locked up have no proper access to training, education or rehabilitation.

State and local prisons make up over 80% of the prison population

Wagner, is an attorney and the Executive Director of the Prison Policy Initiative, 28 May **2014**

(Peter, “Tracking State Prison Growth in 50 States”, pg 1, http://www.prisonpolicy.org/reports/overtime.html)

Most (57%) people incarcerated in the United States have been convicted of violating state law and are imprisoned in a state prison. Another 30% are confined in local jails — which are outside the scope of this briefing — generally either for minor violations of state law or because they are waiting to be tried for charges of violating state law**. Federal-level policy directly accounts for only the 10% of people behind bars in the U.S.;** they have either been convicted of violating a federal law or are being detained by the immigration authorities and are awaiting potential deportation to another country. In the aggregate, these state-level policy choices have been the largest driver of our unprecedented national experiment with mass incarceration, but not every state has contributed equally or consistently to this phenomenon. In the U.S., each state is responsible for making its own policy choices about which people to lock up and how for long. **We can’t end our nation’s experiment with mass incarceration without grappling with the wide variety of state-level criminal justice policies, practices and trends.**

The counterplan solves 7 times better than the aff

No country in the world imprisons as many people as America does, or for so long. Across the array of state and federal prisons, local jails and immigration detention centres, some 2.3m people are locked up at any one time. America, with less than 5% of the world’s population, accounts for around 25% of the world’s prisoners. The system is particularly punishing towards black people and Hispanics, who are imprisoned at six times and twice the rates of whites respectively. A third of young black men can expect to be incarcerated at some point in their lives. The system is riddled with drugs, abuse and violence. Its cost to the American taxpayer is about $34,000 per inmate per year; the total bill is around $80 billion. Things were not always this way. In 1970 America’s state and federal prisons together held just under 200,000 inmates. In 2013, the latest year for which figures are available, the number of people in federal prisons, which hold only people convicted of federal crimes such as drug-smuggling or fraud, was itself more than 200,000 (see chart). There were almost 1.4m more inmates in state prisons; and there were over 700,000 people locked up in jails, some of them serving short sentences, the majority of them awaiting trial. Most of the inmates were men, but at 113 per 100,000 the incarceration rate of black women is higher than the overall incarceration rate in France or Germany. Prison conditions are often poor; many of those locked up have no proper access to training, education or rehabilitation.

2nc solvency

Alternative treatment is key to reducing prison populations

Mitchell, Policy Analyst, and Leachman, Director of State Fiscal Research, ’14 [Michael [State Policy Fellow for the Washington State Budget & Policy Center] and Michael [policy analyst for nine years at the Oregon Center for Public Policy (OCPP), community organizer in Chicago] 10/28/14, Center on Budget and Policy Priorities, 'Changing Priorities: State Criminal Justice Reforms And Investments In Education | Center On Budget And Policy Priorities'. Accessed July 7 2015. http://www.cbpp.org/research/changing-priorities-state-criminal-justice-reforms-and-investments-in-education.

Decriminalize certain activities and reclassify certain low-level felonies. The increased use of prison -- and longer prison sentences -- to punish crimes such as the possession of certain drugs, like marijuana, has contributed heavily to the growth in mass incarceration. Lawmakers should look to reduce or eliminate criminal penalties for such crimes when doing so would not affect public safety. Expand the use of alternatives to prison for non-violent crimes and divert people with mental health or substance abuse issues away from the criminal justice system altogether. Policymakers should assess the range of sentencing alternatives available in their state, such as drug and mental health courts and related treatment, community correction centers, community service, sex offender treatment, and fines and victim restitution. Whenever possible, people whose crimes stem from addiction or mental illness should be diverted into treatment programs rather than sent to prison. These treatment programs should be high-quality and adequately funded.[45]

Alternative Sentencing for juveniles solves

Ghandnoosh, PhD, '15 [Nazgol, research analyst at The Sentencing Project who conducts and synthesizes research on criminal justice policies, February 2015, 'Black Lives Matter: Eliminating Racial Inequity in the Criminal Justice System.' Pgs 23-24. Accessed 6 July 2015. http://www.sentencingproject.org/detail/publication.cfm?publication_id=577&id=120/VL

• In Berks County, PA, officials were able to reduce the number of youth in secure detention – most of whom were youth of color – by 67% between 2007 and 2012 in part by increasing reliance on alternatives. These included non-secure shelters for youth who cannot safely return home but did not require locked detention, evening reporting centers, electronic monitoring, and expanded use of evidence-based treatment programs. Because many of these youth had committed technical violations of their probation terms, this broader range of alternatives made it possible to keep them out of detention without harming public safety.

• In 2004, Illinois expanded alternative community programs and decreased reliance on detention. By 2007, detentions had been reduced by 44% across the state's four pilot sites. The sites created a wide variety of programs, including Aggression Replacement Training, Functional Family Therapy, a community restorative board, teen court, and substance abuse treatment. For every $1 spent on the programs, $3.55 in incarceration costs were avoided.

• Other jurisdictions have reduced the proportion of youth of color in detention by adopting graduated sanctions for probation violations. In Rock County, WI, graduated sanctions and incentives for probation violators, such as Aggression Replacement Training and evening reporting, helped drop the percentage of youth of color in the total detention population from 71% to 30%. Similarly, in Union County, NC, the use of graduated sanctions for youth who violated probation helped to decrease the representation of youth of color in the total detention population by 32%.

Reclassifying misdemeanors will reduce prison populations

Mitchell, Policy Analyst, and Leachman, Director of State Fiscal Research, '14 [Michael [State Policy Fellow for the Washington State Budget & Policy Center] and Michael [policy analyst for nine years at the Oregon Center for Public Policy (OCPP), community organizer in Chicago] 10/28/14, Center on Budget and Policy Priorities, 'Changing Priorities: State Criminal Justice Reforms And Investments In Education | Center On Budget And

Policy Priorities'. Accessed July 7 2015. http://www.cbpp.org/research/changing-priorities-state-criminal-justice-reforms-and-investments-in-education.

State incarceration rates have risen primarily because states are sending a much larger share of offenders to prison and keeping them there longer. States can reduce their incarceration rates - without harming public safety - by reclassifying low-level felonies to misdemeanors where appropriate, expanding the use of alternatives to prison (such as fines and victim restitution), shortening jail and prison terms, and eliminating prison sentences for technical violations of parole/probation where no new crime has been committed.

A number of states have enacted criminal justice reforms in recent years. Some have reduced prison populations sharply; reforms in New Jersey, New York, and California for example, helped drive down prison populations in each of those states by roughly 25 percent - while crime rates have continued to fall.[1] In most states, though, reforms have not had a large impact on the size of prison populations, which remain extremely high nationally. Moreover, states rarely have directed the savings from reform explicitly to human capital investments (such as education) or low-income neighborhoods.

That releases thousands of inmates

Ghandnoosh, PhD, '15 [Nazgol, research analyst at The Sentencing Project who conducts and synthesizes research on criminal justice policies, February 2015, 'Black Lives Matter: Eliminating Racial Inequity in the Criminal Justice System.' Pg. 25. Accessed 6 July 2015. http://www.sentencingproject.org/detail/publication.cfm?publication_id=577&id=120/VL

California voters in November 2014 approved Proposition 47, which reclassifies a number of low-level offenses from felonies to misdemeanors.120 This allows 10,000 incarcerated individuals to petition to have their sentences reduced. Moreover, a significant portion of projected state prison savings each year will be allocated to preventing crime from happening in the first place. This includes investments in mental health and substance abuse treatment, programs to reduce school truancy and prevent dropouts, and support for victim services.

Collateral Consequences causes recidivism

Ghandnoosh, PhD, '15 [Nazgol, research analyst at The Sentencing Project who conducts and synthesizes research on criminal justice policies, February 2015, 'Black Lives Matter: Eliminating Racial Inequity in the Criminal Justice System.' Pg. 18 Accessed 6 July 2015. http://www.sentencingproject.org/detail/publication.cfm?publication_id=577&id=120/VL

Reentry is obstructed by the collateral consequences of a criminal conviction. A criminal record creates overwhelming odds against securing steady employment.80 Moreover, those with felony drug convictions are disqualified from receiving federal cash assistance, food stamps, and publicly subsidized housing in many areas.81 Combined with heightened surveillance, these obstacles contribute to three of four people released from prison arrested within 5 years, and half being re-imprisoned.82

2nc federal circumvention

The plan will get circumvented- lack of a radical political climate means systemic changes will not last

Gottschalk, Political Science Professor, '09 [Marie, 5/1/2009, Specializes in American politics, with a focus on criminal justice, health policy, race, the development of the welfare state, and business-labor relations at the University of Pennsylvania. University lecturer for two years in the People's Republic of China, visiting scholar at the Russell Sage Foundation in New York, named a Distinguished Lecturer in Japan by the Fulbright Program, served on the American Academy of Arts and Sciences National Task Force on Mass Incarceration, member of the National Academy of Sciences Committee on the Causes and Consequences of High Rates of Incarceration. The Long Reach of the Carceral State: The Politics of Crime, Mass Imprisonment, and Penal Reform in the United States and Abroad. Law & Social Inquiry, 34: 439–472. doi: 10.1111/j.1747-4469.2009.01152.x/VL

By giving structural problems primacy in efforts to end mass incarceration, we are essentially accepting that the extensive US penal system is here to stay for a very long time to come. After all, structural problems call for comprehensive, often expensive, long-term solutions and commitments. Long-term fixes are problematic not just because they take a long time. As Brodeur notes, they are nettlesome because they are harder to sustain from one change of administration to the next. In the case of the United States, the absence of a respected, expert, nonpartisan civil service that maintains policy continuity, despite political shifts, compounds the problem. The focus on structural problems overshadows the fact that about two-thirds of the people in prison are serving time for nonviolent offenses, many of them property or petty drug offenses that would not warrant a sentence in many other countries. It also deflects attention away from the fact that prisons exacerbate many social ills that contribute to crime and poverty and are unlikely to significantly rehabilitate anyone. Other countries that once had exceptionally high incarceration rates, notably Finland, successfully brought down their rates by focusing on changes in penal policy rather than by mounting a sustained attack on structural problems and the root causes of crime (Lappi-Seppälä 2007, 234; Brodeur 2007, 75).

Four decades ago, the United States had many of the same structural problems it has today, but it did not have such an expansive penal system. Since then, the United States has embarked on a war on drugs and a broader war on crime characterized by penal policies and penal conditions unprecedented in modern US history and unheard of or disdained in other developed countries. A deeper commitment to lifting many more people out of poverty is an admirable goal. But by making that the centerpiece of any penal reform agenda, opponents of the carceral state risk losing a sense of urgency.

Criminal justice is fundamentally a political problem, not a crime and punishment problem. The real challenge is how to create the political will and political pressure to pursue and implement these policies. The central question is: "when in all other respects we defend policies based on social equality, full citizenship, solidarity, and respect for reason and humanity, why should we choose to adopt criminal justice policies that show so little appreciation of these very values and principles?" (Lappi-Seppälä 2007, 290).

States will circumvent the plan

Keller 6/29 [Bill, Conservatives for Criminal-Justice Reform. [online] The New Yorker. Available at: http://www.newyorker.com/magazine/2015/06/29/prison-revolt [Accessed 6 Jul. 2015]./VL

The most significant question is whether conservatives are prepared to face the cost of the remedies, from in-prison education and job training to more robust probationary supervision and drug and mental-health treatment. Joan Petersilia, a criminologist who teaches at the Stanford Law School, points to the last great American exercise in decarceration, half a century ago: President Kennedy's Community Mental Health Act, which aimed to reduce by half the number of patients in state mental hospitals. The promised alternatives—hundreds of community care facilities—were never fully funded, and thousands of deeply troubled people were liberated into homelessness. The mentally ill now make up a substantial portion of inmates in state prisons and county jails.'

Feds model---empirics prove

Alewel, Reporter for NewsChannel 10, 11 December **2013**

(Madison, Congress models new legislation after Texas prison reforms, pg1, http://www.newschannel10.com/story/24198337/congress-models-new-legislation-after-texas-prison-reforms)

Amarillo, TX - Texas prison reforms are **influencing federal legislation** in Congress. United States Senator John Cornyn is modeling the Federal Prison Reform Act after Texas reforms that release non-violent and low-risk offenders back into the community. Overcrowded prisons are a costly burden to taxpayers. A former warden at the Clements Unit in Amarillo said Texas figured that out earlier than most states. "We had two massive waves of prison construction that took our prison beds well over 100,000," said former warden Keith Price. "But once you get to a prison system that size, the cost to keep it running is just phenomenal." About ten years ago, Texas started using a safety risk assessment model to combat overcrowding and overspending. The model assesses the risk level offenders pose to the community just as an insurance company measures a drivers risk on the road. "So a guy that maybe committed a murder 30 or 40 years ago, well maybe he was really dangerous then, but now he's 65," said Price. "Is he really dangerous? He's really sick so the tax payers are spending a fortune on him. So does he really need to be in a high security prison bed? There's probably better places for him."

State prison reforms are changing Federal prison policies now

Pye, Reporter for FreedomWorks, 2 December **2015**

(Jason, Successful conservative reforms could be coming to the federal prison system, http://www.freedomworks.org/content/successful-conservative-reforms-could-be-coming-federal-prison-system)

Republicans and Democrats in both chambers have already come together to introduce legislation that would address the growing costs of incarceration as well as front-end reforms to give judges more discretion as they consider sentences for nonviolent offenders. Another unlikely duo, John Cornyn (R-TX) and Sheldon Whitehouse (D-RI), have teamed up on prison reform. Prisons in the

United States, which has the highest incarceration rate in the world, are severely overcrowded and prison costs have rapidly grown. As noted on Tuesday, the federal Bureau of Prisons' budget nearly doubled between FY 2000 and FY 2013, from $3.668 billion to $6.445 billion, and the annual cost of incarcerating a prisoner has jumped from $21,603 to $29,291 over the same time period. These costs leave little room to in the budget to spend on increasing capacity or modernizing prison facilities. The Bureau of Prisons, for example, has a backlog of major modernization and repair projects at a cost of $348 million, according to a March 2014 report from the Justice Department. This backlog, per the report, doesn't include the "universe of unfunded repair and improvement minor projects." Cornyn and Whitehouse see this as a problem that has to be address sooner rather than later, and they are renewing a partnership that was formed last year. In March 2014, The Senate Judiciary Committee, led by then-Chairman Patrick Leahy (D-VT), overwhelmingly passed Whitehouse's Recidivism Reduction and Public Safety Act (S. 1675), which was amended to include elements of Cornyn's Federal Prison Reform Act (S. 1783). Unfortunately, the resulting bill was never brought to the floor for a vote. But with calls for criminal justice reform growing, Cornyn and Whitehouse, on Tuesday, introduced the Corrections Oversight, Recidivism Reduction, and Eliminating Costs for Taxpayers in Our National System (CORRECTIONS) Act. The CORRECTIONS Act addresses the skyrocketing costs of incarceration by bringing successful prison reforms that have been e**nacted at the state level to the federal prison system.** The measure seeks to reduce the federal prison population by creating a recidivism reduction program that would subject eligible nonviolent offenders to recurring assessments to determine whether they are at a low-, medium- or high-risk of becoming a repeat offender.

State success is modeled by the feds

Halberstam and Hills 1

Daniel, assistant professor law at the University of Michigan Law School specializing in U.S. constitutional law and Roderick, professor of law at the University of Michigan Law School, specializing in U.S. constitutional law, local government law, the law of federalism and intergovernmental relations, The American Academy of Political and Social Science, "State Autonomy in Germany and the United States," 03-2001, Leixs-Nexis Academic

The states may exploit this power to initiate programs as a practical means to counteract Congress's constitutional authority to federalize policy areas. For example, before Congress generates enough political will to legislate in any given area, states may step into the field with their own policy proposals. One result is that state policy initiatives may be quite influential in the federal lawmaking process by **providing the initial impetus** and sometimes even **blueprint for federal action** (Elliot, Ackerman, and Millian 1985). To bypass or overrule the states, not only must Congress often demonstrate that its proposed regulatory scheme is politically desirable, but it must do so by arguing specifically against the continued existence of active state regulation.

Empirics prove- status quo legislation like SAFE has been modeled after the states

Romero, Executive Director of the ACLU, and Holden, general counsel of Koch Industries, 7/7 [Anthony and Mark, POLITICO Magazine. 2015. 'A New Beginning For Criminal Justice Reform'. Accessed July 8 2015. http://www.politico.com/magazine/story/2015/07/a-new-beginning-for-criminal-justice-reform-119822.html./VL

The SAFE Justice Act is the result of this two-year investigation which began in spring 2013 when the House Judiciary Committee unanimously charged the two congressmen to chair a comprehensive review of the problems in America's criminal justice system, as well as an examination of potential solutions. The congressmen started by looking at state reforms that have successfully lowered incarceration rates and the associated cost to taxpayers. Until recently, state prison trends mimicked federal trends, with the relevant statistics rising across the board. In the past decade, however, 27 states have enacted substantial reforms to their criminal justice systems. The results they found are striking. The state imprisonment rate fell 4 percent over the past decade, compared with a 15 percent increase at the federal level. Taxpayers have seen the savings, with states saving at least $4.6 billion in lower prison-related costs. Importantly, 32 states saw a drop in both the percentage of people imprisoned and overall crime rates — a revelation that shows how criminal justice reform doesn't compromise public safety. The SAFE Justice Act would incorporate lessons learned in these states and apply many of them at the federal level. It seeks to address several specific issues with the current criminal justice system. Four areas of reform are particularly promising:

Historical precedent proves punitive prison policy spills over from the state to the federal level

National Research Council '14 [The National Research Council was organized by the National Academy of Sciences in 1916 to associate the broad community of science and technology with the Academy's purposes of furthering knowledge and advising the federal government. Functioning in accordance with general policies determined by the Academy, the Council has become the principal operating agency of both the National Academy of Sciences and the National Academy of Engineering in providing services to the government, the public, and the scientific and engineering communities. The Council is administered jointly by both Academies and the Institute of Medicine. April 2014, The Growth of Incarceration in the United States: Exploring Causes and Consequences. Committee on Causes and Consequences of High Rates of Incarceration, J. Travis, B. Western, and S. Redburn, Editors. Committee on Law and Justice, Division of Behavioral and Social Sciences and Education. Washington, DC: The National Academies Press. Pgs. 101-102./VL

A number of lessons emerge from this look back at the past four decades of changes in sentencing policy. Successive waves of change swept the nation, some affecting all or most states. During the 1970s, experiments with voluntary sentencing guidelines were undertaken in many states, and all but one state enacted mandatory minimum sentence laws typically requiring minimum 1- or 2-year sentences or increases of 1 or 2 years in the sentences that would otherwise have been imposed. During the 1980s, the federal government and nearly every state enacted mandatory minimum sentence laws for drug and violent crimes, typically requiring minimum sentences of 5, 10, and 20 years or longer. During the 1990s, the federal government and more than half the states enacted truth-in-sentencing and three strikes laws. Almost all of the states now have life without possibility of parole laws. Voluntary guidelines and statutory determinate sentencing laws proved ineffective at achieving their aims of increasing consistency and diminishing racial and other unwarranted sentencing disparities. There is little convincing evidence that mandatory minimum sentencing, truth-insentencing, or life without possibility of parole laws had significant crime reduction effects. But there is substantial evidence that they shifted sentencing power from judges to prosecutors; provoked widespread circumvention; exacerbated racial disparities in imprisonment; and made sentences much longer, prison populations much larger, and incarceration rates much higher.

Feds have modeled state prisons reforms- empirics prove

Alewel, Reporter for NewsChannel 10, 11 December **2013**

(Madison, Congress models new legislation after Texas prison reforms, pg1, http://www.newschannel10.com/story/24198337/congress-models-new-legislation-after-texas-prison-reforms)

Amarillo, TX - Texas prison reforms are influencing federal legislation in Congress. United States Senator John Cornyn is modeling the Federal Prison Reform Act after Texas reforms that release non-violent and low-risk offenders back into the community. Overcrowded prisons are a costly burden to taxpayers. A former warden at the Clements Unit in Amarillo said Texas figured that out earlier than most states. "We had two massive waves of prison construction that took our prison beds well over 100,000," said former warden Keith Price. "But once you get to a prison system that size, the cost to keep it running is just phenomenal." About ten years ago, Texas started using a safety risk assessment model to combat overcrowding and overspending. The model assesses the risk level offenders pose to the community just as an insurance company measures a drivers risk on the road. "So a guy that maybe committed a murder 30 or 40 years ago, well maybe he was really dangerous then, but now he's 65," said Price. "Is he really dangerous? He's really sick so the tax payers are spending a fortune on him. So does he really need to be in a high security prison bed? There's probably better places for him."

AT feds solve the states

States will drag their feet---no chance they follow the aff

Collier, 8—J.D. Candidate, B.A. in Philosophy at Arkansas State University, School of Law at Berkeley (Dusty, Spring 2008, "The "Ideal" Pendulum Swing: From Rhetoric to Reality", Berkeley Journal of Criminal Law, Lexis)//emchen

The inevitable result of a focus on retribution has come to fruition, as California faces its greatest criminal justice challenge to date - overcrowded prisons that threaten to overwhelm the system. The CDCR currently incarcerates more than 160,000 inmates in facilities designed to hold less than half that number. 38 The CDCR has received a fifty-two percent budget increase over the last five years, yet the problems have only grown worse. 39 The health conditions have become so deplorable that, in December 2006, **a federal judge ordered the State to reform the prisons** within six months or face the prospect of a mandatory population cap. 40 Despite this and ample evidence-based recommendations by contemporary reformers, **policy-makers continue dragging their feet**. The Governor reorganized the CDCR in 2005, utilizing the rhetoric of rehabilitation and the need for evidence-based recidivism-reduction [*181] strategies. 41 This came as a relief to many who felt that California's recidivism rate, at seventy percent, had been one of the biggest factors contributing to the over-crowding crisis. 42 Yet in August 2006, when the Governor called a special legislative session to hear a variety of reform proposals, most of the proposals emphasized the need for prison and bed construction, undermining the contention that he truly had rehabilitation in mind. 43 Reform advocates continue to present recommendations to the Governor and the legislature, but those recommendations have typically been ignored. 44 Fortunately for the future of our prisons and our state budget, the problem has reached undeniable proportions and the recommendations must now be taken seriously. One of the most striking features of contemporary reform efforts has been the incredible similarity between the new recommendations and those made some forty years ago by the leading rehabilitation advocates of

the time, particularly Norval Morris, Gordon Hawkins, and Karl Menninger. The following is an analysis of the theories and recommendations of these indeterminate era reform advocates, followed by a comparison to the theories and recommendations of more contemporary reformers. These contemporary reformers have shown empirically what Morris, Hawkins, and Menninger realized intuitively, and the case for a synthesized reform package is thus made.

Theory

Interpretation: We get to fiat US actors

A. Offense

Negative Ground- the state's counterplan is built into the topic by the words federal and its- allowing them to limit them out severely undercuts our ground

Best policy option – debate is about a search for the best policy option this solves all of their fairness and education arguments, if the counterplan is better then the plan then all of their arguments are arbitrary and don't apply

Topic specific education- surveillance functions on both the federal and local level. Absent the states cp, we only learn about half of the topic

Real world – most of us will never become senators but we can always become engaged in local government. States cp's provide unique education.

B. Defense

No ground loss, its predictable- they can still run all of their federalism bad arguments- specifically on prisons affs states cp's are the next logical step. Don't punish us because the aff was lazy

2AC add-ons check- the affirmative could just read add-ons in the 2AC specific to their actor that the counterplan cant solve

Its reciprocal- the USFG is a huge multifaceted organization and not just one actor

Reject the argument, not the team- the punishment paradigm rewards theory over substance, decreasing education. Plus, they can't prove a reason why we jacked their ability to beat the rest of our positions.

Err neg on theory-

Structural side bias – the aff has first and last speech, picks the framework for the debate, and has infinite prep.

Topic specific side bias – infinite things that could be detained and lack of kritik links off of a decrease in authority guts neg ground.

WILDERSON K

1nc

Failure to address and interrogate the fundamental antagonism between blackness and civil society reifies the system of the black prison slave- the very nature of whiteness policies the black body independent of rationality or institutional coherence

Wilderson '3 [2003, Professor of African American Studies at University of California, Irvine, 2003 (Frank, A. B. Dartmouth College (Government/Philosophy); MFA Columbia University (Fiction Writing); Ph.D. University of California, Berkeley (Rhetoric/Film Studies), "The Prison Slave as Hegemony's (Silent) Scandal", Social Justice, Vol. 30 Issue 2, p18-27]

In The Wretched of the Earth, Fanon makes two moves with respect to civil society. First, he locates its genuine manifestation in Europe — the motherland. Then, with respect to the colony, he locates it only in the zone of the settler. This second move is vital for our understanding of Black positionality in America and for understanding the, at best, limitations of radical social movements in America. For if we are to follow Fanon's analysis, and the gestures toward this understanding in some of the work of imprisoned intellectuals, then we have to come to grips with the fact that, for Black people, civil society itself — rather than its abuses or shortcomings — is a state of emergency. For Fanon, civil society is predicated on the Manicheasm of divided zones, opposed to each other "but not in service of a higher unity" (Fanon, 1968: 38–39). This is the basis of his later assertion that the two zones produce two different "species," between which "no conciliation is possible" (Ibid.). The phrase "not in service of a higher unity" dismisses any kind of dialectical optimism for a future synthesis. In "The Avant-Garde of White Supremacy," Martinot and Sexton assert the primacy of Fanon's Manichean zones (without the promise of higher unity), even in the face of American integration facticity. Fanon's specific colonial context does not share Martinot and Sexton's historical or national context. Common to both texts, however, is the settler/native dynamic, the differential zoning, and the gratuity (as opposed to the contingency) of violence that accrues to the blackened position. The dichotomy between white ethics [the discourse of civil society] and its irrelevance to the violence of police profiling is not dialectical; the two are incommensurable whenever one attempts to speak about the paradigm of policing, one is forced back into a discussion of particular events — high-profile homicides and their related courtroom battles, for instance (Martinot and Sexton, 2002: 6; emphasis added). It makes no difference that in the U.S. the "casbah" and the "European" zone are laid one on top of the other. What is being asserted here is an isomorphic schematic relation — the schematic interchangeability — between Fanon's settler society and Martinot and Sexton's policing paradigm. For Fanon, it is the policeman and soldier (not the discursive, or hegemonic, agents) of colonialism that make one town white and the other Black. For Martinot and Sexton, this Manichean delirium manifests itself by way of the U.S. paradigm of policing that (re)produces, repetitively, the inside/outside, the civil society/Black world, by virtue of the difference between those bodies that do not magnetize bullets and those that do. "Police impunity serves to distinguish between the racial itself and the elsewhere that mandates it...the distinction between those whose human being is put permanently in question and those for whom it goes without saying" (Ibid.: 8). In such a paradigm, white people are, ipso facto, deputized in the face of Black people, whether they know it (consciously) or not. Whiteness, then, and by extension civil society, cannot be solely "represented" as some monumentalized coherence of phallic signifiers, but must first be understood as a social formation of contemporaries who do not magnetize bullets. This is the essence of their construction through an asignifying absence; their signifying

presence is manifested by the fact that they are, if only by default, deputized against those who do magnetize bullets. In short, white people are not simply "protected" by the police, they are — in their very corporeality — the police. his ipso facto deputization of white people in the face of Black people accounts for Fanon's materiality, and Martinot and Sexton's Manichean delirium in America. What remains to be addressed, however, is the way in which the political contestation between civil society's junior partners (i.e., workers, white women, and immigrants), on the one hand, and white supremacist institutionality, on the other hand, is produced by, and reproductive of, a supplemental antiBlackness. Put another way: How is the production and accumulation of junior partner social capital dependent upon on an anti-Black rhetorical structure and a decomposed Black body? Any serious musing on the question of antagonistic identity formation — a formation, the mass mobilization of which can precipitate a crisis in the institu- tions and assumptive logic that undergird the United State of America — must come to grips with the contradictions between the political demands of radical social movements, such as the large prison abolition movement, which seeks to abolish the prison-industrial complex, and the ideological structure that underwrites its political desire. I contend that the positionality of Black subjectivity is at the heart of those contradictions and that this unspoken desire is bound up with the political limitations of several naturalized and uncritically accepted categories that have their genesis mainly in the works of Antonio Gramsci, namely, work or labor, the wage, exploitation, hegemony, and civil society. I wish to theorize the symptoms of rage and resignation I hear in the words of George Jackson, when he boils reform down to a single word, "fascism," or in Assata's brief declaration, "i hated it," as well as in the Manichean delirium of Fanon, Martinot, and Sexton. Today, the failure of radical social movements to embrace symptoms of all three gestures is tantamount to the reproduction of an anti-Black politics that nonetheless represents itself as being in the service of the emancipation of the Black prison slave

The prison system is only a manifestation of the grammars of productivity and politics that the affirmative explicitly assumes- they legitimize the structure of antiblackness through their appeal to humanity

Wilderson '3 [2003, Professor of African American Studies at University of California, Irvine, 2003 (Frank, A. B. Dartmouth College (Government/Philosophy); MFA Columbia University (Fiction Writing); Ph.D. University of California, Berkeley (Rhetoric/Film Studies), "The Prison Slave as Hegemony's (Silent) Scandal", Social Justice, Vol. 30 Issue 2, p18-27]

Capital was kick-started by the rape of the African continent, a phenomenon that is central to neither Gramsci nor Marx. According to Barrett (2002), something about the Black body in and of itself made it the repository of the violence that was the slave trade. It would have been far easier and far more profitable to take the white underclass from along the riverbanks of England and Western Europe than to travel all the way to Africa for slaves. The theoretical importance of emphasizing this in the early 21st century is twofold. First, capital was kick-started by approaching a particular body (a black body) with direct relations of force, not by approaching a white body with variable capital. Thus, one could say that slavery is closer to capital's primal desire than is exploitation. It is a relation of terror as opposed to a relation of hegemony. Second, today, late capital is imposing a renaissance of this original desire, the direct relation of force, the despotism of the unwaged relation. This renaissance of slavery, i.e., the reconfiguration of the prison-industrial complex has, once again, as its structuring metaphor and primary target the Black body. The value of reintroducing the unthought category of the slave, by way of noting the absence of the Black subject, lies in the Black subject's potential for extending the demand placed

on state/capital formations because its reintroduction into the discourse expands the intensity of the antagonism. In other words, the positionality of the slave makes a demand that is in excess of the demand made by the positionality of the worker. The worker demands that productivity be fair and democratic (Gramsci's new hegemony, Lenin's dictatorship of the proletariat, in a word, socialism). In contrast, the slave demands that production stop, without recourse to its ultimate democratization. Work is not an organic principle for the slave. The absence of Black subjectivity from the crux of radical discourse is symptomatic of the text's inability to cope with the possibility that the generative subject of capitalism, the Black body of the 15th and 16th centuries, and the generative subject that resolves late capital's over-accumulation crisis, the Black (incarcerated) body of the 20th and 21st centuries, do not reify the basic categories that structure conflict within civil society: the categories of work and exploitation. Thus, the Black subject position in America represents an antagonism or demand that cannot be satisfied through a transfer of ownership/organization of existing rubrics. In contrast, the Gramscian subject, the worker, represents a demand that can indeed be satisfied by way of a successful war of position, which brings about the end of exploitation. The worker calls into question the legitimacy of productive practices, while the slave calls into question the legitimacy of productivity itself. Thus, the insatiability of the slave demand upon existing structures means that it cannot find its articulation within the modality of hegemony (influence, leadership, consent). The Black body cannot give its consent because "generalized trust," the precondition for the solicitation of consent, "equals racialized whiteness" (Barrett, 2002). Furthermore, as Orlando Patterson (1982) points out, slavery is natal alienation by way of social death, which is to say, a slave has no symbolic currency or material labor power to exchange. A slave does not enter into a transaction of value (however asymmetrical), but is subsumed by direct relations of force. As such, a slave is an articulation of a despotic irrationality, whereas the worker is an articulation of a symbolic rationality. A metaphor comes into being through a violence that kills the thing such that the concept might live. Gramscian discourse and coalition politics come to grips with America's structuring rationality — what it calls capitalism, or political economy — but not with its structuring irrationality, the anti-production of late capital, and the hyper-discursive violence that first kills the Black subject, so that the concept may be born. In other words, from the incoherence of Black death, America generates the coherence of white life. This is important when thinking the Gramscian paradigm and their spiritual progenitors in the world of organizing in the U.S. today, with their overvaluation of hegemony and civil society. Struggles over hegemony are seldom, if ever, asignifying. At some point, they require coherence and categories for the record, meaning they contain the seeds of antiBlackness.

Civil Society reconfigures itself to the affirmative's call for freedom- the only alternative is to inject radical incoherence into the system- to dance the dance of death is the only way to delink structures of liberal identitiy and productivity

Wilderson '3 [2003, Professor of African American Studies at University of California, Irvine, 2003 (Frank, A. B. Dartmouth College (Government/Philosophy); MFA Columbia University (Fiction Writing); Ph.D. University of California, Berkeley (Rhetoric/Film Studies), "The Prison Slave as Hegemony's (Silent) Scandal", Social Justice, Vol. 30 Issue 2, p18-27]

Fanon (1968: 37) writes, "decolonization, which sets out to change the order of the world, is, obviously, a program of complete disorder." If we take him at his word, then we must accept that no other body functions in the Imaginary, the Symbolic, or the Real so completely as a repository of complete disorder as the Black body. Blackness is the site of absolute dereliction at the level of

the Real, for in its magnetizing of bullets the Black body functions as the map of gratuitous violence through which civil society is possible: namely, those bodies for which violence is, or can be, contingent. Blackness is the site of absolute dereliction at the level of the Symbolic, for Blackness in America generates no categories for the chromosome of history, and no data for the categories of immigration or sovereignty. It is an experience without analog — a past without a heritage. Blackness is the site of absolute dereliction at the level of the Imaginary, for "whoever says 'rape' says Black" (Fanon), whoever says "prison" says Black, and whoever says "AIDS" says Black (Sexton) — the "Negro is a phobogenic object" (Fanon). Indeed, it means all those things: a phobogenic object, a past without a heritage, the map of gratuitous violence, and a program of complete disorder. Whereas this realization is, and should be, cause for alarm, it should not be cause for lament, or worse, disavowal — not at least, for a true revolutionary, or for a truly revolutionary movement such as prison abolition. If a social movement is to be neither social democratic nor Marxist, in terms of structure of political desire, then it should grasp the invitation to assume the positionality of subjects of social death. If we are to be honest with ourselves, we must admit that the "Negro" has been inviting whites, as well as civil society's junior partners, to the dance of social death for hundreds of years, but few have wanted to learn the steps. They have been, and remain today — even in the most anti-racist movements, like the prison abolition movement — invested elsewhere. This is not to say that all oppositional political desire today is pro-white, but it is usually anti-Black, meaning it will not dance with death Black liberation, as a prospect, makes radicalism more dangerous to the United States. This is not because it raises the specter of an alternative polity (such as socialism or community control of existing resources), but because its condition of possibility and gesture of resistance function as a negative dialectic: a politics of refusal and a refusal to affirm, a "program of complete disorder." One must embrace its disorder, its incoherence, and allow oneself to be elaborated by it if, indeed, ones politics are to be underwritten by a desire to take down this country. If this is not the desire that underwrites ones politics, then through what strategy of legitimation is the word "prison" being linked to the word "abolition+n"? What are this movements lines of political accountability? There is nothing foreign, frightening, or even unpracticed about the embrace of disorder and incoherence. The desire to be embraced, and elaborated, by disorder and incoherence is not anathema in and of itself. No one, for example, has ever been known to say, "Gee-whiz, if only my orgasms would end a little sooner, or maybe not come at all." Yet few so-called radicals desire to be embraced, and elaborated, by the disorder and incoherence of blackness—and the state of political movements in the United States today is marked by this very Negrophobogenisis: "Gee-whiz, if only black rage could be more coherent, or maybe not come at all." Perhaps there is something more terrifying about the foy of black than there is in the joy of sex (unless one is talking sex with a Negro). Perhaps coalitions today prefer to remain in-orgasmic in the face of civil society—with hegemony as a handy prophylactic, just in case. If through this stasis or paralysis they try to do the work of prison abolition, the work will fail, for it is always *work from* a position of coherence (i.e., the worker) on *behalf* of a position of incoherence of the black subject, or prison slave. In this way, social formations on the left remain blind to the contradictions of coalitions between workers and slaves. They remain coalitions operating within the logic of civil society and function less as revolutionary promises than as crowding [y] out scenarios of black antagonisms, simply feeding our frustration. Whereas the positionality of the worker (whether a factory worker demanding a monetary wage, an immigrant, or a white woman demanding a social wage) gestures toward the reconfiguration of civil society, the positionality of the black subject (whether a prison slave or a prison slave-in-waiting) gestures toward the disconfiguration of civil society. From the coherence of civil society, the black subject

beckons with the incoherence of civil war, a war that reclaims blackness not as a positive value but as a politically enabling site, to quote Fanon, of "absolute dereliction." It is a "scandal" that rends civil society asunder. Civil war, then, becomes the unthought, but never forgotten, understudy of hegemony. It is a black specter waiting in the wings, an endless antagonism that cannot be satisfied (via reform or reparation) but that must, nonetheless, be pursued to the death

Turns Case- the affirmative's roots in enlightenment identity are antiblack and coheres white supremacy

Wilderson '3 [2003, Professor of African American Studies at University of California, Irvine, 2003 (Frank, A. B. Dartmouth College (Government/Philosophy); MFA Columbia University (Fiction Writing); Ph.D. University of California, Berkeley (Rhetoric/Film Studies), "The Prison Slave as Hegemony's (Silent) Scandal", Social Justice, Vol. 30 Issue 2, p18-27]

By examining the strategy and structure of the Black subject's absence in, and incommensurability with, the key categories of Gramscian theory, we come face to face with three unsettling consequences: (1) The Black American subject imposes a radical incoherence upon the assumptive logic of Gramscian discourse and on today's coalition politics. In other words, s/he implies a scandal. (2) The Black subject reveals the inability of social movements grounded in Gramscian discourse to think of white supremacy (rather than capitalism) as the base and thereby calls into question their claim to elaborate a comprehensive and decisive antagonism. Stated another way, Gramscian discourse and coalition politics are indeed able to imagine the subject that transforms itself into a mass of antagonistic identity formations, formations that can precipitate a crisis in wage slavery, exploitation, and hegemony, but they are asleep at the wheel when asked to provide enabling antagonisms toward unwaged slavery, despotism, and terror. (3) We begin to see how Marxism suffers from a kind of conceptual anxiety. There is a desire for socialism on the other side of crisis, a society that does away not with the category of worker, but with the imposition workers suffer under the approach of variable capital. In other words, the mark of its conceptual anxiety is in its desire to democratize work and thus help to keep in place and insure the coherence of Reformation and Enlightenment foundational values of productivity and progress. This scenario crowds out other postrevolutionary possibilities, i.e., idleness. The scandal, with which the Black subject position "threatens" Gramscian and coalition discourse, is manifest in the Black subject's incommensurability with, or disarticulation of, Gramscian categories: work, progress, production, exploitation, hegemony, and historical self-awareness. Through what strategies does the Black subject destabilize — emerge as the unthought, and thus the scandal of — historical materialism? How does the Black subject function within the "American desiring machine" differently than the quintessential Gramscian subaltern, the worker.

Link – reform

The affirmative's appeals to reforms excludes the radical prison praxis and its analysis of prison productivity that justifies the system

Rodriguez '06 [2006, ,Dylan Rodríguez is Professor and Chair of the Department of Ethnic Studies at UC Riverside. He received his Ph.D. and M.A. degrees in Ethnic Studies from the University of California, Berkeley (2001), and earned two B.A. degrees and a Concentration

degree from Cornell University (1995). “Forced Passages Imprisoned Radical Intellectuals and the U.S. Prison Regime”]

Radical intellectuals who are captives of the state, insofar as they are deWned and categorized as civically dead, are formally deindividuated upon imprisonment. Their presumptive recognition as “individuals” or legal subjects under the juridical mores of U.S. liberalism erode, displaced by a structure of direct subjection to the punitive state. Further, the continuum of subjection that structures this condition can be conceptualized and disaggregated within the Thirteenth Amendment’s signiWcation of a genealogy of antiblack racism, that is, the formative social relations of racial chattel slavery and what Fanon might call the epidermalization of pathology and property. Imprisoned people have no “right” to exist as political beings or social subjects. Often, the state punishes and preempts the political work and affective labor of its captives through physical violence, forced narcotic sedation, isolation, and relocation (often to prisons that are hundreds or thousands of miles away from family, loved ones, and political supporters). 36 – INTRODUCTION What, then, is the significance of political praxis for people whose right to exist has been eliminated? What is an appropriate “methodology” of engagement with this lineage of radical, revolutionary, and liberationist political subjects who are, by force of condition, putative “nonsubjects”? Perhaps these are the very questions that underwrite the permanently troubled relation between the free and the unfree (or the imprisoned and the nonimprisoned), as the structure of political-intellectual “collaboration” begs the question of how “politics” happens at the carceral underside of social formation: imprisoned radical intellectuals are practitioners of a qualitatively different “politics,” precisely because their Weld of engagement is deWned through a relation of direct violence with the state. This condition of confrontation constitutes a discrete modality of praxis that is incommensurable with the myriad forms of political practice in civil society. The condition of praxis overdetermines its political significance, particularly when carried out by juridically dead people: that which is reasonably demanded by the free becomes grounds for punitive sanction against the unfree. Prisoners striking and rebelling for acknowledgment of nonexistent human rights—as in the Attica rebellion of 1971—thus amount to far more than “reformist” struggles against fascistic and localized regimes of domination. Assertions of political personhood by the imprisoned are a constrained attempt to decisively delegitimize the carceral formation’s official attempts to eliminate them from the realm of the “political,” as well as to generate new symbolic and spatial terrain for political struggle against a state regime that consistently militates and militarizes against any such possibility. This is to say that the structuring of unfreedom extinguishes the possibility of legitimate political subjectivity a priori, while constructing a discrete border at which “politics” is presumed subversive in and of itself. At the risk of stating the obvious, I am arguing that the study of and critical engagement with contemporary prison praxis represents a relation of appropriation and translation, structurally dominated by free world (professional and nonprofessional) intellectuals and activists whose necessarily exploitative use of these texts (for there is little material INTRODUCTION – 37 beneWt and much potential punishment in store for their authors) is often endorsed and encouraged by their imprisoned counterparts. The living figure and political specter of the imprisoned political intellectual represents a crisis of meaning for the “methodology” of the nonimprisoned scholar, as well as a fundamental disruption of the free-world activist’s operative assumptions (e.g., bodily mobility, political subjectivity, access to civil society). It is through the lens of this failure of methodology that this book must be read and (re)interpreted.

The affirmative's discourse of bureaucracy and society is antagonistic to the counter-narrative of the radical prisoner which the foundation of the prison state

Rodriguez '06 [2006, ,Dylan Rodríguez is Professor and Chair of the Department of Ethnic Studies at UC Riverside. He received his Ph.D. and M.A. degrees in Ethnic Studies from the University of California, Berkeley (2001), and earned two B.A. degrees and a Concentration degree from Cornell University (1995). "Forced Passages Imprisoned Radical Intellectuals and the U.S. Prison Regime"]

Imprisoned radical intellectuals have inhabited and shaped the formation of the U.S. policing, juridical, and punishment apparatuses since the rise of the Goldwater–Nixon "law-and-order" state. This chapter attends to the unique set of historical, spatial, and bodily conditions of possibility for imprisoned radical intellectuals to engage in "praxis," or what Paulo Freire (in the Marxist tradition) famously invoked as the profound political aliveness of "reXection and action on the world" with the purpose of transforming it.1 Through an extraordinary mirroring and rearticulation of the dystopic structure of imprisonment—a regime founded on the symbiosis between the logics of displacement and degradation—this politicalintellectual work inaugurates new vernacular forms, including the construction of new languages of agency, politics, freedom, identity, community, sovereignty, and struggle. These meanings constantly exceed and slip from the grasp of conventional modes of political, academic, and activist CHAPTER 2 "You Be All the Prison Writer You Wish": The Context of Radical Prison Praxis Apparently, they imagine we prisoners who have forever sentences are just supposed to disappear, but unfortunately, it doesn't work that way. —Standing Deer, "Prisons, Poverty, and Power" (1992) I am a bleak heroism of words that refuse to be buried alive with the liars. —Audre Lorde, "Learning to Write" (1986) 75 discourse. Thus, my use of the term "(radical) prison praxis" foregrounds the institutional and historical condition of this lineage of political work as it is constituted and delimited by a carceral structuring of totalizing and legitimated state violence. Radical prison praxis is fundamentally an institutional and discursive antagonism, that is, an insurgent or insurrectionist formation of critique, dissent, and rebellion that (1) elaborates a conception of political subjectivity—its context, possibilities, and historicity—specific to the formation of the prison as a particular regime of power; (2) conceptualizes praxis through the terms with which it is organically linked and historically "belongs" to, a lineage of imprisoned radical intellectuals; and (3) shifts the presumptive political geography of praxis by examining its formation at the site of imprisonment, a disjuncture from the juridical and cultural domains of civil society.

Link/FW

Role of the Judge is to endorse Critical Prison Praxis to rupture the constitutive logic of the prison systems- bureaucratic reforms fail to deconstruct the foundations of violence of prison production

Rodriguez '06 [2006, ,Dylan Rodríguez is Professor and Chair of the Department of Ethnic Studies at UC Riverside. He received his Ph.D. and M.A. degrees in Ethnic Studies from the University of California, Berkeley (2001), and earned two B.A. degrees and a Concentration degree from Cornell University (1995). "Forced Passages Imprisoned Radical Intellectuals and the U.S. Prison Regime"]

The Wnal section of this chapter departs from the disciplinary and immanently punitive categories of "prison writing" and "prison education" in order to offer a theoretical elaboration of radical "prison praxis." Contesting the repressive and punitive technologies of prison education and philanthropic ventures, as well as the production of prison writing as a domesticating and contained literary genre, imprisoned radical intellectuals exert pedagogical interventions of their own, within and against these contrived material-discursive spaces. Autonomous, and usually illicit prisoner-organized political education circles have often directly spurred acts of individual and collective defiance on the "inside" (hunger strikes, work stoppages, underground prisoner publications, rebellions), at times generating substantive solidarities with activists and supporters on the "outside." Juanita Díaz-Cotto writes of such underground Latino prison collectives in the 1970s: What distinguishes imprisoned radical intellectuals from other radical and revolutionary "organic intellectuals," however, is that they do not construct their political identiWcations through participation in discrete social movements or political organizations. Rather, their individual formation as imprisoned political subjects occurs in a context of systematized repression that, in turn, forces them to map out new "cognitive territories" within which ways of knowing, feeling, and living the experience of unmediated state violence create new spaces and political trajectories of dissent, radicalism, and antisystemic possibility. This far-reaching, decentered, and counterinstitutional knowledge production initiates an epistemological break with the hegemonic common sense of both civil society and the left, illuminating Ron Eyerman and Andrew Jamison's deWnition of contemporary social movements and collective identities: This theorization offers a crucial epistemological intervention, countering the tendency of many American sociologists to objectify the knowledge production of social movements through the empiricist categorizations of "resource mobilization theory." Eyerman and Jamison suggest a more situated and dynamic conception of "social movements as cognitive praxis": In the U.S. context, where the infrastructural paradigm that guides most current progressive social-change organizations is based on bureaucratic hierarchy, access to foundation patronage, and the "professionalization" of activists themselves, a productive rupturing of the empiricist conception of social movement formation may be in order. To consider, as do Eyerman and Jamison, that social movements are dynamic "processes in formation" implies a theorization of movements that de-emphasizes (though does not dismiss) the empirical "structures" that shape their public sustenance, and instead prioritizes the effectiveness of social movements in producing "forms of activity by which individuals create new kinds of social identities." This approach hedges against the quantiWcation of a social movement's signiWcance and effectiveness through measurement of its chronological "life" or evaluation of its ability to "penetrate" and reform hegemonic social or political institutions. Most important, this paradigm creates a theoretical space for analysis of radical movement formations by distinguishing the historical and political trajectory of social movements from their empirically detectable manifestations in organizations, constituencies, and other forms of institutionalized presence. As Eyerman and Jamison argue, Few recent movements Wt this deWnition better than the decentered, eclectic, and politically dynamic intellectual renaissance among radicals and revolutionaries incarcerated in U.S. prisons since the 1970s. My engagement with the praxis of imprisoned radical intellectuals pivots on this conception of the symbiosis between knowledge production and subject formation—processes immersed in the prison's regime of disarticulation and coercive incoherence—as the primary Welds of political practice for this lineage of activists. For these socially and civically "disappeared" political subjects—many of whom have been imprisoned or serve additional prison time on the basis of their political convictions and social movement activities—the construction of a "cognitive praxis" happens in concert with their imprisoned contemporaries, and in resonance with their

predecessors. This theoretical framing is not to romanticize, simplify, or totalize the intellectual work of imprisoned liberationists, but rather to suggest that their institutional and historical location within the U.S. prison grounds an epistemological formation that speaks directly out of the crisis and conXict that inevitably accompanies the repressive logic of "social order." Radical prison praxis may thus be succinctly conceived as the embodied theoretical practices that emerge from imprisoned liberationists' sustained and historical confrontations with, insurrection against, and dis- or rearticulations of the regimes of (legitimated and illicit) state violence inscribed and signiWed by the regime of the prison. What marks this as a lineage of "radical" praxis is, Wrst, that it is materially situated at the "base" of the state's punitive white-supremacist mode of production. This is to suggest that the production of prison space is a socially constitutive technology, to the extent that the essential fulcrum of American white supremacy is the power and institutional capacity to immobilize, neutralize, or eliminate targeted populations. Insurgencies that emerge from within this fulcrum, then, are substantively radical in their potential to disrupt or destroy a primary productive element of the existing social/carceral formation. Second, radical prison praxis articulates a critique of the United States that disarticulates its presumptive legitimacy and coherence as a juridical, military, social, and moral order. Imprisoned radical intellectuals construct a critical political practice that cannot be easily situated within the disciplinary conventions of civil society or the academy. As Harlow contends, it is the very historicalcondition and political substance of this cognitive antagonism that renders it outside the pale of institutional classiWcation and pedagogy The production of new and institutionally antagonistic languages, ideas, and symbols constitutes a basis for the activity of "new social movements" while simultaneously forming the conditions of possibility for the construction of new political and theoretical trajectories for radical counterhegemonic praxis. In this sense, Melucci's theoretical shift away from the empiricist fetishization of the quantiWable apparatuses and bureaucracies of social movement activity to "the ability to produce information" provides a mode of engagement with imprisoned radicals and revolutionaries who largely lack an infrastructural base and have little or no access to Wnancial resources. Melucci's theoretical problematic further elaborates the ongoing challenge confronting contemporary social movements. Decoupling the notion of "hegemony" from more conventional Marxist articulations, he posits a mobile, slippery conceptualization of social formation and "social order." Most important, his conceptualization of the social formation's "constitutive logic" displaces the classical Marxist notion of a "mode of production." Although Melucci's theorization is constrained by its focus on the nation-state as the unit of analysis and does not attempt to engage sites of underdevelopment, warfare, or state capture (unfreedom), it is useful for its elaboration of knowledge production as a malleable, material social movement practice: Critically departing from Melucci's discussion, we might consider how the prison industrial complex and its requisite regime of violence compose crucial and convergent sites for the "constitutive logic" of the existing social system; that is, they construct a nexus for the production and sustenance of varieties of racialized domestic warfare, the articulation of the neoliberal state, and massive containment of surplused and racially criminalized populations. Melucci's central theoretical problem, the question of whether and how the "constitutive logic" of a social system may be engaged across different localities and institutional sites, sheds light on the potential centrality of imprisoned radical intellectuals as primary critics of (and insurrectionists against) the prison regime and the state/ social formation of which it is an increasingly crucial or "constitutive" component.

The prison complex serves as the nexus for current oppressive models of identity and politics- situating insurrectionist knowledge within that space disrupts the production of domination

Rodriguez '06 [2006, ,Dylan Rodríguez is Professor and Chair of the Department of Ethnic Studies at UC Riverside. He received his Ph.D. and M.A. degrees in Ethnic Studies from the University of California, Berkeley (2001), and earned two B.A. degrees and a Concentration degree from Cornell University (1995). "Forced Passages Imprisoned Radical Intellectuals and the U.S. Prison Regime"]

This genealogy is, from its outset, entangled in the essential incommunicability of the violence that it proposes to trace, analyze, and (re)- encounter: as countless captives and prison survivors testify, their formal and totalizing subjection to a regime of legitimated brutality is a condition that largely exceeds communicative possibility, that is, it is a condition beyond words. Still, the echoes and resonances of this lineage of radical intellectuals orchestrate a symphony of Xight from the normative cultural, political, and institutional structures of the United States, decisively disrupting its self-valorizing narratives of freedom and democracy (powerful discourses that increasingly exert, by consensus and by force, a global cache). Inescapable is the social logic of the contemporary U.S. 72 – DOMESTIC WAR ZONES prison, its integral role in organizing and disrupting the matrices and possibilities of everyday human intercourse, and, more crucially, its overwhelming presence in the production of modalities of bodily domination, state and state-sanctioned forms of violence—within and beyond the prison proper—that betray the limits of Foucault's "disciplinary society" and install rituals of spectacular punishment that illuminate the intersections and gaps between various axes of power. The signiWcance of contemporary radical prison praxis—the farranging political-discursive work embodied by imprisoned radical intellectuals that I will outline in the next chapter—is its antagonism to the punitive and disciplinary technologies enmeshing its formation. Invoking Foucault's 1976 reference to the "insurrection of subjugated knowledges" as the catalyst of new forms of locally situated critique, imprisoned radical intellectuals are uniquely situated to offer the beginnings of a material genealogy, as well as an urgent political critique, of the state's capillary extremities, where its most profound techniques of domination emerge. The following chapters elaborate on this bloc and its praxis, the historical contents of which "have been buried or masked in functional coherences or formal systematizations." This is to attempt, in Foucault's terms, a genealogy of the prison regime that proceeds through "a whole series of knowledges that have been disqualiWed as nonconceptual knowledges, as insufWciently elaborated knowledges: naïve knowledges, hierarchically inferior knowledges, knowledges that are below the required level of erudition or scientiWcity."65 The prison's power of domination, while exceeding the staid formalities of the state, simultaneously generates capillary spaces of radical subjectivity and knowledge production that exceed the logical structures of legitimated political-intellectual discourse. Compounding the form and substance of the discourse itself, the praxis of imprisoned radical intellectuals entails the invention of new communicative modalities and strategies, from the production of new political vernaculars to the construction of subversive pedagogical spaces and networks. A genealogy of the prison regime, in the current historical context, traces the outlines of a political crisis of meaning for extant DOMESTIC WAR ZONES – 73 paradigms of social change and transformation, confronting the logic of immobilization and disintegration that deWnes the regime's procession. "If you like, we can give the name 'genealogy' to this coupling together of scholarly erudition and local memories. . . . Genealogies are, quite speciWcally, antisciences. . . . They are about the insurrection of knowledges."66 The prison constitutes the site and moment of radical prison praxis as a crisis for the state: to the extent that imprisoned

intellectuals articulate and mobilize varieties of counterhegemonic or antisystemic power (from collective insurrection and guerrilla combat to "nonviolent" resistance and formal institutional reform demands), they embody a strategic vectoring of political-intellectual insurgency and antiauthoritarian resistance that disrupts—and ultimately reconstitutes—the prison regime's production of dominion. It is the enactment, in other words, of the fundamental—and inescapably political—relation of the very institutionality of the prison itself as a deWnitive zone (dominion) of warfare. There are subjects and populations that, through the materialdiscursive structures of the American social formation, exist as embodied crisis, or Wgures of incoherence.67 The consistent and sometimes ampliWed productions of non- and subhumans (discovered most profoundly in the shifting historical categorizations of blacks and Native Americans) constitute the necessary Wgures of negation and productive Wgures of crisis for the reproduction and coherence of modern Euro-American social formations. In this sense, the birth of Foucault's nineteenthcentury prison can also be understood to incubate a genealogy of human apocalypse within the formation of a putatively inclusivist, modernist disciplinary order. The genesis of this incubated technology of death, what might be considered the rebirthing of the prison as a regime of immobilization and disintegration, is precisely that which is traced by the recent lineage of imprisoned radical intellectuals.

The deaths of the prison system haunts civil society- these death must be brough to the forefront of knowledge to produce effective resistance

Rodriguez '06 [2006, ,Dylan Rodríguez is Professor and Chair of the Department of Ethnic Studies at UC Riverside. He received his Ph.D. and M.A. degrees in Ethnic Studies from the University of California, Berkeley (2001), and earned two B.A. degrees and a Concentration degree from Cornell University (1995). "Forced Passages Imprisoned Radical Intellectuals and the U.S. Prison Regime"]

interior geography of the prison—the logic of death can only reproduce its anticipated failure: the provocation of resistance, subversion, opposition, and revolt through the embodied contradiction of trying to make nonsubjects, including and especially the incomplete production of captive subjects who are, in fact, not outside of—and incompletely isolated from—history. The ongoing self-narrative of Hugo "Yogi" Pinell, one of the longest-held political prisoners in the United States, is illustrative. Pinell has been in some variety of solitary conWnement for about three decades, and has not had a contact visit, seen natural sunlight, or made a phone call since the 1970s. Originally imprisoned in 1965, he became a close friend of W. L. Nolen in Soledad State Prison during the early years of his incarceration. After Nolen's assassination and George Jackson's transfer to San Quentin State Prison (with fellow "Soledad Brothers" Fleeta Drumgo and John Clutchette), Pinell ambivalently embraced political leadership among his cohorts: When W. L. got shot down and George got locked up right there in Soledad, I got a chance to talk to him. He said, "I'm going to San Quentin, man, so you keep everybody together here." So when he gave me that responsibility the other guys said, "Hey Yogi, that's beautiful man, shit, we'll listen to you."44 Engaged in heightened confrontation and periodic guerrilla combat with Soledad's famously white-supremacist bloc of guards and administrators, Pinell (of African-Nicaraguan descent) quickly became one of the focal points—a conspicuously targeted black body—for the prison regime's self-production. His history of coerced bodily transfer among different carceral sites bespeaks shifting temporalities of bodily emergency. During a 2001 interview in the Pelican Bay SHU, Pinell articulated a philosophy of subjection that tangles the violence of state torture within a legacy of black-liberationist sacriWce. Pinell provides a situated

and incisive history of the California prison as a carceral war zone: he and Wve others—the "San Quentin Six"—were prosecuted and tortured by the state for the alleged murder "MY ROLE IS TO DIG OR BE DUG OUT" – 217 of three guards and the assault of three others, casualties resulting from the prison insurrection catalyzed by the cold-blooded killing of the widely respected Jackson in August 1971. Recalling his survival of this period, Pinell articulates and revises the context and meaning of radical political practice once overdetermined by a material logic of death: There is a clear sense in which Pinell historicizes as he rearticulates his own tortured body, conceptualizing his survival and suffering as both a protective practice (shielding fellow captives by taking the beatings himself) and a vessel of political education. In the context of this zone of warfare, Pinell fronts himself as fodder for the regime's violence, having been exposed and targeted by the state as a known guerrilla soldier. Whereas his codefendants in the San Quentin Six trial were eventually released from prison (three were acquitted in the trial, and two were convicted but later granted parole), Pinell is the state's chosen holdover, an object lesson for other latent or incipient combatants Wghting the essential structure of the prison standoff. As such, Pinell rethinks the meaning of survival and warfare, life and death, lineage and legacy for one whose condition of existence is to live intimately with ghosts. He reconceptualizes the terms and possibilities Pinell's cohabitation with his comrades' ghostly presence/present distends and distorts the prison regime's logic of death by reembodying the terms of (bodily and ghostly) possession. Within the actively altered terrain of warfare, there is a saturation of spirits, a persistent returning of liberationist combatants killed in action. Sociologist Avery Gordon has contended that the spirits of the dead and disappeared play an integral role in the shaping of the social world, visiting the living and exerting agency on them through the undeniably historical and political work of haunting: Gordon's meditation must be extended, in this sense, to address and encompass the forms of living death invented and massively proliferated by the contemporary social formation, to the extent that the everyday is irreconcilably shadowed, followed, and overdetermined by unacknowledged casualities of war: Gordon's insightful questioning situates the analytic and political premises of engagement with the living lineage of imprisoned radical intellectuals in the context of contemporary domestic warfare. Near the end of our 2001 interview at Pelican Bay, Pinell rearticulates the substance and circulation of lives lost—and recirculated— within this liberationist lineage. After I acknowledge the essential and radical truth of his testimonial, Pinell observes that we are intimately linked by a tacit mandate or obligation, confronting and displacing my rhetorical gestures of valorization (and othering) by calling me closer, perhaps, encouraging my embrace of his living, haunting presence: The regime "breaks" some, physically exterminates others. An uncounted many, only a few of whom are mentioned here, awaken a new and incorrigible political fantasy, which continuously haunts civil society and its resident nonimprisoned activists and intellectuals. The defeat of institutionalized terror, regimented living death, may very well lie in the radically historicized future visions of imprisoned activist-intellectuals such as Pinell and Viet Mike Ngo, whose short piece "Grave Digger" demands political praxis of a kind yet unseen, one that Wnds historical emergency in place of pragmatism's patience, principled hostility where typically lies the capacity for compromise with the power of domination.

AT Rodriguez answers

Freedom isn't free—prison reforms are just white attempts to distance themselves from the inhuman grammar underwriting the whole system of oppression

Rodriguez '06 [2006, ,Dylan Rodríguez is Professor and Chair of the Department of Ethnic Studies at UC Riverside. He received his Ph.D. and M.A. degrees in Ethnic Studies from the University of California, Berkeley (2001), and earned two B.A. degrees and a Concentration degree from Cornell University (1995). "Forced Passages Imprisoned Radical Intellectuals and the U.S. Prison Regime"]

Civil society's structure of freedom—however endangered and superficial—is denied and reproduced through the mass incarceration of the unfree "natives," the immediate "beings hemmed in," and specifically structured against the lineage of black slave ontology and the orbiting, approximating forms of enslavement/imprisonment that it yields. Thus, working within the logic of Fanon's terms, it is crucial to absorb that nonimprisoned ("free") people are largely constituted by "(white/multicultural) settlers" and an assimilated "native petite bourgeoisie," who at times disavow their political allegiance to the prison regime, yet who by their very existence—as the nominally free—denied and fortify its domain. Addressing the Algerian "native intellectual" class—the colonized petite bourgeoisie whose political loyalties are cast in doubt during the movement of decolonization—Fanon posits a historically situated transformation of "truth," that is, its embodiment in the native and against the settler (and, perhaps, against the native petite bourgeoisie as well). Writing at the very genesis of the contemporary prison regime in 1971, an anonymous poet in Soledad State Prison (California) prophetically lays bare the structural antagonism of the free–unfree relation in "A Sunny Soledad Afternoon": The overriding bitterness of the piece is a deeply principled one, the hostility toward the status of the "citizen" an expression of the political stakes at hand in the reading, interpretation, and circulation of the imprisoned poet's work by a nominally free audience (the text in which the poem was published, Words from the House of the Dead, was essentially a mimeographed compilation of writing and visual art smuggled from Soledad prison). This invitation to partake in a mind-numbing despair, to become intimate with living death, confronts the free person—particularly the self-identified progressive or radical activist—with the irreconcilable contradiction of embracing a freedom, or even waging a liberation struggle, that does not encompass an abolition of the poet's "sunny" Soledad. The poem's political imagery of shattering bones and emptied stares recalls human holocaust while anticipating the words of imprisoned activist, writer, and political educator Viet Mike Ngo. Ngo, during the original writing of this chapter, was punitively transferred to Avenal State Prison and threatened with an indeterminate sentence in the California SHU as retribution for his public political critiques of, and active legal actions against, the California Department of Corrections for its myriad practices of racialized violence, political retribution, and normalized torture of its captives. Speaking from this moment, he advocates an embrace of the political possibility lodged in an overwhelming condition of existence: Ngo clearly recognizes his condition as the embodiment of ontological death, a (non)existence formed by a fundamental social alienation and manifest in the overwhelming despair of imprisonment, a form of isolation that is at once individual and collective (note Ngo's seamless use of the "we" with the "I"). This is precisely why power and strength, that is, the activity and will to resist and perhaps disarticulate the logic of the regime, arrive through his intimacy with despair. It is Ngo's willingness, in fact his need, to be entangled in (rather than to attempt metaphysical transcendence of) the gravity and breathtaking totality of his condition that

structures his liberationist praxis, a political labor that is by definition desperate both because it is borne of despair and because it is all he has. We are left asking what, exactly, Ngo "has" (possesses) in struggle, in relation to loved ones, political supporters, and extended kin in the free world. Imprisoned radical intellectuals like Ngo mediate a unique political fantasy of radical freedom, a liberation practice that refuses to be deWned against, much less coexist with, coercive structures of human incarceration, immobilization, and disintegration. Former political prisoner Ramona Africa, the sole adult survivor of the 1985 police bombing of the MOVE residence in Philadelphia, recounts an otherwise banal—even absurd—confrontation with the repressive practices that shape and articulate the regime's discursive practices of power. Meaningful to the context of her story/autobiographical allegory is that it recounts a scene from her brief, two-month jailing in 1978 for "contempt of court," rather than a moment from her seven-year FORCED PASSAGES – 251 political incarceration from 1985 to 1992: with the notable exception of Martin Luther King Jr.'s "Letter from a Birmingham Jail" (1963), most insurgent carceral or "political-prisoner" counternarratives are authored from the long-term incarceration site of the prison rather than the short-term or transitory captivity of the local jail. Illustrating the forms of life sustenance that she and other jailed MOVE women sustained as a practice of resistance to the jail's logic of containment and isolation, Africa recalls: Africa's allegory signiWes MOVE's praxis of "life" in and against unnatural or premature death, in this case a living death, or carceral logic of death. The scene of this encounter crystallizes the constitutive centrality of technologies of death against life to the rigorous and relentless shaping of the prison's everyday0. As she communed with other jailed black women through the ritual feeding of seagulls, the guard/captor recognized that this practice was a form of intuitive antisystemic maneuvering and theatrical political pedagogy: amid the industrial waste and pollution of the jail, and squarely within its (often unrecognized) sweep of environmental poisoning and death, the civically dead expropriate the jailer's "slop" (the leftovers of the dead) in order to preserve (defend) natural life. Africa's account enacts and animates the crux of social truth embodied by imprisoned radical intellectuals over the past three decades: a distended passage into—and captivity within—a worldly intimacy with death, adjoining and opposing the mundane everyday of civil society, or the alleged free world.

Slavery was re-institutionalized through the criminal legal system—the only method of defeating racism at its roots is starting with prison abolition—other movements and policies will inevitably fail without abolishing supremist institutions

Heitzeg, 15—Professor of Sociology and Critical Studies of Race and Ethnicity at St. Catherine University (Nancy A., "On the Occasion of the 50th Anniversary of the Civil Rights Act of 1964: Persistent White Supremacy, Relentless Anti-Blackness, and the Limits of the Law", Hamline Journal of Public Law & Policy, Lexis)//emchen

***edited for grammar

PART I. INTRODUCTION White supremacy - once writ large in the law via slavery and Jim Crow segregation -- was removed from its legalized pedestal with the Civil Rights Act of 1964, The Voting Rights Act of 1965 and finally, The Fair Housing Act of 1968. 2 The law became "race-neutral" and it now suddenly was illegal to discriminate on the basis on race -- in housing, employment, public accommodations and access to the franchise. Advocates hoped that this legislation would finally bring to fruition the overdue promise of the Civil War Amendments, long subverted via both legislation and judicial interpretation. 3 These strokes of the pen, of course, could not remove bigotry **long steeped in racist archetypes**; nor could this legislation remove [*55] the structural barriers of nearly 400 years of white racial preference and cumulative advantage in the accumulation of wealth and property, access to education and housing, health and well-being, and all matter of social opportunities. 4 Racism, as both white supremacist/anti-black ideology and institutionalized arrangement, remains **merely transformed with its systemic foundations intact**. Segregation in housing and education persists at levels beyond that noted in Brown v. Board of Education, racial wealth gaps grow, and racial disparities in criminal injustice proliferate at a pace that has led to the label "The New Jim Crow". 5 In tragic irony, the Civil Rights Act's requirement of race-neutrality has perhaps ushered in an era of more insidious de facto discrimination that is now denied through "color-blind" rhetoric. A large body of research documents the paradigmatic shift from overt essentialist racism to color-blindness. 6 This style of racism relies heavily on ideological frames and linguistic shifts which allow whites to assert they "do not see race," deny structural racism, claim a level playing field that now victimizes them with "reverse discrimination" and appeals to the "race card," and argue that any discussion of race/racism is, in fact, racist and only serves to foment divisions rather than reflect/redress societal realities. "Color-blind racism" also creates a set of code terms that implicitly indict people of color without ever mentioning race. 7 In the Post-Civil Rights Era, the color-blind paradigm has become deeply ensconced in law and politics. Continued movement towards "race-neutrality" is the hallmark of a series of Supreme Court decisions that deny the role of institutionalized racism and increasingly limit the role of race in constitutional remedies for inequality in matters of affirmative action and educational access, [*56] voting rights, and all matters of criminal injustice. 8 Criminal justice -- as it did post- Reconstruction -- continues to play a central role in the continued subjugation of Blacks, in particular, and will serve as the central example of both past and current patterns of discrimination. On the occasion of the 50th Anniversary of the passage of the Civil Rights Act, we must again raise questions about its ultimate impact on racial justice. While this legislation made a substantial contribution to effectively dislodging white supremacy from the law, the call instead to race-neutrality left anti-blackness unchallenged. The result, buttressed by judicial interpretations that further limit the consideration of race and the proliferation of color-blind rhetoric throughout popular and political discourse, has resulted in a situation of continued subjugation, particularly through the criminal justice system. One must ask -- given Constitutional history, Supreme Court rulings that grind at a snail's pace from the legitimation of slavery and exclusion to segregation to no consideration, and legislative lethargy -- what are the pathways towards racial redress and equal protection of the law? PART II. THE CIVIL RIGHTS ACT IN HISTORICAL AND LEGAL CONTEXT An analysis of the "success" of the Civil Rights Act of 1964 must be centered in a larger discussion of the role of law generally in shaping our constructions of race. The theoretical perspective of Critical Race Theory (CRT), supplemented with the data of the social sciences, guides the analysis here. CRT, from the outset, raised crucial questions as to the ability of law to produce racial equality. In fact, CRT is grounded in "an analysis of how law helped constitute the very racial structure that antidiscrimination law aimed to [*57] regulate." 9 CRT proceeds from the premise that racial privilege and related oppression is deeply rooted in both our history and law, thus making as racism a "normal and ingrained feature of our landscape"; 10 CRT further offers a critique of Civil Rights legal reforms in specific, by noting that these have failed to fundamentally challenge racial inequality. As Bell observes, "the subordination of blacks seems to reassure whites of an unspoken, but no less certain, property right in their whiteness." 11 While all communities of color suffer from racism in general and its manifestation in criminal justice in particular, "Black" has been the literal and figurative counterpart of "white". Anti-black racism is arguably at the very foundation of white supremacy; the two constitute the foundational book-ends for the legal, political and every day constructions of race in the United States. 12 For this reason, in combination with the excessive over-representation of African Americans in the criminal justice system and the prison industrial complex, this analysis will largely focus on the ways in which the law has been a tool for the oppression of African Americans via the furtherance of white supremacy and anti-blackness in both law and practice. While race has never reflected any biological reality, it is indeed a powerful social and political construct. In the U.S. and elsewhere, it has served to delineate "whiteness" as the "unraced" norm -- the "unmarked marker" -- while hierarchically devaluing "other" racial/ethnic categories with Blackness always as the antithesis. 13 The socio-political construction of race coincides with the age of exploration, the rise of "scientific" classification schemes, and perhaps most significantly capitalism. In the United States, the solidification of racial hierarchies cannot be disentangled from the [*58] capitalist demands for "unfree" labor and expanded private property. By the late 1600s, race had been a marker for either free citizens or slave property, and colonial laws had reified this decades before the Revolutionary War. 14 The question of slavery was at the center of debates in the creation of the United States and is referenced no less than ten times. 15 By the time of the Constitutional Convention of 1787, the racial lines defining slave and free had already been rigidly drawn -- white was "free" and black was "slave" -- and the result according to Douglass was this: "assume the Constitution to be what we have briefly attempted to prove it to be, radically and essentially pro-slavery". 16 The Three-Fifths Clause, the restriction on future bans of the slave trade and limits on the possibility of emancipation through escape were all clear indications of the significance of slavery to the Founders. The legal enouncement of slavery in the Constitution is one of the first of many "racial sacrifice covenants" to come, where the interests of Blacks were sacrificed for the nation. 17 The social and constitutional construction of white as free and Black as slave has on-going political and economic ramifications. According to Harris, whiteness not only allows access to property, may be conceived of per se as "whiteness as property". 18 These property rights produce both tangible and intangible value to those who possess it; whiteness as property includes the right to profit and to exclude, even the perceived right to kill in defense of the borders of whiteness. 19 As Harris notes: The concept of whiteness was premised on white supremacy rather than mere difference. "White" was defined and constructed in ways that increased its value

by reinforcing its exclusivity. Indeed, just as [*59] whiteness as property embraced the right to exclude, whiteness as a theoretical construct evolved for the very purpose of racial exclusion. Thus, the concept of whiteness is built on both exclusion and racial subjugation. This fact was particularly evident during the period of the most rigid racial exclusion, as whiteness signified racial privilege and took the form of status property. 20 Conversely, Blackness is defined as outside of the margins of humanity as chattel rather than persons, and defined outside of the margins of civil society. Frank Wilderson, in "The Prison Slave as Hegemonys (Silent) Scandal," describes it like this: "Blackness in America generates no categories for the chromosome of history, and no data for the categories of immigration or sovereignty. It is an experience without analog -- a past without a heritage." 21 Directly condemned by the Constitution in ways that other once excluded groups (American Indians, women, immigrants, LGBTQ) were not, Blackness as marked by slavery-- as property not person - creates an outsider status that makes future inclusion a daunting challenge. 22 Any doubts as to the centrality of white supremacy built on anti-blackness were erased in the case of Scot v. Sanford (1857), where a majority of the Supreme Court denied the citizenship claims of Dred Scott and went further to declare that The Missouri Compromise requirement of balance between free and slave states in the expanding United States was a violation of the due process rights of slave holders. 23 Referring to the legal status of African Americans, Justice Taney's opinion for the majority makes it painfully clear, [*60] They are not included, and were not intended to be included, under the word 'citizens' in the Constitution, and can therefore claim none of the rights and privileges which that instrument provides for and secures to citizens of the United States. On the contrary, they were at that time considered as a subordinate and inferior class of beings, who had been subjugated by the dominant race, and, whether emancipated or not, yet remained subject to their authority, and had no rights or privileges but such as those who held the power and the Government might choose to grant them.. 24 Given the harsh judicial pronouncements here -- never over-ruled -- the legal status of African Americans remains in many respects, **the after-life of the slave**, still subject to stiff neo-slave forms of total legal social control, i.e. convict lease and the prison industrial complex, **despite Constitutional Amendments**, Federal Civil Rights legislation, and executive measures. PART III. WHITE SUPREMACY, ANTI-BLACKNESS AND THE AFTERLIFE OF SLAVERY IN THE LAW In the post -bellum era, the stain of slavery has been impossible to remove. Constitutional Amendments, Supreme Court rulings, and legislation notwithstanding, the exploitation of captive/caged Black labor continues, largely uninterrupted. As Dillon observes: Slavery's production of social and biological death did not end with emancipation, did not cease with the end of segregation, and refused to heed under civil rights legislation. Its logic and power [*61] exceeds the realm of law. The past comes back not just to haunt, but to structure and drive the contemporary operations of power. 25 The primary mechanism for the perpetual denial of full citizenship has been the criminal law, with its attendant systems of policing and punishment. As Frederick Douglas observed nearly 150 years ago, there is no escaping "the general disposition in this country to nimpute crime to color." 26 Post slavery, the criminalizing narrative has been a central cultural feature of on-going efforts at oppression; from convict lease/plantain prison farms to the contemporary prison industrial complex, the control of black bodies for profit has been **furthered by the criminal justice system**. A substantial body of work documents the post -bellum transformation of Black Codes into Slave Codes, slave patrols into police forces, plantations into prisons, and, in the post-Civil Rights era, into the contemporary prison industrial complex. 27 At no point was the law able to stop this; to the contrary, the law and its enforcement apparatus remain consistent, albeit shifting, centerpieces of white supremacy and anti-Blackness. A. THE POST -BELLUM ERA: CONVICT LEASE AND PLANATION PRISONS In the aftermath of the Civil War, the passage of the 13th, 14th, and 15th Amendments seemed to promise an end the abolition of slavery, due process and equal protection at both state and federal levels, and full citizenship via the franchise (at least for Black men). Angela Y. Davis, in Are Prisons Obsolete?, traces the initial rise of the penitentiary system to the abolition of slavery; "[I]n the immediate aftermath of slavery, the southern states hastened to develop a criminal justice system that could legally restrict the [*62] possibilities of freedom for the newly released slaves." 28 There was a subsequent transformation of the Slave Codes into the Black Codes and the plantations into prisons. Southern states quickly passed laws that **echoed the restrictions associated with slavery**, re-inscribed the property interests of "whiteness," and criminalized a range of activities of the perpetrator was black. 29 These laws were enforced by former slave patrols turned police agencies, with the assistance of extra-legal militias, and the white citizenry in general, who are merely protected by these same police, but per Wilderson "not simply "protected" by the police, they are -- in their very corporeality -- the police." 30 All this becomes possible because the 13th Amendment -- "Neither slavery nor involuntary servitude shall exist in the United States" -- **contained a dangerous loophole** -- "except as a punishment for crime." This allowed for the conversion of the old plantations to penitentiaries -- the 18,000 acre Louisiana Penitentiary at Angola is a case in point -- and the creation of prison "farms" such as Parchmann in Mississippi and the infamous Tucker Prison Farm and Cummins Prison Farm in Arkansas. 31 Sheriffs, jailors and wardens leased out entire prisons to private contractors who literally worked thousands of prisoners to death in labor camps, on chain gangs, and in prison farms. These prisoners were **largely black**; in the post-Civil War South the racial composition of prison and jail populations shifted dramatically from majority White to majority Black, and in many states increased ten-fold. 32 As Davis notes, "the expansion of the convict lease system and the county chain gang meant that the antebellum criminal justice system, defined criminal justice largely as a means for **controlling black labor**." 33 [*63] The re-institutionalization of slavery via the criminal legal system also served to effectively undo the newly acquired 15th Amendment right to vote. This was legislatively curtailed by the tailoring of felony disenfranchisement laws to include crimes that were supposedly more frequently committed by blacks. In the post-Civil War period, existing felony disenfranchisement laws were expanded dramatically, especially in the South, and modified to include even minor offenses. This legislation, in combination with literacy tests, poll taxes, grandfather clauses and ultimately, the threat of white terror, essentially denied Blacks the right to vote until the mid-twentieth century. The 14th Amendment's promise of due process and equal protection was insufficient to override this continued economic exploitation and civic exclusion. This was due to a series of Supreme Court rulings that interpreted the 14th in support of state's rights, white supremacy, and against Black inclusion. In United States v. Cruikshank (1876), the Supreme Court ruled that that "The fourteenth amendment prohibits a State from depriving any person of life, liberty, or property, without due process of law; but this adds nothing to the rights of one citizen as against another." 34 This decision, in a case involving the bloody Colfax Massacre, forbade the Federal Government from relying on the Enforcement Act of 1870 to prosecute actions by white paramilitary groups that had been violently suppressing the Black vote. 35 This decision paved the way for nearly a century of unchecked white extra-legal violence and lynching that served to enforce white supremacy in both law and practice. On matters of racial equality, the most famous Supreme Court ruling of the era was Plessy v. Ferguson (1896). 36 Post slavery, white supremacy in the law was accomplished by the introduction of a series of segregationist Jim Crow laws that mandated Black exclusion from white spaces, even in public accommodations. In a challenge to legalized segregation of public transportation in the state [*64] of Louisiana, Plessy argues that these laws have denied him equality before the law. The majority disagrees and sets forth the principle of "separate but equal." Justice Brown (1896) writes for the majority, It is claimed by the plaintiff in error that, in an mixed community, the reputation of belonging to the dominant race, in this instance the white race, is 'property,' in the same sense that a right of action or of inheritance is property. . . We are unable to see how this statute deprives him of, or in any way affects his right to, such property. If he be a white man, and assigned to a colored coach, he may have his action for damages against the company for being deprived of his so-called 'property.' Upon the other hand, if he be a colored man, and be so assigned, he has been deprived of no property, since he is not lawfully entitled to the reputation of being a white man. 37 The sole dissenter in Plessy sets up the juxtaposition between Jim Crow and color-blindness that frames the contemporary debate on race today. Justice Harlan, while acknowledging the reality of white supremacy, decries its support with the law, but with cold comfort: The white race deems itself to be the dominant race in this country. And so it is, in prestige, in achievements, in education, in wealth, and in power. So, I doubt not, it will continue to be for all time, if it remains true to its great heritage, and holds fast to the principles of constitutional liberty. But in view of the constitution, in the eye of the law, there is in this country no superior, dominant, ruling class of citizens. There is no caste here. **Our constitution is color-blind**, and neither knows nor tolerates classes [*65] among citizens. In respect of civil rights, all citizens are equal before the law. 38 Even post-Emancipation, Blacks had no claim to the property rights of whiteness, nor full and equal access to rights of citizenship that entailed. White supremacy and anti-Blackness persisted in law, even in the face of Amendments to the Constitution, which purported to undo the same. B. THE POST-CIVIL RIGHTS ERA, MASS INCARCERATION AND "COLOR-BLINDNESS The Supreme Court ruling in Brown v. the Board of Education of Topeka, Kansas (1954) is often used as the benchmark for chronicling the start of the Civil Rights Movement of the 1950s and 1960s. 39 The Court's unanimous rejection of Plessy's "separate but equal" provided a new Federal framework with which to challenge Jim Crow segregation on the state and local levels. It offered the back drop for the Montgomery bus boycott, the resistance in Birmingham, Bloody Sunday, the voter registration drives of Freedom Summer, and ultimately, passage of the Civil Rights Act of 1964, The Voting Right Act of 1965, the Fair Housing Act of 1968, and the 24th Amendment to the Constitution. 40 While there was hope again that the law itself could be pressed into the service of racial equality, those victories now seem bittersweet. Bell argues that the Brown decision and the ensuing Federal legislation were "silent covenants" of interest-convergence, where "perceived self-interest of whites rather than the racial injustices suffered by Blacks have been the major motivation in racial-remediation policies." 41 Judge Robert L. Carter, one of the attorneys who argued Brown goes further, ". . .the fundamental vice was not legally enforced racial segregation itself; this was a mere [*66] by-product, a symptom of the greater and more pernicious disease - white supremacy." 42 Legally supported segregation was uprooted without dislodging either white supremacy or anti-Blackness, now cloaked in race-neutral rhetoric of "color-blindness". The "color-blind" Constitution and the race-neutral requirement of Federal Civil Rights legislation now serves as convenient cover for the persistence of institutionalized racism. Racially coded but race-neutral rhetoric is widely used in debates over welfare reform, affirmative action, and particularly "law and order" criminal justice policy; 43 in all these cases, the coded racial sub-text reads clearly, and the resultant policies, while purportedly "race neutral," have resulted in disproportionate harm to people of color, especially African

Americans. While race is now widely the text/subtext of political debate, systemic racism still remains largely absent from either political discourse or policy debates of all sorts, including those related to criminal injustice. In the Post-Civil Rights Era, there has been a corresponding shift from de jure racism codified explicitly into the law and legal systems to a de facto racism where people of color, especially African Americans, are subject to **unequal protection of the laws**, excessive surveillance, police terror, extreme segregation, a brutal and biased death penalty, and neo-slave labor via incarceration all in the name of "crime control." 44 "Law and order" criminal justice policies are all guided by thinly coded appeals to white fears of high crime neighborhoods, "crack epidemics," gang proliferation, [*67] juvenile super -- predators, urban unrest, school violence, and more. In all these case, the sub-text reads clearly -- fear of brown and especially Black people. As before, law, policing and punishment are central to the ongoing exclusion of Blacks from civic life. Post slavery, the criminalizing narrative was a cultural feature of on-going efforts at oppression; from convict lease/plantain prison farms to the contemporary prison industrial complex the control of black bodies for profit has been furthered by the criminal justice system. 45 "Slave Codes" become Black Codes and now Black Codes become gang legislation, three-strikes and the War on Drugs in the persistent condemnation of Blackness. 46 As before, the criminal legal system is the primary mechanism for undoing the promised protections of Federal Civil Rights legislation and constitutes again, the major affront to the fulfillment of the 13th, 14th and 25th Amendments. The United States has the highest incarceration rate in the world, with a population of 2.3 million behind bars that constitutes 25% of the world's prisoners. 47 The increased rate of incarceration can be traced to the War on Drugs and the rise of lengthy mandatory minimum prison sentences for drug crimes and other felonies. These policies have proliferated, not in response to crime rate or any empirical data that indicates their effectiveness, due to new-found sources of profit for prisons. 48 As Brewer and Heitzeg (2008) observe: The prison industrial complex is a self-perpetuating machine where the vast profits (e.g. cheap labor, private and public supply and construction contracts, [*68] job creation, continued media profits from exaggerated crime reporting and crime/punishment as entertainment) and perceived political benefits (e.g. reduced unemployment rates, "get tough on crime" and public safety rhetoric, funding increases for police, and criminal justice system agencies and professionals) lead to policies that are additionally designed to insure an endless supply of "clients" for the criminal justice system (e.g. enhanced police presence in poor neighborhoods and communities of color; racial profiling; decreased funding for public education combined with zero-tolerance policies and increased rates of expulsion for students of color; increased rates of adult certification for juvenile offenders; mandatory minimum and "three-strikes" sentencing; draconian conditions of incarceration and a reduction of prison services that contribute to the likelihood of "recidivism"; "collateral consequences"-such as felony disenfranchisement, prohibitions on welfare receipt, public housing, gun ownership, voting and political participation, employment- that nearly guarantee continued participation in "crime" and return to the prison industrial complex following initial release.) 49 The 13th Amendment claim of abolition remains unfulfilled, as the neo- slavery of the prison industrial complex becomes the current vehicle for controlling Black bodies for political and economic gain. The trend towards mass incarceration is marred by racial disparity. While 1 in 35 adults is under correctional supervision and 1 in every 100 adults is in prison, 1 in every 36 Latino adults , 1 in every 15 black men, 1 in every 100 black women, and 1 in 9 black [*69] men ages 20 to 34 are incarcerated. 50 Despite no statistical differences in rates of offending, approximately 50% of all prisoners are black, 30% are white, and 20% are Latino;. 51 These disparities are indicative of differential enforcement practices rather than any differences in criminal participation. This is particularly true of drug crimes, which account for the bulk of the increased prison population. Even though Blacks and whites use and sell drugs at comparable rates, African Americans are anywhere from 3 to 10 times more likely to be arrested, and additionally likely to receive harsher sentences than their white counterparts. 52 It is no mistake that the subtitle of Michelle Alexander's epic indictment of The New Jim Crow is this: Mass Incarceration in the Age of Color-blindness 53 The Drug War, from start to finish, has always been racist: draconian sentences, crack versus powder disparities, police patrol patterns, stop/frisk practices, racial profiling and death at the hands of law enforcement, arrests, convictions, sentencing including death and incarceration, and collateral consequences that include bans on voting, bars to employment, education, housing and economic assistance, and the diminishment of parental rights, all fall heaviest on Blacks. 54 This racial disparity is by design. As Alexander observes criminal justice policies serve to regulate and segregate communities of color in the Post-Civil Rights era: [*70] What has changed since the collapse of Jim Crow has less to do with the basic structure of our society than with the language we use to justify it. In the era of colorblindness, it is no longer socially permissible to use race, explicitly, as a justification for discrimination, exclusion, and social contempt. So we don't. Rather than rely on race, we use our criminal justice system to label people of color "criminals" and then engage in all the practices we supposedly left behind. Today it is perfectly legal to discriminate against criminals in nearly all the ways that it was once legal to discriminate against African Americans. Once you're labeled a felon, the old forms of discrimination--employment discrimination, housing discrimination, denial of the right to vote, denial of educational opportunity, denial of food stamps and other public benefits, and exclusion from jury service--are suddenly legal. As a criminal you have scarcely more rights, and arguably less respect, than a black man living in Alabama at the height of Jim Crow. We have not ended racial caste in America; we have merely redesigned it. 55 We are still not saved by the 14th Amendment. In the Post-Civil Rights Era, the Supreme Court has followed the color-blind logic of the sole dissenter in Plessy and solidified the race-neutral implications of Federal Civil Rights legislation. Color-blindness as the new legal doctrine begins to emerge -- despite judicial dissent -- in cases involving affirmative action and other remedied to centuries of racial inequality. The Supreme Court adopts the color-blind model in The Board of Regents, University of California v. Bakke (1978), where the ruling is in favor of a white student who claimed racial discrimination in his denial of admission to medical school. 56 If the Constitution is to be color-blind, race can only be considered with "strict scrutiny," even as a remedy for past discrimination. Justices Brennan and Marshall, in separate dissents, point out the flaws of this approach. Brennan observes, [*71] Claims that law must be "color-blind" or that the datum of race is no longer relevant to public policy must be seen as aspiration rather than as description of reality. . . for reality rebukes us that race has too often been used by those who would stigmatize and oppress minorities. Yet we cannot . . . let color blindness become myopia which masks the reality that many "created equal" have been treated within our lifetimes as inferior both by the law and by their fellow citizens." 57 Justice Marshall's dissent echoes the warning, one that has now come to pass; For it must be remembered that, during most of the past 200 years, the Constitution as interpreted by this Court did not prohibit the most ingenious and pervasive forms of discrimination against the Negro. Now, when a state acts to remedy the effects of that legacy of discrimination, I cannot believe that this same Constitution stands as a barrier. 58 McCleskey v. Kemp (1987) is perhaps the most significant case of the Post-Civil Rights era with respect to the application of the 14th Amendment as to matter of race. 59 It is here that potential for an interpretation that would allow for real remedies for institutionalized discrimination is presented and denied. The racial disparity that characterizes all criminal justice has been most obvious and contested in the application of capital punishment, especially in the South, where the "killing state" stepped to do what was once the work of extra-legal lynch mobs. 60 After a series of death penalty cases [*72] where the Court ruled that racial discrimination in the application of the criminal laws' ultimate penalty must be addressed, it is here that the Supreme Court in a 5-4 decision clearly defines discrimination as individual not institutionalized. Citing statistical evidence from the now famous Baldus study, McCleskey argued that the application of the death penalty in Georgia was fraught with systemic patterns of racism that transcended but tainted any particular case. Defendants charged with killing white victims were more likely to receive the death penalty, and, in fact, cases involving black defendants and white victims were more likely to result in a sentence of death than cases involving any other racial combination. 61 The majority did not dispute the statistical evidence, but feared the consequences. If the Court accepted McCleskey's claim, then the Equal Protection Clause of the 14th Amendment would apply to patterns of discrimination, to institutionalized racism and sexism, to questions of structured inequality. It could, in fact, be used to challenge the very foundations of the criminal justice system itself, start to finish: laws with disproportionate racial impact, racial profiling and racial bias in police use of force, and prosecutorial discretion. These fears are expressed in Powell's opinion for the majority, "First, McCleskey's claim, taken to its logical conclusion, throws into serious question the principles that underlie our entire criminal justice system. The Eighth Amendment is not limited in application to capital punishment, but applies to all penalties. Thus, if we accepted McCleskey's claim that racial bias has impermissibly tainted the capital sentencing decision, we could soon be faced with similar claims as to other types of penalty. Moreover, the claim that his sentence rests on the irrelevant factor of race easily could be extended to apply to claims based on unexplained discrepancies that [*73] correlate to membership in other minority groups, and even to gender. 62 In the majority's view, equal protection of the laws was for individuals, not oppressed groups, and discrimination must be intentional and similarly individual. McCleskey closed off the last best avenue for remedying structural inequality with the law itself, and preserved the color-blind veneer at the expense of racial remedy. Justice Brennan's impassioned dissent makes the implications of this decision clear: At some point in this case, Warren McCleskey doubtless asked his lawyer whether a jury was likely to sentence him to die. A candid reply to this question would have been disturbing. First, counsel would have to tell McCleskey that few of the details of the crime or of McCleskey's past criminal conduct were more important than the fact that his victim was white. Furthermore, counsel would feel bound to tell McCleskey that defendants charged with killing white victims in Georgia are 4.3 times as likely to be sentenced to death as defendants charged with killing blacks. In addition, frankness would compel the disclosure that it was more likely than not that the race of McCleskey's victim would determine whether he received a death sentence: 6 of every 11 defendants convicted of killing a white person would not have received the death penalty if their victims had been black. While, among defendants with aggravating and mitigating factors comparable to McCleskey's, 20 of every 34 would not have been sentenced to die if their victims had been black. Finally, the assessment would not be complete without the information that cases involving black defendants and white victims are more likely to result [*74] in a death sentence than cases featuring any other racial combination of defendant and victim. Ibid. The story could be told in a variety of ways, but McCleskey could not fail to grasp its essential narrative line: there was a significant chance that race would play a prominent role in determining if he lived or died. . . At the time our Constitution was framed 200 years ago this year, blacks had for more than a century before been regarded as beings of an inferior order, and altogether unfit to associate with the white race, either in social or political relations; and so far inferior that they had no rights which the white man was bound to respect. Only 130 years ago, this Court relied on these observations to deny American citizenship to blacks. Ibid. A mere three generations ago, this Court sanctioned racial segregation, stating that "[i]f one race be inferior to the other socially, the Constitution of the United States cannot put them upon the same plane." Plessy v. Ferguson, 163 U.S. 537, 552 (1896). In more recent times, we have sought to free ourselves from the burden of this history. Yet it has been scarcely a generation since this Court's first decision striking down racial segregation, and barely two decades since the legislative prohibition of racial discrimination in major domains of national life. These have been honorable steps, but we cannot pretend that, in three decades, we have completely escaped the grip of a historical legacy spanning centuries Warren McCleskey's evidence confronts us with the subtle and persistent influence of the past. His message is a disturbing one to a society that has formally repudiated racism, and a frustrating one to a Nation accustomed to regarding its destiny as the product of its own will. Nonetheless, we ignore him at our peril, [*75] for we remain imprisoned by the past as long as we deny its influence in the present. 63 Well into the 21st Century, Supreme Court decisions continue to erode Federal Civil Rights legal gains and the ability of the Civil War Amendments to provide racial redress. The doctrine of strict scrutiny itself continues to be eroded further as the current Supreme Court limits its application and as a series of subsequent cases from Grutter v Bollinger (2003) and Gratz v. Bollinger (2003) to Fisher v. University of Texas at Austin (2014) and Shelby County v. Holder (2012) have shown, the Constitution has indeed erected a legal barrier with claims of colorblindness. 64 Worse still, as Crenshaw notes, the shift even beyond color-blindness towards claims of "post-racial pragmatism," This pragmatism jettisons the liberal ambivalence about race consciousness to embrace a colorblind stance even as it foregrounds and celebrates the achievement of particular racial outcomes. In the new post-racial moment, the pragmatist may be agnostic about the conservative erasure of race as a contemporary phenomenon but may still march under the same premise that significant progress can be made without race consciousness. . .. Colorblindness as doctrine not only undermines litigation strategies that rely on race-conscious remediation, but it also soothes social anxiety about whether deeper levels of social criticism, remediation, and reconstruction might be warranted. While colorblindness declared racism as a closed chapter in our history, post-racialism now provides reassurance to those who weren't fully [*76] convinced that this history had ceased to cast its long shadow over contemporary affairs. Post-racialism offers a gentler escape, an appeal to the possibility that racial power can be side stepped, finessed and ultimately overcome by regarding dominance as merely circumstance that need not get in the way of social progress. As post-racialism becomes the vehicle for a colorblind agenda, the material consequences of racial exploitation and social violence-- including the persistence of educational inequity, the disproportionate racial patterns of criminalization and incarceration, and the deepening patterns of economic stratification--slide further into obscurity. 65 More than a century after the Civil War Amendments, 60 years since Brown, 50 years since the Civil Rights Act of 1964, and we are here, with white supremacy and anti-Blackness intact, but now masked, and with slavery (unwilling to die) transformed yet again. Still, the law, unwilling and unable to offer relief, but worse still, at the center of this exclusionary endeavor, from the outset to the present, remains the definer and purveyor of Black social, civil and literal death. PART VI. REMEDIES? Despite centuries of death-defying movements and oft well-intended legislation, the essential story line and structural reality of white supremacy/anti-Blackness remains foundationally intact. While there has been progress for some, enough to reinforce the claims of a post-racial era, the mainstay, the historical sway of a slavery rooted in both racism and profit, lingers, transformed over and again from "the prison of slavery to the slavery of prison." 66 This same phenomena is called by many names. All the powers of the law - Constitutional amendments, Federal Civil Rights legislation, Supreme Court rulings - **have failed to stymie this trend**, and as we have seen, have often allowed and re-enforced the same. [*77] In the Post-Civil Rights era, efforts to resist are complicated by the insidious cover story created by the paradigm of "color-blind" racism and its corresponding entrenchment in now "race-neutral" law. All matter of inequality is masked by claims of legal equality, but nowhere more so than with regard to the extensive and excessive reliance on mass incarceration. 67 Criminality has become conflated nearly entirely with Blackness, and the entire machinery of it rests on an unspoken understanding that the property

rights of "whiteness" rest now (as always) on the exclusion, the caging, and the execution of Black bodies. The law supports this, still. In light of this, what remedies then remain? The usual calls for still more legal reform, perhaps for reparations, the hope for a more radical future Supreme Court reading of McCleskey seem too distant, too abstract, and perhaps too, **destined to fail at addressing the deep roots of the possessive investment in slavery**. 68 Perhaps **the most fruitful approach** is evidenced in the **prison abolition movement**, which explicitly recognizes the contemporary prison industrial complex as an **extension of slavery** and later, convict lease. 69 As such, the call now, as then, must be for abolition. Angela Davis describes the movement as follows: Prison abolition, like the abolition of slavery, is a long-range goal and the handbook argues that an abolitionist approach requires an analysis of "crime" that links it with **social structures, as opposed to individual pathology**, as well as "anticrime" strategies that focus on the provision of social resources. Of course, there are many versions of prison abolitionism--including those that propose to abolish punishment altogether and replace it with [*78] reconciliatory responses to criminal acts. In my opinion, the most powerful relevance of abolitionist theory and practice today resides in the fact that without a radical position vis-a-vis the rapidly expanding prison system, prison architecture, prison surveillance, and prison system corporatization, prison culture, with all its racist and totalitarian implications, will continue not only to claim ever increasing numbers of people of color, but also to **shape social relations** more generally in our society. Prison needs to be abolished as the **dominant mode** of addressing social problems that are better solved by other institutions and other means. The call for prison abolition urges us to imagine and strive for a very different social landscape. 70 Even here, there is the danger that the prison abolition movement will attend to the dismantling of an essential structure of white supremacy without fully grappling at root with the anti-Blackness that serves as corollary. At the time of this writing, the nation is divided again for the most recent in an ongoing spate of "new 21st century version of lynchings". 71 Police and vigilante killings of unarmed Blacks, now occur at the rate of 1 every 28 hours. 72 New research verifies what some have already known with their lives, that Black children are seen, by police and others, as older [*79] by far-- in fact not seen as children as all. 73 New research too suggests that white Americans are more comfortable with punitive and harsh policing and sentencing when they imagine that the people being policed and put in prison are black. This is **mediated by fear**; the idea of black criminals inspires higher anxiety than that of white criminals, pressing white people to want stronger law enforce enforcement. 74 While these sentiments and actions are rooted in the desire to protect the property of "whiteness,' this is always over and against the perceived intrusion of excluded Blackness. In the final analysis, it is the long shadow of anti-Blackness that must be confronted. All legal, political, and social movement efforts to dismantle white supremacist institutions **will fail in lieu of this**. These will be half measures until, at last, there is acknowledgement and embrace of the "Black specter waiting in the wings. . . .that cannot be satisfied (via reform or reparation), but must nonetheless be pursued to the death." 75

The alternative is prison abolition---that solves

Stanley and Spade, 12- (Eric A. Stanley is finishing a PhD in the history of consciousness at the University of California, Santa Cruz, and is editor of the collection Captive Genders: Trans Embodiment and the Prison Industrial Complex,. Dean Spade is assistant professor at the Seattle University School of Law, teaching administrative law, poverty law, and law and social movements) "Queering Abolition Prison, Now?" From American Quarterly, Volume 64, Number 1, March 2012, American Studies Association, JSTOR //droneofark

From many points of the political spectrum people are now willing to argue that the current criminal justice system is "broken." Reformers often suggest prisons are wasteful and do not act as deterrents, while others argue the criminal justice system is racist, classist, homophobic, and more. However, in contrast, an abolitionist analysis argues that the system is not broken but, according to its own logics, it is working perfectly. How has this discussion affected your thinking, and how do you analyze this debate? Spade: It's interesting to think about the parallel conversation going on about whether our immigration system is "broken." These conversations about these two "broken" systems that operate to exile, cage, and torture immigrants, poor people, people of color, and people with disabilities always seem to rely on an idea that we need these systems, we just need to clean them up or fix them up somehow. I think that abolitionists are asking, in a variety of ways, if we can imagine letting go of the idea that some people need to be caged, exiled, or kept out. If we know that the logics that support criminalization and immigration

enforcement are lies—these systems do not keep us safer but actually increase and perform violence, these systems do not improve our economic well-being but actually enhance exploitation and consume enormous resources, these systems do not heal harm but in fact cause and exacerbate harm—then our advocacy cannot and should not participate in those logics by assuming that exile and caging are, indeed, necessary. When we decide that there is no problem that is best solved by exile or caging, we get to ask all the other questions about how we want to actually solve complex, serious problems, some of which we have really well-developed answers to and some of which people are still working to build responses to. Some have clear models that have worked historically or in other places, others require innovative thinking. Abolition is the commitment to engage in those creative processes rather than to continue to [End Page 121] assume the necessity of a set of practices that have always been and will always be, as long as they are in use, harmful, targeted at certain populations because of processes of racialization and gendering, rationalized through patriarchy, ableism, settler-colonialism and white supremacy, and unredeemable.

Link – reform

Piecemeal reform masks the inherent inequality in prison systems and empirically strengthens its ability to punish marginalized peoples.

Law 9 [Victoria, anarchist activist, writer, freelance editor, "Resistance Behind Bars: The Struggles of Incarcerated Women," pg. 166-9, omak]

The soaring increase in prisons, as well as the horrifying conditions within them, has prompted calls for reform. However, it is important to note the historical impact of reform: the prison itself was born from early reformers' calls to replace corporal and capital punishment with the extended loss of liberty. Imprisonment, reformers argued, would provide the opportunity for those convicted of crimes to reform themselves through hard work, silence and solitude. The Walnut Street Jail in Philadelphia opened in 1790 as a Quaker alternative to corporal punishment and execution and was emulated throughout the country.652 Some Historical Background 167 Separate prisons for women were also the result of well-intentioned calls for reform. In 1874, after Quaker reformers Sarah Smith and Rhoda Coffin led a campaign to end sexual abuse of women imprisoned at the (male) Indiana state prison, a separate women's prison was established. Other states followed suit and, by 1940, 23 states had established separate facilities to hold female prisoners.653 Although female prisons were seen as a much-needed reform over locking women in the cellars and attics of male penitentiaries, their existence led to an increase in the number of women sentenced to imprisonment. In Illinois, for example, the most dramatic increase occurred when the prison at Joliet opened a unit specifically for women. Despite the fact that no more than 10 women had ever been incarcerated at one time, the first female-only unit was a 100-cell building built in 1859. During the next decade, the total number of women sentenced to prison tripled.654 Similarly, in New York State, reformer (and commissioner of the New York State Board of Charities) Josephine Shaw Lowell's repeated calls for separate women's prisons resulted in the opening of the state's first reformatory in Hudson in 1887.655 Within two years, Hudson had reached its capacity of 234; under Lowell's urging, the state legislature opened two other reformatories: Albion in 1893 and Bedford Hills in 1901.656 Even in these reformatories, women did not escape punishments that amounted to torture. Clifford Young, the chief inspector of the New York State Commission of Correction, recounted that in 1919 and 1920, women at Bedford Hills who were perceived as "refractory or hysterical . . . were handcuffed with arms behind the back, and with a second pair [of handcuffs] were fastened to the gratings so that their

weight was on the toes or ball of the foot. While in this position their heads were forced down into a pail of water. The management contended that this was 'treatment,' not punishment."657 Both Albion and Bedford Hills continue to exist today: in January 2007, Albion held 1,106 women and Bedford Hills held 812.658 Resistance Behind Bars 168 More recent calls for reforms have taken into account gender differences and issues particular to women. These, too, have strengthened an already-unjust system of incarceration. In 2006, California governor Arnold Schwarzenegger announced that the California Department of Corrections and Rehabilitation (CDCR) had identified 4,500 women who did not need to be imprisoned. Instead of releasing them, however, CDCR proposed building 4,500 new beds in what they called Female Rehabilitative Community Corrections Centers, essentially mini-prisons, in the urban areas where many of these women had lived before arrest.659 The state legislature rejected the proposal, but in 2007 passed a modified version of the bill, AB76, which called for a "Female Offender Reform Master Plan" that would address the needs particular to its imprisoned female population rather than relying on the supposedly gender-neutral (but often designed for men) onesize-fits-all model. This "master plan" did not address the root causes of rising female incarceration: mandatory sentencing, racial profiling, poverty and the feminization of poverty, the lack of support systems for women leaving prison. Instead, the plan called for increased assessment and implementation of "gender specific rehabilitative programs" within existing prisons. Calls for reform have failed to adequately address the factors leading to women's incarceration. Instead, **they mask the inequities and injustices inherent in the prison system and have historically strengthened its capacity and ability to separate and punish those who transgress social mores, particularly the poor, people of color and other marginalized populations**. Even government entities have realized this: in 1973, the same year that Nixon began his efforts to intensify the War on Crime, the National Advisory Commission on Criminal Justice Standards and Goals stated that prisons fail to reduce or deter crime, provide only temporary protection to the community, and change the incarcerated person for the worse. It recommended that society use imprisonment only as a last resort.660 Some Historical Background 169 Just as some have recognized the injustices and brutality of prisons and called for widespread reforms, others have called for the abolition of the entire system. Prisons act not only as sites of social control but also, as demonstrated in the preceding chapters, as state-sanctioned sites of violence against women, particularly women of color, poor women and those who transgress social norms. Incarceration has not decreased crime; instead, "tough on crime" policies have led to the criminalization (or what Christian Parenti and others have referred to as "widening the net") of more activities, leading to higher rates of arrest, prosecution and incarceration while shifting money and resources away from other public entities, such as education, housing, health care, drug treatment, and other societal supports.

Traditional policy reform strategies fail to dismantle the new Jim Crow laws that created the modern prison industrial complex – reforms are circumvented and the foundational racism is maintained

Alexander 10 [Michelle, civil rights lawyer, advocate, legal scholar, and associate professor of law at Stanford Law School, "The New Jim Crow," pp. 14-15, omak]

The recent decisions by some state legislatures, most notably New York's, to repeal or reduce mandatory drug sentencing laws have led some to believe that the system of racial control described in this book is already fading away. Such a conclusion, I believe, is a serious mistake. Many of the states that have reconsidered their harsh sentencing schemes have done so not out of concern for the lives and families that have been destroyed by these laws or the racial dimensions

of the drug war, but out of concern for bursting state budgets in a time of economic recession. In other words, the racial ideology that gave rise to these laws remains largely undisturbed. Changing economic conditions or rising crime rates could easily result in a reversal of fortunes for those who commit drug crimes, particularly if the drug criminals are perceived to be black and brown. Equally important to understand is this: Merely reducing sentence length, by itself, does not disturb the basic architecture of the New Jim Crow. So long as large numbers of **African Americans** continue to be arrested and labeled drug criminals, they **will continue to be relegated to a permanent second-class status upon their release, no matter how much (or how little) time they spend behind bars.** The system of mass incarceration is based on the prison label, not prison time. Skepticism about the claims made here is warranted. There are important differences, to be sure, among mass incarceration, Jim Crow, and slav ery— the three major racialized systems of control adopted in the United States to date. Failure to acknowledge the relevant differences, as well as their implications, would be a disservice to racial justice discourse. Many of the differences are not as dramatic as they initially appear, however; others serve 14 the new jim crow to illustrate the ways in which systems of racialized social control have managed to morph, evolve, and adapt to changes in the political, social, and legal context over time. Ultimately, I believe that the similarities between these systems of control overwhelm the differences and that mass incarceration, like its predecessors, has been largely immunized from legal challenge. If this claim is substantially correct, the implications for racial justice advocacy are profound. With the benefi t of hindsight, surely we can see that piecemeal policy reform or litigation alone would have been a futile approach to dismantling Jim Crow segregation. While those strategies certainly had their place, the Civil Rights Act of 1964 and the concomitant cultural shift would never have occurred without the cultivation of a critical political consciousness in the African American community and the widespread, strategic activism that fl owed from it. Likewise, **the notion that the New Jim Crow can ever be dismantled through traditional litigation and policy-reform strategies that are wholly disconnected from a major social movement seems fundamentally misguided**. Such a movement is impossible, though, if those most committed to abolishing racial hierarchy continue to talk and behave as if a state-sponsored racial caste system no longer exists. If we continue to tell ourselves the popular myths about racial progress or, worse yet, if we say to ourselves that the problem of mass incarceration is just too big, too daunting for us to do anything about and that we should instead direct our energies to battles that might be more easily won, history will judge us harshly. A human rights nightmare is occurring on our watch**. A new social consensus must be forged about race and the role of race in defi ning the basic structure of our society**, if we hope ever to abolish the New Jim Crow. This new consensus must begin with dialogue, a conversation that fosters a critical consciousness, a key prerequisite to effective social action. This book is an attempt to ensure that the conversation does not end with ner vous laughter.

Link – alternatives to prisons

"Alternatives" to prison are cancerous growths that spread beyond the prison walls into the prisoner's everyday life, controlling him through new mechanisms that rest on the same theme of punishment through confinement

Foucault 76 [Michel Foucault was a French philosopher, historian of ideas, social theorist, philologist and literary critic, "Alternatives to the Prison Dissemination or Decline of Social Control?," in Theory, Culture & Society November 2009 vol. 26 no. 6, omak]

Yet, even in these forms of alternatives to the prison one needs to point out several things: they are all a relatively limited extension of the prison outside its boundary. Many of these measures, such as remission, or partial detention, are simply a way of delaying or deferring imprisonment, or a way of diluting the time of imprisonment over a whole period of one's life; they are therefore not a system that abolishes detention. A fundamental issue arises therefore, which is that these new methods that try to punish without imprisonment are basically a new and more efficient way of re-implementing the older functions of the carceral that I noted earlier. The fact of imposing a debt on someone, of cancelling a number of his freedoms, such as those of movement, are other forms of immobilizing him, of making him dependent, of binding him to an obligation to labour or be productive or live in a family. Above all, they are so many more ways of diffusing outside of prisons the functions of surveillance that will henceforth be exercised not on the individual confined to his cell but dispersed across his apparent life of freedom. Besides, an individual who is on probation is one who is under surveillance amidst the plenitude or flow of daily life, in the midst of the constant relations with family, work, and associates; it is a form of control over his salary, how he uses it, how he manages his budget; it is a surveillance over his whole environment. **All these alternatives** to the old forms of incarceration **have** as their function **the aim of disseminating as far as possible all those forms of power that belonged to the prison, to spread them as a cancerous growth beyond the prison walls**. It is truly a penal or carceral surplus-power that is developing, whilst the prison as an institution is diminishing. The castle falls, but there is an attempt to deliver through different mechanisms the social functions, or the functions of surveillance, control and resocialization that the institution-as-prison was meant to ensure. Of course one must not immediately conclude that what is being put in place through these seeming alternatives will be worse than the prison. It is not worse, though one must bear in mind that, in relation to a system of incarceration, there is nothing really alternative in these new methods. It is more a matter of the transmission (démultiplication) of the old carceral functions that the prison implemented in a rather brutal and inefficient way, so that they are now achieved in more flexible, free and also more extensive ways. They are all variations on the same theme of punishment through confinement.

Alternatives to incarceration fail – imprisonment is just shifted to the local level and any reforms are coopted by internal actors

Austin and Krisberg 82 [Dr. James Austin has over twenty-five years of experience in correctional planning and research. He is the former director of the Institute on Crime, Justice and Corrections at George Washington University in Washington, DC. He serves, or has recently served, as director for several large U.S. Department of Justice-funded research and evaluation programs, Barry Krisberg, Ph.D. is the Director of Research and Policy and Lecturer in Residence at the Chief Justice Earl Warren Institute on Law and Social Policy. Prior to joining the Warren Institute, Dr. Krisberg was a Distinguished Senior Fellow at the Berkeley Center for Criminal Justice. Prior to joining BCCJ, Dr. Krisberg was the President of the National Council on Crime and Delinquency from 1983 to 2009, "The Unmet Promises of Alternatives to Incarceration," Crime & Delinquency July 1982 vol. 28 no. 3 374-409, omak]

The foregoing review of the research literature on alternatives to incarceration suggests that their promise remains largely unmet. In each instance, the nonincarcerative options were transformed, serving criminal justice system values and goals other than reducing imprisonment. Sentencing alternatives, such as restitution and community service, are employed to enhance the increasingly criticized sanctions of probation and fines. There is little evidence that sentencing alternatives

have substantially displaced incarceration. Similarly, **postincarceration release programs often escalate the level of control over clients and have served primarily to control populations within prison systems**. Increasing the availability of community facilities has not reduced populations in secure confinement. **Community correction legislation appears less likely to reduce incarceration than to change the location of imprisonment from the state institutions to county jails**. Moreover, initial declines in state prison commitments can be neutralized by other sentencing or release policies that increase prison populations. Although community correction legislation may have redistributed correctional costs and shifted decision making from state to local levels, it is questionable whether it has made a longterm contribution to reduced imprisonment. An analysis of why these nonincarceration schemes have failed must confront the question of goals. In each attempted reform, significant criminal justice actors added other objectives to, displaced, or replaced the orig- inal goals. An even more troubling problem facing reform efforts is the inherent ambiguity in what constitutes successful alternatives to incarceration. Reviews of enabling legislation as well as program descrip- tions illustrate how multiple and often conflicting objectives characterized these reforms.6° Harland notes that advocates of restitution often fail to anticipate conflicts with traditional criminal justice goals and procedures.61 Sentencing occurs within a system dominated by the values of law enforcement, community protection, and punishment. Other values enter the sentencing process during stages of plea negotiation and presentence investigation. Most criminal justice personnel do not endorse the value of reducing incarceration. Quite the contrary, imprisonment itself is valued, and milder forms of punishment such as probation or diversion rest on the threat that incarceration may be applied if the offender fails to conform. **Alternatives are employed to the extent that they fit the structure of power and values within specific criminal justice systems and the variety of goals pursued by actors within the system**. Generally, the values of police, judges, and prosecutors are predominant. In correction, the strongest influence is exercised by administrators of prison and jail systems, who control large budgets and often share law enforcement values. Probation and parole agencies exert less influence 60. James Austin, "Instead of Justice: Diversion" (Ph.D. diss.; University of California at Davis, 1980); Harland, "Court-Ordered Community Service in Criminal Law." 61. Alan T. Harland, "Goal Conflicts and Criminal Justice Innovation: A Case Study," Justice System Journal , than do police, court, and correctional organizations; often they are subordinate parts of judicial or prison bureaucracies. Thus, alternatives as a means to reduce imprisonment are advocated by the less powerful divisions of the criminal justice system-or by private reform organizations with minimal political and economic influence, which must rely on the media and the presentation of to promote decarceration policies and legislation. Within this milieu, alternatives are attractive to law enforcement, court, and prison officials as tools to supplement nonincarcerative sanctions (e.g., probation, fines, and parole). Public opinion opposing the use of socially defined "lenient" alternatives for serious offenders intensifies the system's reluctance to expand the use of alternatives except in crisis situations (e.g., following riots or federal court orders)

Alternatives to incarceration are wildly insufficient and only subject prisoners to other manifestations of the surveillance state

Price, 15-(Joshua M. Price has engaged in advocacy with and for currently and formerly incarcerated people since 2004. For his efforts, the New York State Assembly has awarded him a citation for Outstanding Contribution to Civil Rights of New Yorkers, and the Broome/Tioga (New York) NAACP has named him "Person of the Year.". He teaches in the Department of Sociology at the State University of New York at Binghamton.) "Prison and Social Death" Part

III: Abolition Democracy pt. 10- Conclusion, p. 145-148, Rutgers University Press, print//droneofark

Pushing for incremental changes in agencies and institutions that act with impunity, such as the parole office or the county jail, put us in significant contradiction with a deeper belief that the structure of these institutions was rife with abuse and racism that no measure of reform could possibly remedy without dismantling the institution entirely. Though we met with the sheriff, he always dismissed our concerns out of hand and continued to act with callous disregard for the health and well-being of people held at the county jail. We tried to cooperate with the parole office so that they would not revoke people's parole so often, and instead support successful reentry a bit more, but the parole office treated us with a mixture of bureaucratic indifference and disdain. Both they and the sheriff usually, though not always, framed our relationship in adversarial terms. In pushing for change, we used a rule of thumb that we learned from a group that advocates for transgender people in prison in California. We did not adopt or advocate for any policy or position that would lead to increased expenditure or reliance on the corrections system, including jail health care or parole. We also resisted solutions predicated on expanding surveillance. Avery Gordon has called this "abolitionist reform," or prison reform that aims ultimately toward the eventual abolition of prison, rather than reform that serves as an apologia for the prison system (A. Gordon 2004). Yet unintended consequences can undermine efforts at abolitionist reform. At what point does one (did we) tacitly support jail expansion by advocating for better health care? I am haunted by the thought that we did exactly this. In early 2013, after a series of suspicious inmate deaths around the state, the New York State Attorney General's Office announced an investigation into the health care at fourteen county jails around New York. The investigation may have been prompted in part by activists, especially in Buffalo and perhaps in Binghamton as well. As a result of the investigation, the attorney general ordered several county jails to make changes to their mental health and medical units. Astutely, several sheriffs around the state used this mandate to propose capital-intensive expansions to their respective jails. Our sheriff, for example, requested a multimillion-dollar expansion of the county jail. In February 2014, the Broome County Legislature voted to provide several million dollars to build more bunk space at the jail and enlarge its medical unit. Other New York counties that have recently expanded their jails include Erie, Tomkins, Tioga, and Cortland in the face of small but vocal opposition. In vain we entered the county legislators' chambers, leafleting and carrying banners protesting the expansion. But I knew—we all knew—we were going to lose. I saw the sheriff and several of his upper-echelon staff across the room, standing by the podium, receiving public kudos from the county executive. They could not avoid seeing us with all our noisy posters and hand-painted T-shirts. Their lips were pursed in quiet disapproval. I could see how furious they were with us, but I thought—they've won! They've won. They've triumphed. This is their moment, not ours. Several years of documenting and fighting against deficient prenatal care, the abominable rates of miscarriage, a lack of sympathy or psychological support for the mentally ill, and the lackadaisical diagnostic protocols in our county jail that have been responsible for at least one death (New York State Correction of Commission 2012) has gotten us little, except that the jail budget will now be greater. This mirrors the expansion of prison medical care at the state level, as the New York State Department of Corrections copes with large numbers of mental health patients and an aging prison population. Rozann Greco, a friend who works with me on the advocacy, visits a new medical unit at Fishkill Correctional Facility in New York. She is part of a delegation on aging in prison. They tour the facility, one of five popping up throughout New York State. It specializes in geriatric care. It provides colonoscopies and prostate surgery. It also treats many of the "cognitive deficiencies," as they term it, of incarcerated people. She tells me that at first she was impressed with the level of care and the attention provided by these clinics. The doctors and staff seem serious, competent, and committed. It is well-staffed and the medical facilities seem up-to-date. But then, as she gets back in her car she thinks, with horror, "What happened to compassionate release?" We discuss the experience at length. Is this the future of prisons? Some right wing pundits argue that people receive better medical care in prison than they do on the outside, as a way to show how comfy prisons are. Is this what we have decided to do as a society, invest more in prison health care instead of health care for the poor and the formerly incarcerated? Is this our vision for better health care and responsible investment? Rozann tells me of a man they told her about during her visit. He routinely banged his head against the bars. The medical facility detected he has mental health problems and diagnosed him based on videos made of his behavior. They issued the man a helmet and prescribed a combination of occupational therapy and antipsychosis medication. His behavior, she was told, has improved remarkably. By all accounts, the incarceration of the mentally ill is a significant social challenge, with some estimates as high as one third of inmates evincing some problem of mental illness. Is this our response to the problem of the incarceration of the mentally ill? Issuing them a helmet and a Prozac? My discussion with her depresses me profoundly. (Fieldnotes, 2009) Advocating for reform thus must aim for more, or something other, than better health care; it must promote alternatives to incarceration. But simply advocating for decarceration or alternatives to incarceration is not enough. Chapter 7, which details our skirmishes with the local parole office, underscores that the criminal justice system polices and controls people through other institutions. In an era of mass supervision, a web of governmental and nongovernmental organizations jousts to impose themselves on the lives of the formerly

incarcerated and their families (Robinson, McNeill, and Maruna 2013; McNeill and Beyens 2014; Miller 2014). The nonprofit and the service sector, in other words, begin where parole, probation, and the prison system leave off. Aiming for abolition, even if couched as "abolition reform," proved of limited utility to me in negotiating this reentry industry. I can be more specific. Our organization, the Southern Tier Social Justice Project, tried to push for concrete changes in policy that emerged from the perspectives of the incarcerated, the formerly incarcerated, and their families, and that would be of direct benefit to them. In 2008, we formed a reentry task force with area service organizations, including residential treatment centers for drugs and alcohol and the parole office. The goal was a "one-stop shop," to use the jargon of those in the field—a comprehensive reentry center that would encompass all of a person's needs when he or she came back into town. I went along reluctantly, because I was worried that in forming a task force we were abandoning our work with community people and focusing too much attention on working with middle-class service providers and state agents such as the Office of Parole and the Department of Social Services (DSS). Our efforts were successful insofar as we formed a task force for reentry. As it turned out, the victory was pyrrhic. Once state funds became available, the Department of Social Services quickly moved in and took over the task force. DSS drummed out nearly all of the formerly incarcerated people who had formed the task force. Although we had always strived for democratic and nonhierarchical decision making, the task force became hierarchical and dominated by a white middle-class service sector as well as the Department of Social Services and the Office of Parole. This linked to a deeper problem inside our organizing efforts. The most committed formerly incarcerated people wanted to form a nonprofit, and, they hoped, get jobs as full-time advocates and peer counselors for the formerly incarcerated. This goal was in tension with our organizing for a political movement, since a nonprofit structure tends to impose hierarchy on an organization. The tension, quite frankly, boiled down to a question of time and focus. Becoming a nonprofit meant focusing a lot more on grant writing, which meant attending to the funding agendas of foundations and government agencies (see generally INCITE! 2007). Nonprofits have received a lot of criticism by progressives alert to the possibility of reproducing the logic of capitalism and of oppressive structures of service provision that sap the strength of political projects (see Rodriguez 2006; Spade 2011). As an all-volunteer effort that was unfunded we had several advantages. We were not beholden to anyone except each other and to the incarcerated. No one had a financial stake. On the other hand, had we applied for nonprofit status (501[c]3), we might have had more stability as an organization. Funding and jobs would have allowed committed community members to dedicate themselves full-time to our efforts to support the formerly incarcerated and their families.

Link – mandatory minimums

The plan just subjects prisoners to policing and poverty---focus on prison time instead of the prison system ensures de-politicization, stigma and exclusion

subject to perpetual surveillance by the police, and unable to integrate into the mainstream society and economy

Alexander 10 [Michelle, civil rights lawyer, advocate, legal scholar, and associate professor of law at Stanford Law School, "The New Jim Crow," pp. 93-95, omak]

Because harsh sentencing is a major cause of the prison explosion, one might reasonably assume that substantially reducing the length of prison the new jim crow sentences would effectively dismantle this new system of control. That view, however, is mistaken. **This system depends on the prison label, not prison time.** Once a person is labeled a felon, he or she is ushered into a parallel universe in which discrimination, stigma, and exclusion are perfectly legal, and privileges of citizenship such as voting and jury ser vice are off-limits. It does not matter whether you have actually spent time in prison; **your second-class citizenship begins the moment you are branded a felon**. Most people branded felons, in fact, are not sentenced to prison. As of 2008, there were approximately 2.3 million people in prisons and jails, and a staggering 5.1 million people under "community correctional supervision"—i.e., on probation or parole.89 Merely reducing prison terms does not have a major impact on the majority of people in the system. It is the badge of inferiority— the felony record—that relegates people for their entire lives, to

secondclass status. As described in chapter 4, for drug felons, there is little hope of escape. Barred from public housing by law, discriminated against by private landlords, ineligible for food stamps, forced to "check the box" indicating a felony conviction on employment applications for nearly every job, and denied licenses for a wide range of professions, people whose only crime is drug addiction or possession of a small amount of drugs for rec reational use fi nd themselves locked out of the mainstream society and economy—permanently. No wonder, then, that most people labeled felons find their way back into prison. According to a Bureau of Justice Statistics study, about 30 percent of released prisoners in its sample were rearrested within six months of release.90 Within three years, nearly 68 percent were rearrested at least once for a new offense.91 Only a small minority are rearrested for violent crimes; the vast majority are rearrested for property offenses, drug offenses, and offenses against the public order.92 For those released on probation or parole, the risks are especially high. They are subject to regular surveillance and monitoring by the police and may be stopped and searched (with or without their consent) for any reason or no reason at all. As a result, they are far more likely to be arrested (again) than those whose behavior is not subject to constant scrutiny by law enforcement. Probationers and parolees are at increased risk of arrest because their lives are governed by additional rules that do not apply to everyone 107748_01_1-296_r6sb.indd 94 10/12/11 7:28:16 AM the lockdown 95 else. Myriad restrictions on their travel and behavior (such as a prohibition on associating with other felons), as well as various requirements of probation and parole (such as paying fi nes and meeting with probation offi cers), create opportunities for arrest. Violation of these special rules can land someone right back in prison. In fact, that is what happens a good deal of the time. The extraordinary increase in prison admissions due to parole and probation violations is due almost entirely to the War on Drugs. With respect to parole, in 1980, only 1 percent of all prison admissions were parole violators. Twenty years later, more than one third (35 percent) of prison admissions resulted from parole violations. To put the matter more starkly: About as many people were returned to prison for parole violations in 2000 as were admitted to prison in 1980 for all reasons. Of all parole violators returned to prison in 2000, only one-third were returned for a new conviction; twothirds were returned for a technical violation such as missing appointments with a parole offi cer, failing to maintain employment, or failing a drug test.95 In this system of control**, failing to cope well with one's exile status is treated like a crime.** If you fail, after being released from prison with a criminal record—your personal badge of inferiority—to remain drug free, or if you fail to get a job against all the odds, or if you get depressed and miss an appointment with your parole offi cer (or if you cannot afford the bus fare to take you there), you can be sent right back to prison—where society apparently thinks millions of Americans belong. This disturbing phenomenon of people cycling in and out of prison, trapped by their second-class status, has been described by Loïc Wacquant as a "closed circuit of perpetual marginality. Hundreds of thousands of people are released from prison every year, only to fi nd themselves locked out of the mainstream society and economy. Most ultimately return to prison, sometimes for the rest of their lives. Others are released again, only to fi nd themselves in precisely the circumstances they occupied before, unable to cope with the stigma of the prison label and their permanent pariah status. Reducing the amount of time people spend behind bars—by eliminating harsh mandatory minimums—will alleviate some of the unnecessary suffering caused by this system, but it will not disturb the closed circuit. Those labeled felons will continue to cycle in and out of prison, subject to perpetual surveillance by the police, and unable to integrate into the mainstream society and economy. Unless the number of people who are labeled felons is dramatically reduced, and unless the laws and policies that keep ex-offenders marginalized from

the mainstream society and economy are eliminated, **the system will continue to create and maintain an enormous undercaste.**

Link – policing/surveillance

Money saved from the plan goes to policing and surveillance

Schenwar, 14—Truthout's editor-in-chief, board of advisors on Waging Non-Violence (Maya, excerpt from the book Locked Down, Locked Out: Why Prison Doesn't Work and How We Can Do Better, published by Berrett-Koehler, "What if We Abolished Prisons: Can decarceration work?", Alternet, www.alternet.org/books/what-if-we-abolished-prisons)//emchen

Diana Zuñiga, the statewide field organizer of the forty-organization-strong decarceration coalition Californians United for a Responsible Budget (CURB), talks of how policies that expand the prison nation creep in under the guise of **confronting mass incarceration**. In California, the state is carrying out a process of "realignment," shifting large numbers of incarcerated people from prisons to county jails. The strategy, championed as a route to reducing the state's skyrocketing prison budget and ending the "revolving door" of recidivism, has actually resulted in most counties moving toward jail expansion. Diana is often alarmed to hear CURB's calls for shrinking the prison system echoed by officials calling for "mental health jails" and "social service jails." She says, "We have seen our language **be coopted** so that law enforcement can appear to be doing the 'right thing.'" Diana is pointing to an even more insidious recent trend in addition to the production of "alternative" forms of confinement: A wide range of influential political groups, switching from a push for "tough on crime" legislation to a "right on crime" message, are advocating that money saved from reducing prison populations be spent on heightened policing and surveillance. The Texas-based conservative group Right on Crime touts "reforms" like increasing monitoring and records-keeping on formerly incarcerated people, scaling up the use of private security companies, and zeroing in on "crime hotspots" in cities: poor neighborhoods of color. I broach the subject with Jazz from the Campaign to End the New Jim Crow, who's also been a leader in the struggle to end New York's "stop and frisk" policy. Jazz points to the way that "targeted" policing tends to play out in reality: violence directed at neighborhoods of color, especially black neighborhoods. "Turning our communities into open-air prisons is not the solution to violence," he says.

AT link turn

This should be the framing question of the debate – despite reformism the number of people in prison has grown dramatically because prison is considered a structural condition of life

Davis PhD 3

(Angela Y. "Are Prisons Obsolete?" page 10\\EJH)

The question of whether the prison has become an obsolete institution has become especially urgent in light of the fact that more than two million people (out of a world total of nine million! now inhabit U.S. prisons, jails, youth facilities, and immigrant detention centers. Are we willing to relegate ever larger numbers of people from racially oppressed communities to an isolated existence marked by authoritarian regimes, violence, disease, and technologies of seclusion that produce severe mental instability? According to a recent study, there may be twice as many people suffering from mental illness who are in jails and prisons that there are in all psychiatric hospitals in the United States combined

Prison reform will fail – so long as the prison industrial complex is intact the conditions for imprisonment will be reproduced in order to maintain corporate profits

Davis PhD 3

(Angela Y. "Are Prisons Obsolete?" page 16/17\\EJH)

What, for example, do we miss if we try to think about prison expansion without addressing larger economic developments? We live in an era of migrating corporations. I order to escape organized labor in this country-and thus higher wages, benefits, and so on-corporations roam the world in search of nations providing cheap labor pools. This corporate migration thus leaves entire communities in shambles. Huge numbers of people lose jobs and prospects for future jobs. Because the economic base of these communities is destroyed, education and other surviving social services are profoundly affected. This process turns the men, women, and children who live in these damaged communities into perfect candidates for prison.

I the meantime, corporations associated with the punishment industry reap profits from the system that manages prisoners and acquire a clear stake in the continued growth of prison populations. Put simply, this is the era of the prison industrial complex. The prison has become a black hole into which the detritus of contemporary capitalism is deposited. Mass imprisonment generates profits as it devours social wealth, and thus it tends to reproduce the very conditions that lead people to prison. There are thus real and often quite complicated connections between the deindustrialization of the economy-a process that reached its peak during the 1980s-and the rise of mass imprisonment, which also began to spiral during the Reagan-Bush era. However, the demand for more prisons was represented to the public in simplistic terms. More prisons were needed because there was more crime. Yet many scholars have demonstrated that by the time the prison construction boom began, official crime statistics were already falling. Moreover, draconian drug laws were being enacted, and "three-strikes" provisions were on the agendas of many states.

Decreasing criminalization won't solve – incarceration rates function independently of crime rates

Davis PhD 3

(Angela Y. "Are Prisons Obsolete?" page 11/12\\EJH)

In thinking about the possible obsolescence of the prison, we should ask how it is that so many people could end up in prison without major debates regarding the efficacy of incarceration. When the drive to produce more prisons and incarcerate ever larger numbers of people occurred in the 1980s during what is known as the Reagan era, politicians argued that "tough on crime" stances-including certain imprisonment and longer sentences-would keep communities free of crime. However, the of mass incarceration during that period had little or no effect on official crime rates. In fact, the most obvious pattern was that larger prison populations led not to safer communities, but, rather, to even larger prison populations. Each new prison spawned yet another new prison. And as the U.S. prison system expanded, so did corporate involvement in construction, provision of goods and services, and use of labor. Because of the extent to which prison building and operation began to attract vast amounts of capital-from the construction industry to food and health care provision-in a way that recalled the emergence of the military industrial complex, we began to refer to a "prison industrial complex. "3

AT perm

The permutation opens up space for co-option

Acey,00 (Camile E.S.A. Acey, radical black feminist student activist, UC Berkeley) "This is an Illogical Statement: Dangerous Trends Anti-Prison Activism" Social Justice, Vol. 27, No. 3 (81), Critical Resistance to the Prison-Industrial Complex (Fall 2000), pp. 209-210 //droneofark

Examining the relationship between popular anti-prison rhetoric and the expressed realities of prison life reveals a huge divergence in political locations. Activists often speak about the "state" without specifically defining what they mean by it. Similarly, they think about the "state" ? and by extension "state power" ? in terms of locality (often even pointing to specific buildings). At every moment that power is wielded, it is established, exercised, and reasserted through the invocation of ideological institutions. These institutions subsequently help to violently enclose space?whether through the act of land grabbing or ghettoization. Therefore, when formulating a radical understanding of, and opposition to, state power, it is necessary for us to locate and deconstruct the iterative space from which power flows, recognizing and continually addressing the fact that space (and, by extension, spatial metaphor) is in constant flux. A metaphor for the liberal-democratic ideal is the idea of a working body ? a healthy body with all the organs functioning properly. Some popular anti-prison discourse is similar to the complaint of a sick patient: particular institutions are saying, "this institution (or this organ) is in the way of society (or my body) being fully functional. I need another one." In particular, education is proposed as an organ that can be transplanted into the "sick" society so as to somehow make it well again. This is unproven; more often we find that new institutions installed alongside the old ones do damage more quickly and efficiently. However, this method of activism continues to be employed because of the myth of time ? the time that "heals all wounds" and the time that "will tell." Time is the skin that holds all these faulty organs in. Hope relies on time; however, the trick of time is that while you are waiting for your hope, the current social order is reproducing itself. In developing our critique, what we need to reveal is not only the faults of the body, but also that the body is itself the fault; modern society cannot be saved. As radical anti-prison activists, our aim therefore should be to make people realize this?that (sticking with the metaphor) we must induce a sustained attack in the body, where the only time is emergency time, where the only time is now.

The affirmative precludes further reform and upholds the prison system – improving the system for some implicates the innocence of others – so long as the aff does not solve all penal injustice they legitimize what remains

Malinowski, social worker, 14

(Nick, 6/3/2014, The Huffington Post, "#Justice4Cecily: Do calls for leniency undermine the movement against state violence?" http://www.huffingtonpost.com/nick-malinowski/justice4cecily-do-calls-f_b_5413729.html\\EJH)

What metric do supporters of the carceral system use to prove it as legitimate? Is it the hundreds of patently innocent people executed by the state despite wrongful convictions? Is it the dramatic racial disproportionalities? Is it the world's highest incarceration rate? Is it the fact that 80 percent of criminal cases involve people too poor to pay for their own lawyer -- that nearly bankrupting

the global economy or laundering billions of dollars for organized crime merit less jail time than possession of $10 of marijuana? Is it that Scooter Libby can be absolved of all wrong-doing simply by being pals with the Vice President? Is it the uneven balance between prosecutors and defense attorneys that coerces 98 percent of defendants to plead guilty to avoid the heightened stakes should they dare take their case to trial? Is it that Bronx prosecutors refuse to bring charges against the Corrections Officers at Rikers Island because they might walk off the job? Is it that after dozens of men are released after years and years in prison as the Brooklyn District Attorney's office shifts through the files of discredited police officers, not a single prosecutor, many of whom must have at least been aware of the fraudulent behaviors if not supporting them, has been arrested, fined or even publicly chastised? The law is unjust -- it is primarily an expression of the powerful and a tool used in the service of the status quo. It has served to codify slavery, discrimination, Japanese internment and warrantless surveillance. Believing that the law will serve justice is a set up.

Is seeking leniency from such an institution a tacit acknowledgment of its legitimacy? Does a cry for mercy imply that others are not entitled to this same reward? Shanda Strain, a Manhattan Assistant District Attorney involved in McMillan's prosecution spoke to this sense of exceptionalism. "In essence, [McMillan] has repeatedly argued that the rules should not apply to everyone equally -- that defendants who are politically motivated deserve special treatment." Now, there is no evidence to support Strain's suggestion that the rules, in so far as they apply to what is commonly referred to as the criminal justice system, apply to everyone equally - the very fact that people believed that political pressure could persuade Zweibel towards leniency should put that argument to rest - also race remains among the most significant factors in predicting outcomes from law enforcement contact, to prosecution, to sentencing. But Strain's point remains: is not an organized plea for leniency in a single case a separation, an attempt to persuade toward "exceptionalism"? In seeking leniency by virtue of innocence, we are pitching our advocacy in the terms provided by the state -- a strategy that relies on an alliance with the very object we have challenged as corrupt where we might otherwise argue for the dissolution of a morally bankrupt penal system and the attendant requirement of a re-imagining of other forms of justice.

The calls from journalists and advocates alike to frame McMillan's arrest experience as related to First Amendment rights to protest, in addition to describing her as innocent, cannot be seen as anything other than attempts to separate her from the thousands of arrests that occur each day in the City. If she is deserving of a different type of support and justice than others around her, it is only because those others are not. McMillan's own descriptions of her experience at Rikers Island further cement this divide as her supporters gleefully announced that she had deputized cellmates to write letters on her behalf and that others served as her protectors in the showers. Protectors from who? McMillan doesn't deserve compassion because she was assaulted, because she was innocent, or because she was politically minded or barhopping; she deserves compassion because in the context of our current punishment system, everyone does. A reliance on claims to innocence leads us away from a structural critique, instead implicitly reinforcing the systemic injustice we claim to be fighting against. By exceptionalizing the case we maybe even foreclose the opportunities for our larger goals. As Audre Lorde, Lilla Watson and other feminists have told us: There is no separate survival.

AT pragmatism

Reject their alternative indicts – demands for immediate solutions derail more important conversations about structural causes of problems in favor of shallow piecemeal solutions meant to address white guilt

Leonard PhD 12

(David J., 11/05/2012, The Huffington Post, "So you want to talk solutions? White denial and the change question, http://www.huffingtonpost.com/dr-david-j-leonard/so-you-want-to-talk-solut_b_1850938.html\\EJH)

One of the common responses to discussions about racism and other forms of injustice is the demand for solutions. The commonplace entry into public and private discussions about racism, the efforts to take over comment sections, to silence those who work to highlight inequality with responses like "what's the solution" does not engender solutions but rather works to **derail the conversation**. Usually deployed alongside the descriptor of wining and complaining, this disingenuous demand (as opposed to a desire to figure out the path toward justice) for solutions illustrates the manner that white male privilege operates. In my many years of teaching and writing, the majority of those who felt entitled to have answers NOW and remedies yesterday were white men. The "shut up... stop complaining...give me solutions" reframe is the embodiment of privilege.

Recognizing our forms of denial and challenging our social and racial myopia is the solution. Refusing to accept the lies and distortions, the misinformation and stereotypes is a remedy. However, for those who are desperate for solutions, who feel disappointed with our collective failure to provide a road map toward justice you don't have to look any further, I got you.

Alt solvency

The alternative solves---it's a question of academic starting points

Sudbury, 04- (Julia Sudbury is a Canada Research Council Chair in Social Justice, Equity and Diversity in social work at the University of Toronto.)"A World Without Prisons: Resisting Militarism, Globalized Punishment, and Empire" Social Justice, Vol. 31, No. 1/2 (95-96), Resisting Militarism and Globalized Punishment (2004), pp. 26-28, JSTOR, pdf//droneofark

The globalization of capital is driving prison expansion in four ways. First, it produces surplus populations black, Latino, indigenous, immigrant, and working-class communities in North America, Europe, and Australia that are immobilized and disenfranchised in penal warehouses in the global North. Second, it produces surplus land that, in the absence of other economic development opportunities, generates local demand for corrections dollars in the form of new prison construction. Third, the globalization of the private prison industry spreads the U.S. model of high-tech mass incarceration throughout the world and offers global South governments the mirage of modernity via mass incarceration. Finally, neoliberal economic restructuring under the tutelage of the IMF and World Bank is undermining traditional survival strategies, decimating government services, driving women and men in the global South into the criminalized drug industry, and fueling cross-border incarceration. In addition, global capitalism is deeply implicated in U.S. and allied military interventions worldwide, which frequently target strategic

economic interests and natural resources. These interventions are not limited to wars using U.S. troops. From Israel to Bolivia, U.S. funds are used to pay for military equipment, training, and troops. Women are particularly at risk in the environment of violence and displacement caused when regimes with poor human rights records deploy armed forces against civilian or insurgent populations. One outcome of this vulnerability is the displacement of poor women from traditional forms of survival and their subsequent engagement in the illicit economies of sex work or the drug trade. Women in militarized situations are also at risk of criminalization and incarceration when they take up insurgent positions against repressive regimes. Militarism and globalization thus generate a web of criminalization that in turn fuels the prison building boom and generates profits for the economic interests served by the transnational prison-industrial complex. Penal warehouses for people of African descent, immigrants, indigenous people, and the global poor, as I have outli are central to the new world order. For that reason, even as "small government" is promoted as a prerequisite for competitiveness in the global market, "correc? tions" budgets continue to skyrocket. That is also why prison abolition remains of vital importance in this time of endless war. What does this mean for our research and praxis as scholars and activists? First, much more work needs to be done to unravel the complex interconnections between mass incarceration, militarism, and the global economy. As activists in the heart of empire, our priority should be to make connections between radical social movements. Bridge-building between the anti-globalization, antiwar, and prison abolitionist movements provides critical opportunities for sharing strategies. For example, global anti-sweatshop activism against Wal-Mart and Nike can serve as a model of cross-border activism that could be deployed to challenge private prison corporations such as Wackenhutand Sodexho. Such transnational activism might successfully prevent the spread of U.S.-style private superjails from South Africa through the rest of the continent and from Mexico and Chile throughout the rest of Latin America. In addition, cross-fertilization between movements will encourage activists to address wider issues that are not always made visible in issue-based campaigns. For example, intensified analysis of globalization might encourage prison abolitionists to consider the need for anti-capitalist economic models as a prerequisite for a world without prisons. Similarly, an engagement between antiwar activists and analyses of mass incarceration would generate a deeper understanding of the need to simultaneously challenge militarism abroad and racialized surveillance and punishment at home. An effective challenge to the interlocking systems of militarism, incarceration, and globalization demands the establishment of broad-based, cross-movement coalitions, in the U.S. and internationally. The World Social Forum (WSF) is an important venue where critiques of, and alternatives to, free trade, imperialism, and neoliberalism are developed. Prison abolitionists need to infuse the politics of the WSF with an analysis of the role of the prison-industrial complex in bolstering global capitalism. At the same time, the movement to abolish prisons can learn from the successes of popular movements in the global South such as the Movimento Sim Terra in Brazil and the Ruta Pacifica in Colombia. These broad based movements involve organized labor, women, the homeless, the unemployed, students, rural campesinos, and indigenous communities. They have developed a sophisticated intersectional analysis of globalization, imperialism, and milita? rism, as well as race, gender, class, and nation. Most important, they have been successful in generating mass mobilizations by developing a viable alternative to the Washington Consensus model, prioritizing people and the environment over corporations and profits. These broad-based popular movements pay attention to issues of identity while maintaining a radical analysis of, and opposition to, global capitalism. Activists in the global North have the advantage of witness? ing firsthand the emergence of the transnational prison-industrial complex as an important weapon in the armory of global corporate

and political elites. Radical prison abolitionists, especially grass-roots activists of color, have a great deal to add to the global movement against imperialism and neoliberal capitalism. Our combined analyses demonstrate that to build un outro mundo (a different world), we must first envision a world without prisons.

CRIME DA

1nc

Crime rates are the lowest in decades – prisons are key

Feeney 14 – writer for Time Magazine

Nolan Feeney, 11/10/2014, Time, "Violent Crime Drops to Lowest Level Since 1978", http://time.com/3577026/crime-rates-drop-1970s/, 7/8/2015, \\BD

Violent crime in the U.S. fell 4.4 percent last year to the lowest level **in decades**, the FBI announced Monday.∂ In 2013, there were 1.16 million violent crimes, the lowest amount since the 1978's 1.09 million violent crimes, Reuters reports.∂ All types of violent crimes experienced decline last year, with rape dropping 6.3 percent, murder and non-negligent manslaughter dropping 4.4 percent and robbery dropping 2.8 percent.∂ The rate of violent crime is 367.9 crimes for every 100,000 people, which marked a 5.1 percent decline since 2012. The rate has fallen each year since at least 1994.∂ Possible reasons for the decline include the country's **high incarceration rate**, an aging population and an increased use of security cameras and cell phone videos capturing incidents.

Crime is low now due to prisons – it's comparatively the largest internal link -the aff reverses the trend

Reynolds 2K - director of the Criminal Justice Center at the National Center for Policy Analysis

Morgan Reynolds, 11/1/2000, The Heartland Institute, "Does Punishment Work to Reduce Crime?", https://www.heartland.org/policy-documents/does-punishment-work-reduce-crime, 7/8/2015, \\BD

Does punishment work to reduce crime?∂ The answer seems obvious to most Americans: Yes, of course punishment reduces crime. Punishment converts criminal activity from a paying proposition to a nonpaying proposition (at least sometime), and people respond accordingly.∂ We all are aware of how incentives affect our decisions. Yet controversy over the very existence of a deterrence and incapacitation effect of incarceration has raged in elite circles, including at a House subcommittee meeting at which I testified.∂ Simple, Powerful Logic∂ The logic of deterrence is pretty obvious, and the evidence is **powerful** too. First, consider the September 18 issue of Forbes, which asks John Lott, senior research scholar at Yale Law School and author of More Guns, Less Crime, "Why the recent drop in crime?" His answer: "Lots of reasons--increases in arrest rates, conviction rates, prison sentence lengths." Lott wisely mentions these facts **before turning to other factors** like increased private deterrence through concealed handgun carrying laws and changes in illegal drug markets.∂ Next, consider Daniel Nagin, a Carnegie-Mellon University professor of public policy, who criticized Lott's finding that shall-issue, concealed carry licensing laws exert an independent deterrent effect on crime. "A number of studies have been successful in isolating a deterrent effect," writes Professor Nagin in a 1998 review of the scientific literature on deterrence and incapacitation. "The combined deterrent and incapacitation effect generated by the collective actions of the police, courts, and prison system is very large."∂ In sharp contrast to the situation 10 years ago, experts who assert the contrary fight a rearguard action. Crime rates have fallen 30 percent over the last decade, while the prison and jail population doubled to two million. Most people are able to connect these dots (The New York Times aside). **Nobel Prize-winning economist** Gary Becker points out that the current wave of

home building in our cities stems from these dramatic gains in public safety.∂ During the subcommittee hearing, Marc Maurer of the Sentencing Project cast doubt on the effectiveness of incarceration by claiming there is no association between imprisonment rates and crime reduction in the 50 states. Yet Professor James Fox, the oft-quoted criminologist from Northeastern University in Boston, admitted under questioning that the negative impact of incarceration on criminal activity is **undeniable**. As German philosopher Arthur Schopenhauer said, truth passes through three stages: First, it is ridiculed; second, it is violently opposed; and third, it is accepted as being self-evident.∂ Too Many Prisoners?∂ If the United States, with so many people in prison, still has one of the world's highest crime rates, doesn't this imply that prison does not work?∂ First, our crime rate, especially the property crime rate, isn't so high by international standards any more, though our violent crime rate remains far too high. Second, the nation had to imprison more people in recent years because it failed to do so earlier (although our ill-advised war on drugs inflamed the problem too).∂ It was not as if crime in the U.S. was rising so fast that the rate of imprisonment could not keep up. Rather, the rate of imprisonment fell first by deliberate design. By the time the United States began incarcerating more criminals in the mid-1970s, huge increases were required to bring the risk of imprisonment up to the crime rate. As Charles Murray notes, it's more difficult to reestablish a high rate of imprisonment relative to crime after the crime rate has escalated than to maintain a high risk of imprisonment from the outset. We experienced the same phenomenon in Texas, where crime rocketed up during the 1980s while expected punishment plunged.∂ Both U.S. and Texas experience show that imprisonment can stop a rising crime rate and then gradually push it down.∂ Public opinion strongly supports the use of prisons to give criminals their just desserts. The endorsement of punishment is relatively uniform across social groups. More than three-quarters of the public see punishment as the primary justification for sentencing. Still, the public holds out some hope for rehabilitation, too. About 60 percent express hope that services like psychological counseling, training, and education inside prison will correct personal shortcomings.∂ Punishment, though unpleasant and expensive, supplies the wrongdoer with a major incentive to reform. Even career criminals give up crime because they don't want to go back to prison.

*insert impact

Link – prisons solve

Prisons solve crime – deterrence and incapacitation

Drago et al. 9 – Drago (University of Naples Parthenope, Center for Studies in Economics and Finance, and Institute for the Study of Labor), Galbiati (Centre National de la Recherche Scientifique–EconomiX and Cepremap), Vertova (University of Bergamo and Econpubblica, Bocconi University)

Francesco Drago, Roberto Galbiati, Pietro Vertova, 2009, JSTOR, "The Deterrent Effects of Prison: Evidence from a Natural Experiment", 7/8/2015, \\BD

Using this data set, we exploit the variation in the remaining sentence at the date of the pardon to identify how former inmates' propensity to recommit a crime responds to a policy that exogenously manipulates prison sentences. Our results show that a marginal increase in the remaining sentence reduces the probability of recidivism by 0.16 percentage points (1.3 percent). This means that for former inmates, 1 month less time served in prison commuted into 1 month more in expected sentence **significantly** reduces their propensity to recommit a crime. By further inspecting our data, we can make some interesting comparisons of the behavior of different

categories of former inmates. The effects we find are **fairly homogeneous** across inmates with different individual characteristics. Only individuals convicted to relatively longer sentences do not seem to be deterred, whereas foreign inmates are slightly more responsive than Italians. Young individuals have a behavioral response similar to that of adults.∂ This evidence allows us to make some considerations regarding both policy and theory. First, prison sentences represent **effective** disincentives to individuals' criminal activity. In particular, a policy commuting actual sentences in expected sentences **significantly** reduces recidivism. This suggests that alternative approaches to incapacitation relying on the behavioral response of criminals to disincentives to engage in criminal activity may be effective in reducing crime. Second, given that existing estimates reveal a nonpositive effect of time served on recidivism (Kuziemko 2007), we can draw some quantitative inferences on the possible effect of expected sentences on propensity to recommit a criminal act. For a 7- month period we estimate an elasticity in the propensity to recommit a crime with respect to the average sentence that individuals expect equal to −0.74. This means that increasing the expected sentence by 50 percent should reduce recidivism rates by about 35 percent in 7 months.∂ This paper contributes to the literature providing evidence that potential criminals do respond to a change in prison sentences. The natural experimental setting allows us to solve some fundamental problems involved in identifying individuals' response to a variation in the severity of punishment, which is typically tested by analyzing how crime rates are affected by an increase in criminal sanctions. When we register a drop in crime rates following an increase in criminal sanctions, two explanations compete: the discouragement of criminal behavior is induced by the increase in its relative price (the deterrent effect), or the reduction in crime is mechanically due to the removal of criminals from the community (the incapacitation effect; Levitt 1996; Owens, forthcoming).4 However, it is unclear how much of existing estimates of the effects of an increase in prison sentences may be accounted for by the incapacitation effect (Lee and McCrary 2005). By exploiting the exogenous variation in prison sentences at the individual level generated by the natural experiment, we identify the behavioral response of potential criminals without any possible bias connected to the incapacitation effect and the endogenous response of policy makers.

The aff increases recidivism rates

Drago et al. 9 – Drago (University of Naples Parthenope, Center for Studies in Economics and Finance, and Institute for the Study of Labor), Galbiati (Centre National de la Recherche Scientifique–EconomiX and Cepremap), Vertova (University of Bergamo and Econpubblica, Bocconi University)

Francesco Drago, Roberto Galbiati, Pietro Vertova, 2009, JSTOR, "The Deterrent Effects of Prison: Evidence from a Natural Experiment", 7/8/2015, \\BD

D. Deterrent Effects of Prison Sentences∂ By construction, the residual sentence is equal to the sentence minus the number of months served in prison, which means that time served, residual sentence, and original sentence are collinear. Hence, the estimated effect on recidivism has to be interpreted as the joint deterrent effect of an additional month in the expected sentence and of 1 month less served in prison (i.e., the effect of the policy that commutes 1 month of the actual sentence to be served to 1 month of the expected sentence for future crimes). While the nature of the basic experiment does not allow us to separately identify the impact of the expected sentence on recidivism, it is possible to make some quantitative inferences on this effect given that existing estimates reveal a nonpositive impact of time served on recidivism (Kuziemko 2007).20∂ Assuming a zero effect of time served on recidivism, a reduction of 0.16 percentage points in the

probability of recidivism (see table 2) implies an elasticity of the average recidivism rate to expected punishment (considering the average original sentence plus the average residual sentence) of −0.74. This means that when expected sentences are increased by, for example, 25 percent, the propensity to reoffend in 7 months should decrease by about 18 percent. We do not have data on the average recidivism rate after 12 months, but we know that the recidivism rate after 17 months was 22 percent (see the next subsection). Hence, considering the estimated effect and an annual average recidivism rate between 0.18 and 0.20, we would have an elasticity of the average recidivism rate with respect to sentence length between −0.43 and −0.47. This elasticity is even larger than existing estimates of the elasticity of crime with respect to imprisonment that includes the effect of expected punishment and incapacitation on criminal activity. The biggest estimates of the elasticity of the annual crime rate with respect to the prison population are provided by Levitt (1996), who finds elasticities of −0.40 and −0.30 for violent and property crimes, respectively. This estimate, however, includes both an incapacitation and a deterrent effect. Although it is difficult to make quantitative comparisons with previous studies relying on U.S. aggregate data, a presumable annual elasticity between −0.43 and −0.47 does seem large compared to this evidence.

Even the threat of longer prison sentences decreases recidivism - empirics

Drago et al. 9 – Drago (University of Naples Parthenope, Center for Studies in Economics and Finance, and Institute for the Study of Labor), Galbiati (Centre National de la Recherche Scientifique–EconomiX and Cepremap), Vertova (University of Bergamo and Econpubblica, Bocconi University)

Francesco Drago, Roberto Galbiati, Pietro Vertova, 2009, JSTOR, "The Deterrent Effects of Prison: Evidence from a Natural Experiment", 7/8/2015, \\BD

In this paper we contribute to the **empirical** literature on the study of criminal punishment by providing evidence that individuals vary their criminal activity in response to a change in prison sentences. Our research design exploits the natural experiment provided by the Collective Clemency Bill passed by the Italian Parliament in July 2006. The institutional features of the bill imply, for all the individuals released upon the approval of the bill, an exogenous variation in prison sentences at the individual level. This experimental setting allows us to identify the deterrent effect of a change in prison sentences separately from its incapacitation effect and from the possible endogenous reactions of policy makers to crime. Our findings show that a policy that commutes actual sentences in expected sentences significantly reduces inmates' recidivism. Moreover, the results provide credible evidence that a 1- month increase in expected punishment lowers the probability of committing a crime. This corroborates the theory of general deterrence. The results indicate a large deterrent effect of expected punishment. However, from a policy perspective, caution should be used in concluding that sentences should be increased for any kind of crime. Indeed, it is not clear whether these results can be extended to individuals who have never received prison treatment. Finally, without the provision in the bill that introduces the mechanism of residual sentences, recidivism rates would have been much higher. This suggests that inmates given probation should have a lower propensity to recommit a crime, given that if they reoffend, they have to serve the remaining sentence in addition to the new sentence. If, on the one hand, a longer time served might reduce the risk of recidivism (Kuziemko 2007), on the other hand, the **threat** of a longer sentence also decreases it. Future works should address whether the benefits of granting some inmates probation outweigh the cost associated with the risk that these former inmates will reoffend.

Prisons are key to target serious and repeat offenders

Helm and Doward 12 – Political Editor for The Observer, writer for The Guardian

Toby Helm and Jamie Doward, 7/7/2012, The Guardian, "Longer prison terms really do cut crime, study shows", http://www.theguardian.com/law/2012/jul/07/longer-prison-sentences-cut-crime, 7/8/2015, \\BD

Tougher prison sentences reduce crime, particularly burglary, according to **ground-breaking** research.∂ The study, by academics at Birmingham University, also found that during periods when police detect more offences, crime tends to fall overall, suggesting that levels of police activity – and therefore of staffing – have a direct impact on criminal activity.∂ The findings are likely to be seized on by critics of the government's plans for reducing the number of police officers as part of spending cuts.∂ The research, carried out for Civitas, an independent thinktank, used local sentencing data released by the Ministry of Justice under freedom of information requests to track the effectiveness of penal policy and policing on recorded crime across the 43 forces in England and Wales between 1993 and 2008.∂ The researchers concluded that prison was particularly effective in reducing property crime when targeted at **serious** and **repeat** offenders. They concluded that an increase of just one month in the average sentence length for burglaries – from 15.4 to 16.4 months – would reduce burglaries in the following year by 4,800, out of an annual total of 962,700.∂ For fraud, an increase in sentences from 9.7 to 10.7 months would result in a reduction of 4,700 offences a year, out of 242,400. The report declares this to be "a substantial effect, especially when we consider that the length of sentence usually corresponds to approximately half the actual time spent in custody".∂ The study also estimates that a policy of forcing offenders to serve a higher proportion of their sentences in prison would have a further dramatic effect on cutting crime, in part because more offenders would be behind bars for longer. If offenders were made to serve two-thirds of their sentence in custody, rather than the current half, it suggests that there would be 21,000 fewer recorded burglaries and 11,000 fewer recorded frauds in England and Wales.∂ The findings tend to support the thrust of policies followed by the last Labour government, which increased funding to the police and concentrated on the roughly 100,000 persistent offenders responsible for a high proportion of crime. This approach increased the prison population, but it also led to reductions in overall levels of crime.

Link – mandatory minimums

Mandatory minimum implementation is the largest cause of the crime rate decline

Otis 13 – adjunct professor of law at Georgetown University

William Otis, 7/2/2013, US News, "Like Less Crime? Thank Mandatory Minimums", http://www.usnews.com/opinion/articles/2013/09/02/tell-eric-holder-that-mandatory-minimums-worked-to-reduce-crime, 7/8/2015, \\BD

It is both odd and unfortunate that Attorney General Eric Holder wants to turn back the clock on a sentencing system that works in favor of one that fails. Two generations ago, in the '60s and '70s, we believed we could uniformly trust judges to get it right at sentencing, with no binding input from Congress. The result was a national crime wave. Big cities, for example, had twice the amount of murder they have now.∂ By the '80s, we had learned our lesson and embraced determinate sentencing. That meant sentencing guidelines and, for a few very serious offenses, mandatory minimums below which the judge couldn't go.∂ From the early '90s to the present day, there's been a 50 percent reduction in crime – levels not seen since the baby boomers were in

grade school. This massive increase in our ability to live in peace and safety has been a moral and economic boom. Millions of ordinary people did not become crime victims and did not have to fork out to pay hospital bills or to replace stolen savings. Tougher sentencing and increased imprisonment did not alone produce these benefits, but they contributed **significantly**.♂ Now Attorney General Eric Holder wants to jeopardize all this by gutting mandatory minimum sentencing in federal court. He's proposed that, for the most part, federal prosecutors be barred from writing truthful indictments that, if proved, would require the defendant to get at least a minimum sentence.♂ The proposal is misconceived. First, Holder says he would limit his plan to "nonviolent" offenses. But that doesn't go nearly far enough; nonviolent offenses can be extremely harmful, if not lethal. Trafficking in heroin or methamphetamine is not, per se, violent, but it results in tremendous social damage, for which taxpayers have to pick up the bill. Those who sell these drugs to make a quick buck, no matter how "nonviolently," deserve at least a rock-bottom sentence that can't be watered down by an overly sympathetic or naive judge.♂ Sentencing has never been given over exclusively to the judge's discretion; instead, it has been a shared function. From the founding of the republic, the executive branch has had the ability to decide whether to bring a more or a less serious charge; the legislative branch has set the general parameters of sentencing ranges; and the judicial branch – the judge – has imposed the specific sentence. It is one thing, and wise, to give judges substantial discretion. It's another to give them all of it, exempt from checks and balances. Because judges vary widely in temperament, ideology and experience, letting individual ones decide without constraint what the sentence will be is sure to lead to irrational disparity. Without congressionally imposed floors, we'll go back to the luck-of-the-draw. Nearly identical defendants with similar records will get widely varying sentences based solely on whose courtroom they're assigned to.♂Finally, existing law already provides an escape hatch for deserving defendants facing a tough mandatory minimum. Often, they can plea bargain their way to a lesser charge. Even if convicted under a mandatory minimum charge, however, the judge can sidestep the required sentence if the defendant has little criminal history, has not committed a violent act and comes clean about the extent of his crime. Also, a defendant can avoid a mandatory sentence by helping prosecutors bring other gang members to justice.♂ We tried the attorney general's version of the justice system before. **It doesn't work**. More realistic, law-guided sentencing does.

Mandatory minimums are key to solve crime – deterrence and leverage

Bernick and Larkin 14 - Assistant Director of the Center for Judicial Engagement, Senior Legal Research Fellow at The Heritage Foundation

Evan Berick and Paul Larkin, 2/10/2014, The Heritage Foundation, “Reconsidering Mandatory Minimum Sentences: The Arguments for and Against Potential Reforms”, http://www.heritage.org/research/reports/2014/02/reconsidering-mandatory-minimum-sentences-the-arguments-for-and-against-potential-reforms, 7/8/2015, \\BD

Mandatory minimum sentences also prevent crime because certain and severe punishment inevitably will have a deterrent effect.[48] Locking up offenders also incapacitates them for the term of their imprisonment and thereby protects the public.[49] In fact, where the chance of detection is low, as it is in the case of most drug offenses, reliance on fixed, lengthy prison sentences is preferable to a discretionary sentencing structure because mandatory sentences enable communities to conserve scarce enforcement resources without losing any deterrent benefit.[50]♂ Finally, the available evidence supports those conclusions. The 1990s witnessed a significant drop in crime across all categories of offenses,[51] and the mandatory minimum

sentences adopted in the 1980s contributed to that decline.[52]♫Moreover, mandatory minimums are an important law enforcement tool. They supply the police and prosecutors with the leverage necessary to secure the cooperation and testimony of low-level offenders against their more senior confederates.[53] The evidence shows that mandatory minimums, together with the Sentencing Guidelines promulgated by the U.S. Sentencing Commission, have produced more cooperation and accomplice testimony in organized crime cases.[54]

MPX – economy

Crime is incredibly costly- hurts the economy

American Law and Legal Library No Date [The most comprehensive legal information site on the web, 'Economic And Social Effects Of Crime - Determining Costs'. Accessed July 10 2015. http://law.jrank.org/pages/12118/Economic-Social-Effects-Crime-Determining-costs.html./VL

The following annual figures estimating the various costs of crime in the mid-1990s come from the National Institute of Justice and a study by David A. Anderson called "The Aggregate Burden of Crime." The study was published in the October 1999 issue of the Journal of Law and Economics. Crime costs are based on approximately 49 million annual crimes and attempted crimes in the United States. $105 billion each year in medical bills and lost earnings; $450 billion when including pain and suffering and lost quality of life $400 billion to operate corrections facilities $130 billion for crime prevention and loss of potential productivity of criminals and inmates $1 trillion when including the cost of the criminal justice systems, as well as private individuals and companies taking security measures $426 billion of the $450 billion is related to violent crime, the remaining $24 billion to property crime $4,118 is the annual cost of crime to each U.S. citizen $603 billion lost to the economy from fraud and unpaid taxes $500 million of money or valuables taken in robberies $15 billion in property stolen $127 billion from rape offenses; assault $93 billion, murder $61 billion, and child abuse $56 billion $45 billion paid by insurance programs to crime victims $8 billion paid to victims by U.S. government annually for restorative and emergency services 3 percent of all medical expenses in the nation is related to violent crimes 1 percent of annual U.S. earnings is equal to wage losses from violent crime 10 to 20 percent of mental healthcare costs are attributed to crime $54,000 is the average cost of each arson incident; $31,000 for each assault $25,000 to $30,000 is the annual cost of an inmate in prison 4 out of 5 gunshot victims end up on public assistance and uninsured, costing the government $4.5 billion annually (From the National Center For Policy Analysis Web site at http://www.ncpa.org/pi/crime.html) As opposed to street crime, white-collar crime is considered far more costly to society. It was estimated in the mid- 1990s that white-collar crime cost U.S. businesses as much as $400 billion a year, or about 6 percent of total revenue in the nation. Consumer fraud alone cost Americans about $45 billion each year.

MPX – vtl

Crime hurts victim's v2l

Hanson et al '10 [Rochelle F. Hanson [Professor of Psychiatry at the Medical University of South Carolina], Genelle K. Sawyer [Assistant Professor in the Department of Psychology at the Military College of South Carolina], Angela M. Begle [Instructor at the National Crime Victims Research and Treatment Center (NCVC) at the Medical University of South Carolina (MUSC)], and Grace S. Hubel [sixth year graduate student in the Clinical Psychology Training Program at

the University of Nebraska-Lincoln], The Impact of Crime Victimization on Quality of Life. Journal of traumatic stress. 2010;23(2):189-197. doi:10.1002/jts.20508./VL

In addition to the effects of victimization on role functioning, researchers postulate a link between crime and the victim's report of life satisfaction and well-being. Studies examining these constructs typically focus on indicants such as fear of crime, concerns for personal safety, happiness, and satisfaction with overall quality of life (e.g., Demaris & Kaukinen, 2005; Michalos & Zumbo, 2000; Norris & Kaniasty, 1994; Zlotnick, Johnson, & Kohn, 2006). In general, a history of crime victimization does not appear to have a profound effect on these variables. For example, in their study examining the impact of crime-related issues on happiness and satisfaction with quality of life in British Columbia, Michalos and Zumbo (2000) concluded that "crime-related issues have relatively little impact on people's satisfaction with the quality of their lives, with life satisfaction or happiness here" (p. 290). Although victimization was associated with some concerns about neighborhood crime and problems, a tendency to engage in more defensive behaviors, less satisfaction with their own and their family's safety in neighborhoods, as well as lower levels of satisfaction with quality of life, the overall relationships (i.e., proportion of variance accounted for) were quite low, leading the authors to conclude that victimization did not have a significant overall impact on these factors. However, it is important to highlight that few respondents were victims of violent crimes (38%); the vast majority were non-violent, property crimes (90%), which likely contributes to these findings. Using data from the National Survey of Families and Households, Zlotnick et al. (2006) examined whether women reporting partner violence at an initial interview differed from those who did not report these experiences on measures of global life satisfaction, functional impairment, social support, and past 30-day alcohol use obtained in a 5-year follow-up interview. Results indicated that partner violence reported at the initial interview was related to a greater degree of functional impairment and less life satisfaction 5 years later. Consistent with these findings, Demaris and Kaukinen (2005) found that individuals who experienced a serious injury and those who had been stalked were more likely to be "very concerned" about their personal safety and to "always" carry a protective device, which may affect life satisfaction and well-being. Physical and sexual assault severity were also related to a greater likelihood of always carrying a protective device, but not to being very concerned about personal safety. However, once timing of first victimization and the victim–offender relationship were included in analyses, only severity of physical assault was related to an increased likelihood of carrying something for personal protection.

Crime fundamental alters perceptions of the world and makes life unenjoyable

Wasserman 7, (Assistant Professor of Criminology at California State University, PhD, "IMPACT OF CRIME ON VICTIMS"http://www.ccvs.state.vt.us/sites/default/files/resources/VVAA%20Ch%206%20Impact%20of%20Crime.pdf)

The trauma of victimization can have a profound∂ and devastating impact on crime victims and∂ their loved ones. It can alter the victim's view of∂ the world as a just place and leave victims with∂ new and difficult feelings and reactions that they∂ may not understand. It is important for victim∂ assistance professionals to understand the∂ different ways that crime can affect victims—∂ psychologically, financially, physically and∂ spiritually. Any discussion of the impact of crime∂ on victims is necessarily general in scope. The∂ following information is offered to help victim∂

assistance professionals to be aware of the common types of reactions that victims experience, and should be used as general guidelines to provide direction and references for additional resources. Crime has significant, yet varying consequences, on individual crime victims, their families and friends, and communities. The impact of crime on victims results in emotional and psychological, physical, financial, social and spiritual consequences.

MPX – turns case

Crime creates endemic fear and makes social relations impossible

Moser 4, (Caroline, urban social anthropologist/social policy specialist , PhD Sussex University, "URBAN VIOLENCE AND INSECURITY: AN INTRODUCTORY ROADMAP", http://eau.sagepub.com/content/16/2/3.full.pdf)

ALTHOUGH ACCELERATING RATES of violence and crime are by no means an urban specific problem, they are particularly problematic in urban areas. The sheer scale of violence in the poor areas or slums means that, in many contexts, it has become "routinized" or "normalized" into the functional reality of daily life.(20) Daniel Esser, in this volume, mentions new labels such as "failed cities" and "cities of chaos" to describe the loss of control by public bodies, and the victimization of urban residents in the cities of Kabul and Karachi, while Dennis Rodgers refers to Managua as "the city of chaos". Violence is linked to fear and insecurity, which pervades people's lives, with serious implications for trust, well-being and social capital among communities and individuals. Thus, Mo Hume, in her article on El Salvador, describes how random criminal violence and highly visible gang activity contribute to a situation where fear and insecurity characterize everyday life for many citizens: "The war may have ended, but social and political relations remain characterized by what Taussig calls 'terror as usual', exhibiting itself through a sharp rise in street crime, a growing gang culture and high levels of violence in the private realm."

Crime creates division – leads to poverty and exclusion

Moser 4, (Caroline, urban social anthropologist/social policy specialist , PhD Sussex University, "URBAN VIOLENCE AND INSECURITY: AN INTRODUCTORY ROADMAP", http://eau.sagepub.com/content/16/2/3.full.pdf)

Finally, and very fragmentally, a number of papers tentatively address the issue of fear. In cities across the world, relentless "routinized" daily violence dominates the lives of local populations. The fear of such violence **isolates the poor in their homes and the rich in their segregated spaces**. This isolation, in turn, **perpetuates a fear of the "other**" as Lemanski calls it, and contributes to the **fragmentation of cities, socially, economically and politically**. To date, few violence-related strategies have confronted or addressed the issue of fear or its associated relationship to power and powerlessness. Ultimately, however, this may provide a critically important mechanism for redressing the impact of violence on the daily lives of the poor and excluded in cities throughout the world, so graphically described in the papers in this volume.

MPX – poverty

Crime leads to poverty – it should be the primary focus

Raspberry 86 – writer for the Washington Post, but citing the director of the Justice Deptartment's National Institute of Justice

William Raspberry, 7/9/1986, Orlando Sentinel, "A New Twist: Crime As A Cause Of Poverty", http://articles.orlandosentinel.com/1986-09-09/news/0250260007_1_crime-and-fear-costs-of-crime-poverty, 7/9/2015, \\BD

WASHINGTON — In the days when decent people used to worry about the "roots of crime," a lot of us were convinced that one of the chief causes of crime was poverty. We believed that poverty, because it produced hunger, dehumanizing living conditions, alienation and despair, tended to make people anti-social and predispose them to criminal activity. Poverty, we said, causes crime.∂ But the director of the Justice Deptartment's National Institute of Justice has turned the idea on its head. Crime, says James Stewart, writing in Policy Review, causes poverty. The former Oakland, Calif., police official does not mean merely that crime impoverishes its victims by stealing their goods and cash (and sometimes their health and life), though he does contend that these direct costs of crime hit hardest at the poor who are least able to afford insurance or replace stolen necessities.∂ "The less-direct costs of crime to the poor may be even more destructive," he argues. "The traditional means by which poor people have advanced themselves -- overtime, moonlighting or education to improve future opportunities -- can easily be obstructed by crime and fear. Why risk a late job or night school if the return home means waiting at deserted bus stops and walking past crowds of threatening teen-agers?∂ If crime makes it harder for residents of poor neighborhoods to avail themselves of income-boosting opportunity, it also strangles that opportunity directly, by driving business -- and jobs -- out of low-income neighborhoods. "A number of economic features ought to attract capital to revive inner cities," says Stewart. "Most poor neighborhoods are . . . in or near the center of our cities and therefore should be prime locations for commerce. The inner city usually provides easy access to railheads, highways . . . as well as to a ready labor supply. It already has the infrastructure often missing from the suburbs and exurbs."∂ But to a dismaying extent, the inner city also has crime: Crime that translates into unacceptable losses through theft and burglary for the business owners, crime that makes suppliers and contractors reluctant to come into the area, crime that leads many workers to look for jobs in less-menacing neighborhoods.∂ What is the solution? Not enterprise zones, which afford relief from taxes and government regulation, but not from crime. But there is another way. Stewart offers the examples of four communities -- East Brooklyn, Oakland, Watts and Portland, Ore. -- that managed a job-producing economic turnaround by launching a direct assault on crime.∂ The East Brooklyn Industrial Park (with city help) knocked down abandoned buildings, installed burglar alarms, trained private guards and patrols and provided escort services for businesses and residents. Portland undertook a similar effort along its Union Avenue commercial strip.∂ Clorox, IBM and other tenants of Oakland's Bramalea Corp. spend $300,000 a year for enhanced police security and a program to "curtail incivilities and disorderly behavior." Watts, a high-crime area of south central Los Angeles, has created an oasis of safety in the Martin Luther King Jr. Shopping Center, an impressive center complete with wrought-iron fence around its perimeter, closed-circuit monitoring, private guards and a city police field office.∂ Obviously, crime isn't the only thing that causes poverty (just as poverty isn't the only cause of anti-social attitudes that produce crime). There are countless people who, though deprived, are not depraved. There are scores of communities whose residents, though reasonably law-abiding, remain poor.∂ I

don't think Stewart would argue the matter. His point is not that decent behavior automatically creates businesses and jobs, but that too much crime can destroy business and employment opportunities and make it harder for poor people to break out of their poverty.∂ "Crime," he says, "is the ultimate tax on enterprise. It must be **reduced** or **eliminated** before poor people can fully share in the American dream."

Crime causes economic decline as well as a poverty trap- rigorous empirics prove

Mehlum et al '05 [Halvor Mehlum [Professor of Economics at University of Oslo, Deputy leader of Centre of Equality, Social Organization, and Performance (ESOP), Co-editor of Nordic Journal of Political Economy Member of the Executive committee at European Development Research Network (EUDN)], Karl Moene [Professor at University of Oslo, Scientific Advisor at the Center of Applied Research, Oslo (from 1987) Board member of the Norwegian Research Council, Environment/Development (1992-2000) Editor of the Scandinavian Journal of Economics (1992-1999) Panel member of Economic Policy (1999-2000)], Ragnar Torvik [Professor at Norwegian University of Science and Technology], Crime induced poverty traps, Journal of Development Economics Volume 77, Issue 2, August 2005, Pages 325–340. doi:10.1016/j.jdeveco.2004.05.002/VL

The first linkage represents an old theme, passionately described by Thomas More in Utopia (1518) "[L]eave fewer occasions to idleness;[…] so there may be work found for those companies of idle people whom want forces to be thieves, or who now, being idle vagabonds or useless servants, will certainly grow thieves at last." Later Georg von Mayr found that crime rates in Bavaria in the period 1835–1865 depended positively on the cost of living of the poor (von Mayr, 1917). Sociologists and criminologists have emphasized how poverty and idleness explain high crime rates (Allan and Steffensmeier, 1989 and Currie, 1997). The connection between crime and poverty has also caught renewed attention among economists. Applying panel data for 45 developed and developing countries over the period 1965–1995, Fajnzylber et al. (2001) find that violent crime rates decline when economic growth improves (see also Fajnzylber et al., 2002 and Miguel, 2002). The second linkage, from crime to economic performance, is documented by many recent observers. Bourguignon's (2001) survey concludes that social costs of crime are substantial in countries with more than the average level of criminality. In Latin America, for example, the costs of crime are in several cases above seven percent of GDP (Londoño and Guerrero, 2000). The Economist (1996) provides an even more dramatic assessment of Latin America: "[T]he region spends an astonishing 13–15% of GDP on security expenses (both private and public). That is more than total welfare spending. It represents a crippling burden on the economy". Crime is also seen as an important deterrent to doing business in countries like South Africa and constitutes one of the biggest challenges to economic growth in Africa (EIU, 1998). Russia has also experienced escalating crime and violence spirals in the 1990s with bad economic consequences (Ledeneva and Kurkchiyan, 2000). Finally, the negative impact of crime on economic performance is also evident from cross-country regressions (Barro and Sala-I-Martin, 1995, chap. 12). Put together, the two linkages between crime and growth are damaging as they generate a vicious circle that can result in a poverty trap. Economic stagnation explains rising crime and rising crime, in turn, explains the economic stagnation. Some countries may therefore end up in an equilibrium state characterized by persistently low or negative growth rates and high or rising crime levels. Other countries, where crime is prevented and labor demand is not allowed to plummet, may take off on a sustainable path of social and economic development where high growth produces low crime rates, which leads to further economic growth and development.

Prefer our projections- rigorous theoretical models also prove

Mehlum et al '05 [Halvor Mehlum [Professor of Economics at University of Oslo, Deputy leader of Centre of Equality, Social Organization, and Performance (ESOP), Co-editor of Nordic Journal of Political Economy Member of the Executive committee at European Development Research Network (EUDN)], Karl Moene [Professor at University of Oslo, Scientific Advisor at the Center of Applied Research, Oslo (from 1987) Board member of the Norwegian Research Council, Environment/Development (1992-2000) Editor of the Scandinavian Journal of Economics (1992-1999) Panel member of Economic Policy (1999-2000)], Ragnar Torvik [Professor at Norwegian University of Science and Technology], Crime induced poverty traps, Journal of Development Economics Volume 77, Issue 2, August 2005, Pages 325–340. doi:10.1016/j.jdeveco.2004.05.002/VL

Note that the reason for the increasing return to modern sector job creation in the third regime is different from those in other recent theories. In growth theory, economic geography, and the "Big push" literature increasing returns play an important role. Positive externalities at the micro level produce an aggregate production function with increasing returns to scale.7 In contrast, our model has a constant returns to scale technology and without crime the return of job creation is constant and independent of the level of modernization. When crime is taken into account, however, the return of job creation becomes a function of the level of modernization, solely as a result of socially disruptive behavior. In regime three a marginal increase in labor demand reduces the number of criminals. Each firm is too small to take this positive externality into account.

In the model, the overall shape of the return to job creation follows the movement in crime levels: As crime declines, the return to job creation increases and vise versa. In regime three the condition for this to happen is that the positive social externality through crime outweighs the increase in wages. Several reasonable mechanisms that we have left out from the discussion would strengthen the increasing returns result of regime three. For example, a constraint on each thief's capacity of stealing would limit the negative effect from the wage rise following higher production levels. The wage rise would also be limited if the probability of being caught as a criminal went up together with modernization. This probability could go up as a result of both tax financed improvements in law enforcement, (more tax income and fewer thieves) or because the probability of being caught increases with the amount being stolen as in Usher (1989).

Law enforcement and crime deterrence are key to solve

Mehlum et al '05 [Halvor Mehlum [Professor of Economics at University of Oslo, Deputy leader of Centre of Equality, Social Organization, and Performance (ESOP), Co-editor of Nordic Journal of Political Economy Member of the Executive committee at European Development Research Network (EUDN)], Karl Moene [Professor at University of Oslo, Scientific Advisor at the Center of Applied Research, Oslo (from 1987) Board member of the Norwegian Research Council, Environment/Development (1992-2000) Editor of the Scandinavian Journal of Economics (1992-1999) Panel member of Economic Policy (1999-2000)], Ragnar Torvik [Professor at Norwegian University of Science and Technology], Crime induced poverty traps, Journal of Development Economics Volume 77, Issue 2, August 2005, Pages 325–340. doi:10.1016/j.jdeveco.2004.05.002/VL

The possibility of being caught in a trap has implications for economic policies and the design of reform programs. First, policies that improve law enforcement and raise the expected costs of being a criminal not only reduce crime rates but may also trigger a sustainable economic take off.

Second, improving the conditions of the worst off group may have similar growth enhancing effects. Third, downsizing the public sector may generate higher crime levels. In general, a temporary fall in labor demand may kick off social reactions that lead the economy into contraction. Hence, a big bang reform intended to improve the efficiency may actually end up as a reverse big push into a poverty trap.

Crime collapses the efforts of low-income people working to get out of poverty

Samenow 14 – B.A. from Yale, Ph.D. from University of Michigan

Stanton E. Samenow, 12/24/2014, Pyschology Today, "Crime Causes Poverty", https://www.psychologytoday.com/blog/inside-the-criminal-mind/201412/crime-causes-poverty, 7/9/2015, \\BD

Social scientists and public officials have long identified poverty as a "root cause" of crime or, at least, as a significant "risk factor." Such a causal linkage was made by Roman emperor Marcus Aurelius (121-180 A.D.), who declared, "Poverty is the mother of crime." ∂During the 1960s, Attorney General Ramsey Clark emphasized that the United States government needed to combat crime by improving the deplorable conditions under which impoverished people were living. What followed was a plethora of social programs aimed at doing just that. Although many citizens benefited and improved their lot in life, crime remained an intractable problem.∂What may not be apparent is that crime causes poverty.∂Consider the costs of establishing and operating a small business in a rundown inner city neighborhood. An entrepreneur saves for years and finally amasses funds sufficient to establish a hair salon. She has paid for schooling to learn the skills to become a beautician, and she has honed them working for other people. Now she can rent space, purchase supplies and a stylist's chair or two, and begin fixing women's hair in her own shop. By careful management of her finances, she is able to invest additional sums in her business and expand the services she offers. A break-in and robbery occur, setting her back enormously. While awaiting costly repairs, she loses revenue and customers every day. She has to spend additional sums to tighten security. Having had a small profit margin as she struggled to maintain her salon, she now slides into the red or may not be able to re-open at all, thus losing the source of her livelihood.∂Consider what has transpired in inner city areas rocked by social unrest. It can take years, even decades, for businesses to return to neighborhoods that were burned and looted. Such was the case during the 1968 riots in Washington, D.C., following the assassination of Martin Luther King, Jr. Recently, damage occurred to businesses in Ferguson, Missouri after a grand jury did not indict a white police officer for killing a young black man.∂ It is not peaceful protestors who threaten the livelihoods of small business owners. It is criminals who seize upon an opportunity when there is social disorder. In the name of a cause, they ∂ strike -- destroying property belonging to fledgling entrepreneurs. Having begun to emerge from poverty, these merchants are plunged back into it when criminals demolish overnight what they have worked so hard to build.

It's key in the inner city

Stewart 86 – Director of the National Institute of Justice and the U.S. Department of Justice

J K Stewart, 1986, National Criminal Justice Reference Service, "Urban Strangler - How Crime Causes Poverty in the Inner City", https://www.ncjrs.gov/App/abstractdb/AbstractDBDetails.aspx?id=102533, 7/9/2015, \\BD

Most poor people are honest citizens whose opportunities for advancement are stunted by the drug dealers, muggers, and other criminals who terrorize their neighborhoods. These predators prey on the property and sometimes the lives of the poor, who suffer higher rates of victimization than wealthier people. Poor people often lack insurance to cover property loss. Crime lowers their property values as well, making it harder to accumulate capital and borrow money. Crime can also destroy the quality of life in public housing projects. It hampers commerce and industry in inner cities by raising the operating costs of businesses and scares away customers and suppliers. The ineffectiveness of the criminal justice system in solving most crimes is a further problem. Poor people have little mobility and cannot escape their neighborhoods. Crime and disorder increase people's sense of fear and vulnerability, starting the process of neighborhood deterioration. Strong anticrime efforts based on increased security measures are the best way to reverse this process. Fences, lighting, monitoring, and private security guards are measures that several communities have used to revitalize their commercial districts. These programs have shown that providing security enables businesses to succeed even in the most hostile environments. Reducing crime should be the first step in any urban antipoverty program.

Crime leads to massive poverty

Lippman 91 – writer for the Baltimore Sun

Theo Lippman, 3/30/1991, The Baltimore Sun, “Cause crime. Crime causes poverty...”, http://articles.baltimoresun.com/1991-03-30/news/1991089022_1_cost-of-crime-poverty-fight-crime, 7/9/2015, \\BD

Poverty doesn’t cause crime. Crime causes poverty. Therefore, to fight poverty, fight crime.∂ How does crime cause poverty? Suppose your family lives just above the poverty line. A burglar breaks into your house and steals all your clothes. What it costs you to replace them drops you into poverty, since you no longer have the minimum needed for food and shelter.∂ Or suppose you're on your way home from work. A mugger takes your paycheck and beats you up so badly that you have to miss another week's work. Losing two weeks' pay is impoverishing at many levels.∂ In 1988, according to the Department of Justice, "the total estimated cost of crime to victims was $16.6 billion. This estimate includes losses from property theft or damage, cash losses, medical expenses and other costs. The estimate was derived by summing crime victims' estimates of the amount of stolen cash, the value of stolen property, medical expenses and the amount of pay lost from work because of injuries, police-related activities, court-related activities, or time spent repairing or replacing property."∂ Not all of that $16.6 billion came from poor and nearly poor victims, but much of it did. The rate of criminal victimization is higher in cities, where most of the poor live, than in suburbs or non-metropolitan areas. It is highest by far in cities our size -- 500,000-999,999 -- half again the rate for large metropolitan suburbs, more than double the rate for medium metro suburbs.∂ The rate of criminal victimization also correlates to income for many crimes. Someone with an income of less than $7,500 is three times more likely to be robbed than someone with an income over $50,000, and is twice as likely to be assaulted.∂ That $16.6 billion surely underestimates the annual monetary cost of crime. Think of the lost wages of people who won't take a better-paying job -- or a job at all -- because of fear of street crime. Think of higher insurance costs in high crime neighborhoods. Think of paying for home security systems out of food budgets.

MPX – communities

Crime kills social cohesion and magnifies impacts of poverty

Kawachi et al '99 [Ichiro Kawachi [John L. Loeb and Frances Lehman Loeb Professor of Social Epidemiology Chair, Department of Social and Behavioral Sciences at Harvard, Co-Editor in Chief of the international journal Social Science & Medicine, elected member of the Institute of Medicine of the US National Academy of Sciences], Bruce P. Kennedy [social epidemiologist, formerly at the Harvard School of Public Health], and Richard G. Wilkinson [Former Professor Emeritus of Social Epidemiology at the University of Nottingham, Honorary Professor of Epidemiology and Public Health at University College London and Visiting Professor at University of York] [Crime: social disorganization and relative deprivation, Social Science & Medicine Volume 48, Issue 6, March 1999, Pages 719–731. doi:10.1016/S0277-9536(98)00400-6/VL

One dynamic aspect of social capital that cross-sectional analyses fail to address is the reciprocal relationship between crime and social capital. In other words, high crime rates may themselves produce disinvestment in community social capital. Skogan (1991)identified several feedback processes that contribute to declining social capital, including: fear of crime leading to physical and psychological withdrawal from community life; deteriorating conditions leading to the exit of businesses, with accompanying loss of jobs (and norms of labor market attachment); and further change in the composition of localities (e.g. middle class flight). If people shun their neighbors due to fear of crime, fewer opportunities exist for local networks and associations to take hold. The resulting disorganization of community structure in turn fuels further crime, producing a vicious cycle of declining social capital, followed by rising crime, followed by further disinvestment in social capital. The trend toward increasing residential segregation during recent decades — whether by race or class — has been further hypothesized as a mechanism by which traditional social buffers have become depleted (and social capital eroded) in many inner-city areas of the US (Kawachi and Kennedy, 1997). Demographic evidence suggests that, accompanying the surge in income inequality in the US since the mid 1970's, there has been sharp increase in the spatial concentration of poverty. Between 1970 and 1990, the percentage of urban poor Americans living in nonpoor neighborhoods (defined as having poverty rates below 20%) declined from 45 to 31%, while the percentage living in poor neighborhoods (poverty rates between 20 and 40%) increased from 38 to 41%. Meanwhile, the share of the urban poor living in very poor neighborhoods (over 40% poverty) grew from 17 to 28% (Massey, 1996). Such patterns of residential concentration impose a double burden on the poor — not only do they have to grapple with the multiple problems arising from their own lack of income; they also have to deal with the social effects of living in a neighborhood where most of their neighbors are also poor (Wilson, 1987; Kawachi and Kennedy, 1997). Examples of such `concentration effects' include lack of role models of labor force attachment (caused by persistently high unemployment), and exposure to unsupervised peer group activity as well as high rates of delinquency.

Entrenched opposition to the plan—economic interests and stubborn belief

Mauer and Cole, 5/23—*executive director of the Sentencing Project **professor of law and public policy at Georgetown University (Marc Mauer and David Cole, 5-23-2015, "How to Lock Up Fewer People," New York Times, http://www.nytimes.com/2015/05/24/opinion/sunday/how-to-lock-up-fewer-people.html)//emchen

Ending mass incarceration will not be easy. Opposition will come from rural community leaders who see prisons as **economic development**, legislators who still **respond emotionally** to the "crime of the week" and prosecutors who **measure success** by convictions and incarcerations, rather than by resolving conflict. But the recent tragic police shootings of young black men have, for the moment, focused our attention on the imperative for reform. And state budgetary crises have led many to question the vast resources we devote to holding too many people under lock and key. Today, at long last, a consensus for reform is emerging. The facts that no other Western European nation even comes close to our incarceration rates, and that all have lower homicide rates, show that there are better ways to address crime. The marked disparities in whom we choose to lock up pose one of the nation's most urgent civil rights challenges. But **we will not begin to make real progress** until we face up to the full dimensions of the task.

The plan is unpopular—public backlash and empirics—turns the case

Salins and Simpson, 13—Loyola University Chicago School of Law (Lauren Salins and Shepard Simpson, "Efforts to Fix a Broken System: Brown v. Plata and the Prison Overcrowding Epidemic", Loyola University Chicago Law Journal, Lexis)//emchen

By endorsing rehabilitative services and programming for both inmates and parolees, states can ensure that they are taking steps to reduce recidivism. 265 The question of whether the Brown Court's holding will cause the **public's "lock and key" mentality** to shift to an endorsement of proactive alternatives to incarceration deserves reflection. At a minimum, it is possible that society will welcome creative and effective ways to reduce crime. 266 As the answers to these questions play out in Brown's wake, it is beneficial to further assess the aforementioned programs that states can implement to prevent crime, particularly a successful rehabilitative model used by the Illinois Department of Corrections. 267 2. What Does Work? An Example of Proactive Reform in Illinois The use of proactive corrections reform, specifically rehabilitative measures, is hardly novel. 268 Experts and scholars have been pushing for such reform for years. 269 As states attempt to navigate the most effective ways to implement proactive reforms, it is useful to look at successful alternatives to incarceration. While many states have various diversionary and rehabilitative programs, 270 this Subsection focuses on [*1198] successful efforts employed by the Illinois prison system. 271 Not unique to Illinois, drug offenders are routinely housed alongside those who have committed violent crimes as a result of deficient bed space and poor infrastructural organization in correctional facilities. 272 This setup promotes the criminogenic effect of prisons and significantly contributes to overcrowding in almost every U.S. prison facility. 273 According to the Center for Health and Justice, illegal drug use "has played a fundamental role in the population explosion within the American justice system." 274 To prevent drug offenders from congesting prisons, Illinois implemented one promising front-end proactive measure: diverting drug offenders from the traditional prison system and into tailored treatment plans. 275 The Sheridan Correctional Center, an Illinois Department of Corrections facility, is a medium security all-male prison that is dedicated entirely to housing individuals dealing with substance abuse. 276 In addition to providing its inmates with rehabilitative services, this facility collaborates with community programs to help reintegrate these individuals into society and ensure they receive assistance upon release. 277 As a result, lower-level offenders who otherwise would have been placed in traditional prison facilities are [*1199] separated into this particularized facility based on their needs and provided with services to help prevent them from reoffending. 278 At first glance, it may appear as though this method is fiscally ineffective. The cost to house these men is significantly higher than in other facilities - Illinois must pay $ 34,733 per year to house an adult in the Sheridan Correctional Center, 279 while it costs the State $ 19,492 to house an adult offender in the maximum security Menard Correctional Center. 280 However, enacting proactive reforms, such as the use of treatment centers and drug programs, as an alternative to traditional incarceration will ultimately help end the cycle of recidivism. With more tailored treatment options, individuals can receive the care needed to help resolve the underlying causes of their criminal tendencies. 281 The numbers behind this particular proactive program are telling: individuals treated at the Sheridan Correctional Center are 40% less likely than other Illinois inmates to reoffend one year after their release and 85% less likely to commit another crime in their lifetime. 282 This downturn in recidivism will in turn reduce the fiscal cost of housing these individuals in the future and the social cost of allowing individuals who are not sufficiently rehabilitated to reenter society. 283 Although Illinois and other states have started to implement proactive reforms to counter prison overcrowding,

public support is still needed if such programs are to **achieve long-term success**. 284 Convincing the rest of society that an emphasis on rehabilitation rather than harsh corrections and sentencing policies is more effective **will not be easy**. The past few decades have shown that an **uphill battle lies ahead**. 285 [*1200] Hopefully, in time, the public's view of corrections will begin to evolve now that states are faced with Brown's ultimatum: release or reform.

The plan is unpopular—it's try or die for those whose economic survival depends on the prison system

Senger, 6(William, 2006, "Abolition: Good Idea/Bad Approach", Journal of Prisoners on Prisons Vol. 1 No. 1 Summer, www.jpp.org/documents/forms/JPP1_1/Senger.pdf)//emchen

The real problem which faces abolitionists is that the hierarchy in Ottawa has no control over its own institutions. If abolition is to occur, the power of the subordinates in the system will have to be removed. One example of subordinate power is the guards' union which gets more powerful each time a new penitentiary opens and the union membership increases by absorbing the new recruits. The union also becomes more powerful with each riot it causes since it can use prison riots as a bargaining tool to increase membership or salaries. Guards are **dependent upon the system** for their livelihood. Because they are right in the thick of the action, they can manipulate events in their favour. The guards' union and its activities are not scrutinised by any government department and therefore it polices its own activities. This is a great deal of authority 1 Journal of Prisoners on Prisons Vol. 1 No. 1 Summer (1988) which the union exploits at every opportunity. Abolition of prisons will never occur until the power of the guards' union is eroded. The union is only one example of a bargaining unit which **requires the survival of the prison system**. Other jobs are created by the prison system: clerical staff, building contractors, suppliers, administrators, and employees working in prison industries and services. These groups would fight abolition **just to save their jobs**. The entire system is **a business now**, more interested in jobs and money than rehabilitation or abolition. The power of this system is in its ability to provide secure employment. Any attempt to change the system must take place at the source of the power. The groups who hold this power must be exposed for what they really are: a violent, corrupt, and greedy group of oppressors who are making a living by degrading and oppressing prisoners. Until such time as power is taken away from the oppressors, the injustices occurring behind prison walls will continue. Men and women will continue to leave prisons with bitter feelings for the diseased society which allowed them to suffer. Abolition can only occur when the power of the oppressor is in the hands of the oppressed. The activists working to better prison conditions are only succeeding in giving the system more to oppress.

Link – XO

The plan is an XO – causes a resurgence of political fights over executive power even if it is on balance popular

Savage 13, (Charlie, Masters degree from Yale Law School, "Justice Dept. Seeks to Curtail Stiff Drug Sentences", http://www.nytimes.com/2013/08/12/us/justice-dept-seeks-to-curtail-stiff-drug-sentences.html)

Still, in states that have undertaken prison and parole overhauls, the changes were approved by state lawmakers. Mr. Holder's reform is different: instead of going through Congress for legislation to modify mandatory minimum sentencing laws, he is invoking his power of prosecutorial discretion to sidestep them.∂ Earlier in Mr. Obama's presidency, the administration

went through Congress to achieve policy goals like reducing the sentencing disparity between crack and powder forms of cocaine. But it has increasingly pursued a strategy of invoking unilateral executive powers without Congress, which the White House sees as bogged down by Republican obstructionism. Previous examples, like Mr. Obama's decision last year to issue an executive order allowing immigrants who came to the United States illegally as children to remain without fear of deportation and to work, have drawn fire from Republicans as "power grabs" that usurp the role of Congress.

Prisons Northwestern

Their Evidence

Racism – Radical Change Good

Top down legalist reforms fail – radical change key

Michelle **Alexander 10**, Associate Professor of Law at Ohio State University, 2010, "The new Jim Crow: Mass incarceration in the age of colorblindness." http://www.kropfpolisci.com/racial.justice.alexander.pdf, AB)

So what is to be demanded in this moment in our nation's racial history? If the answer is more power, more top jobs, more slots in fancy schools for "us"—a narrow, racially defined us that excludes many—we will continue the same power struggles and can expect to achieve many of the same results. Yes, we may still manage to persuade mainstream voters in the midst of an economic crisis that we have relied too heavily on incarceration, that prisons are too expensive, and that drug use is a public health problem, not a crime. But if the movement that emerges to end mass incarceration does not meaningfully address the racial divisions and resentments that gave rise to mass incarceration, and if it fails to cultivate an ethic of genuine care, compassion, and concern for every human being—of every class, race, and nationality— within our nation's borders, including poor whites, who are often pitted against poor people of color, the collapse of mass incarceration will not mean the death of racial caste in America. Inevitably a new system of racialized social control will emerge—one that we cannot foresee, just as the current system of mass incarceration was not predicted by anyone thirty years ago. No task is more urgent for racial justice advocates today than ensuring that America's current racial caste system is its last. Given what is at stake at this moment in history, bolder, more inspired action is required than we have seen to date. Piecemeal, top-down policy reform on criminal justice issues, combined with a racial justice discourse that revolves largely around the meaning of Barack Obama's election and "post-racialism," will not get us out of our nation's racial quagmire. We must flip the script. Taking our cue from the courageous civil rights advocates who brazenly refused to defend themselves, marching unarmed past white mobs that threatened to kill them, we, too, must be the change we hope to create. If we want to do more than just end mass incarceration—if we want to put an end to the history of racial caste in America—we must lay down our racial bribes, join hands with people of all colors who are not content to wait for change to trickle down, and say to those who would stand in our way: Accept all of us or none. That is the basic message that Martin Luther King Jr. aimed to deliver through the Poor People's Movement back in 1968. He argued then that the time had come for racial justice advocates to shift from a civil rights to a human rights paradigm, and that the real work of movement building had only just begun.64 A human rights approach, he believed, would offer far greater hope for those of us determined to create a thriving, multiracial, multiethnic democracy free from racial hierarchy than the civil rights model had provided to date. It would offer a positive vision of what we can strive for—a society in which all human beings of all races are treated with dignity, and have the right to food, shelter, health care, education, and security.65 This expansive vision could open the door to meaningful alliances between poor and workingclass people of all colors, who could begin to see their interests as aligned, rather than in conflict—no longer in competition for scarce resources in a zero-sum game. A human rights movement, King believed, held revolutionary potential. Speaking at a Southern Christian Leadership Conference staff retreat in May 1967, he told SCLC staff, who were concerned that the Civil Rights Movement had lost its steam and its direction, "It is necessary for us to realize that we have moved from the era of civil rights to the era of human rights." Political reform efforts were no longer adequate to the task at hand, he said. "For the last 12 years, we have been in a reform movement. . . . [But] after Selma and the voting rights bill, we moved into a new era, which must be an era of revolution. We must see the great distinction between a reform movement and a revolutionary movement. We are called upon to raise certain basic questions about the whole society."66 More than forty years later, civil rights advocacy is stuck in a model of advocacy King was determined to leave behind. Rather than challenging the basic structure of society and doing the hard work of movement building— the work to which King was still committed at the end of his life—we have been tempted too often by the opportunity for people of color to be included within the political and economic structure as-is, even if it means alienating those who are necessary allies. We have allowed ourselves to be willfully [indifferent] ~~blind~~ to the emergence of a new caste system—a system of social excommunication that has denied millions of African Americans basic human dignity. The significance of this cannot be overstated, for the failure to acknowledge the humanity and dignity of all persons has lurked at the root of every racial caste system. This common thread explains why, in the 1780s, the British Society for the Abolition of Slavery adopted as its official seal a woodcut of a kneeling slave above a banner that read, "AM I NOT A MAN AND A BROTHER"? That symbol was

followed more than a hundred years later by signs worn around the necks of black sanitation workers during the Poor People's Campaign answering the slave's question with the simple statement, I AM A MAN. The fact that black men could wear the same sign today in protest of the new caste system suggests that the model of civil rights advocacy that has been employed for the past several decades is, as King predicted, inadequate to the task at hand. If we can agree that what is needed now, at this critical juncture, is not more tinkering or tokenism, but as King insisted forty years ago, a "radical restructuring of our society," then perhaps we can also agree that a radical restructuring of our approach to racial justice advocacy is in order as well. All of this is easier said than done, of course. Change in civil rights organizations, like change in society as a whole, will not come easy. Fully committing to a vision of racial justice that includes grassroots, bottom-up advocacy on behalf of "all of us" will require a major reconsideration of priorities, staffing, strategies, and messages. Egos, competing agendas, career goals, and inertia may get in the way. It may be that traditional civil rights organizations simply cannot, or will not, change. To this it can only be said, without a hint of disrespect: adapt or die

Racism – Alt Causes

The war on drugs fuels the current incarceration system – it's an alt cause they don't solve for

Michelle **Alexander 10**, Associate Professor of Law at Ohio State University, 2010, "The new Jim Crow: Mass incarceration in the age of colorblindness." http://www.kropfpolisci.com/racial.justice.alexander.pdf, AB)

Some might argue that as disturbing as this system appears to be, there is nothing particularly new about mass incarceration; it is merely a continuation of past drug wars and biased law enforcement practices. Racial bias in our criminal justice system is simply an old problem that has gotten worse, and the social excommunication of "criminals" has a long history; it is not a recent invention. There is some merit to this argument. Race has always influenced the administration of justice in the United States. Since the day the first prison opened, people of color have been disproportionately represented behind bars. In fact, the very first person admitted to a U.S. penitentiary was a "light skinned Negro in excellent health," described by an observer as "one who was born of a degraded and depressed race, and had never experienced anything but indifference and harshness."14 Biased police practices are also nothing new, a recurring theme of African American experience since blacks were targeted by the police as suspected runaway slaves. And every drug war that has ever been waged in the United States—including alcohol prohibition—has been tainted or driven by racial bias.15 Even post-conviction penalties have a long history. The American colonies passed laws barring criminal offenders from a wide variety of jobs and benefits, automatically dissolving their marriages and denying them the right to enter contracts. These legislatures were following a long tradition, dating back to ancient Greece, of treating criminals as less than full citizens. Although many collateral sanctions were repealed by the late 1970s, arguably the drug war simply revived and expanded a tradition that has ancient roots, a tradition independent of the legacy of American slavery. In view of this history and considering the lack of originality in many of the tactics and practices employed in the era of mass incarceration, there is good reason to believe that the latest drug war is just another drug war corrupted by racial and ethnic bias. But this view is correct only to a point. In the past, the criminal justice system, as punitive as it may have been during various wars on crime and drugs, affected only a relatively small percentage of the population. Because civil penalties and sanctions imposed on ex-offenders applied only to a few, they never operated as a comprehensive system of control over any racially or ethnically defined population. Racial minorities were always overrepresented among current and ex-offenders, but as sociologists have noted, until the mid-1980s, the criminal justice system was marginal to communities of color. While young minority men with little schooling have always had relatively high rates of incarceration, "before the 1980s the penal system was not a dominant presence in the disadvantaged neighborhoods."16 Today, the War on Drugs has given birth to a system of mass incarceration that governs not just a small fraction of a racial or ethnic minority but entire communities of color. In ghetto communities, nearly everyone is either directly or indirectly subject to the new caste system. The system serves to redefine the terms of the relationship of poor people of color and their communities to mainstream, white society, ensuring their subordinate and marginal status. The criminal and civil sanctions that were once reserved for a tiny minority are now used to control and oppress a racially defined majority in many communities, and the systematic manner in which the control is achieved reflects not just a difference in scale. The nature of the criminal justice system has changed. It is no longer concerned primarily with the prevention and punishment of crime, but rather with the management and control of the dispossessed. Prior drug wars were ancillary to the prevailing caste system. This time the drug war is the system of control. If you doubt that this is the case, consider the effect of the war on the ground, in specific locales. Take Chicago, Illinois, for example. Chicago is widely considered to be one of America's most diverse and vibrant cities. It has boasted black mayors, black police chiefs, black legislators, and is home to the nation's first black president. It has a thriving economy, a growing Latino community, and a substantial black middle class. Yet as the Chicago Urban League reported in 2002, there is another story to be told.17 If Martin Luther King Jr. were to return miraculously to Chicago, some forty years after bringing his Freedom Movement to the city, he would be saddened to discover that the same issues on which he originally focused still produce stark patterns of racial inequality, segregation, and poverty. He would also be struck by the dramatically elevated significance of one particular institutional force in the perpetuation and deepening of those patterns: the criminal justice system. In the few short decades since King's death, a new regime of racially disparate mass incarceration has emerged in Chicago and become the primary mechanism for racial oppression and the denial of equal opportunity. In Chicago, like the rest of the country, the War on Drugs is the engine of mass incarceration, as well as the primary cause of gross racial disparities in the criminal justice system and in the ex-offender population. About 90 percent of those sentenced to prison for a drug offense in Illinois are African American.18 White drug offenders are rarely arrested, and when they are, they are treated more favorably at every stage of the criminal justice process, including plea bargaining and sentencing.19 Whites are consistently more likely to avoid prison and felony charges, even when they are repeat offenders.20 Black offenders, by contrast, are routinely labeled felons and released into a permanent racial undercaste.

Multiple alt cause to reforming communities they don't solve for

Nkechi Taifa 97, clinical instructor at Howard University School of Law and Director of Howard Clinical Law Center's Public Service Program, Spring 1997, 'THE INTERNATIONAL CONVENTION ON THE ELIMINATION OF ALL FORMS OF RACIAL DISCRIMINATION (CERD): ARTICLE: Codification or Castration? The Applicability of the International

Convention to Eliminate All Forms of Racial Discrimination to the U.S. Criminal Justice System," Howard Law Journal, 40 How. L.J. 641, AB)

It makes little sense to reduce racial disparities in drug control efforts by increasing the number of arrests and rate of incarceration of white drug dealers. Many independent experts believe that because U.S. drug control efforts aim to curtail supply rather than demand, they cannot help but be futile as well as unfair.[141] They have proposed alternative measures, e.g. increased substance abuse treatment, drug education, and positive social investments in low income neighborhoods, to respond to public concerns about drug dealing and drug abuse.[142] Complying with the letter and spirit of ICERD requires the United States to untangle the twisted dynamics of race, poverty, drugs and law enforcement that have determined the course of the war on drugs to date. This may be an extraordinarily difficult undertaking, but it is imperative.[143] Racial discrimination in the war on drugs is intolerable because of the direct and irremediable harm to individual offenders, their families, and their communities. But the racial discrimination is not just devastating to black Americans. It contradicts the principles of justice and equal protection of the law that should be the nation's bedrock. It undermines faith among all races and ethnic groups in the fairness and efficacy of the U.S. criminal justice system.[144] In drug control policy as in many other aspects of American life, it is time for the United States to fulfill the promise it made to Americans and the world when it ratified ICERD.

Alt Causes – changing educative programs and discourse is a pre-requesite

Angela **Davis, and** Dylan **Rodriguez 00,** Davis teaches in the History of Consciousness program at the University of California and has been actively involved in prison-related campaigns and Rodriguez is an Assistant Professor at University of California - Riverside and was involved in the formation of Critical Resistance, 2000, "The Challenge of Prison Abolition: A Conversation", http://www.bowdoin.edu/news/events/archives/images/Prison%20Abolition.pdf, AB)

and criminologists, and many others. Although you were quite clear in the conference's opening plenary session that the purpose of Critical Resistance was to encourage people to imagine radical strategies for a sustained prison abolition campaign, it was clear to me that only a few people took this dimension of the conference seriously. That is, it seemed convenient for people to rejoice at the unprecedented level of participation in this presumably "radical" prison activist gathering, but the level of analysis and political discussion generally failed to embrace the creative challenge of formulating new ways to link existing activism to a larger abolitionist agenda. People were generally more interested in develop-ing an analysis of the prison-industrial complex that incorporated the local work that they were involved in, which I think is an important practical connection to make. At the same time, I think there is an inherent danger in conflating militant reform and human rights strategies with the underlying logic of anti-prison radicalism, which conceives of the ultimate eradication of the prison as a site of state violence and social repression. What is required, at least in part, is a new vernacular that enables this kind of political dream. How does prison abolition necessitate new political language, teachings, and organizing strategies? How could these strategies help to educate and organize people inside and outside the prison for abolition? Angela: In order to imagine a world without prisons — or at least a social landscape no longer dominated by the prison — a new popular vocabulary will have to replace the current language, which articulates crime and punishment in such a way that we cannot think about a society without crime except as a society in which all the criminals are imprisoned. Thus, one of the first challenges is to be able to talk about the many ways in which punishment is linked to poverty, racism, sexism, homophobia, and other modes of dominance. In the university, the emergence of the interdisciplinary field of prison studies can help to trouble the prevailing criminology discourses that shape public policy as well as popular ideas about the permanence of prisons. At the high school level, new curricula can also be developed that encourage critical thinking about the role of punishment.

Community organizations can also play a role in urging people to link their demands for better schools, for example, to a reduction of prison spending.

Racism – Reformism good

Reform solves for abolition

Allegra M. **McLeod 15**, Associate Professor at Georgetown University Law Center, 2015, "Prison Abolition and Grounded Justice", UCLA Law Review, 62 UCLA L. Rev. 1156 (2015), http://www.uclalawreview.org/wp-content/uploads/2015/06/McLeod_6.2015.pdf, AB)

Abolition as an ethical and institutional framework—as an aspirational horizon for reform—is not unduly or merely utopian, but orients critical thought and reformist efforts toward meaningful and just legal, ethical, and institutional transformation to which we might commit ourselves.370 Nor is abolition through gradual decarceration and the incremental investment in other substitutive social projects apart from criminal law enforcement utterly implausible. Faced with fiscal crises, many jurisdictions are actively rethinking their dependence on incarceration as a means of responding to criminalized conduct, including through de facto and de jure decriminalization.371 Although the elimination of the penal state in its current forms is difficult to imagine, as the German abolitionist criminologist Sebastian Scheerer suggested decades ago, so too were many other transformative events, right up until the time they came to pass.

You're too sweeping – reform is possible and should be balanced with abolition

Angela **Davis, and** Dylan **Rodriguez 00,** Davis teaches in the History of Consciousness program at the University of California and has been actively involved in prison-related campaigns and Rodriguez is an Assistant Professor at University of California - Riverside and was involved in the formation of Critical Resistance, 2000, "The Challenge of Prison Abolition: A Conversation", http://www.bowdoin.edu/news/events/archives/images/Prison%20Abolition.pdf, AB)

Angela: The seemingly unbreakable link between prison reform and prison development — referred to by Foucault in his analysis of prison history — has created a situation in which progress in prison reform has tended to render the prison more impermeable to change and has resulted in bigger, and what are considered "better," prisons. The most difficult question for advocates of prison abolition is how to establish a balance between reforms that are clearly necessary to safeguard the lives of prisoners and those strategies designed to promote the eventual abolition of prisons as the dominant mode of punishment. In other words, I do not think that there is a strict dividing line between reform and abolition. For example, it would be utterly absurd for a radical prison activist to refuse to support the demand for better health care inside Valley State, California's largest women's prison, under the pretext that such reforms would make the prison a more viable institution. Demands for improved health care, including protection from sexual abuse and challenges to the myriad ways in which prisons violate prisoners' human rights, can be integrated into an abolitionist context that elaborates specific decarceration strategies and helps to develop a popular discourse on the need to shift resources from punishment to education, housing, health care, and other public resources and services.

Gender- Reformism Good

Slow reforms and support for community solves – this is both an advocate for the CP and a deficit to the affirmative

Dave W. **Frank, 14,** Attorney at Christopher C. Myers & Associates , Ohio Northern University—Claude W. Pettit College of Law, 2/14/14, "Commentary: Abandoned: Abolishing Female Prisons to Prevent Sexual Abuse and Herald an End to Incarceration", http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1322&context=bglj, AB)

As described earlier, U.K. prison reformers offered support and community care as alternatives to prisons and punishment.173 The U.S. should adopt these alternatives as it ends female incarceration and moves toward total prison abolition. Funds for prisons should be reinvested in community programs that provide support services such as substance abuse treatment, childcare, medical attention, housing assistance, and educational training.174 The development of support and community care services would benefit both the would-be-prisoner and society as a whole.175 While the urge to retaliate against a perceived offender is understandable, ultimately it is ineffective.176 True prison alternatives, such as models of support and community care, can be defined by what they are not. They are not incarceration, punishment, or retribution by another name.177 They are not alternatives that reproduce the conditions of confinement through other forms of in-jail treatment or community-based corrections.178 They are not alternatives, such as probation or parole, imposed under the threat of incarceration.179 They do not incarcerate at arms-length through home detention or halfway houses.180 They do not restrict people's movements through community policing181 or electronic monitoring programs182 They do not attempt to reform through the physical coercion of boot camps,183 substance testing,184 daily inspections,185 or chemical castration.186 Such alternatives, modeled on incarceration, inflict punishment and pain imprecisely, uneconomically, or ineffectively. While seeking vengeance against an outcast group—those accused and convicted of crimes—may provide society with a sense of justice and finality, this vengeful urge is ultimately destructive. True alternatives to prison abandon this vengeance by refusing to create outcasts, and instead recognizing and attending to the needs of those most marginalized by our society.

Gender – Prison focus bad

An exclusive focus on prisons is bad – leaves people unprepared for the world beyond

Angela Y. **Davis 03**, Professor of Feminist Studies at University of CA Santa Cruz, 2003, "Are Prisons Obsolete?", http://www.feministes-radicales.org/wp-content/uploads/2010/11/Angela-Davis-Are_Prisons_Obsolete.pdf, AB)

As important as some reforms may be-the elimination of sexual abuse and medical neglect in women's prison, for example-frameworks that rely exclusively on reforms help to produce the stultifying idea that nothing lies beyond the prison. Debates about strategies of decarceration, which should be the focal point of our conversations on the prison crisis, tend to be marginalized when reform takes the center stage. The most immediate question today is how to prevent the further expansion of prison populations and how to bring as many imprisoned women and men as possible back into what prisoners call lithe free world." How can we move to decriminalize drug use and the trade in sexual services? How can we take seriously strategies of restorative rather than exclusively punitive justice? Effective alternatives involve both transformation of the techniques for addressing "crime" and of the social and economic conditions that track so many children from poor communities, and espeCially communities of color, into the juvenile system and then on to prison. The most difficult and

urgent challenge today is that of creatively exploring new terrains of justice, where the prison no longer serves as our major anchor.

Gradual - Reformism CP

Solvency

Abolition must be gradual to be effective - transform criminal law and people's livelihoods

Allegra M. **McLeod 15**, Associate Professor at Georgetown University Law Center, 2015, "Prison Abolition and Grounded Justice", UCLA Law Review, 62 UCLA L. Rev. 1156 (2015), http://www.uclalawreview.org/wp-content/uploads/2015/06/McLeod_6.2015.pdf

If prison abolition is conceptualized as an immediate and indiscriminate¶ opening of prison doors—that is, the imminent physical elimination of all structures¶ of incarceration—rejection of abolition is perhaps warranted. But abolition¶ may be understood instead as a gradual project of decarceration, in which radically¶ different legal and institutional regulatory forms supplant criminal law enforcement.¶ These institutional alternatives include meaningful justice **reinvestment to¶ strengthen the social arm of the state and** improve human **welfare; decriminalizing¶ less serious infractions**; improved design of spaces and products to reduce opportunities for¶ offending; **urban redevelopment and "greening" projects**; proliferating¶ restorative forms of redress; and creating both **safe harbors** for individuals at risk¶ of or fleeing violence **and alternative livelihoods** for persons otherwise subject to¶ criminal law enforcement. When abolition is conceptualized in these terms—as¶ a transformative goal of gradual decarceration and positive regulatory substitution¶ wherein penal regulation is recognized as morally unsustainable—then inattention¶ to abolition in criminal law scholarship and reformist discourses comes into¶ focus as a more troubling absence.16 Further, the rejection of abolition as a horizon¶ for reform mistakenly assumes that reformist critiques concern only the occasional,¶ peripheral excesses of imprisonment and prison-backed policing rather¶ than more fundamentally impugning the core operations of criminal law enforcement,¶ and therefore requiring a departure from prison-backed criminal¶ regulation to other regulatory frameworks.

Short term efforts to reduce incarceration is an effective combination of critique, action, and goals that holds reform and abolition in creative tension in order to maintain the advantages of both—we aren't reformism, but non-reformist reforms towards abolition

Berger 13¶ [2013, Dan Berger is an Assistant Professor at the University of Washington Bothell, "Social Movements and Mass Incarceration: What is To Be Done?", Souls: A Critical Journal of Black Politics, Culture, and Society, Volume 15, Issue 1-2, 2013, pages 3-18]

The strategy of decarceration **combines radical critique, direct action, and tangible goals for reducing the reach of the carceral state.** It is a **coalitional strategy that works to shrink the prison system through a combination of pragmatic demands** and **far-reaching, open-ended critique**. It is **reform in pursuit of abolition**. Indeed, decarceration allows a **strategic launch pad for the politics of abolition**, providing what has been an **exciting but abstract framework with a course of action**. 32 Rather than juxtapose pragmatism and radicalism, as has so often happened in the realm of radical activism, the strategy of decarceration **seeks to hold them in creative tension**. It is a strategy **in the best tradition of the black freedom struggle**. It is a strategy that seeks to **take advantage of political conditions without sacrificing its political vision**. Today we are in a moment where it is possible, in the words of an organizer whose work successfully closed Illinois's infamous supermax prison Tamms in January 2013, to confront prisons as both an economic and a moral necessity. 33 Prisons bring together diverse forms of oppression across race, class, gender, sexuality, citizenship status, HIV status and beyond. The movements against them, therefore, will need to bring together **diverse communities of resistance.** They will need to unite people across a range of issues, identities, and sectors. That is the coalition underlying groups such as Californians United for a Responsible Budget (CURB), the Nation Inside initiative, and Decarcerate PA. The fight against prisons is **both a targeted campaign** and a **broad-based struggle**

for social justice. These movements must include the leadership by those directly affected while at the same work to understand that prisons affect us all. This message is the legacy of prison rebellions from Attica in 1971 to Pelican Bay in 2012. The challenge is to **maintain the aspirational elements of that message while at the same time translating it into a political program**. Decarceration, therefore, **works not only to shrink the prison system but to expand community cohesion and maximize what can only be called freedom**. Political repression and mass incarceration are joined at the hip. The struggles against austerity, carcerality, and social oppression, the struggles for restorative and transformative justice, for grassroots empowerment and social justice **must be equally interconnected**. For it is only when the movement against prisons is as interwoven in the social fabric of popular resistance as the expansion of prisons has been stitched into the wider framework of society that we might hope to supplant the carceral state. There are many obstacles on the path toward decarceration; the existence of a strategy hardly guarantees its success. Until now, I have focused largely on the challenges internal to the movement, but there are even taller hurdles to jump in encountering (much less transforming) the deeply entrenched carceral state. Perhaps the biggest challenge, paradoxically, comes from the growing consensus, rooted in the collective fiscal troubles of individual states, that there is a need for prison reform. In that context, a range of politicians, think tanks, and nonprofit organizations—from Right on Crime to the Council on State Governments and the Pew Charitable Trusts—have offered a spate of neoliberal reforms that trumpet free market solutions, privatization, or shifting the emphasis away from prisons but still within the power of the carceral state. Examples include the "Justice Reinvestment" processes utilized by states such as Texas and Pennsylvania that have called for greater funding to police and conservative victim's rights advocates while leaving untouched some of the worst elements of excessive punishment. These neoliberal reforms can also be found in the sudden burst of attention paid to "reentry services" that are not community-led and may be operated by private, conservative entities. 34 Perhaps the grandest example can be found in California, where a Supreme Court ruling that overcrowding in the state's prisons constituted cruel and unusual punishment has been met with a proposal for "realignment," that shifts the burden from state prisons to county jails. 35 A combination of institutional intransigence and ideological commitment to punish makes the road ahead steep. Even as many states move to shrink their prison populations, they have done so in ways that have left in place the deepest markings of the carceral state, such as the use of life sentences and solitary confinement, and the criminalization of immigrants. Social movements will **need to confront the underlying ideologies that hold that there is an "acceptable" level of widespread imprisonment**, that there is a specter of villainy out there—be they "illegal immigrants," "cop killers," "sex criminals"—waiting in the wings to destroy the American way of life. 36 **There is a risk**, inherent in the sordid history of prison reform, that the current reform impulse will be bifurcated along poorly defined notions of "deservingness" that will continue to uphold the carceral logic that separates "good people" from "bad people" and which decides that no fate is too harsh for those deemed unworthy of social inclusion. This, then, is a movement that **needs to make nuanced yet straightforward arguments that take seriously questions of accountability while showing that more cops and more** (whether bigger or smaller) **cages only takes us further from that goal**. 37 At stake is the kind of world we want to live in, and the terms could not be more clear: the choice, to paraphrase Martin Luther King, is either carceral chaos or liberatory community. The framework of community—as expressed Decarcerate PA slogan "build communities not prisons" and the CURB "budget for humanity" campaign—allows for a robust imagination of the institutions and mechanisms that foster community versus those that weaken it. It focuses our attention on activities, slogans, programs, and demands that maximize communities. In short, it allows for unity. If the state wants to crush dissent through isolation, our movements must rely on togetherness to win. Solidarity is **the difference between life and death**. State repression **expands in the absence of solidarity**. Solidarity is a lifeline against the logic of criminalization and its devastating consequences. For the most successful challenges to imprisonment come from intergenerational movements: movements where people raise each other's consciousness and raise each other's children, movements that fight for the future because they know their history. Here, **in this pragmatic but militant radicalism, is a chance to end mass incarceration and begin the process of shrinking the carceral state out of existence.**

The mindset of abolishing prisons detracts from reformation and won't work

Herbert 8 (Nick Herbert [Minister of state for policing and criminal justice and Conservative MP for Arundel and South Downs], "The abolitionists' criminal conspiracy," The Gaurdian, Sunday, 27 July 2008 10.00 EDT)

Last week saw an International Conference on Penal Abolition. With such a heady ambition, what can be next? A global conference to abolish crime? **The ambition of an eccentric minority to abolish prison isn't just dotty. It's [It is] a distraction from a real and pressing agenda**, which is **to reform prisons** which simply aren't working. ¶ **A century ago, prisons had hard labour and treadmills. Today, they have colour TVs in cells. Jails may have changed, but the enduring truth that they are necessary has not. We will always have a small minority of offenders who, by their behaviour, pose so great a threat to the lives and property of the law-abiding majority that they must be kept apart from us. Ignoring this reality and arguing for the total abolition of prison is a hopelessly utopian goal that does the credibility of penal reformers no service.** The case for penal abolition rests on a series of tenuous assertions. Let's set aside the obvious, if uncomfortable, fact that part of the purpose of prison is to punish. It's said that short-term prison sentences don't work, because recidivism rates are shockingly high and there is little time for any restorative programmes to work. But since the evidence is that longer sentences have lower recidivism rates, and provide the opportunity to rehabilitate offenders, this might be an argument to lengthen sentences, not abolish them altogether. After all, another purpose of prison is to incapacitate offenders.¶ Of course, overcrowded prisons that are awash with drugs, and a system which gives short-term prisoners no supervision or support on release, is almost calculated to fail. But this could equally be an argument – the one which the modern Conservative party is making – for a complete transformation of prison regimes and a system of support for offenders when they are released from jail. It's a logical non sequitur on a grand scale to argue that because short-term prison sentences currently aren't working, we should therefore stop using them at all.¶ Abolitionists say that short-term prison sentences have a poorer recidivism rate than community sentences. In fact, both have a lamentable record – and one that has deteriorated in the last ten years. But the difference is hardly surprising, since the worst recidivists are bound to end up in jail. According to Home Office figures (pdf), only 12% of those sentenced to prison have no previous convictions. Over half have five or more previous convictions, and over a third have ten or more. Those who say that prison should be reserved for serious or serial offenders tend to ignore the fact that it already is.¶ Serial offenders who end up with custodial sentences have usually run through the gamut of weak community sentences already. If we want to avoid magistrates having little choice but to send them down, the logical thing to do is to make community sentences far more effective. Yet the perverse reaction of the abolitionists is to recommend that the very community disposals that have, by definition, already failed are used again.¶ Over a third of unpaid work requirements are not completed. Drug rehabilitation requirements have an even worse record – fewer than half are completed. If a fraction of the energy and resources that are being devoted to the cause of penal abolition were directed to thinking seriously about how better to design non-custodial punishments, short-term prison sentences would be less necessary.¶ What do the abolitionists really want? If it's the end of all custody, including for the most serious and dangerous offenders, then we can dismiss their demands as truly silly. If it's the abolition of short-term custodial sentences, then the effect on the overall prison population will be minimal. Justice ministry tables show (pdf) that over 87% of the current prison population are serving sentences of over 12 months. Abolishing prison for those serving, say, six months or less would mean watering down 60,000 sentences – but it would reduce the prison population by less than 7,000. The more effective and sustainable way to reduce the prison population in the long term is to reduce re-offending, as the Conservative party's radical "rehabilitation revolution" proposes.¶ It would be nice to live in a society where there were no prisons, just as it would be nice if there were no hospitals because there was no illness. But until someone steps forward with a ten-year plan to Make Crime History, jails are here to stay. The challenge is to create prisons with a purpose – not to hold lazy conferences making futile calls for their abolition.

Abolition movements only work when also building institution based alternatives – anti-prison movements run into conflicts with anti-violence movements

Cassandra **Shaylor** and Cynthia **Chandler** 200**5** – Shaylor is an activist, attorney, and artist based in Oakland. She is the co-founder and former co-director of Justice Now and a co-founder of Critical Resistance, both abolitionist organizations focused on dismantling the prison industrial complex and building a world without prisons. Her academic and written work has focused on issues of women in prison, abolition, and the intersections of race, sexuality, gender, and punishment. Chandler is the Co-Founder and Executive Director of Justice Now, a human rights organization working with women in prison and local communities to build a safe, compassionate world without prisons. Cynthia speaks and publishes regularly on prison industrial complex abolition, racial justice, and women's health. In 2010, Cynthia was awarded a Gevelber Distinguished Lectureship on Public Interest Law from Northeastern University School of Law.

She received a JD from Harvard University School of Law and an MPhil in Criminology from the University of Cambridge. "Reform and Abolition: Points of Tension and Connection", Defending Justice: An Activist Resource Kit, http://www.publiceye.org/defendingjustice/organizing/shaylor_reform.html, 7/28/15

We can simultaneously address the needs of people who are suffering in the system currently and challenge the efforts by the Right to co-opt our attempts to change the system by carefully crafting reform strategies that are about diminishing the power of the system and building alternatives to it. For instance, a focus on strategic decarceration is a significant step toward the ultimate abolition of the prison. Such campaigns focus on: implementing a moratorium on prison construction; closing existing prisons; changing laws and sentencing structures that imprison the greatest numbers of people (such as drug laws, three strikes schemes, property offenses, anti-sex work ordinances, etc); and creating community-based institutions that provide services that people need. When implementing such strategies, however, it is important to build them on rhetorical approaches that do not play into the hands of the Right. An example, which often occurs in relation to death penalty and immigrant rights work, is the pitting of non-violent prisoners (those who "deserve" to be released) against violent prisoners (those who do not) or "innocent" prisoners against "guilty" prisoners. Though the number of people who are in prison for violent offenses is extremely small, the first question posed to prison abolitionists is the question of how to respond to harms that people inflict. In response, strategies for creating systems of accountability instead of punishment when someone is harmed can be developed without relying on policing and prison. While the antiprison movement has historically challenged racist policing and imprisonment practices, few strategies have been developed for alternative mechanisms of safety and justice. As a result, the anti-violence movement has struggled to respond to interpersonal violence in an era when policing and prisons are often the only available response. Moreover, through a desire to have the State acknowledge the vulnerability of marginalized groups, anti-violence activists often push for increased criminalization, such as hate crimes legislation, as a response to discrimination. Through these practices, activists interested in protecting vulnerable groups can unintentionally bolster the same systems of oppression and State violence that most often target the groups they are seeking to protect. There is a need to break down barriers between and within the anti-prison and anti-violence movements, to expand the definition of violence to include Statesanctioned violence such as imprisonment, and to create tangible alternatives for establishing true safety and justice.

VOCA Reform CP

Counterplan: The USFG should eliminate the Victims of Crime Act funding restriction that disqualifies incarcerated sexual violence survivors from receiving aid under the Crime Victims' Fund.

VOCA funding restrictions prevent incarcerated sexual assault victims from receiving aid – trauma and STD risk follow the victims back home

JDI 9/**09** – Just Detention International, human rights organization that seeks to end sexual abuse in all forms of detention. All of JDI 's work takes place within the framework of international human rights laws and norms. The sexual assault of detainees, whether committed by corrections staff or by inmates, is a crime and is recognized internationally as a form of torture. "Prisoner Rape Survivors Need Crime Victim Assistance Services", http://www.justdetention.org/en/factsheets/Factsheetvoca.pdf, 7/28/15, ACC

Sexual assault is a crime that has a devastating impact on survivors. Quality medical care and crisis counseling are essential to the ability of rape survivors to heal from their abuse and to rebuild their lives.

Unfortunately, in the U.S. today, rather than being recognized as the victims of crime that they are, survivors of rape and other forms of sexual abuse in detention are denied access to even the most basic assistance offered to rape survivors in the community – such as rape crisis counseling.2 One reason for this alarming lack of services in prisons and jails stems directly from a funding restriction in the guidelines of the federal Victims of Crime Act (VOCA).3 This restriction precludes agencies that receive victim assistance grants under VOCA from using any such funding to serve incarcerated individuals – even in cases where detainees have been raped or subjected to other forms of sexual violence.4 JDI believes that this VOCA funding restriction must be lifted as a matter of urgency. Passed in 1984, VOCA created the Crime Victims' Fund, which uses fines and penalties assessed in federal court to fund victim assistance and crime victim compensation programs. Victim assistance programs provide crisis intervention, counseling, and resources in the aftermath of a crime.5 Victim compensation programs provide money to help pay out-of-pocket expenses incurred as a result of a crime.6 Every year, some 300 million dollars are allotted for crime victim assistance7 – the VOCA funding restriction means that no incarcerated survivor of sexual violence in detention is eligible to benefit from that assistance. The vast majority of rape crisis centers and related service providers receive a significant portion of their funding from VOCA, limiting their ability to serve prisoner rape survivors. To make matters worse, the VOCA funding restriction has caused many rape crisis centers and other community-based service providers erroneously to believe that they will jeopardize their VOCA funding even if they use funds from other sources to serve incarcerated individuals. As a result, even agencies that receive private donations are sometimes reluctant to serve survivors in prisons or jails. Sexual violence behind bars is shockingly common. In a 2007 survey of prisoners across the country, the Bureau of Justice Statistics (BJS) found that 4.5 percent (or 60,500) of the more than 1.3 million inmates held in federal and state prisons had been sexually abused in the previous year alone.8 A BJS survey in county jails was just as troubling; nearly 25,000 jail detainees reported having been sexually abused in the past six months.9 The most vulnerable inmates come from the same marginalized populations as the individuals at greatest risk for sexual abuse in the community, including youth, gay and transgender individuals, and people with disabilities.10 Survivors of sexual abuse behind bars experience the same emotional pain as other rape victims – and they need and deserve the same services. The absence of confidential counseling in the aftermath of an assault causes many prisoner rape survivors to develop serious long-term problems, like post-traumatic stress disorder (PTSD), depression, and alcohol and other drug addictions.11 Moreover, the high rates of HIV and other sexually transmitted diseases in detention place incarcerated survivors at great risk for infection.12 Once released – and more than 95 percent of inmates do return home13 – survivors bring their emotional trauma and medical conditions back to their communities.

Reform Good - Mental Health NB

State mental health cuts already forcing more people into prison – Instant release doesn't provide for the mentally ill

Ron **Honberg**, **et al** March 20**11** (Sita Diehl, Angela Kimball, Darcy Gruttadaro, Mike Fitzpatrick, National Alliance on Mental Illness, the nation's largest grassroots mental health organization dedicated to building better lives for the millions of Americans affected by mental illness. NAMI has more than 1,100 State Organizations and Affiliates across the country that engage in advocacy, research, support and education. Members are families, friends and people living with mental illnesses such as major depression, schizophrenia, bipolar disorder, obsessive compulsive disorder(OCD), panic disorder, posttraumatic stress disorder (PTSD) and borderline

personality disorder, “State Mental Health Cuts: A National Crisis”, http://www2.nami.org/ContentManagement/ContentDisplay.cfm?ContentFileID=126233, 7/26/15, ACC)

One in 17 people in America lives with a serious mental illnesses such as schizophrenia, major depression, or bipolar disorder.1 About one in 10 children live with a serious mental disorder.2 In recent years, the worst recession in the U.S. since the Great Depression has dramatically impacted an already inadequate public mental health system. From 2009 to 2011, massive cuts to non-Medicaid state mental health spending totaled nearly $1.6 billion dollars. And, deeper cuts are projected in 2011 and 2012. States have cut vital services for tens of thousands of youth and adults living with the most serious mental illness. These services include community and hospital based psychiatric care, housing and access to medications. To make matters worse, Medicaid funding of mental health services is also potentially on the chopping block in 2011. The temporary increase in federal funding of Medicaid through the stimulus package will end on June 30, 2011. Medicaid is the most important source of funding of public mental health services for youth and adults, leaving people with mental illness facing the real threat of being cut off from life-saving services. Communities pay a high price for cuts of this magnitude. Rather than saving states and communities money, these cuts to services simply shift financial responsibility to emergency rooms, community hospitals, law enforcement agencies, correctional facilities and homeless shelters. Massive cuts to mental health services also potentially impact public safety. As a whole, people living with serious mental illness are no more violent than the rest of the population. In fact, it is well documented that these individuals are far more frequently the victims of violence than the perpetrators of violent acts. However, the risks of violence among a small subset of individuals may increase when appropriate treatment and supports are not available. The use of alcohol or drugs as a form of self medication can also increase these risks. Unfortunately, the public often focuses on mental illness only when high visibility tragedies of the magnitude of Tucson or Virginia Tech occur. However, less visible tragedies take place everyday in our communities—suicides, homelessness, arrests, incarceration, school drop-out and more. These personal tragedies also occur because of our failure to provide access to effective mental health services and supports.

Gradual release programs more effective than immediate release – provides support while readjusting to society

Mark **Kleiman et al** 3/18/**15** -Mark Kleiman is professor of public policy at the UCLA Luskin School of Public Affairs; in July he will move to the Marron Institute at New York University. He is the author of When Brute Force Fails: How to Have Less Crime and Less Punishment. Angela Hawken is associate professor of economics and policy analysis and the James Q. Wilson Fellow at the School of Public Policy at Pepperdine University. She has studied the effects of mandated drug treatment and swift-certain-fair community-corrections programs on offender outcomes. Ross Halperin is a project manager with BOTEC Analysis, where he works on operational plans for graduated re-entry programs. “We don’t need to keep criminals in prison to punish them”, http://www.vox.com/2015/3/18/8226957/prison-reform-graduated-reentry, ACC)

The transition from prison to the "free world" can be very tough, both for the offender and for the neighborhood he returns to. In the month after getting out, a person released from prison has about a dozen times the mortality rate of people of the same age, race, and sex in the same neighborhood, with the leading causes of death among former inmates being drug overdose, cardiovascular disease, homicide, and suicide. This shouldn't be a surprise. Consider someone whose conduct earned him[/her] (much more rarely "her") a prison cell. Typically, that person went into prison with poor impulse control, weak if any attachment to the legal labor market, few marketable skills, and subpar work habits. More often than not, ~~he's~~[they’re] returning to a high-crime neighborhood. Many of ~~his~~[their] friends on the outside are also criminally active. Maybe, if ~~he's~~[their] lucky and has been diligent, ~~he's~~ [they’ve] learned something useful in prison. Perhaps ~~he's~~[they’ve] even picked up a GED. But he[/she] hasn't learned much about how to manage him[/her]self in freedom because he[/she] hasn't had any freedom in the recent past.

And he[/she] hasn't learned to provide for him[/her]self because [she's/]he's been fed, clothed, and housed at public expense. Now let him[them] out with $40 in ~~his~~[their] pocket, sketchy if any identification documents, and no enrollment for basic income support, housing, or health insurance. Even if [s/]he has family or friends who can tide him[/her] over during the immediate transition, [her/]his chances of finding legitimate work in a hurry aren't very good. If [s/]he's not working, [s/]he has lots of free time to get into trouble and no legal way of supporting [her/]himself. Altogether, it's a formula for failure — and failure is, too often, what it produces. But there is a better way. The current system never made sense, and it makes less sense every day. The cost of buildings and staff goes up every year; the cost of information collection goes down. We need to learn to substitute effective supervision for physical confinement. That's the idea behind "graduated re-entry." To get back to our historic level of incarceration, we would have to reduce the prisoner headcount by 80 percent. We can't get from where we are to where we need to be just by releasing the innocent and harmless. More than half of today's prisoners are serving time for violent offenses, and even those now in prison for nonviolent crimes often have violent histories. Solving mass incarceration requires releasing some seriously guilty and dangerous people. The problem is how to do that while also protecting public safety by turning ex-criminals into productive, free citizens. For the transition from prison to life outside to be successful, it needs to be gradual. If someone needed to be locked up yesterday, [s/]he shouldn't be completely at liberty today. And [s/]he shouldn't be asked to go from utter dependency to total self-sufficiency in one flying leap. [S/]He needs both more control and more support. Neither alone is likely to do the job. Of course, both control and support cost money. But so does prison. The trick is to start the re-entry process before what would otherwise have been the release date, so the money you spend in the community is balanced by the money you're not spending on a cell. The average cost of holding a prisoner comes to about $2,600 per month. At the same time, even very intrusive supervision leaves a released offender freer than [s/]he would have been on the inside. So even a program that looks expensive and intrusive compared with ordinary re-entry or parole is cheap and liberating compared with a cellblock. Start with housing. A substantial fraction of prison releasees go from a cellblock to living under a bridge: not a good way to start free life. Spend some of the money that would otherwise have financed a prison cell to rent a small, sparsely furnished efficiency apartment. In some ways, that apartment is still a cell and the offender still a prisoner. [S/]He can't leave it or have visitors except as specifically permitted. The unit has cameras inside and is subject to search. But [s/]he doesn't need guards, and doesn't have to worry about prison gangs or inmate-on-inmate assault.

Released prisoners have increased likelihood of death – drug overdose, cardiovascular disease, homicide, suicide, and mental relapse – prison and release reforms can alleviate the risk

Ingrid A. **Binswanger et al** 3/10/**10** – Ingrid A. "Release from Prison — A High Risk of Death for Former Inmates", NCBI.com, The National Center for Biotechnology Information advances science and health by providing access to biomedical and genomic information, http://www.ncbi.nlm.nih.gov/pmc/articles/PMC2836121/, 7/26/15, ACC)

During the first 2 weeks after release from the Washington State Department of Corrections, the risk of death among former inmates was 12.7 times that among Washington State residents of the same age, sex, and race. The sharply elevated risk immediately after release suggests that the reentry process contributes to excess mortality in this population. Overall, we observed an increase by a factor of 3.5 in the risk of death among former inmates. Mortality rates did not return to the baseline of the general population of the same age, sex, and race even several weeks after release. Factors such as level of education, employment status, level of income, neighborhood of residence, and health insurance status may account in part for the difference between the mortality rates among former inmates and those among other state residents of the same age, sex, and race. National estimates suggest that state prison inmates have a lower level of education than does the general population.19 However, socioeconomic differences between former inmates and the general population are unlikely to account for all the observed variation in the relative risk of death during the 8 weeks after release from prison. Our estimates for the study period showed that the risk of death was sharply higher after release than during incarceration, perhaps because there are fewer overdoses, homicides, or motor vehicle accidents during incarceration. Inprison mortality rates reported by the U.S. Bureau of Justice Statistics for 2001 and 2002 (244 deaths per 100,000 prisoners in state correctional facilities; 192 deaths per 100,000 Washington State prisoners) were also considerably lower than those among former inmates.20 Our comparisons were limited by the lack of specificity of the data in CDC WONDER on racial groups other than black or white, which may account for some of the interaction observed according to race. We may not have identified all deaths among former inmates, including deaths occurring outside the United States. Data on the Social Security numbers and names of former inmates may be more likely to be incorrect than data on other members of the population, but the personal identifiers of former inmates were likely to be as accurate as possible since these were provided by the criminal justice system. Ascertainment of known deaths may be better for men than for women and for whites than for blacks and persons of other races,21 but the NDI is currently the best available source for identifying deaths in the United States.21,22 Many types of personal identifiers and all known aliases for linkage improved our ability to ascertain deaths correctly. We have identified important risks that former inmates must confront: drug overdose, cardiovascular disease, homicide, and suicide. A period of relative abstinence during incarceration may have led to diminished physiological tolerance to drugs, increasing the risk of overdose. The excess risk of homicide suggests that former inmates were exposed to considerable personal risk from violence. Firearms were involved in many deaths in this population after release. The risk of death from cardiovascular disease and lung cancer may be related to the high prevalence of tobacco use in populations in correctional institutions.23,24 A high prevalence of underlying mental illness and the psychological stress of reentry may have contributed to the excess risk of suicide. Persons with mental illness may have particular difficulty obtaining care and medications from community providers after the medications provided by prisons run out. Improved transitional planning for inmates with mental illness may help to reduce this risk. We could not verify data from the Department of Corrections, nor could we be certain that deaths did not occur when an inmate was incarcerated in another correctional system within Washington State or elsewhere. Classification of the causes of death was subject to the limitations imposed by the use of data recorded in the NDI from death certificates. For instance, some suicides may have been misclassified as drug overdoses and some drug overdoses may have been misclassified as cardiovascular deaths. However, many suspected overdoses, suicides, and accidental deaths would have been coroners' cases and undergone investigation with toxicologic testing and autopsy, making our data at least as accurate as most standard reports on the cause of death provided by treating physicians.Our study was based in a prison system in a single state in the United States, so we cannot be certain that the findings are generalizable to other correctional systems, states, or countries. U.S. prisons reported more than 600,000 releases in 2002.25 In addition, jails in which persons awaiting trial or serving short-term sentences for misdemeanors are detained had approximately 10 million releases in 1997 (7.2 million unique persons).26 If former jail inmates have an elevated risk of death similar to that of former inmates of Washington State prisons, the effect of the excess risk of death after release could be substantial. Because a disproportionate number of black and Hispanic men interact with the criminal justice system, decreasing the risk of death after release may decrease disparities in health outcomes in this population overall. The age distribution in the categories of leading

causes of death suggests that specific interventions might be targeted according to age. Interventions aimed at decreasing the risk of death could include planning for the transition from prison to the community, including use of halfway houses, work-release programs, drug-treatment programs, education about susceptibility to overdose after relative abstinence during incarceration, and preventive care to modify cardiac risk factors. Possible interventions after release include providing intensive case management during the period immediately following release and improving access to and continuity of medical and mental health care. In addition to possible reductions in mortality after release, there might be secondary benefits for society from such interventions, in the form of increased public safety.

Your let people out without resolving psychological issues that recreates the issues of the status quo.

NC 6 (November Coalition, non-profit organization Working to End Drug War Injustice, "Abolishing the Prison Industrial Complex," July 2006, http://www.november.org/stayinfo/breaking06/CarceralLandscapes.html)//ghs-VA

The other thing that I like to point out is that most of the time, terrible things happen within a pretty limited context. The majority of really violent acts, with the exception of **serial killers** or people who are really disturbed, happen as crimes of passion or with people who they know. Crimes of passion are highly-specific incidents in highly-specific contexts. That's not to say that it's ok, or change the fact that they may have killed someone, for example. But that kind of person doesn't pose the kind of threat to society that people often play-up. I'm not sure what to do with people who are currently locked-up. A lot of people who are locked up need mental healthcare, need good mental health care. They need immensely supportive environments where they can engage with the damage they've done and the people they've harmed, if they're someone who's capable of processing something like that. If they're not capable of processing something like that, they may need some other kind of support or supervision that might not have to be locked.

Total abolition fails to account for the mentally ill prisoners reliant on mental healthcare of prisons – sudden cut off medication endangers lives

Matt **Ford 6/8** - an associate editor at The Atlantic, where he covers law and the courts, 6/8/15, the Atlantic, "America's Largest Mental Hospital Is a Jail", http://www.theatlantic.com/politics/archive/2015/06/americas-largest-mental-hospital-is-a-jail/395012/, 7/25/15, ACC)

Demetrio's battle with mental illness began at an early age. "My mother was murdered and I watched it when I was young, so that's how it started," he told me. Doctors diagnosed him with post-traumatic stress disorder and bipolar disorder as an adolescent. He served time for drug-related offenses in 1987 and 1993, then kept out of trouble for the next 18 years. He drifted in and out of Chicago-area hospitals during that period, checking himself in when he felt suicidal. While on parole for a 2009 burglary charge, he went off his medication and stopped reporting to his parole officer. That landed him back in state prison to serve the remainder of his sentence. There, Demetrio received medication and treatment, but it ended the moment he became a free man last year. Prison doctors tried to set him up with an appointment in one of the city's remaining community mental-health clinics. "They said the earliest I could see a doctor was June [2014]," he told the sheriff and me. "When were you released?" asked Dart. Nine months earlier in October 2013, Demetrio replied. He knew that surviving until the following June wouldn't be easy. "I was trying to stretch my medicine out by not taking it regularly like I should have every day," he told me. "It didn't work." This spring, he was arrested on aggravated battery charges—for getting in a fight with a man selling drugs to his family, he told me—and landed back in Cook County Jail on a $250,000 bond. He said he wasn't medicated when the fight erupted and was eager to get back out. "I've been in Chicago my whole life. I have a 14-year-old son. His mother's all messed up right now,

she's on drugs, that's why I'm trying to get out of here," he told me. Demetrio spoke lucidly and without difficulty during our conversation. He credited the hydroxyzine, Klonopin, and Prozac he was receiving at the jail. "I've been lucky so far," he told me. "If I wasn't on my medication, I'd be a whole different person." Cook County Jail does house its share of serious violent offenders. Some of them are mentally ill. Many aren't. But the overwhelming majority of Cook County Jail's mentally ill population is booked for minor offenses, Dart told me. "When people do not receive the care they need, they become symptomatic," Jones Tapia explained. "When people become symptomatic with acute mental illness, a lot of times those behaviors look criminal. And we have done an excellent job of criminalizing people with mental illness in our state." When the criminal-justice system is your only hope, perverse incentives are also inevitable. In 1976, the Supreme Court ruled in Estelle v. Gamble that prisons are constitutionally required to provide adequate medical care to inmates in their custody. As a result, prisoners are the only group of Americans with a constitutional right to health care. Multiple city and county officials told me they had encountered mentally ill people who committed crimes simply to receive treatment.

Reform Good – Disability NB

Reforming prisons is key to solve for those struggling with mental illness

E. Fuller **Torrey et al 14**, Associate Director, Stanley Medical Research Institute Founder and Board Member, Treatment Advocacy Center Mary T. Zdanowicz, Esq. Mental health law attorney, Eastham, Massachusetts Sheriff Aaron D. Kennard (retired), M.P.A. Executive Director, National Sheriffs' Association H. Richard Lamb, M.D. Emeritus Professor of Psychiatry, University of Southern California, Keck School of Medicine Board Member, Treatment Advocacy Center Donald F. Eslinger Sheriff, Seminole County, Florida Board Member, Treatment Advocacy Center Michael C. Biasotti Chief of Police, New Windsor, New York Board Member, Treatment Advocacy Center Doris A. Fuller Executive Director, Treatment Advocacy Center, "The Treatment of Persons with Mental Illness in Prisons and Jails: A State Survey" APRIL 8, 2014 http://www.tacreports.org/storage/documents/treatment-behind-bars/treatment-behind-bars.pdf, AB)

Prison and jail officials thus have few options. Although they are neither equipped nor trained to do so, they are required to house hundreds of thousands of seriously mentally ill inmates. In many cases, they are unable to provide them with psychiatric medications. The use of other options, such as solitary confinement or restraining devices, is sometimes necessary and may produce a worsening of symptoms. Yet, when things go wrong, as they inevitably do, the prison and jail officials are blamed. The present situation is unfair to both the inmates and the officials and is untenable. The ultimate solution to this problem is to maintain a functioning public mental health treatment system so that mentally ill persons do not end up in prisons and jails. To this end, public officials need to: Reform mental illness treatment laws and practices in the community to eliminate barriers to treatment for individuals too ill to recognize they need care, so they receive help before they are so disordered they commit acts that result in their arrest. Reform jail and prison treatment laws so inmates with mental illness can receive appropriate and necessary treatment just as inmates with medical conditions receive appropriate and necessary medical treatment. Implement and promote jail diversion programs such as mental health courts. Use court-ordered outpatient treatment (assisted outpatient treatment/AOT) to provide the support at-risk individuals need to live safely and successfully in the community. Encourage cost studies to compare the true cost of housing individuals with serious mental illness in prisons and jails to the cost of appropriately treating them in the community. Establish careful intake screening to identify medication needs, suicide danger, and other risks associated with mental illness. Institute mandatory release planning to provide community support and foster recovery. Provide appropriate mental illness treatment for inmates with serious psychiatric illness.

The aff's unrealistic approach is actively dangerous for mentally disabled folk

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo
"Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and

Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Before and during deinstitutionalization, opponents of closures in the mental health and developmental disabilities arenas claimed that the policy is unrealistic and that its proponents should wait until the time is right for it. One of the most pervasive arguments against deinstitutionalization, which is still debated today, is the widespread belief that certain people will always require some custodial care. This is true for people with cognitive, psychiatric and intellectual/developmental disabilities- especially those labels on the severe or profound side of the spectrum. Many professionals, and parents, believe that the best interests of "these people" will always be better served in residential settings and although others can benefit from programs and therapies, they cannot. This is the position of organizations such as Voice of the Retarded, and some, vocal, family members from NAMI (the National Alliance of Mental Illness). They actively lobby for increasing options such as involuntary hospitalizations and medication or residential living options. This of course ends up competing with those who advocate for more community living options and supports, both ideologically and in terms of budgetary priorities.

The aff lets homeless disabled people die in the streets

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

In addition to resistance to deinstitutionalization and community living when they were proposed or enacted, there have also been critiques against them after the fact, which some characterize as "the backlash against deinstitutionalization." Such critiques helped build a narrative in which deinstitutionalization is seen as a culprit in a variety of social problems of its era, and especially as leading to increases in homelessness and trans-incarceration (especially of people with mental illness in jails and prisons). This section will explicate some of the key arguments in these debates and hopefully bring new light to understanding both deinstitutionalization and its backlash. Although there are variations to this idea, the hegemonic story is that deinstitutionalization led to "dumping people in the streets," or to "mentally ill" people living in the streets or in jail via being homeless. Snow et al. (1986) give a few examples of such accounts as reported in the popular media during the 1980s: "...a recent Time essay (Krauthammer, 1985:103) contends that a conservative estimate would place "a majority of the homeless . . .near either psychosis or stupor" and then adds, presumably to mollify public fears, that the homeless do not pose a serious safety threat because "the overwhelming majority are simply too crazy to be dangerous." A Newsweek cover story (Morganthau et. al., 1986:14-19) on the homeless mentally ill paints a similar picture by claiming that the majority of the homeless who will succumb to the effects of exposure on city streets "will be found to have a history of chronic mental illness and to have spent at least some time in psychiatric hospitals." And a People magazine essay (1986:27-36) on homelessness asserts rather matter-of-factly that "probably the greatest contributors to the size of the homeless population. . .are the state mental hospitals." (Snow et al. 1986: 1). Add to these news stories the stack of scholarly books written on the topic, such as Dear and Wolch's Landscapes of Despair: From Deinstitutionalization to Homelessness, Issac and Armat's Madness in the Streets and E. Fuller Torrey's Out of the Shadows, and it would be clear to any lay person that the connection between deinstitutionalization in mental health and homelessness is undisputable.

Reform Good - Sexual Violence Specific

Untreated PTSD in victims of sexual violence can lead to suicide

Kevin **Caruso NO DATE** – Caruso is the Founder and Senior Writer for Suicide.com, a website run by suicide survivors with information and hotlines to help possible victims. "Rape Victims Prone to Suicide", http://www.suicide.org/rape-victims-prone-to-suicide.html, 7/28/15

Rape is a horrible crime. And it effects the victims for the rest of their lives. Depression and post-traumatic stress disorder are common conditions among rape victims. Numerous rape victims have suicidal thoughts. Many die by suicide. Sexual assaults are, unfortunately, extremely common. In the U.S., a sexual assault occurs every two minutes. Here are some additional disquieting statistics about rape: 17% of American women have been the victim of sexual assault at some point in their lives. In 2002, there were 247,730 sexual assaults -- Approximately 87,000 were victims of completed rape; 70,000 were victims of attempted rape; and 91,000 were victims of sexual assault. (Data is from the National Crime Victimization Survey and does not include data on victims 12 and younger.) About 44% or rape victims are under the age of 18. 15% of rape victims are under the age of 12. 93% of the rape victims age 18 and under knew the rapist. Of these rapists, 34.2% were family members and 58.7% were acquaintances. In 2001, it was estimated that only 39% of rapes and sexual assaults were reported to the police. 66% of rape victims know their assailant. 40% of the rapes occur in the victim's home. 20% of the rapes occur in the home of a friend or acquaintance. 10% of the rapes occur outdoors. 8% of the rapes occur in parking structures. Rape has long-term emotional consequences that can lead to suicide. It is quite common for rape victims to suffer from depression. And untreated depression is the number one cause for suicide.

Reform CP – AT: Perm

Perm fails – abolition and reform strategies TRADE OFF and link to politics

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

A more implicit critique of deinstitutionalization and prison abolition is in the way it is perceived by the public and (social) scientific literature. Specifically, the characterization of these movements as radical and utopian did much to hasten the backlash against their activists as well as against the ideas they put forward. Prisoner organizing, described in chapter 5, was a particular target of backlash and critique from the public and the state. This strand of activism, which was more radical and marginal by nature, **started to overpower reform based efforts and prison litigation,** which were driven primarily by civil rights lawyers and progressive policy makers. The prisoner movement provided a bridge between the activism on the left, which was largely white and middle class, and the revolutionary stance of black power activism, according to Gottschalk (2006). Most importantly, because of this movement, prison issues became a major concern for most radical and progressive social justice organizations at the time, regardless of their "cause."

Abolitionist movements are perceived as too radical and diminish reform efforts

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Famed criminologist Roger Matthews further critiques prison abolitionists for trying to abolish not only prison but the state, as a centralized entity that controls punishment and other governing operations, and moving those entities into the hands of individuals and local communities. Thus, he refers to abolitionists as "anarcho-communist." This is in contrast, in his view, to the position offered by many other prison activist groups who attempt to make the state a more effective or accountable entity in relation to penalty (Sim 2009). Prison abolition is also seen as "uncivil" and undemocratic, as it does not espouse change through pressure groups which lobby for particular policies, such as specific reform efforts within particular provinces or 289 states, but seek to abolish a whole system. This strategy is perceived as breaking from the liberal political discourse all together, as well as the discourse of modern social movements (Sim 2009). On the other hand, abolitionism has come to be regarded as a remnant of 1960s

idealism, rooted in extreme libertarian views, similar to those espoused by anti-psychiatry and other antiauthoritarian activists. From the inception of prison abolitionism as a movement, its activists were being dismissed as "dreamers, crackpots and sentimentalists" (in Knopp 1976). Activists in these movements point out that it is ironic that abolitionism is considered to be idealistic, while prison reform, whose oxymoronic goal to create reformed non-oppressive prisons is considered realistic.

50 States CP

1NC

Text: The 50 states should abolish state prisons.

There are far more people incarcerated in state prisons than federal prison

Wagner & Sakala 14 (Peter, attorney and the Executive Director of the Prison Policy Initiative, Leah, Senior Policy Analyst and has been working with the Prison Policy Initiative since 2008, "Mass Incarceration: The Whole Pie ", March 12th, http://www.prisonpolicy.org/reports/pie.html)CDD

So now that we have a sense of the bigger picture, a natural follow-up question might be something like: how many people are locked up in any kind of facility for a drug offense? While the data don't give us a complete answer, we do know that it's 237,000 people in state prison, 95,000 in federal prison, and 5,000 in juvenile facilities, plus some unknowable portion of the population confined in military prisons, territorial prisons and local jails.

A2: Federal prisons worse than state

State prisons are far worse than federal prisons- Nearly twice as many assaults

O'Donnell 4 (Jayne, reporter for USA today, "State time or federal prison?", 3/18, http://usatoday30.usatoday.com/money/companies/2004-03-18-statetime_x.htm)CDD

State penitentiaries, with inmate-on-inmate assaults nearly twice as likely as in federal prisons, are a far cry from the comparatively cushy accommodations in federal prisons, where former ImClone CEO Sam Waksal now sits and where Martha Stewart is likely to soon be spending time. The distinction could be especially important for former Tyco CEO Dennis Kozlowski and former CFO Mark Swartz, waiting to hear how a jury rules in their New York state trial on charges of having plundered Tyco for $600 million. James Connelly, former vice chairman of Fred Alger Management, already is a guest of New York state, serving up to three years in a state prison after pleading guilty to evidence tampering in the mutual fund scandal. The guilty pleas of at least two other mutual fund executives could also force them to do state time in New York. State authorities know they carry a bigger stick than the feds and aren't afraid to use it. New York Attorney General Eliot Spitzer says the threat of possible state prison time has been a valuable tool for his office's investigation of the mutual fund industry. "Have you ever been to a state prison?" Spitzer asked. "The idea of taking a bus trip to (Clinton Correctional Facility, a New York state maximum-security prison in) Dannemora sent shock waves through the mutual fund industry." More violence Bleak state prisons house far more violent criminals than federal pens and present such a scary plight, they often affect plea negotiations, defense attorneys and prosecutors say. And New York state sentencing guidelines add a more ominous element: Anyone sentenced to a minimum six years in prison has to serve most of the term in a maximum-security prison — something that's virtually unheard of for white-collar criminals in the federal system. Many white-collar crimes violate both state and federal laws and can be prosecuted in either jurisdiction. Defense attorneys say their clients are often more likely to plead guilty to reduce the chance of going to state prison. "Experienced defense attorneys are acutely aware that there are huge differences between the federal and state penal institutions and almost always seek to have clients housed by the feds," says white-collar defense attorney Reid Weingarten, who represents former Tyco general counsel Mark Belnick, slated to go on trial April 12 on charges related to the alleged looting of the company. "Prosecutors are equally aware of the differences and have been known to take advantage of the reality to extract guilty pleas from defendants who are exposed in both systems." Who goes to federal prison Anyone who violates a federal law, usually including: Large-scale drug traffickers Organized crime figures Robbers of federally chartered banks Immigration violators All Washington, D.C.-based felons Those guilty of felonies on federal property, including military bases, or against some high-level federal employees. White-collar criminals guilty of crimes such as securities or mail fraud. Who goes to state prison Those charged with a felony by state authorities, usually including: Murderers Rapists Robbers Those who commit violent crimes using guns White-collar criminals who did not also violate federal law, such as petty embezzlers. It's hard to imagine being lucky when you're a defendant in a white-collar criminal case, but those charged by U.S. attorneys working for the Justice Department will at least be in the federal system, where there is a good chance of being housed in a minimum-security prison camp. Defendants targeted by state attorneys general such as Spitzer or a district attorney such as Manhattan's Robert Morgenthau could wind up at notorious prisons such as Attica or Sing Sing. The chance of being assaulted in a state prison, which houses a greater percentage of violent criminals, is higher. In 2000, one out of 36 inmates was assaulted by other inmates in state prison. In federal prison, the assault rate was one of every 58 inmates, according to the 2001 Corrections Yearbook. Meanwhile, a 2000 survey of inmates in seven Midwestern state prisons showed that about one in five male inmates reported a pressured or forced sex incident, while about one in 10 said they had been raped, according to an article published in The Prison Journal.

State prisoners are sexually abused at more than double the rate of federal prisoners

Frieden 12 (Terry, CNN Justice Department Producer, "Study finds nearly 1 in 10 state prisoners is sexually abused while incarcerated", 5/17, http://www.cnn.com/2012/05/17/us/us-state-prisons-abuse/)CDD

Nearly one of every 10 state prisoners is sexually victimized during confinement, according to a Justice Department study released Thursday. The Bureau of Justice Statistics examined data collected in surveys of former prisoners about their time behind bars. The officials found that most of the victims had been abused while they were in state prisons, but a small percentage were molested in local jails or halfway houses. The victimization rate of 9.6% is **more than double** the rate cited in a report on the subject in 2008. However, the Bureau of Justice Statistics, an arm of the Justice Department, cautioned that the previous study was based on a survey of current inmates in both state and federal institutions. The nature of the sexual incidents did not change. Female prisoners were more than three times as likely to be victims of sexual abuse as male prisoners. Prison staff sexual misconduct was prevalent. The study noted nearly seven in eight such incidents involved perpetrators of the opposite sex. More than 75% of the former prisoners who reported staff sexual misconduct were male inmates who said they had interaction with female staff, the report said. Violence associated with the sexual incidents was found to be common.

Policies meant to help minorities anger Republicans

Weishar 13 (Mike, politics & news writer, "Republicans Have Chosen to Remain the Party of Hate", July 29th, http://quietmike.org/2013/07/29/republicans-the-party-of-hate/)CDD

America has gone through a lot of social changes in recent years, but instead of embracing this change, the majority of Republicans have rejected it and have run off in the opposite direction. It is the primary reason why the Republican Party has one presidential election victory in the last twenty years. Still, at a time when it's easier than ever for anyone to get their voices heard, minorities of all shapes and sizes are speaking up. Meanwhile, conservatives have ignored these voices and have turned to a new faction within their party determined to ridicule and belittle them. Conservative distaste for minorities has always been there, but I can't remember a time when it was directly in front of us like this. I suppose this is the result of the Information Age coupled with a Black President and a vocal extremist wing called the Tea Party. Everywhere we look, Republicans are attacking minorities either with purpose or pure ignorance. Blacks, Latinos, gays, women and the poor are all targets in some way, shape or form. Despite the warnings from moderate Republicans on the dangers of offending these voters, they are effectively doing just that. They would rather marginalize entire groups of people and risk losing further elections, than try to understand and empathize with them. "In the emergency room they have what's called rape kits, where a woman can get cleaned out," – Texas Rep. Jodie Laubenberg Let's start with my favorite group; women. The Roe v. Wade decision came down forty years ago, but watching the news you'd think it happened yesterday. Since Obama was elected, US states backed with Republican led legislators have enacted hundreds of anti-abortion laws. These bills have led to the closing of countless clinics and have effective closed the abortion option to women in some states. Let's not forget the compulsory ultra-sound exams and the diminishing time frame you can have one. In addition to abortion restrictions, we have conservative objections to birth control access (you know, the thing that prevents abortions in the first place). Reproductive rights are on the front-line of the Republican war on women, but Republican governors have also repealed laws granting equal pay for women. One thing that has stayed constant throughout the years is the Republican ignorance toward African Americans. The hate and racism persists no thanks to the false information being spread by right-wing pundits and racism passed down through generations of the white majority. Listening to these conservative pundits on Fox News, you get the impression that blacks are made up of criminals, murderers, welfare queens and all come from broken families. It's no wonder they believe Zimmerman was right in shooting an unarmed black teenager on his way home from the store. Disgust towards African Americans must still run pretty deep in the Party of Hate. If not, they wouldn't be celebrating the gutting of the voting rights act. Nor would they instantly move toward preventing them from voting, the most important right of any American. It's clear Republicans would rather shut them up than listen.

Republicans hate letting prisoners out of prison

4/15 Millhiser (Ian, a Senior Fellow at the Center for American Progress Action Fund and the Editor of ThinkProgress Justice, "House Republicans Are Outraged That Obama Is Too Merciful", 2015, http://thinkprogress.org/justice/2015/07/15/3680759/house-republicans-clemency-letter/)CDD

On Monday, President Obama announced that he would commute 46 "unduly harsh sentences" as the first wave of what his administration has promised will be an aggressive effort to expand its (up unto this point fairly rare) grants of mercy. This decision did not sit well with several key House Republicans, including some who have recently indicated that they are willing to work with Democrats on criminal justice reform. In a letter addressed to Attorney General Loretta Lynch on Tuesday, 19 members of the House Judiciary Committee — including its chair — attacked the president's grants of clemency. Much of the letter consists of a list of questions about the particular individuals who received clemency; the lawmakers want to know, for example, "what quantity of narcotics did each offender possess?" The letter's primary substantive

critique of the administration, however, is a novel constitutional argument that Obama and the Justice Department are discriminating in favor of drug offenders in a manner that is somehow legally objectionable. "[T]he fact that the Department's clemency initiative is focused solely on federal drug offenders continues this Administration's plainly unconstitutional practice of picking and choosing which laws to enforce and which to change," the letter claims. The suggestion that the Obama administration is crossing a line because they've decided to focus their efforts on drug offenders is unusual as an historic matter. President Gerald Ford discriminated in favor of disgraced former presidents in his exercise of the executive's power to grant mercy, while President George W. Bush discriminated in favor of former high-ranking aides to Vice President Dick Cheney. Presidents have historically exercised their power to grant pardons or clemency as they please, and they are not required to get Congress's permission in order to do so. Indeed, the president's broad discretion to grant mercy to whoever they choose, when they choose, so long as the beneficiary of that mercy is an alleged or convicted federal offender, is part of America's constitutional design. The Constitution itself lays this power out in broad terms, providing that the president "shall have Power to grant Reprieves and Pardons for Offenses against the United States, except in Cases of Impeachment." As the Supreme Court explained in Schick v. Reed, the drafters of this constitutional provision "spoke in terms of a 'prerogative' of the President, which ought not be 'fettered or embarrassed.'" Moreover, the Court added, "the power flows from the Constitution alone, not from any legislative enactments, and that it cannot be modified, abridged, or diminished by the Congress." Should the signatories to the House Republicans' letter distrust the Supreme Court's interpretation of the Constitution, perhaps they will trust the conservative Heritage Foundation. According to The Heritage Guide to the Constitution, "[t]he power to pardon is one of the least limited powers granted to the President in the Constitution," and its scope "remains quite broad, almost plenary." So the accusation that President Obama has somehow misused his powers by giving particular attention to federal drug offenders is frivolous. There's also a very specific policy reason which explains why the administration would target drug offenders over people convicted of a different crime — federal sentencing law has changed significantly with respect to drug offenders in recent years. As the House Republicans' letter itself explains, former Attorney General Eric Holder announced that the administration would prioritize drug offenders who, among other things, "likely would have received a substantially lower sentence if convicted of the same offense(s) today," when determining whether to issue a grant of clemency. In any event, the letter suggests that bipartisan progress on criminal justice reform could prove fragile in the face of some lawmaker's overarching need to attack leaders of the other party. Outside of Congress, there are encouraging signs for advocates eager to see traditional opponents come together to reduce excessive sentences and otherwise reform the criminal justice system. Liberal groups such as the Center for American Progress (which is the partner organization of ThinkProgress's parent organization) and the ACLU have joined with conservative groups such as FreedomWorks and Americans for Tax Reform to push for wide-ranging reforms. The Koch brothers are a major supporter of this effort.

I/L

Killing the Iran deal increases US sanctions

7/22 Shiner (Meredith, yahoo political correspondent, "Killing Iran pact could lead to war, Rep. Keith Ellison warns'", 2015, https://www.yahoo.com/politics/killing-iran-pact-could-lead-to-war-rep-keith-124767932951.html)CDD

"I clearly prefer diplomacy over warfare, and if we don't do this deal, I don't see how we can avoid military conflict," Ellison said. "Because if [Republicans] do manage to scuttle this deal, clearly Congress is going to increase sanctions and Iran is probably going to be afraid, and so they'll probably accelerate their production of a nuclear weapon. If we detect [them] doing that, we're going to issue an ultimatum for them to stop. If they don't, we're probably going to bomb them."

Impact

US Sanctions on Iran are genocide

Greenwald 12 (Glenn, a former columnist on civil liberties and US national security issues for the Guardian, "Iran sanctions now causing food insecurity, mass suffering", Oct 7th, http://www.theguardian.com/commentisfree/2012/oct/07/iran-santions-suffering)CDD

The Economist this week describes the intensifying suffering of 75 million Iranian citizens as a result of the sanctions regime being imposed on them by the US and its allies [my emphasis]: "Six years ago, when America and Europe were putting in place the first raft of measures to press Iran to come clean over its nuclear ambitions, the talk was of "smart" sanctions. The West, it was stressed, had no quarrel with the Iranian people—only with a regime that seemed bent on getting a nuclear bomb, or at least the capacity for making one. Yet, as sanctions have become increasingly punitive in the face of Iran's intransigence, it is ordinary Iranians who are paying the price. "On October 1st and 2nd Iran's rial lost more than 25% of its value against the dollar. Since the end of last year it has depreciated by over 80%, most of that in just the past month. Despite subsidies intended to help the poor, prices for staples, such as milk, bread, rice, yogurt and vegetables, have at least doubled since the beginning of the year. Chicken has become so scarce that when scant supplies become available they prompt riots. On October 3rd police in Tehran fired tear-gas at people demonstrating over the rial's collapse. The city's main bazaar closed because of the impossibility of quoting accurate prices. . . . "Unemployment is thought to be around three times higher than the official rate of 12%, and millions of unskilled factory workers are on wages well below the official poverty line of 10m rials (about $300) a month." Pervasive unemployment, inflation, medicine shortages, and even food riots have been reported elsewhere. That sanctions on Muslim countries cause mass

human suffering is not only inevitable but part of their design. In 2006, the senior Israeli official Dov Weisglass infamously described the purpose of his nation's blockade on Gaza with this candid admission: "'The idea is to put the Palestinians on a diet, but not to make them die of hunger." Democratic Rep. Brad Sherman justified the Iran sanctions regime this way: "Critics of sanctions argue that these measures will hurt the Iranian people. Quite frankly, we need to do just that." Even more infamously, the beloved former Democratic Secretary of State Madeleine Albright - when asked in 1996 by 60 Minutes' Lesley Stahl about reports that 500,000 Iraqi children had died as a result of US-imposed sanctions on that country - stoically replied: "I think this is a very hard choice, but the price - we think the price is worth it." So extreme was the suffering caused by sanctions in Iraq that one former UN official, Denis Halliday, resigned in protest, saying that the sanctions policy met the formal definition of "genocide": "We are now in there responsible for killing people, destroying their families, their children, allowing their older parents to die for lack of basic medicines. We're in there allowing children to die who were not born yet when Saddam Hussein made the mistake of invading Kuwait." In an excellent Op-Ed for Al Jazeera last week, Murtaza Hussain extensively documented the devastation wrought on 26 million Iraqis by that sanctions regime - the one Albright declared as "worth it" - and argues: "that tragedy is being willfully replayed, only this time the target is the population of Iran". He explained: "Intensifying sanctions against the country have sent the Iran's rial into an unprecedented free-fall, causing it to plummet in value by 75 per cent since the start of the year; and, stunningly, almost 60 per cent in the past week alone. "Ordinary Iranians completely unconnected to the government have had their lives effectively ground to a halt as the sudden and unprecedented collapse of the financial system has rendered any meaningful form of commerce effectively impossible. In recent weeks, the price of staples such as rice and cooking oil have skyrocketed and once ubiquitous foods such as chicken have been rendered completely out of the reach of the average citizen." That is a fact that should be deeply disturbing to any decent person. In 2001, the writer Chuck Sudetic visited Iraq and then wrote in Mother Jones about what he saw: namely, that the US-led sanctions regime "killed more civilians than all the chemical, biological, or nuclear weapons used in human history".

Prisons K

1NC

Legalistic solutions for prison reform inevitably fail and cause more oppressive structures to be put in place

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

The law is not only a mechanism of attempts at release and decarceration but can be a tool used by the state to control certain populations. Even seemingly progressive or libratory laws and regulations often have loopholes or are based on assumptions that cut against any efforts for justice and equality. A prevalent example is the 13th Amendment, which symbolizes for many a rights based approach, especially in the post-slavery era. The 13th Amendment to the U.S. Constitution was signed in 1864 and (at least seemingly) abolished and prohibited slavery and involuntary servitude. But as Guyora Binder (1996), Kim Gilmore (2000) and others show, there is a clause in the 13th Amendment, which authorizes the state to use the labor of felons, as slavery is abolished except for punishment of crime. Thus, a seemingly benevolent and beneficial constitutional amendment became a state mechanism of control, capable of giving freedom to some and not to others. This practice of involuntary servitude of felons gave rise to the racialization of both criminalization and unpaid labor. Some scholars/ activists thus view the convict lease system as the transition between slavery and the creation of the Prison Industrial Complex (Davis 2000), as 272 was discussed in the introduction chapter. The abolition of slavery thus did not end the practice of servitude or unpaid work. Many **prison abolitionists are therefore wary of simply abolishing a system without starting to rethink what can come in its place,** or starting to build it de facto. The 13th **amendment can thus serve as a warning sign for prison abolitionists and anti-institutionalization activists of the fact that abolition in itself is only a first step and unless the roots of oppression are tackled, another oppressive structure will come to replace it.** It also serves to point to the limits of the law in bringing about abolition, as the law only addresses very narrow aspects of profound social questions. Like the clause in the 13th amendment, the cases dealing with institutional release of people with disabilities were also used to establish clear boundaries on who is worthy or unworthy of rights and freedom. In 1975, the U.S. Supreme Court ruled on the constitutional right of a "nondangerous mental patient" in O'Connor v. Donaldson. In a unanimous decision, the Supreme Court ruled that Kenneth Donaldson, a "nondangerous" mental patient, had a constitutional right to liberty. The judgment relayed that it was not constitutional to incarcerate a person who is deemed nondangerous who can safely live by themselves or with the support of others. This proved to be a landmark case, seemingly assuring the freedom and liberty of people labeled with mental illnesses. This was viewed as a milestone as such rights are not usually associated or guaranteed to those institutionalized. In fact, as opposed to incarceration in prisons, there is no limit on a time an inmate must spend in a psychiatric hospital or institution. At the same time though, the ruling reinforced the notion that those who are "dangerous" are not deserving of such rights and freedoms. This ruling, therefore, once again constructed and reinforced the boundaries between those deserving of freedoms and rights and those who mark 273 the lines of un-freedom (in this case, people with psychiatric disabilities who are labeled as dangerous, which is the main cause of involuntary institutionalization to begin with). Some contend that the prisoners" rights movements had a positive effect overall, as they almost entirely eliminated or at least reduced practices like torture, starvation, freezing, banning the exercise of religion and so forth, from American prisons. Others claim that such seemingly progressive measures only led to the strengthening of the penal system and led to the increased usage of more invisible and repressive modes of control in the prisons. (Gottschalk 2006). Abolitionist Ruth Gilmore wants us to question the role that activists play "first in normalizing the prison and then enabling its perpetually expanding use as an all-purpose remedy for the thwarted rights of both prisoners and harmed free people" (Gilmore 2006: 23). Penal expansion came about after the rise of the civil rights movements. But were rights a way, used by the state, that eventually pacified any real change or inclusion? The 1990 American with Disabilities Act can be perceived as a reform measure that seemingly provides equality under the law, thus pacifying more radical opposition (from groups like ADAPT, which use direct action to protest the placement of people with disabilities in nursing homes). If we look at rates of unemployment of people with disabilities, which have

risen or have stayed the same since the enactment of the ADA, and the fact that most cases brought under the ADA are not ruled in favor of disabled plaintiffs, we can begin to analyze such laws as a form of co-option of activism by the state. Brown insists that rights must not be confused with equality and that they "are more likely to become sites of the production of identity as injury than vehicles of emancipation" (Brown 1995: 134). For instance, if a woman's rights are violated it is then up to the state to uphold those rights as they have been written into law. Protection is then institutionalized, creating a female dependence on state power. There is no discussion of transcending the existing patterns of male 274 dominance within the masculinist state because women have been granted equality under law. The liberal philosophy of writing rights into law thus entrenches and subjugates women into the existing systems of traditional subordination, allowing no real way out of the cycle of dependency, protection and regulation. Litigation and rights discourse draws on the state in fixing social ills of its own creation. Under this view, using the law as an arena to create change assumes that the law is just and is a fruitful arena through which change can come to harmed populations. But many anti-prison and social justice activists perceive the law as inherently repressive, not just in cases where the plaintiffs do not win justice. Hence their use of the term "criminal injustice system" to refer to the current state of punishment in the U.S. Prison expansion serves as a reminder that it is precisely this kind of reform impetus that boomeranged against incarcerated populations. **By using the law, one perpetuates and reifies an oppressive structure that needs to be challenged and ultimately abolished**. As Audre Lorde (1984) wrote years ago - **the master's tools will not dismantle the master's house.**

Vote negative to re-conceptualize and challenge the 1ACs assumptions about the process of abolition – the act of critique in and of itself is a goal that actively resists top-down legalistic oppression

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

It is my hope, as an activist/scholar that this work brings to light the ghost of the incarceration yet to come but also highlights abolition as praxis to resist it. As Gordon (2004) explicated, the aim of the politically engaged intellectual is to nourish cultures of resistance and 367 to aid in the fulfillment of the human potential of all. In addition, and in response to critique that claimed that his work in Discipline and Punish is not practical but only theoretical in nature, Foucault explained that his role as an intellectual (or scholar/activist) is not to prescribe solutions, but to open up conversations. He remarked that "it is true that certain people, such as those who work in the institutional setting of the prison… are not likely to find instructions in my book that tell them „what is to be done". But my project is precisely to bring it about that they „no longer know what to do", so that the acts, gestures, discourses that up until then had seemed to go without saying become problematic, difficult, dangerous" and that "it seems to be that "what is to be done" ought not to be determined form above by reformers, be they prophetic or legislative, but by a long work of comings and goings, of exchanges, reflections, trials and different analyses" (Foucault 1994: 256). Critique, according to Foucault, is sometimes the goal and sometimes the means to a goal, often one which is not yet conceived but is used in a process of trial and error. Foucault asserts that critique "should be an instrument for those who fight, those who resist and refuse what is. Its use should be in processes of conflict and confrontation, essays in refusal. It doesn't have to lay down the law for the law. It isn't a stage in programming. It is a challenge directed to what is" (Foucault 1994: 236). I contend that this challenge towards "what is" is the work of abolition today, and for the future of a non-carceral society. Even for those of us who find deinstitutionalization, anti- psychiatry and prison abolition movements to be "too radical" or problematic for whatever reason, I believe activists and scholars could benefit greatly from connecting them to each other and paying attention to the path of abolition of oppressive institutions. People or ideas, which are perceived as radical are often characterized as dangerous, and sometimes "crazy," and

these are exactly the populations 368 we still hold behind bars and locked doors. But in terms of abolition, people who called for the abolition of slavery were also called dangerous and some lost their lives in the struggle, but you would be hard pressed to find people who advocate for slavery today. One can hope that this will be the case in relation to prisons and institutions in the imminent future. As Sebastian Scheerer (1987: 7) comments: "the great victories of abolitionism are slowly passing into oblivion, and with them goes the experience that there has never been a major social transformation in the history of mankind that had not been looked upon as unrealistic, idiotic or utopian by the large majority of experts even a few years before the unthinkable became reality." This research attempts to ensure that abolition of the carceral in the form of deinstitutionalization, prison abolition and anti-psychiatry do not pass into oblivion and are not only preserved but built upon in a shared horizon combating "the incarceration yet to come."

F/W

Abolition as a revolutionary framework comes first - critical analysis is key to education and understandings of the world / prisons

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

In a conversation between activist/scholars Angela Y. Davis and Dylan Rodriguez, they describe prison abolition as much bigger than a critique of incarceration, but rather providing a broader critique of society (Davis 2000a). The most powerful relevance of the prison abolitionist stance, for them, is to analyze the prison as a core structure that shapes social relations in society, not just for those affected directly but for everyone. The prison has direct implications for all, in terms of morality, ethics, surveillance, commodification, criminalization, inequality and oppression based on race and class (Davis 2000a). Thus, prison abolition insists not only on ridding ourselves of imprisonment but of imagining "a new world order" in the absence of the carceral archipelago. As Angela Y. Davis (2000) suggests, "The call for prison abolition urges us to imagine and strive for a very different social landscape." In a discussion group at the 2009 annual meetings of the American Sociological Association, Dylan Rodriguez connected prison abolition in particular to the creation and preservation of particular racial formation, especially in the U.S. context. Rodriguez conceptualizes abolition as a radical intellectual position, which is not about closure of prisons, as that is not enough, but perceives it instead as a revolutionary framework which transforms the way we analyze and understand forces that shape our histories and everyday lives. The prison is therefore conceptualized by Rodriguez not merely as a punitive institution, but as a mechanism of state violence and racial domination. Put simply, for Rodriguez, abolition is a way to expose global white supremacy and its institutions of control. Dismantling the walls of the prison, however, is not a goal that will eliminate the use of coercion and punishment as mechanism of state control, according to some abolitionists (Davis 11 2000; Sudbury 2004). Hence the shift of many prison abolitionist activists and writers, beginning in the 1990s, from promoting prison abolition to conceptualizing penal abolition more broadly (Morris 1995). Penal abolition is sometimes viewed as a more comprehensive practice and discourse, attempting to revolutionize the way we perceive crime and punishment (Magnani and Wray 2006). Saleh-Hanna (2000) defines penal abolition as: a social movement whose future goal is to eliminate the penal system; a theoretical framework which re-conceptualizes crime, offenders, community, justice etc.; and a political strategy promoting rights and equality to all, leading to safer communities that will no longer be based on punitive principles

Genealogy F/W

Genealogy f/w – external state focus is bad and useless until we examine our pre-conceptions

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

It seems that, unlike Foucault, activists develop an attachment to ideas of progress, because "a better world is possible." Indeed, Brown (2001) asserts that activists claim that without a progressive vision, what is the point of working for change? But genealogy does not prescribe political aims, or draft formulas for alternative futures. Its aim is to make clearer our current visions of the future, how and why they came into dominance, and the ways they operate in a manner reminiscent to those they came to replace. In one of his works, on pastoral power and governmentality, Foucault links policy (and its studies) with policing (and the state). The preoccupation with policy, Foucault posits, is not merely a deficit of reform politics, but a symptom of contemporary thought, which does not question the bureaucratic administration of everyday life by the state (biopolitics) (Brown 2001). Thus, a political commitment focused on policy changes or any specific prescription for change would further reinforce the administration of everyday life by the state. The mode of effective history, though, is political in nature. The present political options seem constrained by their histories, but these histories are open to ruptures, and tales of impossibility. The political also comes into play by choosing genealogical locales and the answers they generate. What is happening now, and what is this now in which we are living? And how are we defined, as subjects, in this time? What kind of subjects have we become and how? The type of questions asked, the kind of openings that are sought and most of all, what is done with them is the subject of political inclinations, desires, power and pure chance (Brown 2001). Genealogy is also political in its essence, in the ways it transforms those conducting and utilizing it. In its extreme, genealogy calls for a change from within. It is a political tool in the sense that it encourages us to question what we took for granted before, and begs us to be what 123 we have not been before. It is "an agitation within" (Kendall and Wickham 1999). Nietzsche's original aim in devising the genealogical method, later revised by Foucault, is to create a distance between ourselves and our knowledge, a space of questioning and defamiliarization from both epistemology (what we know) and ontology (what we are) (Brown 2001). In summary, genealogy, as Brown recounts, opens up the terrain for postprogressive and postunitary politics, as well as postidentity politics, but does not prescribe their replacement. But genealogy does open up new conversations and formulations of our present circumstances. By using genealogy as his methodology Foucault rejects temporal logic (as in notions of progress) in favor of spatial ones (power as circulating and disciplinary). Spatial assignment is perceived as a technique of power. Thus, Foucault's work moves us, as scholars and activists, from typologies of time to geography of power (Brown 2001). I hope my work can expand genealogy to of not just instruments of power but the topography of their resistance. For that end, the next chapter will start charting the genealogy of deinstitutionalization and prison abolition not just as historical events, but as forms of disqualified knowledges.

EXT: Link

Alternatives to imprisonment reproduce the same institutional oppressions as before when they come from top-down legislative efforts

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Some view the shift from institutional life to community living as a victory, a move away from anachronistic approaches that segregate people with disabilities, into humanistic discourses that advocate for equality, inclusion and

integration. Taking an analytical approach in the spirit of Foucault's genealogical inquiry (see Foucault 1963; 1977), however, blurs the lines between what has come to be termed as "community living" and "institutional living." Much of what we conceive of as advancement (releasing people who are mad from asylums into psychiatric hospitals to be cared for; or the placement of people with cognitive disabilities labels away from large institutions and into group homes) are in fact not signs of progress, if one takes a Foucauldian approach. I argue that the shift from custodial care and institutionalization to deinstitutionalization and community living should not be seen as the rise and fall of one epoch to be replaced by the other. This is because the effects of the former still linger on in the latter. In other words, I wonder whether institutionalization and community living should be conceived of as two separate epistemes, as Burrell and Trip (2011) seem to suggest in their genealogy of deinstitutionalization in New Zealand, or are they governed by similar logic that operates in seemingly different ways? 256 The concept of community based services was supposed to be more than a change in the location of the provision of services, in the eyes of those advocating for the abolition of the institutional mindset, as opposed to reforming or closing institutions. It was meant as an epistemic shift in regards to the hierarchical system of care and the lack of meaningful relationships offered to people with disabilities. In theory, community based services were supposed to help in bringing down the barriers that prevent full participation of people with disabilities from all aspects of life. In reality, as was demonstrated above, "community" often became a negation, that which is not the institution or mental hospital (Carey 2011). From an abolitionist perspective, it was a negative abolition, but the attempt to create something new out of the ashes of the old institutions, i.e. achieving meaningful relationships and living in the community, was not always successful. Community services were certainly smaller and more dispersed but the relations of power/knowledge at their core remained intact. Professionals created the programs and ran them, with little change or input from the service users. Under these conditions, it is not very surprising that many of these services fostered further segregation and marginalization of people with disabilities. Proponents of community based services envision a world of both natural supports and paid services but the system is ultimately directed by the needs and guidance of the service users themselves. Self Advocates Becoming Empowered (SABE) argue that any service provision that is not controlled by the service users themselves is institutional, whether it is given in an enclosed setting or not. Ultimately, they argue, decision making and resources should come from the disabled person, hence their advocacy for legislation such as Money Follows the Person as well as person directed services. This shift in perspective, from institutional to community based models, should not be made by disabled people or policy makers solely, but by all members of any given community 257 that will value and include other members, including those who have been historically marginalized and segregated (Carey 2011).

Absent a remove of the profit motive under capitalism – the aff can't solve

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Because of the rising cost of prison construction and maintenance, the corporate world and criminal justice systems are now turning to various alternatives to incarceration models. But this turn to alternatives to incarceration signifies the increased privatization of penalty, not the decline of imprisonment by any means. These corporations now lobby for alternatives to incarceration and use both the rhetoric of increased efficiency and that of restorative justice. Needless to say that no restoration can occur when private companies take over meanings of what is just and do it for profit (Selman 2009). Ruth Morris was a particularly vocal critic of some alternatives to incarceration, which she saw as a continuation of the current state of affairs. Morris (1989) distinguishes between "true community alternatives" and prisons in the community (like group homes as mini-institutions). Prison-like institutions tend to widen the net and regulate lives that would not be surveilled without such "alternatives"; create social isolation and segregation in the community; categorize people into staff vs. inmates; and promote control and violence as the basic tool for human interaction. In contrast, some characteristics of true alternatives to imprisonment include treating people in a humane fashion; creating meaningful integration into the totality of the community as much as possible; rejecting stigma and labels; and demonstrating non-violent ways of resolving problems. Finally, it is important to

note that activists view prison and penal abolition as part of a larger social justice agenda. Although this agenda is not the same for all activists, as some are faithbased, some have more anti-statist or anti-capitalist stances and so on, they all perceive the prison or penal systems as enmeshed in other injustice. In this sense, **until the roots causes of injustice, oppression and inequality are resolved, there is little point in changing only one aspect of the equation,** i.e. the reliance on imprisonment. Many activists therefore advocate change in the areas of housing, education, health care and more as forms of prevention to incarceration. In 259 addition, anti-prison and social justice activists, like the American Friends Service Committee, focus on alternative to violence programs as way of addressing not only imprisonment but the prevention of harm, the reduction of the school to prison pipeline and a way to address structural inequalities in the lives of those most marginalized and at risk of incarceration.

Legal solutions fail and are co-opted and circumvented – resources and budgets stay institutionalized / The aff fails – federal policies, lack of conversion plans, and lack of budgetary priorities doom solvency

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Even in places where near consensus is achieved regarding deinstitutionalization and institutional closure, there are various impediments to the successful implementation of the policy. The biggest barrier to implementation of community living and community mental health on a national level is federal policies that make it fiscally undesirable to move people out of institutions and nursing homes. There is inherent institutional bias in programs such as Medicaid, due to their funding stream, strong political lobby and staff organizations and unions that are often underutilized (Lerman 1985). This bias means that money (in the form of benefits or waivers) goes towards institutions, nursing homes or group homes but not to the person who benefits from these services directly. The introduction of Medicaid money (as waivers, benefits etc.) mostly applies to alternative institutions (nursing homes, hostels) and not alternative care. There is a lack of reimbursements that could cover services such as non-hospitalization long term treatment, day and vocational habilitation, advocacy and support for living in the community. 301 The consequence is that most people with disabilities do not have real choices in terms of whether and with whom they would like to live, if their main source of funding is federal benefits. Many disability advocacy organizations, most prominently ADAPT, therefore support any initiatives (such as Money Follows the Person, Medicaid Community Attendant Services Act (MiCasa) and the Community Choice Act) that enable people to utilize their benefits and waivers as they see fit, to hire their own aides and enable them to live an integrated life in community settings of their own choosing. In the mental health and developmental disabilities fields, deinstitutionalization was justified, by its advocates and the states, as saving money on a state and federal level. However, at least in the 1980s and in some states to this day, the spending on mental health has only increased post deinstitutionalization and the majority of the budget still goes to psychiatric centers and hospitals, because of outdated ideologies but also the policy bias described above (Johnson 1990). In the field of mental health, one of the immediate consequences of deinstitutionalization in the seventies was that more patients were treated in institutions than before the program began, and more money was going to institutional care than to community mental health. For example, Shadish (1984) describes an innovative approach to treat mental patients who were released from institutions, called the Lodge Society. This program, which had been in operation from the early 1960s, had been proven to be effective in establishing the well being of released patients as well as helping them with job placement and decreasing their dependence on professionals. But in a large effort to disseminate this model, less than 10% of the 255 hospitals contacted made any effort to adopt or learn more about this program. One of the reasons offered for this rejection is that the Lodge model goes against many of the ideals of the current mental health system. Under this program, it is believed that social factors are the major factor 302 contributing to people's behaviors and the way these behaviors are perceived. But the current system views mental patients as the ones responsible for their own predicament and therefore they are the ones who need to be changed or cured. In addition, although lodges are much cheaper than hospitalization, they are not reimbursable or profitable under the current health care system. The lodge system also discourages dependence on health care professionals, but often it is these professionals who hold the resources that the residents need. In contrast, Shadish (1984) reports on the growth of the nursing home industry at that time, as the major beneficiary of deinstitutionalization. They filled this role, which the lodges did not, because they were constructed around the same beliefs as the general health care system and retained the "mentally ill" in their former place as patients and dependent on care and services from medical professionals, not peer support. Another issue is the absence of conversion plans for existing institutions and move into a policy that actively encourages community living and care (Center on Human Policy 1979). Blatt et. al. (1977) pushed for the idea that for deinstitutionalization to be

successful, a full conversion model from an institutional to a community service model should be achieved. In order to accomplish full conversion one must recognize the depth of business interests in seemingly nonprofit services and agencies. Secondly, creating new meaningful use for the evacuated settings after their closure is paramount. In chapter 2, I discussed a few recent examples in Upstate New York in which a former developmental center and psychiatric hospitals that closed down as part of the deinstitutionalization movement were converted into prisons shortly afterwards. Some facilities created smaller units on the ground of the old institutions in which people with the same disability labels can live. Such examples illustrate the need to guarantee explicitly what will 303 happen with the physical remains of the closed institution and have the community involved in such decisions. One of the most prominent barriers to implementation of any policy is lack of budgets and budgetary priorities. In the case of state-run institutions and mental hospitals there are two compounding issues at play. The first is that states are often reluctant to close institutions since they were funded by municipal and state bonds (Blatt et. al. 1977). Secondly, even when they close down, the budgets of each institution do not seem to go directly into community services. This of course creates a budgetary issue as monies that used to be utilized for the care of people with disabilities either disappear from the budget all together or go to the upkeep of institutions even as the number of their residents is very small. In most states traditional institutional facilities receive the bulk of the mental health budget, even while the patient populations have shrunk significantly over the years (Lerman 1985). One of the reasons is that there is renewed interest in upgrading the old facilities, which have closed down or are underutilized. Many states had thus included in their mission statement of deinstitutionalization the desire to improve conditions of institutions for those who will need them. However, this priority not only raised the mental health budget overall, but it also cut the funds from community programs and less restrictive placements (Lerman 1985). Miller (1991, citing Rothman 1979) claims that in New York State and Pennsylvania, while thousands of patients were left with little housing or treatment options in the community, the budgets for the depopulated hospitals actually increased at the beginning stages of deinstitutionalization. He sums up the situation by remarking that although most mental patients left the institutions in past decades, the staff, resources and budgets remained institutionalized

More links in this

The use of legal advocacy, as a strategy of closure and abolition, is based on the belief that massive legal pressure will collapse the walls of the prison. This pressure would come from dual tracks- the prisoners filing lawsuits based on constitutional principles, and advocates, abolitionists and reformers putting pressure from outside the prison32. By the end of the 1970s it was becoming clear in the field of developmental disabilities that community living is desirable, but the institutionalized population was not decreasing in most states. The "inevitable" change 31 A similar phenomenon can be seen in Ferri and Connor's (2006) analysis of desegregation efforts in relation to race and disability in schools.

EXT: Impact

Turns case – institutional movement get silenced and circumvented

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo
"Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

What led to successful deinstitutionalization and what led to the "fall" of the radical prison movement of the 1970s? Deinstitutionalization and anti-psychiatry were not as threatening to the state as the radical prison movement was in the 1960s and 1970s. Since the prison movement was connected to black power and other anti-statist and revolutionary struggles the state repression against its activist was very pronounced and had lingering effects, to the point that many prominent activists in those struggles are incarcerated to this day. This is not to say that 275 some activism related to deinstitutionalization was perceived favorably by the state. For example, to this day self-advocates are denied visitation to their friends in nursing homes and institutions for the fear of "influencing them" with an anti-institutional mindset (O"Brien 1997, see also footnote 38). Secondly, deinstitutionalization was not motivated by ideology alone, as

can be observed throughout this research. It was the result of planned and unplanned policies, budgetary considerations, politics on a local level as well as pressure from disabled people, their families and professionals. In contrast, at least at that time, discussion of decarceration and prisoners‟ rights was mostly ideologically motivated and was not combined with other forces such as policy changes and a shift in professional view of incarceration. Without the ideological fervor of its supports, the prisoner movement had little chance of survival. Because of state repression and the backlash against it, the radical prisoner rights movement was silenced.

Aff fails – other moves must come first

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Closure of repressive institutions, such as mental hospitals and prisons, can be conceptualized as a necessary but not sufficient action on the road to abolition. The most important element in institutional closure, according to Taylor (1995/6), is to ensure that people do not end up re-incarcerated in other ways such as in group homes or other institutional placements. In this sense the effectiveness of deinstitutionalization as a movement is in ensuring community living, not the closure of the institution, which is only a first step in such a process. 207 This ideological stance may create a dilemma of whether proponents of deinstitutionalization should wait until there are sufficient community placements before advocating for institutional closure, or go ahead regardless based on the principle that no one should live in an institution at any time, which is the very dilemma posed by Mathiesen in regards to abolition in general . Taylor (1995/6) suggests that in such cases one should ask, which path would lead to the least harm done to the fewest people. Such questioning, he believes, would lead one to realize that institutional living is unjustifiable under any circumstances, even if community settings are imperfect at the present time. The mere closure of prisons and large state institutions for people labeled as mentally retarded or mentally ill does not necessarily entail a radical change in policy, attitudes or the lived experiences of those incarcerated. Penal abolitionist Ruth Morris reflects on her own experiences within the prison abolition movement in Canada and the United States: "…. My objection to prisons is to something much more oppressive than closed buildings, or even locks and keys. It's important to think this out, because otherwise we delude ourselves about building alternatives when actually we are creating their very spirit in the community, destroying people just as effectively as any building with locks can possibly do" (Morris 1989: 141). In this light, closure in itself is still embedded within the same circuits of power that created such institutions, unless there is an epistemic shift in the way community, punishment, dis/ability and segregation are conceptualized. Therefore closure of prisons and institutions is only one step in the way to achieve a shift in perspective. Other activists within the prison abolition movement also emphasize that activism entails much more the closing prisons. It is about creating a society free of systems of inequity, which produce hatred, violence, desperation and suffering. In such a society the idea of caging people for wrong doings will be seen as absurd (Lee 2008). 208 Closure of repressive institutions should be distinguished from abolition but perhaps it is also not the same as deinstitutionalization. In the ethnography Deinstitutionalizing Women, Johnson (1998) describes the lives of women in a locked ward within an institution for people with developmental and intellectual disabilities. When a decision to close the institution was made, most of the women studied asked to be placed with family or their advocates. For the most part their requests were ignored and out of 21 women, a third were moved to other institutions and the remaining were placed in group homes. As a result, Johnson (1998) contends that although the institution finally closed, its deinstitutionalization was a failure. This can be seen in the way the institution closed, with opposition from parents and the union who were given little information and advance notice of the closure. In essence, Johnson claims, it was not deinstitutionalization but institutional closure. The final placement of the

women only reinforces this analysis. Johnson further claims that the women were locked into a discourse that objectified them and saw them as needy and dependent, and until that discourse was changed any attempt for true deinstitutionalization was futile (Johnson 1998). When a system is abolished there is a danger that other systems that fulfills the same functions would arise to fill in the void left by the abolished system. More specifically, within the U.S. prison archipelago there is a clear overrepresentation of poor people of color. Therefore, some penal abolitionists (Davis 2000; Gilmore 2000) position slavery, the convict lease system and the prison industrial complex on a continuum, as sites of warehousing the racialized underclass. Under this analysis it is clear that just "tearing down the walls" is insufficient as the state will find another mechanism by which to construct and contain its unwanted populations (Appel 2002). Famed sociologist W.E. B Du Bois, in his book Black Reconstruction (1935), discusses abolition not as a mere negative process, one of tearing down. It is ultimately about 209 creating new institutions. Du Bois was very insistent that in order to abolish slavery in modern times, new democratic institutions have to be established and maintained. Because that did not occur, slavery found a new home in Jim Crow, convict lease systems, second class education and mass incarceration. Thus, the abolition of slavery was only successful in the negative aspect, but no new institutions were created to successfully incorporate black people into the existing social order. Prisons today have thrived precisely because of the lack of such resources that Du Bois was arguing for. Prisons today cannot be abolished until such equality ensuring mechanisms are in place (Davis 2005). Being free of chains is only the beginning.

EXT: Utopian Alt Good

Alt solves – utopian thought is an active political strategy

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

Sociologist and life-long anarchist activist Howard Ehrlich47 believes that radicals, as opposed to reformers or revolutionaries, are almost by definition not "of the society." Most are politically engaged and experiment with alternative ways of being and thinking, in terms of antiauthoritarianism, anti-racism, anti-capitalism etc. The radical life is living today the way you would like the future society to be. Similarly, Ernest Bloch exclaims that "the essential function of utopia is a critique of what is present. If we had not already gone beyond the barriers, we could not even perceive them as barriers" (in Muñoz 2009: 37). This is reminiscent of Thomas Mathiesen's work, which theorized abolition as "the unfinished," always a work in progress. Mathiesen's work has often been criticized for lacking any concrete suggestions for penology or even activism, thus remaining abstract and detached from specific activist and policy stances (Saleh-Hanna 2000). But reclaiming utopia as a liberatory, as opposed to derogatory, position would conceive this work as helpful in fashioning new ways of envisioning the world and opening up opportunities that are not closed off by readymade prescriptions. For Muñoz, "the here and now is a prison house" (2009: 1). The connection to prison abolition and the more radical factions of the anti-institutional stance are conjured up by this affirmation from Muñoz, and not simply because he brings up prison as the ultimate metaphor for stagnation and lack of imagination. Muñoz further discusses Ernst Bloch's distinction between concrete and abstract utopias, explaining that the latter are useful only as "they pose a critique function that fuels a critical potentially transformative political imagination" (2009: 3). Concrete utopias, on the other hand, represent collective hopes, and are the blocks upon which hope can exist. As Bloch writes "hope's methodology… dwells in the region of the not-yet" (quoted in Muñoz 2009: 3). The "not-yet," as Bloch refers to it, seems akin to Mathiesen's formulation of the "unfinished" in relation to the work of the abolitionist.

1NC Anarchy Alt

Endorse a co-operative insurrection towards individualist anarchism – legalistic and authoritarian movements inevitable fail

Jim **Baker 92** BAD Broadside #6, Contemporary Individualist Anarchism: The Broadsides of the Boston Anarchist Drinking Brigade 1988-2000, 1992, "ANARCHISM AND CIVILITY", Political Notes No. 184, http://www.libertarian.co.uk/lapubs/polin/polin184.htm, AB)

A generally accepted anarchist tenet is that the State can only be effectively dismantled by a voluntary, cooperative and spontaneous insurrection by the people. Authoritarian revolutions gotten up by manipulative vanguardists are rejected as inconsistent with the anarchist belief that the means must be consistent with the ends. History has plenty of examples to show that seizure of power through elitist revolt, rather than furthering the goals of the revolution, actually becomes a process for the strengthening of the State in a new and more vicious form. From an evanescent moment of exultant freedom one inevitably wakes up to the hangover of a Napoleon or a Lenin or a Mao. Nevertheless, contemporary anarchists are often still mesmerized by the call to arms, even when the chance of such a romantic gesture succeeding is nil. The only real revolutions occur when popular discontent causes the state to collapse under the weight of its own folly, not when some bloody vanguard, following whatever destructive fantasy its leaders concoct, meets the modern state head-on. This inevitably results in meaningless hardship for the people involved, with the greatest misery reserved for innocents who gets in the way of either side's fallacious ideology. Being a "rebel" and antagonizing the flatulent powers-that be in a modern state can be an exciting game, but it is only bluster and puerile self-gratification when genuine revolt is implausible. In the end the most radical "revolutionaries" either end up as bitter, dead-end martyrs or become the next generations' "born-again" capitalists. Having had their fling, they come to believe in their new "realism" as holistically as they embraced rebellion. None of this brings us any closer to a solution to the problem of the State. The fallacy of revolutionary adventurism is mirrored on a personal level by the intolerant and abusive discourse of identity politics. Everyone is pre-judged by their race, gender, sexual or religious affiliation, and socially compartmentalized in some politically correct egg basket. The goal of the anarchist movement is to establish a free, tolerant and cooperative society which will embrace diversity and celebrate difference. If the means are to be consistent with the ends, then how can such an abrasive and bigoted practice as identity politics possibly achieve that end? Identifying the "enemy" by birth or predilection, regardless of an individual's actual beliefs or actions, is simple bigotry. Awarding moral virtue on the same grounds is simple stupidity. Similarly, essaying to act as a unwarranted spokesperson for a diverse grouping of individuals who by chance share a single basic characteristic is the most arrogant sort of elitism. Real people, stripped of their individual identities, are thus subsumed in some hypothetical single-dimensional construct that effectively denies them any complexity of character. This isn't an answer to institutionalized racism and bigotry, but rather its mirror image. This sort of prejudicial activity has appeal for the simpleminded. It's easy to either attack or adulate a stranger on the grounds of appearance. A similar anxiety powered the old Sumptuary laws which punished anyone who dressed above their social class -- it was too unnerving for the elite to think they might make a mistake and treat an inferior as an equal, thanks to illicit appearances. Political prejudice makes it simple to get through the difficulty of rootless modern life where there are no clear-cut exterior indications of what a person might really be like. All white males (unless, perhaps, gay) are dangerous, power-driven and bigoted. All women (unless, perhaps, Republican) are intuitive, nurturing and empathetic with Nature. Members of minorities (take your pick) are morally superior to members of majorities. Classifications and labels which assist us in making such decisions are more real (and more important) than the people they describe. Et cetera. Bullshit. The goal of a tolerant and cooperative society of free individuals can only be achieved by those very means -- by being tolerant, cooperative and free. We must be better companions to our fellow mortals, whatever their outward characteristics. Civility, which facilitates cooperation, is imperative if anarchy is to really work. Pigheaded and selfimportant aggressiveness, hypercriticism and easy intolerance is a recipe for the status quo. We don't mean to suggest some sort of all accepting, "turn-the-other-cheek" bourgeois crap, either. Once you get beyond the labels, there are still unfortunately plenty of folks that it makes sense to despise. Arrogant, violent, intolerant, fanatical, bigoted, manipulative, rapacious... individuals with these characteristics must be guarded against, but they are not all found in one easily recognized group identity. These adjectives equally describe individual men, women, blacks, whites, handicapped people -- the whole gamut of the human race. Nor is anyone as morally pure as some of our new puritan idealists would insist that they be. A person is the sum of their character traits, not a distillation of the most pronounced ones. Radicals are just as prone to frailties of character as industrialists. It is by their actual effect on their community and environment that we should evaluate our fellow beings, not by some dominant virtue or fault which particularly excites us. It would be far preferable to tolerate an insensitive verbal bigot who in practice actually helped people than a pious hypocrite who mouthed politically correct platitudes and then went home and beat his lover. Anarchism involves conscientious and responsible judgement, and the effort to see through the shucks, facades and hype of our unregenerate society. One of the most virulent traps for the contemporary Left is the aping of the knee-jerk bigotry of the Right, which involves a meanspirited "us-and-them" prejudice through group identity. There are

plenty of actual villains out there, some easily identifiable, others hidden in hypocrisy. There are equally many good people obscured by the accidents of their birth, uprearing or situation. Let us therefore focus on the individual rather than the group, and recognize that the only way we will ever really achieve the goals of Anarchy is through living those difficult precepts in the here and now, and treat each other civilly. There can be no other effective preparation for Anarchy's ultimate realization in the future.

Anarchy Alt: Solves Prisons

Just getting rid of federal prisons isn't enough – governmental action makes privatization inevitable which doesn't go far enough and replicates the harms of the 1AC

Joe **Peacott 97**, leading figure at BAD Press, work on economics and sociology has been published by the Libertarian Alliance and referenced favorably by leading anarchist scholars, "PRIVATIZATION? IT DOESN'T GO FAR ENOUGH!" October 1997, BAD Broadside #17, http://www.libertarian.co.uk/lapubs/polin/polin184.htm, AB)

Privatized prisons best show the minimal difference between a government-run agency, and one that has been turned over to a for-profit corporation. In these new privately-owned jails, prisoners are still abused, beaten, and raped, guards still run the smallest details of prisoners, lives, and people continue to be locked up without their consent. Private prisons are the antithesis of private decision-making and private agreement, since the "customer, in this case the prisoner, is not allowed to have any autonomous life, makes few personal decisions, and cannot freely choose to stop doing business with the new company and leave. Additionally, for-profit prisons are totally dependent on the state to provide them with new 'customers' by arresting and convicting people who have violated the laws created by various levels of government. Without government action there would be no prisoners, and therefore no prisons, public or private. Anarchists value private decision-making and private voluntary agreements between individuals. We oppose government because it interferes with these activities of nonviolent, non-coercive people. Privatization sounds appealing to some anarchists, because it holds out the hope of decreasing such state involvement and interference in people's lives. But, while it does alter the way in which government interacts with individuals, it generally does not result in any increase in people's freedom to choose how to live. It doesn't give us more options, it often doesn't provide better service, and it doesn't stop government from reaching into our pockets to obtain the money to subsidize many of these new enterprises. And it certainly doesn't decrease our taxes, since governments always find new ways to spend our money, even if privatization has resulted in some savings. People should be free to produce and consume whatever they want, as long as they don't interfere with others, equal freedom to do so. If someone wants to transport people in their van in return for money, or a group of people wish to run a bus service, it should be no one's business but that of the parties to the exchange. If someone wants to take penicillin or Valium without getting a doctor's note, or wishes to consult a medical school graduate before making health care decisions, both options should be available. True freedom, true private life, means the freedom to live however we like, making our own arrangements with other people when and if it suits us (and them). Only the complete abolition of government will truly 'privatize' our lives. Government-sponsored privatization? It doesn't go far enough!

Anarchy Alt Solves

Individualist anarchy is pretty chill

Joe **Peacott 91**, leading figure at BAD Press, work on economics and sociology has been published by the Libertarian Alliance and referenced favorably by leading anarchist scholars,

"Individualism Reconsidered", http://www.bad-press.net/wp-content/uploads/2012/06/Individualism-Reconsidered.htm, AB)

Individualists feel that the way to maximize human freedom and happiness is by abolishing not just the state, but all other involuntary relationships and organizations as well. Although I reject mandatory participation in any organization or society, I am not opposed to cooperation between free individuals to better satisfy their desires and needs. I oppose the welfare state and support private property, but encourage interested people to voluntarily help others in need of assistance. And, while I oppose any restrictions on voluntary economic activities, I am opposed to the theft of the labor of others, which is called profit. I feel that people's desires can be fulfilled, and a just society achieved, without the oversight of either the state or the community. The individualist view of the person is quite different from that of the collectivist. The individualist views people as responsible agents who, even in present-day, unfree society, have to take at least partial responsibility for the situations in which they find themselves, and therefore are capable of changing their situation, at least in part. Through gradual and often small changes in the way people think and lead their lives today, and through a continual expansion in the number of people adopting a libertarian outlook, government can be abolished and the world changed to a free one. Collectivists, on the other hand, often seem to view people as perpetual victims of an evil social system, which strips them of the ability to make choices, and therefore frees them of all responsibility for their lives and problems. This view of people leads to an elitist attitude towards people and their problems. Collectivists often end up in the unanarchic position of regarding people as ignorant and immature, and therefore in need of protection from themselves and others by continued regulation and laws. Rarely, for instance, do collectivists endorse decriminalization and deregulation of drugs as a solution to the violence and illness associated with the use of illegal pleasure drugs. In their view, apparently, it is only after the revolution (made by the enlightened collectivists) has been achieved, and the economic leveling of libertarian socialism has allowed other people to develop their reasoning faculty to an adequate level, that they should be allowed to make unsupervised decisions. Because of their different outlook on people, individualists look at people's problems and their solutions in a vastly different way. The primary idea in individualist thought is that the individual person should be free to do whatever they wish with their body or property, provided it does not interfere with the equal freedom of other non-invasive or non- coercive persons. Additionally, individualists support the freedom of people to engage in whatever activities they wish with other consenting persons in all spheres of human interaction. People should be free to choose any kind of economic, sexual, medical, or any other sort of relationship with any person who consents to it.

Solves all hierarchies

Joe **Peacott 91**, leading figure at BAD Press, work on economics and sociology has been published by the Libertarian Alliance and referenced favorably by leading anarchist scholars, "Individualism Reconsidered", http://www.bad-press.net/wp-content/uploads/2012/06/Individualism-Reconsidered.htm, AB)

The most serious problem with the collectivist view of people and the world is what I call "groupism", the idea that categories of people are more important than, and fully represent the needs and aspirations of, individual members of these categories. The collectivist anarchist press, like most of the rest of the leftist press, is filled with references to "women's issues", "communities/people of color", "the working class", "the lesbian and gay community", "people with AIDS (PWAs)", etc. (See the political statement published in every issue of Love and Rage for a perfect example of this tendency among collectivists to ghettoize people into such groups.) The assumption is made that self-proclaimed representatives of these supposed communities or groups are somehow able to speak for all the individual members of these huge groups of people. I have frequently heard people start their presentations at conferences and other events with the formulation, "Speaking as a woman (or black person, or gay man, or lesbian, etc)...," and then go on to speak as if they are representative of all other persons who share the description in question. And a

writer in Mayday #6 stated that "people of color have their own struggle; it may not be ours." No recognition is given to the reality that these alleged communities and groups are made up of vastly different individuals with a broad range of interests and viewpoints. One cannot speak meaningfully about the interests or ideas of black people or women or homosexualists or workers, because the different individuals described by these labels are often very unlike most members of their "group", just as they are frequently very much like many persons who are of a different class, sex, color, or sexual proclivity. Much to the dismay of leftists, anarchist and otherwise, there are large numbers of anti-abortion women, antiunion workers, anti-sandinista nicaraguans, and anti-ANC black south africans. Collectivist anarchists who make assumptions about people based on their color or sex are just as racist and sexist as non-anarchists who also make assumptions about people based on these criteria; they simply make different, but equally invalid, assumptions. These people also judge people's activities differently based on what "community" a person is a part of. For instance, in Reality Now #8, animal liberationists, who otherwise condemn killing animals for fur, defended american indian people who are engaged in fur trapping. According to these people, the fact that indian people are "oppressed" makes it acceptable for them to engage in conduct that non-indian americans would be criticized for. Similarly, collectivist anarchists defended the hierarchical and authoritarian social structure of dine/navajo people at Big Mountain in Open Road #20, encouraging non- indian people to "'tak[e] direction' from the traditional Native American leadership". Defending authority based on the color of those who wield it is simply racist.

Aff AT: Genealogy F/W Card

Genealogy is unfalsifiable and totalizing in its critique – reject it

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). Sociology - Dissertations. Paper 70, http://surface.syr.edu/cgi/viewcontent.cgi?article=1070&context=soc_etd, AB)

As can be seen above, genealogy is a complex and multifaceted enterprise, which can be explained and employed in a variety of ways. After relating the connection it has with other methodologies, it might be useful to lay out some questions that are left unanswered from Foucault's own description of the genealogical method. It is unclear from Foucault's description of genealogy and his own research whether he believes genealogy sits outside of power and its effects. On a more general note, we can ask whether genealogy can be considered a method without truth claiming effects. In other words, does Foucault not fall into the same trap as Marx, whom he critiques extensively as a totalizing 121 theorist, in which he is the only one outside of false consciousness (or in Foucault's theorization, outside of discourse) that can really perceive what is going on and critique it? Other questions remain when analyzing Foucault's own use of various research practices. Are Foucault's theorizations really localized and dispersed, as he described in interviews when discussing genealogy and his own work? Notions such as biopolitics or disciplinary power seem to be quite unitary and all encompassing. Foucault's own historicization in his expanded works spans through whole centuries without much specificity. Thus, it remains an open question whether or not Foucault practices what he preached, so to speak (i.e. whether he really attended to the specific and localized events as intended in his description of genealogy). A related question is whether Foucault was even practicing genealogy in his later writings. He is most certainly conducting extensive archival research that excavates buried histories, especially in regards to discursive formations and how they came to be dominant. But if genealogy is the combination of erudite knowledges with subjugated ones, should not we see more accounts of people's own knowledge, the everyday knowledge (savoir)? Where are the subjugated knowledges in Discipline and Punish or The History of Sexuality for example?

Other Stuff

Ableism

The term 'colorblind' is ableist – use the term 'racial indifference'

Andrea (AJ) **Plaid 10**, associate editor of the award-winning race-and-pop-culture blog Racialicious. She is also an associate producer of the renowned web series Black Folk Don't. Her work on race, gender, sex, and sexuality can be found in multiple publications, SEPTEMBER 9, 2010, http://www.racialicious.com/2010/09/09/%E2%80%9Ccolorblindness%E2%80%9D-%E2%80%9Cilluminated-individualism%E2%80%9D-poor-whites-and-mad-men-the-tim-wise-interview-part-1/, AB)

His latest book, Colorblind: The Rise of Post-racial Politics and the Retreat from Racial Equity, is full of win because he succinctly takes apart the Obama Age meme of "post-racial" as well as its progenitor, the ableist term "colorblind(ness)," as the fallback retorts when race—and particularly racism—is discussed and/or called out.

PIC

PIC out of bad people

Liat **Ben-Moshe 11**, Assistant Professor, Disability Studies at University of Toledo "Genealogies of Resistance to Incarceration: Abolition Politics within Deinstitutionalization and Anti-Prison Activism in the U.S." (2011). A similar barrier is constructed by the category of "the dangerous few" in regards to imprisonment, as discussed in an earlier chapter. Sauve (1988), a prisoner himself, perceives prison abolition as two worldviews. One advocates for the total abolition of prisons and its system of penalty. The second holds that a few small prisons for violent criminals are a necessary evil but all other prisons should be closed and depopulated on a major scale. He sees the first strand as unrealistic and utopian, and so radical as to deter people from joining the movement. Total abolitionists, as he refers to them, seem to want to return to a mythical Garden of Eden where everyone loved their fellow men and women. In realistic terms, he believes that the "dangerous few" still need to be segregated from the rest of society. These views are reflective of many opponents to decarceration who advocate for abolition but only for certain populations.

CP text: The United States federal government should increase the evidentiary threshold under Section 3123 to a reasonable suspicion standard.

This solves privacy – provides clear limitations on surveillance

Richard M. **Thompson 14** – (Legislative Attorney at Congressional Research Service, "The Fourth Amendment Third-Party Doctrine", 6/5/14, Congressional Research Service, http://fas.org/sgp/crs/misc/R43586.pdf, AB)

Notwithstanding the concurring opinions in Jones, the bulk of Supreme Court and lower federal court precedent have left most non-content information unprotected by the Fourth Amendment. In some instances, Congress filled this void by creating varying levels of privacy protection for this type of non-content information. However, these protections are in the main not as robust as the warrant requirement, and in some instances, searches may be justified by little more than "official curiosity."171 Seven years after the Court handed down Smith and ruled that government access to telephone toll records was not covered by the Fourth Amendment, Congress enacted as part of the Electronic Communications Privacy Act of 1986 (ECPA) several provisions requiring the government to seek a court order before using a pen register or trap and trace device.172 Again, these devices allow the government to gather dialed telephone numbers and email addressing information, among other non-content information.173 Under 18 U.S.C. § 3123, a court "shall issue an ex parte order authorizing the installation and use of a pen register or trap and trace device ... if the court finds that the attorney for the Government has certified that the information likely to be obtained by such installation and use is relevant to an ongoing criminal investigation."174 A few things should be noted about this provision. First, the "shall" language removes discretion from the judge; if the judge finds the government has made the required certification, he must issue the order.175 Second, while the court must ensure that the government has made the proper certification, ECPA does not require an "independent judicial inquiry into the veracity of the attested facts."176 This means that the judge will not make an independent assessment whether the relevancy standard has been met, but only that the government has made the proper certification. One district court has noted that "the extremely limited judicial review required by [the pen register statute] is intended merely to safeguard against purely random use of this device."177 One magistrate judge went so far as to describe his role under the pen register statute as a "rubber stamp" limited to "proofreading errors," and that "without independent judicial review, the authorization of pen registers is subject to misuse and abuse."178 Third, the relevancy standard, which again the government, and not the court, determines if it has been met, is a "far from burdensome" legal standard.179 The Supreme Court has held, at least in the subpoena context, that information sought is not relevant only if "there is no reasonable possibility that the category of materials the Government seeks will produce information relevant to the general subject" of the investigation.180 In light of this relatively lax standard, several prominent commentators on privacy and technology have suggested that Congress should increase the evidentiary threshold under Section 3123 from mere relevance to at least a reasonable suspicion standard similar to that used for accessing certain stored communications.1 Also included in ECPA is the Stored Communications Act (SCA), in which Congress provided varying degrees of protection to information historically subject to the third-party doctrine and, thus, outside the reach of the Fourth Amendment. Under 18 U.S.C. § 2703(c), service providers must hand over "records or other information pertaining to a subscriber" so long as the government can establish "specific and articulable facts" that the records are "relevant and material" to an ongoing criminal investigation.182 This is akin to the Terry reasonable suspicion standard—it is lower than probable cause but does require the government to articulate its basis to believe that the information is connected to criminal activity.183 This standard has been applied to data such as the to/from address line in an email or the IP addresses of websites a person has visited. Some courts have construed Section 2703(d) in conjunction with the pen register statute to allow the government access to cell site location information.184 Section 2703(c)(2) requires the providers to hand over other customer information such as their name, address,

telephone calling records, length of service, telephone number, and means and source of payments, including credit card or bank account numbers with either an administrative, grand jury, or trial subpoena.185 Additionally, Congress has passed more targeted privacy protection laws. For instance, the privacy of cable subscribers is safeguarded under the Cable Communications Privacy Act of 1984,186 and the privacy of video store customers under the Video Privacy Protection Act.187 More recently, various Members of Congress have sought to temper the reach of the third-party doctrine with respect to transactional data. Several days after the Edward Snowden leaks became public, Senator Paul filed the "Fourth Amendment Restoration Act of 2013" (S. 1121) in an effort to "stop the National Security Agency from spying on citizens of the United States[.]"188 This bill would require that "[t]he Fourth Amendment to the Constitution shall not be construed to allow any agency of the United States Government to search the phone records of Americans without a warrant based upon probable cause."189 While dictating to the judiciary what the Fourth Amendment should and should not protect may be beyond Congress's constitutional power,190 **Congress clearly can play a role in setting substantive and procedural limitations on government surveillance authorities.** For instance, Senator Paul has introduced a similar bill, the "Fourth Amendment Preservation and Protection Act of 2013" (S. 1037), which would prohibit federal, state, and local government officials from accessing information relating to an individual held by a third party in a "system of records."191 Other congressional measures would alter the third-party doctrine in a more targeted way. Several location monitoring bills would, for instance, prohibit companies from sharing their customers' location information unless the government obtained a warrant or one of several limited exceptions applied.192 So what does the future have in store for the third-party doctrine and the government's collection of non-content, transactional data? At this point, there appears to be only one solid vote on the Court in Justice Sotomayor for eliminating or significantly reducing the scope of this doctrine. Although there are hints in Justice Alito's Jones opinion that he and the three members of his concurrence are ready to reconsider this rule when it comes to pervasive government surveillance, his rationale was left somewhat underdeveloped. It will take future opinions to get a better sense of whether or how far these Justices are willing to go to limit government access to non-content information held in the hands of third parties. In the meantime, the lower federal courts might continue to limit or distinguish the third-party doctrine in specific and narrow instances. For instance, in the NSA telephone metadata case, Judge Leon limited Smith to its facts and held that it did not apply to this more comprehensive data collection program.193 Likewise**, if and when the Supreme Court is asked to reconsider the scope of the third-party doctrine, it is more likely to carve out specific exceptions than to overturn it in its entirety**. This approach would permit the courts to engage in a more nuanced, normative approach to analyzing the privacy interests implicated by accessing records derived from transactions between people and other various entities. Another possibility is for Congress to act. Justice Alito observed in Jones that "[i]in circumstances involving dramatic technological change, the best solution to privacy concerns may be legislative" as "a legislative body is well situated to gauge changing public attitudes, to draw detailed lines, and to balance privacy and public safety in a comprehensive way."194 This argument that Congress is best suited to address the nuanced policy questions that privacy and security entails has been expressed by commentators as well.195 Like the courts, it appears unlikely that Congress would be willing to completely eliminate the third-party doctrine. On the other hand, Congress may be more inclined to engage in a subject-by-subject approach, in which Congress limits the third-party doctrine in certain areas. Congress provided statutory protection for telephone toll records in the pen register/trap and trace statute; for Internet metadata in the Stored Communications Act; and for video customer records in the Video Privacy Protection Act. It could enact similar protection for other subject areas where non-content information is shared with companies as a necessary part of doing business.

Congress can modify the 4th amendment- this solves

Rosen and Wittes 11, Jeffrey and Benjamin, professor of law at The George Washington University and senior fellow in Governance Studies at The Brookings Institution, "Constitution 3.

0 : Freedom and Technological Change," Brookings Institution Press, 2011. ProQuest ebrary. Web. 30 June 2015.

The final question is what branch of government will create the use restrictions I have in mind. Can courts do this in the name of the Fourth Amendment, or is it up to Congress? In my view, Congress is the most likely regulator. The Fourth Amendment prohibits unreasonable searches and seizures. Use limitations are neither searches nor seizures, however. They are restrictions on what the government can do with information after it has searched for and seized it. There is little in the way of constitutional text, history, or precedent that supports recognizing use restrictions as part of Fourth Amendment protections. Granted, it is possible to creatively reimagine Fourth Amendment law in ways that recognize use restrictions. As far back as 1995, Harold Krent made such an argument. 1 Krent reasoned that obtaining information is a seizure and that the subsequent use of the information— including downstream disclosures of it— could make the seizure "unreasonable." In other words, instead of saying that searches and seizures occur at a specific time, they could be deemed to occur over a period of time. All uses of information would be required to be reasonable, and courts could distinguish between acceptable and unacceptable uses of information according to their reasonableness. The argument is creative, but I think it is too far a stretch from existing doctrine to expect courts to adopt it. In my view, there are two basic problems. First, most of the information collected by the government is not protected under current Fourth Amendment law. Collecting third-party records is neither a search nor a seizure (which is why they are frequently collected; information that is protected by the Fourth Amendment is collected only rarely). Under Krent's proposal, however, presumably we would need to overhaul that doctrine to make all evidence collection a seizure to enable courts to then pass on the reasonableness of the seizure. If we took that step, however, we would need an entirely new doctrine on what seizures are reasonable, quite apart from downstream uses. This would require a fairly dramatic overhaul of existing Fourth Amendment law, all to enable use restrictions. Second, disclosures of information come in so many shapes and sizes that courts would have little basis on which to distinguish reasonable from unreasonable uses. Every database is different, every data point is different, and every disclosure is different. The kind of fine-grained reasonableness inquiry called for by Fourth Amendment law would leave judges with few clear guideposts or historical precedents on which to distinguish uses that violate the Fourth Amendment from those that do not. For both of these reasons, recognizing use restrictions in Fourth Amendment law may create more problems than it solves. At the very least, we should not expect courts to take such a leap any time soon. In contrast, legislatures are well equipped to enact use restrictions. They can promulgate bright-line rules concerning information collected under specific government powers, and they can explain the scope of the limitation and the contexts in which it is triggered. Furthermore, they can legislate use restrictions at the same time as they enact the statutes authorizing the evidence collection. That way, use restrictions can be a part of the original statutory design, rather than something imposed years later by the

State Drafting CP

1NC Shell: State Drafting CP

CP Text: The fifty states and all relevant territories should draft an amendment expressly guaranteeing a right to informational privacy, then advocate and hold a voluntary convention to engage in a non-binding amendment proposal for this amendment

It solves and competes – it's distinct from regular procedure which shields the link to PTX since Congress isn't involved

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

There is a way to address the defects of the national convention approach. The nation could adopt an amendment process that avoids the problems of a runaway convention and most of the other uncertainties while also depriving Congress of the ability to block amendments. Under this reformed amendment process, the state legislatures would draft the amendment themselves rather than have a convention draft it. Once two-thirds of the state legislatures had approved the same specific language for an amendment, that amendment would thereby be formally proposed. This would trigger the ratification stage, which would require, as it does now, three-quarters of the states to ratify a constitutional amendment. This simple version of the reform could be improved in three ways. First, to facilitate deliberation and coordination, the amendment process would specifically authorize an advisory convention among the states so that they could discuss, in a nonbinding way, possible amendments to propose. Second, to prevent the small states from having excessive power relative to their populations, the voting rule for ratification should be changed so that each state's ratification does not count equally, but instead is measured based on its electoral votes. Third, to ensure that the ratification decision is made by a different entity than the state legislatures that propose the amendment, ratification would be decided by either state conventions or the people of the states through ballot measures.

2NC Solvency: States

Solves from the states alone

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

In proposing this reform, I will rely on the normative approach that I outlined earlier. In particular, I will assume that the best way to pass constitutional provisions is through a strict supermajority process that uses one entity to propose the amendment and another to ratify it. Yet, I will make one significant adjustment to this normative approach—limiting my proposals to those that are likely to be attractive to state legislatures. As I discuss in the next section, Congress is not likely to amend the Constitution to eliminate its veto, but the state legislatures might call a convention to increase their power. For state legislatures to do this, however, the amendment procedure has to be attractive to them.116 My goal in this Article is not merely to explore the normative defects of the broken convention process. It is also to show that a reform is available that would solve the problem and that could conceivably be enacted under the existing system. Thus, focusing on reforms that might be adopted is not an arbitrary limitation, but one that is essential to my purposes.

It solves and ensures passage

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

The overall effect of the political controls would be significant. In my view, they would operate to strongly discourage the passage of nonconforming amendments and to provide a reasonably strong chance that a state drafting amendment would, if it were actually popular, be enacted. While there is no single aspect of the process that guarantees these results, the combination of effects is likely to be powerful. First, the state agreement largely eliminates the coordination problems and therefore assures that if two-thirds of the states apply, a convention will be called. Second, the joint strategy of the states to write a specific amendment, to announce that a runaway convention would be illegal and improper, to select sympathetic convention delegates, and to attempt to block any nonconforming amendment at the ratification stage should have a significant effect in both blocking a runaway convention and in promoting passage of the state drafting amendment.

2NC Solvency: Coordination

The CP solves coordination problems

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

The state legislatures could address these difficulties by combining elements of the state drafting procedure with the existing national convention approach. First, the states should hold a voluntary convention in order to agree on a single specific amendment and a strategy for adopting it. By proposing a single specific amendment, the states would significantly reduce the coordination problems among the states and between the states and Congress. With two-thirds of the state legislatures calling for the exact same amendment, Congress would have no discretion to argue that the applications were not for the same subject.

AT: CP = Watered Down

No deficits, reforms are just as successful and any issues are insignificant

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

Obviously, this focus places limits on the normative attractiveness of the reforms that are available. If the state legislatures would be unwilling to enact good reforms, then no good reform could occur. Fortunately, I do not believe this is a significant problem. Given my assumption that a strict supermajoritarian process that uses two entities is desirable, the reform I propose here is close to what one might regard as the ideal. While the need for state legislative enthusiasm does require adopting a less than ideal approach, the defects are not so large as to make the proposal unattractive. The best is sometimes the enemy of the good. It makes sense, however, to address these possibly superior alternatives, which state legislatures are unlikely to adopt, after discussing the reform proposal.

AT: Runaways bad / Links to PTX

Solves and ensures no runaway failure or Congressional backlash

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

To address this problem, it would be useful for the states to hold a convention, but to do so in a way that avoids the pitfalls of the existing convention method. The Constitution ought to authorize conventions that are both voluntary and advisory. A group of states could choose to hold a convention whenever they deemed it advisable, but no state would be required to attend. The convention would not have any binding powers. Instead, it would allow the states to debate the merits of different proposals. It would also allow them to assess the popularity of different proposals and to compromise on a single amendment to be considered by each state legislature. A successful convention would endorse a single proposal that each state legislature could then approve. This type of convention would avoid the problems that afflict national conventions under the existing convention approach. First, it could not result in a runaway convention. The convention itself would have no power and its endorsement therefore could not allow a proposal to avoid state scrutiny. There also could be no runaway convention because proposals would result only from the actions of the state legislatures. Second, calling a convention would not require the states to agree on a single subject. A convention would not require specification of a subject and the delegates could discuss whatever they deemed important. But because the convention would have no power, it would have an incentive to discuss subjects that the state legislatures were interested in. Third, there would be no need for the convention to agree on specific voting rules or voting rights. While the convention might want to do so, nothing significant would turn on it since it would be an advisory body. The convention could report its votes in a variety ways, tabulating them based on state population, state equality, or some combination. With this information, the state legislatures would then be in a position to determine which proposals had significant support and to decide whether to formally endorse those proposals. Finally, there would be no problem of congressional sabotage of the convention because Congress would have no authority over it.

AT: Links to PTX

Congress doesn't even need to authorize them if the states agree to it

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

If at least two-thirds of the states agreed to the application, this would eliminate most of the discretion that Congress ordinarily exercises when there are calls for a limited convention. First, with two-thirds of the states calling for the same convention, Congress would not have to decide whether state applications that differed from one another should be interpreted as calling for a single limited convention. Second, this proposal would also address the situation where Congress holds that there are no limited conventions.132 The contingency portion of this application would address that possibility and require Congress, in those circumstances, to call an unlimited convention. Thus, this proposed application would largely eliminate the two main ways that Congress might hold that applications for a limited convention did not actually require such a convention to be called.

States CP

Solvency

State constitutions sufficient to protect from infringing surveillance - Florida's 100 new laws prove

Jenna **Buzzacco-Foerster 6/30**, "More than 100 new state laws take effect Wednesday," 6/30/15, http://www.tcpalm.com/news/politics/legislative-session-2015/more-than-100-new-state-laws-take-effect-wednesday_04854714, AZ

A law aimed at protecting Floridians from unwanted surveillance is one of more than 100 that take effect Wednesday. The law — dubbed the Freedom from Unwarranted Surveillance Act — spells out that unmanned aerial drones can't be used for surveillance. It also says when devices can be used.

"From my standpoint, I think it's a good start," said Stephen Myers, owner of Angel Eyes UAV in Naples. "It's a good beginning." Drones can be used to assess property taxes, for aerial mapping, and to conduct environmental monitoring. The law also says that drones can be used by a person licensed by the state to perform "reasonable tasks within the scope" of the person's job. Myers said that could mean insurance companies can use drones for roof inspections or to inspect large properties, like golf courses, for damage following a storm.

Rep. Ray Rodrigues, R-Estero, said he supported the law because it protected Floridians' privacy, while still allowing some commercial uses.

"We've seen the technology for drones evolve rather rapidly and the technology has exceeded the statutory privacy protections," said Rodrigues, who co-sponsored the measure in the House. "I saw a strong effort to ensure our right to privacy. It addressed the concerns I had."

The drone law is one of dozens — including the state's $78 billion spending plan and a nearly $400 million tax cut package — that went into effect Wednesday, the first day of the state's fiscal year.

States solve

Jeffrey A. **Parness 11**, B.A., Colby College, J.D., University of Chicago, taught for six years at the University of Akron School of Law, Northern Illinois University, 2011, "American State Constitutional Equalities", GONZAGA LAW REVIEW Vol. 45:3, https://www.law.gonzaga.edu/law-review/files/2011/02/Parness.pdf , AB)

American state constitutions can play a key role today in protecting individuals.9 State constitutional laws can afford protections beyond those dictated by federal lawmakers. While the federal Constitution chiefly implies individual rights through recognizing federal and state governments with express and limited powers, state constitutions often "contain positive or affirmative rights."10 At worst, expansive state constitutional rights are hortatory, simply duplicating important federal values or iterating unenforceable local values. At best, they

extend new rights locally, deeming unlawful any oppressions that are irrational or uncompelling.11 Because of their narrower setting, in constitutional matters states are more able "to experiment, to improvise, [and] to test new theories."12 Thus, if "a state experiment succeeds, others may follow," and if an experiment fails, the failure will be isolated.13 As well, because they are more prone to amendment than the federal Constitution,14 state constitutions can more quickly respond to failed experiments, social changes, and new values.15 Of course, for many, too many amendments may diminish the enhanced or special status of constitutional law.16 State constitutional rights can be read to be independent of, and thus to reach beyond, federal constitutional rights17 even when the federal and state constitutions are both applicable and employ the same or similar language.18 For example, a reasonable search or seizure for federal constitutional purposes may be an unreasonable search or seizure under a state constitution.19 A state constitutional right can also follow the federal constitutional language on federal rights, even though that federal right is inapplicable to the states.20 State constitutions can also expressly recognize rights and limits on governmental conduct that are unaddressed in the federal Constitution.21 Thus, they can expand rights by condemning private as well as public acts resulting in inequalities.22 They can **explicitly speak to privacy and other enumerated rights,**23 thus avoiding the difficulties in recognizing similar protections through vague terms like liberty and through unenumerated rights analyses. 24 Further, state constitutions can explicitly limit state governmental acts directed at certain citizens who are far less protected or relatively unprotected under the federal Constitution.25 Finally, comparable constitutional rights and limits may themselves be read differently from state to state. Thus, there can be varying interstate levels of judicial protection for certain comparable rights with heightened judicial review required at times.26 Greater equalities should be especially promoted by state constitutions where significant and unfair inequalities continue without other federal or state law remedies.27 One example is discrimination based upon sexual orientation. A quick review of contemporary American state constitutions reveals there is already a wide range of local constitutional initiatives furthering equality

States approve, innovation + support

Jeffrey A. **Parness 11**, B.A., Colby College, J.D., University of Chicago, taught for six years at the University of Akron School of Law, Northern Illinois University, 2011, "American State Constitutional Equalities", GONZAGA LAW REVIEW Vol. 45:3, https://www.law.gonzaga.edu/law-review/files/2011/02/Parness.pdf , AB)

Equalities in employment, housing, schooling, and other settings have broad public support. Greater express state constitutional recognitions of self-executing rights of all persons to be free from employment, housing, schooling, and other discrimination on the basis of race, sex and other inappropriate classifications, subject to limited legislative oversight, would extend equalities beyond federal law mandates. They would reflect the establishment of fundamental local values and allow for experimentation. They could also prompt varying balances between judicial and legislative authority over equality, both between states and within states depending upon the equality context.

The states solve – the federal government has ceded privacy protection to the states

Jeffrey M. **Shaman 6**, Vincent de Paul Professor of Law, DePaul University College of Law, "THE RIGHT OF PRIVACY IN STATE CONSTITUTIONAL LAW," 2006, http://org.law.rutgers.edu/publications/lawjournal/issues/37_4/Shaman.pdf

The right of privacy has developed primarily through decisions of the United States Supreme Court interpreting the Federal Constitution.9 Over the years, the Supreme Court has used the Fourteenth Amendment

to the United States Constitution10 to formulate an evolving right of privacy that encompasses certain family rights, reproductive rights, and, most recently, a right of intimate association.11 Yet the Court has placed definitive limits on family and reproductive rights, and also has refused to extend the right of privacy to other areas.12 There is scant agreement among the Justices of the Supreme Court concerning the right of privacy, and at times, the high Court's **commitment to privacy has wavered** considerably. As a result of the Court's continuing equivocation in this area, the scope of the right of privacy under the Federal Constitution is considerably uncertain. Given this uncertainty, it was hardly surprising when a number of states stepped into the breach to revitalize the right of privacy. State constitutions, after all, are an important source of protection for individual rights and liberties, including the right of privacy. Indeed, state constitutions contain various provisions that can be used to protect the right of privacy. Many state constitutions contain due process or law of the land clauses safeguarding liberty that have been interpreted to ensure the right of privacy.13 Similarly, state constitutional provisions that deny the existence of arbitrary power over individual liberty have been construed to protect the right of privacy.14 State constitutional provisions guaranteeing equality also are used as a means of protection for the right of privacy. In some states, a right of privacy has been found implicit in constitutional provisions declaring, "All persons are by nature free and independent, and have certain natural and unalienable rights"15 or stating, "The enumeration in this Constitution of certain rights shall not be construed to deny, impair, or disparage others retained by the people."16 In modern times, five states—Alaska, California, Florida, Hawaii, and Montana—have amended their constitutions to expressly protect the right of privacy.17 These express provisions provide **fertile ground for the recognition** of expansive privacy rights. But even where only a more general constitutional provision, such as a due process clause, is available as a source of protection for privacy, some states have been willing to countenance expansive privacy rights. In recent years, as claims have been made to expand the right of autonomy to new dimensions, the states have differed in their willingness to do so. Some state courts have moved forward to expand the right of a woman to choose to have an abortion, while others have declined to take that course. A number of state courts have recognized the right of intimate association and struck down sodomy laws well before the Supreme Court was willing to do so, while other state courts chose to stand fast with the then prevailing federal approach rebuffing the right of intimate association. Of late, a number of state courts have faced the issue of same-sex marriage or civil union, and have reached various conclusions concerning it. The Supreme Court of Massachusetts became a pioneer by being the first judicial body in the nation to rule that the right of privacy secured by the state constitution encompassed a right to same-sex marriage.18 Some twenty-eight years before that, the Supreme Court of Alaska pioneered a different sort of privacy by ruling that the state constitutional guarantee of privacy afforded a right to possess marijuana for personal use in the privacy of one's home,19 although the court later was unwilling to extend that right to the possession of cocaine.20 The Alaska ruling was reminiscent of a few earlier cases upholding, on grounds of privacy, a right to smoke cigarettes or to ingest alcoholic beverages.21 Those decisions, though, fell into desuetude for many years, until they were revived as the foundation for regenerating the right of privacy.

States solve best – they're already pioneers in privacy law

Somini **Sengupta 13**, foreign correspondent for The Times, "States rush to fill gap in U.S. privacy laws; Lawmakers see increase in support after accounts of federal surveillance," lexis, 11/01/13

State legislatures around the United States, facing growing public concern about the collection and trading of personal data, have rushed to propose a series of privacy laws, including limiting how schools can collect student data and deciding whether the police need a warrant to track cellphone locations. Over **two dozen privacy laws have passed this year** in more than 10 states, in places as different as Oklahoma and California. Many lawmakers say that news reports of widespread surveillance by the National Security Agency have led to more support for the bills among constituents. And in some cases, the state lawmakers say, they have felt compelled to act because of the stalemate in Washington on legislation to strengthen privacy laws. "Congress is obviously not interested in updating those things or protecting privacy," said Jonathan Stickland, a Republican state representative in Texas. **"If they're not going to do it, states have to do it."** This year, Texas passed a bill introduced by Mr. Stickland that requires warrants for email searches, while Oklahoma enacted a law meant to protect the privacy of student data. At least three states proposed measures to regulate who inherits digital data, including Facebook passwords, when a user dies.

Some of the bills extend to surveillance beyond the web. Eight states, for example, have passed laws this year limiting the use of drones, according to the American Civil Liberties Union, which has advocated such privacy laws. In Florida, a lawmaker has drafted a bill that would prohibit schools from collecting biometric data to verify who gets free lunches and who gets off at which bus stop. Vermont has limited the use of data collected by license plate readers, which are used mostly by the police to record images of license plates. California, long a pioneer on digital privacy laws, has passed three online privacy bills this year. One gives children the right to erase social media posts, another makes it a misdemeanor to publish identifiable nude pictures online without the subject's permission, and a third requires companies to tell consumers whether they abide by "do not track" signals on web browsers. More than a year ago, the White House proposed a consumer privacy bill of rights, but Congress has not yet taken on the legislation. And a proposed updating of the 27-year-old Electronic Communications Privacy Act has stalled. Many states have already responded to those opinions. In the past couple of years, about 10 states have passed laws restricting employers from demanding access to their employees' social media accounts. California set the stage on digital privacy 10 years ago with a law that required organizations, whether public or private, to inform consumers if their personal data had been breached or stolen. Several states followed, and today, nearly every state has a data breach notification law. This year, California amended that landmark law, adding an Internet user's login name and password to the menu of personal information that is covered. The California attorney general's office also has a full-time unit to enforce digital privacy laws.

Privacy Bill CP

1NC Shell

Privacy bill solves – creates a better framework of privacy policy

White House 12 – The White House ["Consumer Data Privacy in a Networked World: A Framework for Protecting Privacy and Promoting Innovation in the Global Digital Economy", February 2012, https://www.whitehouse.gov/sites/default/files/privacy-final.pdf] hk

The United States is committed to protecting privacy. It is an element of individual dignity and an aspect of participation in democratic society. To an increasing extent, privacy protections have become critical to the information-based economy. Stronger consumer data privacy protections will buttress the trust that is necessary to promote the full economic, social, and political uses of networked technologies. The increasing quantities of personal data that these technologies subject to collection, use, and disclosure have fueled innovation and significant social benefits. We can preserve these benefits **while** also ensuring that our consumer data privacy policy better reflects the value that Americans place on privacy and bolsters trust in the Internet and other networked technologies. The framework set forth in the preceding pages provides a way to achieve these goals. **The Consumer Privacy Bill of Rights should be the legal baseline that governs consumer data privacy in the United States**. The Administration will work with Congress to bring this about, but it will also work with private sector stakeholders to adopt the Consumer Privacy Bill of Rights in the absence of legislation. To encourage adoption, the Department of Commerce will convene multistakeholder processes to encourage the development of enforceable, context-specific codes of conduct. The United States Government will engage with our international partners to increase the interoperability of our respective consumer data privacy frameworks. Federal agencies will continue to develop innovative privacy-protecting programs and guidance as well as enforce the broad array of existing Federal laws that protect consumer privacy. A cornerstone of this framework is its call for the ongoing participation of private-sector stakeholders. The views that companies, civil society, academics, and advocates provided to the Administration through written comments, public symposia, and informal discussions have been invaluable in shaping this framework. Implementing it, and making progress toward consumer data privacy protections that support a more trustworthy networked world, will require all of us to continue to work together.

2NC: Solvency

Individual control over data solves the aff

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson,

Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

The principle of Individual Control in the Consumer Privacy Bill of Rights shifts the focus away from the longstanding principle of notice-and-choice to more dynamic and flexible mechanisms. Notice-and-choice is one important mechanism of privacy protection, but the Commerce Department Green Paper process found that routine checking of boxes puts too much weight on the unmanageable burden of reading privacy policies and does not differentiate among situations that present material privacy risk and those that do not. Whether data is used in a commercial context, or for basic medical or scientific research, may also be relevant to what kind of individual control is warranted. The Consumer Privacy Bill of Rights therefore calls for contextual mechanisms to exercise choice at the time of collection "appropriate for the scale, scope, and sensitivity of the data in question," and also for additional mechanisms to address the use of personal data after collection. This principle reflects the Big Data environment in two ways. First, it recognizes that the increasing velocity and variety of data collection make notice-and-choice ineffective. consumers are asked for consent too frequently and on devices such as mobile phones that are not suited to deliberate informed consent. Second, it recognizes that the velocity of data includes increased sharing with third parties with whom consumers do not have a direct relationship. Moving away from a one-size-fits-all notice and choice regime in which consumers often face a binary choice (either to give up data control or not to use a service) will strengthen fair exchange of value between consumers and companies by allowing consumers greater choices of how much to share in exchange for a given level of features and benefits. There are certainly contexts in which individual control will play a minor role as compared to other principles such as Respect for Context and Focused Collection. The expanded use of sensors and other developing forms of automated data collection will make notice-and-choice and other mechanisms of control impossible or infeasible in an increasing number of circumstances. The principles of Consumer Privacy Bill of Rights are intended to apply in interactive and dynamic ways appropriate to the technologies they address; the expansion of Big Data will put a premium on such application.

Privacy principles reduce the risk of leaks

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

1. Re-identification risk: The risk that personal data can leak **from big data research platforms** is real. Principles including Transparency, Security, Focused Collection, and Accountability will all be important to manage this risk. Transparency will enable regulators, enforcement authorities, and interested members of the public such as advocates and academics to know what kind of data is being released and in what form. Assessing whether the users' rights to have data held securely should include an assessment of who is able to access the data and therefore whether the re-identification risk can be minimized by binding those individuals to legal commitments to avoid re-identification. The right to have only focused collection of user data will also reduce re-identification risk by limiting gratuitous collection of data. And finally, an organization with strong institutional accountability procedures in place should handle data carefully and only release it publicly after evaluating the risk of re-identification. If the organization fails to consider this risk, then appropriate parties can be held accountable for resulting harm.

Resolves false info and models – their ev assumes the squo

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

2. Data and model inaccuracy: The Consumer Privacy Bill of Rights can reduce the risk that decisions are made about an individual based on inaccurate information or an incorrect model. The principles of Transparency, Respect for Context, and Access and Accuracy are all useful to ensure fairness in

big data decisionmaking. Since the Fair Credit Reporting Act (FCRA) was enacted, individuals have had basic transparency rights enabling them to know that personal information about them is being used for important decisions, as well as the right to access and correct personal data to ensure that it is accurate. Such transparency is critical to make sure that individuals know their data is being used therefore be able to assure its accuracy or decide to exclude themselves from uses they object to. Similarly, the Access and Accuracy affords a mechanism to assure that data and the inference drawn from are accurate. While most consumers will not be able to identify errors in models, 5 transparency on inferences drawn by a model may shine light on algorithmic errors, The CPBR Transparency principle also requires that companies explain how they will use data and this should be understood to include relevant information about the decision-making models and algorithms. There is work to be done to define how much of the decision-making metrics should be exposed, as some of that information will be proprietary. Enough context about the decision metrics should be made available to enable consumer protection enforcement agencies and other stakeholders to assess whether the decisions models are fair. These principles are reinforced by the Respect for Context principle. When data is used out of context, the CPBR provides that if "companies decide to use or disclose personal data for purposes that are inconsistent with the context in which the data was disclosed, they must provide heightened measures of Transparency and Individual Choice." This will help individuals to flag uses of information that are likely to create risk and increase the likelihood that both personal data and models derived from personal data are accurate.

Transparency is key

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

First and foremost, an expanded commitment to transparency is **necessary** to guard against the risk of unfair, inaccurate use of personal data. The variety of personal information in big data systems requires a more active transparency in which individuals, consumer advocates and enforcement agencies can understand precisely how personal data is used, in some cases with resolution down to the level of individual data elements. Recognizing that individual control and consent may not be practical for high velocity collection and use of personal data**,** such systems will place more reliance on respect for context, assuring the information is only collected where the context makes such collection reasonably apparent, and that the use is consistent with the original context of collection. In context use should be able to proceed without individual consent, but out of context use would require increased transparency and individual control. Large collections of personal data create increased risk of breach and loss, to security must be given special attention. As important decisions may be made through big data systems, **access and accuracy rights are vital** to be sure individuals are not treated unfairly. And finally, institutional accountability mechanism are vital to assure that all of the principles in the Consumer Privacy Bill of Rights are adhered to the use of big data systems. Beyond just the substantive principles of the Consumer Privacy Bill of Rights, the larger policy process that the Administration's privacy framework puts into place has a dynamic, flexible quality that will be especially important to help American society evolve new privacy norms in response to the challenge of large scale analytics. As explained by Ken Bamberger and Deirdre Mulligan, the evolution of 'privacy on the ground' has enabled the evolution of privacy rules in a 8 manner that is responsive to public requirements while at the same allowing flexibility for the development of new services and business models. The Consumer Privacy Bill of Rights framework is designed to facilitate the continuous evolution of norms and rules as large-scale analytics drive new business models.

2NC: Agenda PTX NB

Read the Albert evidence specific to constitutional amendments

2NC: Big Data NB

The CP keeps up with big data innovations

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", 4/4/14 https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf, AB)

For each of the big data privacy risks identified here, the substantive principles in the Consumer Privacy Bill of Rights offer guidance to develop concrete responses to those risks in a manner that provides clarity for individuals and flexibility for innovative big data analytic applications. Given the rapid evolution of big data analytic applications, the unique procedural aspects of the Consumer Privacy Bill of Rights also offers a means by which principle-based privacy approaches to new applications can be developed rapidly as enforceable codes of conduct and then enforced under the FTC's existing statutory authority

2NC AT: Ethics S. Deficit

Solves ethics claims – specifically designed to become conscious of the use of data collection

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

3. Unfair use of sensitive inferences: Even if inferences are accurate, it may be unfair as a matter of ethics or public policy to use such information for certain purposes. For example, behavioral profiling techniques used for marketing purposes can provide advertisers the ability to reach audiences defined by age, ethnicity, race, gender and other sensitive categories. The recent statement of privacy principles from leading civil rights organizations ("Civil Rights Principles for the Era of Big Data") offers useful guidance on this point. The Respect for Context principle was **specifically designed** to prevent misuse of such profiles for more sensitive, harmful discriminatory purposes. As the CPBR explains: The Administration also encourages companies engaged in online advertising to refrain from collecting, using, or disclosing personal data that may be used to make decisions regarding employment, credit, and insurance eligibility or similar matters that may have significant adverse consequences to consumers…. Such practices also may be at odds with the norm of responsible data stewardship that the Respect for Context principle encourages." 6 Just because it is possible to learn or infer a sensitive characteristic of an individual, that does not imply that it is either legally or ethically permissible to use such an inference (no matter how accurate or inaccurate) for all purposes. However, addressing the use of such characteristics is a matter of social policy broader than privacy policy. Antidiscrimination laws and norms of countries around the world regularly prohibit acting in a discriminatory manner based on information about an individual, even if it is publicly available. Indeed, some of the personal characteristics that entail the highest degree of legal concern include gender and race, attributes of individuals that are readily observable and in most cases public information. The Transparency and Access Accuracy principles provide mechanisms that can be helpful in identifying where data collected about individuals is used in ways contrary to legal or ethical principles. Despite this, reflexive and poorly justified application of the Fourth Amendment third party doctrine can lead to the "unwarranted" assumption that as soon as personal data is public it can be used for any purpose**.** The Respect for Context principle stands in opposition to this view and squarely for the proposition that privacy interests in personal information are determined as much by how the data is to be used as is the public or non-public status of the data.

2NC AT: Circumvention S.Deficit

No risk of a solvency deficit – transparency principle resolves circumvention

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

The Transparency Principle requires companies to disclose when and why they collect individuals' personal data, so that consumers can guard against misuse of their personal data. Beyond just individual awareness, transparency has a vital function for the evolution of privacy norms themselves. In the modern history of information privacy, transparency has enabled consumer advocates, policy makers, enforcement agencies, the press and the interested public to engage in dialogue and criticism about how commercial privacy practices are evolving. It is only with awareness of actual privacy practices that society can have a meaningful dialogue about which practices are acceptable and which fall outside legal and/or social norms. Meaningful transparency in big data systems will require going beyond just disclosure of policies as to personal data. Enabling **citizens, governments and advocates to address big data** privacy challenges requires a more active transparency - the ability to be aware of and track the actual flow and use of personal information. Big Data is different from the regular use of personal data in that consumers are not only affected by the primary collection of data, but also by the subsequent aggregation of that data to inform algorithms that govern companies' decision-making and affect individual users. Therefore users need additional tools to help them follow complex data flows and understand what picture of them this data enables, beyond just the general disclosures in privacy policies. For example, disclosing to an individual that a health insurance company knows her address does not inform her of the likelihood that this information is being combined with multiple other databases to create "neighborhood profiles" that in turn could affect pricing for individual customers within those neighborhoods. The requirement that companies detail how they will use gathered data bears more weight in the Big Data context than requirements that companies simply disclose what personal data they collect. A transparency framework that updates consumers when companies come up with new uses for aggregated personal data will increase user trust and help ensure that accountability takes place at the rate of business growth, rather than at the rate of governmental enforcement

DAs

Privacy Turn

1NC

Increased internet freedom would result in desensitization of human rights abuses and an increase in divisions.

Jamie **Metzl, 69**, served as Deputy Staff Director and Senior Counselor of the United States Senate Committee on Foreign Relations,[7] Senior Coordinator for International Public Information and Senior Advisor to the Undersecretary for Public Diplomacy and Public Affairs at the Department of State,[8] and Director of Multilateral and Humanitarian Affairs on the National Security Council, "Information Technology and Human Rights," http://www.heinonline.org.turing.library.northwestern.edu/HOL/Page?page=705&handle=hein.journals%2Fhurq18&collection=journals, shlee

In an information age where satellite television broadcasts and Internet appeals to address mass violations of human rights reach world populations on a daily basis, there is a danger that people will become callous to reports of difficulties everywhere in the world, that the limited human capacity for absorption, compassion, and responsive action will become spread so thin as to dilute popular outrage and forestall responsive action. There is also a danger that as information technology systems continue to play ever greater roles in the international worlds of commerce and communications, those without access to such systems will be denied the tools necessary to improve their conditions. This appears to be happening even in this early stage in the development of information technology systems. Although Internet access can be achieved through satellite, packet radio, microwave, or cable links, it is still mostly done by telephone, access to which is highly concentrated in the wealthiest countries!' It is thus not surprising that access to the Internet is no better distributed internationally.° This international division between rich and poor is often mirrored within states. In the United States, for example, where 60 percent of global computer networking takes place, the Rand Corporation has estimated that while only 3 percent of the bottom income quartile of the population had access to computer networks in 1993, 23 percent of the top quartile had access during the same period" In an information age, disparities in access to information and sources of knowledge can only exacerbate existing divisions between rich and poor societies, states, and individuals.

2NC

Increased privacy rights results would result in more oppressive forms of control

Morozov 11 (Evgeny Morozov, Bernard L. Schwartz Senior Fellow at the New America Foundation and a contributing editor of Foreign Policy, "Whither Internet Control?", April 2011, http://muse.jhu.edu/journals/journal_of_democracy/v022/22.2.morozov.html,shlee)

Most talk of "liberation technologies" as ways of weakening "Internet [End Page 62] control" turns out to be about the technological rather than the sociopolitical dimension. But what if success in that area is met with larger and more sophisticated efforts at exerting sociopolitical control? Scholars still know little about the factors that influence the dynamics and the distribution of the two kinds of control. As technological methods lose efficacy, sociopolitical methods could simply overtake them: An authoritarian government might find it harder to censor blogs, but still rather easy to jail bloggers. Indeed, if censorship becomes infeasible, imprisonment may become inevitable. Thus, if the technological dimension

of Internet control were one day to be totally eliminated, the upshot could be a set of social and political barriers to freedom of expression that might on balance be worse—not least because "liberation technologies" would be powerless to overcome them. It would be a cruelly paradoxical outcome indeed should liberation technology's very success spur the creation of a sociopolitical environment in which there would be nothing for technology to "liberate."

Politics DA

1NC - Unpopular

The plan is ridiculously capital-intensive

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

"Nothing is 'easy,'" writes Henry Paul Monaghan, "about the processes prescribed by Article V."112 Scholars today describe the requirements of Article V as practically impossible to meet.113 For instance, Bruce Ackerman views Article V as establishing a "formidable obstacle course."114 Sanford Levinson argues that "Article V, practically speaking, brings us all too close to the Lockean dream (or nightmare) of changeless stasis,"115 and that it is "the Constitution's most truly egregious feature."116 Rosalind Dixon has described the "virtual impossibility of formal amendment to the Constitution under Article V."117 Jeffrey Goldsworthy observes that "the supermajoritarian requirements of Article V are so onerous as to be arguably undemocratic, by making it much too easy for minorities to veto constitutional amendments."118 Vik Amar explains that Article V establishes "particular and cumbersome processes."119 And Richard Fallon laments that "[e]ven under the best of circumstances, the requirement that three-fourths of the states must ratify constitutional amendments makes it nearly impossible to achieve significant change in our written Constitution through the Article V process."120 Article V, in short, is seen as a dead end. This is not a new perspective on the difficulty of successfully using Article V. Writing in 1885, Woodrow Wilson decried the "cumbrous machinery of formal amendment erected by Article Five."121 Even earlier, at the adoption of the Constitution, John DeWitt doubted whether it would ever be possible to amend the Constitution using Article V: "[W]ho is there to be found among us, who can seriously assert, that this Constitution, after ratification and being practiced upon, will be so easy of alteration?"122 DeWitt believed states would have views too different to meet Article V's required supermajority threshold: Where is the probability that three fourths of the States in that Convention, or three fourths of the Legislatures of the different States, whose interests differ scarcely in nothing short of everything, will be so very ready or willing materially to change any part of this System, which shall be to the emolument of an individual State only?123 The answer, he predicted, was that formal amendment would be rare.

2NC - Unpopular

It's unpopular – this link turns the aff and causes circumvention

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

Political parties and increased political polarization may have exacerbated the difficulty of Article V. As American political parties have become nearly evenly divided across both the federal and state governments over the last two generations, writes David Kyvig, "divisions within society together with the requirements of Article V frustrated every attempt to bring about fundamental change."132 Kyvig adds that the close balance between political parties and among the forces of federalism alongside the "centripetal power of the federal government and the centrifugal strength of the states" have combined to inhibit agreement on formal amendment.133 Daryl Levinson and Rick Pildes observe that political parties in the United States "today are both more internally

ideologically coherent and more sharply polarized than at any time since the turn of the twentieth century."134 Rick Pildes connects the onset of today's hyperpolarized politics to the adoption of the Voting Rights Act of 1965: [T]his polarization reflects the deep structural and historical transformation in American democracy unleashed in 1965 by the enactment of the VRA. That moment began the process of ideologically realigning the political parties and of purifying them, so that both parties are far more ideologically coherent, and differentiated from each other, than at any time in many generations. The culmination of that historical transformation – which can be seen as the maturation or full realization of American democracy – is today's hyperpolarized partisan politics.135 Pildes concludes that "[t]he reality is that the era of highly polarized, partisan politics will endure for some time to come."136 This only complicates an already difficult formal amendment process that relies on strong supermajorities across both the federal and state institutions. Nevertheless, as Christopher Eisgruber cautions, measuring amendment difficulty is itself difficult because amendment difficulty turns "upon a number of cultural considerations, such as the extent to which state politics differ from national politics and the extent to which people are receptive to or skeptical about the general idea of constitutional amendment."137 The difficulty of measuring amendment difficulty has not discouraged scholars from comparing amendment difficulty across nations. In such measures, the United States has ranked among the most difficult to amend.138

Terror DA

Case Turn

Turns case – terrorism kills human rights

Office of the United Nations High Commissioner for Human Rights 8 "Human Rights, Terrorism and Counter-terrorism", Fact Sheet No. 32, July 2008, http://www.ohchr.org/Documents/Publications/Factsheet32EN.pdf, AB)

Terrorism aims at the very destruction of human rights, democracy and the rule of law. It attacks the values that lie at the heart of the Charter of the United Nations and other international instruments: respect for human rights; the rule of law; rules governing armed conflict and the protection of civilians; tolerance among peoples and nations; and the peaceful resolution of conflict. Terrorism has a direct impact on the enjoyment of a number of human rights, in particular the rights to life, liberty and physical integrity. Terrorist acts can destabilize Governments, undermine civil society, jeopardize peace and security, threaten social and economic development, and may especially negatively affect certain groups. All of these have a direct impact on the enjoyment of fundamental human rights. The destructive impact of terrorism on human rights and security has been recognized at the highest level of the United Nations, notably by the Security Council, the General Assembly, the former Commission on Human Rights and the new Human Rights Council.7 Specifically, Member States have set out that terrorism: • Threatens the dignity and security of human beings everywhere, endangers or takes innocent lives, creates an environment that destroys the freedom from fear of the people, jeopardizes fundamental freedoms, and aims at the destruction of human rights; • Has an adverse effect on the establishment of the rule of law, undermines pluralistic civil society, aims at the destruction of the democratic bases of society, and destabilizes legitimately constituted Governments; • Has links with transnational organized crime, drug trafficking, money-laundering and trafficking in arms, as well as illegal transfers of nuclear, chemical and biological materials, and is linked to the consequent commission of serious crimes such as murder, extortion, kidnapping, assault, hostage-taking and robbery; 8 • Has adverse consequences for the economic and social development of States, jeopardizes friendly relations among States, and has a pernicious impact on relations of cooperation among States, including cooperation for development; and • Threatens the territorial integrity and security of States, constitutes a grave violation of the purpose and principles of the United Nations, is a threat to international peace and security, and must be suppressed as an essential element for the maintenance of international peace and security. International and regional human rights law makes clear that States have both

a right and a duty to protect individuals under their jurisdiction from terrorist attacks. This stems from the general duty of States to protect individuals under their jurisdiction against interference in the enjoyment of human rights. More specifically, this duty is recognized as part of States' obligations to ensure respect for the right to life and the right to security. The right to life, which is protected under international and regional human rights treaties, such as the International Covenant on Civil and Political Rights, has been described as "the supreme right"8

Case

Privacy Advantage

Amendment Fails

Plan causes privacy paternalism and OVERKILL with an amendment

Adam **Thierer 14**, senior research fellow at the Mercatus Center at George Mason University with the Technology Policy Program, Jan 23, 2014, "Do We Need A Constitutional Amendment Restricting Private-Sector Data Collection?", https://privacyassociation.org/news/a/do-we-need-a-constitutional-amendment-restricting-private-sector-data-colle, AB)

Astonishingly, Rosen doesn't seem to think that we should be free to do so. During our NPR debate, he said his amendment would disallow individuals from surrendering private data or privacy because he viewed these rights as "unalienable." But Rosen should keep in mind that not everyone shares the same privacy values and that many of us will voluntarily trade some of our data for the innovative information services we desire. If that choice is taken away from us then **"privacy regulation**," as privacy scholar Daniel Solove has recently noted, "**risks becoming too paternalistic**. Regulation that sidesteps consent denies people the freedom to make choices," Solove argues. "The end result is that either people have choices that are not meaningful or people are denied choices altogether." By making privacy choices for us, Rosen's proposed amendment would likely suffer from that same sort of privacy paternalism. Such paternalism is particularly problematic in this case since privacy is such a highly subjective value and one that evolves over time. As Solove notes, "the correct choices regarding privacy and data use are not always clear. For example, although extensive self-exposure can have disastrous consequences, many people use social media successfully and productively." Privacy norms and ethics are changing faster than ever today. One day's "creepy" tool or service is often the next day's "killer app." Finally, practically speaking, **a constitutional amendment is overkill** since many other options exist for protecting individual privacy from private data collection efforts. User education and empowerment is essential. So, too, is privacy by design and an expanded role for privacy professionals within private organizations. Targeted enforcement of existing laws, torts and other measures will continue to be applied here and perhaps even expand in their focus. And, again, more constraint on government's ability to commandeer private databases is absolutely essential. These are all far more practical and less-restrictive steps that can be taken without resorting to the sort of **constitutional sledgehammer** that Jeff Rosen favors. or upending the information economy.

Privacy Turn – Takes Away Freedom

Plan constrains private entity which takes AWAY freedom – turns case

Adam **Thierer 14**, senior research fellow at the Mercatus Center at George Mason University with the Technology Policy Program, Jan 23, 2014, "Do We Need A Constitutional Amendment Restricting Private-Sector Data Collection?", https://privacyassociation.org/news/a/do-we-need-a-constitutional-amendment-restricting-private-sector-data-colle, AB)

There are several problems with Rosen's proposal—legal, economic and practical. The bottom line is that a constitutional amendment would be too sweeping in effect and that better alternatives exist to deal with the privacy concerns he identifies. Conflating Two Different Things First, it goes without saying that a constitutional amendment is not a matter to be taken lightly. It alters the underlying fabric of our republic and represents the ultimate legal constraint. Rosen nonetheless thinks one is needed to cover both governmental- and private-sector data collection practices, even though the Fourth Amendment

already applies to government. Many people are rightly outraged about the extent of government surveillance activities that have come to light in the wake of the Snowden revelations. A crucial component of these revelations is that our government is increasingly vacuuming up data from private entities—sometimes with their consent, but often without those private entities having any choice in the matter (or perhaps not even knowing about it at all). This leads many privacy advocates to make a big leap: Because much of the data that our government collects today originates from private data collection efforts, we should just treat those private entities the same as government actors. "Once data is collected by private parties, the government will inevitably demand access," Rosen says. Therefore, he says, we should impose the same data collection restrictions on private actors that we impose on governments. Of course, it's always been true that "the government will inevitably demand access" to private data, but to the extent it is a growing problem, Rosen and other privacy advocates should redouble their efforts to constrain government surveillance powers and the ability to indiscriminately suck up privately held data. We could start with strong ECPA reform, elimination of the third-party doctrine, and other bolstered Fourth Amendment constraints on national security and law enforcement powers. Importantly, a private entity is just not the same as a government entity, and we should continue to distinguish between them when crafting data collection policies. Rosen says that "distinction between surveillance by the government and surveillance by Google makes little sense," but in reality, the differences between public and private entities remains profound. Private entities cannot fine, tax or imprison us. And while we can escape the orbit of private companies and their services, the same is not true for governments. We need to have serious discussions about how to help people better manage their privacy preferences, but if we begin those conversations by mistakenly conflating government and corporate power, then the end result will be sweeping controls on our modern information economy. Which is the next problem with Rosen's proposal: It would create serious social and economic trade-offs that he fails to consider. In terms of social trade-offs, a constitutional amendment limiting data collection might conflict with certain speech and information-gathering freedoms. As Professor Eugene Volokh has noted, at least here in the U.S., "We already have a code of 'fair information practices,' and it is the First Amendment, which generally bars the government from controlling the communication of information … whether the communication is 'fair' or not." Meanwhile, recent commercial speech jurisprudence—such as the Supreme Court's 2011 decision in Sorrell v. IMS Health Inc.—has bolstered First Amendment protections for data-gathering and use. There would also be economic trade-offs associated with Rosen's proposed amendment. Private data collection is the fuel that powers our information economy. It creates value for consumers by making possible innovative goods and services at a great price—often free. Banning private data collection and use will likely mean fewer choices or higher prices. That's why many of us already trade away some of our personal information in exchange for digital services that improve our lives in other ways. For example, the same location "tracking" techniques that Rosen and many others decry as privacy violations are also what enable the free mapping and traffic services that we rely on daily. Shouldn't we be allowed to make that trade?

Not having a clear definition of privacy turns case

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

Although the conclusions put forth in this article do not in themselves dictate any particular legal result, they should nonetheless serve to inform the development of Canada's fledgling privacy tort. We ought to know what privacy is, and what interests underlie it, before we set about fine-tuning a legal test designed to protect it. The same point can perhaps be put better in the negative: **without a clear conceptual account of privacy, "a legal privacy right would be**", as Delany and Carolan note, "**incomplete, incoherent, and liable to cause confusion".**230 An appellate court tasked with determining the scope of a Canadian privacy tort will have to identify the nature of a privacy invasion, find an appropriate doctrinal basis for the action, and decide how to balance competing interests in privacy and freedom of speech. I have argued throughout this article that a coherent understanding of

privacy must include both a physical and an informational dimension. The American approach, which recognizes both the wrongful disclosure of information and intrusions on private activities, provides a more comprehensive and conceptually justified response than the narrower "informationist" approach employed in New Zealand and England.

Privacy Doesn't Solve

Too vague to be legit

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

The "right to be let alone" occupies a hallowed place in privacy discourse. Although the phrase was coined by Judge Cooley42—who used it not to justify a right to privacy, but rather to explain why tort law regards trespass to the person as wrongful—it is now generally attributed to Warren and Brandeis, who invoked it throughout their seminal 1890 article.43 The latter authors analyzed numerous cases of trespass, defamation, confidence, and especially common law copyright, and identified a latent principle of privacy—operating unarticulated— which they argued should thenceforth be protected independently, as a distinct tort.44 This principle of privacy, expressed as a "right to be let alone", is anchored in the more fundamental interest of an "inviolate personality".4 The Warren and Brandeis formulation has come under much academic criticism. The first problem is its vagueness.46 Because neither the "right to be let alone" nor the concept of "inviolate personality" is adequately defined, 47 the article gives no practical or conceptual guidance on the scope of the right.48 A related criticism is that the phrase "right to be let alone" itself appears to be less a definition of privacy than simply a description of one example of it.49

Privacy is too sweeping/broad

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

The second criticism, stemming from the above mentioned vagueness, is that this conception of privacy is overly broad. As Gavison explains: [It] cover[s] almost any conceivable complaint anyone could ever make. A great many instances of "not letting people alone" cannot readily be described as invasions of privacy. Requiring that people pay their taxes or go into the army, or punishing them for murder, are just a few . . . examples.50 This conceptual over breadth is evident in how the "right to be let alone" has been used in American constitutional jurisprudence, where it is often equated with privacy51 and is taken to encompass the right to "live one's life as one chooses". 52 This includes the "privilege of an individual to plan his own affairs . . . [and] do what he pleases".53 This "substantive"54 conception of privacy confers a zone of decisional autonomy, and currently forms the basis for the right to abortion in American constitutional law.55 It has been much criticized as being really an "assertion of liberty per se [rather] than one of privacy".56 A narrower and clearer definition of privacy is needed.

Focus on surveillance as information gathering ignores content of the surveillance – causes restriction which turns the case

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational

Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

Conceiving of privacy as a claim to control personal information gets us very close to understanding its essence.63 Simply put, we intuit privacy as a claim to control, and this intuition is reflected in the social norms that surround us.64 We feel that this conception of privacy is the reason someone has a moral claim to keep the contents of his diary secret; and reasonable people reflect that understanding by respecting this right, or at least by intuiting that reading a person's diary violates something we all sense to be private. Furthermore, as I explain in section two, the claim to control personal information is closely associated with the values underpinning privacy (especially the values of dignity and autonomy). However, there are three significant problems with control-based definitions. The first problem is that insofar as they concentrate on information,65 they are too restricted.66 We all recognize, intuitively, that privacy can be invaded even where information is not communicated, such as where a peeping tom trains his telescope on a woman's bedroom to watch her undress. A definition of privacy that fails to capture such physical intrusions simply lacks intuitive coherence. It might be suggested that informational control can capture this example, the argument being that the tom has in fact received information about his victim (in the sense that he has learned what she looks like without clothes). This argument is problematic however, owing to its artificiality. Parker responds to it by asking us to imagine that the tom and the woman are lovers.67 Is it still sensible to regard the tom, when he sneaks a peak at his lover through the window after leaving her side, as obtaining information about what she looks like naked—information he already has?68 If the answer is no, then such peeping falls outside this definition of privacy, resulting in an intuitive under-inclusiveness. Even if we strain and answer yes because the man has learned that his lover remains undressed or is in a different pose, this information-based approach clearly fails to capture the true essence of the invasion.69 It is not that information has been acquired but rather that she is being "looked at . . . against her wishes".70 Wacks explains: What is essentially in issue in cases of intrusion is the frustration of the legitimate expectations of the individual that he should not be seen or heard in circumstances where has not consented to or is unaware of such surveillance. The quality of the information thereby obtained, though it will often be of an intimate nature, is not the major objection.71 These observations lead to a related point. As Moreham has convincingly argued, by failing to appreciate the true essence of the complaint, this information-based approach necessarily fails to appreciate the gravity of the privacy violation itself, and therefore must logically undervalue it.72 This is because, to be internally coherent, the information-based approach must regard the information learned as the only relevant factor when assessing the gravity of an invasion; but if we consider Parker's peeping lover example, we see that very little new information has in fact been communicated. Consequently, as the information learned was negligible, so too must be the violation of privacy. Such an approach is clearly inadequate if we regard this example as a serious violation of privacy.73 So, the first major problem with the "control over information" approaches is their narrowness, in that they fail to adequately capture what we intuit—that physical intrusions violate privacy for reasons unrelated to, and irrespective of, any information that may also be gleaned (or subsequently published) as a consequence of an intrusion. It is the looking (or listening or touching) itself, not the acquisition of information, that is offensive to our intuitive sense of privacy. Furthermore, as I explain in section two, the values underpinning privacy, and the reasons why it is important, strongly support including a physical intrusion dimension in our definition. Before moving to the remaining criticisms, it is worth noting that there is widespread academic74 and law commission75 recognition, and some judicial recognition, that physical intrusions lie at the conceptual core of privacy

Their definition of privacy is vague which causes exclusion

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

A second criticism of control-based definitions concerns ambiguity in the manner in which "control" is used by various commentators.77 If control is used, as Fried uses it,78 to mean actual control, and privacy is thus the state of controlling information, it follows that a person who cannot exert control

cannot enjoy privacy.79 But surely this cannot be correct, for it would mean that a person could not assert a right to privacy even in relation to highly sensitive personal information gathered while she is in a public place80—a position roundly rejected by academics,81 the House of Lords,82 the European Court of Human Rights,83 the New Zealand Court of Appeal84 and the Supreme Court of Canada.85 A related problem here is that treating privacy as a state of actual control over information may suggest a loss of privacy where there is only the threat of a loss.86 Moreham illustrates this by noting that if X had a machine capable of reading all of Y's emails, and also of seeing Y's naked body through her clothes, Y could not be said to have actual control over that information. So even if X never actually used the hypothetical device, the mere fact that he had it would violate Y's privacy.87 In short, "[c]ontrol-based definitions therefore fail to distinguish between those situations where there is a risk of unwanted access and those where unwanted access has in fact been obtained".88 A better conception of privacy is thus to formulate it, as Westin does, as a claim to control information, rather than a state of control itself.89 A third criticism of control-based definitions concerns their potential over breadth.90 This stems from the fact that many authors fail to identify with precision the types of information falling within a controlbased conception of privacy. Simply put, defining privacy as a claim to control information relating to one's self does little to help us know what information is in fact private. On a plain reading, it could mean that any information about a person is private, including the colour of her eyes or even her name—information that, to be sure, few would intuit to be private. What is needed is some conceptual device to guide us in ascertaining what information is private. I return to this issue, as well as to the concept of privacy as a claim to control, after considering the remaining conceptions of privacy.

Squo Solves

New ECPA legislation restores privacy rights – status quo solves

Chris **Calabrese 7/5**, the legislative counsel for privacy-related issues in the American Civil Liberties Union, "Post USA Freedom Act: There's more to be done," 7/5/15, http://www.ourmidland.com/opinion/editorials/post-usa-freedom-act-there-s-more-to-be-done/article_6676dd8c-7565-5ba4-8387-0158caae0784.html, AZ

But unless ECPA is reformed to reflect modern realities, government agents will continue to assert the authority to search our communications and our private possessions without a warrant and without showing any evidence whatsoever that a crime has been committed.
That's an intolerable and completely unwarranted invasion of our privacy. It isn't what the law's authors intended, of course. But government agencies are taking advantage of ECPA's unintended consequences to evade constitutional checks on their powers. And as long as ECPA remains on the books as written, it no longer represents an unexpected assault on our liberty. It is an intentional one.
Fortunately, members in both houses of Congress, led by Senators Mike Lee and Pat Leahy, and Representatives Kevin Yoder and Jared Polis, have introduced legislation to reform ECPA, and restore Fourth Amendment protections to our online communications. The ECPA Amendments Act and Email Privacy Act, respectively, would restore the law's original purpose to protect privacy in the ways we communicate, transact businesses, learn and recreate today by protecting emails and other communications stored with third party service providers for any amount of time.
Their legislation has broad, bipartisan support. It is backed by hundreds of members in Congress, including more than 270 House members. Outside the halls of Congress, conservatives, moderates and liberals, small and large businesses, labor unions, civil libertarians and former prosecutors all advocate reforms to an obsolete law that threatens the liberty and prosperity of the American people.
Congress has regularly had to pass reforms to legislation that technology has rendered obsolete and vulnerable to exploitation by the executive branch. We're calling on ECPA to be next.
Since our founding as a nation, Americans have insisted that we be secure in our persons and secure in our liberties. We made progress toward that end with the passage of the USA Freedom Act. The next step is the reform of ECPA, and re-establishing that neither changes in technology nor laws that have outlived their purpose can be allowed to infringe on Americans' privacy protections.

Your evidence is overstated – there is no root cause, and checks on surveillance in the status quo prevent escalation or injustice

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

There are, of course, infinite examples of people being persecuted, abused or discriminated against because of personal attributes (such as their religion or political opinion) which have been identified by others or by the State. This naturally tends to invite suspicion concerning disclosure of personal information. However, to draw a connection between this type of injury and the absence of privacy is misguided – it fails to identify the root cause of such conduct. People were not demonised, persecuted and murdered in Nazi Germany because there was no right to privacy, but because of the implementation by a totalitarian regime of policies based on a racist ideology which tapped into pervasive anti-Semitic attitudes in the community.132 In liberal democracies such as Australia, the strongest safeguards against the misuse of personal information by the State are the checks and balances built into the system through the separation of powers and the rule of law, and ultimately, the accountability of the executive government to the people at democratic elections. State agencies may only collect and use personal information about citizens if such action comes within the executive power of the State or is specifically authorised by law. Unauthorized action can be challenged in the courts. Moreover, the trend in recent times has been to provide further protection in the form of legislation such as the Privacy Act (Cth) 1988 which imposes obligations in relation to the collection, use and disclosure of information which the State is legally authorised to collect. Gibbs argues that the danger of introducing the concept of privacy into legal discourse is that 'it starts to colonize the various rights of action that already exist'.133 Bundling up complaints about the acquisition, disclosure and use of personal information under the heading 'privacy' militates against the clear and precise identification of the interests at stake and what, if any, remedies should be granted by the law when those interests are compromised.134 As a general rule, the misuse of personal information to discriminate against a person in employment or the provision of services is best addressed by laws which are specifically directed against the attitudes and conduct which cause the harm, rather than by a general right of privacy. Anti-discrimination laws fulfil this function. Of course, it may also be necessary to impose restrictions on the release of personal information held by private and public sector organisations in order to minimise the possibility of such information falling into the hands of criminals and sociopaths. But the object of such laws is the protection of personal security and safety, not privacy per se.

Quit your whining – privacy right concerns are unfounded and status quo solves

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

The existence of a right to privacy is dubious. Even if such a right does exist it is not a very important right, ranking well down in the list of interests that are conducive to human flourishing. Privacy proponents have been incapable of explaining the foundation for such a right and why it should enjoy a high level of legal protection. The present level of protection of privacy in specific contexts both through legislation and at common law is adequate, particularly in view of the recourse now available under the doctrine of confidence in relation to public disclosures of intimate information. The right to privacy can be seen as a late-twentieth/early twenty-first century First World invention, indicative of a highly individualistic society fearful of the capabilities of the technology it has developed. However the alarmist rhetoric of privacy advocates who proclaim the imminent demise of privacy does not match reality: in fact, it is arguable that citizens in Western societies enjoy a level of de facto privacy unprecedented in history.158 As to the threats posed by the monitoring capabilities of the new information technologies, it is now becoming apparent that technology itself can provide the means to counter them.159 The current legal focus and level of discussion concerning the right of privacy is a clear illustration of the human propensity for losing perspective. It follows that very few interests should be subjugated to the right of privacy.

Manufacturers are starting to respect privacy rights – account for privacy concerns through the national data protection

Marc **Dautlich and** Cerys Wyn **Davies 6/30**, head of information law at Pinsent Masons and partner, "Drone manufacturers can help operators respect privacy rights, says watchdog", 6/30/15, http://www.out-law.com/en/articles/2015/june/drone-manufacturers-can-help-operators-respect-privacy-rights-says-watchdog/, AZ

Drone manufacturers can help the organisations wishing to operate them respect privacy rights by warning of the "potential intrusiveness" of their use, an EU privacy body has said.

The Article 29 Working Party, a committee made of up representatives from the national data protection authorities (DPAs) throughout the EU, said the manufacturers could also put information on their packaging to tell operators where the use of drones is permitted. The manufacturers can also help account for privacy concerns in the use of drones by designing the devices with data protection in mind, it said.

"Data protection should be embedded within the entire life cycle of the technology, from the very early design stage, right through to its ultimate deployment, use and final disposal; such technology should be engineered in such a way as to avoid the processing of unnecessary personal data (for example, in case of strategic or critical infrastructures, engineering firmware of drones in order to inhibit data collection within previously defined no-fly zones could be advisable)," the Working Party's new opinion (21-page / 455KB PDF) said.

New codes of conduct could be drawn up by drone manufacturers and operators to ensure data protection requirements are considered and addressed, it recommended. The codes could help "enhance the social acceptability of drones", it said.

Current Supreme Court protections of privacy sufficient – LA v. Patel proves

Moxila **Upadhyaya and** Brandt **Mori 6/24**, trial attorney in civil litigation and real estate and business lawyer, "U.S. Supreme Court Issues Significant Ruling Protecting Privacy Rights of Hotel Owners and Guests", 6/24/15, http://www.mondaq.com/unitedstates/x/407006/Data+Protection+Privacy/US+Supreme+Court+Issues+Significant+Ruling+Protecting+Privacy+Rights+of+Hotel+Owners+and+Guests, AZ

One difficult situation in which hotel operators and owners can find themselves occurs when law enforcement demands access to private hotel guest records without a warrant.

On June 22, 2015, the U.S. Supreme Court issued an important decision addressing this very dilemma, siding with hotel owners. In City of Los Angeles v. Patel, the Court struck down a Los Angeles municipal provision that required hotels to make guest records available for inspection by any L.A. Police Department officer without the need for a search warrant. Prior to the Court's ruling, any officer could obtain, without a warrant, sensitive records, including a hotel guest's name, address, and vehicle details; the number of members in the guest's party; the method of payment; arrival and departure date; and room number. A hotel owner who refused to turn over such information could be arrested on the spot and be subject to a misdemeanor charge punishable by up to six months in jail and a $1,000 fine.

In its 5-4 decision, the Court held that the provision is unconstitutional because it violates the Fourth Amendment's protection against unreasonable searches and seizures. Because the municipal provision failed to afford hotel owners any pre-compliance opportunity to challenge the requested search, the Court held the provision to be facially unconstitutional. In so holding, the Court noted that "business owners cannot reasonably be put to this kind of choice" – that is, either handing over their guests' private information or facing arrest and criminal prosecution.

Writing for the Court, Justice Sonia Sotomayor noted that the Fourth Amendment may be satisfied as long as a hotel owner is afforded an opportunity to have a neutral decisionmaker review an officer's demand to search the hotel guest records before he or she faces penalties for failing to comply. This can be accomplished, for example, through an administrative subpoena by which the hotel owner may challenge law enforcement's request before a judge. This outcome, according to the Court, "reduces the risk that officers will use these administrative searches as a pretext to harass business owners."

Framing Advantage

Consequentialism

Deontological theories of privacy rights are baseless and guaranteed to fail

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

Non-consequentialist (rights) theories. The leading contemporary non-consequentialist theories are those which are framed in the language of rights. Following the Second World War, there has been an immense increase in 'rights talk',81 both in the number of supposed rights and in total volume. Rights doctrine has progressed a long way since its original aim of providing 'a legitimisation of ... claims against tyrannical or exploiting regimes'.82 As Tom Campbell points out: The human rights movement is based on the need for a counter-ideology to combat the abuses and misuses of political authority by those who invoke, as a justification for their activities, the need to subordinate the particular interests of individuals to the general good.83 There is now, more than ever, a strong tendency to advance moral claims and arguments in terms of rights.84 Assertion of rights has become the customary means to express our moral sentiments. As Sumner notes: 'There is virtually no area of public controversy in which rights are not to be found on at least one side of the question – and generally on both.'85 The domination of rights talk is such that it is accurate to state that human rights have at least temporarily replaced maximising utility as the leading philosophical inspiration for political and social reform.86 Despite the dazzling veneer of deontological rights-based theories, when examined closely they are unable to provide convincing answers to central issues such as: what is the justification for rights? How can we distinguish real from fanciful rights? Which right takes priority in the event of conflicting rights? Such intractable difficulties stem from the fact that contemporary rights theories lack a coherent foundation. It has been argued that attempts to ground rights in virtues such as dignity, concern or respect are unsound and that they fail to provide a mechanism for moving from abstract ideals to concrete rights.87 A non-consequentialist ethic provides no method for distinguishing between genuine and fanciful rights claims and is incapable of providing guidance regarding the ranking of rights in the event of a clash. In light of this, it not surprising that the number of alleged rights has blossomed exponentially since the fundamental protective rights of life, liberty and property were advocated in the seventeenth and eighteenth centuries. Today, all sorts of dubious claims have been advanced on the basis of rights: for example, 'the right to a tobacco-free job', the 'right to sunshine', the 'right of a father to be present in the delivery room', the 'right to a sex break',88 and even 'the right to drink myself to death without interference'.89 Novel rights are continually evolving and being asserted. A good example is the recent claim by the Australian Prime Minister (in the context of the debate concerning the availability of IVF treatment to same-sex couples or individuals) that each child has the right to a mother and father. In a similar vein, in light of the increasing world oil prices, it has been declared that this violates the right of Americans to cheap gasoline. In England, the Premier League has been accused of violating the right of football club supporters to an F.A. Cup ticket. Due to the great expansion in rights talk, rights are now in danger of being labelled as mere rhetoric and are losing their cogent moral force. Or, as Sumner points out, rights become an 'argumentative device capable of justifying anything [which means they are] capable of justifying nothing'.90 Therefore, **in attempting to uncover the scope and content of 'emerging' rights such as the right to privacy it is normally unhelpful to consider the issue from the perspective of a deontological rights-based normative theory.** Against the background of such a theory, proponents of the right can simply assert the existence of a right to privacy and equally validly, opponents can assert a 'right to know'. An impasse is then reached because there is no underlying ideal that can be invoked to provide guidance on the issue. As with many rights, the victor may unfortunately be the side which simply yells the loudest.91 This may seem to be unduly dismissive of rights-based theories and pay inadequate regard to the considerable moral reforms that have occurred against the backdrop of rights talk over the past half-century. There is no doubt that rights claims have proved to be an effective lever in bringing about social change. As Campbell correctly notes, rights have provided 'a constant source of inspiration for the protection of individual liberty'.92 For

example, recognition of the (universal) right to liberty resulted in the abolition of slavery; more recently the right of equality has been used as an effective weapon by women and other disenfranchised groups. For this reason, it is accepted that there is an ongoing need for moral discourse in the form of rights. This is so even if deontological rights-based moral theories (with their absolutist overtones) are incapable of providing answers to questions such as the existence and content of proposed rights, and even if rights are difficult to defend intellectually or are seen to be culturally biased. There is a need for rights-talk, at least at the 'edges of civilisation and in the tangle of international politics'.93 Still, the significant changes to the moral landscape for which non-consequentialist rights have provided the catalyst must be accounted for. There are several responses to this. First, the fact that a belief or judgment is capable of moving and guiding human conduct says little about its truth – the widespread practice of burning 'witches' in medieval times being a case in point. Secondly, at the descriptive level, the intuitive appeal of rights claims, and the absolutist and forceful manner in which they are expressed, has heretofore been sufficient to mask fundamental logical deficiencies associated with the concept of rights. Finally, and perhaps most importantly, we do not believe that there is no role in moral discourse for rights claims, simply that the only manner in which rights can be substantiated is in the context of a consequentialist ethic.94

Util & Consequentialism are necessary and prevent absolutism

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

Consequentialism. A more promising tack for ascertaining the legitimacy of a right to privacy is to ground the analysis in a consequentialist ethic. The most popular consequentialist moral theory is utilitarianism. Several different forms of utilitarianism have been advanced. In our view, the most cogent (and certainly the most influential in moral and political discourse) is hedonistic act utilitarianism, which provides that the morally right action is that which produces the greatest amount of happiness or pleasure and the least amount of pain or unhappiness. This theory selects the avoidance of pain, and the corollary, the attainment of happiness, as the ultimate goals of moral principle. We are aware that utilitarianism has received a lot of bad press over the past few decades, resulting in its demise as the leading normative theory. Considerations of space and focus do not permit us to fully discuss these matters. This has been done elsewhere.95 The key point to note for the purpose of the present discussion is that for those with a leaning towards rights-based ethical discourse, utilitarianism is well able to accommodate interests in the form of rights. Rights not only have a utilitarian ethic, but in fact **it is only against this background that rights can be explained and their source justified.** Utilitarianism provides a sounder foundation for rights than any other competing theory. For the utilitarian, the answer to why rights exist is simple: recognition of them best promotes general utility. Their origin accordingly lies in the pursuit of happiness. Their content is discovered through empirical observations regarding the patterns of behaviour which best advance the utilitarian cause. The long association of utilitarianism and rights appears to have been forgotten by most. However, over a century ago it was John Stuart Mill who proclaimed the right of free speech, on the basis that truth is important to the attainment of general happiness and this is best discovered by its competition with falsehood.96 Difficulties in performing the utilitarian calculus regarding each decision make it desirable that we ascribe certain rights and interests to people – interests which evidence shows tend to maximise happiness97 – even more happiness than if we made all of our decisions without such guidelines. Rights save time and energy by serving as shortcuts to assist us in attaining desirable consequences. By labelling certain interests as rights, we are spared the tedious task of establishing the importance of a particular interest as a first premise in practical arguments.98 There are also other reasons why performing the utilitarian calculus on each occasion may be counter-productive to the ultimate aim. Our capacity to gather and process information and our foresight are restricted by a large number of factors, including lack of time, indifference to the matter at hand, defects in reasoning and so on. We are quite often not in a good position to assess all the possible alternatives and to determine the likely impact upon general happiness stemming from each alternative. Our ability to make the correct decision will be greatly assisted if we can narrow down the range of relevant factors in light of pre-determined guidelines. History has shown that certain patterns of conduct and norms of behaviour if observed are most conducive to promoting happiness. These observations are given expression in the form of rights which can be asserted in the absence of evidence why adherence to them in the particular case would not maximise net happiness. Thus utilitarianism is well able to explain the existence and importance of rights. It is just that rights do not have a life of their own (they are derivative, not foundational), as is the case with deontological theories. Due to the derivative character of utilitarian rights, they do not carry the same degree of absolutism or 'must be doneness' as those based on deontological theories. However, this is not a criticism of utilitarianism, rather it is a strength since it is farcical to claim that any right is absolute. Another advantage of utilitarianism is that it is the

only theory that provides a mechanism for ranking rights and other interests. In event of clash, the victor is the right which will generate the most happiness.

Harel and Sharon 11 (Harel is part of the Hebrew University Law Faculty, Professor of law, Boston University Law School and Sharon is part of the Department of Philosophy, Stanford University [Alon Harel and Assaf Sharon, "'Necessity knows no law'", Volume 61 – Number 4 Fall 2011, Project Muse] hk

Even orthodox advocates of deontological prohibitions concede that certain significant risks warrant the infringement of rights - including the right to life.10 A leading strategy for dealing with the dilemma of extreme cases is what has come to be known as threshold deontology. Thus, most contemporary deontologists agree that deontological [End Page 849] injunctions can be overridden under certain circumstances. Even if one concedes that shooting down a plane carrying fifty passengers in order to save fifty victims is not justified, the numbers can surely be fiddled with until an acceptable ratio is achieved. What about shooting down fifty passengers to save 1 000 victims? What about 10 000? And what about shooting down two to save 50? The issue surely must not hinge on playing with the numbers. As a matter of principle, there must be some ratio of victims to potential victims that would indeed justify the downing of the plane.11 This is not merely an abstract observation of moral philosophers. The duties to protect are an established component of many constitutions, including the German Federal Constitution. This duty entails a duty to protect the potential victims of a terrorist attack, and such a duty, enshrined in the Constitution, may under certain circumstances require infringing some people's rights. Some of the difficulties faced by threshold deontology are familiar and need not be rehearsed here.12 Let us, however, point out one difficulty which, to our mind, has not received due emphasis. Threshold deontology we argue is not faithful to the underlying values and commitments of deontology of at least one central brand - Kantian deontology. The basic challenge faced by threshold deontology is to address the following question: if the life of one person cannot be sacrificed for the sake of saving one other person, or two, or even one hundred, why can it be sacrificed to save one thousand, or ten thousand, or one million? The natural answer of a Kantian threshold deontologist is to maintain that, while sacrificing one person to save two or three violates the victims' dignity, the sacrifice of one to save a thousand does not violate the victims' dignity. In other words, **there is a threshold above which the sacrifice of life does not constitute a violation of dignity.**

Kuehn 91 (Kuehn has Fellowships from the Canada Council, the National Endowment for the Humanities, and the Institute of Advanced Studies of the University of Edinburgh, taught in Canada, Germany and the U.S.A., was Gastprofessor at the University of Hamburg, and Kuehn joined the Boston University faculty in August of 2004, and teaches full time both semesters each year [Manfred Kuehn, "Kantian Ethics and Socialism (Review)", Journal of the History of Philosophy, Volume 29, Number 2, April 1991, pp. 318-321 (Review), project muse] hk

Even if we grant that a "critical reconstruction" has to satisfy different criteria from an "interpretation," there must be some criteria for assessing its adequacy on textual and historical grounds. To qualify as a reconstruction, it must have sufficient similarity to its prototype. While it is often difficult to determine what is sufficient in a particular case, most philosophical scholars would agree--I believe--that if a reconstruction were to lead to views that contradict some of the most fundamental features of its prototype, then it does not qualify as a reconstruction. But precisely this is the case with van der Linden's interpretation of Kant's duty to promote the highest good as central for Kantian social ethics. The following three points should go some way towards showing this: (i) When van der Linden interprets "the highest good as a society in which human agents seek to make one another happy," he claims he has changed "somewhat Kant's common definition of the highest good, but [has] preserve[d] the meaning of his claim that we must promote the highest good (as the union of universal virtue and universal happiness)" (4). **But this is clearly false.** He has radically changed Kant's meaning by emphasizing a different factor from the one Kant does. Kant differentiates in the highest good between an "a priori factor" that depends upon us, i.e., our morality, and an "empirically conditioned factor" that does not necessarily depend upon us, i.e., is external to us. This latter factor is happiness. A duty "to further the summum bonum as far as it in us lies" (AK 5: 453) can only amount to furthering the component that is up to us, i.e., to pursuing the strictest morality, not universal happiness. Van der Linden wants us to further what is external to us, empirically conditioned, and clearly not entirely in our power (see also point ii). It is in this way that he transforms the summum bonum into a "social ideal." This ideal is perhaps more reasonable than Kant's, but it also amounts to the opposite of Kant's own ideal. At one point van der Linden observes: "Cohen eliminates the distinction between the highest political good and the highest moral good and puts in their place one highest good, a peaceful international order of democratic socialist societies" (164). That seems to

me, more or less, what van der Linden also does. (ii) When van der Linden attempts "to show that each of the formulations of the categorical imperative.., demands that we seek a moral society in which human agents try to make one another happy" (5f.), he clearly makes happiness the criterion for the morality of acts. However, if Kant was opposed to anything in his moral theory, it was precisely to this move. To be sure, his arguments are directed more against egoistic versions of this type of consequentialism, but his arguments can be seen to be directed against collectivist ones as well. For one thing, **Kant was much too skeptical about our ability to predict what will bring about happiness** (be it our own or that of other people) to give it such a central place in his moral theory (see especially Ak 4: 393-97, and 8: 370). Kant is also adamant that man's morality should not be based upon anything depending on "the circumstances in which he is placed" (ibid., 389). And this is one of the main reasons why he held that "from the viewpoint of the people's welfare, no theory properly applies at all; instead, everything rests on practice submissive to experience" (Ak 8: 3o6). Van der Linden's reconstruction transforms Kant's theory into something Kant himself says is impossible. (iii) In one of the late historical pieces on which van der Linden relies so much, Kant expressis verbis rejects the highest good as a moral principle, saying, when "we ask about the principle of morals, the doctrine of the highest good as the ultimate end of a will that is in conformity to its laws can thus be wholly ignored and put aside as episodic" (On the Old Saw: That May Be Right in Theory; Ak 8: 28o). What Kant considers (and, according to the logic of his position, must consider) as inessential and "episodic," thus becomes central in van der Linden's reconstruction. When he tells us "I place politics, history, social conflict, and the moral commitment to change society at the core of Kant's practical philosophy, attempting to undercut the view of ethics as primarily concerned with the struggle between individual duty and inclination" (vii, emphasis mine), he himself tells us precisely what he does.

***Consequentialism trumps deontology*

Lindsay 5 – senior lecturer, faculty of law at Monash University (July 15, "AN EXPLORATION OF THE CONCEPTUAL BASIS OF PRIVACY AND THE IMPLICATIONS FOR THE FUTURE OF AUSTRALIAN PRIVACY LAW," Melbourne University Law Review: Volume 29, 7/15/05, https://www.law.unimelb.edu.au/files/dmfile/29_1_4.pdf) mj

Consequentialist accounts justify privacy insofar as it produces desirable outcomes. Rigorous versions of consequentialism are forms of utilitarianism, whereby outcomes are determined by an aggregation, or maximisation, of individual utilities. Utilitarian-influenced approaches are well-suited to evaluating which of a number of competing interests should prevail by reference to overall results. For example, a strict consequentialist could have no objection to an invasion of privacy that was **necessary to produce a desirable outcome**, such as the preservation of life or an increase in economic welfare. However, pure forms of consequentialism have considerable difficulties in dealing with arguments that rights should be respected regardless of the consequences.68 As a simple example, a consequentialist might consider acceptable the publication of intimate details of an intercepted telephone conversation or, indeed, the placement of surveillance cameras inside a person's home, if the invasion of privacy results in an increase in overall welfare. However, those who have favoured explicitly consequentialist views of privacy have generally not been indirect utilitarians. H J McCloskey, for example, simply regarded the protection of privacy as justified to the extent that it promotes what are, for him, the more fundamental goods of human happiness, justice and liberty.72 This led him to conclude, in general terms, that if concerns about privacy come into conflict with more fundamental concerns regarding liberty of action, **invasions of privacy should be accepted**, and social attitudes adjusted accordingly. If privacy is understood within the context of overall social processes of rationalisation and normalisation, and as integral to struggles over self-definition, the difficulties consequentialist accounts face in taking privacy seriously are comprehensible. In particular, by valuing a purely instrumental concept of reason, welfarism can be seen as privileging impersonal social objectives over human values, such as the ability of individual subjects to define themselves and respect for human dignity. Strict welfarist analysis is therefore completely implicated in processes of rationalisation and normalisation, suggesting that it is especially **ill-suited as a means for analysing the value of privacy.** It is only if the models of the individual subject and of human reason underlying welfarism are enriched in ways suggested by Mill and Sen — by including values such as the ability of the individual to determine his or her own ends — that consequentialism is ever likely to be sympathetic to privacy. The implication of such a broad approach would be to constrain the untrammelled pursuit of welfarist objectives by the

protection of individual rights, however formulated. However, broadening the approach in this way would seem to introduce the universalistic pretensions that plague deontological approaches to privacy.

***Human rights is the epitome of consequentialism*

Çalı 7– B.A., M.A., Ph.D., Lecturer in Human Rights, University College London. She is a Council of Europe expert on the European Convention on Human Rights and was a senior researcher for the British Independent Expert on the United Nations Sub-Commission on the Promotion and Protection of Human Rights in preparation of a study on "Reservations to Human Rights Treaties" between 1999–2002 [Başak Çalı, "Balancing Human Rights? Methodological Problems with Weights, Scales and Proportions", Human Rights Quarterly 29.1 (2007) 251-270, project muse] hk

A specific group of human rights are categorized as qualified rights in political and legal practice because it is a common understanding that such [End Page 257] rights are not and should not be absolute.31 A human right is regarded as absolute when it cannot be overridden under any empirical circumstance whatsoever.32 Any competing consideration that may emerge according to circumstances is ruled out as irrelevant to upholding a human right in practice. The most common examples of absolute rights provisions in international law are freedom from torture, right to due process, and freedom from slavery.33 **These protections call for action from decision makers, independent of the circumstances.** Courts are also under an obligation to ensure that any measure taken by executive authorities does not infringe upon the absolute character of the right.34 Even the existence of exceptional circumstances, such as a state of emergency or an armed conflict, does not suspend this requirement of independent action.35 [End Page 258] Qualified rights, on the other hand, are marked by their lack of absoluteness. They may conflict with other interests that may or may not be protected by human rights. Whether the protection of such rights then should be subject to consequential forms of analysis remains unclear. Human rights protections precisely aim to act as constraints on consequentialist forms of reasoning. Acts of balancing require identification of interests, assigning values to them and ultimately to deciding which interest yields the net benefit. This leads to a contradicting position of subjecting the constraint itself (human rights protections) to a test of consequentialism.36 This position can only be logical if qualified rights, such as that of freedom of expression, freedom of assembly, or freedom of association are thought to be intrinsically different from absolute rights such as freedom from torture and freedom from slavery. This distinction would mean two things: First, qualified human rights are by their nature in a commensurate conflicting relationship with communal aims and interests and are, therefore, context-sensitive. Second, context-sensitive rights are by their nature subject to utilitarian calculations of net benefit. None of these points, however, are coherent with the nature of human rights protections. It is clear that acts of balancing require this central assumption—that conflicts are commensurate. The case-law of the European Court of Human Rights reflects the strong influence of this assumption. The European Court of Human Rights takes striking a fair balance "between the competing interests of the individual and the community as a whole"37 as one of its interpretive principles in assessing qualified human rights claims. This view reduces important questions about human rights to a conflict between the rights claims of a particular individual against the community. Human rights protections do indeed benefit certain persons at certain times. **The nature of human rights protections, however, is not about the interests of a specific person, but those of each and every person**. Every time a human rights protection is upheld, this does mean that a common interest is simultaneously sacrificed. It also does not follow that more of human rights protections mean less protection of common interests. [End Page 259]

***Rights protection is necessary irrespective of majority opinion*

Çalı 7– B.A., M.A., Ph.D., Lecturer in Human Rights, University College London. She is a Council of Europe expert on the European Convention on Human Rights and was a senior researcher for the British Independent Expert on the United Nations Sub-Commission on the Promotion and Protection of Human Rights in preparation of a study on "Reservations to Human Rights Treaties" between 1999–2002 [Başak Çalı, "Balancing Human Rights? Methodological Problems with Weights, Scales and Proportions", Human Rights Quarterly 29.1 (2007) 251-270, project muse] hk

Human rights protections are best conceived, regardless of absolute or qualified forms, to serve their own purpose toward an understanding of common good. The deep values and considerations that back up human rights protections are not important because they maximize an overall good, but because they provide a space for individually-centered concerns in a political society.38 In international law, for example, human rights protections, by definition, concern everyone, obligations erga

omnes.39 In arguing **that human rights are important for each and every individual**, the emphasis should be on the separateness of individuals rather than their aggregate. The practice of the Inter-American Convention regarding freedom of expression,40 for example, suggests that this freedom has a "double effect," belonging to each individual to express and a collective to receive information and ideas.41 Even though this formulation might help to increase the rhetorical importance of freedom of expression, the risk of making rights vulnerable to their perceived importance to the community remains. For example, if a community overwhelmingly decides that it does not consider it to be important to receive information about climate change, should this have an effect on the right of individuals to freedom of expression? When human rights are defined as belonging to each and every individual, it is clear that their existence does not depend on a collective need and the right should be protected despite the lack of collective need or interest. Additionally, balancing—identifying, quantifying, and weighing the interests—is not the only way to address these contextual considerations. Indeed, even the European Court of Human Rights, has employed a range of non-balancing approaches. For example, the European Court of Human [End Page 260] Rights has considered the chilling effect caused by restricting the media's freedom of expression without balancing that right against communal interests.42 This shows a way of thinking about fundamental values behind freedom of expression without seeing this right in a head to head competition with a communal interest. When the Court says that the restriction of freedom of speech for a journalist would have a chilling effect, it is not weighing the right against other interests, but showing why it is important in its own end.43 Engagement with the context, consequences, and history can be undertaken consistent with human rights aims, not necessarily at the expense of them.

Yes War

U.S Russia war is uniquely likely

DeBar 14 (Press.TV citing Don DeBar, political analyst, host and journalist at CPRmetro.org, "US encirclement of Russia setting stage for nuclear war: Analyst", 11/9/14, http://www.presstv.com/detail/2014/11/09/385326/us-moves-make-nuclear-war-possible/, AB)

Political activist Don DeBar believes "the stakes are extremely" high for a nuclear war between Washington and Moscow due to US policy of military encirclement of Russia. "The United States has been advancing towards Russia physically in terms of placement of military resources, they are now parked at the borders of Russia from the Baltics up in the Baltic Sea in the very northwest corner of Russia down to the middle of Ukraine at this point in the southwest part of Russia," he told Press TV on Saturday. "The United States has been committing some very hostile acts towards Russia, attempting to tank its currency, attempting to isolate it economically in general, and Russia has, in turn, been looking elsewhere to find partners for the development that it seeks for its own population," the activist added. These hostile moves, DeBar said, have come at the same time that the Obama administration is pursuing its "pivot" to Asia which is aimed at containing China and giving rise to Japan as a military power. DeBar made the comments after American philosopher Noam Chomsky said that the escalating tensions between the United States and Russia could spark a nuclear war. "China has risen as an economic power. Russia has come back as an economic power, [it]maintains its nuclear weaponry and has been upgrading its military," DeBar said. "As tensions rise, as the law of unintended consequences has greater and greater play and as Chomsky cited the low-risk individual incidents of accidental war-peace planning, as you keep rolling the dice, sooner or later you'll get '7' or '11' and that's the end of humanity," the analyst noted. "The stakes are extremely high. The ironic part is that President Barack Obama got a Nobel Peace Prize at the beginning of his presidency because he had spoken to the need to eliminate nuclear weapons and he is now spending what's going to end up being a trillion dollars over the next 30 years, but hundreds of billions of dollars in the near term to upgrade and expand the power of the American nuclear arsenal," DeBar explained.

MAD doesn't check

Kroeig 14 (Matthew Kroenig, Associate Professor and International Relations Field Chair Department of Government Georgetown University & Nonresident Senior Fellow Brent Scowcroft Center on International Security

The Atlantic Council, "The History of Proliferation Optimism: Does It Have A Future?", February 2014, http://www.matthewkroenig.com/The%20History%20of%20Proliferation%20Optimism_Feb2014.pdf, AB)

Scott Sagan and other contemporary proliferation pessimists have provided systematic and thoroughgoing critiques of the proliferation optimism position.32 Sagan shows that the spread of nuclear weapons leads to greater levels of international instability because: states might conduct preventive strikes on the nuclear facilities of proliferant states, proliferant states might not take the necessary steps to build a secure, second-strike capability, and organizational pathologies within nuclear states could lead to accidental or inadvertent nuclear launch.33 As Frank Gavin writes in his review of the optimism/pessimism debate, "The real problem, however, is that Sagan plays small ball in his debate with Waltz, conceding the big issues. Why not challenge Waltz on his core arguments about deterrence and stability?"34 Rather than repeat the substantial efforts of previous pessimists, therefore, I will take up Gavin's challenge and focus on three big issues. In particular, this section maintains that proliferation optimists: present an oversimplified version of nuclear deterrence theory, follow a line of argumentation that contains an internal logical contradiction, and do not address the concerns of U.S. foreign policymakers. First and foremost, proliferation optimists present an oversimplified view of nuclear deterrence theory. Optimists argue that since the advent of Mutually Assured Destruction (MAD), any nuclear war would mean national suicide and, therefore, no rational leader would ever choose to start one. Furthermore, they argue that the requirements for rationality are not high. Rather, leaders must value their own survival and the survival of their nation and understand that intentionally launching a nuclear war would threaten those values. Many analysts and policymakers attempt to challenge the optimists on their own turf and question whether the leaders of potential proliferant states are fully rational.35 Yet, these debate overlook the fact that, apart from the optimists, leading nuclear deterrence theorists believe that nuclear proliferation contributes to a real risk of nuclear war even in a situation of Mutually Assured Destruction (MAD) among rational states.36 Moreover, realizing that nuclear war is possible does not depend on peculiar beliefs about the possibility of escaping MAD.37 Rather, as we will discuss below, these theorists understand that some risk of nuclear war is necessary in order for deterrence to function. To be sure, in the 1940s, Viner, Brodie, and others argued that MAD rendered war among major powers obsolete, but nuclear deterrence theory soon advanced beyond that simple understanding.38 After all, great power political competition does not end with nuclear weapons. And nuclear-armed states still seek to threaten nuclear-armed adversaries. States cannot credibly threaten to launch a suicidal nuclear war, but they still want to coerce their adversaries. This leads to a credibility problem: how can states credibly threaten a nuclear-armed opponent? Since the 1960s, academic nuclear deterrence theory has been devoted almost exclusively to answering this question.39 And their answers do not give us reasons to be optimistic.

It's totally possible – seven independent reasons

-structural rivalries and stress
-belief that war is impossible
-thick interdependence
-rising nationalism and competing claims
-powerful military establishments
-diplomatic alliances
-temptation to maintain dominance

Allison 14 (Graham Allison, director of the Belfer Center for Science and International Affairs at the Harvard Kennedy School, "Just How Likely Is Another World War?", 6/30/14, The Atlantic, http://www.theatlantic.com/international/archive/2014/07/just-how-likely-is-another-world-war/375320/, AB)

This essay attempts to use the "May Method" to highlight seven salient similarities and seven instructive differences between the challenges confronting Chinese and American leaders today and those facing world leaders in 1914. While most of the similarities make the possibility of conflict today more plausible that it might otherwise seem, and most of the differences make conflict seem less plausible, instructively, some have the opposite effect. 1. "Thucydides's Trap": structural stress that inevitably occurs when a rapidly rising power rivals a ruling power. As Thucydides observed about ancient Greece, an ascendant Athens naturally became more ambitious, assertive, arrogant, and even hubristic. Predictably, this instilled fear, anxiety, and defensiveness among the leaders of Sparta. Accustomed to economic primacy, naval dominance, and an empire on which the sun

never set, Britain in 1914 viewed with alarm the unified German Reich that had overtaken it in industrial production and research, that was demanding a greater sphere of influence, and that was expanding its military capability to include a navy that could challenge Britain's control of the seas. In the decade before the war, this led Britain to abandon a century of "splendid isolation" to tighten entanglements with France and then Russia. During the same period, German military planners watched with alarm as Russia rushed to complete railways that could allow it to move forces rapidly to the borders of Germany and its faltering Austro-Hungarian ally. In 2014, what for most Americans is our natural, God-given position as "Number One" is being challenged by an emerging China on track to surpass the United States in the next decade as the world's largest economy. As China has grown more powerful, it has become more active and even aggressive in its neighborhood, particularly in what it believes are the rightly named "China" seas to its east and south. Fearful neighbors from Japan and the Philippines to Vietnam naturally look to the U.S. for support in its role as the guardian of what since World War II has been an American Pax Pacifica. 2. The virtual inconceivability of "total" war. In 1914, aside from occasional small wars and colonial smackdowns, war was "out of fashion." The best-selling book of the era by Norman Angell argued that war was a "great illusion," since the nominal winner would certainly lose more than it could possibly gain. In 2014, the "long peace" since World War II, reinforced by nuclear weapons and economic globalization, makes all-out war between great powers so obviously self-defeating that it seems unthinkable. 3. Thick interdependence: economic, social, and political. In 1914, the U.K. and Germany were each other's major European trading partner and principal foreign investor. King George and Kaiser Wilhelm were first cousins, the latter having sat by the deathbed of his grandmother, Queen Victoria, in 1901, and marched as second only to George at the funeral of George's father, King Edward VII, in 1910. Elites of both societies studied at each other's major universities, were partners in business, and socialized together. In 2014, China is the United States' second-largest trading partner, the U.S. the largest buyer of Chinese exports, and China the largest foreign holder of American debt. A quarter of a million Chinese students study annually in American universities, including most recently Chinese President Xi Jinping's only daughter. 4. Rising nationalism that accentuates territorial disputes. In 1914, as the Ottoman Empire unraveled, Serbian nationalists aspired to create a greater Serbia, and Russia and Austria-Hungary competed for influence among the Ottoman successor states in the Balkans. Meanwhile, resurgent Germans planned for a larger Germany and French patriots dreamed about recapturing Alsace-Lorraine, provinces taken by Germany from France after the Franco-Prussian War of 1870–71. In 2014, China's claim to the Senkaku Islands administered by Japan in the last China Sea, and the "9-dash line" by which it asserts ownership of the entire South China Sea, are reflections of ambitions that are defining new facts in the surrounding waters, exciting nationalism among its neighbors and in its own population. 5. Powerful military establishments focused on a primary enemy for the purposes of planning and buying (and justifying defense budgets). In 1914, Britain and Germany's militaries viewed each other as major threats, Germany and Russia saw the other as major rivals, and France was focused on the danger posed by Germany. In 1907, as Germany's naval expansion approached the point at which it could challenge British naval primacy, the British prime minister asked the leading analyst in the foreign ministry for a memorandum "on the present State of British relations with France and Germany." That now-famous document written by Eyre Crowe predicted that Germany would not only establish the strongest army on the continent, but also "build as powerful a navy as she can afford." Germany's pursuit of what the memorandum called "political hegemony and maritime ascendency" would pose a threat to the "independence of her neighbors and ultimately the existence of England." Today, the U.S. Department of Defense plans against something it calls the "Anti-Access/Area Denial threat," a thinly veiled "you know who" for China. Since its humiliation in 1996, when it was forced to back down from threats to Taiwan after the U.S. sent two aircraft carriers to support Taiwan, China has planned, built, and trained to push U.S. naval forces back beyond Taiwan to the first island chain and eventually to the second. 6. Entangling alliances that create what Henry Kissinger has called a "diplomatic doomsday machine." In 1914, a web of complex alliance commitments threatened rapid escalation into Great Power war. After unifying Germany in the late nineteenth century, Chancellor Otto von Bismarck constructed a network of alliances that would keep the peace in Europe while isolating Germany's principal enemy, France. Kaiser Wilhelm wrecked Bismarck's finely tuned alliance structure by refusing to extend Germany's alliance with Russia in 1890. Two years later, Russia allied with France. This led Germany to strengthen its ties to Austria-Hungary, and Britain to entertain deeper entanglement with both France and Russia. In 2014, in East Asia, the United States has many allies, China few. In 2014, in East Asia, the United States has many allies, China few. American obligations and operational plans cover a spectrum from the U.S.-Japan Treaty of Mutual Cooperation and Security, which obligates the U.S. to regard any attack upon Japan as an attack on the U.S., to agreements with the Philippines and others that require only consultation and support. As an assertive

China defines air identification zones, drills for oil and gas in contested areas, excludes other states' ships from waters around disputed islands, and operates ships and aircraft to redraw "rules of the road," it becomes easier to imagine scenarios in which mistakes or miscalculation lead to results no one would have chosen. 7. Temptation of a coup de main to radically improve power and prestige. In 1914, a declining Austria-Hungary faced rising, Russian-backed Pan-Slavism in the Balkans. Seeing Serbia as the epicenter of Pan-Slavism, Emperor Franz Joseph imagined that this menace could be contained by a decisive defeat of Serbia. The assassination of his heir, Franz Ferdinand, provided an opportunity. In 2014, Shinzo Abe seeks to reverse Japan's "lost decades." A quarter-century ago, Japan appeared to be on the threshold of becoming "Number One." Since then, it has stagnated economically and become almost irrelevant in international politics. Abe's program for revival thus includes not only "Abenomics," but also restoration of Japanese influence in the world, including revision of the constitution and expansion of Japan's military forces to meet what he explicitly calls the "China threat." In sum, those who see reminders of events a century ago in developments today are not deluded.

Solvency

1NC – Amendments Ineffective

Constitutional Amendments are ineffective and solved through other processes

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

The consequence of the difficulty of Article V has been to reroute political actors pursuing constitutional change from formal to informal amendment. Today, the battleground for constitutional change is what Bruce Ackerman calls a "transformative appointment[] to the Supreme Court."139 Ackerman explains that Article V's formal model of dual federalism, requiring assent from both national and state institutions, has been replaced by a new informal method of constitutional change that relies on the assent of only national institutions.140 The Electoral College selects the President in a national election, which in turn authorizes the President's use of the appointment power to trigger a "decisive break with the constitutional achievements of the past generation."141 The United States Senate then debates the merits of the President's Supreme Court nominee.142 And the Supreme Court subsequently either adopts or rejects an informal constitutional amendment intended to change the Constitution fundamentally.143 This new model of informal amendment codifies constitutional change in "transformative judicial opinions that self-consciously repudiate preexisting doctrinal premises and announce new principles that redefine the American people's constitutional identity,"144 rather than in a formal written change to the constitutional text. The difficulty of formally amending the Constitution has accordingly pushed "a significant amount of constitutional change off the books,"145 and forced political actors to update the Constitution informally through non-Article V methods,146 leaving the actual constitutional text unchanged. As Lawrence Church observes, the amendment procedures under Article V are "too cumbersome and erratic to serve as the sole vehicle for constitutional development in a complex and rapidly changing society."147 There are several other more flexible modes of constitutional change that do not rely on the mechanistic procedures of Article V in order to keep the constitutional regime current and reflective of new social and political equilibria. They result in unwritten changes to the Constitution that may be as constraining as a formal amendment. That the United States Constitution is both written and unwritten is therefore now uncontroversial.148 The Constitution is "much more, and much richer, than the written document."149 Though we cannot deny the importance of the constitutional text, it "is only one component of the country's actual constitution."150 The written constitution cannot completely reduce to writing the principles of natural rights that form our higher law and against which we judge the moral legitimacy of our positive law.151 Nor can it reflect the political forces, democratic traditions, and judicial precedent that constitute the

Constitution.152 Whether something is constitutional therefore depends less on where or whether it is codified than whether political actors perceive it as politically legitimate and conform their conduct to it.153

2NC – Amendments Ineffective

Article V amendments are too capital-intensive to be relevant

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

The pace of formal amendment in the United States is decelerating. Article V remains invoked by political actors but its successful use has declined since its entrenchment. Of the twenty-seven formal amendments inscribed in the text of the Constitution since its ratification in 1789, fifteen were ratified from the founding through 1870.102 The first ten, the Bill of Rights, were ratified in the same year, 1791.103 From 1871 through 1933, there were six formal amendments.104 From 1934 through 1967, there were four formal amendments.105 From 1968 through 1991, there was only one formal amendment.106 And since 1992, over twenty years ago, there has likewise been only one formal amendment.107 Article V has in fact become so infrequently used that Article V amendments have even been described as irrelevant.108 In addition to the decelerating pace of formal amendment, the content of formal amendment has changed as well. As John Vile observes, "[m]ost amendments ratified over the course of the last sixty years have dealt with minor structural features of the Constitution or with voting rights."109 András Sajó agrees, observing that since the Reconstruction Amendments, "amendments have been concerned with the technique of government," with the exception of the Prohibition Amendment, which was an effort to entrench morality.110 The changing orientation of successful uses of Article V compelled Robert Dixon, writing in 1968, to refer to Article V as the "comatose article of our living constitution."111 Whether it is dead or comatose can be answered by asking whether Article V has fallen into either disuse or desuetude. But first let us recognize that the declining use of Article V is attributable to its difficulty.

1NC – States Say No

States would probably not all agree

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

Today, Article V's state supermajority ratification threshold has become functionally even more difficult to achieve as a result of the expansion of the Union. As Rosalind Dixon explains, the increased number of states – from thirteen in 1789 to fifty since 1967 – has changed the denominator for Article V, which has increased the Constitution's amendment difficulty.128 Dixon explains: "All else being equal, this change in the denominator for Article V has implied a directly proportionate increase in the difficulty of ratifying proposed amendments."129 Dixon furthermore observes that today's fifty-state denominator under Article V would be equivalent to a founding-era state supermajority ratification threshold lower than two-thirds: "On one calculation, if one were to try to adjust for this change in the denominator for Article V, the functional equivalent to the 75% super-majority requirement adopted by the framers would in fact now be as low as 62%."130 Thomas Jefferson predicted this denominator problem, in 1823, when he wrote: [T]he States are now so numerous that I despair of ever seeing another amendment to the Constitution, although the innovations of time will certainly call, and now already call, for some, and especially the smaller States are so numerous as to render desperate every hope of obtaining a sufficient number of them in favor of "Phocion's" proposition.131 The Constitution's amendment difficulty therefore derives partly from Article V's structure.

75% of states need to support it for it to pass

Constitution 87, Article V of the Constitution, 1787, http://www.archives.gov/federal-register/constitution/article-v.html, AB)

The Congress, whenever two thirds of both houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two thirds of the several states, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three fourths of the several states, or by conventions in three fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the ninth section of the first article; and that no state, without its consent, shall be deprived of its equal suffrage in the Senate.

Only 10 states support privacy rights

NCSL 14, National Conference of State Legislatures, "PRIVACY PROTECTIONS IN STATE CONSTITUTIONS" 12/12/14, http://www.ncsl.org/research/telecommunications-and-information-technology/privacy-protections-in-state-constitutions.aspx, AB)

Constitutions in 10 states—Alaska, Arizona, California, Florida, Hawaii, Illinois, Louisiana, Montana, South Carolina and Washington—have explicit provisions relating to a right to privacy. The privacy protections afforded in some of these states mirror the Fourth Amendment of the U.S. Constitution relating to search and seizure or government surveillance, but add more specific references to privacy [shown in italics]. In addition, more general provisions in other states have been interpreted by courts to have established privacy rights or various types.

1NC – Policies Fail

Privacy policies fail- only are created to protect corporate interests.

Erison 6 (Richard Victor Ericson, professor with the Centre of Criminology at the University of Toronto , "The New Politics of Surveillance and Visibility,"2006, from The New Politics of Surveillance and Visibility,sl)

Discussions about privacy rights often proceed as if privacy is itself a stable phenomena that must be protected from incursions or erosion. Such a conceptualization tends to downplay the historical variability and political contestation associated with the precise content of 'privacy.' Claims to privacy and secrecy are political efforts to restrict the ability of others to see or know specific things. One of the more intriguing developments in this regard concerns how powerful interests are now appealing to such rights. The synoptic capabilities of contemporary surveillance have produced a greater number of powerful individuals and institutions with an interest in avoiding new forms of scrutiny. As such, privacy rights that were originally envisioned as a means for individuals to secure a personal space free from state scrutiny are being reconfigured by corporate and state interests. Corporations routinely appeal to legal privacy and secrecy protections. One of the more ironic of these involves efforts by firms that conduct massive commercial data surveillance to restrict the release of the market segment profiles that they derive from such information on the grounds that these are 'trade secrets.' The ongoing war on terror accentuates how the state is also concerned with carving out a sphere of privacy, even as it tries to render the actions of others more transparent. For example, the US. Patriot Act prohibits Internet service providers from disclosing the extent to which they have established governmental Internet monitoring measures. The US. administration has refused to meet Congressional demands for information regarding the implementation of the Patriot Act. The Pentagon regularly invokes claims to 'national security' to restrict public awareness of military matters, in-duding the capabilities of its surveillance technologies. Hence, legal claims to privacy are being invoked as a means to render the actions of powerful interests more opaque at the same time that these same institutions are making the lives of others more transparent. Some see this trend towards non-reciprocal visibility as one of the greatest inequities in contemporary surveillance (Brin 1998).

Privacy Version 2 Northwestern

CPs

Congress Legislation CP

1NC

CP text: The United States federal government should increase the evidentiary threshold under Section 3123 to a reasonable suspicion standard.

This solves privacy – provides clear limitations on surveillance

Richard M. **Thompson 14** – (Legislative Attorney at Congressional Research Service, "The Fourth Amendment Third-Party Doctrine", 6/5/14, Congressional Research Service, http://fas.org/sgp/crs/misc/R43586.pdf, AB)

Notwithstanding the concurring opinions in Jones, the bulk of Supreme Court and lower federal court precedent have left most non-content information unprotected by the Fourth Amendment. In some instances, Congress filled this void by creating varying levels of privacy protection for this type of non-content information. However, these protections are in the main not as robust as the warrant requirement, and in some instances, searches may be justified by little more than "official curiosity."171 Seven years after the Court handed down Smith and ruled that government access to telephone toll records was not covered by the Fourth Amendment, Congress enacted as part of the Electronic Communications Privacy Act of 1986 (ECPA) several provisions requiring the government to seek a court order before using a pen register or trap and trace device.172 Again, these devices allow the government to gather dialed telephone numbers and email addressing information, among other non-content information.173 Under 18 U.S.C. § 3123, a court "shall issue an ex parte order authorizing the installation and use of a pen register or trap and trace device ... if the court finds that the attorney for the Government has certified that the information likely to be obtained by such installation and use is relevant to an ongoing criminal investigation."174 A few things should be noted about this provision. First, the "shall" language removes discretion from the judge; if the judge finds the government has made the required certification, he must issue the order.175 Second, while the court must ensure that the government has made the proper certification, ECPA does not require an "independent judicial inquiry into the veracity of the attested facts."176 This means that the judge will not make an independent assessment whether the relevancy standard has been met, but only that the government has made the proper certification. One district court has noted that "the extremely limited judicial review required by [the pen register statute] is intended merely to safeguard against purely random use of this device."177 One magistrate judge went so far as to describe his role under the pen register statute as a "rubber stamp" limited to "proofreading errors," and that "without independent judicial review, the authorization of pen registers is subject to misuse and abuse."178 Third, the relevancy standard, which again the government, and not the court, determines if it has been met, is a "far from burdensome" legal standard.179 The Supreme Court has held, at least in the subpoena context, that information sought is not relevant only if "there is no reasonable possibility that the category of materials the Government seeks will produce information relevant to the general subject" of the investigation.180 In light of this relatively lax standard, several prominent commentators on privacy and technology have suggested that Congress should increase the evidentiary threshold under Section 3123 from mere relevance to at least a reasonable suspicion standard similar to that used for accessing certain stored communications.1 Also included in ECPA is the Stored Communications Act (SCA), in which Congress provided varying degrees of protection to information historically subject to the third-party doctrine and, thus, outside the reach of the Fourth Amendment. Under 18 U.S.C. § 2703(c), service providers must hand over "records or other information pertaining to a subscriber" so long as the government can establish "specific and articulable facts" that the records are "relevant and material" to an ongoing criminal investigation.182 This is akin to the Terry reasonable suspicion standard—it is lower than probable cause but does require the government to articulate its basis to believe that the information is connected to criminal activity.183 This standard has been applied to data such as the to/from address line in an email or the IP addresses of websites a person has visited. Some courts have construed Section 2703(d) in conjunction with the pen register statute to allow the government access to cell site location information.184 Section 2703(c)(2) requires the providers to hand over other customer information such as their name, address,

telephone calling records, length of service, telephone number, and means and source of payments, including credit card or bank account numbers with either an administrative, grand jury, or trial subpoena.185 Additionally, Congress has passed more targeted privacy protection laws. For instance, the privacy of cable subscribers is safeguarded under the Cable Communications Privacy Act of 1984,186 and the privacy of video store customers under the Video Privacy Protection Act.187 More recently, various Members of Congress have sought to temper the reach of the third-party doctrine with respect to transactional data. Several days after the Edward Snowden leaks became public, Senator Paul filed the "Fourth Amendment Restoration Act of 2013" (S. 1121) in an effort to "stop the National Security Agency from spying on citizens of the United States[.]"188 This bill would require that "[t]he Fourth Amendment to the Constitution shall not be construed to allow any agency of the United States Government to search the phone records of Americans without a warrant based upon probable cause."189 While dictating to the judiciary what the Fourth Amendment should and should not protect may be beyond Congress's constitutional power,190 **Congress clearly can play a role in setting substantive and procedural limitations on government surveillance authorities.** For instance, Senator Paul has introduced a similar bill, the "Fourth Amendment Preservation and Protection Act of 2013" (S. 1037), which would prohibit federal, state, and local government officials from accessing information relating to an individual held by a third party in a "system of records."191 Other congressional measures would alter the third-party doctrine in a more targeted way. Several location monitoring bills would, for instance, prohibit companies from sharing their customers' location information unless the government obtained a warrant or one of several limited exceptions applied.192 So what does the future have in store for the third-party doctrine and the government's collection of non-content, transactional data? At this point, there appears to be only one solid vote on the Court in Justice Sotomayor for eliminating or significantly reducing the scope of this doctrine. Although there are hints in Justice Alito's Jones opinion that he and the three members of his concurrence are ready to reconsider this rule when it comes to pervasive government surveillance, his rationale was left somewhat underdeveloped. It will take future opinions to get a better sense of whether or how far these Justices are willing to go to limit government access to non-content information held in the hands of third parties. In the meantime, the lower federal courts might continue to limit or distinguish the third-party doctrine in specific and narrow instances. For instance, in the NSA telephone metadata case, Judge Leon limited Smith to its facts and held that it did not apply to this more comprehensive data collection program.193 Likewise**, if and when the Supreme Court is asked to reconsider the scope of the third-party doctrine, it is more likely to carve out specific exceptions than to overturn it in its entirety**. This approach would permit the courts to engage in a more nuanced, normative approach to analyzing the privacy interests implicated by accessing records derived from transactions between people and other various entities. Another possibility is for Congress to act. Justice Alito observed in Jones that "[i]in circumstances involving dramatic technological change, the best solution to privacy concerns may be legislative" as "a legislative body is well situated to gauge changing public attitudes, to draw detailed lines, and to balance privacy and public safety in a comprehensive way."194 This argument that Congress is best suited to address the nuanced policy questions that privacy and security entails has been expressed by commentators as well.195 Like the courts, it appears unlikely that Congress would be willing to completely eliminate the third-party doctrine. On the other hand, Congress may be more inclined to engage in a subject-by-subject approach, in which Congress limits the third-party doctrine in certain areas. Congress provided statutory protection for telephone toll records in the pen register/trap and trace statute; for Internet metadata in the Stored Communications Act; and for video customer records in the Video Privacy Protection Act. It could enact similar protection for other subject areas where non-content information is shared with companies as a necessary part of doing business.

2NC

Congress can modify the 4th amendment- this solves

Rosen and Wittes 11, Jeffrey and Benjamin, professor of law at The George Washington University and senior fellow in Governance Studies at The Brookings Institution, "Constitution 3.

0 : Freedom and Technological Change," Brookings Institution Press, 2011. ProQuest ebrary. Web. 30 June 2015.

The final question is what branch of government will create the use restrictions I have in mind. Can courts do this in the name of the Fourth Amendment, or is it up to Congress? In my view, Congress is the most likely regulator. The Fourth Amendment prohibits unreasonable searches and seizures. Use limitations are neither searches nor seizures, however. They are restrictions on what the government can do with information after it has searched for and seized it. There is little in the way of constitutional text, history, or precedent that supports recognizing use restrictions as part of Fourth Amendment protections. Granted, it is possible to creatively reimagine Fourth Amendment law in ways that recognize use restrictions. As far back as 1995, Harold Krent made such an argument. 1 Krent reasoned that obtaining information is a seizure and that the subsequent use of the information— including downstream disclosures of it— could make the seizure "unreasonable." In other words, instead of saying that searches and seizures occur at a specific time, they could be deemed to occur over a period of time. All uses of information would be required to be reasonable, and courts could distinguish between acceptable and unacceptable uses of information according to their reasonableness. The argument is creative, but I think it is too far a stretch from existing doctrine to expect courts to adopt it. In my view, there are two basic problems. First, most of the information collected by the government is not protected under current Fourth Amendment law. Collecting third-party records is neither a search nor a seizure (which is why they are frequently collected; information that is protected by the Fourth Amendment is collected only rarely). Under Krent's proposal, however, presumably we would need to overhaul that doctrine to make all evidence collection a seizure to enable courts to then pass on the reasonableness of the seizure. If we took that step, however, we would need an entirely new doctrine on what seizures are reasonable, quite apart from downstream uses. This would require a fairly dramatic overhaul of existing Fourth Amendment law, all to enable use restrictions. Second, disclosures of information come in so many shapes and sizes that courts would have little basis on which to distinguish reasonable from unreasonable uses. Every database is different, every data point is different, and every disclosure is different. The kind of fine-grained reasonableness inquiry called for by Fourth Amendment law would leave judges with few clear guideposts or historical precedents on which to distinguish uses that violate the Fourth Amendment from those that do not. For both of these reasons, recognizing use restrictions in Fourth Amendment law may create more problems than it solves. At the very least, we should not expect courts to take such a leap any time soon. In contrast, legislatures are well equipped to enact use restrictions. They can promulgate bright-line rules concerning information collected under specific government powers, and they can explain the scope of the limitation and the contexts in which it is triggered. Furthermore, they can legislate use restrictions at the same time as they enact the statutes authorizing the evidence collection. That way, use restrictions can be a part of the original statutory design, rather than something imposed years later by the

State Drafting CP

1NC Shell: State Drafting CP

CP Text: The fifty states and all relevant territories should draft an amendment expressly guaranteeing a right to informational privacy, then advocate and hold a voluntary convention to engage in a non-binding amendment proposal for this amendment

It solves and competes – it's distinct from regular procedure which shields the link to PTX since Congress isn't involved

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

There is a way to address the defects of the national convention approach. The nation could adopt an amendment process that avoids the problems of a runaway convention and most of the other uncertainties while also depriving Congress of the ability to block amendments. Under this reformed amendment process, the state legislatures would draft the amendment themselves rather than have a convention draft it. Once two-thirds of the state legislatures had approved the same specific language for an amendment, that amendment would thereby be formally proposed. This would trigger the ratification stage, which would require, as it does now, three-quarters of the states to ratify a constitutional amendment. This simple version of the reform could be improved in three ways. First, to facilitate deliberation and coordination, the amendment process would specifically authorize an advisory convention among the states so that they could discuss, in a nonbinding way, possible amendments to propose. Second, to prevent the small states from having excessive power relative to their populations, the voting rule for ratification should be changed so that each state's ratification does not count equally, but instead is measured based on its electoral votes. Third, to ensure that the ratification decision is made by a different entity than the state legislatures that propose the amendment, ratification would be decided by either state conventions or the people of the states through ballot measures.

2NC Solvency: States

Solves from the states alone

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

In proposing this reform, I will rely on the normative approach that I outlined earlier. In particular, I will assume that the best way to pass constitutional provisions is through a strict supermajority process that uses one entity to propose the amendment and another to ratify it. Yet, I will make one significant adjustment to this normative approach—limiting my proposals to those that are likely to be attractive to state legislatures. As I discuss in the next section, Congress is not likely to amend the Constitution to eliminate its veto, but the state legislatures might call a convention to increase their power. For state legislatures to do this, however, the amendment procedure has to be attractive to them.116 My goal in this Article is not merely to explore the normative defects of the broken convention process. It is also to show that a reform is available that would solve the problem and that could conceivably be enacted under the existing system. Thus, focusing on reforms that might be adopted is not an arbitrary limitation, but one that is essential to my purposes.

It solves and ensures passage

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

The overall effect of the political controls would be significant. In my view, they would operate to strongly discourage the passage of nonconforming amendments and to provide a reasonably strong chance that a state drafting amendment would, if it were actually popular, be enacted. While there is no single aspect of the process that guarantees these results, the combination of effects is likely to be powerful. First, the state agreement largely eliminates the coordination problems and therefore assures that if two-thirds of the states apply, a convention will be called. Second, the joint strategy of the states to write a specific amendment, to announce that a runaway convention would be illegal and improper, to select sympathetic convention delegates, and to attempt to block any nonconforming amendment at the ratification stage should have a significant effect in both blocking a runaway convention and in promoting passage of the state drafting amendment.

2NC Solvency: Coordination

The CP solves coordination problems

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

The state legislatures could address these difficulties by combining elements of the state drafting procedure with the existing national convention approach. First, the states should hold a voluntary convention in order to agree on a single specific amendment and a strategy for adopting it. By proposing a single specific amendment, the states would significantly reduce the coordination problems among the states and between the states and Congress. With two-thirds of the state legislatures calling for the exact same amendment, Congress would have no discretion to argue that the applications were not for the same subject.

AT: CP = Watered Down

No deficits, reforms are just as successful and any issues are insignificant

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

Obviously, this focus places limits on the normative attractiveness of the reforms that are available. If the state legislatures would be unwilling to enact good reforms, then no good reform could occur. Fortunately, I do not believe this is a significant problem. Given my assumption that a strict supermajoritarian process that uses two entities is desirable, the reform I propose here is close to what one might regard as the ideal. While the need for state legislative enthusiasm does require adopting a less than ideal approach, the defects are not so large as to make the proposal unattractive. The best is sometimes the enemy of the good. It makes sense, however, to address these possibly superior alternatives, which state legislatures are unlikely to adopt, after discussing the reform proposal.

AT: Runaways bad / Links to PTX

Solves and ensures no runaway failure or Congressional backlash

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

To address this problem, it would be useful for the states to hold a convention, but to do so in a way that avoids the pitfalls of the existing convention method. The Constitution ought to authorize conventions that are both voluntary and advisory. A group of states could choose to hold a convention whenever they deemed it advisable, but no state would be required to attend. The convention would not have any binding powers. Instead, it would allow the states to debate the merits of different proposals. It would also allow them to assess the popularity of different proposals and to compromise on a single amendment to be considered by each state legislature. A successful convention would endorse a single proposal that each state legislature could then approve. This type of convention would avoid the problems that afflict national conventions under the existing convention approach. First, it could not result in a runaway convention. The convention itself would have no power and its endorsement therefore could not allow a proposal to avoid state scrutiny. There also could be no runaway convention because proposals would result only from the actions of the state legislatures. Second, calling a convention would not require the states to agree on a single subject. A convention would not require specification of a subject and the delegates could discuss whatever they deemed important. But because the convention would have no power, it would have an incentive to discuss subjects that the state legislatures were interested in. Third, there would be no need for the convention to agree on specific voting rules or voting rights. While the convention might want to do so, nothing significant would turn on it since it would be an advisory body. The convention could report its votes in a variety ways, tabulating them based on state population, state equality, or some combination. With this information, the state legislatures would then be in a position to determine which proposals had significant support and to decide whether to formally endorse those proposals. Finally, there would be no problem of congressional sabotage of the convention because Congress would have no authority over it.

AT: Links to PTX

Congress doesn't even need to authorize them if the states agree to it

Michael B. **Rappaport 10**, Hugh and Hazel Darling Foundation Professor of Law, Director, Center for the Study of Constitutional Originalism, "REFORMING ARTICLE V: THE PROBLEMS CREATED BY THE NATIONAL CONVENTION AMENDMENT METHOD AND HOW TO FIX THEM", November 2010, VIRGINIA LAW REVIEW VOLUME 96 , NUMBER 7, http://www.virginialawreview.org/sites/virginialawreview.org/files/1509_1.pdf, AB)

If at least two-thirds of the states agreed to the application, this would eliminate most of the discretion that Congress ordinarily exercises when there are calls for a limited convention. First, with two-thirds of the states calling for the same convention, Congress would not have to decide whether state applications that differed from one another should be interpreted as calling for a single limited convention. Second, this proposal would also address the situation where Congress holds that there are no limited conventions.132 The contingency portion of this application would address that possibility and require Congress, in those circumstances, to call an unlimited convention. Thus, this proposed application would largely eliminate the two main ways that Congress might hold that applications for a limited convention did not actually require such a convention to be called.

AT: Say No

We don't need all states to say yes to win – a substantial number is sufficient to pass the plan – empirics prove controversy doesn't prevent passage

Alan **Greenblatt 13**, governmental and political reporter at NPR and won the National Press Club's Sandy Hume award for political journalism while reporting for Congressional Quarterly, "Failure To Ratify: During Amendment Battles, Some States Opt To Watch," 2/21/13, http://www.npr.org/sections/itsallpolitics/2013/02/20/172495803/failure-to-ratify-during-amendment-battles-some-states-opt-to-watch, az

Mississippi has received lots of attention this week for finally having ratified the 13th Amendment, which abolished slavery. But **the state is hardly alone in being slow about blessing some long-established national principle**. **After a sufficient number of states have ratified an amendment, it can feel like a moot point for legislatures to give belated approval to laws that are already in effect**. "Legislative calendars are crowded, and arguing over settled matters isn't a good use of time," says Larry Sabato, director of the University of Virginia Center for Politics. Remember from civics class how constitutional amendments are ratified? Two-thirds of both chambers of Congress approve a resolution, which is then sent to the states. If three-quarters of them pass the amendment within a set period of time, it's enshrined into the Constitution. 'They Missed The Boat' This has happened on 27 of the 33 occasions that Congress has sent amendments out to the states. Of the six amendments submitted to the states that failed to attract the needed support, the most recent came in 1985, when time ran out for states to ratify an amendment giving full congressional representation to the District of **Columbia. Once an amendment has been passed by three-quarters of the states, the others need not bother; it's settled law.** Lots of states have withheld approval of amendments that have already achieved the support needed for ratification. For example, four states — Connecticut, Rhode Island, Vermont and Utah — have never ratified the 16th Amendment, allowing the imposition of the federal income tax. Their residents still pay up come April 15, though. "Massachusetts, Georgia and Connecticut didn't ratify the first 10 amendments until the late 1930s" — actually, 1939 — "about the time that the Bill of Rights became a big deal in the United States," says Pauline Maier, an MIT historian and author of Ratification. "They missed the boat in 1789-91." After the amendment to repeal Prohibition was rapidly passed by the necessary 36 states in 1933, only a couple of the states that had missed the boat ever bothered with it. "Maybe they felt they didn't need to, because other states had already repealed it," says Florence M. Jumonville, a historian and librarian at the University of New Orleans. Reluctant Rhode Island But no state, it seems, has been as reluctant to sign off on constitutional provisions as Rhode Island. **Some appear to be cases where the state's vote wasn't needed, such as the 16th Amendment and the 22nd Amendment (two-term limits for presidents).** Rhode Island, though, had boycotted the Constitutional Convention and originally rejected the Constitution itself. It was the last of the 13 original colonies to approve the founding document, in part because of a long-forgotten argument over paper money. "They already felt they had just fought a war to get out from one distant government, and they didn't want to be under another one," says Al Klyberg, former director of the Rhode Island Historical Society. Rhode Island later pushed hard against the 17th Amendment, which created direct election of U.S. senators. Prior to its adoption in 1913, senators were chosen by state legislatures. The old system suited Rhode Island. Thanks to the clubby atmosphere it created in the Senate, Rhode Island Republican Nelson Aldrich so dominated the body that he was often referred to as the "general manager of the United States." Also, letting the Legislature pick senators ensured GOP dominance within the state. Rural towns dominated by the GOP had disproportionate representation in the state

Legislature and hadn't selected a Democratic senator since 1850 (prior to the Republican Party's founding). "It was very clear why the General Assembly would fail to ratify that amendment," says Patrick T. Conley, historian laureate of the state. "It would be relinquishing power." Rhode Island also initially resisted the 15th Amendment, which (in theory, upon ratification in 1870) guaranteed voting rights for African-American men. One of its senators had already helped water down its language during congressional consideration, so that it didn't address discrimination based on nationality or ethnicity. Still, Rhode Island officials worried that it might interfere with the state's practice of requiring naturalized citizens to own property before they could vote. "There was a big anti-Irish sentiment to Rhode Island's reticence to amending," Conley says. 'Feel-Good Ratification' Ultimately, pressure was put on the state because its approval was needed for ratification, due to opposition from Southern states as well as Oregon and California. Those states were reluctant to ratify for fear the franchise might be extended to citizens of Chinese ancestry; they didn't get around to ratifying the amendment until 1959 and 1962, respectively. A number of states have played catch-up in this way, approving amendments decades after they had become part of the Constitution. Tennessee, for example, didn't approve the 15th Amendment until 1997, while Maryland ratified the 17th Amendment just last year. "This is what you might call a feel-good ratification," says Richard Bernstein, the author of Amending America. "They're trying to make amends for having missed making it part of the Constitution the first time." But **it's also a reminder that constitutional amendments — even though they must achieve some sort of consensus because of the supermajority vote requirements for passage — were often highly controversial in their day.** There were reasons Rhode Island didn't want to approve direct election of senators, or Mississippi didn't vote to abolish slavery back in the 1860s. "Virtually all of the amendments were controversial in some way," says Bernstein, who teaches history and political science at City College of New York, "even the Bill of Rights itself."

State constitutions sufficient to protect from infringing surveillance - Florida's 100 new laws prove

Jenna **Buzzacco-Foerster 6/30**, "More than 100 new state laws take effect Wednesday," 6/30/15, http://www.tcpalm.com/news/politics/legislative-session-2015/more-than-100-new-state-laws-take-effect-wednesday_04854714, AZ

A law aimed at protecting Floridians from unwanted surveillance is one of more than 100 that take effect Wednesday. The law — dubbed the Freedom from Unwarranted Surveillance Act — spells out that unmanned aerial drones can't be used for surveillance. It also says when devices can be used.

"From my standpoint, I think it's a good start," said Stephen Myers, owner of Angel Eyes UAV in Naples. "It's a good beginning." Drones can be used to assess property taxes, for aerial mapping, and to conduct environmental monitoring. The law also says that drones can be used by a person licensed by the state to perform "reasonable tasks within the scope" of the person's job. Myers said that could mean insurance companies can use drones for roof inspections or to inspect large properties, like golf courses, for damage following a storm.

Rep. Ray Rodrigues, R-Estero, said he supported the law because it protected Floridians' privacy, while still allowing some commercial uses.

"We've seen the technology for drones evolve rather rapidly and the technology has exceeded the statutory privacy protections," said Rodrigues, who co-sponsored the measure in the House. "I saw a strong effort to ensure our right to privacy. It addressed the concerns I had."

The drone law is one of dozens — including the state's $78 billion spending plan and a nearly $400 million tax cut package — that went into effect Wednesday, the first day of the state's fiscal year.

States solve

Jeffrey A. **Parness 11**, B.A., Colby College, J.D., University of Chicago, taught for six years at the University of Akron School of Law, Northern Illinois University, 2011, "American State

Constitutional Equalities", GONZAGA LAW REVIEW Vol. 45:3, https://www.law.gonzaga.edu/law-review/files/2011/02/Parness.pdf , AB)

American state constitutions can play a key role today in protecting individuals.9 State constitutional laws can afford protections beyond those dictated by federal lawmakers. While the federal Constitution chiefly implies individual rights through recognizing federal and state governments with express and limited powers, state constitutions often "contain positive or affirmative rights."10 At worst, expansive state constitutional rights are hortatory, simply duplicating important federal values or iterating unenforceable local values. At best, they extend new rights locally, deeming unlawful any oppressions that are irrational or uncompelling.11 Because of their narrower setting, in constitutional matters states are more able "to experiment, to improvise, [and] to test new theories."12 Thus, if "a state experiment succeeds, others may follow," and if an experiment fails, the failure will be isolated.13 As well, because they are more prone to amendment than the federal Constitution,14 state constitutions can more quickly respond to failed experiments, social changes, and new values.15 Of course, for many, too many amendments may diminish the enhanced or special status of constitutional law.16 State constitutional rights can be read to be independent of, and thus to reach beyond, federal constitutional rights17 even when the federal and state constitutions are both applicable and employ the same or similar language.18 For example, a reasonable search or seizure for federal constitutional purposes may be an unreasonable search or seizure under a state constitution.19 A state constitutional right can also follow the federal constitutional language on federal rights, even though that federal right is inapplicable to the states.20 State constitutions can also expressly recognize rights and limits on governmental conduct that are unaddressed in the federal Constitution.21 Thus, they can expand rights by condemning private as well as public acts resulting in inequalities.22 They can **explicitly speak to privacy and other enumerated rights,**23 thus avoiding the difficulties in recognizing similar protections through vague terms like liberty and through unenumerated rights analyses. 24 Further, state constitutions can explicitly limit state governmental acts directed at certain citizens who are far less protected or relatively unprotected under the federal Constitution.25 Finally, comparable constitutional rights and limits may themselves be read differently from state to state. Thus, there can be varying interstate levels of judicial protection for certain comparable rights with heightened judicial review required at times.26 Greater equalities should be especially promoted by state constitutions where significant and unfair inequalities continue without other federal or state law remedies.27 One example is discrimination based upon sexual orientation. A quick review of contemporary American state constitutions reveals there is already a wide range of local constitutional initiatives furthering equality

States approve, innovation + support

Jeffrey A. **Parness 11**, B.A., Colby College, J.D., University of Chicago, taught for six years at the University of Akron School of Law, Northern Illinois University, 2011, "American State Constitutional Equalities", GONZAGA LAW REVIEW Vol. 45:3, https://www.law.gonzaga.edu/law-review/files/2011/02/Parness.pdf , AB)

Equalities in employment, housing, schooling, and other settings have broad public support. Greater express state constitutional recognitions of self-executing rights of all persons to be free from employment, housing, schooling, and other discrimination on the basis of race, sex and other inappropriate classifications, subject to limited legislative oversight, would extend equalities beyond federal law mandates. They would reflect the establishment of fundamental local values and allow for experimentation. They could also prompt varying balances between judicial and legislative authority over equality, both between states and within states depending upon the equality context.

The states solve – the federal government has ceded privacy protection to the states

Jeffrey M. **Shaman 6**, Vincent de Paul Professor of Law, DePaul University College of Law, "THE RIGHT OF PRIVACY IN STATE CONSTITUTIONAL LAW," 2006, http://org.law.rutgers.edu/publications/lawjournal/issues/37_4/Shaman.pdf

The right of privacy has developed primarily through decisions of the United States Supreme Court interpreting the Federal Constitution.9 Over the years, the Supreme Court has used the Fourteenth Amendment to the United States Constitution10 to formulate an evolving right of privacy that encompasses certain family rights, reproductive rights, and, most recently, a right of intimate association.11 Yet the Court has placed definitive limits on family and reproductive rights, and also has refused to extend the right of privacy to other areas.12 There is scant agreement among the Justices of the Supreme Court concerning the right of privacy, and at times, the high Court's **commitment to privacy has wavered** considerably. As a result of the Court's continuing equivocation in this area, the scope of the right of privacy under the Federal Constitution is considerably uncertain. Given this uncertainty, it was hardly surprising when a number of states stepped into the breach to revitalize the right of privacy. State constitutions, after all, are an important source of protection for individual rights and liberties, including the right of privacy. Indeed, state constitutions contain various provisions that can be used to protect the right of privacy. Many state constitutions contain due process or law of the land clauses safeguarding liberty that have been interpreted to ensure the right of privacy.13 Similarly, state constitutional provisions that deny the existence of arbitrary power over individual liberty have been construed to protect the right of privacy.14 State constitutional provisions guaranteeing equality also are used as a means of protection for the right of privacy. In some states, a right of privacy has been found implicit in constitutional provisions declaring, "All persons are by nature free and independent, and have certain natural and unalienable rights"15 or stating, "The enumeration in this Constitution of certain rights shall not be construed to deny, impair, or disparage others retained by the people."16 In modern times, five states—Alaska, California, Florida, Hawaii, and Montana—have amended their constitutions to expressly protect the right of privacy.17 These express provisions provide **fertile ground for the recognition** of expansive privacy rights. But even where only a more general constitutional provision, such as a due process clause, is available as a source of protection for privacy, some states have been willing to countenance expansive privacy rights. In recent years, as claims have been made to expand the right of autonomy to new dimensions, the states have differed in their willingness to do so. Some state courts have moved forward to expand the right of a woman to choose to have an abortion, while others have declined to take that course. A number of state courts have recognized the right of intimate association and struck down sodomy laws well before the Supreme Court was willing to do so, while other state courts chose to stand fast with the then prevailing federal approach rebuffing the right of intimate association. Of late, a number of state courts have faced the issue of same-sex marriage or civil union, and have reached various conclusions concerning it. The Supreme Court of Massachusetts became a pioneer by being the first judicial body in the nation to rule that the right of privacy secured by the state constitution encompassed a right to same-sex marriage.18 Some twenty-eight years before that, the Supreme Court of Alaska pioneered a different sort of privacy by ruling that the state constitutional guarantee of privacy afforded a right to possess marijuana for personal use in the privacy of one's home,19 although the court later was unwilling to extend that right to the possession of cocaine.20 The Alaska ruling was reminiscent of a few earlier cases upholding, on grounds of privacy, a right to smoke cigarettes or to ingest alcoholic beverages.21 Those decisions, though, fell into desuetude for many years, until they were revived as the foundation for regenerating the right of privacy.

States solve best – they're already pioneers in privacy law

Somini **Sengupta 13**, foreign correspondent for The Times, "States rush to fill gap in U.S. privacy laws; Lawmakers see increase in support after accounts of federal surveillance," lexis, 11/01/13

State legislatures around the United States, facing growing public concern about the collection and trading of personal data, have rushed to propose a series of privacy laws, including limiting how schools can collect student data and deciding whether

the police need a warrant to track cellphone locations. Over **two dozen privacy laws have passed this year** in more than 10 states, in places as different as Oklahoma and California. Many lawmakers say that news reports of widespread surveillance by the National Security Agency have led to more support for the bills among constituents. And in some cases, the state lawmakers say, they have felt compelled to act because of the stalemate in Washington on legislation to strengthen privacy laws. "Congress is obviously not interested in updating those things or protecting privacy," said Jonathan Stickland, a Republican state representative in Texas. **"If they're not going to do it, states have to do it."** This year, Texas passed a bill introduced by Mr. Stickland that requires warrants for email searches, while Oklahoma enacted a law meant to protect the privacy of student data. At least three states proposed measures to regulate who inherits digital data, including Facebook passwords, when a user dies. Some of the bills extend to surveillance beyond the web. Eight states, for example, have passed laws this year limiting the use of drones, according to the American Civil Liberties Union, which has advocated such privacy laws. In Florida, a lawmaker has drafted a bill that would prohibit schools from collecting biometric data to verify who gets free lunches and who gets off at which bus stop. Vermont has limited the use of data collected by license plate readers, which are used mostly by the police to record images of license plates. California, long a pioneer on digital privacy laws, has passed three online privacy bills this year. One gives children the right to erase social media posts, another makes it a misdemeanor to publish identifiable nude pictures online without the subject's permission, and a third requires companies to tell consumers whether they abide by "do not track" signals on web browsers. More than a year ago, the White House proposed a consumer privacy bill of rights, but Congress has not yet taken on the legislation. And a proposed updating of the 27-year-old Electronic Communications Privacy Act has stalled. Many states have already responded to those opinions. In the past couple of years, about 10 states have passed laws restricting employers from demanding access to their employees' social media accounts. California set the stage on digital privacy 10 years ago with a law that required organizations, whether public or private, to inform consumers if their personal data had been breached or stolen. Several states followed, and today, nearly every state has a data breach notification law. This year, California amended that landmark law, adding an Internet user's login name and password to the menu of personal information that is covered. The California attorney general's office also has a full-time unit to enforce digital privacy laws.

Privacy Bill CP

1NC Shell

Privacy bill solves – creates a better framework of privacy policy

White House 12 – The White House ["Consumer Data Privacy in a Networked World: A Framework for Protecting Privacy and Promoting Innovation in the Global Digital Economy", February 2012, https://www.whitehouse.gov/sites/default/files/privacy-final.pdf] hk

The United States is committed to protecting privacy. It is an element of individual dignity and an aspect of participation in democratic society. To an increasing extent, privacy protections have become critical to the information-based economy. Stronger consumer data privacy protections will buttress the trust that is necessary to promote the full economic, social, and political uses of networked technologies. The increasing quantities of personal data that these technologies subject to collection, use, and disclosure have fueled innovation and significant social benefits. We can preserve these benefits **while** also ensuring that our consumer data privacy policy better reflects the value that Americans place on privacy and bolsters trust in the Internet and other networked technologies. The framework set forth in the preceding pages provides a way to achieve these goals. **The Consumer Privacy Bill of Rights should be the legal baseline that governs consumer data privacy in the United States**. The Administration will work with Congress to bring this about, but it will also work with private sector stakeholders to adopt the Consumer Privacy Bill of Rights in the absence of legislation. To encourage adoption, the Department of Commerce will convene multistakeholder processes to encourage the development of enforceable, context-specific codes of conduct. The United States Government will engage with our international partners to increase the interoperability of our respective consumer data privacy frameworks. Federal agencies will continue to develop innovative privacy-protecting programs and guidance as well as enforce the broad array of existing Federal laws that protect consumer privacy. A cornerstone of this framework is its call for the ongoing participation of private-sector stakeholders. The views that companies, civil society, academics, and advocates provided to the Administration through written comments, public symposia, and informal discussions have been invaluable in shaping this framework. Implementing it, and making progress toward consumer data privacy protections that support a more trustworthy networked world, will require all of us to continue to work together.

2NC: Solvency

Individual control over data solves the aff

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

The principle of Individual Control in the Consumer Privacy Bill of Rights shifts the focus away from the longstanding principle of notice-and-choice to more dynamic and flexible mechanisms. Notice-and-choice is one important mechanism of privacy protection, but the Commerce Department Green Paper process found that routine checking of boxes puts too much weight on the unmanageable burden of reading privacy policies and does not differentiate among situations that present material privacy risk and those that do not. Whether data is used in a commercial context, or for basic medical or scientific research, may also be relevant to what kind of individual control is warranted. The Consumer Privacy Bill of Rights therefore calls for contextual mechanisms to exercise choice at the time of collection "appropriate for the scale, scope, and sensitivity of the data in question," and also for additional mechanisms to address the use of personal data after collection. This principle reflects the Big Data environment in two ways. First, it recognizes that the increasing velocity and variety of data collection make notice-and-choice ineffective. consumers are asked for consent too frequently and on devices such as mobile phones that are not suited to deliberate informed consent. Second, it recognizes that the velocity of data includes increased sharing with third parties with whom consumers do not have a direct relationship. Moving away from a one-size-fits-all notice and choice regime in which consumers often face a binary choice (either to give up data control or not to use a service) will strengthen fair exchange of value between consumers and companies by allowing consumers greater choices of how much to share in exchange for a given level of features and benefits. There are certainly contexts in which individual control will play a minor role as compared to other principles such as Respect for Context and Focused Collection. The expanded use of sensors and other developing forms of automated data collection will make notice-and-choice and other mechanisms of control impossible or infeasible in an increasing number of circumstances. The principles of Consumer Privacy Bill of Rights are intended to apply in interactive and dynamic ways appropriate to the technologies they address; the expansion of Big Data will put a premium on such application.

Privacy principles reduce the risk of leaks

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

1. Re-identification risk: The risk that personal data can leak **from big data research platforms** is real. Principles including Transparency, Security, Focused Collection, and Accountability will all be important to manage this risk. Transparency will enable regulators, enforcement authorities, and interested members of the public such as advocates and academics to know what kind of data is being released and in what form. Assessing whether the users' rights to have data held securely should include an assessment of who is able to access the data and therefore whether the re-identification risk can be minimized by binding those individuals to legal commitments to avoid re-identification. The right to have only focused collection of user data will also reduce re-identification risk by limiting gratuitous collection of data. And finally, an organization with strong institutional accountability procedures in place should handle data carefully and only release it publicly after evaluating the risk of re-identification. If the organization fails to consider this risk, then appropriate parties can be held accountable for resulting harm.

Resolves false info and models – their ev assumes the squo

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

2. Data and model inaccuracy: The Consumer Privacy Bill of Rights can reduce the risk that decisions are made about an individual based on inaccurate information or an incorrect model. The principles of Transparency, Respect for Context, and Access and Accuracy are all useful to ensure fairness in big data decisionmaking. Since the Fair Credit Reporting Act (FCRA) was enacted, individuals have had basic transparency rights enabling them to know that personal information about them is being used for important decisions, as well as the right to access and correct personal data to ensure that it is accurate. Such transparency is critical to make sure that individuals know their data is being used therefore be able to assure its accuracy or decide to exclude themselves from uses they object to. Similarly, the Access and Accuracy affords a mechanism to assure that data and the inference drawn from are accurate. While most consumers will not be able to identify errors in models, 5 transparency on inferences drawn by a model may shine light on algorithmic errors, The CPBR Transparency principle also requires that companies explain how they will use data and this should be understood to include relevant information about the decision-making models and algorithms. There is work to be done to define how much of the decision-making metrics should be exposed, as some of that information will be proprietary. Enough context about the decision metrics should be made available to enable consumer protection enforcement agencies and other stakeholders to assess whether the decisions models are fair. These principles are reinforced by the Respect for Context principle. When data is used out of context, the CPBR provides that if "companies decide to use or disclose personal data for purposes that are inconsistent with the context in which the data was disclosed, they must provide heightened measures of Transparency and Individual Choice." This will help individuals to flag uses of information that are likely to create risk and increase the likelihood that both personal data and models derived from personal data are accurate.

Transparency is key

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

First and foremost, an expanded commitment to transparency is **necessary** to guard against the risk of unfair, inaccurate use of personal data. The variety of personal information in big data systems requires a more active transparency in which individuals, consumer advocates and enforcement agencies can understand precisely how personal data is used, in some cases with resolution down to the level of individual data elements. Recognizing that individual control and consent may not be practical for high velocity collection and use of personal data, such systems will place more reliance on respect for context, assuring the information is only collected where the context makes such collection reasonably apparent, and that the use is consistent with the original context of collection. In context use should be able to proceed without individual consent, but out of context use would require increased transparency and individual control. Large collections of personal data create increased risk of breach and loss, to security must be given special attention. As important decisions may be made through big data systems, **access and accuracy rights are vital** to be sure individuals are not treated unfairly. And finally, institutional accountability mechanism are vital to assure that all of the principles in the Consumer Privacy Bill of Rights are adhered to the use of big data systems. Beyond just the substantive principles of the Consumer Privacy Bill of Rights, the larger policy process that the Administration's privacy framework puts into place has a dynamic, flexible quality that will be especially important to help American society evolve new privacy norms in response to the challenge of large scale analytics. As explained by Ken Bamberger and Deirdre Mulligan, the evolution of 'privacy on the ground' has enabled the evolution of privacy rules in a 8 manner that is responsive to public requirements while at the same allowing flexibility for the development of new services and business models. The Consumer Privacy Bill of Rights framework is designed to facilitate the continuous evolution of norms and rules as large-scale analytics drive new business models.

2NC: Agenda PTX NB

Read the Albert evidence specific to constitutional amendments

2NC: Big Data NB

The CP keeps up with big data innovations

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", 4/4/14 https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf, AB)

For each of the big data privacy risks identified here, the substantive principles in the Consumer Privacy Bill of Rights offer guidance to develop concrete responses to those risks in a manner that provides clarity for individuals and flexibility for innovative big data analytic applications. Given the rapid evolution of big data analytic applications, the unique procedural aspects of the Consumer Privacy Bill of Rights also offers a means by which principle-based privacy approaches to new applications can be developed rapidly as enforceable codes of conduct and then enforced under the FTC's existing statutory authority

2NC AT: Ethics S. Deficit

Solves ethics claims – specifically designed to become conscious of the use of data collection

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

3. Unfair use of sensitive inferences: Even if inferences are accurate, it may be unfair as a matter of ethics or public policy to use such information for certain purposes. For example, behavioral profiling techniques used for marketing purposes can provide advertisers the ability to reach audiences defined by age, ethnicity, race, gender and other sensitive categories. The recent statement of privacy principles from leading civil rights organizations ("Civil Rights Principles for the Era of Big Data") offers useful guidance on this point. The Respect for Context principle was **specifically designed** to prevent misuse of such profiles for more sensitive, harmful discriminatory purposes. As the CPBR explains: The Administration also encourages companies engaged in online advertising to refrain from collecting, using, or disclosing personal data that may be used to make decisions regarding employment, credit, and insurance eligibility or similar matters that may have significant adverse consequences to consumers…. Such practices also may be at odds with the norm of responsible data stewardship that the Respect for Context principle encourages." 6 Just because it is possible to learn or infer a sensitive characteristic of an individual, that does not imply that it is either legally or ethically permissible to use such an inference (no matter how accurate or inaccurate) for all purposes. However, addressing the use of such characteristics is a matter of social policy broader than privacy policy. Antidiscrimination laws and norms of countries around the world regularly prohibit acting in a discriminatory manner based on information about an individual, even if it is publicly available. Indeed, some of the personal characteristics that entail the highest degree of legal concern include gender and race, attributes of individuals that are readily observable and in most cases public information. The Transparency and Access Accuracy principles provide mechanisms that can be helpful in identifying where data collected about individuals is used in ways contrary to legal or ethical principles. Despite this, reflexive and poorly justified application of the Fourth Amendment third party doctrine can lead to the "unwarranted" assumption that as soon as personal data is public it can be used for any purpose. The Respect for Context principle stands in opposition to this view and squarely for the proposition that privacy interests in personal information are determined as much by how the data is to be used as is the public or non-public status of the data.

2NC AT: Circumvention S.Deficit

No risk of a solvency deficit – transparency principle resolves circumvention

Weitzner et al 14 (Weitzner, MIT Computer Science and Artificial Intelligence Lab, Abelson, MIT Department of Electrical Engineering and Computer Science, Dwork, Microsoft Research, Rus, MIT Computer Science and Artificial Intelligence Lab, Pentland, MIT Media Lab Vadhan, Harvard University, [Daniel Weitzner, Hal Abelson, Cynthia Dwork, Cameron Kerry, Daniela Rus, Sandy Pentland, Salil Vadhan, "Consumer Privacy Bill of Rights and Big Data: Response to White House Office of Science and Technology Policy Request for Information", DP: 4-4-14 DA: 7-1-15, https://ipp.mit.edu/sites/default/files/documents/MITBigDataPrivacyComments.pdf] hk)

The Transparency Principle requires companies to disclose when and why they collect individuals' personal data, so that consumers can guard against misuse of their personal data. Beyond just individual awareness, transparency has a vital function for the evolution of privacy norms themselves. In the modern history of information privacy, transparency has enabled consumer advocates, policy makers, enforcement agencies, the press and the interested public to engage in dialogue and criticism about how commercial privacy practices are evolving. It is only with awareness of actual privacy practices that society can have a meaningful dialogue about which practices are acceptable and which fall outside legal and/or social norms. Meaningful transparency in big data systems will require going beyond just disclosure of policies as to personal data. Enabling **citizens, governments and advocates to address big data** privacy challenges requires a more active transparency - the ability to be aware of and track the actual flow and use of personal information. Big Data is different from the regular use of personal data in that consumers are not only affected by the primary collection of data, but also by the subsequent aggregation of that data to inform algorithms that govern companies' decision-making and affect individual users. Therefore users need additional tools to help them follow complex data flows and understand what picture of them this data enables, beyond just the general disclosures in privacy policies. For example, disclosing to an individual that a health insurance company knows her address does not inform her of the likelihood that this information is being combined with multiple other databases to create "neighborhood profiles" that in turn could affect pricing for individual customers within those neighborhoods. The requirement that companies detail how they will use gathered data bears more weight in the Big Data context than requirements that companies simply disclose what personal data they collect. A transparency framework that updates consumers when companies come up with new uses for aggregated personal data will increase user trust and help ensure that accountability takes place at the rate of business growth, rather than at the rate of governmental enforcement

Privacy Turn

1NC

Increased internet freedom would result in desensitization of human rights abuses and an increase in divisions.

Jamie **Metzl, 69**, served as Deputy Staff Director and Senior Counselor of the United States Senate Committee on Foreign Relations,[7] Senior Coordinator for International Public Information and Senior Advisor to the Undersecretary for Public Diplomacy and Public Affairs at the Department of State,[8] and Director of Multilateral and Humanitarian Affairs on the National Security Council, "Information Technology and Human Rights," http://www.heinonline.org.turing.library.northwestern.edu/HOL/Page?page=705&handle=hein.journals%2Fhurq18&collection=journals, shlee

In an information age where satellite television broadcasts and Internet appeals to address mass violations of human rights reach world populations on a daily basis, there is a danger that people will become callous to reports of difficulties everywhere in the world, that the limited human capacity for absorption, compassion, and responsive action will become spread so thin as to dilute popular outrage and forestall responsive action. There is also a danger that as information technology systems continue to play ever greater roles in the international worlds of commerce and communications, those without access to such systems will be denied the tools necessary to improve their conditions. This appears to be happening even in this early stage in the development of information technology systems. Although Internet access can be achieved through satellite, packet radio, microwave, or cable links, it is still mostly done by telephone, access to which is highly concentrated in the wealthiest countries!' It is thus not surprising that access to the Internet is no better distributed internationally.° This international division between rich and poor is often mirrored within states. In the United States, for example, where 60 percent of global computer networking takes place, the Rand Corporation has estimated that while only 3 percent of the bottom income quartile of the population had access to computer networks in 1993, 23 percent of the top quartile had access during the same period" In an information age, disparities in access to information and sources of knowledge can only exacerbate existing divisions between rich and poor societies, states, and individuals.

2NC

Increased privacy rights results would result in more oppressive forms of control

Morozov 11 (Evgeny Morozov, Bernard L. Schwartz Senior Fellow at the New America Foundation and a contributing editor of Foreign Policy, "Whither Internet Control?", April 2011, http://muse.jhu.edu/journals/journal_of_democracy/v022/22.2.morozov.html,shlee)

Most talk of "liberation technologies" as ways of weakening "Internet [End Page 62] control" turns out to be about the technological rather than the sociopolitical dimension. But what if success in that area is met with larger and more sophisticated efforts at exerting sociopolitical control? Scholars still know little about the factors that influence the dynamics and the distribution of the two kinds of control. As technological methods lose efficacy, sociopolitical methods could simply overtake them: An authoritarian government might find it harder to censor blogs, but still rather easy to jail bloggers. Indeed, if censorship becomes infeasible, imprisonment may become inevitable. Thus, if the technological dimension

of Internet control were one day to be totally eliminated, the upshot could be a set of social and political barriers to freedom of expression that might on balance be worse—not least because "liberation technologies" would be powerless to overcome them. It would be a cruelly paradoxical outcome indeed should liberation technology's very success spur the creation of a sociopolitical environment in which there would be nothing for technology to "liberate."

Politics DA

1NC - Unpopular

The plan is ridiculously capital-intensive

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

"Nothing is 'easy,'" writes Henry Paul Monaghan, "about the processes prescribed by Article V."112 Scholars today describe the requirements of Article V as practically impossible to meet.113 For instance, Bruce Ackerman views Article V as establishing a "formidable obstacle course."114 Sanford Levinson argues that "Article V, practically speaking, brings us all too close to the Lockean dream (or nightmare) of changeless stasis,"115 and that it is "the Constitution's most truly egregious feature."116 Rosalind Dixon has described the "virtual impossibility of formal amendment to the Constitution under Article V."117 Jeffrey Goldsworthy observes that "the supermajoritarian requirements of Article V are so onerous as to be arguably undemocratic, by making it much too easy for minorities to veto constitutional amendments."118 Vik Amar explains that Article V establishes "particular and cumbersome processes."119 And Richard Fallon laments that "[e]ven under the best of circumstances, the requirement that three-fourths of the states must ratify constitutional amendments makes it nearly impossible to achieve significant change in our written Constitution through the Article V process."120 Article V, in short, is seen as a dead end. This is not a new perspective on the difficulty of successfully using Article V. Writing in 1885, Woodrow Wilson decried the "cumbrous machinery of formal amendment erected by Article Five."121 Even earlier, at the adoption of the Constitution, John DeWitt doubted whether it would ever be possible to amend the Constitution using Article V: "[W]ho is there to be found among us, who can seriously assert, that this Constitution, after ratification and being practiced upon, will be so easy of alteration?"122 DeWitt believed states would have views too different to meet Article V's required supermajority threshold: Where is the probability that three fourths of the States in that Convention, or three fourths of the Legislatures of the different States, whose interests differ scarcely in nothing short of everything, will be so very ready or willing materially to change any part of this System, which shall be to the emolument of an individual State only?123 The answer, he predicted, was that formal amendment would be rare.

2NC - Unpopular

It's unpopular – this link turns the aff and causes circumvention

Albert 14 (Richard Albert, Associate Professor at Boston College Law School, "Constitutional Disuse or Desuetude: The Case of Article V." Boston University Law Review 94, (2014): 1029-., http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1758&context=lsfp, AB)

Political parties and increased political polarization may have exacerbated the difficulty of Article V. As American political parties have become nearly evenly divided across both the federal and state governments over the last two generations, writes David Kyvig, "divisions within society together with the requirements of Article V frustrated every attempt to bring about fundamental change."132 Kyvig adds that the close balance between political parties and among the forces of federalism alongside the "centripetal power of the federal government and the centrifugal strength of the states" have combined to inhibit agreement on formal amendment.133 Daryl Levinson and Rick Pildes observe that political parties in the United States "today are both more internally

ideologically coherent and more sharply polarized than at any time since the turn of the twentieth century."134 Rick Pildes connects the onset of today's hyperpolarized politics to the adoption of the Voting Rights Act of 1965: [T]his polarization reflects the deep structural and historical transformation in American democracy unleashed in 1965 by the enactment of the VRA. That moment began the process of ideologically realigning the political parties and of purifying them, so that both parties are far more ideologically coherent, and differentiated from each other, than at any time in many generations. The culmination of that historical transformation – which can be seen as the maturation or full realization of American democracy – is today's hyperpolarized partisan politics.135 Pildes concludes that "[t]he reality is that the era of highly polarized, partisan politics will endure for some time to come."136 This only complicates an already difficult formal amendment process that relies on strong supermajorities across both the federal and state institutions. Nevertheless, as Christopher Eisgruber cautions, measuring amendment difficulty is itself difficult because amendment difficulty turns "upon a number of cultural considerations, such as the extent to which state politics differ from national politics and the extent to which people are receptive to or skeptical about the general idea of constitutional amendment."137 The difficulty of measuring amendment difficulty has not discouraged scholars from comparing amendment difficulty across nations. In such measures, the United States has ranked among the most difficult to amend.138

Terror DA

Case Turn

Turns case – terrorism kills human rights

Office of the United Nations High Commissioner for Human Rights 8 "Human Rights, Terrorism and Counter-terrorism", Fact Sheet No. 32, July 2008, http://www.ohchr.org/Documents/Publications/Factsheet32EN.pdf, AB)

Terrorism aims at the very destruction of human rights, democracy and the rule of law. It attacks the values that lie at the heart of the Charter of the United Nations and other international instruments: respect for human rights; the rule of law; rules governing armed conflict and the protection of civilians; tolerance among peoples and nations; and the peaceful resolution of conflict. Terrorism has a direct impact on the enjoyment of a number of human rights, in particular the rights to life, liberty and physical integrity. Terrorist acts can destabilize Governments, undermine civil society, jeopardize peace and security, threaten social and economic development, and may especially negatively affect certain groups. All of these have a direct impact on the enjoyment of fundamental human rights. The destructive impact of terrorism on human rights and security has been recognized at the highest level of the United Nations, notably by the Security Council, the General Assembly, the former Commission on Human Rights and the new Human Rights Council.7 Specifically, Member States have set out that terrorism: • Threatens the dignity and security of human beings everywhere, endangers or takes innocent lives, creates an environment that destroys the freedom from fear of the people, jeopardizes fundamental freedoms, and aims at the destruction of human rights; • Has an adverse effect on the establishment of the rule of law, undermines pluralistic civil society, aims at the destruction of the democratic bases of society, and destabilizes legitimately constituted Governments; • Has links with transnational organized crime, drug trafficking, money-laundering and trafficking in arms, as well as illegal transfers of nuclear, chemical and biological materials, and is linked to the consequent commission of serious crimes such as murder, extortion, kidnapping, assault, hostage-taking and robbery; 8 • Has adverse consequences for the economic and social development of States, jeopardizes friendly relations among States, and has a pernicious impact on relations of cooperation among States, including cooperation for development; and • Threatens the territorial integrity and security of States, constitutes a grave violation of the purpose and principles of the United Nations, is a threat to international peace and security, and must be suppressed as an essential element for the maintenance of international peace and security. International and regional human rights law makes clear that States have both

a right and a duty to protect individuals under their jurisdiction from terrorist attacks. This stems from the general duty of States to protect individuals under their jurisdiction against interference in the enjoyment of human rights. More specifically, this duty is recognized as part of States' obligations to ensure respect for the right to life and the right to security. The right to life, which is protected under international and regional human rights treaties, such as the International Covenant on Civil and Political Rights, has been described as "the supreme right"8

Case

Privacy Advantage

Rights Fail—Paternalistic

Plan causes privacy paternalism and OVERKILL with an amendment

Adam **Thierer 14**, senior research fellow at the Mercatus Center at George Mason University with the Technology Policy Program, Jan 23, 2014, "Do We Need A Constitutional Amendment Restricting Private-Sector Data Collection?", https://privacyassociation.org/news/a/do-we-need-a-constitutional-amendment-restricting-private-sector-data-colle, AB)

Astonishingly, Rosen doesn't seem to think that we should be free to do so. During our NPR debate, he said his amendment would disallow individuals from surrendering private data or privacy because he viewed these rights as "unalienable." But Rosen should keep in mind that not everyone shares the same privacy values and that many of us will voluntarily trade some of our data for the innovative information services we desire. If that choice is taken away from us then **"privacy regulation**," as privacy scholar Daniel Solove has recently noted, "**risks becoming too paternalistic**. Regulation that sidesteps consent denies people the freedom to make choices," Solove argues. "The end result is that either people have choices that are not meaningful or people are denied choices altogether." By making privacy choices for us, Rosen's proposed amendment would likely suffer from that same sort of privacy paternalism. Such paternalism is particularly problematic in this case since privacy is such a highly subjective value and one that evolves over time. As Solove notes, "the correct choices regarding privacy and data use are not always clear. For example, although extensive self-exposure can have disastrous consequences, many people use social media successfully and productively." Privacy norms and ethics are changing faster than ever today. One day's "creepy" tool or service is often the next day's "killer app." Finally, practically speaking, **a constitutional amendment is overkill** since many other options exist for protecting individual privacy from private data collection efforts. User education and empowerment is essential. So, too, is privacy by design and an expanded role for privacy professionals within private organizations. Targeted enforcement of existing laws, torts and other measures will continue to be applied here and perhaps even expand in their focus. And, again, more constraint on government's ability to commandeer private databases is absolutely essential. These are all far more practical and less-restrictive steps that can be taken without resorting to the sort of **constitutional sledgehammer** that Jeff Rosen favors. or upending the information economy.

Rights Fail—Backfire

Explicit constitutional right to privacy backfires

Mary **Fan 12**, Professor of Law at the University of Washington, "CONSTITUTIONALIZING INFORMATIONAL PRIVACY BY ASSUMPTION", 3/2012, https://www.law.upenn.edu/journals/conlaw/articles/volume14/issue4/Fan14U.Pa.J.Const.L.953(2012).pdf, az

It is high time to call out the assumption for the hazy moral intuition that it is and situate the moral intuition in law, and as law, insofar as it is supportable. Resting a protection—even a hazy hypothetical protection—on a moral intuition is dangerous from a pragmatic as well as principled perspective. Moral intuitions are akin to "naïve theories" and heuristics—error-prone and intuition-guided generalizations—that suffer from the manifold cognitive biases identified in the judgment and decision making literature.18 Status quo bias is an example of a cognitive bias with the potential to chill policy innovations if we persist in an intuitive, feels-wrong approach to determining violations.19 New ideas rouse vague

feelings of unease and disquiet because they disrupt the status quo, to which we are intuitively attached. We cannot always trust and use as a guide the affective sense that a particular policy seems disquieting in the change it wreaks. Moreover, inability to distinguish the chaff risks demeaning an important guide and principle for understanding what the liberty explicitly safeguarded by the Constitution means. This Article argues that the work of privacy as a constitutional concept is to adapt the idea of liberty in times of social change. Insofar as constitutionally relevant, the idea of informational privacy helps further define, and should be informed by, the freedoms safeguarded in the Constitution, such as the protections for liberty under procedural and substantive due process. There is a principled reason for distinguishing between the cases of HIV and sexual orientation outings by the state with the aim of marring employment, family, and friendships and cases where state employees want a job representing an important public trust but do not want to get drug tested like the rest of us. And it is more than the crude rule of thumb that we know a violation when we feel it.

Privacy Turn – Takes Away Freedom

Plan constrains private entity which takes AWAY freedom – turns case

Adam **Thierer 14**, senior research fellow at the Mercatus Center at George Mason University with the Technology Policy Program, Jan 23, 2014, "Do We Need A Constitutional Amendment Restricting Private-Sector Data Collection?", https://privacyassociation.org/news/a/do-we-need-a-constitutional-amendment-restricting-private-sector-data-colle, AB)

There are several problems with Rosen's proposal—legal, economic and practical. The bottom line is that a constitutional amendment would be too sweeping in effect and that better alternatives exist to deal with the privacy concerns he identifies. Conflating Two Different Things First, it goes without saying that a constitutional amendment is not a matter to be taken lightly. It alters the underlying fabric of our republic and represents the ultimate legal constraint. Rosen nonetheless thinks one is needed to cover both governmental- and private-sector data collection practices, even though the Fourth Amendment already applies to government. Many people are rightly outraged about the extent of government surveillance activities that have come to light in the wake of the Snowden revelations. A crucial component of these revelations is that our government is increasingly vacuuming up data from private entities—sometimes with their consent, but often without those private entities having any choice in the matter (or perhaps not even knowing about it at all). This leads many privacy advocates to make a big leap: Because much of the data that our government collects today originates from private data collection efforts, we should just treat those private entities the same as government actors. "Once data is collected by private parties, the government will inevitably demand access," Rosen says. Therefore, he says, we should impose the same data collection restrictions on private actors that we impose on governments. Of course, it's always been true that "the government will inevitably demand access" to private data, but to the extent it is a growing problem, Rosen and other privacy advocates should redouble their efforts to constrain government surveillance powers and the ability to indiscriminately suck up privately held data. We could start with strong ECPA reform, elimination of the third-party doctrine, and other bolstered Fourth Amendment constraints on national security and law enforcement powers. Importantly, a private entity is just not the same as a government entity, and we should continue to distinguish between them when crafting data collection policies. Rosen says that "distinction between surveillance by the government and surveillance by Google makes little sense," but in reality, the differences between public and private entities remains profound. Private entities cannot fine, tax or imprison us. And while we can escape the orbit of private companies and their services, the same is not true for governments. We need to have serious discussions about how to help people better manage their privacy preferences, but if we begin those conversations by mistakenly conflating government and corporate power, then the end result will be sweeping controls on our modern information economy. Which is the next problem with Rosen's proposal: It would create serious social and economic trade-offs that he fails to consider. In terms of social trade-offs, a constitutional amendment limiting data collection might conflict with certain speech and information-gathering freedoms. As Professor Eugene Volokh has noted, at least here in the U.S., "We already have a

code of 'fair information practices,' and it is the First Amendment, which generally bars the government from controlling the communication of information … whether the communication is 'fair' or not." Meanwhile, recent commercial speech jurisprudence—such as the Supreme Court's 2011 decision in Sorrell v. IMS Health Inc.—has bolstered First Amendment protections for data-gathering and use. There would also be economic trade-offs associated with Rosen's proposed amendment. Private data collection is the fuel that powers our information economy. It creates value for consumers by making possible innovative goods and services at a great price—often free. Banning private data collection and use will likely mean fewer choices or higher prices. That's why many of us already trade away some of our personal information in exchange for digital services that improve our lives in other ways. For example, the same location "tracking" techniques that Rosen and many others decry as privacy violations are also what enable the free mapping and traffic services that we rely on daily. Shouldn't we be allowed to make that trade?

Not having a clear definition of privacy turns case

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

Although the conclusions put forth in this article do not in themselves dictate any particular legal result, they should nonetheless serve to inform the development of Canada's fledgling privacy tort. We ought to know what privacy is, and what interests underlie it, before we set about fine-tuning a legal test designed to protect it. The same point can perhaps be put better in the negative: **without a clear conceptual account of privacy, "a legal privacy right would be**", as Delany and Carolan note, "**incomplete, incoherent, and liable to cause confusion".**230 An appellate court tasked with determining the scope of a Canadian privacy tort will have to identify the nature of a privacy invasion, find an appropriate doctrinal basis for the action, and decide how to balance competing interests in privacy and freedom of speech. I have argued throughout this article that a coherent understanding of privacy must include both a physical and an informational dimension. The American approach, which recognizes both the wrongful disclosure of information and intrusions on private activities, provides a more comprehensive and conceptually justified response than the narrower "informationist" approach employed in New Zealand and England.

Privacy Doesn't Solve

Privacy policies fail- only are created to protect corporate interests.

Erison 6 (Richard Victor Ericson, professor with the Centre of Criminology at the University of Toronto , "The New Politics of Surveillance and Visibility,"2006, from The New Politics of Surveillance and Visibility,sl)

Discussions about privacy rights often proceed as if privacy is itself a stable phenomena that must be protected from incursions or erosion. Such a conceptualization tends to downplay the historical variability and political contestation associated with the precise content of 'privacy.' Claims to privacy and secrecy are political efforts to restrict the ability of others to see or know specific things. One of the more intriguing developments in this regard concerns how powerful interests are now appealing to such rights. The synoptic capabilities of contemporary surveillance have produced a greater number of powerful individuals and institutions with an interest in avoiding new forms of scrutiny. As such, privacy rights that were originally envisioned as a means for individuals to secure a personal space free from state scrutiny are being reconfigured by corporate and state interests. Corporations routinely appeal to legal privacy and secrecy protections. One of the more ironic of these involves efforts by firms that conduct massive commercial data surveillance to restrict the release of the market segment profiles that they derive from

such information on the grounds that these are 'trade secrets.' The ongoing war on terror accentuates how the state is also concerned with carving out a sphere of privacy, even as it tries to render the actions of others more transparent. For example, the US. Patriot Act prohibits Internet service providers from disclosing the extent to which they have established governmental Internet monitoring measures. The US. administration has refused to meet Congressional demands for information regarding the implementation of the Patriot Act. The Pentagon regularly invokes claims to 'national security' to restrict public awareness of military matters, in-duding the capabilities of its surveillance technologies. Hence, legal claims to privacy are being invoked as a means to render the actions of powerful interests more opaque at the same time that these same institutions are making the lives of others more transparent. Some see this trend towards non-reciprocal visibility as one of the greatest inequities in contemporary surveillance (Brin 1998).

Too vague to be legit

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

The "right to be let alone" occupies a hallowed place in privacy discourse. Although the phrase was coined by Judge Cooley42—who used it not to justify a right to privacy, but rather to explain why tort law regards trespass to the person as wrongful—it is now generally attributed to Warren and Brandeis, who invoked it throughout their seminal 1890 article.43 The latter authors analyzed numerous cases of trespass, defamation, confidence, and especially common law copyright, and identified a latent principle of privacy—operating unarticulated— which they argued should thenceforth be protected independently, as a distinct tort.44 This principle of privacy, expressed as a "right to be let alone", is anchored in the more fundamental interest of an "inviolate personality".4 The Warren and Brandeis formulation has come under much academic criticism. The first problem is its vagueness.46 Because neither the "right to be let alone" nor the concept of "inviolate personality" is adequately defined, 47 the article gives no practical or conceptual guidance on the scope of the right.48 A related criticism is that the phrase "right to be let alone" itself appears to be less a definition of privacy than simply a description of one example of it.49

Privacy is too sweeping/broad

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

The second criticism, stemming from the above mentioned vagueness, is that this conception of privacy is overly broad. As Gavison explains: [It] cover[s] almost any conceivable complaint anyone could ever make. A great many instances of "not letting people alone" cannot readily be described as invasions of privacy. Requiring that people pay their taxes or go into the army, or punishing them for murder, are just a few . . . examples.50 This conceptual over breadth is evident in how the "right to be let alone" has been used in American constitutional jurisprudence, where it is often equated with privacy51 and is taken to encompass the right to "live one's life as one chooses". 52 This includes the "privilege of an individual to plan his own affairs . . . [and] do what he pleases".53 This "substantive"54 conception of privacy confers a zone of decisional autonomy, and currently forms the basis for the right to abortion in American constitutional law.55 It has been much criticized as being really an "assertion of liberty per se [rather] than one of privacy".56 A narrower and clearer definition of privacy is needed.

Focus on surveillance as information gathering ignores content of the surveillance – causes restriction which turns the case

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

Conceiving of privacy as a claim to control personal information gets us very close to understanding its essence.63 Simply put, we intuit privacy as a claim to control, and this intuition is reflected in the social norms that surround us.64 We feel that this conception of privacy is the reason someone has a moral claim to keep the contents of his diary secret; and reasonable people reflect that understanding by respecting this right, or at least by intuiting that reading a person's diary violates something we all sense to be private. Furthermore, as I explain in section two, the claim to control personal information is closely associated with the values underpinning privacy (especially the values of dignity and autonomy). However, there are three significant problems with control-based definitions. The first problem is that insofar as they concentrate on information,65 they are too restricted.66 We all recognize, intuitively, that privacy can be invaded even where information is not communicated, such as where a peeping tom trains his telescope on a woman's bedroom to watch her undress. A definition of privacy that fails to capture such physical intrusions simply lacks intuitive coherence. It might be suggested that informational control can capture this example, the argument being that the tom has in fact received information about his victim (in the sense that he has learned what she looks like without clothes). This argument is problematic however, owing to its artificiality. Parker responds to it by asking us to imagine that the tom and the woman are lovers.67 Is it still sensible to regard the tom, when he sneaks a peak at his lover through the window after leaving her side, as obtaining information about what she looks like naked—information he already has?68 If the answer is no, then such peeping falls outside this definition of privacy, resulting in an intuitive under-inclusiveness. Even if we strain and answer yes because the man has learned that his lover remains undressed or is in a different pose, this information-based approach clearly fails to capture the true essence of the invasion.69 It is not that information has been acquired but rather that she is being "looked at . . . against her wishes".70 Wacks explains: What is essentially in issue in cases of intrusion is the frustration of the legitimate expectations of the individual that he should not be seen or heard in circumstances where has not consented to or is unaware of such surveillance. The quality of the information thereby obtained, though it will often be of an intimate nature, is not the major objection.71 These observations lead to a related point. As Moreham has convincingly argued, by failing to appreciate the true essence of the complaint, this information-based approach necessarily fails to appreciate the gravity of the privacy violation itself, and therefore must logically undervalue it.72 This is because, to be internally coherent, the information-based approach must regard the information learned as the only relevant factor when assessing the gravity of an invasion; but if we consider Parker's peeping lover example, we see that very little new information has in fact been communicated. Consequently, as the information learned was negligible, so too must be the violation of privacy. Such an approach is clearly inadequate if we regard this example as a serious violation of privacy.73 So, the first major problem with the "control over information" approaches is their narrowness, in that they fail to adequately capture what we intuit—that physical intrusions violate privacy for reasons unrelated to, and irrespective of, any information that may also be gleaned (or subsequently published) as a consequence of an intrusion. It is the looking (or listening or touching) itself, not the acquisition of information, that is offensive to our intuitive sense of privacy. Furthermore, as I explain in section two, the values underpinning privacy, and the reasons why it is important, strongly support including a physical intrusion dimension in our definition. Before moving to the remaining criticisms, it is worth noting that there is widespread academic74 and law commission75 recognition, and some judicial recognition, that physical intrusions lie at the conceptual core of privacy

Their definition of privacy is vague which causes exclusion

Chris DL **Hunt 11**, PhD Candidate in law and WM Tapp Scholar, Gonville & Caius College, University of Cambridge, "Conceptualizing Privacy and Elucidating its Importance: Foundational

Considerations for the Development of Canada's Fledgling Privacy Tort", http://queensu.ca/lawjournal/issues/pastissues/Volume37a/5-Hunt.pdf, AB)

A second criticism of control-based definitions concerns ambiguity in the manner in which "control" is used by various commentators.77 If control is used, as Fried uses it,78 to mean actual control, and privacy is thus the state of controlling information, it follows that a person who cannot exert control cannot enjoy privacy.79 But surely this cannot be correct, for it would mean that a person could not assert a right to privacy even in relation to highly sensitive personal information gathered while she is in a public place80—a position roundly rejected by academics,81 the House of Lords,82 the European Court of Human Rights,83 the New Zealand Court of Appeal84 and the Supreme Court of Canada.85 A related problem here is that treating privacy as a state of actual control over information may suggest a loss of privacy where there is only the threat of a loss.86 Moreham illustrates this by noting that if X had a machine capable of reading all of Y's emails, and also of seeing Y's naked body through her clothes, Y could not be said to have actual control over that information. So even if X never actually used the hypothetical device, the mere fact that he had it would violate Y's privacy.87 In short, "[c]ontrol-based definitions therefore fail to distinguish between those situations where there is a risk of unwanted access and those where unwanted access has in fact been obtained".88 A better conception of privacy is thus to formulate it, as Westin does, as a claim to control information, rather than a state of control itself.89 A third criticism of control-based definitions concerns their potential over breadth.90 This stems from the fact that many authors fail to identify with precision the types of information falling within a controlbased conception of privacy. Simply put, defining privacy as a claim to control information relating to one's self does little to help us know what information is in fact private. On a plain reading, it could mean that any information about a person is private, including the colour of her eyes or even her name—information that, to be sure, few would intuit to be private. What is needed is some conceptual device to guide us in ascertaining what information is private. I return to this issue, as well as to the concept of privacy as a claim to control, after considering the remaining conceptions of privacy.

New ECPA legislation restores privacy rights – status quo solves

Chris **Calabrese 7/5**, the legislative counsel for privacy-related issues in the American Civil Liberties Union, "Post USA Freedom Act: There's more to be done," 7/5/15, http://www.ourmidland.com/opinion/editorials/post-usa-freedom-act-there-s-more-to-be-done/article_6676dd8c-7565-5ba4-8387-0158caae0784.html, AZ

But unless ECPA is reformed to reflect modern realities, government agents will continue to assert the authority to search our communications and our private possessions without a warrant and without showing any evidence whatsoever that a crime has been committed.
That's an intolerable and completely unwarranted invasion of our privacy. It isn't what the law's authors intended, of course. But government agencies are taking advantage of ECPA's unintended consequences to evade constitutional checks on their powers. And as long as ECPA remains on the books as written, it no longer represents an unexpected assault on our liberty. It is an intentional one.
Fortunately, members in both houses of Congress, led by Senators Mike Lee and Pat Leahy, and Representatives Kevin Yoder and Jared Polis, have introduced legislation to reform ECPA, and restore Fourth Amendment protections to our online communications. The ECPA Amendments Act and Email Privacy Act, respectively, would restore the law's original purpose to protect privacy in the ways we communicate, transact businesses, learn and recreate today by protecting emails and other communications stored with third party service providers for any amount of time.
Their legislation has broad, bipartisan support. It is backed by hundreds of members in Congress, including more than 270 House members. Outside the halls of Congress, conservatives, moderates and liberals, small and large businesses, labor unions, civil libertarians and former prosecutors all advocate reforms to an obsolete law that threatens the liberty and prosperity of the American people.
Congress has regularly had to pass reforms to legislation that technology has rendered obsolete and vulnerable to exploitation by the executive branch. We're calling on ECPA to be next.
Since our founding as a nation, Americans have insisted that we be secure in our persons and secure in our liberties. We made progress toward that end with the passage of the USA Freedom Act. The next step is the reform

of ECPA, and re-establishing that neither changes in technology nor laws that have outlived their purpose can be allowed to infringe on Americans' privacy protections.

Your evidence is overstated – there is no root cause, and checks on surveillance in the status quo prevent escalation or injustice

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

There are, of course, infinite examples of people being persecuted, abused or discriminated against because of personal attributes (such as their religion or political opinion) which have been identified by others or by the State. This naturally tends to invite suspicion concerning disclosure of personal information. However, to draw a connection between this type of injury and the absence of privacy is misguided – it fails to identify the root cause of such conduct. People were not demonised, persecuted and murdered in Nazi Germany because there was no right to privacy, but because of the implementation by a totalitarian regime of policies based on a racist ideology which tapped into pervasive anti-Semitic attitudes in the community.132 In liberal democracies such as Australia, the strongest safeguards against the misuse of personal information by the State are the checks and balances built into the system through the separation of powers and the rule of law, and ultimately, the accountability of the executive government to the people at democratic elections. State agencies may only collect and use personal information about citizens if such action comes within the executive power of the State or is specifically authorised by law. Unauthorized action can be challenged in the courts. Moreover, the trend in recent times has been to provide further protection in the form of legislation such as the Privacy Act (Cth) 1988 which imposes obligations in relation to the collection, use and disclosure of information which the State is legally authorised to collect. Gibbs argues that the danger of introducing the concept of privacy into legal discourse is that 'it starts to colonize the various rights of action that already exist'.133 Bundling up complaints about the acquisition, disclosure and use of personal information under the heading 'privacy' militates against the clear and precise identification of the interests at stake and what, if any, remedies should be granted by the law when those interests are compromised.134 As a general rule, the misuse of personal information to discriminate against a person in employment or the provision of services is best addressed by laws which are specifically directed against the attitudes and conduct which cause the harm, rather than by a general right of privacy. Anti-discrimination laws fulfil this function. Of course, it may also be necessary to impose restrictions on the release of personal information held by private and public sector organisations in order to minimise the possibility of such information falling into the hands of criminals and sociopaths. But the object of such laws is the protection of personal security and safety, not privacy per se.

Quit your whining – privacy right concerns are unfounded and status quo solves

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

The existence of a right to privacy is dubious. Even if such a right does exist it is not a very important right, ranking well down in the list of interests that are conducive to human flourishing. Privacy proponents have been incapable of explaining the foundation for such a right and why it should enjoy a high level of legal protection. The present level of protection of privacy in specific contexts both through legislation and at common law is adequate, particularly in view of the recourse now available under the doctrine of confidence in relation to public disclosures of intimate information. The right to privacy can be seen as a late-twentieth/early twenty-first century First World invention, indicative of a highly individualistic society fearful of the capabilities of the technology it has developed. However the alarmist rhetoric of privacy advocates who proclaim the imminent demise of privacy does not match reality: in fact, it is arguable that citizens in Western societies enjoy a level of de facto privacy unprecedented in history.158 As to the threats posed by the monitoring capabilities of the new

information technologies, it is now becoming apparent that technology itself can provide the means to counter them.159 The current legal focus and level of discussion concerning the right of privacy is a clear illustration of the human propensity for losing perspective. It follows that very few interests should be subjugated to the right of privacy.

Manufacturers are starting to respect privacy rights – account for privacy concerns through the national data protection

Marc **Dautlich and** Cerys Wyn **Davies 6/30**, head of information law at Pinsent Masons and partner, "Drone manufacturers can help operators respect privacy rights, says watchdog", 6/30/15, http://www.out-law.com/en/articles/2015/june/drone-manufacturers-can-help-operators-respect-privacy-rights-says-watchdog/, AZ

Drone manufacturers can help the organisations wishing to operate them respect privacy rights by warning of the "potential intrusiveness" of their use, an EU privacy body has said.

The Article 29 Working Party, a committee made of up representatives from the national data protection authorities (DPAs) throughout the EU, said the manufacturers could also put information on their packaging to tell operators where the use of drones is permitted. The manufacturers can also help account for privacy concerns in the use of drones by designing the devices with data protection in mind, it said.

"Data protection should be embedded within the entire life cycle of the technology, from the very early design stage, right through to its ultimate deployment, use and final disposal; such technology should be engineered in such a way as to avoid the processing of unnecessary personal data (for example, in case of strategic or critical infrastructures, engineering firmware of drones in order to inhibit data collection within previously defined no-fly zones could be advisable)," the Working Party's new opinion (21-page / 455KB PDF) said.

New codes of conduct could be drawn up by drone manufacturers and operators to ensure data protection requirements are considered and addressed, it recommended. The codes could help "enhance the social acceptability of drones", it said.

Current Supreme Court protections of privacy sufficient – LA v. Patel proves

Moxila **Upadhyaya and** Brandt **Mori 6/24**, trial attorney in civil litigation and real estate and business lawyer, "U.S. Supreme Court Issues Significant Ruling Protecting Privacy Rights of Hotel Owners and Guests", 6/24/15, http://www.mondaq.com/unitedstates/x/407006/Data+Protection+Privacy/US+Supreme+Court+Issues+Significant+Ruling+Protecting+Privacy+Rights+of+Hotel+Owners+and+Guests, AZ

One difficult situation in which hotel operators and owners can find themselves occurs when law enforcement demands access to private hotel guest records without a warrant.

On June 22, 2015, the U.S. Supreme Court issued an important decision addressing this very dilemma, siding with hotel owners. In City of Los Angeles v. Patel, the Court struck down a Los Angeles municipal provision that required hotels to make guest records available for inspection by any L.A. Police Department officer without the need for a search warrant. Prior to the Court's ruling, any officer could obtain, without a warrant, sensitive records, including a hotel guest's name, address, and vehicle details; the number of members in the guest's party; the method of payment; arrival and departure date; and room number. A hotel owner who refused to turn over such information could be arrested on the spot and be subject to a misdemeanor charge punishable by up to six months in jail and a $1,000 fine.

In its 5-4 decision, the Court held that the provision is unconstitutional because it violates the Fourth Amendment's protection against unreasonable searches and seizures. Because the municipal provision failed to afford hotel owners any pre-compliance opportunity to challenge the requested search, the Court held the provision to be facially unconstitutional. In so holding, the Court noted that "business owners cannot reasonably be put to this kind of choice" – that is, either handing over their guests' private information or facing arrest and criminal prosecution.

Writing for the Court, Justice Sonia Sotomayor noted that the Fourth Amendment may be satisfied as long as a hotel owner is afforded an opportunity to have a neutral decisionmaker review an officer's demand to search the hotel guest records before he or she faces penalties for failing to comply. This can be accomplished, for example, through an administrative subpoena by which the hotel owner may challenge law enforcement's request before a judge. This outcome, according to the Court, "reduces the risk that officers will use these administrative searches as a pretext to harass business owners."

States Solve

States Solve – empirics prove state interpretations gain influence nationally

Jay **Stanley 10**, Senior Policy Analyst with the ACLU, "The Crisis in Fourth Amendment Jurisprudence," 5/2010, https://www.acslaw.org/files/ACS%20Issue%20Brief%20-%20Stanley%204th%20Amendment.pdf, az

The situation in the states is significant for several reasons. First, state law today serves as a source of alternative legal thinking on privacy. Prior to the 20th century expansion in First Amendment rights, the states played just that kind of role. While the Supreme Court was extremely hostile to free speech claims before World War I, historians point out that the legal and cultural groundwork for the subsequent revival of the First Amendment could be found in the states, where a significant number of court decisions rejected the Supreme Court‟s approach and kept the possibility of genuine free speech rights alive within the American legal "conceptual universe."96 Over time, **the spread of alternative interpretations of privacy rights within the states could gain influence at the national level, as has happened before on other issues including the exclusionary rule and the death penalty, where state law has influenced interpretations of "evolving standards of decency"** under the Eighth Amendment.97 Second, divergent state interpretations on privacy are also a symptom of unease with the current state of the law, and to some extent they highlight the arbitrariness and indeterminateness of privacy law as it now stands. They are also, not incidentally, a source of privacy protection for a large number of people. As the majority noted in Katz, "the protection of a person‟s general right to privacy – his right to be let alone by other people – is, like the protection of his property and of his very life, left largely to the law of the individual States."98

State Constitutions Solve – functions as a testing ground

Elbert **Lin 02**, West Virginia Solicitor General, "Prioritizing Privacy: A Constitutional Response to the Internet," June 2002, http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1383&context=btlj, az

What remains novel, however, is the argument for a federal constitutional right to informational privacy on the Internet. Only a handful of scholars' 3 have suggested that the United States Supreme Court will strengthen its lukewarm hint at a constitutional right to informational privacy in Whalen v. Roe, in 1977.14 Moreover, only a few of those scholars call for the right with regard to the Internet. Similarly, only a small number of commentators have recommended a state constitutional right to informational privacy.' 5 Most commentators have eschewed federal and state constitutional rights as possible solutions to the increasing technological threat to informational privacy, either dismissing them as weak (and presumably incapable of change) 6 or contending that a constitution is ill-equipped to protect against privacy-destroying technologies. 17 Rather, the debate over informational privacy-on the Internet, in particular-oscillates between industry self-regulation and government legislation, though support increases for other solutions, such as casting privacy as a property right or expanding the privacy torts.' 8 This Article will argue that a constitutional right to informational privacy is necessary and appropriate for protecting privacy on the Internet. Moreover, **given the progress they have already made, and their receptiveness to experimentation, the state constitutions are and should continue to be the testing grounds for an eventual federal constitutional right to informational privacy on the Internet**. Part II lays out the threat posed by the Internet and computers to informational privacy, defining the contours of "informational privacy," the computer technology that threatens informational privacy, and the threat itself, and focusing less on the disclosure aspect and more on the dissemination and use of personal information. In closing, Part II notes that online privacy is the most significant informational privacy

concern. Part Il argues that the Internet has created the need for a constitutional right by elevating informational privacy to a generalized concern. Part III also examines the failure of the current, nonconstitutional legal regime to address the threat of the Internet. Part IV discusses the current state of the constitutional right to informational privacy, considering both the federal and state constitutions, and surveying in detail the constitutional rights in the eleven most noteworthy states, ten of which have explicit constitutional provisions for privacy. The right has not been utilized in Internet litigation and offers the lack of a generalized interest in privacy as a reason for the current weakness in both the federal and state constitutional rights. Part V determines that the constitutional right can best be developed in the states. The leading states have already developed robust constitutional rights, and constitutional experimentation is an accepted premise at the state level. Part VI concludes the Internet has altered the interest in informational privacy such that constitutional protection is necessary and, furthermore, it is best sought first through the state constitutions.

Court Fails

The Supreme Court is a mess – they're political flip-floppers that are too ambivalent to ensure a decisive ruling

Jeffrey M. **Shaman 6**, B.A. from the Pennsylvania State University, J.D. from the University of Southern California, and LL.M. from Georgetown University, where he was a Keigwin Graduate Fellow. teaches Constitutional Law, State Constitutional Law, and First Amendment Freedom of Speech, member of the American Law Institute, the American Society of Legal History, and the U.S. Association of Constitutional Law, 2006, "THE RIGHT OF PRIVACY IN STATE CONSTITUTIONAL LAW", p.984-987, http://org.law.rutgers.edu/publications/lawjournal/issues/37_4/Shaman.pdf, AB)

On occasion, the Court has turned to the past as a source of fundamental rights. Thus, in Moore v. City of East Cleveland, a 1977 decision, **the plurality opinion concluded** that the **right** to live together in an extended family **was fundamental because it was a liberty "deeply rooted in this Nation's history and tradition**."87 Some **years later, a reluctant majority of the Court would again look to history in order to "assume" that under the Due Process Clause, an individual possessed a right to bodily integrity**, which encompassed the right to refuse unwanted medical treatment**.88 History, though, can be a double-edged sword, wielded either to accept rights on the basis of** their **historical** pedigree **or reject them on the ground that they are not firmly established in our history and tradition**. An example of the latter occurred in a 1989 decision, Michael H. v. Gerald D., ruling that a biological father did not have a right to visit his child because no such right could be found in the traditions of our society. 89 And in Washington v. Glucksberg, the Court ruled an individual did not have a right to physician-assisted suicide, once again because none could be found in the traditions of our society.90 In 1969, **the Court countenanced a different aspect of privacy by ruling**, in Stanley v. Georgia, **that** the **private possession of obscene material cannot constitutionally be made a crime, even though distribution of the material may be proscribed.**91 The decision in Stanley was based on the First Amendment right of an individual to receive information and ideas which, in the Court's view, takes on an added dimension in the privacy of a person's own home.92 As the Court put it, "If the First Amendment means anything, it means that a State has no business telling a man, sitting alone in his own house, what books he may read or what films he may watch."93 Thus, **Stanley recognized that the concept of privacy may comprehend a spatial element involving sanctity of the home**, an interest related to, though not the same as, the right of individual autonomy.94 In a case involving another component of the First Amendment, freedom of association, the Court suggested that because the Bill of Rights was designed to secure individual liberty, it should afford substantial protection for the formation and preservation of "certain kinds of highly personal relationships."95 As the Court explained, the constitutional shelter granted to these relationships reflects the realization that individuals draw much of their emotional enrichment from close ties with others. "Protecting these relationships from unwarranted state interference therefore safeguards the ability independently to define one's identity that is central to any concept of liberty."96 **Regard for personal relationships or the sanctity of the home, however, was shunted** aside in Bowers v. Hardwick, a 1986 decision, **in which the Court once again turned to history to cut short the reach of the Due Process Clause, ruling** by a vote of 5-4, **that the right of privacy does not encompass the right of a consenting adult to engage in homosexual conduct,** even in the privacy of his or her home.97 In upholding the constitutionality of a Georgia criminal law prohibiting sodomy, the majority opinion drew a strict distinction "between family, marriage, or procreation on the one hand and homosexual activity on the other."98 Taking a historical approach to constitutional interpretation, the Court refused to give constitutional countenance to a right to engage in homosexual conduct because, in the Court's reading of history, **such a right was neither "deeply rooted in this Nation's history and tradition**"99 nor "implicit in the concept of ordered liberty."100 **Seventeen years later, however, Bowers was overruled** by a 6-3 majority in Lawrence v. Texas, in which the Court held that a Texas sodomy statute making it a crime for two persons of the same sex to engage in intimate sexual relations was a violation of the Due Process Clause.101 Indeed, in Lawrence, not only did the Court decisively overrule Bowers, 102 it also apologized for it, saying that Bowers was unjustly demeaning to gay and lesbian persons.103 And the

Court devoted a good part of its opinion in Lawrence to explaining why it believed that Bowers had been wrongly decided.104 In Lawrence, the Court dismissed the historical approach that had been taken in Bowers, noting that the historical record was more complex than understood in Bowers, and that the Court's historical analysis in Bowers was open to considerable doubt.105 More importantly, the Court thought that the Bowers majority did not take sufficient account of more recent historical developments: "In all events we think that our laws and traditions in the past half century are of most relevance here."106 Significantly, that more recent tradition showed an emerging awareness that liberty provides substantial protection to adult persons in deciding how to conduct their private lives in matters pertaining to sex.107 In other words, more recent history showed a trend toward recognizing that the sexual life of consenting adults was a private matter that should be beyond the realm of state authority, at least state criminal authority.108 The Court further explained that the liberty component of the Due Process Clause protects persons from unwarranted government intrusions into a dwelling or other private places and also protects other spheres of our lives and existence, outside the home, where the State should not be a dominant presence.109 The Court affirmed that "Freedom extends beyond spatial bounds. Liberty presumes an autonomy of self that includes freedom of thought, belief, expression, and certain intimate conduct. **The instant case involves liberty of the person both in its spatial and more transcendent dimensions**."110 Quoting Casey, the Court once again proclaimed, "These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, arecentral to the liberty protected by the Fourteenth Amendment."11 **The Supreme Court has yet to develop a consistent theory to determine the scope of the right of privacy under the Fourteenth Amendment**. Today, **some** of the **Justices** on the high Court **believe in adhering strictly to an historical approach which encompasses only those rights that are "deeply rooted in this Nation's history and tradition**" or "implicit in the concept of ordered liberty."112 Other Justices, though, are more forward looking; they see history as an ongoing phenomena and constitutional interpretation as an evolving process that comprehends the recognition of new rights that are central to personal dignity and autonomy. Although the right of privacy is firmly established as a fundamental right under the Fourteenth Amendment to the Federal Constitution, **the Supreme Court remains ambivalent about the right of privacy, embracing it with fervor in one case, rejecting it in another. As a result, the Court's decisions concerning privacy are marked by inconsistency, leaving the scope of the right of privacy under the Federal Constitution far from certain.**

Courts and existing amendment reinterpretations fail

Nicole **Tutrani 10**, Law Clerk to the Honorable Henry Coke Morgan, Jr. at the Eastern District of Virginia, "The "Right to Privacy" and its Constitutional Evolution: The Ninth and Fourteenth Amendments", November 20, 2010, https://www.regent.edu/admin/stusrv/writingcenter/docs/APSA7thedSamplePaper(PoliticalScienceStudentWriter'sManual).pdf, AB)

In summation, most twentieth-century Supreme Court opinions regarding the "right to privacy" as derived from the Ninth Amendment are inherently flawed. The original intent of both the Ninth and Fourteenth Amendments do not allow for the liberties the Court has taken in their interpretation. The Ninth Amendment, which was intended to protect the states against a latitude of governmental interpretation, has instead become the Supreme Court's perpetual grab bag of rights in the service of changing social morality. As a states' rights amendment, provisions from the Ninth Amendment are also logically un-incorporable to the states through the Fourteenth. Decisions, such as Griswold v. Connecticut, Roe v. Wade, and Lawrence v. Texas are prime examples of how the original meaning of these amendments has been ignored. Although it is not unreasonable to assume a "right to privacy" as provided for by the first eight amendments, recent interpretations of this right have resulted in an incredibly flawed body of case law. It would seem that the Constitution is evolving in such a way that it no longer protects the peoples' liberty; rather, it answers their demands for the expansion of license based on an ever-changing social order.

Framing Advantage

Consequentialism

Deontological theories of privacy rights are baseless and guaranteed to fail

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

Non-consequentialist (rights) theories. The leading contemporary non-consequentialist theories are those which are framed in the language of rights. Following the Second World War, there has been an immense increase in 'rights talk',81 both in the number of supposed rights and in total volume. Rights doctrine has progressed a long way since its original aim of providing 'a legitimisation of ... claims against tyrannical or exploiting regimes'.82 As Tom Campbell points out: The human rights movement is based on the need for a counter-ideology to combat the abuses and misuses of political authority by those who invoke, as a justification for their activities, the need to subordinate the particular interests of individuals to the general good.83 There is now, more than ever, a strong tendency to advance moral claims and arguments in terms of rights.84 Assertion of rights has become the customary means to express our moral sentiments. As Sumner notes: 'There is virtually no area of public controversy in which rights are not to be found on at least one side of the question – and generally on both.'85 The domination of rights talk is such that it is accurate to state that human rights have at least temporarily replaced maximising utility as the leading philosophical inspiration for political and social reform.86 Despite the dazzling veneer of deontological rights-based theories, when examined closely they are unable to provide convincing answers to central issues such as: what is the justification for rights? How can we distinguish real from fanciful rights? Which right takes priority in the event of conflicting rights? Such intractable difficulties stem from the fact that contemporary rights theories lack a coherent foundation. It has been argued that attempts to ground rights in virtues such as dignity, concern or respect are unsound and that they fail to provide a mechanism for moving from abstract ideals to concrete rights.87 A non-consequentialist ethic provides no method for distinguishing between genuine and fanciful rights claims and is incapable of providing guidance regarding the ranking of rights in the event of a clash. In light of this, it not surprising that the number of alleged rights has blossomed exponentially since the fundamental protective rights of life, liberty and property were advocated in the seventeenth and eighteenth centuries. Today, all sorts of dubious claims have been advanced on the basis of rights: for example, 'the right to a tobacco-free job', the 'right to sunshine', the 'right of a father to be present in the delivery room', the 'right to a sex break',88 and even 'the right to drink myself to death without interference'.89 Novel rights are continually evolving and being asserted. A good example is the recent claim by the Australian Prime Minister (in the context of the debate concerning the availability of IVF treatment to same-sex couples or individuals) that each child has the right to a mother and father. In a similar vein, in light of the increasing world oil prices, it has been declared that this violates the right of Americans to cheap gasoline. In England, the Premier League has been accused of violating the right of football club supporters to an F.A. Cup ticket. Due to the great expansion in rights talk, rights are now in danger of being labelled as mere rhetoric and are losing their cogent moral force. Or, as Sumner points out, rights become an 'argumentative device capable of justifying anything [which means they are] capable of justifying nothing'.90 Therefore, **in attempting to uncover the scope and content of 'emerging' rights such as the right to privacy it is normally unhelpful to consider the issue from the perspective of a deontological rights-based normative theory.** Against the background of such a theory, proponents of the right can simply assert the existence of a right to privacy and equally validly, opponents can assert a 'right to know'. An impasse is then reached because there is no underlying ideal that can be invoked to provide guidance on the issue. As with many rights, the victor may unfortunately be the side which simply yells the loudest.91 This may seem to be unduly dismissive of rights-based theories and pay inadequate regard to the considerable moral reforms that have occurred against the backdrop of rights talk over the past half-century. There is no doubt that rights claims have proved to be an effective lever in bringing about social change. As Campbell correctly notes, rights have provided 'a constant source of inspiration for the protection of individual liberty'.92 For example, recognition of the (universal) right to liberty resulted in the abolition of slavery; more recently the right of equality has been used as an effective weapon by women and other disenfranchised groups. For this reason, it is accepted that there is an ongoing need

for moral discourse in the form of rights. This is so even if deontological rights-based moral theories (with their absolutist overtones) are incapable of providing answers to questions such as the existence and content of proposed rights, and even if rights are difficult to defend intellectually or are seen to be culturally biased. There is a need for rights-talk, at least at the 'edges of civilisation and in the tangle of international politics'.93 Still, the significant changes to the moral landscape for which non-consequentialist rights have provided the catalyst must be accounted for. There are several responses to this. First, the fact that a belief or judgment is capable of moving and guiding human conduct says little about its truth – the widespread practice of burning 'witches' in medieval times being a case in point. Secondly, at the descriptive level, the intuitive appeal of rights claims, and the absolutist and forceful manner in which they are expressed, has heretofore been sufficient to mask fundamental logical deficiencies associated with the concept of rights. Finally, and perhaps most importantly, we do not believe that there is no role in moral discourse for rights claims, simply that the only manner in which rights can be substantiated is in the context of a consequentialist ethic.94

Util & Consequentialism are necessary and prevent absolutism

Carolyn **Doyle &** Mirko **Bagaric 5**, "The right to privacy: appealing, but flawed", The International Journal of Human Rights, Volume 9, Issue 1, 2005, p. 3-36, Taylor & Francis Online, AB)

Consequentialism. A more promising tack for ascertaining the legitimacy of a right to privacy is to ground the analysis in a consequentialist ethic. The most popular consequentialist moral theory is utilitarianism. Several different forms of utilitarianism have been advanced. In our view, the most cogent (and certainly the most influential in moral and political discourse) is hedonistic act utilitarianism, which provides that the morally right action is that which produces the greatest amount of happiness or pleasure and the least amount of pain or unhappiness. This theory selects the avoidance of pain, and the corollary, the attainment of happiness, as the ultimate goals of moral principle. We are aware that utilitarianism has received a lot of bad press over the past few decades, resulting in its demise as the leading normative theory. Considerations of space and focus do not permit us to fully discuss these matters. This has been done elsewhere.95 The key point to note for the purpose of the present discussion is that for those with a leaning towards rights-based ethical discourse, utilitarianism is well able to accommodate interests in the form of rights. Rights not only have a utilitarian ethic, but in fact **it is only against this background that rights can be explained and their source justified.** Utilitarianism provides a sounder foundation for rights than any other competing theory. For the utilitarian, the answer to why rights exist is simple: recognition of them best promotes general utility. Their origin accordingly lies in the pursuit of happiness. Their content is discovered through empirical observations regarding the patterns of behaviour which best advance the utilitarian cause. The long association of utilitarianism and rights appears to have been forgotten by most. However, over a century ago it was John Stuart Mill who proclaimed the right of free speech, on the basis that truth is important to the attainment of general happiness and this is best discovered by its competition with falsehood.96 Difficulties in performing the utilitarian calculus regarding each decision make it desirable that we ascribe certain rights and interests to people – interests which evidence shows tend to maximise happiness97 – even more happiness than if we made all of our decisions without such guidelines. Rights save time and energy by serving as shortcuts to assist us in attaining desirable consequences. By labelling certain interests as rights, we are spared the tedious task of establishing the importance of a particular interest as a first premise in practical arguments.98 There are also other reasons why performing the utilitarian calculus on each occasion may be counter-productive to the ultimate aim. Our capacity to gather and process information and our foresight are restricted by a large number of factors, including lack of time, indifference to the matter at hand, defects in reasoning and so on. We are quite often not in a good position to assess all the possible alternatives and to determine the likely impact upon general happiness stemming from each alternative. Our ability to make the correct decision will be greatly assisted if we can narrow down the range of relevant factors in light of pre-determined guidelines. History has shown that certain patterns of conduct and norms of behaviour if observed are most conducive to promoting happiness. These observations are given expression in the form of rights which can be asserted in the absence of evidence why adherence to them in the particular case would not maximise net happiness. Thus utilitarianism is well able to explain the existence and importance of rights. It is just that rights do not have a life of their own (they are derivative, not foundational), as is the case with deontological theories. Due to the derivative character of utilitarian rights, they do not carry the same degree of absolutism or 'must be doneness' as those based on deontological theories. However, this is not a criticism of utilitarianism, rather it is a strength since it is farcical to claim that any right is absolute. Another advantage of utilitarianism is that it is the only theory that provides a mechanism for ranking rights and other interests. In event of clash, the victor is the right which will generate the most happiness.

Harel and Sharon 11 (Harel is part of the Hebrew University Law Faculty, Professor of law, Boston University Law School and Sharon is part of the Department of Philosophy, Stanford University [Alon Harel and Assaf Sharon, "Necessity knows no law", Volume 61 – Number 4 Fall 2011, Project Muse] hk

Even orthodox advocates of deontological prohibitions concede that certain significant risks warrant the infringement of rights - including the right to life.10 A leading strategy for dealing with the dilemma of extreme cases is what has come to be known as threshold deontology. Thus, most contemporary deontologists agree that deontological [End Page 849] injunctions can be overridden under certain circumstances. Even if one concedes that shooting down a plane carrying fifty passengers in order to save fifty victims is not justified, the numbers can surely be fiddled with until an acceptable ratio is achieved. What about shooting down fifty passengers to save 1 000 victims? What about 10 000? And what about shooting down two to save 50? The issue surely must not hinge on playing with the numbers. As a matter of principle, there must be some ratio of victims to potential victims that would indeed justify the downing of the plane.11 This is not merely an abstract observation of moral philosophers. The duties to protect are an established component of many constitutions, including the German Federal Constitution. This duty entails a duty to protect the potential victims of a terrorist attack, and such a duty, enshrined in the Constitution, may under certain circumstances require infringing some people's rights. Some of the difficulties faced by threshold deontology are familiar and need not be rehearsed here.12 Let us, however, point out one difficulty which, to our mind, has not received due emphasis. Threshold deontology we argue is not faithful to the underlying values and commitments of deontology of at least one central brand - Kantian deontology. The basic challenge faced by threshold deontology is to address the following question: if the life of one person cannot be sacrificed for the sake of saving one other person, or two, or even one hundred, why can it be sacrificed to save one thousand, or ten thousand, or one million? The natural answer of a Kantian threshold deontologist is to maintain that, while sacrificing one person to save two or three violates the victims' dignity, the sacrifice of one to save a thousand does not violate the victims' dignity. In other words, **there is a threshold above which the sacrifice of life does not constitute a violation of dignity.**

Kuehn 91 (Kuehn has Fellowships from the Canada Council, the National Endowment for the Humanities, and the Institute of Advanced Studies of the University of Edinburgh, taught in Canada, Germany and the U.S.A., was Gastprofessor at the University of Hamburg, and Kuehn joined the Boston University faculty in August of 2004, and teaches full time both semesters each year [Manfred Kuehn, "Kantian Ethics and Socialism (Review)", Journal of the History of Philosophy, Volume 29, Number 2, April 1991, pp. 318-321 (Review), project muse] hk

Even if we grant that a "critical reconstruction" has to satisfy different criteria from an "interpretation," there must be some criteria for assessing its adequacy on textual and historical grounds. To qualify as a reconstruction, it must have sufficient similarity to its prototype. While it is often difficult to determine what is sufficient in a particular case, most philosophical scholars would agree--I believe--that if a reconstruction were to lead to views that contradict some of the most fundamental features of its prototype, then it does not qualify as a reconstruction. But precisely this is the case with van der Linden's interpretation of Kant's duty to promote the highest good as central for Kantian social ethics. The following three points should go some way towards showing this: (i) When van der Linden interprets "the highest good as a society in which human agents seek to make one another happy," he claims he has changed "somewhat Kant's common definition of the highest good, but [has] preserve[d] the meaning of his claim that we must promote the highest good (as the union of universal virtue and universal happiness)" (4). **But this is clearly false.** He has radically changed Kant's meaning by emphasizing a different factor from the one Kant does. Kant differentiates in the highest good between an "a priori factor" that depends upon us, i.e., our morality, and an "empirically conditioned factor" that does not necessarily depend upon us, i.e., is external to us. This latter factor is happiness. A duty "to further the summum bonum as far as it in us lies" (AK 5: 453) can only amount to furthering the component that is up to us, i.e., to pursuing the strictest morality, not universal happiness. Van der Linden wants us to further what is external to us, empirically conditioned, and clearly not entirely in our power (see also point ii). It is in this way that he transforms the summum bonum into a "social ideal." This ideal is perhaps more reasonable than Kant's, but it also amounts to the opposite of Kant's own ideal. At one point van der Linden observes: "Cohen eliminates the distinction between the highest political good and the highest moral good and puts in their place one highest good, a peaceful international order of democratic socialist societies" (164). That seems to me, more or less, what van der Linden also does. (ii) When van der Linden attempts "to show that each of the formulations of the categorical imperative.., demands that we seek a moral society in which human agents try to make one another happy" (5f.), he clearly makes happiness the criterion for the morality of acts. However, if Kant was opposed to anything in his moral theory, it was

precisely to this move. To be sure, his arguments are directed more against egoistic versions of this type of consequentialism, but his arguments can be seen to be directed against collectivist ones as well. For one thing, **Kant was much too skeptical about our ability to predict what will bring about happiness** (be it our own or that of other people) to give it such a central place in his moral theory (see especially Ak 4: 393-97, and 8: 370). Kant is also adamant that man's morality should not be based upon anything depending on "the circumstances in which he is placed" (ibid., 389). And this is one of the main reasons why he held that "from the viewpoint of the people's welfare, no theory properly applies at all; instead, everything rests on practice submissive to experience" (Ak 8: 3o6). Van der Linden's reconstruction transforms Kant's theory into something Kant himself says is impossible. (iii) In one of the late historical pieces on which van der Linden relies so much, Kant expressis verbis rejects the highest good as a moral principle, saying, when "we ask about the principle of morals, the doctrine of the highest good as the ultimate end of a will that is in conformity to its laws can thus be wholly ignored and put aside as episodic" (On the Old Saw: That May Be Right in Theory; Ak 8: 28o). What Kant considers (and, according to the logic of his position, must consider) as inessential and "episodic," thus becomes central in van der Linden's reconstruction. When he tells us "I place politics, history, social conflict, and the moral commitment to change society at the core of Kant's practical philosophy, attempting to undercut the view of ethics as primarily concerned with the struggle between individual duty and inclination" (vii, emphasis mine), he himself tells us precisely what he does.

***Consequentialism trumps deontology*

Lindsay 5 – senior lecturer, faculty of law at Monash University (July 15, "AN EXPLORATION OF THE CONCEPTUAL BASIS OF PRIVACY AND THE IMPLICATIONS FOR THE FUTURE OF AUSTRALIAN PRIVACY LAW," Melbourne University Law Review: Volume 29, 7/15/05, https://www.law.unimelb.edu.au/files/dmfile/29_1_4.pdf) mj

Consequentialist accounts justify privacy insofar as it produces desirable outcomes. Rigorous versions of consequentialism are forms of utilitarianism, whereby outcomes are determined by an aggregation, or maximisation, of individual utilities. Utilitarian-influenced approaches are well-suited to evaluating which of a number of competing interests should prevail by reference to overall results. For example, a strict consequentialist could have no objection to an invasion of privacy that was **necessary to produce a desirable outcome**, such as the preservation of life or an increase in economic welfare. However, pure forms of consequentialism have considerable difficulties in dealing with arguments that rights should be respected regardless of the consequences.68 As a simple example, a consequentialist might consider acceptable the publication of intimate details of an intercepted telephone conversation or, indeed, the placement of surveillance cameras inside a person's home, if the invasion of privacy results in an increase in overall welfare. However, those who have favoured explicitly consequentialist views of privacy have generally not been indirect utilitarians. H J McCloskey, for example, simply regarded the protection of privacy as justified to the extent that it promotes what are, for him, the more fundamental goods of human happiness, justice and liberty.72 This led him to conclude, in general terms, that if concerns about privacy come into conflict with more fundamental concerns regarding liberty of action, **invasions of privacy should be accepted**, and social attitudes adjusted accordingly. If privacy is understood within the context of overall social processes of rationalisation and normalisation, and as integral to struggles over self-definition, the difficulties consequentialist accounts face in taking privacy seriously are comprehensible. In particular, by valuing a purely instrumental concept of reason, welfarism can be seen as privileging impersonal social objectives over human values, such as the ability of individual subjects to define themselves and respect for human dignity. Strict welfarist analysis is therefore completely implicated in processes of rationalisation and normalisation, suggesting that it is especially **ill-suited as a means for analysing the value of privacy.** It is only if the models of the individual subject and of human reason underlying welfarism are enriched in ways suggested by Mill and Sen — by including values such as the ability of the individual to determine his or her own ends — that consequentialism is ever likely to be sympathetic to privacy. The implication of such a broad approach would be to constrain the untrammelled pursuit of welfarist objectives by the protection of individual rights, however formulated. However, broadening the approach in this way would seem to introduce the universalistic pretensions that plague deontological approaches to privacy.

***Human rights is the epitome of consequentialism*

Çalı 7– B.A., M.A., Ph.D., Lecturer in Human Rights, University College London. She is a Council of Europe expert on the European Convention on Human Rights and was a senior researcher for the British Independent Expert on the United Nations Sub-Commission on the Promotion and Protection of Human Rights in preparation of a study on "Reservations to Human Rights Treaties" between 1999–2002 [Başak Çalı, "Balancing Human Rights? Methodological Problems with Weights, Scales and Proportions", Human Rights Quarterly 29.1 (2007) 251-270, project muse] hk

A specific group of human rights are categorized as qualified rights in political and legal practice because it is a common understanding that such [End Page 257] rights are not and should not be absolute.31 A human right is regarded as absolute when it cannot be overridden under any empirical circumstance whatsoever.32 Any competing consideration that may emerge according to circumstances is ruled out as irrelevant to upholding a human right in practice. The most common examples of absolute rights provisions in international law are freedom from torture, right to due process, and freedom from slavery.33 **These protections call for action from decision makers, independent of the circumstances.** Courts are also under an obligation to ensure that any measure taken by executive authorities does not infringe upon the absolute character of the right.34 Even the existence of exceptional circumstances, such as a state of emergency or an armed conflict, does not suspend this requirement of independent action.35 [End Page 258] Qualified rights, on the other hand, are marked by their lack of absoluteness. They may conflict with other interests that may or may not be protected by human rights. Whether the protection of such rights then should be subject to consequential forms of analysis remains unclear. Human rights protections precisely aim to act as constraints on consequentialist forms of reasoning. Acts of balancing require identification of interests, assigning values to them and ultimately to deciding which interest yields the net benefit. This leads to a contradicting position of subjecting the constraint itself (human rights protections) to a test of consequentialism.36 This position can only be logical if qualified rights, such as that of freedom of expression, freedom of assembly, or freedom of association are thought to be intrinsically different from absolute rights such as freedom from torture and freedom from slavery. This distinction would mean two things: First, qualified human rights are by their nature in a commensurate conflicting relationship with communal aims and interests and are, therefore, context-sensitive. Second, context-sensitive rights are by their nature subject to utilitarian calculations of net benefit. None of these points, however, are coherent with the nature of human rights protections. It is clear that acts of balancing require this central assumption—that conflicts are commensurate. The case-law of the European Court of Human Rights reflects the strong influence of this assumption. The European Court of Human Rights takes striking a fair balance "between the competing interests of the individual and the community as a whole"37 as one of its interpretive principles in assessing qualified human rights claims. This view reduces important questions about human rights to a conflict between the rights claims of a particular individual against the community. Human rights protections do indeed benefit certain persons at certain times. **The nature of human rights protections, however, is not about the interests of a specific person, but those of each and every person**. Every time a human rights protection is upheld, this does mean that a common interest is simultaneously sacrificed. It also does not follow that more of human rights protections mean less protection of common interests. [End Page 259]

***Rights protection is necessary irrespective of majority opinion*

Çalı 7– B.A., M.A., Ph.D., Lecturer in Human Rights, University College London. She is a Council of Europe expert on the European Convention on Human Rights and was a senior researcher for the British Independent Expert on the United Nations Sub-Commission on the Promotion and Protection of Human Rights in preparation of a study on "Reservations to Human Rights Treaties" between 1999–2002 [Başak Çalı, "Balancing Human Rights? Methodological Problems with Weights, Scales and Proportions", Human Rights Quarterly 29.1 (2007) 251-270, project muse] hk

Human rights protections are best conceived, regardless of absolute or qualified forms, to serve their own purpose toward an understanding of common good. The deep values and considerations that back up human rights protections are not important because they maximize an overall good, but because they provide a space for individually-centered concerns in a political society.38 In international law, for example, human rights protections, by definition, concern everyone, obligations erga omnes.39 In arguing **that human rights are important for each and every individual**, the emphasis should be on the separateness of individuals rather than their aggregate. The practice of the Inter-American Convention regarding freedom of expression,40 for example, suggests that this freedom has a "double effect," belonging to each individual to express and a collective to

receive information and ideas.41 Even though this formulation might help to increase the rhetorical importance of freedom of expression, the risk of making rights vulnerable to their perceived importance to the community remains. For example, if a community overwhelmingly decides that it does not consider it to be important to receive information about climate change, should this have an effect on the right of individuals to freedom of expression? When human rights are defined as belonging to each and every individual, it is clear that their existence does not depend on a collective need and the right should be protected despite the lack of collective need or interest. Additionally, balancing—identifying, quantifying, and weighing the interests—is not the only way to address these contextual considerations. Indeed, even the European Court of Human Rights, has employed a range of non-balancing approaches. For example, the European Court of Human [End Page 260] Rights has considered the chilling effect caused by restricting the media's freedom of expression without balancing that right against communal interests.42 This shows a way of thinking about fundamental values behind freedom of expression without seeing this right in a head to head competition with a communal interest. When the Court says that the restriction of freedom of speech for a journalist would have a chilling effect, it is not weighing the right against other interests, but showing why it is important in its own end.43 Engagement with the context, consequences, and history can be undertaken consistent with human rights aims, not necessarily at the expense of them.

Yes War

U.S Russia war is uniquely likely

DeBar 14 (Press.TV citing Don DeBar, political analyst, host and journalist at CPRmetro.org, "US encirclement of Russia setting stage for nuclear war: Analyst", 11/9/14, http://www.presstv.com/detail/2014/11/09/385326/us-moves-make-nuclear-war-possible/, AB)

Political activist Don DeBar believes "the stakes are extremely" high for a nuclear war between Washington and Moscow due to US policy of military encirclement of Russia. "The United States has been advancing towards Russia physically in terms of placement of military resources, they are now parked at the borders of Russia from the Baltics up in the Baltic Sea in the very northwest corner of Russia down to the middle of Ukraine at this point in the southwest part of Russia," he told Press TV on Saturday. "The United States has been committing some very hostile acts towards Russia, attempting to tank its currency, attempting to isolate it economically in general, and Russia has, in turn, been looking elsewhere to find partners for the development that it seeks for its own population," the activist added. These hostile moves, DeBar said, have come at the same time that the Obama administration is pursuing its "pivot" to Asia which is aimed at containing China and giving rise to Japan as a military power. DeBar made the comments after American philosopher Noam Chomsky said that the escalating tensions between the United States and Russia could spark a nuclear war. "China has risen as an economic power. Russia has come back as an economic power, [it]maintains its nuclear weaponry and has been upgrading its military," DeBar said. "As tensions rise, as the law of unintended consequences has greater and greater play and as Chomsky cited the low-risk individual incidents of accidental war-peace planning, as you keep rolling the dice, sooner or later you'll get '7' or '11' and that's the end of humanity," the analyst noted. "The stakes are extremely high. The ironic part is that President Barack Obama got a Nobel Peace Prize at the beginning of his presidency because he had spoken to the need to eliminate nuclear weapons and he is now spending what's going to end up being a trillion dollars over the next 30 years, but hundreds of billions of dollars in the near term to upgrade and expand the power of the American nuclear arsenal," DeBar explained.

MAD doesn't check

Kroeig 14 (Matthew Kroenig, Associate Professor and International Relations Field Chair Department of Government Georgetown University & Nonresident Senior Fellow Brent Scowcroft Center on International Security The Atlantic Council, "The History of Proliferation Optimism: Does It Have A Future?", February 2014, http://www.matthewkroenig.com/The%20History%20of%20Proliferation%20Optimism_Feb2014.pdf, AB)

Scott Sagan and other contemporary proliferation pessimists have provided systematic and thoroughgoing critiques of the proliferation optimism position.32 Sagan shows that the spread of nuclear weapons leads to greater levels of international instability because: states might conduct preventive strikes on the nuclear facilities of proliferant states, proliferant states might not take the necessary steps to build a secure, second-strike capability, and organizational pathologies within nuclear states could lead to accidental or inadvertent nuclear launch.33 As Frank Gavin writes in his review of the optimism/pessimism debate, "The real problem, however, is that Sagan plays small ball in his debate with Waltz, conceding the big issues. Why not challenge Waltz on his core arguments about deterrence and stability?"34 Rather than repeat the substantial efforts of previous pessimists, therefore, I will take up Gavin's challenge and focus on three big issues. In particular, this section maintains that proliferation optimists: present an oversimplified version of nuclear deterrence theory, follow a line of argumentation that contains an internal logical contradiction, and do not address the concerns of U.S. foreign policymakers. First and foremost, proliferation optimists present an oversimplified view of nuclear deterrence theory. Optimists argue that since the advent of Mutually Assured Destruction (MAD), any nuclear war would mean national suicide and, therefore, no rational leader would ever choose to start one. Furthermore, they argue that the requirements for rationality are not high. Rather, leaders must value their own survival and the survival of their nation and understand that intentionally launching a nuclear war would threaten those values. Many analysts and policymakers attempt to challenge the optimists on their own turf and question whether the leaders of potential proliferant states are fully rational.35 Yet, these debate overlook the fact that, apart from the optimists, leading nuclear deterrence theorists believe that nuclear proliferation contributes to a real risk of nuclear war even in a situation of Mutually Assured Destruction (MAD) among rational states.36 Moreover, realizing that nuclear war is possible does not depend on peculiar beliefs about the possibility of escaping MAD.37 Rather, as we will discuss below, these theorists understand that some risk of nuclear war is necessary in order for deterrence to function. To be sure, in the 1940s, Viner, Brodie, and others argued that MAD rendered war among major powers obsolete, but nuclear deterrence theory soon advanced beyond that simple understanding.38 After all, great power political competition does not end with nuclear weapons. And nuclear-armed states still seek to threaten nuclear-armed adversaries. States cannot credibly threaten to launch a suicidal nuclear war, but they still want to coerce their adversaries. This leads to a credibility problem: how can states credibly threaten a nuclear-armed opponent? Since the 1960s, academic nuclear deterrence theory has been devoted almost exclusively to answering this question.39 And their answers do not give us reasons to be optimistic.

It's totally possible – seven independent reasons

-structural rivalries and stress
-belief that war is impossible
-thick interdependence
-rising nationalism and competing claims
-powerful military establishments
-diplomatic alliances
-temptation to maintain dominance

Allison 14 (Graham Allison, director of the Belfer Center for Science and International Affairs at the Harvard Kennedy School, "Just How Likely Is Another World War?", 6/30/14, The Atlantic, http://www.theatlantic.com/international/archive/2014/07/just-how-likely-is-another-world-war/375320/, AB)
This essay attempts to use the "May Method" to highlight seven salient similarities and seven instructive differences between the challenges confronting Chinese and American leaders today and those facing world leaders in 1914. While most of the similarities make the possibility of conflict today more plausible that it might otherwise seem, and most of the differences make conflict seem less plausible, instructively, some have the opposite effect. 1. "Thucydides's Trap": structural stress that inevitably occurs when a rapidly rising power rivals a ruling power. As Thucydides observed about ancient Greece, an ascendant Athens naturally became more ambitious, assertive, arrogant, and even hubristic. Predictably, this instilled fear, anxiety, and defensiveness among the leaders of Sparta. Accustomed to economic primacy, naval dominance, and an empire on which the sun never set, Britain in 1914 viewed with alarm the unified German Reich that had overtaken it in industrial production and research, that was demanding a greater sphere of influence, and that was expanding its military capability to include a navy that could challenge Britain's control of the seas. In the decade before the war, this led Britain to abandon a century of "splendid isolation" to tighten

entanglements with France and then Russia. During the same period, German military planners watched with alarm as Russia rushed to complete railways that could allow it to move forces rapidly to the borders of Germany and its faltering Austro-Hungarian ally. In 2014, what for most Americans is our natural, God-given position as "Number One" is being challenged by an emerging China on track to surpass the United States in the next decade as the world's largest economy. As China has grown more powerful, it has become more active and even aggressive in its neighborhood, particularly in what it believes are the rightly named "China" seas to its east and south. Fearful neighbors from Japan and the Philippines to Vietnam naturally look to the U.S. for support in its role as the guardian of what since World War II has been an American Pax Pacifica. 2. The virtual inconceivability of "total" war. In 1914, aside from occasional small wars and colonial smackdowns, war was "out of fashion." The best-selling book of the era by Norman Angell argued that war was a "great illusion," since the nominal winner would certainly lose more than it could possibly gain. In 2014, the "long peace" since World War II, reinforced by nuclear weapons and economic globalization, makes all-out war between great powers so obviously self-defeating that it seems unthinkable. 3. Thick interdependence: economic, social, and political. In 1914, the U.K. and Germany were each other's major European trading partner and principal foreign investor. King George and Kaiser Wilhelm were first cousins, the latter having sat by the deathbed of his grandmother, Queen Victoria, in 1901, and marched as second only to George at the funeral of George's father, King Edward VII, in 1910. Elites of both societies studied at each other's major universities, were partners in business, and socialized together. In 2014, China is the United States' second-largest trading partner, the U.S. the largest buyer of Chinese exports, and China the largest foreign holder of American debt. A quarter of a million Chinese students study annually in American universities, including most recently Chinese President Xi Jinping's only daughter. 4. Rising nationalism that accentuates territorial disputes. In 1914, as the Ottoman Empire unraveled, Serbian nationalists aspired to create a greater Serbia, and Russia and Austria-Hungary competed for influence among the Ottoman successor states in the Balkans. Meanwhile, resurgent Germans planned for a larger Germany and French patriots dreamed about recapturing Alsace-Lorraine, provinces taken by Germany from France after the Franco-Prussian War of 1870–71. In 2014, China's claim to the Senkaku Islands administered by Japan in the last China Sea, and the "9-dash line" by which it asserts ownership of the entire South China Sea, are reflections of ambitions that are defining new facts in the surrounding waters, exciting nationalism among its neighbors and in its own population. 5. Powerful military establishments focused on a primary enemy for the purposes of planning and buying (and justifying defense budgets). In 1914, Britain and Germany's militaries viewed each other as major threats, Germany and Russia saw the other as major rivals, and France was focused on the danger posed by Germany. In 1907, as Germany's naval expansion approached the point at which it could challenge British naval primacy, the British prime minister asked the leading analyst in the foreign ministry for a memorandum "on the present State of British relations with France and Germany." That now-famous document written by Eyre Crowe predicted that Germany would not only establish the strongest army on the continent, but also "build as powerful a navy as she can afford." Germany's pursuit of what the memorandum called "political hegemony and maritime ascendency" would pose a threat to the "independence of her neighbors and ultimately the existence of England." Today, the U.S. Department of Defense plans against something it calls the "Anti-Access/Area Denial threat," a thinly veiled "you know who" for China. Since its humiliation in 1996, when it was forced to back down from threats to Taiwan after the U.S. sent two aircraft carriers to support Taiwan, China has planned, built, and trained to push U.S. naval forces back beyond Taiwan to the first island chain and eventually to the second. 6. Entangling alliances that create what Henry Kissinger has called a "diplomatic doomsday machine." In 1914, a web of complex alliance commitments threatened rapid escalation into Great Power war. After unifying Germany in the late nineteenth century, Chancellor Otto von Bismarck constructed a network of alliances that would keep the peace in Europe while isolating Germany's principal enemy, France. Kaiser Wilhelm wrecked Bismarck's finely tuned alliance structure by refusing to extend Germany's alliance with Russia in 1890. Two years later, Russia allied with France. This led Germany to strengthen its ties to Austria-Hungary, and Britain to entertain deeper entanglement with both France and Russia. In 2014, in East Asia, the United States has many allies, China few. In 2014, in East Asia, the United States has many allies, China few. American obligations and operational plans cover a spectrum from the U.S.-Japan Treaty of Mutual Cooperation and Security, which obligates the U.S. to regard any attack upon Japan as an attack on the U.S., to agreements with the Philippines and others that require only consultation and support. As an assertive China defines air identification zones, drills for oil and gas in contested areas, excludes other states' ships from waters around disputed islands, and operates ships and aircraft to redraw "rules of the road," it becomes easier to imagine scenarios in

which mistakes or miscalculation lead to results no one would have chosen. 7. Temptation of a coup de main to radically improve power and prestige. In 1914, a declining Austria-Hungary faced rising, Russian-backed Pan-Slavism in the Balkans. Seeing Serbia as the epicenter of Pan-Slavism, Emperor Franz Joseph imagined that this menace could be contained by a decisive defeat of Serbia. The assassination of his heir, Franz Ferdinand, provided an opportunity. In 2014, Shinzo Abe seeks to reverse Japan's "lost decades." A quarter-century ago, Japan appeared to be on the threshold of becoming "Number One." Since then, it has stagnated economically and become almost irrelevant in international politics. Abe's program for revival thus includes not only "Abenomics," but also restoration of Japanese influence in the world, including revision of the constitution and expansion of Japan's military forces to meet what he explicitly calls the "China threat." In sum, those who see reminders of events a century ago in developments today are not deluded.

Isaac 2

Jeffrey C. Isaac, James H. Rudy Professor of Political Science and Director of the Center for the Study of Democracy and Public Life at Indiana University-Bloomington, 2002 ("Ends, Means, and Politics," *Dissent*, Volume 49, Issue 2, Spring, Available Online to Subscribing Institutions via EBSCOhost, p. 35-37)

As writers such as Niccolo Machiavelli, Max Weber, Reinhold Niebuhr, and Hannah Arendt have taught, an unyielding concern with moral goodness **undercuts political responsibility**. The concern may be morally laudable, reflecting a kind of personal integrity, but it suffers from three fatal flaws: (1) It fails to see that the purity of one's intention **does not ensure** the achievement of what one intends. Abjuring violence or refusing to make common cause with morally compromised parties may seem like the right thing; but if such tactics entail impotence, then it is hard to view them as serving any moral good beyond the clean conscience of their supporters; (2) it fails to see that in a world of **real violence and injustice**, moral purity is not simply a form of powerlessness; it is often a form of **complicity in injustice**. [end page 35] This is why, from the standpoint of politics—as opposed to religion—pacifism is always a potentially immoral stand. In categorically repudiating violence, it refuses in principle to oppose certain violent injustices with any effect; and (3) it fails to see that politics is as much about **unintended consequences** as it is about intentions; **it is the effects of action, rather than the motives of action, that is most significant**. Just as the alignment with "good" may engender impotence, **it is often the pursuit of "good" that generates evil**. This is the lesson of communism in the twentieth century: it is **not enough** that one's goals be sincere or idealistic; it is **equally important**, **always**, to ask about **the effects of pursuing these goals** and to judge these effects in **pragmatic and historically contextualized** ways. Moral absolutism **inhibits this judgment**. It **alienates** those who are not true believers. It promotes **arrogance**. And it **undermines political effectiveness**.

No NSA abuses – checks the internal link

Lowry 2015,

Rich, Editor, the National Review, 5-27-2015, "Lowry: NSA data program faces death by bumper sticker," Salt Lake Tribune, http://www.sltrib.com/csp/mediapool/sites/sltrib/pages/printfriendly.csp?id=2557534

You can listen to orations on the NSA program for hours and be outraged by its violation of our liberties, inspired by the glories of the Fourth Amendment and prepared to mount the barricades to stop the NSA in its tracks — and still have no idea what the program actually does. That's what the opponents leave out or distort, since their case against the program becomes so much less compelling upon fleeting contact with reality. The program involves so-called metadata, information about phone calls, but not the content of the calls — things like the numbers called, the time of the call, the duration of the call. The phone companies have all this information, which the NSA acquires from them. What happens next probably won't shock you, and it shouldn't. As Rachel Brand of the Privacy and Civil Liberties Oversight Board

writes, "It is stored in a database that may be searched only by a handful of trained employees, and even they may search it only after a judge has determined that there is evidence connecting a specific phone number to terrorism." The charge of domestic spying is redolent of the days when J. Edgar Hoover targeted and harassed Martin Luther King Jr. Not only is there zero evidence of any such abuse, it isn't even possible based on the NSA database alone. There are no names with the numbers. As former prosecutor Andrew C. McCarthy points out, whitepages.com has more personal identifying information. The NSA is hardly a rogue agency. Its program is overseen by a special panel of judges, and it has briefed Congress about its program for years.

No Moral Objections to Surveillance – even new concerns don't assume the strength of activist potential

Sagar 15—Rahul Sagar, Assistant Professor of Politics at Princeton University, 2015 ("Against Moral Absolutism: Surveillance and Disclosure After Snowden," *Cambridge Journals Online*, June 12th, Available online at http://journals.cambridge.org/action/displayAbstract?fromPage=online&aid=9749725&fileId=S0892679415000040, Accessed on 7/15/15)

I have challenged the conspiratorial view that state surveillance serves to reinforce the hegemony of a shadowy elite. A basic premise of the discussion that follows is that in contemporary liberal democracies, communications surveillance is a legitimate activity. What, then, ought to be the bounds of such surveillance and how far can we be confident that these bounds are being observed? In order to ascertain the rightful bounds on communications surveillance we need to weigh the interests it furthers against those it threatens. The interest it furthers is national security. Greenwald questions this link on a number of grounds. He argues that surveillance is a disproportionate response to the threat of terrorism, which has been "plainly exaggerated" because the "risk of any American dying in a terrorist attack is . . . considerably less than the chance of being struck by lightning." · Furthermore, even if the threat of terrorism is real, surveillance isunjustified because to "venerate physical safety above all other values" means accepting "a life of paralysis and fear." He also questions surveillance's relevance to national security on the grounds that it is often employed to further other national or commercial interests. He asks how, for instance, does "spying on negotiation sessions at an economic summit or targeting the democratically elected leaders of allied states" serve national security?· Arguably these criticisms miss the mark. That terrorist plots thus far have been amateurish does not mean that terrorists will not learn and eventually succeed in causing greater harm. Nor is being concerned about terrorism tantamount to "pursuing absolute physical safety." · The terror in terrorism comes from the unpredictability and the brutality of the violence inflicted on civilians. There is a difference between voluntarily undertaking a somewhat risky bicycle ride in rush hour traffic and being unexpectedly blown to bits while commuting to work. Finally, it is widely accepted that countries have a right to pursue their national interests, subject of course to relevant countervailing ethical considerations. It is not hard to imagine how intercepting Chancellor Angela Merkel's conversation could serve the United States' national security interests (for example, it could provide intelligence on Europe's dealings with Russia). What are the countervailing values that have been overlooked in this case? The President's Review Group on Intelligence and Communications Technologies, set up in the wake of Snowden's disclosures, warns that surveillance of foreign leaders must be "respectful." But the justification offered is strategic rather than moral: the group urges caution out of recognition for "the importance of cooperative relationships with other nations." · A moral justification would have weak legs since American allies, including Germany, reportedly engage in similar practices. As Greenwald himself acknowledges, the NSA's surveillance of foreign leaders is "unremarkable" because "countries have spied on heads of state for centuries, including allies." Greenwald also raises objections from a national security perspective. He warns that mass surveillance undermines national security because "it swamps the intelligence agencies with so much data that they cannot possibly sort through it effectively." He also questions the efficacy of communications surveillance, arguing that it has little to show in terms of success in combating terrorism. But these criticisms are equally unpersuasive. It is certainly possible that a surveillance program could generate so much raw data that an important piece of information is overlooked. But in such a case the appropriate response would not be to shut down the programbut rather to bulk up the processing power and manpower devoted to it. Finally, both the President's Review Group and the Privacy and Civil Liberties Oversight Board have examined the efficacy of the

NSA's programs. Both report that the NSA's foreign surveillance programs have contributed to more than fifty counterterrorism investigations, leading them to conclude that the NSA "does in fact play an important role in the nation's effort to prevent terrorist attacks across the globe." □· So far I have argued that communications surveillance can further national security. However, national security is not the only value liberal democracies and their citizens deem important. Hence we need to consider how far communications surveillance impinges on other important interests and values. Greenwald identifies two major harms. The first is political in nature. Mass surveillance is said to stifle dissent because "a citizenry that is aware of always being watched quickly becomes a compliant and fearful one." Compliance occurs because, anticipating being shamed or condemned for nonconformist behavior, individuals who know they are being watched "think only in line with what is expected and demanded." □· Even targeted forms of surveillance are not to be trusted, Greenwald argues, because the "indifference or support of those who think themselves exempt invariably allows for the misuse of power to spread far beyond its original application." □· These claims strike me as overblown. The more extreme claim, that surveillance furthers thought control, is neither logical nor supported by the facts. It is logically flawed because accusing someone of trying to control your mind proves that they have not succeeded in doing so. On a more practical level, the fate met by states that have tried to perfect mass control—the Soviet Union and the German Democratic Republic, for example—suggests that surveillance cannot eliminate dissent. It is also not clear that surveillance can undermine dissident movements as easily as Greenwald posits. The United States' record, he writes, "is suffused with examples of groups and individuals being placed under government surveillance by virtue of their dissenting views and activism—Martin Luther King, Jr., the civil rights movement, antiwar activists, environmentalists." □□ These cases are certainly troubling, but it hardly needs pointing out that surveillance did not prevent the end of segregation, retreat from Vietnam, and the rise of environmental consciousness. This record suggests that dissident movements that have public opinion on their side are not easily intimidated by state surveillance (a point reinforced by the Arab Spring). Surveillance may make it harder for individuals to associate with movements on the far ends of the political spectrum. But why must a liberal democracy refrain from monitoring extremist groups such as neo-Nazis and anarchists? There is the danger that officials could label as "extreme" legitimate movements seeking to challenge the prevailing order. Yet the possibility that surveillance programs could expand beyond their original ambit does not constitute a good reason to end surveillance altogether. A more proportionate response is to see that surveillance powers are subject to oversight. The second harm Greenwald sees surveillance posing is personal in nature. Surveillance is said to undermine the very essence of human freedom because the "range of choices people consider when they believe that others are watching is . . . far more limited than what they might do when acting in a private realm." □· Internet-based surveillance is viewed as especially damaging in this respect because this is "where virtually everything is done" in our day, making it the place "where we develop and express our very personality and sense of self." Hence, "to permit surveillance to take root on the Internet would mean subjecting virtually all forms of human interaction, planning, and even thought itself to comprehensive state examination." □· This claim too seems overstated in two respects. First, it exaggerates the extent to which our self-development hinges upon electronic communication channels and other related activities that leave electronic traces. The arrival of the Internet certainly opens new vistas, but it does not entirely close earlier ones. A person who fears what her browsing habits might communicate to the authorities can obtain texts offline. Similarly, an individual who fears transmitting materials electronically can do so in person, as Snowden did when communicating with Greenwald. There are costs to communicating in such "old-fashioned" ways, but these costs are neither new nor prohibitive. Second, a substantial part of our self-development takes place in public. We become who we are through personal, social, and intellectual engagements, but these engagements do not always have to be premised on anonymity. Not everyone wants to hide all the time, which is why public engagement—through social media or blogs, for instance—is such a central aspect of the contemporary Internet.

Privacy violations inevitable – tech and corporations

Goldsmith, 2015

Jack the Henry L. Shattuck Professor at Harvard Law School, The Ends of Privacy, The New Rambler, Apr. 06, 2015 (reviewing Bruce Schneier, Data and Goliath: The Hidden Battles to

Collect Your Data and Control Your World (2015)). Published Version
http://newramblerreview.com/images/files/Jack- Goldsmith_Review-of-Bruce-Schneier.pdf

The truth is that consumers love the benefits of digital goods and are willing to give up traditionally private information in exchange for the manifold miracles that the Internet and big data bring. Apple and Android each offer more than a million apps, most of which are built upon this model, as are countless other Internet services. More generally, big data promises huge improvements in economic efficiency and productivity, and in health care and safety. Absent abuses on a scale we have not yet seen, the public's attitude toward giving away personal information in exchange for these benefits will likely persist, even if the government requires firms to make more transparent how they collect and use our data. One piece of evidence for this is that privacy-respecting search engines and email services do not capture large market shares. In general these services are not as easy to use, not as robust, and not as efficacious as their personal-data-heavy competitors. Schneier understands and discusses all this. In the end his position seems to be that we should deny ourselves some (and perhaps a lot) of the benefits big data because the costs to privacy and related values are just too high. We "have to stop the slide" away from privacy, he says, not because privacy is "profitable or efficient, but because it is moral." But as Schneier also recognizes, privacy is not a static moral concept. "Our personal definitions of privacy are both cultural and situational," he acknowledges. Consumers are voting with their computer mice and smartphones for more digital goods in exchange for more personal data. The culture increasingly accepts the giveaway of personal information for the benefits of modern computerized life. This trend is not new. "The idea that privacy can't be invaded at all is utopian," says Professor Charles Fried of Harvard Law School. "There are amounts and kinds of information which previously were not given out and suddenly they have to be given out. People adjust their behavior and conceptions accordingly." That is Fried in the 1970 Newsweek story, responding to an earlier generation's panic about big data and data mining. The same point applies today, and will apply as well when the Internet of things makes today's data mining seem as quaint as 1970s-era computation.

The right to security trumps the right to privacy – Individual ethics prove

Himma 2007 (KENNETH EINAR , "Privacy Versus Security: Why Privacy is Not an Absolute Value or Right" *San Diego Law Review*,
http://poseidon01.ssrn.com/delivery.php?ID=946099113093066103077074112016017090015022028045089092075001073099001099109106114127011017012000106100015114101076020123093078010050012092072093113078096021081008038034055090107126078091116028103066027088072124015085097094100087114086001099009078&EXT=pdf&TYPE=2)

From an intuitive standpoint, the idea that the right to privacy is an absolute right seems utterly implausible. Intuitively, it seems clear that there are other rights that are so much more important that they easily trump privacy rights in the event of a conflict. For example, if a psychologist knows that a patient is highly likely to commit a murder, then it is, at the very least, morally permissible to disclose that information about the patient in order to prevent the crime—regardless of whether such information would otherwise be protected by privacy rights. Intuitively, it seems clear that life is more important from the standpoint of morality than any of the interests protected by a moral right to privacy. Still one often hears—primarily from academics in information schools and library schools, especially in connection with the controversy regarding the USA PATRIOT Act—the claim that privacy should never be sacrificed for security, implicitly denying what I take to be the underlying rationale for the PATRIOT Act. This also seems counterintuitive because it does not seem unreasonable to believe we have a moral right to security that includes the right to life. Although this right to security is broader than the right to life, the fact that security interests include our interests in our lives implies that the right to privacy trumps even the right to life—something that seems quite implausible from an intuitive point of view. If I have to give up the most private piece of information about myself to save my life or

protect myself from either grievous bodily injury or financial ruin, I would gladly do so without hesitation. There are many things I do not want you to know about me, but should you make a credible threat to my life, bodily integrity, financial security, or health, and then hook me up to a lie detector machine, I will truthfully answer any question you ask about me. I value my privacy a lot, but I value my life, bodily integrity, and financial security much more than any of the interests protected by the right to privacy.

Surveillance reinforces the equal protection of the law – key to equitable morals

Taylor 05

[In Praise of Big Brother: Why We Should Learn to Stop Worrying and Love Government Surveillance; James Stacey Taylor; Public Affairs Quarterly Vol. 19, No. 3 (Jul., 2005), pp. 227-246 Published by: University of Illinois Press on behalf of North American Philosophical Publications Stable URL: http://www.jstor.org/stable/40441413] //duff

A system of constant State surveillance would have other advantages, too. Under the current criminal justice system a wealthy defendant who is innocent of the charges that she is faced with can use her wealth to hire private investigators to demonstrate her innocence, either by finding persons who witnessed the crime of which she is accused, or by finding persons who can provide her with a legitimate alibi. This option is not open to poorer defendants who are similarly innocent, but who cannot afford to hire private investigators. Since this is so, innocent, poor defendants are more likely than innocent, wealthy defendants to accept plea bargains, or to be convicted of crimes that they did not commit. If, however, a poor person were to be accused of a crime in a State that subjected its citizens to constant surveillance, the judge in her case would be morally justified (indeed, would be morally required) in enabling the defense to secure information that would prove her innocence, and that would have been gathered by the State's surveillance devices. A State's use of constant surveillance could thus reduce the number of persons who are wrongfully convicted. This would not only be good in itself, but it would also lead to a more equitable justice system, for the disparity in wrongful conviction rates between the wealthy (who could use their wealth to prove their innocence) and the poor could be eliminated.

Transparency is inevitable and aids psychological and ethical self-development – welcome to Post-Privacy

Seemann, 2015,

Michael Seemann studied Applied Cultural Studies in Lünebur, Now he blogs at mspr0.de and writes for various media like Rolling Stone, TIME online, SPEX, Spiegel Online, c't and the DU magazine " Digital Tailspin Ten Rules for the Internet After Snowden" The Network Notebooks series March 2015 http://networkcultures.org/wp-content/uploads/2015/03/NN09_Digital_Tailspin_SP.pdf

POST-PRIVACY: TRANSPARENCY AS A STOIC EXERCISE In his book Post-Privacy: Prima leben ohne Privatsphäre (Post-Privacy: Living just Fine Without Privacy),18 Christian Heller embraces an even more radical strategy. He argues that it is time to say goodbye to privacy altogether and to embrace the inevitable: transparency. He highlights, amongst other points, the fact that privacy as we know it today is a relatively new form of coexistence, and one that has not only been advantageous. The private sphere has, for the longest time, been the place of the oppression of women, for example. Contrast this with the gay rights movements, which were among the first to show how social progress can be achieved by making ultimately personal information public. Since we are unable to halt technological progress, we'd better get used to the idea of total transparency, says Heller. Heller himself acts out this idea in practice. He documents all of his daily routines, his finances, and large amounts of highly personal information in a publicly accessible wiki.19 It is easy to dismiss this as a self-indulgent discovery trip, but Heller is undeniably radicalizing an issue that has become the norm, in social networks anyway, namely the fact that formerly private matters are explicitly being made public. Unlike many Facebook users, however, Heller doesn't deceive himself. He is highly aware of the fact that his data

can be used and abused, by anyone, at any time, for any purpose. In this sense, post-privacy as a strategy complies well with Nassim Nicholas Taleb's dictum of antifragility. Post-privacy is a practical exercise in stoicism: basing your assumptions on the worst case scenario – in this case, that all information is public by default – will not give you a false sense of security, but rather will allow you to make plans in such a way that, should this worst case actually occur, you will not be confronted with unsolvable problems. If you keep in mind that all data is accessible, in one way or another, this can actually reduce anxiety – one of the more negative effects of surveillance.

Ethics

No D- Rule – Consequences 1st

Weigh consequences — especially *when responding to terrorism.*

Isaac 2

Jeffrey C. Isaac, James H. Rudy Professor of Political Science and Director of the Center for the Study of Democracy and Public Life at Indiana University-Bloomington, 2002 ("Ends, Means, and Politics," *Dissent*, Volume 49, Issue 2, Spring, Available Online to Subscribing Institutions via EBSCOhost, p. 35-37)

As writers such as Niccolo Machiavelli, Max Weber, Reinhold Niebuhr, and Hannah Arendt have taught, an unyielding concern with moral goodness **undercuts political responsibility**. The concern may be morally laudable, reflecting a kind of personal integrity, but it suffers from three fatal flaws: (1) It fails to see that the purity of one's intention **does not ensure** the achievement of what one intends. Abjuring violence or refusing to make common cause with morally compromised parties may seem like the right thing; but if such tactics entail impotence, then it is hard to view them as serving any moral good beyond the clean conscience of their supporters; (2) it fails to see that in a world of **real violence and injustice**, moral purity is not simply a form of powerlessness; it is often a form of **complicity in injustice**. [end page 35] This is why, from the standpoint of politics—as opposed to religion—pacifism is always a potentially immoral stand. In categorically repudiating violence, it refuses in principle to oppose certain violent injustices with any effect; and (3) it fails to see that politics is as much about **unintended consequences** as it is about intentions; **it is the effects of action, rather than the motives of action, that is most significant**. Just as the alignment with "good" may engender impotence, **it is often the pursuit of "good" that generates evil**. This is the lesson of communism in the twentieth century: it is **not enough** that one's goals be sincere or idealistic; it is **equally important**, **always**, to ask about **the effects of pursuing these goals** and to judge these effects in **pragmatic and historically contextualized** ways. Moral absolutism **inhibits this judgment**. It **alienates** those who are not true believers. It promotes **arrogance**. And it **undermines political effectiveness**.

Yes - Consequentialism - surveillance

Privacy needs to be considered in a utilitarian framework to be properly evaluated—weigh it against our impacts

Solove 2—Daniel Solove is an Associate Professor at George Washington University Law School and holds a J.D. from Yale Law School, he is one of the world's leading expert in information privacy law and is well known for his academic work on privacy and for popular books on how privacy relates with information technology, he has written 9 books and more than

50 law review articles, 2002 (“Conceptualizing Privacy,” Available online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=313103, accessed on 7/17/15)

Thus far, attempts to locate a common denominator for conceptualizing privacy have been unsatisfying. Conceptions that attempt to locate the core or essence of privacy wind up being too broad or too narrow. I am not arguing that we must always avoid referring to privacy in the abstract; sometimes it is easiest and most efficient to do so. Rather, such abstract reference to privacy often fails to be useful when we need to conceptualize privacy to solve legal and policy problems. Therefore, it may be worthwhile to begin conceptualizing privacy in a different way. A bottom-up contextualized approach toward conceptualizing privacy will prove quite fruitful in today’s world of rapidly changing technology. Of course, in advocating a contextual analysis of privacy, the issue remains: At what level of generality should the contexts be defined? This is a difficult question, and I doubt there is a uniform level of generality that is preferable. This Article does not recommend that contexts be defined so narrowly as to pertain to only a few circumstances. It is often useful to define contexts of some breadth, so long as the generalization is not overly reductive or distorting. All generalization is an imperfection. Focusing on particular contexts and practices is a way of carving up experience into digestible parts. The human mind simply cannot examine experience in its chaotic totality: it must bite off pieces to analyze. The way we conceptualize privacy in each context profoundly influences how we shape legal solutions to particular problems. We can evaluate the results of our conceptions by looking to how well they work in solving the problems. Although I critique attempts to locate an overarching conception of privacy, I am certainly not arguing against endeavors to conceptualize privacy. Conceptualizing privacy in particular contexts is an essential step in grappling with legal and policy problems. Thus, the issue of how we conceptualize privacy is of paramount importance for the Information Age, for we are beset with a number of complex privacy problems, causing great disruption to numerous important practices of high social value. With the method of philosophical inquiry I am recommending, we can better understand, and thus more effectively grapple with, these emerging problems.

The value of privacy depends on the context—don’t buy into their universal absolutes arguments

Solove 7—Daniel Solove, an Associate Professor at George Washington University Law School and holds a J.D. from Yale Law School, one of the world’s leading expert in information privacy law and is well known for his academic work on privacy and for popular books on how privacy relates with information technology, has written 9 books and more than 50 law review articles, 2007 (““I’ve Got Nothing to Hide” and Other Misunderstandings of Privacy,” Available online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=998565 , accessed on 7/17/15)

Because privacy involves protecting against a plurality of different harms or problems, the value of privacy is different depending upon which particular problem or harm is being protected. Not all privacy problems are equal; some are more harmful than others. Therefore, we cannot ascribe an abstract value to privacy. Its value will differ substantially depending upon the kind of problem or harm we are safeguarding against. Thus, to understand privacy, we must conceptualize it and its value more pluralistically. Privacy is a set of protections against a related set of problems. These problems are not all related in the same way, but they resemble each other. There is a social value in protecting against each problem, and that value differs depending upon the nature of each problem.

There should not be a universal ethical rule against surveillance, the context matters.

Stoddart, 2014

Eric. School of Divinity, University of St Andrews "Challenging ‘Just Surveillance Theory’: A Response to Kevin Macnish’s ‘Just Surveillance? Towards a Normative Theory of Surveillance’." Surveillance & Society 12.1 (2014): 158-163.

I am sorry to say that I find Macnish's aim of a normative ethics of surveillance to be an unnecessary goal. I could be persuaded that a radically revised model of practical reasoning based on the Just War Tradition might have saliency for investigative strategies involving surveillance technologies. However, 'surveillance' is much too all-encompassing a term to be the subject of its own ethics. There can be no 'ethics of surveillance' but there may be norms appropriate for particular contexts of surveillance. This means examining specific domains

in which surveillance is deployed, along with other strategies, to address concerns or challenges. For example, the ethics of surveillance in elderly care or the ethics of surveillance in education are valuable discussions to be had. My point is that it ought to be the ethics of elderly care that is foregrounded within which we would be seek to understand the ethical deployment of surveillance mechanisms.

Privacy is instrumental and never a moral absolute—its only valued through other ends

Solove 2—Daniel Solove is an Associate Professor at George Washington University Law School and holds a J.D. from Yale Law School, he is one of the world's leading expert in information privacy law and is well known for his academic work on privacy and for popular books on how privacy relates with information technology, he has written 9 books and more than 50 law review articles, 2002 ("Conceptualizing Privacy," Available online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=313103, accessed on 7/17/15)

However, along with other scholars,342 I contend that privacy has an instrumental value—namely, that it is valued as a means for achieving certain other ends that are valuable. As John Dewey observed, ends are not fixed, but are evolving targets, constantly subject to revision and change as the individual strives toward them.343 "Ends are foreseen consequences which arise in the course of activity and which are employed to give activity added meaning and to direct its further course."344 In contrast to many conceptions of privacy, which describe the value of privacy in the abstract, I contend that there is no overarching value of privacy. For example, theories of privacy have viewed the value of privacy in terms of furthering a number of different ends. Fried claims that privacy fosters love and friendship. Bloustein argues that privacy protects dignity and individuality. Boling and Inness claim that privacy is necessary for intimate human relationships. According to Gavison, privacy is essential for autonomy and freedom. Indeed, there are a number of candidates for the value of privacy, as privacy fosters self-creation, independence, autonomy, creativity, imagination, counter-culture, freedom of thought, and reputation. However, no one of these ends is furthered by all practices of privacy. The problem with discussing the value of privacy in the abstract is that privacy is a dimension of a wide variety of practices each having a different value—and what privacy is differs in different contexts. My approach toward conceptualizing privacy does not focus on the value of privacy generally. Rather, we must focus specifically on the value of privacy within particular practices.

Deontology Bad - Privacy

Deontological absolutes create bad conceptions of privacy. They destroy our ability to truly advance privacy

Solove 2—Daniel Solove is an Associate Professor at George Washington University Law School and holds a J.D. from Yale Law School, he is one of the world's leading expert in information privacy law and is well known for his academic work on privacy and for popular books on how privacy relates with information technology, he has written 9 books and more than 50 law review articles, 2002 ("Conceptualizing Privacy," Available online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=313103, accessed on 7/17/15)

Why should scholars and judges adopt my approach to conceptualizing privacy? To deal with the myriad of problems involving privacy, scholars and judges will have to adopt multiple conceptions of privacy, or else the old conceptions will lead them astray in finding solutions. The Court's 1928 decision in Olmstead v. United

States345 epitomizes the need for flexibility in conceptualizing privacy. The Court held that the wiretapping of a person's home telephone (done outside a person's house) did not run afoul of the Fourth Amendment because it did not involve a trespass inside a person's home.346 Justice Louis Brandeis vigorously dissented, chastising the Court for failing to adapt the Constitution to new problems: "[I]n the application of a Constitution, our contemplation cannot be only of what has been, but of what may be."347 The Olmstead Court had clung to the outmoded view that the privacy protected by the Fourth Amendment was merely freedom from physical incursions. As a result, for nearly forty years, the Fourth Amendment failed to apply to wiretapping, one of the most significant threats to privacy in the twentieth century.348 Finally, in 1967, the Court swept away this view in Katz v. United States,349 holding that the Fourth Amendment did apply to wiretapping. These events underscore the wisdom of Brandeis's observations in Olmstead—the landscape of privacy is constantly changing, for it is shaped by the rapid pace of technological invention, and therefore, the law must maintain great flexibility in conceptualizing privacy problems. This flexibility is impeded by the use of an overarching conception of privacy. Trying to solve all privacy problems with a uniform and overarching conception of privacy is akin to using a hammer not only to insert a nail into the wall but also to drill a hole. Much of the law of information privacy was shaped to deal with particular privacy problems in mind. The law has often failed to adapt to deal with the variety of privacy problems we are encountering today. Instead, the law has attempted to adhere to overarching conceptions of privacy that do not work for all privacy problems. Not all privacy problems are the same, and different conceptions of privacy work best in different contexts. Instead of trying to fit new problems into old conceptions, we should seek to understand the special circumstances of a particular problem. What practices are being disrupted? In what ways does the disruption resemble or differ from other forms of disruption? How does this disruption affect society and social structure? These are some of the questions that should be asked when grappling with privacy problems. In the remainder of this section, I will discuss several examples that illustrate these points.

Security First

Security comes first—privacy is never absolute

Himma 7—Kenneth Himma, Associate Professor of Philosophy, Seattle Pacific University, holds JD and PhD and was formerly a Lecturer at the University of Washington in Department of Philosophy, the Information School, and the Law School, 2007 ("Privacy vs. Security: Why Privacy is Not an Absolute Value or Right," Available online at http://ssrn.com/abstract=994458, accessed on 7/17/15)

Although an account that enables us to determine when security and privacy come into conflict and when security trumps privacy would be of great importance if I am correct about the general principle, my efforts in this essay will have to be limited to showing that the various theories of legitimacy presuppose or entail that, other things being equal, security is, as a general matter, more important than privacy. Among the moral rights most people believe deserve legal protection, none is probably more poorly understood than privacy. What exactly privacy is, what interests it encompasses, and why it deserves legal protection, are three of the most contentious issues in theorizing about information ethics and legal theory. While there is certainly disagreement about the nature and importance of other moral rights deserving legal protection, like the right to property, the very concept of privacy is deeply contested. Some people believe that the various interests commonly characterized as privacy interests have some essential feature in common that constitutes them as privacy interests; others believe that there is no such feature and that the concept of privacy encompasses a variety of unrelated interests, some of which deserve legal protection while others do not Notably, many people tend to converge on the idea that privacy rights, whatever they ultimately encompass, are absolute in the sense that they may not legitimately be infringed for any reason. While the various iterations of the USA PATRIOT Act are surely flawed with respect to their particulars, there are many people who simply oppose, on principle, even a narrowly crafted attempt to combat terrorism that infringes minimally on privacy interests. There is no valid justification of any kind, on this absolutist conception, for infringing any of the interests falling within the scope of the moral right to privacy.

Security Trumps Constitution

The counter-terror benefits of mass surveillance outweigh privacy and the Constitution.

Posner 5 —

Richard A. Posner, Senior Lecturer in Law at the University of Chicago, Judge on the United States Court of Appeals for the Seventh Circuit in Chicago, was named the most cited legal scholar of the 20th century by *The Journal of Legal Studies*, 2013 "Our Domestic Intelligence Crisis," *Washington Post*, December 21st, http://www.washingtonpost.com/wp-dyn/content/article/2005/12/20/AR2005122001053.html

These programs are criticized as grave threats to civil liberties. They are not. Their significance is in flagging the existence of gaps in our defenses against terrorism. The Defense Department is rushing to fill those gaps, though there may be better ways. The collection, mainly through electronic means, of vast amounts of personal data is said to invade privacy. But machine collection and processing of data cannot, as such, invade privacy. Because of their volume, the data are first sifted by computers, which search for names, addresses, phone numbers, etc., that may have intelligence value. This initial sifting, far from invading privacy (a computer is not a sentient being), keeps most private data from being read by any intelligence officer. The data that make the cut are those that contain clues to possible threats to national security. The only valid ground for forbidding human inspection of such data is fear that they might be used to blackmail or otherwise intimidate the administration's political enemies. That danger is more remote than at any previous period of U.S. history. Because of increased political partisanship, advances in communications technology and more numerous and competitive media, American government has become a sieve. No secrets concerning matters that would interest the public can be kept for long. And the public would be far more interested to learn that public officials were using private information about American citizens for base political ends than to learn that we have been rough with terrorist suspects – a matter that was quickly exposed despite efforts at concealment. The Foreign Intelligence Surveillance Act makes it difficult to conduct surveillance of U.S. citizens and lawful permanent residents unless they are suspected of being involved in terrorist or other hostile activities. That is too restrictive. Innocent people, such as unwitting neighbors of terrorists, may, without knowing it, have valuable counterterrorist information. Collecting such information is of a piece with data-mining projects such as Able Danger. The goal of national security intelligence is to prevent a terrorist attack, not just punish the attacker after it occurs, and the information that enables the detection of an impending attack may be scattered around the world in tiny bits. A much wider, finer-meshed net must be cast than when investigating a specific crime. Many of the relevant bits may be in the e-mails, phone conversations or banking records of U.S. citizens, some innocent, some not so innocent. The government is entitled to those data, but just for the limited purpose of protecting national security.The Pentagon's rush to fill gaps in domestic intelligence reflects the disarray in this vital yet neglected area of national security. The principal domestic intelligence agency is the FBI, but it is primarily a criminal investigation agency that has been struggling, so far with limited success, to transform itself. It is having trouble keeping its eye on the ball; an FBI official is quoted as having told the Senate that environmental and animal rights militants pose the biggest terrorist threats in the United States. If only that were so. Most other nations, such as Britain, Canada, France, Germany and Israel, many with longer histories of fighting terrorism than the United States, have a domestic intelligence agency that is separate from its national police force, its counterpart to the FBI. We do not. We also have no official with sole and comprehensive responsibility for domestic intelligence. It is no surprise that gaps in domestic intelligence are being filled by ad hoc initiatives.We must do better. The terrorist menace, far from receding, grows every day. This is not only because al Qaeda likes to space its attacks, often by many years, but also because weapons of mass destruction are becoming ever more accessible to terrorist groups and individuals.

Security Balance Good

The current balance between security and privacy is perfect

Karen J. **Greenberg**, [the executive director of the Center on Law and Security], APRIL 12, **2007**

Karen J. Greenberg, Jeff Grossman, Sybil Perez, Joe Ortega, Jim Diggins, Wendy Bedenbaugh, [SECRECY AND GOVERNMENT: America Faces the Future PRIVACY IN THE AGE OF NATIONAL SECURITY] Pgs. 74-75

People often talk about the threats to our privacy under the Patriot Act and other Bush administration programs, but the actual notion of what privacy is – whether we have a right to it, why we think we have a right to it, and whether we even want it – seems to be somewhat up for grabs. The issue brings together the government, the corporate sector, the medical sector, and many diverse specialties that we do not usually combine in the same conversation. I see today's discussion as the beginning of a longterm dialogue about these ideas, which hopefully will come into focus as we talk about them. Privacy is a generational issue, and the way in which policymakers and commentators address it today may be irrelevant sooner than we think. My mother will not use her credit card at the supermarket because she does not want people to know what groceries she buys. That is her notion of privacy. One of my brothers will not go through the E-ZPass lane at the tollbooth because he does not like the idea of anybody knowing where he has been or where he is going. My daughter and her friends, however, post photos and trade notes on Facebook. They are an open book to one another and they do not care. They have a very different conception of what privacy should be. I think that the idea of protecting privacy, as we understand it, is already outdated. Over time, we should begin to understand a new concept of privacy that is very much within us. Prof. Burt Neuborne: We are going to ask difficult and theoretical questions about the nature of privacy and how it evolved as an idea. In thinking about the future, this panel will also discuss the notion of what privacy will look like in the technologically explosive world of the 21st century, why we should care, and what parameters should be imposed upon it. Valerie Caproni: Given my position as general counsel for the FBI, I suspect that few people will be surprised when I say that the primacy of privacy has not been sacrificed to the demands of national security or law enforcement. I do think that the topic needs to be discussed and that there must be public debate about it. I recognize that many of the panelists today feel that the accretion of power in the executive branch has endangered privacy and that we seem to have an endless desire to collect information on citizens. Nevertheless, it is my strong belief that the FBI is striking the correct balance between privacy and security (I do not have sufficiently in-depth knowledge to talk about other federal agencies). Too often, the debate is phrased in terms of an either/or proposition: you can either respect privacy or have national security, but not both. I reject that notion. The question is one of balance. From the Bureau's perspective, the notion of balancing security and privacy is nothing new. Benjamin Franklin said, "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." I think we respect the notion of a middle ground. For all of our almost 100 years of existence, the FBI has been in the business of balancing national security and civil liberties. We view privacy as one element of civil liberties. There have admittedly been times in our history when we did not do a good job of balancing those equities. The abuses of the 1960s and '70s that led to the Church Committee in the Senate and the Pike Committee in the House are prime examples of the balance being askew, but things have changed since those days. The agents now working at the Bureau were children in the days of the counterintelligence programs known as "COINTELPRO." Those programs are not a part of any current agent's history.

Secret surveillance programs are necessary

Michael **Sheehan** was appointed a deputy assistant secretary of state in the Bureau of International Organizations . Secrecy and Government: America Faces the Future. April 12, 20**07**

So there are different levels of secrecy; the secrecies involved in discrete acts and the secrecies involved in entire state actions. But to get back to what we are concerned with today, we are talking

about issues involv- ing counterterrorism and some of the programs involved. I think that most people would agree that the government needs to keep certain secrets. The issues really revolve around pro- grams, not secrets – secret *programs*. Three of them have been mentioned here today: the NSA wiretap program, which President Bush initiat- ed after September 11th; the national security letter program that has been internally investigat- ed by the FBI; and the NYPD programs looking at some of the actions prior to the Republican National Convention here in New York City. In my view, each one of these programs was jus- tif ied in itself and was generally well-needed. But each of them probably suf- fered a little from not get- ting the proper legislative action and oversight to prevent abuse. The NSA wiretap program, which we wrote about here at the Center on Law and Security, was in my view well-warranted, and the presi- dent should have gotten the proper authority from the Congress. And he would have gotten it. I believe that if he had partnered with the Congress to give them aggressive oversight, he would have gotten that also. I believe that both sides of the aisle would have been able to pro- vide constructive oversight of that program, and it would have worked much better. Perhaps the program would not have been in the jeopardy that it is in right now, although it still is going on. You do not hear a lot of squawking from the Democratically-controlled Congress because they recognize its value. Now, with proper over- sight, I think they are a little bit more comfort- able with it.

Greatest Hits Util Cards

Utilitarianism is the only moral framework and alternatives are contradictory

Nye, 86 (Joseph S. 1986; Phd Political Science Harvard. University; Served as Assistant Secretary of Defense for International Security Affairs; "Nuclear Ethics" pg. 18-19)

The significance and the limits of the two broad traditions can be captured by contemplating a hypothetical case.34 Imagine that you are visiting a Central American country and you happen upon a village square where an army captain is about to order his men to shoot two peasants lined up against a wall. When you ask the reason, you are told someone in this village shot at the captain's men last night. When you object to the killing of possibly innocent people, you are told that civil wars do not permit moral niceties. Just to prove the point that we all have dirty hands in such situations, the captain hands you a rifle and tells you that if you will shoot one peasant, he will free the other. Otherwise both die. He warns you not to try any tricks because his men have their guns trained on you. Will you shoot one person with the consequences of saving one, or will you allow both to die but preserve your moral integrity by refusing to play his dirty game? The point of the story is to show the value and limits of both traditions. Integrity is clearly an important value, and many of us would refuse to shoot. But at what point does the principle of not taking an innocent life collapse before the consequentialist burden? Would it matter if there were twenty or 1,000 peasants to be saved? What if killing or torturing one innocent person could save a city of 10 million persons from a terrorists' nuclear device? At some point does not integrity become the ultimate egoism of fastidious self-righteousness in which the purity of the self is more important than the lives of countless others? Is it not better to follow a consequentialist approach, admit remorse or regret over the immoral means, but justify the action by the consequences? Do absolutist approaches to integrity become self-contradictory in a world of nuclear weapons? "Do what is right though the world should perish" was a difficult principle even when Kant expounded it in the eighteenth century, and there is some evidence that he did not mean it to be taken literally even then. Now that it may be literally possible in the nuclear age, it seems more than ever to be self-contradictory.35 Absolutist ethics bear a heavier burden of proof in the nuclear age than ever before.

The impossibility to attain knowledge of every outcome or abuse leaves utilitarianism as the only option for most rational decision-making

Goodin 95 – Professor of Philosophy at the Research School of the Social Sciences at the Australian National University (Robert E., Cambridge University Press, "Utilitarianism As a Public Philosophy" pg 63)

My larger argument turns on the proposition that there is something special about the situation of public officials that makes utilitarianism more plausible for them (or, more precisely, makes them adopt a form of utilitarianism that we would find more acceptable) than private individuals. Before proceeding with that larger argument, I must therefore say what it is that is so special about public officials and their situations that makes it both more necessary and more desirable for them to adopt a more credible form of utilitarianism. Consider, first the argument from necessity. Public officials are obliged to make their choices under uncertainty, and uncertainty of a very special sort at that. All choices-public and private alike- are made under some degree of uncertainty, of course. But in the nature of things, private individuals will usually have more complete information on the peculiarities of their own circumstances and on the ramifications that alternative possible choices might have for them. Public officials, in contrast, at relatively poorly informed as to the effects that their choices will have on individuals, one by one. What they typically do know are generalities: averages and aggregates. They know what will happen most often to most people as a result of their various possible choices. But that is all. That is enough to allow public policy makers to use the utilitarian calculus – if they want to use it at all – to choose general rules of conduct. Knowing aggregates and averages, they can proceed to calculate the utility payoffs from adopting each alternative possible general rule. But they cannot be sure what the payoff will be to any given individual or on any particular occasion. Their knowledge of generalities, aggregates and averages is just not sufficiently fine-grained for that.

Utilitarianism is the only way to access morality. Sacrifice in the name of preserving rights destroys any hope of future generations attaining other values.

Nye, 86 (Joseph S. 1986; Phd Political Science Harvard. University; Served as Assistant Secretary of Defense for International Security Affairs; "Nuclear Ethics" pg. 45-46)

Is there any end that could justify a nuclear war that threatens the survival of the species? Is not all-out nuclear war just as self contradictory in the real world as pacifism is accused of being? Some people argue that "we are required to undergo gross injustice that will break many souls sooner than ourselves be the authors of mass murder."73 Still others say that "when a person makes survival the highest value, he has declared that there is nothing he will not betray. But for a civilization to sacrifice itself makes no sense since there are not survivors to give meaning to the sacrifical [sic] act. In that case, survival may be worth betrayal." Is it possible to avoid the "moral calamity of a policy like unilateral disarmament that forces us to choose between being dead or red (while increasing the chances of both)"?74 How one judges the issue of ends can be affected by how one poses the questions. If one asks "what is worth a billion lives (or the survival of the species)," it is natural to resist contemplating a positive answer. But suppose one asks, "is it possible to imagine any threat to our civilization and values that would justify raising the threat to a billion lives from one in ten thousand to one in a thousand for a specific period?" Then there are several plausible answers, including a democratic way of life and cherished freedoms that give meaning to life beyond mere survival. When we pursue several values simultaneously, we face the fact that they often conflict and that we face difficult tradeoffs. If we make one value absolute in priority, we are likely to get that value and little else. Survival is a necessary condition for the enjoyment of other values, but that does not make it sufficient. Logical priority does not make it an absolute value. Few people act as though survival were an absolute value in their personal lives, or they would never enter an automobile. We can give survival of the species a very high priority without giving it the paralyzing status of an absolute value. Some degree of risk is unavoidable if individuals or societies are to avoid paralysis and enhance the quality of life beyond mere survival. The degree of that risk is a justifiable topic of both prudential and moral reasoning.

The aff is moral evasion: consequentialism is imperative

Kai **Nielsen**, Professor of Philosophy, University of Calgary, 19**93**, Absolutism and Its Consequentialist Critics, ed. Joram Graf Haber, p. 170-2

Forget the levity of the example and consider the case of the innocent fat man. If there really is no other way of unsticking our fat man and if plainly, without blasting him out, everyone in the cave will drown, then, innocent or not, he should be blasted out. This indeed overrides the principle that the innocent should never be deliberately killed, but it does not reveal a callousness toward life, for the people involved are caught in a desperate situation in which, if such extreme action is not taken, many lives will be lost and far greater misery will obtain. Moreover, the people who do such a horrible thing or acquiesce in the doing of it are not likely to be rendered more callous about human life and human suffering as a result. Its occurrence will haunt them for the rest of their lives and is as likely as not to make them more rather than less morally sensitive. It is not even correct to say that such a desperate act shows a lack of respect for persons. We are not treating the fat man merely as a means. The fat man's person-his interests and rights are not ignored. Killing him is something which is undertaken with the greatest reluctance. It is only when it is quite certain that there is no other way to save the lives of the others that such a violent course of action is justifiably undertaken. Alan Donagan, arguing rather as Anscombe argues, maintains that "to use any innocent man ill for the sake of some public good is directly to degrade him to being a mere means" and to do this is of course to violate a principle essential to morality, that is, that human beings should never merely be treated as means but should be treated as ends in themselves (as persons worthy of respect)." But, as my above remarks show, it need not be the case, and in the above situation it is not the case, that in killing such an innocent man we are treating him merely as a means. The action is universalizable, all alternative actions which would save his life are duly considered, the blasting out is done only as a last and desperate resort with the minimum of harshness and indifference to his suffering and the like. It indeed sounds ironical to talk this way, given what is done to him. But if such a terrible situation were to arise, there would always be more or less humane ways of going about one's grim task. And in acting in the more humane ways toward the fat man, as we do what we must do and would have done to ourselves were the roles reversed, we show a respect for his person. In so treating the fat man-not just to further the public good but to prevent the certain death of a whole group of people (that is to prevent an even greater evil than his being killed in this way)-the claims of justice are not overriden either, for each individual involved, if he is reasonably correct, should realize that if he were so stuck rather than the fat man, he should in such situations be blasted out. Thus, there is no question of being unfair. Surely we must choose between evils here, but is there anything more reasonable, more morally appropriate, than choosing the lesser evil when doing or allowing some evil cannot be avoided? That is, where there is no avoiding both and where our actions can determine whether a greater or lesser evil obtains, should we not plainly always opt for the lesser evil? And is it not obviously a greater evil that all those other innocent people should suffer and die than that the fat man should suffer and die? Blowing up the fat man is indeed monstrous. But letting him remain stuck while the whole group drowns is still more monstrous. The consequentialist is on strong moral ground here, and, if his reflective moral convictions do not square either with certain unrehearsed or with certain reflective particular moral convictions of human beings, so much the worse for such commonsense moral convictions. One could even usefully and relevantly adapt herethough for a quite different purpose-an argument of Donagan's. Consequentialism of the kind I have been arguing for provides so persuasive "a theoretical basis for common morality that when it contradicts some moral intuition, it is natural to suspect that intuition, not theory, is corrupt." Given the comprehensiveness, plausibility, and overall rationality of consequentialism, it is not unreasonable to override even a deeply felt moral conviction if it does not square with such a theory, though, if it made no sense or overrode the bulk of or even a great many of our considered moral convictions, that would be another matter indeed. Anticonsequentialists often point to the inhumanity of people who will sanction such killing of the innocent, but cannot the compliment be returned by speaking of the even greater inhumanity, conjoined with evasiveness, of those who will allow even more death and far greater misery and then excuse themselves on the ground that they did not intend the death and misery but merely forbore to prevent it? In such a context, such reasoning and such forbearing to prevent seems to me to constitute a moral evasion. I say it is evasive because rather than

steeling himself to do what in normal circumstances would be a horrible and vile act but in this circumstance is a harsh moral necessity, he [it] allows, when he has the power to prevent it, a situation which is still many times worse. He tries to keep his 'moral purity' and [to] avoid 'dirty hands' at the price of utter moral failure and what Kierkegaard called 'double-mindedness.' It is understandable that people should act in this morally evasive way but this does not make it right.

In a nuclear world, you have to weigh consequences

Sissela **Bok**, Professor of Philosophy at Brandeis, 19**88**, Applied Ethics and Ethical Theory, edited by David Rosenthal and Fudlou Shehadi, p. 202-3

The same argument can be made for Kant's other formulations of the Categorical Imperative: "So act as to use humanity, both in your own person and in the person of every other, always at the same time as an end, never simply as a means"; and "So act as if you were always through actions a law-making member in a universal Kingdom of Ends." No one with a concern for humanity could consistently will to risk eliminating humanity in the person of himself and every other or to risk the death of all members in a universal Kingdom of Ends for the sake of justice. To risk their collective death for the sake of following one's conscience would be, as Rawls said, "irrational, crazy." And to say that one did not intend such a catastrophe, but that one merely failed to stop other persons from bringing it about would be beside the point when the end of the world was at stake. For although it is true that we cannot be held responsible for most of the wrongs that others commit, the Latin maxim presents a case where we would have to take such a responsibility seriously—perhaps to the point of deceiving, bribing, even killing an innocent person, in order that the world not perish.

A2 Privacy Good

Privacy Security Balance

Privacy relations self-correct to balance harms – empirics prove

Etzioni 15 Amitai, "The New Normal – Finding a Balance between Individual Rights and the Common Good, Transaction Publishers – New Brunswick, NJ, Senior Advisor to the Carter White House; taught at Columbia, Harvard Business, Copyright 2015, ISBN 978-1-4128-5477-1)

Moreover, given that societal steering mechanisms are rather

loose, societies tend to over-steer and must correct their corrections with still further adjustments. For example, in the mid-1970s, the Church and Pike Committees investigated abuses by the CIA, FBI and NSA, uncover- ing "domestic spying on Americans, harassment and disruption of targeted individuals and groups, assassination plots targeting foreign leaders, infiltra- tion and manipulation of media and business:'32 As a result, Congress passed the Foreign Intelligence Surveillance Act of 1978 (FISA) and created the Foreign Intelligence Surveillance Court to limit the surveillance of American citizens by the US government.33 After 9/11, several reports concluded that the reforms had gone too far by blocking the type of interagency intelligence

sharing that could have forestalled the terrorist attacks.34 As a result, the Patriot Act was enacted in a great rush and, according to its critics, sacrificed privacy excessively in order to enhance security and "correct" what are considered the excesses of the reforms the Church and Pike committees set into motion. Since then, the Patriot Act itself has been recalibrated.35

At each point in time, one must hence ask whether society is tilting too far in one direction or the other. Civil libertarians tend to hold that rights in general and privacy in particular are not adequately protected. The govern- ment tends to hold that national security and public safety require additional limitations on privacy. It is the mission of legal scholars, public intellectuals, and concerned citizens to nurture dialogues that help sort out in which direc-

tion corrections must next be made.36 Note that often some tightening in one area ought to be combined with some easing in others. For instance, currently a case can be made that TSA screening regulations are too tight, while the monitoring ofwhether visitors and temporary residents committed to leaving the US actually do so is too loose.

<?rin Kerr and Peter Swire engage in an important dialogue on whether the issues presented above are best suited for treatment by the courts or by Congress, and whether they are largely viewed through the prism of the Fourth Amendment or Congressional acts. The following discussion treats both as if they were an amalgam.

Privacy Violations inevitable

Privacy is dead – Americans willingly share all their data anyway, legal change isn't necessary

Etzioni 15 Amitai, "The New Normal – Finding a Balance between Individual Rights and the Common Good, Transaction Publishers – New Brunswick, NJ, Senior Advisor to the Carter White House; taught at Columbia, Harvard Business, Copyright 2015, ISBN 978-1-4128-5477-1)

One major response to privacy merchants' expanding reach has been well encapsulated by the CEO of Sun Microsystems, Scott McNealy, who stated "You have zero privacy ... Get over it:'44 Facebook's founder, Mark Zuckerberg'. argues that social norms undergirding privacy law are obsolete.45 That is, instead offinding new ways to protect individuals from corporations, individu- als should learn to accept changed-in effect, much lower-levels of privacy. He elaborated, "**People have really gotten comfortable not only sharing more information and different kinds, but more openly and with more people . .. That social norm is just something that has evolved over time**:'46 Zuckerberg continued: "We view it as our role in the system to constantly be innovating and be updating what our system is to reflect what the current social norms are:'47He thus implies that the privacy erchants are not undermining the norm, but merely accommodating their wares to already in-place changes in norms. As I see it, it is true that the privacy norms are eroding due to other fac- tors than the corporate drive to use private information for profit making, as one sees with people going on talk shows to reveal much about themselves, a form of exhibitionism. However, there can be little doubt that corporations, especially the new social media, led by Facebook, are aiding, abetting, and seeking to legitimate the erosion of privacy. The Wall Street Journal editorial page, which reflects that publication's philosophy, argues that the change in norms indicates that the introduction of new laws or regulations to better protect privacy is not called for.48 L. Gordon Crovitz pointed out that, as ofMarch 2011, more than half of Americans over age twelve have Facebook accounts.49 He

proceeded to ask: "If most Americans are happy to have Facebook accounts, knowingly trading personal information for other benefits, why is Washington so focused on new privacy laws? There is little evidence that people want new rules:•so Furthermore, Crovitz argues, consumers value the benefits of information gathering, including better-targeted ads, specific recommendations for cus- tomers, and huge troves of data for research, such as in Google Flu Trends, which tracks search terms about illnesses to assist epidemiologists. "**People are increasingly at ease with sharing personal data in exchange for other benefits**;' he argues.51

Privacy erosion inevitable -- technological innovation.

Stalder, 2009

Felix. Department of Sociology, Queens University "Privacy is not the Antidote to Surveillance." Surveillance & Society 1.1 (2009): 120-124.

The standard answer to these problems the call for our privacy to be protected. Privacy, though, is a notoriously vague concept. Europeans have developed on of the most stringent approaches where privacy is understood as 'informational self-determination'. This, basically, means that an individual should be able to determine the extent to which data about her or him is being collected in any given context. Following this definition, privacy is a kind of bubble that surrounds each person, and the dimensions of this bubble are determined by one's ability to control who enters it and who doesn't. Privacy is a personal space; space under the exclusive control of the individual. Privacy, in a way, is the informational equivalent to the (bourgeois, if you will) notion of "my home is my castle." As appealing and seemingly intuitive as this concept is, it plainly doesn't work. Everyone agrees that our privacy has been eroding for a very long time – hence the notion of the "surveillance society" – and there is absolutely no indication that the trend is going to slow down, let alone reverse. Even in the most literal sense, the walls of our castles are being pierced by more and more connections to the outside world. It started with the telephone, the TV and the Internet, but imagine when your fridge begins to communicate with your palm pilot, updating the shopping list as you run out of milk, and perhaps even sending a notice to the grocer for home delivery. Or maybe the stove will alert the fire department because you didn't turn off the hot plate before rushing out one morning.6 A less futuristic example of this connectivity would be smoke detectors that are connected to alarm response systems. Outside the home, it becomes even more difficult to avoid entering into relationships that produce electronic, personal data. Only the most zealous will opt for standing in line to pay cash at the toll both every day, if they can just breeze through an electronic gate instead. This problem is made even more complicated by the fact that there are certain cases in which we want "them" to have our data. Complete absence from databanks is neither practical nor desirable. For example, it can be a matter of life and death to have instant access to comprehensive and up-to-date health-related information about the people who are being brought into the emergency room unconscious. This information needs to be too detailed and needs to be updated too often – for example to include all prescriptiondrugs a person is currently using – to be issued on, say, a smartcard held by the individual, hence giving him or her full control over who accesses it. To make matters worse, with privacy being by definition personal, every single person will have a different notion about what privacy means. Data one person might allow to be collected might be deeply personal for someone else. This makes it very difficult to collectively agree on the legitimate boundaries of the privacy bubble.

Privacy can't be restored – technological and corporate invasions happen all the time.

Lewis 2014

James Andrew Lewis is a senior fellow and director of the Strategic Technologies Program at the Center for Strategic and International Studies. Previously, US Departments of State and Commerce as a Foreign Service officer and as a member of the Senior Executive Service.

"Underestimating Risk in the Surveillance Debate" - Center For Strategic & International Studies - Strategic Technologies Program – December - http://csis.org/publication/underestimating-risk-surveillance-debate

On average, there are 16 tracking programs on every website.4 This means that when you visit a website, it collects and reports back to 16 companies on what you've looked at and what you have done. These programs are invisible to the user. They collect IP address, operating system and browser data, the name of the visiting computer, what you looked at, and how long you stayed. This data can be made even more valuable when it is matched with other data collections. Everything a consumer does online is tracked and collected. There is a thriving and largely invisible market in aggregating data on individuals and then selling it for commercial purposes. Data brokers collect utility bills, addresses, education, arrest records (arrests, not just convictions). All of this data is recorded, stored, and made available for sale. Social networking sites sell user data in some anonymized form so that every tweet or social media entry can be used to calculate market trends and refine advertising strategies. What can be predicted from this social media data is amazing—unemployment trends, disease outbreaks, consumption patterns for different groups, consumer preferences, and political trends. It is often more accurate than polling because it reflects peoples' actual behavior rather than the answer they think an interviewer wants to hear. Ironically, while the ability of U.S. agencies to use this commercial data is greatly restricted by law and policy, the same restrictions do not apply to foreign governments. The development of the Internet would have been very different and less dynamic if these business models had not been developed. They provide incentives and financial returns to develop or improve Internet services. There is an implicit bargain where you give up privacy in exchange for services, but in bargains between service providers and consumers, one side holds most of the cards and there is little transparency. But the data-driven models of the Internet mean that it is an illusion to think that there is privacy online or that NSA is the only entity harvesting personal data.

Corporate Privacy Invasions worse

Private abuse of digital information is worse and only surveillance can stop that.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review, http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

The critics' preoccupation with the dangers of state oppression often leads them to overlook the dangers of private abuse of surveillance. They have a surprisingly difficult time coming up with actual examples of serious harm from government surveillance abuse. Instead, they tend to talk about the "chilling effect" from awareness of surveillance. By contrast, there have been many examples of serious harm from private abuse of personal information gained from digital sources. At least one person has committed suicide as a consequence of the Internet publication of video showing him engaged in sexual activity. Many people have been humiliated by the public release of a private recording of intimate conduct, and blackmail based on threats of such disclosure has emerged as a common practice. Some of this private abuse is and should be illegal. But the legal prohibitions can only be enforced if the government has some of the surveillance capacities that critics decry. Illicit recording and distribution can only be restrained if the wrongdoers can be identified and their actions effectively restrained. Less compromising critics would deny government these capacities.

Corporation commit much worse privacy violations.

Lowry 15,
Rich, Editor, the National Review, 5-27-2015, "Lowry: NSA data program faces death by bumper

sticker," Salt Lake Tribune,
http://www.sltrib.com/csp/mediapool/sites/sltrib/pages/printfriendly.csp?id=2557534

In the context of all that is known about us by private companies, the NSA is a piker. Take the retailer Target, for example. According to The New York Times, it collects your "demographic information like your age, whether you are married and have kids, which part of town you live in, how long it takes you to drive to the store, your estimated salary, whether you've moved recently, what credit cards you carry in your wallet and what Web sites you visit." Of course, the Fourth Amendment applies to the government, not private entities like Target. The amendment protects against unreasonable searches and seizures of our "persons, houses, papers, and effects." If the NSA were breaking into homes and seizing metadata that people had carefully hidden away from prying eyes, it would be in flagrant violation of the Fourth Amendment. But no one is in possession of his or her own metadata. Even if the NSA didn't exist, metadata would be controlled by someone else, the phone companies. The Supreme Court has held that you don't have an expectation of privacy for such information in the possession of a third party. One frightening way to look at mail delivery is that agents of the state examine and handle the correspondence of countless of millions of Americans. They aren't violating anyone's Fourth Amendment rights, though, because no one expects the outside of their envelopes to be private.

Alt causes to privacy violations – corporations, the use of nonsensitive information

Etzioni 15 Amitai, "The New Normal – Finding a Balance between Individual Rights and the Common Good, Transaction Publishers – New Brunswick, NJ, Senior Advisor to the Carter White House; taught at Columbia, Harvard Business, Copyright 2015, ISBN 978-1-4128-5477-1)

Another key principle is a ban on using nonsensitive information to divine the sensitive (e.g., using information about routine consumer purchases to divine one's medical condition) because it is just as intrusive as collecting and employing sensitive information.65 This is essential because currently such behavior is rather common.66 Thus, under the suggested law, Target would be prevented from sending coupons for baby items to a teenage girl after the chain store's analysis of her recent purchases suggested she might be pregnant.67 To further advance the cyber age privacy doctrine, much more attention needs to be paid to private actors. Privacy rights, like others, are basically held against the government, to protect people from undue intrusion by public authori- ties. However, cybernation is increasingly carried out by the private sector. There are corporations that make shadowing Internet users-and keeping very detailed dossiers on them-their main line ofbusiness.According to Slobogin, Companies like Acxiom, Docussearch, ChoicePoint, and Oracle can provide the inquirer with a wide array of data about any of us, including: Basic demographic information, income, net worth, real property holdings, social security number, current and previous addresses, phone numbers and fax numbers, names of neighbors, driver records, license plate and VIN numbers, bankruptcy and debtor filings, employment, business and criminal records, bank account balances and activity, stock purchases, and credit card activity.68 These data are routinely made available to government agencies, including the FBI. **Unless this private cybernation is covered, the cyber age privacy doctrine will be woefully incomplete**.69 Given that private actors are very actively engaged in cybernation and often tailor their work so that it might be used by the government (even if no contract is in place and they are, hence, not subject to the limits imposed on the government), ex.tending the privacy doctrine beyond the public/private divide is of pivotal importance for the future of privacy in the cyber age. Admittedly, applying to the private sector restrictions and regulations similar to those that control the government may well be politically unfeasible in the current environment. However, as one who analyzes the conditions ofsociety from a normative viewpoint, I am duty-bound to point out that it makes ever less sense to maintain this distinction.70 Privacy will be increasingly lost in the cyber age, with little or no gain to the common good, unless private

actors- and not just the government-are more reined in. To what extent this may be achieved by self-regulation, changes in norms, increased transparency, or government regulation is a question not addressed here.

Privacy Discriminates

Privacy capabilities in the digital age privilege those with the greatest access to resources—minority groups and poor communities are put at a significant disadvantage

Koebler 15 (Jason, "Why Mass Surveillance Is Worse for Poor People", http://motherboard.vice.com/read/why-mass-surveillance-is-worse-for-poor-people)

Since Edward Snowden revealed that the whole damn world is a surveillance state , a host of encryption and privacy services have popped up. But, people who have the luxury of using them, and the luxury of actually worrying about their privacy, are overwhelmingly well off, overwhelmingly white, and overwhelmingly male. Is privacy only for the privileged?

As we learn that the NSA, FBI, and even local law enforcement have their hands on any number of surveillance tools, it's getting ever more complicated to actually keep your communications safe from them. Anonymity tools like Tor and encryption services aren't always easy to use, and even default encryption on the iPhone requires you to have enough money to buy and pay the contract on an iPhone. Technological literacy is something that only the privileged can afford, and, beyond that, there is increasingly a concrete dollar amount that will afford you a modicum more of privacy.

Last week, news broke that AT&T would disable so-called "super cookies," which track users throughout the internet, for those who pay an extra $29 monthly. In the developing world, many people don't know of an internet beyond Facebook thanks to Facebook Zero, a service that provides access to the social network, but not the real internet, for free.

"You have to design with people and not just for people"

"It's not just AT&T," Daniel Kahn Gillmor of the American Civil Liberties Union said Monday at the New America Foundation's cybersecurity event in Washington, DC. "If the only party you're talking to is Facebook, then it becomes a central point for data collection and surveillance. For communities without phones, that's the only way they're going to get access. Access to the whole, worldwide internet could become the domain of people who have the ability to pay for it."

Less obvious, however, is the fact that protecting yourself online requires a digital literacy that you don't learn when you're working two jobs or living on welfare. It's a problem that Google says it's constantly dealing with. The wording of the warnings Chrome gives you get when you click on a nefarious link, for instance, have to be constantly workshopped to be useful to the largest number of people while still being technical enough to describe what's going on to the computer literate.

"Usability is fundamentally important, and there are very hard problems we're grappling with. We have large numbers of users with different backgrounds, disabilities, ages, and technological literacy," Tara Whalen, a staff privacy analyst at Google, said at the conference. "A specific example of this is with an SSL certificate. When it breaks, it's hard to explain nuances—is this a risk, what went wrong."

And that's just for technology that people use every day, such as a web browser. How are you supposed to get people who haven't been taught that "password" is not such a good password to use an encryption app, especially when the majority of primarily white, primarily male, primarily rich developers haven't thought about making them accessible to everyone?

"If you look at some of the developer communities, the people who volunteer to make [encryption] tools, the diversity is not particularly large," Whalen said. "The numbers of minorities are low, the number of women participating is low. Anyone in a marginalized group doesn't have the resources to participate in a free labor project."

"Bridging that gap is a challenge. You have to involve people in participatory design—you have to design with people and not just for people," she added.

This is, of course, not an entirely new phenomenon. Crime ridden parts of cities are often under constant surveillance, whether it be police cameras or foot patrols. That problem, however, has extended to the digital realm.

The key here, according to Seda Gurses, a postdoc at New York University working on surveillance and privacy issues, is to push companies to build privacy into everything that they do. Asking users to take privacy into their own hands sounds good in theory, but simply doesn't work for everyone.

"There's this word, it's hard to say, but it's responsibilization, which is encouraging people to manage risk themselves," she said. "If you think there are risks, you are responsible for protecting yourself from it. This is problematic of course. Instead of burdening the users, we should ask the phone companies or whoever to give them secure phones. We should make sure the network is secured in a way it can't be eavesdropped on."

Right now, we're seeing little of that happening. The digital divide is extending to become a privacy divide.

Privacy Rights Coopted

The right to privacy has been coopted by information capitalism and preserves discriminatory practices

Torin **Monahan**, Associate Professor of Communication Studies at the University of North Carolina at Chapel Hill, June **2015**, "The Right to Hide? Anti-Surveillance Camouflage and the Aestheticization of Resistance", Communication and Critical/Cultural Studies Vol. 12, No. 2, pp. 159–178, Date Accessed 7/18/15, JL @ DDI

Ultimately, discourses of "the right to hide" are weak variations of "the right to privacy," both of which depend on conceptually inadequate and empirically deficient mobilizations of universal rights. Indeed, poor and racialized populations subjected to the most invasive forms of monitoring are much more concerned with issues of domination and control, along with the practicalities of survival, than they are with legal or philosophical abstractions like privacy.69 Privacy is also a deeply individualistic concept, poorly suited to forestall discriminatory practices against social groups.70 As Sami Coll explains, "The notion of privacy, as a critique of [the] information society, has been assimilated and reshaped by and in favour of informational capitalism, notably by being over-individualized through the selfdetermination principle." 71 The discourse of the right to hide, as with the right to privacy, accepts the legitimacy of state demands for legible populations and offers symbolic compromises to assert degrees of freedom within those constraints.

Privacy rights Fail

Their understanding of privacy rights as personal will fail because its impossible in modern society.

Stalder, 2009,

Felix. Department of Sociology, Queens University "Privacy is not the Antidote to Surveillance." Surveillance & Society 1.1 (2009): 120-124.

So rather than fight those connections – some of which are clearly beneficial, some of which are somewhat ambiguous, and some are clearly disconcerting – we have to reconceptualize what these connections do. Rather than seeing them as acts of individual transgression (X has invaded Y's privacy) we have to see them part of a new landscape of social power. Rather than continuing on the defensive, by trying to maintain an ever-weakening illusion of privacy, we have to shift to the offensive and start demanding accountability of those whose power is enhanced by the new connections. In a democracy, political power is, at least ideally, tamed by making the government accountable to those who are governed, not by carving out areas in which the law doesn't apply. It is, in this perspective, perhaps no co-incidence that many of the strongest privacy advocates (at least in the US) lean politically towards libertarianism, a movement which includes on its fringe white militias which try to set up zones liberated from the US government. In our democracies, extensive institutional mechanisms have been put into to place to create and maintain accountability, and to punish those who abuse their power. We need to develop and instate similar mechanisms for the handling of personal information – a technique as crucial to power as the ability to exercise physical violence – in order to limit the concentration of power inherent in situations that involve unchecked surveillance. The current notion of privacy, which frames the issue as a personal one, won't help us accomplish that.9 However, notions of institutionalized accountability will, because they acknowledge surveillance as a structural problem of political power. It's time to update our strategies for resistance and develop approaches adequate to the actual situation rather than sticking to appealing but inadequate ideas that will keep locking us into unsustainable positions.

A2: Constitutional Violation

NSA programs don't violate the Fourth Amendment because the information has been given to a third-party.

Herman & Yoo, 2014

Yoo, John, law professor at the University of California, Berkeley, and a visiting scholar at the American Enterprise Institute and Arthur Herman. senior fellow at Hudson Institute. "A Defense of Bulk Surveillance." National Review 65 (2014): 31-33.

Considering the millions of phone numbers making billions of phone calls that year and every year, these levels of surveillance can hardly be considered a major intrusive system. But what about the program's constitutionality and alleged violation of the Fourth Amendment? The Fourth Amendment does not protect some vague and undefined right to privacy. Instead, it declares: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause." The Constitution protects only the privacy of the "person," the home, and

"papers and effects," which are usually located in the home. It does not reach information or things that we voluntarily give up to the government or to third parties outside of the home or our persons. The Fourth Amendment also does not make such information absolutely immune—it is still subject to search if the government is acting reasonably or has a warrant. These basic principles allow the government to search through massive databases of call and e-mail records when doing so is a reasonable measure to protect the nation's security, which is its highest duty.

Privacy Bad – Economy

Giving up privacy helps economy

JIM **HARPER** Updated Aug. 7, 20**10**. It's Modern Trade: Web Users Get as Much as They Give http://allthingsd.com/20100809/its-modern-trade-web-users-get-as-much-as-they-give/

The reason why a company like Google can spend millions and millions of dollars on free services like its search engine, Gmail, mapping tools, Google Groups and more is because of online advertising that trades in personal information. And it's not just Google. Facebook, Yahoo, MSN and thousands of blogs, news sites, and comment boards use advertising to support what they do. And personalized advertising is more valuable than advertising aimed at just anyone. Marketers will pay more to reach you if you are likely to use their products or services. (Perhaps online tracking makes everyone special!) If Web users supply less information to the Web, the Web will supply less information to them. Free content won't go away if consumers decline to allow personalization, but there will be less of it. Bloggers and operators of small websites will have a little less reason to produce the stuff that makes our Internet an endlessly fascinating place to visit. As an operator of a small government-transparency web site, WashingtonWatch.com, I add new features for my visitors when there is enough money to do it. More money spent on advertising means more tools for American citizens to use across the web.

Publicity allows benefits for business and individuals

Andrew **McStay** Lecturer in Media Culture at Bangor University. November 8, **2013**. Why too much privacy is bad for the economy

Paradoxically though, for Posner, wealth maximisation means that businesses should be afforded greater levels of privacy because placing businesses under the public spotlight harms economic growth. Privacy for individuals simply hides discreditable facts and hinders the flow of economically valuable information, but for businesses it is necessary for entrepreneurship and the creation of innovative strategies and techniques. In this view, for total market efficiency, transparency and net societal gain to be reached, goal-directed systems should be allowed to operate without disruptive intervention. Posner extends this as far as considering the long-term value in fully disclosing sexuality, political affiliations, minor mental illnesses, early dealings with the law, credit scores, marital discord and even nose-picking. This makes a virtue out of disclosure and forced publicness. As well as being economically beneficial, radical transparency could mean that, over time, irrational shunning and biases (for example, about being gay) would be excluded. Less is said, however, about the outcomes for folk who would make privacy sacrifices in order to enlighten the rest of us.

Privacy Bad – Patriarchy

The Private sphere as a safe space is fundamentally flawed – normalizes patriarchal exploitation

Etzioni 15 Amitai, "The New Normal – Finding a Balance between Individual Rights and the Common Good, Transaction Publishers – New Brunswick, NJ, Senior Advisor to the Carter White House; taught at Columbia, Harvard Business, Copyright 2015, ISBN 978-1-4128-5477-1)

To suggest that the time has come to leave behind the reasonable expectation of privacy standard is not to say that the courts should revert to pre-Katz Fourth Amendment analysis, which gave considerable weight to the home as the locus of privacy. In Katz the majority ruled that "the Fourth Amendment protects people, not places:' rejecting the "trespass" doctrine enunciated in Olmstead. However, even after this, the home remained largely inviolable in

The eyes of the courts .ItseemsKatzdidnotdetachFourthAmendmentsafe- guards from the home but rather extended the sphere ofprivacy beyond it to other protected spaces. Information collected about events in one's home is still often considered a priori a violation of privacy, while much more license is granted to the state in collecting information about conduct in public and

commercial spaces. As Justice Scalia put it, "at the very core' of the Fourth Amendment 'stands the right ofa man to retreat into his own home and there be free from unreasonable governmental intrusion: With few exceptions, the question whether a warrantless search of a home is reasonable and hence constitutional must be answered no:'18 This is an idea that has deep roots in American and English common law: "Zealous and frequent repetition of the adage that "a man's house is his castle;' made it abundantly clear that both in England and the colonies, "the freedom of one's house" was one of the most vital elements of English liberty:'19 In Dow Chemical Company v. United States, the Court established that the expectation of privacy was lower in an

industrial plant than a home because the latter "is fundamentally a sanctuary, where personal concepts of self and family are forged, where relationships are nurtured and where people normally feel free to express themselves in intimate ways."20

Feminist scholars correctly and roundly criticized the inviolability of the home and the private/public distinction in privacy law. Catharine MacKinnon writes the problem with granting the home extra protection is that "while the private has been a refuge for some, it has been a hellhole for others, often at the same time:'21 Linda McClain points out that **freedom from state interference in the home "renders men unaccountable for what is done in private-rape, battery, and other exploitation**'.'22

A2 Surveillance Bad

Surveillance Good – Solves Discrimination

Mass surveillance is less discriminatory because it targets everyone equally.

Hadjimatheou 2014

Katerina Hadjimatheou, Security Ethics Group, Politics and International Studies, University of Warwick "The Relative Moral Risks of Untargeted and Targeted Surveillance" Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1

There are good reasons to think that both the extent to which surveillance treats people like suspects and the extent to which it stigmatises those it affects increases the more targeted the measure of surveillance. As has already been established,

stigmatisation occurs when individuals are marked out as suspicious. Being marked out implies being identified in some way that distinguishes one from other members of the wider community or the relevant group. Being pulled out of line for further search or questioning at an airport; being stopped and searched on a busy train platform while other passengers are left alone; having one's travel history, credit card, and other records searched before flying because one fits a profile of a potential terrorist- these are all examples of being singled out and thereby marked out for suspicion. They are all stigmatising, because they all imply that there is something suspicious about a person that justifies the intrusion. In contrast, untargeted surveillance such as blanket screening at airports, spot screening of all school lockers for drugs, and the use of speed cameras neither single people out for scrutiny nor enact or convey a suspicion that those surveilled are more likely than others to be breaking the rules. Rather, everybody engaged in the relevant activity is subject to the same measure of surveillance, indiscriminately and irrespective of any evidence suggesting particular suspiciousness. Such evidence may well emerge from the application of untargeted surveillance, and that evidence may then be used to justify singling people out for further, targeted surveillance. But untargeted surveillance itself affects all people within its range equally and thus stigmatises none in particular.

Mass surveillance solves discrimination.

Simon, Arthur Levitt Professor of Law at Columbia University, **2014,**
William H. Simon, 10-20-2014, "Rethinking Privacy," Boston Review, http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

More generally, broad-reach electronic mechanisms have an advantage in addressing the danger that surveillance will be unfairly concentrated on particular groups; targeting criteria, rather than reflecting rigorous efforts to identify wrongdoers, may reflect cognitive bias or group animus. Moreover, even when the criteria are optimally calculated to identify wrongdoers, they may be unfair to law-abiding people who happen to share some superficial characteristic with wrongdoers. Thus, law-abiding blacks complain that they are unfairly burdened by stop-and-frisk tactics, and law-abiding Muslims make similar complaints about anti-terrorism surveillance. Such problems are more tractable with broad-based electronic surveillance. Because it is broad-based, it distributes some of its burdens widely. This may be intrinsically fairer, and it operates as a political safeguard, making effective protest more likely in cases of abuse. Because it is electronic, the efficacy of the criteria can be more easily investigated, and their effect on law-abiding people can be more accurately documented. Thus, plaintiffs in challenges to stop-and-frisk practices analyze electronically recorded data on racial incidence and "hit rates" to argue that the criteria are biased and the effects racially skewed. Remedies in such cases typically require more extensive recording.

Targetted Surveillance Worse

Untargeted surveillance stigmatizes subjects, is inefficient and could be easily replaced by targeted, evidenced-based surveillance

Hadjimatheou 13, Katerina Hadjimatheou, Research Fellow on an EU-funded project on the ethics of surveillance in serious and organized crime entitled SURVEILLE, Accepted 3 May 2013, Published: 8 August 2013, "The Relative Moral Risks of Untargeted and Targeted Surveillance", Springer Science+Business Media Dordrecht 2013, Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1, https://www.evernote.com/shard/s348/share/578cb-s348/res/796c48d9-1e0e-442d-90be-928f137c2267/art_10.1007_s10677-013-9428-1.pdf) LS

1. Untargeted surveillance is unfair because it treats innocent people like suspects without any prior evidence of suspiciousness. Suspicion should be triggered by evidence of wrongdoing, rather than precede it. By

suspecting those for whom no evidence of wrongdoing exists, untargeted surveillance stigmatises them unfairly; undermines the presumption of innocence (Haggerty and Ericson 1997: 42; Monahan 2010: 99); and "promotes the view…that everybody is untrustworthy'" (Norris in House of Lords 2009: 27[107]; New Scientist 2006). 2. Untargeted surveillance is inefficient in reducing security threats. Evidence about the effectiveness of untargeted surveillance strongly suggests that such measures result in the detection of very few if any genuine security threats of the kind it is intended to reduce.2 Scrutinising individuals who are obviously not suspicious imposes privacy and other costs on them without any prospect of increased benefit to security and is thus "futile and time-wasting" (Lord Bingham, UKHL 12, 2006, 35). Targeted surveillance focuses scarce resources only on those for whom suspicion exists and is therefore likely to be more efficient (Bou-Habib 2008; Risse and Zeckhauser 2004). Each of these criticisms implies that the risks of untargeted surveillance could be reduced or eliminated by imposing on those doing the surveillance a prior requirement for objective, evidence-based, targeted suspicion.

As opposed to mass surveillance, targeted suspicion singles those out who do not meet the "moral standards" of the community, causing negative stigmatization, fracturing the community, and undermining equality

Hadjimatheou 13, Katerina Hadjimatheou, Research Fellow on an EU-funded project on the ethics of surveillance in serious and organized crime entitled SURVEILLE, Accepted 3 May 2013, Published: 8 August 2013, "The Relative Moral Risks of Untargeted and Targeted Surveillance", Springer Science+Business Media Dordrecht 2013, Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1, https://www.evernote.com/shard/s348/share/578cb-s348/res/796c48d9-1e0e-442d-90be-928f137c2267/art_10.1007_s10677-013-9428-1.pdf) LS

I begin this section by discussing some difficulties with the idea that untargeted surveillance treats people like suspects and thereby stigmatises them. Stigmatisation and its costs result from being singled out. Untargeted surveillance is, other things being equal, less stigmatising of those individuals it affects than targeted surveillance, precisely because it treats everybody within its range with equal scrutiny. One standard understanding of stigmatisation defines it as the process of marking a person out as having an undesirable characteristic (Courtwright 2011; Arneson 2007). For the purposes of this paper, the undesirable characteristic associated with people who are marked out as suspects is failure to meet the justified moral standards of the (relevant) community. When surveillance marks people out as suspects, it marks them out as poten- tially having failed to uphold or having violated a rule they are prima facie obliged to follow. For example, the rules of transport security, of professional codes of ethics, and of the criminal law are rules people are normally obliged to follow either because they have explicitly consented to do so or because they enjoy the benefits that accrue from a situation in which the rules are followed collectively. The harms of stigmatising people as suspicious can affect both individuals and society as a whole. On an individual level, being stigmatised as having failed to maintain the moral standards of the community can be humiliating. People are humiliated when they cannot prevent appearing to others in ways that are demeaning (Bou-Habib 2011:44). If individuals who are humiliated as a result of their stigmatisation are in fact innocent of any rule- breaking, they may feel anger or indignation at what they perceive to be an unjust implica- tion of wrongdoing. This may create knock-on social costs, by eroding their trust in the surveilling authorities, which in turn may reduce their willingness to cooperate with those authorities and to support the enforcement of other rules (Fundamental Rights Agency of the EU FRA 2010: 21). Stigmatisation can also make those affected feel alienated from others as they perceive that others' estimation of them has fallen. This can affect negatively people's self-confidence and their willingness and ability to connect and engage effectively with others. It can also lead people to become socially isolated if they react by withdrawing from contact with others (Courtwright 2011:2). At the same time,

social isolation of those stigmatised may be imposed from outside, if other individuals avoid or reject them as a result of surveillance policy. When particular groups of people who share salient traits -such as religion or race-are stigmatised as suspicious, as has been seen to occur with semi-targeted When stigmatisation based on ethnic grounds reflects ethnic prejudice it can be experi- enced as particularly humiliating both by those surveilled and by those who are not themselves surveilled but who share the traits that trigger the suspicion and for that reason feel implicated (Parmar 2011: 9). As all this suggests, stigmatisation caused by surveillance can be harmful to individuals and can distort social relationships in ways that impede the pursuit of important social goals, including security and equality. All of these potential costs are likely to increase along with the importance of the moral standard or rule one is suspected of having broken. Being stigmatised as a suspected cheat at cards in a casino is neither as humiliating nor as likely to lead to social isolation or discrimination as being stigmatised by police as a potential paedophile. The costs of stigmatisation are also likely to intensify the greater the implication of guilt conveyed in the measure of surveillance: a bag search is less stigmatising than a house search, which in turn is less stigmatising than being taken to the police station for questioning. The extent to which people are stigmatised may also be affected by the number and identity of any witnesses to the surveillance: other things being equal, the greater the number of people who witness or become aware of the stigmatisation and the more influential or important those people are, the more severe both the individual and social costs are likely to be.

A2 Surveillance Discriminates

Mass surveillance doesn't stigmatize – simply enforces normal rules depending on situation

Hadjimatheou 13, Katerina Hadjimatheou, Research Fellow on an EU-funded project on the ethics of surveillance in serious and organized crime entitled SURVEILLE, Accepted 3 May 2013, Published: 8 August 2013, "The Relative Moral Risks of Untargeted and Targeted Surveillance", Springer Science+Business Media Dordrecht 2013, Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1, https://www.evernote.com/shard/s348/share/578cb-s348/res/796c48d9-1e0e-442d-90be-928f137c2267/art_10.1007_s10677-013-9428-1.pdf) LS

It might be objected that the act of choosing a range for any measure of untargeted surveillance itself involves suspicion and that therefore untargeted surveillance continues to be stigmatising. This is true in some cases, as is discussed below. But it seems wrong for many routine examples of untargeted surveillance. There are reasons why people travelling by aeroplane are subject to searches not imposed on those travelling by car and reasons why car drivers but not pilots are subject to surveillance by speed camera. In order to accept the claim that surveilling all car drivers by speed camera stigmatises them as suspected speeders or that surveilling all airline passengers stigmatises them as potential terrorists, we would have to accept that these reasons are always or often related to the suspiciousness of either the activity surveilled or the individuals engaged in it. This seems highly unlikely. Driving cars is a dangerous activity and thus should be regulated by enforceable rules such as speed limits. The only people who can break the particular rule of road safety embodied in a speed limit are car drivers. Surveilling anyone else but them would be perverse. Therefore it seems wrong to argue that the indiscriminate surveillance of all people engaged in a particular activity singles them out and thereby stigmatises them, when the surveillance is used in order to enforce the rules of that particular activity.

Bulk surveillance doesn't mean profiling – not rooted in problematic assumptions.

Hadjimatheou 13, Katerina Hadjimatheou, Research Fellow on an EU-funded project on the ethics of surveillance in serious and organized crime entitled SURVEILLE, Accepted 3 May 2013, Published: 8 August 2013, "The Relative Moral Risks of Untargeted and Targeted Surveillance", Springer Science+Business Media Dordrecht 2013, Ethic Theory Moral Prac (2014) 17:187–207 DOI 10.1007/s10677-013-9428-1, https://www.evernote.com/shard/s348/share/578cb-s348/res/796c48d9-1e0e-442d-90be-928f137c2267/art_10.1007_s10677-013-9428-1.pdf) LS

Untargeted surveillance should be distinguished from profiling, with which it often has much in common, but which does treat people like suspects and thereby stigmatise them. Profiling can be defined as the systematic association of sets of physical, behavioural, psychological or ethnic characteristics with rule-breaking and their use as a basis for making security decisions (Hadjimatheou 2011:5–9). It is increasingly proposed as an alternative to untargeted surveillance, despite the widespread concerns about its moral risks.4 Profiling is similar to untargeted surveillance to the extent that it affects groups of people, but it differs in that it singles these groups out for suspicion. For example, the use of metal detectors or sniffer dogs in some 'problem' schools resembles untargeted surveillance because it is used to enforce the rules of a particular institution and is targeted indiscriminately at all members of the institution who could break the rules. But the fact that such measures respond to suspicion that pupils at some schools are more likely to be breaking the rules than others makes them more like profiling. The same could be said of a measure to install a CCTV network in a specific area in virtue of the fact that it is inhabited or frequented by a minority population deemed to be criminally inclined.

A2: Democracy/chilling effect

Surveillance does not eliminate dissent, empirical examples demonstrate the opposite.

Sagar, 2015

Rahul, associate professor of political science at Yale-NUS College and the Lee Kuan Yew School of Public Policy at the National University of Singapore. He was previously assistant professor in the Department of Politics at Princeton University., "Against Moral Absolutism: Surveillance and Disclosure After Snowden," Ethics & International Affairs / Volume 29 / Issue 02 / 2015, pp 145-159.

Greenwald identifies two major harms. The first is political in nature. Mass surveillance is said to stifle dissent because "a citizenry that is aware of always being watched quickly becomes a compliant and fearful one." Compliance occurs because, anticipating being shamed or condemned for nonconformist behavior, individuals who know they are being watched "think only in line with what is expected and demanded."13 Even targeted forms of surveillance are not to be trusted, Greenwald argues, because the "indifference or support of those who think themselves exempt invariably allows for the misuse of power to spread far beyond its original application."14 These claims strike me as overblown. The more extreme claim, that surveillance furthers thought control, is neither logical nor supported by the facts. It is logically flawed because accusing someone of trying to control your mind proves that they have not succeeded in doing so. On a more practical level, the fate met by states that have tried to perfect mass control—the Soviet Union and the German Democratic Republic, for example—suggests that surveillance cannot eliminate dissent. It is also not clear that surveillance can undermine dissident movements as easily as Greenwald posits. The United States' record, he writes, "is suffused with examples of groups and individuals being placed under government surveillance by virtue of their dissenting views and activism—Martin Luther King, Jr., the civil rights movement, antiwar activists, environmentalists."15 These cases are certainly troubling, but it hardly needs pointing out that surveillance did not prevent the end of segregation, retreat from Vietnam, and the rise

of environmental consciousness. This record suggests that dissident movements that have public opinion on their side are not easily intimidated by state surveillance (a point reinforced by the Arab Spring). Surveillance may make it harder for individuals to associate with movements on the far ends of the political spectrum. But why must a liberal democracy refrain from monitoring extremist groups such as neo-Nazis and anarchists? There is the danger that officials could label as "extreme" legitimate movements seeking to challenge the prevailing order. Yet the possibility that surveillance programs could expand beyond their original ambit does not constitute a good reason to end surveillance altogether. A more proportionate response is to see that surveillance powers are subject to oversight.

A2: Authoritarianism

The claims about authoritarianism are hyperbolic and paranoid. All law enforcement practice might be used improperly, but accountability checks the worst practices.

Simon, 2014,

William H. Simon, Arthur Levitt Professor of Law at Columbia University, 10-20-2014, "Rethinking Privacy," Boston Review, http://bostonreview.net/books-ideas/william-simon-rethinking-privacy-surveillance

The third trope of the paranoid style is the slippery slope argument. The idea is that an innocuous step in a feared direction will inexorably lead to further steps that end in catastrophe. As The Music Man (1962) puts it in explaining why a pool table will lead to moral collapse in River City, Iowa, "medicinal wine from a teaspoon, then beer from a bottle." In this spirit, Daniel Solove in Nothing to Hide (2011) explains why broad surveillance is a threat even when limited to detection of unlawful activity. First, surveillance will sometimes lead to mistaken conclusions that will harm innocent people. Second, since "everyone violates the law sometimes" (think of moderate speeding on the highway), surveillance will lead to over-enforcement of low-stakes laws (presumably by lowering the costs of enforcement), or perhaps the use of threats of enforcement of minor misconduct to force people to give up rights (as for example, where police threaten to bring unrelated charges in order to induce a witness or co-conspirator to cooperate in the prosecution of another). And finally, even if we authorize broad surveillance for legitimate purposes, officials will use the authorization as an excuse to extend their activities in illegitimate ways. Yet, slippery slope arguments can be made against virtually any kind of law enforcement. Most law enforcement infringes privacy. ("Murder is the most private act a man can commit," William Faulkner wrote.) And most law enforcement powers have the potential for abuse. What we can reasonably ask is, first, that the practices are calibrated effectively to identify wrongdoers; second, that the burden they put on law-abiding people is fairly distributed; and third, that officials are accountable for the lawfulness of their conduct both in designing and in implementing the practices.

Surveillance doesn't harm freedom or autonomy, because they aren't reliant on digital communication.

Sagar, 2015

Rahul, associate professor of political science at Yale-NUS College and the Lee Kuan Yew School of Public Policy at the National University of Singapore. He was previously assistant

professor in the Department of Politics at Princeton University., "Against Moral Absolutism: Surveillance and Disclosure After Snowden," Ethics & International Affairs / Volume 29 / Issue 02 / 2015, pp 145-159.

The second harm Greenwald sees surveillance posing is personal in nature. Surveillance is said to undermine the very essence of human freedom because the "range of choices people consider when they believe that others are watching is . . . far more limited than what they might do when acting in a private realm."16 Internet-based surveillance is viewed as especially damaging in this respect because this is "where virtually everything is done" in our day, making it the place "where we develop and express our very personality and sense of self." Hence, "to permit surveillance to take root on the Internet would mean subjecting virtually all forms of human interaction, planning, and even thought itself to comprehensive state examination."17 This claim too seems overstated in two respects. First, it exaggerates the extent to which our self-development hinges upon electronic communication channels and other related activities that leave electronic traces. The arrival of the Internet certainly opens new vistas, but it does not entirely close earlier ones. A person who fears what her browsing habits might communicate to the authorities can obtain texts offline. Similarly, an individual who fears transmitting materials electronically can do so in person, as Snowden did when communicating with Greenwald. There are costs to communicating in such "old-fashioned" ways, but these costs are neither new nor prohibitive. Second, a substantial part of our self-development takes place in public. We become who we are through personal, social, and intellectual engagements, but these engagements do not always have to be premised on anonymity. Not everyone wants to hide all the time, which is why public engagement—through social media or blogs, for instance—is such a central aspect of the contemporary Internet.

A2: Tyranny

The argument that NSA surveillance enables tyranny is wrong. The data exists inevitably and if you are concerned about the risk of a tyrant taking over, there are much bigger issues than privacy to be concerned about.

Etzioni, Professor of International Relations at the George Washington University, **2014** Amitai Etzioni , Intelligence and National Security (2014): NSA: National Security vs. Individual Rights, Intelligence and National Security, DOI: 10.1080/02684527.2013.867221

Part VI: The Coming Tyrant? A common claim among civil libertarians is that, even if little harm is presently being inflicted by government surveillance programs, the infrastructure is in place for a less-benevolent leader to violate the people's rights and set us on the path to tyranny. For example, it has been argued that PRISM 'will amount to a "turnkey" system that, in the wrong hands, could transform the country into a totalitarian state virtually overnight. Every person who values personal freedom, human rights and the rule of law must recoil against such a possibility, regardless of their political preference'.177 And Senator Rand Paul (R-KY) has been 'careful to point out that he is concerned about the possible abuses of some future, Hitler-like president'.178 A few things might be said in response. First, all of the data that the government is collecting is already being archived (at least for short periods – as discussed above) by private corporations and other entities. It is not the case that PRISM or other such programs entail the collection of new data that was not previously available. Second, if one is truly concerned that a tyrant might take over the United States, one obviously faces a much greater and all-encompassing threat than a diminution of privacy. And the response has to be similarly expansive. One can join civic bodies that seek to shore up democracies, or work with various reform movements and public education drives, or ally with groups that prepare to retreat

to the mountains, store ammunition and essential foods, and plan to fight the tyrannical forces. But it makes no sense to oppose limited measures to enhance security on these grounds.

A2: State Abuses are morally objectionable

No Ethical abuse – ethical benefits to surveillance outweigh AND inherent safeguards check

Taylor 05

[In Praise of Big Brother: Why We Should Learn to Stop Worrying and Love Government Surveillance James Stacey Taylor Public Affairs Quarterly Vol. 19, No. 3 (Jul., 2005), pp. 227-246 Published by: University of Illinois Press on behalf of North American Philosophical Publications Stable URL: http://www.jstor.org/stable/40441413] //duff

It must be admitted that, in practice, a system of constant State surveillance is likely to be abused to some extent.20 However, if one adopts a rights-based understanding of claim (ii) above (i.e., if one holds that such a system of State surveillance is permissible as long as it does not in itself violate persons' moral rights), this objection can be readily rebutted. On such an understanding of claim (ii) one could first note that this abuse-based objection gets its force from the view that such abuse would violate persons' moral rights. The proponent of a rights-based understanding of claim (ii) would certainly agree with this underlying view, and would join with its advocates in condemning such abuse. However, the rights theorist who was in favor of such a system of State surveillance would also note that the condemnation of the abuse of State surveillance is not to condemn State surveillance itself. To condemn the use of x for the purposes of v, where y violates persons' rights (e.g., to privacy or autonomy) is not also to condemn the use of x for the purposes of z, where z does not violate persons' rights. Thus, a rights theorist who was a proponent of State surveillance could argue, to offer the possibility of abuse as an objection to constant State surveillance is to confuse the moral status of different possible uses of such surveillance. For such proponents of State surveillance, then, this first objection can be readily dismissed. If one adopts a consequentialist understanding of claim (ii), however, defending the use of constant State surveillance against this objection is more difficult. This is because the likelihood of such abuse together with the likelihood of such abuse causing harm must be weighed against the benefits (as outlined above) that such a system is likely to provide. And, given that such a system has not yet been implemented, such a weighing and balancing of its relative costs and benefits will be difficult to assess with certainty. Despite this, however, there is good reason to believe that little harm will accrue from the abuse of such a system of surveillance. Thus, given the likelihood that such a system of State surveillance will bring important benefits to the citizens of the State in which it is installed, the possibility of its abuse should not deter consequentialists from endorsing the above pro-surveillance argument. To show why there is good reason to believe that little harm would accrue from such a system of State surveillance its consequentialist proponents should first distinguish between major abuses of such a system and minor abuses of it. A major abuse of such a system would be one in which the State used its power together with its improved surveillance capabilities to persecute or oppress its citizens, either individually or as a whole. A minor abuse of the system would be one in which some of the agents of the State secured access to the information gathered by its surveillance devices for their own nefarious purposes, such as voyeurism or the mockery of the persons whose recorded actions they are viewing. The consequentialist proponent of constant and universal State surveillance need not be unduly concerned about the possibility of major abuses of the State surveillance system. If the State were prone to abuse its citizens in this way prior to the installation of such a system, this would provide good consequentialist grounds for resisting its introduction. The consequentialist proponent of constant State surveillance is thus only concerned with defending the introduction of such a surveillance system in those cases where the State was not prone to abusing its citizens in this way. This is not to say, however, that a State (or the agents of a State) that was not prone to persecuting or oppressing its citizens might not occasionally persecute individual citizens. In response to this the consequentialist proponent of constant State surveillance should note that given its power were the State (or its agents) to decide to persecute some of its citizens in this way it would not need a system of surveillance to do this effectively. Thus, although such a surveillance system might make it easier for the State (or its agents) to engage in the persecution that it had decided upon, this would not make things any worse for the person or persons thus persecuted. As such, then, the possibility of the major abuse of a system of constant and universal State surveillance by a State that was not prone to persecuting its citizens would not, for a conseqentialist, be a significant objection to the introduction of such a system. What, then, of the concern that such a system of constant State surveillance would be subject to minor abuses? The most obvious

response to this concern is to argue that if such a system of surveillance is introduced then it must be accompanied by a series of safeguards that would reduce the possibility that the information that it gathers would be abused in this way. It might, for example, be that such a system should be accompanied by the requirement that only a very few persons have access to the information that it gathers, that such persons be screened carefully and supervised closely, and that they are subject to draconian penalties for any abuses that they might perpetrate. If they were severe enough such safeguards would be likely to reduce the possibility of the minor abuse of such a system of surveillance to a level whereby the harm that its abusers might cause would be outweighed by the advantages that it would provide to the State's citizens as a whole. However, the consequentialist proponent of State surveillance also has a second - and more philosophically interesting - response to the concern that such surveillance would be subject to minor abuse: that such abuse would not be harmful, and so would not detract from the advantages outlined above. This response is based on observing that given the penalties for abuse by which such a system would be accompanied (as outlined above) any such abuse would be perpetrated covertly. As such, its victims (e.g., persons subjected to the voyeuristic gaze of some of the agents of the State) would not know that they were victims. Yet even though this is so, the proponents of this second response to the above abuse-based objection do not use this observation to argue that, since such persons did not know that they were being watched, this watching did not harm them.21 This is because, as Joel Feinberg has persuasively argued, the mere fact that a person is ignorant of the frustration of her interests (e.g., her interest not to be the unwilling subject of voyeurism) does not mean that she has not thereby been harmed.22 Rather, this second consequentialist response to the above abuse-based objection conjoins this observation with the claim that for a person to be harmed her life must have been adversely affected in some way, whether she knew of this or not. To support this latter claim it will be useful to examine more closely Feinberg's argument against the view that a person can be harmed only if she knows that she has been harmed. This examination will serve two purposes. First, it will show why the consequentialist proponent of constant State surveillance should not claim that the unwitting victim of (e.g.) State voyeurism failed to be harmed by it owing to her ignorance of it. Second, it will support the claim that a person's life must be adversely affected for her to be considered harmed - the claim on which this second response rests.

EXT: No Abuse of Surveillance

The NSA is well-regulated and constrained by judicial oversight.

Cohen, 2015

Michael A. Cohen, 15, fellow at The Century Foundation. Previously, Michael served in the U.S. Department of State as chief speechwriter for U.S. Representative to the United Nations Bill Richardson and Undersecretary of State Stuart Eizenstat. , 6-3-2015, "NSA Surveillance Debate Drowned Out on Both Sides by Fear Tactics," World Politics Review, http://www.worldpoliticsreview.com/articles/15905/nsa-surveillance-debate-drowned-out-on-both-sides-by-fear-tacticsa

The arguments of NSA opponents have, for two years, relied on hypothetical, trumped-up fears of the government ransacking our private information. These concerns have been raised even though, from all appearances, the NSA's domestic surveillance activities are reasonably well-regulated and constrained by judicial oversight. NSA opponents like to point out that a recent court decision determined that the bulk records collection program was illegal, which ignores the many other court decisions that accepted its legality. More important, it ignores the decisions of the secret FISA Court, which ordered the NSA not to scrap collection programs that were determined to be operating unconstitutionally, but rather to make changes to them to get them in line with constitutional constraints.

There's no evidence of abuse of surveillance powers.

Simon, 2013,

David Simon, producer of HBO's The Wire, 7/3/13, "We are shocked, shocked...," http://davidsimon.com/we-are-shocked-shocked/

I know it's big and scary that the government wants a data base of all phone calls. And it's scary that they're paying attention to the internet. And it's scary that your cell phones have GPS installed. And it's scary, too, that the little box that lets you go through the short toll lane on I-95 lets someone, somewhere know that you are on the move. Privacy is in decline around the world, largely because technology and big data have matured to the point where it is easy to create a net that monitors many daily interactions. Sometimes the data is valuable for commerce — witness those facebook ads for Italian shoes that my wife must endure — and sometimes for law enforcement and national security. But be honest, most of us are grudging participants in this dynamic. We want the cell phones. We like the internet. We don't want to sit in the slow lane at the Harbor Tunnel toll plaza. The question is not should the resulting data exist. It does. And it forever will, to a greater and greater extent. And therefore, the present-day question can't seriously be this: Should law enforcement in the legitimate pursuit of criminal activity pretend that such data does not exist. The question is more fundamental: Is government accessing the data for the legitimate public safety needs of the society, or are they accessing it in ways that abuse individual liberties and violate personal privacy — and in a manner that is unsupervised. And to that, the Guardian and those who are wailing jeremiads about this pretend-discovery of U.S. big data collection are noticeably silent. We don't know of any actual abuse. No known illegal wiretaps, no indications of FISA-court approved intercepts of innocent Americans that occurred because weak probable cause was acceptable. Mark you, that stuff may be happening. As happens the case with all law enforcement capability, it will certainly happen at some point, if it hasn't already. Any data asset that can be properly and legally invoked, can also be misused — particularly without careful oversight. But that of course has always been the case with electronic surveillance of any kind.

Other

A2 Semantic Discontinuity

Semantic discontinuity is just as likely to benefit the interests of power.

Balkin, 2012

Jack M. Knight Professor of Constitutional Law and the First Amendment, Yale Law School. "Room for maneuver: Julie Cohen's theory of freedom in the information state." Jerusalem Review of Legal Studies 6.1 (2012): 79-95.

A third caveat follows from the second. Cohen's conception of semantic discontinuity is necessarily asymmetric. She judges the presence or absence of semantic discontinuity from the perspective of a particular individual, and not from the perspective of governments, businesses, or other powerful institutions. This asymmetry is necessary to ensure that discontinuity helps individuals rather than hurts them. **Some gaps in legal and technological enforcement might benefit the powerful far more than the powerless.** Governments might take advantage of gaps in civil liberties protections; large businesses might take advantage of gaps in consumer protection regulations. Facebook's ever-shifting privacy policies seem to be a prominent example of a business taking full advantage of semantic discontinuities wherever it finds them. But Cohen seeks semantic discontinuity for the benefit of the ordinary individual and not for the Leviathan state, the national security apparatus, the multinational corporation, or the malefactor of great wealth. Although this asymmetry is theoretically necessary to Cohen's argument, it is not clear whether she can fully justify or operationalize it. Gaps and ambiguities in code and law that benefit individuals might also benefit powerful corporations, and vice versa. Indeed, sometimes it may not be possible to separate the two in practice. Think of Google's current position on fair use as an example. YouTube's business model is premised on incomplete and ineffective enforcement of copyright infringement. For that matter, so is Google's entire enterprise of scraping content from virtually every site on the Web, storing it, indexing it, and serving up parts of it on demand, all without permission of the copyright owner. Here Cohen's notion of semantic discontinuity seems related to Jonathan Zittrain's argument for protecting emerging businesses that foster the generativity of the Internet.16 Many of the businesses and intermediaries on which the play of everyday practice depends are themselves the beneficiaries of gaps and ambiguities in the law. It may be difficult if not impossible to create information systems and policies that offer gaps and ambiguities that individuals can exploit without also handing the same tools to large private enterprises—who, after all, have greater access to technical and legal talent to exploit them. Indeed,

the problem with ambiguities in a legal system is that the rich may be able to exploit them better than the poor; and the problem with gaps is that the powerful may be able to push through them more easily than the weak. The philosopher Anacharsis once remarked to the great lawgiver Solon that laws are like spider's webs that snare the weak and poor but that the rich and mighty can easily break through.17 Semantic discontinuity is ultimately about tradeoffs, and Cohen's book only begins the discussion about how those tradeoffs might be accomplished. Even the metaphor of tradeoffs may be misleading, as it suggests a careful balance of benefits and risks. But the whole point of gaps and discontinuities in networked systems is that they offer opportunities for the unexpected, and for unforeseen transformations of power—**including ever new opportunities for exercising power over others**.

Semantic discontinuty doesn't work in the context of national security.

Balkin, 2012

Jack M. Knight Professor of Constitutional Law and the First Amendment, Yale Law School. "Room for maneuver: Julie Cohen's theory of freedom in the information state." Jerusalem Review of Legal Studies 6.1 (2012): 79-95.

Many of the issues of privacy and intellectual property that Cohen is concerned with in her book may be recast as issues of national security, terrorism, or crime prevention. This is perhaps the greatest difficulty for her approach. Once an issue is successfully characterized **in public debates as a matter of national security**, calls for imperfect, gap-filled systems may seem unrealistic and counterproductive. Governments face shadowy threats from overseas and can ill afford leaky systems of surveillance and enforcement. Not surprisingly, both governments and businesses that seek to protect intellectual property rights and rights of data collection have incentives to describe problems of governance in precisely these ways. What Cohen celebrates as semantic discontinuity they will see as imperfection and an obstacle to effective law enforcement rather than a strategy for protecting human flourishing. Nevertheless, at the same time, these governments and businesses will want to maintain their own form of semantic discontinuity. They will want to preserve for themselves plenty of room for maneuver and avoid surveillance of their own operations, while reducing or eliminating semantic discontinuity that benefits ordinary individuals. Indeed, this seems to be the general direction of digital enforcement—toward the construction of a great two-way mirror in which ordinary people's lives are increasingly transparent to powerful public and private entities that are not transparent to the people they view. Whether these developments are inevitable, or whether there is another, more democratic future available to us, is the great question for information policy in the digital age.

Semantic discontinuity fails – gaps in the law create artirariness and injustice.

Elkin-Koren 2012, Niva, Professor of Law at the University of Haifa Faculty of Law and the Founding Director of the Haifa Center for Law and Technology. "Affordances of Freedom: Theorizing the Rights of Users in the Digital Era" Jerusalein Review of Legal Studies, Vol. 6, No. 1 (2012), pp. 96-109

The powerful semantic notion of Semantic Discontinuity is lost in translation to the legal regime. Legal rules must reduce abstract concepts into operative norms. Indeed, the law is a system of meaning, but it

is first, and foremost, a normative scheme with operational functions-directing people's behavior by norms. As a general matter, I believe we should be skeptical of intentionally inserting imperfection into legal systems, as there can never be any perfect systems of control. Our legal system in general and copyright law in particular, is already full of gaps. Copyright enforcement does not even come close to perfect enforcement: not every infringer is detected and reported, and reported infringers are rarely investigated and brought to court. Trials often take long time, and not always end up in conviction. Imperfection is also typical of enforcement by technology, as any encryption technology has flaws and vulnerabilities. Human beings, and the technologies they generate, are inherently imperfect and always subject to circumvention and challenge. There is always error, dysfunction, faults and new or unpredictable circumstances which render the legal rule, and its enforcement, imperfect. The digital era did not change this. Security failures, vulnerability to cyber attacks, and systems failures in introducing new digital products are but a few examples. Moreover, we should beware of systematically promoting unpredictability by law, as a mechanism for securing freedom.39 **Gaps and incompleteness in law create uncertainty, unpredictability and risk, and are therefore susceptible to power, abuse, arbitrariness, and injustic**e. Gaps grant law enforcement agencies more discretion in implementing their enforcement policy, and may lead to selective enforcement and injustice. In fact, unpredictability in law enforcement may abandon citizens at the mercy of an arbitrary bureaucracy. Logical gaps and formal incompleteness as a legal policy may also overlook the presence of power. Gaps in legal rules may leave some room for maneuver, but given the structure of power such flexibility may not automatically play in favor of fundamental liberties. When power is inserted into the equation, rights become significant. Negotiating cultural pathways is unlike negotiating the scope of legal rights. For the most part, the law is not a matter of negotiating meaning, but rather a matter of coercive power. Incompleteness, complexity, and unpredictability in law often work to benefit the strong, sophisticated and more powerful; those who can master the law and use it at their service. Google was able to take advantage of uncertainty and to risk potential liability in the Google Books lawsuit. Individuals, small businesses, and startup companies often cannot.4 o

Prostitution DDI

1NC Case Frontline

Solvency

1. Be skeptical of their Conant evidence– All it says is that repealing the act "could be the first step," it doesn't predict future action or make decisive warrants. Also it links back to the 1ACs criticism from the first advantage because it uses solving the AIDS epidemic as the sole reason for decriminalization.

2. Repealing the Mann Act can't solve– this only decriminalizes prostitutes that cross state or foreign borders. The 1AC doesn't specify the extent of prostitutes that this decriminalization would happen for

U.S Legal No Date (USLegal is the legal destination site for consumers, small business, attorneys, corporations, and anyone interested in the law, or in need of legal information, products or services., No date, Federal Mann Act, http://prostitution.uslegal.com/federal-mann-act/)

The Mann Act is a federal statute that prohibits **interstate or foreign transportation** of an individual with the intention of engaging such individual in sexual activity or prostitution. The Mann Act is also known as the White Slave Traffic Act. The Act made it a felony to transport knowingly any person in interstate commerce or foreign commerce for prostitution, or any other immoral purpose. It also made it a felony to coerce an individual into such immoral acts. -

3. The plan's decriminalization doesn't increase worker autonomy.

Janice G. **Raymond 2003** – (Janice G. Raymond is an American lesbian radical feminist activist known for her work against violence, sexual exploitation and the "medical abuse" of women. "Ten Reasons for Not Legalizing Prostitution

And a Legal Response to the Demand for Prostitution," http://www.embracedignity.org/uploads/10Reasons.pdf)

Most women in prostitution did not make a rational choice to enter prostitution¶ from among a range of other options. They did not sit down one day and decide¶ that they wanted to be prostitutes. They did not have other real options such as¶ medicine, law, nursing or politics. Instead, their "options" were more in the realm¶ of how to feed themselves and their children. Such choices are better termed¶ survival strategies.¶ Rather than consenting to prostitution, a prostituted woman more accurately¶ complies with the extremely limited options available to her. Her compliance is¶ required by the fact of having to adapt to conditions of inequality that are set by¶ the customer who pays her to do what he wants her to do.¶ Most of the women interviewed in the studies authored by Raymond et al.,¶ reported that choice in entering the sex industry could only be discussed in the¶ context of a lack of other options. Many described prostitution as their last ¶ 10¶ choice, or as an involuntary way of making ends meet (Raymond et al., 2001;¶ Raymond et al., 2002). In one study, 67% of a group of law enforcement officials¶ expressed the opinion that women did not enter prostitution voluntarily. Similarly,¶ 72% of social service providers did not think that women voluntarily choose to¶ enter the sex industry (Raymond et al 2001, p. 91).¶ The distinction between forced and voluntary prostitution is precisely what the¶ sex industry is promoting because it will give the industry more legal security and¶ market stability if this distinction can be utilized to legalize prostitution, pimping¶ and brothels. Women who consider bringing charges against pimps and¶ perpetrators will bear the burden of proving that they were "forced." How will¶ marginalized women ever be able to prove coercion? If prostituted women must¶ prove that force was used in recruitment or in their "working conditions," very few¶ women in prostitution will have legal recourse, and very few offenders will be¶ prosecuted.¶ Women in prostitution must continually lie about their lives, their bodies, and their¶ sexual responses. Lying is part of the job definition when the customer asks, "did¶ you enjoy it?" The very edifice of prostitution is built on the lie that "women like¶ it." Some prostitution survivors have stated that it took them years after leaving¶ prostitution to acknowledge that prostitution

wasn't a free choice because to deny¶ their own capacity to choose was to deny themselves.¶ There is no doubt that a small number of women say they choose to be in¶ prostitution, especially in public contexts orchestrated by the sex industry. In the¶ same way, some people choose to take dangerous drugs such as amphetamine.¶ However, even when some people consent to use dangerous drugs, we still¶ recognize that is harmful to them, and most people do not seek to legalize¶ amphetamine. In this situation, it is harm to the person, not the consent of the¶ person that is the governing standard.¶ A 1998 International Labor Organization (United Nations ILO) report suggested¶ that the sex industry be treated as a legitimate economic sector, but still found¶ that¶ …prostitution is one of the most alienated forms of labour; the¶ surveys [in 4 countries] show that women worked 'with a¶ heavy heart,' 'felt forced,' or were 'conscience-stricken' and¶ had negative self-identities. . A significant proportion claimed¶ they wanted to leave sex work [sic] if they could (Lim, 1998,¶ p. 213).¶ When a woman remains in an abusive relationship with a partner who batters¶ her, or even when she defends his actions, concerned people now understand¶ that she is not there voluntarily. They recognize the complexity of her¶ compliance. Like battered women, women in prostitution may deny their abuse if¶ they are not provided with meaningful alternatives.

4. The Mann act is a criminalization of the INDIVIDUALS that hire the sex workers and brings them across borders, not the workers themselves. Repealing the act won't solve.

Victims and Villains

1. Even legalization can't solve for the HIV/AIDS epidemic in the sex worker industry– there's no way that decriminalization can solve.

Janice G. **Raymond 2003** – (Janice G. Raymond is an American lesbian radical feminist activist known for her work against violence, sexual exploitation and the "medical abuse" of women. "Ten Reasons for Not Legalizing Prostitution

And a Legal Response to the Demand for Prostitution," http://www.embracedignity.org/uploads/10Reasons.pdf)

A legalized system of prostitution often mandates health checks and certification,¶ but only for women and not for male buyers. Health examinations or tests for¶ women but not men make no public health sense because monitoring prostituted¶ women does not protect them from HIV/AIDS or STDs. This is not to advocate¶ that both women in prostitution and male buyers should be checked. It is simply to¶ point out the duplicity of a policy that implies, "We'll have safer sex and HIV/AIDS¶ control if we examine the women under a regulated or decriminalized system of¶ prostitution." Male buyers can and do originally transmit disease to the women¶ they purchase.¶ It has been argued that legalized brothels or other "controlled" prostitution¶ establishments protect women through enforceable condom policies. In one¶ study, 47% of women in U.S. prostitution stated that men expected sex without a ¶ 9¶ condom; 73% reported that men offered to pay more for sex without a condom;¶ and 45% of women said that men became abusive if they insisted that men use¶ condoms (Raymond et al, 2001, p. 72). Although certain sex businesses had¶ rules that required men to wear condoms, men nonetheless attempted to have¶ sex without condoms. One woman stated: "It's 'regulation' to wear a condom at¶ the sauna, but negotiable between parties on the side. Most guys expected blow¶ jobs without a condom (Raymond et al, 2001, p. 72)."¶ In reality, the enforcement of condom policy was left to the individual women in¶ prostitution, and the offer of extra money was an insistent pressure. One woman¶ stated: "I'd be one of those liars if I said 'Oh I always used a condom.' If there¶ was extra money coming in, then the condom would be out the window. I was¶ looking for the extra money (Raymond et al., 2001, p. 73)." Many factors militate¶ against condom use: the need of women to make money; older women's decline¶ in attractiveness to men; competition from places that do not require condoms;¶ pimp pressure on women to have sex with no condom for more money; money¶ needed for a drug habit or to pay off the pimp; and the general lack of control that¶ prostituted women have over their bodies in prostitution venues.¶ "Safety policies" in brothels did not protect women from harm. Where brothels¶ allegedly monitored the buyers and employed "bouncers," women stated that¶ they were injured by buyers and, at times, by brothel owners and their friends.¶ Even when someone intervened to momentarily control buyers' abuse, women¶ lived in a climate of fear.

Although 60% of women reported that buyers had¶ sometimes been prevented from abusing them, half of those same women¶ answered that, nonetheless, they thought that they might be killed by one of¶ their buyers (Raymond et al., 2002).

2. Neither legalization nor decriminalization can solve for worker's rights.

Janice G. **Raymond 2003** – (Janice G. Raymond is an American lesbian radical feminist activist known for her work against violence, sexual exploitation and the "medical abuse" of women. "Ten Reasons for Not Legalizing Prostitution

And a Legal Response to the Demand for Prostitution," http://www.embracedignity.org/uploads/10Reasons.pdf)

In two studies in which 186 victims of commercial sexual exploitation were¶ interviewed, women consistently indicated that prostitution establishments did¶ little to protect them, regardless of whether the establishments were legal or¶ illegal. One woman said, "The only time they protect anyone is to protect the¶ customers" (Raymond, Hughes & Gomez, 2001; Raymond, d'Cunha, Ruhaini¶ Dzuhayatin, Hynes & Santos, 2002).¶ One of these studies interviewed 146 victims of trafficking in 5 countries. Eighty¶ percent of the women interviewed had suffered physical violence from pimps and¶ buyers and endured similar and multiple health effects from the violence and¶ sexual exploitation, regardless of whether the women were trafficked¶ internationally or were in local prostitution (Raymond et al, 2002, p. 62).¶ A second study of women trafficked for prostitution in the United States yielded¶ the following statements. Women who reported that sex businesses gave them¶ some protection qualified it by pointing out that no "protector" was ever in the¶ room with them. One woman who was in out-call prostitution stated: "The driver¶ functioned as a bodyguard. You're supposed to call when you get in, to¶ ascertain that everything was OK. But they are not standing outside the door¶ while you're in there, so anything could happen" (Raymond et al, 2001, p. 74).¶ In brothels that have surveillance cameras, the function of cameras was to¶ protect the buyer and the brothel rather than the women, with one brothel putting¶ in cameras after a buyer died (Raymond et al, 2001, p. 74). Protection of the¶ women from abuse was of secondary or no importance.

Decriminalization

1. No spillover–women will still work in the illegal prostitution industry and health care isn't solved better, empirics prove.

Farley 4 (Melissa, Prostitution Researcher & Educator, "Bad for the Body, Bad for the Heart"

Prostitution Harms Women Even if Legalized or Decriminalized)

The regulation of prostitution by zoning is a physical¶ manifestation of the same social/psychological stigma that de- criminalization advocates allegedly want to avoid. Reflecting the¶ social isolation of those in it, prostitution is often removed from¶ the mainstream. Whether in Turkish genelevs (walled-off¶ multiunit brothel complexes) or in Nevada brothels (ringed with¶ barbed wire or electric fencing), women in state-zoned prostitution¶ are physically isolated and socially rejected by the rest of society.¶ Often, when prostitution is not physically removed from¶ other businesses, for example in the case of strip clubs, club owners¶ deny that prostitution occurs in their venues.¶ Advocates of decriminalization argue that the health of those¶ in prostitution will be improved by decriminalization because¶ otherwise women will not have access to health care. It is¶ assumed that women will seek health care as soon as the stigma of¶ arrest is removed from prostitution. If the stigma is removed,¶ advocates argue, women will then file a complaint whenever they¶ are abused, raped, or assaulted in prostitution. They assume that¶ the complaint will be followed with a police response that treats¶ women in prostitution with dignity and as ordinary citizens.¶ Unfortunately, health care workers and police too often share the¶ same contempt toward those in prostitution that others do.¶ Aformer prostitute in NZ said to the Parliament: "This bill provides¶ people like me . . . with some form of redress[italics added], for¶ the brutalisation that may happen...when you're with a client and¶ you have a knife pulled on you" (Georgina Beyer, speech,¶ Wellington, NZ, June 26, 2003). The specific form of redress¶ offered by the NZ decriminalization law was not described by the¶ speaker, nor is it articulated in the law. The dilemma for the person¶ in prostitution is not that there is no legal redress for coercion,¶ physical assault, and rape in the new law or in old laws. The¶ dilemma is that in prostitution there is no avoiding sexual harassment,¶ sexual exploitation, rape, and acts that are the equivalent of¶ torture.¶ Decriminalization in NZ was promoted as a means of providing¶ those in prostitution

with legal redress against violent johns.¶ However, prostituted women could already take legal action¶ under existing laws but rarely did so. Explaining this situation, a¶ NZ Prostitutes Collective member stated, "They don't want to¶ draw attention to themselves and what they're doing" (Else, 2003,¶ n.p.). Women in the Netherlands have expressed similar sentiments,¶ even though prostitution has been legal there for many years. Their concern was the loss of anonymity that exists in legal¶ prostitution. Once officially registered as prostitutes, Dutch¶ women feared that this designation would pursue them for the¶ rest of their lives. Despite the fact that if officially registered as¶ prostitutes they would accrue pension funds, the women still preferred¶ anonymity (Schippers, 2002). They wanted to leave prostitution¶ as quickly as possible with no legal record of having been in¶ prostitution (Daley, 2001). Similarly, despite attempts to unionize¶ women in Germany's $16.5 billion legal prostitution industry, the¶ women not only avoided unions, they avoided registering with¶ the government and they continued to engage in illegal prostitution¶ in part because they felt that the remote areas where prostitution¶ is zoned put them at increased, not decreased, risk of physical¶ danger (Taubitz, 2004).

2. Decriminalization legitimizes ALL other aspects of the sex industry – third party businessmen, pimps, and the men who buy women for sexual activity.

Janice G. **Raymond 2003** – (Janice G. Raymond is an American lesbian radical feminist activist known for her work against violence, sexual exploitation and the "medical abuse" of women. "Ten Reasons for Not Legalizing Prostitution

And a Legal Response to the Demand for Prostitution," http://www.embracedignity.org/uploads/10Reasons.pdf)

What does legalization of prostitution or decriminalization of the sex industry¶ mean? In the Netherlands, legalization amounts to sanctioning all aspects of the¶ sex industry: the women themselves, the buyers, and the pimps who, under the¶ regime of legalization, are transformed into third party businessmen and¶ legitimate sexual entrepreneurs. Legalization/decriminalization of the sex¶ industry also converts brothels, sex clubs, massage parlors and other sites of¶ prostitution activities into legitimate venues where commercial sexual acts are¶ allowed to flourish legally with few restraints.¶ Some people believe that, in calling for legalization or decriminalization of¶ prostitution, they dignify and professionalize the women in prostitution. But¶ dignifying prostitution as work doesn't dignify the women, it simply dignifies the¶ sex industry. People often don't realize that decriminalization means¶ decriminalization of the whole sex industry, not just the women in it. And they¶ haven't thought through the consequences of legalizing pimps as legitimate sex¶ entrepreneurs or third party businessmen, or the fact that men who buy women¶ for sexual activity are now accepted as legitimate consumers of sex.

3. Decriminalization increases the risk of sex trafficking because it makes enforcement of the remaining laws more difficult.

Janice G. **Raymond 2003** – (Janice G. Raymond is an American lesbian radical feminist activist known for her work against violence, sexual exploitation and the "medical abuse" of women. "Ten Reasons for Not Legalizing Prostitution

And a Legal Response to the Demand for Prostitution," http://www.embracedignity.org/uploads/10Reasons.pdf)

Legalized or decriminalized prostitution industries are one of the root causes of¶ sex trafficking. One argument for legalizing prostitution in the Netherlands was¶ that legalization would help to end the exploitation of desperate immigrant¶ women who had been trafficked there for prostitution. However, one report found¶ that 80% of women in the brothels of the Netherlands were trafficked from other¶ countries (Budapest Group, 1999)(1). In 1994, the International Organization of¶ Migration (IOM) stated that in the Netherlands alone, "nearly 70 % of trafficked¶ women were from CEEC [Central and Eastern European Countries]" (IOM, 1995,¶ p. 4).¶ The government of the Netherlands presents itself as a champion of antitrafficking¶ policies and programs, yet it has removed every legal impediment to¶ pimping, procuring and brothels. In the year 2000, the Dutch Ministry of Justice¶ argued in favor of a legal quota of foreign "sex workers," because the Dutch¶ prostitution market demanded a variety of "bodies" (Dutting, 2001, p. 16). Also in¶ 2000, the Dutch government sought and received a judgment from the European¶ Court recognizing prostitution as an economic activity, thereby enabling women¶ from the European Union and former Soviet bloc countries to obtain working¶ permits as "sex workers" in the Dutch sex industry if they could prove that they¶ are self employed. Non-governmental organizations (NGOs) in

Europe report¶ that traffickers use the work permits to bring foreign women into the Dutch¶ prostitution industry, masking the fact that women have been trafficked, by¶ coaching them to describe themselves as independent "migrant sex workers"¶ (Personal Communication, Representative of the International Human Rights¶ Network, 1999).¶ In the year since lifting the ban on brothels in the Netherlands, eight Dutch victim¶ support organizations reported an increase in the number of victims of trafficking,¶ and twelve victim support organization reported that the number of victims from¶ other countries has not diminished (Bureau NRM, 2002, p. 75). Forty-three of¶ the 348 municipalities (12%) in the Netherlands choose to follow a no-brothel¶ policy, but the Minister of Justice has indicated that the complete banning of¶ prostitution within any municipality could conflict with the federally guaranteed¶ "right to free choice of work" (Bureau NRM, 2002, p.19).¶ The first steps toward legalization of prostitution in Germany occurred in the¶ 1980s. By 1993, it was widely recognized that 75% of the women in Germany's¶ prostitution industry were foreigners from Uruguay, Argentina, Paraguay and ¶ 4¶ other countries in South America (Altink, 1993, p. 33). After the fall of the Berlin¶ wall, 80% of the estimated 10,000 women trafficked into Germany were from¶ Central and Eastern Europe and CIS countries (IOM. 1998a , p. 17). In 2002,¶ prostitution in Germany was established as a legitimate job after years of being¶ legalized in tolerance zones. Promotion of prostitution, pimping and brothels are¶ now legal in Germany.¶ The sheer volume of foreign women in the German prostitution industry suggests¶ that these women were trafficked into Germany, a process euphemistically¶ described as facilitated migration. It is almost impossible for poor women to¶ facilitate their own migration, underwrite the costs of travel and travel documents,¶ and set themselves up in "business" without intervention.¶ In 1984, a Labor government in the Australian State of Victoria introduced¶ legislation to legalize prostitution in brothels. Subsequent Australian¶ governments expanded legalization culminating in the Prostitution Control Act of¶ 1994. Noting the link between legalization of prostitution and trafficking in¶ Australia, the US Department of State observed: "Trafficking in East Asian¶ women for the sex trade is a growing problem…lax laws – including legalized¶ prostitution in parts of the country – make [anti-trafficking] enforcement difficult at¶ the working level" (U.S. Department of State, 2000, p. 6F).

2NC Case Blocks

Turn – Child Prostitution

Legalization has empirically resulted in significantly increased child prostitution rates.

Janice G. **Raymond 2003** – (Janice G. Raymond is an American lesbian radical feminist activist known for her work against violence, sexual exploitation and the "medical abuse" of women. "Ten Reasons for Not Legalizing Prostitution

And a Legal Response to the Demand for Prostitution," http://www.embracedignity.org/uploads/10Reasons.pdf)

Another argument for legalizing prostitution in the Netherlands was that it would¶ help end child prostitution. Yet child prostitution in the Netherlands has¶ increased dramatically during the 1990s. The Amsterdam-based ChildRight¶ organization estimates that the number of children in prostitution has increased¶ by more than 300% between 1996 –2001, going from 4,000 children in 1996 to¶ 15,000 in 2001. ChildRight estimates that at least 5,000 of these children in¶ Dutch prostitution are trafficked from other countries, with a large segment being¶ Nigerian girls (Tiggeloven, 2001).¶ Child prostitution has increased dramatically in the state of Victoria compared to¶ other Australian states where prostitution has not been legalized. Of all the¶ states and territories in Australia, the highest number of reported incidences of¶ child prostitution came from Victoria. In a 1998 study undertaken by ECPAT¶ (End Child Prostitution and Trafficking) who conducted research for the¶ Australian National Inquiry on Child Prostitution, there was increased evidence of¶ organized commercial exploitation of children (ECPAT Australia, 1998).

Turn – Human Trafficking

Human trafficking perpetuates endless violence against sex workers– it normalizes violence like rape, racism, and domestic violence

Farley 4 (Melissa, Prostitution Researcher & Educator, "Bad for the Body, Bad for the Heart"

Prostitution Harms Women Even if Legalized or Decriminalized)

It is a cruel lie to suggest that decriminalization or legalization¶ will protect anyone in prostitution. There is much evidence that¶ whatever its legal status, prostitution causes great harm to¶ women. The following sections summarize some of the many¶ studies that now document the physical and emotional harm¶ caused by prostitution.¶ In the past two decades, a number of authors have documented¶ or analyzed the sexual and physical violence that is the normative¶ experience for women in prostitution, including Baldwin (1993,¶ 1999); Barry (1979, 1995); Boyer, Chapman, and Marshall (1993);¶ Dworkin (1981, 1997, 2000); Farley, Baral, Kiremire, and Sezgin¶ (1998); Giobbe (1991, 1993); Hoigard and Finstad (1986); Hughes¶ (1999); Hunter (1994); Hynes and Raymond (2002); Jeffreys¶ (1997); Karim, Karim, Soldan, and Zondi (1995); Leidholdt (1993);¶ MacKinnon (1993, 1997, 2001); McKeganey and Barnard (1996);¶ Miller (1995); Silbert and Pines (1982a, 1982b); Silbert, Pines, and¶ Lynch (1982); Valera, Sawyer, and Schiraldi (2001); Vanwesenbeeck¶ (1994); and Weisberg (1985).¶ Sexual violence and physical assault are the norm for women in¶ all types of prostitution. Nemoto, Operario, Takenaka, Iwamoto,¶ 1094 VIOLENCE AGAINST WOMEN / October 2004¶ and Le (2003) reported that 62% of Asian women in San Francisco¶ massage parlors had been physically assaulted by customers.¶ These data were from only 50% of the massage parlors in San¶ Francisco. The other 50%—those brothels controlled by pimps/¶ traffickers who refused entrance to the researchers—were probably¶ even more violent toward the women inside. Raymond,¶ D'Cunha, et al. (2002) found that 80% of women who had been¶ trafficked or prostituted suffered violence-related injuries in prostitution.¶ Among the women interviewed by Parriott (1994), 85%¶ had been raped in prostitution. In another study, 94% of those in¶ street prostitution had experienced sexual assault and 75% had¶ been raped by one or more johns (Miller, 1995). In the Netherlands,¶ where prostitution is legal, 60% of prostituted women suffered¶ physical assaults; 70% experienced verbal threats of physical¶ assault; 40% experienced sexual violence; and 40% had been¶ forced into prostitution or sexual abuse by acquaintances¶ (Vanwesenbeeck, 1994). Most young women in prostitution were¶ abused or beaten by johns as well as pimps. Silbert and Pines¶ (1981, 1982b) reported that 70% of women suffered rape in prostitution,¶ with 65% having been physically assaulted by customers¶ and 66% assaulted by pimps.¶ Of 854 people in prostitution in

nine countries (Canada,¶ Colombia, Germany, Mexico, South Africa, Thailand, Turkey,¶ United States, and Zambia), 71% experienced physical assaults in¶ prostitution, and 62% reported rapes in prostitution (Farley, Cotton,¶ et al., 2003). Eighty-nine percent told the researchers that they¶ wanted to leave prostitution but did not have other options for¶ economic survival. To normalize prostitution as a reasonable job¶ choice for poor women makes invisible their strong desire to¶ escape prostitution.¶ Vanwesenbeeck (1994) found that two factors were associated¶ with greater violence in prostitution. The greater the poverty, the¶ greater the violence; and the longer one is in prostitution, the¶ more likely one is to experience violence. Similarly, the more time¶ women spent in prostitution, the more STDs they reported¶ (Parriott, 1994).¶ Those promoting prostitution rarely address class, race, and¶ ethnicity as factors that make women even more vulnerable to¶ health risks in prostitution. Farley (2003a) found that in NZ, as¶ Farley / HARMS OF PROSTITUTION 1095¶ elsewhere, indigenous women are placed at the bottom of a brutal¶ race and class hierarchy within prostitution itself. When the¶ researchers compared Maori/Pacific Islander New Zealanders to¶ European-origin New Zealanders in prostitution, the Pacific¶ Islander/Maori were more likely to have been homeless and to¶ have entered prostitution at a young age. Mama Tere, an¶ Auckland community activist, referred to NZ prostitution as an¶ "apartheid system" (Farley, 2003a). Plumridge and Abel (2001)¶ similarly described the NZ sex industry as "segmented," noting¶ that 7% of the population in Christchurch were Maori; however,¶ 19% of those in Christchurch prostitution were Maori.¶ Women in prostitution are treated as if their rapes do not matter.¶ For example, in Venezuela, El Salvador, and Paraguay, the¶ penalty for rape is reduced by one fifth if the victim is a prostitute¶ (Wijers & Lap-Chew, 1997). Many people assume that when a¶ prostituted woman is raped, that rape is part of her job and that¶ she deserved or even asked for the rape. In an example of this bias,¶ a California judge overturned a jury's decision to charge a customer¶ with rape, saying "a woman who goes out on the street and¶ makes a whore out of herself opens herself up to anybody" (Arax,¶ 1986, p. 1).¶ We asked women currently in prostitution in Colombia, Germany,¶ Mexico, South Africa, and Zambia whether they thought¶ that legal prostitution would offer them safety from physical and¶ sexual assault. Forty-six percent of these women in prostitution¶ from six countries felt that they were no safer from physical and¶ sexual assault even if prostitution were legal. Brothel prostitution¶ is legal in Germany, one of the countries surveyed. In an indictment¶ of legal prostitution, 59% of German respondents told us¶ that they did not think that legal prostitution made them any safer¶ from rape and physical assault (Farley et al., 2003). A comparable¶ 50% of 100 prostitutes in a Washington, D.C., survey expressed¶ the same opinion (Valera et al., 2001).¶ It is not possible to protect the health of someone whose "job"¶ means that they will get raped on average once a week (Hunter,¶ 1993). One woman explained that prostitution is "like domestic¶ violence taken to the extreme" (Leone, 2001). Another woman¶ said, "What is rape for others, is normal for us" (Farley, Lynne, &¶ Cotton, in press).

Legalizing prostitution results in higher rates of violence, rape, and sex trafficking.

Guttery 13 – Christine. ("Head to Head: Prostitution should not be legalized because it promotes inequality and human trafficking," 12/4/13, http://www.lsureveille.com/opinion/columnists/head-to-head-prostitution-should-not-be-legalized-because-it/article_f61e2f0c-5d4a-11e3-bb03-001a4bcf6878.html)

Some human rights activists seek to cut down on this crime by legalizing prostitution. This is not the answer.¶ Legalizing it only increases the demand for it by deeming promiscuous behavior socially acceptable, simply continuing the cycle of sexual abuse in the sex industry.¶ Selling sex is a dangerous, harmful profession and shouldn't be promoted by legislation.¶ Victims of trafficking or not, prostitutes suffer from violence and abuse and may face rape, beatings or other forms of torture.¶ According to a U.S. study of nearly 2000 prostitutes over a span of 30 years, mortality rates were nearly 200 times those of other people with similar demographics.¶ While some say selling sex is empowering for women, for many it's the exact opposite.¶ Pimps and sex traffickers frequently target vulnerable people with histories of abuse. Nearly all involved in the sex industry have suffered from abuse and violence.¶ According to a report on human trafficking and prostitution funded by the U.S. Department of Justice, 88 percent of female sex workers — trafficked or not — want to exit the industry, but numerous factors make it difficult, some of which include lack of employment skills, dependence on pimp, poor health, addiction, shame and lack of ID.¶ The same report revealed that nearly 80 percent of prostitutes interviewed felt they had been coerced or forced into the industry. This doesn't sound like empowerment to me.¶ Case studies show legalization actually fuels

trafficking and abuse.¶ While regulations are intended to combat trafficking and abuse, in reality, legalizing prostitution empowers pimps, traffickers and the sex industry, according to an article published by the Journal Of Trauma Practice.¶ Based on studies conducted in locations where the sex trade has been legalized, including Australia, Germany and the Netherlands, the number of sex trafficking victims significantly increased after legalization, and violence is still prevalent in the industry.

T-Curtail

1NC

A. Curtail means to, on face, cut short or reduce

Webster's 10 Webster's New World College Dictionary Copyright © 2010 by Wiley Publishing, Inc., Cleveland, Ohio. Used by arrangement with John Wiley & Sons, Inc. http://www.yourdictionary.com/curtail#websters

Curtail transitive verb
to cut short; reduce; abridge

B. The plan repeals the Mann act, and as an effect, the plan stops all of the surveillance that was conducted AS A RESULT of the Mann act. Doing the plan could have no effect on the surveillance, as other justifications can be given for surveillance.

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big.. All sorts of things affect surveillance and allowing the plan to do something that isn't directly reducing surveillance unlimits the topic.

D. Effects-T is a voter for negative preparation and clash, it becomes impossible to prepare for the infinite amount of steps until a decrease eventually occurs.

E. T is a voter because the opportunity to prepare promotes better debating

Possible Case List

Removing TSA scanners, removing drone usage, mandating no more surveillance of sex workers, FISCA

A2: We Don't Abolish

Curtail does not mean abolish

O'Niell 45 O'Niell, Chief Justice. **OPINION BY:** O'NIELL STATE v. EDWARDS No. 37719

Supreme Court of Louisiana 207 La. 506; 21 So. 2d 624; 1945 La. LEXIS 783 February 19, 1945 lexis

The argument for the prosecution is that the ordinance abolished the three open seasons, namely, the open season from October 1, 1943, to January 15, [*511] 1944, and the open season from October 1, 1944, to January 15, 1945, and the open season from October 1, 1945, to January 15, 1946; and that, in that way, the ordinance suspended altogether the right to hunt wild deer, bear or squirrels for the [***6] period of three years. The ordinance does not read that way, or convey any such meaning. According to Webster's New International Dictionary, 2 Ed., unabridged, the word "curtail" means "to cut off the end, or any part, of; hence to shorten; abridge; diminish; lessen; reduce." The word "abolish" or the word "suspend" is not given in the dictionaries as one of the definitions of the word "curtail". In fact, in common parlance, or in law composition, the word "curtail" has no such meaning as "abolish". The ordinance declares that the three open seasons which are thereby declared curtailed are the open season of 1943-1944, -- meaning from October 1, 1943, to January 15, 1944; and the open season 1944-1945, -- meaning from October 1, 1944, to January 15, 1945; and the open season 1945-1946, -- meaning from October 1, 1945, to January 15, 1946. To declare that these three open seasons, 1943-1944, 1944-1945, and 1945-1946, "are hereby curtailed", without indicating how, or the extent to which, they are "curtailed", means nothing.

Repeal means to abolish, this is in the context of law

Merriam-Webster No Date (Merriam-Webster, Merriam-Webster, Incorporated, is an American company that publishes reference books, especially dictionaries, Repeal synonyms, http://www.merriam-webster.com/thesaurus/repeal)

Repeal¶ noun¶ Synonyms and Antonyms of REPEAL the doing away with something by formal action <the repeal of Prohibition during Franklin D. Roosevelt's first term>¶ Synonyms abatement, abolishment, abrogation, annulment, avoidance, cancellation (also cancelation), defeasance, dissolution, invalidation, negation, nullification, quashing, repeal, rescindment, voiding

Neolib Link

Decriminalizing prostitution by repealing the Mann act brings the sex worker into the neoliberal markets. Prostitution is empirically a product of neoliberalism and the way the 1AC challenges prostitution is not able to solve for the implications on a global scale; the K is a prerequisite.

Svati P. Shah, 2013, ("Thinking Through "Neoliberalism" in the Twenty-first Century," S&F Online, Spring 2013, http://sfonline.barnard.edu/gender-justice-and-neoliberal-transformations/thinking-through-neoliberalism-in-the-twenty-first-century/)

Much of the present reality of prostitution is connected to the politics of global migration mainly because prostitution in general, and especially in the global South, involves some element of movement from place of origin. At the same time, an NGO-sector devoted to rescuing women from prostitution has grown exponentially since the twin policies of privatization and lowering tariffs were adopted in India in the early 1990s. These organizations have identified migrancy and "porous borders" as the key factors that encourage trafficking. According to this logic, a readily available solution to trafficking is to increase border controls further, and to limit the level of cross-border migration available to people seeking work.¶ The links between migration and economic survival for people living in poverty in India occurs against the backdrop of depleted water tables, drought-plagued arable land, and rural displacement. Such regions now supply the lion's share of economic migrants to the world's economies. Agricultural labor has generally been the main mode of survival in these areas, but this is also less and less sustainable, as food security decreases with the increased consolidation of corporatized food production, seed patenting, and decreased farm subsidies. There is a clear double standard at work in easing barriers to the migration of capital through decreased tariffs on foreign investment and international agreements like NAFTA, while increasing the barriers to cross-border migration, affecting especially landless economic migrants. This double standard has affected the sex industry by limiting access to travel for cross-border migrants, while simultaneously improving the market for trafficking in persons by making cross-border migration more legally difficult.¶ The New "Neoliberalism"¶ The lived consequences of the idea that "neoliberalism" is a period and, indeed, an ethos, **have included increased police sweeps, brothel raids, and displacement for sex workers** throughout cities in the global South. Discourses on human trafficking that have focused on sexual exploitation and prostitution, to be sure, have had a vexed relationship with the question of poverty. While prostitution was often related to economic vulnerability and the lack of economic power among the women who have formed the core research population of my own work, discourses on human trafficking have tended to conflate poverty with a generalized lack of agency, such that poverty also becomes inextricable, and, in some representations, co-equal with trafficking itself. I would argue that this rendering of poverty only becomes possible when "neoliberalism" ceases to be understood in economic terms. In the current hegemonic understanding of "trafficking-as-prostitution," conflating human trafficking with poverty has tended to render "poverty" itself as an agent of trafficking. If poverty essentially "traffics" human beings into underground economic sectors, including prostitution, then poor people are necessarily rendered as non-agentive beings with respect to the illegal and underground strategies for economic survival they may engage in. Two examples of this perspective on poverty in its relationship to trafficking are the Swedish government's 2003 report entitled Poverty and Trafficking in Human Beings: A Strategy for Combating Trafficking in Human Beings Through Swedish International Development Cooperation,[3] and a 2006 article by Sarah Gonzales, published on the Captive Daughters website, entitled "Poverty and Sex Trafficking: How will Warren Buffett's $30.7 billion donation to The Bill & Melinda Gates Foundation, earmarked to fight poverty, affect global sex trafficking, the cause of which is rooted in poverty?"[4] In the Swedish government's report, poverty and trafficking are linked because "[p]eople become the victims of human traffickers mainly due to inequitable resource allocation and the absence of viable sources of income. Families have no assets and incomes are inadequate. In the countryside, agriculture is less profitable than formerly and land has become increasingly scarce."[5] Similarly, according to the article by Gonzales:¶ What we do know is that poverty drives sex trafficking, and that sex trafficking as the delivery system for prostitution means that each day scores of young, poor women and girls will turn to sex trafficking and prostitution as a means to […] provide for themselves, and for their families, because they have no other

choice. The hope is that funds earmarked for fighting poverty will eventually fight sex trafficking, too, putting an end to this exploitative practice by offering viable economic options for poverty-stricken women and girls in developing nations who want to work.[6]¶ Both of these relatively emblematic antitrafficking perspectives are rooted in a legal and policy orientation which emphasizes combating "exploitation." The concern with exploitation is at the heart of debates and definitions of trafficking. Both of the perspectives excerpted above were generated in relation to the UN "Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children." The final protocol definition of trafficking was the result of much debate and disagreement between groups about the difference between trafficking and prostitution. The definition bears mentioning here, as it outlines the parameters through which juridical debates on trafficking, prostitution, and poverty are ostensibly framed. The definition reads:¶ "Trafficking in persons" shall mean the recruitment, transportation, transfer, harbouring or receipt of persons, by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability or of the giving or receiving of payments or benefits to achieve the consent of a person having control over another person, for the purpose of exploitation. Exploitation shall include, at a minimum, the exploitation of the prostitution of others or other forms of sexual exploitation, forced labour or services, slavery or practices similar to slavery, servitude or the removal of organs.[7]¶ The discourse that seems to be emerging among various governmental and nongovernmental actors concerned with the issue of trafficking is one in which poverty, exploitation, and trafficking are theorized in relation to each other in the relative absence of a discussion about class or the effects of bilateral and regional trade agreements in the global South

Queerness Michigan 7

1AC

No Plan Version

Increasingly technological surveillance practices in the status quo force queer bodies to the margins – data analysis founded upon pattern and predictability reinforces exclusion of nontraditional gender identities.

Conrad 9 Surveillance, Gender, and the Virtual Body in the Information Age, Kathryn Conrad Associate Professor and Director of Undergraduate Studies in the Department of English at the University of Kansas. Surveillance & Society 6(4) p 381-385

Tied closely to the surveillance and regulation of sexual behaviour and identity—tied in part because of the ways gender identity and sexual object choice are linked in the West—is the surveillance and regulation of gender. The genderqueer body—the intersexed, the hermaphroditic, the transgender(ed), the transexual, and even the 'effeminate male' or the 'masculine' female—is one that does not conform to the accepted biological binary of 'man' and 'woman' and/or its attendant 'masculine' and 'feminine' behaviours and physical markers.1 1 The history of lesbian and gay activism is closely tied to that of genderqueer activism (perhaps first and most obviously with the Stonewall Riots in New York in 1969, which saw the birth both of contemporary gay rights activism and transgender activism), and activism to challenge the gender system is one strategy for confronting a system into which genderqueers have not fit. But even those who are 'out' about their genderqueer status must often 'pass' as one of two genders in order to survive—quite literally—in a two-gendered world. According to the group Gender Education and Advocacy, the between 1970 and 2004, 321 murders of trans people have been tallied; and 'more than one new anti-transgender murder has been reported in the media every month since 1989' (GEA 2004a, c2004b). Although gathering reliable statistics for the number of people killed because they were genderqueer is impossible, these statistics along with more publicised cases, such as that of the murder of Brandon Teena in 1993, suggest that being readably genderqueer, at least in the West, still comes with significant risk. Information technologies, as I have suggested above, have given some gender and queer theorists people hope for liberation from the sometimes oppressive gendered discourses that accompany biological embodiment. But surveillance, whether driven by criminology or marketing, has, as I have suggested above, been the engine for the very informatisation of the body in which these feminist and queer theorists have placed their hope. Further, surveillance, particularly the surveillance tied to prediction, is not only a use to which information technologies have been put; it is also the inspiration for many of the new developments in information systems technology. And the patterns that those information systems create, collect, and circulate are, in turn, intricately and inextricably bound up with surveillance technologies. This, I would suggest, should lead gender and queer theorists away from information technologies as a tool for the transformation of the human subject. The predictive models that are at the centre of current surveillance technologies have been created with the goal of prediction and therefore control of the future, but they must rely on the past to do so. The past provides the patterns from which the models take their shape. Given this, predictive models, and the surveillance systems that feed them, are inherently conservative. By this I do not mean to suggest that they are particularly politically conservative; indeed, many political conservatives are just as invested in the ideology of privacy that surveillance constantly transgresses. Rather, predictive models fed by surveillance data necessarily reproduce past patterns. They cannot take into effective consideration randomness, 'noise', mutation, parody, or disruption unless those effects coalesce into another pattern. This inability to accommodate randomness may simply suggest that predictive models are ineffective. But they are not ineffective; like other surveillance techniques discussed above, they are normative. The potentially normative effect of predictive surveillance might be clearest, and of most concern, in the case of the transsexual body who has transitioned from one gender to another. The virtual body created by data, in the case of a transsexual person, appears contradictory, confusing; the data history for a trans person comprises two bodies (male and female) rather than one genderqueer body. A hopeful reading, inspired perhaps by an optimistic (and selective) reading

of Butler, would be that this contradictory data would have the effect of destabilising the gender system. But rather than abandoning the gender system that the transsexual / genderqueer body clearly transgresses, predictive surveillance technology, relying on past data as it does, can only reinforce it. The material body would thus be pressured to conform or be excluded from the system. Further, Lyon's concerns about 'leaky containers' of data are heightened when one's data history does not fit into accepted norms. The Director of the National Center for Transgender Equity in the United States, Mara Keisling, has discussed the potential impact of surveillance technologies on transgendered persons, expressing the fear that, for instance, radio-frequency identification (RFID) tags embedded in identification cards—an option initially considered in the United States REAL ID Act of 2005—would allow for the private gender data of a genderqueer person to be read from afar by those with RFID readers (Keisling 2007; NCTEquality 2008). As suggested above, the risks attending the exposure of personal data for a genderqueer person can be profound. Just as importantly, however, dataveillance that is tied to predictive strategies further embeds the very norms those bodies challenge. At the level of the everyday, such technologies put subjects' ability to control their own self-presentation—and their own decisions to accept, challenge, or 'pass' within the system—even further out of their hands.

This influx of surveillance begs the question of what a body is and defines the acceptable body in relation to its comprehensibility – normative gender standards determine the 'aliveness' of a subject.

Puar 09 [Jasbir Puar, professor of women's and gender studies at Rutgers University, Women and Performance: a journal of feminist theory, Vol. 19, No. 2, July 2009, http://planetarities.web.unc.edu/files/2015/01/puar-prognosis-time.pdf]//JIH

These are of course older historical questions about the changing contours of what counts as a living body, reanimated by emergent technologies. Surveillance technologies and related bioinformatic economies – DNA encoding and species preservation, stem-cell research, digitization, biometrics, life logging devices, regenerative medical sciences, whose role includes increasing the contact zones and points of interface between bodies, and their subindividual capacities (not to mention related technologies developed to manage the constant amassing of information) – renew all sorts of questions about bodies and their materialities. What is a body in informational terms? Where does a body – and its aliveness – begin and where does it end? If we view information itself as a form of life (or life itself as a compendium of information) we might be led to ask: What is a life? When does it begin and end? And, who owns it? What defines living? In turn, what counts as a death – as dying?6 Why, as Donna Haraway once asked, should a body end at the skin? (1991). Kaushik Sunder Rajan favors the formulation ''biocapital'': neoliberal circuits of political economy which he argues are generating incipient forms of materiality as well as changing the grammar of ''life itself.'' New forms of currency – biological material and information – simultaneously produce the materialization of information on the one hand, and a decoupling from its material biological source on the other. As such, we have a constitutive contradiction informing this dialectic between bodily material and information: ''information is detached from its biological material originator to the extent that it does have a separate social life, but the 'knowledge' provided by the information is constantly relating back to the material biological sample . . . It is knowledge that is always relating back to the biological material that is the source ofthe information; but it is also knowledge that can only be obtained, in the first place, through extracting information from the biological material'' (Sunder Rajan 2006, 42). If the value of a body is increasingly sought not only in its capacity to labor but in the information that it yields – and if there is no such thing as excess, or excess info, if all information is eventually used or is at least seen as having imminent utility – we might ask whether this is truly a revaluing of otherwise worthless bodies left for dying. If statistical outliers as well as species can live through DNA, what does it mean to be debilitated or extinct? Are all bodies really available for rehabilitation?

This violent social system determines the meaning individuals assign to themselves – antiqueerness functions as a system of self-surveillance and leads to the suppression of the queer soul.

Yep et al., 2003 [Lovaas, and Elia, Professors @ San Francisco University, Gust, Karen, and John, Journal of Homosexual Studies, Vol. 45, No. 2/3/4,, pp. 21-22]//JCE

These are the internal injuries that individuals inflict upon themselves. Very early in life children learn from interpersonal contacts and mediated messages that deviations from the heteronormative standard, such as homosexuality, are anxiety-ridden, guilt-producing, fear-inducing, shame-invoking, hate-deserving, psychologically blemishing, and physically threatening. Internalized homophobia, in the form of self-hatred and self-destructive thoughts and behavioral patterns, becomes firmly implanted in the lives and psyches of individuals in heteronormative society. Exemplifying the feelings and experiences of many people who do not fit in the heteronormative mandate, Kevin Jennings (1994) tells us his personal story: I was born in 1963. . .[I] realized in grade school that I was gay. I felt absolutely alone. I had no one to talk to, didn't know any openly gay people, and saw few representations of gays in the media of the 1970s. I imagined gay people were a tiny, tiny minority, who had been and would always be despised for their "perversion." Not once in high school did I ever learn a single thing about homosexuality or gay people. I couldn't imagine a happy life as a gay man. So I withdrew from my peers and used alcohol and drugs to try to dull the pain of my isolation. Eventually, at age seventeen I tried to kill myself, like one out of every three gay teens. I saw nothing in my past, my present, or (it seemed) my future suggesting that things would ever get any better. (pp. 13-14) Heteronormativity is so powerful that its regulation and enforcement are carried out by the individuals themselves through socially endorsed and culturally accepted forms of soul murder. Soul murder is a term that I borrow from the child abuse and neglect literature to highlight the torment of heteronormativity (Yep, 2002). Shengold (1999) defines soul murder as the "apparently willful abuse and neglect of children by adults that are of sufficient intensity and frequency to be traumatic . . . [so that] the children's subsequent emotional development has been profoundly and predominantly negatively affected" (p. 1). Further explaining this concept, Shengold (1989) writes, "soul murder is neither a diagnosis nor a condition. It is a dramatic term for circumstances that eventuate in crime–the deliberate attempt to eradicate or compromise the separate identity of another person" (p. 2, my emphasis). Isn't the incessant policing and enforcement, either deliberately or unconsciously, by self and others, of the heteronormative mandate a widespread form of soul murder?

The queer body is constantly forced into life as overkill – this is the naturalization of antiqueerness that perpetuates violence that renders queerness inherently dead.

Stanley 2011 [Eric, "Near Life, Queer Death Overkill and Ontological Capture," Social Text 107 s Vol. 29, No. 2 s Summer 2011]

Overkill is a term used to indicate such excessive violence **that it pushes a body beyond death**. Overkill is often determined by the postmortem removal of body parts, as with the partial decapitation in the case of Lauryn Paige and the dissection of Rashawn Brazell. The temporality of violence, the biological time when the heart stops pushing and pulling blood, yet the killing is not finished, suggests the aim is **not simply the end of a specific life, but the ending of all queer life**. This is the time of **queer death**, when the **utility of violence gives way to the pleasure in the other's mortality**. If queers, along with others, approximate nothing, then the task of ending, of killing, that which is nothing must go beyond normative times of life and death. In other words, if Lauryn was dead after the first few stab wounds to the throat, then **what do the remaining fifty wounds signify?** The legal theory that is offered to nullify the practice of overkill often functions under the name of the trans- or gay- panic defense. Both of these defense strategies argue that the murderer became so enraged after the "discovery" of either genitalia or someone's sexuality they were forced to protect themselves from the threat of queerness. Estanislao Martinez of Fresno, California, used the trans- panic defense and received a four- year prison sentence after admittedly stabbing J.

Robles, a Latina transwoman, at least twenty times with a pair of scissors. Importantly, this defense is often used, as in the cases of Robles and Paige, after the murderer has engaged in some kind of sex with the victim. The logic of the trans- panic defense as an explanation for overkill, in its gory semiotics, offers us a way of understanding queers as the nothing of Mbembe's query. Overkill names the technologies necessary to do away with that which is already gone. Queers then are the specters of life whose threat is so unimaginable that one is "forced," **not simply to murder, but to push them backward out of time, out of History, and into that which comes before**.27 In thinking the overkill of Paige and Brazell, I return to Mbembe's query, **"But what does it mean to do violence to what is nothing?"**28 This question in its elegant brutality repeats with each case I offer. By resituating this question in the positive, the "something" that is more often than not translated as the human is made to appear. Of interest here, the category of the human assumes generality, yet can only be activated through the specificity of historical and politically located intersections. To this end, the human, the "something" of this query, within the context of the liberal democracy, names rights- bearing subjects, or those who can stand as subjects before the law. The human, then, makes the nothing not **only possible but necessary.** Following this logic, the work of death, of the death that is already nothing, not quite human, binds the categorical (mis)recognition of humanity. The human, then, resides in the space of life and under the domain of rights, whereas the queer inhabits the place of **compromised personhood and the zone of death**. As perpetual and axiomatic threat to the human, **the queer is the negated double of the subject of liberal democracy**. Understanding the nothing as the unavoidable shadow of the human serves to counter the arguments that suggest overkill and antiqueer violence at large are a pathological break and that the severe nature of these killings signals something extreme. In contrast, overkill is precisely not outside of, but is that which constitutes liberal democracy as such. Overkill then is the proper expression to the riddle of the queer nothingness. Put another way, the spectacular material- semiotics of overkill should not be read as (only) individual pathology; these vicious acts must indict the very social worlds of which they are ambassadors. Overkill is what it means, **what it must mean**, to do violence to what is nothing.

And, government decrease of surveillance can never be a neutral action regarding queer bodies – the construction of intimacy becomes instrumentalized in the calculus of biopolitics.

Puar 14 [Jasbir Puar, professor of women's and gender studies at Rutgers University, "Jasbir Puar: Regimes of Surveillance," Cosmologics, Dec 4, 2014, http://cosmologicsmagazine.com/jasbir-puar-regimes-of-surveillance/]//JIH

Jasbir Puar: Much of the work in Terrorist Assemblages mapped out the dissolution of public/private divides that have in the past animated feminist scholarship regarding the state and state intrusion into the "private." This private, as women of color and transnational feminists have pointed out, has never quite existed given the level of state bureaucratic and administrative presence in the households of immigrants and people of color. One interest of mine is connecting the securitization upsurge that occurred after 9/11 with the formation of Homeland Security to both earlier and more recent discourses of security that revolve around the "home," and in particular the home as something private, national, and safe. So before the War on Terror we had the War on Drugs: this rationalized policing in the name of safe homes, in Black communities in particular. The War on Drugs no doubt provided a domestic blueprint for the foreign deployment enacted after September 11th. This is one connective point to 9/11.

Another connective tissue to 9/11 is the financial crisis of 2008, which was not a break from the securitization of the home and homeland, but a manifestation of one of its tactical failures, that of securing the home economically. I think 2008 marks the end of the "post 9/11″ moment and re-complicates the "Muslim terrorist" as the predominate target of surveillance technologies and discourses. Surveillance happens—obliquely, but it happens—through the instrument of the sub-prime mortgage, whereby once again the security and safety of

the home is determined through the surveillance of those subjects deemed financially suspect. In this case, predominantly Black and Latino populations were subject to foreclosures. Surveillance and securitization economies work through a sort of monetization of ontology—certain bodies are intrinsically risky investments via a circular logic of precarity whereby these bodies are set up as unable to take on risk in the very system that produces them as risky.

This kind of connective analysis links various kinds of figures that emerge as targets of explicit surveillance—in the case of 9/11, a religious figure, the fundamentalist terrorist—to the on-going systems of surveillance that bubble underneath. One analysis that I offer in Terrorist Assemblages is the irony of the decriminalization of sodomy in the Lawrence decision of 2004, a ruling that pivoted around the privatization of anal (and thus homosexual) sex within the sanctity of the privately-owned home. This was at a time when Homeland Security was requiring registration of men from Muslim countries, infiltrating mosques, enacting home deportations—just generally disrupting and halting the construction of any kind of private home. One interpretation, then, of who exactly the Lawrence decision protects is: not so much the lesbian or gay or homosexual or queer subject, but rather one whose private home has no reason to be suspected and is not suspicious. The construction of "intimacy," as it is anchored in the private, becomes instrumentalized within the calculus of biopolitics, a measure of one's worth to the state.

Thus, vote aff to deconstruct the necropolitical oppression of queer bodies.

Embracing the idea that bodies are undefined intensities provides possibility for a new realm of the body-as-information in which identity is determined through encounter rather than rigid sets of data.

Puar 09 [Jasbir Puar, professor of women's and gender studies at Rutgers University, Women and Performance: a journal of feminist theory, Vol. 19, No. 2, July 2009, http://planetarities.web.unc.edu/files/2015/01/puar-prognosis-time.pdf]//JIH

Out of the numerous possibilities that ''assemblage theory'' offers, much of it has already begun to transform queer theory, from Elizabeth Grosz's crucial re-reading of the relations between bodies and prosthetics (which complicates not only the contours of bodies in relation to forms of bodily discharge, but also complicates the relationships to objects, such as cell phones, cars, wheelchairs, and the distinctions between them as capacity-enabling devices) (1994), to Donna Haraway's cyborgs (1991), to Deleuze and Guattari's ''BwO'' (Bodies without Organs – organs, loosely defined, rearranged against the presumed natural ordering of bodily capacity) (1987). I want to close by foregrounding the analytic power of conviviality that may further complicate how subjects are positioned, underscoring instead more fluid relations between capacity and debility. Conviviality, unlike notions of resistance, oppositionality, subversion or transgression (facets of queer exceptionalism that unwittingly dovetail with modern narratives of progress in modernity), foregrounds categories such as race, gender, and sexuality as events – as encounters – rather than as entities or attributes of the subject. Surrendering certain notions of revolution, identity politics, and social change – the ''big utopian picture'' that Massumi complicates in the opening epigraph of this essay – conviviality instead always entails an ''experimental step.'' Why the destabilization of the subject of identity and a turn to affect matters is because affect – as a bodily matter – makes identity politics both possible and yet impossible. In its conventional usage, conviviality means relating to, occupied with, or fond of feasting, drinking, and good company – to be merry, festive, together at a table, with companions and guests, and hence, to live with. As an attribute and function of assembling, however, conviviality does not lead to a politics of the universal or inclusive common, nor an ethics of individuatedness, rather the futurity enabled through the open materiality of bodies as a Place to Meet. We could usefully invoke

Donna Haraway's notion of ''encounter value'' here, a ''becoming with'' companionate (and I would also add, incompanionate) species, whereby actors are the products of relating, not pre-formed before the encounter (2008, 16). Conviviality is an ethical orientation that rewrites a Levinasian taking up of the ontology of the Other by arguing that there is no absolute self or other,15 rather bodies that come together and dissipate through intensifications and vulnerabilities, insistently rendering bare the instability of the divisions between capacity-endowed and debility-laden bodies. These encounters are rarely comfortable mergers but rather entail forms of eventness that could potentially unravel oneself but just as quickly be recuperated through a restabilized self, so that the political transformation is invited, as Arun Saldhana writes, through ''letting yourself be destabilized by the radical alterity of the other, in seeing his or her difference not as a threat but as a resource to question your own position in the world'' (2007, 118). Conviviality is thus open to its own dissolution and self-annihilation and less interested in a mandate to reproduce its terms of creation or sustenance, recognizing that political critique must be open to the possibility that it might disrupt and alter the conditions of its own emergence such that it is no longer needed – an openness to something other than what we might have hoped for. This is my alternative approach to Lee Edelman's No Future, then, one that is not driven by rejecting the figure of the child as the overdetermined outcome of ''reproductive futurism'' (2004),16 but rather complicates the very terms of the regeneration of queer critique itself. Thus the challenge before us is how to craft convivial political praxis that does not demand a continual reinvestment in its form and content, its genesis or its outcome, the literalism of its object nor the direction of its drive.

The affirmative's method of convivial assemblage rather than search for legal inclusion is key to envision a framework independent of rigid racialized and gendered categories of personhood.

Weheliye 14. Alexander G. Weheliye, professor of African American studies at Northwestern University, Habeas Viscus, pg. 82

We are in dire need of alternatives to the legal conception of personhood that dominates our world, and, in addition, to not lose sight of what remains outside the law, what the law cannot capture, what it cannot magically transform into the fantastic form of property ownership. Writing about the connections between transgender politics and other forms of identity- based activism that respond to structural inequalities, legal scholar Dean Spade shows how the focus on inclusion, recognition, and equality based on a narrow legal framework (especially as it pertains to antidiscrimination and hate crime laws) not only hinders the eradication of violence against trans people and other vulnerable populations but actually creates the condition of possibility for the continued unequal "distribution of life chances."22 If demanding recognition and inclusion remains at the center of minority politics, it will lead only to a delimited notion of personhood as property that zeroes in comparatively on only one form of subjugation at the expense of others, thus allowing for the continued existence of hierarchical differences between full humans, not-quite-humans, and nonhumans. This can be gleaned from the "successes" of the mainstream feminist, civil rights, and lesbian-gay rights movements, which facilitate the incorporation of a privileged minority into the ethnoclass of Man at the cost of the still and/or newly criminalized and disposable populations (women of color, the black poor, trans people, the incarcerated, etc.).23 To make claims for inclusion and humanity via the U.S. juridical assemblage removes from view that the law itself has been thoroughly violent in its endorsement of racial slavery, indigenous genocide, Jim Crow, the prison-industrial complex, domestic and international warfare, and so on, and that it continues to be one of the chief instruments in creating and maintaining the racializing assemblages in the world of Man. Instead of appealing to legal recognition, Julia Oparah suggests counteracting the "racialized (trans)gender entrapment" within the prison-industrial complex and beyond with practices of "maroon abolition" (in reference to the long history of escaped slave contraband settlements in the

Americas) to "foreground the ways in which often overlooked African diasporic cultural and political legacies inform and undergird anti- prison work," while also providing strategies and life worlds not exclusively centered on reforming the law.24 Relatedly, Spade calls for a radical politics articulated from the "'impossible' worldview of trans political existence," which redefines "the insistence of government agencies, social service providers, media, and many nontrans activists and nonprofiteers that the existence of trans people is impossible."25 A relational maroon abolitionism beholden to the practices of black radicalism and that arises from the incompatibility of black trans existence with the world of Man serves as one example of how putatively abject modes of being need not be redeployed within hegemonic frameworks but can be operationalized as variable liminal territories or articulated assemblages in movements to abolish the grounds upon which all forms of subjugation are administered.

A fluid understanding of identity is necessary in order to avoid sexual othering and exceptionalization.

Perry 14 [Brock Perry, Graduate Division of Religion, Drew University, "Towards an ontogenesis of queerness and divinity: Queer political theology and Terrorist Assemblages," May 30, 2014]//JIH

The historical shift in modernity and modern state formation to which the concept of homonationalism attends is marked by biopolitical control of national and transnational bodies in which those determined unworthy of homonational citizenship are relegated to racialised and perversely sexualised populations. Homonationalism is dependent upon this 'sexual othering' for the moral, sexual and cultural exceptionalisation of rights-bearing homosexual citizens over against 'Orientalist constructions of "Muslim sexuality"' as inherently homophobic, irrationally religious and sexually perverse (Puar 2007, 4). The biopolitical population management that Puar describes is based not only on particular identities taken as a whole, but also on cross-sections of information ablated from bodies and represented statistically. As statistics, race and sex are experienced as a series of transactional information flows captured or happened upon at chance moments that perceive and render bodies transparent or opaque, secure or insecure, risky or at risk, risk-enabled or risk-disabled, the living or the living dead. (160)

Thus, biopolitical control is made diffuse between populations as identities are dissected into fragments of information that never fully add up to the representational subject, but are neither unrelated to it. Puar argues that state practices of surveillance and detention make use of those fragments of information that are multiplicitously and variably manifested between and within identities in a way that identity politics and intersectional analyses, which take the representational subject for granted, have been unable to adequately counter (162, 206). She concludes that identity politics, both a symptom of and a response to these networks of control, capitulates once again to chasing the space of retribution for the subject. Control masks itself, or masks its effects, within the endless drive to recoup the resistant subject. (162)

Puar densely articulates the relation of identity and representation to biopolitics and elucidates the failure of identity politics to grasp its production by the very systems of power it seeks to resist. An ontologically static and unchanging understanding of identity lends itself to biopolitical control by confirming the stability of the information used to determine those included in life and those relegated to a racialised and perversely sexualised population. Identity politics leaves bodies in these populations always in need of reclaiming subjecthood along the lines of identity that made the subject separable under biopolitical control in the first place. Before turning with Puar to affect theory in order to think both with and beyond identity politics, I want to first turn to issues of political theology and the secular that I contend are related to the issues of modern state formation being discussed here, and which will be necessary for critical responses to the issues of homonationalism, biopolitics and identity that Puar describes.

Impact calculus should begin from the perspective of queer necropolitics – predictive scenario planning disavows zones of abandonment that perpetuate mundane forms of violence on queer bodies.

Haritaworn et al. 14. Jin Haritaworn, professor of sociology at the University of York, Adi Kuntsman, professor of humanities, research, and social sciences at Manchester Metropolitan University, and Sylvia Posocco, professor of psychological studies at the University of London, Birbeck, Queer Necropolitics, Routledge, 2014, pg. 1

Most prominently, Jasbir Puar (2007), tracing the shift from AIDS to gay marriage, identifies a recent turn in how **queer subjects are figured**, from **those who are left to die**, to those that **reproduce life**. Yet, not all sexually or gender non- conforming bodies are 'fostered for living'; just as only some queer deaths are constituted as grievable (Butler 2004),1 while others are targeted for killing or left to die.

This book comes at a time of growing interest in the necropolitical as a tool to make sense of the symbiotic co-presence of life and death, manifested ever more clearly in the cleavages between rich and poor, citizens and non-citizens (and those who can be stripped of citizenship); the culturally, morally, economically valuable and the pathological; queer subjects invited into life and queerly abjected populations marked for death. Our discussions are inspired by Achille Mbembe's concept of '**necropolitics'** — a concept he develops when analysing the **centrality** of **death in subalternity**, **race**, **war** and **terror** (Mbembe 2003) - and by Puar's (2007) insightful elaboration of '**queer necropolitics'**, which attempts to make sense of the expansion of **liberal gay politics** and its **complicity** within the US **'war on terror'**, while calling our attention specifically to the 'differences between queer subjects who are being folded (back) into life and the **racialized queernesses** that **emerge** through the **naming of populations'**, often those marked for death (p. 36).

Our collection assembles various ways of queering the necropolitical and of interrogating claims to queerness in the face(s) of death, both spectacular and banal. **Thinking through necropolitics** on the **terrain of queer critique** brings into view **everyday death worlds**, from the perhaps more expected sites of death making (such as war, torture or imperial invasion) to the ordinary and completely normalized violence of the market. As many of the contributors to this volume point out, the **distinction** between **war and peace dissolves** in the face of the **banality of death** in the 'zones of abandonment' (Biehl 2001; Povinelli 2011) that regularly accompany contemporary democratic regimes. These are not merely about exclusion; more insidiously perhaps they create **their own forms of deadly inclusion**.

The insistence on the **unremarkable**, the **ordinary** and the **mundane** is of particular **importance**. In contrast to other works in the field that deal with death in relation to queerness and beyond - such as the AIDS epidemic or the Holocaust - contributors in this book focus less on grand moments or processes of commemoration and more on the everyday and the ordinary. In that respect, our orientation (Ahmed 2006) is not so much towards a past that is remembered and celebrated. In the place of the finished past, we turn to the present and future(s), including those **haunted futures** (Ferreday and Kuntsman 2011; Gordon 2011) where **queer vitalities** become **cannibalistic** on the **disposing** and **abandonment** of others. Indeed, we argue that the **queer nostalgia** for other times, coupled with a **victim subjectivity** that **refuses accountability** for current **privileges** and **injustices**, may itself work to **naturalize** and **accelerate death-making logics** in the present (Haritaworn, 2013). Furthermore, in considering the rise of homonormative and transnormative identities as contingent on settler colonialism, anti-blackness and permanent war - which provide the conditions of queer ascendancies — we refuse a view of the past as finished and the present as democratic and post-genocidal (e.g. Morgensen 2010; Smith 2007; see also Bassichis and Spade, Chapter 9 in this book).

Using 'queer necropolitics' as a **theoretical entry point** and as a concept- metaphor, our book explores the **processes**, **conditions** and **histories** that **underpin** and **sustain** a range of '**unequal regimes** of **living** and **dying'** (Luibheid 2008: 190), consolidating and extending the existing analytical vocabulary for understanding queer politics and experiences. In putting the concept of 'queer necropolitics' at the centre of

our discussion, the book is in dialogue with the emerging scholarship focussing on the analysis of the necropolitical (see, for example, Inda 2005; Osuri 2006). We extend this body of scholarship by turning our attention to specifically queer aspects: deadly underpinnings of militarized queer intimacies, nationalized practices of queer mourning, assimilationist logics of feminist, gay and transgender rights and criminalizing policies in the name of sexual safety and queer space. Contributors explore the relations between queerness and war, immigration, colonization, imprisonment and other forms of population control in various cultural and political settings. Among the many topics addressed in the chapters of this book are racism in the name of 'LGBT rights'; queer colonialities; trans migrations; vitality and necropolitics in the new world order; the ontology and phenomenology of sexual and gender violence; the racialization of 'LGBT', queer and transgender politics in the 'wars on terror'; and regimes of remembering and oblivion of queer and non-queer lives and deaths.

Plan Text Version

Increasingly technological surveillance practices in the status quo force queer bodies to the margins – data analysis founded upon pattern and predictability reinforces exclusion of nontraditional gender identities.

Conrad 9 Surveillance, Gender, and the Virtual Body in the Information Age, Kathryn Conrad Associate Professor and Director of Undergraduate Studies in the Department of English at the University of Kansas. Surveillance & Society 6(4) p 381-385

Tied closely to the surveillance and regulation of sexual behaviour and identity—tied in part because of the ways gender identity and sexual object choice are linked in the West—is the surveillance and regulation of gender. The genderqueer body—the intersexed, the hermaphroditic, the transgender(ed), the transexual, and even the 'effeminate male' or the 'masculine' female—is one that does not conform to the accepted biological binary of 'man' and 'woman' and/or its attendant 'masculine' and 'feminine' behaviours and physical markers.1[1] The history of lesbian and gay activism is closely tied to that of genderqueer activism (perhaps first and most obviously with the Stonewall Riots in New York in 1969, which saw the birth both of contemporary gay rights activism and transgender activism), and activism to challenge the gender system is one strategy for confronting a system into which genderqueers have not fit. But even those who are 'out' about their genderqueer status must often 'pass' as one of two genders in order to survive—quite literally—in a two-gendered world. According to the group Gender Education and Advocacy, the between 1970 and 2004, 321 murders of trans people have been tallied; and 'more than one new anti-transgender murder has been reported in the media every month since 1989' (GEA 2004a, c2004b). Although gathering reliable statistics for the number of people killed because they were genderqueer is impossible, these statistics along with more publicised cases, such as that of the murder of Brandon Teena in 1993, suggest that being readably genderqueer, at least in the West, still comes with significant risk. Information technologies, as I have suggested above, have given some gender and queer theorists people hope for liberation from the sometimes oppressive gendered discourses that accompany biological embodiment. But surveillance, whether driven by criminology or marketing, has, as I have suggested above, been the engine for the very informatisation of the body in which these feminist and queer theorists have placed their hope. Further, surveillance, particularly the surveillance tied to prediction, is not only a use to which information technologies have been put; it is also the inspiration for many of the new developments in information systems technology. And the patterns that those information systems create, collect, and circulate are, in turn, intricately and inextricably bound up with surveillance technologies. This, I would suggest, should lead gender and queer theorists away from information technologies as a tool for the transformation of the human subject. The predictive models that are at the centre of current surveillance technologies have been created with the goal of prediction and therefore control of the future, but they must rely on the past to do so. The past provides the patterns from which the models take their shape. Given this, predictive models, and the surveillance systems that feed them, are inherently conservative. By this I do not mean to suggest that they are particularly politically conservative; indeed, many political conservatives are just as invested in the ideology of privacy that surveillance constantly transgresses. Rather, predictive models fed by surveillance data necessarily reproduce past patterns. They cannot take into effective

consideration randomness, 'noise', mutation, parody, or disruption unless those effects coalesce into another pattern. This inability to accommodate randomness may simply suggest that predictive models are ineffective. But they are not ineffective; like other surveillance techniques discussed above, they are normative. The potentially normative effect of predictive surveillance might be clearest, and of most concern, in the case of the transsexual body who has transitioned from one gender to another. The virtual body created by data, in the case of a transsexual person, appears contradictory, confusing; the data history for a trans person comprises two bodies (male and female) rather than one genderqueer body. A hopeful reading, inspired perhaps by an optimistic (and selective) reading of Butler, would be that this contradictory data would have the effect of destabilising the gender system. But rather than abandoning the gender system that the transsexual / genderqueer body clearly transgresses, predictive surveillance technology, relying on past data as it does, can only reinforce it. The material body would thus be pressured to conform or be excluded from the system. Further, Lyon's concerns about 'leaky containers' of data are heightened when one's data history does not fit into accepted norms. The Director of the National Center for Transgender Equity in the United States, Mara Keisling, has discussed the potential impact of surveillance technologies on transgendered persons, expressing the fear that, for instance, radio-frequency identification (RFID) tags embedded in identification cards—an option initially considered in the United States REAL ID Act of 2005—would allow for the private gender data of a genderqueer person to be read from afar by those with RFID readers (Keisling 2007; NCTEquality 2008). As suggested above, the risks attending the exposure of personal data for a genderqueer person can be profound. Just as importantly, however, dataveillance that is tied to predictive strategies further embeds the very norms those bodies challenge. At the level of the everyday, such technologies put subjects' ability to control their own self-presentation—and their own decisions to accept, challenge, or 'pass' within the system—even further out of their hands.

This influx of surveillance begs the question of what a body is and defines the acceptable body in relation to its comprehensibility – normative gender standards determine the 'aliveness' of a subject.

Puar 09 [Jasbir Puar, professor of women's and gender studies at Rutgers University, Women and Performance: a journal of feminist theory, Vol. 19, No. 2, July 2009, http://planetarities.web.unc.edu/files/2015/01/puar-prognosis-time.pdf]//JIH

These are of course older historical questions about the changing contours of what counts as a living body, reanimated by emergent technologies. Surveillance technologies and related bioinformatic economies – DNA encoding and species preservation, stem-cell research, digitization, biometrics, life logging devices, regenerative medical sciences, whose role includes increasing the contact zones and points of interface between bodies, and their subindividual capacities (not to mention related technologies developed to manage the constant amassing of information) – renew all sorts of questions about bodies and their materialities. What is a body in informational terms? Where does a body – and its aliveness – begin and where does it end? If we view information itself as a form of life (or life itself as a compendium of information) we might be led to ask: What is a life? When does it begin and end? And, who owns it? What defines living? In turn, what counts as a death – as dying?6 Why, as Donna Haraway once asked, should a body end at the skin? (1991). Kaushik Sunder Rajan favors the formulation ''biocapital'': neoliberal circuits of political economy which he argues are generating incipient forms of materiality as well as changing the grammar of ''life itself.'' New forms of currency – biological material and information – simultaneously produce the materialization of information on the one hand, and a decoupling from its material biological source on the other. As such, we have a constitutive contradiction informing this dialectic between bodily material and information: ''information is detached from its biological material originator to the extent that it does have a separate social life, but the 'knowledge' provided by the information is constantly relating back to the material biological sample . . . It is knowledge that is always relating back to the biological

material that is the source ofthe information; but it is also knowledge that can only be obtained, in the first place, through extracting information from the biological material'' (Sunder Rajan 2006, 42). If the value of a body is increasingly sought not only in its capacity to labor but in the information that it yields – and if there is no such thing as excess, or excess info, if all information is eventually used or is at least seen as having imminent utility – we might ask whether this is truly a revaluing of otherwise worthless bodies left for dying. If statistical outliers as well as species can live through DNA, what does it mean to be debilitated or extinct? Are all bodies really available for rehabilitation?

This violent social system determines the meaning individuals assign to themselves – antiqueerness functions as a system of self-surveillance and leads to the suppression of the queer soul.

Yep et al., 2003 [Lovaas, and Elia, Professors @ San Francisco University, Gust, Karen, and John, Journal of Homosexual Studies, Vol. 45, No. 2/3/4,, pp. 21-22]//JCE

These are the internal injuries that individuals inflict upon themselves. Very early in life children learn from interpersonal contacts and mediated messages that deviations from the heteronormative standard, such as homosexuality, are anxiety-ridden, guilt-producing, fear-inducing, shame-invoking, hate-deserving, psychologically blemishing, and physically threatening. Internalized homophobia, in the form of self-hatred and self-destructive thoughts and behavioral patterns, becomes firmly implanted in the lives and psyches of individuals in heteronormative society. Exemplifying the feelings and experiences of many people who do not fit in the heteronormative mandate, Kevin Jennings (1994) tells us his personal story: I was born in 1963. . .[I] realized in grade school that I was gay. I felt absolutely alone. I had no one to talk to, didn't know any openly gay people, and saw few representations of gays in the media of the 1970s. I imagined gay people were a tiny, tiny minority, who had been and would always be despised for their "perversion." Not once in high school did I ever learn a single thing about homosexuality or gay people. I couldn't imagine a happy life as a gay man. So I withdrew from my peers and used alcohol and drugs to try to dull the pain of my isolation. Eventually, at age seventeen I tried to kill myself, like one out of every three gay teens. I saw nothing in my past, my present, or (it seemed) my future suggesting that things would ever get any better. (pp. 13-14) Heteronormativity is so powerful that its regulation and enforcement are carried out by the individuals themselves through socially endorsed and culturally accepted forms of soul murder. Soul murder is a term that I borrow from the child abuse and neglect literature to highlight the torment of heteronormativity (Yep, 2002). Shengold (1999) defines soul murder as the "apparently willful abuse and neglect of children by adults that are of sufficient intensity and frequency to be traumatic . . . [so that] the children's subsequent emotional development has been profoundly and predominantly negatively affected" (p. 1). Further explaining this concept, Shengold (1989) writes, "soul murder is neither a diagnosis nor a condition. It is a dramatic term for circumstances that eventuate in crime–the deliberate attempt to eradicate or compromise the separate identity of another person" (p. 2, my emphasis). Isn't the incessant policing and enforcement, either deliberately or unconsciously, by self and others, of the heteronormative mandate a widespread form of soul murder?

The queer body is constantly forced into life as overkill – this is the naturalization of antiqueerness that perpetuates violence that renders queerness inherently dead.

Stanley 2011 [Eric, "Near Life, Queer Death Overkill and Ontological Capture," Social Text 107 s Vol. 29, No. 2 s Summer 2011]

Overkill is a term used to indicate such excessive violence **that it pushes a body beyond death**. Overkill is often determined by the postmortem removal of body parts, as with the partial decapitation in the case of Lauryn Paige and the dissection of Rashawn Brazell. The temporality of violence, the biological time when the heart stops pushing and pulling blood, yet the killing is not finished, suggests the aim is **not simply the end of a specific life, but the ending of all queer life**. This is the time of **queer death**, when the **utility of violence gives way to the**

pleasure in the other's mortality. If queers, along with others, approximate nothing, then the task of ending, of killing, that which is nothing must go beyond normative times of life and death. In other words, if Lauryn was dead after the first few stab wounds to the throat, then **what do the remaining fifty wounds signify?** The legal theory that is offered to nullify the practice of overkill often functions under the name of the trans- or gay- panic defense. Both of these defense strategies argue that the murderer became so enraged after the "discovery" of either genitalia or someone's sexuality they were forced to protect themselves from the threat of queerness. Estanislao Martinez of Fresno, California, used the trans- panic defense and received a four- year prison sentence after admittedly stabbing J. Robles, a Latina transwoman, at least twenty times with a pair of scissors. Importantly, this defense is often used, as in the cases of Robles and Paige, after the murderer has engaged in some kind of sex with the victim. The logic of the trans- panic defense as an explanation for overkill, in its gory semiotics, offers us a way of understanding queers as the nothing of Mbembe's query. Overkill names the technologies necessary to do away with that which is already gone. Queers then are the specters of life whose threat is so unimaginable that one is "forced," **not simply to murder, but to push them backward out of time, out of History, and into that which comes before**.27 In thinking the overkill of Paige and Brazell, I return to Mbembe's query, **"But what does it mean to do violence to what is nothing?"**28 This question in its elegant brutality repeats with each case I offer. By resituating this question in the positive, the "something" that is more often than not translated as the human is made to appear. Of interest here, the category of the human assumes generality, yet can only be activated through the specificity of historical and politically located intersections. To this end, the human, the "something" of this query, within the context of the liberal democracy, names rights- bearing subjects, or those who can stand as subjects before the law. The human, then, makes the nothing not **only possible but necessary.** Following this logic, the work of death, of the death that is already nothing, not quite human, binds the categorical (mis)recognition of humanity. The human, then, resides in the space of life and under the domain of rights, whereas the queer inhabits the place of **compromised personhood and the zone of death**. As perpetual and axiomatic threat to the human, **the queer is the negated double of the subject of liberal democracy**. Understanding the nothing as the unavoidable shadow of the human serves to counter the arguments that suggest overkill and antiqueer violence at large are a pathological break and that the severe nature of these killings signals something extreme. In contrast, overkill is precisely not outside of, but is that which constitutes liberal democracy as such. Overkill then is the proper expression to the riddle of the queer nothingness. Put another way, the spectacular material- semiotics of overkill should not be read as (only) individual pathology; these vicious acts must indict the very social worlds of which they are ambassadors. Overkill is what it means, **what it must mean**, to do violence to what is nothing.

And, government decrease of surveillance through a predictive model can never be a neutral action regarding queer bodies – the construction of intimacy becomes instrumentalized in the calculus of biopolitics.

Puar 14 [Jasbir Puar, professor of women's and gender studies at Rutgers University, "Jasbir Puar: Regimes of Surveillance," Cosmologics, Dec 4, 2014, http://cosmologicsmagazine.com/jasbir-puar-regimes-of-surveillance/]//JIH

Jasbir Puar: Much of the work in Terrorist Assemblages mapped out the dissolution of public/private divides that have in the past animated feminist scholarship regarding the state and state intrusion into the "private." This private, as women of color and transnational feminists have pointed out, has never quite existed given the level of state bureaucratic and administrative presence in the households of immigrants and people of color. One interest of mine is connecting the securitization upsurge that occurred after 9/11 with the formation of Homeland Security to both earlier and more recent

discourses of security that revolve around the "home," and in particular the home as something private, national, and safe. So before the War on Terror we had the War on Drugs: this rationalized policing in the name of safe homes, in Black communities in particular. The War on Drugs no doubt provided a domestic blueprint for the foreign deployment enacted after September 11th. This is one connective point to 9/11.

Another connective tissue to 9/11 is the financial crisis of 2008, which was not a break from the securitization of the home and homeland, but a manifestation of one of its tactical failures, that of securing the home economically. I think 2008 marks the end of the "post 9/11″ moment and re-complicates the "Muslim terrorist" as the predominate target of surveillance technologies and discourses. Surveillance happens—obliquely, but it happens—through the instrument of the sub-prime mortgage, whereby once again the security and safety of the home is determined through the surveillance of those subjects deemed financially suspect. In this case, predominantly Black and Latino populations were subject to foreclosures. Surveillance and securitization economies work through a sort of monetization of ontology—certain bodies are intrinsically risky investments via a circular logic of precarity whereby these bodies are set up as unable to take on risk in the very system that produces them as risky.

This kind of connective analysis links various kinds of figures that emerge as targets of explicit surveillance—in the case of 9/11, a religious figure, the fundamentalist terrorist—to the on-going systems of surveillance that bubble underneath. One analysis that I offer in Terrorist Assemblages is the irony of the decriminalization of sodomy in the Lawrence decision of 2004, a ruling that pivoted around the privatization of anal (and thus homosexual) sex within the sanctity of the privately-owned home. This was at a time when Homeland Security was requiring registration of men from Muslim countries, infiltrating mosques, enacting home deportations—just generally disrupting and halting the construction of any kind of private home. One interpretation, then, of who exactly the Lawrence decision protects is: not so much the lesbian or gay or homosexual or queer subject, but rather one whose private home has no reason to be suspected and is not suspicious. The construction of "intimacy," as it is anchored in the private, becomes instrumentalized within the calculus of biopolitics, a measure of one's worth to the state.

Thus the plan: The United States federal government should curtail its surveillance of predictive gender models.

Embracing the idea that bodies are undefined intensities provides possibility for a new realm of the body-as-information in which identity is determined through encounter rather than rigid sets of data.

Puar 09 [Jasbir Puar, professor of women's and gender studies at Rutgers University, Women and Performance: a journal of feminist theory, Vol. 19, No. 2, July 2009, http://planetarities.web.unc.edu/files/2015/01/puar-prognosis-time.pdf]//JIH

Out of the numerous possibilities that ''assemblage theory'' offers, much of it has already begun to transform queer theory, from Elizabeth Grosz's crucial re-reading of the relations between bodies and prosthetics (which complicates not only the contours of bodies in relation to forms of bodily discharge, but also complicates the relationships to objects, such as cell phones, cars, wheelchairs, and the distinctions between them as capacity-enabling devices) (1994), to Donna Haraway's cyborgs (1991), to Deleuze and Guattari's ''BwO'' (Bodies without Organs – organs, loosely defined, rearranged against the presumed natural ordering of bodily capacity) (1987). I want to close by foregrounding the analytic power of conviviality that may further complicate how subjects are positioned, underscoring instead more fluid relations between capacity and debility. Conviviality, unlike notions of resistance, oppositionality, subversion or transgression (facets of queer exceptionalism that unwittingly dovetail with modern narratives of progress in modernity), foregrounds categories such as race,

gender, and sexuality as events – as encounters – rather than as entities or attributes of the subject. Surrendering certain notions of revolution, identity politics, and social change – the ‘‘big utopian picture’’ that Massumi complicates in the opening epigraph of this essay – conviviality instead always entails an ‘‘experimental step.’’ Why the destabilization of the subject of identity and a turn to affect matters is because affect – as a bodily matter – makes identity politics both possible and yet impossible. In its conventional usage, conviviality means relating to, occupied with, or fond of feasting, drinking, and good company – to be merry, festive, together at a table, with companions and guests, and hence, to live with. As an attribute and function of assembling, however, conviviality does not lead to a politics of the universal or inclusive common, nor an ethics of individuatedness, rather the futurity enabled through the open materiality of bodies as a Place to Meet. We could usefully invoke Donna Haraway’s notion of ‘‘encounter value’’ here, a ‘‘becoming with’’ companionate (and I would also add, incompanionate) species, whereby actors are the products of relating, not pre-formed before the encounter (2008, 16). Conviviality is an ethical orientation that rewrites a Levinasian taking up of the ontology of the Other by arguing that there is no absolute self or other,15 rather bodies that come together and dissipate through intensifications and vulnerabilities, insistently rendering bare the instability of the divisions between capacity-endowed and debility-laden bodies. These encounters are rarely comfortable mergers but rather entail forms of eventness that could potentially unravel oneself but just as quickly be recuperated through a restabilized self, so that the political transformation is invited, as Arun Saldhana writes, through ‘‘letting yourself be destabilized by the radical alterity of the other, in seeing his or her difference not as a threat but as a resource to question your own position in the world’’ (2007, 118). Conviviality is thus open to its own dissolution and self-annihilation and less interested in a mandate to reproduce its terms of creation or sustenance, recognizing that political critique must be open to the possibility that it might disrupt and alter the conditions of its own emergence such that it is no longer needed – an openness to something other than what we might have hoped for. This is my alternative approach to Lee Edelman’s No Future, then, one that is not driven by rejecting the figure of the child as the overdetermined outcome of ‘‘reproductive futurism’’ (2004),16 but rather complicates the very terms of the regeneration of queer critique itself. Thus the challenge before us is how to craft convivial political praxis that does not demand a continual reinvestment in its form and content, its genesis or its outcome, the literalism of its object nor the direction of its drive.

A fluid understanding of identity is necessary in order to avoid sexual othering and exceptionalization.

Perry 14 [Brock Perry, Graduate Division of Religion, Drew University, “Towards an ontogenesis of queerness and divinity: Queer political theology and Terrorist Assemblages,” May 30, 2014]//JIH

The historical shift in modernity and modern state formation to which the concept of homonationalism attends is marked by biopolitical control of national and transnational bodies in which those determined unworthy of homonational citizenship are relegated to racialised and perversely sexualised populations. Homonationalism is dependent upon this ‘sexual othering’ for the moral, sexual and cultural exceptionalisation of rights-bearing homosexual citizens over against ‘Orientalist constructions of “Muslim sexuality”’ as inherently homophobic, irrationally religious and sexually perverse (Puar 2007, 4). The biopolitical population management that Puar describes is based not only on particular identities taken as a whole, but also on cross-sections of information ablated from bodies and represented statistically. As statistics, race and sex are experienced as a series of transactional information flows captured or happened upon at chance moments that perceive and render bodies transparent or opaque, secure or insecure, risky or at risk, risk-enabled or risk-disabled, the living or the living dead. (160)

Thus, biopolitical control is made diffuse between populations as identities are dissected into fragments of information that never fully add up to the representational subject, but are neither unrelated to it. Puar argues that state practices of surveillance and detention make use of those fragments of information that are multiplicitously and variably manifested between and within identities in a way that identity politics and intersectional analyses, which take the representational subject for granted, have been unable to adequately counter (162, 206). She concludes that identity politics, both a symptom of and a response to these networks of control, capitulates once again to chasing the space of retribution for the subject. Control masks itself, or masks its effects, within the endless drive to recoup the resistant subject. (162)

Puar densely articulates the relation of identity and representation to biopolitics and elucidates the failure of identity politics to grasp its production by the very systems of power it seeks to resist. An ontologically static and unchanging understanding of identity lends itself to biopolitical control by confirming the stability of the information used to determine those included in life and those relegated to a racialised and perversely sexualised population. Identity politics leaves bodies in these populations always in need of reclaiming subjecthood along the lines of identity that made the subject separable under biopolitical control in the first place. Before turning with Puar to affect theory in order to think both with and beyond identity politics, I want to first turn to issues of political theology and the secular that I contend are related to the issues of modern state formation being discussed here, and which will be necessary for critical responses to the issues of homonationalism, biopolitics and identity that Puar describes.

The affirmative's method of convivial assemblage is key to envision a legal framework independent of rigid racialized and gendered categories of personhood.

Weheliye 14. Alexander G. Weheliye, professor of African American studies at Northwestern University, Habeas Viscus, pg. 82

We are in dire need of alternatives to the legal conception of personhood that dominates our world, and, in addition, to not lose sight of what remains outside the law, what the law cannot capture, what it cannot magically transform into the fantastic form of property ownership. Writing about the connections between transgender politics and other forms of identity- based activism that respond to structural inequalities, legal scholar Dean Spade shows how the focus on inclusion, recognition, and equality based on a narrow legal framework (especially as it pertains to antidiscrimination and hate crime laws) not only hinders the eradication of violence against trans people and other vulnerable populations but actually creates the condition of possibility for the continued unequal "distribution of life chances."22 If demanding recognition and inclusion remains at the center of minority politics, it will lead only to a delimited notion of personhood as property that zeroes in comparatively on only one form of subjugation at the expense of others, thus allowing for the continued existence of hierarchical differences between full humans, not-quite-humans, and nonhumans. This can be gleaned from the "successes" of the mainstream feminist, civil rights, and lesbian-gay rights movements, which facilitate the incorporation of a privileged minority into the ethnoclass of Man at the cost of the still and/or newly criminalized and disposable populations (women of color, the black poor, trans people, the incarcerated, etc.).23 To make claims for inclusion and humanity via the U.S. juridical assemblage removes from view that the law itself has been thoroughly violent in its endorsement of racial slavery, indigenous genocide, Jim Crow, the prison-industrial complex, domestic and international warfare, and so on, and that it continues to be one of the chief instruments in creating and maintaining the racializing assemblages in the world of Man. Instead of appealing to legal recognition, Julia Oparah suggests counteracting the "racialized (trans)gender entrapment" within the prison-industrial complex and beyond with practices of "maroon abolition" (in reference to the long history of escaped slave contraband settlements in the Americas) to "foreground the ways in which often overlooked African diasporic cultural and political legacies inform and undergird anti- prison work," while also providing strategies and life worlds not exclusively centered on reforming the law.24 Relatedly, Spade calls for a radical politics articulated from the "'impossible' worldview of trans political existence," which redefines "the insistence of government agencies, social service providers, media, and many nontrans activists and nonprofiteers that the existence of trans people is impossible."25 A relational maroon abolitionism beholden to the practices of black radicalism and that arises from the incompatibility of black trans existence with the world of Man serves as one example of how putatively abject modes of being need not be redeployed within hegemonic frameworks but can be operationalized as variable liminal territories or articulated assemblages in movements to abolish the grounds upon which all forms of subjugation are administered.]

Queer scholars must engage the law to combat normalization

Duggin 94 [Lisa Duggan, associate professor of American studies and history at New York University, Queering the State, Social Text, No. 39 (Summer, 1994), pp. 1-14]//JIH

When we turn our attention to this project, we run into difficulty the moment we step outside our classrooms, books, journals, and conferences. How do we represent our political concerns in public discourse? In trying to do this, In trying to hold the ground of the fundamental criticism of the very language of current public discourse that queer theory has enabled, in trying to translate our constructionist languages into terms that have the power to transform political practices, we are faced with several difficulties.

First, the discussion of the construction of categories of sexual identity resist translation into terms that are culturally legible and thus usable in consequential public debates. To illustrate this difficulty let 's

imagine that you are asked to appear on the Oprah Winfrey show to talk about public school curriculums. Guest A says material on gays will influence children to think gay is okay and thus to become disgusting perverts themselves. Guest B, from Parents and Friends of Lesbians and Gays, says that this will not happen because sexual identity is fixed by the age of three, if not in utero. You are Guest C-what do you say? That "the production of queer sexualities is historically and culturally conditioned," that if gay materials in class are conducive to the production of queer sexualities you are squarely in favor of their use? The difficulties here on the level of legibility and on the level of political palatability are readily apparent. Second, the use of constructionist language to discuss homosexuality tends to leave heterosexuality in its naturalized place-it can be taken up by homophobes to feed the fantasy of a world without homosexual bodies and desires." If history can make them, history can also UNmake them" seems to be the logic here. At a conference in Toronto a decade ago, Dorothy Allison and Esther Newton suggested responding to this danger in constructionist arguments by producing buttons demanding" Deconstruct Heterosexuality First." Of course, we can respond as the button suggests and work to denaturalize heterosexuality which queer studies is, in fact, doing,but this is unlikely to be received in current public debates without guffaws and disbelief.

The usual response to these difficulties is to resort to what is called "strategic essentialism" the use of essentialist categories and identity politics in public debates because that is all anyone can understand and we need to be effective in the political arena. I take the concerns that lead to the embrace of strategic essentialism seriously but I think that it is ultimately an unproductive solution. It allows sexual difference and queer desires to continue to be localized in homosexualized bodies. It consigns us, in the public imagination, to the realms of the particular and the parochial, the defense team for a fixed minority that most "special" of special interest groups- again, letting everyone else off the hook. I would argue that we need to find a way to close the language gap in queer studies and queer politics. We need to do this especially with reference to the operations of the state. Though queer politics is presently claiming public and cultural space in imaginative new ways (kiss-ins, for example), the politics of the state are generally being left to lesbian and gay civil rights strategies. These strategies are greatly embattled at present, and there are still many gains to be made through their deployment. But they are increasingly ineffective in the face of new homophobic initiatives; they appear unable to generate new rhetorics and tactics against attacks designed specifically to disable identity-based antidiscrimination policies.9We cannot afford to fallback on strategic essentialism(it will not get us out of the trouble we are now in), and we cannot afford to abandon the field.

Impact calculus should begin from the perspective of queer necropolitics – predictive scenario planning disavows zones of abandonment that perpetuate mundane forms of violence on queer bodies.

Haritaworn et al. 14. Jin Haritaworn, professor of sociology at the University of York, Adi Kuntsman, professor of humanities, research, and social sciences at Manchester Metropolitan University, and Sylvia Posocco, professor of psychological studies at the University of London, Birbeck, Queer Necropolitics, Routledge, 2014, pg. 1

Most prominently, Jasbir Puar (2007), tracing the shift from AIDS to gay marriage, identifies a recent turn in how **queer subjects are figured**, from **those who are left to die**, to those that **reproduce life**. Yet, not all sexually or gender non- conforming bodies are 'fostered for living'; just as only some queer deaths are constituted as grievable (Butler 2004),1 while others are targeted for killing or left to die.

This book comes at a time of growing interest in the necropolitical as a tool to make sense of the symbiotic co-presence of life and death, manifested ever more clearly in the cleavages between rich and poor, citizens and non-citizens (and those who can be stripped of citizenship); the culturally, morally, economically valuable and the pathological; queer subjects invited into life and queerly abjected populations marked for death. Our discussions are inspired by Achille Mbembe's concept of '**necropolitics'** — a concept he develops when analysing the **centrality** of **death in subalternity**, **race**, **war** and **terror** (Mbembe 2003) - and by Puar's (2007) insightful elaboration of '**queer necropolitics'**, which attempts to make sense of the expansion of **liberal gay politics** and its **complicity** within the US **'war on**

terror', while calling our attention specifically to the 'differences between queer subjects who are being folded (back) into life and the **racialized queernesses** that **emerge** through the **naming of populations'**, often those marked for death (p. 36).

Our collection assembles various ways of queering the necropolitical and of interrogating claims to queerness in the face(s) of death, both spectacular and banal. **Thinking through necropolitics** on the **terrain of queer critique** brings into view **everyday death worlds**, from the perhaps more expected sites of death making (such as war, torture or imperial invasion) to the ordinary and completely normalized violence of the market. As many of the contributors to this volume point out, the **distinction** between **war and peace dissolves** in the face of the **banality of death** in the 'zones of abandonment' (Biehl 2001; Povinelli 2011) that regularly accompany contemporary democratic regimes. These are not merely about exclusion; more insidiously perhaps they create **their own forms of deadly inclusion**.

The insistence on the **unremarkable**, the **ordinary** and the **mundane** is of particular **importance**. In contrast to other works in the field that deal with death in relation to queerness and beyond - such as the AIDS epidemic or the Holocaust - contributors in this book focus less on grand moments or processes of commemoration and more on the everyday and the ordinary. In that respect, our orientation (Ahmed 2006) is not so much towards a past that is remembered and celebrated. In the place of the finished past, we turn to the present and future(s), including those **haunted futures** (Ferreday and Kuntsman 2011; Gordon 2011) where **queer vitalities** become **cannibalistic** on the **disposing** and **abandonment** of others. Indeed, we argue that the **queer nostalgia** for other times, coupled with a **victim subjectivity** that **refuses accountability** for current **privileges** and **injustices**, may itself work to **naturalize** and **accelerate death-making logics** in the present (Haritaworn, 2013). Furthermore, in considering the rise of homonormative and transnormative identities as contingent on settler colonialism, anti-blackness and permanent war - which provide the conditions of queer ascendancies — we refuse a view of the past as finished and the present as democratic and post-genocidal (e.g. Morgensen 2010; Smith 2007; see also Bassichis and Spade, Chapter 9 in this book).

Using 'queer necropolitics' as a **theoretical entry point** and as a concept- metaphor, our book explores the **processes**, **conditions** and **histories** that **underpin** and **sustain** a range of '**unequal regimes** of **living** and **dying'** (Luibheid 2008: 190), consolidating and extending the existing analytical vocabulary for understanding queer politics and experiences. In putting the concept of 'queer necropolitics' at the centre of our discussion, the book is in dialogue with the emerging scholarship focussing on the analysis of the necropolitical (see, for example, Inda 2005; Osuri 2006). We extend this body of scholarship by turning our attention to specifically queer aspects: deadly underpinnings of militarized queer intimacies, nationalized practices of queer mourning, assimilationist logics of feminist, gay and transgender rights and criminalizing policies in the name of sexual safety and queer space. Contributors explore the relations between queerness and war, immigration, colonization, imprisonment and other forms of population control in various cultural and political settings. Among the many topics addressed in the chapters of this book are racism in the name of 'LGBT rights'; queer colonialities; trans migrations; vitality and necropolitics in the new world order; the ontology and phenomenology of sexual and gender violence; the racialization of 'LGBT', queer and transgender politics in the 'wars on terror'; and regimes of remembering and oblivion of queer and non-queer lives and deaths.

Heteronormativity - Generic

The desire of surveillance to reveal what is hidden and assumed to be shameful correlates with gendered and sexualized politics that favor heteronormativity and marginalize genderqueer and transgender communities

Ball et al 9 (Kristen, Business School, Open University; Nicola Green, Department of Sociology, University of Surrey; Hille Koskela, Department of Social Policy, University of Helsinki; David J. Phillips, Faculty of Information, University of Toronto, "Surveillance Studies Needs Gender and Sexuality," Surveillance and Society, 2009, es)

Surveillance Studies needs Gender and Sexuality. That is why this issue came into being. Although this is a comparatively short issue of Surveillance and Society, perhaps representing the fact that the critique of surveillance through these lenses is still in its infancy, its contributions highlight some of the ways in which studies of gender and sexuality are fundamental to mounting a critique of surveillance. Surveillance theory holds that surveillance processes are routine, systemic, purposeful and focused (Surveillance Studies Network 2006). They are woven into everyday life. They aggregate individuals into populations, in part by creating robust, replicable analytical categories. This is done with the strategic objective of institutional management of those populations and the everyday life of the individuals that comprise them. Marginalisation, exclusion and mass discrimination are necessary byproducts of this manageable order. On reading the papers in this issue, it emerges that the political economies, methods, outcomes, and profound normalizing tendencies associated with surveillance are deeply amenable to critiques informed by theories of gender and sexuality. These articles turn our attention to three particularly problematic phenomena that surround surveillance practices. The first is the oft-cited and fallacious public response to surveillance as being 'if I have nothing to hide then I have nothing to fear'. The second concerns the outcomes of categorisation for gendered and sexualised subjects. The third highlights how intermediated surveillant methods produce new forms of vulnerability. Nothing to hide: nothing to fear? One of the common concerns amongst the papers in this issue is that of subjectivity and the experience of surveillance. Hitherto, studies of the surveilled subject have been limited to a very narrow range of areas, as Ball (2009) describes: To date, discussions of the surveillance society have assumed a limited range of positions for the surveilled subject, reducing the experience of surveillance to one of oppression, coercion, ambivalence or ignorance. Few studies have suggested to the contrary (Koskela 2004; McGrath 2004). In some circumstances it is the case that the experience of surveillance features coercion (for example, in the mandatory provision of DNA on arrest in the UK to feed the Police National Computer DNA database), oppression (for example, those whose international mobilities are deemed 'risky') ambivalence or ignorance (for example, consumers who are unaware that their data doubles are structuring their access to goods and services), but this is not the whole story. Indeed if the subject is perfectly docile and compliant, as Foucault predicted, then we have perfect surveillance, which is rarely the case. The fact that individuals sometimes appear to do little to counter surveillance does not mean that surveillance means nothing to them. Surveillance may be tolerated or even sought after because the giving of data satisfies individual anxieties, or may represent patriotic or participative values to the individual. It may also be the case that individuals are ambivalent towards surveillance because there is sometimes no identifiable 'watcher' or perceivable 'control' being asserted, or because the pleasures of performative display override the scrutinies that come hand-in-hand with self-revelation (Ball 2009: 640-641). Papers within this issue begin to augment the documentation of the experience of surveilled subjects. In particular they challenge the normative statement of 'nothing to hide: nothing to fear,' a response which is often cited in 'vox pop' media coverage of the surveillance society. They do so by problematising the association between that which is hidden with that which is shameful - an association which is implicit within the phrase 'nothing to hide: nothing to fear'. In the Anglo-American north, the politics of what is hidden and what is revealed are imbued with gendered and sexualised politics of heteronormativity and shame, and of vulnerability and fear. In this volume, Toby Beauchamp and Kevin Walby, for example, highlight how the equating of 'what is hidden' with 'what is shameful' is problematic for transgender and genderqueer communities. Beauchamp's article on transgendered people and border security explores contradictory revelation and concealment practices across medical, political, and security discourses, and the almost insurmountable difficulty of managing a usable gender identity at their intersection. In Walby's paper 'Are you looking for fags?' we are reminded of McGrath's (2004)

accounts of the Manhattan gay bar 'Splash', and of other sexual practices within queer subcultures that embrace exposure as both political tactic and erotic thrill. Walby explores how that sort of publicness is necessarily marginalised and suppressed within institutional frameworks of "official" and normative publicness, such as that maintained and policed by Canada's 'National Capital Commission.' Categorically just? To date, one of the themes within surveillance studies has been the discriminatory and exclusionary outcomes of social sorting. Discussions of practices within inter alia consumer surveillance (Danna and Gandy 2002), the surveillance of mobile populations (Amoore and DeGoede 2005) and surveillance within political processes (Sussman and Galicio 2004) highlight the difficulties with categorisation which arises as a result of social sorting. Social sorting has very real consequences for subjects. For example, errors occur when databases are combined, inaccurate or unrepresentative data are used and missing data are 'filled in' (Danna and Gandy 2002), leading to the observation that social sorting is nearly always 'wrong' at the level of the individual (Berry and Linoff 2000). Recent evidence (Canhoto 2007; Beckett 2008) also suggests that the production of profiles is socially embedded and replicates the prejudices of data mining experts. Potential is created for prejudices to be written into algorithms which identify risk, entitlement and criminality. As a result data subjects may unwittingly suffer discrimination, or may be wrongly allocated to categories they do not belong. Moreover inadequacies tend to be perpetuated because replacing legacy systems is both expensive and complex (Head 2007). Social sorting is often based on geodemographic information, and ascribes value judgement to different groups of people. For example, particular consumption preferences, whilst forming distinct groups, are mapped onto places when combined with information such as a postcode. Lifestyles and places hence begin to merge (Burrows and Gane 2006) and neighbourhood characteristics come to determine the products and services offered to individuals living there. Some of these characteristics include discriminatory categories the likes of which would be illegal in other settings. For example, in Cherry vs. Amoco Oil Co, a noteworthy legal case in the US, it was revealed that a white woman who lived in a predominantly black neighbourhood was refused a credit card not because of her personal credit history, but because the postcode in which she lived was considered too risky in the credit checking system. One of the most important things to note about the categorisation practices usually discussed in studies of surveillance is that categories are statistically generated. Central to the operation of a category is its norm, or average: the ascription of any case – human or otherwise – to a category implies some kind of proximity to the norm expressed by the category. Categories thus have a normalising tendency. And whilst the majority of the work on categorisation to date critiques at the level of systems and practices, some of the papers within this issue address the implications of categorisation itself at the local level. Kathryn Conrad, in particular, critiques the normalizing tendency of categories in terms of the pressure it places on queer subjects, while Anthony Corones and Susan Hardy, and Kevin Walby show how essentialist discourses around gender and sexuality normalise diverse responses to surveillant processes.

Current surveillance practices reinforce heteronormativity, objectification of women, and cause global humiliation for those who don't fit neatly into our binaries.

Jakubowska 13 Gender verification in sport as a surveillance practice: An inside and outside perception Jakubowska, Honorata. The Institute of Sociology, Adam Mickiewicz University Surveillance & Society11.4 (2013): 454-465. Proquest

All the regulations concerning verifying gender apply only to women. These processes of gendering the female body are not limited to sports only (see e.g., Corones and Hardy 2009), but are highly visible in sports where the female body is prominent. Confining gender verification to women is also based on the assumption that men have better physical abilities. It is considered that only men taking part in women's competition can have an unfair advantage. A woman or feminized man therefore loses at the starting line. People associated with the sport of running agree with this way of thinking:! It doesn't make sense to examine men, because we always achieve worse results. If the man has feminine characteristics, he just will achieve worse results. (Athlete 1) With [a] man, there is no problem. Giving female hormones to the man will rather reduce his athletic potential.2 (Other Respondent 1) This approach can be considered to be right when we look at sports results in most disciplines. However, the limitation of gender verification as applying only to women can be considered a major tool for strengthening the dominant gender order in sports. Men also differ in the levels of androgens so that some of them could have a 'natural' hormonal advantage over others, yet they are not excluded from competing. In the case of men, a high level of androgens is not perceived as problematic. On the contrary, it makes them not only better athletes but also more masculine. When a woman has high androgen levels, she contradicts her femininity in two ways: either by way of the results-where the defeat of other women challenges the myth of female

weakness (or 'the frailty myth')-or, by her physical appearance, which does not fit the standards of heteronormativity. From this point of view, sex testing that was previously used for 30 years, and has been reintroduced through new rules that guard the 'natural' boundaries of gender through intricate biological surveillance of women's bodies, reproduces the social order (Lyon 2007: 3); in this case with reference to gender. Current regulations according to which only 'suspected' cases are verified have a heteronormative character. Since sex verification examinations concern primarily those athletes who do not conform to traditional feminine images, certain ideas about what a woman should look like are reinforced. The opinions of interviewees associated with running prove the power of these norms and their capacity to reinforce a dichotomous perception of gender. Some questioned the sex of Caster Semenya based on their contact with her. Frankly speaking, her behavior, the way she moves, she was [like] a man for me, every move, every gesture was not a feminine gesture but a masculine one. ... Her style of running, the way she showed her joy, the clenched fists, for me, it/she was really like a guy, to be honest. Zero femininity. There was nothing feminine about her. (Athlete 2) One can see it, physical characteristics, it is not a woman, in short, it is a man. We know that there are various things in nature, there are also genetic errors and some people are born as hermaphrodites. But in terms of these features, they have more testosterone, a different body structure etc. (Other Respondent 2) Excuse me for my language, but she is a tomboy. (Other Respondent 3) The visually aesthetic aspect is obviously not the main criterion of gender verification or the verification of androgen levels. However, due to the entertaining character of sports in the global media, the visual appearance of women plays a very important role. As Schneider (2003)3 wrote: ... in the places where sport is practiced, there intersexes, transvestites and sportswomen of extreme body image no longer appear ... television took away the right to visibility for optical deviations.! From this point of view, the surveillance of sportswomen's bodies can be perceived not only as a tool for ensuring fair competition, but also for strengthening heteronormative femininity, and thereby providing pleasure for sports viewers. The term surveillant scopophilia (Magnet and Rodgers 2011: 3; Magnet 2011) can be useful here. According to Lyon (2006a: 48), referring to Laura Mulvey (1975):! ... [when] applied to the cinema or, more broadly, to the viewer society, scopophilia (pleasure of looking) has been translated as the predominantly male gaze of Hollywood that depersonalizes women, turning them into objects to be looked at. In sport, scopophilia can be understood as the possibility to watch or peep at the female body doing sport. The outfits worn in many sports disciplines, such as tennis, volleyball and athletics, as well as the modern technology that allows people to view the body in close-ups, give aesthetic pleasure and attract many viewers to women's sports. Surveillance practices support the pleasure of looking by identifying those bodies deemed threatening, from the heteronormative point of view. Referring to Mary Douglas' theory (1966) these 'dirty bodies' must be excluded to maintain the purity of the system. Thus, both visual and biological surveillance is an important means by which female sports spaces are 'sanitized' or purified from perceived troublesome others (McCahill 2002). The privacy of 'othered bodies' Surveillance of intimate and private issues is common to both sports and many other areas of social life (see e.g. Lyon 2006a). In medical, travel or athletic contexts, it may be embarrassing for the 'othered' body to undergo this type of surveillance (Magnet and Rodgers 2011). However, one major difference between sports and other areas of social life is that elite athletes are public figures and their bodies are also on public display. With certain ideas about what an athlete should look like, there is extensive discussion of the changes in their appearance or their suitability to compete. Questioning the sex of athletes also becomes the subject of immense public discussion, which was shown very clearly by the case of Caster Semenya. Respondents in this study emphasized the harm and humiliation that such public controversy could bring to an athlete, even though they were convinced that Caster Semenya should undergo the verification of her sex. They especially stressed the impact of the media coverage of Semenya's case. It caused terrible harm to her. (Athlete 2) It was very hard for her, mentally. And I will say this-I take my hat off to her, for her ability to take and resist it all, and still show up on television ... This is a humiliation on a global scale.

The invisible violence goes on all around us. Victims are viewed as less valuable and denied basic rights, and suffer homophobic violence daily.

Lloyd 6 Lloyd, M. , 2006-08-31 "Who Counts? Understanding the Relation Between Normative Violence and the Production of Political Bodies" Paper presented at the annual meeting of the American Political Science Association, Marriott, Loews Philadelphia, and the Pennsylvania Convention Center, Philadelphia, PA Online <PDF>. 2013-12-16 from http://citation.allacademic.com/meta/p150590_index.html

But what if what we recognize as physical violence depends on certain categorizations that are, in themselves, normatively violent, that operate, in other words, to exclude certain subjects and/or

acts of violence? What if physical violence occurs precisely because some people are apprehended as less valuable than others? And, here we have only to think of homophobic or racist violence. What if we cannot see the violence that certain peoples suffer as violence at all because those people are invisible ('unreal', in Butler's lexicon) to us; that is, fail to figure within our consciousness as human and are thus denied the rights, privileges, protections and help that accrue to the human? Should we still argue for an exclusive focus on actual, empirical violence? Or would we be better evaluating how and why certain persons are construed as somehow deserving of, or soliciting, violence in the first place? It is my contention in this section that an analysis of normative violence is, in fact, something we cannot do without since it not only sheds valuable light on the kinds of political violence that characterize the contemporary world (including war, ethnic conflict, terrorism, racist violence to mention only some of the most obvious) but also because it forces us to consider how our ability to recognize certain actions as violent might itself depend on the effacement of other (violent) actions. To illustrate how this argument works, I now want to turn to Precarious Life.

Bodies that don't fit our definitions of "normal" are under constant surveillance and causes us to label them as "invalid" or less than human, denying the relevance of their experience.

Saltes '13 'Abnormal' Bodies on the Borders of Inclusion: Biopolitics and the paradox of Disability Surveillance Saltes, NatashaView Profile. Surveillance & Society11.1/2 (2013): 55-73. Ph. D Sociology, Queen's University

Recognizing the exclusionary impact of understanding disability through medical discourse, the disability rights movement has made challenging the biomedical response to disability (referred to in disability studies literature as the 'medical model" or the 'individual model") a priority by adopting the social model view and reframing 'disability" as a social construct (Oliver 1990a, 1996). The social model rejects the idea that disability emerges from functional limitations/impairment and argues instead that disability emerges through social practices that fail to account for the needs of people with impairments (Oliver 1990a, 1996). In essence, it is attitudes and perceptions of what constitutes ontological norms that result in disability. The social model takes issue with the medical model for understanding disability within a health context. The problem with this approach is that it elicits a medical response to disability as a condition that occurs within the individual and should therefore be treated and cured (Oliver 1990a, 1996: 35-36).3 The social model's argument against the medicalization of disability resonates with what Williams and Calnan (1996) refer to as the 'medicalization thesis" (1996: 1609), in which conditions that were not initially considered medical issues have become situated within the field of medicine. They note that the preoccupation and emphasis on 'locating the genetic precursors of illness, diseases, disabilities and behaviours, means that the knowledge base of scientific medicine has encroached still further into defining the limits of "normality" and proper functioning, deportment and control of the human body [8]" (1996: 1609). The genesis of normal has altered how the ontology of the body is experienced and perceived. Consequently, the 'abnormal" body has become objectified by medical discourse and its techniques of intervention. Hughes (2002) argues that 'the production of medical knowledge about disabled people has itself been disabling" (59). He explains: The definition of disability as a corporeal problem has meant that, for the most part, throughout modernity, disabled people have come under the jurisdiction, control and surveillance of (bio)medicine. This process of locating disability within the disciplinary scope of medicine has influenced profoundly the state of knowledge about it. Disability has been understood as sickness, and disabled people have been understood as invalid. (Hughes 2002: 58) In The Birth of the Clinic, Foucault (1973) articulates how the body becomes separated from the individual to become the focus of the 'medical gaze". The medical model invariably locates disability in the body as a 'body problem", placing people with impairments under the scrutiny of the medical gaze and thereby absolving society from the responsibility of removing disabling social barriers (Oliver 1990a; Rioux and Valentine 2006). By distinguishing

between disability and impairment, the social model is able to put forth a political agenda that advocates for social change. While the social model has been credited for advancing rights based disability discourse, it has also been criticized for removing the body and impairment from this discourse, thereby denying the relevance of individual experiences of impairment and disability. By understanding impairment as a functional limitation, a number of scholars have argued that the social model neglects to recognize that impairment can also be socially constructed (Hughes and Paterson 1997; Shakespeare and Watson 2001; Tremain 2008). Taking the social model into account, while being mindful of its limitations, is helpful for understanding the political response toward people with impairments. It also provides a useful means with which to recognize how the biomedical objectification of people with impairments can be linked to Foucault"s notion of biopolitics as a means of regulating populations and 'defending society from the abnormal

Legal

Specifically, the courts' policing of name changes for trans people strips them of ontological freedom

Tran 4 (Dinh Tu Tran Dinh is pursuing her L.L.M. degree at Georgetown University Law Center.She has worked as an attorney on many crucial issues facing transgender people. 25 Women's Rts. L. Rep. 222 (2003-2004). Excerpt from Call Me by My Proper Name: Legal Surveillance and Discipline of Transgender Body and Identity. Heinonline.org. *jsk*)

<Tradition differs from law and this differ- ence becomes distinctly evident in limiting how the court should decide a case. In Lawrence v. Texas, Justice Kennedy admonishes, "Our obli- gation is to define the liberty of all, not to man- date the majority's code." With this in mind, I want to introduce a new conception of liberty, that I call ontological freedom. Ontological freedom entails concrete moments in which the self manifests itself in the outside. In Hegel: The Restlessness of Negative, Jean-Luc Nancy gracefully describes the moments of freedom: "It is not starting out from myself that I decide, as if I was free; in liberating myself, it is on my- self, from out of myself that I decide. Deciding oneself, liberating oneself and giving oneself are one and the same: the self outside itself in the blossoming, the supreme manifestation of mani- festation in general." That is, ontological free- dom involves the process of becoming in which a self must embody itself, shaping, contouring, growing and changing itself as well as the em- bodied self in the world. Only through these moments, and these movements toward and in the outside could it literally become itself and truly be free.

Transgender individuals are denied their ontological freedom because their very being is restricted by the heterosexual regime of binary sex and gender. This is evident in the change of a name. Although the court maintains that transgender individuals can alter their name from either a male to female or a female to male name, it enforces two conditions that only apply to transgender individuals' application and does so for the only purpose of surveillance and discipline, ensuring the transgender individ- ual will always suit the proper name, embody- ing

the proper sex and having the proper gen- der mindset while limiting the very assumption of the proper name itself.

There are two ways in which one could change one's name. First, under common law one may use any name so long that there is no fraud, misrepresentation or interference with the rights of others. Common law does not re- quire any judicial proceeding; it just requires the mere habitual and consistent use of the name. Second, under New York Civil Rights law, Statute § 60, an individual can file a "peti- tion for leave to assume another name." And I'm going to skip over what's required, but I'm going on to what the case demands from trans- gender individuals.

Consequently, the court grants the peti- tioner's application only if the order shall not be used or relied upon by the petitioner as any evidence or judicial determination that the sex of the petitioner has in fact been changed.

In another case entitled, "In the Matter of Anonymous for Leave to change his name," (1990), the court denied the petitioner's appli- cation to change his name from William to Ve- ronica because "his purpose is only to avoid embarrassing situations due to sexual prefer- ence and physical well-being." The petitioner does not collaborate this claim by "competent medical and psychiatric evaluation, including whether he is a transves- tite or a transsexual, and if a transsexual, whether or not he has undergone a sex change operation and now is anatomically and psycho- logically a woman."

Having a court order to change one's name could be advantageous. One of the advantages is that where "the court order sets a definite date on which the new name is to be assumed, it gives the name change an 'aura of propriety and official sanction' and makes it a matter of public record." The court might be aware of the trans- gender individuals' pressing need to have a court directive; however, the court's conception of a name is wrong. Names are not property, because it cannot be an extension of self and cannot materialize. It only leaves this aura, a feeling or impression of a property. The proper name always and already functions within the social system of differences, constituting the subject as a "male" or "female."

For Butler, the constitutive moment is also a regulatory moment. In Bodies that Matter, Judith Butler refers to this interpellation as the "enabling violence," because on the one hand, violence occurs in the moment in which a trans- gender individual only can come into being or become a subject if he assume the female name; and on the other hand, through this assumption, a transgender individual acquires its agency as a female subject in this society. Under Butler's analysis, transgender individuals can never come into being or even be recognized in their very being if they do not reiterate the law of father or the dominant norm. The reason un- derlies many transgender individuals' petition and sometimes even the trajectory of their tran- sitional process. Without a clearly female name, a transgender individual cannot embody "female" according to society's eyes, and inevi- tably, falls into the realm of the abject. Trans- gender individuals'

assumption of a clearly fe- male name represents the process in which subjects come into being in this heterosexual patriarch system. Only through these align- ments of institutions and practices can domina- tions be exposed.>

Tech/Data

The convergence of technology and identity through surveillance in the status quo necessitates a new perspective on information that focuses on embodiment rather than simple representation.

Van der Ploed 03 [Irma van der Ploeg, PhD, Associate Professor at the Infonomics and New Media Research Centre, "Biometrics and the body as information: Normative issues of the sociotechnical coding of the body," 2003]//JIH

Today, the socio-technical production of social categories and identities through IT-mediated surveillance relies increasingly on a gradually extending intertwinement of individual physical characteristics with information systems (van der Ploeg 1999a). The impetus for this development stems to a considerable extent from governments and government-related authorities facing security problems relating to processes of globalization and increasing mobility of persons. The apt metaphor of states' "embrace" of their citizens in the quote from Torpey's History of the Passport used as an epigraph at the beginning of this chapter becomes particularly striking when "the files" of which he speaks show the tendency to include ever more data pertaining to bodily characteristics. But it is in various domains of society and spheres of activity, ranging from work, health care, and law enforcement, to consumption, travel and leisure, that the generation, collection, and processing of "body data" is increasing (Lyon 2001).

I argue that in order to make sense of the normative and socio-political implications of this phenomenon, we may need to let go of the idea that this merely concerns the collection of yet another type of personal information. Instead of consisting of mere information about persons, a proactive understanding of this development may be better served by considering the ways in which this "informatization of the body" may eventually affect embodiment and identity as such. We may need to consider how the translation of (aspects of) our physical existence into digital code and "information," and the new uses of bodies this subsequently allows, amounts to a change on the level of ontology, instead of merely that of representation.

As Katherine Hayles writes: When changes in incorporating practices take place, they are often linked with new technologies that affect how people use their bodies and experience space and time. Formed by technology at the same time that it creates technology, embodiment mediates between technology and discourse by creating new experiential frameworks that serve as boundary markers for the creation of corresponding discursive systems. In the feedback loop between technological innovations and discursive practices, incorporation is a crucial link. (Hayles 1992: 163)

Instead of the standard dual picture of the body as an ahistorical, natural entity, the representations of which change over time (due to scientific and technological innovations), we may need to consider how all three terms are caught in a process of co-evolution. With technological and discursive practices converging towards an ontology of "information," it is unlikely that their mediating link, embodiment – even while acknowledging its constraining and limiting power – will remain unaffected. And because embodiment concerns our most basic experience of the body and of being in the world, these developments carry profound normative and moral implications we ought to attempt to uncover.

Surveillance/Observation

Queer bodies suffer constant observation, and the dominant culture coerces them into hiding who they are. They suffer like prisoners in the panopticon, internalizing the surveillance and allowing it to change their very nature, destroying agency.

LeBlanc 10 UNQUEERING TRANSGENDER? A QUEER GEOGRAPHY OF TRANSNORMATIVITY IN TWO ONLINE COMMUNITIES by Fred Joseph LeBlanc Master of Arts in Gender & Women's Studies Victoria University of Wellington 2010 P27-30

In an early text, written with Wichins, Valentine (1997) discusses the social construction of the body and is specifically concerned with not only the ways people alter their bodies but the construction of identities around bodies that are not culturally understandable in terms of existing binary categories. To him, the altering of bodies calls into play new questions of difference and power, specifically the policing of these bodies by cultural means. In policing social space and the bodies therein, Foucault's use of Jeremy Bentham's panopticon as a metaphor for surveillance is of particular interest. The panopticon is an architectural technology of a building in the form of a ring. In the centre of this ring is a tower facing the inner face of the ring. The outer building is divided into cells, each the width of the building itself. Each of these cells has two windows: one facing the tower, the other on the opposite wall, allowing light to seep in. The tower's surveiller surveys the silhouettes of the cell's captives (see Image 1, next page). It was considered an easy and effective exercise of power. This policing produced a politics of space and visibility inscribed in architecture. Visibility is organised around a dominating gaze and the technology of the panopticon was not so much to punish wrongdoers as to prevent even the possibility of wrongdoing, by immersing people in a field of total visibility where the opinion, observations and discourse of others would restrain them from harmful acts. (Foucault 1980: 153) 27 The only downside of the panopticon was the fear of darkened, and thus unregulated, space which prevents the visibility of the person being regulated. It is in this sense that visibility produces surveillance (Thompson, 2004). Indeed, it is the technology of the panopticon that allows for interiorisation of a total, omniscient gaze. A surveiller need not watch the cells, as the potential for surveillance will result in each individual interiorising the gaze so that the individual will exercise surveillance over – and against – themselves. This ideal surveillance cancels human agency; it is this penetrative element of the gaze that polices gender "wrongdoing" and produces a "good citizen" within a certain knowledge/power matrix. The assimilationist agenda has privileged the internalised gaze as part of its politics: Gender-normative gays and lesbians self police their gender in such a way that it cannot be questioned or misinterpreted, thus demonstrating that their sexuality is distinct from their gender.

Constant surveillance assimiliates all peoples into "citizen subject" thorugh processes of discipline and total normalization, erasing difference and asserting bio-power over entire populations.

Lee 10 Bare Life, Interstices, and the Third Space of Citizenship Lee, Charles professor of Justice and Social Inquiry, Arizona State University. Women's Studies Quarterly38.1/2 (Spring 2010): 57-81 proquest

Michel Foucault has conceptualized the modern form of power as "bio -power," wherein the essential measure of liberal governance is to oversee the welfare of the population (wealth, longevity, health, etc.) through mechanisms of calculation, monitoring, regulation, and utilization, such that citizen life will be fostered productively in the interests and security of the state (1980a; 1997). Biopower taps into the bodies and souls of human subjects to ensure the reproduction of the social body in a "proper" mode and "proper" way (Foucault 1980b). As a technique of liberal governance, the inscription of subjects into modern citizenship initiates modern state's systematic surveillance of its population. David Lyon points out that the civil, political, and social rights granted to citizens in the age of modernity imply that "people had to be registered, and their personal details filed, which of course paradoxically facilitated their increased surveillance" (2001, 294). New and minute forms of surveillance and control were established via

documentary identification of citizens (i.e., birth certificates, driver's licenses, Social Security cards, passports, bankbooks, credit cards) throughout liberal societies by the last quarter of the twentieth century (294). Rather than an autonomous species standing in opposition to corporate bureaucratic power, citizenship is itself entangled in the webs of surveillance and subjection, discipline and normalization as a constitutive part of liberal governance in the making of citizen-subjects (Cruikshank I999). Aihwa Ong conceives citizenship as what Foucault calls the "technologies of government," involving a set of "policies, programs, codes, and practices . . . that attempt to instill in citizen-subjects particular values (self-reliance, freedom, individualism, calculation, or flexibility)" that are conducive to the production of the way of life in advanced liberal societies (2003, 6). These technologies of citizenship nurture a particular type of liberal subject - an entrepreneurial individual who is self-governing, selfmanaging, and self-regulating (7-9). Woven into liberal regime's biopolitical rationality, citizens are thus both made and self-making, both subject to regulatory control and "empowered" to act in their own interests as fullfledged citizen-subjects (Cruikshank 1999, 4; Ong 2003, 9). As Barry Hindess argues, however, to the extent that modern citizenship structures a biopolitical regime vis-à-vis the internal populations in advanced liberal states, it further informs the relations between states in an overarching "supranational regime of population management" (2005, 243). In other words, while during the colonial era European states sought to bring non-Western populations into the modern system of states through imperial discipline and direct domination, the decolonization process has subjected the newly independent states to a new regulatory regime of market interactions (i.e., international trading in goods and services) supervised by powerful Western states and supranational agencies to discipline the conduct of states (247). Postcolonial states have to demonstrate their fitness within the international system by participating in various international arrangements, embracing the market mechanism, and subjecting themselves to regulations by international financial agencies (250). As Hindess notes, liberalism is not merely a normative political doctrine or ideology, but a "positive project of government" that uses "market interactions to civilize and to regulate the conduct both of states themselves and of those within the particular populations under their authority" (25 1). This supranational governmental project orients posteolonial states toward a modern liberal world order as their own populations are molded into the institutions of citizenship (247, 256).

Surveillance in public-private spaces such as parks serves to regulate and exclude non-heterosexual activities

Walby 9 (Kevin Walby- Dept of Sociology and Anthropology, Carleton University, Canada. "He asked me if I was looking for fags," Surveillance and Society Vol 6 no 4 (2009). library.queensu.ca/ojs/index.php/surveillance-and-society/article/view/3268/3231 *jsk*)

<Public Sex, Parks and Surveillance The notion of 'public sex' is misleading. It assumes there is a stable difference between 'public' and 'private'. Edwards (1994: 91) uses the term 'not-private' sex, since the paradox of public sex is its hiding "in darkness, and around corners to evade constantly increased state surveillance…[oscillating] from apparent non-privacy into comparative privacy". For this reason, so-called public sex involves redefining privacy and anonymity (Bell 1995). Notions of 'public' and 'private' are also central in the regulation of sexuality (Colter et al. 1996). The 1957 Wolfenden Report, influential across the UK and North America, called for complete withdrawal of regulation of sex in the private sphere but broader policing of public sex. The Wolfenden Report became core policy for many governments, including Canada's, facilitating the decriminalization of private 'homosexuality' in a 1969 amendment of the Criminal Code of Canada. The Wolfenden Report simultaneously legitimated regulation of male with male sex in public, evidenced by crackdowns on bathhouses and tearooms that occurred in Toronto during the late 1970s through the 1980s (Walby 2009; Smith 1988). Decriminalization of 'private homosexuality' was advanced while 'public homosexuality' became criminalized.

As Califia (1994: 71) puts it, too narrow a definition of 'public' or 'private' in relation to sex "could leave us with little or no right to be visibly gay, meet each other in public places, or participate in sex outside of monogamous, closeted relationships". That we are 'free' to pursue sexuality in 'private' means that sex is subject to various forms of regulation. The surveillance

that occurs where space and pleasure-seeking intersect is only intensified in the revanchist city (Hannigan 1998; Smith 1996) where business and moral entrepreneurs seek to sanitize space and create more commercial zones.

Laws concerning public sex are written or enforced in ways that target specific types of people in specific locations (e.g. men who have sex with men in public). What results from governing public sex through law "is the performative inscription of a particular type of sexual figure who is deviant, abnormal, suspect, and in need of regulation by the criminal law" (Johnson 2007: 532). The claim here is that not all public sex is regulated equally. If laws are enforced in ways that discriminate against public male with male sexual relations, this begs the questions of why. Is it simply homophobia?

For Herek (2004: 8), the term 'homophobia' was important in that it "crystallized the experiences of rejection, hostility, and invisibility that homosexual men and women in mid-20th century North America had experienced throughout their lives". But Herek points out that the term 'homophobia' has been "too diffuse in its application" and "overly narrow in its characterization of oppression as ultimately the product of individual fear" (ibid. 11). The stereotyping, persecution and exclusion of men who have sex with men is based on more than an amorphous fear – regulation of sexuality always has a spatial element.

Some argue that 'heteronormativity' is a more precise term. Heteronormativity refers to how heterosexuality is privileged as 'natural' sexuality, favouring monogamous relations between opposite sexes that aim towards child bearing. Same sex relations, promiscuity, and kinky sex are shunned. It is not only sex acts but also urban areas that are coded through heteronormative hierarchies of property and propriety (Berlant and Warner 1998). Heteronormativity is not a thing, however, it is a process. The privileging of heterosexuality and demonization of queer sexuality is achieved and inscribed through routine text-based surveillance practices (Smith 1988) involving occurrence reports and other kinds of information sharing. Governance of homoerotic desire occurs in a field of contending discourses, where multiple techniques are used to produce regulatory knowledge in a search for 'homosexuals' (Walby 2009; Kinsman 1996).

The heteronormative order is also a spatial order. Moral contours of heterosexuality are etched into city spaces: "the city organizes and 'naturalizes' heterosexuality in so much as it divides and confines sexual identities across public and private spaces, defining the locations appropriate for specific sexual performances" (Hubbard 2000: 211). Parks are a site of such attempts at ordering. Edwards (1994) writes that parks in Britain have been used for public sex since 18th century industrialization. Merrick (2002) discusses the policing of male with male sex in the then wooded and marshy Champs-Elysées area of 18th century Paris. Men having sex with men choose the park because it is more discreet than the street corner. Parks can be public-private spaces. The park is sometimes viewed as risky by sex participants, not because of HIV/AIDS, but since gay bashing from police or homophobic community members is a possibility. This in turn contributes to how men also think of park sex as thrilling and exciting (Lee 1979). For Edwards (1994: 108), "public sex is primarily conducted within the context or parameters of pleasure and danger or eroticism and oppression due to its constant oscillation across a series of codes of decency, order and privacy". The park is a liminal zone where the rules for everyday sexual conduct are suspended.

At the same time, the park (especially at night) is thought of as a site where male against female violence occurs (Little 2005; Chan and Rigakos 2002; Pain 1997). Public parks are contested

zones because they are accessible by numerous social groups who make different use values of the locale. Even Christopher Park in New York, iconic in gay communities, is neither stably queer or heteronormative (Conlon 2004). Instead, it is through contestation that space becomes produced or intelligible as belonging to one or another social group and the conduct associated with them. It is not only 'private' and 'public' that are constituted through such regulation and surveillance. It is through surveillance that 'homosexuals' as so-called sexual deviants become intelligible as governance objects to organizations like the NCC. Examining the textual organization of surveillance practices and the work of surveillance agents (Walby 2005), in this paper I focus on how the NCC as a governance agency mobilizes against and monitors people with diverse sexualities.>

Constant observation and the assigning of terms like "trans" by the dominant mainstream erases the lived experience of the victims

LeBlanc 10 UNQUEERING TRANSGENDER? A QUEER GEOGRAPHY OF TRANSNORMATIVITY IN TWO ONLINE COMMUNITIES by Fred Joseph LeBlanc Master of Arts in Gender & Women's Studies Victoria University of Wellington 2010 P27-30

Anita shows the complications of lived experience upon the transgender category and the limits of transgender as an identity. Anita knows she is "gay" and "a man," but she also knows that everything she does is "like a woman" and is therefore read as transgender. In fact, in his field work at the New York Lesbian and Gay Community Services Center and the surrounding areas, Valentine found many people on whom the transgender category would be placed, but identified as gay men and saw their gender variance as part of their (homo)sexuality – and this was not limited to male-bodied women. Jade, an older female-bodied individual who identifies as a "mother," "lesbian," and a "man," found the word transgender not representative of her experience because "the word 'trans' was only used in 'transsexual,' meaning you were flipping over, changing your organs" (ibid.) Valentine considers that this is not merely a mis- or non-education issue and that some gay-identified people would adopt the transgender label and abandon their gay identity if they were better informed of it. Rather, for many gender-variant people, personal experiences cannot be accounted for so easily by the categories homosexuality or transgender; both sexual and gendered experiences exceed the boundaries of their categories.

Impacts

Bare Life

Bodies become occupied by the state, subjected to surveillance, ID numbers, passes, and permits. This leads to unthinkable despair and a state of bare life.

Enns 2004 Philosophy Department at the University of Toronto where she holds a postdoctoral fellowship Bare Life and the Occupied Body Diane Enns 7:3 | © 2004

If we bracket for a moment Agamben's most extreme case of the Muselmann, the concept of bare life becomes useful for thinking about the state-occupied body, the inhabitant of nowhere, stripped of political identity, nationhood, and basic human rights, by virtue of the fact of birth, a body whose very biological rhythms are regulated and controlled by a sovereign power. We could explore a number of examples here: the Iraqi's body, ravaged by hunger and disease, occupied by a sinister program of economic sanctions that Joy Gordon calls "a weapon of mass destruction" that has caused "a legitimized act of mass slaughter"36; the Tamil, the Chechen, the Tibetan, the indigenous Zapatista -- a discouragingly long list of peoples who are victimized to one extent or another by an occupying or colonizing power. It is the Palestinian occupation however, that comes most to my mind in this evocation of bare life. Tanya Reinhardt demonstrates in her detailed documentation of life in the occupied territories, how the Palestinian body is regulated, rendered vulnerable by the state power that penetrates all aspects of daily life from controlling where one can and cannot travel, where and how one can work, whether

one can import or export produce, medical supplies and cooking fuel, to whether one is safe in one's home.37 This is a systematic destruction of all semblance of normal life through a complicated and extensive web of enforcements from passes, identity numbers, permits, routine interrogations, road blocks that require leaving home in the night to get to work, to surveillance and political assassinations. Out of this emerges the figure of the "suicide bomber,"38 a figure of bare life, in this sense of abject vulnerability, reduction to a life devoid of any political meaning except that by which he is excluded, and by the fact that his or her life would be extinguished with impunity if the act did not already accomplish death. Intriguing contradictions arise however, when we consider the fact that these human bombs become martyrs to their own people through the sacrifice of their lives -- a sacrifice that defies their own Islamic faith, as well as the figure of homo sacer, whose life is not able to be sacrificed because it is meaningless already.39 In this case, the element of sacrifice appears to be the only meaning available, a final recourse to a limited resistance. This is an argument made repeatedly in the struggle to bring the plight of the Palestinians to the world's attention.40 In an oft-quoted interview, Eyad El Sarraj, a psychiatrist from the Gaza strip and recipient of several human rights awards, describes the association of sacrifice with power when asked to what he attributes the escalation of violence in the second Intifada: It's despair. The hopelessness that comes from a situation that keeps getting worse, a despair where living becomes no different from dying. Desperation is a very powerful force -- it's not only negative. It propels people to actions or solutions that previously would have been unthinkable. . . .

To affirm our own humanity, we have forced others into positions of sacred lives- they may be sacrificed without punishment. Their death at our hands doesn't constitute a crime. They have no lives worth living. There isn't even a value to their deaths.

Norris 2k GIORGIO AGAMBEN AND THE POLITICS OF THE LIVING DEAD Norris, Andrew. Andrew Norris is Assistant Professor of Political Science at the University of Pennsylvania .Diacritics30.4 (Winter 2000) http://search.proquest.com.proxy.lib.umich.edu/cv_635091/docview/746427833/fulltext/170BAD97AF434E1CPQ/1?accountid=14667

With the rise of sovereignty we witness the rise of a form of life that corresponds to it. "The sovereign sphere [sfera] is the sphere in which it is permitted to kill without committing homicide and without celebrating a sacrifice [sacrificio], and sacred life [sacra]-that is, life that may be killed but not sacrificed-is the life that has been captured in this sphere" [83]. Agamben does not define the sacred in terms of "what is set apart for worship of the deity." He is interested in the more fundamental question of the logic of sacrifice (from Latin sacrificium, from sacr-, sacer, holy, cursed) as revealed in the life that is sacred (from Latin sacrare, also from sacr-, sacer). What Agamben terms sacred life is, like the sovereign, both within and without the legal order (or, as its etymology suggests, both holy and cursed). It is inside the legal order insofar as its death can be allowed by that order; but it is outside it insofar as its death can constitute neither a homicide nor a sacrifice. But where sovereignty is a form of power that occupies this threshold, sacred life is nothing more than a life that occupies this threshold, a life that is excluded and included in the political order. Here this takes the form not, as in Aristotle, of a metaphysical puzzle, but rather of a mute helplessness in the face of death. "Sacredness is . . . the originary form of the inclusion of bare life [nuda vita] in the judicial order, and the syntagm homo sacer names something like the originary 'political' relation, which is to say, bare life insofar as it operates in an inclusive exclusion as the referent of the sovereign decision" [85]. This is the explicit revelation of the metaphysical requirement that politics establish a relation with the nonrelational [cf. note 8]. Indeed, the sovereign decision is the realization of the ambiguity of the distinction between bare and political life. It is law (political life) that is not law (insofar as it steps outside of the strictures and limitations of formal law) dealing with bare life (that is, nonpolitical life), and insofar as it does so that nonpolitical (bare) life it treats is political. The result is the paradox of a sacrifice that is dedicated to no legal or religious end [114] but that participates in and affirms the economy or logic of the legal/religious system as a metaphysical, political system. Where in René Girard's superficially similar account of sacrifice the victim is a scapegoat for the murderous desires of the community that unites around her, here the stakes are considerably higher. Instead of an act of self-protection on the part of the community [Girard 4, 101-02], sacrifice is the performance of the metaphysical assertion of the human: the Jew, the Gypsy, and the gay man die that the German may affirm his transcendence of his bodily, animal life.22 Contemporary instances of this threshold life abound, from refugees and people in concentration camps to "neomorts" and figures in "overcomas" whom we are tempted to turn into organ farms. Perhaps the clearest example is that of people in camps forcibly subjected to extreme medical tests and prisoners who have been condemned to death who are asked to "volunteer" for the same: The particular status of the VPs [Versuchspersonen] was decisive: they were persons sentenced to death or detained in a camp, the entry into which meant the **definitive exclusion from the political community**. Precisely because they were lacking almost

all the rights and expectations that we characteristically attribute to human existence, and yet were still biologically alive [biologicamente ancora vita], they came to be situated at a limit zone [una zona-limite] between life and death, inside and outside, in which they were no longer anything but bare life [nuda vita]. Those who are sentenced to death and those who dwelt in camps are thus in some way unconsciously assimilated to homines sacres, to a life that may be killed without the commission of homicide. Like the fence of the camp, the interval between death sentence and execution delimits an extratemporal and extraterritorial threshold [soglia] in which the human body is separated from its normal [normale] political status and abandoned, in a state of exception [in stato di eccezione], to the most extreme misfortunes. [159] When, in the United States, men condemned to death have been offered the possibility of parole in exchange for "volunteering" to undergo tests that could not be imposed upon those with full rights of citizenship [156-57], the reasoning was quite understandable, and even attractive in its economy and "fairness": given that the person has been condemned to die, he has essentially already lost his life. As far as the law is concerned his life is no longer his own, and in that sense he is a "living dead man" [131]. Hence there will be no crime against him if his life is "lost" again. But neither will that death be the imposition of the death penalty. Indeed, it is precisely insofar as he awaits execution that he remains alive: his life remains only to be taken from him in the moment of punishment. Death in the experiment thus reveals the paradoxes of death row as a sphere that delayed penalty makes possible, that of the threshold between life and death.23

Biopower Impacts

Biopower allows nations to operate with impunity, committing spectacular violence, warfare, and genocides all in the name of securing life.

Newman 4 SPECIAL ISSUE Terror, Sovereignty and Law: On the Politics of Violence By Saul Newman* is an associate professor in the Department of Government in the School of Public Affairs at American University [Vol. 05 No. 05] 2004

This inscription of violence and war in the framework of the social finds its modern permutation in what Foucault terms "biopolitics." The "race wars" of earlier periods have now become codified in modern political discourses that have as their central concern the preservation of the biological life of the species. The target of politics in contemporary societies, according to Foucault, is the administration of life itself. This designates a new form of power – "biopower." The operation of power is now aimed at the regulation, calculation and administration of populations. **Violence is still inscribed at the heart of these modern societies**. However, the crucial difference with modern regimes of biopower is that, unlike sovereign regimes, where blood was shed symbolically on behalf of the sovereign, now wars are waged on a **massive scale** by states on behalf of the populations they administer. Sovereign societies, according to Foucault, were characterised by the symbol of the sword and the right of the sovereign to either take life or to spare it. The symbolic register of these societies was a supreme power over life and death: "The sovereign exercised his right of life only by exercising his right to kill… Its symbol was, after all, the sword."24 Sovereign societies were characterised by the power of the spectacle – witness the "spectacle of the scaffold," whose grotesque horrors and excessive violence Foucault described in the execution of the regicide Damiens.25 Power was exercised here in a highly symbolic fashion, through a violence that was excessive, spectacular and ritualised. Punishment involved, for instance, the literal sacrifice of the body of the condemned. Foucault argues that this notion of violence as spectacle and symbolic sacrifice is no longer characteristic of modern societies, in which power operates in a quiet, methodical, regulative fashion. Modern societies, by contrast, are characterised by an entirely different register and technology of power – one in which the symbolic power of the sovereign to take life has been supplanted by a power that operates at the level of population and whose principle is to secure life. This modern technology of power is no less bloody, according to Foucault – having produced **unprecedented genocides and holocausts**. However, its symbolic order is non-violent. That is to say, it is based on the principle of the preservation, rather than the sacrifice, of life. 23 Again we see the parallel between violence and sovereignty - the way that the condition of sovereignty is also this undecidability, in relation to the law. That power is organised around the principle of the security and preservation of life is an undeniable fact of contemporary politics. The obsession with security

now in the wake of recent outbreaks of terrorism is perhaps paradigmatic of this modern principle of power. As Agamben argues, the concern with security and the preservation of life, while always one of the several prerogatives of modern state power, has now become the fundamental principle of state activity. We can see this new preoccupation with security in the obsession with "terrorist plots" within one's own borders, with a new invisible enemy that can strike at any time. The security and protection of internal populations from this invisible enemy – that is seen as both an external threat and an internal contaminant - has become the primary concern of political power. Questions of national security and the protection from terror are now the central feature of any political platform. Needless to say, this new raison d'être of the modern state has as its flip side **the systematic destruction of life – the meaningless military operations,** for instance, that are engaged in precisely in the name of the preservation of life

The expression of humanist biopower will destroy the planet

Bernauer, Boston College professor of philosophy, **1990**

(James, "Michael Foucault's Force of Flight: Toward an Ethics of Thought," pp. 141-142)

This capacity of power to conceal itself cannot cloak the tragedy of the implications contained in Foucault's examination of its functioning. While liberals have fought to extend rights and Marxists have denounced the injustices of capitalism, a political technology, acting in the interests of a better administration of life, has produced a politics that places man's "existence as a living being in question." The very period that proclaimed pride in having overthrown the tyranny of monarchy, that engaged in an endless clamor for reform, that is confident in the virtues of its humanistic faith -- this period's politics created a landscape dominated by history's bloodiest wars. **What comparison is possible between a sovereign's authority to take a life and a power that, in the interest of protecting a society's quality of life, can plan, as well as develop the means for its implementation, a policy of mutually assured destruction? Such a policy is neither an aberration of the fundamental principles of modern politics nor an abandonment of our age's humanism in favor of a more primitive right to kill**; it is but the other side of a power that is "situated and exercised at the level of life, the species the race, and the large-scale phenomena of population. **The bio-political project of administering and optimizing life closes its circle with the production of the Bomb. "The atomic situation is now at the end point of this process: the power to expose a whole population to death is the underside of a power to guarantee and individuals continued existence.** " The solace that might have been expected from being able to gaze at scaffolds empty of the victims of a tyrant's vengeance has been stolen form us by the noose that has tightened around each of our own necks.

Liberal biopolitical governance risks unending war against all threats to the species—that apocalyptic violence will inevitably turn against the species itself.

Dillon and Reid '9 (Michael, professor of Politics at the University of Lancaster, and Julian, Lecturer in International Relations at Kings College and Professor of International Relations at the University of Lapland, "The Liberal Way of War: Killing to Make Life Live, pg 30-33, JS)

One way of expressing the core problematic that we pursue in this book is, therefore, in the form of a question posed back to Paine on account of that definitive claim. What happens to the liberal way of rule and its allied way of war when liberalism goes global in pursuit of the task of emancipating the species from war, by taking the biohuman as its referent object of both rule and war? What happens to war, we ask, when a new form of governmental regime emerges which attempts to make war in defence and promotion of the entire species as opposed to using war in service of the supposedly limited interests of sovereigns? For the liberal project of the removal of species life from the domain of human enmity never in practice **entailed an end to war**, **or to the persistence of threats requiring war.** Paine makes this clear in his original formulation. Under liberal regimes, Paine observes, war will still be defined by relations between the human and its enemies. The enemies of the human will simply no longer be '**its**

species' (Paine 1995: 595). What that meant, in practice, was that the liberal way of rule had to decide what elements and what expressions of human life best served the promotion of the species. Those that did not were precisely those that most threatened it; those upon which it was called to wage war. Deciding on what elements and expression of the human both serve and threaten is the definitive operation by which liberalism constitutes its referent object of war and rule: that of the biohuman. Whatever resists the constitution of the biohuman is hostile and dangerous to it, **even if it arises within the species itself.** Indeed, as we shall show, since life is now widely defined in terms of continuous emergence and becoming, it is a continuous becoming-dangerous to itself. The locus of threat and danger under the liberal way of rule and war progressively moves into the very morphogenic composition and re-composability of living systems and of living material. **The greatest source of threat to life becomes life.** It is very important to emphasize that this discourse of danger is precisely not that which commonly arises in the political anthropologies of human cupidity of early modern political theory going back classically, for example, to Hobbes and Locke, which was nonetheless still formulated in a context still circumscribed by the infinity of divine providence, however obscure this was becoming, and however much this obscurity helped fuel the crisis of their times. The analytics of finitude, rather than the analytics of redemption, circumscribe late modern discourses of governance and danger now, instead. Biology, one might therefore also say, itself arose as a science of finitude; of the play of species life and death outwith the play of human life and redemption. The same might very well be said for modern 'political science.' Biology does not, of course, recognize cupidity. Cupidity arises in a different, anthro-political, order of things. These days, especially, biology recognizes only the dynamics of complex adaptive evolutionary emergence and change of living systems, whose very laws of formation it increasingly understands in informational terms. These, additionally, empower it to re-compose living material according to design rather than nature in order to rectify the infelicities of nature, or, indeed, pre-empt its expression by positively creating new nature, rather than merely negating existing nature. Pre-emption here is not negative, it is positive. It is not precaution, so much as creative production. The discourse of danger being elaborated through the liberal way of rule and war, in the age of life as information, is therefore related to the possibility that complex adaptive emergence and change can go acerbic. The possibility of catastrophe lies, immanently, in the very dynamics of the life process itself. Neither is this a discourse of danger which revolves around traditional othering practices alone, however pervasive and persistent these politically toxic devises remain. This is a discourse of danger which hyperbolicizes fear in relation to the radically contingent outcomes upon which the very liveliness of life itself is now said to depend. Biohumanity—itself an expression of the attempt to give concrete form to finitude politically—is therefore both threat and promise. The corollary is therefore also clear: enemies of the species **must be cast out from the species** as such. 'Just war' in the cause of humanity here—a constant liberal trope (Douzinas 2003)—takes a novel turn when the humanity at issue is biohumanity. For just war has constantly to be waged for biohumanity against the continuous becoming-dangerous of life itself; and less in the form of the Machiavellian or Hobbesian Homo lupus than in the form of continuously emergent being, something which also prompts the thought that Foucault's analytics of finitude might itself have to be revised to take account of the infinity of becoming which now also characterizes the contemporary ontology of the life sciences. Since the object is to preserve and promote the biohuman, **any such war to end war becomes war without end;** thus turning Walzer's arguments concerning the justification of liberal war inside out (Walzer 2000: 329-335). The project of removing war from the life of the species becomes a lethal and, in principle, continuous and **unending process**. In a way, as a matter of its biopolitical logic, there is little particularly startling about this claim. Immanent in the biopoliticization of liberal rule, **it is only a matter of where, when and how it finds expression.** As the very composition and dynamics of species life become the locus of the threat to species life, so the properties of species life offer themselves in the form of a new king of promise: war may be removed from the species should those properties be attended to differently. Consider, for example, Kant's 'Idea for a Universal History': if he lives among others of his own species, man is an animal who needs a master… he requires a master to break his self-will and force him to obey a universally valid will under which everyone can be free. But where is he to find such a master? Nowhere else but in the human species. (Kant 2005; emphasis added) 'Nowhere else but in the human species.' Here Kant, too, discloses the circumscription of his reflections by the analytics of finitude. Put simply, liberalism's strategic calculus of necessary killing has, then, to be furnished by the laws and dynamics, the exigencies and contingencies, derived from the properties of the biohuman itself. **Making life live becomes the criterion against which the liberal way of rule and war must seek to say how much killing is enough**. In a massive, quite literally **terrifying, paradox**, however, since the biohuman **is the threat**, it cannot, itself, adjudicate how much self-immolation would be

enough to secure itself against itself without destroying itself. However much the terror of the liberal way of rule and war currently revolves around the 'figure' of Al-Qaeda, the very dispositive of terror which increasingly circumscribes the life of the biohuman at the beginning of the twenty-first century is the fear induced by its very own account of life. No specific manner or form is proper, then, to the biohuman other than this: its being continuously at work instrumentally reassigning itself in order, it is said, to survive, but in fact to secure itself against its own vital processes. Within the compass of this biopolitical imaginary of species existence, the biohuman becomes the living being to whom all manner of self-securing work must be assigned. The task thus posed through the liberal way of rule and war by its referent object of rule and war—the biohuman—is no longer that, classically, of assigning the human its proper nature with a view to respecting it. The proper nature of the biohuman has become the infinite re-assignability of the very pluripotency itself. This is the strategic goal of the liberal way of war because it has become the strategic goal of the liberal way of rule. From the analytics of finitude, politically, has thus arisen an infinity of securitization and fear.

Biopower eliminates all value to life

Agamben 98 (Giorgio, U of Verona, Homo Sacer: Sovereign Power and Bare Life, p.139-40) LA

It is not our intention here to take a position on the difficult ethical problem of euthanasia, which still today, in certain countries, occupies a substantial position in medical debates and provokes disagreement. Nor are we concerned with the radicaliry with which Binding declares himself in favor of the general admissibility of euthanasia. More interesting for our inquiry is the fact that the sovereignty of the living man over his own life has its immediate counterpart in the determination of a threshold beyond which life ceases to have any juridical value and can, therefore, be killed without the commission of a homicide. The new juridical category of "life devoid of value" (or "life unworthy of being lived") corresponds exactly—even if in an apparently different direction—to the bare life of homo sacer and can easily be extended beyond the limits imagined by Binding. It is as if every valorization and every "politicization" of life (which, after all, is implicit in the sovereignty of the individual over his own existence) necessarily implies a new decision concerning the threshold beyond which life ceases to be politically relevant, becomes only "sacred life," and can as such be eliminated without punishment. Every society sets this limit; every society—even the most modern—decides who its "sacred men" will be. It is even possible that this limit, on which the politicization and the exceprio of natural life in the juridical order of the state depends, has done nothing but extend itself in the history of the West and has now— in the new biopolitical horizon of states with national sovereignty—moved inside every human life and every citizen. Bare life is no longer confined to a particular place or a definite category. It now dwells in the biological body of every living being.

The dark underside of biopower is the mobilization of whole populations for the purpose of wholesale slaughter

Foucault 72 (Michael, Professor of the History of Systems of Thought College De France, The Foucault Reader, pg. 258) LD

Since the classical age, **the West has undergone a very profound transformation of these mechanisms of power**. "Deduction" has tended to be no longer the major form of power but merely one element among others, **working to incite, reinforce, control, monitor, optimize, and organize the forces under it: a power bent on generating forces, making them grow, and ordering them, rather than one dedicated to impeding them, making them submit, or destroying them**. There has been a parallel ·shift in the right of death, or at least a tendency to align itself with the exigencies of a life-administering power and to define itself accordingly. This death that was based on the right of the sovereign is now manifested as simply the reverse of the right , of the social body to ensure, maintain, or develop its life . **Yet wars were never as bloody as they have been since the**

nineteenth century, and all things being equal, never before did regimes visit such holocausts on their own populations . But **this formidable power of death-and this is perhaps what accounts for part of its force and the cynicism with which it has greatly expanded its limits-now presents itself a s the counterpart of a power that exerts a positive influence on life, that endeavors to administer, optimize, and multiply it, subjecting to precise controls and comprehensive regulations . Wars are no longer waged in the name of a sovereign who must be de fended; they are waged on behalf of the existence of everyone**; **entire populations are mobilized for the purpose of wholesale slaughter** in the name of life necessity: **massacres have become vital** . **It is as managers of life and survival, of bodies and the race, that so many regimes have been able to wage so many wars, causing so many men to be killed**. And through a turn that closes the circle, as the technology of wars has caused them to tend increasingly toward all-out destruction, the decision that initiates them and the one that terminates the□ are in fact increasingly informed by the naked question of survival. **The atomic situation is now at the end point of this process: the power to expose a whole population to death is the underside of the power to guarantee an individual's continued existence**. The principle underlying the tactics of battle-that one has to be capable of killing in order to go on living-has become the principle that defines the strategy of states. But the existence in question is no longer the juridical existence of sovereignty; at stake is the biological existence of a population. **If genocide is indeed the dream of modern powers, this is not because of a recent return of the ancient right to kill; it is because power is situated and exercised at the level of life, the species, the race, and the large-scale phenomena of population.**

Exclusion

Policed bodies are forced into exclusion, and made socially dead- this mind set extends to justify ethnic cleansing and bio-political extinction.

Parker 12 Visiting Research Associate in the Department of Sociology at LSE

Between the Reservation and the Camp: Neoliberal Governmentalities of Exceptional Urban Space

29 May 2012. Simon Parker

As Foucault reminds us, policed bodies have always been the subject of physical separation and removal from the healthy body politic—a process that gave rise to the physical, permanent institution of the prison, the clinic and the asylum (Foucault 1977, 2001). In these heterotopic spaces, the suspension of civic rights gave rise to a disciplinary order in which the state enjoyed qualitative and quantitative control over the abject which had as its end the intensification and extension of 'bare life' (Agamben, 1998) and where law and moral order, these most essential and fundamental aspects of the civic community, are indefinitely suspended (Parker 2010). The camp therefore represents a controlled space of the 'social dead'—the deferment of whose physical death is merely a question of expediency or technical-administrative exigency (Goldhagen 1996). But its manifestation and recombination extends beyond annihilationist regimes of biopolitical extinction and 'ethnic cleansing' into the banal spaces of the everyday urban world where the twin space of controlled exceptionality and exclusion--'the reservation'--also features strongly within more familiar landscapes of abjection.

Omnicide

Otherization of queer populations leads to mass acts of violence, psychological violence, and suffering – results in omnicide.

Sedgwick 8 [Eve, Professor of English at Duke University, Epistemology of the Closet, second revised edition, California at Berkeley Press, p. 127-130]//JIH

From at least the biblical story of Sodom and Gomorrah, scenarios of same-sex desire would seem to have had a privileged, though by no means an exclusive, relation in Western culture to scenarios of both genocide and omnicide. That sodomy, the name by which homosexual acts are known even today to the law of half of the United States and to the Supreme Court of all of them, should already be inscribed with the name of a site of mass extermination is the appropriate trace of a double history. In the first place there is a history of the mortal suppression, legal or subjudicial, of gay acts and gay people, through burning, hounding, physical and chemical castration, concentration camps, bashing—the array of sanctioned fatalities that Louis Crompton records under the name of gay genocide, and whose supposed eugenic motive becomes only the more colorable with the emergence of a distinct, naturalized minority identity in the nineteenth century. In the second place, though, there is the inveterate topos of associating gay acts or persons with fatalities vastly broader than their own extent: if it is ambiguous whether every denizen of the obliterated Sodom was a sodomite, clearly not every Roman of the late Empire can have been so, despite Gibbon's connecting the eclipse of the whole people to the habits of a few. Following both Gibbon and the Bible, moreover, with an impetus borrowed from Darwin, one of the few areas of agreement among modern Marxist, Nazi, and liberal capitalist ideologies is that there is a peculiarly close, though never precisely defined, affinity between same-sex desire and some historical condition of moribundity, called "decadence," to which not individuals or minorities but whole civilizations are subject. Bloodletting on a scale more massive by orders of magnitude than any gay minority presence in the culture is the "cure," if cure there be, to the mortal illness of decadence. If a fantasy trajectory, utopian in its own terms, toward gay genocide has been endemic in Western culture from its origins, then, it may also have been true that the trajectory toward gay genocide was never clearly distinguishable from a broader, apocalyptic trajectory toward something approaching omnicide. The deadlock of the past century between minoritizing and universalizing understandings of homo/heterosexual definition can only have deepened this fatal bond in the heterosexist imaginaire. In our culture as in Billy Budd, the phobic narrative trajectory toward imagining a time after the homosexual is finally inseparable from that toward imagining a time after the human; in the wake of the homosexual, the wake incessantly produced since first there were homosexuals, every human relation is pulled into its shining representational furrow. Fragments of visions of a time after the homosexual are, of course, currently in dizzying circulation in our culture. One of the many dangerous ways that AIDS discourse seems to ratify and amplify preinscribed homophobic mythologies is in its pseudo-evolutionary presentation of male homosexuality as a stage doomed to extinction (read, a phase the species is going through) on the enormous scale of whole populations. 26 The lineaments of openly genocidal malice behind this fantasy appear only occasionally in the respectable media, though they can be glimpsed even there behind the poker-face mask of our national experiment in laissez-faire medicine. A better, if still deodorized, whiff of that malice comes from the famous pronouncement of Pat Robertson: "AIDS is God's way of weeding his garden." The saccharine luster this dictum gives to its vision of devastation, and the ruthless prurience with which it misattributes its own agency, cover a more fundamental contradiction: that, to rationalize complacent glee at a spectacle of what is imagined as genocide, a proto-Darwinian process of natural selection is being invoked—in the context of a Christian fundamentalism that is not only antievolutionist but recklessly oriented toward universal apocalypse. A similar phenomenon, also too terrible to be noted as a mere irony, is how evenly our culture's phobia about HIV-positive blood is kept pace with by its rage for keeping that dangerous blood in broad, continuous circulation. This is evidenced in projects for universal testing, and in the needle-sharing implicit in William Buckley's now ineradicable fantasy of tattooing HIV-positive persons. But most immediately and pervasively it is evidenced in the literal bloodbaths that seem to make the point of the AIDS-related resurgence in violent bashings of gays--which, unlike the gun violence otherwise ubiquitous in this culture, are characteristically done with two-by-fours, baseball bats, and fists, in the most literal-minded conceivable form of body-fluid contact. It might be worth making explicit that the use of evolutionary thinking in the current wave of utopian/genocidal fantasy is, whatever else it may be, crazy. Unless one believes, first of all, that same-sex object-choice across history and across cultures is one thing with one cause, and, second, that its one cause is direct transmission through a nonrecessive genetic path--which would be, to put it gently, counter-intuitive--there is no warrant for

imagining that gay populations, even of men, in post-AIDS generations will be in the slightest degree diminished. Exactly to the degree that AIDS is a gay disease, it's a tragedy confined to our generation; the long-term demographic depredations of the disease will fall, to the contrary, on groups, many themselves direly endangered, that are reproduced by direct heterosexual transmission. Unlike genocide directed against Jews, Native Americans, Africans, or other groups, then, gay genocide, the once-and-for-all eradication of gay populations, however potent and sustained as a project or fantasy of modern Western culture, is not possible short of the eradication of the whole human species. The impulse of the species toward its own eradication must not either, however, be underestimated. Neither must the profundity with which that omnicidal impulse is entangled with the modern problematic of the homosexual: the double bind of definition between the homosexual, say, as a distinct risk group, and the homosexual as a potential of representation within the universal. 27 As gay community and the solidarity and visibility of gays as a minority population are being consolidated and tempered in the forge of this specularized terror and suffering, how can it fail to be all the more necessary that the avenues of recognition, desire, and thought between minority potentials and universalizing ones be opened and opened and opened?

Overkill

Queer bodies are forced into a zone of perpetual death as soon as their queerness is discovered – this serves to justify their eradication through violent and psychological means.

Stanley 11 [Eric, Prof. President's Postdoctoral fellow in the departments of Communication and Critical Gender Studies at the University of California, San Diego, "Near Life, Queer Death: Overkill and Ontological Capture]

The legal theory that is offered to nullify the practice of overkill often functions under the name of the trans- or gay-panic defense. Both of these defense strategies argue that the murderer became so enraged after the "discovery" of either genitalia or someone's sexuality they were forced to protect themselves from the threat of queerness. Estanislao Martinez of Fresno, California, used the trans-panic defense and received a four-year prison sentence after admittedly stabbing J. Robles, a Latina transwoman, at least twenty times with a pair of scissors. **Importantly, this defense is often used**, as in the cases of Robles and Paige, **after the murderer has engaged in some kind of sex with the victim**. The logic of the trans-panic defense as an explanation for overkill, in its gory semiotics, offers us a way of understanding queers as the nothing of Mbembe's query. Overkill names the technologies necessary to do away with that which is already gone. Queers then are the specters of life whose threat is so unimaginable that one is "forced," not simply to murder, but to push them backward out of time, out of History, and into that which comes before. 27 In thinking the overkill of Paige and Brazell, I return to Mbembe's query, "But what does it mean to do violence to what is nothing?"28 This question in its elegant brutality repeats with each case I offer. By resituating this question in the positive, the "something" that is more often than not translated as the human is made to appear. Of interest here, the category of the human assumes generality, yet can only be activated through the specificity of historical and politically located intersection. To this end, the human, the "something" of this query, within the context of the liberal democracy, names rights-bearing subjects, or those who can stand as subjects before the law. The human, then, makes the nothing not only possible but necessary. Following this logic, the work of death, of the death that is already nothing, not quite human, binds the categorical (mis)recognition of humanity. The human, then, resides in the space of life and under the domain of rights, whereas the queer inhabits the place of compromised personhood and the zone of death. As perpetual and axiomatic threat to the human, the queer is the negated double of the subject of liberal democracy. Understanding the nothing as the unavoidable shadow of the human serves to counter the arguments that suggest overkill and antiqueer violence at large are a pathological break and that the severe nature of these killings signals something extreme. In

contrast, overkill is precisely not outside of, but is that which constitutes liberal democracy **as such.** Overkill then is the proper expression to the riddle of the queer nothingness. Put another way, the spectacular material- semiotics of overkill should not be read as (only) individual pathology; these vicious acts must indict the very social worlds of which they are ambassadors. **Overkill is what it means, what it must mean, to do violence to what is nothing**.

Queerness is placed in a space of living death – this results in social, political, civil, and physical punishment, specifically in the forms of imprisonment and surveillance

Lamble 14. Sarah Lamble, "Queer Investments in Punishment" in *Queer Necropolitics*, pg. 161

Each of these examples involves the **direct** or **indirect mobilization** of **discursive**, **financial** or **labour-related resources** towards **state practices of imprisonment** and **punishment**. Given the ongoing **colonial legacies of the carceral state**, the **disproportionate number** of **people of colour in prison** and racial character of expanding prison populations, these **queer investments** in **punishment** are, by their very nature, investments in **state racism** and **violence**. In this way, such **investments** are **symptomatic** of what Jasbir Puar, drawing from Achilles Mbembe's work, describes as **queer necropolitics**. **Necropolitics** can be understood as **technologies of power** that (**re)produce** social relations of **living** and **dying**, such that some populations are ushered into the **worlds of life and vitality**, while others are **funnelled** into what Mbembe calls **death worlds**, worlds of **slow living death** and **dead living** (Mbembe 2003). Death here includes **literal physical death**, but also **social**, **political** and **civil death** - the **social relations of death**, **decay** and **dying** that **emerge** from **prolonged exposure** to **violence**, **neglect**, **deprivation** and **suffering**. Offering a corrective to Michel Foucault's work on biopolitics,18 Mbembe puts forward 'the notion of **necropolitics and necropower** to account for the various ways in which, in our contemporary world, weapons are deployed in the interest of the **maximum destruction of person** and the **creation of death-worlds**, **new** and **unique** forms of **social existence** in which **vast populations** are **subjected** to conditions of life conferring upon them **the status of living dead'** (2003: 40). In other words, while **biopolitical powers** work to **manage**, **order** and **foster life** for citizens worthy of **protection**, such powers work in tandem with **necropolitical powers** that produce **death** for those destined to **abandonment**, **violence** and **neglect**. Taking up this concept within contemporary queer politics, Puar thus draws attention to the ways in which the **folding into life** of **some queers** is predicated on the **folding out of life** of **others** (Puar 2007: 36). While Mbembe's analysis focuses primarily on situations of military occupa- tion, colonialism and war, the modern prison arguably constitutes **another key instantiation of necropower**. For the prison is also a site that **produces the conditions of living death**; it is a place where bodies are **subject** to **regimes of slow death** and **dying**. Not only are **deprivation**, **abuse** and **neglect** regular features of **incarceration itself**, but the **monotonous regime of caged life** - the **experience of 'doing time'** - involves the **slow wearing away** of **human vitality** and the **reduction of human experience** to a **bleak existence** (Scratonand McQulloch 2009; Taylor 2000). The prison serves as a site of mass warehousing of bodies in conditions that often resemble the death worlds that Mbembe describes. While the modern prison was designed as an institution that aimed in part to train prisoners as productive workers, obedient citizens and docile subjects a strategy that used disciplinary power in the broader service of biopolitical power (Foucault 1978/ 1995) - contemporary prisons are little more than mass warehouses for poor, racialized and otherwise disenfranchized populations (Gilmore 2007). Particularly as prison populations continue to grow to unprecedented levels, many states are abandoning even the

pretence of rehabilitation, by dramatically reducing the hours that prisoners spend out of their cells, slashing funding for educational and other programmes and leaving prisoners to increasingly spend their days in monotonous isolation.

These conditions, coupled with **overcrowding**, **lack of adequate medical care** and **disconnection from family** and **friends**, mean that prisoners have increased risks of self-harm, psychological abuse, trauma and suicide, both during imprisonment and post-release (Collins '2008; Taylor 2000). The stigma of a prison record also means that employment and housing are difficult to secure post-release, such that the consequences of imprisonment extend well beyond the duration of one's sentence. In this way, the prison thus plays a significant role in altering the 'distribution of life chances' or what Ruth Wilson Gilmore describes as 'group differentiated vulnerability to premature death' (2007: 247).

To argue that the prison is an institution of necropolitical power and that prisoners are resigned to slow death, **is not to deny** the **resilience and agency** of those who **survive** prison on a daily basis. It is instead to underscore how the **conditions of captivity govern life** in ways that are akin to **slow and prolonged death**, thus **severely restricting** the **possibilities** for **resistance** and **survival**. Ironically, and perhaps most devastatingly, it is through the act of **potentially reclaiming death** that prisoners **exercise a desperate form of agency**. As Mbembe argues, in the **realms of the living dead**, death offers **a brutal moment of power**. 'For death is precisely that **from and over which** I have power. But it is also that **space** where **freedom** and **negation operate'** (Mbembe 2003: 39). Hence it should be no surprise that the **hunger strike**, the **exercise of threat of the living** to **authorize their own death**, persists as a last **resort of collective power** in prison. As the recent prisoner hunger strikes in California, Italy, England, Palestine and elsewhere have demonstrated alongside other less visible forms of collective organizing inside **there is persistent resilience** among **prisoners** to **resist** and **survive** the **brutal conditions** of their **captivity**.

Arguably, what makes the prison an example of necropolitics and not just an instance of ruthless state brutality is that the imposition of death and suffering on some populations is **explicitly legitimized** and **authorized** in the name of **fostering** and **protecting the life** of **others**. In other words, the **enhancement and protection of life** for **some** is **predicated** on the **violent sequestering of others**. There are parallels here to what Nikolas Rose (2000) describes as circuits of security and circuits of insecurity - contemporary forms of governance that work by moving some subjects into modes of security and others into abandonment - as well as to what Judith Butler (2004) describes as the politics of 'precarious life' or what Elizabeth Povinelli (2011) refers to as 'economies of abandonment'. Necropolitics, however, draws **more explicit attention** to the **deathly logic** of these **modes of governance**, **foregrounding** the **exercise of sovereign power** to **authorize** and **legitimate** the **politics** of **death** and **killing** in the name of **vitality** and **living**.

Members of the queer community are forced into a 'near life' marked by overkill – this space of nonexistence leads to brutal murders and other forms of exceptional violence.

Haritaworn et al. 14. Jin Haritaworn, professor of sociology at the University of York, Adi Kuntsman, professor of humanities, research, and social sciences at Manchester Metropolitan University, and Sylvia Posocco, professor of psychological studies at the University of London, Birbeck, Queer Necropolitics, Routledge, 2014, pg. 8

Our understanding of queer necropolitics is further in conversation with Eric Stanley's (2011) forerunning discussion. Stanley articulates the sense in which **death-making**, figured in relation to the **brutal murders of trans/queer people** in the United States and the **exceptional violence** inflicted on **murdered subjects after death**, holds important **ontological consequences**. The piece documents how this protracted onslaught systematically fails to be registered in public discourse and public consciousness. According to Stanley, the legal category of **'overkill'** may account for the **vicious assaults** that these **working-class** and largely **people of colour gender non-conforming subjects** are **subjected to** in death, and for how their remains become **the object of further affront**. The 'overkill' of these subjects is far from an anomaly or an exceptional occurrence; rather, it is **central** to the **reproduction** of US **liberal democracy**. As Stanley explains, 'overkill' occupies the same social and political terrain as LGBT identities, where the extreme vulnerability of some can be contrasted to the security of others. LGBT identities appear to be **securely tied to subjects of rights** to the extent that they become **fully invested** in claims that **anti-queer violence** is an **exceptional occurrence** to be dealt with **through the punitive state**. 'Overkill', by way of contrast, points to a **queer ontology** of **'near life'** - a **form of existence** that **echoes** the notions of **'the living dead'** we have discussed in relation to the work of Mbembe (2003) and Agamben (1998), and with reference to the 'social death' theorized by Patterson (1982). **Spaces of nonexistence** populated by **'near life'** and marked by **'overkill'** (Stanley 2011) are not external to, but rather **constitutive of**, the **state** and the **law** and form the **substratum** of contemporary liberal democracies. The chapters in this volume tease out and explore how relations of proximity and contiguity between life and death - as graduated and mutually imbricated domains - articulate in different contexts, and fully within, not outside or beyond, the political.

Violence – Generic

The normalization of a heteronormative cisgender subject leads to violence and ostracization of queer bodies.

Mary Nardini gang [criminal/anarchist queers from Milwaukee, Wisconsin "That's Just Queer," March 13, 2010, https://undercoverqueer.wordpress.com/tag/mary-nardini-gang/]//JIH

Queerness is both a place and position. It is a space that creates room for those our culture identifies as the alien, the immoral, the criminal, the deviant. It is an anti-society; it is an insurrectionary response. But it is also an alignment against totality, against the oppression of the overwhelming majority, against the crushing popular conception. It is a revolt against a culture of privilege that designates us as being unworthy of privilege, because we do not fit within the limits of "normalcy."

Normalcy is everything that society has groomed you to be. It is the future already predetermined for you, without your consent.It is defined and structured by capitalism, by civilization, by the violence of empire. It is maintained by practices of violence and intimidation. Normalcy is every slur and every threat you have ever experienced. It is the ostracization and condemnation of the Christian right. It is the assumption that you should desire the same things as every other American, that you should assimilate into mainstream American lifestyle. It is the reasoning that gay individuals should possess the same rights as others because "they're just like us." It is the assumption that until we are "just like everyone else," with children and a lifelong partner and minivans and steady jobs, that we do not deserve those rights. Normalcy is police brutality, it is repeated rape, it is the criminal convictions of four lesbians of color who defended themselves against the hate of a heterosexual white male. Normalcy is the practice of domination, the subjugation of everything that does not neatly fall under its totality.

Normalcy does violence to both our bodies and minds; it is emotional and cultural terrorism. Anyone who has experienced the anguish of not being able to fulfill the rigid expectations of

loved ones, the pain of being considered a lesser person and of less worth and importance, of being ignored and demonized simply because one is "other," understands that normalcy rejects bodies and minds that do not fit within the social code. Normalcy mutilates, poisons and erases us, in order to "help" and "allow" us to fit within the social norm, to ascribe to the ideals of whiteness, of prosperity, of "male" and "female," of monogamy and family-oriented life. And if we cannot achieve these ideals, we are taught to hate who we are, to blame and abuse our bodies and our inner selves.

Solvency

The creation of a realm of acceptance for bodies deemed deviant in the status quo can only occur if coalition politics are centered on connection and fluid uncertainty.

Weir 2008 [Allison, "Home and Identity: In memory of Iris Marion Young", Hypatia, volume 23, Number 3, Summer, pp. 4-21, Indiana University Press]//JIH

Yet we need also to move beyond the dichotomy of home/not home, of safety and risk, to imagine an alternative: I want to argue for an ideal of home as a site of the risk of connection, of sustaining relationship through conflict. Thus, rather than oscillating between the desire for a safe, secure, conflict-free home and the recognition that homes are in fact sites of violence and abuse, predicated on oppression and exclusion, we can recognize and affirm an ideal of home as a space of mutuality and conflict, of love and its risks and struggles, of caring and conflictual connections to others. In particular, our political homes?including our identity politics?might be seen as places where we engage in the risk of connection with each other, in the conflictual, messy, dangerous, and intimate work of engagement with each other?engagement in dialogue, in arguments, in struggles, in openness to vulnerability, to critique and self-critique, and to change, with a commitment to solidarity with each other that mediates our commitment to our shared struggles. Shifting to an ideal of home as the space where we risk connection might help us set clear limits on conflict and risk, so that these do not develop into violence. This might enable us to address the violence that is a response to terror and anger at those who threaten our comfort and safety, and the violence that is an assertion of right to dominate the other within thew alls of home. Ifw e are not looking for perfect safety, for absolute privacy, for a return to the womb, for the mother who is the angel of the house, perhaps we can learn not to accept violence and oppression as the price of that dream. Perhaps we can imagine and embrace a different dream of a better home.

Thus, rather than rejecting identity politics as a false home, and turning to strategic coalitions of disconnected individuals, we might embrace the possibility of identity politics (and coalition politics?) as homes?as sites of the connections and conflicts essential to solidarity. Surely, Bernice Reagon is right to point out that when we do feminist politics we should not be looking for safety. Coalition politics are necessarily risky and dangerous, and when we are doing thisw ork we can feel ourselves "threatened to the core" (1983, 343). For Reagon, this means that we should not confuse coalition with home: we must separate the two. But ifw e are able to shift to an ideal of home as a space where we are able to recognize and confront power relations?which surely exist in the safesto f homes?and ifw e are able to sustain relationship through these confrontations, and through the feelings of risk and danger they entail, then we might question the stark opposition between the safety of home and the danger of politics; between home as a place of happy unity and politics as a site of hostile collisions. We might imagine overlapping spheres of homes that are places where we risk connection. This does not mean that everywhere should be home. But shifting to this alternative ideal of home might help us risk connection in our political lives, and itm ight help us be more realistic about our expectations of

home. It might also help those who are privileged to welcome strangers into their homes. And this might help us move closer toward Reagon's ideal of an "old-age perspective" (1983, 348). "The only way you can take yourself seriously is if you can throw yourself into the next period beyond your little meager human-body-mouth-talking all the time-You must believe that believing in human beings in balance with the environment and the universe is a good thing" (352-53). With these words, Reagon holds out for us the dream of a better home, which we can create only by expanding ourselves to embrace connection. Surely, the only way we can get closer to this dream is by recognizing that our ideal of home must include conflict and struggle.

Plan Text Version – State Engagement Good

LGBT movements through the state can be successful and are in fact necessary to challenge societal heteronormativity

Chen 11 (Jian, Assistant Professor of Queer Studies in the English Department at Ohio State University, "Entangled Spheres: Review of Eric A. Stanley and Nat Smith, eds., Captive Genders: Trans Embodiment and the Prison Industrial Complex." Postmodern Culture, May 2011 Project muse, eas)

Captive Genders: Trans Embodiment and the Prison Industrial Complex contributes to the emergent surge of U.S. based transgender cultural critique over the first decades of the 21st century. In conversation with monographs by Susan Stryker, Kate Bornstein, J. Jack Halberstam, Judith Butler, David Valentine, Gayle Salaman, Dean Spade, Micha Cárdenas, Kale Bantigue Fajardo, and Mel Y. Chen, edited anthologies such as the Transgender Studies Reader (with a second volume upcoming), Transgender Migrations: The Bodies, Borders, and Politics of Transition, Gender Outlaws: The Next Generation, Trans/Love: Radical Sex, Love & Relationships Beyond the Gender Binary, and Trans Bodies, Trans Selves (forthcoming), and an expanding trans-media network including work by Yozmit, Ignacio Rivera, Kit Yan, Wu Tsang, Felix Endara, Shawna Virago, Sean Dorsey, and the Electronic Disturbance Theater, the collection of texts that is Captive Genders produces critical interventions assembled around embodied transgender, gender deviant, and queer experiences. These interlinked works share a marked shift towards transgender and gender non-conformant bodies as material interfaces with social regimes of gender and sexual control. But to interpret these pieces together as "emergent" is to already discipline their divergent workings and our interaction with them. These transgender and gender deviant interventions are increasing self-aware of the specificities of their mediums and their networked capabilities, whether they are print book, embodied performance, digital video, cell phone video, online installation, or electronic disturbance. And they depart from late 20th century literary, cultural, and social theory that has tended to emphasize the representational economy of the public sphere—mediated by the linguistic sign—as the chosen field of inquiry and subversion. Therefore, they do not call for a politics of critical interpretation that would "read" an emergent subjectivity along a single plane of social history as much as they work through entanglements with, and transmissions of, the multiple times, spaces, and bodies subjected to the experience of so-called shared society and historical progress. Taking my cue from these transgender and gender devious works, this review of Captive Genders assembles, connects, transmits, and intensifies, rather than performing a critical interpretation.

Social movements for decolonization and racial, gender, sexual, and economic justice in the U.S. in the 1960s and 1970s, in connection with social uprisings in Third World colonies and internationally, transformed the American public sphere to include communities segregated and subordinated by the apartheid U.S. state. People of color, civil rights, feminist, Third World, gay liberation, women of color/Third World feminist, leftist, and anti-war movements developed oppositional cultural practices as critical components of mobilizing against institutional white supremacy, colonialism, patriarchy, classism, homophobia, and heterosexism. These social mobilizations, therefore, did not only inject previously barred communities into the dominant public sphere, but also dismantled institutional public culture through the infusion of divergent, subordinated cultural imaginations. The flexibility and contingency attributed to the system of the sign by Euro-American post-Marxist intellectual and cultural movements after World War II, including postmodernism and poststructuralism, are indebted to the de-structuring of the representational economy of the public sphere by U.S. and Third World anti-colonial and social justice movements, as much as anti-fascist, anti-capitalist critical lineages in Europe and "new" postindustrial and neoliberal conditions. By the 1980s, the political and cultural transformations activated by 1960s/70s liberation movements began to be translated into niche political blocs, niche markets, and niche cultures. As highlighted by several pieces in Captive Genders, this moment of incorporation and backlash coincides with the moment when the penal system under the apartheid U.S. state expands into a booming prison industrial complex, at the edges of the "post"-apartheid American public sphere. The managed inclusion of

previously excluded communities and cultural imaginations into the apparatuses of the U.S. state, including state sponsored cultural and economic industries, has had the effect of formalizing cultural and political activism into semi-technical skills and knowledge (including literary and cultural production and interpretation, 501(c)(3) community organizing, and legal and social advocacy) and severing cultural and political work from embodied communities. Also, regulated inclusion by the U.S. state has distanced marginally included, more resourced LGBT (lesbian, gay, bisexual, transgender) people, immigrants, people of color, and women from less resourced and poorer segments of these communities, whose direct experience of the state's administrative and penal systems is often not mediated by measured participation in the public sphere. The writings collected in Eric A. Stanley and Nat Smith's Captive Genders provide multi-vocal accounts of those segments of communities that have been forcibly denied access to the post-apartheid American public sphere. People of color, economically impoverished people, and people with scarce or no access to quality education, health care, and social services make up the vast majority of the nearly 2.3 million people currently incarcerated in U.S. state and federal prisons and local jails, according to the most recent records released by the U.S. Bureau of Justice Statistics in 2010. These numbers do not include those incarcerated and "detained" in U.S. territories, military facilities, U.S. Immigration and Customs Enforcement (ICE) facilities, jails in Native American lands, and juvenile facilities.1 The mass number of people imprisoned and detained in U.S. prisons, jails, and facilities is bound to increase with the Obama administration's implementation of the 2012 National Defense Authorization Act. Presently, African American people comprise 12.6 % of the national population, compared to 38% of the U.S. federal or state prison population. White people comprise 72.4% of the national population, compared to 32% of the prison population. Latino/a people comprise 16.3% of the national population, compared to 22% of the prison population. U.S. Bureau of Justice Statistics 2010 prisoner reports do not count Native Americans, Pacific Islanders, Asians, and people identifying as two or more races in the prison population separately or explicitly. By deduction, these people together make up 7.3% of the prison population, while together comprising 8.8% of the national population.2 Although females comprise 7% of the federal and state prisoner population, compared to the 93% male prison population, women make up one of the fastest growing populations in prisons.3 People in prison are predominantly from low-income backgrounds, lacking in educational and economic opportunities. Most are unemployed or under-employed prior to incarceration, do not have high school diplomas, read English below a sixth grade level, and have a history of drug addiction and/or mental illness.4

LGBT people can find a voice in political activism and that component of movements is necessary to solve

Konnoth 9 (Craig, J.D. Yale Law School, "Created in Its Image: The Race Analogy, Gay Identity, and Gay Litigation in the 1950s-1970s," http://www.yalelawjournal.org/pdf/832_iqr36m8v.pdf, Yale Law Journal, December 5, 2009, eas)

Serena Mayeri has pointed out that as the women's movement progressed, it became clear that women's interests were implicated in contexts untouched by the civil rights movement. Furthermore, as the Court began to limit the remedies available for race-based discrimination, women's rights activists began to decrease their dependence on the race analogy.160 Accordingly, women's rights activists did not always rely on direct, rhetorical comparisons of sex discrimination to racial discrimination in court. Rather, in the foundational sex discrimination case of Reed v. Reed, 161 the plaintiffs, represented by Ruth Bader Ginsburg, described minority status using "abstract" factors such as trait-immutability, political powerlessness, and histories of discrimination.162 Formally, these characteristics were independent of the race analogy. In actual fact, however, they were firmly based in a comparison with race, since their significance lay in their being attributed to African-Americans. Soon, however, they gained formal significance in Supreme Court doctrine on their own terms. Groups (including blacks) were not legally recognized minorities because of their resemblance to another group; technically, they were minorities because they possessed the relevant characteristics.163 This would lay the groundwork for gay activists' reliance on these categories rather than directly on the analogy. While women's rights activists proffered formal criteria of suspectness to the Court in a bid to extend the logic of antidiscrimination to areas untouched by the racial justice movement (but before the Court had accepted this argument), those considering gay equality suggested similar criteria in an academic context and stopped focusing on the race analogy. A Yale Law Journal note164 and a Journal of Family Law comment165 on gay marriage, for example, advocated that the Court use a formal characteristics approach. Like women's rights advocates, the authors were unsure how the Court would approach an area of litigation untouched by the racial justice movement. As of 1973, as the articles note, the Court did not always apply the reasoning of the race cases to other areas.166 Furthermore, family rights were not a typical locus for racial justice litigation.

Thus, while the articles suggested that it would be desirable for the Supreme Court to apply strict scrutiny to antigay discrimination, they did not rely on the direct rhetorical comparison between blacks and gays that Kameny used. Instead, they engaged in a doctrinal construction of what constituted a suspect class,167

based on the familiar notions of immutability, control over classification, history of discrimination, and lack of political power. Even if the locus of discrimination involved (family rights) was not rhetorically comparable to the areas in which African-American litigants generally filed suit, groups possessing the formal characteristics deserved protection. Instead of relying on the similarity of contexts and loci of discrimination described above,168 or a point-by-point comparison to a particular group, the authors suggested that the comparison be mediated through abstract legal categories. Later in 1973, the Court formally endorsed this approach.169 Since then, other academic writers have similarly focused on the formal criteria of suspectness, ignoring or deemphasizing the race analogy.170 This emphasis on abstract criteria rather than analogies aided gay litigants in the bid for an independent identity, without reliance on the race analogy.

These developments were significantly aided by social changes. The uprising at the Stonewall Inn consolidated the gay activism that Kameny had encouraged and deepened its sense of community; a new generation of activists came to the fore. As gays became more secure in their group status and their legal and political activism, the use of the race analogy declined in litigation— not a single brief related to gay issues filed with the Supreme Court in the early 1970s referred to the analogy.171 While it had been politic for gay activists to develop a narrative of an independent minority status distinct from the mainstream, they soon understood this status on its own terms without continued reliance on the race analogy.

Thus, in briefs filed to the Supreme Court in the 1970s, mini-histories of the discrimination that homosexuals as a group had experienced since time immemorial became regular. In ACLU litigation, references to the ban on sodomy in Justinian's Code to establish this history, for example, became almost perfunctory.172 Furthermore, activists articulated their relationship with the heterosexual majority independently, without looking to that between blacks and whites. In Baker v. Nelson, petitioners advanced "hypotheses" for earlier forms of discrimination by the majority due to their "fear and ignorance," not of minorities in general, but of "all sexual matters."173 Simultaneously, they criticized this majority outlook from the point of view of "psychiatr[y] and sociolog[y]," which were bringing about a change in the majority's "attitude."174 Thus, the appellants implied, since the ignorance of the majority regarding sexuality and homosexuals had decreased, gays deserved marriage rights, whatever the situation of other minorities. Thus, gays acknowledged that the causes of homophobia were different from and independent of the origins of racism and that the status of gays as a minority group was therefore not contingent on that of blacks.

Radical movements end up devolving to legal reform—it's the only way to solve

Leachman 14 (Gwendolyn, Sears Law Fellow, Williams Institute on Sexual Orientation and Gender Identity, UCLA School of Law; J.D.; "From Protest to Perry: How Litigation Shaped the LGBT Movement's Agenda," UC Davis Law Review, June 2014, lexis, eas)

The LGBT movement is a particularly rich setting for examining the factors that foster intramovement consensus around legal issues as shared, first-order priorities. This movement comprises diverse, even oppositional activist communities. Although large, national civil rights organizations constitute the LGBT movement's mainstream, n4 a critical faction of grassroots and protest-based activists historically have taken a more confrontational approach. Radical protest groups that challenged the mainstream LGBT movement's focus on formal legal equality n5 diffused throughout the country in the early 1990s. Touting a radical, "queer" political identity, n6 these protest groups articulated a set of structural goals, such as combating the widespread homophobia propagated by media images and religious organizations and transforming heterosexual-dominated public spaces. n7 Yet despite queer groups' radical rhetoric, the protest actions they organized ultimately came to focus on many of the same formal legal priorities that they critiqued. n8 This Article aims to understand how these seemingly polarized factions within the LGBT movement have come to agree that [*1671] legal issues are important, action-worthy items - the priorities of a common LGBT movement agenda.

Marriage equality is a key example of an LGBT legal objective that queer protest groups have pursued, despite the issue's apparent dissonance with a radical critique of civil rights n9 and with calls for structural social transformation. n10 One early same-sex marriage demonstration illustrates how LGBT impact litigation, and the publicity it received, may have put this issue on the protest agenda. In 1990, an emerging national conversation about same-sex marriage began to intensify in the mainstream media. n11 News coverage gravitated toward same-sex marriage as activists prepared for marriage equality litigation in Hawaii n12 and Washington, D.C., n13 and LGBT litigators rallied n14 against the injustices created by unequal marriage [*1672] laws in other areas (e.g., insurance, employment, and child custody). n15 Protest groups seized on the public debate. San Francisco's chapter of Queer Nation, one of the major protest groups to emerge in cities across the United States in the late 1980s, staged its first "marry-in" at City Hall in September of 1990. n16 Protestors donning "signs, placards, and post-modern wedding drag" alighted on the steps of the government building en masse for a mock wedding ceremony. Though this demonstration was emblematic of the group's confrontational and irreverent tactical approach, n17 the marriage focus clearly contradicted many members' political values. n18 Queer Nation fliers advertising for the event acknowledged the problem, referring to marriage as "an institution which we all agree oppresses us." n19 Yet members were strongly encouraged to attend the protest nonetheless. n20

What compelled Queer Nation to demand the right to same-sex marriage, especially given the issue's divisive effect on Queer Nation's membership and its clash with the group's radical politics? I argue that impact litigation and the extralegal benefits it generates can refocus the priorities of protest-based activists away from their original goals and toward formal legal objectives. n21 My data on the California LGBT [*1673] movement from 1985 to 2008 show that litigation received the most news coverage of any movement tactic and that the movement organizations that used litigation had a greater likelihood of survival than organizations using other tactics. These benefits favored litigation compared to protest and other tactics, making litigation the most visible and stable tactic of the LGBT movement. An analysis of archival data collected from movement organizations further shows that protest groups seized on the mainstream media coverage of the movement to set their own agendas; protest groups organized actions in response to recent headlines (rather than members' primary issues of concern) to attract publicity and participants to the protest's timely and newsworthy focus. Because the media primarily reported on litigated issues, protest organizations' reactivity to media coverage appears to have redirected those organizations away from their original priorities and toward legal goals. n22 The protest groups' agendas came to be centered not on their members' priorities, but rather the more limited set of issues that could be translated into formal legal claims. Profound implications follow, suggesting litigation may play a role in constraining radical politics.

LGBT movements centered around legal reforms find more success and garner more attention

Leachman 14 (Gwendolyn, Sears Law Fellow, Williams Institute on Sexual Orientation and Gender Identity, UCLA School of Law; J.D.; "From Protest to Perry: How Litigation Shaped the LGBT Movement's Agenda," UC Davis Law Review, June 2014, lexis, eas)

The Article proceeds in three Parts. Part I provides background on the contemporary historical trajectory of the LGBT movement, showing how a civil rights agenda focused on assimilation and formal equality came to define the mainstream LGBT movement. Part II reviews legal, sociolegal, and sociological literatures about law and social movements to examine the theoretical frameworks that inform the study of litigation's effect on this movement. A critical read of this literature suggests that litigation generates resources like media coverage and organizational funding, making litigation a highly visible and stable movement tactic. Sociological scholarship also suggests that [*1674] social movement activists, even those who operate outside the courts, strategically select claims and issues that resonate with dominant forms of legal rhetoric (e.g., individual rights), elevating those claims and issues to the forefront of a movement's agenda. I argue that these literatures in combination predict that formal legal claims pursued through litigation will become central priorities on a social movement's agenda.

Part III draws on original data from archival, media, and organizational sources to investigate the processes through which the movement issues being litigated may become primary LGBT movement agenda items. First, a quantitative analysis of mainstream newspaper coverage of LGBT movement activity from 1985 to 2008 shows that litigation was the movement tactic that received the most frequent coverage in the mainstream news media. This suggests that litigation experienced more public visibility than other movement action. n23 Second, a quantitative analysis examining the survival rates of LGBT movement organizations finds that LGBT organizations that used litigation had significantly higher survival rates (i.e., they were less likely to disband) than those that did not litigate. This suggests that litigation and the issues pursued through litigation are stable and persistent features of LGBT politics. n24 Third, a qualitative comparison of strategy-formation processes in litigating, protest, and lobbying movement organizations examines the processes through which these different types of movement groups select which substantive issues to pursue. n25 I find that litigating organizations tended to be proactive in selecting their priorities; litigating groups looked ahead to define future goals and resisted deviation from those predetermined goals. n26 In contrast, protest organizations planned actions as a post hoc reaction to media events, and lobbying organizations based strategies around the opportunities for advocacy provided by legislators. n27 Consequently, litigating groups were more independent and autonomous than other organizations in how they constructed their substantive agendas. The same logic that made litigating organizations [*1675] proactive, however, may also play a role in orienting litigating groups' agendas toward the narrow set of possibilities for change that legal doctrine affords. Thus, although litigating groups were relatively more autonomous than protest groups (in that they chose forward-thinking priorities and stayed on task to achieve them), litigating groups nonetheless appear to have been constrained by the limited set of opportunities afforded by formal law. As I argue in this Article, the rub is that this constraint may have affected not only the litigating groups themselves but also the protest and lobbying groups, because groups that did not litigate nevertheless drew their agendas from news coverage shaped by movement litigation.

Part III then synthesizes my empirical findings and suggests that litigation both defined and constrained the LGBT movement's substantive agenda. n28 Litigation generated the most media coverage and greater organizational stability than other tactics, pushing the substantive issues being litigated to the forefront of the LGBT movement's agenda. Protestors seeking newsworthy and timely action concentrated primarily on recent events, typically those they found covered in the litigation-focused mainstream news media. Sometimes the events protestors targeted were not publicized in the media but rather in other places of public access, such as government buildings; yet these public-access events, such as criminal trials, litigation, or police commission meetings, also tended to be state sponsored and related to law. Thus, the reactive approach of the protest-based activists appears to have subtly shifted their groups' actions toward litigation-generated media events or state-generated public-access events; either way would have caused radical protest groups to become redirected toward legal priorities. Taken as a whole, my findings suggest a set of systemic processes through which radical protest groups' substantive goals may become displaced by the formal equality goals pursued through impact litigation.

Sociolegal literature shows pragmatic reforms are more successful- legal rhetoric attracts media attention, resources, and support outside the original movement

Leachman 14 (Gwendolyn, Sears Law Fellow, Williams Institute on Sexual Orientation and Gender Identity, UCLA School of Law; J.D.; "From Protest to Perry: How Litigation Shaped the LGBT Movement's Agenda," UC Davis Law Review, June 2014, lexis, eas)

B. Legal Mobilization Scholarship on Litigation Attracting Movement Resources

The sociolegal literature on legal mobilization provides a second theory of law's agenda-setting capacity within movements. Sociolegal [*1688] scholarship on "legal mobilization" looks at the collective translation of movement grievances into an assertion of legal claims. n88 Focal questions for legal mobilization research are how and why movement actors engage with law, what meaning this has for the actors who do it, and what implications it has for the movement. n89

Empirical studies of legal mobilization emphasize how litigation and legal rhetoric attract three primary extralegal benefits to a movement's cause (beyond the material legal remedies that may result from movement litigation). n90 First, litigation attracts significant coverage in the mainstream news media. n91 In his study of the pay equity reform movement, Professor Michael McCann found that lawsuits generated a "tremendous amount of mainstream media attention." n92 News media coverage of litigation for pay equity reform was five to ten times greater than coverage of any other tactic, including legislation, electoral politics, and protest. n93 McCann also found that "the overwhelming majority of this coverage explicitly concerned law suits and legal issues." n94 These findings square with other social science accounts, which would suggest that law and litigation are newsworthy items. The corporate structure of news organizations compels competition for readership. Reporters, operating under pressure to effectively gather stories under deadline, keep an eye on sites of routine news production such as political and legal institutions. n95 This [*1689] likely biases coverage toward movement issues and tactics that occur in those legal institutions. n96 News outlets also try to attract readership with general interest stories or drama. n97 Social movement litigation, which pits opposing parties in a dramatic, high-stakes contest over politically potent issues, offers a dramatic story line as well as identifiable protagonists for personal interest profiles. n98 Protest, by contrast, is typically much less disruptive, n99 and it may be difficult to identify individual representatives.

Second, litigation generates financial resources for social movement organizations n100 that contribute to those organizations' long-term survival. n101 The publicity that lawsuits receive generates support for movement organizations and facilitates fund-raising. n102 Litigation also attracts funding by offering a clear marker for success in the resulting judicial opinion. Organizations that specialize in litigation emphasize [*1690] the outcomes of their legal cases - regardless of whether a case is a clear win or loss - to galvanize fund-raising and organizational support. n103 An outright win incentivizes support by allowing contributors to assess the impact of their efforts. Conversely, the "denial of the claim might serve to highlight more intensely the injustice suffered by the group," creating "a sense of urgency for the movement" that motivates support. n104 Furthermore, unlike protest or lobbying tactics, the outcomes of litigation are clearly traceable to the litigating organizations themselves, whose official involvement is on public record. Protest and lobbying, by contrast, typically involve collective efforts by multiple movement entities, making it difficult to identify the impact of any particular movement actors. The contributions that result from protest and lobbying tactics are thus more likely than those that

result from litigation to be diffused throughout the movement, rather than flowing to the individual organizations involved. n105 Accordingly, litigating organizations are more likely than protest or lobbying organizations to generate organization-sustaining resources.

A third extralegal outcome of litigation is its ability to galvanize movement activism outside the courts. n106 Litigation efforts can motivate activists by helping them name particular grievances, blame responsible parties, and lay claim to a specific remedy. n107 A public lawsuit can awaken a sense of collective rights entitlement n108 or provide activists rhetorical tools for claiming injustice, n109 sparking grassroots mobilization and protest. Litigation can also focus activists' [*1691] obscure sense of grievance into pointed political effort with concrete goals. n110 These factors enable litigation to sustain the momentum of collective action in the face of virulent opposition, n111 which may otherwise sap the energy of a mobilized group.

These resource-generating facets linking litigation to increased publicity, organizational support, and movement mobilization would appear to contradict the critical legal scholarship, which sees litigation as an agent of disempowerment and deradicalization. Legal mobilization scholarship, rather, rejects the critical notion of a "competitive, zero-sum relationship among political tactics," n112 focusing instead on the "synergistic" and "mutually influential" n113 relationship between protest and litigation. In this view, litigation is a "complementary and interactive" element of a social movement's diversified tactical approach. n114

Sociological scholarship shows that legal reforms' social environment enables an organized and strong focus on a couple issues

Leachman 14 (Gwendolyn, Sears Law Fellow, Williams Institute on Sexual Orientation and Gender Identity, UCLA School of Law; J.D.; "From Protest to Perry: How Litigation Shaped the LGBT Movement's Agenda," UC Davis Law Review, June 2014, lexis, eas)

C.

"Discursive Opportunity" Theory and the Privileging of a Movement's Legal Tactics and Agenda

Sociological scholarship expands on the legal mobilization research by providing insight into the mechanisms through which litigation [*1692] generates extralegal resources and the consequences this has for a movement's agenda. This research examines how a movement's social environment may constrain or enable opportunities for activism and thereby shape patterns of movement mobilization and sustained organization. n115 While sociological research has focused mostly on how activists seize on shifting political or economic conditions as opportunities for action, n116 a growing body of research suggests that movements may also respond to relatively stable features of their cultural environments. This research suggests that social movements' rhetorical strategies are constrained by "discursive opportunity structures," or the deeply embedded ideas and belief systems that dominate the political culture in which a movement operates. n117 Movement activists strategically keep ""a finger on the pulse' of the wider arena," much like business strategists do for the competitive marketplace, to perceive opportunities for action in the cues conveyed by their "targets, opponents, allies, potential allies, and the public." n118 Activists who hope to convince these broad audiences of the value of their movement's cause must select rhetoric that "resonates" with culturally dominant values and systems of meaning. n119

Legal norms and ideas derived from constitutional texts, court decisions, and statutes constitute many of the ideas and values that dominate political discourse and become privileged social movement rhetoric. n120 Social movement actors "draw upon critical concepts emphasized in the legal domain" to produce "claims [that] are more [*1693] likely to resonate, and thus to persuade potential supporters." n121 In the United States, institutionalized legal discourse emphasizes rights claims that adhere to liberal legal principles of formal equality and limited state involvement in individual liberty. Empirical work suggests that these liberal assumptions that prevail in formal legal doctrine also prevail over alternative definitions and dominate movement discourse. n122 Professor Myra Marx Ferree has shown that U.S. feminists frame abortion as a matter of individual choice, a liberal construction that defines rights as formal protections for individuals. n123 Feminists devised their strategies to conform to judicial rhetoric, which itself "drew upon longer-standing political traditions of liberal individualism." n124

The sociological literature expands theoretical understandings of litigation as a source of extralegal movement resources (i.e., media and organizational support). Litigation is the sole social movement tactic that is inextricably linked to dominant legal principles; lawyers who seek to prevail in litigation (or who are at least ethically obligated to try) must "translate" n125 or "repackage" n126 their clients' and movements' grievances into a resonant legal claim. Movement litigation thereby engages dominant legal ideas and viewpoints by necessity. Furthermore, previous work has found that movement lawyers draw on dominant legal rhetoric during litigation - even when that rhetoric is widely viewed as problematic - to a greater extent than movement lobbyists advocating for legislative change. n127 This bolsters [*1694] the hypothesis from the legal mobilization literature that movement litigation will generate rhetoric that receives greater media coverage and organization-sustaining resources than other tactics. n128

The sociological literature on "discursive opportunity structures" further suggests that legal issues will become privileged priorities on a social movement's agenda. If dominant legal principles shape social movements' rhetorical strategies, as sociological research shows, dominant legal principles may also shape activists' strategic selection of agenda items. Discursive opportunity may compel activists to prioritize grievances that may be translated into formal legal terms. Critical legal scholarship, which shows that lawyers pursue priorities that can be adapted into legal claims, supports this hypothesis. n129 Theories of discursive opportunity suggest this may be a more widespread phenomenon, wherein both lawyers and grassroots activists alike selectively focus on issues that resonate with the ideological structures of formal law.

Empirics prove that litigation focused strategies are more effective- media and organization

Leachman 14 (Gwendolyn, Sears Law Fellow, Williams Institute on Sexual Orientation and Gender Identity, UCLA School of Law; J.D.; "From Protest to Perry: How Litigation Shaped the LGBT Movement's Agenda," UC Davis Law Review, June 2014, lexis, eas)

III. Empirical Evidence for the Legalization of the LGBT Movement

This Part draws on three original empirical studies to investigate potential mechanisms that may privilege litigation over other LGBT movement tactics so that the issues being litigated come to dominate the LGBT movement's substantive agenda. Considering the LGBT movement over the past thirty years, these studies investigate several questions: Which movement tactics - litigation, lobbying, or protest - have been most visible in the mainstream news media? Are organizations that use litigation, lobbying, or protest most likely to survive and become permanent movement players? n134 How do the strategy-formation processes used by primarily litigation-, lobbying-, or protest-based movement organizations vary with differences in each organization's relative ability to drive its own agenda or the agendas of others in the movement? The overarching theory here is that if litigation produces media visibility and confers organizational [*1696] stability, the organizations that litigate will rise to prominence in the movement, and their legal goals will come to dominate the movement's overall substantive agenda. I call this process the "legalization" of a social movement's agenda.

My empirical studies show that litigation received more media coverage than any other LGBT movement tactic, suggesting that litigation had greater visibility than other tactics. In addition, LGBT movement organizations that used litigation were at a statistically lower risk of demise (i.e., they were more likely to survive, and for longer) than other types of LGBT movement organizations. This finding suggests that litigation will become a stable presence in social movements and that litigating organizations will become more prominent and influential movement actors. A qualitative analysis of a small subset of LGBT movement organizations explores these findings in greater detail and reveals the processes through which litigation influences a social movement's broader agenda. Whereas litigating LGBT movement groups proactively pursued preplanned organizational priorities, protest groups formed their agendas reactively, focusing on the issues covered by the mainstream media. This phenomenon appears to have diverted protest groups away from their original priorities and toward the issues that the media found newsworthy. Given earlier findings that litigation coverage dominated news headlines, I argue that the processes identified here may enable litigation to dominate protest activism as well. These findings suggest that the media visibility and stability of social movement litigation can legalize the agendas of movement actors outside the courtroom.

2AC-A2: FW

We Meet

We meet – we are the USFG. The binary established by the negative to differentiate between who is and isn't the USFG is a biopolitical method of creating an included class and an excluded class and reduces us to bare-life

Agamben, Italian philosopher who teaches at the Università IUAV di Venezia, 2000 (Giorgio, Means Without Ends: Notes on Politics, p. 30.1)

Any interpretation of the political meaning of the term people ought to start from the peculiar fact that in modern European languages this term always indicates also the poor, the underprivileged, and the excluded. The same term names the constitutive political subject as well as the class that is excluded – de facto, if not de jure – from politics.

The Italian term popolo, the French term people, and the Spanish term pueblo – along with the corresponding adjectives popolare, populaire, popular – and the late-Latin terms populus and popularis from which they all derive, designate in common parlance and in the political lexicon alike the whole of the citizenry as a unitary body politic (as in "the Italian people" or in giudice popolare" [juryman] as well as those who belong to inferior class (as in homme du peuple [man of the people], rione polplare [working-class neighborhood], front populaire is more undifferentiated – does retain the meaning of ordinary people as opposed to the rich and the aristocracy. In the American Constitution one thus reads without any sort of distinction: "We, the people of the United States…"; but when Lincoln in the Gettysburg Address invokes a "government of the people, by the people, for the people," the repetition implicitly sets another people against the first. The extent to which such an ambiguity was essential even during the French Revolution (that is, at the very moment in which people's sovereignty was claimed as a principle) is witnessed by the decisive role played in it by a sense of compassion for the people intended as the excluded class. Hannah Arendt reminds us that:

The very definition of the word was born out of compassion, and the term became the equivalent for misfortune and unhappiness – le peule, les malbeureux m'applaudissent, as Robespierre was wont to say; le peuple toujours malbeureux, as even Sieyes, one of the least sentimental and most sober figures of the Revolution, would put it.

But this is already a double concept for Jean Boldin – albeit in a different sense – in the chapter of Les Six Livres de la Republique in which he defines Democracy or Etat Popular: while the menu peuple is that which is wise to exclude from political power, the peuple en corps is intended as entitled to sovereignty.

Such a widespread and constant semantic ambiguity cannot be accidental: it surely reflects an ambiguity inherent in the nature and function of the concept of people in Western politics. It is as if, in other words what we call people was not actually a unitary subject but rather a dialectical oscillation between two opposite poles: on the one hand, the People as a whole and as an integral body politic and, on the other hand, the people as a subset and as a fragmentary multiplicity of needy and excluded bodies; on the one hand, an inclusive concept that pretends to be without remainder while, on the other hand, an exclusive concept known to afford no hope; at one pole, the total state of the sovereign and integrated citizens and, at the other pole, the banishment – either court of miracles or camp – of the wretched, the oppressed, or the vanquished. There exists no single and compact referent for the term people anywhere: like many fundamental political concepts (which, in this respect, are similar to Abel and Frueds Urworte or to Dumont's hierarchal relations), people is a polar concept that indicates a double movement and a complex relationship between two extremes. This also means, however, that the constitution of the human species into a body politic comes into being through a fundamental split and that in the concept of people we can easily recognize the conceptual pair identified earlier as the defining category of the original political structure: naked life (people) and political existence (People), exclusion and inclusion, zoe and bios. The concept of people always already contains within itself the fundamental biopolitical fracture. It is what cannot in included in the whole of which it is a part as well what cannot belong to the whole in which it is always already include.

State Engagement Bad

Queerness

Government reform is bankrupt for the queer body – attempts to create progress through the law only replicate the law's own anti-queerness and mask the structural violence that it inherently creates.

Stanley 11 [Eric Stanley, President's Postdoctoral fellow in the departments of Communication and Critical Gender Studies at the University of California, San Diego, "Near Life, Queer Death: Overkill and Ontological Capture", Social Text 107, Vol. 29, No. 2, Summer 2011, https://queerhistory.files.wordpress.com/2011/06/near-life-queer-death-eric-stanley.pdf]//JIH

Where statistics fail, scars rise to tell other histories. From the phenomenological vault of growing up different, to the flickers of brutal details, one would not have to dig deep to uncover a corpse. Yet even with the horrific details, antiqueer violence is written as an outlaw practice, a random event, and an unexpected tragedy. Dominant culture's necessity to disappear the enormity of antiqueer violence seems unsurprising. Yet I suggest that mainstream LGBT discourse also works in de- politicized collusion with the erasure of a structural recognition. Through this privatization the enormity of antiqueer violence is vanished. 21 Thinking violence as individual acts versus epistemic force works to support the normative and normalizing structuring of public pain. In other words, privatizing antiqueer violence is one of the ways in which the national body and its trauma are heterosexualized, or in which the relegation of antiqueer violence, not unlike violence against women, racist violence, violence against animals (none of which are mutually exclusive), casts the national stage of violence and its ways of mourning as always human, masculinist, able- bodied, white, gender- conforming, and heterosexual. For national violence to have value it must be produced through the tangled exclusion of bodies whose death is valueless. To this end, as mainstream LGBT groups clamber for dominant power through attachment of a teleological narrative of progress, they too reproduce the argument that antiqueer violence is something out of the ordinary. The problem of privatizing violence is not, however, simply one of the re- narration of the incidents. The law, and specifically "rights" discourse, which argues to be the safeguard of liberal democracy, is one of the other motors that works to privatize this structural violence. Rights are inscribed, at least in the symbolic, with the power to protect citizens of the nation-state from the excesses of the government and against the trespass of criminality. In paying attention to the anterior magic of the law, it is not so much, or at least not only, that some are granted rights because they are human, but that the performative granting of rights is what constitutes the promise of humanity under which some bodies are held. This is important in thinking about the murder of Brazell, and about antiqueer violence at large, because it troubles the very foundations of the notion of protection and the formative violence of the law itself. According to the juridical logic of liberal democracy, if these rights are infringed upon, the law offers remedy in the name of justice. This necessary and assumptive formal equality before the law is the precursor for a system argued to be based on justice. In other words, for the law to lay claim to something called justice, formalized equality must be a precondition. The law then is a systematic and systematizing process of substitution where the singular and the general are shuttled and replaced to inform a matrix of fictive justice. Thus for the law to uphold the fantasy of justice and disguise its punitive aspirations, antiqueer violence, like all structural violence, must be narrated as an outlaw practice and unrepresentative of culture at large. This logic then must understand acts like the murder of Brazell in the singular. Through a mathematics of mimesis the law reproduces difference as similarity. By funneling the desperate situations and multiple possibilities into a calculable trespass kneading out the contours and the excess along the way, equality appears. To

acknowledge the inequality of "equality" before the law would undo the fantastical sutures that bind the U.S. legal system. In the hope of being clear, for the law to read antiqueer violence as a symptom of larger cultural forces, the punishment of the "guilty party" would only be a representation of justice. To this end, the law is made possible through the reproduction of both material and discursive formation of antiqueer, along with many other forms of violence. I too quickly rehearse this argument in the hope that it might foreclose the singular reliance on the law as the ground, and rights as the technology, of safety.

The state acts to regulate bodies and reinforce oppressive norms – we must challenge oppression through rejection.

The Mary Nardini Gang 8 ["Towards the Queerest Insurrection", 2008, http://www.weldd.org/resources/towards-queerest-insurrection]//JIH

Susan Stryker writes that the state acts to "regulate bodies, in ways both great and small, by enmeshing them within norms and expectations that determine what kinds of lives are deemed livable or useful and by shutting down the space of possibility and imaginative transformation where peoples' lives begin to exceed and escape the state's use for them." We must create space wherein it is possible for desire to flourish. This space, of course, requires conflict with this social order. To desire, in a world structured to confine desire, is a tension we live daily. We must understand this tension so that we can become powerful through it - we must understand it so that it can tear our confinement apart. This terrain, born in rupture, must challenge oppression in its entirety. This of course, means total negation of this world. We must become bodies in revolt. We need to delve into and indulge in power. We can learn the strength of our bodies in struggle for space for our desires. In desire we'll find the power to destroy not only what destroys us, but also those who aspire to turn us into a gay mimicry of that which destroys us. We must be in conflict with regimes of the normal. This means to be at war with everything. If we desire a world without restraint, we must tear this one to the ground. We must live beyond measure and love and desire in ways most devastating. We must come to understand the feeling of social war. We can learn to be a threat, we can become the queerest of insurrections.

The political will fail – moving within the state causes a sense of pacification where the left believes they have done good while still upholding the existing inequalities

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

I believe that homosexuals are revolutionary today in as much as we have overcome politics. The revolution for which we are fighting is among other things the negation of all male supremacist political rackets (based among other things on sublimated homosexuality), since it is the negation and overcoming of capital and its politics, which find their way into all groups of the left, sustaining them and making them counter-revolutionary.

My arsehole doesn't want to be political, it is not for sale to any racket of the left in exchange for a bit of putrid opportunist political 'protection'. While the arseholes of the 'comrades' in the groups will be revolutionary only when they have managed to enjoy them with others, and when they have stopped covering their behinds with the ideology of tolerance for the queers. As long as

they hide behind the shield of politics, the heterosexual 'comrades' will not know what is hidden within their own thighs.

As always, it is only rather belatedly, in the wake of the 'enlightened' bourgeoisie, that the left-wing groups have begun to play the game of capitalist tolerance. From declared hangmen, and a thousand times more repugnant than the hustlers and fascists, given all their (ideological) declarations of revolution, the activists of these groups have transformed themselves into 'open' debaters with homosexuals. They fantasise about becoming well-meaning and tolerant protectors of the 'deviant', in this way gratifying their own virile image, already far too much on the decline, at a time when even the ultra-left have suddenly to improvise 'feminist' representatives for 'their' women. Moreover, the fantasy of protectors helps them to exorcise the problem of the repression of their own homoerotic desire. Under it all, the activists of the left always hope to become good policemen. They do not know that real policemen get in there more than they do, and that when this happens, they make love precisely with us gays. When will there be a free homosexual outlet for the activists of the ultra-left ?

Legal strategies fail- lawyers don't stick to their clients' agenda and they can hijack movements

Leachman 14 (Gwendolyn, Sears Law Fellow, Williams Institute on Sexual Orientation and Gender Identity, UCLA School of Law; J.D.; "From Protest to Perry: How Litigation Shaped the LGBT Movement's Agenda," UC Davis Law Review, June 2014, lexis, eas)

A. Critical Legal Scholarship on Lawyer Domination Within Social Movements

Litigation is an important tool for social movements, which often "lack the power to seek their demands through the normal political processes or through direct action." n73 Yet several critiques have emerged regarding the role of lawyers in the struggles of these powerless groups and the potential for social movement lawyers to exert disproportionate influence over progressive movement agendas. This critical work suggests that conventional legal practice has a deradicalizing effect on social movements. Movement lawyers, the argument goes, are often preoccupied with legally achievable ends, which are often formalistic and less radical or transformative than the substantive goals articulated at the movement's grass roots. n74 Lawyers may substitute their own agendas for those of their clients n75 or overshadow their clients in their pursuit of rights-oriented legal change. n76 Lawyers may also co-opt their activist clients by forging [*1686] relationships with activists who require the lawyers' technical expertise (e.g., to seek nonprofit tax-exempt status or to defend arrested protestors from criminal charges). n77 Through these subtle means of persuasion and domination over the lawyer-client relationship, the critical legal literature has shown, lawyers can operate as a mechanism through which conservative legal goals replace radical movement objectives.

Derrick Bell's analysis of the NAACP is a prime example from this area of scholarship. n78 Bell shows how lawyers in the civil rights movement displaced their clients' goals of substantive social change in the lawyers' pursuit of viable legal claims. n79 NAACP lawyers and their clients were part of a social movement intent on ameliorating racial inequalities in public education. n80 However, after the NAACP won a major victory in Brown v. Board of Education, n81 NAACP attorneys and their clients became divided over the specific priorities they should pursue to achieve this goal. The attorneys were focused on achieving racial integration. n82 The African American parents and public-school children they represented, however, were more concerned

with increasing the quality of education within African American schools than with pursuing a racial balance. n83 Bell argues that the lawyers' strategy, which ultimately shaped civil rights law, n84 was less effective than their clients' proposals for furthering the movement's antisubordinationist goals. n85

[*1687] Critical legal scholarship identifies instances in which lawyers have taken control of the agenda through individual strategic negotiations with their clients. However, it does not provide a comprehensive theoretical approach for explaining the sources or scope of lawyers' power within movements. Professor Sandra Levitsky's work, for instance, exposes further ways in which movement lawyering may generate intramovement power imbalances. In a study of LGBT movement organizations in Chicago, Professor Levitsky finds that litigating organizations were able, in the words of one activist, to "hijack" the movement's agenda n86 because the litigating organizations had the financial backing to act independently without seeking other groups' cooperation. n87 The grassroots organizations, which had significantly fewer resources, were forced to contend with and support the highly visible litigation agenda. Levitsky's research suggests that litigating movement actors may garner power within their movement inadvertently, owing to the unique ability of litigation to attract resources and publicity.

Biopolitics

The ethical creation of self comes before their political prescriptions -- it determines our relationship to biopolitical decisions regarding which lives and lifestyles are and are not allowed to subsist politically—their framework arguments just recreate this violence

Gabardi 2001 [Wayne, Negotiating Postmodernism pp. 77-79]

Based on his research into ancient Greek ethics, **Foucault identified four** interrelated **modes of ethical practice that formed the basis of** both **a framework of ethical analysis and a model of freedom**. They were ethical substance**,** a mode of subjectivation**,** ethical work, and telos.5° **Ethical substance refers to that aspect** or part **of** an individual's **behavior that is** determined to be **the** main **focus** or "the prime material **of** his (or her) **moral conduct**." The mode of subjectivation is the form with which the different parts or aspects of one's self are arranged. It is the model that fashions or molds one's self into a distinctive style of existence. Foucault's own mode of subjectivation fused aesthetics and politics into a model of creative resistance, making one's life into a work of art formed out of social and political struggle. **Ethical work involves the** means, the **methods, and** the **techniques by which we change ourselves into an ethical subject**. **Telos involves** committing oneself to a certain mode of being and **striving to** consciously **place one's** everyday **actions within a pattern of conduct**. Taken together, **these ethical practices inform a conception of self- hood in which a person takes an active role in shaping** his or her **identity**, **rather than conforming to existing** external standards and **systems of power/knowledge**. The self is an assemblage of practices rather than an innate entity. While both disciplined bodies and active ethical subjects are forged within the same power environments, **the** active **reflexive self appropriates practices of conduct from power/knowledge formations without being dependent on their disciplinary codes**. Foucault based this activity principally on an aesthetic model because it was his conviction that art is the most potent medium of radical reflexivity and resistance. Art is a potentially explosive transformative force. By linking it to the pursuit of an ethical life, **Foucault was able to** stabilize and **channel** its **energy into a relationship where** "**self-care" and "responsibility for the other"** inform and **enhance the aesthetic drive**. The interview "The Ethic of Care for the Self as a Practice of Freedom" (1984) illuminates how in his final work Foucault was reweaving ethics, aesthetics, and politics by making connections between power, resistance, self-care, liberty, and caring for others. **He states** that **freedom is the ontological condition and** the **basis of ethics**.5' He defines ethics as a practice, a way of life, an "ethos," rather than as a theory or a codified set of rules.52 He makes clear that self-care "implies complex relations with others" and that "this ethos of freedom is also a way of caring for others."" He states that **power means "relationships of power:' that resistance and freedom are implicit in power relations**, and that **"domination" is different from power**. **It is a situation in which** "the **relations of power are fixed in such a way that they are perpetually asymmetrical** and the margin of liberty is extremely limited?'54 Foucault further concludes that **the relationship between philosophy and politics is fundamental** and that **philosophy is charged with the duty of "challenging all phenomena of domination** at whatever level or under whatever form they present themselves'55 This leads me to conclude that **Foucault's idea of freedom as ethical agency involves choosing a life "style" and then integrating specific techniques of self-formation** within an environment of power formations. **The** power **context of life**

stylization further **requires the cultivation of self-discipline and** agonistic **struggle to** both **resist disciplinary power matrices and carve out a space for self-empowerment and creative choice.** In other words, **freedom entails a movement from resistance to ethics to political action**. **Resistance,** the most primal expression of freedom, **involves the revolt of the body against the normalizing effects of disciplinary biopower**. **This critical resistance**, largely reactive and defensive, **is channeled into an affirmative ethical project concerned with self-care**. **The rejection of an imposed identity and a set of norms becomes the impetus for fashioning one's own ethical code and conduct**. **The ethical agent becomes a political actor in joining struggles that seek to alter power relations** so that one can more freely live one's life. **The battle is joined at the local and microlevels by countering norms with norms and techniques with techniques.** I further conclude that **if**, as I have argued, **ours is a time of cultural postmodernization,** of global-local flows of postmodern goods services, and identities, of greater aesthetic-reflexive individuation, **and of the pervasive effects of information and mass media in our Lives, then quality of life** and lifestyle **issues should take** (and have taken) **on a greater importance in our daily social interactions**, economic decisions, **ethical considerations, and political concerns**. Understood in this way, **Foucault's idea of freedom as an aesthetic-ethical-political practice of lifestyle determination takes on greater significance. It is both a product of our late modern/postmodern transition and a new mode of being and normative guide in negotiating this condition**.

Analysis of biopolitics cannot succeed from a state-oriented approach

Milchman and Rosenberg 2005 [Alan & Alan, "Michel Foucault: Crises and Problemizations", The Review of Politics, Volume 67, p. 340]

According to Dean, it is through an analytics of government that the specific technologies, practices and rationalities of liberal government, and its implication in a regime of bio-politics, can be investigated. For Dean:

An analytics is a type of study concerned with the analysis of the specific conditions under which particular entities emerge, exist and change. It is thus distinguished from most theoretical approaches in that it seeks to attend to, rather than efface, the singularity of ways of governing and conducting ourselves. Thus it does not treat particular practices of government as instances of ideal types and concepts. Neither does it regard them as effects of a law-like necessity or treat them as manifestations of a fundamental contradiction. An analytics of government examines the conditions under which regimes of practices come into being, are maintained and are transformed. … These regimes also include, moreover, the different ways in which these institutional practices can be thought, made into objects of knowledge, and made subject to problematizations (pp. 20-21). Thus, an analytics of government in the Foucauldian mode, is genealogical; it examines the historicity and contingency of both liberal regimes of practices, and the modes of subjectification to which they give rise, even as it eschews any metaphysics, philosophy of history, or philosophical anthropology. Moreover, such an analytics of government also acknowledges the enormous significance of political power beyond the state in the liberal regimes of modern democracy. From the perspective of governmentality, with its arts and regimes encompassing, as Rose points out, "a multitude of programmes, strategies, tactics, devices, calculations, negotiations, intrigues, persuasions and seductions aimed at the conduct of individuals, groups, populations-and indeed oneself"(p. 5), the state is no longer the sole, or necessarily primary, power container. Indeed, for Rose: From this perspective, the question of the state that was so central to earlier investigations of political power is relocated. The state now appears simply as one element-whose function is historically specific and contextually variable-in multiple circuits of power, connecting a diversity of authorities and forces, within a whole variety of complex assemblages (p. 5). Thus, governmentality studies, which investigate power relations at the molecular as well as at the molar level, cannot limit themselves to an analysis of the state. The web of power relations in modern democracies requires an analytics of government that is, as Dean claims, pluralistic; that acknowledges the existence of "a plurality of regimes of practices in a given territory, each composed from a multiplicity of in principle unlimited and heterogeneous

elements bound together by a variety of relations and capable of polymorphous connections with one another" (p.27). Such an analytics, will investigate the distribution of power between state and civil society, public and private, juridical and social, coercive and non-coercive, disciplinary and normalizing. And according to Dean, the point of departure for such "an analytics of government is the identification and examination of specific situations in which the activity of governing comes to be called into question, the moments and the situations in which government becomes a problem" (p. 27).

Examinations must separate themselves from sovereignty—including the state makes understanding modern power relations impossible

Milchman and Rosenberg 2005 [Alan & Alan, "Michel Foucault: Crises and Problemizations", The Review of Politics, Volume 67, p. 340]

What Foucault does insist upon in "Society *Must Be Defended"* is that if we want to analyze modern power relations, we need to extricate ourselves from the theory of sovereignty. This is the meaning of his claim that in political theory we have still not cut off the head of the king. In the place of the theory of sovereignty as a basis for political theory, Foucault enjoins us to investigate the microphysics of power: "... let me say that rather than orienting our research into power toward the juridical edifice of sovereignty, State apparatuses, and the ideologies that accompany them, I think we should orient our analyses of power toward material operations, forms of subjugation [assujeissement], and the connections among and the uses made of the local systems of subjugation on the one hand, and apparatuses of knowledge on the other" (p. 34).6 and the uses made of the local systems of subjugation on the one hand, and apparatuses of knowledge on the other" (p. 34).6

A2 Roleplaying

Adopting the stance of the policymaker in debate is integrally linked to the normative practices of power that work to oppress queer and other marginalized populations – means we become apathetic spectators.

Reid-Brinkley 8 [Shanara Rose Reid-Brinkley, Ph.D. Candidate in Communication at the University of Georgia, holds an M.A. in Communication from the University of Alabama and a B.A. in Political Science and Government from Emory University, 2008, "The Harsh Realities of 'Acting Black': How African-American Policy Debaters Negotiate Representation Through Racial Performance and Style," University of Georgia Ph.D. Dissertation, Available Online at http://www.scribd.com/doc/93057917/Reid-brinkley-Shanara-r-200805-Phd, Accessed 07-09-2014, p. 117-119]//JIH

Genre Violation Four: Policymaker as Impersonal and the Rhetoric of Personal Experience.

Debate is a competitive game. 112 It requires that its participants take on the positions of state actors (at least when they are affirming the resolution). Debate resolutions normally call for federal action in some area of domestic or foreign policy. Affirmative teams must support the resolution, while the negative negates it. The debate then becomes a "laboratory" within which debaters may test policies. 113 Argumentation scholar Gordon Mitchell notes that "Although they [end page 117] may research and track public argument as it unfolds outside the confines of the laboratory for research purposes, in this approach students witness argumentation beyond the walls of the academy as spectators, with little or no apparent recourse to directly participate or alter the course of events." 114 Although debaters spend a great deal of time discussing and researching government action and articulating arguments relevant to such action, what happens

in debate rounds has limited or no real impact on contemporary governmental policy making. And participation does not result in the majority of the debate community engaging in activism around the issues they research.

Mitchell observes that the stance of the policymaker in debate comes with a "sense of detachment associated with the spectator posture."115 In other words, its participants are able to engage in debates where they are able to distance themselves from the events that are the subjects of debates. Debaters can throw around terms like torture, terrorism, genocide and nuclear war without blinking. Debate simulations can only serve to distance the debaters from real world participation in the political contexts they debate about. As William Shanahan remarks:

…the topic established a relationship through interpellation that inhered irrespective of what the particular political affinities of the debaters were. The relationship was both political and ethical, and needed to be debated as such. When we blithely call for United States Federal Government policymaking, we are not immune to the colonialist legacy that establishes our place on this continent. We cannot wish away the horrific atrocities perpetrated everyday in our name simply by refusing to acknowledge these implications"(emphasis in original).116 [end page 118]

The "objective" stance of the policymaker is an impersonal or imperialist persona. The policymaker relies upon "acceptable" forms of evidence, engaging in logical discussion, producing rational thoughts. As Shanahan, and the Louisville debaters' note, such a stance is integrally linked to the normative, historical and contemporary practices of power that produce and maintain varying networks of oppression. In other words, the discursive practices of policy-oriented debate are developed within, through and from systems of power and privilege. Thus, these practices are critically implicated in the maintenance of hegemony. So, rather than seeing themselves as government or state actors, Jones and Green choose to perform themselves in debate, violating the more "objective" stance of the "policymaker" and require their opponents to do the same.

A2 SSD

Switch side debate is irrelevant – reflexive thought about a subject pre-round is enough to solve.

Yudkowsky 08 [Eliezer Yudkowsky, research fellow of the Machine Intelligence Research Institute, June 9, 2008, "Against Devil's Advocacy," http://lesswrong.com/lw/r3/against_devils_advocacy/]//JIH

I surely don't mean to teach people to say: "Since I believe in fairies, I ought not to expect to find any good arguments against their existence, therefore I will not search because the mental effort has a low expected utility." That comes under the heading of: If you want to shoot your foot off, it is never the least bit difficult to do so. Maybe there are some stages of life, or some states of mind, in which you can be helped by trying to play Devil's Advocate. Students who have genuinely never thought of trying to search for arguments on both sides of an issue, may be helped by the notion of "Devil's Advocate". But with anyone in this state of mind, I would sooner begin by teaching them that policy debates should not appear one-sided. There is no expectation against having strong arguments on both sides of a policy debate; single actions have multiple consequences. If you can't think of strong arguments against your most precious favored policies, or strong arguments for policies that you hate but which other people endorse, then indeed, you very likely have a problem that could be described as "failing to see the other points of view". You, dear reader, are probably a sophisticated enough reasoner that if you manage to get yourself stuck in an advanced rut, dutifully playing Devil's Advocate won't get you out of it. You'll just subconsciously avoid any Devil's arguments that make you genuinely nervous, and then congratulate yourself for doing your duty. People at this level need stronger medicine. (So far I've only covered medium-strength medicine.) If you can bring yourself to a state of real doubt and genuine curiosity, there is no need for Devil's Advocacy. You can investigate the contrary position because you think it might be

really genuinely true, not because you are playing games with time-traveling chocolate cakes. If you cannot find this trace of true doubt within yourself, can merely playing Devil's Advocate help you? I have no trouble thinking of arguments for why the Singularity won't happen for another 50 years. With some effort, I can make a case for why it might not happen in 100 years. I can also think of plausible-sounding scenarios in which the Singularity happens in two minutes, i.e., someone ran a covert research project and it is finishing right now. I can think of plausible arguments for 10-year, 20-year, 30-year, and 40-year timeframes. This is not because I am good at playing Devil's Advocate and coming up with clever arguments. It's because I really don't know. A true doubt exists in each case, and I can follow my doubt to find the source of a genuine argument. Or if you prefer: I really don't know, because I can come up with all these plausible arguments. On the other hand, it is really hard for me to visualize the proposition that there is no kind of mind substantially stronger than a human one. I have trouble believing that the human brain, which just barely suffices to run a technological civilization that can build a computer, is also the theoretical upper limit of effective intelligence. I cannot argue effectively for that, because I do not believe it. Or if you prefer, I do not believe it, because I cannot argue effectively for it. If you want that idea argued, find someone who really believes it. Since a very young age, I've been endeavoring to get away from those modes of thought where you can argue for just anything. In the state of mind and stage of life where you are trying to distinguish rationality from rationalization, and trying to tell the difference between weak arguments and strong arguments, Devil's Advocate cannot lead you to unfake modes of reasoning. Its only power is that it may perhaps show you the fake modes which operate equally well on any side, and tell you when you are uncertain.

Defending both sides of the topic makes students complicit with dehumanizing violence. Their interpretation creates indifference, not engagement.

Spanos 13 — William V. Spanos, Distinguished Professor of English and Comparative Literature at the State University of New York at Binghamton, interviewed by Christopher Spurlock, 2013 ("William V. Spanos: An Interested Debate Inquiry," *kdebate*, Volume 1, Issue 1, Available Online at http://kdebate.com/spanos.html, Accessed 07-09-2014)

CS: When we had our discussion in Binghamton, you asked me if teams were ever marginalized or excluded for reading arguments based on your work. Some have argued that this move is most frequently enacted during debates with an argument aptly referred to as "framework" where one team will define and delimit their ideal 'world picture' of a carefully crafted resolution and then explain why the opposing teams argument have violated the parameters of this 'frame.' In earlier comments on debate you had criticized the disinterested nature of the activity and its participants - the detached model of debate where anything goes so long as you "score points" and detach yourself from the real (human) weight of these issues. How might debaters approach debate or relate to our resolutions in a more interested sense?

WVS: The reason I asked you that question is because I've always thought that the debate system is a **rigged process**, by which I mean, in your terms, it's framed to exclude anything that the frame can't **contain** and **domesticate**. To frame also means to "prearrange" so that a particular outcome is assured," which also means the what's outside of the frame **doesn't stand a chance**: it is "framed" from the beginning. It was, above all, the great neo-Marxist Louis Althusser's analysis of the "problematic" - the perspective or frame of reference fundamental to knowledge production in democratic-capitalist societies -- that enabled me to see what the so called distinterestness of empirical inquiry is blind to or, more accurately willfully represses in its Panglossian pursuit of the truth.

Althusser's analysis of the "problematic" is too complicated to be explained in a few words. (Anyone interested will find his extended explanation in his introduction --"From Capital* to Marx's Philosophy" -- to his and Etienne Balibar's book *Reading Capital*. It will suffice here to say that we in the modern West have been *inscribed* by our culture --"ideological state apparatuses (educational institutions, media, and so on)-- by a system of knowledge production that goes by the name of "disinterested inquiry," but in reality the "truth" at which it arrives is a construct, a fiction, and thus ideological. And this is precisely because, in distancing itself from earthly being --the transience of time --this system of knowledge production privileges the panoptic eye in the pursuit of knowledge. This is what Althusser means by the "problematic": a frame that allows the perceiver to see only what it wants to see. Everything that is outside the frame doesn't exist to the perceiver. He /she is blind to it. It's nothing or, at the site of humanity, it's nobody. Put alternatively, the problematic -- this frame, as the very word itself suggests, *spatializes* or *reifies* time -- reduces what is a living, problematic force and not a thing into a picture or thing so that it can be comprehended (taken hold of, managed), appropriated, administered, and exploited by the disinterested inquirer.

All that I've just said should suggest what I meant when, long ago, in response to someone in the debate world who seemed puzzled by the strong reservations I expressed on being informed that the debate community in the U.S. was appropriating my work on Heidegger, higher education, and American imperialism. I said then – and I repeat here to you – that the traditional form of the debate, that is, the hegemonic frame that rigidly determines its protocols—is unworldly in an ideological way. It **willfully separates** the debaters from the world as it **actually is**—by which I mean as it has been produced by the dominant democratic I capitalist culture—and it displaces them to a free-floating zone, a **no place**, as it were, where all things, nor matter how different the authority they command in the real world, are equal. But in *this* real world produced by the combination of Protestant Christianity and democratic capitalism things – and therefore their value – are never equal. They are framed into a system of binaries—Identity/ difference, Civilization/barbarism I Men/woman, Whites/blacks, Sedentary/ nomadic, Occidental/ oriental, Chosen I preterit (passed over), Self-reliance I dependent (communal), Democracy I communism, Protestant Christian I Muslim, and so on — in which the first term is not only privileged over the second term, but, in thus being privileged, is also empowered to demonize the second. Insofar as the debate world frames argument as if every position has equal authority (the debater can take either side) it **obscures** and eventually **effaces** awareness of the degrading imbalance of power in the real world and the **terrible injustices** it perpetrates. Thus framed, debate gives the **false impression** that it is a truly democratic institution, whereas in reality it is **complicitous with the dehumanized and dehumanizing system of power** that produced it. It is no accident, in my mind, that this fraudulent form of debate goes back to the founding of the U.S. as a capitalist republic and that it has produced what I call the "political class" to indicate not only the basic sameness between the Democratic and Republican parties but also its **fundamental indifference** to the plight of those who don't count in a system where what counts is determined by those who are the heirs of this quantitative system of binaries.

Grassroots Good

Non-state social movements are more influential and have a bigger impact on society

Goldberg 10 (Robert, Professor of History, University of Utah, "THE CHALLENGE OF CHANGE: SOCIAL MOVEMENTS AS NON-STATE ACTORS," 2010, Utah Law Review, http://www.epubs.utah.edu/index.php/ulr/article/viewFile/345/283, eas)

In a world of great crises—economic, environmental, and political—men and women usually turn to state actors for solutions. The United States government, the European Union, or the World Bank are seen as the agents of change and reform. This focus blurs the stimulus to change that comes from the bottom up via grassroots movements. The events of September 11, 2001, and more recently in Mombai, Thailand, and Greece suggest the power of social movements, non-state actors, to move history and create the crises of current events. In challenging state authority in American history, social movement activists have nurtured revolution, pressed suffrage and equal rights for women, and transformed the racial status quo, among other changes. In the process of staking a claim to influence, a social movement organizes itself as a community governed by alternative role models, values, and rituals. From this base, social movement agents raise hope of a better world and choose mobilization strategies in a quest to govern. Claims on power demand that activists grapple with authorities who stand ready to protect established institutions and practices. The social movement perspective on governance, then, is twofold. Activists must exercise governance within the movement to firm it for the coming struggle for power. They also must protect members from authorities who seek to disrupt and disband challengers. With its base secured and resources gathered and focused, the social movement is prepared to claim a share of governance and authority from state actors. This Article outlines internal movement characteristics and factors that effect challenges to state actors. It also considers the dynamic of contention, particularly the responses of state authorities to social movement claims on governance. When state actors deny the legitimacy of a constituency and ignore the salience of grievances, opportunities arise for social movement mobilization. A social movement is an organized group that acts with some continuity and is consciously seeking to promote or resist change. Key to social movement activism are the means of challenge. Social movements launch

collective action to influence those who make decisions about the distribution of benefits in a society. Silent vigils, parades, sit-in demonstrations, cross burnings, Boston tea parties, strikes, rallies, kidnappings, boycotts, violence, and similar collective behaviors are initiated to persuade authorities to recognize challengers and to bring change. In gathering numbers and offering inducements or adding disadvantages, activists warn rulers of their power and demand action.1 Such means, however, suggest the weakness of social movements. Powerful actors, unlike social movement activists, have easy access to those who govern. They routinely apply resources—for example, through lobbying or offers of information and funding—and successfully lay claims on authorities. These actors, in fact, may rely on the state's means of coercion to protect them from social movement challenges. In turn, in its role of preserving the status quo, government seeks support from established groups that have a stake in the system as it exists. Social movements cease to be such once they gather sufficient resources and abandon collective action for more prosaic means of influence. As contenders for influence, social movements yearn to sit on the balcony of power, but their weakness demands that they take a stand on the streets and behind the barricades.2 Challenging the status quo is hard labor. It requires that social movements sustain their members over time to withstand assaults from within and without. It means the creation of self-contained communities, non-state entities, administered by their own leaders and codes of conduct. Particularly important in beckoning followers and holding their allegiances are movement blueprints of the good society. These ideological statements diagnose the problems being faced and fix the blame. They offer means and goals. They provide a rationale that glorifies and justifies the movement and its cause. Ideology is a bulwark against frustration, resistance, and factionalism. It is the scaffolding of a new and alternative community of believers. Also necessary to mount a viable challenge is an organizational structure that anoints leaders who set policy, assign tasks, and harness movement resources to goals. Together, ideology and hierarchy create the crucible for challenge and protest. Moreover, they shelter an alternative world, a community of activists whose loyalty is to the challenging group and a vision of a better world.

Critiquing the system through the lense of queerness is a way to recognize intersectionality while attacking the normative.

Mary Nardini gang 14 toward the queerest insurrection Printed clandestinely by the Mary Nardini gang, criminal queers from Milwaukee, Wisconsin Published Date: 20/06/2014 http://www.weldd.org/resources/towards-queerest-insurrection

The Perspective of queers within the heteronormative world is a lens through which we can critique and attack the apparatus of capitalism. We can analyze the ways in which medicine the prison System the church the State, marriage the media, borders, the military, and police are used to control and destroy us. More importantly we can use these cases to articulate a cohesive criticism of every way that we are alienated and dominated. Queer is a position from which to attack the normative- more a position from which to understand and attack the ways in which normal is reproduced and reiterated in destabilizing and problematizing normalcy, we can destabilize and become a problem for the Totality. The history of organized queers as borne out of this position. The most marginalized- transfolk, people of color, sex workers have always been the catalysts for riotous explosions of queer resistance These explosions have been coupled with a radical analysis wholeheartedly asserting that the liberation for queer people is intrinsically tied to the annihilation of capitalism and the state. It is no wonder then that the first people to publicly speak of sexual liberation in this country were anarchists or that those in the last century who struggled for queer liberation also simultaneously struggled against capitalism racism and patriarchy and empire. This is our history.

The LGBT movement is inherently intersectional – all revolutionary movements are fighting against the heterosexual system of oppression

Mieli, leader in the Italian gay movement, 1980 (Mario, Libcom, "Towards a gay communism" 1980, https://libcom.org/library/gay-communism-mario-mieli, MMV)

Today, the real revolutionary movement includes above all else the movement of women and gays, in struggle against the system and the heterosexual phallocentrism that upholds it, chaining to it the (male) proletariat itself. The organisations of the left, on the other hand, essentially male and male supremacist, heterosexual and anti-homosexual, support the public and private capitalist Norm, and hence the system itself. The movement of revolutionary women has shaken the entire society, putting in crisis even those groups who call themselves revolutionary and yet have so far been ramparts of male supremacist bigotry. Even the movement of conscious homosexuals, revolutionary or at least open to a vision of themselves and the world that is different from the traditional one, can no longer be simply neglected by the left politicos. The parties of the left, great and small, now have to try and recuperate homosexuals too, though I think Stalin would still turn in his grave at the very idea.

The heterosexual left, in dealing with the homosexual question, is trying a similar recuperation, if on a lesser scale, to that which it has effected vis-a-vis feminism. Up till only recently, the thieving and 'fascist' government, for the extra-parliamentary left, was also obviously 'queer'. Today, however, it seems even a gay person can prove himself a 'good comrade', a 'valuable activist in the service of the proletariat', while it is also opportune that all 'good comrades' should begin to take account of the contradictions inherent in the sexual sphere. The contrast is blatant. On the one hand, the term 'queer' is used as an insult; on the other, the wolf dresses up as a lamb, preaching acceptance and understanding for homosexual comrades.

For almost all activists in these groups, the homosexual question is a problem of secondary importance, 'superstructural' and involving only a minority. 'We must tolerate homosexuals, so that they don't cause trouble by questioning our heterosexuality and pretending that we too would like to get fucked in the arse'. This last type of reaction enables us to grasp, behind the appearance of a new and more open attitude, the really closed mentality of the heterosexual 'comrades'. And, as a general rule, I would reply : Dear comrade, you are upset when someone questions the repression of your homosexual desire ? And don't tell me : 'You can do what you like among yourselves, but don't interfere with me', when you are not free to desire me, to make love with me, to enjoy sensual communication between your body and mine; when you rule out the possibility of sexual relations with me. If you are not free, then how can I be free ? Revolutionary freedom is not something individual, but a relation of recipocity : my homosexuality is your homosexuality.

I believe that homosexuals are revolutionary today in as much as we have overcome politics. The revolution for which we are fighting is among other things the negation of all male supremacist political rackets (based among other things on sublimated homosexuality), since it is the negation and overcoming of capital and its politics, which find their way into all groups of the left, sustaining them and making them counter-revolutionary.

Critical Race Feminism and Queer theory must be combined *to succeed.*

Saffin 8 BODIES THAT (DON'T) MATTER: SYSTEMS OF GENDER REGULATION AND INSTITUTIONS OF VIOLENCE AGAINST TRANSGENDER PERSONS: A QUEER/CRITICAL RACE FEMINIST CRITIQUE By LORI A. SAFFIN DOCTOR OF PHILOSOPHY WASHINGTON STATE UNIVERSITY Program of American Studies AUGUST 2008

The merging of Critical Race Feminism (CRF) with Queer Theory serves as one such intervention into political and theoretical dialogizing. In juxtaposing two non-analogous theoretical discourses, understandings of sexuality and race are complicated, thereby breaking down unitary and monolithic subjectivities/identifications that these theories (generally) assume and demand. The fusion of Queer Theory with Critical Race Feminism emphasizes the idea that sexuality and race are not disparate constituents of identity but systems of meaning that inherently define one another. Race and sexuality do not exist independently of each other: Race is always sexualized and sexuality is always raced.10 The integration of these two critical and theoretical postures not only makes disciplinary boundaries more permeable, but also allows for a construction of identity that accounts for the imbrication of race, class, gender and sexuality

Embracing queerness opens up space for fluidity across identity and therefore incentivizes effective coalitions across lines of class, race, and gender.

Bassi 14 Tick as Appropriate: (A) Gay, (B) Queer, or (C) None of the Above: Translation and Sexual Politics in Lawrence Venuti's A Hundred Strokes of the Brush Before Bed Serena Bassi Cardiff University, School of Modern Languages, Leverhulme Early Career Fellow Comparative Literature Studies > Volume 51, Number 2, 2014

As a response to these critiques of mainstream gay politics, a new category emerges that attempts to make sense in radically critical ways of the cultural territory inhabited by those who do not live heterosexual lives. The expression "queer," derived from an explicitly homophobic vocabulary, is reappropriated as a sign through which to reject the "homonormative" paradigm of gay politics. The rejection articulated by the term "queer" is twofold: the concept both highlights the fluid nature of identity and takes distance from the liberal political objective of inclusion. In the realm of academia, queer theory—notably in the work of authors such as Teresa de Lauretis, Eve Sedgwick, and Judith Butler—has critiqued the notion that sexual and gender identity is ever fully knowable and fixed, as well as the idea that there should be a causal link between the sex that an individual is assigned at birth (female or male), their gender expression (feminine or masculine), and their sexual desires.23 Beyond academia, "queer" has emerged as a political paradigm in its own right which seeks to generate alternative ways of imagining the political struggle of those whose lives are not knowable by means of heterosexual categories. Instead of defining an identity that is different from mainstream society exclusively on the basis of sexual desires, "queer" is an open-ended signifier which, for Allan Bérubé, stands for everything that is understood as "perverse, … odd, outcast, different and deviant."24 Instead of constituting community on the basis of a fixed, identitarian principle, "queer" has been read as able to "affirm sameness by defining a common identity on the fringes."25 In other words**, it allows us "to open up possibilities for coalition across barriers of class, race and gender**," that is, to build political alliances on the margin with a broader struggle for liberation in mind.26 Finally, "queer" may also help us imagine an intervention in public discourse that goes beyond liberal ideas of what constitutes "political action" and envisage a form of agency that is even more oppositional, as well as fluid and changeable.

Permutation solves – analyzing oppression of queer bodies alongside postcolonial, feminist, critical race, and materialist studies is necessary in order to interrogate all facets of modern oppressive power.

Oswin 08 [Natalie Oswin, Urban and Social/ Cultural Geography, Associate Professor in the Department of Geography, Critical geographies and the uses of sexuality: deconstructing queer space," 2008 http://phg.sagepub.com/content/32/1/89.full.pdf]//JIH

The experiences of non-heterosexuals are no longer excluded within critical geographical work. This important change is undoubtedly the result of various disciplinary engagements with queer theory. And for as long as non-heterosexuals are discriminated against, queer spaces will remain something that, to borrow Spivak's phrase, queers cannot not want. So there is certainly a need for the recent geographical readings of queer spaces that help us understand queer cultural politics as contested sites in which racializations, genderings and classed processes take place. There are also other geographical uses for queer theory. Much of the work that I have highlighted adopts a queer approach to such issues as transnational labour flows, diaspora, immigration, public health, globalization, domesticity, geopolitics and poverty. It demonstrates the use of queer theory to these central concerns of critical geography far beyond analysis of their relationship to gay, lesbian, bisexual or transgendered lives. Once we dismiss the presumption that queer theory offers only a focus on 'queer' lives and an abstract critique of the heterosexualization of space, we can utilize it to deconstruct the hetero/homo binary and examine sexuality's deployments in concert with racialized, classed and gendered processes. Queering our analysis thus helps us to position

sexuality within multifaceted constellations of power. As critical geographers seek to understand these constellations, the advancement of a queer approach alongside postcolonial, feminist, critical race and materialist approaches will most certainly help to ask new questions and illuminate a broader range of critical possibilities.

Ableism

Approaching disability from the starting point of queer theory

Puar 09 [Jasbir Puar, professor of women's and gender studies at Rutgers University, Women and Performance: a journal of feminist theory, Vol. 19, No. 2, July 2009, http://planetarities.web.unc.edu/files/2015/01/puar-prognosis-time.pdf]//JIH

I am particularly interested in approaching these questions from the vantage point of queer theory to put duress on assumptions about what queer bodies are, and to see what queer methods obtain once we let go of the discrete organic queer body as its literal referent. I am reminded of a recent comment by Elizabeth Povinelli, who notes that queer theories remain mired in and beholden to ''a certain literalism of the referent'' of its narrowly constructed proper object.7 (Which calls forth the following questions: Why do we need a literal referent? How literal is the referent? And then, What is that literal reference?). Queer disability studies has taken up these issues, pushing at the boundedness of bodies, by exploring the 'mutation' or deviance of a body that is purportedly whole and organic.8 While it has generally pursued these questions around the subjectivities and political agendas that are and ought to be produced through the intersections of subject formations like ''queer'' and ''disabled'' (that is, queer disabled subjects or disabled queer subjects), these intersections push at the definitional boundaries of each term. In large part, this is because these intersections remind us certainly at the very least because they remind us of the historical entanglements that have produced disabled bodies as already queer (both in their bodily debilities and capacities but also in their sexual practices regardless of sexual object choice) as well as queer bodies that are allegedly intrinsically debilitated. As Robert McRuer writes, ''despite the fact that homosexuality and disability clearly share a pathologized past . . . little notice has been taken of the connection between heterosexuality and able-bodied identity''. ''Compulsory able-bodiedness'' and compulsory heterosexuality are mutually constituitive, argues McRuer.9 But I would also add, compulsory able-bodiedness is absolutely a prerequisite not only for homonationalist subjects but also for certain exceptional queer subjects, those imbued with a self-proclaimed capacity for transgression, subversion, or resistance.

Antiblackness

The particular framework of interrogating necropolitical queer complicities is crucial in order to break down forms of violent whiteness.

Thobani 14. Sunera Thobani, professor in the Institute for Gender, Race, Sexuality and Social Justice at the University of British Columbia, "Prologue," *Queer Necropolitics*, Routledge, 2014, -pg. xv

Violence and **whiteness** constitute the **intractable foundation** of colonial sovereignty and its processes of subjection, argued Fanon (1961) in his radical anti- colonial praxis. Drawing on Fanon's insights, Mbembe (2001) points out that in the **'terror formation'** that is the colony, power takes the form of **commandment** as it **incorporates colonizing subjects** into its **murderous projects** of conquest. Embedded in the depths of such stubbornly brutal terrain, power in the postcolony assumes the form of

necropolitics as 'it makes the **murder** of the **enemy** its **primary** and **absolute objective'** (Mbembe 2003: 12).

In the 21st-century post/colonial formation that is the 'war on terror', the simultaneous constitution of the West and its many rests **relies no less** on **occupation**, **invasion** and **genocide**, albeit in changing configurations and with emergent practices enacted by differentially positioned subjects. For, as Mbembe has astutely noted, 'modernity was at the origin of multiple concepts of sovereignty' (2003: 13). In other words, while liberal democracy **celebrates its citizen-subjects**, the **mark of extermination** that **infuses** its **racial logic** of power gives rise to **the 'Indian' reserve**, the **slave plantation**, the **native quarter**, the **Bantustan**, the **Nazi camp**, as well as the **slums**, **prisons** and **refugee camps** proliferating around the world (Thobani 2012).
