If, however, Obama wishes for a task force to build political momentum toward reform, he'll want a broader group. Based on my experience on the staff of President Bush's 2001 reform commission and work with the White House on reform in 1995, here are a few quick thoughts: First, to build any political momentum a working group should represent the reasonable spectrum of views on Social Security. Something like the DiamondOrszag reform proposal probably represents a reasonable bound on the left, as it retains the current program in pretty much its current form while making it sustainably solvent almost entirely through increased taxes. Something like the President's Commission's "Model Two" is a reasonable bound on the right, since it likewise makes the program sustainably solvent entirely by reducing benefits. There are folks on both the left and right whose views make it such that any reform compromise would be almost impossible – on the left, because many believe Social Security doesn't even face a deficit, and on the right because they believe that simply borrowing a few trillion dollars and investing it in personal accounts will fix the whole problem. Neither view is correct. It may be possible to get some folks further left on board by proposing auto-correction policies that only come into effect to the degree the system faces deficits; I discuss one option in this paper. If they're right that Social Security doesn't face any shortfall, nothing will change. One problem with President Bush's 2001 Commission was that it didn't represent the reasonable spectrum of beliefs on Social Security reform. This didn't make it a dishonest commission; like President Roosevelt's Committee on Economic Security, it was designed to put flesh on the bones laid out by the President. In this case, the Commission was tasked with designing a reform plan that included personal accounts and excluded tax increases. That said**, a commission** only **builds political capital toward enacting reform if it's seen as building a consensus through a process in which all views have been heard.** In both the 2001 Commission and the later 2005 reform drive, Democrats didn't feel they were part of the process. They clearly will be a central part of the process this time, but the goal will now be to include Republicans. Just as Republicans shouldn't reflexively oppose any Obama administration reform plans for political reasons, so Democrats shouldn't seek to exclude Republicans from the process. Second, a reform task force should include a variety of different players, including members of government, both legislative and executive, representatives of outside interest groups, and experts who can provide technical adavice and help ensure the integrity of the reforms decided upon. The 2001 Bush Commission didn't include any sitting Members of Congress and only a small fraction of commissioners had the technical expertise needed to make the plans the best they could be. A broader group would be helpful. Third, any task force or commission needs time. The 2001 Commission ran roughly from May through December of that year and had to conduct a number of public hearings. This was simply too much to do in too little time, and as a result the plans were fairly bare bones. There is plenty else on the policy agenda at the moment, so there's no reason not to give a working group a year or more to put things together.

Drones

NEG

Warrants PIC 1NC Shell

The United States federal government should implement a maximum duration of twenty four hours on drone operations and delete any superfluous data gathered from drone operations within a 30 day period.

Drone warrants & technology restrictions gut law enforcement effectiveness – limits on mission duration and data retention are sufficient to prevent a surveillance state.

McNeal '14 (Gregory McNeal - is a professor at Pepperdine University School of Law and a contributor to Forbes. He is an expert in law and public policy with a specific focus on security, technology and crime, November 2014, "Drones and Aerial Surveillance: Considerations For Legislators," *Brookings*)

To counter the threat of surveillance, privacy advocates have focused solely on requiring warrants before the use of drones by law enforcement. Such a mandate oftentimes will result in the grounding of drone technology in circumstances where law enforcement use of drones would be beneficial and largely non-controversial. For example, in light of the Boston Marathon bombing, police may want to fly a drone above a marathon to ensure the safety of the public. Under many bills, police would not be allowed to use a drone unless they had a warrant, premised upon probable cause to believe a crime had been or was about to be committed. This requirement exceeds current Fourth Amendment protections with regard to the reasonableness of observing activities in public places. What this means is that the police would need to put together a warrant application with sufficient facts to prove to a judge that they had probable cause. That application would need to define with particularity the place to be searched or the persons to be surveilled. All of this would be required to observe people gathered in a public place, merely because the observation was taking place from a drone, rather than from an officer on a rooftop or in a helicopter. In a circumstance like a marathon, this probable cause showing will be difficult for the police to satisfy. After all, if the police knew who in the crowd was a potential bomber, they would arrest those individuals. Rather, a marathon is the type of event where the police would want to use a drone to monitor for unknown attackers, and in the unfortunate event of an attack, use the footage to identify the perpetrators. This is precisely the type of circumstance where the use of drone could be helpful, but unfortunately it has been outlawed in many states. To make matters worse, this type of drone surveillance would pose little to no harms to privacy. A marathon is a highly public event, the event is televised, it takes place on streets where there are surveillance cameras and spectators are photographing the event. Moreover, in the states where drones have been banned (unless accompanied by a warrant), **the police have not been prohibited from using any other type of surveillance equipment** --- just drones. This technology centric approach has done little to protect privacy, but will certainly harm public safety, **depriv**ing **law enforcement of a tool that they could use to protect people.** While warrants are appealing to privacy advocates**, the enactment of overly broad restrictions on drone use can curtail non-invasive, beneficial uses of drones**. **Legislators should reject a warrant-based, technology centric approach** as it is unworkable and counterproductive. Instead, legislators should follow a property rights centric approach, coupled with limits on persistent surveillance, data retention procedures, transparency and accountability measures and a recognition of the possibility that technology may make unmanned aerial surveillance more protective of privacy than manned surveillance. This paper makes five core recommendations: Legislators should follow a property rights approach to aerial surveillance. This approach provides landowners with the right to exclude aircraft, persons, and other objects from a column of airspace extending from the surface of their land up to 350 feet above ground level. Such an approach may solve most public and private harms associated with drones. Legislators should craft simple, duration-based surveillance legislation that will limit the aggregate amount of time the government may surveil a specific individual. Such legislation can address the potential harm of persistent surveillance, a harm that is capable of being committed by manned and unmanned aircraft. Legislators should adopt data retention procedures that require heightened levels of suspicion and increased procedural protections

for accessing stored data gathered by aerial surveillance. After a legislatively determined period of time, all stored data should be deleted.

Legislators should enact transparency and accountability measures, requiring government agencies to publish on a regular basis information about the use of aerial surveillance devices (both manned and unmanned). Legislators should recognize that technology such as geofencing and auto-redaction, may make aerial surveillance by drones more protective of privacy than human surveillance.

2NC – No Warrants Key 2 Solve Intel DA

Warrant-free use and technological advances are core components of law enforcement

***note: this is a re-underlining of Reid evidence from the 1NC Crime Turn – don't read it twice!

Reid, 2014 (Melanie, Professor of Law at Lincoln Memorial University, "GROUNDING DRONES: BIG BROTHER'S TOOL BOX NEEDS REGULATION NOT ELIMINATION," *Journal of Law and Technology*, 20:3, Online: http://jolt.richmond.edu/index.php/grounding-drones-big-brothers-tool-box-needs-regulation-not-elimination/)

If state and federal legislators are successful and remain on a determined course to restrict application of drones, drone use may be severely limited, similar to what took place after the court decision on thermal imaging. After the Kyllo decision in which the Court held that thermal imaging constituted a search under the Fourth Amendment,[260] law enforcement was no longer able to use the technology to assist in building sufficient probable cause for a search warrant. Admittedly, thermal imaging allows law enforcement the ability to collect intelligence within private dwellings, i.e., locations where the owner has a reasonable expectation of privacy. Drone surveillance collects intelligence in public areas where there is no such expectation of privacy. Law enforcement needs a variety of investigatory tools that can be used without a warrant in order to gather enough facts for probable cause to justify search and arrest warrants. If government becomes significantly limited in its ability to collect information in a reasonable and impartial manner, the ability to investigate a complaint and determine if a crime has been committed will be hindered. Drone use is a reasonable, non-intrusive technique and should be one of those investigatory tools available to law enforcement agencies. Public safety requires that law enforcement have the ability to leverage every reasonable investigatory tool at its disposal to uphold the law and bring criminals to justice. Some techniques which are intrusive and infringe on privacy issues need to be closely monitored and regulated. [95] Public concern is understandable—thousands of drones from both the public and private sector will soon be accumulating a significant amount of information once FAA regulations are put in place by 2015. Drone technology is in its infancy stage. Future drones may be lighter, simpler, with longer flight times and have the ability to act/react to given situations based on software programming without human intervention. Previously, laws were passed to regulate new technology after its effects and impact on society were determined. In the case of drones, state and federal legislatures are attempting to get ahead of the curve and pass laws based on what drones can be expected to do in the future. I think we are getting ahead of ourselves. The drones of today are the same as aircraft and helicopters which are currently used to conduct aerial surveillance. There is no need to place greater restrictions on drones than regular aircraft. The unintended victims of such a law would be smaller law enforcement agencies that cannot afford their own aircraft or helicopter. Inexpensive drone technology would allow all law enforcement agencies to operate on a level playing field in the use of aerial surveillance for investigations.

2NC – No Warrants Key 2 Solve Intel DA

Warrants impede criminal investigation

Reid, 2014 (Melanie, Professor of Law at Lincoln Memorial University, "GROUNDING DRONES: BIG BROTHER'S TOOL BOX NEEDS REGULATION NOT ELIMINATION," *Journal of Law and Technology*, 20:3, Online: http://jolt.richmond.edu/index.php/grounding-drones-big-brothers-tool-box-needs-regulation-not-elimination/)

Law enforcement has a select group of investigatory tools it can use without triggering Fourth Amendment protections. Surveillance of suspects is one of the oldest tools that law enforcement has used to collect information and determine whether criminal activity is occurring. [160] It is one of the first steps of any criminal investigation. The idea that a warrant would be needed to surveil a suspect would effectively cripple any investigation before it even got off the ground. [51] Only a certain number of investigatory tools are given Fourth Amendment protection. If all investigatory tools were outside the Fourth Amendment, then it would be virtually impossible for law enforcement to ever gain probable cause to seek a warrant. Therefore, law enforcement requires methods and tools that are permissible under Fourth Amendment protections in order to allow for the collection of sufficient information to use as probable cause for an arrest, search, or warrant for other, more intrusive investigatory tools.

2NC – Tech Key 2 Solve Intel DA

Drones Warrants Protect the Public

Friesen 13 (Sarah, "Contrary to Popular Belief, Drones Not All Bad", April 18, 2013, http://dailysignal.com/2013/04/18/contrary-to-popular-belief-drones-not-all-bad/)

Last week, Politico published an article on America's misconception of drones, and why those misconceptions can, and should, be remedied. As technology advances, the ways in which it can be exploited grows. Drones are no exception. While steps need to be taken to ensure that privacy rights are protected from drone activities, the U.S. should not unnecessarily restrain such a valuable technology.¶ Today, the public has a negative perception of drones—to put it mildly. The connotation is generally that of Big Brother watching Americans going about their daily lives—all under the guise of keeping us "safe," of course. This is far from reality.¶ Drones do, in fact, provide many services that keep Americans safe.¶ Border patrol security¶ Emergency preparation and disaster response¶ Cargo delivery (private sector)¶ Maritime domain awareness¶ Environmental monitoring (flooding, dams, levees, etc.)¶ Law enforcement (pursuit or search and rescue)¶ Arguably, these are all things that need to be done. Drones provide a cheaper platform that keeps the pilot out of any potential danger. This raises the obvious question: If drones have good uses, then why do people think they are so bad?¶ Ellen Tauscher, former Undersecretary of State for Arms Control and International Security says that a big contributor to the problem is that "there are too many different names being used to describe the technology." Having so many names floating about only exacerbates an already confusing topic.¶ One of the many names for drones is "unmanned aerial vehicle." This is entirely inaccurate. Drones, like planes and helicopters, do have pilots, but they fly the drones remotely.¶ Another aspect of the confusion surrounding drones, according to Politico, is the secrecy that shrouds how the military uses them. It seems that this secrecy has led to speculation that has tainted the American public's view of drones in general, both military and non-military. America needs to ensure that guidelines for the domestic usage of drones are based on fact, not speculation.¶ Generally, drones can and should be regulated by the laws already in place dealing with aerial surveillance. This is the route that should be taken instead of requiring a warrant for drone usage in the U.S. This would not only severely restrict the effectiveness of drones but also **be a misapplication of the Fourth Amendment**.¶ The government and the private sector need to present a coherent and clear picture to the American people of what drones really are. If the public's inaccurate and negative perception of drones is not altered, it could influence policy to the point of depriving America of a truly valuable tool.¶

A2: Case is a DA

The aff impact claims are speculative at best – legislating warrant requirements off of half-baked public perception of drones is overkill, instead we should pursue minimal restrictions until the impacts of the technology can be accurately assessed.

McNeal '14 (Gregory McNeal - is a professor at Pepperdine University School of Law and a contributor to Forbes. He is an expert in law and public policy with a specific focus on security, technology and crime, November 2014, "Drones and Aerial Surveillance: Considerations For Legislators," *Brookings*)

The emergence of unmanned aerial vehicles in domestic skies raises understandable privacy concerns that require careful and sometimes creative solutions. The smartest and most effective solution is to adopt a property rights approach that does not disrupt the status quo. Such an approach, coupled with time-based prohibitions on persistent surveillance, transparency, and data retention procedures will create the most effective and clear legislative package. Legislators should reject alarmist calls that suggest we are on the verge of an Orwellian police state.[73] In 1985, the ACLU argued in an amicus brief filed in California v. Ciraolo that police observation from an airplane was "invasive modern technology" and upholding the search of Ciraolo's yard would "alter society's very concept of privacy." Later, in 1988, the ACLU argued in Florida v. Riley that allowing police surveillance by helicopter was "Orwellian" and "would expose all Americans, their homes and effects, to highly intrusive snooping by government agents..." In a different context in 2004 (before the advent of the iPhone) police in Boston were going to use Blackberry phones to access public databases (the equivalent of Googling). Privacy advocates decried the use of these handheld phones as "mass scrutiny of the lives and activities of innocent people," and "a violation of the core democratic principle that the government should not be permitted to violate a person's privacy, unless it has a reason to believe that he or she is involved in wrongdoing."[74] Reactionary claims such as these get the public's attention and are easy to make, but have the predicted harms come true? Is the sky truly falling? We should be careful to not craft hasty legislation based on emotionally charged rhetoric. Outright bans on the use of drones and broadly worded warrant requirements that function as the equivalent of an outright ban **do little to protect privacy or public safety** and in some instances **will only serve to protect criminal wrongdoing.** Legislators should instead enact legislation that maintains the current balance between legitimate surveillance and individuals' privacy rights. The best way to achieve that goal is to follow a property centric approach, coupled with limits on pervasive surveillance, enhanced transparency measures, and data protection procedures.

A2: Warrants key to Accountability

Requiring warrants is unnecessary – limitations on data collection and retention are sufficient to solve without destroying essential law enforcement tools.

***note: this is a re-underlining of Yang evidence from the 1NC Crime Turn – don't read it twice!

Yang 2014 [Douglas, J.D., Boston University School of Law, 2014 | "BIG BROTHER'S GROWN WINGS: THE DOMESTIC PROLIFERATION OF DRONE SURVEILLANCE AND THE LAW'S RESPONSE," The Boston University Public Interest Law Journal| 23 B.U. Pub. Int. L.J. 343]

The arrival of drones within United States airspace calls for the creation of a new judicial analysis and for the enactment of new bedrock principles in state and federal legislative bodies. Drone use should not be subject to a mere application of the current judicial framework because unmanned drones have the ability to negate the inherent weaknesses that current manned surveillance techniques possess, n211 much in the same way current surveillance techniques can perform tasks that previously required physical trespass.n212 Because drones are quieter, n213 smaller, n214 cheaper, n215 tireless, n216 and are more capable than traditional [*373] platforms of observation, n217 the legal standards by which they are tested must reflect these realities. Mere application of current law is inadequate because current law already struggles to keep up with technological change. n218 The legislature and Judiciary must not fall into Olmstead's trap of stubborn rigidity; these institutions must allow for "more flexibility to protect a broader concept of human dignity at a time when information technology [has] outstripped what property rights alone [can] protect." n219 Any new standard that courts and legislatures could reasonably be expected to apply must be grounded in law, reality, and logic. For the purposes of this Note's analysis, this Note will lay out a general proposition that **using a warrant-focused scheme incorrectly addresses the privacy problem that drones present**. Following this proposition, this Note will then recommend an alternative to the blanket **warrant** requirement for **drone** surveillance missions. B. Replacing the Blanket Warrant Requirement with Bright-Line Rules While popular among both state and federal legislative responses, [n220] compelling a government entity or agent to obtain a warrant before allowing most drone surveillances mission to take off prohibitively disadvantages government [*374] drone use because such a broad requirement imprecisely applies the blunt force of a warrant's power. Here, the inexact application of a broad restriction inevitably leads to an odd and unreasonable result: under a blanket warrant requirement scheme drones would be unable to perform, without a warrant, some of the same surveillance tasks from the same locations that helicopters and airplanes have been authorized to execute without warrants for decades. [n221] Society should not simply hamstring drone use because of its "fear that rapidly advancing science and technology is making [surveillance] more and more effective." [n222] Rather, there should balance a between legitimate government needs and society's privacy interest. Instead of employing a blanket warrant requirement that overly burdens drone use, legislatures should focus on bringing drones into parity with traditional forms of aerial surveillance, such as airplanes and helicopters. Rather than focus almost exclusively on methods applied, legislatures should also look to results attained: "what information does the government acquire as a result of making the observations?" [n223] This conception of privacy runs in tandem with the Supreme Court's line of opinions that look to the functional result of government action, including Justice Brandeis's dissent in Olmstead and the majority opinion in Katz. [n224] However, abandoning a blanket warrant requirement does not necessary entail abandoning warrants altogether; the following Six Rules for **Drone** Usage ("Rules") apply **warrant** requirements in certain situations and scenarios.

Behavior Pattern Recognition / TSA

NEG

Reform BPR 1NC Shell

The United States federal government should reform the Transportation Security Administration's use of Behavioral Pattern Recognition by instituting baseline staff hiring and training standards as well as enhanced training programs for Behavior Detection Officers.

Hiring and training reforms are key to revamp the US BPR program and solve for racial bias.

Cotton 15 (Transportation Security Specialist)

(Brent A., March 2015, "STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," *NAVAL POSTGRADUATE SCHOOL)*

The TSA SPOT program must continue to evolve, as it is one of the few layers that provide a real time threat assessment outside of the known technology countermeasures. Adversaries are constantly studying the TSA's countermeasures and are exploring mechanisms and concealment techniques to defeat them; however, it is far more difficult for terrorists to conceal their involuntary emotional, physiological, and physical responses that will occur while engaged in high-stakes deception. While the TSA should continue to pursue the basic corrective action needed to fulfill the GAO and OIG recommendations, it should also be considering the strategic direction of the SPOT program, including how to improve effectiveness and defensibility to make SPOT a legitimate, contributing, aviation security program. Considering creative solutions to complex problems aligns with the TSA's commitment to becoming a high performing organization. This most revealing part of this study is the inconclusive and controversial nature of the academic literature in this field. Essentially, no literature evaluating behavior detection in totality is available; the majority of the literature focuses on lie detection in an interview setting, or deception detecting with similar experiment conditions. Additionally, this study finds the academic literature in this field to be too dependent on studies using only trivial lies and unmotivated lie tellers as experiment conditions and test participants. Conclusions about SPOT should not be drawn from academic research relying on these conditions. While this field of study collectively acknowledges the limitations of the experiment conditions, more research in the field of high-stakes lies and deception detection in an airport environment is needed to make conclusive claims about TSA SPOT. Areas in which the literature is in general agreement are: 1) verbal and non-verbal cues to deception do exist, 2) no "Pinocchio's nose" telltale indicator of deception exists, 3) deception can be easier or more difficult to detect depending on the skill of the liar, 4) high-stakes lies may be easier to detect than trivial lies due to the powerful emotions associated with a motivated lie, 5) cues to deception may be more evident during personal lies, and 6) lie catchers can be trained to elicit indicators from liars by increasing their cognitive load. This study concludes that SPOT is a valuable layer of aviation security, but needs to be evolving with the academic research and enhancing their capabilities as more is learned about the science. The GAO, OIG, and now this thesis, have analyzed SPOT with similar findings. The strategic shifts recommended in this thesis align with the TSA's current efforts to become a more effective and efficient organization, and are intended to address the strategic gaps of the program. The TSA should consider major changes to SPOT to improve the security value and provide credibility and defensibility to this misunderstood program. A summary of the recommendations is provided as follows. • Establish an operational baseline performance metric for existing BDOs using arrests/prohibited item to referral ratio. • Develop hiring criteria based on a study of psychometric and other attributes of high performing BDOs. • Place additional hiring emphasis on candidates possessing program-enhancing characteristics, such as language skills and cultural competency/background. • Conduct all SPOT training at FLETC using established procedures. • Revise

SPOT curriculum to include explanation of TSA authority, cultural, political, and socioeconomic variables that affect a person's behavior, and how personal biases affect response to those variables. • Offer advanced training classes in areas that will add value at the checkpoint, as well as offer career advancement opportunities for the BDOs (by collecting and demonstrating proficiency in advanced training areas). • Collaborate with agencies training spy craft or undercover techniques to test BDOs covertly or overtly. It is imperative that the TSA continue to develop the SPOT program to maintain a threat agnostic and unpredictable layer difficult for adversaries to "game."

Solvency – Hiring Reforms

New hiring criteria would make BPR more successful in detecting and stopping terrorist threats

Cotton 15 (Transportation Security Specialist)

(Brent A., March 2015, "STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," *NAVAL POSTGRADUATE SCHOOL)*

A key to the success of the TSA's controversial SPOT program is to ensure that the workforce is comprised of the best possible candidates, ideally with aptitude for the task. A 2008 study on deception detection noted that the average person is slightly better than random at identifying when a person is lying or trying to deceive.93 However, the study also identified several groups that were much better at detecting deception than the average person. The groups included therapists, Secret Service agents, and other law enforcement types. The Secret Service agents were among the highest performing, presumably because of their training on scanning large crowds for non-verbal cues (similar to a BDO's function at an airport), and the low frequency of uncovering a plot or perpetrator (not predisposed to assuming a crime has been committed).94 Although other types of law enforcement did well, the commonality of frequently dealing with criminals may predispose them to a higher instance of type 1 errors (false positives). The study also noted that certain individuals had a "genius level" aptitude for detecting deception, which indicated the need to identify their common characteristics and use them to develop specific core competencies to be used as BDO qualifications.95 The TSA should conduct human factors aptitude research to include psychometric testing (using industry recognized methods, such as Myers-Briggs or similar) to determine which traits occur most frequently in highly skilled behavior assessment officers (not limited to the TSA BDOs, but should include officers from other government agencies or industries using similar techniques). For example, a Meyers-Briggs assessment measures psychological preferences in the form of four dichotomies: extraversion/introversion, sensing/intuition, thinking/feeling, and judging/perceiving to come up with a personality type.96 As an experiment, the TSA's human factors branch could select high performing BDOs (using some form of logical performance data as criteria, such as referral to arrest ratio) and administer the Meyers Briggs to determine what patterns are consistent in the psychological predispositions of high performing BDOs. If patterns emerge (such as strong marks toward sensing versus intuition, or thinking versus feeling), then the TSA can incorporate them into hiring criteria, or use it as a basis for further research or even custom aptitude test development. Additionally, a 2012 study in the Journal of Forensic Psychiatry and Psychology notes that research suggests certain characteristics, such as age, profession/experience, and handedness/hemispheric dominance, can play a role in deception detection aptitude.97 Attempting to find the most appropriate candidate for a job is not a new concept. The Department of Defense uses their armed forces vocational aptitude battery (ASVAB) to determine the vocational aptitude for new military recruits.98 While a basic aptitude test, the TSA should consider a similar model to find the best possible candidates for SPOT. Candidate selection is a key element for the effectiveness and consistency of the program moving forward, and finding candidates with appropriate aptitude should be a priority for the TSA. Hiring best qualified/prepared applicants based on psychometric assessment of aptitude and scientifically proven core competencies also provide much needed defensibility and credibility to the program, which is a major shift in strategic hiring practices for the TSA, and will likely be met with many hurdles, including union pushback.

Solvency – Hiring Reforms

Only the revisions through application of the psychometric assessment of aptitude and scientifically proven core competencies to the candidates is the only way to maintain the security of TSA

Cotton, 2015 (Brent A, Transportation Security Specialist, Transportation Security Administration, Arlington, VA B.S., University of West Florida, "*STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," March 2015)*

The TSA should conduct human factors aptitude research to include psychometric testing (using industry recognized methods, such as Myers-Briggs or similar) to determine which traits occur most frequently in highly skilled behavior assessment officers (not limited to the TSA BDOs, but should include officers from other government agencies or industries using similar techniques). For example, a Meyers-Briggs assessment measures psychological preferences in the form of four dichotomies: extraversion/introversion, sensing/intuition, thinking/feeling, and judging/perceiving to come up with a personality type.96 As an experiment, the TSA's human factors branch could select high performing BDOs (using some form of logical performance data as criteria, such as referral to arrest ratio) and administer the Meyers Briggs to determine what patterns are consistent in the psychological predispositions of high performing BDOs. If patterns emerge (such as strong marks toward sensing versus intuition, or thinking versus feeling), then the TSA can incorporate them into hiring criteria, or use it as a basis for further research or even custom aptitude test development. Additionally, a 2012 study in the Journal of Forensic Psychiatry and Psychology notes that research suggests certain characteristics, such as age, profession/experience, and handedness/hemispheric dominance, can play a role in deception detection aptitude.97 Attempting to find the most appropriate candidate for a job is not a new concept. The Department of Defense uses their armed forces vocational aptitude battery (ASVAB) to determine the vocational aptitude for new military recruits.98 While a basic aptitude test, the TSA should consider a similar model to find the best possible candidates for SPOT. Candidate selection is a key element for the effectiveness and consistency of the program moving forward, and finding candidates with appropriate aptitude should be a priority for the TSA. Hiring best qualified/prepared applicants based on psychometric assessment of aptitude and scientifically proven core competencies also provide much needed defensibility and credibility to the program, which is a major shift in strategic hiring practices for the TSA, and will likely be met with many hurdles, including union pushback. However, the TSA must be committed to solving the hard problems if it wants to maintain this layer of security.

Solvency – Training

Merge of the TSA developed BDOs with FLETC solves for laundry lists of impacts

Cotton, 2015 (Brent A, Transportation Security Specialist, Transportation Security Administration, Arlington, VA B.S., University of West Florida, "*STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," March 2015)*

According to TSA Deputy Administrator John Halinski, the TSA is in the process of centralizing most of their training into the Office of Training and Workforce Engagement (OTWE) to maintain and enhance the capabilities of TSA employees while providing a consistent training experience.102 To accomplish this goal, in April 2012, the TSA established a training presence at DHS's FLETC in Glynco, Georgia. Although a component of the DHS, FLETC is an inter-agency training organization that has trained more than 1,000,000 law enforcement officers from 91 different government agencies or partner organizations.103 FLETC's approach to instruction is to maintain "a mix of permanent, detailed, and recently retired staff (to) provide an appropriate balance of training expertise, recent operational experience, and fresh insight from the field."104 Not surprisingly, FLETC maintains a behavioral science division responsible for designing and administering courses in the many aspects of human behavior. One of the principal topics it addresses is interview skills for criminal investigators and law enforcement officers. Of the topics covered in these classes, several would be directly applicable to the BDO position including interviewing strength and weakness forum, eye accessing cues and behavioral baselines, question types to elicit admissions, subject elimination interviews (ruling out a threat), and cognitive interviews. While it will require dedication to collaboration, it fits perfectly into the TSA training strategy of providing a consistent professional experience to all TSA employees. The TSA will need to consider whether the entire training can be done at FLETC, or if it will still need a small course focused on CONOPS to be taught locally. Either way, the TSA can address some of the GAO and OIG's valid complaints regarding underperforming instructors and inconsistent BDO performance across the country. Additionally, the TSA will be able to leverage existing instructional design and instructor expertise on the topic while potentially building a new course that may be desirable to other agencies or countries. This strategic shift has other intangible benefits as well, such as creating an esprit de corps and sense of camaraderie amongst the workforce. It is no coincidence that the members of the armed forces have all attended a "basic training" after which their sense of accomplishment bonds them together and creates a sense of pride. The TSA can improve the effectiveness of the program by providing a more consistent training experience administered by professional instructors and practitioners at a highly respected educational institution. Leveraging the expertise and reputation of FLETC's 40-year law enforcement training heritage also provides credibility and defensibility to the program, as FLETC's credentials have never been in question. Additionally, the TSA may be able to re-focus existing BDO instructors by assigning them the lower-skill tasks of providing local update training or facilitating continuing education as necessary. While a major strategic shift for the SPOT program, it coincides perfectly with the agencies new effort to centralize training for consistency, while leveraging existing government resources.

Solvency – Training

Reformations of the BDO's basic training understanding how cultural, political, and socioeconomic variables provide the strong baseline for TSA.

Cotton, 2015 (Brent A, Transportation Security Specialist, Transportation Security Administration, Arlington, VA B.S., University of West Florida, "STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," March 2015)

Understanding how cultural, political, and socioeconomic variables impact passengers' appearance, behavior, and response to questioning, should be a major focus of SPOT training. While the BDOs will learn through experience over time what the specific cultures and reactions are at their airport, a strong baseline in cultural competency would be beneficial. One way to identify the differences between people and their behaviors is to understand the similarities. As an example of improving training content, the BDOs curriculum could focus on basic physiological/psychological elements, such as the six universal emotions as described by Dr. Paul Ekman. Dr. Ekman contends that all cultures respond similarly to the same basic human emotions, with the big six being anger, happiness, surprise, disgust, sadness, and fear (see Figure 5).105 An understanding of what all cultures have in common provides a valuable baseline for performing BDO duties.

A2: Case is a DA

Behavior Pattern Recognition models have been proven effective internationally – the issue is HOW the TSA implements the program. Reforms solve.

Zumwalt, 2013 [James, Lt. Col., U.S. Marines, retired, "Outside view: Putting TSA's SPOT program on the spot, http://www.upi.com/Top_News/Analysis/Outside-View/2013/07/23/Outside-View-Putting-TSAs-SPOT-program-on-the-spot/31441374552240/]

The Israeli aviation security model has been so successful that in the last 50 years, no terrorist has successfully hijacked or bombed an Israeli aircraft or a foreign aircraft departing from Israel. The 1986 Hindawi incident reveals how the Israeli security method trains personnel to weigh a range of factors so, even when telltale behavior isn't visible -- i.e., a bomb planted on an unwitting passenger -- detection is still possible. Nezar Hindawi, a Jordanian terrorist working for the Syrian government, took Anne-Marie Murphy -- an Irish housemaid -- as a lover. She became pregnant; he disappeared. Five months later, he suddenly reappeared, professing his love and desire to marry her. He told her to catch the next El Al flight to Tel Aviv, where his parents eagerly awaited her arrival. When a surprised but pleased Murphy said she needed to pack, Hindawi handed her a small bag for the trip, explaining he would follow on the next flight but she needed to depart quickly for hers. Murphy raced off to London's Heathrow airport. Her single carry-on bag was X-rayed and she was motioned on to El Al. (Despite domestic security, El Al always performs its own.) There, Murphy was asked questions for which her answers immediately raised concerns. Despite an uneventful X-ray of her carry-on bag, it was opened and a secret pocket discovered. Cut open, it held 3.3 pounds of the plastic explosive Semtex but no detonator. Re-examining the bag's contents, a small handheld calculator was found, an altimeter detonator hidden inside to effect a sympathetic detonation of the Semtex. Murphy's naivete could have cost 375 lives had it not been for alert security. Questions put to her included: Where she was going (responding, "To visit the Holy Land") and where she would stay (responding, "Hilton hotel"). Trained to focus on inconsistencies, security couldn't resolve, among other things, why a 5-month pregnant women would travel to Israel on vacation with a single carry-on bag and on a non-existent hotel she identified. Such security's success lies in interacting with all passengers -- asking pertinent questions -- to identify irresolvable issues and whether a passenger poses a threat. It is a process fine-tuned over the years, easily integrated into current international and domestic aviation security systems. It requires empowering trained employees to make decisions based not solely on automatic government regulations but individual passenger assessments. TSA's SPOT program, in force for five years, was recently criticized by the U.S. Department of Homeland Security's Inspector General for lacking an objective and strategic plan. A billion dollars spent to date to train 5 percent of TSA's workforce has yet to "ensure that passengers are screened objectively or show that SPOT is cost effective or worthy of expansion." U.S. Rep. Bennie G. Thompson, D-Miss., has put SPOT on the spot, seeking to prevent the waste of any more tax dollars for failing to improve aviation security. TSA has made some smart moves. It added to its course roster threat-oriented training focusing on security questioning and passenger threat assessment. This approach is important because it encourages decision-making based on a professional evaluation of the behavior, the story and the situation, regardless of the risk population to which the passenger belongs (old, young, frequent traveler or first-time traveler). "Chameleon Associates (which provides this training) represents the kind of approach and methods TSA, once created, should have immediately implemented," says Arik Arad, a leading aviation security specialist who consults with government and private aviation stakeholders. If only wielded effectively, SPOT could be "spot on" in improving aviation security. Right now, TSA appears lost in a process not fully understood, evidenced by claims of racial profiling. If performed correctly, SPOT isn't profiling suspects by race but conducting threat categorization to identify potential terrorists. SPOT is a methodology focusing on all passengers -- from point of airport roadside curb entry all the way to the boarding gate. Through interaction and security-related questions, passengers are identified for further screening to ensure a threat posed is dealt with effectively and respectfully -- ensuring unresolved passenger issues don't result in "criminal" treatment. Thus, anyone harboring ill intent is effectively dealt with before boarding the plane. An effective SPOT program incorporates two security elements, predictive screening and threat categorization identification, into

the passenger check-in process -- minimizing intrusive and timely screening procedures and increasing interaction with each and every passenger. Understanding and correctly identifying behavioral concerns is key to successful and efficient aviation security. TSA's Friday announcement of the threat posed by new "underwear bomber" technology makes this particularly urgent. There is a danger in eliminating the SPOT program, which actually only requires fine-tuning, to make it more effective. TSA may want to talk to behavioral "duty experts" about doing so.

A2: BPR Inherently Flawed

Advantages to SPOT o/w – here are 6 reasons why

Florence and Friedman '09 [Justin Florence – Associate in O'Melveny & Myers LLP - J.D. @Yale Law School - M.A Harvard University, Robert Friedman – Associate in Venable LLP – J.D. Georgetown University, 12/27/2009, "PROFILES IN TERROR: A LEGAL FRAMEWORK FOR THE BEHAVIORAL PROFILING PARADIGM," http://www.georgemasonlawreview.org/wp-content/uploads/2014/03/17-2_FlorenceandFriedman.pdf]

First, and most fundamentally, behavioral profiling provides an additional layer of security and another opportunity for homeland security officials to identify potential threats. That is to say, the appropriate question is not whether behavioral profiling is superior to other layers of security— such as hardened cockpit doors, baggage screening, and metal detectors— but rather, whether it enhances security when used in addition to those programs. Second, a core lesson of 9/11 is that it is people, not particular tools, weapons, or objects that pose the greatest threat. The simple box-cutters used as weapons by the 9/11 hijackers are no longer allowed through security, but surely cunning terrorists can devise suitable alternatives if they wish to perpetrate violence on an airplane. Whether through plastic knives, liquid explosives, or blunt objects, it seems unlikely that screening objects alone can eliminate the risk of terrorism. As a TSA spokesman put it, "[s]omewhere out there the needle in the haystack is a bad guy. If our behavior detection officer's [sic] give us better odds of finding that needle, we're going to use every tool we can while protecting the rights and privacy of passengers."70 Behavioral profiling is not the only aviation security tactic that focuses on people—watchlists serve the same function. But again, behavioral profiling can be used in addition to watchlists, and, given the numerous problems with watchlists,71 behavioral profiling may well be more effective. At a minimum, behavioral profiling focuses on the actual individual in question, not just a name. Third, compared to subjecting all passengers to high scrutiny (as the Israeli model does), targeted behavioral profiling along the lines of SPOT is a more efficient use of resources. SPOT allows TSA officials to focus only on particular individuals for more intensive questioning, maximizing the effectiveness of available resources. Fourth, and similarly, behavioral profiling is far less burdensome and invasive for individuals than would be a questioning of every single traveler, as in the Israeli model.72 If the United States were to adopt that approach, passengers would face lengthy delays and be forced to reveal extensive information about themselves. From the standpoint of passenger convenience and air travel expediency, the SPOT program seems to benefit from two important attributes. Because SPOT is based on visually observable behavioral cues, the program is executed through non-intrusive means and effective implementation does not require conducting physical searches. And unlike mandatory baggage screening procedures which apply to all passengers and create delays, long lines, and increased hassle, enforcing SPOT does not necessitate stopping every passenger who walks through the airport. For an air travel population that already registers a strong distaste for TSA and the burdens of aviation security, the less intrusive the passenger impact, the more likely the public will tolerate a security measure.73 Moreover, in passing a law to implement the recommendations of the 9/11 Commission, Congress included a provision directing TSA to reduce the average security-related delays in airports to less than ten minutes— which certainly could not be achieved were every passenger interviewed.74 Fifth, behavioral profiling need not involve any explicit racial or ethnic profiling. This has several advantages. It has a security value, in that it does not permit an individual to evade detection merely because he or she does not have a racial or ethnic appearance that seems to signal a terrorist. Law enforcement experts generally contend that observing an individual's behavior is far more valuable than profiling based on race or ethnicity alone.75 Further, this type of profiling is likely to improve public support for and confidence in the program, by lending it additional legitimacy. Sixth, anecdotal evidence suggests behavioral profiling can yield results. In a recently publicized incident, a BDO identified five men in a security screening line at Washington D.C.'s Dulles International Airport whose behavior seemed suspicious. TSA immediately notified the Metropolitan Washington Airports Authority Police Department. Subsequent questioning revealed that all five passengers had entered the U.S. illegally and possessed likely-fraudulent identification.76 Some of the publicly available results of SPOT also include: identification of a passenger carrying surveillance photos of high-risk buildings and bridges; interception of a man wearing several layers of clothing with wires extending from his sleeves to a black box he was carrying; and the detection of several passengers who were sitting separately but making clandestine signs to one another, while pretending not to know each other, and who later admitted to being paid $5,000 to travel between airports and observe security.77 And recently, a Jamaica-bound passenger aroused the suspicion of BDOs, who, working in conjunction with the Orlando Police Department, the Orange County Bomb Squad, and the Federal Bureau of Investigation, uncovered everything needed to make a bomb in the passenger's checked bag.78 In sum, behavioral profiling has the potential to provide more effective security, at a lower cost, with less disruption of innocent people, than other counter-terrorism screening techniques. As new research into human behavior develops alongside emerging technologies, security officials will have the power and ability to profile more people in more places in more different ways.

The behavioral profiling paradigm offers the promise of better security alongside more liberty and less hassle for travelers.

A2: No Solve Crime/Terrorism NB

TSA Reform is Key to Effective Security Measures

Kaplan 09(Eben, "Target for Terrorists: Post 9/11 Aviation Security", Sept 7, 2006, Council on Foreign Relations, http://www.cfr.org/border-and-port-security/targets-terrorists-post-911-aviation-security/p11397)

Some critics say that by focusing so heavily on screening passengers, security officials have left aircraft vulnerable to attack in other areas. Foremost among these, experts say, is air cargo security. In addition to carrying travelers' baggage, the lower deck of many airliners holds a sizeable amount of airfreight. Though 100 percent of passengers' checked luggage is required to be screened for explosives, according to a Congressional Research Service report (PDF), only a small portion of the air cargo is ever inspected.¶ Others criticize the ease with which airline and airport employees bypass security checkpoints when entering secure areas. Some experts have called for the use of biometric identification for such access. There are also concerns over the potential of an attack by terrorists using a shoulder-fired anti-aircraft missile: In 2002 terrorists fired such a missile at an Israeli charter jet as it took off from Mombasa, Kenya. The Department of Homeland Security has commissioned prototypes of anti-missile systems but it remains unclear when, if ever, such systems will be implemented. ¶ Despite the heightened focus on passenger screening, it too remains a magnet for criticism. At a hearing of the House Committee on Transportation and Infrastructure, John Mica (R-FL), chairman of the Subcommittee on Aviation, lamented, "The TSA's current baggage screening system continues to show no ability to adapt or keep pace with the ever-changing demands of the aviation industry. At the same time that the patchwork system is getting bogged down by its own inefficiencies, there is growing evidence that it does not even afford us more effective security screening." More advanced technologies could improve screening procedures, but the deployment of new devices has been slow. ¶ As for prescreening passengers, Shanks says, "In principle it's a good idea, but in practice it doesn't always turn out that way." The watch lists compared with passenger manifests are just lists of names. Ordinary passengers with names similar to ones on the list have at times been stopped, and Shanks says there's little to stop a terrorist from creating a false identity. Homeland Security Secretary Michael Chertoff seems to agree. In an August 29 Washington Post op-ed, he called for screening measures that would allow U.S. officials access to such data as passengers' cell phone numbers.¶ One approach, called behavior pattern recognition (BPR), uses behavior clues to identify potential terrorists during passenger screening. Rafi Ron, former director of security at Tel Aviv's Ben Gurion airport and now a security consultant working with the TSA to implement BPR programs at U.S. airports, says if BPR is widely implemented it will "add a very important security layer to our aviation [system]." The technique involves first identifying passengers exhibiting suspicious behavior, such as wearing heavy clothing on a warm day, excessive sweating, or using a pay phone in areas with cell phone reception. Individuals identified in this way are then selected for targeted interviews with a law enforcement officer who is trained to detect signs that a passenger is concealing something. Ron describes these interviews as "friendly conversations;" most are only a few minutes long. The vast majority of the passengers questioned like this are allowed to continue on their travels; the few passengers who arouse an officer's suspicions are subjected to an hour-long interrogation and search. Naccara, who has used BPR at Logan Airport for three and a half years, says it works "extremely well."¶ The TSA is testing BPR under a program called Screening Passengers by Observation Technique, or SPOT. Ron says that while no terrorists have been netted, several criminals have been arrested. Yet the process is not foolproof: Shoe-bomber Richard Reid was targeted for an interview by a security guard before boarding a flight from Paris to Miami. The conversation aroused the guard's suspicions, who referred Reid to French law enforcement for further questioning scrutiny. French officials, Ron says, did not properly search Reid, who was wearing a bomb during the entire interrogation.¶ Implementing advanced technology has been widely touted as a means of improving airport security. There are a number of new technologies that may eventually be incorporated into the screening process. These include:¶ Backscatter X-rays can trace the contours of a person's body and reveal any hidden objects, such as non-metallic weapons, plastic explosives, or drugs. Some critics argue these devices reveal too much and are an invasion of privacy, though filters can be added to protect a passengers' modesty.¶ Trace-detection portals or "puffers" can be used to detect explosive residue on a passenger by blowing small bursts of air at the person being screened. These puffs are designed to dislodge molecules from a person's body or clothing, and the air is sucked into a filter and analyzed for suspicious

substances. The same method may be used on luggage.¶ Quadrupole Resonance Scanning is a way of identifying materials packed in passengers' baggage. A scanner bombards a passenger's suitcase with radio waves and examines the wavelengths of the energy emitted by the contents of the bag. This method has been used to detect some 10,000 different substances. ¶ Polygraphs, or lie detectors, as they often called, have long been used in other settings, but in 2006, the TSA began testing a polygraph-like system for passenger screening. In this new system, passengers enter a booth, place one hand on a sensor, and answer a series of questions on a touch screen. The sensor measures such things as blood pressure, pulse, and sweat levels, analyzing them to determine if the person is lying. ¶ While improved techniques and advanced technology can certainly help to make air travel safer, there is no magic bullet. "There will always be vulnerabilities," Naccara says, "We should never be satisfied; we should always be looking for improvements."¶ Do other countries have the same security measures as the United States?¶ No. Specific security measures vary from country to country. General standards for minimum security measures are dictated by the International Civil Aviation Organization (ICAO), but those standards are not always met. Even if foreign airports are screening 100 percent of passengers' baggage, as the ICAO requires, Shanks says, "Other countries may be using technology that is not the best." This might explain how in August 2006, a U.S. college student boarded a plane in Argentina with explosive powder and a stick of dynamite in his checked bag.¶ Some countries have security measures that surpass those of the United States. Tel Aviv's airport is widely regarded as the safest in the world. There, airport officials interview every single passenger using the same BPR techniques that are currently being tested in the United States. Interviewing 100 percent of the passengers, Ron says, "has proven to be more effective than any other aviation security measure," but cultural and legal obstacles have prevented implementation of such a program in the United States.¶

A2: No Solve Crime/Terrorism

Effectiveness cannot be measured on number of terrorists caught

Cotton 15 (Transportation Security Specialist) (Brent A., March 2015, "STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," *NAVAL POSTGRADUATE SCHOOL)* SPOT = Screening Passengers by Observation Techniques

The GAO notes that the SPOT program has not caught a single terrorist, which indicates that the program is not an effective anti-terrorist tactic. As a simple bullet point, the claim is certainly accurate, but taken in context may not be indicative of a lack of effectiveness. No known plots or attack attempts against domestic aviation have occurred since 9/11, which means no relevant data is available from which to draw conclusions about the effectiveness of any aviation countermeasure or program. Additionally, all TSA security programs (and most other domestic anti-terrorism programs) are operating in the same environment. Given the low frequency of terrorist attacks originating in the United States,success cannot be measured by the number of terrorists captured. By this logic, the United States should also stop inspecting luggage and persons at the airport and borders, since no terrorists have been captured using these methods. The logic used by the GAO is akin to saying that a designated hitter in a baseball game is ineffective because he got zero hits in the game. It may be true that he did not get a single hit, but that data point is not sufficient to draw conclusions about his performance. To assess his effectiveness, it is also essential to know how many at bats the hitter attempted. In both cases (SPOT and the baseball player) the data alone does not provide sufficient backing from which to draw conclusions about effectiveness. The low frequency of terrorist attacks (or lack of data) makes it difficult for either the GAO or TSA (really all of the DHS) to understand the effectiveness of anti-terrorist programs. However, it may be that SPOT and other security programs are providing an intangible level of deterrence, which makes aviation an unattractive terrorism target due to the adversaries' reduced likelihood of success, whether real or perceived.

A2: Statistics Prove BPR Useless

SPOT only needs more statistics in order to make a successful process

Cotton 15 (Transportation Security Specialist) (Brent A., March 2015, "STRATEGIC IMPROVEMENTS TO TSA SPOT PROGRAM," *NAVAL POSTGRADUATE SCHOOL)* SPOT = Screening Passengers by Observation Techniques

A combination of claims that SPOT needs to 1) establish a method to measure performance of the BDOs, and 2) establish data input controls to ensure the accuracy of data, which leads this study to conclude that SPOT has a strategic metric issue. Collecting data with sufficient accuracy can be easily addressed operationally, but must be done before any data can be used and analyzed to indicate effectiveness. However, the larger problem is that SPOT needs to establish metrics that, when analyzed, would be indicative of performance. The lack of fidelity into SPOT performance has led the GAO to withhold budget from SPOT, but worse than that, suggests that the TSA may not actually know how effective the program is. The TSA can demonstrate that SPOT regularly identifies criminals at the checkpoint, those intending to commit or in the act of committing a crime, such as smuggling, kidnapping, human trafficking, child pornography, etc. (see Figure 3). It is indicative of some success since persons engaged in high-stakes deception will react predictably to the fear of discovery. Unfortunately, it is not possible to obtain a true P(d) (using criminal identification as proxy data) because it is not possible to also know how many persons actively engaged in criminal or deceptive behavior have passed through the system without being caught. It is impossible to prove the negative, which makes it impossible to obtain a true P(d), and complicates the analysis for both the GAO and TSA. Suggestions on how to understand and begin measuring effectiveness are included in Chapter V.

NB: Ptx

Reform popular – elimination not

Port, 2012 [Rob, editor of SayAnythingBlog.com. In 2011 he was a finalist for the Watch Dog of the Year from the Sam Adams Alliance and winner of the Americans For Prosperity Award for Online Excellence. In 2013 the Washington Post named SAB one of the nation's top state-based political blogs, and named Rob one of the state's best political reporters, "We Don't Need to Reform the TSA, We Need To Get Rid of the TSA, https://sayanythingblog.com/entry/we-dont-need-to-reform-the-tsa-we-need-to-get-rid-of-the-tsa/#authorInfo]

According to Politico, political ire aimed at the rubber-gloved freedom fondlers at the TSA runs the gamut from libertarian-leaning Republicans to liberal Democrats. It seems like just about everybody is upset with the TSA, and political ideology has nothing to do with it. So in an environment like that you'd think the TSA would be headed for the chopping block, but you'd be wrong. There are a lot of plans to reform the TSa. Republican Rep. Marsha Blackburn wants to stop the TSA from wearing uniforms that make them look like police officers. Democrat Senator Chuck Schumer wants to fund "passenger advocates" who would act as liaisons between travelers and TSA agents. Republican Rep. Paul Broun wants the head of the TSA to resign. And there are a myriad of calls for studies into how the TSA does its job, not to mention the health hazards of the scanners used by the agency. But one thing nobody is talking about is eliminating the agency altogether. Why? Probably because after a decade in existence, there are simply too many special interests making a good living from the TSA. Whether it's labor unions gaining many dues-paying members from among the ranks of the federal TSA employees or contractors raking in big bucks to supply the TSA with their security equipment, **it all adds up to a lot of political clout**.

Welfare

States CP

1NC

Text: The fifty states of the United States should eliminate their surveillance of recipients of mean-tested public benefits.

State-designed welfare programs spill upwards – 1996 reform proves

O'Connor, 2004 (Brendan, "A Political History of the American Welfare System: When Ideas Have Consequences," Rowman & Littlefield, p. 112)

Using the immediate pre-Reagan period as a baseline, a 1985 Urban Institute Report found the following reductions in social spending during Reagan's first term: AFCD, 14.5 perfect; food stamps, 13.8 percent; social service and community service block grants, 23.5 perfect and 37.1 percent, respectively; while spending for general employment training was cut by 38.6 percent (Greenberg, 1985: 191-192). These cuts represented a major arrest in the welfare spending trends that had developed since the establishment of the great society programs. Although Reagan could not abolish any of the major welfare programs, his administration changed the face of the American welfare system. It halted the expansion of welfare services, cut expenditures, and through Reagan's "New Federalism," it decentralized power to the fifty states in a number of areas. This decentralization of decision making about welfare policy and administration was a necessary forerunner to subsequent significant retrenchments. It allowed for the development of the welfare waiver programs under which states like Wisconsin and Mississippi developed new programs that represented significant departures from the federal welfare system. These pilot programs, in turn, became the basis for a new welfare system adopted in 1996 (Cammisa, 1998: 106).

Solvency

States solve better – more attuned to local constituents' needs

Carleson 03, senior fellow at the Free Congress Foundation for Education and Research. He served Ronald Reagan as welfare director for the State of California. (Robert B, "States Handled Welfare Reform, So Why Not Use Them Again," March 3, *humanevents.com,* http://humanevents.com/2003/03/03/states-handled-welfare-reform-so-why-not-use-them-again/)

The Congress is about to reauthorize for at least five more years the hugely successful welfare reform of 1996 with some useful changes proposed by President Bush. When it was about to be enacted in 1996 its opponents such as Sen. Daniel Patrick Moynihan (D.-N.Y.) and the Urban Institute predicted that ". . . within a year there will be a million children starving in the streets," and that states will ". . . race to the bottom." We who were proposing the historic reform challenged our opponents to name the governor, legislators, and states that would send their poor children to the streets to starve. Well, it is nearly seven years later and children are not starving in the streets, the nation's family welfare rolls have been cut in half and most mothers are supporting themselves and their children. The states have proven that they can do the job if given the responsibility. No other country in the world has as its basis a government that was established by independent states and has grown by adding states with the same authority as the original 13. Each state has a chief executive, and a legislature elected by its citizens and a court system responsible to its people. They have power to raise taxes and pass all laws not in conflict with the Constitution. They are close to the people and are in a much better position to determine need, enforce work requirements, and determine disability. So let's use them to follow up on family welfare reform by giving them the authority, responsibility and financial incentive to reform the other major welfare programs. These programs are: Medicaid, food stamps, and the Supplemental Security Income Program for the Disabled (SSID). All are open-ended entitlement programs and contain much waste fraud and abuse. Solution for Medicaid Medicaid should not be confused with Medicare. Medicaid provides health care for welfare families and for persons who are on welfare because of their age or disability and have little or no income. Medicare is a health care insurance program for the employed or retired after they reach the age of 65 or become disabled. They have contributed to Medicare throughout their working life with mandatory withholdings from their wages. Medicare is administered by the federal government. Medicaid is administered by the states and paid for by an open-ended federal-state matching program. The governors are screaming for increased federal matching for Medicaid spending. This would be the worst way to go. Federal matching simply causes more, not less, state spending since the more the state spends the more federal money flows in. The solution, as with family welfare, is to replace Medicaid with finite block grants to the states so that the states will have a financial incentive to ensure that waste is reduced or eliminated. Federal mandates should be removed or reduced to give states the ability to design systems to meet their individual needs. The money they save will stay in the state as a reserve against bad times or be used for other necessary state health needs. Controlling Food Stamps The food stamp program is worse. The federal government pays the full cost of food stamps and the states administer the program, paying half of the administrative costs. There is no incentive to eliminate fraud and abuse, since all the money saved is federal money and it costs the state money to administer anti-fraud and waste programs. In addition the federal government sets eligibility standards and benefit levels that may not be synchronized with state standards for their family cash welfare programs. The food industry strongly defends the food stamp program, but we can continue to print the food stamps. Instead of being an open-ended entitlement program for individuals, it should be replaced with finite block grants of stamps to the states, with eligibility and benefit requirements set by the state as they do now with family welfare. Instead of sending a check, the federal government can deposit a truckload of food stamps each month in the state and let the state decide how to distribute them. The savings from the fraud and abuse that is eliminated stays within the state, giving the state a strong incentive to see that the stamps go only to those who need them. Ending SSID Fraud The third program to be reformed as we did with the family welfare program is SSID (Supplemental Security Income Program for the Disabled). This is the program for people who are too disabled to work and have little or no income. In 1971 when I was welfare director for Gov. Reagan in California, the states still administered this program. I found that throughout California non-disabled people were being admitted to the welfare rolls as disabled. It was particularly bad in the Haight- Ashbury District of San Francisco where long-haired hippy doctors were issuing papers declaring their hippy friends disabled. We started a complete review of the cases throughout the state and cleaned the rolls. In 1973, however, the Nixon Administration moved SSID from state to federal administration with some states adding supplements to the federal grants. Knowing when someone is actually disabled and the degree of disability is difficult at best, but certainly cannot be done accurately at the national level. The requirement is that disability must be expected to last for at least a year, but in many instances disability

ends and the persons remain on the rolls. It has been reported that, indeed, some states have been moving their family welfare recipients to the federal disability rolls when in fact the people are not truly incapable of supporting themselves. In addition, SSID recipients are automatically eligible for Medicaid, for which the states are financially obligated to pay half the cost. The states were handling this program quite well until it was removed from them in 1973, and it should be block-granted to them, just as was done with family welfare. Much of the fraud and abuse can be detected and eliminated by the states and their counties, which are much closer to the people than the federal government. The money saved can stay within the state to be used for other pressing needs for disabled people. . We have proven that by ending the individual entitlement nature of family welfare and replacing it with finite block grants the states have been responsible and rolls have plummeted and thousands of families are self supporting. The dire predictions of opponents of welfare reform that the states would "rush to the bottom" and that a million children would be starving in the streets did not happen because states are responsible and care about the welfare of their people. Now that that argument is over, we should build on this success by doing the same with the three remaining welfare entitlement programs. It could be made voluntary for each state, but states that do not take it should receive no additional federal funding. Any governors or state legislators who do not accept the challenge would be sending a message to its voters that they are afraid to accept the responsibility. I am sure that other citizens more willing and able to do so would contest them in the next election.

States avoid the compromises inevitable in Congress

Tracinski 2015 (senior writer at The Federalist. He studied philosophy at the University of Chicago and for more than 20 years has written about politics, markets, and foreign policy)

(Robert, 6/1/15, "7 Way To Roll Back The Welfare State," *The Federalist, http://thefederalist.com/2015/06/01/7-way-to-roll-back-the-welfare-state/)*

Part of the reason we have such a bloated welfare state is because every decision in Congress has to be a compromise between "blue state" politicians who want more and more and more government and "red state" politicians who usually claim they want less. Hence my modest proposal that we kick these decisions back down to the state level, which is where they were always intended to be. This is not a foolproof solution, because we'll still occasionally get local handouts like ObamaCow. But the general idea is that we can let New York and California set up more generous welfare states—if they want to pay for them. And they should let the hinterland scale back welfare. Then the states can compete to see whose approach is more successful and how many people vote with their feet for the small government model. Even now, the results on this are encouraging, with low-tax, low-regulation states experiencing huge increases in population.

In the absence of reform, federal welfare will collapse

Mitchell, 2013 Dan Mitchell, Ph.D (in economics), is a Senior Fellow at the Cato Institute who specializes in fiscal policy, particularly tax reform, international tax competition, and the economic burden of government spending. He also serves on the editorial board of the *Cayman Financial Review.* (Dan Mitchell, "Decentralization and Federalism Is the Libertarian Way to Determine Whether a Basic Income Is Practical or Desirable", 12/18/13, *December Columns,* http://www.libertarianism.org/people/dan-mitchell)//ER

Mitchell argues against a national basic income, suggesting instead that federalism may provide a better solution to the problems of the current welfare state. Some libertarians argue that the state should provide a minimum basic income, mainly because this approach would be preferable to the costly and bureaucratic amalgamation of redistribution programs that currently exist. It's hard to disagree with **the** notion that the **current system is a failure**. The Cato Institute's Michael Tannerhas produced a searing indictment (http://object.cato.org/sites/cato.org/files/pubs/pdf/PA694.pdf) of the modern welfare state, pointing out that **more than $1trillion is spent every year on redistribution programs** for the ostensible purpose of alleviating economic hardship, yet (or more likely **as a result)the poverty rate is at an all-**

time high. Perhaps one reason poverty remains high is that such programs make leisure more attractive than work, as painstakingly illustrated (http://danieljmitchell.wordpress.com/2013/08/20/mirror-mirror-on-the-wall-which-states-provide-the-most-handouts-of-all/)inastudyproducedbyTannerandCharlesHughes.DECEMBER18,2013COLUMNS Moreover, **welfare programs create very high implicit marginal tax rates** (http://danieljmitchell.wordpress.com/2012/07/13/a-picture-of-how-redistribution-programs-trap-the-less-fortunate-in-lives-of-dependency/), making it very difficult for poor people to improve their living standards by engaging in additional productive behavior. **It's almost as if the system was designed to create permanent dependency**. So it's very understandable that well-meaning folks want to dismantle the current approach and try something new. The basic income certainly has the merit of being a big, bold idea. And advocates of the basic income can cite some very iconic libertarian figures who support at least some version of their approach, including Milton Friedman (http://www.amazon.com/Capitalism-Freedom-Fortieth-Anniversary-Edition/dp/0226264211), Friedrich Hayek(http://www.amazon.com/Law-Legislation-Liberty-Volume-Political/dp/0226320901),and Charles Murray(http://www.amazon.com/In-Our-Hands-Replace-Welfare/dp/0844742236).But if we're going to launch a very difficult battle to radically reshape well-entrenched bureaucracies and long-standing policies in DC, it seems reasonable to ask whether there might be a better road to Rome. There are several very practical and compelling reasons to be skeptical about the basic income proposal. The first concern is that **a guaranteed basic income may simply replace one form of government-financed dependency for another.** An economy's output is a function of the quality and quantity of labor and capital that are productively deployed. **That's** an argument for reducing the size of welfare state in order to encourage more work. But it's **no**t an **argument for creating a lump-sum form of redistribution.** That being said, a well-designed basic income presumably will not have the punitive implicit tax rates on those who decide to engage in productive behavior. Moreover, the army of bureaucrats who monitor and over see the current system wouldn't be necessary (though skeptics understandably wonder whether politicians actually would shrink the federal work force even if redistribution programs were axed). The second concern revolves around the question of durability. More specifically, there's no guarantee that politicians in the future won't re-create the current panoply of programs that the basic income is supposed to replace. The political incentives that existed when those programs were first created, after all, presumably would remain in a world where people get a pre-determined amount of cash from the government. This is largely speculative, to be sure. Interest groups would have an incentive to lobby for the creation of new programs with targeted beneficiaries. But perhaps the general public would understand that **even one new handout would be the first step on a slippery slope leading back to something akin to the current system**. A third concern is that the basic income may become overly generous, particularly in a fiscal system where a relatively small slice of the population pays an overwhelming share of the tax burden. In that kind of regime, there would be an incentive for a majority of voters to increase the amount of redistribution. It's unknown whether this would happen. Simply stated, the few experiments that might teach us about incentives with a system of basic income have been too limited to draw any firm conclusions. For those who want to review that literature, Jim Manzi (http://www.nationalreview.com/corner/259761/against-negative-income-tax-jim-manzi#!)has a good summary showing less-than-robust evidence for a basic income and Megan McArdle (http://www.bloomberg.com/news/2013-12-04/four-reasons-a-guaranteed-income-won-t-work.html)raises some very practical objections to the concept. Proponents of the basic income surely would respond by arguing that voters would understand that they were taxing themselves and thus be reluctant to make the basic income too large. The final concern, at least for many libertarians, is that **the federal government shouldn't be in the business of redistributing income**. The Constitution, for instance, does not list food stamps, welfare, housing subsidies, or Medicaid as enumerated powers of Congress in Article I, Section VIII. Supporters of the basic income surely would respond by stating that it's too late to make that argument. Limits on the role of government largely evaporated during the 1930s and it's pointless–even though perhaps intellectually satisfying–to make such arguments today.

A2 States Cause Poverty

Federalism creates variety in state policies--spurs innovation in welfare systems

Mitchell, 2013 Dan Mitchell, Ph.D (in economics), is a Senior Fellow at the Cato Institute who specializes in fiscal policy, particularly tax reform, international tax competition, and the economic burden of government spending. He also serves on the editorial board of the *Cayman Financial Review.* (Dan Mitchell, "Decentralization and Federalism Is the Libertarian Way to Determine Whether a Basic Income Is Practical or Desirable", 12/18/13, *December Columns,* http://www.libertarianism.org/people/dan-mitchell)//ER

The bottom line for advocates is that anything would be better than the current system, so why not try something new? They're right, but there's actually a better way of approaching the issue. Why not take all income-redistribution programs, put them into a single block grant, and then **transfer** the **money–and responsibility–to state governments**? In an ideal world, the block grant would gradually diminish so that states would be responsible for both the collection and disbursement of all monies related to welfare. But that's a secondary issue. **The** main **benefit of this federalist approach is that you stop the Washington-driven expansion of the welfare state and you trigger the creation of 50 separate experiments on how best to provide a safety net.** Some states might choose a basic income. Others might retain something very similar to the current system. Others might try a workfare-based approach, while some could dream up new ideas that wouldn't stand a chance in a one-size-fits-all system run out of Washington, DC. **And as states adopted different systems, they could learn from each other about what works and what doesn't work**. And since it's easier to influence decisions that are closer to home**,** taxpayers at the state level almost certainly would have more ability to impact what happens with their money. Moreover, there's actually some evidence that this approach is practical. **The 1996 welfare reform** legislation isn't a perfect analogy, but the core feature of that law was the elimination of a national entitlement and the **provision** of a block grant **so that states could decide** (with some strings attached) **how to deal with poverty**. By most measures, the 1996 reform **was a success**, with Ron Haskins of the Brookings Institution explaining (http://www.brookings.edu/research/testimony/2006/07/19welfare-haskins) that it resulted in lower levels of welfare dependency and reductions in child poverty. This isn't to say the 1996 law was ideal. The advantage of a comprehensive federalist approach is that policy experts can push states to experiment with different policies. And given the vast differences between various American states, it's almost guaranteed that there will be lots of diversity. LIBERTARIANISM.org(/) This **diversity** not only **will inform policymakers about what works and what doesn't work**. It also will satisfy the libertarian desire to get Washington out of the business of income distribution, **while** presumably **producing a system that** actually **does a better job of helping the less fortunate escape government dependency**. In other words, **all the advantages of the basic income plan without the potential system-wide downsides**

A2 Theory

It's real-world – fifty state policies is comparatively better than one federal policy

Mitchell 13, top expert on tax reform and supply-side tax policy at the Cato Institute (Daniel J, "Instead of a Government-Guaranteed Income, How About a Plan to End the Washington Welfare State?" December 21, *finance.townhall.com*, http://finance.townhall.com/columnists/danieljmitchell/2013/12/21/instead-of-a-governmentguaranteed-income-how-about-a-plan-to-end-the-washington-welfare-state-n1766795/page/full)

I agree, but only sort of. I like the idea of radical reform, but I think there's a better road to Rome. It's called federalism. The bottom line for advocates is that anything would be better than the current system, so why not try something new? They're right, but there's actually a better way of approaching the issue. Why not take all income-redistribution programs, put them into a single block grant, and then transfer the money – and responsibility – to state governments? Here's my argument for decentralization and federalism. In an ideal world, the block grant would gradually diminish so that states would be responsible for both the collection and disbursement of all monies related to welfare. But that's a secondary issue. The main benefit of this federalist approach is that you stop the Washington-driven expansion of the welfare state and you trigger the creation of 50 separate experiments on how best to provide a safety net. Some states might choose a basic income. Others might retain something very similar to the current system. Others might try a workfare-based approach, while some could dream up new ideas that wouldn't stand a chance in a one-size-fits-all system run out of Washington, DC. And as states adopted different systems, they could learn from each other about what works and what doesn't work. And since it's easier to influence decisions that are closer to home, taxpayers at the state level almost certainly would have more ability to impact what happens with their money.

Courts CP Negative

1NC Shells

ASPEC

Failure of the 1AC plan text to specify its agent kills negative ground and debateability –government power is divided into 3 branches.

Rotunda, professor of law at the University of Illinois, **2001 [**Richard, 18 Const. Commentary 319, "THE COMMERCE CLAUSE, THE POLITICAL QUESTION DOCTRINE, AND MORRISON", l/n, (m7,06)]

No one denies the importance of the Constitution's federalist principles. Its state/federal division of authority protects liberty - both by restricting the burdens that government can impose from a distance and by facilitating citizen participation in government that is closer to home. n8 Chief Justice Rehnquist, for the majority, agreed. The "Framers crafted the federal system of government so that the people's rights would be secured by the division of power." n9 The Framers of our Constitution anticipated that a self-interested "federal majority" would consistently seek to impose more federal control over the people and the states. n10 Hence, they created a federal structure designed to protect freedom by dispersing and limiting federal power. They instituted federalism [*321] chiefly to protect individuals, that is, the people, not the "states qua states." n11 **The Framers** sought to protect liberty by creating a central government of enumerated powers. They **divided power** between the state and federal governments, and they further divided power **within the federal government by splitting it among the three branches** of government, **and** they further divided the legislative power (the power that the Framers most feared) by splitting it between **two Houses** of Congress. n12

A. Aff conditionality – They can change their plan after hearing our strategy. This is uniquely bad because the plan is the only locus for negative arguments and preparation and is an independent voter.

B. Policy relevant education – when activists and lobbyists approach the government they have to pick which branch to approach. This is especially true on this topic because the implementation of surveillance policies vastly differs depending on which branch is used. Agents of surveillance can circumvent legislative decisions about individual surveillance programs while judicial decisions shut down all surveillance programs that violate a certain right. This is also a reason that their solvency evidence should detail which agent the aff uses.

C. Kills 1NC Strategy – Can't determine implementation without determining the agent. Not only are our DA links hurt, but the ability to have a competitive CP is lost because textual competition is the key basis for the community.

D. It's not what they do, but what they justify. Even if you think there is no in round abuse, they justify a worse model of debate. However, there is in round abuse because we couldn't read our sweet agent counterplans and agent based DAs since the aff had the possibility of no-linking out of them.

Generic Surveillance 1NC

The United States Supreme Court should [insert plan here].

Courts most Effective Actor in Curtailing Domestic Surveillance

Richards 13 (Neil M. May 20. Professor of Law at Washington University in St. Louis. "The Dangers of Surveillance" http://harvardlawreview.org/2013/05/the-dangers-of-surveillance/)

But as the chilling-effects doctrine has demonstrated, courts have managed to balance threats to free speech against competing government interests. Moreover, because the general details of government surveillance programs should be public, courts and litigants will have more information with which to assess the effects of surveillance. And even when publication of the details of surveillance might threaten ongoing investigations, such details could be released either under seal to the litigants or shared with the court. **Courts have a wide variety of tools to manage the flow of confidential information that litigation inevitably produces, and they would be well suited to such a task**. Such tasks may be difficult and require judgment, but that is the job of courts. The alternative to grappling with the civil-liberties threats that surveillance poses is to ignore those threats altogether, to face the prospect of rendering widespread government surveillance unreviewable and uncheckable. Democratic societies can do better than that. V. CONCLUSION The challenge to our law posed by the Age of Surveillance is immense. The justifications for surveillance by public and private actors are significant, but so too are the costs that the rising tide of unfettered surveillance is creating. Surveillance can sometimes be necessary, even helpful. But unconstrained surveillance, especially of our intellectual activities, threatens a cognitive revolution that cuts at the core of the freedom of the mind that our political institutions presuppose. Therefore, surveillance must be constrained by legal and social rules. The technological, economic, and geopolitical changes of the past twenty years have whittled away at those rules, both formally on their substance (for example, the Patriot Act and the expansion of National Se- 2013] THE DANGERS OF SURVEILLANCE 1965 curity Letter jurisdiction) and in practice (for example, the pressure that the technological social practices of the Internet have exerted on privacy). By thus recognizing the harms of surveillance and crafting our laws accordingly, we can obtain many of its benefits without sacrificing our vital civil liberties or upending the power balance between individuals on the one hand and companies and governments on the other.

XO 12333 1NC

The United States Supreme Court should amend Executive Order 12333 pursuant to the discontinuation of domestic elements of the Signal Intelligence Enabling Project of the National Security Agency.

Courts solve – backdoors that collect data are unconstitutional

Nakashima 5/7 [Nakashima, Ellen, national security reporter, "NSA program on phone records is illegal, court rules" Washington Post, https://www.washingtonpost.com/world/national-security/appeals-court-rules-nsa-record-collection-violates-patriot-act/2015/05/07/c4fabfb8-f4bf-11e4-bcc4-e8141e5eb0c9_story.html May 7, 2015]

A federal appeals **court ruled Thursday that the National Security Agency's collection of** millions of **Americans' phone records violates the** USA Patriot Act, marking the first time an appellate panel has weighed in on a controversial surveillance program that has divided Congress and ignited a national debate over the proper scope of the **government's spy powers**. In a blistering 97-page opinion**, a unanimous three-judge panel** of the U.S. Court of Appeals for the 2nd Circuit overturned a lower court and **determined that the government had stretched the meaning of the statute to enable "sweeping surveillance" of Americans' data in "staggering" volumes**. The ruling comes as Congress begins a contentious debate over whether to reauthorize the statute that underpins the NSA program or let it lapse. The court did not issue an injunction ordering the program to stop. The NSA's mass collection of phone records for counterterrorism purposes — launched after the Sept. 11, 2001, terrorist attacks — was revealed by former agency contractor Edward Snowden in June 2013. The revelation sparked outrage but also steadfast assertions by the Obama administration that the program was authorized by statute and deemed legal by a series of federal surveillance court judges. But the judicial rulings had taken place in secret until the Snowden leaks forced disclosure of once-classified opinions. Under the program, the NSA collects "metadata" — or records of times, dates and durations of all calls — but not call content. The government has argued that huge volumes of records — being collected from U.S. phone companies each day and stored in a database — are relevant to counterterrorism investigations because any record could later prove critical in identifying terrorism suspects. A series of judges on the secretive Foreign Intelligence Surveillance Court have agreed. **The appeals court**, however, **said "such an expansive concept of 'relevance' is unprecedented and unwarranted.**" In the ruling, written by Judge Gerard E. Lynch, the panel noted that **the government never "attempted to identify to what particular 'authorized investigation' " the data of all Americans' phone calls would be relevant.** "At its core," the panel said, "the approach boils down to the proposition that essentially all telephone records are relevant to essentially all international terrorism investigations." Saying **the collection has amounted to "an unprecedented contraction of the privacy expectations of all Americans,**" the court said the government's interpretation of the law would also allow for the bulk collection and storage of data associated with Americans' financial records, medical records, and e-mail and social-media communications. With the statute scheduled to expire June 1, a bipartisan coalition of lawmakers in the House and Senate is seeking to renew it with modifications that sponsors say will enable the NSA to get access to the records it needs while protecting Americans' privacy. The bill, the USA Freedom Act, is poised to pass the House next week. Meanwhile, Senate Majority Leader Mitch McConnell (R-Ky.) and the chairman of the Senate Intelligence Committee, Richard Burr (R-N.C.), have introduced a bill to maintain the program. But if that passes, the government will have to persuade the Supreme Court to reverse the 2nd Circuit decision in order to keep the program from ending. The court decision drew sharp responses from some Republicans on the Senate floor Thursday. "According to the CIA, had these authorities been in place more than a decade ago, they would have likely prevented 9/11," McConnell said. He said the USA Freedom Act would not "keep us safe or protect our privacy." Meanwhile the bill's sponsors — Sens. Patrick J. Leahy (Vt.), who is the ranking Democrat on the Judiciary Committee, and Mike Lee (R-Utah) — issued a statement saying: "Congress should not reauthorize a bulk collection program that the court has found to violate the law. We will not consent to any extension of this program." FBI Director James B. Comey told reporters that if Congress lets the statute, known as Section 215 of the Patriot Act, expire, the FBI will lose a useful tool. "But," he said, if that was to happen, "we press on." Administration officials have indicated they are likely to support the bipartisan legislation. But the American Civil Liberties Union and a coalition of groups on the left and the right are pushing to let the statute simply lapse, on grounds that it would end the NSA bulk collection while leaving in place adequate powers for the government to pursue terrorism cases. The appeals court, noting the impending deadline for the program, declined to grant a preliminary injunction to stop the NSA from collecting the ACLU's call records. "In light of the asserted national security interests at stake, we deem it prudent to pause to allow an opportunity for debate in Congress that may (or may not) profoundly alter the legal landscape," Lynch wrote. The ACLU, the plaintiff in the case, cheered the decision. "**This decision is a resounding victory for the rule of law," said**

ACLU staff attorney **Alex Abdo**, who argued the case before the panel in September. "**For years, the government secretly spied on millions of innocent Americans based on a shockingly broad interpretation of its authority. The court rightly rejected the government's theory that it may stockpile information on all of us in case that information proves useful in the future.**" White House officials said Thursday that they were evaluating the decision and declined to comment further. "The president has been clear that he believes we should end the Section 215 bulk telephony metadata program as it currently exists by creating an alternative mechanism to preserve the program's essential capabilities without the government holding the bulk data," said Edward Price, a National Security Council spokesman. "We continue to work closely with members of Congress from both parties to do just that, and we have been encouraged by good progress on bipartisan, bicameral legislation that would implement these important reforms." The ruling has scrambled the terms of the debate, strengthening the hand of those who want changes that go further than those called for in the USA Freedom Act, said civil liberties advocates. "The people who supported the current version of USA Freedom should start asking for more, because we can get more now," said Jennifer Granick, director of civil liberties at Stanford Law School's Center for Internet and Society. David O'Neil, a former acting head of the Justice Department's Criminal Division, said the ruling "seriously upsets the apple cart three weeks before the sunset." The issue is one that has split lower courts. The U.S. District Court for the District of Columbia held in December 2013 that the program was probably unconstitutional. The appeals court for the District has not yet ruled on that appeal. In its ruling, the U.S. Court of Appeals for the 2nd Circuit said it need not address the plaintiffs' claims that the NSA program violated their First and Fourth amendment rights, because the panel had already concluded the program was unlawful. The court rejected the government's argument that Congress ratified the program by twice reauthorizing Section 215, noting that many members and the public were unaware of how the legislation was being interpreted. It also rejected the government's argument that the ACLU lacked standing to challenge the program. Thursday's ruling was "sweeping and unambiguous," said Michael Sussmann, a former Justice Department official who is now a partner at Perkins Coie practicing surveillance law. "As the deadline quickly approaches, this is a bombshell that forces everyone to reconsider the political fault lines."

Empirics prove - the Supreme Court has the authority to strike parts/all of an Executive Order.

Strohman 08, [Kirk Strohman, LLC, *Executive Orders: The Power of the President's Pen*, Oregon Law Reviev, Vol. 87, No. 1, http://www.thelegality.com/2008/12/11/executive-orders-the-power-of-the-presidents-pen/]

In two more recent cases, the presidents' orders were rejected for conflicting with current law. In 1995, President Clinton signed Executive Order 12954 requiring executive agencies to withhold contracts from employers replacing striking employees. Secretary of Labor Reich was ordered to set specific regulations so that replacement workers, who were presumably less efficient, would not execute government contracts, resulting in higher costs of goods or services. Several organizations sued for injunctive relief arguing that the order violated the National Labor Relations Act (NLRA). The Court of Appeals for the District of Columbia held that Congress passed the NLRA with the intent that certain labor relations would be unregulated. Since the Clinton E.O. was regulatory by its nature, the NLRA – a legislative act of Congress – preempted the E.O. (the government did not seek Supreme Court review of the decision).ə Ten years later, the Supreme Court struck down an executive order from President Bush that ordered the Secretary of Defense to convene military commissions to try foreign enemy combatants detained at Guantanamo Bay. In Hamdan v. Rumsfeld, nearly five years after Bush signed the order, the Court found that the procedures of the order violated the Uniform Code of Military Justice and Article 3 of the Geneva Convention. This case was different from prior E.O. cases because Congress had indirectly supported the order. Congress passed the Detainee Treatment Act of 2005, intending to prevent the Supreme Court from hearing any cases brought by Guantanamo detainees. Nevertheless, the Court found a basis for jurisdiction to hear the case and struck down the order.

Bitcoin 1NC

The United States Supreme Court should substantially curtail the United States Treasury's regulatory domestic surveillance of digital currencies.

Courts Created Financial Security Surveillance and They Can reverse them

Nojeim 99 (April 20. Gregory T. SENIOR COUNSEL AND DIRECTOR, FREEDOM, SECURITY AND TECHNOLOGY PROJECT. "FINANCIAL PRIVACY, REPORTING REQUIREMENTS UNDER THE BANK SECRECY ACT" https://www.aclu.org/report/financial-privacy-reporting-requirements-under-bank-secrecy-act)

The Supreme Court ruled in United States v. Miller, 425 U.S. 435 (1976) that individuals do not have a "reasonable expectation of privacy" under the Fourth Amendment in financial records pertaining to them but maintained by a bank in the normal course of business. See also California Bankers Assoc. v. Shultz, 416 U.S. 21 (1974) (upholding the then limited reporting requirements of the Bank Secrecy Act. ACLU was a plaintiff in this case).∂ Unfortunately, with limited exceptions including the Right to Financial Privacy Act20 enacted in 1978 in response to these court rulings, Congress has consistently limited rather than expanded financial privacy. Indeed, one might rightfully conclude that in recent years, much more attention has been paid to efficiency in reporting and in expanding law enforcement use and access to that which is reported, than to protecting the privacy of the underlying personal transactions, and ensuring that information about innocent transactions is not turned over to the government. The time has come to reassess this course. ∂ In 1992 Congress amended the Bank Secrecy Act to authorize the Treasury Department to adopt the Suspicious Activity Reporting requirements.21 In essence, it gave the Treasury Department a blank check to require reporting of any "suspicious transaction relevant to a possible violation of law or regulation."22 At the same time, Congress completely insulated financial institutions from civil liability for reporting their customers as "suspects" to the government, and Congress barred financial institutions from telling their customers that their bank had spied on them by reporting their transactions. ∂ The Right to Financial Privacy Act is riddled with loopholes, including one very large loophole to accommodate financial institution reporting under the Bank Secrecy Act.23 Though the Right to Financial Privacy Act contemplates that notice will be given customers when financial records are transferred from one federal agency to another24 notice is not given when Suspicious Activity Reports are furnished by FinCEN to law enforcement officials. In terms of financial privacy, this is a sorry state of affairs. ∂ Members of Congress could take a number of steps to enhance financial privacy: ∂ First, instead of urging bank regulators to issue Know Your Customer regulations, creating more incentives for financial institutions to file more Suspicious Activity Reports25 and extending Suspicious Activity Reporting requirements to more businesses, Congress should legislate to ensure that "Know Your Customer" is excised once and for all from all Bank Secrecy Act compliance manuals and procedures.

Facial Recognition 1NC

The United States Supreme Court should end the use of facial recognition in United States domestic surveillance.

Courts can end Facial Recognition and solve better than the aff because they can spillover

Lynch 12 (Jennifer. July 18. Staff Attorney with the Electronic Frontier Foundation. "What Facial Recognition Technology Means for Privacy and Civil Liberties" https://www.eff.org/files/filenode/jenniferlynch_eff-senate-testimony-face_recognition.pdf)

The Fourth Amendment's prohibition of unreasonable searches and seizures presents a baseline protection for governmental biometrics collection in the United States.82 Although there are significant exceptions to Fourth Amendment protections that may make it difficult to map to biometric collection such as facial recognition, 83 a recent Supreme Court case, U.S. v. Jones, 84 and a few other cases85 show that courts are concerned about mass collection of identifying information—even collection of information revealed to the public or a third party—and are trying to identify solutions. Cases like Jones suggest support for the premise that although we may tacitly consent to someone noticing our face or our movements when we walk around in public, it is unreasonable to assume that consent extends to our data being collected and retained in a database, to be subject to repeated searches for the rest of our lives. This is buttressed by important privacy research showing that even though people voluntarily share a significant amount of information about themselves with others online, they still consider much of this information to be private in that they don't expect it to be shared outside of the networks they designate.86 In United States v. Jones, 87 nine justices held that a GPS device planted on a car without a warrant and used to track a suspect's movements constantly for 28 days violated the Fourth Amendment. For five of the justices, a person's expectation of privacy in not having his movements tracked constantly—even in public—was an important factor in determining the outcome of the case.88 Justice Sotomayor would have gone even further, questioning the continued validity of the third-party doctrine (holding that people lack a reasonable expectation of privacy in data such as bank records that they share with a third-party such as the bank).89 She also recognized that: [a]wareness that the Government may be watching chills associational and expressive freedoms. And the Government's unrestrained power to assemble data that reveal private aspects of identity is susceptible to abuse.90 She questioned whether "people reasonably expect that their movements will be recorded and aggregated in a manner that enables the Government to ascertain, more or less at will, their political and religious beliefs, sexual habits, and so on."91 The fact that several members of the Court were willing to reexamine the reasonable expectation of privacy test92 in light of newly intrusive technology could prove important for future legal challenges to biometrics collection. And some of the questions posed by the justices, both during oral argument and in their various opinions, **could be used as models for establishing greater protections for data like facial recognition that is both shared with a third party** such as Facebook **and gathered in public**.93

Drones 1NC

The United States Supreme Court should require warrants for all law enforcement operations utilizing drones, implement a maximum duration of twenty four hours on warranted operations, restrict sense-enhancing technology, and delete any superfluous data within a 30 day period.

Supreme Court's ruling on Dow Chemical Co. v. United States proves Supreme Court doesn't protect privacy rights from aerial surveillance.

Koerner 15 [Matther R. Koerner, Law Student at Duke University, "Drones and the Fourth Amendment: Redefining Expectations of Privacy", Duke Law Journal, Vol. 64, pages 1140-1142, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=3801&context=dlj]

By contrast, courts have not extended the same guarantees afforded to the home and its curtilage to areas deemed analogous to an open field.71 Open fields are not required to be either open or fields in the literal sense, but they typically fall outside of the home's curtilage.72 Accordingly, an absence or insufficiency of the enumerated factors establishing the curtilage of a home would denote an open field.73 The Court has found, for example, that a barn was located in an open field, rather than the curtilage, because the barn was fifty yards from a fence surrounding the home and sixty yards from the home, the barn was not surrounded by a fence, the barn "was not being used for intimate activities of the home," and the resident of the home "did little to protect the barn area from observation by those standing in open fields."74 Open fields do not share the same setting for private activities and information that the Fourth Amendment protects from governmental intrusions.75 Thus, a person may not expect privacy in an open field, and the government's conduct generally would not constitute a search.76 ¶ In Dow Chemical Co. v. United States, 77 the Supreme Court considered whether the curtilage or open-fields doctrine applied to the open areas between buildings on a large industrial property.78 The U.S. Environmental Protection Agency (EPA) conducted warrantless, aerial surveillance of a two-thousand-acre facility owned by Dow Chemical.79 Finding that the extensive, scattered outdoor areas of the complex were neither precisely the curtilage nor an open field,80 the Court concluded that the complex was more similar to an open field.81 Therefore, the Fourth Amendment's guarantees did not extend to these areas, and the government's actions did not constitute a search.82 ¶ The Supreme Court has recently adapted this property-rights paradigm to investigations of the home that would traditionally fall outside the trespass doctrine because they do not complete a traditional, physical trespass. This adaptation, expounded in Kyllo v. United States, 83 has extended the property-rights paradigm to certain invasive technologies in order to shelter the Fourth Amendment's guarantees from modern technology.84 This paradigm will likely play a critical role in evaluating the constitutionality of many sophisticated technologies employed by drones. In Kyllo, a federal agent, investigating whether Danny Kyllo was growing marijuana plants using heat lamps inside his home, used a thermal-imaging device from a public roadway to determine if there was an elevated amount of heat emanating from the walls of the home.85 The Supreme Court considered whether the government's use of the thermal imager constituted an unreasonable search and, more generally, "what limits there are upon [the] power of technology to shrink the realm of guaranteed privacy."86 The majority held that when the government uses sense-enhancing technology to acquire details from within "the home that could not otherwise have been obtained without physical 'intrusion into a constitutionally protected area,'" then this conduct constitutes an unreasonable search when the technology "is not in general public use."87

Courts Solvency Advocates

Courts Solve Surveillance

Court regulations on mass surveillance are stable

Millhiser 15 (Ian Millhiser - Senior Fellow at the Center for American Progress Action Fund and the Editor of ThinkProgress Justice, "Federal Appeals Court Rules That The NSA's Massive Surveillance Program Is Illegal", http://thinkprogress.org/justice/2015/05/07/3656228/breaking-federal-appeals-court-rules-nsas-massive-surveillance-program-illegal/, May 7th 2015)

A unanimous panel of the United States Court of Appeals for the Second Circuit held on Thursday that the National Security Agency's sweeping database of U.S. phone calls is not authorized by federal law. The database, which the public learned about after Edward Snowden leaked a court order concerning the NSA's surveillance activities in 2013, is truly breathtaking in its scope. Snowden leaked an order directing to telephone company Verizon to produce "all call detail records or 'telephony metadata'' relating to Verizon communications within the United States or between the United States and abroad," and the federal government did not "seriously dispute" a claim that "all significant service providers in the United States are subject to similar orders." Though the database does not include the actual content of people's calls, the metadata held by the NSA does include "details about telephone calls, including, for example, the length of a call, the phone number from which the call was made, and the phone number called." The government claims that this law is authorized by a provision that was amended by the USA PATRIOT Act and subsequent laws which permits certain government officials to "make an application for an order requiring the production of any tangible things (including books, records, papers, documents, and other items) for an investigation to obtain foreign intelligence information not concerning a United States person or to protect against international terrorism or clandestine intelligence activities." Yet the law also requires the government to provide a special surveillance court with "a statement of facts showing that there are reasonable grounds to believe that the tangible things sought are relevant to an authorized investigation (other than a threat assessment) conducted [under guidelines approved by the Attorney General].'" The Second Circuit's opinion hones in on the word "relevant" to explain why this law does not authorize the NSA's enormous database. In this case, the court notes, "the parties have not undertaken to debate whether the records required by the orders in question are relevant to any particular inquiry." Rather, [t]he records demanded are all-encompassing; the government does not even suggest that all of the records sought, or even necessarily any of them, are relevant to any specific defined inquiry." This, the court explains, is not allowed: [T]he government takes the position that the metadata collected – a vast amount of which does not contain directly 'relevant' information, as the government concedes – are nevertheless 'relevant' because they may allow the NSA, at some unknown time in the future, utilizing its ability to sift through the trove of irrelevant data it has collected up to that point, to identify information that is relevant. We agree with appellants that such an expansive concept of 'relevance' is unprecedented and unwarranted. Later in its opinion, the court explains just how unusual it is for the government to seek such a sweeping authorization to gather data from a court. "Search warrants and document subpoenas typically seek the records of a particular individual or corporation under investigation, and cover particular time periods when the events under investigation occurred," the Second Circuit explains. Yet, "[t]he orders at issue here contain no such limits." Instead, [t]he metadata concerning every telephone call made or received in the United States using the services of the recipient service provider are demanded, for an indefinite period extending into the future. The records demanded are not those of suspects under investigation, or of people or businesses that have contact with such subjects, or of people or businesses that have contact with others who are in contact with the subjects – they extend to every record that exists, and indeed to records that do not yet exist, as they impose a continuing obligation on the recipient of the subpoena to provide such records on an ongoing basis as they are created. The government can point to no grand jury subpoena that is remotely comparable to the real-time data collection undertaken under this program. Earlier in the opinion, the court lays out some of the information that government officials could uncover with the information in the NSA's database. "[A] call to a single-purpose telephone number such as a 'hotline' might reveal that an individual is: a victim of domestic violence or rape; a veteran; suffering from an addiction of one type or another; contemplating suicide; or reporting a crime." Additionally, "[m]etadata can reveal civil, political, or religious affiliations; they can also reveal an individual's social status, or whether and when he or she is involved in intimate relationships." Though the opinion has clear implications for Americans' right to privacy, the court avoids the question of whether a program like the NSA's database, were it authorized by federal law, would actually be constitutional. In December of 2013, a federal district judge struck down the program on constitutional grounds, holding that "the evolutions in the Government's surveillance capabilities, citizens' phone habits, and the relationship between the NSA and telecom companies" have become "so thoroughly unlike those considered by the Supreme Court thirty-four years ago"

when the justices gave police broad authority to obtain telephone companies' metadata that those precedents can not be applied to the NSA's program. Though the Second Circuit, for its part, held that the NSA's database is illegal, it declined to halt the program immediately, noting that the federal law which allegedly authorizes the program is about to expire. "Allowing the program to remain in place for a few weeks while Congress decides whether and under what conditions it should continue is a lesser intrusion on appellants' privacy than they faced at the time this litigation began," the court explained. Thus, "[i]n light of the asserted national security interests at stake, we deem it prudent to pause to allow an opportunity for debate in Congress that may (or may not) profoundly alter the legal landscape."

Court decisions heavily applicable to technological surveillance

Phillips 13 (Michael Phillips, Law and Politics contributor – The New Yorker, "A New Legal Theory for the Age of Mass Surveillance", http://www.newyorker.com/tech/elements/a-new-legal-theory-for-the-age-of-mass-surveillance, December 10th, 2013)

Yesterday afternoon, a federal judge ruled that the National Security Agency's collection and storage of all Americans' telephone records was likely unconstitutional. The federal judge, George W. Bush appointee Richard J. Leon, declared that "the author of our Constitution, James Madison," would "be aghast" at the N.S.A.'s "almost Orwellian" surveillance. The ruling is the first public legal setback for the government's surveillance policy since the whistle-blower Edward Snowden's disclosures began in June. It challenges a stale thirty-year-old precedent, undermines a central legal rationale of the secret Foreign Intelligence Surveillance Act court, and nudges the law into the age of Internet-connected smartphones, G.P.S., and Big Data. The plaintiffs, who included conservative legal activist Larry Klayman, argued that the N.S.A.'s bulk telephony-metadata program violated the Constitution's prohibitions on unreasonable searches and seizures, their First Amendment rights to free speech and association, and their Fifth Amendment due-process rights, and even caused them emotional distress. They asked Leon to order the government to preliminarily halt the collection of phone records while their case progresses. To win that injunction, the plaintiffs had to accomplish three things: First, they had to show that they had the right to challenge the collection and review of the metadata. Then, they had to establish that they would suffer "irreparable harm" if the court did not order the government to stop. Finally, they had to show that they were "substantially likely" eventually to win their case on the merits of their constitutional argument. Leon ruled in the plaintiffs' favor on all three points, but said that, pending the government's appeal, he would not enforce the order to stop the N.S.A. program, because of the "significant national-security interests at stake." Having agreed with the plaintiffs that the program violated the Fourth Amendment, Leon refused to rule preliminarily on their other claims. In February, 2013, the Supreme Court turned away a similar challenge to N.S.A. surveillance, ruling that the parties in that case lacked standing. The plaintiffs were prominent lawyers, journalists, and human-rights activists who represented, interviewed, or otherwise had contact with suspected terrorists. The Supreme Court refused to hear the case, holding that the plaintiffs could not prove that they were subject to any surveillance at all. But now, thanks to Snowden's disclosures, Klayman's status as a Verizon customer was all it took. Leon ruled that being a Verizon customer is "strong evidence" that he had been subject to at least seven years of data surveillance and five years of that data's storage by the N.S.A. When the government suggested that Klayman lacked standing because Verizon considers itself immune to N.S.A.-related lawsuits and because its customers are just a small part of the program, Leon scoffed. "Omitting Verizon Wireless, A.T. & T., and Sprint from the collection would be like omitting John, Paul, and George from a historical analysis of the Beatles. A Ringo-only database doesn't make any sense." Leon left no doubt that he agreed it was "significantly likely" that the N.S.A. had violated the Constitution, and that the "loss of constitutional freedoms" caused Klayman "irreparable harm." "I cannot imagine a more 'indiscriminate' and 'arbitrary' invasion than this systematic and high-tech collection and retention of personal data on virtually every single citizen for purposes of querying and analyzing it without prior judicial approval," he wrote. "Surely, such a program infringes on 'that degree of privacy' that the founders enshrined in the Fourth Amendment." Leon even questioned the efficacy of the program, finding that the government could not show, even with its three strongest examples, any "indication that [the data collected was] immediately useful or that they prevented an impending attack." His footnotes were sharp-elbowed, too, noting sarcastically that the government's concession that the program is only "sometimes" useful was "candor as refreshing as it is rare." The core of Leon's opinion took aim at the 1979 precedent of Smith v. Maryland, which the government has relied upon in the secret FISA court to justify its broader surveillance programs. In Smith, the government captured the phone records of one man, a robbery suspect already known to the police, who was also suspected of making threatening calls to the victim of the robbery. The Supreme Court ruled that the government did not need a warrant to collect a list of the phone numbers that he had dialed because the suspect had no reasonable expectation of privacy for his phone records, which were held by the phone company. But as Patrick Di Justo has described (a point cited by Leon in his opinion), the data collected by today's bulk telephony-metadata surveillance is vastly different in scale and scope. Leon noted that, in the age of an Internet-connected smartphone in most citizens' pockets, the government and its computers have access to continuously updated location data and other information that the Supreme Court in 1979 would have looked upon as "the stuff of science fiction." "Put simply,

people in 2013 have an entirely different relationship with phones than they did thirty-four years ago," he wrote. "Records that once would have revealed a few scattered tiles of information about a person now reveal an entire mosaic—a vibrant and constantly updating picture of the person's life." In the face of this radical technological change, Leon argued that now is the time to cast this precedent aside. "When do present-day circumstances—the evolutions in the Government's surveillance capabilities, citizens' phone habits, and the relationship between the N.S.A. and telecom companies—become so thoroughly unlike those considered by the Supreme Court thirty-four years ago that a precedent like Smith simply does not apply? The answer, unfortunately for the Government, is now." The "mosaic" language comes from the 2010 circuit-court case United States v. Maynard. (As a Washington, D.C., circuit case, Maynard is the law of Leon's jurisdiction.) The Maynard ruling determined that the government may capture pieces of information that, when reviewed individually, are not invasions of privacy, but may constitute a search subject to a Fourth Amendment review when taken together. With this decision, Leon advanced the "mosaic theory" as a replacement for Smith. The immediate reaction from legal scholars has been mixed. Benjamin Wittes, of the Brookings Institution, wrote that "Leon makes a powerful case that times have changed since the Supreme Court decided Smith, which dealt with a pen-register device against a single suspect—and long before the era of Big Data and cell phones," but he suggested that the Supreme Court would be afraid of undermining a national-security program. "Are five justices really ready to shut down a major intelligence program that administrations of both parties have insisted represents a crucial line of defense against terrorism?" Wittes wrote. Wittes' colleague Paul Rosenzweig, of the Lawfare Institute, was similarly skeptical, finding the technological argument for dismissing Smith "rather unpersuasive." Fourth Amendment scholar Orin Kerr agreed, finding the attack on Smith "deeply unpersuasive," though he later clarified that he would strike down the N.S.A. program on other grounds. The skepticism toward overturning precedent reflects Supreme Court Chief Justice John Roberts's own relationship with stare decisis, the doctrine that courts should generally follow precedent. In his concurring opinion in the Citizens United campaign-finance case, Roberts presented his argument for when it would be appropriate to cast aside precedent: following it is not an "inexorable command" or "mechanical formula of adherence to the latest decision." After all, Roberts wrote, "if it were, segregation would be legal, minimum-wage laws would be unconstitutional, and the Government could wiretap ordinary criminal suspects without first obtaining warrants." Instead, Roberts argued that courts should overturn precedent when "the precedent's validity is so hotly contested that it cannot reliably function as a basis for decision in future cases, when its rationale threatens to upend our settled jurisprudence in related areas of law, and when the precedent's underlying reasoning has become so discredited that the Court cannot keep the precedent alive without jury-rigging new and different justifications to shore up the original mistake." To critics of the opinion such as Rosenzweig, the "passionate" Leon did not find a valid rationale to abandon Smith. But there is reason to believe that at least five Supreme Court justices might agree with Leon that "the time is now" to abandon stare decisis for Smith. In the 2012 Supreme Court case U.S. v. Jones, an unlikely mix of five justices, including conservative Justice Samuel Alito, suggested that it might be time for the law to change, establishing a reasonable right to privacy for the data and metadata created by our smartphone-charged, increasingly connected lives. In Jones, the Supreme Court held that attaching a G.P.S. device to a car to track its movements constitutes a search under the Fourth Amendment. Five of the justices, including Alito, suggested that the G.P.S. surveillance was a search because it violated citizens' reasonable expectations of privacy in their location, an expectation thrown into question by the new technology. "Technology can change those expectations [of privacy]," Alito wrote. "Dramatic technological change may lead to periods in which popular expectations are in flux and may ultimately produce significant changes in popular attitudes. New technology may provide increased convenience or security at the expense of privacy, and many people may find the trade-off worthwhile. And even if the public does not welcome the diminution of privacy that new technology entails, they may eventually reconcile themselves to this development as inevitable." Leon's treatment of Smith acknowledges our technological reality. We are enmeshed in a twenty-four-seven, cradle-to-grave "mosaic" of digital information. We carry our telephones everywhere. The applications nested within them are tiles of personal data, and we teach those applications more and more about ourselves. The executive branch will take its appeal to the Washington, D.C., circuit court, whose judges have previously shown a willingness to think creatively about our high-tech times. With his decision, Leon may press the N.S.A.—and the law—to come to terms with how we live now.

Judicial authority is key to check surveillance policy

Bickford 13 (David Bickford - undersecretary of state and legal director of the Security and intelligence agencies MI5 and MI6, "Leave surveillance to the judges", http://www.theguardian.com/commentisfree/2013/oct/11/mi5-public-open-mind-secrecy-security, October 11th, 2013)

Andrew Parker, the new MI5 chief, is right to be deeply worried by the Snowden revelations. The new availability of information on the web is opening up secrecy like a knife into an oyster. However, Anthony Glees, head of the centre for security and intelligence studies at Buckingham University, ignores the fact that secrecy in this country is overprotected and under-regulated when he suggests the Guardian should be prosecuted for putting this under the microscope. Britain has utterly failed to prepare itself for openness when dealing with politically sensitive issues such as terrorism, or the involvement of their secret agencies in the covert gathering of information. We rarely hear from the intelligence agencies' chiefs; and ministers glide over the threats, never explain their relationship with those agencies, and retain an obviously inadequate system for their supervision. As a result, as long as ministers continue to authorise the agencies' eavesdropping, surveillance, and informant approval, the public will believe there is an unhealthy relationship between them. That scepticism is made worse by the communications data bill's proposal that the agencies

themselves control their mining of communications data. Against this background it is hardly surprising that the Snowden revelations have not been met by the public antagonism one might expect when national security has been compromised. The government must regain the initiative. A first and necessary step is to leave the authorisation of eavesdropping, surveillance and informant approval to the judiciary. This would mean that applications to carry out such covert activities would have to be made by the agencies direct to a judge. This would reduce both the risk and the perception of collusion or political interference. Government may argue that all this is unnecessary as there is already adequate oversight of the agencies. It is true that oversight has improved now parliament itself is in charge of overseeing the agencies. However, that oversight is ex post facto and is, on the admission of former oversight committee chiefs, both inadequate and subject to political pressure. Moreover, it is no substitute for independent judicial authority. As a bonus, if judicial authority were given for telephone and electronic intercepts, evidence thus collected could be used to prosecute terrorists, as happens in the US. The current refusal of the UK government to use intercept evidence would then look even more unwise. This concept of judicial authority for intrusive covert surveillance is not new. Many jurisdictions adhere to it. In the French legal system, a judge supervises covert targeted operations and determines the civil rights balances involved. This way, both the public and the agencies are protected, and at any subsequent trial the evidential uncertainties have already been excluded. In the UK such a procedure would obviate the need for secret courts to determine civil proceedings and reassure the public that fair trials remain a baseplate of our society. It is a system that needs to be introduced to all the UK agencies' covert targeted operations. The government could then turn its attention to the vital job of informing the public. Unlike in the US, the British public do not get to see the intelligence agencies' chiefs grilled by the oversight committee, nor do they see those chiefs and the law enforcement agencies being interviewed together about their objectives and the tools they need to achieve them. The public have a right to see and hear this so that they can make up their own minds about the integrity of the leaders, the validity of their objectives, the need for the tools they use and whether the secrecy demanded is properly balanced. Unless government takes this debate seriously, the British public's need to know what the intelligence agencies are doing will continue to shatter secrecy – and terrorism and organised crime will benefit.

Surveillance policy presents opportunity for judicial independence – key to prevent tyranny

McCormack 14 (Wayne, E.W. Thode Professor of Law, University of Utah, "U.S. Judicial Independence: Victim in the "War on Terror," Washington and Lee Law Review, Volume 71, Issue 1, Winter 2014, http://scholarlycommons.law.wlu.edu/cgi/viewcontent.cgi?article=4374&context=wlulr)

The "head in the sand" attitude of the U.S. Judiciary in the past decade is a rather dismal record that does not fit the high standard for judicial independence on which the American public has come to rely. Many authors have discussed these cases from the perspective of the civil rights and liberties of the individual.512 What I have attempted to do here is sketch out how the undue deference to the Executive in "time of crisis" has undermined the independent role of the Judiciary. Torture, executive detentions, illegal surveillance, and now killing of U.S. citizens, have escaped judicial review under a variety of excuses.513 To be clear, many of the people against whom these abuses have been levied are, or were, very dangerous if not evil individuals. Khalid Sheikh Muhamed and Anwar al-Aulaqi should not be allowed to roam free to kill innocent civilians. But hundreds of years of history show that there are ways of dealing with such people within the limits of restrained government without resort to the hubris and indignity of unreviewed Executive discretion. The turning of blind eyes by many, albeit not all, federal judges is a chapter of this history that will weigh heavily against us in the future No judge wants to feel responsible for the deaths of innocents. But direct responsibility for death lies with those who contribute to the act. Meanwhile, the judge has an ethical responsibility for abuses by government of which the Judiciary is a part. To illustrate the threat, one federal judge resigned from the secret FISA Court in "protest because the Bush administration was bypassing the court on warrantless wiretaps."514 To be fair, his public statement before Congress included the thought that the judges were independent but not making fully informed decisions.515 It makes sense that this courageous judge (who also ruled against the Government in a major Guantanamo case516) would extol the independence of the federal Judiciary, but perhaps those of us outside the club can be forgiven for seriously challenging his assessment. Meanwhile, critics are voicing the belief that recent appointments to the FISA Court will be even more deferential to the Executive.517 To repeat, there is nothing "new" in the killing of innocents for religious or political vengeance.518 This violence has always been with us and unfortunately will continue despite our best efforts to curb it. Pleas

for Executive carte blanche power are exactly what judicial independence was developed to avoid, and what many statements in various declarations of human rights are all about. The way of unreviewed Executive discretion is the way of tyranny.

Supreme Court has jurisdiction to reform surveillance policy

Williams 14 (Lauren C., tech reporter for ThinkProgress with an affinity for consumer privacy, cybersecurity, tech culture and the intersection of civil liberties and tech policy., How The Supreme Court Could Decide The Fate Of NSA Surveillance, http://thinkprogress.org/justice/2014/12/10/3601363/nsa-surveillance-ninth-circuit/)

An Idaho nurse is leading the latest charge against the Obama administration for the U.S. National Security Agency's dragnet phone data surveillance program. With legal help from the American Civil Liberties Union and the Electronic Frontier Foundation, neonatal intensive care nurse Anna Smith contested the government's spy programs Monday in the U.S. Court of Appeals for the Ninth Circuit. In Monday's oral argument for Smith v. Obama, Smith's attorney and husband, Peter Smith, asserted the government violated Smith's privacy by searching and collecting data that reveals intimate details about her and her family without her permission. Smith argued that each time the NSA's database was queried or restocked with new information violated the Fourth Amendment. Smith built his case's standing on the fact Verizon is America's top telecommunications provider and the NSA's program indiscriminately swept up swaths of customer data, which included and potentially revealed personal information about his wife's business and life. "When you can do the hops, and see the connections—you can see that Anna called her doctor, Anna called her mother…It can reveal a lot about a person. It can reveal relationships," Smith told the judges. The government's attorney, Thomas Byron, maintained the NSA could collect phone record information — call length, numbers called and when the call was made — without a warrant thanks to almost 50 years of legal precedent. In the 1970s, the Supreme Court ruled in Smith v. Maryland that phone records could be collected without a warrant. Judges Richard Tallman, Michael Hawkins, and Margaret McKeown drilled Smith with some skepticism on how the government's bulk collection of phone data was constitutionally different from the routine practice of monitoring an individual's phone activity over a set period, and whether one's privacy extends to data given to a third party such as a phone company. Tallman in particular seemed unconvinced that Smith was a victim of the dragnet surveillance, saying that Smith was merely speculating that Verizon Wireless' call records were in fact included in the program and Smith's records specifically were collected and stored. Smith's case is the third to reach the federal appellate courts since Edward Snowden's 2013 NSA revelations. The Second Circuit Court of Appeals in New York and the D.C. Circuit Court of Appeals are hearing similar cases that argue Fourth Amendment violations, as people don't know how revealing telephone metadata is. According to a metadata study, researchers were able to identify who made calls to and from organization that rely on confidentiality and anonymity, such as Alcoholics Anonymous, health clinics, divorce lawyers, pharmacies and gun stores. These cases have yet to be finalized, but depending on their outcome, the Supreme Court could end up deciding the constitutionality of the NSA's phone surveillance program. The Supreme Court tends to get involved in cases mainly where there's a split decision among federal appeals courts — in this case with some courts ruling in the government's favor and others against. But challenging the government has proven to be an uphill legal battle. Civil liberties activists' biggest obstacle is decades-old legal precedent. Smith v. Maryland established that law enforcement could collect the call records of an individual or small group of individuals suspected of a crime. The question is whether the sheer scale and volume of the NSA's metadata program, which was technologically impossible in 1979, is protected under that same ruling. Even if the legal standard wins out, the publicity of challenging the government's actions could have a positive effect down the line; showing that taking the government to task can be done. There have been past cases where despite proof of being targeted for surveillance, courts have ruled in favor of the government. The Al-Haramain Islamic Foundation sued the Bush Administration for illegally wiretapping the charity's leaders and lawyers based on a classified document accidentally disclosed in court documents. The court ruled in favor of the government because the information was classified. After news of the NSA's program broke, the legal fight went public two federal judges issued conflicting rulings on the legality of the NSA's program. Judge Richard Leon of the D.C. district court ruled that the systematic collection and storage of Americans' phone records breached the privacy protections afforded in the Fourth Amendment. A week later, New York's Southern District Court decided the program was legal. Those decisions are now being considered by appeals courts. Snowden's revelations inspired public calls to action for comprehensive reform of U.S. intelligence programs. But in the year since, there's been little movement toward policy changes. Obama rolled back some of the NSA's spying power earlier this year saying intelligence agencies could still collect phone records but couldn't store them, and accessing the database would be subject to a judge's approval. The House later passed a diluted version of a revised USA Freedom Act in May, causing tech companies, lobbyists, and privacy advocates to pull their support. The bill failed to muster enough support in the Senate, and its fate when Republicans take control next year is unclear. Meanwhile, a federal judge for the FISA court reauthorized the NSA's program Monday, keeping the NSA's controversial metadata program intact until February 27, 2015. The extension is the fourth since Obama promised to reform the program in January.

Courts are the preferable branch for surveillance

Slobogin 2015 [Christopher Slobogin, Milton Underwood Professor of Law, Vanderbilt University Law School, Pepperdine Law Review Volume 42 pg 517-548 http://pepperdinelawreview.com/wp-content/uploads/2015/04/Slobogin-Final.pdf]

Neither of these objections are sustainable from the political process perspective. Precisely **because of the** perceived **importance of national security, the legislative and executive branches often either act in collusion with one another or**, as illustrated earlier, **function in ways that undermine the other's prerogatives, with the result that both end up ignoring their constitutional obligations.**155 **Particularly when it comes to national security, courts should have the authority** to ensure that legislatures define the scope of permissible law enforcement and that law enforcement abide by appropriate rule-making mechanisms, a notion the Court has accepted in related national security contexts.156 **At the least**, these obligations should include procedures for assuring public accountability (such as notice-and- comment or other transparent rule-making processes), or, if that is not feasible, **some method of assuring accountability to the legislature**.157 Unfortunately, the perceived imperatives of the War on Terrorism have led both branches to short-circuit these requirements.158

Courts will remain active in resolving privacy violations

Bosset et al 2011 [Bosset, Eric C. et al privacy, data security and consumer protections lawyer, "PRIVATE ACTIONS CHALLENGING ONLINE DATA COLLECTION PRACTICES ARE INCREASING: ASSESSING THE LEGAL LANDSCAPE", Intellectual Property & Technology Law Journal, February 2011 https://www.cov.com/files/Publication/93f04099-eb59-4c35-bcb2-12a7557cae0b/Presentation/PublicationAttachment/33d4c9ef-b65d-4cae-9468-165927e4f9e1/Private%20Actions%20Challenging%20Online%20Data%20Collection%20Practices%20Are%20Increasing.pdf]

The wave of recent lawsuits against ISPs, publishers, and online advertising firms **is likely to continue as more sophisticated technologies for tracking commercial Web browsing activity raise new concerns about consumer privacy. Current federal and state statutes are**, at best, **blunt tools to regulate the rapidly changing environment of the Internet. Courts are appropriately hesitant to impose potentially huge statutory damages authorized under existing statutes** for conduct that provides demonstrable benefits to consumers—in the form of more relevant advertising or free Web content—while the corresponding risk to individual privacy is typically remote. It thus is not surprising that Congress is currently considering ECPA reform as well as comprehensive privacy legislation that would, in some circumstances, afford a private right of action to consumers whose personal information is collected without their consent. Similarly, the White House and federal agencies, such as the Federal Trade Commission and the Department of Commerce, are scrutinizing closely the data collection practices of entities operating online. These issues raise both important and competing public policy considerations that will only be worked out over time. In the meantime, **the courts are likely to remain an active forum for resolving these disputes**.

Lawsuits check the tech

Bosset et al 2011 [Bosset, Eric C. et al privacy, data security and consumer protections lawyer, "PRIVATE ACTIONS CHALLENGING ONLINE DATA COLLECTION PRACTICES ARE INCREASING: ASSESSING THE LEGAL LANDSCAPE", Intellectual Property & Technology Law Journal, February 2011 https://www.cov.com/files/Publication/93f04099-eb59-4c35-bcb2-12a7557cae0b/Presentation/PublicationAttachment/33d4c9ef-b65d-4cae-9468-

165927e4f9e1/Private%20Actions%20Challenging%20Online%20Data%20Collection%20Practices%20Are%20Increasing.pdf]

In the past decade, **the number and quality of online data collection technologies have increased. At first, these technologies were subject to scrutiny principally by regulators**, and industry responded by developing more robust privacy disclosures **concerning their use. More recently, these** next-generation **technologies** also **have been a topic of** heightened **interest from the press**—for example, an ongoing series in the Wall Street Journal2—**and have inspired a spate of putative class action lawsuits relating to online data collection,** alleging violations of various federal and state laws. Indeed, **the past few years have witnessed the rise of a privacy plaintiffs' bar that has sought to transform statutes principally intended to criminally penalize wiretapping and computer hacking into vehicles for consumer protection litigation**.

Courts are taking steps in 2015 to challenge surveillance

Farivar 1/1 [Cyrus Farivar, senior business editor, "If the Supreme Court tackles the NSA in 2015, it'll be one of these five cases" ars technica, January 1, 2015, http://arstechnica.com/tech-policy/2015/01/if-the-supreme-court-tackles-the-nsa-in-2015-itll-be-one-of-these-five-cases/1/]

But **consider two recent Supreme Court cases**: United States v. Jones (2012) and Riley v. California (2014). **Both were decided by** rare **unanimous opinions, and both indicate an awareness that modern tech has changed reasonable privacy.** Jones determined that law enforcement does not have the authority to place a GPS tracker on a suspect without a warrant. Meanwhile, the court found in Riley that law enforcement cannot search a person's phone incident to arrest without a warrant. **"[These cases] are strong signs that the Supreme Court is aware that rules that were created in a period of time when the court analyzed targeted surveillance do not blindly apply where the government is collecting huge quantities of information,"** Patrick Toomey, an attorney with the American Civil Liberties Union, told Ars.

Courts most Effective Actor in Curtailing Domestic Surveillance

Richards 13 (Neil M. May 20. Professor of Law at Washington University in St. Louis. "The Dangers of Surveillance" http://harvardlawreview.org/2013/05/the-dangers-of-surveillance/)

But as the chilling-effects doctrine has demonstrated, courts have managed to balance threats to free speech against competing government interests. Moreover, because the general details of government surveillance programs should be public, courts and litigants will have more information with which to assess the effects of surveillance. And even when publication of the details of surveillance might threaten ongoing investigations, such details could be released either under seal to the litigants or shared with the court. **Courts have a wide variety of tools to manage the flow of confidential information that litigation inevitably produces, and they would be well suited to such a task**. Such tasks may be difficult and require judgment, but that is the job of courts. The alternative to grappling with the civil-liberties threats that surveillance poses is to ignore those threats altogether, to face the prospect of rendering widespread government surveillance unreviewable and uncheckable. Democratic societies can do better than that. V. CONCLUSION The challenge to our law posed by the Age of Surveillance is immense. The justifications for surveillance by public and private actors are significant, but so too are the costs that the rising tide of unfettered surveillance is creating. Surveillance can sometimes be necessary, even helpful. But unconstrained surveillance, especially of our intellectual activities, threatens a cognitive revolution that cuts at the core of the freedom of the mind that our political institutions presuppose. Therefore, surveillance must be constrained by legal and social rules. The technological, economic, and geopolitical changes of the past twenty years have whittled away at those rules, both formally on their substance (for example, the Patriot Act and the expansion of National Se- 2013] THE DANGERS OF SURVEILLANCE 1965 curity Letter jurisdiction) and in practice (for example, the pressure that the technological social practices of the Internet have exerted on privacy). By thus recognizing the harms of surveillance and crafting our laws

accordingly, we can obtain many of its benefits without sacrificing our vital civil liberties or upending the power balance between individuals on the one hand and companies and governments on the other.

Arguing Intellectual Privacy Standards is Key to Correct Courts Decisions in Reducing Domestic Surveillance

Richards 13 (Neil M. May 20. Professor of Law at Washington University in St. Louis. "The Dangers of Surveillance" http://harvardlawreview.org/2013/05/the-dangers-of-surveillance/)

Intellectual-privacy theory therefore suggests a solution to the confusion that has plagued courts and others in dealing with whether surveillance programs create legally cognizable injuries. Despite often displaying an intuitive understanding that surveillance might be potentially harmful, courts have struggled to understand why. This absence of clarity has led to courts misunderstanding and diminishing privacy interests that conflict with other values. When faced with balancing a vague and poorly articulated privacy right against state interests such as the prevention of terrorist attacks, surveillance tends to win. Courts also make the mistake that the ACLU v. NSA court made and cast surveillance as solely a Fourth Amendment issue of crime prevention, rather than as one that also threatens intellectual freedom and First Amendment values of the highest order.92 Other decisions mirror the mistake of the Al-Haramain court in concluding that preventing secret surveillance is less important than inconveniencing the executive branch.93 Additionally, some courts can make the mistake that the Clapper Court made, refusing to recognize as justiciable harms the costly measures that people must adopt to shield their communications from government surveillance.94 Shadowy regimes of surveillance corrode the constitutional commitment to intellectual freedom that lies at the heart of most theories of political freedom in a democracy. Secret programs of wide-ranging intellectual surveillance that are devoid of public process and that cannot be justified in court are inconsistent with this commitment and illegitimate in a free society. My argument is not that intellectual surveillance should never be possible, but that when the state seeks to learn what people are reading, thinking, and saying privately, such scrutiny is a serious threat to civil liberties. Accordingly, meaningful legal process (that is, at least a warrant supported by probable cause) must be followed before the government can perform the digital equivalent of reading our diaries. But we must also remember that in modern societies, surveillance fails to respect the line between public and private actors. Intellectual privacy should be preserved against private actors as well as against the state. Federal prosecutions based on purely intellectual surveillance are thankfully rare, but the coercive effects of monitoring by our friends and acquaintances are much more common. We are constrained in our actions by peer pressure at least as much as by the state. Moreover, records collected by private parties can be sold to or subpoenaed by the government, which (as noted above) has shown a voracious interest in all kinds of personal information, particularly records related to the operation of the mind and political beliefs.

Courts are the preferable branch for surveillance

Slobogin 2015 [Christopher Slobogin, Milton Underwood Professor of Law, Vanderbilt University Law School, Pepperdine Law Review Volume 42 pg 517-548 http://pepperdinelawreview.com/wp-content/uploads/2015/04/Slobogin-Final.pdf]

Neither of these objections are sustainable from the political process perspective. Precisely **because of the** perceived **importance of national security, the legislative and executive branches often either act in collusion with one another or**, as illustrated earlier, **function in ways that undermine the other's prerogatives, with the result that both end up ignoring their constitutional obligations.**155 **Particularly when it comes to national security, courts should have the authority** to ensure that legislatures define the scope of permissible law enforcement and that law enforcement abide by appropriate rule-making mechanisms, a notion the Court has accepted in related national security contexts.156 **At the least**, these obligations should include procedures for assuring public accountability (such as notice-and- comment or other transparent rule-

making processes), or, if that is not feasible, **some method of assuring accountability to the legislature**.157 Unfortunately, the perceived imperatives of the War on Terrorism have led both branches to short-circuit these requirements.158

Courts Solve XO 12333

The Supreme Court has the authority to strike parts/all of an Executive Order.

Strohman 08, [Kirk Strohman, LLC, *Executive Orders: The Power of the President's Pen*, Oregon Law Reviev, Vol. 87, No. 1, http://www.thelegality.com/2008/12/11/executive-orders-the-power-of-the-presidents-pen/]

In two more recent cases, the presidents' orders were rejected for conflicting with current law. In 1995, President Clinton signed Executive Order 12954 requiring executive agencies to withhold contracts from employers replacing striking employees. Secretary of Labor Reich was ordered to set specific regulations so that replacement workers, who were presumably less efficient, would not execute government contracts, resulting in higher costs of goods or services. Several organizations sued for injunctive relief arguing that the order violated the National Labor Relations Act (NLRA). The Court of Appeals for the District of Columbia held that Congress passed the NLRA with the intent that certain labor relations would be unregulated. Since the Clinton E.O. was regulatory by its nature, the NLRA – a legislative act of Congress – preempted the E.O. (the government did not seek Supreme Court review of the decision).ð Ten years later, the Supreme Court struck down an executive order from President Bush that ordered the Secretary of Defense to convene military commissions to try foreign enemy combatants detained at Guantanamo Bay. In Hamdan v. Rumsfeld, nearly five years after Bush signed the order, the Court found that the procedures of the order violated the Uniform Code of Military Justice and Article 3 of the Geneva Convention. This case was different from prior E.O. cases because Congress had indirectly supported the order. Congress passed the Detainee Treatment Act of 2005, intending to prevent the Supreme Court from hearing any cases brought by Guantanamo detainees. Nevertheless, the Court found a basis for jurisdiction to hear the case and struck down the order.

The Supreme Court can and has struck down Executive Orders.

Skarda 11, [Erin Skarda, freelance journalist and editor, *Top 10 Government Showdowns*, Time Magazine, http://content.time.com/time/specials/packages/article/0,28804,2085383_2085381_2085430,00.html]

Harry S. Truman made his fair share of missteps throughout his presidency, but his decision to seize control of the steel industry during the Korean War forever marred his presidential legacy. Concerned over wartime inflation, the Truman Administration imposed wage-price controls for industries that were considered necessary for national defense. These controls led to an ongoing contract dispute between the Wage Stabilization Board and the United Steel Workers Union, which wanted to raise both wages and the price of steel to keep up with increased demand. Truman personally requested an end to the impasse, but terms could not be met by the deadline so the steel companies moved to strike. To prevent a delay in the production of weapons that were needed overseas, Truman ordered his Secretary of Commerce to seize the mills. The seizure angered the steel companies, which claimed that the move was illegal. The Supreme Court agreed. In the 1952 case of Youngstown Sheet & Tube Co. v. Sawyer — known as The Steel Seizure Case — the court made a landmark decision to limit the president's power to seize private property. As for the steelworkers, they went on strike anyway, and after 53 days, agreed to similar terms that the union had proposed almost four months earlier.

Courts Solve Data Collection

The courts are already taking steps to end bulk data collection

Nakashima 5/7 [Nakashima, Ellen, national security reporter, "NSA program on phone records is illegal, court rules" Washington Post, https://www.washingtonpost.com/world/national-security/appeals-court-rules-nsa-record-collection-violates-patriot-act/2015/05/07/c4fabfb8-f4bf-11e4-bcc4-e8141e5eb0c9_story.html May 7, 2015]

A federal appeals **court ruled Thursday that the National Security Agency's collection of** millions of **Americans' phone records violates the** USA Patriot Act, marking the first time an appellate panel has weighed in on a controversial surveillance program that has divided Congress and ignited a national debate over the proper scope of the **government's spy powers**. In a blistering 97-page opinion, **a unanimous three-judge panel** of the U.S. Court of Appeals for the 2nd Circuit overturned a lower court and **determined that the government had stretched the meaning of the statute to enable "sweeping surveillance" of Americans' data in "staggering" volumes**. The ruling comes as Congress begins a contentious debate over whether to reauthorize the statute that underpins the NSA program or let it lapse. The court did not issue an injunction ordering the program to stop. The NSA's mass collection of phone records for counterterrorism purposes — launched after the Sept. 11, 2001, terrorist attacks — was revealed by former agency contractor Edward Snowden in June 2013. The revelation sparked outrage but also steadfast assertions by the Obama administration that the program was authorized by statute and deemed legal by a series of federal surveillance court judges. But the judicial rulings had taken place in secret until the Snowden leaks forced disclosure of once-classified opinions. Under the program, the NSA collects "metadata" — or records of times, dates and durations of all calls — but not call content. The government has argued that huge volumes of records — being collected from U.S. phone companies each day and stored in a database — are relevant to counterterrorism investigations because any record could later prove critical in identifying terrorism suspects. A series of judges on the secretive Foreign Intelligence Surveillance Court have agreed. **The appeals court**, however, **said "such an expansive concept of 'relevance' is unprecedented and unwarranted.**" In the ruling, written by Judge Gerard E. Lynch, the panel noted that **the government never "attempted to identify to what particular 'authorized investigation' " the data of all Americans' phone calls would be relevant.** "At its core," the panel said, "the approach boils down to the proposition that essentially all telephone records are relevant to essentially all international terrorism investigations." Saying **the collection has amounted to "an unprecedented contraction of the privacy expectations of all Americans,**" the court said the government's interpretation of the law would also allow for the bulk collection and storage of data associated with Americans' financial records, medical records, and e-mail and social-media communications. With the statute scheduled to expire June 1, a bipartisan coalition of lawmakers in the House and Senate is seeking to renew it with modifications that sponsors say will enable the NSA to get access to the records it needs while protecting Americans' privacy. The bill, the USA Freedom Act, is poised to pass the House next week. Meanwhile, Senate Majority Leader Mitch McConnell (R-Ky.) and the chairman of the Senate Intelligence Committee, Richard Burr (R-N.C.), have introduced a bill to maintain the program. But if that passes, the government will have to persuade the Supreme Court to reverse the 2nd Circuit decision in order to keep the program from ending. The court decision drew sharp responses from some Republicans on the Senate floor Thursday. "According to the CIA, had these authorities been in place more than a decade ago, they would have likely prevented 9/11," McConnell said. He said the USA Freedom Act would not "keep us safe or protect our privacy." Meanwhile the bill's sponsors — Sens. Patrick J. Leahy (Vt.), who is the ranking Democrat on the Judiciary Committee, and Mike Lee (R-Utah) — issued a statement saying: "Congress should not reauthorize a bulk collection program that the court has found to violate the law. We will not consent to any extension of this program." FBI Director James B. Comey told reporters that if Congress lets the statute, known as Section 215 of the Patriot Act, expire, the FBI will lose a useful tool. "But," he said, if that was to happen, "we press on." Administration officials have indicated they are likely to support the bipartisan legislation. But the American Civil Liberties Union and a coalition of groups on the left and the right are pushing to let the statute simply lapse, on grounds that it would end the NSA bulk collection while leaving in place adequate powers for the government to pursue terrorism cases. The appeals court, noting the impending deadline for the program, declined to grant a preliminary injunction to stop the NSA from collecting the ACLU's call records. "In light of the asserted national security interests at stake, we deem it prudent to pause to allow an opportunity for debate in Congress that may (or may not) profoundly alter the legal landscape," Lynch wrote. The ACLU, the plaintiff in the case, cheered the decision. "**This decision is a resounding victory for the rule of law," said** ACLU staff attorney **Alex Abdo**, who argued the case before the panel in September. "**For years, the government secretly spied on millions of innocent Americans based on a shockingly broad interpretation of its authority. The court rightly rejected the government's theory that it may stockpile information on all of us in case that information proves useful in the future.**" White House officials said Thursday that they were evaluating the decision and declined to comment further. "The president has been clear that he believes we should end the Section 215 bulk telephony metadata program as it currently exists by creating an alternative mechanism to preserve the program's essential capabilities without the

government holding the bulk data," said Edward Price, a National Security Council spokesman. "We continue to work closely with members of Congress from both parties to do just that, and we have been encouraged by good progress on bipartisan, bicameral legislation that would implement these important reforms." The ruling has scrambled the terms of the debate, strengthening the hand of those who want changes that go further than those called for in the USA Freedom Act, said civil liberties advocates. "The people who supported the current version of USA Freedom should start asking for more, because we can get more now," said Jennifer Granick, director of civil liberties at Stanford Law School's Center for Internet and Society. David O'Neil, a former acting head of the Justice Department's Criminal Division, said the ruling "seriously upsets the apple cart three weeks before the sunset." The issue is one that has split lower courts. The U.S. District Court for the District of Columbia held in December 2013 that the program was probably unconstitutional. The appeals court for the District has not yet ruled on that appeal. In its ruling, the U.S. Court of Appeals for the 2nd Circuit said it need not address the plaintiffs' claims that the NSA program violated their First and Fourth amendment rights, because the panel had already concluded the program was unlawful. The court rejected the government's argument that Congress ratified the program by twice reauthorizing Section 215, noting that many members and the public were unaware of how the legislation was being interpreted. It also rejected the government's argument that the ACLU lacked standing to challenge the program. Thursday's ruling was "sweeping and unambiguous," said Michael Sussmann, a former Justice Department official who is now a partner at Perkins Coie practicing surveillance law. "As the deadline quickly approaches, this is a bombshell that forces everyone to reconsider the political fault lines."

Courts have taken action on data collection

The Economist 5/13 [No author,"Edward Snowden in the Primaries", The Economist, May 13, 2015 http://www.economist.com/blogs/democracyinamerica/2015/05/nsa-and-courts]

Last week **a federal appeals court panel ruled that the NSA's indiscriminate hoovering of phone-call metadata**, first revealed by the leaks of Edward Snowden, **is not authorised** by the Patriot Act. The pertinent section of the anti-terror bill, Section 215, is set to expire on June 1st, so the 2nd Circuit's ruling comes at a opportune time for congressional opponents of the NSA's bulk data-collection programme. "How can you reauthorise something that's illegal?" asked Harry Reid, the Senate minority leader. "You can't. You shouldn't".

Courts have taken steps already to end data collection

Stempel 5/7 [Jonathan Stempel, Reuters privacy correspondent, Reuters May 7, 2015 http://www.reuters.com/article/2015/05/07/us-usa-security-nsa-idUSKBN0NS1IN20150507]

A U.S. spying program that systematically collects millions of Americans' phone records is illegal, a federal appeals court ruled on Thursday, putting pressure on Congress to quickly decide whether to replace or end the controversial anti-terrorism surveillance. Ruling on a program revealed by former government security contractor Edward Snowden, **the 2nd U.S. Circuit Court of Appeals in Manhattan said the Patriot Act did not authorize the National Security Agency to collect Americans' calling records in bulk**. Circuit Judge Gerard Lynch wrote for a three-judge panel that Section 215, which addresses the FBI's ability to gather business records, could not be interpreted to have permitted the NSA to collect a "staggering" amount of phone records, contrary to claims by the Bush and Obama administrations. **"Such expansive development of government repositories of formerly private records would be an unprecedented contraction of the privacy expectations of all Americans**," Lynch wrote in a 97-page decision. "We would expect such a momentous decision to be preceded by substantial debate, and expressed in unmistakable language. There is no evidence of such a debate." **The appeals court did not rule on whether the surveillance violated the U.S. Constitution**. It also declined to halt the program, noting that parts of the Patriot Act including Section 215 expire on June 1. Lynch said it was "prudent" to give Congress a chance to decide what surveillance is permissible, given the national security interests at stake. Enacted after the Sept. 11, 2001 attacks, the Patriot Act gives the government broad tools to investigate terrorism. Thursday's **decision voided a December 2013 ruling** in which U.S. District Judge William Pauley in Manhattan **found the NSA program lawful**. The appeals court sent the case back to him for further review

The courts are already taking steps to end bulk data collection

Courts Solve Financial Surveillance

In the past, the Supreme Court has ruled on financial surveillance

Douglas 74, [William O. Douglas, Justice of the Supreme Court, *United States Supreme Court, CALIFORNIA BANKERS ASSN. v. SHULTZ, (1974) No. 72-985 Argued: January 16, 1974 Decided: April 1, 1974*, Find Law, http://caselaw.findlaw.com/us-supreme-court/416/21.html#t*]

The Bank Secrecy Act of 1970, which was enacted following extensive hearings concerning the unavailability of foreign and domestic bank records of customers thought to be engaged in illegal activities, authorizes the Secretary of the Treasury to prescribe by regulation certain bank recordkeeping and reporting requirements, the Act's penalties attaching only upon violation of the regulations thus prescribed. (Unless otherwise indicated, references below to the Act also include the accompanying regulations.) The Act is designed to obtain financial information having "a high degree of usefulness in criminal, tax, or regulatory investigations or proceedings." Title I of the Act requires financial institutions to maintain records of their customers' identities, to make microfilm copies of checks and similar instruments, and to keep records of certain other items. Title II requires the reporting to the Federal Government of certain foreign and domestic financial transactions. Title II, 231, requires reports of the transportation of currency and specified instruments exceeding $5,000 into or out of the country, exception being made, inter alia, for banks and security dealers. Section 241 requires individuals with bank accounts or other relationships with foreign banks to provide specified information on a tax return form. Section 221 delegates to the Secretary of the Treasury the authority to require reports of transactions "if they involve the payment, receipt, or transfer of United States currency, or such other monetary instruments as the Secretary may specify . . .," 222 providing that he may require such reports from the domestic financial institution involved, the parties to the transaction, or both, and 223 providing that he may designate financial institutions [416 U.S. 21, 22] to receive the reports. Under the implementing regulations only financial institutions must file reports with the Internal Revenue Service (IRS), and then only where the transaction involves the deposit, withdrawal, exchange, or other payment of currency exceeding $10,000. The regulations provide that the Secretary may grant exemptions from the requirements of the regulations. Suits were brought by various plaintiffs challenging the constitutionality of the Act, principally on the ground that it violated the Fourth Amendment, because when the bank makes and keeps records under compulsion of the Secretary's regulations it acts as a Government agent and thereby engages in a "seizure" of its customer's records. A three-judge District Court, though upholding the recordkeeping requirements of Title I of the Act and the foreign transaction reporting requirements of Title II, concluded that the domestic reporting provisions of Title II, 221-223, contravened the Fourth Amendment, and enjoined their enforcement. Three separate appeals were taken. In No. 72-985, the California Bankers Association, a plaintiff below, asserts that Title I's recordkeeping provisions violate (1) due process, because there is no rational relationship between the Act's objectives and the required recordkeeping and because the Act is unduly burdensome, and (2) rights of privacy. In No. 72-1196, a bank plaintiff, certain plaintiff depositors, and the American Civil Liberties Union (ACLU), also a plaintiff, as a depositor in a bank subject to the recordkeeping requirements and as a representative of its bank customer members, attack both the Title I recordkeeping requirements and the Title II foreign financial transaction reporting requirements on Fourth Amendment grounds; on Fifth Amendment grounds, as violating the privilege against compulsory self-incrimination; and on First Amendment grounds, as violating free speech and free association rights. In No. 72-1073, the Secretary asserts that the District Court erred in holding Title II's domestic financial transaction reporting requirements facially invalid without considering the actual implementation of the statute by the regulations -

Courts Created Financial Security Surveillance and They Can reverse them

Nojeim 99 (April 20. Gregory T. SENIOR COUNSEL AND DIRECTOR, FREEDOM, SECURITY AND TECHNOLOGY PROJECT. “FINANCIAL PRIVACY, REPORTING REQUIREMENTS UNDER THE BANK SECRECY ACT” https://www.aclu.org/report/financial-privacy-reporting-requirements-under-bank-secrecy-act)

The Supreme Court ruled in United States v. Miller, 425 U.S. 435 (1976) that individuals do not have a "reasonable expectation of privacy" under the Fourth Amendment in financial records pertaining to them but maintained by a bank in the normal course of business. See also California Bankers Assoc. v. Shultz, 416 U.S. 21 (1974) (upholding the then limited reporting requirements of the Bank Secrecy Act. ACLU was a plaintiff in this case).∂ Unfortunately, with limited exceptions including the Right to Financial Privacy Act20 enacted in 1978 in response to these court rulings, Congress has consistently limited rather

than expanded financial privacy. Indeed, one might rightfully conclude that in recent years, much more attention has been paid to efficiency in reporting and in expanding law enforcement use and access to that which is reported, than to protecting the privacy of the underlying personal transactions, and ensuring that information about innocent transactions is not turned over to the government. The time has come to reassess this course. ∂ In 1992 Congress amended the Bank Secrecy Act to authorize the Treasury Department to adopt the Suspicious Activity Reporting requirements.21 In essence, it gave the Treasury Department a blank check to require reporting of any "suspicious transaction relevant to a possible violation of law or regulation."22 At the same time, Congress completely insulated financial institutions from civil liability for reporting their customers as "suspects" to the government, and Congress barred financial institutions from telling their customers that their bank had spied on them by reporting their transactions. ∂ The Right to Financial Privacy Act is riddled with loopholes, including one very large loophole to accommodate financial institution reporting under the Bank Secrecy Act.23 Though the Right to Financial Privacy Act contemplates that notice will be given customers when financial records are transferred from one federal agency to another24 notice is not given when Suspicious Activity Reports are furnished by FinCEN to law enforcement officials. In terms of financial privacy, this is a sorry state of affairs. ∂ Members of Congress could take a number of steps to enhance financial privacy: ∂ First, instead of urging bank regulators to issue Know Your Customer regulations, creating more incentives for financial institutions to file more Suspicious Activity Reports25 and extending Suspicious Activity Reporting requirements to more businesses, Congress should legislate to ensure that "Know Your Customer" is excised once and for all from all Bank Secrecy Act compliance manuals and procedures.

Courts Solve Bitcoin

*This might be an aff answer card - Courts have the jurisdiction to regulate bitcoin

Bernard '15 (Robert Bernard, Law school graduate of Seton hall and practicing attorney, "Bitcoin: How Government Regulation Will Lead to a Brighter Future for the Online Currency," 2015, Seton hall Law Review, http://scholarship.shu.edu/cgi/viewcontent.cgi?article=1679&context=student_scholarship Accessed: 7/30/15, Chase Elsner Utnif Cp Gripe)

A number of law review articles have addressed the legality of Bitcoin.32 Due to how novel Bitcoin is, it truly falls into a legal grey area. There are, however, a few laws the United States could possibly use to regulate Bitcoin. The most obvious argument would be to regulate Bitcoin through Congress' constitutional right to control currency.33 Even though this seems obvious, the Constitution says nothing about private parties making money.34 However, two federal statutes affect a private party from creating a currency: the Stamp Payments Act of 1862 and federal counterfeiting statutes.35 The purpose of the Stamp Payments Act of 1862 is to curb competition with federal currency.36 It states in part, "Whoever makes, issues, circulates, or pays out any note, check, memorandum, token, or other obligation for a less sum than $1, intended to circulate as money or to be received or used in lieu of lawful money of the United States," will be fined and/or jailed not more than six months.37 Bitcoin does not limit transactions to more than $1, and some argue that it is intended to compete with official currency.38 The stronger argument is that Bitcoins do not fall within the Stamp Payments Act.39 Congress goal of the Stamp Payment Act was to prevent competition with federal currency, and challenging Bitcoin would not further this goal.40 Bitcoin is only used over the internet where it competes with the likes of credit cards and PayPal.41 Secondly, the Stamp Payment Act was written long ago, and the instruments described were all physical, tangible instruments.42 A court would be cautious to apply the act to digital currency that Congress could not have envisioned.43 Even though one could argue that Congress need not have envisioned digital currency, the text reads, "or other obligations," and thus implies a textual reading that the Stamp Payment Act targets obligations.44 Most of the cases brought under the Act further this view.45 Bitcoin is not an obligation. It only has value due to individuals giving it value, not because anyone promised to give something in return for it.46 Furthermore, the Stamp Payments Act is 150 years old, courts began limiting its application right after it was passed and have not interpreted since 1899, and the availability of statutes that are a better fit to attack Bitcoin would discourage federal prosecutors from trying to use the Act against Bitcoin.47 Counterfeiting laws are another area people believe Bitcoin could face liability. A lot of this belief is based off the Liberty Dollar case.48 The basis for this opinion is grounded in common ideology that the Liberty Dollar's creator and many Bitcoin users share: fear of the Federal Reserve and belief that an inflation resistant currency would be better for the economy.49 This reasoning, however, is flawed because federal counterfeiting laws deal with coins and paper money resembling United States or foreign currency.50 Liberty Dollars were metal and paper currency backed by precious metals with the intention to be immune from inflation.51 The federal prosecutor focused on the similarity between the Liberty Dollar and official U.S. currency, which could confuse consumers.52 The government noted that the creator encouraged users to spend them, and encouraged business to issue them as change to unsuspecting customers.53 Additionally, the organization profited from this because the face value of the Liberty Dollar was higher then the value of their metal content.54 Rather than a political attack on their beliefs, it was a prosecution of fraud just like any regular counterfeiting operation.55 For that reason the case bears no bearing on Bitcoins. They in no way resemble U.S. currency, and are no threat to unsuspecting individuals.56 The Securities and Exchange Acts of 1933 and 1934 are a viable option to apply to Bitcoin. Congress passed these acts in wake of the Great Depression.57 As a result of the Depression it exposed the vast fluctuation in the price of securities due to market manipulation.58 Congress aim was to force conservative valuations, increase disclosure, and promote surveillance of fraud.59 Stocks, notes, commodities, and investment contracts are subject to the Securities and Exchange Acts.60 How these instruments are defined is important in determining whether or not Bitcoin will fall within the scope of the Securities and Exchange Acts. It is important to note that the definitions are supposed to be construed broadly to focus on real-world implications.61 A stock is "a

proportional part of a corporation's capital represented by the number of equal units owned, and granting the holder the right to participate in the company's general management and to share in its net profits or earnings."62 A note is "a written promise by one party to pay a money to another party or to bearer."63 A commodity is defined as "an article of trade or commerce…The term embraces only tangible goods, such as products or merchandise, as distinguished from services."64 A Bitcoin does not meet the definition of a "stock," "note," or "commodity." Unlike a "stock," an owner of a Bitcoin does not receive dividends or a right to share in profits.65 Furthermore, a Bitcoin owner does not hold voting rights.66 Although one may argue a Bitcoin represents a promise to pay, it is a settled amount, and thus does not meet the definition of a "note."67 Additionally, Bitcoin does not seem to meet the definition of a "commodity," because it is not a tangible good.68 Even though a further examination of a "commodity" may open an argument that Bitcoins act like a "commodity," because one can use it, sell it, or make contracts involving it like many other commodities, an analysis of an "investment contract" shows that Bitcoin has more features of an "investment contract" than a "commodity."69 Due to a better categorization as an "investment contract," it is unlikely Bitcoin would be categorized as a commodity.70 The broad phrase "investment contract" is the most likely category that would encompass a Bitcoin. In SEC v. W.J. Howey Co., the Supreme court interpreted an "investment contract" as "a contract, transaction or scheme whereby a person 1) invests his money in 2) a common enterprise and 3) is led to expect profits 4) soley from the efforts of the promoter or third party…"71 First, most people do purchase Bitcoins with money, rather than mine them.72 Second, the common enterprise could be the network of people who use their computer power to mine, update the ledger, and thus ensure the value of Bitcoins.73 This argument is furthered by pointing out that the as the value of Bitcoins increase, each person who holds them is better off.74 There is also a strong counter argument in the sense that the exchanges, current investment projects, and individuals holding Bitcoins in e-wallets, act independently of one another, rather than in a single profit-seeking investment scheme.75 Third, a strong argument exists that people do expect profits due to many Bitcoin holders belief that Bitcoin is inflation-resistant.76 There is a counter argument that some hold Bitcoins for fun; however, the stronger argument is that they are held for profit.77 Lastly, whether or not this profit is based solely on the efforts of the promoter could go either way.78 One could argue that the Bitcoin community relies on the efforts of miners.79 They could also argue that they do not because of Bitcoin's inherent value due to the limited supply.80 The broad scope of an "investment contract" is the best vehicle to bring Bitcoins into the jurisdiction of the Securities and Exchange Acts. As analyzed above, applying the definition to Bitcoins in the general poses problems. Recently, however, a federal court has shown how it is easier to categorize Bitcoins as an "investment contract" in the context of a specific investment scheme. In November 2011 Trendon Shavers advertised that he was in the business of selling Bitcoins through his Bitcoins Savings and Trust.81 He promised investors a 1% daily return on investment until the investor either withdrawal their funds, or Shavers was no longer profitable.82 Shavers collected 700,467 Bitcoins from investors— approximately $4.5 million during that time period.83 Investors who suffered losses lost around 263,104 Bitcoins— approximately $1.8 million at that time.84 The SEC asserted that Shavers defrauded and made misrepresentations to his investors.85 The question before the United States District Court for the Eastern District of Texas was whether Bitcoins were a security.86 By following the four part

definition laid out in SEC v. W.J. Howey Co., the court found that Bitcoins met the definition of an "investment contract" and thus a security.87 The magistrate judge opined that because Bitcoin can be used as money, that an investment of Bitcoin into Shavers fund was an investment of money.88 Next, the court examined whether there was a common enterprise.89 For a common enterprise, the Fifth Circuit requires some interdependence between the investors and promoter.90 This can be shown by a reliance on the promoter's expertise.91 The magistrate judge found a common enterprise because the investors relied on Shavers expertise in Bitcoin markets and local connections.92 Lastly, the court found that profits were expected from Shavers efforts.93 This case is important for a few reasons. As explained earlier, in general, it is hard to categorize Bitcoins as a stock, note, or investment contract. The broad definition of an investment contract is the best option, but there are strong arguments against that categorization when applying it to the overall Bitcoin economy. The Shavers court found that Bitcoins were an investment contract in Shavers' investment fund, not that Bitcoins in general are investment contracts.94 This shows that the context in which Bitcoins are important. It allows the government to regulate them based on the context in which they are used. The argument for Bitcoins as an investment contract was much stronger when applied to an investment fund. This is one option for the government as the popularity of Bitcoin grows and more funds, such as the Winkelvoss twin's current endeavor, are created. This still, however, leaves unregulated the vast majority of Bitcoins. Most Bitcoins are purchased through exchanges.95 If the government wants to curb the illegal activity and money laundering associated with Bitcoin, regulating the exchanges is the best place to start. The best mechanism to regulate this market is the Bank Secrecy Act and Money Laundering Control Act. The Bank Secrecy Act ("BSA") requires a "money services business" to register with FinCEN.96 The regulations stipulate that a "money services business" includes—but not limited to—check casher, dealers in foreign exchange, one who deals in travelers checks or money orders, money transmitter, and the United States Postal Service.97 The Money Laundering Control Act criminalizes money laundering.98 One who uses "dirty" money to conduct a financial transaction knowing the money is "dirty" and with the intent to promote illegal activity, and profit from the activity is in violation of the Act.99 Every law review article on the topic of Bitcoin addresses E-Gold's collapse at the hands of these laws.100 The site was charged under both laws.101 The charge against E-Gold shows how these laws often apply simultaneously: [T]he E-Gold operation provided digital currency services over the Internet through two sites: www.e-gold.com and www.Omnipay.com. Several characteristics of the E-Gold operation made it attractive to users engaged in criminal activity, such as not requiring users to provide their true identity, or any specific identity. The E-Gold operation continued to allow accounts to be opened without verification of user identity, despite knowing that "e-gold" was being used for criminal activity, including child exploitation, investment scams, credit card fraud and identity theft. In addition, E-Gold assigned employees with no prior relevant experience to monitor hundreds of thousands of accounts for criminal activity. They also participated in designing a system that expressly encouraged users whose criminal activity had been discovered to transfer their criminal proceeds among other "e-gold" accounts. Unlike other Internet payment systems, the E-Gold operation did not include any statement in its user agreement prohibiting the use of "e-gold" for criminal activity.102 E-Gold attempted to argue that a "money transmitting business" under the BSA only applied to a business that engages in a physical transfer of currency.103 The court disagreed.104 By referring to the plain language of statute it held that a "money transmitting service" is one that transacts not just actual currency, but also the value of that currency through a medium of exchange.105 Recently, FinCEN issued guidelines applying to virtual currency to clarify where they fall under the BSA.106 With regards to virtual currency, a "money services business" is: (1) administrator or exchanger that accepts and transmits virtual currency, or buys or sells virtual currency; (2) brokers and dealers of virtual currency; (3) mine and sell virtual currency for money or its equivalent.107 The definitions seem to be an attempt to cast a large web over the Bitcoin community including e-wallets, exchanges like Mt. Gox, and miners.108 This would require them to implement anti-money laundering procedures, keep records, and report suspicious transactions.109 FinCEN's guidance—in terms of legal authority—is, at most, persuasive. An agency's substantive rules create legal rights and obligations, and as such require notice and comment.110 Interpretive rules differ because they "merely advise the public of a statute's meaning or the manner in which it is to be applied."111 As part of the Guidance, FinCEN explicitly stated that the guidance is

interpretive.112 To further clarify, FinCEN noted at the bottom of the guidance, “This guidance explains only how FinCEN characterizes certain activities involving virtual currencies under the Bank Secrecy Act and FinCEN regulations. It should not be interpreted as a statement by FinCEN about the extent to which those activities comport with other federal or state statutes, rules, regulations, or orders.” 113 The deference a court gives to an agency’s interpretive rule varies greatly.114 Court’s will look at the agency’s care, consistency, expertise, and persuasiveness of their opinion.115 These considerations have resulted in court’s giving the agency’s interpretation great respect, but in other instances giving it nothing more than near indifference.116 Law enforcement already follows these guidelines.117 Homeland Security seized a company’s bank account that was transacting with Dwolla and Mt. Gox.118 The affidavit in support of the seizure alleged that the company was a money transmitting business unregistered with FinCEN.119 If law enforcement chooses to continue to enforce in this manner, exchanges and e-wallet providers will have to follow suit; because, as exemplified by E-Gold, if they do not register and knowingly process dirty money, make a profit from the transaction, and do nothing to stop the transaction, they are guilty under both the Bank Secrecy Act and the Money Laundering Control Act. Exchanges have heeded FinCEN’s advice. On June 27th, 2013 Mt. Gox officially registered with FinCEN.120 In May of that year announced that they would require users to verify their accounts in order to make currency deposits or withdrawals.121 More intriguing is that rather than enforce the regulations, FinCEN has reached out to about a dozen Bitcoin firms.122 These letters were sent to warn the firms that they may have to comply with anti-money laundering compliance regulations as money transmitters.123 The letters acknowledged that they operate in a “legal grey area,” but should err on the side of caution and comply.124 Some have complied, while others suspended business out of the fear of civil and criminal sanctions.125 One legal expert believes this is a sign that FinCEN is moving towards a new enforcement precedent of warning before taking action.126 Based on the legal options at the hands of the United States government, it seems clear that the BSA is the major means to regulate Bitcoin. The Security and Exchange Acts are viable options with regards to specific investment schemes, but the majority of Bitcoin use occurs at exchanges. FinCEN’s regulations are clear that they are attempting to regulate these mediums.

New York federal courts prove that courts have the ability to rule over bitcoin

Caraluzzo ’14 (Carlo Caraluzzo is a journalist for cointelegraph [leading news site dealing with bitcoins and other technology based news] 8/22/14, “US District Judge: “Bitcoin is Money”,” Coin telegraph, http://cointelegraph.com/news/112328/us-district-judge-bitcoin-is-money Accessed: 7/30/15, Chase Elsner, Utnif Cp Gripe)

The question of whether or not Bitcoin is money, property or a commodity took one step closer as a Federal judge ruled in the case of Robert Faiella, 54 and Charles Shrem, 24, that Bitcoin was money. This case is actually not the only ruling on the issue by US courts that called Bitcoin money. The judge did not agree with the defense's idea that Bitcoin was not money saying Bitcoin "clearly qualifies as 'money' or ‘funds.’” In this particular case, defendants were moving money through the Silk Road and the judge stated that since Bitcoin has a denominator of value (each Bitcoin is worth a specific amount of fiat currency), it can be used to make purchases of retail goods and services, meaning that it falls under the textbook definition of money. This decision means that both defendants will have to stand trial on September 22, 2014 in U.S. v. Faiella, U.S. District Court, Southern District of New York, No. 14-cr-00243. But the decision can also affect other cases as well, one of which the Bitcoin Foundation has filed an Amicus Curie Brief in the case. The problem might be that the arguments made by the Bitcoin Foundation and the defense team in this case are very similar to those just ruled on by the judge in the Faiella case in New York. The case in Florida is a bit different, however, than the New York case that was just ruled on. In Florida Pascal Reed was charged in March of 2014 with: “Unlawfully engaging in an unregistered money transmitter business without being exempt from registration in violation of Florida Statutes § 560.125(1) filed on May 14, 2014, which charges Reid with being an unauthorized money transmitter under Florida law.” This might seem like a

legal mouthful but the charges are very clear for Reid. Florida statutes clearly define what qualifies as a money transfer service. Reid, however, is also charged with money laundering as well in the first known state level criminal case involving buying and selling cryptocurrencies, although two other individuals were accused of similar activities back in February. The Bitcoin Foundation's brief addressed only the charges of being an unauthorized money transfer service but, if successful, it is likely that the money laundering charges will be dropped. The Foundation's argument is simple in that prosecutors are attempting to superimpose a law intended for fiat currencies on Bitcoin. The Foundation commented in on the matter on their website: "The foundation's position at its core is this: state prosecutors are improperly applying Florida statutes regulating "money service businesses" to individuals conducting peer-to-peer sales of bitcoins." Simply put, the laws that were made to regulate money exchanges should not apply to peer-to-peer asset transfers. The Foundation also argues that under FinCEN guidelines the retail use of Bitcoin is not considered a money transfer. The interesting thing about the amicus brief filed by the Bitcoin Foundation is that while it targets the fundamental unfairness of Reid's charges, Bitcoin does not and should not fall under guidelines developed for an entirely different monetary system. This does however contradict the argument made by the Bitcoin Foundation of Canada that Bitcoin was already regulated under existing law in a recently issued report. The ruling in New York, however, along with another case in Texas, in which Magistrate Judge Amos Mazzant of the Eastern District of Texas ruled that Bitcoin was money in April of 2013. The Internal Revenue Service has already ruled that Bitcoin is considered property for tax purposes, which creates a bookkeeping nightmare for anyone who owns Bitcoin, especially traders. If Bitcoin is considered money then transfers would be considered income and would be taxed at a slightly higher rate (10% vs. 7%). But we have at least two federal courts ruling that Bitcoin is money, which brings the Executive branch (IRS) directly into conflict with the Judicial branch and these issues are settled either by Legislation at a Federal level or by the Supreme Court.

Courts create the legal frameworks that determine the validity of bitcoin

Caraluzzo 14(Carlo Caraluzzo – The Coin Telegraph Column Editor, "Federal Courts Zeroing in on Bitcoin Definition", http://cointelegraph.com/news/112662/federal-courts-zeroing-in-on-bitcoin-definition, October 2nd 2014)

One of the most talked about issues with respect to Bitcoin and other cryptocurrencies is exactly how they are to be legally defined. The Internal Revenue Service has ruled that, for tax purposes, Bitcoin is not to be considered "money". While Bitcoin is commonly used as payment for goods and services and acts as a "denominator of value", the IRS ruled that Bitcoin is taxable as property, not money, simply because it is not considered "legal tender" by Federal and state governments. The US Senate held two different sets of hearings on Bitcoin and the Homeland Security and Governmental Affairs Committee of the Senate held hearings entitled, "Beyond Silk Road: Potential Risks, Threats, and Promises of Virtual Currencies". On the other side of the US Capital building the House of Representatives held hearings on the "Costs and Benefits of Small Business Bitcoin Use". While the Congress is grappling with the issue the courts have taken the lead in legally defining Bitcoin and virtual currencies. There have been three major cases involving this issue in the Federal Courts in 2014. The most well-known is case involving Charlie Shrem in which Shrem pleaded guilty to a lesser offense after having a business relationship with the Deep Web's Silk Road. Shrem and Robert Faiella were accused of selling Bitcoin to Silk Road users so that they could use the BTC to buy drugs, acting in effect as an illegal and unregistered money transmission service. In Texas Trendon T. Shavers was arrested for operating a "Ponzi Scheme" in which he promised investors a 7% weekly return on investment and then used the money to pay older investors their original investment and encourage further investments. Finally, Butterfly Labs was raided by Federal agents after the Federal Trade Commission discovered that the owners were engaging in the "systematic deception" of their customers. The Butterfly labs case is relatively new while the others have been on-going for months so the defense has not yet been properly mounted. But in the other two cases the defenses were remarkably similar. In both cases the primary defense was that since the IRS ruled that Bitcoin was not money then the regulations that were being used in the case were being misapplied. Defendants also claimed that to apply older regulations designed for fiat currencies to cryptocurrencies was essentially ex post facto. Under this legal principle newly created laws cannot be retroactively applied. In both of these cases the judge's opinions have been relatively consistent. In Shrem's case the US District Judge Jed S. Rakoff ruled that: "Bitcoin clearly qualifies as 'money' or 'funds,'" as the digital currency "can be easily purchased in exchange for ordinary currency, acts as a denominator of value, and is used to conduct financial transactions." Congress likely "designed the statute to keep pace

with evolving threats". In the Shaver's Ponzi scheme case the SEC argued successfully that the investments accepted by Shavers clearly met the definition of "securities" because they were in fact both investment contracts and notes. US Magistrate Amos L. Mazzant ruled that the investments constituted an "investment contract" because investors were putting in money and expecting a monetary return of a specific amount, adding that the expectation of return did not have to include cash value as long as there was value of some kind and that Bitcoin could be both money and property under the law. He also ruled against the defense that Bitcoin was not money under the IRS guidelines by first agreeing with Judge Rakoff and added that: "[T]he IRS Notice did not make any determinations about whether Bitcoins are money or not, only that for federal tax purposes, Bitcoins are to be treated as property". Judge Mazzant also said that FinCEN's guidelines further "demonstrates that virtual currencies, like Bitcoin, are being treated like money for purposes of federal regulation." He said that investors were unable to participate in Shaver's plan without surrendering a certain amount of Bitcoin with the expectation of a substantial return. The stakes involved in these decisions are enormous as legislatures, regulatory agencies and the courts wrestle with applying old laws to new technologies, a problem that is likely to continue for some time as some of these cases wend their way to the Supreme Court. There are criminal cases, sometimes with very long sentences, frozen assets, closed businesses and substantial fines. The fact that at least two of the lower courts have basically made identical rulings might make the high Court's job a bit easier but the pressure will surely be on for many years to come before the details are finally agreed upon by all parties.

Court regulations have applicability to digital currency

Elwell et al 15(Craig K. Elwell - Specialist in Macroeconomic Policy, M. Maureen Murphy - Legislative Attorney, Michael V. Seitzinger - Legislative Attorney "Bitcoin: Questions, Answers, and Analysis of Legal Issues", https://fas.org/sgp/crs/misc/R43339.pdf, January 28th 2015)

In order to provide some information on recent efforts by federal, state, and international authorities to study, monitor, or regulate digital currencies, this section of the report (1) identifies the clause in the U.S. Constitution giving power to Congress over money; (2) describes some of the recent federal, state, and international activities and studies dealing with digital money; and (3) identifies some of the federal laws that might be implicated or that have been used with respect to digital money. In providing this information, we have identified some federal statutes and regulatory regimes that may have some applicability to digital currency, although none contains explicit language to that effect or explicitly mentions currency not issued by a government authority. Some federal statutes, because of their broad coverage, are likely to be held by courts to apply in connection with digital currency. For example, courts are likely to hold that the federal criminal mail and wire fraud statutes apply to fraudulent schemes designed to result in monetary losses in connection with buying, selling, or trading digital currencies.25 Federal statutes providing consumer protection with respect to consumer financial transactions, however, such as the Truth in Lending Act26 and the Truth in Savings Act,27 include no language specifically referencing digital currency transactions.

Courts have subject matter jurisdiction over bitcoin

Fleming & Evans 13(William B. Fleming and Joseph Evans - GAGE SPENCER & FLEMING LLP Bitcoin column editors, "BITCOINERS IN THE COURT ROOM, PART I: GOVERNMENT OVERSIGHT", http://fordhamcorporatecenter.org/2013/08/20/bitcoiners-in-the-court-room-part-i-government-oversight/, August 20th 2013)

This series discusses recent private and government actions concerning Bitcoin which reveal that Bitcoin-related litigation and regulation is on the rise and lawyers are well-served to learn about the legal impact of this virtual currency phenomenon. Part I describes recent government actions and their impact on Bitcoin. Part II explores private actions involving Bitcoin. A. BITCOIN PRIMER For the uninitiated, the first question: what is Bitcoin? Bitcoin is a virtual currency which is tradeable and is used to purchase goods and services. Indeed, according to a Bloomberg article, Bitcoin "can be used to buy and sell a broad range of items – from cupcakes to electronics to illegal narcotics." Bitcoin was created in 2009 by a person or group using the name Satoshi Nakamoto. It is entered into circulation electronically through a process called "mining." Members of the Bitcoin network, typically referred to as "miners," are the ones who "mine" Bitcoin. Miners download free software and dedicate their computer server power to solve complex Bitcoin equations. If the miner's computer is the fastest and most powerful for a particular equation the miner is rewarded with Bitcoin. Videos and images are available online displaying massive super computers dedicated to maximizing Bitcoin production. Miners' computers are shown stuffed into basements with cooling systems employed to prevent the hardworking computers from overheating. Mining is not the only way for people to get their hands on Bitcoin; a huge secondary market has developed for Bitcoin trading on decentralized exchanges. Miners harvest Bitcoin supply and subsequently sell it over the exchanges structured by its founder, a process which fuels the

secondary market in the virtual currency and enables the general public to own it. Bitcoin is limited in supply. There are 21 million minable Bitcoins projected to be mined and circulated by 2140. The United States Government Accountability Office ("USGAO") reports that "[a]ccording to Bitcoin's peer-to-peer network generated statistics, as of May 1, 2013, approximately 11 million Bitcoins were in circulation." Trading in the currency has resulted in wild swings in its price. The USGAO reports that, while from May 2012 through February 2013 prices ranged between $5 and $20 per Bitcoin, prices in the ensuing three months reached as high as $237. In that same time period, the number of transactions per day ranged from approximately 8,000 to 70,000. On August 20, 2013, Mt. Gox, a Japanese corporation and the largest Bitcoin exchange in the world, shows one Bitcoin to be worth roughly $120. A controversial feature of Bitcoin usage is that users can easily remain anonymous. Bitcoin is stored in Bitcoin wallets, a series of numbers and letters linked to an IP address. Savvy internet users – the vast majority of Bitcoiners – have found relatively simple ways to hide their IP addresses making it quite difficult to trace a Bitcoin to its owner. As for Bitcoin millionaires, by April 2, 2013, 250 wallets existed that were each worth over $1 million. Since the owners' identities are not public, however, the number of $1 million wallets has no sure bearing on the actual number of Bitcoin millionaires since a solitary end user can hold multiple wallets. Thus, Bitcoin is a highly volatile, hard to trace, wholly digital currency, that can be earned, bought, sold and used to purchase goods and services. B. GOVERNMENT: BITCOIN REGULATION AND ENFORCEMENT Since Shavers ruled that Bitcoin investments are securities, the SEC and private litigants may be able to sue Bitcoiners under federal securities laws. Furthermore, Bitcoin regulation and litigation is heating up as indicated by the Shavers ruling, subpoenas and cease and desist letters from state regulators, a 2014 House of Representatives Appropriations Bill, a USGAO report, the seizure of bank accounts and online payment processor accounts of the largest Bitcoin exchange in the world, a U.S. Treasury Financial Crimes Enforcement ("FinCEN") Guidance and a supposed leaked FBI report. 1. Shavers: Bitcoin Investments Are Securities In the Eastern District of Texas, the SEC brought an enforcement action alleging fraud in connection with an alleged Bitcoin ponzi scheme under Section 10(b) of the Exchange Act and Rule 10b-5 thereunder, Section 17(a) of the Securities Act as well as under Section 5(a) and 5(c) of the Securities Act. According to the SEC, Shavers and Bitcoins Savings and Trust ("BTCST") solicited investors to invest in Bitcoin in return for interest payments of up to 7% weekly. The SEC alleged that Shavers told investors that his high margins and returns for investors were because of his ability to arbitrage the Bitcoin market, capitalizing on the different exchange rates offered by different exchanges in this nascent and still inefficient market.[1] The SEC alleged that defendants were engaged in a fraudulent ponzi scheme and paid certain investors interest and redeemed their underlying Bitcoin investment out of the investments of subsequent investors. In particular the SEC alleged the defendant Shavers acquired Bitcoin for "his personal use" and gave "preferential redemptions to friends and longtime BTCST investors." The Complaint claimed Shavers used Bitcoin message boards to solicit investors: "I don't move a single coin until the cash is in hand and I'm out of harms [sic] way (just incase :)). So risk is almost 0 . . . anything not covered is hedged or I take the risk personally . . . in the event there was a huge change in the market and I needed to personally cover the difference I am more than willing to do so . . . if my business is illegal then anyone trading coins for cash and back to coins is doing something illegal. :) ." Defendants moved to dismiss for lack of subject matter jurisdiction because "Bitcoins [are] not money, and [are] not part of anything regulated by the United States" and therefore were not covered by the federal securities laws. The Eastern District of Texas did not agree. The federal securities laws strictly regulate "securities." A "security" is "any note, stock, treasury stock, security future, security-based swap, bond . . . [or] investment contract . . ." In the case in the Eastern District of Texas, the issue was whether BTCST investments were "investment contracts." The court applied the Supreme Court's Howey test: an investment contract is any contract, transaction, or scheme involving (1) an investment of money, (2) in a common enterprise, (3) with the expectation that profits will be derived from the efforts of the promoter of a third party. The court found that the second and third prongs of the Howey test were satisfied because the SEC alleged a collective reliance on Shavers' expertise in Bitcoin markets to provide a promised daily interest which shows a common enterprise and an expectation of profit from his efforts. As to the first prong, the inquiry focused on the question whether Bitcoin is "money." The Eastern District of Texas answered a resounding yes. "It can be used to purchase goods or services, and as Shavers stated, used to pay for individual living expenses." The Court recognized that Bitcoin is limited to places that accept it, but that it can be exchanged for conventional currencies, so under the first prong – the investment of money – "Bitcoin is a currency or form of money, and investors wishing to invest in BTCST provided an investment of money." The Court concluded, "BTCST investments meet the definition of [an] investment contract, and as such, are securities. For these reasons, the Court finds that it has subject matter jurisdiction over this matter."

Bitcoin is viewed as unconstitutional

Bryans '14 (Danton Bryans, J.D. candidate 2014, Indiana University Maurer School of Law, 2014, "Bitcoin and Money Laundering: Mining for an Effective Solution ," http://ilj.law.indiana.edu/articles/19-Bryans.pdf Accessed: 7/30/15, Chase Elsner, Utnif Cp Gripe)

A. Constitutional Limits on Currency Although Bitcoin may frustrate AML efforts, discussion of solutions under current AML frameworks is unnecessary if Bitcoin is unconstitutional per se. Bitcoin might be seen as illegal because it attempts to assume powers expressly reserved to the federal government under the U.S. Constitution; however, Bitcoin likely falls outside of these powers. The U.S. Constitution reserves rights for the federal government to coin money for the nation,44 to regulate value of the nation's coin,45 to prosecute counterfeiters,46 and it prohibits states from coining money.47 However, the federal government appears to allow local currencies when there appears to be no likelihood of confusion with the nation's currency.48 Conversely, the federal government has prosecuted currencies that pass off as the nation's legitimate currency.49 Thus, as a purely digital currency, the likelihood that Bitcoin would be confused with the nation's federal currency is quite low.50 Although Congress could potentially restrict Bitcoin or other virtual currencies through legislative action, perhaps through its Commerce Clause powers,51 the clauses that relate to the coining of money should not render Bitcoin inherently illegal. B. Bitcoin's Image in the United States Bitcoin's image within the United States is polarized. Some view it as a tool used by criminals to commit crimes,52 whereas others view it as a tool for a legal system of currency that is free from unlawful government interference.53 Most notably, in 2011 Senators Charles Schumer and Joe Manchin denounced Bitcoin in a letter to U.S. Attorney General Eric Holder and the Drug Enforcement Administration (DEA) as "[t]he only method of payment" for an illegal Internet marketplace called Silk Road.54 More recently, an anonymous group claimed to steal copies of presidential candidate and former Massachusetts Governor Mitt Romney's tax records and threatened to release them to the public if the group did not receive $1 million worth of bitcoins.55 In addition to the specific uses of Bitcoin for illegal activities, some agencies examined Bitcoin for more general law enforcement concerns. A leaked U.S. Federal Bureau of Investigation (FBI) report from April 2012 examined the challenges created by Bitcoin for law enforcement.56 The report's summary notes that the FBI (1) has "medium confidence that, in the near term, cyber criminals will treat Bitcoin as another payment option alongside more traditional and established virtual currencies which they have little reason to abandon"57 and (2) has "low confidence, based on current user and vendor acceptance, that malicious actors will exploit Bitcoin to launder money."58 Although the report mentions several possible illegal uses for Bitcoin, including laundering money and trading illicit goods, the report never categorizes Bitcoin as inherently illegal. Although the FBI does not explain this lapse in the report, the most likely reason is that it may be used for other legitimate purposes. Just as a hundred dollar bill may buy a family's groceries or an addict's drugs, so too could a bitcoin buy both legal and illegal goods. Although some may use Bitcoin for illegal purposes, others see it as a viable alternative for private individuals to trade value. In essence, Bitcoin proponents see the virtual currency as either (1) an alternative currency or (2) a commodity.59 In the first view, the bitcoins are functionally equivalent to USD, EUR, or any other currency system.60 Alternatively, bitcoins act as commodities, similar to purchased goods.61 Under either theory, the use of bitcoins should be lawful.6 Bitcoin also gained some governmental acceptance at the state level. In July 2012, New Hampshire State Representative Mark Warden began accepting donations to his campaign through Bitcoin.63 Shortly thereafter, Vermont State Senate candidate Jeremy Hanson verified Bitcoin's use for donations to be acceptable with two Vermont offices before also accepting contributions through Bitcoin.64 Thus, it appears some politicians are willing to accept the system, at least when it comes to receiving contributions, and some state governments allow Bitcoin's use as well. Finally, on March 18, 2013, the Financial Crimes Enforcement Network ("FinCEN") issued interpretive guidance for applying FinCEN's regulations to virtual currencies.65 FinCEN primarily administers compliance with the Bank Secrecy Act (BSA), discussed in detail in Part IV of this Note.66 Though not identifying Bitcoin by name, FinCEN clearly meant to include Bitcoin under its "De-Centralized Virtual Currencies" section of the guidance.67 Some have viewed this as validating Bitcoin's legitimacy in the United States,68 but others disagree.69 Patrick Murck of the Bitcoin Foundation noted that FinCEN does not have authority to promulgate new rules without first going through the required notice and comment proceeding of the Administrative Procedures Act.70 Realistically, although FinCEN's acknowledgment of Bitcoin is promising, the guidance does little to clarify Bitcoin's legal status beyond the BSA.

Courts Solve Facial Recognition

Courts can end Facial Recognition and solve better than the aff because they can spillover

Lynch 12 (Jennifer. July 18. Staff Attorney with the Electronic Frontier Foundation. "What Facial Recognition Technology Means for Privacy and Civil Liberties" https://www.eff.org/files/filenode/jenniferlynch_eff-senate-testimony-face_recognition.pdf)

The Fourth Amendment's prohibition of unreasonable searches and seizures presents a baseline protection for governmental biometrics collection in the United States.82 Although there are significant exceptions to Fourth Amendment protections that may make it difficult to map to biometric collection such as facial recognition, 83 a recent Supreme Court case, U.S. v. Jones, 84 and a few other cases85 show that courts are concerned about mass collection of identifying information—even collection of information revealed to the public or a third party—and are trying to identify solutions. Cases like Jones suggest support for the premise that although we may tacitly consent to someone noticing our face or our movements when we walk around in public, it is unreasonable to assume that consent extends to our data being collected and retained in a database, to be subject to repeated searches for the rest of our lives. This is buttressed by important privacy research showing that even though people voluntarily share a significant amount of information about themselves with others online, they still consider much of this information to be private in that they don't expect it to be shared outside of the networks they designate.86 In United States v. Jones, 87 nine justices held that a GPS device planted on a car without a warrant and used to track a suspect's movements constantly for 28 days violated the Fourth Amendment. For five of the justices, a person's expectation of privacy in not having his movements tracked constantly—even in public—was an important factor in determining the outcome of the case.88 Justice Sotomayor would have gone even further, questioning the continued validity of the third-party doctrine (holding that people lack a reasonable expectation of privacy in data such as bank records that they share with a third-party such as the bank).89 She also recognized that: [a]wareness that the Government may be watching chills associational and expressive freedoms. And the Government's unrestrained power to assemble data that reveal private aspects of identity is susceptible to abuse.90 She questioned whether "people reasonably expect that their movements will be recorded and aggregated in a manner that enables the Government to ascertain, more or less at will, their political and religious beliefs, sexual habits, and so on."91 The fact that several members of the Court were willing to reexamine the reasonable expectation of privacy test92 in light of newly intrusive technology could prove important for future legal challenges to biometrics collection. And some of the questions posed by the justices, both during oral argument and in their various opinions, **could be used as models for establishing greater protections for data like facial recognition that is both shared with a third party** such as Facebook **and gathered in public**.93

Courts can Solve Facial Recognition

Rosensept 11 (Jeffrey. 9/13. "Protect our right to Anonymity" Graduate of Yale Law School. CEO of the National Constitution Center in Philadelphia.http://www.nytimes.com/2011/09/13/opinion/protect-our-right-to-anonymity.html

IN November, the Supreme Court will hear arguments in a case that could redefine the scope of privacy in an age of increasingly ubiquitous surveillance technologies like GPS devices and face-recognition software. The case, United States v. Jones, concerns a GPS device that the police, without a valid warrant, placed on the car of a suspected drug dealer in Washington, D.C. The police then tracked his movements for a month and used the information to convict him of conspiracy to sell cocaine. The question before the court is whether this violated the Fourth Amendment to the Constitution, which prohibits unreasonable searches and seizures of our "persons, houses, papers, and effects." It's imperative that the court says yes. Otherwise, Americans will no longer be able to expect the same degree of anonymity in public places that they have rightfully enjoyed since the founding era. Two federal appellate courts have upheld the use of GPS devices without warrants in similar cases, on the grounds that we have no expectation of privacy when we are in public places and that tracking technology merely makes public surveillance easier and more effective. Photo Credit Edel Rodriguez But in a visionary opinion in August 2010, Judge Douglas H. Ginsburg, of

the United States Court of Appeals for the District of Columbia Circuit, disagreed. No reasonable person, he argued, expects that his public movements will be tracked 24 hours a day, seven days a week, and therefore we do have an expectation of privacy in the "whole" of our public movements.ə "Unlike one's movements during a single journey," Judge Ginsburg wrote, "the whole of one's movements over the course of a month is not actually exposed to the public because the likelihood anyone will observe all those movements is effectively nil."ə Judge Ginsburg realized that ubiquitous surveillance for a month is impossible, in practice, without technological enhancements like a GPS device, and that it is therefore qualitatively different than the more limited technologically enhanced public surveillance that the Supreme Court has upheld in the past (like using a beeper to help the police follow a car for a 100-mile trip).ə The Supreme Court case is an appeal of Judge Ginsburg's decision. If the court rejects his logic and sides with those who maintain that we have no expectation of privacy in our public movements, surveillance is likely to expand, radically transforming our experience of both public and virtual spaces.ə For what's at stake in the Supreme Court case is more than just the future of GPS tracking: there's also online surveillance. Facebook, for example, announced in June that it was implementing face-recognition technology that scans all the photos in its database and automatically suggests identifying tags that match images of a user's friends with their names. (After a public outcry, Facebook said that users could opt out of the tagging system.) With the help of this kind of photo tagging, law enforcement officials could post on Facebook a photo of, say, an anonymous antiwar protester and identify him.ə There is also the specter of video surveillance. In 2008, at a Google conference on the future of law and technology, Andrew McLaughlin, then the head of public policy at Google, said he expected that, within a few years, public agencies and private companies would be asking Google to post live feeds from public and private surveillance cameras all around the world. If the feeds were linked and archived, anyone with a Web browser would be able to click on a picture of anyone on any monitored street and follow his movements.ə To preserve our right to some degree of anonymity in public, we can't rely on the courts alone. Fortunately, 15 states have enacted laws imposing criminal and civil penalties for the use of electronic tracking devices in various forms and restricting their use without a warrant. And in June, Senator Ron Wyden, Democrat of Oregon, and Representative Jason Chaffetz, Republican of Utah, introduced the Geolocation Privacy and Surveillance Act, which would provide federal protection against public surveillance.ə Their act would require the government to get a warrant before acquiring the geolocational information of an American citizen or legal alien; create criminal penalties for secretly using an electronic device to track someone's movements; and prohibit commercial service providers from sharing customers' geolocational information without their consent — a necessary restriction at a time of increasing cellphone tracking by private companies.ə It's encouraging that Democrats and Republicans in Congress are coming together to preserve the expectations of anonymity in public that Americans have long taken for granted. Soon, liberal and conservative justices on the Supreme Court will have an opportunity to meet the same challenge.ə If they fail to rise to the occasion, our public life may be transformed in ways we can only begin to imagine.

Courts Solves Drones

Courts key to check drone search regulations

Thompson 13 (Richard M. Thompson II - Legislative Attorney, "Drones in Domestic Surveillance Operations: Fourth Amendment Implications and Legislative Responses", http://www.a51.nl/storage/pdf/R42701.pdf, April 3rd 2013)

Applying the Fourth Amendment to drones requires application of the threshold question: was there a search? Again, this will depend on all the factors discussed above—the area of the search, the technology used, and whether society would respect the target's expectation of privacy in the place searched. If a reviewing court concludes that the drone surveillance was not a search, neither a warrant nor any degree of individualized suspicion would be required. If, however, the court concluded there was a search, then a court would ask whether a warrant is required, if one of the exceptions apply, and what level of suspicion, if any, is necessary to uphold the search. Unless a meaningful distinction can be made between drone surveillance and more traditional forms of government tracking, existing jurisprudence suggests that a reviewing court would likely uphold drone surveillance conducted with no individualized suspicion when conducted for purposes other than strict law enforcement. The Supreme Court has hesitated from interfering in what they see as the executive's function in protecting the health and safety of the American population. As Chief Justice Rehnquist noted in the Sitz, the Court does not want to transfer from politically accountable officials to the courts the decision as to which among reasonable alternative law enforcement techniques should be employed to deal with serious public danger.... [F]or purposes of Fourth Amendment analysis, the choice among such reasonable alternatives remains with the governmental officials who have a unique understanding of, and a responsibility for, limited public resources, including a finite number of police officers.121 The Court may defer to law enforcement officials in the drone context also. There are countless instances where the government may seek to utilize drones for health and safety purposes that go beyond mere law enforcement. These may include firefighting, search and rescue missions, traffic safety enforcement, or environmental protection. If, on other hand, surveillance is conducted primarily to enforce the law, a warrant may be required, unless one of the exceptions to the warrant requirement applies.

Privacy changes are indeed possible when enacted through the supreme court

HILTNER 15 [PHILIP J. HILTNER, Judicial Law Clerk at Tuscola County Circuit Court, THE DRONES ARE COMING: USE OF UNMANNED AERIAL VEHICLES FOR POLICE SURVEILLANCE AND ITS FOURTH AMENDMENT IMPLICATIONS, WAKE FOREST JOURNAL OF LAW & POLICY, V 3:2, p.413-414, http://www.washingtontimes.com/news/2012/feb/7/coming-to-a-sky-near-you.]

First, change could come through judicial decision-making. Courts could decide to create new rules that limit the types of observations that may be made by UASs. The Supreme Court has already created reasonable protection for individuals inside the home. The Court may very well decide that individuals have a reasonable expectation of privacy from observations made only a few feet outside their windows or above their patios. However, if limitations on police UAS use are to come from the courts, change will likely be slow. If exponential growth can continue to be expected in the UAS market, police surveillance by UAS may become commonplace by the time such a case reaches the Supreme Court. As discussed above, there might be even less chance of constitutional protection as technological devices become a part of general public use.

Courts Solve

Benson 15 (5/20. Thor. Journalist. "5 Ways We Must Regulate Drones at the US Border" http://www.wired.com/2015/05/drones-at-the-border/)

"There are some long-standing court cases that basically extend the border 100 miles interior of the United States, sometimes even farther than that… but aerial surveillance isn't governed by the Fourth Amendment," Gregory McNeal, an associate professor of law at Pepperdine University, told me. In a Brookings Institute paper concerning drone surveillance, McNeal cites the 1986 U.S. Supreme Court case California v. Ciraolo that ruled warrantless surveillance by a small plane flying at an altitude of 1,000 feet was not a unreasonable search and seizure, because it was flying in "publicly navigable airspace." "There are no court cases that tell us drones should be treated differently," McNeal said. Basically, he says, agencies operating drones at the border could fly as far into the U.S. as they want.

Courts can Restrict Drone Usage

Thompson 13 (April 3. Richard M. Legislative Attorney. "Drones in Domestic Surveillance Operations: Fourth Amendment Implications and Legislative Responses. https://www.fas.org/sgp/crs/natsec/R42701.pdf)

The Fourth Amendment to the United States Constitution safeguards Americans' privacy and prevents excessive government intrusion by prohibiting "unreasonable searches and seizures."7 Courts have long grappled with how to apply the text of this 18th century provision to 20th century technologies. Although the Supreme Court has the final say in the interpretation of the Fourth Amendment and other constitutional safeguards,8 Congress and, in many cases, the President are free to institute more stringent restrictions upon government surveillance operations.9 This report first explores the potential uses of drones in the domestic sphere by federal, state, and local governments. It then surveys current Fourth Amendment jurisprudence, including cases surrounding privacy in the home, privacy in public spaces, location tracking, manned aerial surveillance, and those involving the national border. Next, it considers how existing jurisprudence may inform current and proposed drone uses. It then describes the various legislative measures introduced in the 113th Congress to address the legal and policy issues surrounding drones. Finally, it briefly identifies several alternative approaches that may constrain the potential scope of drone surveillance.

Courts Can stop Drones

Bomboy 14(February 7. Scott. Professor at University of San Francisco. "A legal victory for drones warrants a Fourth Amendment discussion" http://blog.constitutioncenter.org/2014/02/a-court-victory-for-drones-warrants-a-fourth-amendment-discussion/)

Under present law, drones can be used without a search warrant. The FBI's current position on drones is that there is "no reasonable expectation of privacy" in areas of private property open to public view. That includes any portion of a yard or field that can be seen from public view. This thinking is based on Supreme Court rulings about manned aerial surveillance vehicles. If that wasn't scary enough to civil liberties groups, there are some judges who believe there is no reasonable expectation of privacy when windows are open to public view. Manhattan Judge Eileen Rakower actually ruled that artist Arne Svenson had a right to take pictures of his neighbors through their windows and sell the pictures as "art." The True Christian Heritage and Christian Ideals That Are Woven Into The Very Fabric Of The Constitution… By that legal logic, drones could be used to peer through windows without a warrant under current law. The Associated Press summed up the FBI's position best when it wrote, "The Agency also wrote that a warrant would not be needed because drones don't physically trespass on private property" – meaning, in theory, a drone flying an inch above the ground would not need a warrant to watch you. That's absolutely frightening given the advances in miniature drone technology. US Sen. Charles Grassley, R-Iowa, said earlier this summer that the "right of privacy is at stake" in the FBI's use of drones.

Supreme Court's ruling on Dow Chemical Co. v. United States proves Supreme Court doesn't protect privacy rights from aerial surveillance.

Koerner 15 [Matther R. Koerner, Law Student at Duke University, "Drones and the Fourth Amendment: Redefining Expectations of Privacy", Duke Law Journal, Vol. 64, pages 1140-1142, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=3801&context=dlj]

By contrast, courts have not extended the same guarantees afforded to the home and its curtilage to areas deemed analogous to an open field.71 Open fields are not required to be either open or fields in the literal sense, but they typically fall outside of the home's curtilage.72 Accordingly, an absence or insufficiency of the enumerated factors establishing the curtilage of a home would denote an open field.73 The Court has found, for example, that a barn was located in an open field, rather than the curtilage, because the barn was fifty yards from a fence surrounding the home and sixty yards from the home, the barn was not surrounded by a fence, the barn "was not being used for intimate activities of the home," and the resident of the home "did little to protect the barn area from observation by those standing in open fields."74 Open fields do not share the same setting for private activities and information that the Fourth Amendment protects from governmental intrusions.75 Thus, a person may not expect privacy in an open field, and the government's conduct generally would not constitute a search.76 ¶ In Dow Chemical Co. v. United States, 77 the Supreme Court considered whether the curtilage or open-fields doctrine applied to the open areas between buildings on a large industrial property.78 The U.S. Environmental Protection Agency (EPA) conducted warrantless, aerial surveillance of a two-thousand-acre facility owned by Dow Chemical.79 Finding that the extensive, scattered outdoor areas of the complex were neither precisely the curtilage nor an open field,80 the Court concluded that the complex was more similar to an open field.81 Therefore, the Fourth Amendment's guarantees did not extend to these areas, and the government's actions did not constitute a search.82 ¶ The Supreme Court has recently adapted this property-rights paradigm to investigations of the home that would traditionally fall outside the trespass doctrine because they do not complete a traditional, physical trespass. This adaptation, expounded in Kyllo v. United States, 83 has extended the property-rights paradigm to certain invasive technologies in order to shelter the Fourth Amendment's guarantees from modern technology.84 This paradigm will likely play a critical role in evaluating the constitutionality of many sophisticated technologies employed by drones. In Kyllo, a federal agent, investigating whether Danny Kyllo was growing marijuana plants using heat lamps inside his home, used a thermal-imaging device from a public roadway to determine if there was an elevated amount of heat emanating from the walls of the home.85 The Supreme Court considered whether the government's use of the thermal imager constituted an unreasonable search and, more generally, "what limits there are upon [the] power of technology to shrink the realm of guaranteed privacy."86 The majority held that when the government uses sense-enhancing technology to acquire details from within "the home that could not otherwise have been obtained without physical 'intrusion into a constitutionally protected area,'" then this conduct constitutes an unreasonable search when the technology "is not in general public use."87

The courts should confront standards of privacy when dealing with drones.

Koerner 15 [Matther R. Koerner, Law Student at Duke University, "Drones and the Fourth Amendment: Redefining Expectations of Privacy", Duke Law Journal, Vol. 64, pages 1135-1136, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=3801&context=dlj]

For these reasons, it is highly probable that courts will soon confront issues regarding the use of drones for domestic surveillance.30 This Note argues that when these issues arise, courts should apply the reasonable-expectation-of-privacy test expounded in Katz v. United States, 31 and, in doing so, expand on the subjective expectation-of-privacy requirement. This oft-neglected element of the two-pronged test provides critical analysis that is especially

relevant to cases involving drones. In further analyzing and clarifying the subjective-expectation requirement, courts should proceed in three steps. First, they should determine whether the surveilled person "exhibited an actual (subjective) expectation of privacy"—the threshold issue in order for the Fourth Amendment to apply.[32] Second, if the person held a subjective expectation of privacy, courts should evaluate the scope of that privacy expectation. And third, they should determine whether the person "expose[d] [information] to the 'plain view' of outsiders" and whether the evidence at issue fell within the scope of that exposure.[33]

Border Surveillance Solvency

Court decisions best attuned to border search activity

Thompson 13 (Richard M. Thompson II - Legislative Attorney, "Drones in Domestic Surveillance Operations: Fourth Amendment Implications and Legislative Responses", http://www.a51.nl/storage/pdf/R42701.pdf, April 3rd 2013)

The Supreme Court has likewise acknowledged this federal interest in the borders, observing that "[t]he Government's interest in preventing the entry of unwanted persons and effects is at its zenith at the international border."73 Again, the touchstone in every Fourth Amendment case is whether the search is reasonable. 74 The Court observed in United States v. Montoya De Hernandez that "the Fourth Amendment balance of reasonableness is qualitatively different at the international border."75 "Routine searches," the Court continued, "are not subject to any requirement of reasonable suspicion, probable cause, or warrant."76 "Routine" searches have included pat downs for weapons or contraband,77 the use of drug sniffing dogs,78 and the inspection of luggage.79 By contrast, "non-routine" searches are those that go beyond a limited intrusion, and require the government official to have (at a minimum) "reasonable suspicion" of wrongdoing.80 Prolonged detentions,81 strip searches,82 and body cavity searches83 have all been considered non-routine searches. Unlike searches directly at the border, the Court has shown more reticence in granting law enforcement unfettered discretion to conduct searches near, but not directly at, the border. In Almeida-Sanchez v. United States, the defendant's vehicle was stopped and searched by U.S. Border Patrol agents 25 miles north of the U.S.-Mexico border.84 The agents had neither a warrant nor probable cause, nor even reasonable suspicion, to conduct the search. The government argued that the search was permissible under Section 287 of the Immigration and Nationality Act. A federal statute, the Court noted, cannot trump the Constitution. The Court refused to permit this suspicionless search, as it was conducted neither at the border nor at its "functional equivalent."85

The Supreme Court solves--- multiple issues of privacy violations are heading to the Supreme Court

Fakhoury 13 (Hanni Fakhoury - Senior Staff Attorney, "Finally, Some Limit to Electronic Searches at the Border", https://www.eff.org/deeplinks/2013/03/finally-some-limit-electronic-searches-border)

In an important new decision, the Ninth Circuit Court of Appeals created the first explicit limits on the government's ability to search electronic devices at the border. The court's decision in United States v. Cotterman (PDF) establishes that government agents must have "reasonable suspicion" before conducting a forensic examination of a computer at the border. In 2007, Howard Cotterman attempted to enter the United States from Mexico through the Lukeville port of entry in Arizona. Border agents detained Cotterman for 8 hours while they searched, without a warrant, two laptops and a digital camera he was carrying. Ultimately wanting to do a more invasive examination of the devices, the agents let Cotterman enter the U.S. but held onto his electronic devices and took them 170 miles away to Tucson, where they continued their warrantless search for two days. Ultimately the agents found child pornography on the computers and Cotterman was arrested and indicted. The trial court suppressed the evidence, finding the warrantless search violated the Fourth Amendment. The government appealed to a three judge panel of the Ninth Circuit who reversed (PDF), finding the search valid under the government's broad authority to search at the border without a warrant or any individualized suspicion. Cotterman asked for the entire Ninth Circuit to review the case en banc. Together with the National Association of Criminal Defense Lawyers, we filed an amicus brief (PDF) asking the court to review this dangerous precedent, which it agreed to do last summer. At issue was just how far the "border search doctrine" extends. The Fourth Amendment requires government searches to be "reasonable" and that typically means a warrant is required before the government can search. But at the border, the Supreme Court explained in United States v. Ramsey that searches are reasonable "pursuant to the longstanding right of the sovereign to protect itself by stopping and examining persons and property crossing into this country." That means at the border, no warrant or even individualized suspicion is necessary for the government to search. While the Supreme Court has hinted that this broad search authority may have limits, it has never explicitly said what those limits are other than to find body cavity searches require "reasonable suspicion" that the traveller is carrying contraband in her body, and noting that especially "destructive" or "offensive" searches

may not be allowed. What these terms mean, however, has never been explained by the high court. And while even the Ninth Circuit itself has proclaimed the border is not an "anything goes" zone, it has previously approved of expansive computer searches in United States v. Arnold. As a result of this broad searching authority, the border has become a place where electronic privacy rights are often surrendered as a cost of entering into the country. Unsurprisingly, that's exactly how the government wants it. Just weeks ago, the Department of Homeland Security issued a Civil Rights/Civil Liberties Impact Assessment on border searches of electronic devices. The report is secret — and the ACLU is suing to get it under the FOIA — but an executive summary (PDF) was released publicly. Unsurprisingly, DHS wants to retain the power to search and seize electronic devices without any suspicion of wrongdoing because even that modest requirement "would be operationally harmful without concomitant civil rights/civil liberties benefits." Thankfully, the Ninth Circuit rejected this. "A person's digital life ought not be hijacked simply by crossing a border" it wrote. Even if DHS doesn't want a "reasonable suspicion" standard for electronic searches at the border, it's now stuck with one in the Western United States (PDF), including along the Mexico-U.S. border in California and Arizona. In explaining its rationale, the Ninth Circuit noted that in the past a person could only pack a limited amount of their things in a suitcase with them before travelling abroad. But with advances in technology, people are now storing vasts amount of their personal information — data like contacts, emails, text messages, photos, financial records — on portable devices like smartphones, laptops and tablets. "It is as if a search of a person's suitcase could reveal not only what the bag contained on the current trip, but everything it had ever carried." A "reasonable suspicion" standard for forensic searches ensured travellers wouldn't be subject to a "computer strip search" every time they crossed the border. This is the first time a court has placed a limit on the government's ability to search an electronic device at the border. Cotterman does leave open one important question: what is a "forensic examination?" Does it include invasive computer searches, done with trained professionals who mirror and image the entire contents of a computer, including deleted information? Or does it also include more superficial searches, such as an officer turning on a cell phone and quickly skimming through a list of contacts or text messages? We'd like to see it include both of these types of searches. Even the simple act of scrolling through a contact list or IM chat is invasive, and shouldn't be done without some indication that criminal activity is occurring. After establishing this new rule, the court turned to determining whether officers had "reasonable suspicion" to examine Cotterman's computer. "Reasonable suspicion" means an agent has specific and articulable facts demonstrating a reasonable likelihood that criminal activity is occurring. Importantly, the court found the isolated act of password protecting files or an entire hard drive did not support a finding of "reasonable suspicion." But the rest of its "reasonable suspicion" analysis leaves much to be desired. It found "reasonable suspicion" existed because Cotterman (1) had a 15-year-old prior conviction for a sex offense; (2) travelled abroad frequently; (3) was returning from a country known for "sex tourism," Mexico; and (4) had a "collection of electronic equipment." These facts capture a large number of people and, we think, don't rise to the level of particularized suspicion legally sufficient under the law. That's why we'd prefer the more stringent "probable cause" standard, which requires law enforcement to show it is more likely than not that evidence of a crime will be found in the place to be searched. But ultimately, Cotterman is a step in the right direction towards ensuring our historic Fourth Amendment protections keep pace with modern technological advances, and an important decision in the growing challenges to the government's border search powers. It's doubtful this will be the last judicial word on the case. Cotterman's lawyer has already indicated he will likely seek Supreme Court review. And while Professor Orin Kerr has speculated that the government may not be able to seek Supreme Court review, you can be sure they're unhappy with this decision and would welcome a chance to have the high court review the case. In the meantime, people crossing the border in the Ninth Circuit's jurisdiction can breathe a small sigh of relief that their electronic privacy can't be violated as easily as it was before. And for everyone, be sure to check out our guide to protecting your electronic privacy at the border.

The Supreme Court solves border surveillance--- key to clear up disagreements in lower courts

Freiwald 9 (Susan Freiwald – BA Harvard University JD, "ELECTRONIC SURVEILLANCE AT THE VIRTUAL BORDER", http://www.olemiss.edu/depts/ncjrl/pdf/ljournal09Freiwald.pdf)

Perhaps surprisingly, the question of exactly how the Fourth Amendment regulates foreign intelligence surveillance of U.S. Persons remains unanswered by the Supreme Court. Though some decisions issued in the period after Keith and before passage of FISA assumed that the President's power over foreign affairs included the right to conduct warrantless surveillance for foreign intelligence purposes, others questioned that proposition.138 In a recent case issued by the Foreign Intelligence Surveillance Court of Review ("FISCR"), which met for the first time to consider whether the FISC had properly

found amendments made by the Patriot Act to violate the Fourth Amendment, the FISCR opined that the constitutional question about how the Fourth Amendment regulates foreign intelligence surveillance remained unresolved both before and after it issued its decision.139 The FISCR's decision addressed whether FISA's procedures adequately ensured that agents did not follow FISA standards in cases more properly pursued as law enforcement investigations regulated by the Wiretap Act.140 The FISCR concluded that the statute satisfied the Fourth Amendment, even though the new provisions permit agents to follow FISA procedures whenever significant purpose of the investigation is to gather foreign intelligence information. Before the Patriot Act amendments, agents had to show that the primary purpose, instead of a significant purpose, was to gather foreign intelligence information.141 The FISCR's decision has generated significant criticism in academia, and a federal district court has specifically rejected it.142 In Mayfield v. United States, the district court in Oregon held FISA, as amended, to be facially invalid under the Fourth Amendment because the provisions too easily permitted the executive branch to deprive a U.S. Person of full Fourth Amendment rights without a sufficient showing of probable cause.143 Whether or not the Mayfield court's analysis stands up to review, the court addressed the conditions under which executive branch agents may exile U.S. Persons and expressed concern about the adequacy of the executive's showing.144 Both the FISCR and Mayfield opinions considered whether FISA's procedures provided adequate judicial oversight of the executive's showing to justify exile. Both illustrated that the decision to exile a person has significant implications for that person's rights, and that the exiling process itself must meet constitutional standards. However, both cases may rarely, if ever, be replicated, because of the difficulties involved in challenging exiling decisions.145

Empirically the Supreme Court has been crucial in determining the constitutionality of actions at the border

Robb 78 (Gary Robb – Attorney, "WARRANTLESS BORDER SEARCHES: CROSSING THE BOUNDARY OF UNREASONABLENESS", file:///C:/Users/Jonah/Downloads/19STexLRev265.pdf)

The above series of questions probably had a great deal to do with the government's decision to drop its appeal. 7 The case was dismissed pursuant to Supreme Court Rule 60.72 In all likelihood the government lawyers feared that the authority of federal officials to search at the border would be severely curtailed, and rather than risk an iron-clad standard they opted to step out and fight the battle, instead, on the lower court level. The "probable cause equal entry" rule that has, defacto, existed since 1789 was in danger for the first time in United States v. Johnson. No other case since Johnson has come to the Supreme Court which raised the question of the constitutionality of a "border search" at the border. The Court has granted certiorari, however, to cases involving roving border patrol searches and "temporary checkpoint" searches, an area now to be examined. In Almeida-Sanchez v. United States,73 the constitutionality of "roving border searches" was in question. Almeida-Sanchez was a Mexican citizen with a valid work permit to justify his presence in the United States. As he was traveling on a public highway about twenty-five miles north of the Mexican border, he was stopped by a roving Border Patrol unit.74 Despite his possession of the permit, the agents proceeded to search the vehicle and discovered 162 pounds of marijuana. The Court of Appeals for the Ninth Circuit affirmed his conviction, reiterating the trial court's decision not to exclude the marijuana as evidence. The Supreme Court granted certiorari.7 " The government contended that Section 287(a) of the Immigration and Nationality Act which provides for warrantless searches of vehicles ''within a reasonable distance from any external boundary of the United States" justified the search and seizure of the marijuana. Justice Stewart, writing for the Court, scolded the government in stating simply that"... no act of Congress can authorize a violation of the Constitution."7 Finding no warrant and no probable cause, a 5-4 majority77 held the search to be in violation of the Fourth Amendment The effect of the decision severely eroded the power of customs officials to conduct "roving" inland border searches." The Court felt obliged to strike down "random searches" not conducted at the border with the effect that "the one-hundred mile zone is now like any other area inside the national boundaries; the agents must have probable cause to stop and search automobiles."79 Quoting Chief Justice Taft, the Court said that "those lawfully within the country, entitled to use the public highways, have a

right to free passage without interruption or search . . .,"s Though by no means bestowing Taft's "free passage" right, the Court, by having finally granted certiorari and deciding a "border search" case, at last recognized that a sizable constitutional question was in need of resolution.

NSA Courts Solvency

Courts Key to Reversing Legal Justifications that allow for Mass NSA Surveillance

Gallagher 13 (Ryan. 9/17 Journalist who reports on surveillance, security, and civil liberties. http://www.slate.com/blogs/future_tense/2013/09/17/claire_eagan_fisc_how_surveillance_court_ruled_the_nsa_s_domestic_snooping.html)

The secret court that oversees NSA surveillance has declassified documents that reveal for the first time the legal justification for the spy agency's daily collection of virtually all Americans' phone records.ð On Tuesday, a previously top-secret opinion and order signed off by Foreign Intelligence Surveillance Court Judge Claire Eagan was published. The opinion, dated Aug. 29, shows how the court decided to deem the NSA's mass collection of domestic phone records constitutional and in line with section 215 of the Patriot Act, which allows the government to secretly grab so-called "business records." The NSA's operation of a vast database storing metadata on millions of calls made by Americans daily was first revealed by the Guardian in June, based on documents leaked by former NSA contractor Edward Snowden. The release of the court opinion and order on the phone records program comes after a declassification review of the secret legal files was conducted, primarily due to the huge backlash prompted by Snowden's leaks.ð The opinion shows that the court is relying on a Supreme Court case from 1979 to conclude that the bulk collection of phone records is not a violation of the Fourth Amendment, which protects against unreasonable searches and seizures. In Smith v. Maryland, at issue was the warrantless monitoring of a robbery suspect's phone calls. The Supreme Court judges in Smith found that the monitoring was permissible because "a person has no legitimate expectation of privacy in information he voluntarily turns over to third parties" and that they doubted "people in general entertain any actual expectation of privacy in the numbers they dial." Grounded in the same logic, the newly released FISC opinion states:ð In sum, because the application at issue here concerns only the production of call detail records or "telephone metadata" belonging to a telephone company, and not the contents of communications, Smith v. Maryland compels the conclusion that there is no Fourth Amendment impediment to the collection. Furthermore, for the reasons stated in [REDACTED] and discussed above, this Court finds that that the volume of records being acquired does not alter this conclusion.ð Aside from the bizarre redaction here, which appears to have censored a crucial detail for inexplicable reasons, the reliance on Smith v. Maryland is contentious. The 1979 case concerned the monitoring of a single individual, already a criminal suspect, for a period of only a few days. The NSA's metadata program involves the daily mass collection of billions of phone records from millions of Americans not suspected of committing any crime. These records can be mined using sophisticated software that draws relationships between people, and they can be used to conduct retrospective surveillance of people dating back several years. This raises constitutional questions that were simply not a consideration in the Maryland case more than three decades ago.ð Notably, the opinion also indicates that no company that was ordered to turn over the bulk metadata has challenged its legality in the court, despite having the ability to do so. ð The publication of the legal documents will add fuel to the already simmering debate about the phone records program, which several lawmakers have blasted since it was revealed in June. According to the ACLU, there are at least 19 NSA-related bills are pending in Congress, with some of them aimed at reforming and effectively shutting down the phone records database in its current form. Last week, separately released documents about the phone records program showed how the NSA had unlawfully violated court rules governing the use of the database, while providing the court false information about how it was being operated for a period of almost three years.

Shielding

Shields the pres from Public

Even in today's no restraint society, the court has remained immune from the public

Burton, 2004 [Adam Burton, graduate of Georgetown University Law Center, PAY NO ATTENTION TO THE MEN BEHIND THE CURTAIN: THE SUPREME COURT, POPULAR CULTURE, AND THE COUNTERMAJORITARIAN PROBLEM, UMKC Law Review, 73:53, Fall 2004 JWS]

At any rate**, by the 1990s, restraint in popular culture had all but evaporated**. **In the most obvious example, the salivating media devoured and propagated the most lascivious details of the allegations put forth in the Starr Report, and President Clinton's sexual practices became a staple of popular culture, inspiring countless Saturday Night Live sketches**, Monica Lewinsky Halloween costumes (complete with stained blue dress), n92 and Monica internet fan pages, n93 to name only a few indicators of popular culture's obsession with the story. That the most intimate details of the President's encounters, and not merely the simple fact of the encounters, could be revealed in the government's official reports is a testament to the lack of regard that our popular culture holds for the privacy of public figures. While the degree of detail might have been thought of as excessive and in poor taste in earlier times, and may have inspired sympathy for the President's situation and repulsion for his attackers, the architects of the Starr Report calculated that exposing the salacious minutiae of the President's sex acts would fascinate the American public in the age of Jerry Springer. n94 And **the new tools of information technology were quickly utilized to allow the public to satisfy its desire to know**. In addition to garnering widespread [*66] television coverage, the Starr Report was available on the Internet within minutes of its official publication. n95 **The Clinton-Lewinsky scandal is the most obvious example of the exposure of the private life of a political figure, but by no means the only one. Exposure is not limited to circumstances of scandal, sexual or otherwise**. Even before the Lewinsky scandal, the private lives of the Clintons were subject to scrutiny; an audience member at a 1992 campaign speech famously asked the future President what style of underwear he preferred. n96 The inspection of the Clintons was not limited to the family's patriarch. Chelsea's braces garnered unwanted attention, even inspiring a scene in the film Beavis and Butt-Head Do America. n97 In the same vein, the arrest of President Bush's daughter, Jenna, for underage drinking also generated headlines n98 and is manifest in expressions of popular culture. n99 **How has the Supreme Court fared in an age of no restraint? If the Court's power is, as in Oz, equivalent to mystery, n100 what are the implications of this culture of exposition to the Court's ability to maintain its distance from the public, and therefore its institutional clout?** Or, if, as in Frankfurter's estimation, the Court's authority rests on its "moral sanction," can the Court retain its aura of moral righteousness when purveyors of popular culture pander to public tastes, coveting scandal, eager to expose and exaggerate the deficiencies of any public figure? **The Court has, even in our age, remained largely immune from attack in the avenues of mass visual popular culture**. Novelists and journalists have, at times, closely scrutinized, if not excoriated, the Justices and the Court as a whole. n101 Bob Woodward and Scott Armstrong examined the inner workings of the Berger Court in their best-selling non-fiction book The Brethren, n102 in which the Justices [*67] were depicted as a body of men who engaged in petty politics not only to advance their policy preferences, but also to gratify their personal jealousies. n103 Edward Lazarus published a similar tell-all expos6 of the Rehnquist Court in Closed Chambers. n104 However, **the Court as an institution has generally remained below the radar of representational popular culture and the more general audience it attracts, except in extraordinary circumstances, after which it again fades into relative obscurity.** As I will show below, the Court's decisions sometimes frame the background of fictional productions exploring controversial social issues, such as abortion or capital punishment, and the Court has as such been portrayed as a tangential "character," sometimes without ever actually "appearing" on-screen. n105 The **Court itself**, however, **rarely is depicted as a subject worthy of exploration: The real Justices rarely appear on television, in the national media, or in fictitious representation. The lack of publicity can be explained in part by the Court's protection of its anonymity. Thus, "no American institution has so . . . controlled the way it is viewed by the public," n106 although that control is neither absolute nor complete.**

The Courts are protective of the president on his decisions regardless of popularity

Federal Judicial Center, No Date

[*History of the Federal Judiciary*; http://www.fjc.gov/history/home.nsf/page/talking_ji_tp.html; Accessed on 7/31/15]

A central principle of **the United States system of government holds that judges should be able to reach decisions free from political pressure.** The **framers of the Constitution shared a commitment to judicial independence, and** they **organized the new government to ensure that federal judges would have a proper measure of independence from the executive and legislative branches. The Constitution guaranteed that judges would** serve "during good behavior" and would **be protected** from any reduction in their salaries**, thus preventing removal by a President who opposed their judicial philosophy and congressional retaliation against unpopular decisions.** These twin foundations of judicial independence were well established in the British judicial system of the eighteenth century and had been enacted by many of the new state constitutions following independence from Great Britain. But **the constitutional outline for the judiciary also ensured that the court system would always be subject to the political process and thus to popular expectations. The Constitution's provision for "such inferior courts as the Congress may from time to time ordain and establish," granted the legislative branch the most powerful voice in deciding the structure and jurisdiction of the nation's court system. The appointment of judges by the President**, with the advice and consent of the Senate, **further ensured that important aspects of the judiciary would be part of the political process. The inherent tension between provisions for judicial** independence and the elected branches' **authority to define the court system has led to recurring debates on judicial tenure and the federal courts' jurisdiction.**

Shields political capital

Court decisions shield presidents' political capital

Altmann 07(Jennifer Greenstein Altmann - assistant editor at the Princeton Weekly Bulletin, "Pillars or politicos? Whittington examines high court justices", http://www.princeton .edu/main/news/archive/S18/17/72G06/?section=featured, June 18, 2007)

In his new book, "Political Foundations of Judicial Supremacy: The Presidency, the Supreme Court and Constitutional Leadership in U.S. History," Whittington argues that in recent years the court has become the key player in an important political tussle: Who has the final say in constitutional matters? Whittington asserts that the court has become the final arbiter, but that status did not result from a power grab by the court. Its power, remarkably, has come from politicians, who have pushed onto the court the responsibility for making final rulings on constitutional matters because, paradoxically, it benefits the politicians. "Presidents are mostly deferential to the court," said Whittington. "They have pushed constitutional issues into the courts for resolution and encouraged others to do the same. That has led to an acceptance of the court's role in these issues." It seems counterintuitive that politicians would want to defer to the court on some of the most high-stakes decisions in government, but Whittington has found that they do so because the court often rules in the ways that presidents want — and provides politicians with the political cover they need. In 1995, the Clinton administration faced a proposal from the Senate to regulate pornography on the Internet. The president thought the bill was unconstitutional, but he didn't want to risk appearing lenient on such a hot-button issue right before he was up for re-election, Whittington said. Clinton signed the legislation with the hope that the Supreme Court would strike it down as unconstitutional, which it later did.

Shields Politicians

Courts shield politicians from political backlash

Whittington 07(Keith E. Whittington, William Nelson Cromwell Professor of Politics at Princeton University and currently director of graduate studies in the Department of Politics, 2007, "Political foundations of judicial supremacy", http://press.princeton.edu/titles/8427.html)

An active and independent Court can assume the blame for advancing constitutional commitments that might have electoral costs. The relatively obscure traceability chain between elected officials and judicial action allows coalition members to simultaneously achieve certain substantive goals while publicly distancing themselves from electoral responsibility for the Court and denouncing it for its actions. Elected officials have an incentive to bolster the authority of the courts precisely in order to distance themselves from the responsibility for any of its actions. As long as the Court is acting in concert with basic regime commitments, and thus not imposing serious electoral or policy costs on pother affiliated political actions, it may enjoy substantial autonomy in interpreting those commitments.

Courts allow politicians to avoid controversial issues

Solum 05(Lawrence Solum, Professor of Law at Loyola Law School in Los Angeles, "Legal Theory Lexicon 047: The Counter-Majoritarian Difficulty" 6-19-2005 http://lsolum.typepad.com/legal_theory_lexicon/2005/06/legal_theory_le_1.html)

There is another side to this story. There may be reasons why elected politicians prefer for the Supreme Court to "take the heat" for some decisions that are controversial. When the Supreme Court acts, politicians may be able to say, "It wasn't me. It was that darn Supreme Court." And in fact, the Supreme Court's involvement in some hot button issues may actually help political parties to mobilize their base: "Give us money, so that we can [confirm/defeat] the President's nominee to the Supreme Court, who may cast the crucial vote on [abortion, affirmative action, school prayer, etc.]." In other words, what appears to be counter-majoritarian may actually have been welcomed by the political branches that, on the surface, appear to have been thwarted.

Courts rulings shield congress members from political blame

Evensky 07(Jerry Evensky, Professor of Economics Syracuse University, 2007, " Adam Smith's Moral Philosophy", http://www.und.edu/instruct/weinstei/jrweinstein%20-%20The%20Wealth%20of%20Nations%20and%20Universal%20Opulence%20-%20Evensky%20Review.pdf)

The question of why Congress has tended to devolve quasi-legislative powers to agencies and the courts remains. Plainly, institutional politics has become quite complex. Some commentators argue that members of Congress often use the agencies and the courts to avoid difficult choices and political blame. Members, according to this view, often are unable or unwilling to resolve their differences so they give up and leave legislation ambiguous or include contradictory provisions, a practice which sometimes leaves interested parties no option but to take the matter to court. Other observers note that Congress and the courts have largely been willing allies in the expansion of the federal bench into the legislative arena. Unwilling to trust agency regulators under Republican administrations. Democratic majorities in Congress repeatedly turned to the courts to help put teeth into increasingly complex and detailed legislation in the 1970s and 1980s. Yet other analysts emphasize the influence of interest groups to whom Congress and the president are responding when they approve legislation. Each of these interpretations seems to fit at least some major legislation. Members of Congress have certainly tried to use the courts when they have lacked the political support to secure policy goals through legislation. As just discussed, failed efforts by members to enforce the War Powers Resolution in the courts show the limits of enticing the courts to resolve political controversies. But Congress's tendency to draw the courts into the policy arena also reflects the cumbersome nature of legislating under divided government. Unable to procure favorable outcomes from regulators, members of Congress and organized groups have deliberately sought the assistance of the courts in battling administrations.

Court decisions facilitate policymaking without endangering political support

Miller and Barnes 04(Mark Miller, Associate Professor of Government Clark University, Making Policy, Making Law, Jeb Barnes, Assistant Professor of Political Science at the University of Southern California,http://books.google.com/books?id=cuE9Ee5KU5IC&pg=PA68&lpg=PA68&dq=%22reverence+that+the+american+public+extends+to+the+judicial+branch%22&source=bl&ots=7C6lAB5VOz&sig=hbmeL9Lkl6qajHlNhn3kAHQX_Os&hl=en&ei=k0JnSszmAomnlAf1m63dDA&sa=X&oi=book_result&ct=result&resnum=1)

ln the 1960s, the conventional wisdom among political scientists came to be that the ' federal courts in general and the U.S. Supreme Court in particular are protected from the most deadly of congressional attacks by the high respect and reverence that the American public extends to the judicial branch. ln the early 1960s, Murphy and Pritchett argued that "courts are protected by their magic; only rarely can a hand be laid on a judge without a public outcry of sacrilege" (Murphy and Pritchett 1961, 554-55). ln the late 1960s, Nagel continued this theme when he argued that milder forms of attacks on specific decisions of the Supreme Court had more chance of passing in Congress than did more frontal attacks (Nagel 1969, 277). Others argue that many in Congress actually prefer that the federal courts hand down decisions on extremely divisive issues (see, e.g., Dahl 1957; Bickel 1962; Graber 1993). As Graber explains this line of reasoning, °'Mainstream politicians may facilitate judicial policymaking in part because they have good reason to believe that the courts will announce those policies they privately favor but cannot openly endorse without endangering their political support" (1993, 43). Schubert (1960) and Miller (1995) have argued that the presence of so many lawyers in Congress also protects the courts from serious institutional attacks. Harry Stumpf summarizes this line of scholarship when he writes, "Tbe prestige or sacrosanctity argument in Congress is used and used with some effectiveness in protecting the judiciary against anti-Court legislative reaction" (Stumpf 1965, 394).

Courts shield legislators from political backlash

Whittington 07(Keith E. Whittington, William Nelson Cromwell Professor of Politics at Princeton University and currently director of graduate studies in the Department of Politics, 2007, "Political foundations of judicial supremacy", http://press.princeton.edu/titles/8427.html)

Effective political leaders find the means for achieving the policy results that they want while protecting legislators from any political backlash that might result from those policies (and

insuring that legislators reap any political rewards that might result). As Doug Arnold has explained, voters can only hold legislators accountable for their past performance if their can follow a "traceability chain" between the actions of the legislator and policy outcomes. When the policy is a popular one, legislators strive to "strengthen" the traceability chain (they engage in highly visible position taking). When the policy is unpopular, they take steps to "weaken" or "break" it. Coalition leaders can manipulate the timing of unpopular votes, for example, so that legislators need not cast too many at once or too close to an election. They can avoid putting the unpopular actions of individual legislators on record. They can bundle legislative proposals so as to avoid separate votes on unpopular items. They can create complex and indirect mechanisms for implementing unpopular policies, such as automatic cost-of-living increases for congressional salaries. They can delegate unpopular policy decisions to others, such as bureaucrats or special commissions, allowing legislators to avoid blame themselves while shifting blame to others. Position taking is fundamentally about taking actions without policy consequences. In order to take an electorally advantageous position, politicians need only posture, not achieve results. Legislators on the losing side of an issue still score political points with their constituents by taking the "right" stance, even if the policy outcome goes against the preferences of the voters. Because legislators also have policy preferences of their own, as well as longer-term concerns about how voter attitudes might be affected by real events, they cannot simply take the electorally popular position. Sometimes legislators believe taxes need to be raised despite voter hostility. If legislators could simply posture without consequence, then they could always vote against taxes, but their responsibility for policy outcomes constrains their position taking. The more pivotal a legislator's vote becomes to determining policy outcomes, then the more the value of the substantive policy outcome must be weighed against the value of the position taking. When legislators know that a president will veto a given piece of legislation, for example, they may be free to vote in favor of it in order to satisfy constituents (or perhaps, some particular group of constituents). When the threat of a presidential veto is removed, however, legislators may be forced to switch their own votes in order to prevent an undesired bill from becoming law.Independent and active judicial review generates position-taking opportunities by reducing the policy responsibility of the elected officials. They may vote in favor of a bill that they personally dislike secure in the knowledge that it will never be implemented. State statutes regulating abortion after the Roe decision, for example, were often pure symbolism, though they could also play a more productive role in pressing the Court to refine its doctrine or in filling in the lacuna left by the judicial decisions.

Theory Cards

Congress not enforced

Congress decisions are not enforced – NSA proves

Wilson R. **Huhn 2007**

(Wilson R. Huhn, Professor and Associate Director of the Constitutional Law Center at The University of Akron School of Law, Congress Has the Power to Enforce the Bill of Rigths Against the Federal Government; Therefore FISA Is Constitutional and the President's Terrorist Surveillance Program Is Illegal, Volume 12, Issue 2, Article 6, pages 537-538, http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1075&context=wmborj)

The principal point of this Article is that Congress has plenary authority to enforce the Bill of Rights against the federal government. Although this precept is a fundamental one, neither the Supreme Court nor legal scholars have articulated this point in clear, simple, and direct terms. The Supreme Court does not have a monopoly on the Bill of Rights. Congress, too, has constitutional authority to interpret our rights and to enforce or enlarge them as against the actions of the federal government**. Congress exercised its power to protect the constitutional rights of American citizens when it enacted the Foreign Intelligence Surveillance Act (FISA),** the federal law that requires the government to obtain a warrant from a special court before engaging in electronic eavesdropping for the purpose of obtaining foreign intelligence. **In spite of this law,** the National Security Agency has conducted a program of **warrantless surveillance** called the Terrorist Surveillance Program. The Attorney General made a nuanced and unique argument in support of the Terrorist Surveillance Program. He suggested that wiretapping for foreign intelligence is more central to the role of the President than it is to the role of Congress, and therefore FISA, the federal statute which requires the President to obtain warrants, is unconstitutional. In response to that argument, this Article contends that Congress has the power to enforce the Bill of Rights against the federal government and that FISA does represent an exercise by Congress of one of its core functions-to protect the rights of American citizens. The Attorney General also contended that FISA was amended by the Authorization for Use of Military Force (AUMF), adopted September 18, 2001. This point has been addressed by other legal scholars, and drawing upon their work, this Article identifies six principal reasons why the AUMF cannot be construed as either repealing or suspending the warrant requirements of FISA. Finally, the Attorney General argued that FISA is unconstitutional under a broad reading of executive power called the theory of the "unitary executive." This Article contends that this theory was rejected by the four great Justices of the Roosevelt Court, Hugo Black, William Douglas, Felix Frankfurter, and Robert Jackson, in the case of Youngstown Sheet & Tube v. Sawyer. Justice Jackson, in particular, eloquently argued that the President is subject to the rule of law. This Article also suggests that the opinion of Anthony Kennedy in Clinton v. City of New York is relevant. In that case, Justice Kennedy made "individual liberty" the centerpiece of the separation of powers analysis. The Article concludes that both the rule of law and individual liberty are served by upholding the constitutionality of FISA.

Courts are Enforced

The Executive branch obeys rulings from the Supreme Court.

Denniston 11, [Lyle Denniston, Legal Journalist, *Constitution Check: Can the president ignore Supreme Court rulings?,* Constitution Daily, http://blog.constitutioncenter.org/2011/10/constitution-check-can-the-president-ignore-supreme-court-rulings/]

Presidents in general have tended to see it as their duty to obey Supreme Court rulings, and, at times, even to enforce them. For example, President Dwight Eisenhower called out the military in 1957 to enforce the Supreme Court's order to racially integrate the Little Rock, Ark., public schools. Eisenhower told the nation: "Whenever normal agencies prove inadequate to the task and it becomes necessary for the Executive Branch of the Federal Government to use its powers and authority to uphold Federal Courts, the President's responsibility is inescapable." The Gingrich comment might be understood in a way that he did not explicitly mention: as an argument in favor of allowing each of the three branches of the government to decide for itself what the limits of the Constitution are as they apply specifically to that branch's powers. A year after the Little Rock crisis, the Supreme Court reinforced the duty to desegregate those schools and others in the Deep South. In doing so, it issued what is probably its most fervent claim to have the last word on the Constitution's meaning. Citing Marbury v. Madison (1803) and its comment that it is the judiciary that is to "say what the law is," the Court in the Cooper case remarked that the Marbury decision "declared the basic principle that the federal judiciary is supreme in the exposition of the law of the Constitution…[That] is a permanent and indispensable feature of our constitutional system." Although Abraham Lincoln, before he became president, was already deeply troubled about the Supreme Court's Dred Scott decision enforcing slavery, he said in a Springfield, Ill., speech within weeks after that ruling in 1857: "We think [the Court's] decisions on constitutional questions, when fully settled, should control, not only the particular cases decided, but the general policy of the country, subject to be disturbed only by amendments of the Constitution as provided in that instrument itself. More than this would be revolution." Candidate Gingrich has made clear that his suggestion that the Supreme Court be ignored was aimed, in its most vigorous form, at two decisions by the Justices: the 2004 decision in Hamdan v. Rumsfeld striking down President George W. Bush's military commission plan for Guantanamo detainees, and its 2008 decision in Boumediene v. Bush, allowing Guantanamo detainees a constitutional right to challenge their detention in a federal habeas corpus court. President Bush, though unhappy with both, offered no resistance to either. The Gingrich comment might be understood in a way that he did not explicitly mention: as an argument in favor of allowing each of the three branches of the government to decide for itself what the limits of the Constitution are as they apply specifically to that branch's powers. That is called the theory of "departmentalism," and it can be traced all the way back to Thomas Jefferson. It is plain, though, that the current Supreme Court does not accept that theory, and that, of course, is at the heart of Mr. Gingrich's complaint.

CIRCUMVENTION

Yes Circumvention

Megan/Jonathan/Sukriti/Anshul/Joanna/Eric

Federal

President

Executive will circumvent the NSA- FDR wire tapping proves

Katyal and Caplan 08 ("The Surprisingly Stronger Case for the Legality of the NSA Surveillance Program: FDR Precendent, http://scholarship.law.georgetown.edu /cgi/viewcontent.cgi?article=1058&context=fwps_papers, accessed 7-15-2015, EHS MKS)

This Article explains why **the legal case** for the recently disclosed **National Security Agency surveillance program turns out to be stronger than what the Administration has advanced.** In defending its action, **the Administration overlooked the details surrounding one of the most important periods of presidentially imposed surveillance in wartime—President Franklin Delano Roosevelt's (FDR) wiretapping and his secret end-run around both the wiretapping prohibition enacted by Congress and decisions of the United States Supreme Court.** In our view, the argument does not quite carry the day, but it is a much heftier one than those that the Administration has put forth to date to justify its NSA program. The secret history, moreover, serves as a powerful new backdrop against which to view today's controversy. In general, **we believe that compliance with executive branch precedent is a critical element in assessing the legality of a President's actions during a time of armed conflic**t. **In the crucible of legal questions surrounding war and peace, few judicial precedents will provide concrete answers. Instead, courts will tend to invoke the political question doctrine or other prudential canons to stay silent; and even in those cases where they reach the merits, courts will generally follow a minimalist path.** For these and other reasons, the ways in which past Presidents have acted will often be a more useful guide in assessing the legality of a particular program, **as Presidents face pressures on security unimaginable to any other actor outside or inside government**. At the same time as Presidents realize these pressures, they are under an oath to the Constitution, and so the ways in which they balance constitutional governance and security threats can and should inform practice today

Executive has circumvented Surveillance- no proof it wont happen again

Eric **Sandberg-Zakian** 20**11** (L/N-Harvard National Security Journal, 2 Harv. Nat'l Sec. J. 491, "Beyond Guantanamo: Two Constitutional Objections to Nonmilitary Preventive Detention", Covington & Burling, LLP, Washington, D.C. J.D. Yale Law School, 2010. B.A. Yale University, 2007, Accessed 7/15/15, EHS MKS)

At home, no less than abroad, **the state turned its massive resources to preventing terrorist attacks**. Just **months after September 11th**, for example, **Congress had already overhauled the federal government's counterterrorism powers with the USA PATRIOT Ac**t, [n41] the Department of Justice had announced that it would shift its focus from crime prosecution to terrorism prevention, [n42] and President George W. **Bush** had **ordered the National Security Agency to conduct electronic surveillance of certain U.S. persons without first obtaining a court order, circumventing the Foreign Intelligence Surveillance Act**. [n43] Congress continued its restructuring of the executive branch's national security wing, creating the Department of [*501] Homeland Security in 2002 n44 and the Office of the Director of National Intelligence in 2005. n45

Obama circumvents all the time- 7 specific times

Amy **Payne** 20**14 (**"7 Times Obama Ignored the Law to Impose His Executive Will, February 14, 2014, http://dailysignal.com/2014/02/14/7-times-obama-ignored-law-impose-executive-will/, Accessed 7/15/15, EHS MKS)

President Obama—the imperial President, the "I've got a pen and I've got a phone" President who can't wait to show us his "year of action"—once vowed to do exactly the opposite. The biggest problems that we're facing right now have to do with George Bush trying to bring more and more power into the executive branch and not go through Congress at all. And that's what I intend to reverse when I'm President of the United States of America. That was candidate Obama back in 2008. This comment somehow slipped under the radar for the past few years and resurfaced this week. Proving the absurdity of this campaign promise, Heritage's legal experts have put together a list of seven illegal actions the Obama Administration has taken in the President's unilateral drive for executive power. **If it seems like there should be more than seven, you're on to something**. It's more complicated than you think to tell what's illegal or unconstitutional when it comes to presidential power. Heritage's Elizabeth Slattery and Andrew Kloster explain: While it might not be possible to define in all instances precisely when an action crosses the line and falls outside the scope of the President's statutory or constitutional authority, what follows is a list of

unilateral actions taken by the Obama Administration that we think do cross that line. **1. Delaying Obamacare's employer mandate** The Administration announced that Obamacare won't be implemented as it was passed, so employers with 50 or more employees don't have to provide the mandated health coverage for at least another year (and longer if they play their cards right). Slattery and Kloster observe that "The law does not authorize the President to push back the employer mandate's effective date." **2. Giving Congress and their staffs special taxpayer-funded subsidies for Obamacare** It was uncomfortable for Members of Congress when they realized that, through Obamacare, they had kicked themselves and their staffs out of the taxpayer-funded subsidies they were enjoying for health coverage. But the Administration said no problem and gave them new subsidies. In this case, "the Administration opted to stretch the law to save Obamacare—at the taxpayers' expense." 3. **Trying to fulfill the "If you like your plan, you can keep it" promise—after it was broken** When Americans started getting cancellation notices from their insurance companies because Obamacare's new rules were kicking in, the President's broken promise was exposed. He tried to fix things by telling insurance companies to go back to old plans that don't comply with Obamacare—just for one year. Slattery and Kloster note that "The letter announcing this non-enforcement has no basis in law." **4. Preventing layoff notices from going out just days before the 2012 election** There's a law that says large employers have to give employees 60 days' notice before mass layoffs. And layoffs were looming due to federal budget cuts in 2012. But the Obama Administration told employers to go against the law and not issue those notices—which would have hit mailboxes just days before the presidential election. The Administration "also offered to reimburse those employers at the taxpayers' expense if challenged for failure to give that notice." **5. Gutting the work requirement from welfare reform** The welfare reform that President Bill Clinton signed into law in 1996 required that welfare recipients in the Temporary Assistance for Needy Families program work or prepare for work to receive the aid. The Obama Administration essentially took out that requirement by offering waivers to states, even though the law expressly states that waivers of the work requirement are not allowed. "Despite [the law's] unambiguous language, the Obama Administration continues to flout the law with its 'revisionist' interpretation," write Slattery and Kloster. **6. Stonewalling an application for storing nuclear waste at Yucca Mountain** This was another case where the Administration simply refused to do what was required by law. An application was submitted for nuclear waste storage at Yucca Mountain, but "Despite the legal requirement, the Obama Administration refused to consider the application." **7. Making "recess" appointments that were not really recess appointments** Slattery and Kloster explain that "In January 2012, President Obama made four 'recess' appointments to the National Labor Relations Board (NLRB) and Consumer Financial Protection Bureau, claiming that, since the Senate was conducting only periodic pro forma sessions, it was not available to confirm those appointees." The catch: The Senate wasn't in recess at the time. Courts have since struck down the appointments, but the illegitimate appointees already moved forward some harmful policies.

Executive circumvented FISA once- no proof that it won't happen again

NYT 07 ("Spies, Lies and FISA", October 14 2007, http://www.nytimes.com/2007/10/14/opinion/14sun1.html?_r=0, Accessed 7/16/15)

As Democratic lawmakers try to repair a deeply flawed bill on electronic eavesdropping, the White House is pumping out the same fog of fear and disinformation it used to push the bill through Congress this summer. President Bush has been telling Americans that any change would deny the government critical information, make it easier for terrorists to infiltrate, expose state secrets, and make it harder "to save American lives." There is no truth to any of those claims. No matter how often Mr. Bush says otherwise, there is also no disagreement from the Democrats about the need to provide adequate tools to fight terrorists. The debate is over whether this should be done constitutionally, or at the whim of the president. The 1978 Foreign Intelligence Surveillance Act, **or FISA, requires a warrant to intercept international communications involving anyone in the United States**. A secret court has granted these warrants quickly nearly every time it has been asked. **After 9/11, the Patriot Act made it even easier to conduct surveillance, especially in hot pursuit of terrorists.** But that was not good enough for the Bush team, which was determined to use the nation's tragedy to grab ever more power for its vision of an imperial presidency. Mr. **Bush ignored the FISA law and ordered the National Security Agency to intercept phone calls and e-mail between people abroad and people in the United States without a warrant, as long as "the target" was not in this country. The president did not announce his decision**. He allowed a few lawmakers to be briefed but withheld key documents. **The special intelligence court was in the dark until The Times disclosed the spying in December 2005.** Mr. **Bush still refused to stop. He claimed that FISA was too limiting for the Internet-speed war against terror.** But he never explained those limits and rebuffed lawmakers' offers to legally accommodate his concerns. This year, **the administration found an actual problem with FISA: It requires a warrant to eavesdrop on communications between foreigners that go through computers in the United States**. It was a problem that did not exist in 1978, and it had an easy fix. But Mr. Bush's lawyers tacked dangerous additions onto a bill being rushed through Congress before the recess. When the smoke cleared, Congress had fixed the real loophole, but also endorsed the idea of spying without court approval. It gave legal cover to more than five years of illegal spying. Fortunately, the law is to expire in February, and some Democratic legislators are trying to fix it. House members have drafted a bill, which is a big improvement but still needs work. The Senate is working on its bill, and we hope it will show the courage this time to restore the rule of law to American surveillance programs. There are some red lines, starting with the absolute need for court supervision of any surveillance that can involve American citizens or others in the United States. The bill passed in August allowed the administration to inform the FISA court about its methods and then issue blanket demands for data to communications companies without any further court approval or review. The House bill would permit the government to conduct surveillance for 45 days before submitting it to court review and

approval. (Mr. Bush is wrong when he says the bill would slow down intelligence gathering.) After that, ideally, the law would require a real warrant. If Congress will not do that, at a minimum it must require spying programs to undergo periodic audits by the court and Congress. The administration wants no reviews. Mr. Bush and his team say they have safeguards to protect civil liberties, meaning surveillance will be reviewed by the attorney general, the director of national intelligence and the inspectors general of the Justice Department and the Central Intelligence Agency. There are two enormous flaws in that. The Constitution is based on the rule of law, not individuals; giving such power to any president would be un-American. And this one long ago showed he cannot be trusted. Last week, The Times reported that the C.I.A. director, Gen. Michael V. Hayden, is investigating the office of his agency's inspector general after it inquired into policies on detention and interrogation. This improper, perhaps illegal investigation sends a clear message of intimidation. We also know that the F.B.I. has abused expanded powers it was granted after 9/11 and that the former attorney general, Alberto Gonzales, systematically covered up the president's actions with deliberately misleading testimony. **Mr. Bush says the law should give immunity to communications companies that gave data to the government over the last five years without a court order. He says they should not be punished for helping to protect America, but what Mr. Bush really wants is to avoid lawsuits that could uncover the extent of the illegal spying he authorized after 9/11.** It may be possible to shield these companies from liability, since the government lied to them about the legality of its requests. But the law should allow suits aimed at forcing disclosure of Mr. Bush's actions. It should also require a full accounting to Congress of all surveillance conducted since 9/11. And it should have an expiration date, which the White House does not want. Ever since 9/11, we have watched Republican lawmakers help Mr. Bush shred the Constitution in the name of fighting terrorism. We have seen Democrats acquiesce or retreat in fear. It is time for that to stop.

The executive can circumvent via national security letters

Sanchez 15

(Julian Don't (Just) Let the Sun Go Down on Patriot Powers, May 29, 2015, http://motherboard.vice.com/read/dont-just-let-the-sun-go-down-on-patriot-powers)

Also permanent are National Security Letters or NSLs, which allow the FBI to obtain a more limited range of telecommunications and financial records without even needing to seek judicial approval. Unsurprisingly, the government loves these streamlined tools, and used them so promiscuously that the FBI didn't even bother using 215 for more than a year after the passage of the Patriot Act. Inspector General reports have also made clear that the **FBI is happy to substitute NSLs for 215 orders** when even the highly accommodating FISC manages a rare display of backbone. In at least one case, when the secret court refused an application for journalists' records on First Amendment grounds, the Bureau turned around and **obtained the same data** using National Security Letters.

The president fails –trumanites write their own orders

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

Put differently, the question whether the President could institute a complete about-face supposes a top-down policy-making model. The illusion that presidents issue orders and that subordinates simply carry them out is nurtured in the public imagination by media reports of "Obama's" policies or decisions or initiatives, by the President's own frequent references to "my" directives or personnel, and by the Trumanites own reports that the President himself has "ordered" them to do something. But true top-down decisions that order fundamental policy shifts are rare.369 The reality is that when the President issues an "order" to the Trumanites, the Trumanites themselves normally formulate the order.370 The Trumanites "cannot be thought of as men who are merely doing their duty. They are the ones who determine their duty, as well as the duties of those beneath them. They are not merely following orders: they give the orders."371 They do that by "entangling"372 the President. This dynamic is an aspect of what one scholar has called the "deep structure" of the presidency.373 As Theodore Sorensen put it,

"Presidents rarely, if ever, make decisions—particularly in foreign affairs—in the sense of writing their conclusions on a clean slate . . . . [T]he basic decisions, which confine their choices, have all too often been previously made."374

Justice Douglas, a family friend of the Kennedys, saw the Trumanites' influence first-hand: "In reflecting on Jack's relation to the generals, I slowly realized that the military were so strong in our society that probably no President could stand against them."375 As the roles of the generals and CIA have converged, the CIA's influence has expanded—aided in part by a willingness to shade the facts, even with sympathetic Madisonian sponsors. A classified, 6,000-word report by the Senate Intelligence Committee reportedly concluded that the CIA was "so intent on justifying extreme interrogation techniques that it blatantly misled President George W. Bush, the White House, the Justice Department and the Congressional intelligence committees about the efficacy of its methods."376 "The CIA gets what it wants," President Obama told his advisers when the CIA asked for authority to expand its drone program and launch new paramilitary operations.377

Sometimes, however, the Trumanites proceed without presidential approval. In 1975, a White House aide testified that the White House "didn't know half the things" intelligence agencies did that might be legally questionable.378 "If you have got a program going and you are perfectly happy with its results, why take the risk that it might be turned off if the president of the United States decides he does not want to do it," he asked.379 Other occasions arise when Trumanites in the CIA and elsewhere originate presidential "directives"—directed to themselves.380 Presidents then ratify such Trumanite policy initiatives after the fact.381 To avoid looking like a bystander or mere commentator, the President embraces these Trumanite policies, as does Congress, with the pretense that they are their own.382 To maintain legitimacy, the President must appear to be in charge. In a narrow sense, of course, Trumanite policies are the President's own; after all, he did formally approve them.383 But the policies ordinarily are formulated by Trumanites—who prudently, in Bagehot's words, prevent "the party in power" from going "all the lengths their orators propose[]."384 The place for presidential oratory, to the Trumanites, is in the heat of a campaign, not in the councils of government where cooler heads prevail.385

The idea that presidential backbone is all that is needed further presupposes a model in which the Trumanites share few of the legitimacy conferring features of the constitutional branches and will easily submit to the President. But that supposition is erroneous. Mass entertainment glorifies the military, intelligence, and law enforcement operatives that the Trumanites direct. The public is emotionally taken with the aura of mystery surrounding the drone war, Seal Team Six, and cyber-weapons. Trumanites, aided by Madisonian leaks, embellish their operatives' very real achievements with fictitious details, such as the killing of Osama bin Laden386 or the daring rescue of a female soldier from Iraqi troops.387 They cooperate with the making of movies that praise their projects, like Zero Dark Thirty and Top Gun, but not movies that lampoon them, such as Dr. Strangelove (an authentic F-14 beats a plastic B-52 every time).388 Friendly fire incidents are downplayed or covered up.389 The public is further impressed with operatives' valor as they are lauded with presidential and congressional commendations, in the hope of establishing Madisonian affiliation.390 Their simple mission—find bad guys and get them before they get us—is powerfully intelligible. Soldiers, commandos, spies, and FBI agents occupy an honored pedestal in the pantheon of America's heroes. Their secret rituals of rigorous training and preparation mesmerize the public and fortify its respect. To the extent that they are discernible, the Trumanites, linked as they are to the dazzling operatives they direct, command a measure of admiration and legitimacy that the Madisonian institutions can only envy.391 Public opinion is, accordingly, a flimsy

check on the Trumanites; it is a manipulable tool of power enhancement. It is therefore rarely possible for any occupant of the Oval Office to prevail against strong, unified Trumanite opposition, for the same reasons that members of Congress and the judiciary cannot; a non-expert president, like a non-expert senator and a non-expert judge, is intimidated by expert Trumanites and does not want to place himself (or a colleague or a potential political successor) at risk by looking weak and gambling that the Trumanites are mistaken. So presidents wisely "choose" to go along.

The president can't control drone policy

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

The drone policy has been a case in point. Nasr has described how the Trumanite network not only prevailed upon President Obama to continue its drone policy but succeeded in curtailing discussion of the policy's broader ramifications:

When it came to drones there were four formidable unanimous voices in the Situaton Room: the CIA, the Office of the Director of National Intelligence, the Pentagon, and the White House's counterterrorism adviser, John Brennan. Defense Secretary Robert Gates . . . was fully supportive of more drone attacks. Together, Brennan, Gates, and the others convinced Obama of both the urgency of counterterrorism and the imperative of viewing America's engagement with the Middle East and South Asia through that prism. Their bloc by and large discouraged debate over the full implications of this strategy in national security meetings.392

Executive Branch - Generic

Government officials will continue surveillance regardless and even if <INSERT PIAN ACTOR> stops surveillance, other agencies are capable of replacing that actor

Bernstein, 2015

(Leandra is an author for a world renowned news organization called Sputnik. The article cites a former FBI agent disclosure. "Former FBI agent: Government Likely to Continue Domestic Surveillance" http://sputniknews.com/us/20150703/1024143850.html#ixzz3fsjk9IPBhttp://sputniknews.com/us/20150703/1024143850.htmlFormer Date Accessed- 7/14/15. Anshul Nanda.)

Federal Bureau of Investigation agent Coleen Rowley **claims** that the **US government will likely continue its pattern of domestic surveillance**.¶ WASHINGTON (Sputnik), Leandra Bernstein — The US government will likely continue its pattern of domestic surveillance following the Monday court ruling to temporarily extend bulk data collection, whistleblower and former Federal Bureau of Investigation agent Coleen Rowley told Sputnik.¶ "I think, **if the past is any predictor of the future,** that U**S government officials will find yet another way around any legal restrictions** to continue their 'Total Information Awareness' project," Rowley said.¶ On Monday, the **Foreign Information Surveillance Act (FISA) Court issued a ruling upholding the National Security Agency (NSA) to continue bulk collection of metadata**, a program that was supposed to be ended with the passage of the USA Freedom Act in May 2015.¶ The ruling was based on a motion filed by civil libertarian groups demanding an immediate end to the metadata collection program, which was deemed unconstitutional by a US federal appeals court in May 2015.¶ Asked what the Monday ruling means for the future of government surveillance reform, Rowley stated, "I think the Judge [Michael Mosman] probably answered this in his 'Plus ca change, plus c'est la meme chose' [the more things change, the more they stay the same] quote."¶ The new portion of the classified files published by The Intercept now reveals how easily it can be done: "as easy as typing a few words in Google."¶ © FLICKR/ DON HANKINS¶ NSA Spies Can Hack Any Computer in 'A Few Mouse Clicks'¶ The FISA decision to take advantage of the five-month period to continue mass surveillance did not come as a surprise "based on the past record of illegal government spying," Rowley explained.¶ The FISA Court authorizes surveillance carried out by the US intelligence community. The Court is permitted to operate in secret, due to the classified activity it oversees.¶ Following the September 11, 2001 terrorist attacks, the George W. Bush administration proposed the implementation of a massive data-mining program called the Total Information Awareness.¶ The program was **developed by the Department of Defense research agency to be capable of analyzing private communications, commercial transactions and other data domestically and abroad in order to identify and classify potential terrorist threats**.¶ While the program was never officially implemented, **multiple programs across the intelligence community accomplished a similar effect**, as was revealed in classified documents leaked by NSA whistleblower Edward Snowden in 2013.¶ Read more: http://sputniknews.com/us/20150703/1024143850.html#ixzz3fsinxkHH

Agencies circumvent power that was given to them through the Congress all the time

Ackerman, 2015

(Spencer Ackerman is an editor/ reporter for the US News in New York. Full Date: June 1, 2015. "Fears NSA will seek to undermine surveillance reform; Privacy advocates are wary of covert legal acrobatics from the NSA similar to those deployed post-9/11 to circumvent congressional authority" http://www.lexisnexis.com/hottopics/lnacademic/. Date Accessed- 7/15/15. Anshul Nanda)

Privacy advocates fear the **National Security Agency** will attempt to **weaken new restrictions** on the **bulk collection of Americans' phone and email records with a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday.¶ Related: Bush-era surveillance powers expire as US prepares to roll back NSA power¶ The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret.¶ Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act.¶ Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions on bulk phone records collection by taking an expansive view of the bill's definitions, thanks to a pliant, secret surveillance court.¶ "**My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]**," Paul said on the Senate floor on Sunday.¶ Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform.¶ "My time on the **intelligence committee has taught me to always be vigilant for secret**

interpretations of the law and new surveillance techniques that Congress doesn't know about," Wyden, a member of the intelligence committee, told the Guardian.¶ "Americans were rightly outraged when they learned that **US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens.** The **American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind."**¶ The USA Freedom Act is supposed to prevent what Wyden calls " secret law ". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance.¶ Yet in recent memory, the **US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs**, from 2001 to 2004.¶ Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the **continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004**, an internal NSA draft history records that attorneys found a different legal rationale that " essentially gave NSA the same authority to collect bulk internet metadata that it had ".¶ After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa court, that Section 215 of the Patriot Act authorized it all along - precisely the contention that the second circuit court of appeals rejected in May.¶ Despite that recent history, veteran intelligence attorneys reacted with scorn to the idea that **NSA lawyers will undermine surveillance reform.** Robert Litt, the senior lawyer for director of national intelligence, James Clapper, said during a public appearance last month that creating a banned bulk surveillance program was " not going to happen ".¶ "The whole notion that NSA is just evilly determined to read the law in a fashion contrary to its intent is bullshit, of the sort that the Guardian and the left - but I repeat myself - have fallen in love with. The interpretation of 215 that supported the bulk collection program was creative but not beyond reason, and it was upheld by many judges," said the former NSA general counsel Stewart Baker, **referring to Section 215 of the Patriot Act.**¶ This is the **section that permits US law enforcement** and **surveillance agencies to collect business records and expired at midnight,** almost two years after the whistleblower Edward Snowden revealed to the Guardian that the Patriot Act was secretly being used to justify the collection of phone records from millions of Americans.¶ With one exception, the judges that upheld the interpretation sat on the non-adversarial Fisa court, a body that approves nearly all government surveillance requests and modifies about a quarter of them substantially. The exception was reversed by the second circuit court of appeals.¶ Baker, speaking before the Senate voted, predicted: "I don't think anyone at NSA is going to invest in looking for ways to defy congressional intent if USA Freedom is adopted."¶ The USA Freedom Act**, a compromise bill, would not have an impact on the vast majority of NSA surveillance**. **It would not stop any overseas-focused surveillance program, no matter how broad in scope, nor would it end the NSA's dragnets of Americans' international communications authorized by a different law**. Other bulk domestic surveillance programs, like the one the **Drug Enforcement Agency operated, would not be impacted.**¶ The rise of what activists have come to call "bulky" surveillance, like the "large collections" of Americans' electronic communications records the FBI gets to collect under the Patriot Act, continue unabated - or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday.¶ Related: FBI used Patriot Act to obtain 'large collections' of Americans' data, DoJ finds¶ That collection, recently confirmed by a largely overlooked Justice Department inspector general's report, points to a slipperiness in shuttering surveillance programs - one that creates opportunities for clever lawyers.¶ The Guardian revealed in 2013 that Barack Obama had permitted the NSA to collect domestic internet metadata in bulk until 2011. Yet even as Obama closed down that NSA program, the Justice Department inspector general confirms that by 2009, the **FBI was already collecting the same "electronic communications" metadata under a different authority.**¶ It is unclear as yet how the **FBI transformed that authority, passed by Congress** for the collection of "business records", into large-scale collection of Americans' email, text, instant message, internet-protocol and other records. And a **similar power to for the FBI gather domestic internet metadata, obtained through non-judicial subpoenas called "National Security Letters"**, also exists in a different, non-expiring part of the Patriot Act.¶ Jameel Jaffer, the deputy legal director of the ACLU, expressed confidence that the second circuit court of appeals' decision last month would effectively step into the breach. The panel found that legal authorities permitting the collection of data "relevant" to an investigation cannot allow the government to gather data in bulk - setting a potentially prohibitive precedent for other bulk-collection programs.¶ "We don't know what kinds of bulk-collection programs the government still has in place, but in the past it's used authorities other than Section 215 to **conduct bulk collection of internet metadata, phone records, and financial records. If similar programs are still in place, the ruling will force the government to reconsider them, and probably to end them**," said Jaffer, whose organization brought the suit that the second circuit considered.¶ Julian Sanchez, a surveillance expert at the Cato Institute, was more cautious.¶ "The second circuit ruling establishes that a 'relevance' standard is not completely unlimited - it doesn't cover getting hundreds of millions of people's records, without any concrete connection to a specific inquiry - but doesn't provide much guidance beyond that as to where the line is," Sanchez said.¶ "I wouldn't be surprised if the government argued, in secret, that nearly anything short of that scale is still allowed, nor if the same Fisa court that authorized the bulk telephone program, in defiance of any common sense reading of the statutory language, went along with it."¶

Curtailing surveillance in specific areas will just cause agencies to literally surveil areas outside/around it- mosque surveillance tactics prove

Goldman et. al, 12

(Adam and Matt are editors for the Associated Press. "NYPD Defends Tactics Over Mosque Spying; Records Reveal New Details On Muslim Surveillance." http://www.huffingtonpost.com/2012/02/24/nypd-defends-tactics-over_n_1298997.html. Date Accessed- 7/13/15. Anshul Nanda)

NEW YORK -- **The New York Police Department targeted Muslim mosques with tactics normally reserved for criminal organizations**, according to newly obtained police documents that showed police collecting the **license plates of worshippers, monitoring them on surveillance cameras and cataloging sermons** through a network of informants.¶ The documents, obtained by The Associated Press, have come to light as the **NYPD fends off criticism of its monitoring of Muslim student groups and its cataloging of mosques and Muslim businesses in nearby Newark, N.J.**The NYPD's spokesman, Paul Browne, forcefully defended the legality of those efforts Thursday, telling reporters that its officers may go wherever the public goes and collect intelligence, even outside city limits.¶ The new documents, prepared for Police Commissioner Raymond Kelly, show how the NYPD's roster of **paid informants monitored conversations and sermons inside mosques. The records offer the first glimpse of what those informants, known informally as "mosque crawlers," gleaned from inside the houses of** worship.¶ For instance, when a Danish newspaper published inflammatory cartoons of Prophet Muhammad in September 2005**, Muslim communities around the world erupted in outrage. Violent mobs took to the streets in the Middle East.** A Somali man even broke into the cartoonist's house in Denmark with an ax.¶ In New York, thousands of miles away, it was a different story. Muslim leaders preached peace and urged people to protest lawfully. Write letters to politicians, they said. Some **advocated boycotting Danish products, burning flags and holding rallies**.¶ All of that was permissible under law and protected by the First Amendment to the Constitution. All was reported to the **NYPD by its mosque crawlers and made its way into police files for Kelly.**¶ "Imam Shamsi **Ali brought up the topic of the cartoon, condemning them.** He announced a rally that was to take place on Sunday (02/05/06) near the United Nations. He asked that everyone to attend if possible and reminded everyone to keep their poise if they can make it," one report read.¶ At the Muslim Center of New York in Queens, the report said, "Mohammad Tariq Sherwani led the prayer service and urged those in attendance to participate in a demonstration at the United Nations on Sunday."¶ **When one Muslim leader suggested planning a demonstration**, one of the people involved in the discussion about how to get a permit was, in fact, working for the NYPD.¶ **"It seems horrible to me that the NYPD is treating an entire religious community as potential terrorists**," said civil rights lawyer Jethro Eisenstein, who reviewed some of the documents and is involved in a decades-old class-action lawsuit against the police department for spying on protesters and political dissidents.¶ The **lawsuit is known as the Handschu case, and a court order in that case governs how the NYPD may collect intelligence**.¶ Eisenstein said the documents prove the NYPD has violated those rules.¶ "This is a flat-out violation," Eisenstein said. "This is a smoking gun."¶ Browne, the NYPD spokesman, did not discuss specific investigations Thursday but told reporters that, because of the Handschu case, the NYPD operates under stricter rules than any other department in the country. He said police do not violate those rules.¶ His statements were intended to calm a controversy over a 2007 operation in which the NYPD mapped and photographed all of Newark's mosques and eavesdropped on Muslim businesses. Newark Mayor Cory Booker said he was never told about the surveillance, which he said offended him.¶ Booker and his police director accused the NYPD of misleading them by not revealing exactly what they were doing. Had they known, they said it never would have been permitted. But Browne said Newark police were told before and after the operation and knew exactly what it entailed.¶ Kelly, **the police commissioner, and Mayor Michael Bloomberg have been emphatic that police only follow legitimate leads of criminal activity and** do not **conduct preventive surveillance in ethnic communities**.¶ Former and current law enforcement officials either involved in or with direct knowledge of these programs say they did not follow leads. The officials spoke on condition of anonymity because they were not authorized to discuss the secret programs. But the documents support their claims.¶ The effort highlights one of the most difficult aspects of policing in the age of terrorism. Solving crimes isn't enough; police are expected to identify would-be terrorists and move in before they can attack.¶ There are no universally agreed upon warning signs for terrorism. Terrorists have used Internet cafes, stayed in hostels, worked out at gyms, visited travel agencies, attended student groups and prayed at mosques. So the NYPD monitored those areas. In doing so, they monitored many innocent people as they went about their daily lives.¶ Using plainclothes officers from the squad known as the Demographics Unit, police swept Muslim neighborhoods and catalogued the location of mosques. The ethnic makeup of each congregation was logged as police fanned out across the city and outside their jurisdiction, into suburban Long Island and areas of New Jersey.¶ "African American, Arab, Pakistani," police wrote beneath the photo of one mosque in Newark.¶ Investigators looked at mosques as the center of Muslim life. All their connections had to be known.¶ David Cohen, the **NYPD's top intelligence officer, wanted a source inside every mosque within a 250-mile radius of New York,** current and former officials said. **Though the**

officials said they never managed to reach that goal, documents show the NYPD successfully placed informants or undercovers - sometimes both - **into mosques from Westchester County, N.Y.**, to New Jersey.¶ The NYPD used these sources to get a sense of the sentiment of worshippers whenever an event generated headlines. The goal, former officials said, was **to alert police to potential problems before they bubbled up**.¶ Even when it was clear there were no links to terrorism**, the mosque informants gave the NYPD the ability to "take the pulse" of the community,** as Cohen and other managers put it.¶ When New York Yankees pitcher Cory Lidle and his flight instructor were killed on Oct. 11, 2006, when their small plane crashed into a Manhattan high-rise apartment, fighter planes were scrambled. Within hours the FBI and Homeland Security Department said it was an accident. Terrorism was ruled out.¶ Yet for days after the event, the NYPD's mosque crawlers reported to police about what they heard at sermons and among worshippers.¶ (View the PDF documents on Danish cartoons, mosque targeting and summaries of plane crash.)¶ At the Brooklyn Islamic Center, a confidential informant "noted chatter among the regulars expressing relief and thanks to God that the crash was only an accident and not an act of terrorism," one report reads.¶ "The worshippers made remarks to the effect that `it better be an accident; we don't need any more heat,'" an undercover officer reported from the Al-Tawheed Islamic Center in Jersey City, N.J.¶ In some instances, th**e NYPD put cameras on light poles and trained them on mosques, documents show. Because the cameras were in public space, police didn't need a warrant to conduct the surveillance.**¶ **Police also wrote down the license plates of cars in mosque parking lots, documents show. In some instances, police in unmarked cars outfitted with electronic license plate readers would drive down the street and record the plates of everyone parked near the mosque, former officials recalled.¶ "They're viewing Muslims like they're crazy.**

Intelligence Community will coopt reform

Greenwald, 2014

(Glenn is a constitutional Lawyer and an author of a best selling book on politics and Law called No Place to Hide. " Congress is Irrelevant on Mass surveillance. Here is what matters instead.". https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/. Date Accessed- 7/15/15. Anshul Nanda)

there is a real question about whether the defeat of this bill is good, bad, or irrelevant. To begin with, it **sought to change only one small sliver of NSA mass surveillance (domestic bulk collection of phone records under section 215 of the Patriot Act) while leaving completely unchanged the primary means of NSA mass surveillance,** which takes place under section 702 of the FISA Amendments Act, based on the lovely and quintessentially American theory that all that matters are the privacy rights of Americans (and not the 95 percent of the planet called "non-Americans").¶ There were some mildly positive provisions in the USA Freedom Act: the placement of "public advocates" at the FISA court to contest the claims of the government; the prohibition on the NSA holding Americans' phone records, requiring instead that they obtain FISA court approval before seeking specific records from the telecoms (which already hold those records for at least 18 months); and reducing the agency's "contact chaining" analysis from three hops to two. One could reasonably argue (as the ACLU and EFF did) that, though **woefully inadequate**, the bill was a net-positive as a first step toward real reform, but one could also reasonably argue, as Marcy Wheeler has with characteristic insight, that the **bill is so larded with ambiguities and fundamental inadequacies that it would forestall better options and advocates for real reform should thus root for its defeat.**¶ When pro-privacy members of Congress first unveiled the bill many months ago, it was actually a good bill: real reform. But the White House worked very hard— in partnership with the House GOP—to water that bill down so severely that what the House ended up passing over the summer did more to strengthen the NSA than rein it in, which caused even the ACLU and EFF to withdraw their support. The Senate bill rejected last night was basically a middle ground between that original, good bill and the anti-reform bill passed by the House.¶ * * * * *¶ All of that illustrates what is, to me, **the most important point from all of this: the last place one should look to impose limits on the powers of the U.S. government is . . . the U.S. government. Governments don't** walk around **try**ing **to figure out** how **to limit their own power,** and that's particularly true of empires.**¶** The **entire system in D.C. is designed at its core to prevent real reform**. This **Congress is not going to enact anything resembling fundamental limits on the NSA's powers of mass surveillance**. Even if it somehow did, this **White House would never sign it**. Even if all that miraculously happened, the fact that the **U.S. intelligence community** and National Security State **operates with no limits** and no oversight **means** they'd easily **co-opt the entire reform process**. **That's what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA "oversight" court**—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and "Dutch" Ruppersberger, while the court quickly became a rubber stamp with subservient judges who operate in total secrecy.

No checks on executive abuses

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

National security policy in the United States has remained largely constant from the Bush Administration to the Obama Administration. This continuity can be explained by the "double government" theory of 19th-century scholar of the English Constitution Walter Bagehot. As applied to the United States, Bagehot's theory suggests that U.S. national security policy is defined by the network of executive officials who manage the departments and agencies responsible for protecting U.S. national security and who, responding to structural incentives embedded in the U.S. political system, operate largely removed from public view and from constitutional constraints. The public believes that the constitutionally-established institutions control national security policy, but that view is mistaken. Judicial review is negligible; congressional oversight is dysfunctional; and presidential control is nominal. Absent a more informed and engaged electorate, little possibility exists for restoring accountability in the formulation and execution of national security policy.

The dual government system guarantees circumvention

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

The Obama Administration has also continued, and in some ways expanded, Bush-era surveillance policies. For example, the Obama Administration continued to intercept the communications of foreign leaders; 26 further insisted that GPS devices may be used to keep track of certain citizens without probable cause or judicial review27 (until the Supreme Court disapproved28); continued to investigate individuals and groups under Justice Department guidelines re-written in 2008 to permit "assessments" that require no "factual basis" for FBI agents to conduct secret interviews, plant informants, and search government and commercial databases;29 stepped up the prosecution of government whistleblowers who uncovered illegal actions,30 using the 1917 Espionage Act eight times during his first administration to prosecute leakers (it had been so used only three times in the previous ninety-two years);31 demanded that businesses turn over personal information about customers in response to "national security letters" that require no probable cause and cannot legally be disclosed;32 continued broad National Security Agency ("NSA") homeland surveillance;33 seized two months of phone records of reporters and editors of the Associated Press for more than twenty telephone lines of its offices and journalists, including their home phones and cellphones, without notice;34 through the NSA, collected the telephone records of millions of Verizon customers, within the United States and between the United States and other countries, on an "ongoing, daily basis" under an order that prohibited Verizon from revealing the operation;35 and tapped into the central servers of nine leading U.S. internet companies, extracting audio and video chats, photographs, emails, documents, and connection logs that enable analysts to track foreign targets and U.S. citizens.36 At least one significant NSA surveillance program, involving the collection of data on the social connections of U.S. citizens and others located within the United States, was initiated after the Bush Administration left office.37 These and related policies were formulated and carried out by numerous high- and mid-level national security officials who served in the Bush Administration and continued to serve in the Obama Administration.38 Given Senator Obama's powerful criticism of such policies before he took office as President, the question,39 then, is this: Why does national security policy remain constant even when one President is replaced by another who as a candidate repeatedly, forcefully, and eloquently promised fundamental changes in that policy? I. Bagehot's Theory of Dual Institutions A disquieting answer is provided by the theory that Walter Bagehot suggested in 1867 to explain the evolution of the English Constitution.40 While not without critics, his theory has been widely acclaimed and has generated significant commentary.41 Indeed, it is something of a classic on the subject of institutional change generally, and it foreshadowed modern organizational theory.42 In brief, Bagehot's notion was as follows. Power in Britain reposed initially in the monarch alone. Over the decades, however, a dual set of institutions emerged.43 One set comprises the monarchy and the House of Lords.44 These Bagehot called the "dignified" institutions—dignified in the sense that they provide a link to the past and excite the public imagination.45 Through theatrical show, pomp, and historical symbolism, they exercise an emotional hold on the public mind by evoking the grandeur of ages past.46 They embody memories of greatness. Yet it is a second, newer set of institutions— Britain's "efficient" institutions—that do the real work of governing.47 These are the House of Commons, the Cabinet, and the Prime Minister.48 As Bagehot put it: "[I]ts dignified parts are very complicated and somewhat imposing, very old and rather venerable; while its efficient part . . . is decidedly simple and rather modern . . . . Its essence is strong with the strength of modern simplicity; its exterior is august with the Gothic grandeur of a more imposing age."49 Together these institutions comprise a "disguised republic"50 that obscures the massive shift in power that has occurred, which if widely understood would create a crisis of public confidence.51 This crisis has been averted because the efficient institutions have been careful to hide where they begin and where the dignified institutions end.52 They do this by ensuring that the dignified institutions continue to partake in at least some real governance and also by ensuring that the efficient institutions partake in at least some inspiring public

ceremony and ritual.53 This promotes continued public deference to the efficient institutions' decisions and continued belief that the dignified institutions retain real power.54 These dual institutions, one for show and the other for real, afford Britain expertise and experience in the actual art of governing while at the same time providing a façade that generates public acceptance of the experts' decisions. Bagehot called this Britain's "double government."55 The structural duality, some have suggested, is a modern reification of the "Noble Lie" that, two millennia before, Plato had thought necessary to insulate a state from the fatal excesses of democracy and to ensure deference to the golden class of efficient guardians.56 Bagehot's theory may have overstated the naiveté of Britain's citizenry. When he wrote, probably few Britons believed that Queen Victoria actually governed. Nor is it likely that Prime Minister Lord Palmerston, let alone 658 members of the House of Commons, could or did consciously and intentionally conceal from the British public that it was really they who governed. Big groups keep big secrets poorly. Nonetheless, Bagehot's enduring insight—that dual institutions of governance, one public and the other concealed, evolve side-by-side to maximize both legitimacy and efficiency—is worth pondering as one possible explanation of why the Obama and Bush national security policies have been essentially the same. There is no reason in principle why the institutions of Britain's juridical offspring, the United States, ought to be immune from the broader bifurcating forces that have driven British institutional evolution. As it did in the early days of Britain's monarchy, power in the United States lay initially in one set of institutions—the President, Congress, and the courts. These are America's "dignified" institutions. Later, however, a second institution emerged to safeguard the nation's security. This, America's "efficient" institution (actually, as will be seen, more a network than an institution) consists of the several hundred executive officials who sit atop the military, intelligence, diplomatic, and law enforcement departments and agencies that have as their mission the protection of America's international and internal security. Large segments of the public continue to believe that America's constitutionally established, dignified institutions are the locus of governmental power; by promoting that impression, both sets of institutions maintain public support. But when it comes to defining and protecting national security, the public's impression is mistaken. America's efficient institution makes most of the key decisions concerning national security, removed from public view and from the constitutional restrictions that check America's dignified institutions. The United States has, in short, moved beyond a mere imperial presidency to a bifurcated system—a structure of double government—in which even the President now exercises little substantive control over the overall direction of U.S. national security policy. Whereas Britain's dual institutions evolved towards a concealed republic, America's have evolved in the opposite direction, toward greater centralization, less accountability, and emergent autocracy.

Executive Branch – Circumvent Courts

The Judicial Branch is possibly the worst actor for the plan- it endorses to liberty destroying theories

Greenwald, 2014

(Glenn is a constitutional Lawyer and an author of a best selling book on politics and Law called No Place to Hide. " Congress is Irrelevant on Mass surveillance. Here is what matters instead.". https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/. Date Accessed- 7/15/15. Anshul Nanda)

U.S. court proceedings. A U.S. federal judge already ruled that the NSA's domestic bulk collection program likely violates the 4th Amendment**, and in doing so,** obliterated many of the government's underlying justifications**. Multiple cases are now on appeal, almost certainly headed to the Supreme Court. None of this was possible in the absence of Snowden disclosures.¶ For a variety of reasons,** when it comes to placing real limits on the NSA, I place almost as little faith in the judiciary as I do in the Congress and executive branc**h. To begin with**, the Supreme Court is dominated by five right-wing justices on whom the Obama Justice Department has repeatedly relied to endorse their most extreme civil-liberties-destroying theories**. For another, of all the U.S. institutions that have completely abdicated their role in the post-9/11 era, the** federal judiciary has probably been the worst, the most consistently subservient to the National Security State. **Courts have no power over agencies**

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

Normally, of course, courts proceed in public, hear arguments from opposing counsel, and issue opinions that are available for public scrutiny. Not so with the FISC. All of its proceedings are closed to the public.298 The adversarial system integral to American jurisprudence is absent. Only government lawyers appear as counsel, unanswered by any real or potential adverse party.299 The FISC has pioneered a two-tiered legal system, one comprised of public law, the other of secret law. FISC opinions—even redacted portions of opinions that address only the FISC's interpretation of the constitutional rights of privacy, due process, or protection against unreasonable search or seizure—are rarely available to the public.300 Nancy Gertner, a former federal judge in Massachusetts, summed up the court: "The judges that are assigned to this court are judges that are not likely to rock the boat . . . . All of the structural pressures that keep a judge independent are missing there. It's one-sided, secret, and the judges are chosen in a selection process by one man."301 The Chief Judge of the FISC candidly described its fecklessness. "The FISC is forced to rely upon the accuracy of the information that is provided to the Court," said Chief Judge Reggie B. Walton. "The FISC does not have the capacity to investigate issues of noncompliance, and in that respect the FISC is in the same position as any other court when it comes to enforcing [government] compliance with its orders."302 The NSA's own record proved him correct; an internal NSA audit revealed that it had broken privacy rules or overstepped its legal authority thousands of times since 2008.303

The judiciary, in short, does not have the foremost predicate needed for Madisonian equilibrium: "a will of its own."304 Whatever the court, judges normally are able to find what appear to the unschooled to

be sensible, settled grounds for tossing out challenges to the Trumanites' projects. Dismissal of those challenges is couched in arcane doctrine that harks back to early precedent, invoking implicitly the courts' mystical pedigree and an aura of politics-transcending impartiality. But challenges to the Trumanites' projects regularly get dismissed before the plaintiff ever has a chance to argue the merits either before the courts or, sometimes more importantly, the court of public opinion. Try challenging the Trumanites' refusal to make public their budget 305 on the theory that the Constitution does, after all, require "a regular statement and account of the receipts and expenditures of all public money";306 or the membership of Members of Congress in the military reserve307 on the theory that the Constitution does, after all, prohibit Senators and Representatives from holding "any office under the United States";308 or the collection of phone records of the sort given by Verizon to the NSA on the theory that the law authorizing the collection is unconstitutional.309 Sorry, no standing, case dismissed.310 Try challenging the domestic surveillance of civilians by the U.S. Army311 on the theory that it chills the constitutionally protected right to free assembly,312 or the President's claim that he can go to war without congressional approval313 on the theory that it is for Congress to declare war.314 Sorry, not ripe for review, case dismissed.315 Try challenging the introduction of the armed forces into hostilities in violation of the War Powers Resolution.316 Sorry, political question, non-justiciable, case dismissed.317 Try challenging the Trumanites' refusal to turn over relevant and material evidence about an Air Force plane accident that killed three crew members through negligence,318 or about racial discrimination against CIA employees,319 or about an "extraordinary rendition" involving unlawful detention and torture.320 Sorry, state secrets privilege, case dismissed Sometimes the courts have no plausible way of avoiding the merits of national security challenges. Still, the Trumanites win. The courts eighty years ago devised a doctrine—the "non-delegation doctrine"—that forbids the delegation of legislative power by Congress to administrative agencies.322 Since that time it has rarely been enforced, and never has the Court struck down any delegation of national security authority to the Trumanite apparatus.323 Rather, judges stretch to find "implied" congressional approval of Trumanite initiatives. Congressional silence, as construed by the courts, constitutes acquiescence.324 Even if that hurdle can be overcome, the evidence necessary to succeed is difficult to get; as noted earlier,325 the most expert and informed witnesses all have signed nondisclosure agreements, which prohibit any discussion of "classifiable" information without pre-publication review by the Trumanites. As early as 1988, over three million present and former federal employees had been required to sign such agreements as a condition of employment.326 Millions more have since become bound to submit their writings for editing and redaction before going to press. And as the ultimate trump card, the Trumanites are cloaked in, as the Supreme Court put it, "the very delicate, plenary and exclusive power of the President as the sole organ of the federal government in the field of international relations—a power which does not require as a basis for its exercise an act of Congress."327 The basis of their power, the Court found, is, indeed, not even the Constitution itself; the basis of Trumanite power is external sovereignty—the membership of the United States in the community of nations, which confers extra-constitutional authority upon those charged with exercising it.328

FISA Rubber Stamps

The FISA court is just a rubber stamp – Only rejected .03% of requested warrants in the past 33 years

Eichelberger 13 (Erika Eichelberger is a reporter in Mother Jones' Washington bureau. She has also written for The Nation, The Brooklyn Rail, and Tom Dispatch, "FISA Court Has Rejected .03 Percent Of All Government Surveillance Requests", Mon Jun. 10, 2013 1:30 PM EDT, http://www.motherjones.com/mojo/2013/06/fisa-court-nsa-spying-opinion-reject-request)

After last week's revelations extensive National Security Agency surveillance of phone and internet communications, **President Barack Obama made it a point to assure Americans that, not to worry**, there is plenty of oversight of his administration's snooping programs. **"We've got congressional oversight and judicial oversight," he said Friday, referring in part to the Foreign Intelligence Surveillance Court (FISC),** which was created in 1979 to oversee Department of Justice requests for surveillance warrants against foreign agents suspected of espionage or terrorism in the United States. **But the FISC has declined just 11 of the more than 33,900 surveillance requests made by the government in 33 years, the Wall Street Journal reported Sunday. That's a rate of .03 percent, which raises questions about just how much judicial oversight is actually being provided.** ¶ **"The FISA system is broken," Marc Rotenberg**, executive director of the Electronic Privacy Information Center, **told the Journal. "At the point that a FISA judge can compel the disclosure of millions of phone records of US citizens engaged in only domestic communications, unrelated to the collection of foreign intelligence…there is no longer meaningful judicial review."**¶ But according to Timothy Edgar, a top privacy lawyer at the Office of the Director of National Intelligence and the National Security Council under Bush and Obama, it's not quite as simple as the FISC rubber stamping nearly every application the government puts in front of it. ¶ The reason so many orders are approved, he said, is that the Justice Department office that manages the process vets the applications rigorously... [S]o getting the order approved by the Justice Department lawyers is perhaps the biggest hurdle to approval. "The culture of that office is very reluctant to get a denial," he [told the Journal].¶ Still, **the entire process is closed. The FISC court hears evidence for surveillance applications presented solely by the Department of Justice. The court does not have to release its opinions or any information regarding such hearings**.¶ In February, Sens. Dianne Feinstein (D-Calif.), Jeff Merkley (D-Ore.), Ron Wyden (D-Ore.), and Mark Udall (D-Colo.), wrote a letter to the FISC asking the court to consider releasing portions of its opinions to the public by "writing summaries of its significant interpretations of the law in a manner that separates the classified facts of the application under review from the legal analysis, so as to enable declassification." After the revelations on the spying programs last week, Sen. Al Franken called the same thing. ¶ In response to the senators' letter, the FISA court's presiding judge, Reggie B. Walton, said in March that it would be very difficult to release summaries of the court's opinions to the public, because the legal analysis in most opinions is "inextricably intertwined" with classified information. ¶ This post has been corrected. A commenter pointed out that a previous version stated that the FISA court has rejected .0003 percent of all government surveillance requests. The correct percentage is .03. Apologies for the bad math.

FISA freely allows and renews NSA programs regardless of how controversial they are

VOLZ 15 (DUSTIN VOLZ is a reporter for the National Journal, "NSA Spying Wins Another Rubber Stamp", February 27, 2015, http://www.nationaljournal.com/tech/nsa-spying-wins-another-rubber-stamp-20150227 - JD)

A federal court has again renewed an order allowing the National Security Agency to continue its bulk collection of Americans' phone records, a decision that comes more than a year after President Obama pledged to end the controversial program.¶ **The Foreign Intelligence Surveillance Court approved this week a government request to keep the NSA's mass surveillance of U.S. phone metadata operating until June 1, coinciding with when the legal authority for the program is set to expire in Congress.¶ The extension is the fifth of its kind since Obama said he would effectively end the Snowden-exposed program as it currently exists during a major policy speech in January 2014**. Obama and senior administration officials have repeatedly insisted that they will not act alone to end the program without Congress.¶ "While the administration waits for the Congress to act, it has continued to operate the program with ... important modifications in place," White House press secretary Josh Earnest said in a statement released late Friday.¶¶ **More than a year's worth of efforts to reform the NSA stalled last year, as the Senate came two votes short of advancing the USA Freedom Act in November. The measure failed to overcome a filibuster by Republicans, many of whom warned any limitation imposed on the NSA could bolster terrorist groups like the Islamic State.¶** It is widely expected that lawmakers will reintroduce versions of the Freedom Act in the new Congress, but no bill has emerged so far. Core parts of the post-9/11 Patriot Act will sunset on June 1, including Section 215, which grants the NSA legal authority to conduct its controversial dragnet surveillance program.¶ Amid the congressional inaction, **the FISA Court has now renewed the NSA's most controversial spying program five times**—in March, June, September, December and now February—since Obama delivered his pledge to end it in its current form.¶ "Congress has a limited window before the June 1 sunset to enact legislation that would implement the President's proposed path forward for the telephony metadata program, while preserving key intelligence authorities," Earnest said in his statement. "The administration continues to stand ready to work with the Congress on such legislation and would welcome the opportunity to do so."¶ **Some NSA critics and even some lawmakers, such as Rep. Adam Schiff, the top Democrat on the House Intelligence Committee, have called for Obama to end the program unilaterally.¶** The intelligence community, under Obama's direction, has implemented some changes to how it stores and collects U.S. and foreign communications data, but privacy advocates have repeatedly insisted those tweaks are not enough.¶ It remains unclear if there is a path forward for substantial NSA reform in Congress, leaving surveillance critics to worry lawmakers may ultimately pass a clean reauthorization of the Patriot Act.

The FISA court passes warrants without a second thought and can be circumvented by the executive branch – Bush Administration empirically proves

Greenwald 13 (Glenn Greenwald is a fomer columnist on civil liberties and US national security issues for the Guardian. An ex-constitutional lawyer, he was until 2012 a contributing writer at Salon. He is the author of How Would a Patriot Act? (May 2006), a
critique of the Bush administration's use of executive power, "The bad joke called 'the FISA court' shows how a 'drone court' would work", Friday 3 May 2013, http://www.theguardian.com/commentisfree/2013/may/03/fisa-court-rubber-stamp-drones)

From the start, the Fisa court was a radical perversion of the judicial process. It convened in total secrecy and its rulings were classified. The standard the government had to meet was not the traditional "probable cause" burden imposed by the Fourth Amendment but a significantly diluted

standard. **There was nothing adversarial about the proceeding**: only the Justice Department (DOJ) was permitted to be present, but not any lawyers for the targets of the eavesdropping request, who were not notified. Reflecting its utter lack of real independence, the court itself was housed in the DOJ.¶ And, and was totally predictable, **the court barely ever rejected a government request for eavesdropping. From its inception, it was the ultimate rubber-stamp court, having rejected a total of zero government applications -** zero **- in its first 24 years of existence, while approving many thousands. In its total 34 year** history - from 1978 through 2012 - **the Fisa court has rejected a grand total of 11 government applications, while approving more than 20,000.**¶ Despite how obedient and compliant this court always was, **the Bush administration decided in late 2001 that it would have its National Security Agency** (NSA) **intercept the calls and emails of Americans without bothering to obtain the Fisa court approval required by the criminal law, claiming** - with a straight face - **that complying with the law was "too cumbersome" in the age of Terrorism.** Once this lawbreaking was revealed by the New York Times in late 2005, the response from the DC political class was not to punish the responsible government officials for their lawbreaking, but rather to enact a new law (called the Fisa Amendments Act of 2008) that, in essence, simply legalized the warrantless eavesdropping scheme of the Bush administration.¶ **That new Fisa law vested vast new surveillance powers in the US government to spy on the communications of Americans without the annoyance of obtaining permission from the Fisa court.** It **requires warrants from the Fisa court only in the narrowest of circumstances: the ones most susceptible to abuse**. Although candidate Obama pretended to have serious concerns about the law (when he voted for it) and vowed to rein in its excesses, his administration last year demanded the renewal of this law with no reforms, and Congress, on a fully bipartisan basis, complied.¶ One of the provisions of the new Fisa law requires the DOJ annually to disclose to Congress the number of eavesdropping applications it files and the number approved and rejected by the Fisa court. Earlier this week, that disclosure was provided to Senate Majority Leader Harry Reid for the year 2012, and this is what it reported:¶ fisc¶ Public domain¶ Let's repeat that: **"of 1,789 applications, the FISA court did not deny any applications in whole or in part."** What fantastic oversight (1789 is, ironically, the year the Constitution was ratified). **The court did "modify" 40 of those applications - less than 3% - but it approved every single one. The same was true of 2011, when the DOJ submitted 1,676 applications and the Fisa court, while modifying 30, "did not deny any applications in whole, or in part".**

The FISA court is nothing but a rubber stamp – they even circumvent the supreme court

Masnik 14 (Mike is the founder and CEO of Floor64 and editor of the Techdirt blog." FISA Court Rubber Stamps Continued Collection Of Metadata On Every Single Phone Call", Oct 11th 2013, https://www.techdirt.com/articles/20131011/16065524845/fisa-court-rubber-stamps-continued-collection-metadata-every-single-phone-call.shtml)

This won't come as a huge surprise, I would imagine, but the telephony metadata dragnet collection that has to be renewed every few months "expired" today and was promptly reapproved by the FISA court, because "fuck you, that's why." That's not quite what they said, but consider it the bureaucratic-speak equivalent, coming from the Director of National Intelligence:¶ Previously on several occasions, the Director of National Intelligence declassified certain information about this telephony metadata collection program in order to provide the public with a more thorough and balanced understanding of the program. Consistent with his prior declassification decision and in light of the significant and continuing public interest in the telephony metadata collection program, DNI Clapper has decided to declassify and disclose publicly that the government filed an application with the Foreign Intelligence Surveillance Court seeking renewal of the authority to collect telephony metadata in bulk, and that the

court renewed that authority. ¶ The administration is undertaking a declassification review of this most recent court order. ¶ Of course, it's true that **last month, the previous order rubber-stamping this approval was declassified and revealed. Even though the same thing has been rubber stamped every few months for at least the past seven years, this time there was an attempt at a full justification for why it made sense**. **Of course, since it was a one-sided situation, without any adversarial hearing or opinion, it allowed the FISA court to make up its own rules and completely contradict the Supreme Court** (to whom it's supposed to listen). It seems highly doubtful that the eventual declassified version of this rubber stamp will be any different than the last one. ¶ Of course, in the last three months, **we've also learned that this program of collecting data on every phone call in the US has been necessary to stop precisely zero attacks in the US** -- but it did apparently lead them to a taxi driver sending some money to some not very nice people in Somalia. And, because of that, the NSA gets to keep track of everyone's phone calls. As has been explained repeatedly, **this seems to go against not just the spirit and intended purpose of the 4th Amendment, but the plain language of that same Amendment. But, the FISA court has earned its rubber stamp reputation for a reason, and apparently it's not about to give up on it.**

AT: Public Accountability Solves

Less surveillance means diminished public accountability

Marc **Rotenberg** 20**02** [Marc Rotenberg is an Executive Director, Electronic Privacy Information Center (EPIC), and Adjunct Professor, Georgetown University Law Center. Former Counsel, Senate Judiciary Committee (Senator Patrick Leahy). "Symposium: Modern Studies in Privacy Law PRIVACY AND SECRECY AFTER SEPTEMBER 11"June 2002. Minnesota Law Review. 86 Minn. L. Rev. 1115 JC]

One of the consequences of the expanded secrecy is clearly that public accountability is diminished. This has consequences both large and small. **In the context of electronic surveillance** undertaken pursuant to the new powers created by the USA PATRIOT Act, **it means that targets of government** searches who might previously have been notified that they were subject to government **surveillance will not be so told**. n49 **It** [*1126] **means that public reporting of the use of surveillance authority by federal investigators will be less detailed and less useful than reports on similar activities in the past.** And on large open questions, like who was responsible for the dissemination of deadly anthrax spores in the nation's capital in mid-October, **the government can continue to make representations about the status of the case with little opportunity for the public to probe the government's claims because information associated with the investigation remains secret.**

Less surveillance means diminished public accountability

Marc **Rotenberg** 20**02** [Marc Rotenberg is an Executive Director, Electronic Privacy Information Center (EPIC), and Adjunct Professor, Georgetown University Law Center. Former Counsel, Senate Judiciary Committee (Senator Patrick Leahy). "Symposium: Modern Studies in Privacy Law PRIVACY AND SECRECY AFTER SEPTEMBER 11"June 2002. Minnesota Law Review. 86 Minn. L. Rev. 1115 JC]

What we have witnessed since September 11 is both the diminishment of personal privacy and the expansion of government secrecy. Now this is a significant development that bears some exploration however we may feel about the specific steps taken in the wake of September 11. It is my aim at this point to look more closely at the interplay of these two trends and to see if the traditions in privacy law help us understand the transformation taking place since September 11. Should it surprise us that as personal privacy is diminished, government secrecy expands? We can begin with the observation of some commentators that **there is a tradeoff between** privacy and transparency or **privacy and openness.** According to this view **privacy stands in opposition to these values, and we may give up some privacy to gain greater public accountability.** The communitarian scholar Amitai Etzioni, for example, has argued that **privacy must be balanced against competing interests.** n51 Since September 11 Etzioni has endorsed a number [*1127] of proposals to expand **surveillance**, including adoption of a National ID card and new airport screening procedures. n52 It is Etzioni's view that these **measures will promote public safety and reduce the risk of future terrorist acts**. n53 David Brin, author of The Transparent Society, argued in similar fashion that **privacy should give way to other social interests, particularly the need for greater openness and transparency that characterizes democratic society.** n54 Brin has also argued since September 11 for greater tracking and monitoring procedures.

AT: Civil Suits Solve

Civil Suits ineffective against telecom companies

Mike **Wagner**, 20**09** [Mike Wagner, AB, Villanova University; JD, The George Washington University. Mike Wagner is an associate in the Washington office of Covington & Burling LLP, where he counsels government contractors on issues arising at all phases of the public procurement process and handles complex white collar investigations involving allegations of fraud and corruption. Prior to joining Covington, he served as a law clerk on the U.S. Court of Appeals for the Third Circuit and the U.S. District Court for the District of Maryland. A graduate of GW Law, he was an Articles Editor on the George Washington Law Review and received the 2010 Scribes Law Review Writing Award for best student-written article. November 2009, "Warrantless Wiretapping, Retroactive Immunity, and the Fifth Amendment". The George Washington Law Review, 78 Geo. Wash. L. Rev. 204. JC]

Although he could not have known it at the time, **Klein**'s observations and subsequent decision to blow the whistle on his employer would soon make him the star witness in a class-action suit **filed against AT&T for its role in the government's warrantless domestic surveillance program**. n8 **This action, brought pursuant to a federal statutory provision authorizing civil suits against any person who engages in warrantless wiretapping**, **n9 appeared poised to provide a measure of relief to those U.S. citizens subjected to such government surveillance. The FISA Amendments Act of 2008** ("FISAA"), n10 **however**, an unprecedented law granting retroactive immunity from civil suit to telecommunications providers like AT&T, **effectively eliminates this claim and others like it**. n11 This Note argues that Congress should amend FISAA to remove its retroactive grant of immunity because it unconstitutionally infringes on the rights guaranteed in the Fifth Amendment of the Consitution. First, FISAA violates the Fifth Amendment's Due Process Clause n12 because it retroactively abrogates [*206] a right of action which had already accrued to a claimant. Second, FISAA contravenes the Fifth Amendment's Takings Clause n13 by eliminating accrued tort claims without providing just compensation.

Civil suits are empirically ineffective against federal officers

Mike **Wagner**, 20**09** [Mike Wagner, AB, Villanova University; JD, The George Washington University. Mike Wagner is an associate in the Washington office of Covington & Burling LLP, where he counsels government contractors on issues arising at all phases of the public procurement process and handles complex white collar investigations involving allegations of fraud and corruption. Prior to joining Covington, he served as a law clerk on the U.S. Court of Appeals for the Third Circuit and the U.S. District Court for the District of Maryland. A graduate of GW Law, he was an Articles Editor on the George Washington Law Review and received the 2010 Scribes Law Review Writing Award for best student-written article. November 2009, "Warrantless Wiretapping, Retroactive Immunity, and the Fifth Amendment". The George Washington Law Review, 78 Geo. Wash. L. Rev. 204. JC]

Carr v. United States, [n103] another case rejecting a due process challenge to a law immunizing a defendant from tort liability, is likewise unpersuasive because it too involved a case in which the prospective elimination of a cause of action. The plaintiff in Carr, **a federal employee**, was injured in a car accident due to the driving of his colleague, also a federal employee, in 1965. [n104] The plaintiff **initiated a civil suit against his co-worker, but the Federal Drivers' Act of 1961 abrogated any civil suits against federal employees acting within the scope of their employment and substituted the United States in their place.** [n105] The plaintiff challenged the abrogation of his cause of action as a violation of the Fifth Amendment's Due Process Clause, but the Fourth Circuit rejected this argument: "The accident occurred over four years after the enactment of the Drivers Act. Therefore, ... [the plaintiff] had no interest entitled to constitutional protection." [n106] Just as in Ducharme, due process concerns were not implicated because the plaintiff's cause of action, which accrued after the adoption of the immunity provision, was abrogated prospectively by statute. This distinction is crucial to understanding why the laws were upheld in Ducharme and Carr but not in Ettor or Richmond Screw. **In light of this precedent, the**

importance of determining whether FISAA acts retroactively or prospectively is plain. If the causes of action eliminated by FISAA had accrued prior to its passage, then FISAA would operate retroactively and the plaintiffs' property would be eligible for due process protections. Because tort actions generally accrue at the time of injury, [n107] the cause of action in the suits abrogated by FISAA accrued when the NSA, with the help of AT&T and other telecommunications firms, began improperly monitoring the plaintiffs' telephone and Internet lines soon after the September 11 **[*220]** attacks. [n108] Thus, as Professor Anthony Sebok explains, by the time Congress passed FISAA several years later, the plaintiffs' claims had already vested.

FBI Fusion Centers

Generic – No Regulations

Fusion centers guarantee profiling will continue post-plan

Constitution Project '12 The Constitution Project (8/15/12, The Constitution Project, "RECOMMENDATIONS FOR FUSION CENTERS", http://www.constitutionproject.org/pdf/fusioncenterreport.pdf)

2. Reports of Political, Racial and Religious Profiling

Despite these constitutional principles, there have been numerous anecdotal reports of incidents in which fusion centers have targeted individuals in the United States for surveillance and investigation based solely on beliefs and characteristics that are protected by the First and Fourteenth Amendments. Although federal guidance to fusion centers cautions against profiling, these incidents demonstrate that significant additional guidance, training and oversight are crucial to ensure that fusion centers and other law enforcement agencies do not engage in racial, religious and political profiling.41

Recent **reports from across the country bear testament to the potential for problematic profiling at fusion centers, particularly regarding bulletins and intelligence reports circulated by fusion centers.** These are a few examples:

• **The** February 2009 "**Prevention Awareness Bulletin," circulated by a Texas fusion center, described Muslim lobbying groups as "providing an environment for terrorist organizations to flourish**" and warned that "the threats to Texas are significant."

The bulletin called on law enforcement officers to report activities such as Muslim "hip hop fashion boutiques, hip hop bands, use of online social networks, video sharing networks, chat forums and blogs."42

• A Missouri-based fusion center issued a February 2009 report describing support for the presidential campaigns of Ron Paul or third party candidates, possession of the iconic "Don't Tread on Me" flag and anti-abortion activism as signs of membership in domestic terrorist groups.43

• **The Tennessee Fusion Center listed a letter from the American Civil Liberties Union (ACLU) to public schools on its online map of "Terrorism Events and Other Suspicious Activity." The letter had advised schools that holiday celebrations focused exclusively on Christmas were an unconstitutional government endorsement of religion.**44

• **The Virginia Fusion Center's 2009 Terrorism Risk Assessment Report described student groups at Virginia's historically black colleges as potential breeding grounds for terrorism and characterized the "diversity" surrounding a military base as a possible threat**.45

Fusion centers do what they want

German and Stanley '7, German is on the Policy Counsel for National Security, ACLU Washington Legislative Office; Stanley is the Public Education Director, ACLU Technology and Liberty Program (December 2007, Michael German and Jay Stanley, American Civil Liberties Union, "WHAT'S WRONG WITH FUSION CENTERS?," https://www.aclu.org/files/pdfs/privacy/fusioncenter_20071212.pdf)

Ambiguous Lines of Authority. The **participation of agencies from multiple jurisdictions in fusion centers allows the authorities to manipulate differences in federal, state and local laws to maximize information collection while evading accountability and oversight through the practice of "policy shopping**."

Private Sector Participation . **Fusion centers are incorporating private-sector corporations** into the intelligence process, breaking down the arm's length relationship that protects the privacy of innocent Americans who are employees or customers of these companies, and increasing the risk of a data breach.

Military Participation . **Fusion centers are involving military personnel** in law enforcement activities in troubling ways.
Data Fusion = Data Mining . Federal fusion center guidelines encourage whole sale data collection and manipulation processes that threaten privacy.
Excessive Secrecy . **Fusion centers are hobbled by excessive secrecy, which limits public oversight**, impairs their ability to acquire essential information and impedes their ability to fulfill their stated mission, bringing their ultimate value into doubt.

Their inherently local nature makes regulation impossible

O'Neil '8 political science graduate student at the University of California Los Angeles (UCLA) Previously, iobhan served as the analyst for domestic security and intelligence at the Congressional Research Service (CRS). She spent five years working in homeland security serving as the deputy chief of the Intelligence Bureau of the New Jersey Office of Homeland Security and Preparedness (OHSP) (April 2008, Siobhan, Homeland Security Affairs, "The Relationship between the Private Sector and Fusion Centers: Potential Causes for Concern and Realities", https://www.hsaj.org/articles/134)
Given that **fusion centers are entities established by states and localities to serve their own law enforcement**, emergency response, and homeland security needs, and **compounded by the sensitivities associated with federalism, the federal government is in a difficult position of balancing its interests and respecting the local nature of fusion centers**. As such, t**he federal government has been understandably hesitant to place requirements on fusion centers.** Instead, federal **agencies have produced guidelines, which have not been compulsor**y, to include the National Strategy for Information Sharing and Fusion Center Guidelines. 8 While **these documents** address some of the tactical and operational concerns related to fusion centers, they **are often vague to a fault and fail to provide the comprehensive vision for fusion centers as part of the nation's homeland security posture.**
Failure to create a consensus on the role, structural requirements, and responsibilities for fusion centers is apt to increase the potential for ineffectiveness, which threatens the viability of fusion centers. If fusion centers fail to demonstrate their worth and strengthen and augment our nation's homeland security efforts, political support and external agency engagement with these centers is likely to decline. Moreover, potential civil liberties abuses could damage fusion centers' credibility and undermine their public support. It has rightfully been warned that even rumors of impropriety and civil liberties abuses associated with a single fusion center can cause irreparable damage to the reputation of all fusion centers nationwide. This would be unfortunate given the potential for fusion centers to provide public safety and homeland security benefits to both local communities and the nation.

Fusion centers aren't under federal jurisdiction—localities won't enforce rules

Price '13, Michael Price serves as counsel for the Brennan Center's Liberty and National Security Program (12/10/13, Michael Price, Brennan Center for Justice, "National Security and Local Police", https://www.brennancenter.org/publication/national-security-local-police)
The Brennan Center has identified three major reasons the system is ineffective:
Information sharing among agencies is governed by inconsistent rules and procedures that encourage gathering useless or inaccurate information. This poorly organized system wastes resources and also risks masking crucial intelligence.
As an increasing number of agencies collect and share personal data on federal networks, inaccurate or useless information travels more widely. Independent oversight of fusion centers is virtually non-existent, compounding these risks.

Oversight has not kept pace, increasing the likelihood that intelligence operations violate civil liberties and harm critical police-community relations.

According to a report by the Government Accountability Office, 95 percent of suspicious activity reports are not even investigated by FBI. This is unsurprising. In the past, police departments shared information only when there was 'reasonable suspicion' of criminal activity. This time-tested standard ensured that police were focused on real threats and not acting on their own biases or preconceptions. But with this crucial filter removed after the attacks of 9/11, almost any behavior — from photographing a landmark, to stretching in the park, to attending a mosque — can be viewed as potentially suspicious, reported, and shared with thousands of other government agencies. It is impractical to sift through and follow up on every report, so important information can easily fall through the cracks. In some instances, the practice has also undermined community trust in the police, which is an essential element of domestic counterterrorism.

Efforts by the federal government to address this oversight gap have been half-hearted. **The system is not under federal government control. Federal funds simply flow to state legislatures, which then allocate them as they see fit — no questions asked**. **State and local governments** have **rarely stepped into the breach**, allowing **intelligence activities to go unchecked and unsupervised.**

Black Lives Matter/Profiling

Fusion centers view Black colleges as "hotbeds for extremists"

Ford '9, Black Agenda report executive director (4/29/2009, Glen Ford, Black Agenda Report, "Black Colleges Profiled as Suspected Havens for "Extremists"", http://www.blackagendareport.com/content/black-colleges-profiled-suspected-havens-%E2%80%9Cextremists%E2%80%9D)

Black Colleges Profiled as Suspected Havens for "Extremists"

A Black Agenda Radio commentary by Glen Ford

"**The Fusion Center appears to believe that Black colleges are by definition hotbeds of militancy and rebellion."**

Those deep thinkers in the Homeland Security Department are paying good money for some very bad advice on what constitutes a threat to American society. An inkling of the kind of madness that passes for research at Homeland Security, is provided by a recent report to the Virginia State Police. The report, which emanates from the basement offices of something called the Virginia **Fusion Center, claims that "a wide variety of terror or extremist groups" have ties to the Hampton Roads region of the state. Specifically, the report claims that the area's two historically Black universities are virtual magnets for terrorists and "extremists" – as are the two Black universities in the Richmond area.**

For those who are familiar with the four schools – Norfolk State University, Hampton University, Virginia State University in Petersburg and Virginia Union University in Richmond – the very thought of them as havens for "extremist" politics is laughable. Political action is not what these schools are known for. And that's too bad. But th**e Fusion Center, whoever they are, appears to believe that Black colleges are by definition hotbeds of militancy and rebellio**n. I wish that were true, but it's not. It appears **the researchers at Virginia's Fusion Center believe** that **Black institutions are inherently suspect. The Homeland Security Department is paying these guys millions of dollars a year to give vent to their own racist paranoia – and to sic the political bloodhounds on a bunch of apolitical Black students.**

"**The presumption seems to be that dangerous people are not white, and white people are not dangerous**."

The **creeps at the Fusion Center see security dangers in diversity, which they believe creates special national security perils.** The Hampton Roads region of Virginia has attracted a wide diversity of population from all parts of the globe. **The Fusion Center report says, "While the vast majority of these individuals are law-abiding, this ethnic diversity also affords terrorist operatives the opportunity to assimilate easily into society, without arousing suspicion**." The statement reveals the screaming racist posing as a researcher. Clearly the report's authors believe that the safest communities, national security-wise, are those that are uniformly white and English-speaking. Presumably, in such surroundings it's hard for the "dangerous" people to hide in a crowd. The presumption seems to be that dangerous people are not white, and white people are not dangerous. White communities are the ones that need protecting, while the non-white or diverse communities represent some degree of danger.

This is pure racist crap, and dangerous stuff to have circulating among the police. The **logic of the Fusion Report, if taken seriously, would lead the State to aggressively infiltrate the student ranks at Black colleges**. They wouldn't discover much in the way of subversive anything, but it is in the nature of the spy to invent what he can't find.

Virginia's crackpot Fusion Center is one of at least 58 such idiot-tanks that have sprung up around the country since 9/11, at a cost of $250 million dollars in public funds. That quarter billion dollar investment has led to the discovery of a single fact: Some white people are not comfortable, in general, with diversity, and are still nervous as hell around Black people.

Fusion centers spy on black lives matter protests

BondGraham ’14 (4/15/15, Darwin, East Bay Express, “Counter-Terrorism Officials Helped Track Black Lives Matter Protesters”, http://www.eastbayexpress.com/oakland/counter-terrorism-officials-helped-track-black-lives-matter-protesters/Content?oid=4247605)

On December 9, 2014, at 4:48 p.m., **an internal email with the subject line, "Reminder for Tonight and this week: Do Not Advise Protesters That We Are Following Them on Social Media," circulated among dozens of California Highway Patrol commanders.** The message read: "A quick reminder ... as you know, our TLO [Terrorism Liaison Officers] officers are actively following multiple leads over social media." The note continued, "this morning, we found posts detailing protesters' interaction with individual officers last night. In the posts, protesters are stating that we (CHP) were claiming to follow them on social media. Please have your personnel refrain from such comments; we want to continue tracking the protesters as much as possible. If they believe we are tracking them, they will go silent."

In recent years, police agencies throughout the United States have scoured social media as part of criminal investigations. But the police are also watching social media to spy on political protesters, especially those they suspect will engage in acts of civil disobedience. **During the recent Black Lives Matter protests**, **local and state** police **agents monitored protesters on social media** and activist websites. Several hundred CHP emails obtained by the Expressshow that social media is now a key source of intel for the police when monitoring political protests.

But the emails raise serious questions, say civil libertarians and some of the activists whose posts were harvested as intel. How do police monitor social media? Do they store data or track particular people? Are agencies over-reacting and wasting resources? And why are counter-terrorism police involved?

The TLOs tasked by the CHP with monitoring Black Lives Matter protesters on social media are employed by different local agencies and serve as points of contact for matters regarding terrorism. The role was created after 9/11, and **the officers communicate through networks coordinated by fusion centers**, such as the Northern California Regional Intelligence Center, or NCRIC, which connects police agencies from Monterey County to the Oregon border.

"We don't know as much about the TLO program as we should," said Nadia Kayyali, an activist with the Electronic Frontier Foundation. "We don't know what their standards are, their policies with respect to limits and privacy."

"We are not the CHP," Matthew Hopkins the deputy commander of Cal STAC told me. "There are CHP officers in the center, but it's a task force environment. We assess threats. Transnational crime. Terrorism." Hopkins said Cal STAC is a fusion center like NCRIC, except that its main focus is assessing strategic threats to the state of California. Hopkins said he could not comment on any emails sent by his subordinate because he hasn't seen them.

"**They've built this big network and they have tremendous resources**," said @domainawareness about the involvement of fusion centers in monitoring the Black Lives Matter protests. "But **they don't have enough to do, so they're using this to watch political protesters. It's mission creep**."

said he is not surprised to see the extensive monitoring of social media by the police. "I come out of Act Up in NYC," said Petrelis. "The cops came to our meetings and they picked up all the lit.

Fusion centers rely on racial profiling

Cyril ’15 Staff writer for The Progressive (April 2015, Malkia Amala Cyril, The Progressive, “Black America's State of Surveillance”, http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance)

They will use **fusion centers**. Originally designed to increase interagency collaboration for the purposes of counterterrorism, these **have instead become the local arm of the intelligence community**.

According to Electronic Frontier Foundation, there are currently seventy-eight on record. **They are the clearinghouse for increasingly used "suspicious activity reports**"—described as "official documentation of observed behavior reasonably indicative of pre-operational planning related to terrorism or other criminal activity." These reports and other collected data are often stored in massive databases like e-Verify and Prism. As anybody who's ever dealt with gang databases knows**, it's almost impossible to get off a federal or state database, even when the data collected is incorrect or no longer true.**

Predictive policing doesn't just lead to racial and religious profiling—it relies on it. Just as stop and frisk legitimized an initial, unwarranted contact between police and people of color, almost 90 percent of whom turn out to be innocent of any crime, **suspicious activities reporting and the dragnet approach of fusion centers target communities of color.** One review of such reports collected in Los Angeles shows approximately 75 percent were of people of color.

This is the future of policing in America, and it should terrify you as much as it terrifies me. Unfortunately, it probably doesn't, because my life is at far greater risk than the lives of white Americans, especially those reporting on the issue in the media or advocating in the halls of power. One of the most terrifying aspects of high-tech surveillance is the invisibility of those it disproportionately impacts.

Islamaphobia

Fusion centers monitor lawful religious activity

Patel and Price '12 Faiza Patel serves as co-director of the Brennan Center's Liberty and National Security Program; Michael Price serves as counsel for the Brennan Center's Liberty and National Security Program (10/18/12, Faiza Patel, Michael Price, Brennan Center for Justice, "Fusion Centers Need More Rules, Oversight", https://www.brennancenter.org/analysis/fusion-centers-need-more-rules-oversight)

Instead of looking for terrorist threats, **fusion centers were monitoring lawful political and religious activity**. That year, **the Virginia Fusion Center described a Muslim get-out–the-vote campaign as "subversive." In 2009, the North Central Texas Fusion Center identified lobbying by Muslim groups as a possible threat**.

The DHS dismissed these as isolated episodes, but the two-year Senate investigation found that such tactics were hardly rare. It concluded that **fusion centers routinely produce "irrelevant, useless or inappropriate" intelligence that endangers civil liberties.**

None of their information has disrupted a single terrorist plot. These revelations call into question the value of fusion centers as currently structured. At a minimum, they underscore the need for greater oversight and clearer rules on what information fusion centers collect and disseminate.

Of course, effective information sharing is critical to national security. But as the Senate investigation demonstrates, there is little value in distributing information if it is shoddy, biased or simply irrelevant. When fusion centers feed such information into the echo chamber of federal databases, they only compound mistakes and clog the system.

The DHS has failed to create effective mechanisms or incentives for quality control. Instead, **fusion centers collect and share information according to their individual standards, which vary considerably.**

These rules often **permit information to flow to federal agencies that has no connection to criminal activity** — let alone terrorism. This creates the risk that intelligence networks will become saturated with poor or irrelevant information as well as lend undue credibility to inaccurate data. The Senate report showed that these risks are not just theoretical.

Fusion centers need explicit and consistent rules. The DHS should ensure that the information the centers collect and distribute is relevant, useful and constitutional by requiring them to show some reasonable suspicion that criminal activity is afoot.

This is not a particularly high bar to clear. The reasonable suspicion standard is familiar to every police officer. The requirement would serve as an important bulwark against privacy and civil rights violations, but it would also keep meaningless information out of the system.

Without such well-defined and familiar standards, as the Senate report demonstrates, fusion centers are left rudderless.

In addition, fusion centers must have active, independent oversight. While Congressional inquiries are important for exposing problems, the Senate should not have been the first governmental body to take a critical look at fusion centers.

At the state and local level, **there is often no mechanism to ensure that fusion centers are generating useful information or complying with the law**. At the federal level, the DHS is responsible for verifying that the data shared by fusion centers meet certain minimum standards. But **the DHS has delegated this responsibility to the centers themselves and has not conducted independent audits.**

DHS oversight has been so poor that the department could not even say how much money it has spent on fusion centers, estimating the cost at somewhere from $289 million to $1.4 billion.

Fusion centers guarantee profiling will continue post-plan

Constitution Project '12 The Constitution Project (8/15/12, The Constitution Project, "RECOMMENDATIONS FOR FUSION CENTERS", http://www.constitutionproject.org/pdf/fusioncenterreport.pdf)

2. Reports of Political, Racial and Religious Profiling

Despite these constitutional principles, there have been numerous anecdotal reports of incidents in which fusion centers have targeted individuals in the United States for surveillance and investigation based solely on beliefs and characteristics that are protected by the First and Fourteenth Amendments. Although federal guidance to fusion centers cautions against profiling, these incidents demonstrate that significant additional guidance, training and oversight are crucial to ensure that fusion centers and other law enforcement agencies do not engage in racial, religious and political profiling.41

Recent **reports from across the country bear testament to the potential for problematic profiling at fusion centers, particularly regarding bulletins and intelligence reports circulated by fusion centers.** These are a few examples:

• **The** February 2009 "**Prevention Awareness Bulletin," circulated by a Texas fusion center, described Muslim lobbying groups as "providing an environment for terrorist organizations to flourish**" and warned that "the threats to Texas are significant."

The bulletin called on law enforcement officers to report activities such as Muslim "hip hop fashion boutiques, hip hop bands, use of online social networks, video sharing networks, chat forums and blogs."42

• A Missouri-based fusion center issued a February 2009 report describing support for the presidential campaigns of Ron Paul or third party candidates, possession of the iconic "Don't Tread on Me" flag and anti-abortion activism as signs of membership in domestic terrorist groups.43

• **The Tennessee Fusion Center listed a letter from the American Civil Liberties Union (ACLU) to public schools on its online map of "Terrorism Events and Other Suspicious Activity." The letter had advised schools that holiday celebrations focused exclusively on Christmas were an unconstitutional government endorsement of religion.**44

• **The Virginia Fusion Center's 2009 Terrorism Risk Assessment Report described student groups at Virginia's historically black colleges as potential breeding grounds for terrorism and characterized the "diversity" surrounding a military base as a possible threat**.45

Local Authorities/Citizens

General Local surveillance can break the law without consequence – they can they can cover it up with non disclosure agreements

Fenton 15 (Justin Fenton, who joined The Sun in 2005, has covered the Baltimore Police Department since 2008. His work includes an investigation into Cal Ripken Jr.'s minor league baseball stadium deal with his hometown of Aberdeen and a three-part series chronicling a ruthless con woman, "Baltimore Police used secret technology to track cellphones in thousands of cases", April 9, 2015, http://www.baltimoresun.com/news/maryland/baltimore-city/bs-md-ci-stingray-case-20150408-story.html#page=1 -JD)

The Baltimore Police Department has used an invasive and controversial cellphone tracking device thousands of times in recent years while following instructions from the FBI to withhold information about it from prosecutors and judges, a detective revealed in court testimony Wednesday.¶ The testimony shows for the first time how frequently city police are using a cell site simulator, more commonly known as a "stingray," a technology that authorities have gone to great lengths to avoid disclosing.¶ The device mimics a cellphone tower to force phones within its range to connect. Police use it to track down stolen phones or find people.¶ Until recently, the technology was largely unknown to the public. Privacy advocates nationwide have raised questions whether there has been proper oversight of its use.¶ Baltimore has emerged in recent months as a battleground for the debate. In one case last fall, a city detective said a nondisclosure agreement with federal authorities prevented him from answering questions about the device. The judge threatened to hold him in contempt if he didn't provide information, and prosecutors withdrew the evidence.¶ The nondisclosure agreement, presented for the first time in court Wednesday, explicitly instructs prosecutors to drop cases if pressed on the technology, and tells them to contact the FBI if legislators or judges are asking questions.¶ Detective Emmanuel Cabreja, a member of the Police Department's Advanced Technical Team, testified that police own a Hailstorm cell site simulator — the latest version of the stingray — and have used the technology 4,300 times since 2007.¶ Cabreja said he had used it 600 to 800 times in less than two years as a member of the unit.¶ Nate Wessler, an attorney with the American Civil Liberties Union, said 4,300 uses is "huge number." He noted that most agencies have not released data.¶ The Florida Department of Law Enforcement says its officers have used the device about 1,800 times. Police in Tallahassee say they have used it more than 250 times; police in Tacoma, Wash., 170 times.¶ Former U.S. Judge Brian L. Owsley, a law professor at Indiana Tech, said he was "blown away" by the Baltimore figure and the terms of the nondisclosure agreement. "That's a significant amount of control," he said.¶ Agencies have invoked the nondisclosure agreement to keep information secret. At a hearing last year, a Maryland State Police commander told state lawmakers that "Homeland Security" prevented him from discussing the technology.¶ Wessler said the secrecy is upending the system of checks and balances built into the criminal justice system.¶ "In Baltimore, they've been using this since 2007, and it's only been in the last several months that defense attorneys have learned enough to start asking questions," he said. "Our entire judicial system and constitution is set up to avoid a 'just trust us' system where the use of invasive surveillance gear is secret."¶

Can't stop government data collection on companies – subpoena power can bypass the fourth amendment and violate the rights of Americans

KRAVETS 15 (David Kravets is a WIRED senior staff writer and founder of the fake news site TheYellowDailyNews.com. He's a dad of two boys and has been a reporter since the manual typewriter days, "We Don't Need No Stinking Warrant: The Disturbing, Unchecked Rise of the Administrative Subpoena", 08.28.12, http://www.wired.com/2012/08/administrative-subpoenas/ - JD)

But by law, utilities must hand over customer records — which include any billing and payment information, phone numbers and power consumption data — to the DEA without court warrants if drug agents believe the data is "relevant" to an investigation. So the utility eventually complied, after losing a legal fight earlier this month.¶ Meet the administrative subpoena (.pdf): With a federal official's signature, banks, hospitals, bookstores, telecommunications companies and even utilities and internet service providers — virtually all businesses – are required to hand over sensitive data on individuals or corporations, as long as a government agent declares the information is relevant to an investigation. Via a wide range of laws, Congress has authorized the government to bypass the Fourth Amendment — the constitutional guard against unreasonable searches and seizures that requires a probable-cause warrant signed by a judge.¶ In fact, there are roughly 335 federal statutes on the books (.pdf) passed by Congress giving dozens upon dozens of federal agencies the power of the administrative subpoena, according to interviews and government reports. (.pdf)¶ "I think this is out of control. What has happened is, unfortunately, these statutes have been on the books for many, many years and the courts have acquiesced," said Joe Evans, the utility's attorney.¶ Anecdotal evidence suggests that federal officials from a broad spectrum of government agencies issue them hundreds of thousands of times annually. But none of the agencies are required to disclose fully how often they utilize them — meaning there is little, if any, oversight of this tactic that's increasingly used in the war on drugs, the war on terror and, seemingly, **the war on Americans' constitutional rights** to be free from unreasonable government trespass into their lives.¶ That's despite proof that FBI agents given such powers under the Patriot Act quickly began to abuse them and illegally collected Americans' communications records, including those of reporters. Two scathing reports from the Justice Department's Inspector General uncovered routine and pervasive illegal use of administrative subpoenas by FBI anti-terrorism agents given nearly carte blanche authority to demand records about Americans' communications with no supervision.¶ When the 9th U.S. Circuit Court of Appeals, perhaps the nation's most liberal appeals court based in San Francisco, ordered Golden Valley to fork over the data earlier this month, the court said the case was "easily" decided because the records were "relevant" to a government drug investigation.¶ With the data the Alaska utility handed over, the DEA may then use further administrative subpoenas to acquire the suspected indoor-dope growers' phone records, stored e-mails, and perhaps credit-card purchasing histories – all to build a case to acquire a probable-cause warrant to physically search their homes and businesses.¶ But the administrative subpoena doesn't just apply to utility records and drug cases. Congress has spread the authority across a huge swath of the U.S. government, for investigating everything from hazardous waste disposal, the environment, atomic energy, child exploitation, food stamp fraud, medical insurance fraud, terrorism, securities violations, satellites, seals, student loans, and for breaches of dozens of laws pertaining to fruits, vegetables, livestock and crops.¶ Not one of the government agencies with some of the broadest administrative subpoena powers Wired contacted, including the departments of Commerce, Energy, Agriculture, the Drug Enforcement Administration and the FBI, would voluntarily hand over data detailing how often they issued administrative subpoenas.¶ The Drug Enforcement Administration obtained the power under the Comprehensive Drug Abuse Prevention and Control Act of 1970 and is believed to be among the biggest issuers of administrative subpoenas.¶ "It's a tool in the toolbox we have to build a drug investigation. Obviously, a much, much lower threshold than a search warrant," said Lawrence Payne, a DEA spokesman, referring to the administrative subpoena generically. Payne declined to discuss individual cases.¶ Payne said in a telephone interview that no database was kept on the number of administrative subpoenas the DEA issued.¶ But in 2006, Ava Cooper Davis, the DEA's deputy assistant administrator, told a congressional hearing, "The administrative subpoena must have a DEA case file number, be signed by the investigator's supervisor, and be given a sequential number for recording in a log book or computer database so that a particular field office can track and account for any administrative subpoenas issued by that office."¶ After being shown Davis' statement, Payne then told Wired to send in a Freedom of Information Act request, as did some of the local DEA offices we contacted, if they got back to us at all. "Would suggest a FOIA request to see

whether you can get a number of administrative subpoenas. Our databases have changed over the years as far as how things are tracked and we don't have access to those in public affairs unfortunately," Payne said in an e-mail.¶ He said the agency has "never" been asked how many times it issued administrative subpoenas.¶ Amy Baggio, a Portland, Oregon federal public defender representing drug defendants for a decade, said DEA agents "use these like a doctor's prescription pad on their desk." Sometimes, she said, they issue "hundreds upon hundreds of them" for a single prosecution — often targeting mobile phone records.¶ "They are using them exponentially more in all types of federal criminal investigations. I'm seeing them in every drug case now," Baggio said. "Nobody is watching what they are doing. I perceive a complete lack of oversight because there isn't any required."

SOD Surveillance uses illegal means to find suspects and can get away with it– This allows the DEA to circumvent existing laws

Ungar 13 (Rick Ungar in addition to the pages of Forbes.com, can be found me every Saturday morning on your TV arguing with my more conservative colleagues on "Forbes on Fox" on the Fox News Network and at various other times during the week serving as a liberal talking head on other Fox News and Fox Business Network shows. He also serves as a Democratic strategist with Mercury Public Affairs, "More Surveillance Abuse Exposed! Special DEA Unit Is Spying On Americans And Covering It Up", AUG 5, 2013, http://www.forbes.com/sites/rickungar/2013/08/05/more-surveillance-abuse-exposed-special-dea-unit-is-spying-on-americans-and-covering-it-up/ -JD)

As Americans sort through their feelings regarding the disclosure of the massive collection of metadata by the National Security Administration, we are now learning of what may be a far more insidious violation of our constitutional rights at the hands of a government agency.¶ Reuters is reporting that a secret U.S. Drug Enforcement Administration branch has been collecting information from "intelligence intercepts, wiretaps, informants and a massive database of telephone records" and disseminating the data to authorities across the nation to "help them launch criminal investigations of Americans."¶ In this case, the Americans who are being subjected to these investigations are suspected drug dealers.¶ The unit of the DEA that is conducting the surveillance is known as the Special Operations Division ("SOD") and is made up of a partnership of numerous government agencies including the NSA, CIA, FBI, IRS and the Department of Homeland Security.¶ While there are suggestions that elements of the program may be legal, there is obvious concern on the part of those running the program—a concern that has not prevented them from going ahead with the collecting and using of covertly gathered data—that the surveillance effort may not be entirely kosher. We know this to be true because, according to documents reviewed by Reuters, DEA agents are specifically instructed never to reveal nor discuss the existence and utilization of SOD provided data and to further "omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use 'normal investigative techniques to recreate the information provided by SOD.'"¶ The last line of the directive is particularly disturbing.¶ By instructing agents to use "normal investigative techniques to recreate the information provided by SOD", law enforcement is being instructed to flat out lie when disclosing how they came across the tips or other information provided by SOD leading to an arrest. These agents are directed to give substance to the lie by fabricating a false source or method utilized to gain information leading to an arrest.¶ In law enforcement parlance, it is called "parallel construction."¶ Accordingly to a former federal agent, the SOD 'tip' system works as follows:¶ "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert

the state police to find an excuse to stop that vehicle, and then have a drug dog search it."¶ When the SOD tip leads to an arrest, the agents then pretend that the drug bust was the surprise result of pulling the vehicle over as a routine traffic stop.¶ So secretive is the program, SOD requires that agents lie to the judges, prosecuting attorneys and defense attorneys involved in a trial of a defendant busted as a result of SOD surveillance—a complete and clear violation of every American's right to due process, even when that American is a low-life drug dealer.

Agencies

Despite a desire to maintain squo policies—security agencies will abide by the law

Glennon ’14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

The Trumanite network is as little inclined to stake out new policies as it is to abandon old ones. The Trumanites’ grundnorm is stability, and their ultimate objective is preservation of the status quo. The status quo embraces not only American power but the Trumanites’ own careers, which are steadily elevated by the conveyer belt on which they sit. Preoccupied as they are with cascading crises, swamped with memos and email and overwhelmed with meetings, Trumanites have no time to re-examine the cosmological premises on which policy is based.179 Their business is reacting, day and night. Working weekends and evenings is routine; theirs are 24/7 jobs180 that leave no time for pondering big pictures. They are caught up in tactics;181 larger ends are for memoirs. Reflecting on the “fail[ure] to take an orderly, rational approach” to Vietnam decisionmaking, Robert McNamara wrote that “we faced a blizzard of problems, there were only twenty-four hours a day, and we often did not have time to think straight.” 182 His successors encountered an equally frenetic environment.183 With the anger, frustration, emotion, and the mental and physical exhaustion induced in working long hours under crisis conditions, a pernicious but existing policy gradually comes to be seen as the least bad choice. The status quo is preserved by minimizing risks, which means no bold departure from the settled long-term policy trajectory. “Men who have participated in a decision,” as James Thomson succinctly put it, “develop a stake in that decision.”184 Slow is therefore best. The risk of embarrassment is lower in continuing a policy someone else initiated than in sponsoring one’s own new one. If the policy fails, the embarrassment is someone else’s.

Trumanites are therefore, above all, team players. They are disinclined to disagree openly. “The further up you go,” one prominent organization theorist put it, “the less you can afford to stick out in any one place.”185 As one seasoned adviser said, because “there is a real team concept and where money disputes are not usually the core, radically different views of the direction to be taken by an administration can cause serious trouble.”186 He advises that a “new president should take care that his key officials in foreign policy all have a roughly similar outlook on the world and America’s place in it.”187 Accordingly, once a policy is final, Trumanites rally readily round it, however much they might once have disagreed. Dissent shades into disloyalty and risks marginalization, particularly in a policy group with high esprit de corps. As Kissinger put it, “[s]erving the machine becomes a more absorbing occupation than defining its purpose.”188 Little credit is gained by advocating for an option that has earlier been rejected. Likelier than not, one’s superior, or his superior, was present at the creation of the policy and takes pride in its authorship. “In government it is always easier to go forward with a program that does not work,” David Halberstam wrote, “than to stop it altogether and admit failure.”189 Even those immersed in the policy-making process are often bewildered by its outcome. The Army chief of staff, Harold Johnson, could think of “no logical rationale” to explain the military’s continuing recommendations for incremental escalation of the U.S. war effort in Vietnam—even though the military had difficulty devising any persuasive strategy to produce victory.190

The Trumanites’ commitment is therefore to process rather than outcome. “It is an inevitable defect,” Bagehot wrote, that “bureaucrats will care more for routine than for results; or, as Burke put it, ‘that

they will think the substance of business not to be much more important than the forms of it.'"191 "Men so trained," he believed, "must come to think the routine of business not a means but an end—to imagine the elaborate machinery of which they form a part, and from which they derive their dignity, to be a grand and achieved result, not a working and changeable instrument."192 At a certain point, policy within such a system reaches critical mass, and its gravitational pull is too strong to escape even for political appointees, who are easily co-opted.193 "The vast bureaucratic mechanisms that emerge develop a momentum and a vested interest of their own," Kissinger wrote.194 "There is a trend toward autarky."195 There thus emerges, as Goldsmith put it, a "persistence in the interests and outlook of the national security leadership and especially of the national security bureaucracy."196

The intelligence agencies are separated from the rest of the government

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

Neil Sheehan205 reflected on why nothing would happen. Sheehan's Times colleague Halberstam recalled that Sheehan came away with one impression: that "the government of the United States was not what he had thought it was; it was as if there were an inner U.S. government, what he called 'a centralized state, far more powerful than anything else . . . . It had survived and perpetuated itself . . . . [I]t does not function necessarily for the benefit of the Republic but rather for its own ends, its own perpetuation; it has its own codes which are quite different from public codes.'"206

The Trumanite network has achieved, in a word, autonomy. 207 The maintenance of Trumanite autonomy has depended upon two conditions. The first is that the Madisonian institutions appear to be in charge of the nation's security. The second is that the Madisonian institutions not actually be in charge.

Intel agencies run the show—other institutions are just figureheads

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

Although the Madisonian institutions seem to be in charge and, indeed, to be possessed of power broad enough to remedy their own deficiencies, a close look at each branch of government reveals why they are not. A more accurate description would be that those institutions are in a state of entropy and have become, in Bagehot's words, "a disguise"—"the fountain of honour" but not the "spring of business."241 The Presidency, Congress, and the courts appear to set national security policy, but in reality their role is minimal. They exercise decisional authority more in form than in substance. This is the principal reason that the system has not, as advertised, self-corrected.242

Law Enforcement

Local law enforcement has been instructed to keep surveillance capabilities a secret

Ham 14

Mary Katherine Ham, an American journalist. She is Editor-at-Large of Hot Air, a contributing editor to Townhall Magazine, and a Fox News Channel contributor, "Most transparent administration ever telling local police to keep surveillance secret", *HOTAIR,* http://hotair.com/archives/2014/06/16/most-transparent-administration-ever-telling-local-police-to-keep-surveillance-secret/, 06/16/14//SRawal

This isn't a matter of an Obama administration official whispering in local law enforcement's ears or sending a vague memo. They've been actively interfering in public records requests and lawsuits: **The Obama administration has been quietly advising local police not to disclose details about surveillance technology they are using to sweep up basic cellphone data from entire neighborhoods,** The Associated Press has learned. Citing security reasons, **the U.S. has intervened in routine state public records cases and criminal trials regarding use of the technology.** This has resulted in **police departments withholding materials or heavily censoring documents in rare instances when they disclose any about the purchase and use of such powerful surveillance equipment.** Federal involvement in local open records proceedings is unusual. It comes at a time when President Barack Obama has said he welcomes a debate on government surveillance and called for more transparency about spying in the wake of disclosures about classified federal surveillance programs. As we know, **local law enforcement is well on its way to becoming baby military forces**, with MRAPs, riot gear galore, and firepower sometimes akin to the U.S. Marine Corps. Now, **we know they're becoming baby NSAs, and being just as secretive about it**. What I find most discouraging about this story is that, if **you can't get any clear idea from your local government about where and how it might be capable of spying on you, there is no chance you're going to get any answers from the feds.** And, if **we can't be assured that we can even have cellphone conversations without our information being dragnetted**, we're not really free at all. This seems a rather low bar.

Local surveillance can break the law without consequence – they can they can cover it up with non disclosure agreements

Fenton 15 (Justin Fenton, who joined The Sun in 2005, has covered the Baltimore Police Department since 2008. His work includes an investigation into Cal Ripken Jr.'s minor league baseball stadium deal with his hometown of Aberdeen and a three-part series chronicling a ruthless con woman, "Baltimore Police used secret technology to track cellphones in thousands of cases", April 9, 2015, http://www.baltimoresun.com/news/maryland/baltimore-city/bs-md-ci-stingray-case-20150408-story.html#page=1 -JD)

The Baltimore Police Department has used an invasive and controversial cellphone tracking device thousands of times in recent years while following instructions from the FBI to withhold information about it from prosecutors and judges, a detective revealed in court testimony Wednesday.¶ The testimony shows for the first time how frequently city police are using a cell site simulator, more commonly known as a "stingray," a technology that authorities have gone to great lengths to avoid disclosing.¶ The device mimics a cellphone tower to force phones within its range to connect. Police use it to track down stolen phones or find people.¶ Until recently, the technology was largely unknown to the public. Privacy advocates nationwide have raised questions whether there has been proper oversight of its use.¶ Baltimore has emerged in recent months as a battleground for the debate. In one case last fall, a city detective said a nondisclosure agreement with federal authorities prevented him from answering questions about the device. The judge threatened to hold him in contempt if he didn't provide information, and prosecutors withdrew the evidence.¶ The nondisclosure agreement, presented for the first time in court Wednesday, explicitly instructs prosecutors to drop cases if pressed on the

technology, and tells them to contact the FBI if legislators or judges are asking questions.¶ Detective Emmanuel Cabreja, a member of the Police Department's Advanced Technical Team, testified that police own a Hailstorm cell site simulator — the latest version of the stingray — and have used the technology 4,300 times since 2007.¶ Cabreja said he had used it 600 to 800 times in less than two years as a member of the unit.¶ Nate Wessler, an attorney with the American Civil Liberties Union, said 4,300 uses is "huge number." He noted that most agencies have not released data.¶ The Florida Department of Law Enforcement says its officers have used the device about 1,800 times. Police in Tallahassee say they have used it more than 250 times; police in Tacoma, Wash., 170 times.¶ Former U.S. Judge Brian L. Owsley, a law professor at Indiana Tech, said he was "blown away" by the Baltimore figure and the terms of the nondisclosure agreement. "That's a significant amount of control," he said.¶ Agencies have invoked the nondisclosure agreement to keep information secret. At a hearing last year, a Maryland State Police commander told state lawmakers that "Homeland Security" prevented him from discussing the technology.¶ Wessler said the secrecy is upending the system of checks and balances built into the criminal justice system.¶ "In Baltimore, they've been using this since 2007, and it's only been in the last several months that defense attorneys have learned enough to start asking questions," he said. "Our entire judicial system and constitution is set up to avoid a 'just trust us' system where the use of invasive surveillance gear is secret."¶

Racist Police

The aff does nothing to solve local surveillance rooted in racism

APUZZO 15 (Matt Apuzzo is a reporter for the NYT, and Professor at Georgetown University, and reported for Associated Press and the Standard-Times, "Ferguson Police Routinely Violate Rights of Blacks, Justice Dept. Finds", MARCH 3, 2015, http://www.nytimes.com/2015/03/04/us/justice-department-finds-pattern-of-police-bias-and-excessive-force-in-ferguson.html?_r=0)

WASHINGTON — **Ferguson, Mo., is a third white, but the crime statistics compiled in the city over the past two years seemed to suggest that only black people were breaking the law.** They accounted for 85 percent of traffic stops, 90 percent of tickets and 93 percent of arrests. In cases like jaywalking, which often hinge on police discretion, blacks accounted for 95 percent of all arrests.¶ **The racial disparity in those statistics was so stark that the Justice Department has concluded in a report** scheduled for release on Wednesday **that there was only one explanation**: **The F**erguson **P**olice **D**epartment **was** routinely **violating the constitutional rights of its black residents.¶ The report,** based on a six-month investigation, **provides a glimpse into the roots of the racial tensions that boiled over in Ferguson last summer after a black teenager, Michael Brown, was fatally shot by a white police officer**, making it a worldwide flash point in the debate over race and policing in America. **It describes a city where the police used force almost exclusively on blacks and regularly stopped people without probable cause**. Racial bias is so ingrained, the report said, that Ferguson officials circulated racist jokes on their government email accounts.¶ In a November 2008 email, a city official said Barack Obama would not be president long because "what black man holds a steady job for four years?" Another email included a cartoon depicting African-Americans as monkeys. A third described black women having abortions as a way to curb crime.¶ **"There are serious problems here that cannot be explained away," said a law enforcement official** who has seen the report and spoke on the condition of anonymity because it had not been released yet.¶ Those findings reinforce what the city's black residents have been saying publicly since the shooting in August, that the criminal justice system in Ferguson works differently for blacks and whites. A black motorist who is pulled over is twice as likely to be searched as a white motorist, even though searches of white drivers are more likely to turn up drugs or other contraband, the report found.¶ Minor, largely discretionary offenses such as disturbing the peace and jaywalking were brought almost exclusively against blacks. When whites were charged with these crimes, they were 68 percent more likely to have their cases dismissed, the Justice Department found.¶ "I've known it all my life about living out here," Angel Goree, 39, who lives in the apartment complex where Mr. Brown was killed, said Tuesday by phone.¶ Many such statistics surfaced in the aftermath of Mr. Brown's shooting, but the Justice Department report offers a more complete look at the data than ever before. Federal investigators conducted hundreds of interviews, reviewed 35,000 pages of police records and analyzed race data compiled for every police stop.¶ The report will most likely force Ferguson officials to either negotiate a settlement with the Justice Department or face being sued by it on charges of violating the Constitution. Under Attorney General Eric H. Holder Jr., the Justice Department has opened more than 20 such investigations into local police departments and issued tough findings against cities including Newark; Albuquerque, N.M.; and Cleveland.¶ But the Ferguson case has the highest profile of Mr. Holder's tenure and is among the most closely watched since the Justice Department began such investigations in 1994, spurred by the police beating of Rodney King in Los Angeles and the riots that followed.¶ While much of the attention in Ferguson has been on Mr. Brown's death, federal officials quickly concluded that the shooting was simply the spark that ignited years of pent-up tension and animosity in the area. The Justice Department is expected to issue a separate report Wednesday clearing the police officer, Darren Wilson, of civil rights violations in the shooting.¶ **It is not clear what changes Ferguson could make that would head off a lawsuit.¶ The report calls for city officials to acknowledge that the police department's tactics have caused widespread mistrust and violated civil rights. Ferguson officials have so far been reluctant to do so**, particularly as relations between the city and Washington have grown strained.¶ Mr. Holder was openly critical of the way local officials handled the protests and the investigation into Mr. Brown's death, and declared a need for "wholesale change" in the police department. Ferguson officials criticized Mr. Holder for a rush to judgment and saw federal officials as outsiders who did not understand their city.¶

Local Police police surveillance easily turns into violence – the Aff cannot solve

FRIEDERSDORF 15 (Conor Friedersdorf is a staff writer at The Atlantic, where he focuses on politics and national affairs. He lives in Venice, California, and is the founding editor of The Best of Journalism, a newsletter devoted to exceptional nonfiction, "Few Conservatives Take Police Abuses Seriously", MAY 1, 2015, http://www.theatlantic.com/politics/archive/2015/05/few-conservatives-take-police-abuses-seriously/391886/)

Nearly a quarter century ago, the libertarian magazine Reason published an essay on civil unrest suffused with an insight that movement conservatism still hasn't grasped. Then-editor Virginia Postrel was writing in the wake of the Los Angeles riots of 1992. "What caused the riots?" she asked. "How do we prevent them from recurring?" She agreed with law-and-order voices of that era that a dearth of conscience and empathy were factors. "**Only people without empathy could drag people out of their cars and beat them within an inch of their lives**," she wrote. "**Only people without empathy could burn and loot the lives and dreams of their neighbors**." **But she went on to observe that a small criminal element preys on South Los Angeles every day whereas riots occur once in a generation**. Rottenness may have been necessary to explain the beating of Reginald Denny or the terror inflicted on small business owners, but it wasn't sufficient to explain such mayhem.¶**To turn rottenness into riots**, she argued, **another necessary condition was widespread rage**. "**Black Angelenos, black Americans, are very, very angry. Most did not riot; many saw their stores burn, their dreams explode, their lives suddenly get harder**," she wrote. "**Nor were all the rioters either black or angry: a plurality of looters arrested were Latino; many in Hollywood and downtown were white** ... But rage did fuel these riots, at least at the beginning. To violent people, the not-guilty verdicts—and the rage they engendered among the general public—provided a signal to riot, to converge at once on shops and passersby. Rage supplied cover for more venal motivations. And it spurred the political apologies for the rioters."¶As well, the attention paid to the riots gave the non-violent majority a chance to peacefully voice their rage. "If you listen to what those people are actually saying—often in loud and angry voic
es—you will not hear the cliches of pundits and politicians," she wrote. "The Great Society, pro or con, will not come up. Instead you will hear this: **The criminal justice system does not protect black Americans. It does not make their streets safe from violence. It does not rally to the side of black crime victims**. It sees black people only as criminals, never as citizens. It does not give them respect." **The LAPD was not the only contributing factor, but anyone hoping to understand the L.A. riots had to contend with the city's policing**.

Local law enforcement treats black lives matter like a terrorist threat

Johnson ’15 associate editor at AlterNet (4/29/15, Adam, Popular Resistance, “Government Treating #BlackLivesMatter Like A Terrorist Group”, https://www.popularresistance.org/government-treating-blacklivesmatter-like-a-terrorist-group/)

We learned in the wake of the Occupy Wall Street movement that **the government’s use of its anti-terror apparatus at a local and federal level was both routine and pervasive.** Thus far, the means with which similar practices have been used on #BlackLivesMatter have been subtly emerging — thanks in large part to some truly intrepid journalism — from across the country. Here is a recap of the five of the worst examples:

1. **NYPD** and FBI **uses counter-terror apparatus on #BlackLivesMatter New York.**

Though it was mostly taken for granted by those paying attention within the activists community, official recognition that the NYPD and its FBI Joint Terror Task Force were using their counter terror units on #BlackLivesMatter didn’t really come until a casual admission by the NYPD in the New York Post the day before the announcement of the Eric Garner verdict in December of last year:

“They wore me out, ” said one counterterror expert who monitored the protests. “Their ability to strategize on the fly is something we haven’t dealt with before to this degree.”

A few weeks later, the New York Post would again be the forum with which the NYPD would casually assert counter terror units were used on #BlackLivesMatter, this time in connection to an alleged assault on an NYPD officer: “Linsker was nabbed by members of the Joint Terrorism Task Force around 3:45 a.m., sources said.”

Alex Kane reported for Vice:

How the NYPD's Counterterrorism Apparatus Is Being Turned on Protesters

The police wearing the counterterrorism jackets at protests are perhaps the most palpable sign of the agency's transformation since 2001. Before 9/11 the NYPD had no counterterrorism bureau and the Intelligence Division focused its resources on gang activity. After the September 11 attacks, however, billions of dollars were poured into the department to counter the threat of terrorism, as a 2011 60 Minutes report showed. Critics of the NYPD's post-9/11 turn have been arguing that practices devoted to fighting terrorism have violated the Constitution.

Now, they say, the NYPD is unleashing its counterterrorism tools on activists against police brutality, conflating legitimate protest with the threat of terrorism.

2. California Highway Patrol used counterterror units to monitor #BlackLivesMatter in Bay Area.

A cache of emails revealed by Darwin BondGraham of the East Bay Expresstwo weeks ago **revealed the California Highway Patrol were using its anti-terrorism apparatus, including fusion centers like Northern California Regional Intelligence Center to monitor #BlackLivesMatter activists on social media**. As BondGraham would lay out:

An email sent on December 12 illustrates how counter-terrorism officials working out of fusion centers helped CHP monitor protesters. At 12:12 p.m. that day, Elijah Owen, a senior intelligence advisor with the California State Threat Assessment Center (Cal STAC) sent CHP officer Michael Berndl a copy of a protest flliercalling for a speak-out and march against the CHP the next day. "Just so it's on your folks' radar," wrote Owen. Cal STAC officers appear in other CHP emails as sources of information, or recipients of intel gathered by the Oakland Police Department, Alameda County Sheriff's Office, and other agencies.

Earlier this year, **the California Highway Patrol would also casually drop in the LA Times how they used fake twitter profiles to monitor protesters:**

Despite Wednesday's incident, Browne said he will continue to deploy plainclothes officers to gather intelligence from protesters. Officers have also been creating Twitter accounts, on which they don't identify themselves as police, in order to monitor planned demonstrations.

It's unclear to what extent these two approaches – using anti-terror apparatus to monitor #BlackLivesMatter social media and the use of fake online profiles to monitor #BlackLivesMatter-overlapped.

3. Massachusetts Counterterror **fusion centers were used to monitor #BlackLivesMatter protesters** in Boston.

Similarly, fusion centers were used to monitor #BlacklivesMatter protests in Massachusetts. As the ACLU's Kade Crockford noted last November:

Law enforcement officials at the Department of Homeland Security-funded "Commonwealth Fusion Center" spied on the Twitter and Facebook accounts of Black Lives Matter protesters in Boston earlier this week, the Boston Herald reports.

The reference to the so-called 'fusion' spy center comes at the very end of a news story quoting Boston protesters injured by police in Tuesday night's demonstrations, which was possibly the largest Ferguson related protest in the country the day after the non-indictment of Darren Wilson was announced.

The state police Commonwealth Fusion Center monitored social media, which provided "critical intelligence about protesters' plans to try to disrupt traffic on state highways," state police said.

Though it was buried at the end of the Boston Herald story, **the use of fusion centers – deliberately set up for the purposes of stopping terrorism – are, once again, being used to monitor peaceful domestic dissent.**

4. FBI Joint Terror Task Force was used to track #BlackLivesMatter Minnesota.

Just as with the California Highway Patrol, internal emails between local police departments and federal authorities revealed the extent to which the counter-terror apparatus was casually – and entirely turn-key – used on #BlackLivesMatter. The Intercept's Lee Fang revealed in March:

Why Was an FBI Joint Terrorism Task Force Tracking a BlackLives Matter protest?

Members of an FBI Joint Terrorism Task Force tracked the time and location of a Black Lives Matter protest last December at the Mall of America in Bloomington, Minnesota, email obtained by The Intercept shows

The email from David S. Langfellow, a St. Paul police officer and member of an FBI Joint Terrorism Task Force, informs a fellow task force member from the Bloomington police that "CHS just confirmed the MOA protest I was talking to you about today, for the 20th of DEC @ 1400 hours." CHS is a law enforcement acronym for "confidential human source."

In other words, these emails revealed that not only was the FBI using its Joint Terror Task Force – an entity that exploded post-9/11 in the name of fighting terrorism – but also using paid informants who were undercover posing as protestors. Once again, tactics and legal allowances created in the name of "stopping terrorism" are being used, without any oversight or public debate, on entirely peaceful domestic activism.

5. Emails reveal Missouri National Guard viewed Ferguson protestors as "enemy forces."

The most haunting revelation may just be the latest, from CNN:

Missouri National Guard's term for Ferguson protesters: 'Enemy forces'

As the Missouri National Guard prepared to deploy to help quell riots in Ferguson, Missouri, that raged sporadically last year, **the guard used highly militarized words such as "enemy forces" and "adversaries" to refer to protesters, according to documents obtained by CNN.**

CNN's use of military speak aside ("quell riots"), the report clearly shows those in charge viewed both rioter and protester alike as enemy combatants and Ferguson as a war zone.

What makes this, and the other above examples, so pernicious isn't just the use of anti-terror language, legal authority, and apparatuses on peaceful domestic activism, it's the entirely casual nature with which it's done. Beyond a few PR tweaks, there doesn't seem to be, in any of these internal documents, an ounce of doubt or hesitation as to whether or not using systems set up ostensibly to combat al-Qaeda should be so quickly turned on domestic activism. If all you have is a hammer, as the cliche goes, everything looks like a nail. We've given our hyper-militarized police and the FBI the hammer of coordinated mass surveillance, infiltration, and monitoring in the name of fighting a phenomenon that kills fewer people a year than bee stings, It was only a matter of time, therefore, that mass protests would begin to look like a nail in the eyes of our paranoid, over-equipped security officials.

Islamaphobia

Local Surveillance like the NYPD is Islamaphobic

Kane 13 (Alex Kane is an assistant editor for the news website Mondoweiss, which covers the Israel–Palestine conflict, and the World section editor at AlterNet. His work has also appeared in Salon, The Daily Beast's "Open Zion" blog, Vice, BBC Persian, +972 magazine, the Electronic Intifada, Extra!, and Common Dreams, Kane is citing the book "Enemies Within" by Matt Apuzzo and Adam Goldman, "Alex Kane on Enemies Within : Inside the NYPD's Secret Spying Unit and bin Laden's Final Plot Against America", October 24th, 2013, http://lareviewofbooks.org/review/raking-the-coals-islamophobia-surveillance-targeting-and-the-nypds-secret-spying-unit)

Like the NYPD, the FBI has used its own power to pressure Muslims into becoming informants in exchange for help. According to the American Civil Liberties Union, the FBI has told Muslim-Americans trapped abroad because of their inclusion on a no-fly list that they could get off easily — by spying on their own communities back home in the US. For all the oversight of the FBI — something the NYPD doesn't have to contend with — parts of the federal agency still view Muslims as targets for spying rather than partners in the fight against terrorism. Far from an aberration in America's post-9/11 landscape, the NYPD is merely the most extreme example of a law enforcement apparatus running roughshod over the rights of Muslim Americans.¶ What's also missing from Apuzzo and Goldman's otherwise excellent exposé of **the NYPD is the larger political context in which the spying took place**. **The NYPD's logic is Islamophobic at its core: all Muslims are deemed potential terrorists until they're proven not to be, an inversion of how law enforcement is supposed to work.** Yet there's little exploration of how Islamophobic discourse from the media and elected officials contribute to the implementation and acceptance of spying targeting Muslims.¶ In the same year that **Apuzzo and Goldman began reporting on the NYPD's Intelligence Division, New York Republican Peter King set up House hearings to probe "radicalization" among Muslim-Americans — a transparent attempt to cast aspersions on one particular community**. In 2010, anti-Muslim blogger Pamela Geller worked the national media into a frenzy over what was inaccurately labeled the "Ground Zero mosque." **King, Geller and other prominent figures who demonized Muslims directly after 9/11 opened up space for institutions with even more power, like the police, to move a discourse of bigotry into policies of bigotry**. **In an atmosphere where anti-Muslim sentiment largely went unchallenged, it's no surprise that hardly an eye was batted when the NYPD hired CIA officials to implement an intelligence collection program aimed at law-abiding citizens.¶** The book presents an undeniably damning portrait of the NYPD's surveillance operation. Now, it's up to the courts and lawmakers to decide whether these operations are legal or prudent. Three federal lawsuits are being pursued in reaction to Apuzzo's and Goldman's groundbreaking investigations. The next New York City mayor will have to grapple with the question of continuing or halting the spy operations. Judges and elected officials will have a documented record on which to look back to decide these weighty questions in the coming months: Enemies Within.¶

Surveillance is heavily biased– It is assumed that Muslims are terrorists

Khalek 14 (Rania Khalek is an independent journalist reporting on the underclass and marginalized communities, "How NSA Spying Impacts Muslim Communities and Cultivates Islamophobia", January 26, 2014, http://raniakhalek.com/2014/01/26/how-nsa-spying-impacts-muslim-communities-and-cultivates-islamophobia/ -JD)

RANIA KHALEK: That's a really good point that you make and I actually want you to touch on that a little bit more about how **the vilification and demonization of Muslims inside the United States and foreign has really been used to justify this type of mass surveillance and in some cases it seems to have worked. All you have to do is say terrorist, Islamic terrorism and people are like, oh okay**. Could you talk a little bit about that?¶ ABBAS: I agree

wholeheartedly that **the fear of Islam, the fear of Muslims, is a notion I think has been cultivated by policy choices at the federal level**. **The use of airport screenings, that inevitably cultivates and reflects the bias that people have against Muslims**, **has** I think **created space for an anti-Muslim movement to take root**. Right after September 11, you didn't have your Act for America's, your David Yerushalmi's, your Center for Security Policy's—**this well-organized, well-financed movement dedicated towards marginalizing Muslims and that gave rise to** essentially **an engine of generating ant-Muslim sentiment that creates this terrible and despicable cycle** where now you have the overt argument being made that Muslims are here in the United States to abrogate the US constitution, to overthrow the US government and replace it with Sharia law, which couldn't be further from the truth.¶ As the facts would have it, the American Muslim community is a well-educated, well-integrated and looking to continue to do so in the world. You can't identify an American Muslim radical voice in the United States, whereas if you go to Europe, you can find people that have a platform that say despicable objectionable things. In the US, that's just not the case.¶ But we still have in the US, which is really exporting anti-Muslim sentiment to other parts of the world especially Europe, we still have this fear of Islam that absolutely does give rise to justify these surveillance policies.¶ GOSZTOLA: So for people who are hearing this debate and they maybe think it's kind of abstract, we've been hearing people talk about collection of the information and then we've been hearing about how the information is stored. And right now when we're talking about the program under the Patriot Act, the Section 215 program, which is the bulk records collection of the phone records, it's all about who's going to hold it, who's going to store it, and it's kind of like we're not talking about the collection. I'd like you to talk about why the collection would be really bad and I think a thing you could address is how the collection of people's information in Muslim communities in New York is a huge deal for them and collecting that information is the beginning of the injustice.¶ ABBAS: Absolutely. What we know a lot about now regarding the NSA's surveillance programs is what is collected, some of the searching mechanisms that can be utilized to sift through the collected information. But what **we really get to see in more granular detail with the NYPD's specifically designed Muslim surveillance program is how indiscriminately collected information gets utilized and what people in positions of authority that can collect such information think is an appropriate use of taxpayer dollars.** And what we find is that **the NYPD thought it was absolutely worth taxpayer money to send their agents on camping trips of 19 and 20-year-old college students. They thought it was absolutely critical for them to map the Muslim community in Newark, New Jersey, and beyond, identifying every halal grocery store, every halal restaurant.** These things are laughable when we see them up close and in granular detail and just like the PCLOB board has determined itself, a board that was authorized by Congress years ago, that the sifting through everybody's information on an ongoing basis actually is not only objectionable in itself but it's not productive by any criteria.¶ So you have for instance James Clapper arguing that there's the 'piece of mind' quotients that is part of the benefit of their surveillance program because we're monitoring everything. At the very least we know that nothing is happening. But this mentality that gave rise to the NSA program is really the objectionable thing that needs to end because it gives rise to not only indiscriminate collection of information automatically through these telecommunications companies, but it's also given rise to a network of 15,000 FBI informants that have saturated the Muslim community across the country, that are sent to mosques without any type of criminal predicate just to collect information because there's a sense that that's where the problem. And that's the inevitable result of indiscriminate collection. It's always going to be the case that indiscriminate collection—in addition to not being productiv—will lead to despicable consequences.¶ And I'll end my answer here.¶ The saddest thing I've ever heard as a CAIR staff attorney, and I hear lots of sad things, was when **a young guy told me that when he goes to the mosque to pray, his mom warns him to be careful. And the mom warns him to be careful because there's an understanding based on experience that the mosque is likely filled with informants and infiltrators that are not there to make us any safer but there to extract information from innocent Americans by any means necessary.**¶

The Public

Project Vigilant allows the government to use private operatives' information on citizens

Blain 10

Loz Blain, one of Gizmag's most versatile contributors since 2007. Joining the team as a motorcycle specialist, he has since covered everything from medical and military technology to aeronautics, music gear and historical artefacts, 8-2-2010, "Surveillance: two rare glimpses into who's watching you, and how ," *GIZMAG*, http://www.gizmag.com/surveillance-whos-watching-and-how/15919//SRawal

Do yourself a favor and check out Glenn Greenwald's article at Salon.com, titled "Project Vigilant and the government/corporate destruction of privacy." In the article, he shows **how the United States government neatly sidesteps any legal restraints that might prevent it from gathering information on its citizens** – in this case, **by accepting dossiers from a network of private cyber-vigilantes that operates in near-total secrecy and with no accountability to mechanisms like the Privacy Act or the Freedom of Information Act. This group is comprised of as many as 500 operatives, some of whom have experience in data security and surveillance after leaving top-level positions at organizations like the U.S. Department of Justice, Homeland Security, the Pentagon, the NSA, the New York Stock Exchange**... a**nd they are exploiting loopholes in ISP contracts to mine data on every step you take online**. **Project Vigilant is just one further tool the U.S. government uses when it can't get what it wants** – let's not forget that as the 'War on Terror' escalated, the NSA showed through its warrantless wiretapping program that it believes that such **privacy laws as there are stopping the government from spying on its own citizens are at best flexible, or at worst to be completely ignored**. And it's not like the Obama administration has made amends in this regard – if anything, they've pushed the Bush agenda even further. So your **online communications – including your browsing history, forum participation, social networks, emails and transactions can all be considered to be laid bare on the table, tracked back to your real-world identity and locations, by whoever decides it's worth doing.**

The aff cannot stop Vigilantism – the people will still trigger the impact (SUBJECT TO CHANGE)

Eversley 15 (Melanie Eversley is a reporter on USA TODAY's Breaking News desk and one of the bloggers for On Deadline. Over the years, she has written about Congress, politics, civil rights and race relations, 9 dead in shooting at black church in Charleston, S.C., June 19, 2015, http://www.usatoday.com/story/news/nation/2015/06/17/charleston-south-carolina-shooting/28902017/)

CHARLESTON, S.C. — **Nine people have died in a shooting at a historic black church in Charleston, S.C., police said early Thursday morning**.¶ "I do believe this was a hate crime," Police Chief Gregory Mullen said.¶ **Eight people died on the scene at the Emanuel African Methodist Episcopal Church and one person was pronounced dead at a hospital**, Mullen said. **The suspect, who remains on the loose, is a white male about 21 years old, officials said**.¶ The shooting took place at about 9 p.m. ET on Wednesday. Charleston Police released photos of the suspect during a news conference that started at 6 a.m. ET Thursday, and said he left the scene in a black four door sedan. He is described as "armed and dangerous."¶ **Church members were shot as they took part in shot at bible study**, the NAACP said. Dot Scott, president of the Charleston NAACP, said a female survivor told family members that the gunman initially sat down in the church for a while before opening fire, the Post and Courier reported. Scott added that the gunman reportedly told the woman he was letting her live so she could tell others what happened.¶ **Among the dead was the state senator who was pastor of the church**, Democrat Clementa Pinckney, said South Carolina House Minority Leader Todd Rutherford, the Associated Press reported. Pinckney, 41, was married with two children and had served in the state Senate since 2000, according to online biographies.¶ People were taking part in a prayer meeting at the time of the incident, Mayor Joe Riley said during the press conference.¶ **"This is inexplicable," Riley said. "It is the most intolerable and**

unbelievable act possible ... The only reason someone could walk into church and shoot people praying is out of hate."¶Said Police Chief Mullen: **"This is a tragedy that no community should have to experience. It is senseless. It is unfathomable that someone would walk into a church when people are having a prayer meeting and take their lives."**

The aff doesn't solve the murderous acts of vigilantes – even the police can't stop them

CNN WIRE 15 (As a partner of KTLA, the CNN Wire service provides national and international coverage of breaking news, politics, health, finance, entertainment and more. The syndication network includes regional content from television stations and publications across the country, "4 Dead, Including 2 Teens, in South Carolina Shooting; 8-Year-Old Boy Injured", JULY 15, 2015, http://ktla.com/2015/07/15/4-dead-including-2-teens-in-south-carolina-shooting-8-year-old-boy-injured/)

Four people were found shot dead Wednesday in Orangeburg County, South Carolina, and authorities say they are looking for the person responsible.¶A boy, about 8 years old, was injured, Sheriff Leroy Ravenell told reporters. The child's condition was not immediately clear.¶**Ravenell said that authorities believe the shooting was an isolated event** and that they are "following some good leads."¶"We don't think that we have anybody in this area that's still out actively committing crimes," the sheriff said.¶**He vowed police would not rest until "we arrest the person that killed these individuals."**¶**Three of the four people killed were found inside a home, and have been identified**. They are Tamara Alexia Almeshia Perry, 14; Shamekia Tyjuana Sanders, 17; and Crystal Hutto, 28.¶**The fourth victim, a black adult male, was found deceased in the home's yard. All the victims suffered gunshot wounds.**¶**Police located a vehicle believed to be connected to that home earlier Wednesday, Ravenell said. It had been burned.**¶**The sheriff declined to answer a number of questions, citing an ongoing investigation.**¶**"We don't want this lingering out there with the public not knowing what's going on," he said.**¶

It is easy and cheap to surveil mobile communications—anyone can do it

Blain 10

Loz Blain, one of Gizmag's most versatile contributors since 2007. Joining the team as a motorcycle specialist, he has since covered everything from medical and military technology to aeronautics, music gear and historical artefacts, 8-2-2010, "Surveillance: two rare glimpses into who's watching you, and how ," *GIZMAG*, http://www.gizmag.com/surveillance-whos-watching-and-how/15919//SRawal

And if you were under the misapprehension that your mobile communications were any safer, Chris Paget's recent **demonstration of cellphone tower spoofing showed just how easy and inexpensive it is for anyone with the appropriate knowledge to intercept and record your private phone calls** as well. Paget's **device simply pretends to be a cellphone tower that delivers a closer and stronger signal than a real tower. Mobile phones automatically connect to the tower with the best signal, so they switch over to the spoofed tower, which quietly records the conversation and sends the information on to the real network. The user is completely unaware.** Worse still, the equipment Paget built for his demonstration, in which **dozens of audience members' phones were 'hijacked,' cost him less than US$1500** – most of which was for the laptop he ran the system through. More about the demonstration at Paget's blog. So **the ability to spy on your mobile conversations is now so cheap to attain that it's no longer the sole preserve of cashed-up government and law enforcement agencies – just about anyone can do it**. And it's a glimpse at the kind of capability the NSA and other agencies have almost certainly had since day one.

Businesses

Businesses sharing citizens' information with the government is a new privacy threat

Fang 15

Lee Fang, a journalist with a longstanding interest in how public policy is influenced by organized interest groups and money, 04/01/15, "How Big Business Is Helping Expand NSA Surveillance, Snowden Be Damned," Intercept, https://firstlook.org/theintercept/2015/04/01/nsa-corporate-america-push-broad-cyber-surveillance-legislation//SRawal

For all its appeal to corporations, **CISA represents a major new privacy threat to individual citizens. It lays the groundwork for corporations to feed massive amounts of communications to private consortiums and the federal government**, a scale of cooperation even greater than that revealed by Snowden. **The law also breaks new ground in suppressing pushback against privacy invasions**; in exchange for channeling data to the government, businesses are granted broad legal immunity from privacy lawsuits — potentially leaving consumers without protection if companies break privacy promises that would otherwise keep information out of the hands of authorities**. Ostensibly, CISA is supposed to help businesses guard against cyberattacks by sharing information on threats with one another and with the government. Attempts must be made to filter personal information out of the pool of data that is shared.** But **the legislation** — at least as marked up by the Senate Intelligence Committee — **provides an expansive definition of what can be construed as a cybersecurity threat, including any information for responding to or mitigating "an imminent threat of death, serious bodily harm, or serious economic harm," or information that is potentially related to threats relating to weapons of mass destruction, threats to minors, identity theft, espionage, protection of trade secrets, and other possible offenses. Asked at a hearing in February how quickly such information could be shared with the FBI, CIA, or NSA,** Deputy Undersecretary for Cybersecurity Phyllis Schneck replied, "fractions of a second." Questions persist on how to more narrowly define a cybersecurity threat, what type of personal data is shared, and which government agencies would retain and store this data. Sen. Ron Wyden, D-Ore., who cast the lone dissenting vote against CISA on the Senate Intelligence Committee, declared the legislation "a surveillance bill by another name." Privacy advocates agree. "**The lack of use limitations creates yet another loophole for law enforcement to conduct backdoor searches on Americans,"** argues a letter sent by a coalition of privacy organizations, including Free Press Action Fund and New America's Open Technology Institute. Critics also argue that CISA would not have prevented the recent spate of high-profile hacking incidents. As the Electronic Frontier Foundation's Mark Jaycox noted in a blog post, the JPMorgan hack occurred because of an "un-updated server" and prevailing evidence about the Sony breach is "increasingly pointing to an inside job." But **the intelligence community and corporate America have this year unified behind the bill.** For a look into the breadth of the corporate advocacy campaign to pass CISA, see this letter cosigned by many of the most powerful corporate interests in America and sent to legislators earlier this year. Or **another lette**r, reported in the Wall Street Journal**, signed by** "**general counsels of more than 30 different firms, including 3M and Lockheed Martin Corp."**

AT: Oversight

Oversight fails—Executive and agency interference—kills the signal

Sullivan ’14, Writer for the Associated Press, 3/19/14, Eileen Sullivan, Huffington Post, “CIA-Senate Accusations Complicate Oversight Of Surveillance Programs”, http://www.huffingtonpost.com/2014/03/19/cia-senate-surveillance_n_4995971.html

"We've set the balance between public disclosure and the need for secrecy by empowering the congressional intelligence committees," Robert Litt, general counsel of the office of the director of national intelligence, said Wednesday. Litt was speaking to a privacy oversight panel that has been reviewing some of the more controversial spy programs revealed last year. But that balance is suspect amid complaints that the executive branch interferes with Congress. Sen. Dianne Feinstein, D-Calif., the chair of the Senate Intelligence Committee and a longtime supporter of the NSA surveillance programs, has accused the government of this type of interference. Feinstein said the CIA interfered with and then tried to intimidate a congressional investigation into the agency's possible use of torture as it probed suspected terrorists after the Sept. 11 attacks. "This is kind of a raw example of how things can go wrong in congressional oversight," said David M. Barrett, a Villanova University professor who has studied the history of Congress and the intelligence community. "Congressional oversight of intelligence is going to be imperfect. It always is." Privacy advocates have been critical of the congressional oversight of the NSA programs, raising concerns that lawmakers are too close to the administration, hindering objective and effective oversight of the secret programs. "Even when Congress tries to do some oversight, they're thwarted by the administration," said Michelle Richardson of the American Civil Liberties Union. "I don't think the public has faith in congressional oversight anymore."

Congress has no idea what’s happening

Grayson ’13, the United States Representative for Florida's 9th congressional district, 10/25/13, Alan Grayson, “**Congressional oversight of the NSA is a joke. I should know, I'm in Congress**”, http://www.theguardian.com/commentisfree/2013/oct/25/nsa-no-congress-oversight

Pike's investigation initiated one of the first congressional oversight debates for the vast and hidden collective of espionage agencies, including the Central Intelligence Agency (CIA), the Federal Bureau of Investigation (FBI), and the National Security Agency (NSA). Before the Pike Commission, Congress was kept in the dark about them – a tactic designed to thwart congressional deterrence of the sometimes illegal and often shocking activities carried out by the "intelligence community". Today, we are seeing a repeat of this professional voyeurism by our nation's spies, on an unprecedented and pervasive scale. Recently, the US House of Representatives voted on an amendment – offered by Representatives Justin Amash and John Conyers – that would have curbed the NSA's omnipresent and inescapable tactics. Despite furious lobbying by the intelligence industrial complex and its allies, and four hours of frantic and overwrought briefings by the NSA's General Keith Alexander, 205 of 422 Representatives voted for the amendment. Though the amendment barely failed, the vote signaled a clear message to the NSA: we do not trust you. The vote also conveyed another, more subtle message: members of Congress do not trust that the House Intelligence Committee is providing the necessary oversight. On the contrary, "**oversight" has become "overlook".** Despite being a member of Congress possessing security clearance, I've learned far more about government spying on me and my fellow citizens from reading media reports than I have from "intelligence" briefings. If the vote on the Amash-Conyers amendment is any indication, my colleagues feel the same way. In fact, one long-serving conservative Republican told me that he doesn't attend such briefings anymore, because, "they always lie". Many of us worry that Congressional Intelligence Committees are more loyal to the "intelligence community" that they are tasked with policing, than to the Constitution. And the House Intelligence Committee isn't doing anything to assuage our concerns. I've requested classified information, and further meetings with NSA officials. The House Intelligence Committee has refused to provide either. Supporters of the NSA's vast ubiquitous domestic spying operation assure the public that members of Congress can be briefed on these activities whenever they want. Senator Saxby Chambliss says all a member of Congress needs to do is ask for information, and he'll get it. Well I did ask, and the House Intelligence Committee said "no", repeatedly. And

virtually every other member not on the Intelligence Committee gets the same treatment. Recently, a member of the House Intelligence Committee was asked at a town hall meeting, by his constituents, why my requests for more information about these programs were being denied. This member argued that I don't have the necessary level of clearance to obtain access for classified information. That doesn't make any sense; every member is given the same level of clearance. There is no legal justification for imparting secret knowledge about the NSA's domestic surveillance activities only to the 20 members of the House Intelligence Committee. Moreover, how can the remaining 415 of us do our job properly, when we're kept in the dark – or worse, misinformed?

Checks from within the agencies fail

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

Indeed, intra-Trumanite checks have already been tried. When questions arose as to whether Justice Department lawyers inappropriately authorized and oversaw warrantless electronic surveillance in 2006, its Office of Professional Responsibility commenced an investigation—until its investigators were denied the necessary security clearances, blocking the inquiry.550 The FBI traditionally undertakes an internal investigation when an FBI agent is engaged in a serious shooting; "from 1993 to early 2011, FBI agents fatally shot about seventy 'subjects' and wounded about eighty others—and every one of those [shootings] was justified," its inspectors found.551 Following the NSA surveillance disclosures, President Obama announced the creation of an independent panel to ensure that civil liberties were being respected and to restore public confidence—a panel, it turned out, that operated as an arm of the Office of the Director of National Intelligence, which oversees the NSA.552 Inspectors general were set up within federal departments and agencies in 1978 as safeguards against waste, fraud, abuse, and illegality,553 but the positions have remained vacant for years in some of the government's largest cabinet agencies, including the departments of Defense, State, Interior, and Homeland Security.554 The best that can be said of these inspectors general is that, despite the best of intentions, they had no authority to overrule, let alone penalize, anyone. The worst is that they were trusted Trumanites who snored through everything from illegal surveillance to arms sales to the Nicaraguan contras to Abu Ghraib to the waterboarding of suspected terrorists. To look to Trumanite inspectors general as a reliable check on unaccountable power would represent the ultimate triumph of hope over experience.

Trumanites control congress

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

Like the courts, Congress's apparent power also vastly outstrips its real power over national security. Similar to the Trumanites, its members face a blistering work load. Unlike the Trumanites, their work is not concentrated on the one subject of national security. On the tips of members' tongues must be a ready and reasonably informed answer not only to whether the United States should arm Syrian rebels, but also whether the medical device tax should be repealed, whether and how global warming should be addressed, and myriad other issues. The pressure on legislators to be generalists creates a need to defer to national security experts. To a degree congressional staff fulfill this need. But few can match the Trumanites' informational base, drawing as they do on intelligence and even legal analysis that agencies often withhold from Congress. As David Gergen put it, "[p]eople . . . simply do not trust the Congress with sensitive and covert programs."344

The Trumanites' threat assessments,345 as well as the steps they take to meet those threats, are therefore seen as presumptively correct whether the issue is the threat posed by the targets of drone strikes, by weapons of mass destruction in Iraq, or by torpedo attacks on U.S. destroyers in the Gulf of Tonkin. Looming in the backs of members' minds is the perpetual fear of casting a career-endangering vote. No vote would be more fatal than one that might be tied causally to a cataclysmic national security breakdown. While the public may not care strongly or even know about many of the Bush policies that Obama has continued, the public could and would likely know all about any policy change—and who voted for and against it—in the event Congress bungled the protection of the nation. No member wishes to confront the "if only" argument: the argument that a devastating attack would not have occurred if only a national security letter had been sent, if only the state secrets privilege had been invoked, if only that detainee had not been released. Better safe than sorry, from the congressional perspective. Safe means strong. Strong means supporting the Trumanites.

Because members of Congress are chosen by an electorate that is disengaged and uninformed, Madison's grand scheme of an equilibrating separation of powers has failed, and a different dynamic has arisen.346 His design, as noted earlier,347 anticipated that ambition counteracting ambition would lead to an equilibrium of power and that an ongoing power struggle would result among the three branches that would leave room for no perilous concentration of power.348 The government's "several constituent parts" would be "the means of keeping each other in their proper places."349 But the overriding ambition of legislators chosen by a disengaged and uninformed electorate is not to accumulate power by prescribing policy for the Trumanites, as Madison's model would otherwise have predicted. Their overriding ambition is to win reelection, an ambition often inconsistent with the need to resist encroachments on congressional power. All members of Congress know that they cannot vote to prescribe—or proscribe—any policy for anyone if they lose reelection. It is not that Madison was wrong; it is that the predicate needed for the Madisonian system to function as intended—civic virtue—is missing.

As a result, Trumanite influence permeates the legislative process, often eclipsing even professional committee staff. Trumanites draft national security bills that members introduce. They endorse or oppose measures at hearings and mark-ups. They lobby members, collectively and one-on-one. Their positions appear on the comparative prints that guide members through key conference committee deliberations. Sometimes Trumanites draft the actual language of conference reports. They wait outside the chambers of the House and Senate during floor debates, ready on-the-spot to provide members with instant arguments and data to back them up. Opponents frequently are blind-sided. Much of this activity is removed from the public eye, leading to the impression that the civics-book lesson is correct; Congress makes the laws. But the reality is that virtually everything important on which national security legislation is based originates with or is shaped by the Trumanite network.

Conversely, congressional influence in the Trumanites' decisionmaking processes is all but nil. The courts have, indeed, told Congress to keep out. In 1983, the Supreme Court invalidated a procedure, called the "legislative veto," which empowered Congress to disapprove of Trumanite arms sales to foreign nations, military initiatives, and other national security projects.350 The problem with the concept, the Court said, was that it permitted Congress to disapprove of executive action without the possibility of a presidential veto.351 A legislative proposal thereafter to give the Senate Intelligence Committee the power to approve or disapprove covert actions was rejected, on the grounds that the Court had ruled out such legislative controls.352

Defenders of the process often claim that congressional oversight nonetheless works.353 How they can know this they do not say.354 Information concerning the oversight committees' efficacy remains tightly held and is seldom available even to members of Congress, let alone the general public. "Today," James Bamford has written, "the intelligence committees are more dedicated to protecting the agencies from budget cuts than safeguarding the public from their transgressions."355 Authorization too often is enacted without full knowledge of what is being approved.356 Even when intelligence activities such as the NSA surveillance are reported, meaningful scrutiny is generally absent.357 Members of oversight committees typically are precluded from making available to non-member colleagues classified information that is transmitted to the committees.358 This is true even if the activities in question are unlawful. Following the NSA surveillance leaks, for example, Senator Wyden said that he "and colleagues" believed that additional, unnamed "secret surveillance programs . . . go far beyond the intent of the statute."359 The Senate Armed Services Committee has "seemed generally clueless and surprised about the legal standard"360 applied by the Executive in construing the scope of its authority under the AUMF.361 The 9/11 Commission was unambiguous in its own conclusions concerning the reliability of congressional intelligence oversight; the word the Commission used to described it was "dysfunctional."362 The oversight committees' performance from the Iranian Revolution through the mining of Nicaraguan harbors,363 the Iran-Contra affair,364 NSA surveillance,365 and other similar episodes366 provides scant evidence to contradict the Commission's conclusion.

AT: Fiat

Even if laws are passed, the NSA will shift resources to other surveillance

Groll 6/4, Assistant editor for Foreign Policy (6-4-2015, Elias Groll, Foreign Policy, "Congress May Have Passed the Freedom Act, But Mass Surveillance Is Alive and Well", http://foreignpolicy.com/2015/06/04/congress-may-have-passed-the-freedom-act-but-mass-surveillance-is-alive-and-well/) EWimsatt

Onee useful way to think about the USA Freedom Act that President Barack Obama signed into law on Tuesday night is as a lightning-rod for the National Security Agency. By changing the way the NSA examines domestic phone records, the agency is now able to make the argument that it has undergone significant reforms in the aftermath of the Edward Snowden revelations. By giving up the authority to collect all American phone records, the agency has paid a small price — and gotten rid of a program that it had come to consider a burden, anyway — to keep its most important authorities intact.

Agencies get around the rules

Rosenthal 6/12, reporter at Mother Jones (6-12-2015, Max J. Rosenthal, Mother Jones, "America's secret surveillance court may be about to get a little less secret", http://www.motherjones.com/politics/2015/06/usa-freedom-act-fisa-court-transparency) EWimsatt

There are other procedural moves the government could use to limit what information is made public. The court could simply issue summaries of decisions that don't include their key parts, or the executive branch could heavily redact them. "In theory, the executive branch could comply with this part of the statute by redacting 99 percent—everything but one sentence, essentially—of an opinion," Goitein says.

She admits that specific tactic is unlikely—it would be an obvious and public skirting of the law's intent—but stresses that even though the law makes important progress in disclosure, there are still many loopholes that could cut down on how much the public will get to see.

"I think the history strongly suggests that the intelligence establishment will take every single little bit of rope it has," she says. "And then some."

There's no enforcement mechanism—and multiple legal justifications

Vladeck '6/1, professor of law at the American University Washington College of Law. (6/1/15, Stephen Vladeck, Foreign Policy, "Forget the Patriot Act – Here Are the Privacy Violations You Should Be Worried About", http://foreignpolicy.com/2015/06/01/section-215-patriot-act-expires-surveillance-continues-fisa-court-metadata/)

The government's defense, as we've come to learn, is flawed in two vital respects: First, as several since-disclosed opinions from the FISA Court have made clear, the government's minimization requirements under the 2008 statute were often too skimpy, allowing the retention and use of information that both the statute and the Fourth Amendment prohibit. Second — and perhaps more importantly — even where the minimization rules were legally sufficient, there have been numerous instances in which government officials violated them, with the FISA Court only discovering the abuses after they were voluntarily reported by Justice Department lawyers. As a result, the government collected and retained

a large volume of communications by U.S. citizens that neither Congress nor the Constitution allowed it to acquire.

More alarmingly, with regard to collection under Executive Order 12333, there isn't any similar judicial review (or meaningful congressional oversight), which means that it has entirely been up to the government to police itself. As State Department whistleblower John Napier Tye explained last summer, there is every reason to doubt that such internal accountability has provided a sufficient check. In his words, "Executive Order 12333 contains nothing to prevent the NSA from collecting and storing all … communications … provided that such collection occurs outside the United States in the course of a lawful foreign intelligence investigation."

To put the matter bluntly, whereas the Section 215 debate has addressed whether the government can collect our phone records, Executive Order 12333 and the 2008 FISA Amendments Act allow the government to collect a lot of what we're actually saying, whether on the phone, in our emails, or even to our search engines. There is no question that from a privacy perspective, these programs are far more pernicious than what's been pegged to Section 215.There is also no question that such collection raises even graver constitutional questions than the phone records program. Whereas there is an open debate over our expectation of privacy in the metadata we voluntarily provide to our phone companies, there's no doubt that we have an expectation of privacy in the content of our private communications.

Why, then, has all the fuss been around Section 215 and the phone records program, while the far more troubling surveillance authorities provided by Executive Order 12333 and the 2008 FISA Amendments Act have flown under the radar?

Part of it may be because of the complexities described above. After all, it's easy for people on the street to understand what it means when the government is collecting our phone records; it's not nearly as obvious why we should be bothered by violations of minimization requirements. Part of it may also have to do with the government's perceived intent. Maybe it seems more troubling when the government is intentionally collecting our phone records, as opposed to "incidentally" (albeit knowingly) collecting the contents of our communications. And technology may play a role, too; how many senders of emails know where the server is located on which the message is ultimately stored? If we don't realize how easily our communications might get bundled with those of non-citizens outside the United States, we might not be worried about surveillance targeted at them.

But whatever the reason for our myopic focus on Section 215, it has not only obscured the larger privacy concerns raised by these other authorities, but also the deeper lessons we should have taken away from Snowden's revelations. However much we might tolerate, or even embrace, the need for secret government surveillance programs, it is all-but-inevitable that those programs will be stretched to — and beyond — their legal limits. That's why it's important not only to place substantive limits upon the government's surveillance authorities, but also to ensure that they are subject to meaningful external oversight and accountability as well. And that's why the denouement of Section 215 debate has been so disappointing.

This should have been a conversation not just about the full range of government surveillance powers, including Executive Order 12333 and the 2008 FISA Amendments Act, but also about the role of the FISA Court and of congressional oversight in supervising those authorities. Instead, it devolved into an over-heated debate over an over-emphasized program. Congress has tended to a paper cut, while it ignored

the internal bleeding. Not only does the expiration of Section 215 have no effect on the substance of other surveillance authorities, it also has no effect on their oversight and accountability

.

The surveillance data can come from foreign nations and the private sector

Carr 6/3, Senior Lecturer in International Politics and the Cyber Dimension at Aberystwyth University (6/3/2015, Madeline Carr, The Conversation, "US government clips NSA wings, but snooping is a global effort", http://theconversation.com/us-government-clips-nsa-wings-but-snooping-is-a-global-effort-42771)

The USA Freedom Act only applies to US citizens, which means the NSA is still free to gather meta data on citizens of other nations. Meanwhile, other governments are moving to hand greater powers to their intelligence services.

Watching you around the world

In the UK, for example, GCHQ operates a similar program to the NSA. In early 2015, a consortium of civil rights organisations took GCHQ before the Investigatory Powers Tribunal – a British court set up to hear complaints against the security services. The consortium argued that GCHQ's mass surveillance program – as well sharing the results of that program with the NSA – was an abuse of human rights law. The tribunal found in favour of GCHQ but the case is expected to proceed to the European Court of Human Rights in Strasbourg later this year.

Left as it is, GCHQ can help to alleviate problems that the NSA will face in collecting data on US citizens. As part of the "Five Eyes" intelligence sharing arrangement that includes the US, UK, Australia, New Zealand and Canada, GCHQ is perfectly positioned to collect and pass on communications data on US citizens that the NSA may be prevented from collecting itself.

What's more, in the wake of the British election, the UK government is seeking once again to implement a law known as the Snooper's Charter. This is essentially a data retention bill that would require telecommunications companies and internet service providers to hold onto the meta data (but not content) from their customers' emails, phone calls, texts and internet browsing for 12 months.

Meanwhile, in the weeks following the Charlie Hebdo attacks in Paris, France moved to introduce significantly strengthened data retention laws. Echoing the US response to the 9/11 terrorist attacks, French Prime Minister Manuel Valls suggested that an "extraordinary situation calls for extraordinary measures". This has implications for European negotiations over data protection laws which have been implemented to shield EU citizens from the NSA surveillance program.

Questions about the balance between privacy and security are ongoing and to some extent, they define the times. With increasing intensity, organisations have been racing to take advantage of personal data trail that we now generate online. There can be little doubt that this provides opportunities for use in law enforcement and intelligence.

It's worth remembering, though, that mass surveillance is not carried out by the NSA or the FBI or even GCHQ. It's carried out by private corporations such as Google and Facebook. Adequate oversight of the

way intelligence agencies access and use that data is extremely important but we have remarkably little oversight of the way private companies deal with our data. And in many cases, they operate with very little transparency themselves.

In February 2015, the Belgian Privacy Commission found that Facebook is acting in violation of European law. A few months later, Apple CEO Tim Cook launched an attack against the collection and monetisation of personal data saying that Silicon Valley businesses are "lulling their customers into complacency about their personal information".

And as for telcos and ISPs, those that don't already retain our data aren't acting out of ethical concerns – they don't keep the information because the expense of storage currently outweighs the commercial value of the data.

So while US citizens have reasons to celebrate about the USA Freedom Act, they should remember that the NSA has allies around the world who continue to collect data on both their own citizens – and those in the US.

The DEA bypasses its own oversight

Shackford 6/3, associate editor at Reason.com. (6/3/2015, Scott Shackford, Reason, "The DEA Bypasses Federal Oversight to Better Snoop on Us All", http://reason.com/blog/2015/06/03/the-dea-bypasses-federal-oversight-to-be)

It seems as though the Drug Enforcement Administration (DEA) has reversed this dynamic, all in the name of more easily snooping on people. USA Today has determined that the DEA has drastically increased its use of electronic surveillance over the past decade by deliberately bypassing its own federal oversight and turning to local prosecutors. The Department of Justice (DOJ) has tougher requirements to permit eavesdropping than states and local judges:

The DEA conducted 11,681 electronic intercepts in the fiscal year that ended in September. Ten years earlier, the drug agency conducted 3,394.

Most of that ramped-up surveillance was never reviewed by federal judges or Justice Department lawyers, who typically are responsible for examining federal agents' eavesdropping requests. Instead, DEA agents now take 60% of those requests directly to local prosecutors and judges from New York to California, who current and former officials say often approve them more quickly and easily.

Drug investigations account for the vast majority of U.S. wiretaps, and much of that surveillance is carried out by the DEA. Privacy advocates expressed concern that the drug agency had expanded its surveillance without going through internal Justice Department reviews, which often are more demanding than federal law requires.

Wiretaps — which allow the police to listen in on phone calls and other electronic communications — are considered so sensitive that federal law requires approval from a senior Justice Department official before agents can even ask a federal court for permission to conduct one. The law imposes no such restriction on state court wiretaps, even when they are sought by federal agents.

LINKS TO AFFS

DEA

Regardless of what the plan does- agencies i.e. the DEA will circumvent in order to catch high scale drug lords and control operations dependent upon surveillance

Heath, 2015

(Brad is an analyst for the News Company USA Today. Full Date: June 3, 2015. "Drug wiretaps triple in past decade; Agents take majority of requests to local prosecutors, judges." http://www.lexisnexis.com/hottopics/lnacademic/. Date Accessed- 07/15/15. Anshul Nanda)

The **U.S. Drug Enforcement Administration** more than **tripled** its **use of wiretaps** and **other types of electronic eavesdropping over the past decade**, **largely bypassing federal courts and Justice Department lawyers in the process,** newly obtained records show.¶ The **DEA conducted 11,681 electronic intercepts in the fiscal year that ended in September.** Ten years earlier, the drug agency conducted 3,394.¶ Most of that **ramped-up surveillance was never reviewed by federal judges or Justice Department lawyers,** who typically are responsible for examining federal agents' eavesdropping requests. Instead, **DEA agents now take 60% of those requests directly to local prosecutors and judges from New York to California**, who current and former officials say often are quicker to approve them.¶ **Drug investigations account for the vast majority of U.S. wiretaps, and much of that surveillance** is **carried out** by the **DEA**. Privacy advocates expressed concern that the drug agency had expanded its surveillance without going through internal Justice Department reviews, which often are more demanding than federal law requires.¶ Wiretaps -- which let the police listen in on phone calls and other electronic communications -- are considered so sensitive that federal law requires approval from a senior Justice Department official before agents can even ask a federal court for permission to conduct one. The law imposes no such restriction on state court wiretaps, even when they are sought by federal agents.¶ "That law exists to make sure that wiretap authority is not abused, that it's only used when totally appropriate," said Hanni Fakhoury, an attorney with the Electronic Frontier Foundation. "That's a burden. And if there's a way to get around that burden, the agents are going to try to get around it."¶ USA TODAY obtained the DEA's wiretapping statistics under the Freedom of Information Act. The figures include every order authorizing or extending electronic eavesdropping. Some orders could be counted more than once, if they include the collection of both voice calls and text messages, for example.¶ DEA Spokesman Joseph Moses said agents' increased use of wiretaps reflects "the proliferation of communication devices and methods" used by the drug traffickers. He said **wiretaps have been critical for agents to penetrate networks high-level traffickers use to control operations.**¶ The legal safeguards for wiretaps are supposed to be the same in both state and federal courts. To tap into communications, police must persuade prosecutors and a judge that they have probable cause to think that the communications will contain evidence of a crime, and that they have no other way to build their case. But how judges and prosecutors interpret those requirements can vary among jurisdictions.¶ "Within Justice, it was a rigorous standard," said Stephen T'Kach, a former lawyer in the Justice Department office responsible for approving wiretaps. "In the states, you have 50 different standards for what's going to be enough."¶ Moses said DEA agents were "making no attempt to circumvent federal legal standards and protections by instead pursuing state wiretap authorizations." Instead, he said, the **rapid growth of state-authorized eavesdropping reflects local prosecutors' increased willingness to take on complex wiretap investigations**, which often involve teams of local police and federal agents. At the same time, he said, some federal prosecutors "may be unable to support wire intercept investigations due to manpower or other resource considerations," so agents take their cases to state officials rather than see them dropped.¶ The DEA records do not indicate which state courts have approved the ramped-up surveillance, but state court records and statistics compiled by the federal courts' administrative office offer some indications.¶ For example, judges in the Los Angeles suburb of Riverside, Calif., authorized more wiretaps in 2013 than any other jurisdiction in the country and significantly more than any federal court, according to records compiled by the Administrative Office of the U.S. Courts.¶ The number of wiretaps approved there nearly doubled between 2013 and 2014, to 602, according to California's attorney general.¶ John Hall, a spokesman for Riverside County's district attorney, said he could not comment on whether the office had approved wiretaps for federal investigators because the applications often are sealed. Court records there show prosecutors submitted some wiretap applications at the request of the DEA.¶ State court judges in Buffalo and San Diego also approved DEA wiretap requests, according to court records.¶ "There was always some heartburn in Justice when DEA was going into state courts," T'Kach said. That was tempered, he said, because state wiretap laws must include all of the safeguards federal law requires, and there was no suggestion that evidence gathered through state-court wires was being thrown out of court later.¶ How often that happens is difficult to measure. Agents said many of the cases in which state judges authorize wiretaps end up being prosecuted in state courts, where challenges to wiretap evidence are less common.

Local governements are stopping the war on drugs- means cant solve through the national level

Ron **Paul 14** ("Ferguson: The War Comes Home", August 25, 2014 Monday, L/N- Farmington Daily Times (New Mexico), Accessed 7/16/15, EHS MKS)

America's attention recently turned away from the violence in Iraq and Gaza toward the violence in Ferguson, Missouri, following the shooting of Michael Brown. While all the facts surrounding the shooing have yet to come to light, the shock of seeing police using tear gas (a substance banned in warfare), and other military-style weapons against American citizens including journalists exercising their First Amendment rights, has started a much-needed debate on police militarization. **The increasing use of military equipment by local police is a symptom of growing authoritarianism**, not the cause. The cause is policies that encourage police to see Americans as enemies to subjugate, rather than as citizens to "protect and serve." This attitude is on display not only in Ferguson, but in the police lockdown following the Boston Marathon bombing and in the Americans killed and injured in "no-knock" raids conducted by militarized SWAT teams. One particularly tragic victim of police militarization and the war on drugs is "baby Bounkham." This infant was severely burned and put in a coma by a flash-burn grenade thrown into his crib by a SWAT team member who burst into the infant's room looking for methamphetamine. As shocking as the case of baby Bounkham is, no one should be surprised that empowering police to stop consensual (though perhaps harmful and immoral) activities has led to a growth of authoritarian attitudes and behaviors among government officials and politicians. **Those wondering why the local police increasingly look and act like an occupying military force should consider that the drug war was the justification for the Defense Department's "1033 program," which last year gave local police departments almost $450 million worth of "surplus" military equipment. This included armored vehicles and grenades like those that were used to maim baby Bounkham.** Today, **the war on drugs has been eclipsed by the war on terror as an all-purpose excuse for expanding the police state.** We are all familiar with how the federal government increased police power after September 11 via the Patriot Act, TSA, and other Homeland Security programs**. Not as widely known is how the war on terror has been used to justify the increased militarization of local police departments to the detriment of our liberty. Since 2002, the Department of Homeland Security has provided over $35 billion in grants to local governments for the purchase of tactical gear, military-style armor, and mine-resistant vehicles.** The threat of terrorism is used to justify these grants. However, the **small towns that receive tanks and other military weapons do not just put them into storage until a real terrorist threat emerges. Instead, the military equipment is used for routine law enforcement.** Politicians love this program because it allows them to brag to their local media about how they are keeping their constituents safe. Of course, the military-industrial complex's new kid brother, the law enforcement-industrial complex, wields tremendous influence on Capitol Hill. Even many so-called progressives support police militarization to curry favor with police unions. **Reversing the dangerous trend of the militarization of local police can start with ending all federal involvement in local law enforcement**. Fortunately, **all that requires is for Congress to begin following the Constitution, which forbids the federal government from controlling or funding local law enforcement. However, Congress will not restore constitutional government on its own**; the American people must demand that Congress stop facilitating the growth of an authoritarian police state that threatens their liberty.

Texas legislature is already solving in their state- Says national level is only hurting

Frank **Knaack 11** ("A Glimmer of Hope in Texas' Approach to the War on Drugs", JUNE 22, 2011 | 12:43 PM, https://www.aclu.org/blog/glimmer-hope-texas-approach-war-drugs, Accessed 7/17/15, EHS MKS)

June 2011 marks the 40th anniversary of President Richard Nixon's declaration of a "war on drugs" — a war that has cost roughly a trillion dollars, has produced little to no effect on the supply of or demand for drugs in the United States, and has contributed to making America the world's largest incarcerator. Throughout the month, check back daily for posts about the drug war, its victims and what needs to be done to restore fairness and create effective policy. **The federal government's failed "war on drugs" has had a devastating impact on Texas**. From the now infamous Tulia and Hearne drug arrest scandals, to the millions of dollars wasted through anti-drug trafficking programs, **Texas' drug policies have eroded our liberties and squandered our tax dollars**. But hope is not lost in Texas. While it's true that the state's close proximity to the horrific "war on drugs"-related violence in Mexico has fueled the adoption of some "we must surrender our liberty to ensure our security"-type legislation, there have been some positive changes as well. The cost of the "war on drugs" has forced our legislators to look at alternatives to incarceration for nonviolent drug offenders, and racial profiling scandals have forced needed changes in state laws governing criminal trials. While we cannot count on a smart drug policy in Texas anytime soon, a glimmer of hope is finally on the horizon. For starters, the need to rationally address Texas' massive corrections budget, in part fueled by the large number of inmates sentenced for nonviolent drug offenses, has led to a number of positive changes. The call for alternatives to incarceration, in Texas and across the country, has also benefited from "a growing belief among state lawmakers that prosecuting drug offenders aggressively often fails to treat their underlying addiction problems and can result in offenders cycling in and out of prisons for years." S**ince 2003, the Texas Legislature has passed a number of bills aimed at reducing the number of individuals incarcerated for nonviolent offenses, including drug offenses**. Instead of building new and costly prisons, **the legislature has increased the use of probation and provided increased funding for**

nonviolent offenders to attend residential and nonresidential treatment programs. And, as the numbers show, concerns about any coinciding decrease in public safety are unfounded: as Right on Crime pointed out, "**serious property, violent, and sex crimes per 100,000 Texas residents have declined 12.8 percent since 2003."** And there's more good news! In response to drug task force scandals in Tulia, Hearne, and elsewhere involving the falsifying of government records, witness tampering, fabricating evidence, stealing drugs from evidence lockers, selling drugs to children, and large-scale racial profiling, the Texas Legislature passed legislation that prohibits the conviction of people for drug offenses based solely on the word of an undercover informant. Many of the innocent individuals (mostly African-American men) in those cases were convicted based on testimony by sworn officers and informants with checkered pasts (to put it nicely). So, while we still face the old and discredited zero-sum security/liberty rhetoric, real **progress has been made in Texas to reduce the negative impact of the** 40 year-old "**war on drugs**" for all Texans. Thus, hope is not lost!

Can't stop government data collection on companies – subpoena power can bypass the fourth amendment and violate the rights of Americans

KRAVETS 15 (David Kravets is a WIRED senior staff writer and founder of the fake news site TheYellowDailyNews.com. He's a dad of two boys and has been a reporter since the manual typewriter days, "We Don't Need No Stinking Warrant: The Disturbing, Unchecked Rise of the Administrative Subpoena", 08.28.12, http://www.wired.com/2012/08/administrative-subpoenas/ - JD)

But by law, utilities must hand over customer records — which include any billing and payment information, phone numbers and power consumption data — to the DEA without court warrants if drug agents believe the data is "relevant" to an investigation. So the utility eventually complied, after losing a legal fight earlier this month.¶ Meet the administrative subpoena (.pdf): With a federal official's signature, banks, hospitals, bookstores, telecommunications companies and even utilities and internet service providers — virtually all businesses – are required to hand over sensitive data on individuals or corporations, as long as a government agent declares the information is relevant to an investigation. Via a wide range of laws, Congress has authorized the government to bypass the Fourth Amendment — the constitutional guard against unreasonable searches and seizures that requires a probable-cause warrant signed by a judge.¶ In fact, there are roughly 335 federal statutes on the books (.pdf) passed by Congress giving dozens upon dozens of federal agencies the power of the administrative subpoena, according to interviews and government reports. (.pdf)¶ "I think this is out of control. What has happened is, unfortunately, these statutes have been on the books for many, many years and the courts have acquiesced," said Joe Evans, the utility's attorney.¶ Anecdotal evidence suggests that federal officials from a broad spectrum of government agencies issue them hundreds of thousands of times annually. But none of the agencies are required to disclose fully how often they utilize them — meaning there is little, if any, oversight of this tactic that's increasingly used in the war on drugs, the war on terror and, seemingly, **the war on Americans' constitutional rights** to be free from unreasonable government trespass into their lives.¶ That's despite proof that FBI agents given such powers under the Patriot Act quickly began to abuse them and illegally collected Americans' communications records, including those of reporters. Two scathing reports from the Justice Department's Inspector General uncovered routine and pervasive illegal use of administrative subpoenas by FBI anti-terrorism agents given nearly carte blanche authority to demand records about Americans' communications with no supervision.¶ When the 9th U.S. Circuit Court of Appeals, perhaps the nation's most liberal appeals court based in San Francisco, ordered Golden Valley to fork over the data earlier this month, the court said the case was "easily" decided because the records were "relevant" to a government drug investigation.¶ With the data the Alaska utility handed over, the DEA may then use further administrative subpoenas to acquire the suspected indoor-dope growers' phone records, stored e-mails, and perhaps credit-card purchasing histories – all to build a case to acquire a probable-cause warrant to physically search their homes and businesses.¶ But the administrative subpoena doesn't just apply to utility records and drug cases. Congress has spread the authority across a huge swath of the U.S. government, for investigating everything from hazardous waste disposal, the environment, atomic energy, child exploitation, food stamp fraud, medical insurance fraud, terrorism, securities violations, satellites, seals,

student loans, and for breaches of dozens of laws pertaining to fruits, vegetables, livestock and crops.¶ Not one of the government agencies with some of the broadest administrative subpoena powers Wired contacted, including the departments of Commerce, Energy, Agriculture, the Drug Enforcement Administration and the FBI, would voluntarily hand over data detailing how often they issued administrative subpoenas.¶ The Drug Enforcement Administration obtained the power under the Comprehensive Drug Abuse Prevention and Control Act of 1970 and is believed to be among the biggest issuers of administrative subpoenas.¶ "It's a tool in the toolbox we have to build a drug investigation. Obviously, a much, much lower threshold than a search warrant," said Lawrence Payne, a DEA spokesman, referring to the administrative subpoena generically. Payne declined to discuss individual cases.¶ Payne said in a telephone interview that no database was kept on the number of administrative subpoenas the DEA issued.¶ But in 2006, Ava Cooper Davis, the DEA's deputy assistant administrator, told a congressional hearing, "The administrative subpoena must have a DEA case file number, be signed by the investigator's supervisor, and be given a sequential number for recording in a log book or computer database so that a particular field office can track and account for any administrative subpoenas issued by that office."¶ After being shown Davis' statement, Payne then told Wired to send in a Freedom of Information Act request, as did some of the local DEA offices we contacted, if they got back to us at all. "Would suggest a FOIA request to see whether you can get a number of administrative subpoenas. Our databases have changed over the years as far as how things are tracked and we don't have access to those in public affairs unfortunately," Payne said in an e-mail.¶ He said the agency has "never" been asked how many times it issued administrative subpoenas.¶ Amy Baggio, a Portland, Oregon federal public defender representing drug defendants for a decade, said DEA agents "use these like a doctor's prescription pad on their desk." Sometimes, she said, they issue "hundreds upon hundreds of them" for a single prosecution — often targeting mobile phone records.¶ "They are using them exponentially more in all types of federal criminal investigations. I'm seeing them in every drug case now," Baggio said. "Nobody is watching what they are doing. I perceive a complete lack of oversight because there isn't any required."

SOD Surveillance uses illegal means to find suspects and can get away with it– This allows the DEA to circumvent existing laws

Ungar 13 (Rick Ungar in addition to the pages of Forbes.com, can be found me every Saturday morning on your TV arguing with my more conservative colleagues on "Forbes on Fox" on the Fox News Network and at various other times during the week serving as a liberal talking head on other Fox News and Fox Business Network shows. He also serves as a Democratic strategist with Mercury Public Affairs, "More Surveillance Abuse Exposed! Special DEA Unit Is Spying On Americans And Covering It Up", AUG 5, 2013, http://www.forbes.com/sites/rickungar/2013/08/05/more-surveillance-abuse-exposed-special-dea-unit-is-spying-on-americans-and-covering-it-up/ -JD)

As Americans sort through their feelings regarding the disclosure of the massive collection of metadata by the National Security Administration, we are now learning of what may be a far more insidious violation of our constitutional rights at the hands of a government agency.¶ Reuters is reporting that a secret U.S. Drug Enforcement Administration branch has been collecting information from "intelligence intercepts, wiretaps, informants and a massive database of telephone records" and disseminating the data to authorities across the nation to "help them launch criminal investigations of Americans."¶ In this case, the Americans who are being subjected to these investigations are suspected drug dealers.¶ The unit of the DEA that is conducting the surveillance is known as the Special Operations Division ("SOD") and is made up of a partnership of numerous government agencies including the NSA, CIA, FBI, IRS and the Department of Homeland Security.¶ While there are suggestions that elements of the program may be legal, there is obvious concern on the part of those running the program—a concern that has not prevented them from going ahead with the collecting and using of covertly gathered data—that the surveillance effort may not be entirely kosher. We know this to be true because, according to documents reviewed by Reuters, DEA agents are specifically instructed never to reveal nor discuss the existence and utilization of SOD provided data and to further "omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are

instructed to then use 'normal investigative techniques to recreate the information provided by SOD.'"¶ The last line of the directive is particularly disturbing.¶ By instructing agents to use "normal investigative techniques to recreate the information provided by SOD", law enforcement is being instructed to flat out lie when disclosing how they came across the tips or other information provided by SOD leading to an arrest. These agents are directed to give substance to the lie by fabricating a false source or method utilized to gain information leading to an arrest.¶ In law enforcement parlance, it is called "parallel construction."¶ Accordingly to a former federal agent, the SOD 'tip' system works as follows:¶ "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert the state police to find an excuse to stop that vehicle, and then have a drug dog search it."¶ When the SOD tip leads to an arrest, the agents then pretend that the drug bust was the surprise result of pulling the vehicle over as a routine traffic stop.¶ So secretive is the program, SOD requires that agents lie to the judges, prosecuting attorneys and defense attorneys involved in a trial of a defendant busted as a result of SOD surveillance—a complete and clear violation of every American's right to due process, even when that American is a low-life drug dealer.

Movements against the state

The FBI has a history of surveiling black activists- no proof that they will stop post plan

NADIA KAYYALI 14 ("The History of Surveillance and the Black Community", FEBRUARY 13, 2014, https://www.eff.org/deeplinks/2014/02/history-surveillance-and-black-community, Accessed 7/16/15, EHS MKS)

February is Black History Month and that history is intimately linked with surveillance by the federal government in the name of "national security." Indeed, the history of surveillance in the African-American community plays an important role in the debate around spying today and in the calls for a congressional investigation into that surveillance. Days after the first NSA leaks emerged last June, EFF called for a new Church Committee. We mentioned that Dr. Martin Luther King, Jr., was one of the targets of the very surveillance that eventually led to the formation of the first Church Committee. This Black History Month, we should remember the many African-American activists who were targeted by intelligence agencies. Their stories serve as cautionary tales for the expanding surveillance state. The latest revelations about surveillance are only the most recent in a string of periodic public debates around domestic spying perpetrated by the NSA, FBI, and CIA. This spying has often targeted politically unpopular groups or vulnerable communities, including anarchists, anti-war activists, communists, and civil rights leaders. Government surveillance programs, most infamously the FBI's "COINTELPRO", **targeted Black Americans fighting against segregation and structural racism in the 1950s and 60s.** COINTELPRO, short for Counter Intelligence Program, was started in 1956 by the FBI and continued until 1971. The program was a systemic attempt to infiltrate, spy on, and disrupt activists in the name of "national security." While it initially focused on the Communist Party, in the 1960s its focus expanded to include a wide swathe of activists, with a strong focus on the Black Panther Party and civil rights leaders such as Dr. Martin Luther King, Jr. FBI papers show that in 1962 "the FBI started and rapidly continued to gravitate toward Dr. King." This was ostensibly because the FBI believed black organizing was being influenced by communism. In 1963 FBI Assistant Director William Sullivan recommended "increased coverage of communist influence on the Negro." However, the FBI's goal in targeting Dr. King was clear: to find "avenues of approach aimed at neutralizing King as an effective Negro leader," because the FBI was concerned that he might become a "messiah." The FBI subjected Dr. King to a variety of tactics, including bugging his hotel rooms, photographic surveillance, and physical observation of King's movements by FBI agents. The FBI's actions went beyond spying on Dr. King, however. Using information gained from that surveillance, the FBI sent him anonymous letters attempting to "blackmail him into suicide." The agency also attempted to break up his marriage by sending selectively edited "personal moments he shared with friends and women" to his wife. The FBI also specifically targeted the Black Panther Party with the intention of destroying it. They infiltrated the Party with informants and subjected members to repeated interviews. Agents sent anonymous letters encouraging violence between street gangs and the Panthers in various cities, which resulted in "the killings of four BPP members and numerous beatings and shootings," as well as letters sowing internal dissension in the Panther Party. The agency also worked with police departments to harass local branches of the Party through raids and vehicle stops. In one of the most disturbing examples of this, the FBI provided information to the Chicago Police Department that aided in a raid on BPP leader Fred Hampton's apartment. The raid ended with the Chicago Police shooting Hampton dead. The FBI was not alone in targeting civil rights leaders. The NSA also engaged in domestic spying that included Dr. King. In an eerily prescient statement, Senator Walter Mondale said he was concerned that the NSA "could be used by President 'A' in the future to spy upon the American people, to chill and interrupt political dissent."

Mann act

TVPA isn't going away- means the aff can't access solvency

DONNA M. HUGHES 08 ("Protecting trafficking victims", March 12, 2008 8:00 AM, http://www.nationalreview.com/article/223881/wilberforce-can-free-again-donna-m-hughes, Accessed 7/16/15, EHS MKS)

Protecting trafficking victims. The nation's most recent political sex scandal — New York governor Eliot Spitzer's involvement with a high-end call-girl ring — will doubtless provide much fodder for the late-night comedy shows. But American prostitution is no laughing matter: The victimization of women and girls, and sometimes men and boys, by pimps has been widely recognized throughout U.S. history. In the mid-1800s, Congress passed a law criminalizing the importation of aliens for prostitution. In the early 1900s as part of the first international movement against sex trafficking, Congress passed the Mann Act, a law criminalizing the act of transporting persons across state lines for the purpose of prostitution. In 2000, Congress passed the Trafficking Victims Protection Act (TVPA), making the pimping of persons under the age of 18, or pimping by means of fraud, force, or coercion, a serious federal felony. ("Pimping" is an informal term for what the TVPA 2000 calls "sex trafficking": "The recruitment, harboring, transportation, provision, or obtaining of a person for the purpose of a commercial sex act.") And in 2006, the Adam Walsh Child Protection and Safety Act created new federal anti-trafficking crimes and enhanced the penalties of the Mann Act. In December, the House of Representatives passed the William Wilberforce Trafficking Victims Protection Reauthorization Act by a vote of 405 to 2. The legislation modernizes and harmonizes existing federal laws against pimping to create a new set of criminal statutes, which will make the prosecution of sex-trafficking offenses easier and more efficient. It also creates a new international standard as a model for other countries. THE ANTI- ANTI-TRAFFICKING MOVEMENT Now the bill is in the Senate, where the same groups who opposed its passage in the House are rallying forces to derail it. Critics of the House-passed Wilberforce Act allege that it will "federalize" anti-trafficking efforts. The Washington Post claims it will send FBI agents on the "trail of pimps," and sources in the story claim it will cause all prostitutes to be considered victims of trafficking. Laurence E. Rothenberg, deputy assistant attorney general at the Office of Legal Policy, made a related charge before the House Judiciary Committee: "The federal government cannot prosecute every prostitution case." None of these objections holds water. In fact, FBI agents have been on the trail of pimps for decades, bringing down major prostitution rings and arresting sexual predators, particularly those that exploit children or work in organized networks. Last year, through the Department of Justice's Innocence Lost Initiative, which targets perpetrators of child sex trafficking, the FBI carried out 125 investigations that resulted in 308 arrests, 55 indictments, and 106 convictions of sex traffickers who exploited children. Most of these perpetrators were American pimps. Also, the reforms do not conflate pimping with prostitution. They target sexual predators — the recruiters and organizers of prostitution/sex trafficking operations who routinely brutalize and destroy the lives of young women and corrupt local communities. The proposed bill does not involve the federal government in non-pimping prostitution offenses. Sex-worker-rights groups and pimps, not surprisingly, also oppose the act. The Sex Workers Outreach Project and the Erotic Service Providers Union held a demonstration against the bill outside the office of Rep. Tom Lantos, the prime sponsor of the bill in the House before his death earlier this year. Most of the debate and misunderstanding of the Wilberforce Act is centered on the requirement of proving that "force, fraud, and coercion" compelled victims to engage in commercial sex acts. The TVPA "severe form of trafficking" statute requires the use of force, fraud, or coercion on an adult victim, while the Mann Act (the federal law against transporting a person across states lines for purposes of prostitution) does not require that the perpetrator to use force, fraud, or coercion. These statutes will be brought together in the criminal code to create two levels of sex trafficking: sex trafficking (without force, fraud, and coercion) and aggravated sex trafficking (with force, fraud, and coercion). Also, the Wilberforce Act will change the older Mann Act statute by eliminating its transportation-of-victims requirement — and substituting in the TVPA's "in or affecting interstate or foreign commerce" requirement. When transportation across state lines is not provable, prosecutors will no longer need to show brutality or acts of fraud, force, or coercion — such acts will increase the punishment of a pimp rather than being the sole basis of conviction. In addition, one of the biggest challenges to prosecuting cases of sex trafficking is getting victims to cooperate or testify against brutal pimps. These reforms will make it possible to bring multi-defendant cases against pimps. THE MESSAGE WE SEND When sex trafficking is a federal crime only when there is proof of force, fraud, coercion, or the exploitation of a minor, this encourages states in the U.S. and foreign governments to require high standards of proof for trafficking convictions. This type of law is supported by those favoring the legalization of prostitution. Currently, the TVPA sex-trafficking statute would be acceptable in the Netherlands, where prostitution is legal, because recruiting and exploiting women and men in prostitution is allowed as long as the victim can't prove that force, fraud, or coercion was used or the victim is not underage. By defining prostitute recruitment as sex trafficking, the Wilberforce Act will send a message that all pimping-related activities are illegal. In addition, the Wilberforce Act will create a new standard for the evaluation of countries' performance in combating sex trafficking. Called the "demand standard," countries will be assessed on whether they are making efforts to reduce the demand for commercial sexual activities. The Wilberforce Act doesn't introduce radical new laws, but

rather pulls together a century and a half of laws and approaches. It sets a new standard for the U.S. and a model for the world to oppose all forms of pimping. A broad coalition of groups recognizes the historic importance of this bill. In November, they organized a lobby day in the House that conveyed to members of Congress the passion and commitment with which they supported these measures. They are now preparing to campaign in the Senate to ensure the passage of this important bill.

Repealing the MANN act may solve on a national level but everyday surveillance of women doesn't stop post plan

Chemaly,14 ("Sexual Surveillance of Women is a Consequence of Conservative Norms, Not Liberal Social Mores" 11/13/2014 4:49 pm,http://www.huffingtonpost.com/soraya-chemaly/sexual-surveillance-of-women-is-a-consequence-of-conservative-norms_b_6141032.html, Accessed 7/16/15, EHS MKS)

We live in an increasingly voyeuristic culture that affects us all, but, it turns out that **girls and women are watched secretly, without their consent,** for male sexual pleasure, much more than most care to think about or admit. From girls and women who are being abused by spouses or fathers to women who have no idea at all who is watching them. **It happens to women in their apartments; in changing rooms; department store rest rooms; supermarket bathrooms; on public stairways and subway platforms; in sports arenas and locker rooms; in police stations and in classrooms while they teach**. Last Spring, a solider in the U.S. army faced charges for filming women cadets in showers. In July, Johns Hopkins Health System agreed to pay $190 million to 8,000 women and girls after it was revealed that a doctor, Dr. Nikita Levy, had filmed women during gynecological exams. He was a doctor there for 25 years. **He wore a pen-shaped camera and took more than 1,200 videos, including 62 cases involving minors.** During the same month, students at the University of Delaware, almost all female, were offered free counseling after it was revealed that male student had hidden video cameras in school bathrooms. He had more than **1,500 recordings**. Last month, a man in a café secretly set up a camera in a neighborhood restaurant's bathroom. Yesterday, it was a man arrested for secretly filming "people" on tanning beds in a Planet Fitness gym. Taken to another arena, what do people think non-consensual, invasive ultrasounds legally mandated for women by male-dominated state legislatures are**? These are pictures of women's bodies, taken against their will, for no good reason, in the exercise of traditional**, paternalistic male power. That these images are recategorized so that they are not considered coercive surveillance is a discriminatory slight of hand that comes with power. Betrayals like the one Freundel is charged with are particularly profound. As with cases involving sexual transgressions in the other conservative faiths, the military, schools and families, these intimate violations, perpetrated by a trusted authority figure, do particularly deep harm, not just to individuals, but to an entire community.

Women are surveyed in everyday life all the time- repealing the MANN act will do nothing to overcome the idea of the "male gaze"

AUTUMN **WHITEFIELD-MADRANO 13** ("I'll Be Watching You: NSA Surveillance and the Male Gaze", June 18, 2013, http://thenewinquiry.com/blogs/the-beheld/ill-be-watching-you-nsa-surveillance-and-the-male-gaze/, Accessed 7/17/15, EHS MKS)

I would give readers a quick 101 on the NSA surveillance scandal before I go on to make my point, but the fact is, I've got no facts. I saw the headlines, heard the occasional bits of cocktail party buzz, and saw a flurry of blog posts—which I skimmed at best, or skipped altogether—crop up in my RSS feed. And then, I shrugged. Apathy doesn't seem like the greatest reason to tune out of something that, intellectually and politically speaking, enrages me—or at least should enrage me, if rage were a rational response that arose upon provocation of our most deeply held beliefs. But there it is: In a country whose founding principles include freedom of expression, learning that the government is—what, reading our e-mails? listening to our phone conversations?—this citizen's response is meh. The longer this story has remained in the news, the

more bizarre my apathy seemed to me. Until it didn't. I began to wonder if the reason the NSA activities didn't upset me more on a visceral level, as opposed to an intellectual one, was that my default assumption of day-to-day experience was that I was being watched. Watched by Big Brother? Not so much. But being watched, observed, surveyed, seen? Yes. Welcome to what it's like to be a woman, gentlemen. Consider the headline of this excellent piece by Laurie Penny in New Statesman, spurred by the NSA revelations: If you live in a surveillance state for long enough, you create a censor in your head. It's an incisive, uncomfortable truth, and it's made all the more uncomfortable when coupled with one of my favorite passages from John Berger's Ways of Seeing: A woman must continually watch herself. … Whilst she is walking across a room or weeping at the death of her father, she can scarcely avoid envisaging herself walking or weeping. From earliest childhood she has been taught and persuaded to survey herself continually. … Men look at women. Women watch themselves being looked at. This determines not only most relations between men and women but also the relation of women to themselves. The surveyor of woman in herself is male: the surveyed female. Thus she turns herself into an object—and most particularly an object of vision: a sight. To conflate Penny and Berger: If you spend a lifetime housing your internal surveyor, you might not be terribly surprised when you find that there are external surveyors you hadn't considered. Not that women walk through our days consciously considering that men might be looking at us. In fact, that's part of the point: Being seen becomes such a default part of the way you operate that it ceases to be something you need to be actively aware of. Not that the cold slap of Hey, baby is ever so far away as to keep women truly unaware of the public dynamic surrounding gender. In urban areas (and plenty of non-urban areas too), we deal with street harassment so frequently that it begins to feel difficult to overestimate just how much we're actually being observed by passersby. The triumphant joke of the tinfoil-hat crowd rings frightfully true in the light of the NSA activities—just because you're paranoid, doesn't mean they're not after you—is yesterday's news to women. Am I actually being looked at—specifically by men, and specifically as a woman—every time I leave my house? Probably not. But the expectation or possibility of being seen has been there as long as I can remember. And the minute I think I've slipped out of the observation zone—by wearing a dowdy outfit that conceals my body, or simply by being in my own world for a moment—there's a catcall there to remind me that even if I'm not paranoid, that doesn't mean they're…not afterme (I hope!). But there, watching. I'm trying to think of how I'd process the news that our "for the people, by the people" government can invade our privacy anytime it damn well pleases, if I hadn't ever internalized the sensation of being observed. I imagine I'd be more surprised, for starters, but I also wonder if I'm asking the wrong question here. As humans, we love little more than to watch each other in a variety of ways (is TV anything other than controlled people-watching?). Men are observed too—differently than women are, but it's not like men are entirely unaware that they're being seen by others. Here I turn to Robin James, Ph.D., associate professor of philosophy at UNC Charlotte: "I'm thinking that (properly masculine, i.e. white, etc.) men experience surveillance in profoundly enabling ways," she wrote to me when I asked her to expand on a Twitter exchange we had. "[B]eing watched by someone who you know is your equal (that is, you watch them, they watch you in return) is what reaffirms both of your statuses as equals, as subjects, etc. If your gaze isn't returned in kind, that means you're not considered an equal, that you're not seen as a real member of society." All emphasis there is mine, and for a reason: The point isn't that women don't observe men, or that men don't observe one another, but that the quality of the gaze is different. I don't walk down the street and feel like I have less cultural weight than my male peers. But when you're 12—the age I was when I heard my first catcall from an adult man, and my young age here is hardly unusual—you do have less cultural weight, you do have less power. You learn early on to associate being observed for your femininity with powerlessness, and that's not an easy mind-set to shed. (Which is exactly why street harassment has long been an effective tool of oppression, but that's another story.) Broad strokes here: Men don't have that experience. Rather, they didn't until it came out that the National Security Agency—a greater power than virtually every man in the country—could watch you whenever they pleased. Here are a few of the things that may result for women from objectification, whether it comes from others or internally as a result of being objectified by others: Depression. Limiting one's social presence. Temporarily lowered cognitive functioning. (Of course, there are also suggestions that self-objectification may boost some women's well-being. Another day, another post.) When I look at these effects and compare them with where I'm at intellectually about the NSA privacy invasions—a shrinking of oneself versus righteous outward anger—I'm troubled. Would I feel more righteous anger if I hadn't learned to absorb, possibly to my personal detriment, the effects of objectification and tacitly accepted surveillance as something that just happens? And more importantly: Has the collective energy of women been siphoned into this realm, leaving us less energy for, as they say, leaning in? I'm not saying that just because women might be used to being watched by men means that we're inherently blasé about being watched by governmental bodies; in fact, I'm guessing some women are more outraged than they would be if they were male, even if they're not directly connecting that outrage with womanhood. (Also, I don't believe the male gaze to be wholly responsible for my indifferent reaction here; it's just the one that's relevant.) Let's also not forget that 56% of Americans deem phone surveillance as an acceptable counterterrorism measure. And I'm certainly not saying that we shouldn't be

concerned about the NSA revelations; we should. But not only are women more used to being watched, we also have a worldwide history of dealing with our governments jumping in where they don't belong. It feels invasive whether that space is our phone line or our uterus. It just might not feel all that surprising.

Zero day

BACKDOOR CARDS WORK FOR THIS TOO

Only businesses can solve—government solutions take too long

Spink Adrian Spink No date ("What are Java Zero-Day Attacks and How Can They Affect You?", NO DATE, http://www.findtheedge.com/general/what-are-java-zero-day-attacks-and-how-can-they-affect-you, accessed 7/16/15)

Secuity-Measures-NeededRecent months have seen a procession of Java zero-day attacks impact a wide variety of organisations. Simply put, zero-day attacks occur when a problem with a piece of software is discovered and exploited before the developer is even aware that there is an issue. Facebook, Apple, Twitter and Microsoft have all recently disclosed compromised computers, and many more firms have been hit but not gone public with the information. The very nature of a zero-day attack means your systems could be vulnerable in the period between the exploit being identified and the patch being deployed by Oracle, the owners of Java. It's unlikely we've seen the last of these exploits; Java's rich programming language wasn't designed for a hostile Internet environment, so it's likely more vulnerabilities will be uncovered. There are also many other products running on our desktops that could be susceptible to this style of attack, as has been shown by the recent Internet Explorer zero-day issues. Traditional anti-virus and perimeter security techniques do not offer complete protection – for this reason, organisations need to review their risk exposure, and plan their responses accordingly. So what practical advice can we offer: 1. Remove Java? While many security experts recommend the seemingly straightforward solution of disabling or removing Java from browsers, but this is not always practical. Some firms will be dependent on Java to run both internal and third party applications. For large organisations, the cost and logistics of ensuring Java is disabled for every browser may be prohibitive. Many browsers now offer the ability to control how Java is handled, however, and the latest version of Java has enhancements to the control panel settings that may offer you a solution with a little tweaking. 2. Maximise your end-point security Anti-virus solutions will protect you from the most common exploits once they have been identified, but it's even more important to ensure: You have full coverage across all your end-points Security updates are installed on all endpoints quickly You have 'zero-day' and 'Host Intrusion Prevention' features enabled 3. User Awareness Educating your users about the potential risks, and how to avoid phishing attacks, is a great way to reduce your exposure. 4. Protect your critical information assets In the longer term, 'advanced persistent threats' are likely to increase. Firms need to ask themselves – while making the assumption that their network will be breached at some point in the future – what additional measures could be taken to protect critical information assets in advance, and limit damage. Summary **Zero day attacks are inevitable**, so buisnessess need to take steps to protect their data and systems well ahead of time. It's tempting to put off thinking about these issues, but this is only likely to magnify the amount of damage caused if your system is targeted in the future.

NSA

Reforms fail – the NSA will circumvent

Greenwald 14 (Glenn, lawyer, journalist and author – he founded the Intercept and has contributed to Salon and the Guardian, named by Foreign Policy as one of the Top 100 Global Thinkers of 2013, "CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD", https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/)

All of that illustrates what is, to me, the most important point from all of this: the last place one should look to impose limits on the powers of the U.S. government is . . . **the U.S. government**. Governments don't walk around trying to figure out how to limit their own power, and **that's particularly true of empires**. The entire system in D.C. is designed at its core **to prevent real reform**. This Congress is not going to enact anything resembling fundamental limits on the NSA's powers of mass surveillance. **Even if** it somehow did, this White House would never sign it. **Even if** all that miraculously happened, the fact that the U.S. intelligence community and National Security State **operates with no limits and no oversight** means they'd easily **co-opt the entire reform process**. That's what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA "oversight" court—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and "Dutch" Ruppersberger, while the court quickly became a **rubber stamp** with **subservient judges** who operate in total secrecy. Ever since the Snowden reporting began and public opinion (in both the U.S. and globally) began radically changing, the White House's strategy has been obvious. It's vintage Obama: **Enact something that is called "reform**"—so that he can give a pretty speech telling the world that he heard and responded to their concerns—but that in actuality changes almost nothing, **thus strengthening the very system he can pretend he "changed."** That's the same tactic as Silicon Valley, which also supported this bill: Be able to point to something called "reform" so they can trick hundreds of millions of current and future users around the world into believing that their communications are now safe if they use Facebook, Google, Skype and the rest. In pretty much every interview I've done over the last year, I've been asked why there haven't been significant changes from all the disclosures. I vehemently disagree with the premise of the question, which equates "U.S. legislative changes" with "meaningful changes." But it has been clear from the start that **U.S. legislation is not going to impose meaningful limitations on the NSA's powers of mass surveillance,** at least not fundamentally.

Private surveillance industry will continue post-plan

Mead, 2013

(Derek is an editor-in-chief for the Motherboard- a news company. "Mass Surveillance Is Big Business: Corporations Are as Good at Spying as Governments." http://motherboard.vice.com/blog/mass-surveillance-is-big-business-corporations-are-as-good-at-spying-as-governments. Date Accessed- 7/14/15. Anshul Nanda.)

Data is the currency of surveillance, and it's **not just the NSA and GCHQ looking to cash in**. As a newly released cache of **documents and presentation materials highlights, the private surveillance industry is booming**. More shocking is that many firms claim in their own corporate PowerPoints that they've got capabilities that rival that of the government giants.¶ The document trove, called the Surveillance Industry Index (SII) and released by Privacy International, and contains 1,203 documents from 338 companies in 36 countries, all of which detail surveillance technologies. Some advertised capabilities are astounding: A firm named Glimmerglass, which produces monitoring and repair equipment for undersea cables, touts in a brochure that its equipment enables "dynamic selection and distribution of signals for analysis and storage."¶ Another firm, Elaman, advertises its line of FinFisher IT intrusion products in another brochure. It reads like any other brochure for tech products, with Elaman stating that the "FinFisher product suite [aids] government agencies in collecting critical IT information from target computers." The system is designed for anyone to use, the company says; all users have to do is insert a USB dongle into a target computer and, after a "short period of time," it will "extract information like usernames and passwords, e-mails, files, and other critical system and network information from Windows systems."¶ **That private companies are developing advanced data-gathering and monitoring technology should come as no surprise**, especially **when the NSA's reliance on private contractors in the development of its own surveillance tech is well documented.** The surveillance industry, like many other sectors of the massive private industry that supports law enforcement and governments worldwide, is driving the state of the art forward. But what is surprising is how open the industry actually is.¶ **As Privacy International notes in its announcement of the SII, much of its documents are from its "collection of materials and brochures at surveillance trade shows around the world**," as well as information from Wikileaks and Omega Research Foundation. Surveillance companies are businesses, too, and like weapons manufacturers who try to drum up business at major weapons expos like Sofex, the surveillance industry has its fair share of trade shows and glossy, superlative-laden promo materials.¶ A screenshot from one linked document¶ Of course, that world isn't open to average consumers, which is why SII—and previously, Wikileaks' Spy Files, among others—is eye-opening. What's even more concerning than systems that guarantee "complete data inflow from all networks" is who's buying it. And while all the brochures I've read so far are careful to specify that surveillance tech is only for legal data collection, "legal" is a very fluid term worldwide.¶ **Governments have increasingly relied on data collection to hold onto pow**er, and as our own Meghan Neal detailed a few months ago, the surveillance needs of dictators continue to be served by American companies despite embargoes. During the Arab Spring, **surveillance and internet control were major tools used by governments to try to control dissent; most recently**, Sudan hit the internet kill switch in order to limit the spread of anti-government info online.¶ The **flip side of that control is preemptive surveillance and data collection.** And while data-driven law enforcement is currently in vogue in the West—a privacy battle all its own—the **capabilities available on the thriving private surveillance market are also available for regimes worldwide to crush encroachment in their power**.¶ There's a very good reason that the UN High Commissioner called privacy a human right earlier this year: The vast tools available to people with enough money and network access are more capable of accessing private information than ever before. And unless local laws say otherwise—what laws that haven't been circumvented or changed, that is—there's no oversight of what someone might monitor.¶ "**There is a culture of impunity permeating across the private surveillance market, given that there are no strict export controls on the sale of this technology**, as there on the sale of conventional weapons," Matthew Rice, a research consultant with Privacy International, told The Guardian. "This market profits off the suffering of people around the

world, yet it lacks any sort of effective oversight or accountability.¶ So when a company advertises that its technology can rip phone call content straight off a cell network, it's doing so with a sense of agnosticism. A firm might not sell tech to some guy off the street, but when a guy like Moammar Gadhafi wants to pick up a bunch of surveillance tech, foreign markets say yes.¶ Again, aside from economic embargoes and the like, the use of such technology is regulated by local laws, and spying on political rivals or everyday folks may be legal, depending on where it's used. It's a nice sentiment for firms looking to profit off of surveillance. But for private citizens worldwide, and especially those living under the most oppressive governments, the elimination of privacy is surely a dangerous trend.

Legislation limiting surveillance provides cover to continue surveillance- Freedom Act proves

Groll 15

Elias Groll, an assistant editor at Foreign Policy. A native of Stockholm, Sweden, he received his undergraduate degree from Harvard University, where he was the managing editor of The Harvard Crimson, "Congress May Have Passed the Freedom Act, But Mass Surveillance Is Alive and Well", *FOREIGN POLICY,* http://foreignpolicy.com/2015/06/04/congress-may-have-passed-the-freedom-act-but-mass-surveillance-is-alive-and-well/, 06/04/15//SRawal

One useful way to think about the USA Freedom Act that President Barack Obama signed into law on Tuesday night is as a lightning-rod for the National Security Agency. **By changing the way the NSA examines domestic phone records, the agency is now able to make the argument that it has undergone significant reforms in the aftermath of the Edward Snowden revelations**. **By giving up the authority to collect all American phone records, the agency has paid a small price — and gotten rid of a program that it had come to consider a burden, anyway — to keep its most important authorities intact**. The full measure of those powers were on prominent display in the New York Times on Thursday, when the paper reported that **the agency has expanded its "warrantless surveillance of Americans' international Internet traffic to search for evidence of malicious computer hacking**." **The NSA**, the paper reported, **has also partnered with the FBI to provide federal investigators with intelligence about computer intrusions carried out by foreign powers**, according to documents provided by Snowden. There is no evidence of outright wrongdoing in Thursday's reports, but they signal another expansion of the NSA's authorities to collect data on the Internet. Sen. Patrick Leahy, the Vermont Democrat and ranking member of the Judiciary Committee, said Thursday's report "underscores the critical importance of placing reasonable and commonsense limits on government surveillance in order to protect the privacy of Americans" and that "Congress should have an open, transparent and honest debate about how to protect both our national security and our privacy." Jonathan Mayer, a cybersecurity researcher, told the Times that FBI use of NSA data to combat cybercrime threatens to conflate the latter's intelligence gathering role with the former's law enforcement mandate. "That's a major policy decision about how to structure cybersecurity in the U.S. and not a conversation that has been had in public," he said. In short, the Times report, which was published in conjunction with ProPublica, reveals that **the NSA has directed some of its most powerful tools toward cracking down on state-sponsored hackers online. The agency now has the power to search the data streams it has access to for snippets of code and other identifying information to spot hackers and track their activities.** It is doing so by relying on one of its most important tools: Its position atop the global Internet infrastructure. **The NSA has risen to become the world's most powerful intelligence agency in no small part because a huge amount of the world's Internet traffic flows through the United States.** Fiber optic cables carry large amounts of Internet data from one part of the world to another, and when that traffic arrives in the United States, the NSA is there to have a look at it. Section 702 of the FISA Amendments Act governs parts of the NSA's relationship with U.S. telecommunications companies, and it is through such companies that the NSA is able to access enormous troves of data for terrorism and foreign intelligence purposes.

The NSA justifies increased surveillance based on secret law- impossible to stop circumvention

Ackerman 15

Spencer Ackerman, national security editor for Guardian US. A former senior writer for Wired, he won the 2012 National Magazine Award for Digital Reporting, 6-1-2015, "Fears NSA will seek to undermine surveillance reform," *Guardian*, http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law//SRawal

Privacy **advocates fear the National Security Agency will attempt to weaken new restrictions on the bulk collection of Americans' phone and email records with a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday. The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret. Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point**. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act. Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions on bulk phone records collection by taking an expansive view of the bill's definitions**, thanks to a pliant, **secret surveillance court**. "My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]," Paul said on the Senate floor on Sunday. Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform. "**My time on the intelligence committee has taught me to always be vigilant for secret interpretations of the law and new surveillance techniques that Congress doesn't know about," Wyden, a member of the intelligence committee, told the Guardian. "Americans were rightly outraged when they learned that US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens. The American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind.**" The USA Freedom Act is supposed to prevent what Wyden calls "secret law". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance. Yet in recent memory, **the US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004**. Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, **an internal NSA draft history records that attorneys found a different legal rationale that "essentially gave NSA the same authority to collect bulk internet metadata that it had"**

Body Cavity Searches

No Enforcement/Legal Redress

No enforcement in prisons—sexual violence allowed to continue
Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW,* http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 44-48//SRawal

In the United States, **sexual abuse by guards in women's prisons is so notorious and widespread that it has been described as "an institutionalized component of punishment behind prison walls."**1 **Women in prisons2 across the United States are subjected to diverse and systematic forms of sexual abuse: vaginal and anal rape; forced oral sex and forced digital penetration; quid pro quo coercion of sex for drugs, favors, or protection; abusive pat searches and strip searches; observation by male guards while naked or toileting; groping; verbal harassment; and sexual threats**.3 Guards and prisoners openly joke about prisoner "girlfriends" and guard "boyfriends." Women prisoners become pregnant when the only men they have had contact with are guards and prison employees; often they are sent to solitary conªnement—known as "the hole"—as punishment for having sexual contact with guards or for getting pregnant.**4 Such open and obvious abuses would seem relatively easy for a prison administration to detect and prevent if it chose to do so**. **Prisons owe an afªrmative legal duty to protect their inmates against abuse.5 Congress and forty-four states have criminalized all sexual contact between guards and prisoners, regardless of consen**t.6 **Nonetheless, within women's prisons guards routinely commit serious sexual offenses against the women in their custody**. **Government administrators know that such abuse is occurring**7 and acknowledge their duty to prevent it.8 However, **they have generally neglected to do much about it**, as **most prisons have failed to adopt institutional and employment policies that effectively prevent or reduce custodial sexual abuse**.9 In most workplaces, an employee who had sex on the job would be ªred. In prison, **a report of custodial sexual abuse is more likely to result in punishment or retaliation against the prisoner than in disciplinary consequences for the guard.**10 **One might expect the law to furnish incentives for prisons to control such unlawful acts by their employees,** as it does for other civil defendants**. It does not**.11 Instead, as I demonstrate in this Article, a network of prison law rules—the Prison Litigation Reform Act of 1995 ("PLRA"),12 governmental immunities, and constitutional deference— work together to confer near-complete immunity against prisoners' claims. In the United States, both male and female prisoners are stereotyped as black;13 more than two thirds of women in U.S. prisons are African American or Latina.14 In this Article, I consider how the gendered racialization of women prisoners informs legal and institutional indifference to their treatment in prison. Like black women under slavery,15 **women in contemporary prisons are subjected to institutionalized sexual abuse, while the law refuses to protect them or provide redress.**

No enforcement of prison reform laws- video-taping strip searches and inadequate mental health services prove
Trounstine 14

Jean Trounstine, author/editor of five published books and many articles, professor at Middlesex Community College in Massachusetts, and a prison activist, 9-10-2014, "Videotaping Strip Searches in Jail Is Not Reform," *Truthout*, http://www.truth-out.org/opinion/item/26098-videotaping-strip-searches-in-jail-is-not-reform#//SRawal

Much has been written about Sheriff Michael J. Ashe of Hampden County as a heralded criminal justice reformer. Most recently the Massachusetts Attorney General candidate, Warren Tolman, claimed support of Ashe with these words,"Sheriff Ash**e has been a leader in the Commonwealth on finding ways to rehabilitate, treat mental illness and be proactive in instituting criminal justice**

reforms." Even Judge Michael Ponser, the judge who ruled that Sheriff's Ashe's deplorable policy of **videotaping strip-searches in the women's prison in Chicopee was "unconstitutional**," also noted that Ashe has a good reputation running the county's jails in the Conclusion to his Decision. But Debra Baggett**, the plaintiff** in the class-action case for 178 former and current detainees at the Chicopee jail **has much to say about the place where 274 strip searches were videotaped**. The lawsuit was filed by the law offices of Howard Friedman in 2011 against Sheriff Michael J. Ashe and Assistant Superintendent Patricia Murphy of the Western Massachusetts Regional Correctional Center in Chicopee and it contended that the searches violated the Fourth Amendment which protects citizens from unreasonable searches and seizures. **These tapes, began in** mid-September **2008,** and according to the suit, **68 percent of them show "some or all of the women's genitals, buttocks, or breasts."** Per Friedman's law office website, "From September 15, 2008 to May 20, 2010, **males held the camera for about 70% of the strip searches."** And the gender of the camera holder is not irrelevant in spite of the fact that men were supposed to have their backs to the prisoners during the videotaping. As the judge pointed out, "If you're going to videotape something, it's awfully hard not to view it." **The jail contended that these videotapes were used for safety reasons and to document a "potentially dangerous move"** from general population to the segregation unit. But as David Milton, an attorney for the women, said of the jail, in a telephone interview, "No one couldn't identify a single place in the country that videotaped strip searches." Baggett, who is now living in Alabama, said that to her, **the policies at Chicopee certainly didn't look so progressive**. She explained that "Seg" or the **Segregation Unit was "multi-function;" in other words, it was used to isolate women with behavioral issues and supposedly to prevent those with mental health issues from suicide.** Baggett said to me, imagine being a woman who had just lost her daughter or someone who had been raped a few hours before her arrest—both cases which occurred during her jail stay in Seg—and imagine how distraught you might be. Then imagine a jail that decides to handle such women with strip searches after they have been transferred from general population to Seg. From Think Progress, These searches required a woman to "run her fingers through her hair, remove dentures if she wore them, raise both arms, lift her breasts, lift her stomach for visual inspection if she had a large mid-section, and remove any tampon or pad if she were menstruating. She was then required to turn around, bend over, spread her buttocks, and cough." Then imagine being videotaped during those searches. **Videotaped, because the jail contended this was a necessity to stop possible infractions.** In two phone interviews, Baggett was very open about the fact that **a "Mental Health person was almost non-existent**" in her experience in Seg. **She never once saw a psychiatrist** while she was there**. She said that medication for her mental health issues was taken away when she entered WCC and she had a severe withdrawal from being without it that led to restraints and pepper spray. She said this kind of treatment exacerbated the issues that she suffered from.**

Abuses will continue- prisoners can't effectively access legal redress Buchanan 07

Kim Shayo Buchanan, Associate professor of Law and Gender Studies at USC Gould School of Law who specializes in constitutional law, international and comparative human rights law, prisoners' rights, reproductive rights, race, gender and sexuality, "Impunity: Sexual Abuse in Women's Prisons", *HARVARD LAW REVIEW,* http://www.law.harvard.edu/students/orgs/crcl/vol42_1/buchanan.pdf, Vol 42, 2007, pp. 70-73//SRawal

With few, if any, exceptions, prisoners' civil claims against correctional authorities for toleration of sexual abuse have succeeded only when a large number of women testify to widespread abuses, and some guard witnesses break ranks to corroborate the prisoners' accounts that severe custodial sexual abuse was both widespread and publicly known within the prison.199 When prison administrators seek to restrict male guards' access to women prisoners in order to protect the prisoners against sexual abuse, courts generally have upheld these institutional policies against guards' employment discrimination claims,200 at least at the appellate level.201 However, **when a prisoner brings civil claims on her own behalf, they are generally screened out or rejected.**202 Indeed, **one commentator argues that juries are so reluctant to award any damages to prisoners that they will not on basis that prisoner was "not credible" because she had formed a "plan" to get a transfer by reporting sexual activity with corrections officers; the court** found some of this activity not to have happened because it was uncorroborated, and **stated that other activity "could only reasonably be described as consensual**" because the prisoner "never tried to caught [the guards] off, scream, or yell"). 70 Harvard Civil Rights-Civil Liberties Law Review [Vol. 42 do so unless they believe the defendant has acted with such malice that punitive damages are appropriate.203 Even when prisoners are able to prove that they have been raped, juries may tend to "lowball prisoners' nonwage damages as an expression of disregard for them."204 For example, in Morris v. Eversley, 205 a jury convicted a guard of sexually assaulting a female prisoner based on DNA evidence. **A civil jury awarded the prisoner only $500 in compensatory damages and $7,500 in punitive damages.2**06 The district court judge found the verdict generally inadequate, and

ordered a new trial. The new jury awarded $1,000 for compensatory damages and $15,000 for punitive damages. The judge, apparently frustrated by this paltry award, wrote: I was bafºed that the ªrst jury awarded such low amounts, and yet **the second jury did not award much more**. **It is hard to imagine that Morris could be made whole for the damages she suffered, including the loss of her dignity, by a mere $500 or $1,000 in compensatory damages**. . . . **[A] prisoner**, even a former prisoner, **is unable to recover a fair measure of damages**.207 **Such inadequate jury awards reºect the discredited prejudicial racial and gender stereotypes by which low-status women, especially black women, prostitutes, and prisoners, are viewed as less likely to be harmed by sexual assault**. Outside of the prison context, damage awards for sexual assault are typically much higher**. A recent survey of civil actions for sexual assault resolved in state appellate courts between 2001 and 2004 found that damage awards in sexual assault cases outside prison can range from nothing to well over one million dollars**. But in cases involving institutional liability, "a signiªcant number of cases award compensatory damages of $100,000 to $200,000." Ellen M. Bublick, Tort Suits Filed by Rape and Sexual Assault Victims in Civil As Bublick observes, "[i]nadequate damage awards may be a particular issue when the victim and the assailant are acquaintances or partners," as they are by deªnition in cases of custodial sexual abuse 1. **The Prison Litigation Reform Act The Prison Litigation Reform Act209 ("PLRA") was expressly designed to deter prisoner lawsuits**. It was introduced in 1995 to respond to congressional concern about the dramatic increase in prisoner litigation between 1980 and the mid-1990s—an increase that, as commentators have noted, coincided with a dramatic increase in the incarcerated population in the United States.210 **The PLRA was not intentionally designed to block lawsuits for custodial sexual abuse; rather, it was designed to address the perceived problem of jailhouse lawyers who brought frivolous lawsuits**. In 1995, during the Senate debate over the bill, Senator Bob Dole cited a notorious prisoner lawsuit in which a prisoner complained that the prison served chunky, rather than creamy, peanut butter.211 Numerous other frivolous suits, such as claims arising from an unsatisfactory prison haircut and a desire for a particular brand of sneakers, were also used during the PLRA debates as examples of the pressing need for special barriers to prisoner litigation.212 During the congressional debates, Senator Joe Biden pointed out that the PLRA would erect "too many roadblocks to meritorious prison lawsuits."213 He urged Congress not to "lose sight of the fact that some of these lawsuits have merit—some prisoners' rights are violated."214 Senator Biden pointed out that hundreds of women prisoners had been sexually abused by dozens of guards, openly and for years, in Washington, D.C., prisons. He noted that this practice changed only after their class action was successful.215 Despite Senator Biden's warnings, no amendment was adopted to protect the right of prisoners to sue in the event of sexual abuse by guards. The PLRA is a status-based law that excludes almost all prisoner claims from the courts.216 Like historical doctrines designed to deter rape average sentence given to Black women's assailants is two years. The average sentence given to white women's assailants is ten years." Crenshaw, Sexual Harassment, supra note 44, at 1471. complainants, black witnesses, and married women from bringing white men to court, the PLRA establishes unique hurdles that are nearly impossible for prisoner plaintiffs to overcome. The most damaging hurdle imposed by the PLRA is its grievanceexhaustion requirement.217 Like the marital privacy doctrine that excluded wives' claims from the courts in order to protect "family government,"218 this provision values the peace of mind of those in power over the safety of those who are in their custody. **The grievance-exhaustion provision requires inmates to exhaust internal prison grievance procedures before they may bring their claims to an outside authority, even if the procedures are complex, ineªcient, unfair, or incapable of offering a remedy for the prisoner's claim.219 If the prisoner has failed to do so, the litigation is dismissed**. **Thus a prison is virtually insulated from prisoner litigation to the extent that its grievance process is complex and time-consuming, its deadlines for ªling a grievance are brief,220 and the threat of retaliation deters prisoners from using the process at all**. In practice the grievance-exhaustion requirement "invites technical mistakes resulting in inadvertent noncompliance with the exhaustion requirement, and bar[s] litigants from court because of their ignorance and uncounselled procedural errors."221 Unreasonably quick grievance deadlines evoke the "fresh complaint" requirements of traditional rape doctrine.222 In New York, for example, the Department of Corrections imposes a fourteen-day limit for ªling any prisoner grievance, unless the grievance authority determines that "mitigating circumstances" justify the delay.223 If a **prisoner is in a "consensual" sexual relationship with a guard, she is unlikely to express a grievance until well after the guard becomes threatening or abusive, thus missing the deadline**.224 If she misses the grievance deadline, her litigation is dismissed**. Furthermore, prison grievance procedures offer no prospective relief to protect the prisoner before she is raped**. If a guard has merely threatened to assault the prisoner, offered a quid pro quo for sex, or groped her— or if she did not think to preserve a DNA sample during her rape—the grievance process will do nothing.225 Even though ªling a grievance is futile in such circumstances, **the PLRA still requires the prisoner to report the abuse to her abuser's colleagues through an often-humiliating disciplinary procedure**226 **that is likely to result in retaliation**. In addition to its grievance-exhaustion requirement, **the PLRA further hinders prisoner litigation by prohibiting any prisoner lawsuit "without a prior showing of physical injury**."227 Some courts have raised this barrier even further by requiring that the physical injury be at least as serious as an injury that would meet the Eighth Amendment's "de minimis harm" requirement.228 **Presumably, vaginal or anal rape would sufªce**.229 On its face, however, **the physical injury requirement appears to bar prisoner claims for sexual abuse if no physical injury results**.230 For example, the text of this provision

appears to bar claims that a prisoner was forced to perform or submit to oral sex, was digitally penetrated, or was coerced into sexual compliance through threats or inducements without a beating.

Drones

No Enforcement

***There is no enforcement of drone regulation

Kinane 15

Ed Kinane, activist with the Upstate Drone Action, 2-17-2015, "'Concerns over domestic drones: spying, civil liberties' abuse & accidents'," *RT English*, http://www.rt.com/op-edge/233043-commercial-drones-intelligence-agencies-abuse//SRawal

I think we should be very concerned about the abuse of the drones for surveillance. Already we have US intelligence agencies like the FBI, NSA gathering enormous amounts of surveillance data with very little control over them. And we've seen that our intelligence agencies don't necessarily respect out laws regarding these matters. Trying to enforce regulations is very difficult especially when you go up against the NSA, the National Security Administration, or the FBI, or Homeland Security. There is very little in the way of enforcement. The FAA, the Federal Aviation Administration, is already stretched very thin. And it's not their function to be enforcing the rules and regulations, and they don't have the means to do it. It is a very risky situation we're going into…We would have many drones in the air probably... how do we know which ones are doing what? It would give very good cover to spy drones because we're just used to spy drones because we're just used to seeing drones in the air. So we don't think of it when we see drones that really are performing functions that are very inappropriate for them.

Local Police will Use

Drone use would continue- local police and commercial drones
Nelson 15

Steven Nelson, reporter at U.S. News & World Report, 2-24-2015, "FAA Wants Local Cops to Be Drone Police," *US News & World Report*, http://www.usnews.com/news/articles/2015/02/24/faa-wants-local-cops-to-be-drone-police//SRawal

See this peeking in your window? You can't shoot it, a federal official said Tuesday**. State and federal officials droned on Tuesday about rules for increasingly popular unmanned aircraft.** Federal Aviation Administration official Mark Bury told dozens of state attorneys general at an event in the nation's capital that his agency needs help enforcing federal rules on drones**. "We're hoping that moving forward we'll be able to enlist the assistance of local law enforcement in gathering information about operations of unmanned aircraft that violate our regulations,"** said Bury, the FAA's assistant chief counsel for regulations, during a panel discussion. "**We simply don't have the manpower,"** he said. Last week, the FAA released proposed rules for commercial drones under 55 pounds. If adopted**, the rules would require licenses – issued after knowledge tests and valid for two years – to use the aircraft and mandate that operators keep the drones within eyesight and under 500 feet**. Some rules are already in place that affect use of small drones. **Temporary air restrictions above stadiums hosting large events, for example, already apply.** Drones can perform an ever-expanding list of tasks, and safeguards for privacy and public safety are only now catching up. **Many possible applications of drones aren't regulated**. Mississippi Attorney General Jim Hood, who repeatedly solicited new hunting buddies during this week's National Association of Attorneys General meeting, asked about using the aircraft to pursue prey. **Bury told Hood the FAA considered the issue but doesn't have a strong regulatory interest. "From [the FAA's] perspective, if installation of a weapon, camera, whatever … if safe operation is not implicated, we don't really have an interest,"** he said.

Other Aerial Surveillance

Plan fails- law enforcement would move to powerful aerial surveillance cameras Timberg 14

Craig Timberg, national technology reporter for The Post, 2-5-2014, "Get the feeling you're being watched? These eyes in the sky can track every person, vehicle in an area for hours.," *Washington Post*, http://www.washingtonpost.com/business/technology/new-surveillance-technology-can-track-everyone-in-an-area-for-several-hours-at-a-time/2014/02/05/82f1556e-876f-11e3-a5bd-844629433ba3_story.html//SRawal

DAYTON, Ohio — Shooter and victim were just a pair of pixels, dark specks on a gray streetscape**. Hair color, bullet wounds, even the weapon were not visible in the series of pictures taken from an airplane flying two miles above**. But what the images revealed — to a degree impossible just a few years ago — **was location, mapped over time**. Second by second, **they showed a gang assembling, blocking off access points, sending the shooter to meet his target and taking flight after the body hit the pavement**. When the report reached police, **it included a picture of the blue stucco building into which the killer ultimately retreated**, at last beyond the view of the powerful camera overhead. "I've witnessed 34 of these," said Ross McNutt, the genial president of Persistent Surveillance Systems, which collected the images of the killing in Ciudad Juárez, Mexico, from a specially outfitted Cessna. "It's like opening up a murder mystery in the middle, and you need to figure out what happened before and after." As Americans have grown increasingly comfortable with traditional surveillance cameras**, a new, far more powerful generation is being quietly deployed that can track every vehicle and person across an area the size of a small city**, for several hours at a time. **Although these cameras can't read license plates or see faces, they provide such a wealth of data that police, businesses and even private individuals can use them to help identify people and track their movements**. Already, the cameras have been flown above major public events such as the Ohio political rally where Sen. John McCain (R-Ariz.) named Sarah Palin as his running mate in 2008, McNutt said. They've been flown above Baltimore; Philadelphia; Compton, Calif.; and Dayton in demonstrations for police. They've also been used for traffic impact studies, for security at NASCAR races and at the request of a Mexican politician, who commissioned the flights over Ciudad Juárez**. Defense contractors are developing similar technology for the military, but its potential for civilian use is raising novel civil liberties concerns. In Dayton, where Persistent Surveillance Systems is based, city officials balked last year when police considered paying for 200 hours of flights, in part because of privacy complaints.**

The police keeps the new powerful aerial surveillance secret Smith 14

Ms. Smith, 4-15-2014, "Record and rewind: Cops quietly test aerial surveillance to track crime," *Network World*, http://www.networkworld.com/article/2226742/microsoft-subnet/record-and-rewind--cops-quietly-test-aerial-surveillance-to-track-crime.html//SRawal

Because America apparently isn't enough of a surveillance society, and **aerial surveillance only works if it is "looking at the right spot," cops have been testing a new wide-area surveillance system that can watch, record and rewind every outdoor activity that happens in a city, every person, every car and every crime.** It "is something of a time machine - the entire city is filmed and recorded in real time," reported The Center for Investigative Reporting (CIR). "Imagine Google Earth with a rewind button and the ability to play back the movement of cars and people as they scurry about the city." Retired Air Force veteran Ross **McNutt previously helped build a wide-area surveillance system that provided the military with a "360-degree eye in the sky**" to "hunt down bombing suspects in Iraq and Afghanistan." Although it wouldn't seem like there's a huge need to hunt down terrorists from above in the United States, McNutt, the creator of Ohio-based Persistent Surveillance Systems, **decided law enforcement in the U.S. also needed such "gaming-changing" surveillance capabilities.** Instead of needing such powerful surveillance to track suspected terrorists, **the Los Angeles County Sheriff's Department used it to track necklace-snatchers, thieves similar to purse-**

snatchers, except they were stealing necklaces. PSS high-resolution surveillance cameras were fitted to the belly of small plane, giving the police the power to literally watch the entire city of Compton, CA. CIR said of the sample image**: "Persistent Surveillance Systems' technology captures in real time a necklace snatching and the getaway car that was involved**." Those aerial cameras can "record a 25-square-mile patch of Earth constantly-for up to six hours." Although the aerial surveillance isn't as powerful as the unblinking, all-seeing 1.8-gigapixel camera of DARPA's ARGUS-IS, McNutt believes that in a few years, the **technology will be able to cover an area about "as large as the entire city of San Francisco."** He told Gizmodo that his PSS system is like a "live version of Google Earth, only with TiVo capabilities." "Our whole system costs less than the price of a single police helicopter and costs less for an hour to operate than a police helicopter," McNutt told CIR. "But at the same time, it watches 10,000 times the area that a police helicopter could watch." Why hadn't the citizens of Compton heard of the aerial surveillance? **L.A. County Sheriff's Sgt. Doug Iketani told CIR, "The system was kind of kept confidential from everybody in the public. A lot of people do have a problem with the eye in the sky, the Big Brother, so in order to mitigate any of those kinds of complaints, we basically kept it pretty hush-hush."**

Businesses sell info

Businesses will use drones for surveillance

Ray **Henry, 7-6**-2015, "Utility companies look to use drones for surveillance, equipment inspection," SecurityInfoWatch, http://www.securityinfowatch.com/news/14026747/utility-companies-look-to-use-drones-for-surveillance-equipment-inspection

Power **companies across the United States are testing** whether small **drones** can spot trouble on transmission lines or inspect equipment deep inside hard-to-reach power plant boilers. That's just for starters. Researchers and industry executives predict **the drones could provide security surveillance** to deter vandalism on remote gear and make it safer for utility workers to climb poles and towers. **One of the country's largest power companies, Southern Co., says it hopes drones can eventually** identify storm damage in the Southeast and **allow it to increase its routine inspections. About a dozen utility or service companies have sought permission to use drones for similar purposes.**

Business use drones
Whitlock 14

Craig Whitlock, covers the Pentagon and national security. He has reported for The Washington Post since 1998, 10-16-2014, "FAA rules might allow thousands of business drones," Washington Post, https://www.washingtonpost.com/world/national-security/faa-releases-proposed-rules-for-domestic-drone-use/2015/02/15/6787bdce-b51b-11e4-a200-c008a01a6692_story.html//SRawal

Thousands of businesses could receive clearance to fly drones two years from now under proposed rules that the Federal Aviation Administration unveiled Sunday, a landmark step that will make automated flight more commonplace in the nation's skies. Meanwhile, the White House on Sunday issued presidential directive that will require federal agencies for the first time to publicly disclose where they fly drones in the United States and what they do with the torrents of data collected from aerial surveillance. Together, **the FAA regulations and the White House order provide some basic rules of the sky that will govern who can fly drones in the United States and under what conditions, while attempting to prevent aviation disasters and unrestrained government surveillance**. **The FAA's draft rules would make it relatively simple for real estate agents, aerial photographers, police departments, farmers and anyone else to fly small drones for work purposes. Operators** would need to pass a written proficiency test, register the drone and pay about $200 in fees — but **would not have to obtain a regular pilot's license or demonstrate their flying skills.** The long-awaited regulations — **the FAA had been drawing them up for several years — are expected to lead to a revolution in commercial aviation.** But they must first undergo a lengthy period of public review and comment that is projected to take at least until early 2017. Once the rules are finalized, **the FAA estimates that more than 7,000 businesses will obtain drone permits within three years.**

And these businesses and corporations will sell the info to the government
Boghasian 03

Heidi Boghosian, executive director of the National Lawyers Guild and co-host of the civil liberties radio show Law and Disorder, "The Business of Surveillance," Vol. 39, No. 3, *AMERICAN BAR PUBLICATION- Human Rights,* http://www.americanbar.org/publications/human_rights_magazine_home/2013_vol_39/may_2013_n2_privacy/the_business_of_surveillance.html, 2003//SRawal

Corporations routinely and readily hand over customers' private personal data, absent warrants, to government agencies often without legal justification or beyond what was requested. The NSA has collected records of phone calls of millions of individuals with data provided by AT&T, Verizon, and BellSouth. Despite reports citing abuses of the Patriot Act from the Justice Department Office of the Inspector General, su**ch data collection is authorized by legislation signed by Presidents Bush and Obama.** Bush issued an executive order authorizing the NSA to monitor phone calls, e-mails, Internet activity, text messaging, and other communication involving any party believed by the NSA to be outside the United States, even if the other end of the communication lies within the United States, without a warrant or other express approval. This executive order was issued pursuant to congressional passage of the Authorization for Use of Military Force, presumably on the grounds that if the president can order targeted assassinations, there is no reason why lesser intrusions should be limited. **Several former officials and telecommunications workers have indicated that the NSA program extends beyond the surveillance of those suspected to be linked to foreign terrorists. A significant disclosure came in 2005 when former technician Mark Klein revealed that AT&T was cooperating with the NSA. The firm had installed a fiber optic splitter at a San Francisco facility that made copies of Internet traffic to and from AT&T customers, and gave them to the NSA.**

SPOT (TSA Airports)

Agencies will use Racial Profiling

The aff does nothing –The CBP, TSA, and ICE will still be allowed to use racial profiling- Horwitz 14

Sari Horwitz, covers the Justice Department and criminal justice issues nationwide for The Washington Post, where she has been a reporter for 30 years, 12-5-2014, "Racial profiling will still be allowed at airports, along border despite new policy," *Washington Post*, http://www.washingtonpost.com/politics/racial-profiling-will-still-be-allowed-at-airports-along-border-despite-new-policy/2014/12/05/a4cda2f2-7ccc-11e4-84d4-7c896b90abdc_story.html//SRawal

In recent months, **DHS officials pushed** the White House and Justice Department **to allow major exclusions for prominent DHS agencies such as the TSA, Immigration and Customs Enforcement, and Customs and Border Protection, officials said. CBP, for instance, will still be allowed to use racial profiling when conducting inspections at the country's "ports of entry" and interdictions of travelers at the border, officials said**. **Some DHS officials also questioned the Justice Department's authority to set policies for a separate federal agency.** DHS **Secretary Jeh Johnson made the case in a series of high-level meetings, arguing that while his department did not condone profiling, immigration and customs agents and airport screeners needed to consider a variety of factors to keep the nation safe, according to officials familiar with his personal efforts. TSA officials**, meanwhile, **argued that they should not be covered by the new limits on the grounds that the TSA is not a law enforcement agency. "We** tend to **have a very specific clientele** that we look for,'' said one federal official involved in immigration enforcement, who spoke on the condition of anonymity to discuss internal deliberations. "If you look at numbers, the vast majority of people we deal with are Hispanic. Is that profiling, or just the fact that most of the people who come into the country happen to be Hispanic?''

Racial profiling in these agencies is still legally allowed- Muslims will be targeted Rhodan 14

Maya Rhodan, Web Reporter at Time Magazine, 12-8-2014, "New Federal Racial Profiling Guidelines Worry Civil Rights Groups," *TIME*, http://time.com/3623851/justice-department-racial-profiling-muslims-sikhs-aclu//SRawal

But some **carve-outs—such as screenings and inspections by the Transportation Security Administration and U.S. Customs and Border Protection—have raised eyebrows among groups including the American Civil Liberties Union, Muslim Advocates and the Sikh Coalition**. "**It's baffling that even as the government recognizes that bias-based policing is patently unacceptable, it gives a green light for the FBI, TSA, and CBP to profile racial, religious and other minorities at or in the vicinity of the border and in certain national security contexts,** and does not apply the Guidance to most state and local law enforcement," said Laura Murphy, the director of ACLU's Washington legislative office. **Muslim Advocates,** a faith-based legal and educational advocacy organization**, echoed those sentiments. "While these changes are welcome,"** a statement reads, "it **is difficult to see how the guidance will improve the lives of law-abiding American Muslims who are singled out and targeted based on their faith,** not evidence of wrongdoing, **by the FBI, Customs and Border Protection, and other law enforcement agencies." The Department of Justice guidelines do not apply to activities conducted by military, intelligence or diplomatic personnel**. Border screening activities are also not covered, which has been of particular concern to civil rights groups. After 9/11, sweeping counterterrorism efforts were imposed that led Arab and Muslim Americans—and some perceived to be Muslim or Arabic such as South Asians and Sikhs—to feel singled out and profiled by the federal government. A 2009 ACLU and Rights Working Group report found that **Arabs,**

Muslims and South Asians "have been disproportionately victimized through various government initiatives" including FBI surveillance, questioning, airline profiling and no-fly lists.

Other programs result in racial profiling
Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, "The Reality of Racial Profiling", http://www.civilrights.org/publications/reports/racial-profiling2011/the-reality-of-racial.html?referrer=https://www.google.com/, 2011//SRawal

- Operation front line
- Lower standard from probable cause to reasonable suspicion
- Terrorists screening center

Another example of a federal program that involves racial profiling is Operation Front Line (OFL). The stated purpose of OFL,47 which was instituted just prior to the November 2004 presidential election, is to "detect, deter, and disrupt terror operations."48 **OFL is a covert program**, **the existence of which was discovered through a Freedom of Information Act lawsuit filed by the American-Arab Anti-Discrimination Committee** and the Yale Law School National Litigation Project.49 According to the 2009 ACLU/Rights Working Group report, data regarding OFL obtained from the Department of Homeland Security show that**: an astounding seventy-nine percent of the targets investigated were immigrants from Muslim majority countries**. Moreover, foreign nationals from Muslim-majority countries were 1,280 times more likely to be targeted than similarly situated individuals from other countries. Incredibly, not even one terrorism-related conviction resulted from the interviews conducted under this program. What did result, however, was an intense chilling effect on the free speech and association rights of the Muslim, Arab and South Asian communities targeted in advance of an already contentious presidential election.50 Lists of individuals who registered under NSEERS were apparently used to select candidates for investigation in OFL.51 **Inasmuch as the overwhelming majority of those selected were Muslims, OFL is a clear example of a federal program that involves racial profiling**. Moreover, because OFL has resulted in no terror-related convictions, the program is also a clear example of how racial profiling uses up valuable law enforcement resources yet fails to make our nation safer.52 Although Arabs and Muslims, and **those presumed to be Arabs or Muslims based on their appearance, have since 9/11 been targeted by law enforcement authorities in their homes, at work, and while driving or walking,53 airports and border crossings have become especially daunting**. One reason for this is a wide-ranging and intrusive Customs and Border Patrol (CBP) guidance issued in July 2008 that states, "**in the course of a border search, and absent individualized suspicion, officers can review and analyze the information transported by any individual attempting to enter …. the United States**."(Emphasis added)54 In addition, the standard to copy documents belonging to a person seeking to enter **the U.S. was lowered from a "probable cause" to a "reasonable suspicion" standard**.55 **Operating under such a broad and subjective guidance, border agents frequently stop Muslims, Arabs, and South Asians for extensive questioning about their families, faith, political opinions, and other private matters, and subject them to intrusive searches**. Often, their cell phones, laptops, personal papers and books are taken and reviewed. **The FBI's Terrorist Screening Center (TSC) maintains a list of every person who, according to the U.S. government, has "any nexus" to terrorism.5**6 Because of misidentification (i.e., mistaking non-listed persons for listed persons) and over-classification (i.e., assigning listed persons a classification that makes them appear dangerous when they are not), **this defective "watch-list" causes many problems for Muslims, Arabs, and South Asians seeking to enter the United States, including those who are U.S. citizens.**

No Enforcement

TSA regulation enforcement is ineffective- Sikh turbans are still invasively searched despite better regulation

Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, "The Reality of Racial Profiling", http://www.civilrights.org/publications/reports/racial-profiling2011/the-reality-of-racial.html?referrer=https://www.google.com/, 2011//SRawal

Individuals wearing Sikh turbans or Muslim head coverings are also profiled for higher scrutiny at airports. In response to criticism from Sikh organizations, the Transportation Security Administration (TSA) recently revised its operating procedure for screening head coverings at airports. **The current procedure provides that: All members of the traveling public are permitted to wear head coverings (whether religious or not) through the security checkpoints**. The new standard procedures subject all persons wearing head coverings to the possibility of additional security screening, which may include a patdown search of the head covering. **Individuals may be referred for additional screening if the security officer cannot reasonably determine that the head area is free of a detectable threat item. If the issue cannot be resolved through a pat-down search, the individual will be offered the opportunity to remove the head covering in a private screening area.**63 Despite this new procedure, and TSA's assurance that in implementing it "TSA does not conduct ethnic or religious profiling, and employs multiple checks and balances to ensure profiling does not happen,"64 Sik**h travelers report that they continue to be profiled and subject to abuse at airports.**65 Amardeep Singh, director of programs for the Sikh Coalition and a second-generation American, recounted the following experience in his June 2010 testimony before the Subcommittee on the Constitution, Civil Rights, and Civil Liberties of the House Judiciary Committee: Two months ago, my family and I were coming back to the United States from a family vacation in Playa Del Carmen, Mexico. At Fort Lauderdale Airport, **not only was I subjected to extra screening, but so was** [**my 18 month-old son Azaad].** I was sadly forced to take my son, Azaad, into the infamous glass box so that he could [be] patted down. He cried while I held him. He did not know who that stranger was who was patting him down. His bag was also thoroughly searched. His Elmo book number one was searched. His Elmo book number two was searched. His minimail truck was searched. **The time spent waiting for me to grab him was wasted time. The time spent going through his baby books was wasted time.** I am not sure what I am going to tell him when he is old enough and asks why his father and grandfather and soon him—**Americans all three**—are **constantly stopped by the TSA 100% of the time at some airports.**

Borders

Obama ignores the Immigration law- leads to detrimental consequences

JAMES JAY **CARAFANO** • 7/13/**14** ("Immigrants ignore U.S. immigration laws because Obama won't enforce them", June 13th, 2014, http://www.washingtonexaminer.com/immigrants-ignore-u.s.-immigration-laws-because-obama-wont-enforce-them/article/2550787, Accessed 7/16/15, EHS MSK)

Today, **the flood of unaccompanied minors illegally crossing the borde**r makes Napolitano's declaration **look foolish**. Last year, the Department of Health and Human Services reported it had custody of about 2,000 minors who had entered illegally, without a parent. This year more than 52,000 unaccompanied children have been apprehended at the South Texas border alone. Why the dramatic upsurge? It comes fo**llowing the president's 2012 declaration that his administration would defe**r, virtually automatically, **deportation of minors unlawfully present in the U**.S. Over the last year, "coyotes" have been using that promise as a marketing tool for their people smuggling business. Coupling this announcement with disastrous policies towards El Salvador, Honduras, and Guatemala -- the three countries from which most of these children come -- **Obama has done much to undermine all the enforcement measures that had stemmed the tide of illegal migration.** Now Washington has stepped in with three proposals to solve the problem. First, **the president has asked for $3.8 billion in "emergency" spending**. T**hat's** a l**aughable** request **intended** mostly **as a sound bite for the White House to claim it is doing something. Little** of the **money would go toward making the border more secure**. A lot would go to hiring immigration judges -- a two-year process that hardly qualifies as emergency spending**. If there are legitimate additional needs Congress should just address them in the annual appropriations bill.** Second, **some want to cut foreign aid to punish El Salvador, Honduras, and Guatemala**. But, Congress has to be careful not to gut programs that help those nations battle the gangs and cartels that have made life there so difficult. Indeed, **by withholding security assistance funds over the last few years, Washington has inadvertently fueled the problems many Central Americans seek to flee.** Third, **there is a move to amend current law to allow for expedited removal of minors from countries that are noncontiguous with the United States**. If done right, **that policy change would actually help over the long-term. Even under expedited removal**, U.S. officials must fully consider a child's safety in their decision-making. After all, once the U.S. takes custody of a minor, it's responsible for that child. Today's border crisis offers an important lesson: **When an administration ignores the law or only pretends to enforce it, no one pretends to obey it. The consequences are self-evident.**

Arizona won't follow new border laws

Elizabeth **Erwin 4/11** ("Arizona lawmakers want to ignore President Obama's executive orders", Mar 11, 2015 6:27 PM, http://www.abc15.com/news/state/arizona-lawmakers-want-to-ignore-president-obamas-executive-orders, Accessed 7/16/15,)

President Barack Obama has signed some big executive orders lately. **They've impacted** guns and immigration, two **issues Arizonans clearly care about.** But the approach some lawmakers are taking to keep us from enforcing those rules has some questioning if the plan is even legal! "**The legislature wants to prevent enforcement of executive orders and prevent enforcement of federal agency policy directives**," said attorney David Abner with Knapp & Roberts Law Firm. **House Bill 2368 says unless**

those orders have been voted on by Congress and signed into law, Arizona wouldn't have to follow them. "It's political grandstanding. There's nothing of substance to this. It's silly," Abner said. "Well, unfortunately, it's a waste of time, somewhat ridiculous. In fact very ridiculous," said House Minority Leader Bruce Wheeler. Wheeler voted against the bill. He said the priorities of what gets floor time doesn't match up with what Arizonans really need. "**We ought to be addressing education and jobs. Instead we're addressing these extremist bills**," Wheeler said. **Abner said even if this bill is signed into law there's no way it would stand up in court**. "If our state officials ignore federal law they run the risk of prosecution by federal authorities," Abner said. ABC15 reached out to the bill's sponsors today for comment. We have not heard back yet.

Decryption

Loopholes

Loopholes exist for the FBI and NSA
Cushing 14

Tim Cushing, Techdirt contributor, 12-5-14, "Ron Wyden Introduces Legislation Aimed At Preventing FBI-Mandated Backdoors In Cellphones And Computers," *Techdirt.*, https://www.techdirt.com/articles/20141204/16220529333/ron-wyden-introduces-legislation-aimed-preventing-fbi-mandated-backdoors-cellphones-computers.shtml//SRawal

Here's the actual wording of the backdoor ban [pdf link], which has a couple of loopholes in it. (a) IN GENERAL.—Except as provided in subsection (b), no agency may mandate that a manufacturer, developer, or seller of covered products design or alter the security functions in its product or service to allow the surveillance of any user of such product or service, or to allow the physical search of such product, by any agency. Subsection (b) presents the first loophole, naming the very act that Comey is pursuing to have amended in his agency's favor. (b) EXCEPTION.—Subsection (a) shall not apply to mandates authorized under the Communications Assistance for Law Enforcement Act (47 U.S.C. 1001 et seq.). Comey wants to alter CALEA or, failing that, get a few legislators to run some sort of encryption-targeting legislation up the Congressional flagpole for him. Wyden's bill won't thwart these efforts and it does leave the NSA free to continue with its pre-existing homebrewed backdoor efforts -- the kind that don't require mandates because they're performed off-site without the manufacturer's knowledge.

They will still have access- government can still influence companies
Newman 14

Lily Hay Newman, 12-5-2014, "Senator Proposes Bill to Prohibit Government-Mandated Backdoors in Smartphones," *Slate Magazine*, http://www.slate.com/blogs/future_tense/2014/12/05/senator_wyden_proposes_secure_data_act_to_keep_government_agencies_from.html//SRawal

It's worth noting, though, that the Secure Data Act doesn't actually prohibit backdoors—it just prohibits agencies from mandating them. There are a lot of other types of pressure government groups could still use to influence the creation of backdoors, even if they couldn't flat-out demand them. Here's the wording in the bill: "No agency may mandate that a manufacturer, developer, or seller of covered products design or alter the security functions in its product or service to allow the surveillance of any user of such product or service, or to allow the physical search of such product, by any agency."

Financial Surveillance

Banks can break the law

Will be circumvented by banks- ineffective SEC enforcement
Kwak 11

James Kwak, An Associate Professor At The University Of Connecticut School Of Law, Is Co-Author Of White House Burning, 12-14-2011, "Too Big to Stop: Why Big Banks Keep Getting Away With Breaking the Law," *Atlantic*, http://www.theatlantic.com/business/archive/2011/12/too-big-to-stop-why-big-banks-keep-getting-away-with-breaking-the-law/249952//SRawal

Move along, nothing to see here. That's been the Wall Street line on the financial crisis and the calamitous behavior that caused it, and that strategy has been spectacularly successful. Since Spring 2010, financial institutions' predatory practices have fallen off the front pages of newspapers, replaced by manufactured fears of over-regulation and -- thanks to an assist from the European continent -- an Orwellian belief that government debt lies at the root of our economic problems. Occasionally, a news event brings the need for financial reform momentarily into the partial spotlight, like last week when Judge Jed Rakoff rejected a proposed settlement between the SEC and Citigroup over a complex security called a CDO (actually, a CDO-squared) that the bank manufactured and pushed onto investor clients solely so it could bet against it. In April 2010, when the SEC sued Goldman over similar behavior, that was big-time news for weeks. But Citigroup's behavior in "Class V Funding III" was far worse. The issue in the Goldman case was whether the bank properly disclosed that John Paulson, a hedge fund manager, was involved in the selection of securities for the deal, because he wanted to bet against them. This time, Citigroup's own proprietary "trading desk" asked its CDO "structuring desk" to create a debt instrument that it could bet against. The trading desk came up with a list of securities to include in the new CDO and passed it on to the structuring desk, which in turn sent it to a supposedly independent third party that would manage the CDO itself, called CSAC. In one email, the person on the structuring desk overseeing the deal wrote, "This is [the CDO trading desk]'s prop trade (don't tell CSAC). CSAC agreed to terms even though they don't get to pick the assets" (SEC complaint against Brian Stoker, paragraph 32.) Half of the eventual CDO was based on securities chosen by Citi's trading desk (paragraph 42). (Yves Smith has more, from the SEC's order against CSAC--which, by the way, is part of Credit Suisse, another big bank.) Of course, the structuring desk didn't do this just as a favor to the trading desk: "On November 14, 2006, Stoker's immediate supervisor informed Stoker that Stoker should take action to ensure that the structuring desk received 'credit for [the trading desk's] profits' on Class V III" (complaint, paragraph 33). As is common in these cases, the SEC and Citi negotiated a settlement in which the bank would pay $285 million ($190 million for its profits plus a $95 million penalty) but neither admit nor deny the allegations. Judge Rakoff (who previously gave the SEC a hard time over a settlement with Bank of America over the closing of the Merrill Lynch acquisition) refused to approve the settlement, saying that it offered no factual basis on which to even decide whether it was fair, adequate, reasonable, and in the public interest (pp. 13-14). CAPTURED! The absence of a factual basis is a decent legal argument, but I think what Rakoff is really taking aim at is the problem of regulatory capture. For Citi, the settlement boiled down to two things: a $95 million penalty and a promise not to break the law in the future. Anyone who can do basic arithmetic can see that it's worth it to break the law under those terms so long as you have a two-thirds chance of getting away with it (and who thinks the SEC is catching more than one-third of all violations?). And earlier in the case, Rakoff asked the SEC how often it has actually enforced the promise by a bank not to violate the law in the future. The answer: never, at least not in the past ten years (pp. 22-23).In short, a settlement like this seems to have exactly zero value as a deterrent. The SEC argues that it could lose at trial, but that doesn't justify a settlement that is worth nothing to begin with. It argues that its resources are better spread across more cases, but many times zero is still zero. So the real question is why the SEC wants these settlements so badly. Rakoff's take: after calling the settlement, at most, "a mild and modest cost of doing business" for Citigroup, he continues, "It is harder to discern from the limited information before the Court what the S.E.C. is getting from this settlement other than a quick headline" (p. 11 in his order). Regulatory capture can occur for many reasons: outright bribery and the hope of future job offers are possibilities, but so are ideological conformity and the desire for good relationships and a peaceful life. The result is the same, however: an agency that cannot or does not enforce the public interest against powerful private actors. In that case, the only hope the public has is private lawsuits--hence Rakoff's desire for facts on the record that can help those suits proceed and his impatience with the "neither admit nor deny" convention. The SEC seems to have taken this construction to the height of absurdity in this week's settlement with Wachovia, which neither admits nor denies rigging the market in municipal bond derivatives--even though it admitted criminal violations in a parallel settlement with the Justice Department.

Banks bend laws- government tries and protects economy
Packin 14

Nizan Geslevich Packin, Assistant Professor of Business Law, Zicklin School of Business, Baruch College, City University of New York, “Breaking Bad? Too-Big-To-Fail Banks Not Guilty As Not Charged”, *Washington University Law Review,* http://openscholarship.wustl.edu/cgi/viewcontent.cgi?article=6085&context=law_lawreview, 2014, Vol. 91 Issue 4, pp. 1092-1093//SRawal

In the years following the financial crisis, the media reported on largescaled scandals in which the biggest banks were illegally involved. Nevertheless, even after it had learned about these scandals, the U.S. government only fined rather than prosecuted the relevant banks. This approach, which was nicknamed too-big-to-jail, caused a great deal of anger and frustration.20 Trying to justify this policy, Attorney General Holder explained that the DOJ cannot indict big financial institutions because doing so might harm the economy. Holder, testifying before the Senate Judiciary Committee, said that he is "concerned that the size of some of these institutions becomes so large that it does become difficult for us to prosecute them when we are hit with indications that if we do prosecute—if we do bring a criminal charge—it will have a negative impact on the national economy, perhaps even the world economy."21 Some have argued that this declaration is unsurprising given that in 1999, as Deputy Attorney General, Holder instructed prosecutors to consider "collateral consequences" when determining whether or not to prosecute corporations.22

Gets circumvented- Obama has waived punishments for financial institutions Sirota 14

David Sirota, an In These Times senior editor and syndicated columnist, is a staff writer at PandoDaily who graduated from Northwestern University's Medill School of Journalism9-19-2014, "Is Obama Going Easy On Banks That Break the Law?," *In These Times*, http://inthesetimes.com/article/17182/credit_suisse_wall_street_banks_above_the_law//SRawal

Yet earlier this month, the Obama administration announced its proposal to waive some of the possible sanctions against Credit Suisse. The little-noticed waiver, which was outlined in the Federal Register, comes amid criticism that the Obama administration has gone too easy on major financial institutions that break the law. In its announcement outlining the waiver, the Department of Labor notes that Credit Suisse "operated an illegal cross-border banking business that knowingly and willfully aided and assisted thousands of U.S. clients in opening and maintaining undeclared accounts" and in "using sham entities" to hide money. Under existing Department of Labor rules, the conviction could prevent Credit Suisse from being designated a Qualified Professional Asset Manager. That designation exempts firms from other federal laws, giving them the special status required to do business with many pension funds. The Obama administration is proposing to waive those anti-criminal sanctions against Credit Suisse, thereby allowing Credit Suisse to get the QPAM designation needed to continue its pension business. The waiver proposal follows a larger pattern. In June, Bloomberg News reported that federal prosecutors have successfully pushed U.S. government agencies to allow Credit Suisse to avoid many regulatory sanctions that could have accompanied its criminal conviction. "The New York Fed said last month that the bank can continue handling government securities as a so-called primary dealer," reported the news service. "The SEC let the firm continue as an investment adviser while the agency considers a permanent waiver." Pensions and Investments magazine has reported that despite Department of Labor assurances of tough enforcement of its sanctions against convicted financial firms, the agency has "granted waivers for all 23 firms seeking individual waivers since 1997." Critics say that by using such maneuvers, the Obama administration is effectively cementing a "too big to punish" doctrine. That criticism intensified in 2012 and 2013, when top Justice Department officials defended the administration's reluctance to prosecute banks by publicly declaring that the government considers the potential economic impact of such prosecutions. Those declarations echoed an earlier memo by Attorney General Eric Holder, which stated that officials could take into account "collateral consequences" when deciding whether to prosecute major corporations. Why is the Obama administration reducing sanctions on Credit Suisse? The administration says it is a decision based on pragmatism, not favoritism. The Federal Register announcement, for instance, notes that Credit Suisse has assets of nearly $1 trillion, and argues that if the anti-criminal provisions were enforced, the bank would lose its ability to offer investment products to pension funds. The announcement also argues that the Credit Suisse entities that specifically conduct pension business "are independent of" and "not influenced by Credit Suisse AG's management and business activities." What the administration did not mention, of course, is that according to data compiled by the Sunlight Foundation, employees of Credit Suisse have given President Obama's campaigns more than $376,000. That's particularly relevant in light of an April study of SEC data from London Business School professor Maria M. Correia. That analysis showed that "politically connected firms are on average less likely to be involved in … enforcement action and face lower penalties if they are prosecuted."

FACTA

CIA can collect info about international money transfers

Gorman et al 14

Siobhan Gorman, Devlin Barrett and Jennifer Valentino-Devries, Gorman is a reporter for The Wall Street Journal covering terrorism, counter terrorism, and intelligence and Barett is staff reporter for the Wall Street Journal covering federal law enforcement and security, Devries works on special projects for the Investigations group at The Wall Street Journal, 1-25-2014, "CIA's Financial Spying Bags Data on Americans." *WSJ,* http://www.wsj.com/articles/SB10001424052702303559504579198370113163530//SRawal

The Central Intelligence Agency is building a vast database of international money transfers that includes millions of Americans' financial and personal data, officials familiar with the program say. The program, which collects information from U.S. money-transfer companies including Western Union, is carried out under the same provision of the Patriot Act that enables the National Security Agency to collect nearly all American phone records, the officials said. Like the NSA program, the mass collection of financial transactions is authorized by a secret national-security court, the Foreign Intelligence Surveillance Court. The CIA, as a foreign-intelligence agency, is barred from targeting Americans in its intelligence collection. But it can conduct domestic operations for foreign intelligence purposes. The CIA program is meant to fill what U.S. officials see as an important gap in their ability to track terrorist financing world-wide, current and former U.S. officials said. The program serves as the latest example of blurred lines between foreign and domestic intelligence as technology globalizes many activities carried out by citizens and terrorists alike. The CIA program also demonstrates how other U.S. spy agencies, aside from the NSA, are using the same legal authority to collect data such as details of financial transactions.

SWIFT gives foreign bank information to the CIA and FBI

Lichtblau and Risen 06

Eric Lichtblau and James Risen, Lichtblau an American journalist and Washington bureau reporter for The New York Times and Risen is an American journalist for The New York Times who previously worked for the Los Angeles Times 6-23-2006, "Bank Data Is Sifted by U.S. in Secret to Block Terror," New York Times, http://www.nytimes.com/2006/06/23/washington/23intel.html?pagewanted=1&_r=1&adxnnl=1&adxnnlx=1437145270-dW19y5TsMerwdeYBVsXS9w

Data from the Brussels-based banking consortium, formally known as the Society for Worldwide Interbank Financial Telecommunication, has allowed officials from the C.I.A., the Federal Bureau of Investigation and other agencies to examine "tens of thousands" of financial transactions, Mr. Levey said. While many of those transactions have occurred entirely on foreign soil, officials have also been keenly interested in international transfers of money by individuals, businesses, charities and other groups under suspicion inside the United States, officials said. A small fraction of Swift's records involve transactions entirely within this country, but Treasury officials said they were uncertain whether any had been examined.

CIA collects Americans' financial information

RT 13

Russia Times, “CIA monitors Americans' financial activities”, *RT English,* http://www.rt.com/usa/cia-monitors-americans-finances-796/, 11-15-13//SRawal

The Central Intelligence Agency is collecting bulk records of international money transfers, including the financial and personal data of millions of Americans. Citing “officials familiar with the programs,” the Wall Street Journal reported that the CIA and FBI collect financial information when international transactions are filed through numerous money-transfer companies, including MoneyGram and Western Union. As with the National Security Agency’s surveillance efforts, the CIA’s actions are authorized under the 2001 Patriot Act and overseen by the same Foreign Intelligence Surveillance Court that has sanctioned the collection of millions of Americans’ phone records and digital data. As an agency that specializes in foreign intelligence gathering, the CIA is only permitted to target American citizens in connection to foreign activity. Officials told the WSJ that the intent of the program is to help track the flow of money financing terrorist organizations around the world. The CIA does not collect information on transfers that occur within the United States or on those that take place bank-to-bank. The majority of the transactions recorded take place entirely outside of the United States, the newspaper said, but some do involve cash that enters or leaves the country. In some cases, Social Security numbers are used in an attempt to connect the flow of money to a single individual.

No Circumvention

FISA Isn't a rubber Stamp

FISC isn't a rubber stamp – Multiple reasons as to why warrant approval rate is so high

Clarke 14 (Conor Clarke, J.D. Candidate, Yale Law School, Is the Foreign Intelligence Surveillance Court Really a Rubber Stamp? Ex Parte Proceedings and the FISC Win Rate", February 28, 2014, http://www.stanfordlawreview.org/online/foreign-intelligence-surveillance-court-really-rubber-stamp-ex-parte-proceedings-and-fisc-win)

The fact that ex parte proceedings are lopsided in a broad range of contexts—and that there are good reasons to expect them to be lopsided—**has several implications for the current debate over the FISC. First, it gives us reason to be skeptical of other explanations for why the FISC approves so many requests. For example, former FISC Judge James Carr has written that the "low FISA standard of probable cause—not spinelessness or excessive deference to the government—explains why the court has so often granted the Justice Department's requests."**[28] But if this were correct, we should expect different approval rates when the requesting party needs to clear a higher bar—say, by justifying the warrant (probable cause) and delayed notice (necessity) in Title III cases. We don't see this. **It also casts doubt on the relationship between the lopsided win rate and the political affiliation of FISC judges—a common media suggestion.**[29] If Republican deference to the executive produced the FISC win rate, we should also expect to see variation in win rates based on political affiliation in the Title III and delayed-notice contexts (where data on individual judges are available). Again, we don't.¶ A second set of conclusions involves consistency. **There are good reasons to be skeptical of ex parte proceedings: they are in tension with basic norms of due process—the right to notice, to a hearing, to confront adversaries, and so forth.** But if the FISC's ex parte proceedings are troubling to some critics, those critics should explain whether and why that skepticism extends to the Title III and delayed-notice contexts. The government's win rate can't help distinguish among these cases.¶ Third, **thinking about the lopsided win rate as a general consequence of ex parte proceedings, rather than as a specific problem of the FISC, offers perspective on the current FISC reform proposals. In January 2014, President Obama suggested creating an adversarial process for "significant cases" heard by the FISC**[30]—a proposal that mirrors roughly similar proposals under consideration in Congress.[31] These proposals highlight an important difference between the FISC's ex parte work and the ex parte work of federal courts responding to delayed-notice and Title III requests: FISC cases sometimes generate precedent on novel questions of law. But these cases are also rare—it has been said that novel legal questions come before the FISC only "[o]nce in a very great while."[32] **If this proposal is adopted, critics of the FISC should be at peace with the fact that the judges will probably continue to approve the vast majority of the executive's routine requests; in other words, adding an occasional adversary for the most significant cases is unlike to affect the win rate.**¶ But the simplest lesson of this analysis is that **public discourse should stop focusing on the rate with which the FISC approves applications. Ultimately, we should care about the substance of what the court approves, not the frequency with which it does so. And if the substance of what the court does affects how the government selects applications, there's no reason to think FISC reforms will change the win rate. Even an ex parte process that has satisfied the FISC's most fervent critics might continue to produce an outcome in which the government always wins.**

FISA could be reformed via a special advocate

Carr 13 (JAMES G. CARR, a former judge on the FISA Court, "A Better Secret Court", JULY 22, 2013, http://www.nytimes.com/2013/07/23/opinion/a-better-secret-court.html)

¶OLEDO, Ohio — **CONGRESS created the Foreign Intelligence Surveillance Court in 1978 as a check on executive authority. Recent disclosures about vast data-gathering by the government have raised concerns about the legitimacy of the court's actions. Congress can take a simple step to restore confidence in the court's impartiality and integrity: authorizing its judges to appoint lawyers to serve the public interest when novel legal issues come before it.**¶The court is designed to protect individual liberties as the government protects us from foreign dangers. In 1972, the Supreme Court ruled that the Nixon administration had violated the Fourth Amendment by conducting warrantless surveillance on a radical domestic group, the White Panthers, who were suspected of bombing a C.I.A. recruiting office in Ann Arbor, Mich. In 1975 and 1976, the Church Committee, a Senate panel, produced a series of reports about foreign and domestic intelligence operations, including surveillance by the F.B.I. of suspected communists, radicals and other activists — including, notoriously, the Rev. Dr. Martin Luther King Jr.¶ The Foreign Intelligence Service Act set up the FISA Court in response. **To obtain authority to intercept the phone and electronic communications of American citizens and permanent residents, the government must only show probable cause that the target has a connection to a foreign government or entity or a foreign terrorist group. It does not have to show, as with an ordinary search warrant, probable cause that the target is suspected of a crime.**¶For decades, the court worked under the radar. That changed after 2005, when The New York Times disclosed a National Security Agency program of surveillance of e-mail to and from foreign countries. Though the surveillance was conducted outside of FISA (Congress later specified that FISA court approval was required), the disclosures brought the court to the public's attention. **Criticism of the court** (on which I served for six years after 9/11, while the caseload grew enormously) **revived recently after revelations that the N.S.A., without court orders specifying individual targets, gathered troves of data from companies like Google and Facebook.**¶ **Critics note that the court has approved almost all of the government's surveillance requests. Some say the court is virtually creating a secret new body of law governing privacy, secrecy and surveillance.** Others have called for declassified summaries of all of the court's secret rulings.¶James Robertson, a retired federal judge who served with me on the FISA court, recently called for greater transparency of the court's proceedings. He has proposed the naming of an advocate, with high-level security clearance, to argue against the government's filings. He suggested that the Privacy and Civil Liberties Oversight Board, which oversees surveillance activities, could also provide a check. I would go even further.¶In an ordinary criminal case, the adversarial process assures legal representation of the defendant. Clearly, in top-secret cases involving potential surveillance targets, a lawyer cannot, in the conventional sense, represent the target.¶Congress could, however, authorize the FISA judges to appoint, from time to time, independent lawyers with security clearances to serve "pro bono publico" — for the public's good — to challenge the government when an application for a FISA order raises new legal issues.¶**During my six years on the court, there were several occasions when I and other judges faced issues none of us had encountered before. A staff of experienced lawyers assists the court, but their help was not always enough given the complexity of the issues.**¶**The low FISA standard of probable cause** — not

spinelessness or excessive deference to the government — **explains why the court has so often granted the Justice Department's requests. But rapid advances in technology have outpaced the amendments to FISA, even the most recent ones, in 2008.¶ Having lawyers challenge novel legal assertions in these secret proceedings would result in better judicial outcomes. Even if the government got its way all or most of the time, the court would have more fully developed its reasons for letting it do so**. Of equal importance, the appointed lawyer could appeal a decision in the government's favor to the Foreign Intelligence Surveillance Court of Review — and then to the Supreme Court. **No opportunity for such review exists today, because only the government can appeal a FISA court ruling.¶** One obvious objection: judges considering whether to issue an ordinary search warrant hear only from the government. Why should this not be the same when the government goes to the Foreign Intelligence Surveillance Court?¶ My answer: the court is unique among judicial institutions in balancing the right to privacy against the president's duty to protect the public, and it encounters issues of statutory and constitutional interpretation that no other court does or can.¶ For an ordinary search warrant, the judge has a large and well-developed body of precedent. When a warrant has been issued and executed, the subject knows immediately. If indicted, he can challenge the warrant. He can also move to have property returned or sue for damages. These protections are not afforded to FISA surveillance targets. Even where a target is indicted, laws like the Classified Information Procedures Act almost always preclude the target from learning about the order or challenging the evidence. This situation puts basic constitutional protections at risk and creates doubts about the legitimacy of the court's work and the independence and integrity of its judges. To avert these dangers, Congress should amend FISA to give the court's judges the discretion to appoint lawyers to serve not just the interests of the target and the public — but those of the court as well.

FISA is not the problem – It is the process

NPR 13 (Dina Temple-Raston reporting for NRP citing Joel Brenner, the former general counsel at the National Security Agency, Mike German is with the American Civil Liberties Union, "FISA Court Appears To Be Rubber Stamp For Government Requests", JUNE 13, 2013, http://www.npr.org/2013/06/13/191226106/fisa-court-appears-to-be-rubberstamp-for-government-requests)

LINDA WERTHEIMER, HOST:¶ It's MORNING EDITION, from NPR News. I'm Linda Wertheimer.¶ RENEE MONTAGNE, HOST:¶ And I'm Renee Montagne.¶ The NSA leaks revealing the broad extent of U.S. surveillance programs are also putting a spotlight on the special court that oversees them. It's called the Foreign Intelligence Surveillance Court. Created by Congress in 1978 to ensure the government doesn't abuse its surveillance powers, it operates in secret.¶ NPR's Dina Temple-Raston has this report on how the court works.¶ DINA TEMPLE-RASTON, BYLINE: **The criticism of the Foreign Intelligence Surveillance Court is simple: that it's a rubber stamp, and that the government always gets what it wants**. And here's a number that seem to support that: 1,856. That's the number of applications presented to the court by the government last year. And it's also the number that the court approved: 100 percent success.¶ But Joel Brenner, the former general counsel at the National Security Agency, says this is not proof that the FISA court is a rubber stamp.¶ JOEL BRENNER: I **can tell you that that court has taken a**

wire brush to certain applications that have come before it. The idea that somehow they put their stamp on everything the government puts before them couldn't be farther from the truth.¶ TEMPLE-RASTON: To understand why every application seems to be approved, you have to understand how the process works. The government goes to the FISA court with a proposition. It tells the judge, for example, that the NSA wants to track the phone calls and emails of someone they say is vital to an international terrorism investigation. Basically, according to Brenner, the government says...¶ BRENNER: Here's what we'd like to do, and there follows a back and forth and a discussion with a FISA judge, who, in many cases, has serious questions about what is being done or how it's being done.¶ TEMPLE-RASTON: That FISA judge is a regular federal judge who presides over day-to-day criminal and civil cases. In a FISA case, that judge is supposed to question the government's case.¶ Mike German is with the American Civil Liberties Union, and he says that isn't enough.¶ MICHAEL GERMAN: These are federal judges, and deserve some respect. But it's the process that's broken.¶ TEMPLE-RASTON: German is a former FBI agent, and now the ACLU's senior policy counsel.¶ GERMAN: **I don't think it's necessarily a rubber stamp, but it's just that it suffers from these fatal flaws.**¶ TEMPLE-RASTON: **There are two fatal flaws, according to civil liberties groups. The first is that the court is secret. To get an idea of how secret, the leaked document about the NSA asking to collect Verizon phone records was a FISA order. One had never been seen publicly before.**¶ **The second problem**, the ACLU's Mike German says, **is that the process isn't adversarial. There isn't the equivalent of a defense attorney to challenge the prosecution's version of events. It's just the prosecution talking to the judge - a little like the grand jury process.**¶ GERMAN: **You have a prosecutor who goes in a room with 23 grand jurors to indict somebody, but the process - because it isn't adversarial - often doesn't come to the right result.**¶ JENNIFER DASKAL: There are certain things that just can't be adversarial. They don't work that way.¶ TEMPLE-RASTON: Jennifer Daskal teaches at Georgetown Law School and used to be a lawyer with Human Rights Watch. She also worked at the Department of Justice.¶ DASKAL: **What you have, I think, is an incredible amount of secrecy about how the court works - often for good reason. But as a result, there is this misperception and fear and assumptions that the executive always gets what it wants, and that the executive is always overreaching, and overreaching more and more with time.**¶ TEMPLE-RASTON: It may be there are other ways to measure whether the government gets what it wants from a FISA court. The Justice Department says it presented 212 requests to conduct surveillance in the U.S. to the FISA court last year. It says the court modified 200 of them before they were approved. The problem: the public doesn't know why these orders from the government were modified or how they were changed.¶ This week, senators introduced legislation that would declassify significant FISA court rulings.¶ Dina Temple-Raston, NPR News.¶

The FISA court is not a rubber stamp – Lack of oversight is the problem

http://www.cbsnews.com/news/former-judge-admits-flaws-with-secret-fisa-court/

A former federal judge who served on a secret court overseeing the National Security Agency's secret surveillance programs denied Tuesday that the judges act as "rubber stamps." But **James Robertson said the system is flawed because of its failure to allow legal adversaries to question the government's actions.**¶ "**Anyone who has been a judge will tell you a judge needs to hear both sides of a case**," Robertson, a former federal district judge based in Washington who served on the secret Foreign Intelligence Surveillance Court, said during a hearing of the federal oversight board directed by President Barack Obama to scrutinize government spying.¶ **Robertson questioned**

whether the secret FISA court should play the role of providing legal approval for the surveillance programs, saying the court "has turned into something like an administrative agency."¶ Much of the NSA's surveillance is overseen by the FISA court, which meets in secret and renders rulings that are classified. Many of these rulings also likely been disclosed by Edward Snowden, the NSA systems analyst who leaked significant information about the spying program. After Snowden began exposing the NSA's operations in June, Obama instructed the board to lead a "national conversation" about the secret programs. The board has been given several secret briefings by national security officials and it plans a comprehensive inquiry and a public report on the matter.¶ The board's chairman, David Medine, had told The Associated Press in advance of Tuesday's hearing that "our primary focus will be on the programs themselves. Based on what we've learned so far, further questions are warranted."¶ Robertson, who said he asked to join the FISA court "to see what it was up to," had previously played a central role in national security law. Robertson was the judge who ruled against the Bush administration in the landmark Hamdan vs. Rumsfeld case, which granted inmates at the U.S. naval prison at Guantanamo Bay, Cuba, the right to challenge their detentions. That ruling was upheld by the Supreme Court in 2006.¶ **Robertson said Tuesday that FISA court judges have been scrupulous in pushing back at times against the government, repeatedly sending back flawed warrants. But he warned that Congress' 2008 reform of the FISA system expanded the government's authority by forcing the court to approve entire surveillance systems, not just surveillance warrants**, as it previously handled. Robertson said the system needed the presence of a legal adversary to act as a check on the government's programs.¶ "**This process needs an adversary,"** Robertson said, **suggesting that the oversight board itself might play that role in the secret legal setting.**

Civil Suits Solve

Civil suits can deter spousal surveillance

Camille **Calman** 20**05** [Camille Calman is a litigator who has handled a range of matters, including false advertising cases under the Lanham Act and before the National Advertising Division; libel defense; copyright; and trademark; for clients in media, technology, financial services, consumer products, and other industries. She has performed internal investigations for clients in the financial services industry. She works closely with the entertainment transactions group, in particular with respect to theater and performing arts, on rights clearance issues, claims and demands, litigation, and settlement. She also counsels clients on libel and other issues related to newsgathering and publishing; advertising, promotions, and sweepstakes law; and copyright fair use., November 2005, "SPY VS. SPOUSE: REGULATING SURVEILLANCE SOFTWARE ON SHARED MARITAL COMPUTERS" Columbia Law Review, 105 Colum. L. Rev. 2097 JC]

A more pressing question is what society might hope to achieve by regulating surveillance software. Regulating technology is unlikely to change marital behavior. Certainly some **spousal spies will be deterred by the prospect of civil suits** and monetary damages. But it is unrealistic to presume that a law can stop adultery or jealousy altogether. Perhaps it is paternalistic to expect that the state can improve marital relations by banning a form of software. **Putting** such **a law on the books could**, **however, have an important expressive effect**. [n228] **Jealousy would still exist, but perhaps the existence of the statute would reinforce, and increase awareness of, the social norm that frowns on spying**. [n229] Spouses, recognizing the possibility of surveillance thanks to the statute's existence, might be more cautious. **Discouraging snooping might encourage other means of solving problems within marriages, such as seeking counseling and increasing honest communication.**

Civil suits are effective against Telecom providers without court authorization

Mike **Wagner**, 20**09** [Mike Wagner, AB, Villanova University; JD, The George Washington University. Mike Wagner is an associate in the Washington office of Covington & Burling LLP, where he counsels government contractors on issues arising at all phases of the public procurement process and handles complex white collar investigations involving allegations of fraud and corruption. Prior to joining Covington, he served as a law clerk on the U.S. Court of Appeals for the Third Circuit and the U.S. District Court for the District of Maryland. A graduate of GW Law, he was an Articles Editor on the George Washington Law Review and received the 2010 Scribes Law Review Writing Award for best student-written article. November 2009, "Warrantless Wiretapping, Retroactive Immunity, and the Fifth Amendment". The George Washington Law Review, 78 Geo. Wash. L. Rev. 204. JC]

Subject to certain narrowly defined exceptions, [n20] electronic government surveillance on U.S. soil is prohibited unless the FISC first determines that there is probable cause to believe that the target is an agent of a foreign power and that the place at which the surveillance is directed is being used by a foreign power or its agent. [n21] If the government ignores this warrant requirement and engages in electronic domestic surveillance anyway, it will be found to have violated FISA. [n22] In such a case, FISA creates a direct private cause of action for anyone "who has been subjected to ... electronic surveillance" in violation of FISA. n23 Interestingly, **FISA** specifically **contemplated the potential civil liability of private telecommunications providers assisting in government surveillance, but the Act made clear that such private carriers would be protected from civil suit only when they assisted the**

government "in accordance with the terms of a court order, **[*208]** **statutory authorization, or certification" in writing from the Attorney General**. [n24]

Past civil suits have proved to change FISA and improve government surveillance regulation

Trevor **Rush**, 20**08** [Lieutenant Commander Trevor Rush, JAGC, USN, Judge Advocate General's Corps, U.S. Navy. Presently assigned as Vice Chair and Associate Professor for the International and Operational Law Department at The Judge Advocate General's Legal Center and School, Charlottesville, Va. 2008 "Mayfield, FISA, and the Fourth Amendment" Naval Law Review, 56 Naval. L. Rev. 87 JC]

At the time of these events, **Brandon Mayfield was an American citizen** born in Oregon **and** reared in Kansas. [n6] He was married with three children, a former U.S. Army officer with an honorable discharge, and a practicing Oregon lawyer. [n7] In what became integral to the Mayfield family's civil suit against the U.S. Government, Mr. Mayfield was also **a practicing Muslim**. [n8] The Mayfield family alleged that their religion and ties to the local Muslim community caused the Government to mishandle the case and violate the family's civil rights. **These allegations had merit because the U.S. Government would ultimately pay a settlement and apologize to Brandon Mayfield, who was completely innocent of any connection to the terrible events in Madrid**. **However, before his innocence could be shown, the Government turned the Mayfield family's world upside down by using all the tools of counter-intelligence, national security, criminal investigation, and prosecution. As a result of the Mayfield family's civil suit, a federal court declared portions of** the Foreign Intelligence **Surveillance** Act [hereinafter **FISA**], [n9] **to be unconstitutional under the Fourth Amendment of the United States Constitution**. [n10] This article examines *Mayfield v. United States* and concludes that the court erred. The story of the Mayfields is the epitome of the old adage that "bad facts make bad law." Mr. Mayfield was an innocent man that the Government accused of being a terrorist and in the process invaded his privacy and freedom. In a society that treasures both liberty and justice, it is tragic when the Government accuses an innocent person of an offense he did not commit. In this particular case, it is distressing to suspect that Mr. Mayfield's religion **[*89]** played a role in that tragedy. The end result was that the Madrid terrorists succeeded not just in their immediate objectives of death and destruction, but also in tarnishing the criminal justice system of the United States, a country they did not directly attack. Whether through its individual agents or the totality of the justice system, the U.S. Government failed the Mayfield family, and the resulting financial settlement with the Mayfields is appropriate. Nothing in this article is meant to detract from that result.

Oversight

Effective

Congress has power over agencies

Michaels '8, Acting Professor, UCLA School of Law. Law Clerk to the Hon. David H. Souter, U.S. Supreme Court, 2005-06. Law Clerk to the Hon. Guido Calabresi, U.S. Court of Appeals for the Second Circuit, 2004-05. J.D., Yale Law School, 2003. (August 2008, Jon D. Michaels, CALIFORNIA LAW REVIEW, "All the President's Spies: Private-Public Intelligence Partnerships in the War on Terror", 96 Calif. L. Rev. 901, Lexis)

Armed with data far more detailed and more timely than what it currently receives, n227 Congress could decide to hold hearings (in camera, if necessary to preserve classified information) to investigate programs that it suspects are misguided, insufficiently attentive to privacy concerns, overly burdensome to the corporations, or exploitative of the status differentials that make it legally easier for the private sector to collect information and give it to the government than for the intelligence agencies to obtain the data in the first place. n228 Congress could also hold up confirmation votes on nominees as leverage to force the Executive to make concessions. n229 Or, it could de-fund a given [*954] program, which it has previously done when it disapproved of an intelligence or national-security operation. n230 (It should be underscored, of course, that even a minority within Congress can wield tremendous influence, by insisting on various amendments to critical bills, by itself trying to hold up nominees, or, at least in the Senate, by filibustering.)

The appropriations power n231 may be particularly potent in the intelligence budgetary arena. Intelligence budgets are treated differently from much of the rest of the overall federal budget, n232and to the extent intelligence line appropriations can remain classified yet be subject to programmatic-level revisions, Congress would have both the dexterity and political cover to exercise aggressively its co-ordinate powers over intelligence policy. That is, the ability to tinker with funding streams on a regular basis gives the legislature a means of acting promptly upon its concerns.n233 What is more, the concomitant opportunity to appropriate in a manner largely occluded from the public gives lawmakers the political freedom to challenge imprudent intelligence policies with less fear of being harshly punished at election time for their so-called "soft-on-terrorism" vote - a fear that routinely prevents many a member from voting against (publicly recorded) military-spending bills. When a vote to deny military appropriations is taken as an article of disloyalty, as it often is, representatives lose perhaps the most straightforward and valuable means of influencing foreign policy. n234 None of this is, of course, to say that Congress [*955] will need to scrutinize every penny spent on intelligence matters. Most operations, like most expenditures in the larger budget or, say, most military promotions requiring Senate confirmation, will be approved as a matter of course. n235 But the option to affect funding when necessary to redirect misguided policy is not an inconsequential one.

Congress has power over surveillance—funding, jurisdiction, and leaks

Riley and Schneider '10 John Riley is an Assistant Professor at the Political Science Department at Kutztown University. Mary Kate Schneider is a research assistant; Mary Kate Schneider is a Ph.D. Candidate, Political Science, University of Maryland, Keith Gregory Logan is the editor of the book, He is an Assistant Professor in the Department of Criminal Justice at Kutztown University (April 2010, John

Riley and Mary Kate Schneider, Praeger Security International, Book Title: “Homeland Security and Intelligence”, Chapter Title: “Congressional Oversight of U.S. Intelligence”, p.173)

Legislative Leverage: how Congress Influences the Intelligence Community

There are three key mechanisms through which Congress can exert leverage over the IC. Foremost, Congress controls the flow of resources from the U.S. government to the intelligence agencies, is responsible for reviewing the agencies’ budgets, and appropriates and authorizes funds through the annual Intelligence Authorization Act. Thus, Congress can threaten to withhold funds from the IC, and the intelligence community is obligated to justify its expenses to Congress. Although this sometimes “smacks of micromanagement,”1 such leverage is a powerful tool in ensuring accountability, serving as both carrot and stick.

A second mechanism through which Congress influences the intelligence community is legal—that is, Congress has both the power and the obligation to pass legislation that authorizes, constrains, or otherwise affects the operations of intelligence agencies. Additionally, Congress is charged with the responsibility to monitor the IC’s adherence to these laws and to the U.S. Constitution.

Third, Congress can shape the actions of the IC through “the power to go public”2 Although leaking classified information would appear to be a threat to national security, S. Res. 400 (the resolution that created the Senate’s intelligence oversight committee) includes provisions through which Congress can declassify information despite opposition from the executive branch.3 Congress has never exercised these formal procedures, but at least one former director of central intelligence (DCI) has been accused of leaking information after a congressional hearing and then blaming the leak on congress.4

The church committee proves congressional effectiveness

Langston ’15 Law Clerk to Chief Special Master Denise K. Vowell, U.S. Court of Federal Claims in Washington, D.C.(Spring 2015, Marc B. Langston, TEXAS A&M LAW REVIEW, “REDISCOVERING CONGRESSIONAL INTELLIGENCE OVERSIGHT: IS ANOTHER CHURCH COMMITTEE POSSIBLE WITHOUT FRANK CHURCH?”, Lexis)

Church led the Church Committee to conduct an unprecedented investigation of intelligence agencies, yielding myriad controversial secrets. His experience in opposing the executive branch over issues such as the Vietnam War encapsulated his requests for cooperation with a formidable coating of confidence. Just as Watergate had provided the political will to create the Church Committee, Church harnessed the secrets of the intelligence agencies to precipitate sweeping reforms and ensure permanent congressional intelligence oversight.

By reviewing this Article's brief summary of Church's political background and key aspects of the Church Committee's work, one hopefully gleans a model for congressional intelligence oversight that is a persuasive alternative to the status quo, wherein congressional intelligence oversight committees defer heavily to the executive branch and offer few protections against government misconduct. As Church $=P487 envisioned, "Congress being a political animal will exercise its surveillance with whatever diligence the political climate of the time makes for." n401 The recent shortcomings of congressional intelligence oversight committees may spawn a renewed interest in returning to a less-deferential posture.

War powers prove congressional effectiveness

Pitt '15, J.D. Candidate, 2016, Fordham University School of Law (April 2015, Celdon Pitt, Fordham Law Review, "FAIR TRADE: THE PRESIDENT'S POWER TO RECOVER CAPTURED U.S. SERVICEMEMBERS AND THE RECENT PRISONER EXCHANGE WITH THE TALIBAN", Lexis) Congress repeatedly has tried to check the President's ability to wage war, using assorted means to at least oversee - if not attempt to seize outright control of - the executive branch's conduct of military operations. n135 The White House has offered various reactions to these methods, ranging from unchallenged acceptance, to grudging acquiescence, to blatant disregard. n136 Two primary methods, appropriations riders and the [*2853] implementation of requirements for congressional notification and consultation, have emerged as both the most effective and the most popular congressional tools for checking the President's war powers. This section will describe several of the ways in which Congress has used these tools to attempt to shape national security policy.¶ 1. Appropriations Riders As a Means of Congressional Oversight: The Boland Amendments and the Iran-Contra Affair Appropriations riders, which contain specific conditions on the grant of funds and are inserted as amendments to large spending bills, give Congress an opportunity to more narrowly tailor the use of federal money. n137 As one scholar notes, this dimension of the power of the purse has been "one of the major factors in shaping and restricting presidential decision making with respect to the commitment of forces abroad." n138 Congress has traditionally given the President much more discretion over the use of funds during times of emergency or conventional war than under circumstances of indefinite conflict or terrorist threat. n139 Riders to defense spending bills therefore have become more common over the last fifty years, as Congress has sought to exercise more control over small wars and covert activity. n140 The Iran-Contra Affair combined all of these elements and sparked a broader debate about the role of "restrictive national security appropriations" in shaping defense policy. n141¶ The Reagan Administration's attempts to overthrow the Communist Sandinista regime in Nicaragua in the early 1980s were scandalous for several reasons. n142 Congress, concerned over reports that the White House was raising and training the anti-Sandinista Contra movement without appropriate oversight, passed an initial spending restriction in 1982. n143 This amendment to the DOD Appropriations Act prohibited the use of funds for military equipment, training, or other activities in support of any group not part of the Nicaraguan armed forces. n144¶ Under the leadership of House Intelligence Committee Chair Edward Boland, Congress gradually tightened funding restrictions over the next [*2854] several years. n145 Congress eliminated all funding by 1984, declaring that no money designated for intelligence activities "may be obligated or expended for the purpose or which would have the effect of supporting, directly or indirectly, military or paramilitary operations in Nicaragua by any nation, group, organization, movement, or individual." n146 President Reagan signed these provisions into law without objection. n147¶ Despite these restrictions, staff members of the National Security Council (a group known as "the Enterprise") channeled money to the Contras as part of a larger scheme to also free U.S. hostages being held in Lebanon by Iranian-backed forces. n148 The Iran-Contra Affair prompted Congress to initiate an investigation into the executive branch's apparent deceit and resolve potential constitutional issues. n149 The congressional committee concluded that the Enterprise executed a covert Contra aid program by raising "private and non-appropriated money[] and without the accountability or restrictions imposed by law on the CIA." n150 Moreover, this was a program "that Congress thought it had prohibited." n151 Aside from the conviction of one member of the Enterprise for the commission of several minor offenses, no legal consequences stemmed from the Iran-Contra Affair. n152 Congress issued a series of recommendations at the end of its report, reminding the White House that "Congress is the partner, not the adversary of the executive branch, in the formulation of policy" and calling for a more rigid system of presidential findings related to covert action. n153¶ 2. Consultation and Notification Requirements A second method of congressional control over defense policy is the enactment of consultation and notification requirements, either through attachment to a spending bill or as stand-alone legislation. n154 When the political system is functioning as designed, the formal framework of consultation and notification is often complemented by a less rigid, more ad hoc consultative process between the executive and legislative branches that is "an essential unwritten ingredient in the national security process." n155 [*2855] Congress also must strike a balance between fulfilling its role as a representative body and observing the need for limited transparency in the national security context. n156 This section will examine two recent efforts by Congress to control presidential discretion through the use of reporting requirements.¶ a. The War Powers Resolution Spurred by the mission creep of U.S. involvement in Vietnam, the War Powers Resolution was "the product of almost four decades of bipartisan effort to recapture legislative authority that had drifted to the President." n157 The resolution declared that any foreign introduction of U.S. armed forces without a declaration of war would require the President to submit a report to

congressional leaders within forty-eight hours. n158 The report must contain details about, at a minimum, the circumstances leading to the deployment, the constitutional and legislative authority under which the President is conducting the military operation, and an estimation of the involvement's scope and duration. n159 This reporting requirement remains in effect for the duration of the engagement, during which the President must submit updates at least every six months. n160 Furthermore, the engagement must cease after sixty days unless Congress has declared war, been incapacitated, or voted to delay the deadline. n161¶ The War Powers Resolution was controversial during its enactment and has been applied unevenly since. n162 The first test came in 1975, when President Gerald Ford initially sought authorization to evacuate the remaining U.S. personnel from Cambodia and South Vietnam, but, after growing impatient with congressional delays, unilaterally approved the evacuations under his executive authority to protect American lives. n163 Two missions to recover captured Americans, from the Mayaguez commercial ship under President Ford and the U.S. embassy in Iran under President Carter, have complied with the reporting requirements in letter but not in spirit. n164 In both cases, the White House circumvented [*2856] congressional input by waiting to file the report until after the engagement had either ceased or "reached the point of no return." n165¶ b. Intelligence Oversight Congress possesses similar tools for oversight of the intelligence community. n166 Passed in the wake of revelations about counterproductive covert actions in Latin America and Southeast Asia, the Intelligence Oversight Act of 1980 n167 prohibits the President from authorizing a covert action without first making a formal determination that "such an action is necessary to support identifiable foreign policy objectives of the United States and is important to the national security of the United States." n168¶ This finding must be submitted in writing to the congressional intelligence oversight committees prior to the initiation of the covert action, unless the President determines that "it is essential to limit access to the finding to meet extraordinary circumstances affecting vital interests of the United States." n169 In that case, the President may inform only the chairs and ranking minority members of each intelligence committee, as well as the majority and minority leaders in both the House and the Senate, as long as he provides a written justification for doing so. n170 If the President complies with neither of these options, he still must inform the intelligence committees "in a timely fashion," along with providing justification for not notifying them earlier. n171

Agencies listen to congress

Rosenbach and Peritz '9 Eric Rosenbach is the Assistant Secretary of Defense for Homeland Defense and Global Security, earlier worked at the Harvard Kennedy S;chool as the Executive Director of the Belfer Center for International Affairs. He managed the Center's operations, taught graduate-level classes; Aki J. Peritz is an Associate at the Belfer Center for Science and International Affairs at the Harvard Kennedy School of Government. (7/18/2009, Eric Rosenbach and Aki J. Peritz, Belfer Center at Harvard, "Confrontation or Collaboration? Congress and the Intelligence Community", http://belfercenter.ksg.harvard.edu/files/IC-book-finalasof12JUNE.pdf)

Although the Constitution gives the executive branch preeminence in dealing with intelligence matters, Article I nevertheless provides Congress with an important oversight role. However, Congressional oversight into intelligence issues is a complex task, requiring a sophisticated understanding of the issues. ¶ The floor debate for the FISA Amendments Act of 2008 provided a clear example of the difficulties Congress faces when trying to modify intelligence legislation. Members, for reasons of classification or technical complexity, did not share a common understanding of the law, let alone how it should be adjusted. ¶ Authorization and Appropriation: ¶ Congress's most important source of leverage is the power to authorize programs and appropriate funds. During the authorization and appropriations process, Congress can signal its intelligence and policy priorities through both the allocation of funds and the inclusion of non budget-related clauses in the authorization and appropriations bills.¶ Nominations: Many of the IC's top leaders, including the Director of National Intelligence and the CIA Director, are nominated by the President and confirmed by the Senate. This sometimes grueling process forces the White House to carefully select its nominees and provides an opportunity for Senate input on both the individuals and issues related to intelligence policy. In recent years, the Senate has withheld confirmation until the executive branch agreed to share additional information on key areas of congressional oversight of intelligence activities.¶ Congressional Hearings: Congress invites—and, in some cases, compels—high-ranking members of the executive branch to appear before Congress to ask them targeted questions

intended to create more transparent and effective IC operations. As noted previously, however, the power of this tool depends in large part on Congress's awareness of IC activities. ¶ Investigations: Congress has responded to perceived intelligence abuses or failures by forming committees and mandating commissions to determine 'what went wrong' and how it might be corrected. In the 1970s, the Church and Pike Committees served this function. More recently, the SSCI conducted extensive investigations on prewar intelligence relating to Iraq. ¶ Treaty Ratification: Treaty ratification is a constitutional power of the Senate. Although few treaties relate directly to intelligence matters, members of the SSCI can use the treaty ratification process to indirectly press related national security policy issues. ¶ Government Accountability Office (GAO): The GAO is the investigative arm of Congress, particularly focused on budget-related issues. As a non-partisan, objective audit and evaluation agency, the GAO gives financial oversight capabilities to Congress. However, classification and security clearance hurdles set by the White House may limit the power of the GAO to investigate intelligence-related topics.

President

The president complies with congressional authority

Dellapenna '6, Professor of Law, Villanova University School of Law; B.B.A., University of Michigan (1965); J.D., Detroit College of Law (1968); LL.M. in Public International & Comparative Law, George Washington University (1969); LL.M. (Environmental Law), Columbia University (1974). (Fall 2006, Joseph W. Dellapenna, ILSA Journal of International & Comparative Law, "PRESIDENTIAL AUTHORITY AND THE WAR ON TERROR", Lexis)

Presidential exercises of unilateral authority did not end with Youngstown Sheet and Tube, but Presidents thereafter tended to involve Congress in their more controversial actions. In Vietnam, the Presidents did not claim sweeping authority independently of Congress, although they came to be accused of abusing the powers conferred by Congress n93 and of lying to Congress to obtain authorization for the war. n94 Unity between the political branches did not hold. Congress repealed the authorization in 1971 n95 and took steps to bar continuation of the War. n96 Congress also enacted legislation to limit the exercise of presidential authority as commander-in-chief (the War Powers Resolution of 1973 n97) and to assure judicial and congressional oversight of intelligence gathering within and without the United States (the Foreign Intelligence Surveillance Act n98). Presidents have never been happy with these restraints, consistently [*38] insisting that they are not bound by them, n99 yet Presidents have complied with them. n100 President Bush's report to Congress on the actions taken to respond to the 9/11 attacks exhibits the typical Presidential posture: compliance with the War Powers Resolution's procedures while insisting that he is not bound by it:

Enforces law

Congress can guarantee the executives abide by the law

Welling ’12 assistant-professor at Groningen University. (August 2012, George M. Welling, “Oversight Powers of Congress”, http://www.let.rug.nl/usa/outlines/government-1991/the-legislative-branch-the-reach-of-congress/oversight-powers-of-congress.php)

Congress' oversight function takes many forms:¶ committee inquiries and hearings;¶ formal consultations with and reports from the executive;¶ Senate advice and consent for executive nominations and treaties;¶ House impeachment proceedings and subsequent Senate trials;¶ House and Senate proceedings under the 25th Amendment in the event that the president becomes disabled, or the office of the vice president falls vacant;¶ informal meetings between legislators and executive officials;¶ congressional membership on governmental commissions; and¶ studies by congressional committees and support agencies such as the Congressional Budget Office, the General Accounting Office or the Office of Technology Assessment -- all arms of Congress.¶ The oversight power of Congress has helped to force officials out of office, change policies and provide new statutory controls over the executive. In 1949, for example, probes by special Senate investigating subcommittees revealed corruption among high officials in the Truman administration. This resulted in the reorganization of certain agencies and the formation of a special White House commission to study corruption in the government.¶ The Senate Foreign Relations Committee's televised hearings in the late 196Os helped to mobilize opposition to the Vietnam War. Congress' 1973 Watergate investigation exposed White House officials who illegally used their positions for political advantage, and the House Judiciary Committee's impeachment proceedings against President Richard Nixon the following year ended his presidency. Select committee inquiries in 1975 and 1976 identified serious abuses by intelligence agencies and initiated new legislation to control certain intelligence activities.¶ In 1983, congressional inquiry into a proposal to consolidate border inspection operations of the U.S. Customs Service and the U.S. Immigration and Naturalization Service raised questions about the executive's authority to make such a change without new legislation. In 1987, oversight efforts disclosed statutory violations in the executive branch's secret arms sales to Iran and the diversion of arms profits to anti-government forces in Nicaragua, known as the contras. Congressional findings resulted in proposed legislation to prevent similar occurrences.¶ Oversight power is an **essential check** in monitoring the presidency and controlling public policy.

Oversight controls agencies-CIA proves

Knott ‘5 Assistant Professor at the Miller Center of Public Affairs, University of Virginia - See more at: http://historynewsnetwork.org/article/380#sthash.hQ6e0msn.dpuf (8/8/2005, Stephen F. Knott, History News Network, “Congressional Oversight and the Crippling of the CIA,” http://historynewsnetwork.org/article/380)

The story of how the executive branch lost its control over the CIA is well known, but deserves a retelling, since it is often presented incompletely. In the aftermath of Vietnam, Watergate, and revelations of CIA assassination plots and domestic spying, Congress moved in the mid-1970s to “reassert” its role in shaping American foreign policy, including the most controversial tool of that policy, covert action. Secrecy was seen as antithetical to the American way, and there was widespread agreement that “rogue” agencies such as the CIA were a threat to liberty. Proponents of congressional intelligence oversight argued that openness and accountability were the cornerstone of a legitimate foreign policy, and it was believed that Congress, due to its diversity of opinion, possessed greater wisdom than the executive branch. Spurred on by the sensational revelations of the Church Committee hearings in the Senate and the Pike Committee in the House, both bodies established permanent intelligence committees.

It is still widely believed that the Church and Pike reforms were an attempt to cure a “cancerous” growth on the Constitution that had developed during the Cold War, an era which witnessed an increasing reliance on executive secrecy and the creation of a “private army” for the president in the form of the CIA. Senator Frank Church and his allies claimed that an assertive legislative role would

bring the United States "back to the genius of the Founding Fathers." This assertion was made despite the fact that American presidents from 1789 to 1974 were given wide latitude to conduct clandestine operations they believed were in the national interest. President Washington, in his first annual message to Congress in 1790, requested a Contingency Fund, or "secret service" fund, as one member of Congress described it. Washington was given this fund, in the amount of $40,000, a sizable sum in the early 1790s. The president was not required to report how he spent this money, he merely had to divulge the amount of money spent, without revealing to whom or for what reasons it had been spent. Thomas Jefferson, James Madison, Andrew Jackson, and Abraham Lincoln, all authorized clandestine operations out of this fund, and did not report the details to Congress. This pattern persisted until the mid-1970s with little or no change, other than the increasing size and bureaucratization of the nation's intelligence apparatus in the twentieth century. The real aberration occurred in the mid-1970s when the United States granted its legislative branch the greatest control over intelligence matters of any Western nation, and overturned the system which had prevailed in the United States since the Founding.¶ The damage done to the CIA by this congressional oversight regime is quite extensive. The committees increased the number of CIA officials subject to Senate confirmation, condemned the agency for its contacts with unscrupulous characters, prohibited any further contact with these bad characters, insisted that the United States not engage or assist in any coup which may harm a foreign leader, and overwhelmed the agency with interminable requests for briefings (some 600 alone in 1996). The committees exercised line by line authority over the CIA's budget and established an Inspector General's office within the agency, requiring this official to share his information with them, causing the agency to refrain from operations with the slightest potential for controversy. The CIA was also a victim of the renowned congressional practice of pork barrel politics. The intelligence committees forced the agency to accept high priced technology that just happened to be manufactured in a committee member's district.¶ On some occasions, members of Congress threatened to leak information in order to derail covert operations they found personally repugnant. Leaks are a recurring problem, as some member of Congress, or some staff member, demonstrated in the aftermath of the September 11th attack. President Bush's criticism of members of Congress was fully justified, despite the protests from Capitol Hill. Leaks have occurred repeatedly since the mid-1970s, and in very few cases has the offending party been disciplined. One of the Founding Fathers of the new oversight regime, former Representative Leo Ryan, held that leaks were an important tool in checking the "secret government."¶ In the wake of the September 11th terror attack, some legislators are now proclaiming their commitment to unleashing the CIA and rebuilding its human "assets." Just a short while ago these same legislators were leading the charge to curtail the agency. One such convert is the chairman of the Senate Foreign Relations Committee, Joseph Biden. The Delaware Democrat was one of seventeen Senators who voted in 1974 to ban all covert operations, and proudly noted during his 1988 campaign for president that he had threatened to "go public" with covert action plans by the Reagan administration, causing them to cancel the operations. Hopefully Senator Biden, and other congressional converts, are undergoing a genuine epiphany. Perhaps they now realize, as Henry Kissinger once observed about the Church Committee, that it is an illusion that "tranquility can be achieved by an abstract purity of motive for which history offers no example." It is precisely this illusion which has prevailed in congressional circles since the heyday of Frank Church and Otis Pike. As Church himself once argued, the United States should not "fight fire with fire . . . evil with evil."¶ Another convert is Senator Robert Torricelli of New Jersey, who led the charge in the mid-1990s to prevent the CIA from hiring unsavory characters. Torricelli rallied to the defense of State Department employee Robert Nuccio, who leaked classified material dealing with CIA operations in Guatemala to Torricelli, who in turn held a press conference and revealed the information to the media. It was these revelations that led to congressional restrictions on the ability of agents in the field to deal with "bad people." Torricelli is now calling for a "thorough inquiry" into what he calls the intelligence community's "stunning failure."¶ There is almost universal agreement that the CIA remains overly reliant on technological tools in gathering information on very human, very political, problems. Yet Congress is partly responsible for this, for the intelligence committees (with the support of some in the executive branch, particularly in the Carter and Clinton administrations) were determined to keep America's hands clean. Technology was safer -- it kept us at a distance from the "dirty stuff." The sad reality is that a CIA operative with any hope of infiltrating a terrorist cell would need to demonstrate his bona fides in any number of reprehensible ways. These are unpleasant thoughts to contemplate, and they certainly do not fit our conception of the way the world ought to work. But America cannot have it both ways -- it cannot expect to deter an Osama bin Laden and keep its hands clean at the same time. Presidents need options short of war to handle this type of threat.¶ While the old CIA may have been noted for the "cowboy" swagger of its personnel, the new CIA is, in the words of one critic, composed of "cautious bureaucrats who avoid the risks that come with taking action, who fill out every form in triplicate" and put "the emphasis on audit rather than action." Congressional meddling is primarily responsible for this new CIA ethos, transforming it from an agency willing to take risks, and act at times in a Machiavellian manner, into just another sclerotic Washington bureaucracy. This cautious, legalistic attitude has crippled the agency's effectiveness and will not change unless the oversight committees of Congress acknowledge the uniquely executive character of intelligence and covert operations, and start to dismantle the cumbersome oversight apparatus erected during the last twenty five years.¶

FISA/FISC CP

AFF – FISA/FISC CP

2AC FISA/FISC CP

Perm do both

Perm do the CP

Non-compliance guarantees circumvention – no oversight means precedent is reversed or ignored by lower FISC court or the NSA

Stanley 13 Jay Stanley, Senior Policy Analyst, ACLU Speech, Privacy & Technology Project. "The FISA Court's Problems Run Deep, and More Than Tinkering is Required" NOVEMBER 21, 2013. ACLU. https://www.aclu.org/blog/fisa-courts-problems-run-deep-and-more-tinkering-required

With the latest release of documents about the NSA and the FISA Court (this one in response to an ACLU/EFF Freedom of Information Act request) we now have yet more evidence that the NSA's compliance with the court's orders has been poor. We learn, for example, that, according to the court, "the NSA exceeded the scope of authorized [metadata] acquisition continuously during the more than [redacted] years of acquisition under these orders." And, "NSA's record of compliance with these rules has been poor." Extraordinary powers require extraordinary oversight. But we're gradually beginning to see the full scope of the FISA Court's inadequacy as an oversight institution. The latest disclosures follow other evidence that this court has had less than a stellar record in enforcing its rulings. Previous documents revealed, for example, that the NSA repeatedly violated court-imposed limits on its surveillance powers, and that the agency experienced numerous so-called "compliance incidents" such as staff using the agency's tremendous powers to spy on love interests. And as my colleague Jameel Jaffer points out, the record suggests that the government has felt free to make bolder, less-supportable arguments before the secret FISA Court than it's willing to make before real courts that are open to the public. It has often been pointed out that the FISA Court is not a normal court, a big reason being that all of its proceedings are ex parte (that is, there is no adversarial proceeding, the court only hears from one side) and that it operates within an ocean of secrecy and compartmentalization. My colleagues Patrick Toomey and Brett Max Kaufman yesterday detailed the sorry story of how these characteristics allowed the court to stretch the law to permit bulk metadata collection.

Can't solve and turn – no accountability for decisions, no review process, and no investigative authority - destroys court transparency

Setty 15 (Sudha Setty; Professor of Law and the Associate Dean for Faculty Development and Intellectual Life at Western New England University School of Law; "Surveillance, Secrecy, and the Search for Meaningful Accountability" Faculty Publications; Digital commons; Western New England University School of Law; 51 STAN. J. INT'L L 16 (2015) http://digitalcommons.law.wne.edu/cgi/viewcontent.cgi?article=1305&context=facschol)

Two forms of relatively weak judicial review exist over the NSA Metadata Program. The primary mechanism by which the NSA has legitimated its surveillance activities is the Foreign Intelligence Surveillance Court (FISC), a closed, non-adversarial setting. Article III courts have had the opportunity to consider post-9/11 surveillance programs on numerous occasions, and with few exceptions, Article III courts have refused to review matters of national securityrelated surveillance. I. Foreign Intelligence Surveillance Court The FISC differs from Article III courts in numerous ways: Its statutory scope is limited to matters of foreign intelligence gathering; its judges are appointed in the sole discretion of the Chief Justice of the United States Supreme Court; its proceedings are secret; its opinions are often secret or are published in heavily redacted form; and its process is not adversarial as

only government lawyers make arguments defending the legality of the surveillance being contemplated. 70 Many of these differences bring into doubt the legitimacy of the court, its ability to afford adequate due process regarding civil liberties concerns, and its ability to uphold the rule of law in terms of government accountability. Compounding this legitimacy deficit is the FISC's own loosening of the relevance standard under Section 215 of the PATRIOT Act such that the FISC has found that bulk data collection without any particularized threat or connection to terrorism is legally permissible. 71 Historically, the FISC has rejected NSA surveillance applications too infrequently to be considered a substantial check on government overreach as an ex ante matter. 72 As an ex post matter, it is unclear to what extent the FISC's work guarantees any meaningful accountability over NSA surveillance activities. On the one hand, because the FISC lacks an adversarial process and has no independent investigative authority, the FISC only addresses ex post compliance problems when the government itself brings the problem to the comt's attention. 73 As such, FISC judges rely on the statements of the government as to the govemment's own behavior and lack the authority to investigate the veracity of the government's representations. 74 For example, in 2011, the FISC found one aspect of the surveillance program brought to its attention months after the program went into effect to be unconstitutional. 76 Additionally, in one declassified opinion, the FISC critiques the NSA's sloppy over-collection of metadata of U.S. communications, and questions the efficacy of bulk data collection as a national security measure. 77 At one point, the FISC sanctioned the NSA for overreaching in saving all metadata and mining daily metadata against an "alert list" of approximately 17,800 phone numbers, only 10% of which had met FISC's legal standard for reasonable suspicion. 78 On such occasions, the administration has modified problematic aspects of the surveillance and continued forward without further impediment by the FISC. 79 On the other hand, the fact that the NSA itself has brought potential compliance incidents to the notice of the FISC indicates at least some internal policing of these programs. However, this is hardly an effective substitute for external review and accountability mechanisms that would ensure that consistent controls are in place. Further, the self-reporting of these compliance incidents does not in any way allow for discourse over the larger structural questions surrounding the surveillance programs. Finally, the ability of the FISC to act as an effective check on NSA oveneaching is severely limited by the secrecy and lack of information available to the FISC judges. Judge Reggie B. Walton, formerly the Chief Judge of the FISC, lamented that "[t]he FISC is forced to rely upon the accuracy of the information that is provided to the Court .... The FISC does not have the capacity to investigate issues of noncompliance .... " 81 The ability of the NSA to not only gather and retain bulk metadata, but also to build in backdoor access into data files despite private encryption efforts has been largely sanctioned by the FISC based on NSA representations as to the seriousness of the security threats posed to the nation. 82 In an enviromnent in which there is a tremendous fear of being held responsible for any future terrorist attack that might occur on U.S. soil, 83 and in which there is a information deficit for those outside of the intelligence community, the FISC has consistently deferred to the NSA's assertions and has not been able to act as an effective accountability mechanism.

That’s key to the democratic process – ensures further infringements on rights and replicates the error – perm is key to transparency and public engagement

HRW 14 (Human Rights Watch; Kenneth Roth; Executive Director of HRW; “Letter to President Obama Urging Surveillance Reforms” January 16, 2014 http://www.hrw.org/news/2014/01/16/letter-president-obama-urging-surveillance-reforms)

Vast changes to US law on surveillance have happened in secret without adequate oversight. The lack of public information has prevented debate about issues of great importance to the democratic process and individual rights. In addition, the companies and organizations that have participated in US surveillance programs have been prevented from disclosing basic data about the information that the government has been demanding of them. You have in the past stated that you welcome a debate

about these matters, and your decision to establish the review group to recommend possible reforms implicitly recognizes the importance of this discussion. Yet **it is impossible to have a healthy and open democratic debate about these matters when the public – and most of the US Congress – is kept in the dark about the scope of the programs and their implementation**. There are legitimate reasons to classify certain types of information – for example, to protect the identities of vulnerable individuals or to protect the public from harm. But classification can too easily become a tool to prevent embarrassment or exposure of wrongdoing, or to conceal information about the functioning of public institutions. Protecting national security does not have to come at the expense of public accountability. For example, there was no legitimate reason why the extent of the government collection of metadata should have been kept from the general public. We urge you to disclose much more about the scope of terms of surveillance occurring under Section 702 and Executive Order 12333, which could have enormous implications for the rights of foreigners abroad. US persons have the same interest as those abroad in knowing when their privacy rights are protected, and that can be revealed without disclosing information that would threaten national security. We also encourage you to support legislative reforms suggested by the review group, including transparency measures to require greater reporting to Congress and the public about use of intelligence gathering powers, and to permit technology companies to report on the number of orders they receive for user data. They also recommended a strong presumption of transparency in decisions about whether to keep programs of the magnitude of the 215 bulk telephony metadata program secret. These measures will not only assist democratic debate today, but guard against abuse of power in the future. The review group also made a number of other specific recommendations with which we agree, and which we hope you adopt and encourage Congress to act on. These include: * Ending the widespread use of National Security Letters (NSLs) without judicial review: National security letters are a form of administrative subpoena that give the FBI and other government agencies expanded power to compel the production of records. Under the PATRIOT Act of 2001, authorization for their use was greatly expanded; the need for individualized suspicion was reduced and a broader array of officials became authorized to issue them. As a result, the use of NSL's dramatically increased to the point where the FBI currently issues nearly 60 NSLs per day without judicial approval and accompanied by strict gag orders on the recipients. According to a report by the Office of the Inspector General in the Department of Justice, the lack of oversight has resulted in serious compliance issues and extensive misuse of NSL authority.[9] The review group effectively called for an end to this practice, saying that NSLs should be subject to judicial authorization, like 215 orders. We agree with these recommendations, and though they require Congressional action we strongly urge you to support them. * Creating an Institutional Advocate at the Foreign Intelligence Surveillance Court (FISC): For years, the FISC has been authorizing dramatic changes to US law in secret without any adversary's view being part of the process. That is a recipe for decisions that set the wrong balance between security and rights, because any judge is more likely to be persuaded by the side whose views he or she hears. The panel supported creating an institutional advocate with appropriate security clearances at the FISC to represent the public's privacy interests. We strongly urge you to support legislative action on this matter. * Strengthening the Privacy and Civil Liberties Oversight Board (PCLOB) and Investing It with Whistleblower Reporting Authority: The PCLOB was established by Congress after September 11, 2001, to conduct oversight of the intelligence community and make recommendations about how to improve privacy and civil liberties protections. But for years, the board remained dormant, without a chairman or staff. It now has a chairman and staff but limited resources. If strengthened further and provided with adequate resources, it can help to check the powers of an intelligence

community that gravitates toward over-classification and secrecy. Additionally, we agree with the review group that the PCLOB should be empowered to receive whistleblower complaints. Would-be whistleblowers need an independent and effective body to which they can report abuses or wrongdoing without having to report them internally first. A presidential policy directive issued in 2012, intended to improve whistleblower protections for federal employees, does not cover contractors and requires whistleblowers to report to a person in their direct chain of command instead of a more independent body.[10] While this would not adequately address the need for whistleblower reform that Human Rights Watch has previously identified, it would be a starting point. More complete whistleblower reform would require more than just creating an independent body to report wrongdoing. It would also require providing whistleblowers with legal protection against retaliation and legal defenses to prosecution. We urge you to propose to Congress a law that will grant such protections to federal employees and consultants in this sector. The rules that the United States establishes today on these matters will likely govern surveillance long after your administration has completed its term. They will also set a key precedent to which other countries will look to as they debate crucial questions about privacy and Internet freedom across the world. We strongly urge you, even as US surveillance capabilities continue to increase, to ensure that those capabilities are effectively regulated, within a framework of the rule of law, maximum transparency, and respect for democracy and human rights. Adopting the recommendations outlined above will be a first step in that direction.

2AC Addon — Internet Freedom

Public surveillance reform key to revive US credibility on the internet freedom agenda
Ries '14

(Internally quoting Zeke Johnson, director of Amnesty International's Security & Human Rights Program. Also internally quoting Cynthia M. Wong is the senior researcher on the Internet and human rights for Human Rights Watch. Before joining Human Rights Watch, Wong worked as an attorney at the Center for Democracy & Technology (CDT) and as director of their Project on Global Internet Freedom. She conducted much of the organization's work promoting global Internet freedom, with a particular focus on international free expression and privacy. She also served as co-chair of the Policy & Learning Committee of the Global Network Initiative (GNI), a multi-stakeholder organization that advances corporate responsibility and human rights in the technology sector. Prior to joining CDT, Wong was the Robert L. Bernstein International Human Rights Fellow at Human Rights in China (HRIC). There, she contributed to the organization's work in the areas of business and human rights and freedom of expression online. Wong earned her law degree from New York University School of Law. Also internally quoting Center for Democracy and Technology Senior Counsel Harley Geiger – Brian Ries is Mashable's Real-Time News Editor. Prior to working at Mashable, Brian was Social Media Editor at Newsweek & The Daily Beast, responsible for using Twitter, Facebook, and Tumblr to cover revolutions, disasters, and presidential elections. During his time at The Daily Beast, he contributed to a team that won two Webby Awards for "Best News Site". "Critics Slam 'Watered-Down' Surveillance Bill That Congress Just Passed" - Mashable - May 22, 2014 – http://mashable.com/2014/05/22/congress-nsa-surveillance-bill/)

As a result, many of its initial supporters pulled their support. "We supported the **original** USA Freedom act, **even though it didn't do much for non-US persons,"** Zeke Johnson, director of Amnesty International's Security & Human Rights Program told Mashable after Thursday's vote. He described the **original version as "a good step to end bulk collection."** However, in its current version, it's not even clear that this bill does that at all, Johnson said. He added that Congress left a lot of "wiggle room" in the bill – something he said is a real problem. "Where there is vagueness in a law, **you can count on the administration to exploit it,"** Johnson said. However, Laura W. Murphy, director of the ACLU Washington Legislative Office, took a more positive view of the bill. "While far from perfect, this bill is an unambiguous statement of congressional intent to rein in the out-of-control NSA," she said in a statement. "While we share the concerns of many — including members of both parties who rightly believe the bill does not go far enough — without it we would be left with no reform at all, or worse, a House Intelligence Committee bill that would have cemented bulk collection of Americans' communications into law." The Electronic Frontier Foundation simply called it "a weak attempt at NSA reform." "The ban on bulk collection was **deliberately watered down** to be ambiguous and exploitable," said Center for Democracy and Technology Senior Counsel Harley Geiger. "We withdrew support for USA FREEDOM when the bill morphed into a codification of large-scale, untargeted collection of data about Americans with no connection to a crime or terrorism." And **Cynthia Wong**, senior Internet researcher at Human Rights Watch, said, "This so-called reform bill won't restore the trust of Internet users in the US and around the world. **Until Congress passes real reform, U.S. credibility and leadership on Internet freedom will continue to fade."**

That's key to the global economy
Kalathil '10

Shanthi Kalathil - Adjunct Faculty and Adjunct Lecturer in the Communication, Culture, and Technology (CCT) Master of Arts Program at Georgetown University. Kalathil has extensive experience advising the U.S. government, international organizations and nonprofits on supporting civil society, independent media, technology, transparency and accountability. Previously a senior Democracy Fellow at the U.S. Agency for International Development and she has authored or edited numerous policy and scholarly publications, including the edited volume Diplomacy, Development and Security in the Information Age. She has taught courses on international relations in the information age at the Monterey Institute of International Studies and Georgetown University. Kalathil holds degrees from U.C. Berkeley and the London School of Economics and Political Science – "Internet Freedom: A Background Paper" – October 2010 - Available via: http://www.aspeninstitute.org/sites/default/files/content/images/Internet_Freedom_A_Background_Paper_0.pdf

As use of the Internet has grown exponentially around the world, so too have concerns about its defining attribute as a free and open means of communication. Around the world, countries, companies and citizens are grappling with thorny issues of free expression, censorship and trust. With starkly different visions for the Internet developing, this era presents challenges—and also opportunities—for those who wish to ensure the Internet remains a **backbone of** liberty and **economic growth. U.S. officials have made clear their vision for the Internet**'s future. President Obama, in a speech before the UN General Assembly, said that **the U.S. is committed** to promoting new communication tools, "so that people are empowered to connect with one another and, in repressive societies, to do so with security. We will support a free and open Internet, so individuals have the information to make up their own minds." His words were reinforced by FCC Chairman Julius Genachowski: "It is essential that we preserve the open Internet and stand firmly behind the right of all people to connect with one another and to exchange ideas freely and without fear."1 Indeed, a free, widely accessible Internet stands **at the heart of** both global communication and **global commerce.** Internet freedom enables dialogue and direct diplomacy between people and civilizations, facilitating the exchange of ideas and culture while bolstering trade and economic growth. Conversely, censorship and other blockages stifle both expression and innovation. When arbitrary rules privilege some and not others, the investment climate suffers. Nor can access be expanded if end users have no trust in the network. However, making reality live up to aspirations for Internet freedom can prove difficult. Numerous global initiatives—spearheaded by governments, private sector and civil society—are attempting to enshrine the norms, principles and standards that will ensure the Internet remains a public space for free expression. At the same time, other norms are fast arising—particularly those defined by authoritarian countries that wish to splinter the Internet into independently controlled fiefdoms. Even as Internet access has expanded around the world, many governments are attempting to control, regulate and censor the Internet in all its forms: blogs, mobile communication, social media, etc. Such governments have devoted vast resources to shaping the Internet's development within their own borders, and they are now seeking to shape the Internet outside their borders as well. Indeed, Internet experts are worried that national governments of all stripes will increasingly seek to extend their regulatory authority over the global Internet, culminating in a balkanized Internet with limited interoperability. Hence, the next few years present a distinct window of opportunity to elevate the principles of the free exchange of ideas, knowledge and commerce on the Internet. While U.S. leadership within this window is vital, a global effort is necessary to ensure that these norms become a standard part of the Internet's supporting architecture.

Decline leads to war
Merlini '11

[Cesare Merlini, nonresident senior fellow at the Center on the United States and Europe and chairman of the Board of Trustees of the Italian Institute for International Affairs (IAI) in Rome. He served as IAI president from 1979 to 2001. Until 2009, he also occupied the position of executive vice chairman of the Council for the United States and Italy, which he co-founded in 1983. His areas of expertise include transatlantic relations, European integration and nuclear non-proliferation, with particular focus on nuclear science and technology. A Post-Secular World? DOI: 10.1080/00396338.2011.571015 Article Requests: Order Reprints : Request Permissions Published in: journal Survival, Volume 53, Issue 2 April 2011 , pages 117 - 130 Publication Frequency: 6 issues per year Download PDF Download PDF (~357 KB) View Related Articles To cite this Article: Merlini, Cesare 'A Post-Secular World?', Survival, 53:2, 117 – 130]

Two neatly opposed scenarios for the future of the world order illustrate the range of possibilities, albeit at the risk of oversimplification. The first scenario entails the premature crumbling of the post-Westphalian system. One or more of the acute tensions apparent today evolves into an open and traditional conflict between states, perhaps even **involving the use of nuclear weapons.** The crisis might be triggered by a collapse of the global economic and financial system, the vulnerability of which we have just experienced, and the prospect of a second Great Depression, with consequences for peace and democracy similar to those of the first. Whatever the trigger, the unlimited exercise of national sovereignty, exclusive self-interest and rejection of outside interference would likely be amplified, emptying, perhaps entirely, the half-full glass of multilateralism, including the UN and the European Union. Many of the more likely conflicts, such as between Israel and Iran or India and Pakistan, have potential religious dimensions. Short of war, tensions such as those related to immigration might become unbearable. Familiar issues of creed and identity could be

exacerbated. One way or another, the secular rational approach would be sidestepped by a return to theocratic absolutes, competing or converging with secular absolutes such as unbridled nationalism.

1AR Transparency Turn

FISA courts undermine democracy

Timm 13 (Trevor Timm; co-founder and the executive director of the Freedom of the Press Foundation. He is a journalist, activist, and lawyer; JD in law from New York Law school; "Reform the FISA Court: Privacy Law Should Never Be Radically Reinterpreted in Secret" JULY 10, 2013; https://www.eff.org/deeplinks/2013/07/fisa-court-has-been-radically-reinterpreting-privacy-law-secret)

It's likely the precedent laid down in the last few years will stay law for years to come if the courts are not reformed. FISA judges are appointed by one unelected official who holds lifetime office: the Chief Justice of the Supreme Court. Under current law, for the coming decades, Chief Justice John Roberts will solely decide who will write the sweeping surveillance opinions few will be allowed to read, but which everyone will be subject to. Judge James Robertson was once one of those judges. He was appointed to the court in the mid-2000s. He confirmed yesterday for the first time that he resigned in 2005 in protest of the Bush administration illegally bypassing the court altogether. Since Robertson retired, however, the court has transitioned from being ignored to wielding enormous, undemocratic power. **"What FISA does is not adjudication, but approval**," Judge Robertson said. "This works just fine when it deals with individual applications for warrants, but the [FISA Amendments Act of 2008] has turned the FISA court into administrative agency making rules for others to follow." Under the FISA Amendments Act, "the court is now approving programmatic surveillance. **I don't think that is a judicial function."** He continued, "**Anyone who has been a judge will tell you a judge needs to hear both sides of a case…This process needs an adversary**." **No opposing counsel, rulings handed down in complete secrecy by judges appointed by an unelected official, and no way for those affected to appeal**. As The Economist stated, **"Sounds a lot like the sort of thing authoritarian governments set up when they make a half-hearted attempt to create the appearance of the rule of law**." This scandal should precipitate many reforms, but one thing is certain: **FISA rulings need to be made public so the American people understand how courts are interpreting their constitutional rights. The very idea of democratic law depends on it.**

Further lack of transparency undermines public confidence in federal surveillance – stymies legal reform and ensures further violations

Butler 13 (Alan Butler; Appellate Advocate Counsel, Electronic Privacy Information Center; J.D., UCLA School of Law; B.A., magna cum laude, Economics, Washington University in St. Louis. "Standing Up to Clapper: How to Increase Transparency and Oversight of FISA Surveillance" New England Law Review v. 48, 55, p 59-100; 2013)

The failure to publish FISC opinions over the last ten years is the root of the current loss of public confidence in the Administration's use of foreign intelligence authorities.192 The court's legal analysis and conclusions, as opposed to the operational details of surveillance activities, are part of the law that cannot properly develop without public oversight. Promulgation of the law is a central requirement of democracy; the **failure** to promulgate **results in a "fail[ure] to make law**." 193 Both the FISC and the Attorney General bear the responsibility to promote public understanding of the FISA process and what it encompasses. This is especially true where the court attempts to strike some balance between national security and civil liberties concerns.194 Secret law undermines our system of checks and balances by disabling the democratic oversight by which the public governs its government.195

1AR Solvency Deficit

Adversarial system is key to consistent rulings – even if they fiat FISCR compliance, trials still ensure NSA noncompliance – specifically true of 702 and 4th amendment rulings

Butler 13 (Alan Butler; Appellate Advocate Counsel, Electronic Privacy Information Center; J.D., UCLA School of Law; B.A., magna cum laude, Economics, Washington University in St. Louis. "Standing Up to Clapper: How to Increase Transparency and Oversight of FISA Surveillance" New England Law Review v. 48, 55, p 59-100; 2013)

The recent revelations about the extent and nature of FISA surveillance have highlighted the important and unreviewed body of constitutional and statutory law being developed by the FISC.205 Unlike other ex parte proceedings, the FISC reviews of applications submitted under Section 702 require extensive analysis and create precedent for the court.206 **But this lawmaking process only works when the judges hear both sides of the argument**. In addition, the Fourth Amendment issues and technical details of surveillance tactics are very complex, **and FISC judges cannot adequately evaluate the various interests without in-depth briefing on both sides**. Any FISC reform should address this problem by providing for a "Special Advocate" to the court, who would operate with a security clearance and argue in opposition to the Department of Justice on important legal questions regarding FISA and the Constitution. The FISC is developing complex legal interpretations under a provision of the FAA that requires the FISC to find that the "targeting and minimization procedures" adopted by the Government are "consistent with . . . the fourth amendment to the Constitution . . . ."207 **But these decisions are necessarily complex and difficult to make in the abstract context of a Section 702 application because Fourth Amendment analysis is necessarily fact-based**.208 In the American judicial system, facts are developed through an adversarial process.209 The government has an interest in arguing in favor of the surveillance applications that it submits to the FISC; a Department of Justice lawyer's role is not to present the judges with reasons why the application might be denied or modified. There is currently no advocate on the other side of these complex and novel issues judged by the FISC. And while recipients of FISA-authorized surveillance orders and directives can file challenges under certain circumstances,210 they cannot review the classified opinions or government briefs and do not have the necessary opportunity or incentive to develop fact-based constitutional arguments. The difficulty in having an adversarial process at the FISC is that the materials presented by the government are highly classified. However, classified proceedings have become more prevalent over the past ten years in the United States211 as well as in the United Kingdom.212 The use of specially appointed, security-cleared attorneys to challenge government legal arguments in national security cases has been in place for more than a decade in the United Kingdom.213 The use of such a "Special Advocate" would be appropriate in the FISA context where FISC judges are asked to make novel and significant legal determinations regarding important constitutional rights. Two former FISC judges,214 and other prominent legal scholars,215 have proposed adding such an adversarial position to ensure that legal developments at the FISC do not suffer from unbalanced advocacy.216

SOP Court CP

Notes

SOP Supreme Court CP

1. The Counterplan is to have to Supreme Court rule on the separation of powers doctrine.
2. The net benefits are the internal SOP DA, and the 4th amendment DA
3. You could read this aff against affirmatives that have the Supreme Court rule on an amendment that is not the separation of powers doctrine ie. 1st, 4th, etc.

1NC Material

1NC Solvency

[Insert Plan] replace the grounds with = "based on the separation of powers doctrine"

1st and 4th amendment challenges to surveillance fail – the counterplan is key to legitimately stopping surveillance

Slobogin 15

(Christopher -Milton Underwood Professor of Law, Chris Slobogin has authored more than 100 articles, books and chapters on topics relating to criminal procedure, mental health law and evidence. IV. A THIRD BASIS FOR CHALLENGING SURVEILLANCE: SEPARATION OF POWERS AND THE NONDELEGATION DOCTRINE One response to standing arguments based on the insights of scholars like Milligan and Richards is that they ignore the close relationship between standing and the scope of the right in question.131 Indeed, when the Fourth Amendment is the basis for the claim, the Supreme Court has explicitly conflated standing with the Amendment's substance. In Rakas v. Illinois, 132 the Court stated that the decision as to whether a defendant can make a Fourth Amendment claim "forthrightly focuses on the extent of a particular defendant's rights under the Fourth Amendment, rather than on any theoretically separate, but invariably intertwined concept of standing."133 If a government action is not a Fourth Amendment "search" vis-à-vis the litigant, Rakas held, then the litigant lacks standing to challenge it. If that reasoning is the correct approach to standing, then in cases challenging covert surveillance on Fourth or First Amendment grounds everything rides on whether the surveillance, as it operates in the way the plaintiff describes it, infringes the plaintiff's reasonable expectations of privacy or speech and association interests.134 While such a finding would presumably be made in the Clapper case, which involved the alleged interception of the content of overseas phone calls,135 it is less certain in connection with collection and querying of metadata. The Fourth Amendment is only meant to protect reasonable expectations of privacy.136 Supreme Court case law to date strongly suggests that any privacy one might expect in one's metadata or Internet activity is unreasonable, because we assume the risk that third parties to which we knowingly impart information (here phone companies and Internet service providers) will in turn divulge it to the government.137 The same type of analysis might limit standing in cases brought under the First Amendment. As the Court intimated in Clapper, 138 one could conclude that even if speech and association are inhibited by surveillance, that inhibition proximately results from the individual's choices, not from anything the government has done to the individual.139 On this view, even if an individual can show that he or she was targeted, standing to contest surveillance does not exist unless and until the government uses the seized information against the individual, because otherwise a colorable claim that a constitutionally cognizable interest was infringed cannot be made. If, despite its impact on political participation, covert surveillance like the metadata program remains immune from Fourth and First Amendment challenges, there remains another avenue of attack, derived directly from separation of powers doctrine. In other work, I have argued that, even if the Fourth (or First) Amendment does not govern a particular type of surveillance, Ely's political process theory provides a basis for challenging panvasive actions that are the result of a seriously flawed political process.140 More specifically, panvasive surveillance might be challengeable on one of three grounds: (1) the surveillance is not authorized by the appropriate legislative body; (2) the authorizing legislative body does not meaningfully represent the group affected by the surveillance; or (3) the resulting legislation or law enforcement's implementation of it violates notions underlying the non-delegation doctrine.141 The first and third of these grounds are based explicitly on separation of powers concerns. As I pointed out, some panvasive surveillance has not been legislatively authorized or has been authorized by legislation that does not announce an "intelligible principle" governing the

implementing agency.142 Panvasive surveillance is also defective under non-delegation principles if, as I have argued is true of the NSA's metadata program, it is implemented by rules or practices that are not explained, were produced through flawed or non-transparent procedures, or are applied unevenly.143 Based on several Supreme Court cases, particularly in the administrative law area,144 I concluded that any one of these deficiencies could be the basis for the claim that the legislature, the relevant law enforcement agency, or both are failing to carry out their constitutional obligations as law-making and law implementing bodies.145 Although this type of claim, like the Fourth and First Amendment claims, aims at "generalized relief," the Court itself has often granted standing to individuals making separation of powers claims.146 The rationale of these cases is not difficult to grasp, because it again reflects the political process rationale. Many years ago Justice Brandeis stated, "[T]he doctrine of the separation of powers was adopted by the convention of 1787 not to promote efficiency but to preclude the exercise of arbitrary power."147 More recently, Chief Justice Burger asserted that "checks and balances were the foundation of a structure of government that would protect liberty."148 More recently still, in Bond v. United States149 the Court stated "[t]he structural principles secured by the separation of powers protect the individual as well."150 If one accepts the possibility that a separation of powers argument can be made in covert surveillance cases, then parties who can demonstrate the type of injury described above—that is, a significant stifling of political participation that, to borrow the Second Circuit's language in its Clapper decision,151 is a reasonable, non-fanciful, and non-paranoid reaction to covert surveillance—should have standing to challenge panvasive surveillance even if it is not a search under the Fourth Amendment or does not abridge First Amendment freedom. The merits claim would not be that the surveillance is an unreasonable search or infringement of speech or association rights, but rather that the legislature has failed in its delegation task or that the relevant law enforcement or intelligence agency has acted in an ultra vires fashion. These are the types of separation of powers claims that courts ought to hear because they assure the proper functioning of the political process that the Court is so eager to protect (with, inter alia, its standing doctrine). To requote Chief Justice Roberts, "[T]he obligation of the Judiciary [is] not only to confine itself to its proper role, but to ensure that the other branches do so as well."152

1NC SOP Net Benefit

The counterplan is key to SOP and checking executive powers – solves democracy and function of the government

Slobogin 15

(Christopher -Milton Underwood Professor of Law, Chris Slobogin has authored more than 100 articles, books and chapters on topics relating to criminal procedure, mental health law and evidence. Named director of Vanderbilt Law School's Criminal Justice Program in 2009, Professor Slobogin is one of the five most cited criminal law and procedure law professors in the country, according to the Leiter Report, Vanderbilt University Law School, Standing and Covert Surveillance, Pepperdine Law Review, February 18, 2015, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2567070, JZG)

If panvasive surveillance cannot be challenged in court, it could well continue indefinitely despite its real threat to democratic institutions. Despite all of the hullabaloo occasioned by Edward Snowden's disclosures, the NSA appears to be continuing its large-scale surveillance and Congress has yet to propose serious limitations on it.162 Although President Obama has put a few new restrictions on the NSA's programs,163 to date there have been few judicial assessments of their constitutional status, and Clapper stands as an obstacle to challenges to all but the most obviously panvasive government actions. While the limitations on standing may make sense in some types of cases, challenges to panvasive surveillance should be treated differently than most other generalized claims. The separation of powers, Fourth Amendment, and First Amendment concerns about this surveillance go to the core of American democracy. The Court's decision in De Jonge v. Oregon, decided almost eight decades ago, makes the point in language that still resonates in this post- 9/11 era: The greater the importance of safeguarding the community from incitements to the overthrow of our institutions by force and violence, the more imperative is the need to preserve inviolate the constitutional rights of free speech, free press and free assembly in order to maintain the opportunity for free political discussion, to the end that government may be responsive to the will of the people and that changes, if desired, may be obtained by peaceful means. Therein lies the security of the Republic, the very foundation of constitutional government.164 Unwarranted surveillance broadly stifles fundamental liberties and undermines "the very foundation of constitutional government." Government is no longer functioning as the framers of the Constitution imagined it should if political discourse, individual creativity, outspokenness and non-conformity are not allowed to flourish. This state of affairs threatens rather than sustains the notion of separate but equal governmental powers, because it diminishes the vitality of the legislative function, improperly enhances the executive function, and ignores the judiciary's role as a regulator of law enforcement through determinations of cause. Standing doctrine, meant to ensure each branch of government is allowed to do its job, should not prevent courts from ensuring that the other branches actually do it.

Democracy checks inevitable extinction.

Diamond '95

(Larry, Senior Fellow at the Hoover Institution and Coeditor of The Journal of Democracy , "Promoting Democracy in the 1990s", December, http://www.wilsoncenter.org/subsites/ccpdc/pubs/di/fr.htm)

This hardly exhausts the lists of threats to our security and well-being in the coming years and decades. In the former Yugoslavia nationalist aggression tears at the stability of Europe and could easily spread. The flow of illegal drugs intensifies through increasingly powerful international crime syndicates that have made common cause with authoritarian regimes and have utterly corrupted the institutions of tenuous, democratic ones. Nuclear, chemical, and biological weapons continue to proliferate. The very source of life on Earth, the global ecosystem, appears increasingly endangered. Most of these new and unconventional threats to security are associated with or aggravated by the weakness or absence of democracy, with its provisions for legality, accountability, popular sovereignty, and openness. LESSONS OF THE TWENTIETH CENTURY The experience of this century offers important lessons. Countries that govern themselves in a truly democratic fashion do not go to war with one another. They do not aggress against their neighbors to aggrandize themselves or glorify their leaders. Democratic governments do not ethnically "cleanse" their own populations, and they are much less likely to face ethnic insurgency. Democracies do not sponsor terrorism against one another. They do not build weapons of mass destruction to use on or to threaten one another. Democratic countries form more reliable, open, and enduring trading partnerships. In the long run they offer better and more stable climates for investment. They are more environmentally responsible because they must answer to their own citizens, who organize to protest the destruction of their environments. They are better bets to honor international treaties since they value legal obligations and because their openness makes it much more difficult to breach agreements in secret. Precisely because, within their own borders, they respect competition, civil liberties, property rights, and the rule of law, democracies are the only reliable foundation on which a new world order of international security and prosperity can be built.

2NC CP

2NC Solvency

The political process theory supports the cp's solvency

(Christopher -Milton Underwood Professor of Law, Chris Slobogin has authored more than 100 articles, books and chapters on topics relating to criminal procedure, mental health law and evidence. Named director of Vanderbilt Law School's Criminal Justice Program in 2009, Professor Slobogin is one of the five most cited criminal law and procedure law professors in the country, according to the Leiter Report, Vanderbilt University Law School, Standing and Covert Surveillance, Pepperdine Law Review, February 18, 2015, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2567070, JZG)

V. OBJECTIONS One objection to the political process rationale for granting standing to litigants with colorable claims of injury from NSA surveillance is that, as Clapper stated, the Court has "often found a lack of standing in cases in which the Judiciary has been requested to review actions of the political branches in the fields of intelligence gathering and foreign affairs."153 A separate but related objection comes from Professor Jesse Choper, who argued in 1980 that the executive and legislative branches have "tremendous incentives jealously to guard [their] constitutional boundaries and assigned prerogatives against invasion by the other," and thus separation of powers issues ought to be non-justiciable political questions.154 Neither of these objections are sustainable from the political process perspective. Precisely because of the perceived importance of national security, the legislative and executive branches often either act in collusion with one another or, as illustrated earlier, function in ways that undermine the other's prerogatives, with the result that both end up ignoring their constitutional obligations.155 Particularly when it comes to national security, courts should have the authority to ensure that legislatures define the scope of permissible law enforcement and that law enforcement abide by appropriate rule-making mechanisms, a notion the Court has accepted in related national security contexts.156 At the least, these obligations should include procedures for assuring public accountability (such as notice-andcomment or other transparent rule-making processes), or, if that is not feasible, some method of assuring accountability to the legislature.157 Unfortunately, the perceived imperatives of the War on Terrorism have led both branches to short-circuit these requirements.158 A different kind of objection is that the political process rationale for standing reaches too broadly.159 If the chilling effect of panvasive surveillance on private communications and speech and association is enough to establish standing, then other challenges to alleged flaws in the political process—ranging from voting matters to educational obligations—could conceivably create standing as well. Perhaps so. As noted above,160 in FEC v. Akins the Court has already recognized as much with respect to the "most basic of political rights" of voting.161 Whether other interests less closely related to the democratic process might be treated similarly is beyond the scope of this Article.

2NC AT Perm Do CP

The counterplan severs the part of the plan text that rules on the ____ amendment. Severance is bad because it also the aff to be a moving target – we can never get stable negative ground – voting issue for fairness

2NC AT Perm Do Both

The permutation still links to the 4th amendment DA

The perm links to the net benefit – creates confusion

Thurmon 92

(Mark Alan, 1992, WHEN THE COURT DIVIDES: RECONSIDERING THE PRECEDENTIAL VALUE OF SUPREME COURT PLURALITY DECISIONS, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=3205&context=dlj, JZG)

When the Supreme Court decides a case, the Federal District Courts and Circuit Courts of Appeals are responsible for finding the governing rules of law in that decision. The first lower court to deal with the issue often "defines" the holding of the case by reviewing the reasoning found in the Supreme Court's opinion. Other lower courts then rely largely on this interpretation. Plurality decisions' greatly complicate this process because lower courts not only have to find the rationale of each opinion, **but must also decide which opinion's rationale governs**. With all these choices, it is not surprising that plurality decisions often do "more to confuse the current state of the law than to clarify it."2

Multiple gruonds cause confusion

Hochschild 2k - J.D., Washington University School of Law

(Adam S., The Modem Problem of Supreme Court Plurality Decision: Interpretation in Historical Perspective, http://heinonline.org/HOL/Page?handle=hein.journals/wajlp4&div=11&g_sent=1&collection=journals#266, JZG)

On the evening of December 12, 2000 America watched as TV legal scholars scrambled to decipher the United States Supreme Court's split decision in Bush v. Gore.' Despite the six different opinions, that case turned out to be easy enough to understand. A clear majority of five Justices ruled the same way. Real problems arise when there is less than a clear majority speaking for the Court when the leading opinion of the Court is a plurality opinion. A Supreme Court plurality decision holds ambiguous precedential value. At the very least, plurality decisions bind the parties in the particular case.2 Our jurisprudential tradition further assumes that all cases elaborate a general rule of decision, or ratio decidendi, that applies to future cases involving similar issues.3 The discernment of a ratio decidendi from a majority opinion is generally uncontroversial because a majority opinion represents the rationale of a majority of Justices.4 But, the discernment of a ratio decidendi from a plurality opinion, which represents the rationale of less than half of the Justices, is more problematic. A majority opinion may command more authority than a plurality decision,5 but precisely what authority does a plurality decision command? In other words, how should courts apply a plurality decision to subsequent controversies involving similar issues? This Note posits that the growing confusion surrounding plurality opinions is a foreseeable consequence of the formative years of the Supreme Court. The hubris of wielding federal judicial power, that has driven Justices since the Court's inception, is the cause of the plurality opinion chaos. An examination of the history of the Supreme Court's power and its methods of decision making suggests that the problem is deeply rooted in American law. Accordingly, an earnest solution involves a shift in our fundamental understanding of the Supreme Court's role. We must begin, at least, by recognizing the esteemed and modest beginnings of the Supreme Court.

2NC SOP Net Benefit

2NC CP Overview

The counterplan solves 100% of the case that is not based on the ____ amendment. We use the same process of the plan but rule on different grounds. 1NC Slobogin is the most specific to the counterplan's process, multiple standings exist for litigants to sue based on the doctrine and the Supreme Court has often given standing to those litigants.

The Counterplan solves the internal SOP net benefit and avoids the 4th amendment good DA.

2NC SOP Good

Executive power is too massive – control over FISA Court is to blame
Williams 14 -Assoc. Professor, Western State College of Law

(Ryan T., The Road Most Travel: Is the Executive's Growing Preeminence Making America More Like the Authoritarian Regimes It Fights So Hard Against?, August 2014, http://works.bepress.com/cgi/viewcontent.cgi?article=1006&context=ryan_williams, JZG)

Through further analysis, one finds that congress' FISA court solution does not establish a valid check on Executive power. First, the FISA court is comprised of eleven justices, who serve seven-year terms.46 All current judges were appointed to the special court by Chief Justice John G. Roberts Jr.47 This method raises concerns about the democratic process. These eleven judges, unlike the Supreme Court justices, were not vetted and brought before Congress for ratification. They were simply appointed by one Supreme Court justice to decide important Constitutional issues, such as the scope of the Fourth Amendment and the limits/expectations of privacy.48 Second, unlike almost any other court, "the FISA court hears from only one side in the case — the government."49 One need not be a Constitutional law professor or political science scholar to realize that if only one side of an argument is heard, the chance for a fair examination of both sides diminishes. The government routinely seeks trillions of records about American citizens, including, but not limited to phone call and e-mail records.50 One wonders how the FISA court considers both sides if only one side is being argued. The fear, of course, is that the two outcomes, to grant or deny the government's request, are not accorded equal weight, if any weight at all. Under such a scenario, one might suspect a disproportionate number of granted requests by the government. Unfortunately, that appears to be the case, here. As of the writing of this Article, nearly every NSA surveillance request ever submitted to the FISA court, with regard to spying on Americans, was granted.51 In 2012, the FISA court granted every single government request and issued nearly 1,800 surveillance orders pursuant to those requests. 52 That equates to more than five orders each day for the entire year. According to the FISA court, no request from any intelligence agency was denied.53 This makes it difficult to argue that Congressional authorization of the FISA court to oversee the Executive's spying program is little more than a talisman, creating a mirage of democratic process cloaked in secrecy and power to a few people in charge. If the FISA court is the supposed watchdog of the privacy interests for Americans, but only the government gets to present its case and every single government request for spying is granted, where is the check? Nothing about the aforementioned process comports with Constitutional notions of checks and balances, regardless of Congressional approval. In addition, the FISA court's findings are almost "never made public."54 The people are not afforded a chance to review the breadth of a surveillance request, which 100% of the time results in a surveillance order. The NSA obtains everything it seeks and reports to no one outside of the Executive branch.

This leads to autocratic rule through the destruction of the separation of powers
Williams 14 -Assoc. Professor, Western State College of Law

(Ryan T., The Road Most Travel: Is the Executive's Growing Preeminence Making America More Like the Authoritarian Regimes It Fights So Hard Against?, August 2014, http://works.bepress.com/cgi/viewcontent.cgi?article=1006&context=ryan_williams, JZG)

D. Resulting Harm Is the Executive's newfound expansive ability to spy on Americans, and seeming inability to challenge it, harmful? Such spying may be necessary to protect the nation from credible terrorist threats. Moreover, on an individual level, why is there is any problem with the Executive tracking all of people's activities and information? If people have nothing to

hide, then what is the harm? First, one potential harm is if (and when) the Executive wants to further expand its powers, and, in secret, unilaterally take away other rights or privileges. By granting the Executive unchecked power for it's NSA surveillance program, a dangerous precedent is set where the **Executive may have incentive to take additional power in other areas, while falsely claiming it is for national security**. It may really be for political or personal gain, or to push another agenda to improperly shape American policy, but if it's under the guise of national security, a precedent is being set where the Executive is beyond reproach. Thus, not having a watchdog over the NSA and the Executive can lead to a host of abuses we have yet to even realize, the worst of which may be yet to come. Second, aspects of the NSA surveillance program may be unconstitutional. Facially, the concept of tracking phone calls, email communications and Internet traffic to see if someone is behaving suspiciously seems a little unnerving. It is not "we have a target, let's start monitoring them." Instead, it's "let's monitor virtually everyone, to see if there are any targets." To some, like the plaintiffs in Clapper, this difference is troubling enough to challenge in court, but their case was dismissed for lack of standing. Conjointly, the NSA surveillance program may have unconstitutional components, but they will continue to remain unnoticed if no one is ever able to challenge the Executive. Finally, **lacking a check on Executive power dilutes America's version of democracy**. The Executive is often supposed to, if not expected to, operate as the unilateral figure in international relations.71 That is not in dispute, but even as the appropriate central-figure in international relations, the Executive was never intended to operate in an unconstitutional manner without reproach. The **separation of powers, so vital to a democratic republic, is severely undermined when one branch is possesses seemingly limitless powers**. If America continues to allow the Executive, the person in charge of the military and controlling the spying agencies, to be effectively unchecked by the other branches, **this much more closely resembles an authoritarian regime than any form of democracy**. Is the current American President a dictator? Surely, this is not the case, but the NSA surveillance program represents a step towards the type of "elective despotism" that Thomas Jefferson and the Founding Fathers fought hard to guard against when they formed the United States of America.72 The aforementioned dangers highlight the problems with the Executive's newfound and unchecked secret and growing power to spy on Americans. The NSA surveillance program, however, is not the only way the Executive has usurped power without being stopped by Congress or the Judiciary in the War on Terror.

Executive is power bad – congress has ceded too much
Katyal 14 -Professor of Law, Georgetown University Law Center

(Neal Kumar, is an American lawyer and chaired professor of law. He served as Acting Solicitor General of the United States from May 2010[2] until June 2011, Internal Separation of Powers: Checking Today's Most Dangerous Branch From Within, The Yale Law Journal, http://poseidon01.ssrn.com/delivery.php?ID=406105097031083079027095086064097030017003038044067033122101097102092029124086026007007019055119006003021102115000083114104108034091000041007071122111113098030043035082069119077112125119018126070088122118088112005125069094003024125099091119&EXT=pdf&TYPE=2, JZG)

the need for internal separation of powers The treacherous attacks of September 11 gave Congress and the President a unique opportunity to work together. Within a week, both houses of Congress passed an Authorization for the Use of Military Force Resolution (AUMF); two months later they enacted the USA PATRIOT Act to further expand intelligence and law enforcement powers.11 But Congress did not do more. It passed no laws authorizing or regulating detentions for United States citizens. It did not affirm President Bush's decision to use military commissions to try unlawful belligerents.12 It stood silent when President Bush took thinly-reasoned legal views of the Geneva Conventions, such as that they did not require Article 5 hearings to determine prisoner-of-war status. 13 The Administration was content to rest on vague legislation like the AUMF, and Congress was content not to do much else.14 There is much to be said for the violation of separation of powers

engendered by these executive decisions, but for purposes of this Essay, I want to concede the executive's claim—that the AUMF gave the President the raw authority to make these decisions. A democratic deficit still exists; the values of divided government and popular accountability are not being preserved. Even if the President had the power to carry out the above acts, it is surely wiser if Congress authorizes them. Congress's imprimatur would have ensured that the people's representatives concurred, aided the government's defense of these actions in courts, and signaled to the world a broader American commitment to these decisions than one man's pen-stroke. Of course, Congress has not been passing legislation to denounce these Presidential actions either. And here we come to a subtle change in the legal landscape with broad ramifications: the demise of the congressional checking function. The story begins with the collapse of the non-delegation doctrine in the 1930s, which enabled broad areas of policymaking authority to be given to the President and agencies under his control. That collapse, however, was tempered by the legislative veto, meaning, in practical terms, that when Congress did not approve of a particular agency action, the legislature could correct the problem. But after INS v. Chadha, 15 which declared the legislative veto unconstitutional, that checking function, too, has disappeared. While Congress has at times engaged in oversight, such as the scandal-driven 1995- 2000 period, such oversight is often stymied by structural dynamics. In most instances today, the only way for Congress to disapprove of a presidential decree, even one chock full of rampant lawmaking, is to pass a bill with a solid enough majority to override a Presidential veto. This transforms the veto into a tool that entrenches presidential decrees, rather than one that blocks congressional misadventures. And because Congress ex ante appreciates the supermajority-override rule, its members do not even bother to try to check the President, knowing that a small cadre of loyalists in either House can block such a bill.16 For example, when some of the Senate's most powerful Republicans (John McCain, Lindsay Graham, and John Warner) tried to regulate detentions and trials at Guantánamo Bay, they were told that the President would veto their bill or any other attempt to modify the AUMF.17 The result is that once a court interprets a congressional act, such as the AUMF, to give the President broad powers, Congress often cannot reverse the interpretation, even if they never intended to give the President those powers in the first place. Members of Congress must not only surmount a supermajority requirement, they must do so in each House. Senator McCain might persuade every one of the other ninety-nine Senators to vote for his bill, but that is of no moment without a supermajority in the House of Representatives as well.18 At the same time, the executive branch has gained power from deference doctrines that induce courts to leave much conduct untouched–particularly in foreign affairs.19 The combination of deference and the presidential veto is particularly insidious—it means that a President can interpret a vague statute to give him additional powers, receive deference in that interpretation from courts, and then lock that decision into place via his veto power. This ratchetand-lock scheme makes it almost impossible to rein in executive power. This expansion of presidential power is exacerbated by the party system. When the political branches are controlled by the same party, considerations of loyalty, discipline, and self-interest generally preclude inter-branch checking. That general reluctance is exacerbated by the paucity of weapons with which to check the President, with the only ones in existence called "nuclear" ones. In earlier times, it was not difficult to use legislative vetoes as surgical checks. But post-Chadha, Congress only has weapons that cause extensive collateral damage. The fear of that damage, of course, becomes yet another reason why Congress is plagued with inertia. And the filibuster, the last big check in periods of single-party government, is useless against the host of problems where Presidents take expansive views of their powers under existing laws (such as the AUMF). Instead of preserving bicameralism, the rule in Chadha has therefore led to its subversion and "no-cameralism." All legislative action is therefore dangerous. Any bill, like Senator McCain's torture bill, can be derailed through compromise. Even if its text ultimately has teeth, a President will interpret it niggardly, and that interpretation will likely receive deference from a court, and it will then be locked into place due to the veto. A rational legislator, fearing this cascading cycle, is likely to do nothing at all. A Congress that conducts little oversight provides a veneer of legitimacy to an adventurist President. The President can appeal to the historic sense of checks and balances, even if those checks are entirely compromised by modern political dynamics. With this system in place, it is no surprise that calls for legislative revitalization in the wake of the September 11th attacks have failed. No successful action-forcing mechanisms have been developed; instead we are still in John Hart Ely's world of giving a "halftime pep-talk imploring that body to pull up its socks and reclaim its rightful authority."20 Instead of another pep-talk, it is time to consider second-best solutions to bring separation of powers into the executive. Bureaucracy can be reformed and celebrated (instead of purged and maligned), and neutral conflict-decision mechanisms can be introduced. Design choices such as these can help bring our government back in line with the principles envisioned by our Founders—ones that have served our nation and the world so well for so long.21

Lack of Court determination in determining the powers of the branches leads to excessive presidential power

Cantu 15

(Edward -Associate Professor, University of Missouri-Kansas City School of Law, 2015 The Separation-of-Powers and the Least Dangerous Branch, Hein Online, JZG)

III. THE UPSHOT: UNPRECEDENTED EXECUTIVE POWER Some appear to hold out in their hope of helping to corral the Court's pragmatism into some construct resembling doctrine. 192 But separation-of powers decisions are interminably pragmatic, and the systemic effect of that pragmatism becomes apparent upon a cursory examination of the state of modern government. The most conspicuous and controversial manifestation of the pragmatism in power allocation that the Court has acquiesced to is the dramatic growth of executive power, and corresponding decrease in congressional power, over the past century. A good example of this dramatic growth, and the reality that the political process is the only check on it, is the recent use by Presidents of executive orders and other mechanisms of presidential control over administration to manage national affairs. In 2001, then-Professor Elena Kagan reflected on the increasing control asserted by Presidents since Ronald Reagan over administrative agencies and declared quite correctly that "[w]e live today in an era of presidential administration." 19 3 She emphasized that "presidential control of administration, in critical respects, expanded dramatically during the Clinton years, making the regulatory activity of the executive branch agencies more and more an extension of the President's own policy and political agenda." 194 Lest one conclude that this is the result of rank grabs at power by ambitious Presidents, Kagan convincingly explained how this increasing assertiveness of Presidents is likely the result of "structural aspects of the modern presidency," 195 created by several dynamics beyond Presidents' control. For example, the American public's expectations of what Presidents can do have increased in recent decades, but the President's ability to convince Congress to go along has only decreased due to increasing partisanship. 196 Given Congress' decreasing ability to effectively legislate because of partisan gridlock, the President is left to meet national expectations using tools the use of which requires no congressional pre-approval. Naturally, then, Presidents get to work, tackling national problems as they see fit, even if that means taking an increasingly assertive stance regarding administrative agencies that Congress originally envisioned would be beyond the President's direct control. As others have explained, 197 in the criminal law context especially, this is a vicious cycle. Congress understands it can escape political accountability and appear "tough on crime" by enacting broad criminal laws. Presidents, in turn, exercise increasing prosecutorial discretion in choosing what conduct the statute criminalizes, and which offenders to prosecute. This further increases the public's expectations of the President, which increases the President's willingness to push the boundaries of his prosecutorial discretion. Which encourages Congress to enact more laws empowering the executive.., and so on. The "structural aspects" of the modern presidency that Justice Kagan discusses manifest in controversies over, for example, President Bush's Executive Order 13,435,198 which banned federal funding for certain types of embryonic stem cell research, based on Bush's belief that the restriction was necessary for "maintaining the highest ethical standards and respecting human life and human dignity."1 99 President Obama reversed this Executive Order with one of his own. 200 These erratic shifts in federal law were due to simply a fundamental policy disagreement, one of a moral nature quintessentially the province of legislatures to resolve, yet one the legislature has left Presidents to resolve through massive delegation, a disinclination to be responsible for controversial federal policy, and a resignation to a reality that modern life requires a powerful executive branch. As of this writing, President Obama is well into his eight-year presidency, and the former constitutional law professor now well-appreciates the practical limitations of attempting to govern with the assistance of Congress. Rightly or wrongly-but no doubt controversially-President Obama has recently declared that, in light of Congress' inability or unwillingness to legislate with respect to important issues, "I have got a pen and I have got a phone," and that he would use his pen and phone to advance his policies without the help of Congress.20 1 Obama has thus, for example, announced, without consultation with Congress, that the executive branch would stop deporting children present in the country illegally,20 2 which some argue is tantamount to refusing to enforce federal immigration laws, at least in a significant categorical respect.20 3 Also controversial is his (as of this time) forthcoming executive order that would raise the minimum wage for federal contractors' employees without any legislation, 20 4 a move justified, as defenders argue,205 only by vaguely delegated authority in the Federal Property and Administrative Services Act of 1949, that charges the executive to promote

"economy and efficiency" in procurement.20 6 Perhaps more relevant-though less controversial for being so familiar-is the increasing use of military power by Presidents since the end of the Second World War without congressional approval. The argument, for example, that wars are illegal without Congress first declaring them is generally deemed so illegitimate-to the point of being almost adorably quaint-such that even those generally against U.S. involvement abroad generally bypass the argument altogether, notwithstanding historical evidence that the Declare War Clause was, absent the need to repel a sudden attack, intended to ensure Congress and not the executive commit the nation to war.20 7 Even half-way measures meant to preserve meaningful congressional constraints on executive war-making powers, such as the War Powers Resolution, have been largely ignored.208 Thus, the Obama administration has asserted that it may conduct airstrikes against Syria without congressional approval.20 9

Obama is violating the SOP – SOP key to stop despotism

Will 14

(George, Obama Violates Separation of Powers, 23 Jun 2014, https://www.newsmax.com/GeorgeWill/Obama-Separation-Powers-Congress/2014/06/23/id/578644/, JZG)

What philosopher Harvey Mansfield calls "taming the prince" — making executive power compatible with democracy's abhorrence of arbitrary power — has been a perennial problem of modern politics. It is now more urgent in America than at any time since the Founders, having rebelled against George III's unfettered exercise of "royal prerogative," stipulated that presidents "shall take care that the laws be faithfully executed." Serious as are the policy disagreements roiling Washington, none is as important as the structural distortion threatening constitutional equilibrium. Institutional derangement driven by unchecked presidential aggrandizement did not begin with Barack Obama, but his offenses against the separation of powers have been egregious in quantity, and qualitatively different. Regarding immigration, healthcare, welfare, education, drug policy, and more, Obama has suspended, waived, and rewritten laws, including the Affordable Care Act. It required the employer mandate to begin this year. But Obama wrote a new law, giving to certain-sized companies a delay until 2016, and stipulating that other employers must certify they will not drop employees to avoid the mandate. Doing so would trigger criminal perjury charges; so, he created a new crime, that of adopting a business practice he opposes. Presidents must exercise some discretion in interpreting laws, must have some latitude in allocating finite resources to the enforcement of laws, and must have some freedom to act in the absence of law. Obama, however, has perpetrated more than 40 suspensions of laws. Were presidents the sole judges of the limits of their latitude, they would effectively have plenary power to vitiate the separation of powers, the Founders' bulwark against despotism.

2NC SOP Low Now

SCOTUS ruling on marriage crushes SOP
Dixon 6-26

(Kristal, Loudermilk: Court Violated Separation of Powers In Marriage Equality Ruling, June 26, 2015, Patch.com, http://patch.com/georgia/cartersville/loudermilk-court-violated-separation-powers-marriage-equality-ruling-0, JZG)

U.S. Representative Barry Loudermilk (R-Cassville) is blasting the U.S. Supreme Court's decision to make marriage equality legal across the country. Loudermilk, who represents Georgia's 11th District in the U.S. House of Representatives, said in a statement that the court "has ignored the foundational intentions of the Constitution." Marriage, he added, has always been recognized as part of a "religious institution," something American founding fathers have deemed to be outside the realm of the federal government. "Therefore, any recognition or licensing of marriage by government was left within the power of the states," he said. "In this decision, the Supreme Court fully stepped upon the principle of federalism and the rights and will of the states regarding social and religious issues. Once again the courts have overstepped their boundaries and have engaged in social engineering by violating the basic premise of separation of powers and the will of the people."

2NC Paris Doesn't Solve

Paris can't solve warming
Friedman 14

(Lisa - E&E reporter, The pending Paris climate deal may not keep the world under 2 C -- does that mean failure?, August 21, 2014, http://www.eenews.net/climatewire/stories/1060004756, JZG)

A growing number of leaders are openly acknowledging that a 2015 international agreement to avert catastrophic global warming will surely fall short of what's needed to achieve that goal. But another consensus is also forming among top U.S. experts: that shortfall is OK, as long as the deal puts all major climate polluters on a serious, upward and transparent path to cutting greenhouse gases. "The big question the public is going to ask is: Are all the major emitters participating? And are they doing enough to help solve this challenge?'" said Peter Ogden, director of international climate and energy policy at the Center for American Progress and a former chief of staff to U.S. Special Envoy for Climate Change Todd Stern. The new agreement to be signed in Paris, to take effect in 2020, will essentially replace the 1997 Kyoto Protocol. Unlike Kyoto, the Paris deal will demand action from everyone, and not just from wealthy industrialized countries. But in order to make that palatable for governments, negotiators are moving away from a traditional top-down approach in which scientists dictate what is needed to save the planet and countries are allotted targets accordingly. Instead, consensus has built around a more voluntary approach in which governments figure out how much they can cut and offer it up as a pledge. Those "intended nationally determined contributions" are due early next year. In interviews with former negotiators and longtime observers of the U.N. climate negotiations, not one person expressed confidence that the sum of countries' targets will be enough to keep rising global temperatures below the internationally agreed 2-degree-Celsius "guardrail" between dangerous and extremely dangerous warming. "If that were the case, it would be a stunning surprise. I don't think anyone expects that," said Joy Hyvarien, executive director of the U.K.-based Foundation for International Law and Development (FIELD). Recently, the Massachusetts Institute of Technology used a sophisticated climate model to come to the same result. Studies show a continuing emissions rise In a report, "Expectations for a New Climate Agreement," researchers reviewed the likely pledges and found that instead of greenhouse gas emissions scaling back dramatically, they would actually result in levels of carbon dioxide equivalent in the atmosphere exceeding 580 parts per million by the end of the century.

Paris wont get us below 2C
Neslen and Mathiesen 15

(Arthur Neslen and Karl Mathiesen, Paris climate pledges 'will only delay dangerous warming by two years', 3 June 2015, http://www.theguardian.com/environment/2015/jun/03/paris-climate-pledges-will-only-delay-dangerous-warming-by-two-years, JZG)

Pledges made by countries to cut their carbon emissions ahead of a crunch climate summit in Paris later this year will delay the world passing the threshold for dangerous global warming by just two years, according to a new analysis. The research, led by a former lead author on the UN's climate science panel, found that the submissions so far by 36 countries to the UN would likely delay the world passing the threshold until 2038, rather than 2036 without the carbon cuts. However, more than 150 countries have yet to submit their carbon pledges despite a deadline of the end of March. While most are relatively small emitters, commitments by big polluters such as India could significantly change the picture. The analysis for the Guardian by the non-profit Climate Analytics comes as climate negotiators from nearly 200 countries meet in Bonn and academics warned the agreement hoped for in Paris would not keep temperatures to UN's target of holding temperature rises below 2C above pre-industrial levels. None of the pledges, known in UN jargon as Intended Nationally Determined Contributions (INDCs), were found to be in line with the 2C limit, when a fair global distribution of emissions cuts was factored into countries' offers. Pledges made by Russia and Canada would be consistent with potentially catastrophic warming of between 3-4C if the pledges were matched with a similar level of ambition globally, according to the research. "The action and ambition we have seen to date is far from sufficient and unless it is rapidly accelerated, the difficulties of

limiting warming below 2C will be extreme," said Dr Bill Hare, the founder of Climate Analytics and a former Intergovernmental Panel on Climate Change (IPCC) lead author. But he added: "What we see in the economic and technological potential for emissions reductions gives us hope that if governments are willing to move fast enough in the next 5-10 years, we might still make it. All that is lacking is political will." Achim Steiner, the director of the UN Environment Programme, said this week that he would measure countries' commitments by "looking at whether the pledges add up to anything that comes close to ensuring that we at least have the possibility to stay within a 2C scenario." The new analysis suggests an uphill struggle. Some civil society groups complain that the focus on national pledges distracts attention from the planet's fast-dwindling carbon budget and the UN Framework Convention on Climate Change's (UNFCCC) goal of stabilising atmospheric greenhouse gas emissions at safe levels. "When the UNFCCC started 21 years ago, atmospheric CO2 concentration were at 300 parts per million (ppm). Today they are at 400 ppm, and increasing faster each year than the one before," said Michael Wadleigh, the founder of the Unesco-supported Homo Sapiens Foundation, and director of the Oscar-winning film, Woodstock. "Despite all the UNFCCC's negotiated agreements, the body is failing in its key objective." Reto Knutti, a lead author for the IPCC's last major climate report, said that scientists would prefer the world to set global carbon quotas – rather than percentages of national emissions set against baseline years – but admitted that this was a hard sell. "We presented carbon budget schemes in Warsaw two years ago [the UN climate summit in 2013], and the policy-makers all said 'we agree and its urgent'. But at the same time, they tried to tweak things so they had to do as little as possible," he said. Nicholas Stern, the author of aninfluential review of the economics of climate change for the UK government, said that the Paris summit would be crucial in at least setting a "floor of ambition" "The question is how fast can you ramp up," he said. "There's no doubt that [INDCs] are coming in too high for 2030 for 2C [of warming]. That's crystal clear. Much too high. But if we get some movement in policies, if we get much stronger innovation of the kind they are trying to encourage, then they could be ramped up quite quickly." Christiana Figueres, the head of the UN climate secretariat, acknowledges Paris is unlikely to meet 2C but said future rounds of pledges could meet the target. "You don't run a marathon with one step," Reuters reported her as as saying.

2NC No EPA Regs Now

States thump climate regulations

Foran 15

(Clare, Mike Pence Says Indiana Will Buck Obama's EPA Climate Plan, 6-24-15, http://www.nationaljournal.com/energy/mike-pence-says-indiana-will-buck-obama-s-epa-climate-plan-20150624, JZG)

June 24, 2015 Indiana Gov. Mike Pence says his state won't comply with the Environmental Protection Agency's effort to curb carbon dioxide from power plants—unless the administration dramatically overhauls its regulation. Mike Pence sent a letter to the President Obama on Wednesday with that warning, saying that unless proposed EPA regulations for power plants are significantly "improved" before the agency finalizes them, Indiana will buck the rule. That declaration arrives on the heels of a major push from Senate Majority Leader Mitch McConnell urging governors not to comply with the regulations, which stand at the heart of Obama's effort to tackle global warming and shore up a legacy on the environment before he leaves office. In his letter to the White House, Pence did not explicitly outline what changes he hopes to see from EPA, but claimed that the regulation "fails to strike the proper balance between the health of the environment and the health of the economy," and warned that it will drive up the cost of electricity. "As Governor of Indiana, I am deeply concerned about the impacts of the Clean Power Plan on our state, especially our job creators, the poor, and the elderly who cannot afford more expensive, less reliable energy. I reject the Clean Power Plan and inform you that absent demonstrable and significant improvement in the final rule, Indiana will not comply," Pence wrote, adding that Indiana will "reserve the right to use any legal means available to block the rule from being implemented." Indiana joined a coalition of states that sued the administration in a failed effort to block the regulations before they were made final. And this is not the first instance when a Republican governor has pushed back against the rule. Oklahoma Gov. Mary Fallin signed an executive order blocking her state from complying with the power-plant regulations. Wisconsin Republican Gov. Scott Walker, a 2016 presidential prospect, has also vowed to fight the regulations in court.

SCOTUS ruling crushed obama's momentum for the green agenda
GUILLÉN 6-29

(Alex, Supreme Court deals blow to Obama's green agenda, 6/29/15, http://www.politico.com/story/2015/06/supreme-court-epa-mercury-emissions-obama-environment-119541.html, JZG)

The Supreme Court dealt President Barack Obama's environmental agenda a major setback on Monday, ruling that the Environmental Protection Agency had erred in writing its 2012 limits on mercury pollution from power plants. The decision could alter the administration's strategy for rolling out an even grander environmental initiative — EPA's first-ever regulations on power plants' greenhouse gas emissions, which had been expected later this summer. Monday's ruling capped a session that delivered mixed signals regarding how the court will judge the inevitable challenge to that landmark climate rule. Even standing alone, Monday's ruling on EPA's Mercury and Air Toxics Standard, one of the administration's major green initiatives, comes as a blow to the agency, which was confident it was on solid legal ground after an unequivocal appellate court win in 2014. EPA said in a statement it was "disappointed" the court did not uphold the rule, but it was still committed to implementing the mercury controls that were now remanded to the U.S. Court of Appeals for the District of Columbia Circuit. And agency spokeswoman Melissa Harrison noted that because "this rule was issued more than three years ago, investments have been made and most plants are already well on their way to compliance." But congressional Republicans and other critics of EPA's agenda appeared emboldened by Monday's ruling as a rebuke for the administration's broader agenda. "Today's decision firmly rejects the Obama administration's circumvention of the democratic process and restores a dose of accountability to the increasingly unaccountable executive branch," House Majority Leader Kevin McCarthy (R-Calif.) said in a statement. He added that the decision "vindicates the House's legislative actions to rein in bureaucratic overreach and institute some

common sense in rule-making." The ruling, which greens had hoped would bolster the legal case for Obama's upcoming climate change rules, saps some of the president's momentum after last week's crucial rulings supporting Obamacare and gay marriage.

2NC Warming Impact Defense

( ) Warming not real- recent temperatures show no increase
Happer '12

(William is a professor of physics at Princeton. "Global Warming Models Are Wrong Again", Wall Street Journal, 3/27/12, http://online.wsj.com/article/SB10001424052702304636404577291352882984274.html)

What is happening to global temperatures in reality? The answer is: almost nothing for more than 10 years. Monthly values of the global temperature anomaly of the lower atmosphere, compiled at the University of Alabama from NASA satellite data, can be found at the website http://www.drroyspencer.com/latest-global-temperatures/. The latest (February 2012) monthly global temperature anomaly for the lower atmosphere was minus 0.12 degrees Celsius, slightly less than the average since the satellite record of temperatures began in 1979

( ) Warming won't cause extinction---mitigation and adaptation solve
Mendelsohn '9

(Robert O. Mendelsohn 9, the Edwin Weyerhaeuser Davis Professor, Yale School of Forestry and Environmental Studies, Yale University, June 2009, "Climate Change and Economic Growth," online: http://www.growthcommission.org/storage/cgdev/documents/gcwp060web.pdf)

These statements are largely **alarmist and misleading**. Although climate change is a serious problem that deserves attention, **society's immediate behavior has an** extremely low probability **of leading to** catastrophic consequences. The **science and economics** of climate change **is quite clear that emissions over the next few decades will lead to only** mild consequences. The severe impacts predicted by alarmists **require a century (or two** in the case of Stern 2006) of no mitigation. Many of the **predicted impacts assume there will be no or little adaptation**. The net economic impacts from climate change over the next 50 years will be small regardless. Most of **the more severe impacts will take more than a century or even a millennium to unfold and many of these** "**potential" impacts will never occur because people will adapt. It is not at all apparent that immediate and dramatic policies need to be developed to thwart long-range climate risks**. What is needed are long-run balanced responses.

2NC EPA Regs Hurt Econ

EPA regs hurt the economy
Harder 15

(Amy, Obama Administration Readies Big Push on Climate Change, June 9, 2015, http://www.wsj.com/articles/obama-administration-readies-big-push-on-climate-change-1433873269, JZG)

People on either side of the fight hotly contest to what degree—or whether at all—the regulations will create new costs on the U.S. economy. EPA Administrator Gina McCarthy has averaged about two speeches a week on climate change since the agency first proposed the carbon rule for power plants a little more than a year ago, according to EPA. Many of the speeches, which include addresses in front of oil and natural gas industry executives around the world, focus on what Ms. McCarthy describes as the positive economic impact of new regulation. "Strategies to reduce carbon can double as investments that return value for your operations as they evolve over time," Ms. McCarthy told an audience of energy executives at a conference in Houston in late April about the agency's proposed rule cutting carbon from the utility sector. Other experts maintain the economic upshots of regulations aren't as clear-cut. "There is no question that regulations are shifting supply and demand curves, so they are increasing costs," said Susan Dudley, who was a top regulatory official in the White House during the George W. Bush administration. "Some of those costs are encouraging cleaner alternatives; sometimes they're shifting things to other countries. Fully understanding the costs and benefits is really challenging."

Delegation CP

This CP would be run against affirmatives whose agent was the Congress- the CP delegates rule making authority to an executive agency, and then has the agency do the plan. The primary net benefit is Politics- delegation allows congress to maximize credit and minimize blame for controversial issues.

Here's how criddle explains the due process clause applied to delegation

The Due Process Clause's application to congressional lawmaking has important implications for legislative delegations to administrative agencies. Specifically, due process of lawmaking prohibits Congress from entrusting lawmaking authority to agencies outside the constraints of liberty-conserving administrative procedures. In other words, to satisfy due process, administrative rulemaking procedures must be sufficiently fair and deliberative to ensure, at a minimum, that an agency's institutional capacity for arbitrariness in the administrative process is not manifestly greater than Congress's capacity for arbitrariness in the legislative process. n229 While due process does not require any "particular form of procedure" in rulemaking proceedings, n230 Congress must take care to prescribe procedural [*170] safeguards that will prevent delegations of lawmaking authority from introducing domination that would subvert the republican ideals implicit in the checks and balances of Articles I and II. n231

1NC Delegation CP

The counterplan avoids politics- Public choice theory proves

Williams, Associate Professor of Law, Saint Louis University School of Law 2K

(*Stanford Law Review, Vol. 38*: DOUGLAS: SYMPOSIUM CONGRESS: DOES IT ABDICATE ITS POWER?: CONGRESSIONAL ABDICATION, LEGAL THEORY, AND DELIBERATIVE DEMOCRACY. published in 2000.)KalM

The question of whether and why Congress abdicates power is a complex one. n4 In Part I, I consider the distinction Dr. Fisher draws between abdication and delegation. I conclude that, with respect to war and budgetary matters, congressional behavior is different from ordinary forms of delegation. Nonetheless, delegation poses some of the same general concerns that attend Dr. Fisher's claim of abdication. For that reason, it makes sense to consider these behaviors as linked, with an initial hypothesis that they stem from the same general conditions. [*76] In Part II, I explore the question of why Congress might willingly choose to give away power. In my view, partial explanations or factors of significance are about the best one can hope to identify in pursuing this inquiry. I will first argue that, to the extent that Congress may be said to have abdicated its constitutional authority, a public choice analytic supplies a useful starting point. On this view, **individual Members of Congress will act in ways that maximize their opportunities for reelection**. In some circumstances, **choices that maximize reelection opportunities may compromise institutional powers and responsibility**. In cases of this sort, we should expect the interests of individual members in advancing their own fortunes to dominate over the members' interest in advancing institutional interests.

Extensions

Solvency-Due Process

Cp text: Congress should delegate authority to the nsa under the due process clause of the constitution

Due Process is the best method of delegation
Criddle Associate law professor 11

Evan WHEN DELEGATION BEGETS DOMINATION: DUE PROCESS OF ADMINISTRATIVE LAWMAKING
From the university of Georgia Law Review

As developed in the foregoing discussion, the due process model promotes the Constitution's republican design by conserving liberty in the administrative state. While reasonable minds might disagree about which particular safeguards are necessary to safeguard individual liberty when Congress entrusts lawmaking powers to administrative agencies, the three-part due process model outlined in the preceding sections best captures the Court's answer to these republican concerns.

This due process model is superior to both the traditional nondelegation doctrine and the current delegation doctrine because it allows Congress to harvest the benefits of broad delegation while checking the attendant threats to individual [*186] liberty. Like the traditional nondelegation doctrine, the due process model takes seriously the republican values embodied in constitutional checks and balances, but it does not require Congress to make every meaningful policy decision within those bounds. Instead, the due process model reconciles administrative lawmaking with the Constitution's republican design by requiring Congress to establish a minimalist substantive standard, combined with administrative procedures and judicial review to further limit potential agency arbitrariness. This approach is more principled than the traditional nondelegation doctrine because it sidesteps the dubious proposition that Congress does not delegate legislative powers to administrative agencies. n313 It also clarifies why congressional delegations need only establish an intelligible principle rather than a fully determinate criterion to pass constitutional muster at a substantial level. n314

For similar reasons, the due process model is vastly superior to the new nondelegation doctrine. n315 Both the new nondelegation doctrine and the due process model support the principle that federal agencies lack inherent authority to make law absent a delegation from Congress through legislation or from the President through subdelegation. The due process model is less susceptible to judicial domination than the new nondelegation doctrine, however, because it does not deputize courts to narrow broad congressional delegations through canons of statutory interpretation. n316 The due process model leaves the responsibility to establish an intelligible principle where it belongs: with Congress and the President, subject to the checks and balances of Articles I and II. The Judicial Branch's role, in contrast, is limited to evaluating whether Congress has established (1) an intelligible principle, (2) fair and deliberative administrative procedures, and (3) structural constraints such as political accountability and judicial review.

Delegation agencies have to abide by the due process clause, solves case
Criddle Associate law professor 11

Evan WHEN DELEGATION BEGETS DOMINATION: DUE PROCESS OF ADMINISTRATIVE LAWMAKING
From the University of Georgia Law review

A third area where the due process model could inform federal administrative law is agency self-regulation. Prior to American Trucking, some legal scholars argued that courts should allow administrative agencies to narrow unconstitutionally broad congressional delegations by establishing substantive standards to limit their own discretion. n353 The Court soundly rejected this position, however, in American Trucking. n354 Just as federal courts cannot cure unconstitutional delegations by supplying intelligible principles of their own design, n355 agency self-regulation does not adequately address the problem of unfettered administrative agency authority. The problem, as the Court recognized, is that an administrative agency's "choice of which portion of [Congress's delegated] power to exercise . . . would itself be an exercise of [*197] [unchecked] legislative authority." n356 If Congress does not provide an intelligible principle to guide agency discretion at the outset, principles of procedural and structural due process are ineffectual as safeguards against administrative arbitrariness because agencies, like courts, lack an independent standard against which to evaluate their actions. Although agency self-regulation might be desirable from a republican perspective to limit arbitrariness downstream at the adjudication stage, it does not fully address the domination concerns that arise when Congress delegates unfettered lawmaking authority to an agency at the rulemaking stage. An agency cannot, therefore, "cure an unlawful delegation of legislative power by adopting in its discretion a limiting construction of the statute." n357

On the other hand, agency self-regulation may remedy Congress's failure to prescribe appropriate administrative procedures. Procedural due process asks whether an agency has engaged in a fair and deliberative process leading to a rational explanation of the legal and factual basis for the agency's action. n358 When courts conduct this inquiry, it should make little difference whether an agency's procedures derive from the APA, other federal legislation, or administrative self-regulation. Although agencies cannot exercise delegated lawmaking powers without employing minimally fair and deliberative procedures, Congress need not be the one to establish those procedures. As long as an agency's lawmaking procedures satisfy the minimum requirements of due process, congressional delegation does not lead to domination. n359

The due process model thus suggests that administrative agencies may cure procedural defects in congressional delegations by binding themselves prospectively to employ fair and deliberative lawmaking procedures. As recognized in American Trucking, however, no amount of agency self-regulation, no matter how well- intentioned, can compensate for Congress's failure to establish a substantive intelligible principle to constrain agency discretion. n360

Evan WHEN DELEGATION BEGETS DOMINATION: DUE PROCESS OF ADMINISTRATIVE LAWMAKING
Published in the university of Georgia law review

This Article has argued that federal courts should abandon the traditional nondelegation doctrine and embrace due process as the primary constitutional constraint on congressional delegation. According to the due process model, Congress may delegate lawmaking authority to administrative agencies if it channels that authority through substantive, procedural, and structural safeguards that prevent delegation from manifestly increasing the federal government's capacity for arbitrary lawmaking, the principal republican concern driving traditional nondelegation principles. Congressional delegations meet this standard when they combine (1) an intelligible principle to guide agency discretion together with (2) deliberative procedural requirements and (3) structural constraints, such as political accountability and judicial review. In most contexts, the APA easily satisfies procedural due process, avoiding the need for further judicial intrusion into [*212] administrative rulemaking procedure. Where an agency's lawmaking procedures do not satisfy the constitutional requirements of due process, however, courts should withhold Chevron deference and, where appropriate, set aside regulations to safeguard the public from administrative domination. The due process model thus takes seriously the nondelegation doctrine's republican ideals while reframing the Court's current delegation jurisprudence to better reconcile congressional delegation in the modern administrative state with the Constitution's enduring commitment to individual liberty.

Solvency-Generic

Delegation solves best

Posner and Vermeule, Professors of Law University of Chicago. 02 (Eric and Adrian Vermeule: *University of Chicago Law Review:* "Interring the Nondelegation Doctrine" published Fall, 2002)KalM

II. Delegation in Political and Economic Theory The burden of Part I was showing that a nondelegation rule lacks any moorings in formal constitutional sources. For some, that is conclusive; nothing more need be said about the consequences of delegation or of a nondelegation rule. For others, however, constitutional argument properly includes consequentialist and functional considerations; many nondelegation proponents appeal to those considerations as well. In this Part we add a consequentialist analysis to the formal argument of Part I. We argue here that there is no successful consequentialist or functional justification for recognizing constitutional restrictions on statutory grants of authority to executive agents. Initially, we need to clear up a terminological confusion created by the literature's metaphoric use of the word "delegation." In debates about the nondelegation doctrine, supporters and opponents alike usually use the word "delegation" to include any transfer of authority from Congress to executive agents. We have avoided this usage because under our constitutional argument a statutory grant of authority [*1744] to executive agents is formally not a delegation of legislative power under the Constitution. The executive's use of that authority is an instance of executive power, not of legislative power. In this Part, however, we will adopt the usage of the literature, for to do otherwise would require labored verbal manipulations. Thus, when we use the word "delegation," we mean to include statutory grants of authority to executive agents. Critics of delegation argue that Congress delegates for nefarious purposes--to make transfers to interest groups and to avoid responsibility for difficult political decisions. These arguments appeal to widespread conspiratorial intuitions about government, and so before addressing the arguments directly we should emphasize the peculiarity of attacking this particular instrument of government power, whatever one's views are about the motives of elected officials. Delegation is ubiquitous in public and private life. The most familiar example is the employment relationship. When managers delegate to employees, they expect that the employees will specialize in some area for which the managers have responsibility. Delegation is just as common in government: mayors, governors, judges, agency heads, police captains, and countless other officials delegate power to subordinates. The ubiquity of delegation is due to the need for (a) authority and (b) division of labor, in any complex institution, whether public or private. All institutions must take direction from a person, or a small group of people, but the leader of an institution cannot possibly perform all of its tasks directly. Instead, the leader or principal delegates broad authority to agents. The principal sometimes controls agents by giving them detailed instructions but more often by giving them a vague goal--"maximize profits" or "sell lots of widgets"--and then rewarding them on the basis of an ex post evaluation of the agent's performance. Although principals sometimes give bad instructions to agents, or fail to discipline them properly, no one thinks that delegation has bad effects in itself. No one argues that shareholders should not delegate; people argue about whether existing compensation packages provide the right kind of incentives for executives. No one argues that the mayor should not delegate; they argue about whether the mayor has delegated to the right people, too much or too little. The reason no one makes these arguments, except in rare cases, is that the value of delegation is too widely understood; it is simply an aspect of the division of labor that underlies both market and nonmarket institutions. Given the self-evident value of delegation, we should not be surprised to find that the United States Congress delegates its powers--using "delegate" in the conventional sense of enacting statutes that [*1745] grant agents legal authority. The critics of delegation need to explain why delegation by Congress raises special functional objections, objections that

cannot be applied generally to all congressional action, and objections that cannot be applied to the countless routine delegations that occur in any complex institution.

Delegation solves best: agencies have expertise

Posner and Vermeule, Professors of Law University of Chicago. 02 (Eric and Adrian Vermeule: *University of Chicago Law Review:* "Interring the Nondelegation Doctrine" published Fall, 2002)KalM

The welfarist argument by the critics of delegation boils down to the claim that social welfare would be greater if Congress made all the specific policy choices rather than delegating that power to agencies. This claim is like an argument that the owner of a corporation should design the corporation's products rather than hiring engineers and marketing experts. The owner knows that the agents might make specific choices that he would not make himself, but by **rewarding** the **agents** on the basis of an ex post evaluation of performance, he **ensures** that **they act** roughly in his interest **while at the same time exploiting their expertise** and the other benefits of a division of labor.

PTX I/L

Delegation doesn't link to politics

Williams, Associate Professor of Law, Saint Louis University School of Law 2K

(DOUGLAS: SYMPOSIUM CONGRESS: DOES IT ABDICATE ITS POWER?: CONGRESSIONAL ABDICATION, LEGAL THEORY, AND DELIBERATIVE DEMOCRACY. published in 2000.)KalM

There are number of reasons to question this logic. First, it is precisely **on issues "of particular local interest" that legislators are unlikely to delegate**, preferring instead to push for the favored position in order to gain credit. n127 Delegation is most likely the product of intense conflict among constituencies - a circumstance in which a delegation allows legislators to blame agencies for adverse constituent effects, while at the same time claiming credit for delivering the goods to benefited constituencies.

Delegation eliminates legislators' accountability

Krent, Associate Professor, Chicago-Kent College of Law, 94 (Harold, Book Review: Delegation and Its Discontents: Power Without Responsibility, Columbia Law Review Column 94, L. Rev, 710)

Yet members of Congress can claim credit for attempting to solve the problems of the environment and the economy by authorizing agencies to tackle the problems, and then distance themselves from the ensuing regulation if unfavorable to their constituents. Delegation permits legislators to "look good" to their constituents without necessarily providing tangible benefits (pp. 8687). [n20] Congress may too readily distribute rights without imposing [*715] commensurate obligations, concealing the tradeoffs that must necessarily follow (p. 9). Indeed, Schoenbrod further observes that members of Congress might try to benefit politically by excoriating an agency's performance before some constituents while taking credit for the agency's efforts before others (pp. 8894). Schoenbrod explains that "just as deficit spending allows legislators to appear to deliver money to some people without taking it from others, delegation allows them to appear to deliver regulatory benefits without imposing regulatory costs. It provides "a handy set of mirrors ... by which a politician can appear to kiss both sides of the apple.'" (p. 10). [n21] Citizens are confused by the game and fail to hold legislators accountable for the resulting policy choices by administrators. In short, delegation permits members of Congress to maximize credit while minimizing blame for legislation, and the less that legislators appear to make the important policy choices that govern the nation, the more estranged from politics citizens may become Schoenbrod also notes that delegation of lawmaking authority in detailed statutes (which he terms "narrow delegation," p. 78) can be as problematic as open-ended delegation to agencies to regulate in the public interest (pp. 7881). [n22] Despite the welter of subsidiary rules in detailed laws such as the Clean Air Act, delegation harms the public whenever Congress enacts legislation setting forth goals such as "a safe environment" without stating clearly how those goals are to be met. The accuracy of the gloomy picture Schoenbrod portrays is of course open to dispute. Members of Congress often act from ideology and not just from the desire to maximize their chance for reelection, as Schoenbrod recognizes (pp. 8588 & n.23). Citizens may vote for representatives not only on the basis of benefits brought home to their districts, but also on the basis of the candidates' political vision. Some voters also perceive the connection between Congress and agencies and therefore hold legislators responsible for the exercise of delegated authority. Moreover, the nexus between delegation and rent-seeking is inexact: Congress at times is quite specific in approving funding for bridges or particular weapon systems that are likely not needed; and some agencies, whether the Federal Reserve Board or the Securities and Exchange Commission, implement statutory directives in a way that may well serve the public interest. Therefore, prohibiting all delegation might not enhance [*716] public welfare, for lawmaking by Congress, at least at times, might be worse. [n23] Nonetheless, Schoenbrod's skepticism is partly warranted. Legislators often adapt their conduct in office to maximize the chance for reelection, or at least to appear conscientious in the public eye, and delegation of lawmaking authority offers a vehicle for furthering such goals. Delegation has resulted in the rent-seeking Schoenbrod describes, as his informative explications of the navel orange marketing order (pp. 4957) and the Clean Air Act (pp. 5881) demonstrate. The risk of abuse is particularly acute when Congress does not specify the governing rules. Thus, although the extent of abuse is debatable, few would reject Schoenbrod's central thesis that delegation often confers benefits on concentrated interests.

Pres Powers I/L

Executive delegation increases presidential powers
Moe Professor of political science 99

Terry Unilateral action and presidential power From Presidential Studies Quarterly (a peer reviewed Journal) http://home.uchicago.edu/~whowell/papers/UnilateralAction.pdf

Yet statutory constraint cannot be counted on to work especially well as a check on unilateral action by presidents. In the first place, legislators may actually prefer broad delegations of authority on many occasions, granting presidents substantial discretion to act unilaterally. This can happen, for instance, (1) when their policy goals are similar to those of presidents; (2) when they are heavily dependent on the expertise and experience of the administration; (3) when they want to avoid making conflictual decisions within the legislature and thus find it attractive to "shift the responsibility" to the executive; (4) when Congress, as a collective institution, really does not have specific preferences and can only decide on the broad outlines of a policy;(5)when, in complex policy areas with changing environments, it is impossible to design a decent policy that promises to meet its objectives unless substantial authority is delegated to the executive; and (6) when certain policies require speed, flexibility, and secrecy if they are to be successful (Moe 1990; Epstein and O'Halloran 1999). Most of these conditions, we should point out, are more likely to be met in foreign than domestic policy, so there is good reason to expect broad delegations to be more common in that realm.

When delegations are broad, presidential powers of unilateral action are at their greatest. One might be tempted to think that they are also innocuous in their effects on the balance of institutional power—for, as long as presidents stay within the broad bounds set by statute, they are simply following the will of Congress, and all is as it should be. This would be something of a misconception ,though. The key issue is :who actually has power to make policy for the nation? And in these cases, that power would rest overwhelmingly with presidents, for with broad delegations of authority, they would be the ones making virtually all the key choices about the content, meaning, and consequences of policy. Whether or not presidents stay within congressional boundaries, then, delegation itself puts expanded powers into their hands that shift the institutional balance in their favor.

Delegation increases agencies the president can control: raises pres powers
Moe Professor of political science 99

Terry Unilateral action and presidential power From Presidential Studies Quarterly http://home.uchicago.edu/~whowell/papers/UnilateralAction.pdf

Finally, whatever the discretion contained in specific pieces of legislation, and whatever opportunities for shirking they open up, it is crucial to recognize that the presidentisgreatlyempoweredbythesheerproliferationofstatutesovertime.Inpart, the reasons are pretty obvious. When new statutes are passed, almost whatever they are, they increase the president's total responsibilities and give him a formal basis for extending his authoritative reach into new realms. At the same time, they add to the total discretion available for presidential control, as well as to their sources contained within the executive. Less obviously, though, the proliferation of statutes creates substantial

ambiguity about what the "take care "clause ought to mean in operation, ambiguity that presidents can use to their great advantage (Corwin 1973, 1984). While it may seem that theburgeoningcorpusoflegislativerequirementswouldtiethepresidentupinknots, the aggregate impact is liberating. For the president, as chief executive, is responsible for all the laws, and inevitably the laws turn out to be interdependent and conflicting in ways that the individual statutes themselves do not recognize. In the aggregate, what they require of him is ambiguous. The president's proper role, as would be true for any executive, is to rise above a myopic focus on each statute in isolation, to coordinate policies by taking account of their interdependence, and to resolve statutory conflicts by balancing their competing requirements. All of this affords him enormous discretion to impose his own priorities on government unilaterally and to push out the boundaries of his own power—claiming all the while that he is faithfully executing the laws. Even though presidents are mere executives, then, charged with taking care that the laws be faithfully executed, Congress cannot be expected to use statutory constraints with great effectiveness in restricting the expansion of presidential power.

Pres Powers Good

Presidential powers good

Posner and Vermeule, Professors of Law University of Chicago. 02 (Eric and Adrian Vermeule: *University of Chicago Law Review:* "Interring the Nondelegation Doctrine" published Fall, 2002)KalM

(2) If it did happen, it might not be bad. The legislatures of many liberal democracies around the world have granted the executive broad rulemaking powers, of varying scope, duration, and legal effect. n85 Sometimes, of course, these practices or episodes represent executive usurpation of legislative authority. **Sometimes they represent a sensible social response to some crisis--war, economic chaos, or social unrest--best resolved by executive processes**. Sometimes, less dramatically, they represent a reasonable judgment by the legislature that the opportunity costs of controlling policy formulation are too high, in light of other things legislatures want to do. Even if Congress granted the president broader rulemaking powers than it already has--thereby sliding the rest of the way to the bottom of the slope--there is little reason to suppose, ex ante, that the grant would represent legislative abdication to an engorged presidency, rather than a desirable response to contemporary social needs. Much more could be said about this essentially empirical and predictive question; Part II amplifies the good reasons supporting delegation to executive agents. Suffice it to say here that the current literature in comparative politics finds that executive usurpation or legislative abdication is rarely the best explanation for broad legislative grants of authority to the executive. n86

Democracy I/L

Delegation increases democratic accountability

Posner and Vermeule, Professors of Law University of Chicago. 02 (Eric and Adrian Vermeule: *University of Chicago Law Review:* "Interring the Nondelegation Doctrine" published Fall, 2002)KalM

B. Democratic Arguments Some critics of delegation argue that delegation violates democratic values. Their main argument focuses on accountability. Suppose that Congress delegates certain powers to an agency. Those who want to influence policy will make arguments to the agency, not to Congress. Those who are disappointed by the agency's decisions will appeal to the agency, not to Congress. Members of Congress are thus not accountable for political outcomes under their responsibility. But in a wellfunctioning democracy those who are ultimately responsible for policy should be directly accountable to those who are affected by it. n97 The problem with this argument is that Congress is accountable when it delegates power--it is accountable for its decision to delegate power to the agency. If the agency performs its function poorly, citizens will hold Congress responsible for the poor design of the agency, or for giving it too much power or not enough, or for giving it too much money or not enough, or for confirming bad appointments, or for creating the agency in the first place. And, as noted above, Congress is accountable not only in this derivative sense. Congress retains the power to interfere when agencies make bad decisions; indeed, it does frequently. n98

Nondel Solves- Circumvention DA

NonDelegation solves circumvention

Lemos, Assistant Professor at Cardozo School of Law 08 (Margaret: *Southern California Law Review:* ARTICLE: THE OTHER DELEGATE: JUDICIALLY ADMINISTERED STATUTES AND THE NONDELEGATION DOCTRINE published 2008) KalM

[*419] Nevertheless, it would be a mistake to say that the nondelegation doctrine is dead. n68 Individual Justices repeatedly have invoked the nondelegation doctrine in separate opinions. n69 Although they have failed to persuade a majority of the Court to strike down the statutes in question, on several occasions the Court has relied on the nondelegation doctrine as a reason for narrowly construing statutes that might otherwise pose a constitutional problem because of the lack of an intelligible principle to cabin agency discretion. n70 **The Court also has relied on the nondelegation principle to invalidate federal statutes that sought to circumvent** the "finely wrought" procedure for the enactment of legislation n71 by vesting power in the president to "cancel" select portions of a duly enacted bill, n72 or by giving a single chamber of Congress authority to invalidate executive action under a statutory delegation. n73 Moreover, to the extent the Court has attempted to explain its lackluster enforcement of the doctrine, it has pointed to functional reasons - such as the difficulty of drawing a coherent line between permissible and impermissible delegations - rather than any rejection of the constitutional principle itself. n74

NonDelegation CP

This CP you read if the affirmative uses an executive agency. The CP would strip that agency of rule making authority and have congress enact and oversee the plan.

1NC Nondelegation

Delegation annihilates democratic accountability

David **Schoenbrod**, Professor of Law, New York Law School, Adjunct Scholar, Cato Institute, Former Staff Attorney and Co-director, Project on Urban Transportation, Natural Resources Defense Council, Former Director of Program Development, Bedford Stuyvesant Restoration Corporation, Former Staff Attorney, Association of the Bar, City of New York Committee on Electric Power and the Environment, Former Professor, Yale Law School, and Member, American Tree Farmers' Association, **and** Jerry **Taylor**, Director of Natural Resource Studies, Cato Institute, **2001** ("Delegation of Legislative Powers" – Legislative Handbook of the Cato Institute) http://www.cato.org/pubs/handbook/hb107/hb107-8.pdf

Delegation: **The Corrosive Agent** of Democracy The concern over congressional delegation of power is not simply theoretical and abstract, for **delegation does violence**, not only to the ideal construct of a free society, but also to the day-to-day practice of **democracy itself**. Ironically, delegation does not help to secure '' good government'' ; **it helps to destroy it**. Delegation Breeds Political Irresponsibility Congress delegates power for much the same reason that Congress ran budget deficits for decades. With deficit spending, members of Congress can claim credit for the benefits of their expenditures yet escape blame for the costs. The public must pay ultimately, of course, but through taxes levied at some future time by some other officials. Likewise, delegation allows legislators to claim credit for the benefits that a regulatory statute airily promises yet escape the blame for the burdens it will impose, because they do not issue the laws needed to achieve those high-sounding benefits. The public inevitably must suffer regulatory costs to realize regulatory benefits, but the laws will come from an agency that legislators can then criticize for imposing excessive burdens on their constituents. Just as deficit spending allows legislators to appear to deliver money to some people without taking it from others, delegation allows them to appear to deliver regulatory benefits without imposing regulatory costs. It provides, in the words of former Environmental Protection Agency deputy administrator John Quarles, '' a handy set of mirrors— so useful in Washington— by which politicians can appear to kiss both sides of the apple.'' Delegation Is **a Political Steroid for Organized Special Interests** As Stanford law professor John Hart Ely has noted, '' One reason we have broadly based representative assemblies is to await something approaching a consensus before government intervenes.'' The Constitution was intentionally designed to curb the '' facility and excess of law-making'' (in the words of James Madison) by requiring that statutes go through a bicameral legislature and the president. Differences in the size and nature of the constituencies of representatives, senators, and the president— and the different lengths of their terms in office— increase the probability that the actions of each will reflect a different balance of interests. That diversity of viewpoint, plus the greater difficulty of prevailing in three forums rather than one, makes it far more difficult for special-interest groups or baremajorities to impose their will on the totality of the American people. Hence, the original design effectively required a supermajority to make law as a means of discouraging the selfish exercise of power by well-organized but narrow interests. Delegation shifts the power to make law from a Congress of all interests to subgovernments typically representative of only a small subset of all interests. The obstacles intentionally placed in the path of lawmaking disappear, and the power of organized interests is magnified. That is largely because diffuse interests typically find it even more difficult to press their case before an agency than before a legislature. They often have no direct representation in the administrative process, and effective representation typically requires special legal counsel, expert witnesses, and the capacity to reward or to punish top officials through political organization, press coverage, and close working relationships with members of the appropriate congressional subcommittee. As a result, the general public rarely qualifies as a '' stakeholder'' in agency proceedings and is largely locked out of the decisionmaking process. Madison's desired check on the '' facility and excess of law-making'' is thus smashed. **Delegation Breeds the Leviathan State** Perhaps the ultimate check on the growth of government rests in the fact that there is only so much time in a day. No matter how many laws Congress would like to pass, there are only so many hours in a session to do so. Delegation, however, **dramatically expands the realm** of the possible by effectively '' deputizing'' tens of thousands of bureaucrats, often with broad and imprecise

missions to '' go forth and legislate.'' Thus, as columnist Jacob Weisberg has noted in the New Republic: '' As a laborsaving device, delegation did for legislators what the washing machine did for the 1950s housewife. Government could now **penetrate every nook and cranny of American life** in a way that was simply impossible before.''

Democratic accountability solves extinction and turns the case- produces better policy making

Peter **Montague**, Co-Director, Environmental Research Foundation, and Publisher, Rachel's Environmental & Health News, **1998** ("Democracy and the Environment" – Green Left Weekly) http://www.greenleft.org.au/back/1998/337/337p12.htm

The environmental movement is treading water and slowly drowning. There is abundant evidence that our efforts -- and they have been formidable, even heroic -- have largely failed. After 30 years of exceedingly hard work and tremendous sacrifice, we have failed to stem the tide of environmental deterioration. Make no mistake: our efforts have had a beneficial effect. Things would be much worse today if our work of the past 30 years had never occurred. However, the question is, Have our efforts been adequate? Have we succeeded? Have we even come close to stemming the tide of destruction? Has our vision been commensurate with the scale and scope of the problems we set out to solve? To those questions, if we are honest with ourselves, we must answer No. What, then, are we to do? This article is intended to provoke thought and debate, and certainly is not offered as the last word on anything. Openness Open, democratic decision-making **will be an essential component of any successful strategy**. After the Berlin wall fell, we got a glimpse of what had happened to the environment and the people under the Soviet dictatorship. The Soviets had some of the world's strictest environmental laws on the books, but **without the ability for citizens to participate** in decisions, or blow the whistle on egregious violations, those laws meant nothing. For the same reason that science cannot find reliable answers without open peer review, **bureaucracies** (whether public or private) **cannot achieve beneficial results** without active citizen participation in decisions and strong protection for whistle-blowers. Errors remain uncorrected, narrow perspectives and selfish motives are rewarded, and the general welfare will not usually be promoted. The fundamental importance of democratic decision-making means that our strategies must not focus on legislative battles. Clearly, we must contend for the full power of government to be harnessed toward achieving our goals, but this is quite different from focusing our efforts on lobbying campaigns to convince legislators to do the right thing from time to time. Lobbying can mobilise people for the short term, but mobilising is not the same as organising. During the past 30 years, the environmental movement has had some notable successes mobilising people, but few successes building long-term organisations that people can live their lives around and within (the way many families in the '30s, '40s and '50s lived their lives around and within their unions' struggles). The focus of our strategies must be on building organisations that involve people and, in that process, finding new allies. The power to govern would naturally flow from those efforts. **This question of democracy is not trivial**. It is deep. And it deeply divides the environmental movement, or rather movements. Many members of the mainstream environmental movement tend to view ordinary people as the enemy (for example, they love to say, "We have met the enemy and he is us".). They fundamentally don't trust people to make good decisions, so they prefer to leave ordinary people out of the equation. Instead, they scheme with lawyers and experts behind closed doors, then announce their "solution". Then they lobby Congress in hopes that Congress will impose this latest "solution" on us all. Naturally, such people don't develop a big following, and their "solutions" -- even when Congress has been willing to impose them -- have often proven to be expensive, burdensome and ultimately unsuccessful. Experts In the modern era, **open democratic decision-making is essential to survival**. Only by informing people, and trusting their decisions, can we survive as a human society. Our technologies are now too complex and too powerful to be left solely in the hands of a few experts. If they are allowed to make decisions behind closed doors, small groups of experts can make fatal errors. One thinks of the old Atomic Energy Commission (AEC) justifying above-ground nuclear weapons testing. In the early 1950s, their atomic fallout was showering the population with strontium-90, a highly radioactive element that masquerades as calcium when it is taken into the body. Once in the body, strontium-90 moves into the bones, where it irradiates the bone marrow, causing cancer. The AEC's best and brightest studied this problem in detail and argued in secret memos that the only way strontium-90 could get into humans would be through cattle grazing on contaminated grass. They calculated the strontium-90 intake of the cows, and the amount that would end up in the cows' bones. On that basis, the AEC reported to Congress in 1953, "The only potential hazard to human beings would be the ingestion of bone splinters which might be intermingled with muscle tissue in butchering and cutting of the meat. An insignificant amount would enter the body in this fashion." Thus, they concluded, strontium-90 was not endangering people. The following year, Congress declassified many of the AEC's deliberations. As soon as these memos became

public, scientists and citizens began asking, “What about the cows' milk?” The AEC scientists had no response. They had neglected to ask whether strontium-90, mimicking calcium, would contaminate cows' milk, which of course it did. Secrecy in government and corporate decision-making continues to threaten the well-being of everyone on the planet as new technologies are deployed at an accelerating pace after inadequate consideration of their effects. Open, democratic decision-making is no longer a luxury. In the modern world, **it is a necessity for human survival**.

Extensions

No Accountability

Delegation produces bad policies and ruins accountability

Lovell, Assistant Professor of Government, College of William and Mary, 2k (George, That Sick Chicken Won't Hunt: The Limits of a Judicially Enforced Non- Delegation Doctrine, Constitutional Commentary, 17 Constitutional, Commentary 79)

Critics of delegation claim that legislative delegation to executive branch agencies is bad because it produces bad policies [*83] and weakens the accountability provided by electoral controls on legislators. Legislative delegation to the executive branch allegedly creates these problems by shifting responsibility for making important policy choices from elected officials in Congress to unelected bureaucrats in executive branch agencies. When decisions are properly made in Congress, electoral controls on individual members make those members reluctant to support policies that benefit narrow interests. However, if Congress delegates the power to make decisions to agency bureaucrats, the lack of electoral controls on those bureaucrats allows concentrated interests to exert a corrupt influence on agency decision-making processes. Shifting such decisions to the executive branch also allows legislators to escape accountability because it allows them to blame the executive branch agencies for any unpopular decisions. Based on this understanding of delegation, the critics conclude that ending delegation will improve accountability. By intervening and striking down all statutes that delegate, judges would force legislators to take responsibility for the "hard choices" involved in regulatory policy-making. Forcing legislators to make those choices will make it less likely that the government will produce policies that favor narrow interests at the expense of a broader public. [n6] David Schoenbrod adds to the surface plausibility of this analysis by using concrete examples of delegated regulatory decisions gone awry. Schoenbrod devotes a great deal of attention to a favorite example, the regulation of navel oranges in the 1980s. [n7] Such regulation came in the form of marketing orders, issued by the Secretary of Agriculture under powers originally delegated by Congress in the Agricultural Adjustment Act of 1933. [n8] Schoenbrod convincingly argues that the marketing orders issued during the 1980s established bad policies that served narrow interests and harmed the general public. Congress empowered an Agriculture Department advisory board to make decisions on marketing orders. One industry actor, Sunkist, was able to dominate the decision-making processes on that board. Sunkist convinced the board to fix an artificially high price for oranges, a policy that advanced Sunkist's interests at the expense of both smaller growers and the general public. [n9] [*84] Schoenbrod blames this outcome on the ability of Congress to delegate. Delegation shifted the decisions to an obscure wing of the executive branch, making it likely that the public would pay little attention (and perhaps not even notice that the price supports existed). Because delegation allowed the executive branch to issue the marketing orders without members of Congress taking a direct vote to create them, members of Congress expected to be able to blame the Department of Agriculture if anyone noticed the harmful orders and complained. At the same time, delegation allowed members of Congress to win support from the concentrated interests that expected to benefit from the shift in authority. [n10] The critique of delegation made by Schoenbrod and other advocates of the **non-delegation doctrine** is based on a particular understanding of how accountability is supposed to work. The critics assume that legislative decision-making occupies a sort of privileged position when establishing or measuring accountability. In this respect, the critique of delegation is connected to the dominant theoretical framework that constitutional scholars use to understand democratic accountability in the separation of powers system. I call that framework the counter-majoritarian framework because its current dominance can be traced back to Alexander Bickel's claim, in The Least Dangerous Branch, that the power of judicial review created a "counter-majoritarian problem" in American democracy. Bickel claimed that judicial review was a "deviant" institution in American democracy because the power allowed unelected judges to make decisions that reversed the choices made by elected legislatures. [n11] Although Bickel was primarily concerned with explaining judicial review, the basic assumptions of his framework have wider application.

Delegation bad: doesn't meet public needs and misplaces responsibility, keeps bad leaders in power

Almendares University of NY Ph.D 12 (Nicholas: *The Journal of Law and Politics:* Blame-Shifting, Judicial Review, and Public Welfare. Published winter, 2012. Accessed June 6th, 2015.)KalM

The delegation n1 of policymaking authority to the bureaucracy is usually justified as a means to take advantage of the bureacracy's expertise, which becomes more attractive as policy becomes more complex and technical. n2 [*241] Legislators are not typically chosen on the basis of technical or scientific knowledge, nor are legislative bodies necessarily well-suited to translate specialized information into policy, so the bureaucracy steps in to fill this gap. n3 Delegation, especially the expansive delegation that is the hallmark of the modern administrative state, leads to two principal problems. The first is how to ensure that the bureaucrats design and implement policies that serve the

best interests of the public, rather than shirking this responsibility in some manner. This problem is usually dealt with by placing the bureaucracy under the control of elected officials. n4 The second principal problem is that the legislature may be able to use delegation to promote its own interests rather than the public's. Congress, or any similarly-situated legislature, can attempt to engage in blame-shifting: rather than enacting an unpopular policy itself, Congress delegates the matter to an agency, shifting responsibility and blame to the agency and thereby reducing the political costs of the policy. In effect, blame-shifting turns the agency into Congress' political cat's-paw. n5 Blame-shifting, then, is an attempt by Congress to reduce the political costs for unpopular policies it wishes to see enacted by making use of delegation. In like fashion, Congress is thought to be able to displace blame for a regulatory program that fails to deliver on its promises. n6 The possibility of blame-shifting has animated many critiques of delegation and the modern administrative state. By reducing political costs, namely lack of voter support in the next election, blame-shifting is thought to enable policies that are not beneficial to the public, such as laws that benefit special interests at the expense of the public at large, thereby undermining both democratic accountability and public welfare. The [*242] proposed solution to blame-shifting has usually been to call upon the judiciary to bar all broad delegations of authority through a renewed or strengthened nondelegation doctrine. n7 The core of this argument is that broad delegations of authority make blame-shifting possible. If, instead, Congress can only engage in specific delegations of authority, which constrain the agency's policy choice and force Congress to more clearly articulate what policy it intends the agency to implement, then blame-shifting will be that much more difficult, perhaps prohibitively so. Congress will be less able to disown a policy and displace blame onto the bureaucracy if Congress has explicitly and expressly authorized the policy.

Delegation gives politicians invisible power, strengthening the panoptic control of the state by allowing rulers to stay in power despite making self-serving decisions

Williams, Associate Professor of Law, Saint Louis University School of Law 2K (DOUGLAS: SYMPOSIUM CONGRESS: DOES IT ABDICATE ITS POWER?: CONGRESSIONAL ABDICATION, LEGAL THEORY, AND DELIBERATIVE DEMOCRACY. published in 2000.)KalM

Second, delegation enables members to mediate disputes among conflicting constituent groups without coming down strongly on one side or the other. Broad delegations often funnel the conflict over the distribution of benefits and burdens in public programs from the legislative to the administrative forum, in which incremental adjustments can be made that tend to lessen the hardships experienced by those who "lose" the battle for benefits and burdens. n49 Mashaw notes, for example, that broad delegations facilitate both temporal and situational variances in regulatory requirements that may better account for the actual effects of regulation than is possible through legislation that eliminates the possibility of such variances by tightly constraining administrative discretion. n50 In this manner, legislators may minimize the chances of alienating important constituents and thus increase their chances of reelection. More generally, and especially when coupled with uncertainty about the effects of various policy choices, "with greater... conflict there is a stronger incentive for Congress to pass the hot potato to the agency by broadening the scope and instruments of delegated authority." n51 Third, broad delegation may permit legislators to exert influence over the implementation of delegated authority in ways that would likely be much more difficult in a regime of more rule-like legislation. n52 This influence may frequently service particular constituents' interests, enabling members to gain visible credit and shift blame in ways that might be unlikely without abdication or delegation at the institutional level. n53 As McCubbins and Schwartz argue, congressional oversight is less costly to members and more effective, in terms of electoral prospects, when undertaken in response to specific complaints about administrative action voiced by important constituents than when conducted systematically. n54 To the extent that broad delegations enable [*86] administrators to exercise the flexibility to respond to legislators' inquiries in ways that reduce friction between

the agency and legislators, such delegations enhance legislators' effectiveness in dealing with constituents' complaints, directly increasing the likelihood of electoral success.

Circumvention

The counterplan will be circumvented: Delegation fails to set specific policy choices

Spence Professor Of Law 97

David Administrative law and agency policy-making: Rethinking the positive theory of political control Published in the yale journal of regulation volume 14, 2, pages 407-450

That is not to say that structural choice is meaningless-rather, that its importance as a determinant of agency policy choice is seriously overstated. It is one thing to say that structural choices about the agency's jurisdiction and mission influence the agency's subsequent policy preferences.64 It is quite another to contend that structure influences most agency policy choices. Indeed, a more circumspect and persuasive version of the structural choice argument is consistent with well-established works from outside the PPT tradition that describe how an agency can become populated by bureaucrats with certain shared values. For example, Kaufman65 and Marcus66 have noted that an agency with a well-defined mission will tend to attract bureaucrats whose goals are sympathetic to that mission. Consequently, the Environmental Protection Agency's (EPA) Office of Water tends to attract people who place a high value on protecting water quality, while the Federal Energy Regulatory Commission's (FERC) Office of Hydropower Licensing tends to attract people who place a high value on encouraging the development of hydroelectric power. Politicians' structural choices can therefore point the agency toward a general goal. Nevertheless, agencies must face many policy choices while attaining that goal which are orthogonal to the original structural choice (as shown in Figure 3). For these policy choices, factors unrelated to the original structural choice-bureaucrats' technical expertise, professional norms, or the influence of the relevant policy network-will determine the agency's policy preferences. Consider the FERC hydroelectric licensing example mentioned above. Congress has made very few structural choices affecting the program since the passage of the Federal Power Act in 1935.67 Yet the FERC has made countless policy decisions about how to achieve its goals during that time. These aging structural choices exerted little influence over decisions profoundly affecting national energy and environmental policy.68

Democracy I/L

Delegation challenges democracy

Shoenbrod attorney, professor, and author 93 (David, attorney, professor, and author who is nationally recognized for his contributions to environmental law and scholarship. A professor of environmental and constitutional law at New York Law School for over 25 years, he is the author or co-author of six books and numerous articles for major newspapers and scholarly journals. Schoenbrod has also been an adjunct scholar and senior fellow at the Cato Institute, an independent public policy research organization, and is a visiting scholar at the American Enterprise Institute for Public Policy, Power without responsibility: How congress Abuses the People through Delegation, page 14)

We can refuse to reelect legislators who make laws we dislike. Delegation shortcircuits this democratic option by allowing our elected lawmakers to hide behind unelected officials. When this concern was raised in the 1940s, the Supreme Court wrongly dismissed it with the argument that Congress and the president still are responsible for the laws made under delegation because they specify the fundamental policy choices in statutes and leave to the agencies only the more technical questions appropriate for resolution by experts.' This argument assumes that Congress and the president make the hard choices, but in fact, as I have argued, they often delegate precisely in order to avoid the hard choices. The Supreme Court also relies upon the power of Congress to repeal agency laws, but that capacity does little to soften the blow delegation inflicts against democratic accountability. Legislators usually hold no vote on whether to let an agency law stand, so they need offend neither those constituents who support nor those who oppose the law in question. Yet they can actively please both groups by doing casework on their behalf; casework, unlike roll-call voting, is not of public record. Delegation thus allows members of Congress to function as ministers rather than legislators; they express popular aspirations and tend to their flocks rather than make hard choices. With delegation members can escape being ejected from office except upon grounds that *would* oust a minister from the pulpit—scandal. In those exceptional cases when incumbent legislators do lose elections, their defeat is far more likely to be caused by some escapade or chicanery than by how they shaped the law.[20]

Delegation excludes the public, and defeats democracy

Lovell, Assistant Professor of Government, College of William and Mary, 2k (George, That Sick Chicken Won't Hunt: The Limits of a Judicially Enforced Non- Delegation Doctrine, Constitutional Commentary, 17 Constitutional, Commentary 79)

It is, however, possible to improve on the first explanation by supplementing it. Critics of delegation suggest that something about the nature of decision-making processes in bureaucratic agencies adds to problems of accountability. Critics conclude that accountability breaks down in cases involving delegation because the public lacks the capacity to pay sufficient attention to regulatory decisions in the agencies. The non-delegation doctrine may improve accountability by simply ensuring that the decisions are made in Congress, the location where the public is most able to pay attention. [*93] Critics of delegation sometimes suggest an explanation of this type when they characterize agency decision-making processes. Critics claim that delegation erodes accountability because it makes policy-making processes complicated, obscure, or just plain boring. Schoenbrod claims that public opinion is often dampened by "prolonged administrative procedures" making public opinion "less powerful" in an administrative setting than "in an open legislative battle." [n25] Delegation allows Congress to defeat the democratic controls by leaving Congress free to add enough layers of decision-making authority to make sure that the process always exhausts the public's limited capacity to pay attention. Faced with such complexity, the people will not bother to identify and punish the legislators responsible for the bad policies.

Delegation kills democracy
Herrman J.D. at University of Pacific 97

David To Delegate Or Not To Delegate-That Is Preemption: The Lack Of Political Accountability In Administrative Preemption Defies Federalism Constraints On Government Power From From the University of Pacufic law Review Lexis 28 Pac. L.J. 1157

Accountability for those who make decisions is both critical to the maintenance of democracy n227 and the legitimacy of rule-making. n228 Only when people can be secure in the knowledge that administrative rule-making is being conducted under the watchful eye of elected officials is rule-making validated. n229 Perhaps the most important link in the accountability chain, especially in relation to administrative preemption, exists between Congress and the agencies. Because the hallmark of preemption is the search for clear congressional intent to displace state law, any attempt to expand federal power at the expense of the states must be responsible through the [*1185] Legislature. n230 Only in this type of system can poor decisions, extending too far into the traditional domain of the states via preemption, be counteracted through new legislation or new representatives. n231 Congressional accountability in a federalist system serves as the backbone for rights-protective legislation, especially in the preemption context where state laws and state autonomy is displaced by federal statutes. n232

Surveillance K2 Democracy

Surveillance is a key tipping point on democracy

Aguilar, and Daniel, Graduate Students 2014

Arndt and Niels Under the Guise of National Security - Surveillance, Snowden and the challenges to democracyhttp://diggy.ruc.dk/bitstream/1800/13534/1/UNDER%20THE%20GUISE%20OF%20NATIONAL%20SECURITY.pdf

As a result of the Snowden revelations, mass media coverage on a global scale has created a critical view on the secrecy inherent in state surveillance systems of democracies. Regardless of whether Snowden's actions can be deemed criminal, the information he leaked has highlighted the extent to which states have taken secret decisions. The US citizens ought to have been consulted with on these decisions, because the government took the liberty to make decisions concerning the governed in secrecy. Yet, historical circumstance seems to have created a general acceptance of the state's role taking on that of the parent who acts for the child's own good. The state occasionally condescends to the citizens' wants and needs, however it does not take their criticisms seriously, nor are the citizens of the state its equal when it comes to big 'power' or 'defence' decisions. This norm of blindness or simply blind acceptance concerning decisions made on the citizens' behalf, has been declared in an interview by Edward Snowden as his greatest fear in making this information public. He fears that nothing will result of this, which he expresses in the interview he did with the Guardian in Hong Kong in June: "The greatest fear that I have regarding the outcome for America of these disclosure is that nothing will change. People will see in the media all of these disclosures they'll know the length the government is going to grant themselves power unilaterally to create greater control over American society and global society. But they [the US citizens] won't be willing to take the risks necessary to stand up and fight, to change things, to force their representatives to actually take a stand in their interests." (Greenwald et.al., 09.06.2013: 10 min. 47 sec.). The US citizens will accept the argument of national security as the excuse and reason for violating the constitution and the civil liberties every citizen in the US holds, and that this will serve as proof that the values inherent in democracy are increasingly getting blurred. However, the criticism of surveillance mobilised in the wake of Snowden's leaks has led to a tipping point. This happens when the threats and risks reach a point where the uncertainty is so great that it actually makes a opening for change, it creates a "moment" where change is possible. The attention is global, and so is the concern. Without the knowledge of the classified programs, people were perfectly content with and accepting of the implicit relation between security and secrecy, because they did not understand the extent to which surveillance was happening. After these leaks this cannot be ignored, which now creates a demand for more transparency as a mean to increase the legitimacy of the US government. Since the leaks, Jim Sensenbrenner, who is a Republican member of the House of Representatives and one of the original authors of the PATRIOT Act (which originally expanded NSA surveillance capabilities in the name of national security after 9/11), has drafted a bill for the reform of the NSA's oversight structures for the purpose of greater transparency. His motivation for doing this is a critique of the implementation of the PATRIOT Act: "The Patriot Act never would have passed…had there been any inclination at all it would have authorized bulk collections" (Serwer, 19.11.2013). This substantiates the conclusion that the PATRIOT Act is being used to legitimate surveillance programs that it was not intended to defend. Sensenbrenner wants to impose public disclosures as well as restrictions on secretive interpretations of what would become the newly tightened Foreign Intelligence Surveillance Act. This legislation, that has yet to pass through vote of Congress, is a concrete result emerging from global outrage regarding the Snowden revelations. Sensenbrenner states: "Congress never intended this. I will rein in the abuse of both the Patriot Act and the U.S. Constitution with the support of the American public." (Richardson, 29.10.2013) In the event of the bill's enactment, the aimed increase in transparency would aid in reconnecting the US citizens with surveillance measures taken on behalf of national security. If the process of national security is reintegrated into the public sphere, rather than kept out of it for the sake of national security. This would mean the first institutional step towards the reintegration of the public into the democratic process, balancing with civil liberties, such as privacy and the right to not be surveilled, and the hopeful revival of deliberative democratic values. The FREEDOM Act, however, is not supported by everyone. One of the many opposing, seemingly superficial, reforms of the NSA oversight is one drafted by Diane Feinstein (Conservative Action Alerts, 27.11.2013), proposing to legally cement the legitimacy of the surveillance programs in FISA. This is where democratic fundamental values will be tested. If the congress votes for Feinsten's bill, and this vote meets little or no public opposition, Edward Snowden's worst fears will probably be realised. This will mean that democratic values are so dissoluted that the public does not care or does not comprehend the implications of accepting the secrecy of the national security oriented state. If the FREEDOM Act passes with the pressure of public support, this will imply that the citizens realize that the threat to the democratic values they defend is greater than the threat to national security. Potentially the echo of this test of democratic values in the US congress could be felt on the global scale. Because of the modern network society and the interconnectedness of the world, this institutional change and integration of the american public sphere into the balance of security versus privacy, could serve as an exemplary reform to then be applied and fought for on a global scale. This perceived risk to democracy is in fact a 'world

risk' and this can also be seen in the massive media coverage there has been around the world. Perceived risks to democracy and civil liberties could echo through the global public sphere, and push for a much needed greater transparency.

Democracy good

Democratization leads to economic growth – Africa proves

Masaki and van de Walle 14 (Takaaki, Postdoctoral Fellow and Data Analyst at AidData Center for Development Policy at the College of William & Mary; a Ph.D. in Government from Cornell University in 2015, Nicolas, professor at Cornell University Department of Government, March 2014, "The impact of democracy on economic growth in sub-Saharan Africa, 1982-2012," United Nations University, http://takaakimasaki.com/wp-content/uploads/2014/08/wp2014-057.pdf)

Since the early 1990s, at the same time, the region's economic-growth trajectory seemed to alter, from the previous two decades of economic stagnation and recession, to a substantial and sustained growth spurt that has now lasted for over two decades in a majority of states in the region. Whereas overall gross national product (GNP) growth in the region was a mediocre 1.7 per cent during the 1980s, it increased appreciably to 2.5 per cent annual growth in the 1990s, and over five per cent annually in the first decade of the new century. The latest numbers suggest gross dom estic product (GDP) growth at 5.3 per cent in 2012 and 5.6 per cent in 2013 (World Bank 2014). The growth appears to be widespread, since over a third of the region's 49 states are growing by more than six per cent this year. Are these two major regional political and economic trends related? Oddly, relatively few observers have argued for a positive causal relationship between the current economic boom and the region's political reform. Radelet (2010) and journalistic outlets such as The Economist1 have suggested that the improvements in political conditions have facilitated the growth, but they are exceptions. Indeed, the consensus in the public policy literature has been that the region's political changes are likely to have either no effect or a negative effect on economic growth. Collier (2009) and Sachs (2005) are just two prominent economists who have written popular best sellers arguing among other things that democratization is not likely to be helpful for the task of economic development. In Britain, the donor sponsored Overseas Development Institute (O D I) has similarly espoused research on low-income country governance issues that is characterized by the argument that multi-party electoral democracy is likely to have a negative effect on governance and economic growth (Kelsall and Booth 2013; Booth 2012). Multi-party electoral systems in the region are often derided as corrupt and clientelist, and their prospects for economic growth contrasted unfavorably with those of autocratic regimes like Angola and Rwanda. So, is the current economic boom taking place despite democratization rather than because of it? In this paper, we argue that empirical and theoretical reasons exist to believe that democratization in Africa since 1990 is associated with faster economic growth and that this 'democratic advantage' increases over time, as democratic consolidation takes place. We argue it is important not to confound the economic effects of stable democracy with those of the actual period of transition to democracy, which is characterized by political instability and uncertainty, which is almost certainly bad for growth, and we show that the longer a democracy sustains itself, the greater its positive impact on growth.

Federalism I/L

Delegation of unpopular issues causes a destruction of federalism
Herrman J.D. at University of Pacific 97

David To Delegate Or Not To Delegate-That Is Preemption: The Lack Of Political Accountability In Administrative Preemption Defies Federalism Constraints On Government Power From From the University of Pacufic law Review Lexis 28 Pac. L.J. 1157

This Comment addresses the problems that exist when administrative agencies, staffed with unelected and unaccountable bureaucrats, preempt state law while sidestepping the procedural safeguards implicit in our federal system. n25 Specifically, this Comment points out that one of the main reasons administrative preemption is able to avoid federalism restraints is because Congress blurs its own responsibility for controversial lawmaking by delegating this responsibility away. n26 This practice, which manipulates voter perception of governmental accountability, coupled with inadequate congressional oversight of administrative rule-making, illustrates the absence of an effective mechanism for imposing accountability upon elected lawmakers. n27 Therefore, agency officials promulgate powerful regulations without subjecting themselves to political repercussions. n28 Thus, the federal system is subverted and congressional delegations of preemptive authority lack the political and procedural checks that legitimize this type of administrative lawmaking. n29

Ending delegation leads to accountability and restores constitutional limits
Lovell, Assistant Professor of Government, College of William and Mary, 2k (George, That Sick Chicken Won't Hunt: The Limits of a Judicially Enforced Non- Delegation Doctrine, Constitutional Commentary, 17 Constitutional, Commentary 79)

A third explanation of how the non-delegation doctrine improves accountability is that ending delegation will restore some important constitutional limitations on Congress's power. According to some critics of delegation, the framers of the Constitution wanted to ensure that Congress would not pass legislation unless, after careful deliberation, a strong consensus formed in favor of a new law. To inhibit excessive legislation and protect liberty, the framers established numerous procedural constraints that slow down the legislative process, prevent Congress from reaching bad compromises without careful deliberation, and offer [*96] opportunities to block or delay legislation. The procedural obstacles that the critics of delegation point to are bicameralism, presentment, and, most importantly, the alleged ban on delegation. [n30] Critics suggest that delegation subverts these important constitutional limits on Congress's power. Delegation makes it easier for members of Congress to pass laws in the absence of a strong consensus, and thus more likely that Congress will pass laws without careful deliberation and restraint. While finding consensus will be harder in a world without delegation - in which members of Congress are forced to take responsibility for their decisions - the delays will be desirable since they will allow opportunities for more careful deliberation. In some cases, a ban on delegation may lead Congress to abandon attempts at regulation, an outcome that critics of delegation are often happy to embrace. [n31]

Delegation destroys federalism
Herrman J.D. at University of Pacific 97

David To Delegate Or Not To Delegate-That Is Preemption: The Lack Of Political Accountability In Administrative Preemption Defies Federalism Constraints On Government Power From From the University of Pacufic law Review Lexis 28 Pac. L.J. 1157

Allowing Congress to avoid responsibility through the delegation of its essential lawmaking power, particularly in the area of preempting state governmental functions, thwarts the federalism aspect implicit in our constitutional design. n222 Although defenders of broad agency powers argue that

administrative bodies are accountable to the legislature through congressional oversight, n223 this argument runs counter to the legislators' goal of blurring their own accountability and preventing divisive legislation. n224 Thus, the important restraints on federal power fail to protect the states from an overreaching government where Congress delegates the power to preempt to federal agencies. n225

Unfortunately, in the area of preemption, the view that political accountability exists as the last defense to state sovereignty is more theory than actuality. By delegating the power of regulatory preemption, Congress has subverted the constitutional scheme. n226

B. The Theory of Administrative Agency Accountability Through Congress

Federalism Good-Generic

Federalism good: laundry list

Bednar, Department of Political Science, University of Michigan 06 (Jenna: Constitutional Political Economy: "Volume 16, Issue 2 , pp 189-205" Cover Date: 2005-06. http://proxy.lib.umich.edu/login?url=http://search.proquest.com/docview/215937734?accountid=14667)KalM

1.2. **Robustness** As described above, a second difficulty in prior studies is the specification of the dependent variable. Many studies focused on the variable stability. Stability is both difficult to measure3 and misplaces the focus. Stability emphasizes federalism as ends—the existence of federalism—rather than federalism as means – its performance. Governments are tools to satisfy goals set by the constitutional designers, goals that may be updated according to changing demands. How well do federations achieve these goals? What institutional systems enable federal structures to perform well? To answer these questions, this study shifts the dependent variable from existence to performance, to emphasize robustness. In the study of robustness, as opposed to stability, we are interested in how a system maintains features and functionalities in the face of change and perturbations (Jen 2002). Our primary concern is how federal systems perform in the real world, under varied, changing circumstances. A federal system must be flexible and responsive, but not overreact to economic, political, and social challenges. This contrasts with a federation in stasis, that cannot respond, and whose citizens suffer. Persistent strong performance will therefore be evidence not of stability but of robustness. And robustness, not stability, should be a better predictor of longevity for those interested in regime duration. In the section that follows, I describe the functionalities that guarantee robustness in detail. I identify opportunism as the chief perturbation that threatens the performance of federations. A robust federation minimizes opportunism to maximize productivity. For empirical verification, since opportunism is not observable, and not measurable, we define a robust federation as one that performs well. 2. Objectives Federalism may provide a variety of benefits; it is populations that seek one or more of these benefits who choose federalism as their governmental form. Federalism's performance at meeting these objectives determines its robustness. The potential benefits from federating, and their logic, follow. 2.1. Military Security A federal union is better able to defend itself than a confederation or looser alliance of states. The strength that comes from an expanded territory and resources, as well as the improved coordination of effort, makes members of the federal union more secure against foreign invasion than they are on their own (the Federalist; Riker 1964; Ostrom 1971). 2.2. Efficiency and Innovation This category includes economic benefits. Some compare federalism to a unitary state, arguing that decentralization brings benefits. In the fiscal federalism literature, the existence of two levels of government mean that taxation and expenditure policy may be efficiently distributed to maximize total utility (e.g. Musgrave 1997, Oates 1999). In the market-preserving federalism literature, decentralization and fragmenting authority enables a state to credibly commit not to expropriate all rents, when coupled with other conditions, such as a decentralization of fiscal control and hard budget constraints (Weingast 1995, Rodden and Rose-Ackerman 1997, Qian and Weingast 1997, Rodden and Wibbels 2002). Also, there may be benefits from lower government policy experimentation (Kollman et al. 2000); these may be economic in nature – welfare policy, taxation schemes – but often are not, directly, as with education or health care. At the same time, federalism is more centralized than a confederacy, and centralized regulation of trade permits a polity to enjoy the benefits of a common market (e.g. the Federalist). 2.3. **Effective Representation** Madison praised federalism for its potential to improve the overall quality of representation over what was present in the state legislatures prior to federation, bolstering the feasibility of democracy (the Federalist, Elazar 1987, Ostrom 1991), Other benefits of federalism cite the value of decentralization: it may more effectively manage heterogeneous populations; distributing authority at lower levels may serve as a pressure

valve, releasing ethnic tensions (the Federalist, Horowitz 1985, Stepan 1999). In the fiscal federalism literature, decentralization permits citizens to elect politicians who will tailor policy to meet local preferences or to move to states that better match their interests (Tiebout 1956, Inman and Rubinfeld 1992, Peterson 1995, Donahue 1997, Oates 1999). Most federations are established for multiple reasons. In the Federalist, Hamilton, Madison, and Jay allude to the unions potential to make the states more **secure against foreign invasion, to improve the economy through establishment of a common market, to minimize the incidence and consequences of skirmishes between the states, and** (particularly Madison), to **improve the quality of** representative **democracy**. A third and fourth reason for federating should be mentioned. First, some federations were established or encouraged by a colonial power with the aim of maintaining dependence, a sort of divide-and-conquer strategy. A fifth objective comes from the political economy of fiscal federalism literature (see especially Cre´mer and Palfrey 1999, 2002 and Hafer and Landa 2004). There are conditions where a majority would prefer federation to either confederation (no federal tax rate) or centralization (no regional tax). However, one must note that these results really concern the divide-the-dollar potential of federalism: that is, how one might divide the federal spoils. Given that federalism is an institutional arrangement, and that Finstitutions create winners and losers, some will prefer federalism—even a majority—if it allows them to take advantage of the minority. This advantage of federalism over unitary or completely decentralized governance does not emphasize federalism's potential to increase total utility; it is a calculation based upon the utility of single agents. The redistributive aspects of federalism are very real, but are largely a problem of federalism, not a virtue (Filippov et al. 2004). Neither of these reasons are selections that a public would make behind the veil of ignorance; that is, in both cases, federalism is adopted to advantage some over others.

Federalism Good-Econ

Federalism good for econ: smaller government branches both compete and co-operate.

Weingast, Senior Fellow, Hoover Institution 8 (Barry: *Journal of Urban Economics Volume 65, Issue 3:* "Second generation fiscal federalism: The implications of fiscal incentives" Published December 25th, 2008. http://scholarship.law.duke.edu/faculty_scholarship/2520) KalM

Local governments exist within a complex set of institutional arrangements, with political, legal-constitutional, and economic aspects. This section develops a framework for analyzing how different institutional arrangements affect the performance of local governments. Federalism, and decentralization more generally, encompasses a wide range of different political–economic systems, not one, whose political and economic properties vary widely (Shah, 1997b; Watts, 1999). As Litvak et al. (1998, p. vii) observe, "decentralization is neither good nor bad for efficiency, equity, or macroeconomic stability; but rather that its effects depend on institutionspecific design." We therefore cannot speak of the tendencies of federalism per se. Some federal systems promote macroeconomic stability and economic growth while others just the opposite. Consider: **For the last three centuries, the richest nation in the world has almost always been federal.** The Dutch Republic from the late sixteenth through mid-seventeenth centuries; England from the late seventeenth or early eighteenth and mid-nineteenth centuries (a de facto though not de jure federal system); and the United States from the late nineteenth to the present. Similarly, modern China, a de facto federal state, has experienced sustained rapid growth. India, having grown slowly for several decades, has experienced high growth in the last. In contrast, the large Latin America federal states of Argentina, Brazil, and Mexico, have all fared much more poorly. How do we account for such large differences in economic performance? In this section, I summarize a comparative theory of decentralized governance that explains the differential economic performance of various types of decentralization. This framework helps understand some of the institutions necessary to support decentralization that provides political officials with incentives to improve social welfare. The comparative theory of federal performance begins with a set of conditions that differentiate federal systems.11 All federal systems decentralize political authority, so a necessary condition for federalism is: (F1) Hierarchy. A hierarchy of governments exists with each level having a delineated scope of authority. Yet federal systems differ enormously in terms of the policy authority assigned to different levels of government. The following conditions characterize how federal states assign authority among national and subnational governments. (F2) Subnational autonomy. Subnational governments have primary both local regulation of the economy and authority over public goods and service provision. (F3) Common market. The national government provides for and polices a common market that allows factor and product mobility. (F4) Hard budget constraints. All governments, especially subnational ones, face hard budget constraints. (F5) Institutionalized authority. The allocation of political authority is institutionalized. We can characterize different federal systems by which of conditions they satisfy, ranging from the hierarchy condition alone to all five conditions.12 An ideal type of federalism, called market-preserving federalism, satisfies all five conditions (Weingast, 1995). These conditions make explicit some of the political assumptions implicit in FGFF. Indeed, many of the major results in this approach implicitly assume most or all these conditions, including Oates's (1972) "decentralization theorem," Tiebout's (1956) interjurisdictional competition, and Musgrave's (1959) solution to the assignment problem. Scholars of fiscal federalism have long argued that federalism places subnational governments in competition with one another (Tiebout, 1956; Oates, 1972; Brennan and Buchanan, 1980). Competition gives subnational governments the incentive to foster local economic prosperity **rather than costly market intervention, service to interest groups, and corruption**. Competition among jurisdictions limits a subnational government's ability to abuse its policy authority, for example, by predating on investments or by granting privileged positions, such as monopolies or above market wages to government workers. Governments that fail to foster markets risk falling land values

and the loss of capital and labor – and hence valuable tax revenue. Put another way, interjurisdictional competition provides political officials with strong fiscal incentives to pursue policies that provide for a healthy local economy. Effective inter-jurisdictional competition requires several institutional conditions. First, subnational governments must have the authority to adapt policies to their circumstances; hence, the subnational autonomy condition (F2). Consistent with the FGFF assignment principle, these governments must have considerable power to regulate local markets, to tailor the provision of local public goods and services to local circumstances, and to set tax rates, ideally to reflect local demand for public services (Musgrave, 1959; Oates, 1972).

Federalism K2 military: empirics

Leider, Student at Yale with Ph.D in philosophy 13 (Robert*:* "FEDERALISM AND THE MILITARY POWER OF THE UNITED STATES" Published September 27th, 2013. http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2330648)KalM

The American experience with militia between 1776 and 1787 to resist King George III and govern under the Articles of Confederation was no watershed moment in constitutional law. It merely confirmed the advantages and disadvantages of professional forces and citizen-soldiers. The compromises over the Constitution's military clauses derive from these tradeoffs: they were an attempt to get the benefits of professional forces and a trained and armed citizenry to have a stable system of defense without risking national oppression. The debate over armies versus militia had begun over a century earlier in Britain. The English Civil Wars solidified the popular hatred of standing armies and volunteer select militia. 8 Several kings used the army and other volunteer forces, which belonged solely to the Crown, to attack the Parliament and religious and political dissenters—and with them, democratic rule.9 From the English Civil Wars through the American Revolution, the army was viewed as dangerous because it was a professional, armed force—composed of unsavory characters—used by the executive authority to subvert popular government and the rule of law.10 The belief in the universal militia as a bastion of liberty came as a result of the English Civil Wars. But the desire for **a standing army** and considerable federal control over the armed forces **resulted from** the inefficiency and ineptitude of the American forces from 1775-1787. The militia was unreliable and resisted training.11 Although the Framers spoke frequently of their preferences for a universal militia—and the Militia Act of 1792 tried to codify it—in reality, a seriously maintained universal militia system ceased to exist by the sixteenth century in England—and was never fully revived on either continent.12 **Federalizing the military power** occurred as the United States adapted the British experience to its own situation, which, unlike England, has a federal structure.13 The constitutional powers and limitations over the military were directed at providing a secure freedom for American citizens. **Channeling the military power through federal and state governments added**, in the Framers' view, an extra layer of **protection**.

No Legitimacy

Delegation lacks legitimacy and effectiveness

Krent 94 (Harold, Associate Professor, Chicago-Kent College of Law, DELEGATION AND ITS DISCONTENTS: POWER WITHOUT RESPONSIBILITY L. Rev. 710)

When there is no agreement within Congress over the policy to be adopted, members of Congress may agree instead to delegate that issue to an agency. But in the long run, he argues, such benefit is illusory. Impasse can exist at the agency level as well, or the agency may delay action in light of the absence of any consensus (pp. 12122). Indeed, the procedural requirements confronting agencies may frustrate speedy resolution of the policy issues. [n30] Schoenbrod recounts the Environmental Protection Agency's (EPA) experience under the Clean Air Act to make his point (pp. 7980), and much the same story can be told about NHTSA's episodic encouragement of passive restraint systems in automobiles. [n31] In addition, delays may arise because agency rules are more difficult to enforce than laws. Businesses may refuse to comply with agency directives and seek judicial review, or they may circumvent the new requirement by pressuring influential members of Congress to alter the recently promulgated rule (p. 122). Agency rules may also lack the authoritative force attributed to congressional enactments - Congress has more legitimacy in the eyes of the public, and its laws of general applicability engender more respect than the case-specific determinations (smokestack by smokestack) of agency officials (p. 122). In any event, legislative gridlock may at times be public-regarding if the momentum for change stems from lobbying by special interest groups. Schoenbrod also argues that the decision-making process in agencies is far less rational than in Congress itself. He dismisses the fears of vote cycling in Congress as overblown (pp. 13134). [n32] Moreover, he points [*719] out (pp. 12628) that even well-meaning agency regulation is subject to unrealistic legislative deadlines, tight legislative control of resources (if not more invidious intervention), [n33] and possible interference by judges unable to provide sound guidance because of Congress' failure to make clear the policy underlying the delegated authority (pp. 13233). Instead, Schoenbrod is convinced that Congress, if forced to legislate itself, would enact far sounder measures than agencies currently do through rule-making or adjudication. He argues, as have others, [n34]that the Constitution's Article I procedures of bicameralism and presentment [n35] restrain excesses, minimize the chance for rent-seeking by interest groups, and discourage arbitrary rule by factions, the forebears of contemporary special interest groups (pp. 10911). Even though lawmakers at times legislate selfishly (pp. 10920), they may well hesitate before engaging in pork-barrel politics that the public can directly attribute to them. Overall, the requirement that both Houses and the President must agree on all legislation provides for more stable rule and protects individuals from government overreaching. He embraces the Madisonian perspective that Article I was intended to moderate legislative proposals, and that public debate during the deliberations in both Houses of Congress and the White House serves an educative function. [n36] He notes that the Madisonian argument is supported by economic intuition that increasing the costs of legislation will prevent capture by special interest groups. [n37]

Reduced delegation restores faith in government

Krent, Associate Professor, Chicago-Kent College of Law, 94 (Harold, Book Review: Delegation and Its Discontents: Power Without Responsibility, Columbia Law Review Column 94, L. Rev, 710)

Schoenbrod presents strong policy arguments against delegation, and riveting portrayals of government waste and inefficiency. Yet broad delegation of authority to agencies represents at most a failure of politics, not of law. The prohibition today against delegation does not represent an underenforced constitutional norm as much as a neglected norm of good government. Such neglect in part may be warranted, given that agency policymaking may be more responsive to majoritarian concerns in some contexts than direct congressional rule. Schoenbrod's book is nonetheless vitally important, for even if the nondelegation doctrine is discarded, vigorous steps should be taken to restore greater faith in government by discouraging routinized delegation and selectively encouraging in its stead alternative forms of regulation and innovative new strategies to influence conduct in the private sector.

Solvency-Generic

Congressional oversight is necessary – three reasons

Kibbe 10 (Jennifer, Associate Professor of Government; Chair of Government at Franklin and Marshall College, 2010, "Congressional Oversight of Intelligence: Is the Solution Part of the Problem?" Intelligence and National Security, Volume 25, Issue 1,

The congressional intelligence committees have come under considerable fire in the last few years for not conducting robust investigations into major intelligence failures (the pre-Iraq war intelligence) and for being too acquiescent in the Bush administration's controversial policies regarding interrogations, secret prisons and warrantless wiretapping. The calls for reform of congressional oversight have echoed from all corners of the debate. But the issue of congressional oversight of intelligence is complex, combining as it does the political and structural complexities of Congress with the difficulty of monitoring something of strategic significance that, by definition, operates in the shadows. Consequently, attempts to reform congressional oversight are inherently difficult. As just one measure of the difficulty, members of Congress introduced over 200 bills between 1947 and 1975 aimed at expanding their supervision of the intelligence community. Of those, exactly one was adopted.1 One of the most prominent voices calling for reform recently has been The National Commission on Terrorist Attacks Upon the United States (9/11 Commission). The commissioners also noted, however, that of their 42 recommendations, those 'strengthening congressional oversight may be among the most difficult and important'.2 Despite the difficulty involved, however, something must be done. The last seven years have shown that intelligence is more crucial than ever to national security, but as the executive branch and the intelligence community try to maximize the utility of intelligence in meeting national security needs, it is imperative that the congressional overseers meet their obligations as well. The importance of legislative oversight of the executive branch in general has long been recognized. 'Quite as important as legislation', noted Woodrow Wilson, 'is vigilant oversight of administration'.3 In the intelligence arena, however, congressional oversight is at an added premium. The first, most obvious reason is the inherent secrecy of the subject. In other areas, such as the environment or banking, the media plays a valuable role in helping Congress monitor the actions of the federal government on behalf of the public. In the largely classified world of intelligence, in all but a few exceptional cases, the media is effectively precluded from playing that supporting role, thus enhancing the importance of legislative oversight. A second less recognized but equally important reason that oversight is so critical to the intelligence enterprise is that, because ' … the intelligence community is constrained in its ability to convince the American public that it can be trusted and deserves their support', Congress also plays an important role in explaining and representing the intelligence community to the public.4 A third reason legislative oversight is so important is that, done well, it helps to improve the intelligence product, whether that means collection, analysis or covert action. When administration and intelligence officials know that they will have to explain a funding choice or particular operation to Congress, it has the effect of adding a layer to their own internal vetting.

Delegation kills responsibility—CP solves

Shoenbrod, attorney, professor, and author, **93** (David, attorney, professor, and author who is nationally recognized for his contributions to environmental law and scholarship. A professor of environmental and constitutional law at New York Law School for over 25 years, he is the author or co-author of six books and numerous articles for major newspapers and scholarly journals. Schoenbrod has also been an adjunct scholar and senior fellow at the Cato Institute, an independent public policy research organization, and is a visiting scholar at the American Enterprise Institute for Public Policy, Power without responsibility: How congress Abuses the People through Delegation, pages 8-9)

Delegation allows our elected lawmakers to disclaim any responsibility for harm done to consumers for three reasons: because the wording of the statute reflects concern for consumers, because the statute took its present form long before the current legislators took office,

and because the secretary in effect makes the law. The public is unlikely to know of the marketing order's existence as it comes from deep within the bowels of the bureaucracy rather than from Congress. In contrast, for Sunkist to see enacted a law that restricts competition without using delegation, legislators would have to vote for and the president would have to sign a statute that limits the supply of navel oranges to consumers. They would need to amend the statute frequently to take account of changing market and crop conditions. Our elected lawmakers could not deny direct responsibility for raising the price of oranges. They conceivably might still enact such a statute, but they would have to risk political vulnerability.

“Domestic” PIC

Text: The United States Federal Government should <insert plan text and remove the word domestic>

The aff’s invocation of “domestic” is an adherence to status quo security politics that sanitizes the otherization and subsequent elimination of the global “foreign”

Campbell 5—David Campbell is a professor of cultural and political geography at Durham University in the UK (September 2005, "The Biopolitics of Security: Oil, Empire, and the Sports Utility Vehicle", http://www.worldbridgermedia.com/mediaenvironment/wp-content/uploads/2008/09/biosecurity.pdf, HSA)

As an imagined community, the state can be seen as the effect of formalized practices and ritualized acts that operate in its name or in the service of its ideals. This understanding, which is enabled by shifting our theoretical commitments from a belief in pregiven subjects to a concern with the problematic of subjectivity, renders foreign policy as a boundary-producing political performance in which the spatial domains of inside/outside, self/other, and **domestic/foreign are constituted through the writing of threats as externalized dangers. ¶** The narratives of primary and stable identities that continue to govern much of the social sciences obscure such an understanding. In international relations these concepts of identity limit analysis to a concern with the domestic influences on foreign policy; this perspective allows for a consideration of the influence of the internal forces on state identity, but it **assumes that the external is a fixed reality that presents itself to the pregiven state** and its agents. In contrast, by assuming that the identity of the state is performativcly constituted, we can argue that there are no foundations of state identity that exist prior to the problematic of identity/difference that situates the State within the framework of inside/outside and self/other. Identity is constituted in relation to difference, and difference is constituted in relation to identity, which means that the “state,” the “international system,” and the “dangers” to each are coeval in their construction.¶ Over time, of course, ambiguity is disciplined, contingency is fixed, and dominant meanings are established. In the history of US foreign policy—regardless of the radically different contexts in which it has operated-the formalized practices and ritualized acts of security discourse have worked to produce a conception of the United States in which freedom, liberty, law, democracy, individualism, faith, order, prosperity, and civilization are claimed to exist because of the constant struggle with and often violent suppression of opponents said to embody tyranny, oppression, anarchy, totalitarianism, collectivism, atheism, and barbarism.¶ This record demonstrates that the boundary-producing political performance of foreign policy does more than inscribe a geopolitical marker on a map. This construction of social space also involves an axiological dimension in which the delineation of an inside from an outside gives rise to a **moral hierarchy that renders the domestic superior and the foreign inferior**. Foreign policy thus incorporates an ethical power of segregation in its performance of identity / difference. While this produces a geography of “foreign” (even “evil”) others in conventional terms, it also requires a disciplining of “domestic” elements on the inside that challenge this state identity. This is achieved through the exclusionary practices in which resistant elements to a secure identity

The impact is endless violence

Friis 2k [UN Sector @ the Norwegian Institute of International Affairs, Peace and Conflict Studies 7.2, “From Liminars to Others: Securitization Through Myths,” http://shss.nova.edu/pcs/journalsPDF/V7N2.pdf#page=2]

The problem with societal securitization is **one of representation.** It is rarely clear in advance who it is that speaks for a community. There is no system of representation as in a state. Since literately anyone can stand up as representatives, there is room for entrepreneurs. It is not surprising if we experience a struggle between different representatives and also their different representations

of the society. What they do share, however, is a conviction that they are best at providing (a new) order. If they can do this convincingly, they gain legitimacy. What must be done is to make the uncertain certain and make the unknown an object of knowledge. To present a discernable Other is a way of doing this. The Other is represented as an Other -- as an unified single actor with a similar unquestionable set of core values (i.e. the capital "O"). They are **objectified**, made into **an object of knowledge**, by re-presentation of their identity and values. In other words, the representation of the Other is depoliticized in the sense that its inner qualities are treated as given and non-negotiable. In Jef Huysmans (1998:241) words, there is both a need for a mediation of chaos as well as of threat. A mediation of chaos is more basic than a mediation of threat, as it implies making chaos into a meaningful order by a convincing representation of the Self and its surroundings. It is a mediation of "ontological security", which means "...a strategy of managing the limits of reflexivity ... by fixing social relations into a symbolic and institutional order" (Huysmans 1998:242). As he and others (like Hansen 1998:240) have pointed out, the importance of a threat construction for political identification, is often overstated. The mediation of chaos, of being the provider of order in general, is just as important. This may imply naming an Other but not necessarily as a threat. Such a dichotomization implies a necessity to **get rid of all** the liminars (what Huysmans calls "**strangers**"). This is because they "...connote a challenge to categorizing practices through the impossibility of being categorized", and does not threaten the community, "...but the possibility of ordering itself" (Huysmans 1998:241). They are a challenge to the entrepreneur by their very existence. They confuse the dichotomy of Self and Other and thereby the entrepreneur's mediation of chaos. As mentioned, a liminar can for instance be people of mixed ethnical ancestry but also representations of competing world-pictures. As Eide (1998:76) notes: "Over and over again we see that the "liberals" within a group undergoing a mobilisation process for group conflict are the first ones to go". The liminars threaten the ontological order of the entrepreneur by challenging his representation of Self and Other and his mediation of chaos, which ultimately undermines the legitimacy of his policy. The liminars may be securitized by some sort of disciplination, from suppression of cultural symbols to ethnic cleansing and expatriation. This is a threat to the ontological order of the entrepreneur, stemming from inside and thus repoliticizing the inside/outside dichotomy. Therefore the liminar must disappear. **It must be made into a Self,** as several minority groups throughout the world have experienced, or it must be forced out of the territory. A liminar may also become an Other, as its connection to the Self is cut and their former common culture is renounced and made insignificant. In Anne Norton's (1988:55) words, "The presence of difference in the ambiguous other leads to its classification as wholly unlike and identifies it unqualifiedly with the archetypal other, denying the resemblance to the self." Then the liminar is no longer an ontological danger (chaos), but what Huysmans (1998:242) calls a mediation of "daily security". This is not challenging the order or the system as such but has become a visible, clear-cut Other. In places like Bosnia, this naming and replacement of an Other, has been regarded by the securitizing actors as the solution to the ontological problem they have posed. Securitization was not considered a political move, in the sense that there were any choices. It was a necessity: Securitization was a solution based on a depoliticized ontology.10 This way the world-picture of the securitizing actor is not only a representation but also made into reality. The mythical second-order language is made into first-order language, and its "innocent" reality is forced upon the world. To the entrepreneurs and other actors involved it has become a "natural" necessity with a need to make order, even if it implies making the world match the map. Maybe that is why war against liminars are so often total;it attempts a total expatriation or **a total "solution"** (like the Holocaust) and not only a victory on the battlefield. If the enemy is not even considered a legitimate Other, the door may be more open to **a kind of violence that is way beyond any war conventions**, any jus in bello. This way, securitizing is legitimized: The entrepreneur has succeeded both in launching his world-view and in prescribing the necessary measures taken against it. This is possible by using the myths, by speaking on behalf of the natural and eternal, where truth is never questioned.

2NC—Impact / Top Level

2NC—Impact—Generic

The construction of binaries essentializes life and produces divisive stereotypes

Winegar 8 (Jessica Winegar is an Assistant Professor Department of Anthropology Temple University Philadelphia,¶ http://www.khaledhafez.net/critical/11.html, Khaled Hafez: The Art of Dichotomy) DJ

Good/evil. Secular/religious. Modern/traditional. These are some of the unfortunate dichotomies which have come to grip much Western political discourse about the Middle East. The political efficacy of these binaries for rendering manageable what are in fact messy situations persists, despite the fact that they have been roundly criticized, especially in intellectual and leftist circles. And even though most people in the international art scene also consider themselves part of these circles, sadly one often finds similar binaries of essentialist difference lurking in curatorial discourses on Middle Eastern artists. It is discouraging when artists' work is understood through the dichotomous lens, and especially when this lens is applied in a way that denigrates contemporary work as traditional or lagging. But it is especially exciting when an artist talks back to the universe of divisions by analyzing their emergence, their different forms, and the work that they do in the world. The artist then becomes an analytical agent examining the circumstances of his/her production, and thus opens up possibilities for a contrapuntal visual practice that is not forcibly encased in the language of resisting power or challenging stereotypes. For over 20 years, Khaled Hafez has explored the continuous reproduction of dichotomies within and between the popular culture of his native Egypt, of France where he lived for several years, and of the United States – the ultimate consumer society and locus of political power, which seems to thrive on the marketing potential of divisive binaries. Through painting and video, Hafez has concentrated primarily on the construction of certain categories and the overlaps between them: East/West, sacred/commercial, old/new, good/evil, animal/human, male/female, and static/kinetic. His work shows how these dichotomies rest on the international system of commodities which creates both the ideas of (cultural) similarity and difference, as well as affective attachments to certain histories and identities. Hafez explores out how each half of a dichotomy has come to be signified through particular visual forms, figures, or objects. This work suggests that it is the continual replication of these visual signifiers in mass media that creates emotions of love and hate, notions of collective memory, and visions of the future. Dichotomies are attractive, then, because they have become seductive visual commodities.¶

2NC—Turns Islamophobia

This us-them dichotomy is the root of Islamophobia

Jamal 8—Amaney Jamal is a professor in political science at Princeton University with a focus in Middle Eastern politics ("Civil liberties and the otherization of Arab and Muslim Americans", https://muslimdiasporas.files.wordpress.com/2014/09/civil-liberties-and-the-otherization-of-arab-and-muslim-americans_.pdf, HSA)

The binary construction of "us" versus "them" is not new to American social relations in the United States or abroad. Racial relations in the United States **have been constructed through the binary lens** of the dominant and the subordinate, a legacy of the history of race relations in this country. Likewise, **the lens through which America sees the rest of the world is tinted with this dichotomy**: "we," whoever and wherever "we" are, enjoy both cultural and moral superiority. Such interactions with "Others" abroad translate into a racial logic in a U.S. context that views ethnic and religious group differences through racial lenses at home. The process of othering, be it based on phenotype or cultural difference, therefore lends itself to racialization, particularly when it involves attributing essentializing characteristics to the entire group. The racialization of Arabs and Muslims, however, draws on yet another element of difference. Not only are they different at home, but their difference is exacerbated by geopolitical realities where the United States has utilized the construction of the "Other" as enemy- terrorist to justify its campaigns abroad.

2NC—Link

The aff's use of "domestic" reifies the domestic-foreign binary – necessitates violence against the "foreign" other

Hirst 10—Dr. Aggie Hirst is a Lecturer in International Politics at City University London (September 7th 2010, "Encountering the Abyss: Deconstructing the Political Philosophy of Leo Strauss and the Straussian Interventions Relating to the Invasion of Iraq", https://www.escholar.manchester.ac.uk/api/datastream?publicationPid=uk-ac-man-scw:96951&datastreamId=FULL-TEXT.PDF, HSA)

Immanent to the friend/enemy binary is an emphasis on the idea that difference is, or should be understood as, synonymous with danger, and that the friend is of necessity the similar one, the one who is familiar. This View, according to Campbell, "involves an axiological dimension in which the delineation of an inside from an outside gives rise to a moral hierarchy that **renders the domestic superior and the foreign inferior**" (Campbell 2005: 948). As Maria Stem notes, this **logic is predicated upon "contours dividing the included from the excluded and borders marking that which is to be made secure from the dangerous Others**" (Stern 2006: 192). The dichotomy thus rests on an oppositional and antagonistic relationship between the friend and enemy, the similar and the other. This is deemed to comprise the condition of possibility of politics; as R.B. J. Walker (2006: 66) has shown, this amounts to the framing of a distinction between norm and exception. This relates directly to the Straussian interventions which mobilised the figure of the terrorist, the tyrant and Saddam Hussein as the enemy. In Campbell's terms, this "renders foreign policy as a boundary-producing political performance in which the special domains of inside/outside, self/other, and domestic/foreign are constituted through the writing of threats as external dangers" (Campbell 2005: 947). Importantly, this formulation can be read as of a "political" character**; it is of the sphere of the political** and thus is emphatically not natural or essential. Accordingly, the politics at play here may be destabilised in ways that upset the internal logic of the Straussians' interventions.

2NC—AT: Dichotomy Good

No link to any dichotomy good offense – focus on the global doesn't deny the cultural

Healy et. al 97— Lynne M. Healy, M.S.W., Ph.D. is Board of Trustees Distinguished Professor. She currently chairs the Administration concentration and is Chair of the International Issues Focused Area of Study. (Yvonne Asamoah, Lynne M. Healy and Nazneen Mayadas, Journal of Social Work Education, Vol. 33, No. 2 (Spring/Summer 1997), "ENDING THE INTERNATIONAL-DOMESTIC DICHOTOMY: NEW APPROACHES TO A GLOBAL CURRICULUM FOR THE MILLENNIUM", HSA) we don't endorse ableist language

The ideas discussed here should not be viewed as separate, alternative possibilities. Rather, they should be treated holistically, with recognition of the significant interaction among them. The call to "end the dichotomy" between the domestic and international is **not a call to negate or ignore nationality or culture, nor does it in any way deny the importance of efforts to indigenize social work education and practice**. Similarly, individual liberation and social liberation are interactional concepts that can be realized in adopting a social development approach with a strong respect for client culture as well as a recognition that **ultimately the sanctity of culture must be subservient to human rights.**

2NC—AT: AFF Answers

2NC—AT: Word PICs Bad

Counter-interpretation – Word PICs limited to words in the plan are legitimate

Most predictable – aff gets to choose the words in their plan – they don't have to defend everything their authors say

Reciprocal – aff gets strategic advantage answering counterplans and DAs with the way they've written their plan – only fair they bear the cost as well

Best policy option – aff has infinite prep to devise the best possible plan – they should be forced to defend it

Productive – if we win our reps matter arguments, proves the distinction is not trivial – this outweighs their offense and is key to effective policy analysis

Bjork '92 (Rebecca S., The Strategic Defense Initiative, P. 2)

Most analyses of SDI are concerned with explaining either the technical controversies surrounding the program, or its effects on issues such as arms control, U. S.-Soviet relations, strategic policy, relationships with allies, and strategic stability.4 While these studies are important, and contribute to a sophisticated understanding of the effects of SDI on international stability, they ignore a vital aspect of the program, one that can lead to important conclusions about SDI and about foreign policy in general. This neglected dimension is the symbolic or rhetorical power of SDI. The Strategic Defense Initiative is not merely a collection of technical tools, research bodies, and bureaucratic organizations. Rather, it is an amalgamation of meanings; meanings which are shaped by. and, in turn, shape a variety of linguistic, political, ideological, cultural, and social forces. These meanings create an understanding of SDI that becomes reality, in the sense that the symbolic understandings of the program influence policy and shape bureaucratic action, which themselves are symbolically constructed. The study of rhetoric, as the analysis and interpretation of public discourse that aims to reveal its various underlying symbolic appeals, is an appropriate way to explore these meanings associated with SDI and to explain their connection to the broader political and socio-cultural context. This approach is similar to the recent turn toward post-structuralist critiques of international relations, in that the focus of the analysis is on discourse.5 Treating the "reality" of world politics as text underscores the increasing concern with modernist assumptions of objectivity, dualism, and rationality, and reflects an attempt to uncover relations of power as they are constructed and reified through language. Viewing SDI as a symbolic, rhetorical response to a difficult moral, political, military, and economic problem (the nuclear arms race) sheds light on SDI itself as well as the role that language plays in the formulation of American foreign policy.

Education – analyzing text is uniquely key to critical thinking

Stratton, 99- Professor of Philosophy and Symbolic Logic (Jon, "Critical Thinking for College Students" p 77, DC)

For critical thinking the most important of the five tasks of language is representation, the "putting of ideas into words." It is the primary way we understand, process, and communicate information. Expressive language is also important to critical thinking. Ideas are seldom, if ever, represented without a degree of expression of feeling. The representative-expressive function of language is carried out in both speaking and writing. Television, film, radio, lectures, public debates, and personal conversations are all examples of verbal thinking. Obviously, these "verbal" media are of immense importance. However, verbal communication comes aand leaves quickly. We hear speech and it vanishes. It is very diffficult to adequately review, evaluate, and revise the verbal media because, unlike writing, it is not permanently available on paper. Writing is permanent, it is "verbal thinking at rest." Writing is "always there," available for our repeated review,

careful evaluation, and precise revision. Hopefully, the process of thinking critically about the written word will enable us eventually to become more adept with the verbal media.

This is uniquely true in the context of the word "domestic"

Healy et. al 97— Lynne M. Healy, M.S.W., Ph.D. is Board of Trustees Distinguished Professor. She currently chairs the Administration concentration and is Chair of the International Issues Focused Area of Study. (Yvonne Asamoah, Lynne M. Healy and Nazneen Mayadas, Journal of Social Work Education, Vol. 33, No. 2 (Spring/Summer 1997), "ENDING THE INTERNATIONAL-DOMESTIC DICHOTOMY: NEW APPROACHES TO A GLOBAL CURRICULUM FOR THE MILLENNIUM", HSA) we don't endorse ableist language

The most **important and damaging distinction** that gets in our way as we redefine competence for American citizens in an interdependent world, is that thick black line we have drawn in our minds and in our institutions **between international affairs and domestic affairs.** American citizens, who are bound to be active participants in local decisions with global consequences, should not be crippled "hurt" by learning in school and college **to segregate domestic and foreign policies in separate compartments**. (pp. 21-22)¶ Because interest in and attention to social work's international dimension have increased, we must face Cleveland's challenge to remove, or at least **blur, the dichotomy between the domestic and the international.** President Clinton underscored this in his first inaugural address, saying: "**There is no longer a clear division between what is foreign and what is domestic**. The world economy, the world environment, the world AIDS crisis, the world arms race-they affect us all" (Clinton, 1998).¶ If we remove the sharp distinction drawn between domestic and international affairs, how would this new way of thinking reshape social work curricula and practice? What barriers lock us into traditional modes of dividing the world? What strategies will lead to reconceptualizing the social work reality as global?¶ CSWE's current Curriculum Policy Statement and educators' reactions to it demonstrate the potential of and obstacles to global-mindedness. For the first time, the CPS explicitly recognizes global interdependence by including the following statements as a Permise Underlying Social Work Education: "Effective social work programs recognize the interdependence of nations and the importance of worldwide professional cooperation" (CSWE, 1994, B3.6, M3.6). This statement has far-reaching implications. Full recognition of global interdependence would lead logically to efforts to eradicate the global-domestic dichotomy. In a world where identifying a purely domestic issue is increasingly **difficult, seeking broader ways to conceptualize practice and the profession becomes important**. The new CPS supports these efforts.

Turns decision-making – we must train debaters to be prepared to defend every single word of their plan

D.G. **Kehl and** Howard **Livingston**, English at Arizona State University and Pace University, July **1999** (English Journal 88.6)

Second, students' own linguistic vulnerability should be demonstrated in a meaningful and convincing way. How would they react, for example, if while shopping they encounter "vegetarian leather" for plain, cheap vinyl; or "synthetic glass" for plastic; or, in place of down payment, they get "customer capital cost reduction"? Third, they should be made more sensitive to language and how it works, not just denotation but connotation, concrete versus abstract terms, specific versus general, adjectives as evaluative projections of a speaker or writer, slanted language, and much more. For example, they can be asked to consider how many times in a year they buy something simply on the persuasive appeal of words rather than on the genuine merits of the product, whether that product is sunglasses, clothes, vehicles, or food. Especially illuminating in developing sensitivity to language are exercises that ask students to distinguish differences in connotation among lists of so-called synonyms. For example, which of the following would they

like to be called—and why: boy/girl, lad/lassie, kid, young person, youngster, tyke, juvenile, future citizen, Generation X-er, member of the rising generation? Lively discussions can be conducted on the connotative effects of the language of advertising. For example, why are certain words taboo in advertising, requiring the substitution of euphemisms: not "fat" but "full figured," not "cheap" but "inexpensive," not "used car" but "preowned automobile," not "smell" but "aroma." (A recent example of doublespeak for "stink" is "exceed the olfactory threshold.") Fourth, students should be taught not only to read critically but also to speak and write re responsibility Wasn't'it Sir Arthur Quiller-Couch who noted that a writer should be prepared to stand cross-examination on every word? And as for reading critically, perhaps Thomas Carlyle said it best: "If we think of it, all that a university or final highest school can do for us is still but what the first school began doing—teach us to read." Isn't that at least a significant part of the English teacher's job description? Finally, students should be taught how to "talk back" by disarming and defusing doublespeak through what Judith Butler calls "counter-appropriation" (or what Hugh Rank has called "intensifying" and "downplaying" in his Doublespeak Schema). Recent communication theory offers further direction for discussing doublespeak in the classroom. For example, even a brilliant, well-organized, and illustrated lecture on language manipulation may have limited success (the doublespeaker would call it "counterproductive").

It's a relevant test of opportunity cost

Bales, '1 [Susan Nall Bales, Pres of the Frameworks Institute, "A conversation with Susan Nall Bales," The Evaluation Exchange Volume VII, No. 1, Winter 2001, http://gseweb.harvard.edu/~hfrp/eval/issue16/bales.html]

Well, framing is a concept that runs through the cognitive, social and behavioral sciences. For the work that my colleagues and I do, it allows us to bridge the difference among these various disciplines that study communications and policy preference, but have done so in isolation from each other. So, the great thing about the concept of framing is that, whether you're looking through the literature of anthropology, psychology, political science, linguistics or sociology, people have studied framing, and so it's a core concept. Essentially, framing has to do with the way an issue is composed: the messengers, visuals and metaphors that are used to convey an idea. The cues that are given to people by the framing direct their reasoning about issues. Given this, **it is vital that advocates understand the composition of the frame and what kinds of meta-messages or world views it calls into play**. What we have tried to do in our work is to break down that frame; to deconstruct it and show people that, when you're talking about making news, you have a number of different variables you can manipulate. **It's not just the message, it's** the visual, **metaphors and colorful language that are used**. You can tell a story in many different ways and the more you know about which elements help and hurt your cause, the better you will be at telling a story about social policy. Strategic frame analysis is really something that has been invented in the last five years by a group of communications scholars and practitioners getting together to compare the way that they look at communications. I would cite as part of that team, Frank Gilliam, with the Center for Communications and Community at UCLA; Meg Bostrum, a political strategist and public opinion expert, linguists George Lakoff at UC/Berkeley and Pamela Morgan, and Joseph Grady and Axel Aubrun, co-founders of Cultural Logic. In my own work, as someone who's run communications campaigns for twenty-five years, I've tried to go back and develop a conversation between the various academic disciplines that ask how people think about social issues. I've added a more applied question, however: how can we change the communication in such a way that people will take another look at social problems? The result is **strategic frame analysis**, which is based in both **theory and practice** and attempts to continue that dialogue.

2NC—AT: Reps Not First

Prefer specificity – our evidence indicates in this context, the distinction between the words in the plan and counterplan have ramifications on implementation and real world policy

Language affects how we view the world – creates a lens that constructs hierarchies

Oxford Companion to American Military History '00 ("Military Language: Informal Speech", http://www.answers.com/topic/military-language-informal-speech)

Informal military language reinforces a service member's primary identity as being part of the group, along with those who share his or her language. Beyond that, informal language constructs a vision of the world that becomes the defining characteristic of group membership. This is done most directly through naming. The names we give to things are of vital importance in understanding the view of the world the namers participate in and is an important part of all language use. Names of objects, perhaps more than any other words, constitute implicit arguments. In informal language, names are often metaphors. Sometimes, these metaphors are obscure. When naval officers associated with aviation refer to the surface fleet surrounding and supporting the carriers as "greyhounds," they use language that seems positive, implying an image of sleekness and speed. However, the relationship drawn on is that between dog and master. The argument, in other words, is that the rest of the surface fleet is useful insofar as it serves the needs dictated by the carriers. Similarly, members of the U.S. military who handle nuclear weapons informally use metaphors, naming places where U.S. nuclear bombs are aimed as "home addresses" and referring to nuclear missiles on board U.S. submarines as "Christmas trees." These homey and domestic metaphors convey the meaning that U.S. nuclear weapons, although extraordinarily destructive, are safe for the U.S. military to handle. Such examples point to another important function of language. The arguments that are implicit in the words we use, particularly the names, often are those that construct hierarchies. Discourse communities use language that possesses its own internal symbolic logic, and this places the members of the community in a hierarchical relationship with those of other communities. Language not only bonds the membership; it also helps construct a world view in which that membership can be secure in the superiority of its knowledge. Because language is never value-neutral but always contains embedded arguments, it is always taking a position on whether that which is named is "good" or "bad." Thus, homey metaphors such as the one about "Christmas trees" bond members of the military community and place a positive value on their work.

That comes prior to their decision-making impacts on framework

Holzscheiter, Research Associate at Center for Transnational Relations, Foreign and Security Policy at Freie Universität Berlin, **'13** (Anna, "Between Communicative Interaction and Structures of Signification: Discourse Theory and Analysis in International Relations" International Studies Perspectives, p 1-21)

Today, many scholars no longer question the circumstance that language is important for the study of international politics, but instead seem to be eager to discuss "how and why language is important" (Fierke 2002:331). Resulting from this general sensitivity of IR scholars toward linguistic and communicative dimensions of political life is a heterogeneity of discourse approaches in contemporary studies of international politics. It is constructivist research in particular whose understanding of social life fundamentally built upon the understanding that "the objects of our knowledge are not independent of our interpretations and our language" (Adler 2002:95). Here, discourse has offered itself almost naturally as one of the most popular concepts. Early influential constructivist writings that summarized the constructivist "credo" that "social constructivism rests on an irreducibly intersubjective dimension of human action" (Ruggie 1998:856) have implicitly supported the claim that intersubjectivity is, before all, constituted through language, communication, and discourse (Onuf 1989; Wendt 1999). As a result, the consolidation of a constructivist school moved language, communication, and discourse closer to the core of IR theory. Within constructivism, discourse has been used to explore the creation and effect of human rights norms (Risse 1999; Brysk 2004); to investigate the powerful conjunction of knowledge and discourse in environmental politics (Litfin 1994; Hajer 1995; Payne 1996); or to understand processes of identity-building and its transformation (Fierke 1996; Neumann 1996; Bially-Mattern 2005; Hansen 2006). In the beginning, constructivists were reluctant to fully acknowledge that seeing intersubjectivity as constituted through language and discourse necessitates a methodological focus on language, communication, and discourse (Kratochwil 1989; Onuf 1989; Wendt 1999; for a critique see Fierke 2002). Today, more often than not, constructivists turn to the notion of discourse when they envisage to identify and operationalize

social facts such as ideas, identities, or norms and when they try to demonstrate that these facts are not natural but are both a result of discursive practices and constituted by socially shared meaning-structures (for example, nuclear danger as constructed through discourse).4 The Social Ontology of Discourse in Constructivist Approaches to International Politics Elaborating on the role of language in constructivist theory, Alexander Wendt and Friedrich Kratochwil suggest distinguishing between thin and thick constructivism, whereby a thick notion of constructivism sees language as the constitutive element of reality and communication as the constitutive element of intersubjectively created realities, rather than taking language and communication as additional facets of social life (Kratochwil 2001:23). Thin constructivists by contrast assume that social facts can also exist independently of the "minds and discourses of the individuals who want to explain them" (Wendt 1999:75). Following this reasoning, this paper suggests drawing a line of differentiation between thick discourse approaches that perceive discourse to be the precondition for social and political life and its analysis as the only way to access and observe social reality and thin ones that treat discourse as one social logic among others. The latter assumption can be roughly associated with certain constructivist works on communicative rationality who by and large belong to the "middle ground" (Adler 1997) between rationalism and constructivism (M€uller 2004; Panke 2006; Kornprobst 2007; Krebs and Jackson 2007). When the first tentative "rapprochements" were made between rationalism and constructivism, the linguistic and discursive facets of international politics emerged as the focal point in a debate about different "logics of action" in social encounters: on the one hand, rational strategic interest-driven action ("bargaining") following a logic of consequences, on the other norm-guided exchange of arguments ("arguing") following a logic of appropriateness. The Habermasian distinction between strategic use (rational, instrumental, self-interest) of language and communicative use (rational, dialogical, communitarian) has been frequently employed as a theoretical basis for these deliberations (Habermas 1984, 1985, 1996). Harald M€uller claimed in 2004: "Arguing and bargaining, at face value, belong to two different social theories—rationalism and communicative action theory" (M€uller 2004:396). By the mid-1990s, approximately, one could witness the birth of a whole new approach to international cooperation and norm-creation that emphasized the role of communicative interaction in international diplomacy and underlined the value of close observation of such interaction for a deeper understanding of cooperation and socialization in international politics. This debate evidences that a specific notion of discourse has also emerged in more traditional schools of IR and that discourse has proven to be of added value to the academic debate among constructivists and rationalists.5 Here, discourse as institutionalized communicative exchange has come to be seen as the terrain where different logics of action can actually be observed and analyzed and where argumentative justifications for behavior manifest themselves. The significance of discourse understood as communicative interaction is mainly epistemological in that it allows explaining how, when, and under which circumstances different social logics come to bear. Rationalists and constructivists convinced of the overlapping terrain between the two social theories often emphasize that discourse as communicative exchange can be seen as a precondition for rational interest-driven behavior: Thus, the social construction of reality via discourse comes to bear particularly in social situations where little common knowledge, uncertainty about other's perspectives and interests and conflicts of norms prevail. Discourse as the exchange of arguments is temporally **prior to rational decision making**. Within this discursive middle ground between rationalism and constructivism, actors are being seen as positioned in an institutionalized context that partly constrains how and what they can argue. Yet, they are still free to pursue a range of options in social interaction (Risse 2000, 2002; M€uller 2004; Krebs and Jackson 2007). On the other hand, thick constructivist approaches posit that all social relations constitute discourse and are, in turn, constituted by discourse (see for example Price 1995; Weldes 1996; Diez 2001; Hansen 2006). Here, it is assumed that nothing can be meaningfully understood outside discourse, that is, even the material outside can only be comprehended in and through language and discourse. For thick constructivists, discursive practices of representation (for example, a cookbook) cannot be dissociated from non-discursive practices (for example, the act of cooking, the tools we use for cooking). When this latter group of researchers investigates discourse, they "study how the world is 'talked into existence'" (Adler 2002:101) and how the representations of cooking shape what we perceive as cooking. This thick constructivism assumes that "social facts are constituted by the structures of language and that, accordingly, consciousness can be studied only as mediated by language" (Adler 2002:97).

It also implicates the effectiveness of the policies we advocate

Holzscheiter, Research Associate at Center for Transnational Relations, Foreign and Security Policy at Freie Universität Berlin, **'13** (Anna, "Between Communicative Interaction and Structures of Signification: Discourse Theory and Analysis in International Relations" International Studies Perspectives, p 1-21)

Bially-Mattern's methodology takes its inspiration from the poststructuralist theory of Lyotard with its emphasis on the analysis of narratives as the fundament of representational force. Her method is linguistic inasmuch as it entails the investigation of ensembles of phrases taken from memoranda, telegrams, communiques, and letters that have been exchanged between British and US ambassadors, heads of state, and foreign policy advisers during the Suez crisis. These phrases are then searched for particular structures within and between the phrases defining the identity of Britain vis-a-vis the United States and vice versa. The representational force of the speaker is deduced from a particular type of argument that dismisses alternative visions of this relationship and attempts to force the addressee to yield to the force of the argument. Bially-Mattern reduces the analysis to a synchronic "snapshot" of the discursive universe. However, her interest lies not so much in the motivation of the individual speakers but rather in the effects of the narratives they construct, thereby creating a particular social reality (identity, order). For Bially-Mattern, the power of representation still rests with the agents who engage in communicative practices and effectively influence larger narratives—discursive orders such as identity narratives, thus, are the production of the articulators of such narratives. However, the productive force of meaning-structures has also, and more commonly, been explored from a macro-structure perspective. Charlotte Epstein's The Power of Words in International Relations and her thorough analysis of the history of antiwhaling discourses represents a convincing Foucault-inspired analysis of how narratives influence the normative beliefs of actors and, as a consequence, predispose political practice (that is, the condemnation of whaling as an inhuman action threatening to extinct a whole species) (Epstein 2008). Epstein explicitly borrows Foucault's notion of power as productive and defines a discourse as "a cohesive ensemble of ideas, concepts, categorizations about a specific object that frame that object in a certain way and therefore delimit the possibilities for action in relation to it" (2). For her, powerful discourses are discourses "that make[s] a difference" (2)—these discourses, however, are seen as grounded in social relations which are both the source of hegemonic discourses and the outcome of discursive power. The productive power of discourses is first and foremost evidenced by the fabrication of specific subject positions, such as the subject position of environmental NGOs which were becoming increasingly influential the more an anti-whaling discourse occupied center state globally. Epstein's diachronic analysis of data spans approximately 100 years of history and comprises historical studies on whaling from a variety of perspectives and sources: her evidence for dominant discourses on whaling is taken primarily from academic literature on various aspects of whale hunting and the emergence of a dominant global save-the-whale (and save-the-planet) discourse, and a range of interviews with pro- and anti-whaling campaigners and activists. These sources are complemented by newspaper reports,

reports of environmental NGOs, etc. The historiographic exercise serves to identify patterns of meaning attached to the hunting of whales that, even though being constantly subject to contestation, have remained particularly influential as a "moral system" disciplining international political practice and defining the boundaries of ethical behavior in this field throughout the twentieth century. The analysis of linguistic facets of international politics provided by Bially- Mattern and Epstein takes place on very different levels, even though they both converge on the assumption that discourse has productive and, as such, constitutive effects on the identities and beliefs of decision makers. In terms of methodology, scholars such as Bially-Mattern or Johnstone, whose methodological focus lies on the semantic structure and logic of individual speech-acts, mostly choose single, or comparative, case studies. These are then subjected to a combination of ethno-methodological (for example, thick description); quantitative (for example, content-analysis); linguistic or conversation analytical;12 and process- tracing methods. Since discourse stands for a sequence of communicative events, the data is taken to evidence different lines of argumentation; microprocesses of discursive persuasion; or the role of particular ideas, knowledge resources and identity constructions in individual argumentative moves. Such micro-approaches, thus, study discourse as a discrete social event and often share an interest in the "trivial" details of interpersonal encounters between actors.

2NC—AT: Reps Focus Bad

Having a counter-advocacy solves – their evidence assumes we just criticize reps which is politically stagnating

Nonsensical – if we have two discoursive options available and one is problematic, just because it was presented first doesn't mean it should be preferred

Language of the plan determines the persuasive appeal of their policy – good advocates choose words wisely

Brien **Hallett**, Matsunaga Institute for Peace at University of Hawai'i--Manoa, **and** Ralph **Summy**, Australian Centre for Peace & Conflict Studies at the University of Queensland, **2003** "Detooling the Language of the Master's House: The Case of Those "Nuclear Things"," Peace & Change, vol 28 no 2

Why bother with the twigs when one can attack the roots? Instead of being on the defensive, opponents should go on the offensive, attacking the cogency of the key terms with which the proponents control the debate, attacking their fixation with power and their minimization of the consequences. For example, instead of debating the merits and demerits of de-alerting "nuclear weapons," opponents should be attacking the key term itself. Opponents should demand to know why the term "nuclear weapon" is used at all, since nuclear weapons are not, in reality, weapons, but are instruments of mass extermination. De-alerting nuclear weapons is a controversial policy; one might be for or against it. De-alerting instruments of mass extermination that arguably border on genocide is not controversial, inasmuch as no nation is justified in preparing for indiscriminate and unprecedented mass slaughter, nuclear or otherwise. Wade and Veneroso make this same point in a different policy area when they criticize the worldwide movement opposing the unfettered flow of capital. They argue, "The battle would be still less one-sided if those who favor capital controls agree to ban that phrase and use only 'capital prudential regulations' to denote the same thing, for words are weapons and no one can oppose prudential regulations."41 More successful social and political movements than the peace movement (and the movement against the global free-flow of capital) consciously have resorted to lexical alternatives to avoid the co-optation that comes from using the opponent's preferred terminology. Thus, in the abortion debate the two antagonists generally do not regard themselves as anti- or pro-abortion. The former refer to themselves as "pro- lifers" and the act as "murder," while the latter, who speak from the mother's perspective and the child's quality of life, describe themselves as "pro-choice." Similarly, vegetarians substitute the neutral term of vegetable eaters used by their carnivore opponents with a more barbed term. Instead of giving up meat, they are refusing to eat "dead flesh." During the long, drawn-out struggle over slavery in America, as long as the issue was framed in terms of "Negroes" being unequal to whites in intellectual and cultural abilities, a coherent if misleading case could be made for the continuation of slavery. Given the agreed status of less than human, the Negro was subject to a debate that centered on their treatment—whether they could be treated harshly or should be dealt with kindly like a domestic animal. However, as soon as the terms of the debate changed to acknowledge that Negroes were not unequal but were fully human with equal rights, the debate changed dramatically to a question of emancipation. While the struggle to preserve the environment has only begun, some progress already has been achieved. The debate has been framed in terms acknowledging the finite nature of our resources and the danger to the continued existence of a living planet if humans gravely upset the ecological balance with pollution, soil degradation, resource depletion, and overpopulation. Corporate leaders and their political allies talk (despite actions not always matching rhetoric) about "sustainable growth," "ecological limits," and "biodiversity" and no longer about unlimited material progress as during most of the last two centuries. On the issue of gun control, the gun lobby in America centers its arguments on the Second Amendment right to bear arms and to defend one's life and property, while their opponents frame the argument in terms of guns contributing to a culture of violence and high murder rates. The antigun forces have challenged the National Rifle Association on the positive grounds of people's safety. Thus, the debate is effectively enjoined, with the antagonists staking out their positions with clearly articulated choices in their use of terminology. That the two sides in the nuclear debate use the same terms, "nuclear weapons" and "nuclear war," to express their divergent perspectives is, indeed, quite remarkable—though perhaps understandable in light of the fact that a number of the opponents still cling to an imagining of the judicious use of nuclear explosives in certain circumstances. The lack of alternative terms would not be a problem if the terms used were

simple, neutral, or emotionless technical jargon like floppy disk or stethoscope, but they are charged with a denotation of enormous power through terror.

That's a key internal link to violence

Brien **Hallett**, Matsunaga Institute for Peace at University of Hawai'i--Manoa, **and** Ralph **Summy**, Australian Centre for Peace & Conflict Studies at the University of Queensland, **2003** "Detooling the Language of the Master's House: The Case of Those "Nuclear Things"," Peace & Change, vol 28 no 2

The manner in which a text is written, a speech is uttered, a thought is thought, is integral to its content. There is no neutral way of representing the world, a form that is somehow detached from the linguistic and social practices in which the speaker or writer is embedded.... Language is not merely a means to an end. It merges into an inseparable unity of substance and form. Language, then, is recognized as being part of the material realm—as constituting a form of action in its own right. 'Words are not just narrative material,' Costas M. Constantinou stresses, 'but can themselves have stories to tell.'40 Thus the language or words chosen will direct the course of any debate, including the nuclear debate. They are what need to be changed to shift the debate away from an attachment to the incredible power and to focus it on an appreciation of the incredible consequences of these "nuclear things." The point of attack for serious antinuclearists should not be diverted onto questions about this or that innovation in bomber, missile, or submarine technology or about a choice between virtual or absolute abolition. Rather, the point of attack should center on the key terms that define the debate—nuclear war and nuclear weapons.

Independent from our critique impacts, policy terminology plays a role in determining the desirability of the plan

Shannon, Law at the University of Idaho, **2k2** (77 Wash. L. Rev. 65)

The first answer to this question is, why should we not care? If proper terminology (of whatever type) is readily available and comprehendible, why should one not want to use it? Does one really need a reason for not misusing any word, technical or otherwise? In other words, though many misuses of Rules terminology might not seem to cause serious problems, surely that is not an argument in favor of a disregard of proper Rules terminology, particularly where the cost of using proper terminology is negligible. The second answer to the question why we should care about the use of proper Rules terminology goes to the cost of using improper terminology even in seemingly trivial contexts. Understanding legal concepts is difficult enough without the confusion created when an inappropriate term is used to represent those concepts. And this is true regardless of how minor the misuse. In some sense, every misuse of legal language impedes the understanding - and, consequently, the progress - of the law.

Turns effective policymaking – clear policy language key to effective implementation

Philip **Milne**, Partner in Simpson Grierson's Wellington Local Government and Environment work group, **1994**

("Validity of Rules in Regional Plans: A Seminar for Wellington Regional Council Officers" http://www.qp.org.nzipubs/3665.pd0 p.17

What can be said however is that in order to minimise the risk of a successful challenge, it is important that rules be drafted as objectively and clearly as practicable. One should always bear in mind the basic principle that so far as is possible, a reader should be able to determine the effect of the rule from the rule itself. In particular, the category within which the rule will place a particular activity should be clear, along with the requirements of the rule

(performance standards/conditions). 5.4 Do the principles relating to certainty and reserving discretions apply equally to different types of activity? There is considerable authority for a consistent application of these principles to rules concerning "permitted activities". (See Ruddlesden and Kapiti Borough (1986) 11 NZ 11)A 301). A permitted activity is one permitted as of right without the need for a resource consent provided it complies with all relevant conditions in a plan. If a proposal meets those conditions it may go ahead without consent. Clearly it is desirable, if not essential, that the classification of an activity as permitted and all conditions attached to those classifications be objectively ascertainable and certain. Otherwise persons carrying out activities in the belief that they are permitted, may in fact be doing so unlawfully.

2NC—AT: Perm Do Both

Still links – no benefit to including the problematic representations of the plan if the counterplan alone is sufficient to solve the 1AC impacts

Doesn't solve - change is only possible if we all unite in crafting new terminology

Brien **Hallett**, Matsunaga Institute for Peace at University of Hawai'i--Manoa, **and** Ralph **Summy**, Australian Centre for Peace & Conflict Studies at the University of Queensland, **2003** "Detooling the Language of the Master's House: The Case of Those "Nuclear Things"," Peace & Change, vol 28 no 2

To properly propose an implementation strategy would require a full-length monograph. The modest suggestions below are intended only to open up the discussion. Furthermore, in devising any political campaign, general prescriptions need to be tailored carefully to local circumstances. The particular context and special local conditions should be paramount in the planners' thinking. With these two provisos in mind then, the following are a few general principles and procedures to consider in initiating an action strategy: • First and foremost, endeavor to change the terms of the debate, destroy the unanimity that unites proponents and far too many of the opponents of nuclear weapons, and suggest that a change in the status quo is possible only if all opponents insist upon reframing the debate with a more honest, more accurate terminology. An uncomfortable linguistic radicalism is the key to nuclear sanity and the absolute abolition of these "things." • Make this appeal to peace researchers around the world through academic bodies such as the International Peace Research Association, Consortium on Peace Research and Education, Asia Pacific Peace Research Association, International Political Science Association, and the Peace Studies Association. Convince them of the necessity to use the new consequentialist terminology in their scholarly writing and teaching. • Formally introduce the new thinking and terminology into peace and conflict studies programs, ranging from grades eight through the tertiary levels. • Invite academics to use the terminology in their research and when writing op-eds and appearing on the electronic media.

Doublethink- the permutations contradictory phrasings is part and parcel of the strategy of political manipulation of language to justify mass atrocity

Mary **Louise**, journalist with the London Morning Paper, **2004**
(http://www.newswithviews.com/guest_opinion/guest32.htm)

Doublethink, or reality control, involves being aware of truthfulness, while at the same time professing carefully devised lies and believing both, as our so-called leaders aptly demonstrate. Political language is designed to make lies sound truthful, and to convey the opposite of actual intentions, in order to greatly influence public opinion. Politically correct terminology is the invention of a simplified new vocabulary that masks, distorts, and alters the true meanings of traditional definitions. It limits the range of ideas and emotions that are allowed to be expressed, and causes unnecessary confusion and conflict that restricts understanding, which makes it difficult to communicate rationally and effectively. Control of language and information is necessary to condition citizens to love their oppressors, appreciate censorship, and tolerate brutality. Freedom is slavery, war is peace, and ignorance is strength.

2NC—AT: Technical Language Bad

Using technocratic language just because the bad people do makes us cogs in the system – only way to counter hegemonic violence is external resistance

Cohn '87 (Carol-, June, Bulletin of Atomic Scientists, "Slick 'Ems, Glick 'Ems, Christmas Trees, and Cookie Cutters: Nuclear Language and How We Learned to Pat the Bomb", Vol. 43, http://www.buildfreedom.com/tl/tl07aa.shtml)

I think it would be a mistake, however, to dismiss these early impressions. While I believe that the language is not the whole problem, it is a significant component, and clue. What it reveals is a whole series of culturally grounded and culturally acceptable mechanisms that make it possible to work in institutions that foster the proliferation of nuclear weapons, to plan mass incineration of millions of human beings for a living. Language that is abstract, sanitized, full of euphemisms; language that is sexy and fun to use; paradigms whose referent is weapons; imagery that domesticates and deflates the forces of mass destruction; imagery that reverses sentient and non sentient matter, that conflates birth and death, destruction and creation--all of these are part of what makes it possible to be radically removed from the reality of what one is talking about, and from the realities one is creating through the discourse. Close attention to the language itself also reveals a tantalizing basis on which to challenge the legitimacy of the defense intellectuals' dominance of the discourse on nuclear issues. When defense intellectuals are criticized for the cold-blooded inhumanity of the scenarios they paint, their response is to claim the high ground of rationality. They portray those who are radically opposed to the nuclear status quo as irrational, unrealistic, too emotional--"idealistic activists." But if the smooth, shiny surface of their discourse--its abstraction and technical jargon--appears at first to support these claims, a look below the surface does not. Instead we find strong current of homoerotic excitement, heterosexual domination, the drive toward competence and mastery, the pleasures of membership in an elite and privileged group, of the ultimate importance and meaning of membership in the priesthood. How is it possible to point to the pursuers of these values, these experiences, as paragons of cool-headed objectivity? While listening to the language reveals the mechanisms of distancing and denial and the emotional currents embodied in this emphatically male discourse, attention to the experience of learning the language reveals something about how thinking can become more abstract, more focused on parts disembedded from their context, more attentive to the survival of weapons than the survival of human beings. Because this professional language sets the terms for public debate, many who oppose current nuclear policies choose to learn it. Even if they do not believe that the technical information is very important, some believe it is necessary to master the language simply because it is too difficult to attain public legitimacy without it. But learning the language is a transformative process. You are not simply adding new information; new vocabulary, but entering a mode of thinking not only about nuclear weapons but also about military and political power, and about the relationship between human ends and technological means. The language and the mode of thinking are not neutral containers of information; they were developed by a specific group of men, trained largely in abstract theoretical mathematics and economics, specifically to make it possible to think rationally about the use of nuclear weapons. That the language is not well suited to do anything but makes it possible to think about nuclear weapons should not be surprising. Those who find U.S. nuclear policy desperately misguided face a serious quandary. If we refuse to learn the language, we condemn ourselves to being jesters on the sidelines. If we learn and use it, we not only severely limit what we can say but also invite the transformation, the militarization, of our own thinking. I have no solution to this dilemma, but I would like to offer a couple of thoughts in an effort to push it a little further--or perhaps even to reformulate its terms. It is adopting the strategy of learning the language. When we outsiders assume that learning and speaking the language will give us a voice recognized as legitimate and will give us greater political influence, we assume that the language itself actually articulates the criteria and reasoning strategies upon which nuclear weapons development and deployment decisions are made. this is largely an illusion. I suggest that technostrategic discourse functions more as a gloss, as an ideological patina that hides the actual reasons these decisions are made. Rather than informing and shaping decisions, it far more often legitimizes political outcomes that have occurred for utterly different reasons. If this is true, it raises serious questions about the extent of the political returns we might get from using it, and whether they can ever balance out the potential problems and inherent costs. I believe that those who seek a more just and peaceful world have a dual task before them--a deconstructive project and a reconstructive project that are intimately linked. Deconstruction requires close attention to, and the dismantling of, technostrategic discourse. The dominant voice of militarized masculinity and decontextualized

rationality speaks so loudly in our culture that it will remain difficult for any other voices to be heard until that voice loses some of its power to define what we hear and how we name the world. The reconstructive task is to create compelling alternative visions of possible futures, to recognize and develop alternative conceptions of rationality, to create rich and imaginative alternative voices--diverse voices whose conversations with each other will invent those futures.

Abstract language cannot be deployed subversively- it structurally excludes other voices and learning to work within it trains us to forget about all political concerns outside of nuclearism and to take pleasure in doing so

Cohn '87 (Carol-, June, Bulletin of Atomic Scientists, "Slick 'Ems, Glick 'Ems, Christmas Trees, and Cookie Cutters: Nuclear Language and How We Learned to Pat the Bomb", Vol. 43, http://www.buildfreedom.com/tl/tl07aa.shtml)

ALTHOUGH I WAS startled by the combination of dry abstraction and odd imagery that characterized the language of defense intellectuals, my attention was quickly focused on decoding and learning to speak it. The first task was training the tongue in the articulation of acronyms. Several years of reading the literature of nuclear weaponry and strategy had not prepared me for the degree to which acronyms littered all conversations, nor for the way in which they are used. Formerly, I had thought of them mainly as utilitarian; they allow you to write or speak faster. They act as a form of abstraction, removing you from the reality behind the words. They restrict communication to the initiated, leaving the rest both uncomprehending and voiceless in the debate. But being at the center revealed some additional, unexpected dimensions. First, in speaking and hearing, a lot of these terms are very sexy. A small supersonic rocket "designed to penetrate any Soviet air defense" is called a SRAM (for short-range attack missile). Submarine-launched cruise missiles are "glick'ems." Air-launched cruise missiles are magical "alchems." Other acronyms serve in different ways. The plane in which the president will supposedly be flying around above a nuclear holocaust, receiving intelligence and issuing commands for where to bomb next, is referred to as "Kneecap" (for NEACP--National Emergency Airborne Command Post). Few believe that the president would really have the time to get into it, or that the communications systems would be working if he were in it--hence the edge of derision. But the very ability to make fun of a concept makes it possible to work with it rather than reject it outright. In other words, what I learned at the program is that talking about nuclear weapons is fun. The words are quick, clean, light, they trip off the tongue. You can reel off dozens of them in seconds, forgetting about how one might interfere with the next, not to mention with the lives beneath them. Nearly everyone I observed--lecturers, students, hawks, doves, men, and women--took pleasure in using the words; some of us spoke with a self-consciously ironic edge, but the pleasure was there nonetheless. Part of the appeal was the thrill of being able to manipulate an arcane language, the power of entering the secret kingdom. But perhaps more important, learning the language gives a sense of control, a feeling of mastery over technology that is finally not controllable but powerful beyond human comprehension. The longer I stayed, the more conversations I participated in, the less I was frightened of nuclear war. How can learning to speak a language have such a powerful effect? One answer, discussed earlier, is that the language is abstract and sanitized, never giving access to the images of war. But there is more to it than that. The learning process itself removed me from the reality of nuclear war. My energy was focused on the challenge of decoding acronyms, learning new terms, developing competence in the language--not on the weapons and the wars behind the words. By the time I was through, I had learned far more than an alternate, if abstract, set of words. The content of what I could talk about was monumentally different. Consider the following descriptions, in each of which the subject is the aftermath of a nuclear attack: Everything was black, had vanished into the black dust, was destroyed. Only the flames that were beginning to lick their way up had any color. From the dust that was like a fog, figures began to loom up, black, hairless, faceless. They screamed with voices that were no longer human. Their screams drowned out the groans rising everywhere from the rubble, groans that seemed to rise from the very earth itself. [You have to have ways to maintain communications in a] nuclear environment, a situation bound to include EMP blackout, brute force damage to systems, a heavy jamming environment, and so on. There is no way to describe the phenomena represented in the first with the language of the second. The passages differ not only in the vividness of their words, but in their content: the first describes the effects of a nuclear blast on human beings; the second describes the impact of a nuclear blast on technical systems designed to secure the "command and control" of nuclear weapons. Both of these differences stem from the difference of perspective: the speaker in the first is a victim of nuclear weapons, the speaker in the second is a user. The speaker in the first is using words to try to name and contain the horror of human suffering all around her; the speaker in the second is using words to insure the possibility of launching the next nuclear attack. Technostrategic language articulates only the perspective of users of nuclear weapons, not the victims. Speaking in expert language not only offers distance, a feeling of control, and an alternative focus for one's energies; it also offers escape from thinking of oneself as victims of nuclear war. No matter what one deeply knows or believes about the likelihood of nuclear war and no matter what sort of terror or despair the knowledge of a nuclear war's reality might inspire, the speakers of technostrategic language are allowed, even forced, to escape that awareness, to escape viewing nuclear war from the position of the victim, by virtue of their linguistic stance. I suspect that much of the reduced anxiety about nuclear war commonly experienced by both new speakers of the language and longtime

experts comes from characteristics of the language itself: the distance afforded by its abstraction, the sense of control afforded by mastering it, and the fact that its content and concerns are those of the users rather than the victims. In learning the language, one goes from being the passive, powerless victim to being the competent wily, powerful purveyor of nuclear threats and nuclear explosive power. The enormous destructive effects of nuclear weapons systems become extensions of the self, rather than threats to it.

That the affirmative thinks they have other objectives in mind is irrelevant- the psychological distancing that occurs when we try and learn the language makes use lose the ability to even think in other terms

Cohn '87 (Carol-, June, Bulletin of Atomic Scientists, "Slick 'Ems, Glick 'Ems, Christmas Trees, and Cookie Cutters: Nuclear Language and How We Learned to Pat the Bomb", Vol. 43, http://www.buildfreedom.com/tl/tl07aa.shtml)

But the better I became at this discourse, the more difficult it became to express my own ideas and values. While the language included things I had never been able to speak about before, it radically excluded others. To pick a bald example: the word "peace" is not a part of this discourse. As close as one can come is. "strategic stability," a term that refers to a balance of numbers and types of weapons systems--not the political, social, economic, and psychological conditions that "peace" implies. Moreover, to speak the word is to immediately brand oneself as a soft-headed activist instead of a professional to be taken seriously. If I was unable to speak my concerns in the language, more disturbing still was that I also began to find it harder even to keep them in my own head. No matter how firm my commitment to staying aware of the bloody reality behind the words, over and over, I found that I could not keep human lives as my reference point. I found that I could go for days speaking about nuclear weapons, without once thinking about the people who would be incinerated by them.

And the pleasure derived from participation in this system is a reason to be skeptical of all their offense- defense intellectuals always cast opponents as too idealistic so as to maintain their membership in the nuclear priesthood

Cohn '87 (Carol-, June, Bulletin of Atomic Scientists, "Slick 'Ems, Glick 'Ems, Christmas Trees, and Cookie Cutters: Nuclear Language and How We Learned to Pat the Bomb", Vol. 43, http://www.buildfreedom.com/tl/tl07aa.shtml)

Close attention to the language itself also reveals a tantalizing basis on which to challenge the legitimacy of the defense intellectuals' dominance of the discourse on nuclear issues. When defense intellectuals are criticized for the cold-blooded inhumanity of the scenarios they paint, their response is to claim the high ground of rationality. They portray those who are radically opposed to the nuclear status quo as irrational, unrealistic, too emotional--"idealistic activists." But if the smooth, shiny surface of their discourse--its abstraction and technical jargon--appears at first to support these claims, a look below the surface does not. Instead we find strong current of homoerotic excitement, heterosexual domination, the drive toward competence and mastery, the pleasures of membership in an elite and privileged group, of the ultimate importance and meaning of membership in the priesthood. How is it possible to point to the pursuers of these values, these experiences, as paragons of cool-headed objectivity?

2NC—AT: This Word Inevitable

Not offense – discriminatory language is also inevitable but that's not a reason to ignore individual utterances – counterplan is still a preferable policy options

It solves – re-languaging can spill over

Geroge **Lakoff**, Linguistics at UC Berkeley, **2001** "The Mind and The World Changing the Very Idea Of American Foreign Policy," google

The problem is a conceptual problem, a problem of mind. Our job is to change ideas, to imagine and implement a new way of thinking. How we understand the world is all-important. Our understanding at least limits, and often determines, our possibilities for action. The US is a powerful country. Our IDEAS in the area of foreign policy shape our actions toward other countries every bit as much as do external events. The academic discipline most relevant to understanding and changing the very nature of our ideas is cognitive science — the interdisciplinary study of mind — and especially that branch of cognitive science concerned with conceptual systems and language, namely, cognitive linguistics. From cognitive science we learn that most of our thought is below the level of consciousness, part of what is called "the cognitive unconscious." Even careful, well- educated planners who think deeply about what they are doing typically make use of a system of unconscious, implicit concepts that they may not be aware of. The job of cognitive linguistics is to study what those concepts are and how they change. Cognitive linguistics has produced two major insights that are of relevance to this study: (1) Language is defined relative to what are called "conceptual frames" — ways of "framing" problems. Again, these are sometimes below the level of consciousness. (2) The major mechanism of abstract thought is conceptual metaphor. It is metaphorical thought that allows us to understand and reason with difficult and sophisticated ideas in everyday terms. As we shall see, most if not all of our major foreign policy ideas are metaphorical. One of our tasks will be to show just what our foreign policy metaphors have been in the past and what new metaphorical ideas are needed to replace them. If the Global Interdependence Initiative – the GII – is to be successful, we will have to construct a clear general way of conceptualizing an overall foreign policy and language to go with it, language that will effectively frame every issue.

Ethics DA – any use of euphemisms is unethical and must be rejected

Neiman '8 (Susan-, Moral Clarity: A Guide for Grown-Up Idealists, P. 4-5)

We have moral needs, needs so strong they cannot override our instincts for self-protection, as the story of Abraham shows. It also shows those needs are not based in religion, or any form of divine command. They include the need to express reverence and the need to express outrage, the need to reject euphemism and cant and to call things by their proper names. They include the need to see our own lives as stories with meaning—meanings we impose on the world, a crucial source of human dignity—without which we hold our lives to be worthless. Most basically and surprisingly, we need to see the world in moral terms. These needs are grounded in a structure of reason. While they may be furthered by religion, or emotion, that is not what keeps them alive. As I will argue, they are based in the principle of sufficient reason that we use as a compass. Moral inquiry and political activism start where reason is missing. When righteous people suffer and wicked people flourish, we begin to ask why. Demands for moral clarity ring long, loud bells because it is something we are right to seek. Those who cannot find it are likely to settle for the far more dangerous simplicity, or purity, instead. This book began in response to needs expressed by readers of my last book, Evil in Modern Thought. Conceived as a history of philosophy, it stirred readers beyond academia who were hungry for serious discussion of ethics and value. More people than I'd ever expected said it was the sort of thing they'd always hoped for from philosophy, and asked me to go one step further. I had reinterpreted the history of modern Western philosophy to show that its major thinkers were driven not by epistemologica! puzzles, but by the search for the meaning of evil and suffering as seen in the events of their day. Was I prepared, readers asked, to give an account of my own views in relation to contemporary events? I was not. The task was daunting, and it seemed presumptuous even to try. Perhaps nothing but the 2004 U.S. election would have persuaded me to do so. Like many who were dismayed on that third of November, I was stunned by the claim that voters chose George W. Bush because they cared about moral values. Either they had been bamboozled, or the left had dramatically failed. The election was probably a result of both, but that's now for historians to settle. The most useful thing I could do as an American philosopher was to examine philosophical consequences of contemporary political discourse, and offer a framework for alternatives. For it isn't enough to argue that if Republicans have captured the field of individual virtues, Democrats still corner the market on social ones; or to point out that many people go to church not in search of spiritual solace, but to get simple services now missing elsewhere. In Conservatives Without Conscience, Nixon's former legal counsel John Dean even argued that the culture wars were constructed to give the right a platform as its traditional targets collapsed with the Cold War. All these claims may be true, but they overlook a gnawing gap. Western secular culture has no clear place for moral language, and its use makes many profoundly uncomfortable. The 2004 election made some things crystal clear. All over the world, people argued about what caused its outcome, but this much

was certain: Everyone, everywhere, was running on moral passion. Whether voters were moved by their views about terrorism, or the war in Iraq, or abortion, what did not decide the most significant election in decades was the bottom line. Bush supporters were likelier to be those his economic policies had hurt, while many of his fiercest opponents stood a chance of benefiting from his tax cuts. Cynics, and old-fashioned Marxists, must return to the drawing board. "Erst kommt das Fressen, dann kommt die Moral," Bcrtolt Brecht s famous claim that grub comes first, and ethics later, turns out to be just a matter of chronology. As soon as our bellies stop rumblinp. we bepin to moralize.

The impact is totalitarianism

David **Bromwich**, English—**Yale**, 2008 "Euphemism and American Violence," http://www.nybooks.com/articles/21199

In Tacitus' Agricola, a Caledonian rebel named Calgacus, addressing "a close-packed multitude" preparing to fight, declares that Rome has overrun so much of the world that "there are no more nations beyond us; nothing is there but waves and rocks, and the Romans, more deadly still than these—for in them is an arrogance which no submission or good behavior can escape." Certain habits of speech, he adds, abet the ferocity and arrogance of the empire by infecting even the enemies of Rome with Roman self-deception: A rich enemy excites their cupidity; a poor one, their lust for power. East and West alike have failed to satisfy them.... To robbery, butchery, and rapine, they give the lying name of "government"; they create a desolation and call it peace. The frightening thing about such acts of renaming or euphemism, Tacitus implies, is their power to efface the memory of actual cruelties. Behind the façade of a history falsified by language, the painful particulars of war are lost. Maybe the most disturbing implication of the famous sentence "They create a desolation and call it peace" is that apologists for violence, by means of euphemism, come to believe what they hear themselves say. On July 21, 2006, the tenth day of the Lebanon war, Condoleezza Rice explained why the US government had not thrown its weight behind a cease-fire: What we're seeing here, in a sense, is the growing—the birth pangs of a new Middle East, and whatever we do, we have to be certain that we're pushing forward to the new Middle East, not going back to the old one. Very likely these words were improvised. "Growing pains" seems to have been Rice's initial thought; but as she went on, she dropped the "pains," turned them into "pangs," and brought back the violence with a hint of redemptive design: the pains were only birth pangs. The secretary of state was thinking still with the same metaphor when she spoke of "pushing," but a literal image of a woman in labor could have proved awkward, and she trailed off in a deliberate anticlimax: "pushing forward" means "not going back." Many people at the time remarked the incongruity of Rice's speech as applied to the devastation wrought by Israeli attacks in southern Lebanon and Beirut. Every bombed-out Lebanese home and mangled limb would be atoned for, the words seemed to be saying, just as a healthy infant vindicates the mother's labor pains. Looked at from a longer distance, the statement suggested a degree of mental dissociation. For the self-serving boast was also offered as a fatalistic consolation—and this by an official whose call for a cease-fire might well have stopped the war. "The birth pangs of a new Middle East" will probably outlive most other phrases of our time, because, as a kind of metaphysical "conceit," it accurately sketches the state of mind of the President and his advisers in 2006. The phrase also marked a notable recent example of a turn of language one may as well call revolutionary euphemism. This was an invention of the later eighteenth century, but it was brought into standard usage in the twentieth—"You can't make an omelet without breaking eggs"—by Stalin's apologists for revolution and forced modernization in the 1930s. The French Revolutionist Jean-Marie Roland spoke of the mob violence of the attack on the Tuileries as agitation or effervescence, never as "massacre" or "murder"—improvising, as he went, a cleansing metaphor oddly similar to Rice's "birth pangs." It was natural, said Roland, "that victory should bring with it some excess. The sea, agitated by a violent storm, roars long after the tempest." The task of the revolutionary propagandist, at a temporary setback, is to show that his zeal is undiminished. This he must do with a minimum of egotism, and the surest imaginable protection is to invoke the impartial authority of natural processes. If one extreme of euphemism comes from naturalizing the cruelties of power, the opposite extreme arises from a nerve-deadening understatement. George Orwell had the latter method in view when he wrote a memorable passage of "Politics and the English Language": Defenceless villages are bombarded from the air, the inhabitants driven out into the countryside, the cattle machine-gunned, the huts set on fire with incendiary bullets: this is called pacification. Millions of peasants are robbed of their farms and sent trudging along the roads with no more than they can carry: this is called *transfer of population* or *rectification of frontiers.* People are imprisoned for years without trial, or shot in the back of the neck or sent to die of scurvy in Arctic lumber camps: this is called elimination of unreliable elements. Such phraseology is needed if one wants to name things without calling up mental pictures of them. Orwell's insight was that the italicized phrases are colorless by design and not by accident. He saw a deliberate method in the imprecision of texture. The inventors of this idiom meant to suppress one kind of imagination, the kind that yields an image of things actually done or suffered; and they wanted to put in its place an imagination that trusts to the influence of larger powers behind the scenes. Totalitarianism depends on the creation of people who take satisfaction in such trust; and totalitarian minds are in part created (Orwell believed) by the ease and invisibility of euphemism.

2NC—AT: Moral Framing Key

The frames we use determine policy outcomes—adopting conservative moral frames ensures the failure of progressive policies—the counterplan is a key corrective to the flawed rhetoric of the affirmative.

The Rockridge Institute 2007—http://www.rockridgeinstitute.org/aboutus/frames-and-framing/index.html

Expressing progressive political ideas and values effectively begins with understanding frames. Frames are the mental structures that allow human beings to understand reality — and sometimes to create what we take to be reality. Contemporary research on the brain and the mind has shown that most thought — most of what the brain does — is below the level of consciousness, and these unconscious thoughts frame conscious thought in ways that are not obvious. These mental structures, or frames, appear in and operate through the words we use to discuss the world around us, including politics. Frames simultaneously shape our thinking and language at multiple levels — the level of moral values, the level of political principles, the level of issue areas (e.g., the environment), the level of a single issue (e.g., the climate crisis), and the level of specific policy (e.g., cap-and-auction). Successful political arguments depend as much on a well-articulated moral frame as they do on policy details — often more. The most effective political messages are those that clearly and coherently link an issue area, single issue, or specific policy to fundamental moral values and political principle frames. Rockridge is the only progressive think tank that takes such a comprehensive view of framing and messaging. The primary determinant of how someone thinks about politics is what we refer to as their fundamental moral frame or their moral worldview. Progressive politics is about morality, about doing what is right. That moral frame is not always obvious, yet it can be stated simply: Progressives care about people and the earth, and act responsibly on that sense of care. All other progressive values — freedom, fairness, equality, security, opportunity, honesty, community, and all the rest — flow from that basic moral understanding of how people should act in the world. Conservatives have been more effective than progressives at getting their worldview, or moral frame, into public discourse. So effective, that progressives all too often adopt conservative frames – as members of Congress did in adopting the President's "unitary executive" frame which defined Congress as responsible for carrying out his mission — and thus primarily responsible for the safety of the troops. Congress may argue against the President's Iraq policy, but when they do so using his words, and thus his fundamental moral frame, they put themselves at a distinct disadvantage. It is nearly impossible to persuasively present a progressive policy using conservative language and frames. The debate on the U.S. response to 9/11 is a great example of how frames work. The phrases "war on terror" and "crimes against humanity" use different words to frame the same issue and, in doing so, evoke different ideas and guide us toward different actions. The phrase "war on terror" frames the issue as an open-ended military action against a vague, indeterminate enemy, with open-ended war powers given to the President for an indefinite period. "Crimes against humanity" frames our response to 9/11 as a police action where international law enforcement agencies are directed to root out groups and individual criminals using many of the same methods effective against crime syndicates. Further, these phrases trigger related moral and political principle frames deep in our unconscious minds, shaping how we experience our relationships to our political leaders and to people in other countries. "War" triggers fundamental moral and political principle frames that evoke an evil world in which we must look to an authoritarian President as commander-in-chief, whose orders we obey in order to protect our entire society from destruction by foreign enemies. With these frames dominating our thinking, we are more likely to tolerate giving up some of our civil liberties and dropping bombs that kill innocent civilians. By contrast, "crimes against humanity," as both a word and issue frame, triggers deep moral and political principle frames of an interdependent world where dangers occur, but they are not debilitating. With this frame foremost in our minds, we are more likely to protect society by enlisting the police, while also reaching out to our neighbors, who are suffering in other countries where poverty, disease, and oppression make it more likely that people will become terrorists. The persistent repetition of the "war on terror" word and issue frame triggers and reinforces deep moral and political principle frames. So, even when someone opposes the Iraq policy, they often do it by invoking the frame they wish to negate. This is why Americans who want to shift the ideas underlying American political debate — towards a greater emphasis on the values of empathy, social responsibility, fairness, honesty, integrity, and community — must do so by changing the deep moral and political principle frames that we use in thinking. We do this in large part by stating these frames openly and often. In other words, it is nearly impossible to persuasively articulate a law enforcement policy on Iraq when one is continually using the phrase "war on terror." Frames matter. Our fundamental moral frame, our worldview, determines how we experience and think about every aspect of our lives, from child rearing to healthcare, from public transportation to national security, from religion to love of country. Yet, people are typically unconscious of how their fundamental moral frames shape their political positions. The Rockridge Institute works to make that thinking more explicit in order to improve political debate.

Executive CP

1nc & Solvency Cards

1nc Executive Counterplan

Text: The President of the United States should, through executive action, stop *

***(Write out the action/area of the 1ac plan text).**

Reductions in domestic surveillance should be done through executive orders – not curtailed by acts of congress or the courts.

E.F.F 14 Electronic Frontier Foundation – Executive Director Cohn

[Cindy Cohn, Tell Obama: Stop Mass Surveillance Under Executive Order 12333, https://act.eff.org/action/tell-obama-stop-mass-surveillance-under-executive-order-12333]

The NSA relies on Executive Order 12333 to engage in mass surveillance of people around the world. But most people have never even heard of this presidential order. It's time to respect the privacy rights of innocent people, regardless of their nationality. Tell Obama: amend Executive Order 12333 to prohibit mass surveillance.

Executive orders are legally binding orders given by the President of the United States which direct how government agencies should operate. Executive Order 12333 covers "most of what the NSA does" and is "the primary authority under which the country's intelligence agencies conduct the majority of their operations."1 So while the U.S. **Congress is considering bills to curtail** mass telephone **surveillance**, the NSA's primary surveillance authority will be left unchallenged.

It's time to change that.

Last July, former State Department chief John Napier Tye came forward with a damning account of Executive Order 12333, which he published in The Washington Post2. Thanks to his account and the reports of others who have spoken out candidly against surveillance under E.O. 12333, we know:

1. Executive Order 12333 is used to collect the content of your communications– including Internet communications like emails and text messages.

2. Executive Order 12333's has no protections for non-U.S. persons, a fact that has been used to justify some of the NSA's most extreme violations of privacy, including the recording of an entire country's telephone conversations.3

3. Executive Order 12333 is used to collect information on U.S. persons who are not suspected of a crime. As Tye wrote, "It does not require that the affected U.S. persons be suspected of wrongdoing and places no limits on the volume of communications by U.S. persons that may be collected and retained."

4. No US court has seriously considered the legality and constitutionality of surveillance conducted under Executive Order 12333.

This executive order was signed by President Ronald Reagan in 1981, many years before the Internet was widely adopted as a tool for mass communication. A stroke of the U.S. President's pen over thirty years ago created the conditions that led to our global surveillance system. The present President could fix it just as easily.

1nc

The President acting alone preserves executive power – prevents congress from stepping in
Wall Street Journal 13

[Wall Street Journal, 9/5/2013. “Obama's Curbs on Executive Power Draw Fire,” http://online.wsj.com/article/SB10001424127887323893004579057463262293446.html]

The president's moves on national-security issues reflect a mix of political pragmatism as well as personal principles, and exactly how much power Mr. Obama actually has given up is the subject of debate. He has walked a fine line on Syria, for example, saying he wasn't required to seek sign-off from lawmakers for a military strike but asking for their approval anyway.

A senior administration official said that while the new drone-strike policy does rein in executive authority, the NSA and Syria proposals weren't a reduction of power but an effort to increase transparency and build public confidence.

Still, the president, who was criticized for seizing too much power through recess appointments and other steps that some said circumvented Congress, now is being criticized by veterans of past Republican administrations for weakening the presidency.

John Yoo, a Justice Department official in the George W. Bush administration, said Mr. Obama had unnecessarily limited his own authority. He noted that it is rare to see a president restrict his powers.

Mr. Obama "has been trying to reduce the discretion of the president when it comes to national security and foreign affairs," said Mr. Yoo, now a law professor at the University of California at Berkeley. "These proposals that President Obama is making really run counter to why we have a president and a constitution."

Others, though, said the president had given up a modicum of authority in an effort to protect presidential power and guard against congressional action.

The question of the extent of executive power has been long debated in Washington. President Lyndon Johnson was accused of using a narrow congressional resolution to vastly and illegally expand the Vietnam War, for example, and President Richard Nixon was accused of creating an "imperial presidency" before his resignation.

More recently, Mr. Obama's predecessor, Mr. Bush, was accused by Democrats of having inappropriately expanded executive powers in combating terrorism.

Jack Quinn, who served as White House counsel for President Bill Clinton, said Mr. Obama's recent moves amount to threading a needle to reach agreements and avoid larger setbacks for executive power. "Sometimes, it's important to show tolerance for others in order to preserve the power that you have," he said. "I don't think anyone can say that he is a shrinking violet when it comes to his use of power as president."

A.B. Culvahouse, White House counsel under Ronald Reagan, agreed that the president imposing constraints on executive authority is the preferable course if it helps dissuade Congress from stepping in to impose the same or more onerous limitations. Lawmakers retain the power of the purse, he noted, and also could codify restrictions in statute.

1nc

A strong unchecked executive is necessary to prevent and win inevitable conflicts McCarthy, Director Center for law and counterterrorism at the Foundation for Defense of Democracies, 06

[Andrew C. McCarthy, March 2006. Directs the. "The Powers of War and Peace by John Yoo," Commentary, https://www.commentarymagazine.com/articles/the-powers-of-war-and-peace-by-john-yoo/]

Yoo's thesis in this book is strongest as an argument grounded in text—the text, that is, of our founding law. Precisely because the Constitution reposes such power in the executive, he argues, it is adaptable to the demands of crisis (though one must add that broad presidential power is necessarily also open to great abuse and even disastrous miscalculation). It is also flexible enough to allow for international cooperation in the name of the national interest without a wholesale commitment to dreamy multilateral constructs (though this, too, can make for trouble in an age of globalization in which dependable allies are essential).

But is Yoo's reading, especially concerning the power of war, truly consistent with the framers' original understanding? As the constitutional scholar Cass Sunstein has observed in reviewing Yoo's book, George Washington himself construed Congress's power to declare war as meaning that "no offensive expedition of importance can be undertaken until after they [Congress] have deliberated on the subject, and authorized such a measure." Other giants of the founding—Adams, Jefferson, Hamilton, Madison, Chief Justice John Marshall—voiced similar sentiments. Even granting that the framers expressly resisted congressional war-making, and promoted a vibrant executive, one need not interpret "declare" as narrowly and legalistically as Yoo suggests.

In short, the tension reflected in the debates at the constitutional convention persists. But one must also be alert to reality. In a world beset by the constant threat of sudden destructive force, a robust and firmly grounded view of presidential power is imperative. Potential perils come today not just from growing national powers like China but from rogue states in Iran and North Korea as well as from increasingly diffuse terror cells that have demonstrated their capacity to continue striking globally even when, as now, they are under siege. If public safety is to be something other than an illusion, securing it will demand the power to attack quickly and, in appropriate circumstances, preemptively; the price of awaiting consensus from 535 members of Congress may be too prohibitive. For showing how that power derives from the very system the framers bequeathed us, John Yoo deserves our deep thanks.

Immigration Solvency

(__)

(__) Executive authority to change immigration laws – opponents are wrong
Gorod, appellate counsel at Constitutional Accountability Center, 15

[Brianne Gorod, 2 – 19 – 15, President Obama's Unproductive Statements About His Productive Immigration Policy, http://www.newrepublic.com/article/121098/president-obamas-executive-order-immigration-wasnt-overreach]

Earlier this week, a federal judge in Texas ordered a temporary halt to the implementation of President Obama's executive action that would defer the deportation of roughly 4.9 million immigrants. The rhetoric in his opinion echoed administration opponents who have criticized President Obama for executive overreach. The president's critics are clearly wrong when they claim he has exceeded his authority as chief executive. Ironically, though, much of the blame for their views may rest with one of the policy's biggest supporters: Obama himself.

As immigration rights advocates pushed the president to take executive action in his first term and early in his second, the president repeatedly resisted, claiming that he didn't have the authority to take the kind of action at issue in the Texas case. "I am president, I am not king. I can't do these things just by myself," he told Univision in 2010. In 2011, he discussed meeting with "immigration advocates ... [who] wish I could just bypass Congress and change the law myself." To these supporters, he responded "that's not how a democracy works." In 2013, he repeated the same message: "I'm the president of the United States. I'm not the emperor of the United States. My job is to execute laws that are passed, and Congress right now has not changed what I consider to be a broken immigration system."

The president's comments may have been motivated more by his sense of immigration politics than his views on immigration law—reports in 2014 indicated that Obama was "dial[ing] down the partisan rhetoric on immigration ... [to] give House Republicans some breathing room to try to pass legislation"—but they nonetheless fueled detractors. Some on the right argued that the president didn't have the authority to take executive action on immigration; when Obama ultimately did take action, they maintained he was simply doing so in order to achieve unilaterally what he could not achieve by working with Congress. Indeed, in the decision out of Texas, the district judge wrote, "The Government must concede that there is no specific law or statute that authorizes [Deferred Action for Parents of Americans and Lawful Permanent Residents (DAPA)]. In fact, the president announced that it was the failure of Congress to pass such a law that prompted him ... to 'change the law.'" (The judge formally based his decision to halt implementation not on the substance of the executive action, but on the government's failure to comply with certain procedural requirements he felt were warranted.)

But President Obama's opponents are as wrong now as he was then: He does have the authority to take executive action on immigration action, and that executive action isn't a response to congressional inaction at all. Rather, it's a response to congressional action—actions by past Congresses that have passed immigration laws that it is now the responsibility of the executive branch to enforce. There's

nothing novel about this. Presidents are always asked to exercise discretion in determining how best to implement laws passed by Congress (a responsibility and power often referred to as "prosecutorial discretion"), and that's exactly what the Framers of our Constitution intended. When the Framers drafted the Constitution, their views on the presidency were shaped not only by their experiences under British rule, but also by their experiences under the Articles of Confederation, the precursor to the Constitution. The Articles lasted just eight years, and one of the central weaknesses that led to its failure was the absence of a strong executive branch capable of enforcing the nation's laws.

Immigration Solvency

(__)

(__) Obama's executive order on immigration has been implemented
Jorgensen, Staff writer for the Observer, 4 – 2 – 15

[Jilian Jorgensen, Council Gearing Up to Implement Immigration Executive Order, Despite Court Challenges, http://observer.com/2015/04/council-gearing-up-to-implement-immigration-executive-order-despite-court-challenges/]

President Barack Obama's immigration reform executive order may be tied up in federal court—but that hasn't stopped the New York City Council from getting ready to implement it, Speaker Melissa Mark-Viverito told the Observer.

"We're just trying to put the wheels in motion and be ready to really roll, fully, once we get the approval—and we believe that court case is going to be overturned, thrown out, whatever—so the executive order can move forward," Ms. Mark-Viverto said in an interview yesterday at her City Hall office.

Mr. Obama's executive order would expand the existing Deferred Action for Child Arrivals program—and, if enacted, would allow as many as five million undocumented immigrants, who came to this country under the age of 16 or have family who are legally here and have resided in the United States for five years, to register to avoid deportation and to work legally in the country, if they have no criminal record.

NSA Solvency

(__) Executive controls all things related to the NSA – started with an executive order Williams, Think Progress Staff, 14

[Lauren C. Williams, The 'Primary Source' Of NSA's Spying Power Is A 33-Year-Old Executive Order By Ronald Reagan, http://thinkprogress.org/world/2014/09/30/3573647/reagan-nsa-order/]

Newly released documents prove the U.S. National Security Agency's spying power overseas primarily comes from a 33-year-old executive order signed by then President Ronald Reagan.

The American Civil Liberties Union obtained a series of internal papers from intelligence agencies including the NSA and Defense Intelligence Agency detailing how integral Reagan's 1981 order is to the NSA's current surveillance program. The order broadly allows the government to collect data from any company that is believed to have ties to foreign organizations. It also complicates the path forward for intelligence reforms in Congress.

Previous reports acknowledge the order's use as a foundation for some of the NSA's surveillance programs such as gaining backdoor access to tech companies' data centers. But the new documents, which were released as part of a Freedom of Information Act lawsuit the ACLU and other civil liberties advocates filed just before Edward Snowden's leaks to the media, show Executive Order 12333 is the "primary source" authority when it comes to the NSA's foreign spy programs.

"Because the executive branch issued and now implements the executive order all on its own, the programs operating under the order are subject to essentially no oversight from Congress or the courts," Alex Abdo, a staff attorney for the ACLU wrote in a blog post.

(__) Executive can reform the NSA - Paul statements prove Volz, Staff Writer for the National Journal, 15

[Dustin Volz, Rand Paul Pledges to 'Immediately' End NSA Mass Surveillance If Elected President The new Republican presidential candidate makes a forceful stand on surveillance, http://www.nationaljournal.com/2016-elections/rand-paul-pledges-to-immediately-end-nsa-mass-surveillance-if-elected-president-20150407]

Sen. Rand Paul vowed Tuesday while announcing his presidential campaign to immediately end the National Security Agency's bulk collection of Americans' phone records.

"The president created this vast dragnet by executive order. And as president on day one, I will immediately end this unconstitutional surveillance," Paul, speaking before a raucous crowd in Kentucky, said. "I believe we can have liberty and security. And I will not compromise your liberty for a false sense of security, not now, not ever. "

Paul has been among the most ardent critics of the NSA's sweeping surveillance programs in Congress—a policy position that has grown more pronounced in the two years since the Edward Snowden disclosures began.

War on Drugs Solvency

(__) Obama can reform drug policy through executive action
Tracy, Cannabis Consultant & Civil Liberties Activist, 14

[Sam Tracy, Three Executive Actions Obama Can Take to Rein in the Drug War, http://www.huffingtonpost.com/sam-tracy/three-executive-actions_b_4691178.html]

In his fifth State of the Union address, President Obama didn't hide his frustrations with one of the least productive Congresses in history. He focused his speech on changes he can make unilaterally, saying, "Some [of my proposals] require Congressional action, and I'm eager to work with all of you. But... wherever and whenever I can take steps without legislation to expand opportunity for more American families, that's what I'm going to do." Sadly, he didn't say a single word about one of the areas where he has the most authority to make positive change: drug policy. Here are three of the most important reforms Obama could make with a stroke of his pen.

1. Reschedule marijuana. Federal drug policy is determined largely by the Controlled Substances Act (CSA), which divides illegal drugs into five categories, or "schedules," of harmfulness. Marijuana remains in the most restrictive category, Schedule I, meaning it has a high potential for abuse and no accepted medical use in treatment. So, while a large majority of people -- including President Obama himself -- recognize that marijuana is safer than alcohol, the drug remains in the same legal category as heroin and LSD. Eighty percent of the public supports medical marijuana and 20 states have legalized its use, yet the federal government refuses to recognize that the drug has any medical benefits. This classification is why the federal government continues to raid medical marijuana facilities even when they're in full compliance with state law.

It doesn't have to be this way. As admitted by Attorney General Holder, President Obama has the power to reschedule marijuana without Congressional approval. The CSA states that any substance can be moved into another category by petitioning the Drug Enforcement Administration, a federal agency under the president's control. While this been tried many times in the past, including by Americans for Safe Access and governors Gregoire and Chafee, the DEA has denied every attempt. Obama can, and should, direct the agency to move marijuana at least to Schedule III, defined as having a lower potential for abuse and a currently accepted medical use (this category already includes Marinol, a synthetic form of the chemical THC found in marijuana). This simple change would allow states to legalize and regulate medical marijuana without any fear of federal intervention.

2. Replace DEA Administrator Michele Leonhart. One of the main causes of the DEA's obstinance is its leadership. As I've written before, Administrator Leonhart has lied to Congress and the American public on multiple occasions. Originally appointed by President George W. Bush, she has been an embarrassment for the Obama Administration for her refusal to admit that marijuana is less harmful than heroin. Even more nonsensically, she recently criticized the White House for flying a hemp American flag and allowing its unofficial softball team to play against a team of drug policy reformers (full disclosure: I'm a proud member of that team, the One Hitters, and we've beaten the White House both times we've played them).

There is a growing movement to replace Leonhart with someone who understands the drugs they're throwing people in prison for. The Marijuana Policy Project's petition to fire her already has over 20,000 signatures and is quickly growing. At least two members of Congress have called for her resignation, with Rep. Cohen saying Leonhart's leadership is "going to be looked upon in 10 or 20 years as the dark ages." Replacing Leonhart with someone more in line with the president's views on drug policy would go a long way towards scaling back the Drug War.

3. Pardon drug offenders serving unjust sentences. One of the president's most important criminal justice powers is the ability to pardon any federal conviction. President Obama has been one of the least merciful presidents in history when it comes to pardons; the eight clemencies and 13 pardons he granted last month was more than he did in his entire first term. Meanwhile, tens of thousands of Americans remain in prison for drugs: In 2012, the most recent date for which data is available, 99,426 of the nation's 196,574 federal prisoners -- just over 50 percent -- were serving time for drug offenses.

If President Obama truly believed his own (correct) statements that drug abuse is a mental health issue, he would pardon all nonviolent drug offenders just as President Carter once pardoned all Vietnam War draft dodgers. After all, what other mental health issue do we imprison people for? However, if Obama doesn't want to take the political risk that such a mass pardoning may bring, he could at least start with the most heinous cases, like the many people serving life sentences for as little as cocaine residue in a clothing pocket.

There is still hope that Congress will take some steps towards ending the War on Drugs in the near future. But as President Obama said, we have a criminal justice system "in which a large portion of people have at one time or another broken the law and only a select few get punished." If Congress refuses to do anything about it, Obama should use his executive powers to reform it as much as he can.

General Solvency – Legal Strength

(__)

(__) Executive Action creates a legal framework – results in congressional agreement BRECHER, J.D. Candidate, May 2013, University of Michigan Law School, 12

[Aaron P. Brecher, "Cyberattacks and the Covert Action Statute: Toward a Domestic Legal Framework for Offensive Cyberoperations," October, http://www.michiganlawreview.org/assets/pdfs/111/3/Brecher.pdf]

Cyberattacks present a challenge for U.S. policymakers: they are difficult to locate within a clear legal category and there is a significant risk of uncontrollable consequences associated with their use. As a result, policymakers must choose a paradigm to govern their use that will ensure that the executive branch is held accountable and shares information with legislators. This Part argues that the federal government should adopt the presumption that cyberattacks will be carried out under the covert action statute, and that the best way forward is for the president to issue an executive order making the covert action regime the presumptive framework for cyberattacks. It includes a brief discussion of why a president might willingly constrain her discretion by issuing the proposed executive order. It also shows that while the internal executive processes associated with both military and intelligence legal frameworks help mitigate the risk of cyberattacks' misuse by the executive, only the covert action regime provides an adequate role for Congress. Finally, this Part argues that the executive order option is preferable to one alternative proposed by scholars—enacting legislation—because of the practical difficulties of passing new legislation. The covert action regime is the best approach for committing cyberattacks under the current law, as it would facilitate cooperation among executive agencies. The debate over which agency and set of legal authorities govern cyberattacks has caused no small amount of confusion.145 Apparently, an Office of Legal Counsel ("OLC") memorandum declined to decide which legal regime should govern the use of cyberattacks, and the uncertainty has led to interagency squabbles, as well as confusion over how cyberattacks are to be regulated.146 Establishing a presumptive answer would go far toward resolving this dispute. Most importantly, adopting the covert action framework as the presumptive legal regime would be a principled way to help ensure constitutional legitimacy when the president orders a cyberattack.147 There is also reason to believe that presidential power is intimately bound up in credibility, which in turn is largely dependent on the perception of presidential compliance with applicable domestic law.148 A practice of complying with the covert action regime for cyberattacks, both when they do not constitute a use of force and when it is unclear whether they do, is most likely to be in compliance with the law. Compliance with the covert action regime would also encourage covert action procedures in close cases without unduly restricting the executive's choice to use military authorities in appropriate circumstances. The executive might also issue the proposed order, even though it would limit her freedom in some ways, because of the possible benefits of constraining future administrations or preempting legislative intervention.149 For example, in this context, an administration may choose to follow the finding and reporting requirements in order to convince Congress that legislative intervention is unnecessary for proper oversight. This is acceptable

if the covert action regime is in fact adequate on its own. Moreover, if greater statutory control over cyberattacks is needed, the information shared with Congress **may give Congress the tools** and knowledge of the issue necessary **to craft related legislation.**150 Additionally, while executive orders are hardly binding, the inertia following adoption of an order may help constrain future administrations, which may be more or less trustworthy than the current one. Creating a presumption through an executive order also establishes a stable legal framework for cyberattacks that allows law to follow policy in this new field, and permits decisionmakers to learn more about the nature of cyberoperations before passing detailed statutes that may result in unintended consequences.

General Solvency – Causes Legislation

(__) Executive action spurs legislation

Kagan, Visiting Professor at Harvard Law School and current Court Justice, 01

[Elena, "Presidential Administration," Harvard Law Review, Vol. 114, No. 8, June, p. 2293-2312]

It is not surprising, given these changes in the political landscape, that a President would turn to administration - a sphere in which he unilaterally can take decisive action. The more the demands on the President for policy leadership increase and the less he can meet them through legislation, the greater his incentive to tap the alternate source of supply deriving from his position as head of the federal bureaucracy. ¶ Administrative action is unlikely to provide a President with all he could obtain through legislation: Congress, after all, has set bounds on administration through prior statutory enactments. But as compared with legislative stasis, administrative action looks decidedly appealing. More, administrative action has the potential to **spur legislative action** by calling public attention to Congress's failure to act on the relevant issue.

General Solvency – Perception

(__) The international perception is that the counterplan is the plan.
SINNAR, Assistant Professor of Law, Stanford Law School, 13

[Shirin Sinnar, May 2013.. "Protecting Rights from Within? Inspectors General and National Security Oversight," Stanford Law Review, 65 Stan. L. Rev. 1027, Lexis]

These limitations on traditional external checks on the executive - Congress and the courts - have led to increased academic interest in potential checks within the executive branch. Many legal scholars have argued that executive branch institutions supply, or ought to supply, an alternative constraint on executive national security power. Some argue that these institutions have comparative advantages over courts or Congress in addressing rights concerns; others characterize them as a second-best option necessitated by congressional enfeeblement and judicial abdication.

Thus, Neal Katyal argues that institutions within the executive branch can provide for the "internal separation of powers" in the foreign policy arena and champions bureaucracy as a check on presidential power. n2 Samuel Issacharoff and Richard Pildes argue that **internal dissension** within the executive branch has historically protected civil liberties in wartime. n3 Dawn Johnsen advocates that legal advisers within the executive branch serve to constrain unlawful executive action. n4 Others contend that internal executive mechanisms have comparative advantages over judicial review: for instance, Gillian Metzger observes that such mechanisms can operate **ex ante and continuously,** rather than solely in response to justiciable challenges or problems that generate congressional attention, and argues that the policy recommendations of executive institutions may face less resistance than external critiques. n5 Moreover, **outside the United States**, legal scholars also point to executive oversight institutions as necessary to mitigate inadequate judicial review of state national security activities. n6

Executive CP-SDI

Executive CP – 1nc Solvency

CP solves.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf, p.16, accessed 7-15-15, TAP]

Ideally, in the aftermath of the Snowden scandals, Congress would undertake to restore order and legal regularity to surveillance policy by passing new legislation on the metadata program. Conceivably, it could choose to end bulk collection of phone records and reaffirm the original requirement of individual orders for the seizure of a target's business records. Given the prevailing sense of urgency about antiterrorism security, however, we think a constructive measure would more likely sanction metadata collection, subject to conditions and requirements designed to avoid unnecessary harm to privacy interests. For the immediate future, however, Congress appears to have gone out of the business of determining policy for antiterrorism surveillance. In the near term, the best hope for privacy interests is for President Obama to make good on his post-Snowden pledge, repeated in his 2015 State of the Union Address, to reform surveillance programs in order to instill "public confidence…that the privacy of ordinary people is not being violated." He promised to work with Congress on the issue. If Congress is not capable of acting, the executive branch can impose its own constraints on surveillance practices.57 But the maintenance of self-imposed executive-branch constraints would depend entirely on the strength of the administration's commitment—and, in two years' time, on the disposition of the next president. Because of the president's central responsibility for national security, the presidency is hardly a reliable institutional champion for privacy interests.

2nc Blocks

2nc – Solvency EXTN

Unilateral executive policymaking is inevitable – only the CP solves AND it solves the aff internal links sufficiently.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf, p.15-6, accessed 7-15-15, TAP]

Even if Congress at some point enacted new restrictions on surveillance, the executive might ignore the law and continue to make policy unilaterally. The job of reviewing executive conduct would again fall to the FISA Court.56 In view of this court's history of broad deference to the executive, Congress would have a challenge to ensure that legislative policies were faithfully implemented.

2nc – Follow-on

Congress will defer to the Executive branch – it will follow the CP which solves every solvency deficit BUT it will take political cover meaning
Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf, p.4, accessed 7-15-15, TAP]

Lacking any settled disposition on surveillance issues, Congress will respond to the leadership, and sometimes merely the political cover, provided by other institutions—especially the president, the intelligence agencies, and the FISA Court. It may take cues from the Justice Department or other executive agencies, and it will defer to rulings by the regular federal courts. In the end, Congress's performance in protecting privacy may depend on the design of the legislative arrangements for dealing with secret programs and on the structures and missions of relevant administrative and judicial institutions.

2nc – Signal

CP sends the most powerful signal (while avoiding Congressional confrontation)

Zbigniew **Brzezinski**, national security advisor under U.S. President Jimmy Carter, 12/3/**12**, Obama's Moment, www.foreignpolicy.com/articles/2012/12/03/obamas_moment

In foreign affairs, the central challenge now facing President Barack Obama is how to regain some of the ground lost in recent years in shaping U.S. national security policy. Historically and politically, in America's system of separation of powers, it is the president who has the greatest leeway for decisive action in foreign affairs. He is viewed by the country as responsible for Americans' safety in an increasingly turbulent world. He is seen as the **ultimate definer** of the goals that the United States should pursue through its diplomacy, economic leverage, and, if need be, military compulsion. And the world at large sees him -- for better or for worse -- as the **authentic voice of America**. To be sure, he is not a dictator. Congress has a voice. So does the public. And so do vested interests and foreign-policy lobbies. The congressional role in declaring war is especially important not when the United States is the victim of an attack, but when the United States is planning to wage war abroad. Because America is a democracy, public support for presidential foreign-policy decisions is essential. But **no one in the government** or outside it **can match the president's authoritative voice when he speaks and then decisively acts for America**. This is true even in the face of determined opposition. Even when some lobbies succeed in gaining congressional support for their particular foreign clients in defiance of the president, for instance, many congressional signatories still quietly convey to the White House their readiness to support the president if he stands firm for "the national interest." And a president who is willing to do so publicly, while skillfully cultivating friends and allies on Capitol Hill, can then establish such intimidating credibility that it is politically unwise to confront him. This is exactly what Obama needs to do now.

Obama key to signal and sustainability

Singer, director – Center for 21st Century Security and Intelligence @ Brookings, and Wright, senior fellow – Brookings, 2/7/**'13**

(Peter W. and Thomas, "Obama, own your secret wars", www.nydailynews.com/opinion/obama-secret-wars-article-1.1265620)

It is time for a new approach. And **all that is required** of the President is to do the thing that he does perhaps best of all: to speak. Obama has a unique opportunity — in fact, an urgent obligation — to create a new doctrine, unveiled in a major presidential speech, for the use and deployment of these new tools of war. While the Republicans tried to paint the President as weak on security issues in the 2012 elections, history will record instead that his administration pushed into new frontiers of war, most especially in the new class of technologies that move the human role both geographically and chronologically further from the point of action on the battlefield. The U.S. military's unmanned systems, popularly known as "drones," now number more than 8,000 in the air and 12,000 on the ground. And in a parallel development, the U.S. Cyber Command, which became operational in 2010, has added an array of new (and controversial) responsibilities — and is set to quintuple in size. This is not just a military matter. American intelligence agencies are increasingly using these technologies as

the tips of the spear in a series of so-called "shadow wars." These include not only the more than 400 drone strikes that have taken place from Pakistan to Yemen, but also the deployment of the Stuxnet computer virus to sabotage Iranian nuclear development, the world's first known use of a specially designed cyber weapon. Throughout this period, the administration has tried to have it both ways — leaking out success stories of our growing use of these new technologies but not tying its hands with official statements and set policies. This made great sense at first, when much of what was happening was ad hoc and being fleshed out as it went along. But that position has become unsustainable. The less the U.S. government now says about our policies, the more that vacuum is becoming filled by others, in harmful ways. By acting but barely explaining our actions, we're creating precedents for other states to exploit. More than 75 countries now have military robotics programs, while another 20 have advanced cyber war capacities. Rest assured that nations like Iran, Russia and China will use these technologies in far more crude and indiscriminate ways — yet will do so while claiming to be merely following U.S. footsteps. In turn, international organizations — the UN among them — are pushing ahead with special investigations into potential war crimes and proposing new treaties. Our leaders, meanwhile, stay mum, which isolates the U.S. and drains its soft power. The current policy also makes it harder to respond to growing concerns over civilian casualties. Indeed, Pew polling found 96% levels of opposition to U.S. drones in the key battleground state of Pakistan, a bellwether of the entire region. It is indisputable than many civilians have been harmed over the course of hundreds of strikes. And yet it is also indisputable that various groups have incentives to magnify such claims. Yet so far, U.S. officials have painted themselves into a corner — either denying that any collateral losses have occurred, which no one believes, or reverting to the argument that we cannot confirm or deny our involvement, which no one believes, either. Finally, the domestic support and legitimacy needed for the use of these weapons is in transition. Polling has found general public support for drone strikes, but only to a point, with growing numbers in the "not sure" category and growing worries around cases of targeting U.S. citizens abroad who are suspected of being terrorists. The administration is so boxed in that, even when it recently won a court case to maintain the veil of semi-silence that surrounds the drone strike program, the judge described the current policy as having an "Alice in Wonderland" feel. The White House seems to be finally starting to realize the problems caused by this disconnect of action but no explanation. After years of silence, occasional statements by senior aides are acknowledging the use of drones, while lesser-noticed working level documents have been created to formalize strike policies and even to explore what to do about the next, far more autonomous generation of weapons. These efforts have been good starts, but they have been disjointed and partial. Most important, they are missing the **much-needed stamp of the President's voice and authority**, which is essential to turn tentative first steps into established policy. Much remains to be done — and said — out in the open. This is why it's time for Obama's voice to ring loud and clear. Much as Presidents Harry Truman and Dwight Eisenhower were able keep secret aspects of the development of nuclear weapons, even as they articulated how and when we would use them, Obama should publicly lay out criteria by which the United States will develop, deploy and use these new weapons. The President has a strong case to make — if only he would finally make it. After all, the new weapons have worked. They have offered new options for military action that are more accurate and proportionate and less risky than previously available methods. But they have also posed many new complications. Explaining our position is about embracing both the good and the bad. It is about acknowledging the harms that come with war regardless of what technology is being used and making clear what structures of accountability are in place to respond. It's also about finally defining where America truly stands on some of the most controversial questions.

These include the tactics of “signature” strikes, where the identity is not firmly identified, and “double tap” strikes, where rescuers aiding victims of a first attack are also brought under fire. These have been reported as occurring and yet seem to run counter to the principles under which the programs have been defended so far. The role of the President is not to conduct some kind of retrospective of what we have done and why, but to lay out a course of the future. What are the key strategic goals and ethical guidelines that should drive the development and use of these new technologies? Is current U.S. and international law sufficient to cover them? There are also crucial executive management questions, like where to draw the dividing line between military and civilian intelligence agency use of such technologies, and how to keep a growing range of covert actions from morphing into undeclared and undebated wars. And, finally, the President must help resolve growing tensions between the executive branch and an increasingly restive Congress, including how to handle situations where we create the effect of war but no U.S. personnel are ever sent in harm’s way. Given the sprawling complexity of these matters, only the President can deliver an official statement on where we stand. If only we somehow had a commander in chief who was simultaneously a law professor and Nobel Peace Prize winner! The President’s voice on these issues won’t be a cure-all. But it will lay down a powerful marker, shaping not just the next four years but the actions of future administrations.

2nc – AT: Rollback

And executive orders have the force of law:

Oxford Dictionary of English **2010**

(Oxford Reference, Georgetown Library)

executive order

▸ noun US (Law) a rule or order issued by the President to an executive branch of the government and having the **force of law**.

CP constrains future Presidents – it creates a legal framework

Brecher, JD University of Michigan, December **2012**

(Aaron, Cyberattacks and the Covert Action Statute, 111 Mich. L. Rev. 423, Lexis)

The executive might also issue the proposed order, even though it would limit her freedom in some ways, because of the possible benefits of **constraining future administrations** or preempting legislative intervention. n149 For example, in this context, an administration may choose to follow the finding and reporting requirements in order to convince Congress that legislative intervention is unnecessary for proper oversight. This is acceptable if the covert action regime is in fact adequate on its own. Moreover, if greater statutory control over cyberattacks is needed, the information shared with Congress may give Congress the tools and knowledge of the issue necessary to craft related legislation. n150 Additionally, while executive orders are hardly binding, **the inertia following adoption of an order may help constrain future administrations**, which may be more or less trustworthy than the current one. **Creating a presumption through an executive order** also **establishes a stable legal framework** for cyberattacks that allows law to follow policy in this new field, and permits decisionmakers to learn more about the nature of cyberoperations before passing detailed statutes that may result in unintended consequences.

2nc – AT: Links to Politics

Only Congressional moves to reclaim war power authority triggers the war power and politics disad

William **Howell**, Sydney Stein professor in American politics at the University of Chicago, **9/3**/13, All Syria Policy Is Local, www.foreignpolicy.com/articles/2013/09/03/all_syria_policy_is_local_obama_congress?page=full

From a political standpoint, seeking congressional approval for a limited military strike against the Syrian regime, as President Barack Obama on Saturday announced he would do, made lots of sense. And let's be clear, **this call has everything to do with political considerations**, and close to nothing to do with a newfound commitment to constitutional fidelity. The first reason is eminently local. Obama has proved perfectly willing to exercise military force without an express authorization, as he did in Libya -just as he has expanded and drawn down military forces in Afghanistan, withdrawn from Iraq, significantly expanded the use of drone strikes, and waged a largely clandestine war on terrorism with little congressional involvement. The totality of Obama's record, which future presidents may selectively cite as precedent, hardly aligns with a plain reading of the war powers described in the first two articles of the constitution. Obama isn't new in this regard. Not since World War II has Congress declared a formal war. And since at least the Korean War, which President Harry Truman conveniently called a "police action," commanders-in-chief have waged all sorts of wars -small and large -without Congress's prior approval. Contemporary debates about Congress's constitutional obligations on matters involving war have lost a good deal of their luster. Constitutional law professors continue to rail against the gross imbalances of power that characterize our politics, and members of whichever party happens to be in opposition can be counted on to decry the abuses of war powers propagated by the president. **But these criticisms** -no matter their interpretative validity -**rarely gain serious political traction**. Too often they appear as arguments of convenience, duly cited in the lead-up to war, but serving primarily as footnotes rather than banner headlines in the larger case against military action. **Obama's recent decision to seek congressional approval is not going to upend a half-century of practice that has shifted the grounds of military decision-making decisively in the president's favor**, any more than it is going to imbue the ample war powers outlined in Article I with newfound relevance and meaning. **For that to happen, Congress itself must claim for itself its constitutional powers regarding war.** Obama did not seek Congress's approval because on that Friday stroll on the White House lawn he suddenly remembered his Con Law teaching notes from his University of Chicago days. He did so for political reasons. Or more exactly, he did so to force members of Congress to go on the record today in order to mute their criticisms tomorrow. And let's be clear, **Congress** -for all its dysfunction and gridlock -**still has the capacity to kick up a good dust storm** over the human and financial costs of military operations. Constitutional musings from Capitol Hill -of the sort a handful of Democrats and Republicans engaged in this past week -rarely back the president into a political corner. The mere prospect of members of Congress casting a bright light on the human tolls of war, however, will catch any president's attention. Through hearings, public speeches, investigations, and floor debates, members of Congress can fix the media's attention -and with it, the public's -on the costs of war, which can have political repercussions both at home and abroad. Think, then, about the stated reasons for some kind of military action in Syria. No one is under the illusion that a short, targeted strike is going to overturn the Assad regime and promptly restore some semblance of peace in the region. In the short term, the strike might actually exacerbate and prolong the conflict, making the eventual outcome even more uncertain. And even the

best-planned, most-considered military action won't go exactly according to plan. Mishaps can occur, innocent lives may be lost, terrorists may be emboldened, and anti-American protests in the region will likely flare even hotter than they currently are. The core argument for a military strike, however, centers on the importance of strengthening international norms and laws on chemical and biological weapons, with the hope of deterring their future deployment. The Assad regime must be punished for having used chemical weapons, the argument goes, lest the next autocrat in power considering a similar course of action think he can do so with impunity. But herein lies the quandary. The most significant reasons for military action are abstract, largely hidden, and temporally distant. The potential downsides, though, are tangible, visible, and immediate. And in a domestic political world driven by visual imagery and the shortest of time horizons, it is reckless to pursue this sort of military action without some kind of political cover. Were Obama to proceed without congressional authorization, he would invite House Republicans to make all sorts of hay about his misguided, reckless foreign policy. But by putting the issue before Congress, these same Republicans either must explain why the use of chemical weapons against one's people does not warrant some kind of military intervention; or they must concede that some form of exacting punishment is needed. Both options present many of the same risks for members of Congress as they do for the president. But crucially, if they come around to supporting some form of military action -and they just might -**members of Congress will have an awfully difficult time criticizing the president for the fallout**. Will the decision on Saturday hamstring the president in the final few years of his term? **I doubt it.** Having gone to Congress on this crisis, must he do so on every future one? No. Consistency is hardly the hallmark of modern presidents in any policy domain, and certainly not military affairs. Sometimes presidents seek Congress's approval for military action, other times they request support for a military action that is already up and running, and occasionally they reject the need for any congressional consent at all. And for good or ill, it is virtually impossible to discern any clear principle that justifies their choices. The particulars of every specific crisis -its urgency, perceived threat to national interests, connection to related foreign policy developments, and what not -can be expected to furnish the president with ample justification for pursuing whichever route he would like. Like jurists who find in the facts of a particular dispute all the reasons they need for ignoring inconvenient prior case law, presidents can characterize contemporary military challenges in ways that render past ones largely irrelevant. Partisans and political commentators will point out the inconsistencies, but their objections are likely to be drowned out in rush to war. **Obama's decision does not usher in a new era of presidential power**, nor does it permanently remake the way we as a nation go to war. **It reflects a temporary political calculation** -and in my view, the right one -of a president in a particularly tough spot. Faced with a larger war he doesn't want, an immediate crisis with few good options, and yet a moral responsibility to act, he is justifiably expanding the circle of decision-makers. But don't count on it to remain open for especially long.

2nc – AT: Perm Do Both

Links to the net benefit

2nc – AT: Perm Do CP

The CP is functionally competitive and distinct from the plan-

1. Cutail-

A. Curtail means cutting away the authority

Merriam-Webster, 15 ('curtail', http://www.merriam-webster.com/dictionary/curtail

Full Definition of CURTAIL transitive verb : to make less by or as if by cutting off or away some part <curtail the power of the executive branch> <curtail inflation>

B. That requires a third party restriction – executive self-restraint isn't topical – the distinction between the plan and the CP is the CP leaves discretion in the hands of the president. A topical plan takes away that discretion.

8th Circuit Court of Appeals 10

(Public Water Supply Dist. No. 3 v. City of Leb., 605 F.3d 511, Lexis)

HN9 7 U.S.C.S. § 1926(b) provides that a rural district's service shall not be curtailed or limited. In this context, the verbs "curtail" and "limit" connote something being **taken from** the current holder, rather than something being retained by the holder to the exclusion of another. "Curtail" is defined as shorten in extent or amount; abridge; "limit" is defined as set bounds to; restrict. The available cases and fragments of legislative history all seem to have in mind **curtailment** resulting from substitution of **some third party** as a water-supplier for the rural district. Shepardize - Narrow by this Headnote

2. Severance – the CP is PIC out of the federal government – the aff uses all three branches – the CP is net less action because it only fiats one branch and excludes the Congress and president – the perm severs out of executive and congressional action.

North, Center for Immigration Studies Fellow, 2010,

[David, "Backgrounder: Beware of Indirect Immigration Policy Making", Center for Immigration Studies, August) http://www.cis.org/indirect-immigration-policy-making, accessed 10-30-14, TAP]

Most of the **dialogue on national immigration policy**, understandably, **is focused on direct federal government policy making**; that is, when **Congress passes a law** or votes appropriations, when the **executive makes policies** within the law, **and** when the **judiciary interprets** the **law**.

Severance is a reason to reject the perm and vote neg, severance destroys neg counterplan and DA ground to shift out of neg links and competition arguments, and

makes the plan conditional, this makes it impossible to test the merits of the plan. fairness requires stability.

3. They should have specified – there is no USFG, just the three branches of the federal government – ASPEC is a voter for fairness and education – it is key to rigorously testing the aff – specification determines our ground – specific links, CPs, and solvency attacks. Even if you don't vote on specification, it provides a reason to reject this permutation

4. 2ac clarification is too late – they don't get to moot the 1nc – the plan is the stasis point for clash within the debate shifting the meaning based on the negative strategy undermines all clash.

The perm just begs the question of whether Agent CPs are good – they are.

1. Key to neg ground – this topic is AWFUL for the neg – over 30 affs are being read on the topic and the Terror DA is awful – generic CPs are the neg's only chance.

2. Key to rigorously test the aff – Debates over implementation are critical to the topic – they determine solvency and are the heart of the debate.
Kalanges, Northern Illinois University College of Law JD candidate, 2014

[Shaina, 34 N. Ill. U. L. Rev. 643, Summer 2014, "ARTICLE: Modern Private Data Collection and National Security Agency Surveillance: A Comprehensive Package of Solutions Addressing Domestic Surveillance Concerns, 34 N. Ill. U. L. Rev. 643" Lexis, accessed 6-28-15, TAP]

This comprehensive package is necessary because of the looming future of technology that is directly linked to NSA surveillance. Young U.S. citizens are not even immune to data collection by private companies when they are at school. 304Link to the text of the note A survey by Common Sense Media brought attention to private companies employed by schools that store student data with information on student health, grades, computer use, cafeteria meals, and disciplinary records. 305Link to the text of the note There are not many restrictions on how these companies use and store this particular data. 306Link to the text of the note Children and adults are also currently using a multitude of applications (apps), or software devices that [678] perform different functions like creating games, location devices, and connections to subscribers. 307Link to the text of the note Edward Snowden released documents detailing collaborations between the NSA and Britain's Government Communication Headquarters to gain access to data from a multitude of apps for collection and storage as early as 2007. 308Link to the text of the note NSA surveillance of the Angry Birds app is one example of app spying that captures details like user sex, location, and age. 309Link to the text of the note While allowing these intrusions now may not seem wholly detrimental to privacy, technological achievements in the future will make privacy virtually impossible for any software participants. The Google Brain project aims to program biology into computer systems so that phones and computers can form extremely intimate links with their owners in the future. 310Link to the text of the note There is currently an "arms race" between major corporations like IBM, Google, Apple, Baidu, and Microsoft to find the most adequate algorithms for the creation of a computer brain. 311Link to the text of the note In this future, apps and computer programs will be designed to read and interact with human emotion. 312Link to the text of the note Lurking behind those programs will be surveillance and data collection. This is "going to take decades," but the project is already in motion and the NSA has

already latched on to every major communication outlet. 313Link to the text of the note If steps are not taken to implement the goals of the aforementioned comprehensive package in the United States, the bounds of the law will expand as technology expands, and privacy expectations will shrink in the shadow of human analysis and surveillance. Still, reclaiming data collected and stored by the NSA could prove problematic, costly, and time consuming. But Judge Leon warned the government in Klayman that a failure to comply with his decision, if not overturned, would result in timely sanctions. 314Link to the text of the note Remedying any past issues and instituting safeguards for future issues is of the utmost importance. The future of NSA surveillance may depend most largely on the direction of the [679] executive, but the legislature and the Supreme Court have a large role to play in setting out guidelines for the NSA and the judiciary and guidelines for how much privacy the Constitution affords information moving across channels that may currently be seized at any moment. 315Link to the text of the note

3. Implementation is 90 percent of policymaking. Elmore, 1980

[Richard Elmore, University of Washington Public Affairs professor, 1980, Science Quarterly, p. 606-8, TAP]

The stakes involved in choosing an analytic approach are clearer when they are put in the context of current thinking about implementation. As the literature on implementation has accumulated certain issues have emerged that demonstrate the consequences both intellectual and practical, of seeing implementation either as a hierarchically ordered process or as a dispersed and decentralized process. Organizational Processes and Outputs The emergence of implementation as a subject for policy analysis coincides closely with the discovery by policy analysis that decisions are not self-executing. **Analysis of policy choices, matters very little if the mechanism for implementing** those choices **is poorly understood**. In answering the question, "**What percentage of** the **work of achieving a desired** governmental **action is done when the preferred** analytic **alternative has been identified**? Allison estimated that, in the normal case, it was about **10 percent**, **leaving** the remaining **90 percent in the realm of implementation**.9 Hence, in Nelson's terms, "the core of analysis of alternatives becomes the prediction of how alternative or structures will behave over. . . time."

But the task of prediction is vastly complicated by the absence of a coherent body of organizational theory, making it necessary to posit several alternative models of organization 7 Those policy analysts who are economists, impatient with the complexities of bureaucracy and the lack of precision in organizational theory, have tried to reduce implementation analysis to a simple choice between market and non-market mechanisms Schultze states the basic argument when he says that the "collective-coercion component of intervention should be treated as a scarce resource" in the formulation of policies, and that policymakers should learn to "maximize the use of techniques that modif the structure of private incentives,"8 Wolf furthers the argument, stating that the whole enterprise of implementation analysis can be reduced to a diagnosis of the pathologies of nonmarket structures, or as he calls it, "a theory of nonmarkel failures." The simplicity of the argument is comforting, but its utility is suspect. It seeks to solve one type of organizational problem, the responsiveness of large-scale bureaucracies, by substituting another type of organizational problem, the invention and execution of quasi markets. There is little evidence to suggest that the latter problem is any more tractable than the former. One would hardly expect, though, that a detailed framework for analysis of organizational alternatives would emerge from an intellectual tradition that regards organizational structure of any kind as a second-best solution to the problem of collective action. 10 Defining implementation analysis as a choice between market and nonmarket structures diverts attention from, and trivializes, an important problem how tome the structure and process of organizations to elaborate, speci and define policies. Most policy analysts, economists or not, are trained to regard complex organizatiom as barriers to the implementation of public policy, not as instruments to be capitalized upon and modified in the pursuit of policy objectives. In fact, organizations can be remarkably effective devices for working out difficult public problems, but their use requires an understanding of the reciprocal nature of authority relations. Formal authority travels from top to bottom in organizations, but the informal authority that derives from expertise, skill, and proximity to the essential tasks that an organization performs travels in the opposite direction. Delegated discretion is a way of capitalizing on this reciprocal relationship, responsibilities that require special expertise and proximity to a problem are pushed down in the organization, leaving more generalized responsibilities at the top. For purposes of implementation, this means that formal authority, in the form of policy statements, is heavily dependent upon specialized problem-solving capabilities further down the chain of authority. Except in cases where a policy requires strict performance of a highly structured routine (for example, airline safety inspections), strong hierarchical controls work against this principle of reciprocity. To use organizations effectively as instruments of policy, analysts and **policymakers have to understand where in the complex network of organizational relationships certain tasks should be performed**, what resources

are necessary for their performance, and whether the performance of the task has some tangible effect on the problem that the policy is designed to solve Analysts and policymakers do not need to know how to perform the task, or even whether the task is performed uniformly; in fact, diversity in the performance of the task is an important source of knowledge about how to do it better.

2nc – Agent CPs Good

Agent CPs are good – framing issue – even if on most topics they are bad, they are critical to being NEG on THIS TOPIC. At worst reject the arg not the team.

1. Key to neg ground – this topic is AWFUL for the neg – over 30 affs are being read on the topic and the Terror DA is awful – generic CPs are the neg's only chance.

2. Key to rigorously test the aff – Debates over implementation are critical to the topic – they determine solvency and are the heart of the debate.

Text

Text: The president of the United States should (plan) through an executive order.

The executive order would follow Obama's position during his campaign and early presidency.

Barack Obama on surveillance, then and now By Caroline **Houck** on Thursday, June 13th**, 2013**
http://www.politifact.com/truth-o-meter/article/2013/jun/13/barack-obama-surveillance-then-and-now/
With revelations that the federal government has been collecting data on phone calls and Internet usage, some have questioned whether President Barack Obama has broken promises he made in the 2008 campaign. YouTube videos have popped up, juxtaposing speeches Obama made as a candidate in 2008 with his more recent argument that trade-offs must be made to protect the American people. Some see this as a reversal in his positions. So we went back and looked at promises tracked in our Obameter and other coverage of the 2008 election to see where Obama stood on the spectrum of security and privacy. In the years leading up to the 2008 campaign and in the early stages of the campaign itself, Obama regularly emphasized the importance of civil liberties and the sanctity of the Constitution. "We need to find a way forward to make sure that we can stop terrorists while protecting the privacy, and liberty, of innocent Americans," then-Sen. Obama said when he voted against Michael Hayden's confirmation as CIA director in 2006. "As a nation we have to find the right balance between privacy and security, between executive authority to face threats and uncontrolled power. What protects us, and what distinguishes us, are the procedures we put in place to protect that balance, namely judicial warrants and congressional review. ... These are concrete safeguards to make sure surveillance hasn't gone too far." During his presidential campaign he reinforced these earlier stances by promising to "strengthen privacy protections for the digital age and … harness the power of technology to hold government and business accountable for violations of personal privacy." Though our Obameter tracking of this promise notes that his specific pledges pertained more to safeguards against commercial privacy infringements than governmental intrusions, he did promise to protect citizens' privacy. As of Jan. 14, this promise was "in the works," as both Obama and Congress considered various measures to protect and define individuals' Internet privacy. But many of Obama's criticisms of government surveillance specifically targeted President George W. Bush's warrantless wiretaps and particular applications of FISA and the USA Patriot Act that Obama called excessive or illegal.

Pres Powers

Executive orders key to presidential power

Risen 4 [Clay, Managing editor of *Democracy: A Journal of Ideas,* M.A. from the University of Chicago "The Power of the Pen: The Not-So-Secret Weapon of Congress-wary Presidents" The American Prospect, July 16, http://www.prospect.org/cs/articles?article=the_power_of_the_pen]

In the modern era, **executive orders have gone from being a tool largely reserved for internal** White House **operations** -deciding how to format agency budgets or creating outlines for diplomatic protocol -- to **a powerful weapon in defining, and expanding, executive power**. In turn, **presidents have** increasingly **used that power to** construct and **promote social policies on** some of the country's most **controversial issues, from civil rights to labor relations to reproductive health**.

2NC/1NR

Avoids Politics

Unilateral actions avoid the politics DA – three reasons

Moe & Howell 99 (Terry M. Moe, William G. Howell, Howell is a graduate student in political science at Stanford University , Moe is a professor of political science at Stanford University and a senior fellow at the Hoover Institutionhttp://home.uchicago.edu/~whowell/papers/UnilateralAction.pdf**,) //RH**

The president's base of independent authority, in fact, is enormously enhanced rather than compromised by the executive nature of the job: First, because presidents are executives, the operation of government is in their hands. As an inherent part of their job, they manage, coordinate, staff, collect information, plan, reconcile conflicting values, and respond quickly and flexibly to emerging problems. These activities are what it means, in practice, to have the executive power, and they give presidents tremendous discretion in the exercise of governmental authority. The opportunities for presidential imperialism are too numerous to count. When presidents feel it is in their political interests, they can put whatever decisions they like to strategic use, both in gaining policy advantage and in pushing out the boundaries of their power. Second, because presidents are executives, they have at their disposal a tremendous reservoir of expertise, experience, and information, both in the institutional presidency and in the bureaucracy at large. These are critical resources the other branches can never match, and they give presidents a huge strategic advantage—in the language of agency theory, an information asymmetry of vast proportions—in UNILATERAL ACTION AND PRESIDENTIAL POWER □ 855 856 □ PRESIDENTIAL STUDIES QUARTERLY pursuing the myriad opportunities for aggrandizement that present themselves in the course of governmental decision making. Third, and finally, there is a key advantage that is often overlooked. Because presidents are executives, and because of the discretion, opportunities, and resources available to them, they are ideally suited to be first movers and to reap the agenda powers that go along with it. If they want to shift the status quo by taking unilateral action on their own authority, whether or not that authority is clearly established in law, they can simply do it—quickly, forcefully, and (if they like) with no advance notice. The other branches are then presented with a fait accompli, and it is up to them to respond. If they are unable to respond effectively, or decide not to, presidents win by default. And even if they do respond, which could take years, presidents may still get much of what they want anyway.

A2 – Congress Overrides XO

Congress rarely overrides unilateral actions

Huder 15, (2-23-2015, Joshua Huder is a senior fellow at the Government Affairs Institute at Georgetown University, earning a PhD at University of Florida in American politics "DHS dispute: Why Congress rarely curtails presidential unilateral actions (+video)," http://www.csmonitor.com/USA/Politics/Politics-Voices/2015/0223/DHS-dispute-Why-Congress-rarely-curtails-presidential-unilateral-actions-video,) //RH

Institutional power is more of an academic topic. Nonetheless, it has enormous ramifications. The current immigration debate is a great example of that. Despite the rhetoric around the Department of Homeland Security funding debate, America has never had a dictator president – the current president included. However, the fight for power in the separation of powers (i.e. How big should the presidency be?) is real. The DHS/immigration debate is an interesting look into that struggle. Much of the modern presidency's power stems from the type of actions we are observing in the immigration debate. Reinterpreting existing law, exercising discretion on the many responsibilities under the purview of the executive branch, or writing orders and directives, presidents have ample opportunity and authority to reshape national policy unilaterally. These actions pale in comparison to actually creating law, as Congress does, but they are important nonetheless. And while Obama's immigration action falls within precedents set by former presidents, Congress is well within its constitutional rights to correct presidential overreach. However, Congress rarely curtails presidential unilateral actions. There have been several attempts but few are successful. The best attempt was the 1974 Budget Control and Impoundment Act, establishing the modern budget process. After Nixon impounded congressionally appropriated funds, Congress established processes and deadlines to take back budgetary control. It also established a reconciliation process that could circumvent filibusters to restore budget harmony. That process could be used to respond to executive actions if those actions fail to follow congressional intent As we see today, even Congress's most powerful tool cannot address executive action. It would take some creative legislative drafting in order to use reconciliation to reverse Obama's immigration action, which prohibits provisions that have no budgetary effect. Which means today's congressional stalemate boils down to one of two possibilities: either Republicans cannot use reconciliation to reverse Obama's executive actions or – because the reconciliation process only allows a limited amount of bills per year – they plan on using it for another purpose. This is the problem Republicans currently face. They cannot circumvent the supermajority requirements of the process. Even if they could, there is no guarantee Republicans could find a Senate majority once the symbolic nature of the cloture vote was removed from the scenario. Should three moderate or border Republicans join Sen. Dean Heller (R) of Nevada in blocking the bill, Congress's response would still be deadlocked. Historically Congress's power has been hampered by its own processes and the political realities of forging majority coalitions. It's often very difficult to pass bills through both chambers. It's particularly challenging to find majorities to challenge unilateral executive actions that fall within the previously accepted scope of executive authority. It's nearly impossible to find a supermajority to do that. Without a Watergate-like scandal, where illegal actions clearly occurred, Congress rarely has the ability to tame America's 80-year tradition of expansive executives. The ambiguity of Article II means that presidential power is open to interpretation, which is another way of saying that presidents' unilateral power is mostly anything that Congress has not expressly prohibited. Given the inherent difficulties of lawmaking and the supermajority processes that have always existed in Congress, historically those prohibitions have been scarce. As Jon Bernstein points out, every modern president overreaches at some point. With a hamstrung legislative branch, that's likely to continue.

Self-Restraint CPs – HJPV

Executive Self-Restraint Mechanism

1nc

Text: the President of the United States should reduce [object of the plan].

The counterplan solves the case while preserving executive flexibility

Metzger 15

[Gillian, Professor of Law, Columbia Law School, April 2015, "ARTICLE: The Constitutional Duty To Supervise", Yale Law Review, LexisNexis, 124 Yale L.J. 1836] Schloss

Supervision and oversight are similarly pivotal when it comes to legal accountability. While courts play a central role in enforcing legal constraints on government, a variety of factors can limit the effectiveness and availability of such judicial review. 252 **Internal supervision is free of many of these obstacles, and thus plays a critical role in guaranteeing administrative adherence to governing legal requirements**.253 Reliance on internal supervision and oversight to achieve legal accountability, instead of just on courts, also minimizes the risk that enforcing legal constraints will undermine managerial control and accountability. 254 Despite its resistance to according supervision much constitutional significance, the Court has noted the role bureaucratic supervision plays in ensuring legal adherence. Thus, for example, it has emphasized the availability of internal administrative complaint mechanisms that could uncover and address constitutional violations in refusing to imply a Bivens right to challenge such violations in court.255 A number of scholars have gone further, underscoring the importance of internal administrative constraints in ensuring that delegated power is not wielded in an arbitrary fashion.256 And while the scope of delegated federal power is much vaster today, similar concerns with ensuring that government officials adhere to governing legal requirements have fueled bureaucratic supervision since the birth of the nation.257 Indeed, the Take Care Clause formally links supervision and legal accountability by tying supervision to faithful execution of the laws.258¶ Put starkly, bureaucratic and managerial accountability in the form of internal executive branch supervision is an essential precondition for political and legal accountability, given the phenomenon of delegation. Scholars debate whether the broad delegations that characterize modern administrative government can ever accord with the Constitution's grant of legislative power to Congress and separation of power principles. That debate will no doubt continue, but has been eclipsed by reality; modern delegation is here to stay.259 The more pressing question today is how best to integrate the inevitable phenomenon of delegation into the Constitution's structure. The answer, to my mind, is recognizing that delegation creates a constitutional imperative to ensure that the powers transferred are used in accordance with constitutional accountability principles. In short, delegation creates a duty to supervise delegated power

2nc Solvency

Executive self-restraint's best – anything else is overly restrictive, which ruins solvency in the long run

Christenson and Kriner 15 [Dino and Douglas, Assistant Professor of Political Science at Boston University, Associate Professor of Political Science at Boston University, EXECUTIVE DISCRETION AND THE ADMINISTRATIVE STATE: POLITICAL CONSTRAINTS ON UNILATERAL EXECUTIVE ACTION, http://law.case.edu/journals/LawReview/Documents/Hill%20Introduction.pdf] Schloss

Zachary Price, Associate Professor at University of California Hastings College of Law, places his focus on informal political constraints on presidential inaction. In particular, Professor Price asks how strong the norm of executive enforcement duty should be. He concludes that it should be relatively robust, since citizens of all stripes have an interest in ensuring that legislative achievements retain lasting force beyond the administration in which they are enacted. In addition, Professor Price contends that transparency, centralization, and definiteness—though arguably desirable in most administrative contexts—are **detrimental** to ensuring fidelity to statutory commands in the agency enforcement context. Thus, both Price's and White's contributions show that the nation's **long-term interest is not always well-served when short-term concerns** motivate the political branches to take actions affecting the distribution of power between them.

Only the executive acting alone solves

Moe and Howell 99 [Terry and William, a professor of political science at Stanford University and a senior fellow at the Hoover Institution, Howell is a graduate student in political science at Stanford University. He is currently writing a dissertation on the politics of unilateral action, Unilateral Action and Presidential Power: A Theory, http://onlinelibrary.wiley.com/doi/10.1111/1741-5705.00070/epdf] Schloss

If the president had the power to act unilaterally in this same situation, as depicted in Figure 1B, **things would turn out much more favorably**. He would not have to accept **Congress's shift in policy** from SQ2 to SQ2* and could take action on his own to move the status quo from SQ2* to V—using his veto to prevent any movement away from this point. V would be the equilibrium outcome (as it was in the earlier case of unilateral action). And although the president would still lose some ground as policy moves from the original SQ2 to V, unilateral action allows him to keep policy much closer to his ideal point—and farther from Congress's ideal point—than would otherwise have been the case. He clearly has **more power over outcomes** when he can act unilaterally.

The president has a unique role in national security

McGinnis 93 [John O., Assistant Professor, Benjamin N. Cardozo School of Law. From 1985-1987 1 was an attorney-adviser and from 1987-1991 Deputy Assistant Attorney General in the Office of Legal Counsel, Department of Justice. I thus participated in drafting some of the materials discussed in this

article, CONSTITUTIONAL REVIEW BY THE EXECUTIVE IN FOREIGN AFFAIRS AND WAR POWERS: A CONSEQUENCE OF RATIONAL CHOICE IN THE SEPARATION OF POWERS, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp] Schloss

The output under the model depends on the relative interests and aptitudes of the institutions that will bargain with and accommodate each other. 8 These are partly defined by the textual provisions whose core is less likely to be disputed. 9 The president's power as commander-in-chief is relevant to his interests both because this gives him some power of initiative of action in war powers and because it creates the expectation that the president is immediately responsible for protecting the security of the nation and the safety of its citizens.' Given these expectations, the president will want to acquire the rights of governance over areas, such as diplomacy, which imminently affect the exercise of this responsibility. Additionally, the structure of the presidency as a single office possessed by one person also gives the executive unique capabilities of acting with "secrecy and dispatch,, 61 giving him a **comparative advantage in carrying out these functions**. Thus, because of the president's constitutional powers and because of expectations that have developed about his responsibilities in the area of foreign affairs and war powers, the president generally places **a very high value on control of the rights of governance in foreign affairs**.62

Congress and the Courts fail – internal checks are key
Metzger 09

Gillian E. Metzger, is a United States Constitutional Law scholar and a professor of law at Columbia University, "THE INTERDEPENDENT RELATIONSHIP BETWEEN INTERNAL AND EXTERNAL SEPARATION OF POWERS," October 7, 2009, Columbia Law School Public Law and Legal Theory Working Paper Group, Google Scholar/NV

Equally important, the relationship between internal and external separation of powers is not unidimensional: Internal mechanisms can, in turn, play a pivotal role in enabling external checks on the executive branch to function. Congress needs information in order to conduct meaningful oversight of the executive branch. Internal agency experts and watchdogs are 94 important sources of that information, whether in the guise of formal reports, studies, and testimony or more informal conversations and leaks. Procedural constraints within agencies 95 can serve a similar function of ensuring that Congress is aware of agency activities. Internal 96 mechanisms also reinforce Congress's role by creating bodies of personnel within the executive branch who are committed to enforcing the governing statutory regime, which sets out the parameters of their authority and regulatory responsibilities, and on whose expertise functioning of those regimes often depends. Courts are equally dependent on information and evidence 97 compiled by agency personnel to adequately review agency actions, and have invoked this dependence in justifying the requirement that agencies disclose underlying information and offer detailed explanations of their decisions. Moreover, despite regularly intoning that "it [is] not 98 the function of the court to probe the mental processes of Secretar[ies] in reaching [their] conclusions," judicial review of agency actions often appear to turn on judges' perceptions of 99 the role politics played in agency officials' decisionmaking. Evidence that decisions were 100 made over the objections of career staff and agency professionals—sometimes indicated by inconsistency in an

agency's position from its previous stance—often triggers more rigorous review. A particularly striking suggestion of how internal checks can effect judicial review 101 came in the recent Boumediene litigation: Just a few months after refusing to grant certiorari in order to allow the CSRT process to proceed, the Court reversed course and granted review, apparently influenced in part by concerns expressed by military lawyers about how the tribunals were functioning.102

Internal checks are net-better than external ones
Katyal 06

Neal Kumar Katyal, professor of law at Georgetown University, "Internal Separation of Powers: Checking Today's Most Dangerous Branch From Within," May 5, 2006, The Yale Law Journal, Google Scholar/NV

Agency design can replicate some functional overlap of responsibilities amongst the branches. One of the classic divisions of power in the Constitution concerns war: While Congress declares it, the President is the Commander-inChief.25 That division is structurally inefficient, in the sense that it creates the possibility of dissension and rivalry, yet its inefficiency is the point.26 Today, the locus of academic concern centers on disputes between whether and to what extent the President and Congress should control agency decisionmaking. These discussions center along the President v. Agency axis. Instead, legal reform could focus on a lower rung: President v. (Agency1 + Agency2). Partially overlapping agency jurisdiction could create friction on issues before they are teed up to the President for decision. Otherwise, the President could easily surround himself with people of a similar worldview who lack expertise. Redundancy has a pejorative connotation–conjuring up images of inefficiency and waste. In private markets, attacks on redundancy became a dominant component of Taylorism (the early twentieth-century scientific management theory) and has motivated many recent agency consolidations.27 But there are a number of positive redundancies–starting with those in the Constitution itself, which creates two houses of Congress and divides functions between two political branches. And reliance on one agency is often risky, for "organizational systems of this sort are a form of administrative brinkmanship. They are extraordinary gambles. When one bulb blows, everything goes."28 As the common saying goes, "where you stand is a function of where you sit." By placing individuals in different organizational structures, different viewpoints emerge. Colin Powell as Secretary of State is a different entity than Colin Powell as head of the Joint Chiefs of Staff. And that point goes not simply for leaders but others within an agency as well.29 Bureaucratic overlap allows agencies to function more like laboratories–devising new solutions to new problems. That is one rationale for the division of antitrust authority between the Federal Trade Commission and Department of Justice.30 Moreover, to the extent particular agencies are captured by interest groups, overlapping bureaucratic entities can mitigate capture's effects.31 The notion of overlapping agency jurisdiction is not unlike the idea of a free market. We do not want one supplier of information to the President; a market better supplies clients than a monopolist. Without bureaucratic overlaps, agencies are not pushed to develop innovative ways of dealing with problems and may ossify.32 It is therefore surprising that market-oriented scholars resist conceptualizing the executive branch in this way. The story of the unitary executive has morphed into a myth of an executive that must have seamless control over all its components. But there is a counter-story to be told, one that emphasizes checks and balances within the Executive Branch, such as those resulting from the 1947 National Security Act. Just as bicameralism and two political branches produce better decisions, there is powerful evidence that presidents succeed because redundancy generates the information a President needs.33 Perhaps no analysis of a modern presidency so condemns the status quo as Richard Neustadt's comparison of FDR and Eisenhower. FDR succeeded because he guaranteed a flow of information to him, using his own contacts in agencies. He would call you in . . . and he'd ask you to get the story on some complicated business, and you'd come back after a couple of days of hard labor and present the juicy morsel you'd uncovered under a stone somewhere, and then you'd find out he knew all about it, along with something else you didn't know.34 FDR used bureaucratic overlaps to produce better policy and information: "His favorite technique was to keep grants of authority incomplete, jurisdictions

uncertain, charters overlapping."[35] Eisenhower, by contrast, imparted "more superficial symmetry and order to his flow of information . . . . Thereby, he became typically the last man in his office to know tangible details and the last to come to grips with acts of choice."[36]

Inspector General Mechanism

1nc

Text: The United States federal government should submit [the object of the plan] to Inspector General investigative review. The Inspector General of [the agency that oversees the plan] should report all relevant abuses in the area of domestic surveillance to the executive branch. The executive branch should fully and immediately implement the recommendations of the Inspector General.

Inspector generals can better scrutinize internal agencies and increases internal compliance.

Renan, 15 (Daphna; Alexander Fellow, New York University School of Law; formerly Attorney Advisor, Office of Legal Counsel, and Counsel, Office of the Deputy Attorney General; "POOLING POWERS"; March 2015; http://columbialawreview.org/wp-content/uploads/2015/03/Renan-Daphna.pdf) KW

Institutional strategies might not have the same drawbacks and, at a minimum, offer an additional course to pursue. We might ask how Congress can use institutions embedded inside the executive to make pooling more accountable. Congress, for instance, has tasked inspectors general inside individual agencies with preventing fraud and abuse.385 Because they are ensconced within the agencies, inspectors general can be more sensitive than courts or Congress to nuanced forms of legal evasion. And their formal and informal features of independence can help protect their ability to **scrutinize the conduct** of the agencies within which they are housed.386 Though inspectors general have not performed uniformly, they have had beneficial effects on **administrative compliance**.387 We might use this type of oversight structure but think about how to extend it into the interstices. **One possibility would be for Congress to task inspectors general with investigating when pooling exceeds an agency's legal mandate or poses a threat to civil rights and civil liberties**.388

2nc Solvency

Counterplan solves the whole case – IG review is *durable* and *thorough*

Brenner, 4 (Joel, NSA Inspector General 2002-2007, "Information Oversight: Practical Lessons from Foreign Intelligence", 9/30/4, http://www.heritage.org/research/lecture/information-oversight-practical-lessons-from-foreign-intelligence) KW

There are numerous additional layers of oversight within the executive branch itself. The Justice Department engages in broad oversight of NSA's policies through its Office of Intelligence Policy and Review, as does the President's Foreign Intelligence Advisory Board. The Assistant to the Secretary of Defense for Intelligence Oversight is further empowered to review activities as well as policies throughout the intelligence community. And the Inspector General of the Department of Defense is empowered to review any aspect of that Department, including the operations of the Defense Agencies, of which NSA is one. As a practical matter, however, NSA's Inspector General conducts the most **intense and effective** executive oversight of NSA's operations.21 In that capacity I have broad authority to audit, investigate, and inspect virtually any activity in the Agency, and I exercise that authority through a competent and experienced staff of more than 60 professionals and support personnel. Our collective **experience** in conducting oversight of a large, far-flung, and technically sophisticated intelligence agency may have something to teach legislators and policy-makers contemplating an expanded role for domestic antiterrorism activities. I will not enter here into the debate over the wisdom or necessity of such activities; but to the extent that they may be done, they should be done well--and scrupulously according to law.

Inspector General review solves the aff and ensures accountability

Goldsmith, 12 (Jack, Professor of Law at Harvard University, former assistant Attorney General to the Office of Legal Counsel under the Bush Administration; March 12, 2012; "Power and Constraint: The Accountable Presidency After 9/11"; W. W. Norton & Company; 1 edition)//JPM

The point for now is to recognize how important the inspector general has become as a fount of accountability inside the presidency's secretive national security bureaucracy. The leaders of the congressional intelligence committees lacked the political will to thoroughly examine the CIA program, as well as the time and resources of Helgerson's team. Moreover, in the early years after 9/11, separation-of-powers objections by the executive branch—classified information, executive privilege, attorney-client privilege, and the like—would have prevented them from anything close to Helgerson's full access to CIA personnel and documents as well as to Department of Justice and CIA legal memoranda. But by giving Helgerson a perch inside the CIA and comprehensive power to investigate, to collect information, to analyze it, and to send it to the Hill, Congress circumvents these hurdles and gets deep inside the presidency. Congress in effect delegates its initial oversight function to the inspector general, who can quickly gather a much more complete understanding of executive branch activity than Congress itself could have.¶ What Helgerson did inside the CIA is emblematic of the role that inspectors general across the government have played since 9/11. **Glenn Fine, the inspector general** of the Department of Justice, was just as forceful. On his own initiative he **launched critical investigations into the FBI**'s roundup of illegal aliens in the panicked weeks and months after 9/11 **and** into its involvement with Defense Department and **CIA**

interrogation practices in Guantanamo Bay, Afghanistan, and Iraq.76 Like Helgerson, Fine saw his office "as an independent entity that reports to both the Attorney General and Congress."77 But in truth, **Fine**, like Helgerson, **acted more as an agent of Congress than of the President.** In the post-9/11 period, **Congress increasingly asked inspectors general to do national security investigations within the executive branch that Congress never could have done as quickly or effectively.** Helgerson's investigation of responsibility for 9/11 was an example of this, as were Fine's reform-minded reports on FBI terrorist watch lists and the FBI's methods of obtaining personal and business records.78 Since 2001, pursuant to a requirement of the PATRIOT Act, **Fine** also r**eviewed allegations of civil liberties abuses and** dutifully **reported them to Congress** (and the public) twice each year, **which then acted on them**.79 Congress also charged Fine and a team of inspectors general to do a "comprehensive report" of the controversial Terrorist Surveillance Program of warrantless wiretapping.80 Congress continued this pattern in a 2010 intelligence of the Director of National Intelligence and gave inspectors eral around the national security world many new tanks,"¶ In 1978, Jimmy Carter's Justice Department concluded that the placement of powerful independent inspectors general inside the presidency "violates the doctrine of separation of powers.'* Two decades later, and just three years before 9/11, a bipartisan group of distinguished experts described inspectors general at "congressional ferrets of dubious constitutionality."*3 Today, constitutional doubts about these congressional ferrets are largely gone. **Inspectors general have grown in stature and power and have become an established, legitimate, and consequential mechanism of executive branch accountability, even in wartime**. Despite presidential resistance, Congress has expanded their jurisdiction to every corner of the national security bureaucracy except the White House itself. It has steadily increased their size, power, and responsibilities over the years. And it consistently gives them political support in their clashes with the executive branch.¶ Many executive branch officials dislike or distrust inspectors general, sometimes with good reason. Inspectors general are not angels. Like all bureaucrats, they have biases, their competence varies, and they make mistakes. There is a genuine question, which I examine later, about who guards these powerful guardians. But on the whole, **executive branch anxiety about inspectors general is a testament to their independence and effectiveness**. What critics fail to appreciate is **how credible independent inspectors general inside the executive branch can enhance executive power.**¶The 2008 amendments to the Foreign Intelligence Surveillance Act are a good example. Beginning in 2004, lawyers inside the government, and then leaks to the press, and then a secret surveillance court, pushed back against excesses in President Bush's controversial Terrorist Surveillance Program. By 2008, President Bush needed new legislation to keep the program going, and Congress obliged with new surveillance powers that were viewed by some as a capitulation to presidential unilateralism. "A weak Democratic Congress passed a law giving the Bush administration virtually unchecked power to intercept Americans* international email messages and telephone calls," charged ACLU Executive Director Anthony Romero." But this characterization is wrong. The Democratic Congress was convinced that the pre-9/11 surveillance regime had been overtaken by technological developments and needed to be more flexible to redress modern terrorism and related foreign intelligence collection challenges. The consensus was that the executive branch should be given power to surveil persons reasonably believed to be outside the United States as long as it took careful steps to redact or eliminate conversations of innocent Americans.¶The problems were that Congress did not trust the executive branch, especially the

Bush administration, to use these new powers faithfully; and it did not trust itself to undertake the hard work of oversight needed to ensure compliance with its mandate. A major part of the solution to these problems was to empower inspectors general around the national security bureaucracy to regularly analyze the procedures used for targeting persons outside the United States and for redacting U.S.-person conversations, and to regularly report its results to Congress, which can then decide—after the hard information-gathering work has been done, inside the executive branch—if the law is being implemented as it wishes.86 In explaining his vote for the law, the then senator and presidential candidate Barack Obama specifically referenced the inspector general guarantees that he believed "ensures that there will be accountability going forward."87 (The new law also imposed other credible constraints, including advance review by a court of the legality of the procedures, and scores of legal restrictions on the executive branch that are enforced by "a bevy of lawyers crawling up their asses all the time," as one senior Department of Justice official said.)88 The executive branch likely would not have received the modernized surveillance powers that are so crucial in the fight against hard-to-find terrorists if not for the existence of a credible inspector general that Congress could trust to monitor and enforce restrictions on presidential discretion in secret. In these and other What John Helgerson uncovered and put in his report comprised the foundation of many subsequent government-wide investigations of the CIA detention and interrogation program, some of which are still going on today. No CIA program—including the ones that underlay the Iran-Contra scandal and the many mitigated during the Church and the Pike Committee hearings has ever undergone so much extended or critical scrutiny. In tjw process both the CIA and the accountability system governing changed fundamentally. ¶ Helgerson followed up the initial review with more focused I investigations of the detention program and the CIA's rendition program as well.89 He eventually referred twenty or so cases for criminal investigation by career Justice Department prosecutors.90 One of these cases—Helgerson called it the most severe—resulted in a prosecution: CIA contractor David Passaro was convicted of assaulting Abdul Wali, who died in an Afghanistan prison in the summer of 2003.91 Some saw a whitewash in the refusal to prosecute others in 2003, but the truth is more benign. "The fact that we do a crime report does not necessarily mean that we believe it should be prosecuted," Helgerson explained.92 Congress required him to tell the Justice Department about "any information, allegation, or complaint" relating to a possible violation of federal criminal law, regardless of whether he thinks an actual crime was committed.93 Prosecutors, by contrast, must convince a jury of a crime beyond a reasonable doubt. The career prosecutors who first examined the inspector general referrals concluded that they lacked sufficient evidence of criminal conduct, criminal intent, or the subject's involvement to bring charges.94 A few cases were close calls, and would later be reopened. But after circling the globe to examine witnesses and evidence, the career prosecutors in 2004 concluded that they could not "probably obtain and sustain a conviction as justice Department regulations require before bringing charges.95 "The professionals at DOJ looked with considerable care at the various serious cases" and "spent countless hours in our work spaces/5 Helgerson later said, satisfied with their decisions.¶ This was not nearly the end of the matter. After the Justice Department review came scrutiny before the CIA "Accountability Boards-" An Accountability Board is an ad hoc group of CIA officials convened by the CIA Director to assess whether CIA officials failed to act "in a professional and satisfactory manner," and if so, whether they should be subject to disciplinary action ranging from

a reprimand to termination.97 Time before a CIA Accountability Board is a mark of dishonor that, during the review (which can take a long time), puts one's career on hold. Some **CIA officials involved in detention and interrogation quit the Agency rather than face an Accountability Board**.¶

IG review causes internal reform, even if the findings remain confidential

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

In addition, the CIA IG interrogations review suggests that the information from IG investigations **informed decisionmaking within the executive branch**, even in the absence of public transparency. Although the CIA IG report was publicly blocked for years, at the time of its release within the executive branch it revealed critical information about actual CIA interrogation practices, apparently with some impact. For instance, the report has been credited with influencing OLC head Goldsmith to withdraw an OLC memo approving extreme interrogations in June 2004211 and possibly contributing to the decision to end waterboarding.212 At the time the report was first issued internally—before the release of the Abu Ghraib photos—it supplied one of the earliest graphic depictions of extreme interrogations. In addition, because the CIA National Clandestine Service later destroyed ninety-two videotapes of detainee interrogations that the IG had reviewed,213 the IG report's description of those interrogations, including the repeated use of waterboarding, remains an **essential source** on those interrogations.

Identifying rights violations and wrongful conduct IG reviews solve better than courts – can critique actions where there aren't laws.

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

In several cases, IG reviews concluded that executive officials had **violated the law** or, even in the absence of a legal violation, had **engaged in wrongdoing**. **Like judicial findings**, IGs' declarations of government wrongdoing had expressive significance, perhaps drawing even **greater legitimacy** from an expectation that executive institutions would not lightly criticize executive conduct. The DOJ IG reports on September 11 detainees and NSLs, and the CIA IG report on harsh interrogations, provided powerful statements of the wrongfulness of government actions.¶ IG investigations sometimes proceeded where the underlying rights concerns **eluded judicial review**. The DHS IG investigated Arar's rendition where separation of powers and state secrets concerns ultimately led courts to decline review of his case and others challenging renditions.231 The DOJ IG NSL reviews exposed noncompliance with the law where courts could not have intervened, for lack of a private plaintiff with the knowledge, incentive, and standing to mount a legal challenge.232 Even where courts could have intervened, IGs had the **institutional advantage** of being able to assess compliance against a broad range of legal authorities, including agency rules and internal policies, which did not create judicially enforceable rights.¶ Furthermore, IGs sometimes showed a willingness to hold the executive accountable even in the "**gaps of the law**." **Particularly in the**

national security context, the lack of judicial review can result in substantive underdevelopment of the law. Cornelia Pillard has criticized the OLC and Solicitor General's office for taking advantage of this non-enforcement, arguing that where courts had not prohibited certain executive conduct, these institutions simply concluded that no constitutional problem existed.233¶ By contrast, IGs in several cases **critiqued government action** even where no specific legal provision applied or where interpretations of the law were strongly contested. For instance, in the DOJ IG September 11 detainees review, the IG criticized the INS's protracted service of immigration charging documents on detainees, which impeded their ability to contest the charges or apply for bond, even though no regulation or policy specified when the INS should serve those documents.234 Similarly, the IG strongly criticized prolonged detentions even though it noted that the lawfulness of detention past a statutory ninety-day removal period had yet to be adjudicated.235 Ultimately, the Second Circuit in Turkmen **sidestepped** the merits of that question: the court concluded that government defendants were entitled to qualified immunity and chose not to reach the underlying constitutional issue.236 In view of judicial disinclination to resolve the matter, the IG's sharp critique of the prolonged detention of September 11 detainees remains the most authoritative "official" judgment that the government's actions were wrong.¶ In fact, IGs sometimes **went further** in actually challenging the legal judgments of others within the executive branch. For example, in its NSL reviews, the DOJ IG rejected FBI counsel's after-the-fact legal justifications for the use of exigent letters.237 The FBI General Counsel argued that a provision in the Electronic Communications Privacy Act permitting voluntary disclosure of records by telecommunications companies in emergencies could justify the use of exigent letters.238 But the IG pronounced that justification unconvincing because the exigent letters did not frame their requests as voluntary, because the department issuing exigent letters denied relying upon the provision, and because the FBI did not recite the factual predication required to invoke the cited provision.239¶ Even more striking, in its 2010 report on exigent letters, the DOJ IG warned against a new legal argument that the FBI asserted would justify future voluntary disclosure of records by communications providers.240 The statutory provision on which the FBI based this new argument was redacted in the IG report, although it appears to relate to the voluntary disclosure of international communications.241 The IG cautioned that invocation of the new legal authority created a "**significant gap** in FBI accountability and oversight," and that Con-gress and the Department of Justice should consider controlling the exercise of that authority in light of recent abuses.242 Thus, moving beyond an assessment of how past agency practices complied with the law, **the IG did what courts are rarely in a position to do**—warn against a prospective legal justification that would bypass ordinary legal requirements.¶ Moreover, on several occasions, IGs criticized, on normative grounds, practices **specifically declared lawful** by the OLC, the executive branch's "chief legal adviser" whose opinions are **binding** on requesting agencies.243 In the NSL review, the DOJ IG warned against the FBI's new argument for voluntary disclosure even though the OLC had at least partly approved the FBI's legal interpretation of the relevant provision.244 Before the release of the September 11 detainees report, the OLC concluded that it was not unlawful to hold aliens for investigative purposes past a statutory 90-day removal period,245 but the IG still censured INS officials for not raising legal concerns over the practice as promptly and strongly as they should have.246

IG investigations cause reform – empirical evidence

Apaza, 11 (Dr Carmen R. Apaza, Assistant Professor, John Jay College of Criminal Justice, City University of New York. "Integrity and Accountability in Government : Homeland Security and the Inspector General". 2011) KW

These are **successful resolutions of issues arising from oIg investigations**, audits, inspections, and evaluations through legal or legal-related action other than criminal prosecution. they include: (1) civil judgments or forfeitures in favor of the united States in federal, state, local, or foreign government legal systems; (2) settlements negotiated by a governmental authority prior to or following filing a formal civil complaint; and (3) settlements or agreements in cases governed by the Program Fraud Civil Remedies Act or other agency-specific civil litigation authority (PcIe and ecIe 2004: 35). ¶ during Fy 2007, the oIgs produced 1,277 successful civil actions, an increase of nearly 35 percent above the Fy 2006 total of 947. cumulatively, during Fys 2003 through 2007, the oIgs were responsible for 4,022 successful civil actions. ¶ contrasting the number of civil actions with the number of criminal prosecutions, civil actions remain short for Fys 2003 through 2007. the main reason for this is related to the crucial mission of the dHS. the dHS mission includes protection of our borders from criminal activities such as illegal immigration, contraband, and smuggling. "We need to protect our nation from illegal activities that are determined by law as crime," said deputy dHS Inspector general taylor in an interview on July 22, 2009. those illegal activities mostly involve corruption committed by DHS officials (e.g., CBP officials). "For the nature of its mission, CBP is vulnerable to corruption. In most instances we found that CBP officials were involved with smugglers and drug traffickers," said Carlton Mann, assistant inspector general for inspections, in an interview on July 22, 2009. In the same these are successful resolutions of issues arising from oIg investigations, audits, inspections, and evaluations through legal or legal-related action other than criminal prosecution. they include: (1) civil judgments or forfeitures in favor of the united States in federal, state, local, or foreign government legal systems; (2) settlements negotiated by a governmental authority prior to or following filing a formal civil complaint; and (3) settlements or agreements in cases governed by the Program Fraud Civil Remedies Act or other agency-specific civil litigation authority (PcIe and ecIe 2004: 35). during Fy 2007, the oIgs produced 1,277 successful civil actions, an increase of nearly 35 percent above the Fy 2006 total of 947. cumulatively, during Fys 2003 through 2007, the oIgs were responsible for 4,022 successful civil actions. contrasting the number of civil actions with the number of criminal prosecutions, civil actions remain short for Fys 2003 through 2007. the main reason for this is related to the crucial mission of the dHS. the dHS mission includes protection of our borders from criminal activities such as illegal immigration, contraband, and smuggling. "**We need to protect our nation from illegal activities that are determined by law as crime**," said deputy dHS Inspector general taylor in an interview on July 22, 2009.

Increased inspector general enforcement solves – internal powers to investigate any agency activity and Congressional reporting solves.

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

*IG is the Inspector General

Among **internal executive structures** that might protect civil liberties or constrain executive power, IGs stand out in two ways. First, despite their location within the executive branch, IGs enjoy several statutory protections from agency interference. The Inspector General Act provides for presidential appointment and Senate confirmation of IGs "without regard to political affiliation and solely on the basis of integrity and demonstrated ability."31 While the President can remove an IG without cause, the Act requires that the President communicate to Congress the reasons for any removal no later than thirty days before the removal.32 Even more significantly,

IGs have a dual-reporting role that requires them to serve their agencies as well as Congress. They are required to keep both their agencies and Congress "fully and currently informed," through submitting detailed semiannual reports to Congress as well as notifying Congress seven days after reporting any particularly serious problems to their agencies.33 Among other extensive requirements, the semiannual reports must identify **any significant IG recommendation that the agency has not fully ad-dressed**,34 facilitating congressional monitoring of agency follow-through. These detailed reporting requirements distinguish IGs from institutions such as the Justice Department OLC or Office of Professional Responsibility, which report only to the Attorney General, and help Congress overcome information problems in supervising agencies.35

Other recently adopted features further protect IG independence: in budget submissions to Congress, the President must now include a statement from an IG who concludes that the budget request for the office would substantially inhibit IG performance, and the Act guarantees independent counsel for IGs.36 Second, IGs enjoy broad investigative powers. The Act authorizes IGs to undertake and carry out audits and investigations without interference from agency leadership and to access documents within and beyond their agencies.37 By law, IGs can access all records within their host agency, request information from other federal agencies, which are required to furnish it, and subpoena documents (but not testimony) outside federal agencies.38 IGs must generally **guarantee confidentiality** to agency whistleblowers, and agencies are prohibited from retaliating against employees who provide information in good faith.39 Despite granting IGs these broad powers, Congress accommodated national security agencies' concerns over information disclosure by permitting certain agencies to block IG investigations in sensitive circumstances. Thus, while agency heads ordinarily may not interfere with IG reviews,40 the heads of the Departments of Defense, Justice, and Homeland Security may block investigations or reports involving sensitive information on intelligence, counterterrorism, undercover operations, or any other matters for which information disclosure would seriously threaten national security.41 Where an agency head invokes such a statutory exception to impede an IG investigation, the Inspector General Act requires a written explanation to the IG and congressional oversight committees within a set time period.42 **Slightly broader escape clauses** apply to the CIA IG and other IGs for the intelligence community, though they preserve a congressional reporting requirement.43

Agencies appear to have **rarely invoked these escape clauses**.44 The Department of Homeland Security has never invoked its authority to impede an investigation,45 and the Department of Justice has done so only once.46 While the congressional reporting requirement may deter agencies from using this authority,47 the latent threat of obstruction may also influence IGs to stay within perceived limits. National security IGs thus face an additional constraint beyond the threat of presidential removal common to all IGs.

IGs best for addressing issues surrounding counter terrorism policies.

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

IGs now play a **significant role** in addressing the impact of counterterrorism policies on individual rights, despite their traditional association with detecting fraud, waste, and abuse. In the post-9/11 period, Congress explicitly required two IGs, those at the Departments of Justice and Homeland Security, to monitor complaints of individual rights violations. The Patriot Act, passed six weeks after the September 11 attacks, required the DOJ IG to designate an official to "review information and receive complaints alleging abuses of civil rights and civil liberties" by department officials and to report twice a year to Congress on its activities.[48] Notably, this provision did not apply solely to complaints related to the Patriot Act, but encompassed civil liberties or civil rights complaints against any department official.[49] Congress also made explicit a civil rights role for the new DHS IG, requiring the IG to designate a senior official to investigate civil rights allegations and to work with the DHS Officer for Civil Rights and Civil Liberties on policy recommendations.[50]¶ On other occasions, Congress mandated that IGs conduct special investigations into counterterrorism programs that raised civil liberties concerns. When Congress reauthorized expiring provisions of the Patriot Act in 2006, it directed the DOJ IG to review several controversial investigative tools used by the FBI.[51] In 2008, Congress directed multiple IGs to review the warrantless surveillance program initiated by President Bush after the September 11 attacks and to report on the impact of expanded surveillance authorities on U.S. persons.[52] The new statutory mandates have **raised the profile** of IGs' rightsmonitoring roles. The DOJ IG has been particularly visible in investigating national security practices implicating individual rights. In response to the Patriot Act mandate, the IG established a new branch to investigate civil rights complaints, coordinated with the Justice Department Civil Rights Division on post- 9/11 backlash complaints, and publicized its new role.[53] From September 2001 through September 2011, the IG completed approximately twenty-one special reviews and audits that it deemed related to its Patriot Act responsibilities.[54] These reviews covered such topics as the Department's treatment of September 11 detainees, use of investigative tools, investigations of domestic advocacy groups, terrorist watch list processes, and participation in detainee abuse abroad. Importantly, these reviews addressed systemic civil rights concerns raised by Congress, the media, or public interest groups, not just fact-specific individual complaints.[55]

IG oversight solves – only internal check that actually works

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Not only do IGs benefit from statutory independence and significant information-gathering powers, but they also benefit from their existing stature, which newer institutions created specifically for rights oversight still struggle to acquire. For instance, while several national

security agencies have appointed civil liberties officers to review counterterrorism policies, responding to a congressional mandate, few have the budget, staff, or visibility of IGs, with the possible exception of the DHS Office for Civil Rights and Civil Liberties.305 Even that office enjoys less stature and information-gathering authority than the agency's IG: the head of the Office for Civil Rights and Civil Liberties is not subject to Senate confirmation306 and lacks the power to subpoena documents.307 Meanwhile, the Privacy and Civil Liberties Oversight Board, created in 2004 to review government terrorism policies, first lacked independence from the White House and then lay dormant for years, without board members, an agenda, meetings, or staff.308 It remains to be seen whether the recently reconstituted board will be successful. Given the scope and pace with which the executive has acquired and employed new national security powers, **no single internal institution is sufficient** to provide oversight, but the independence, powers, stature, and past successes of IGs are a good reason to support, and indeed strengthen, their rights oversight role.

Solves: CIA

CIA IG solves – investigation into human rights concerns and racial profiling.

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

The CIA IG has also investigated human rights concerns presented by its programs, particularly with respect to detainee interrogations and treatment. Most prominently, the IG reviewed the CIA's use of "enhanced" interrogation techniques against CIA detainees in the two-year period following the Septem-ber 11 attacks.56 The IG also reportedly investigated the agency's detention and interrogations of suspects in Iraq, the rendition of suspects to other governments, the registration of "ghost" detainees, and the deaths of several detainees in CIA custody, although reports from these investigations have not been made public.57 The IG reportedly referred twenty-four detainee abuse cases to the Justice Department for possible prosecution.58 Most recently, the CIA IG reviewed the agency's role in building a New York Police Department intelligence unit that mapped and monitored Muslim communities.59

Solves: DHS

IG oversight works – DHS proves that department management accepts changes

Apaza, 11 (Dr Carmen R. Apaza, Assistant Professor, John Jay College of Criminal Justice, City University of New York. "Integrity and Accountability in Government : Homeland Security and the Inspector General". 2011) KW

By analyzing statistical highlights of the Office of the Inspector General (OIG) of DHS, this chapter tests the second and fifth case study propositions proposed in chapter 1. In contrast to the second case study proposition, which says few of the IGs' investigations result in a recommendation for management improvement, evidence from the dHS oIg Semiannual reports to congress and dHS Performance report fails to support this proposition. data show that the dHS oIg has not only issued a significant number of recommendations but it has also been **receiving great concurrence and acceptance** from dHS management. moreover, data analyzed in this chapter support the fifth case study proposition that says IGs achieve increased savings, indictments, and convictions, and their interventions, findings, and recommendations influence agency management.

DHS IGs solve

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Other IGs, including those at the Department of Homeland Security, the Department of Defense (DOD), and the National Security Agency (NSA), have on occasion reviewed individual rights concerns arising out of their agencies' national security programs, although the extent of their work is difficult to assess, in part because many reports remain classified. The DOD IG reported on department-ordered investigations of detainee abuse,60 allegations that the military used mind-altering drugs on detainees,61 and intelligence collection activities.62 The DHS IG investigated the rendition of Maher Arar, a Canadian citizen, to Syria, and the effectiveness of a redress process for travelers facing difdifficulties from terrorist watch list screening.63 The NSA IG, a nonpresidentially appointed IG, is said to have monitored the President's post- 9/11 NSA surveillance program while it was secret, though little is known bout what such monitoring entailed.64 The NSA IG and others conducted a joint review of the program in 2009.65 It is not publicly known whether the first IG for the Intelligence Community, confirmed in late 2011, has issued any reports pertaining to individual rights.

Solves: Insider Threats

Solve for whistleblowers

Apaza, 11 (Dr Carmen R. Apaza, Assistant Professor, John Jay College of Criminal Justice, City University of New York. "Integrity and Accountability in Government : Homeland Security and the Inspector General". 2011) KW

The Inspector General Act of 1978 included provisions that specifically authorize an Ig to **receive and investigate complaints from an employee of the agency** concerning any mismanagement, violations of law or rules, or "gross waste of funds, abuse of authority or a substantial and specific danger to the public health and safety." (1978 IG Act, Sec. 7(a).) The bill specifically prohibits any action against the employee "as a reprisal for making a complaint or disclosing information to an Inspector general." (1978 Ig act, Sec. 7 (a)-(c)) the 2008 Ig reform act added further provisions **to aid whistleblowers** and other complainants in bringing information to the attention of oIgs, by requiring "establishing and maintaining a direct link on the homepage of the oIg's website for reporting waste, fraud, and abuse." (2008 Ig reform act, Sec. 13 (b)(2))

Solves: NSA

The NSA's current IG isn't independent – an independent IG is best suited to challenge unethical NSA practices

Snider and Bttaglia, 13 (Britt Snider was general counsel of the Senate Select Committee on Intelligence from 1987 to 1995 and inspector general of the CIA from 1998 to 2001. Charles Battaglia was a senior staff member and staff director of the Senate intelligence committee from 1985 to 1997. "National Security Agency needs an independent inspector general". 9/26/13. http://www.washingtonpost.com/pb/opinions/national-security-agency-needs-an-independent-inspector-general/2013/09/26/ae37d7fc-25f4-11e3-ad0d-b7c8d2a594b9_story.html) KW

Public confidence in the National Security Agency (NSA) and the efficacy of the oversight system in which it operates is at a low. Ultimately, the NSA needs the support of the public to succeed. It cannot accomplish its mission without the cooperation of the private sector and, like all government agencies, it depends on Congress for funding and legal authority. Without public consensus regarding limits on the NSA's activities, it is more likely that those activities will be challenged by Congress and in court.

Several institutional reforms have been suggested in an effort to boost public support for the agency's data-collection systems, including creating an advocate for the public within the framework of the Foreign Intelligence Surveillance Court and requiring public disclosure of its opinions. But one important option has yet to be proposed: creating an **independent inspector general's office at the NSA**, comparable to the office that was created within the CIA in 1989.

As staff members of the Senate Select Committee on Intelligence, we were deeply involved in writing the legislation that made independent the Central Intelligence Agency's inspector general. We saw how the law made a difference.

Not only was the inspector general's office viewed differently after the law was passed, but the office itself was different. It decided which of the CIA's activities would be investigated, inspected or audited without waiting for direction or approval from agency management. Employees of the IG's office no longer had to worry about the potential effect on their careers if their findings and conclusions were critical of the agency. They may not have always gotten everything right, but they were freer to call things as they saw them and did so, at times to the chagrin of CIA management.

Having an independent inspector general at the CIA produced other advantages for the oversight process: It gave the congressional intelligence committees a more reliable partner — an office that lawmakers could call upon to conduct investigations beyond their own capabilities — and they learned of problems they otherwise might not have come across.

The same dynamic is not possible at the NSA today because the agency's inspector general is **appointed by and works for the NSA director**. For all practical purposes, he is a member of the director's staff and does not report directly to the intelligence committees.

The inspector general of the CIA, by contrast, is **appointed by the president** and can be dismissed only by the president. That person reports to both the CIA director and the congressional

intelligence committees. Although the director may impose constraints on the inspector general's work, the committees must be advised of such constraints and the reasons for their imposition. This has rarely happened because, as a practical matter, the CIA director has not wanted to put himself in that position vis-à-vis the committees.

Some may point out that the NSA falls under the jurisdiction of the Defense Department's inspector general, whose office is independent. The NSA, of course, is one of numerous defense agencies, not all of which require an independent inspector general. But a **stronger, more independent inspector general is necessary**, given the NSA's **size, capabilities, mission** and, most important, **potential for violating the rights of Americans on a grand scale.**

In addition, the Defense Department inspector general's office lacks the personnel and expertise to oversee the highly technical, compartmentalized world in which the NSA operates. Although the Pentagon inspector general should retain the ability to undertake oversight reviews as may be appropriate — such as studying alleged violations of departmental regulations — the lion's share of the oversight work belongs with an inspector general within the agency.

An independent inspector general at the NSA with statutory authority would not guarantee that every violation of law or applicable procedure would be detected, investigated or reported to appropriate authorities. But it would improve the chances that this would happen, which should lead to more effective and timely oversight.

Far from being a threat to the agency's sensitive yet necessary operations, an independent inspector general at the NSA would boost public support for that work.

Solves: Racial Profiling

IG solves for racial profiling – DOJ IG empirically stopped FBI and DOG overreach

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Soon after the September 11 attacks, the Department of Justice began detaining hundreds of aliens for suspected terrorist ties, mostly from Muslim countries, and ultimately held more than 750 of them on immigration violations.76 In 2003, DOJ IG Glenn Fine issued two highly critical reports on the treatment of September 11 detainees: the first a 198-page report covering the decisionmaking behind the prolonged detentions and the second addressing harsh conditions and physical abuse at the Metropolitan Detention Center in Brooklyn.77 While recognizing the "monumental challenges" facing the Department after the September 11 attacks, the IG concluded that the "chaotic situation" did not excuse actions that resulted in "significant" mistreatment of the detainees.78

The reports concluded that the FBI had indiscriminately and haphazardly labeled aliens as being of interest to the terrorism investigation and then lagged in clearing them of terrorist ties, resulting in lengthy detentions.79 Prison officials subjected detainees at the Metropolitan Detention Center to particularly harsh conditions of confinement, including an initial total communications blackout, "lockdown" for twenty-three hours a day, and physical abuse by federal prison guards.80 Most notoriously, prison guards slammed detainees into a soon-bloodied T-shirt taped to a wall that pictured the American flag and the motto, "These colors don't run."81

The **scope, access, and rigor** of the IG investigation are striking. Justified as an exercise of the IG's responsibilities under the Patriot Act and IG Act,82 the investigation went beyond individual allegations of detainee abuse, squarely targeting the Justice Department's "hold until cleared" detention policy that led to lengthy confinement.83 Released with almost no redactions,84 the reports also provided an exceptionally detailed accounting of the government's post-9/11 detention decisions. In addition, the IG surmounted the one significant attempt to obstruct the investigation noted in the reports: although Metropolitan Detention Center officials repeatedly impeded IG attempts to obtain videotapes of detainees, IG investigators discovered more than 300 videotapes in a prison storage room, many of which revealed prison staff engaging in "the very conduct they specifically denied in their interviews."85

Solves: Transparency

IGs solve for transparency – increase oversight and keep Congress informed

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Increasing transparency. Perhaps the least controversial function of rights oversight is to provide enough information about national security conduct to enable external assessment.197 Excessive secrecy allows abuses to go undetected and stymies assessment of whether the security benefits of a program justify burdens on individual rights. **Congress**, the public, **and agencies themselves** require information on the scope, effectiveness, and rights implications of national security programs. Moreover, the IG Act squarely mandates a transparency function for IGs**, requiring them** to keep agencies and Congress fully informed about serious problems in agencies and ordering agencies, in general, to make semiannual IG reports public.198

IG reviews increase transparency about programs

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Most of the IG reviews studied here disclosed significant new information about national security programs, and several **created remarkable transparency** on issues that were previously highly secret. IG reviews frequently brought to light information on civil liberties violations that had not surfaced through litigation or alternative forms of congressional oversight.

Most notably, the DOJ IG's reviews of NSLs disclosed both the unprecedented extent to which the FBI relied on NSLs—information that public interest organizations had unsuccessfully sued to obtain205 and that the FBI had "significantly understated" to Congress206—and the fact that the FBI had used exigent letters to bypass legal processes altogether. Legal and practical barriers made it almost impossible for such information to surface through other channels: a statutory "gag order" forbade NSL recipients from revealing the records requests, phone companies complying with exigent letters had no incentive to expose their circumvention of privacy laws, and targets of either practice had no way of knowing that the government had sought their records. Moreover, the law only required the FBI to provide limited, classified reports to Congress on NSLs, and until 2006 did not require any public disclosure.207 Without identifiable victims of abuse, the information that might reveal abuses of authority resided almost exclusively within the executive branch.

IGs made use of their auditing expertise and broad investigative powers to access and analyze information. In the DOJ IG NSL review, the IG not only drew on a large sample of publicly unavailable data, but also used a detailed, resource-intensive audit to make the raw data on

NSL usage comprehensible.[208] In other cases, IGs appeared to enjoy extraordinary access to high-level government officials and individual employees under scrutiny. In the Septem-ber 11 detainees review, for instance, the DOJ IG interviewed Attorney General John Ashcroft, FBI Director Robert Mueller, and INS Commissioner James Ziglar,[209] and "administratively compelled" interviews with staff at the Metropolitan Detention Center, who could then be subject to discipline for refusing to answer questions or for not responding truthfully.[210]

Solves: TSA

Inspector general solves – behind report on TSA's failure

Bowman, 15 (Michael, 6/9/15, "Top US Inspector 'Deeply Concerned' About TSA Terror Vulnerability", http://www.voanews.com/content/report-us-transportation-security-agency-fails-to-identify-workers-with-terrorist-links/2813393.html)

The top inspector for the agency that protects America's flying public said he is "deeply concerned about its ability to execute its important mission."

Homeland Security Inspector General John Roth said Tuesday his team has uncovered "significant vulnerabilities" in the Transportation Security Administration's conduct of airport screenings, among other shortcomings.

Roth's testimony before the Senate Homeland Security Committee followed IG reports that the TSA failed to identify 73 workers with links to terrorism, and failed to detect simulated weapons and other dangerous items in 96 percent of tests conducted at airport screening checkpoints.

"We have deep concerns about the manner in which TSA manages this risk," Roth said.

AT//IG Investigations Don't Find Abuses

Even if reports don't reveal tons of information they still cause change within the agency

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Even **weaker** IG reviews revealed important facts: despite the DHS IG Arar rendition report's spotty account of the decisionmaking behind Arar's transfer to Syria, for instance, the report did reveal that the Acting Attorney General had deemed Arar's return to Canada prejudicial to U.S. interests and that the government had issued an "operations order" to fly Arar to the Middle East even before it received assurances that he would not be tortured.214 Information disclosed through IG reports helped civil rights plaintiffs corroborate allegations of government abuse. A number of plaintiffs cited or incorporated IG reports into their complaints and courts took judicial notice of their contents. Using the DOJ IG September 11 detainee reports, former detain-ees survived motions to dismiss their civil rights claims against Justice Department officials215 and obtained the dismissal of a criminal indictment based on speedy trial right violations.216 And former counsels for detainees brought a new suit challenging the secret recording of attorney-client conversations at the Metropolitan Detention Center.217

For instance, in Turkmen v. Ashcroft, eight September 11 detainees who had sued Attorney General Ashcroft, FBI Director Robert Mueller, and officials at federal detention facilities twice amended their complaint with new information from the DOJ IG's detainee reports.218 In partially rejecting motions to dismiss, the district court extensively cited those reports, noting that they substantiated plaintiffs' claims of physical and verbal abuse,219 and further ruled that the reports enabled plaintiffs to plead that certain high-ranking defendants were personally involved in establishing wrongful policies.220 In fact, the IG reports had a second-order transparency benefit for plaintiffs: the Turkmen plaintiffs were not only able to use the findings of the reports, but also obtained through discovery notes of interviews that IG investigators had conducted with a number of high-level Justice Department officials.221 Five of the named plaintiffs in Turkmen eventually reached a $1.26 million settlement with the U.S. government.222

AT//Manipulated Findings

The IG has a *statutory obligation* to report its COMPLETE findings

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Identifying rights violations and wrongful conduct. Where the object of concern is individual rights, an agency's compliance with laws or regulations put in place to protect rights is the logical starting point for evaluation. But in the national security context, legal doctrine itself might be underdeveloped as a result of procedural and substantive barriers to judicial review or because legislation lags behind fast-moving executive national security policymaking.199 Thus, a focus on legal compliance alone might not adequately protect individual liberty or equality interests. IGs have a **statutory obligation** to report on serious problems, not just legal abuses,200 permitting them to identify government conduct that unfairly harms individuals or constrains liberty even where the conduct does not violate existing law.

IGs know what the important issues are and don't avoid them

Project On Government Oversight, 9 (Project On Government Oversight (POGO) is a nonpartisan independent watchdog that champions good government reforms. POGO's investigations into corruption, misconduct, and conflicts of interest achieve a more effective, accountable, open, and ethical federal government. 3/20/9. "Inspectors General: Accountability is a Balancing Act". http://www.pogoarchives.org/m/go/ig/accountability/ig-accountability-20090320.pdf) KW

It is possible to prioritize appropriately. For instance, the DOJ IG seems to know which windows need washing: he conducted significant investigations into the FBI's involvement in interrogations at Guantanamo, and then-Attorney General Alberto Gonzales's mishandling of classified documents.46 The OIG also issued three reports on investigations conducted jointly with the Department's Office of Professional Responsibility into allegations of politicized hiring practices and the firing of nine U.S. Attorneys.47

Similarly, the now-departing IG at CIA has managed to focus on sensitive and controversial issues—programs whose scrutiny did not win the IG any love from his agency—that go to the agency's fundamental mission and let the American people know what is being done in their name. For instance, the CIA IG investigated the Agency's interrogation methods for alleged terrorists; issued a blistering report on its failure to prevent or warn about the attacks of September 11, 2001; and issued a report on the circumstances surrounding the shoot-down of a U.S. missionary plane over Peru, based on CIA officers' mistaken identification of the aircraft, and the subsequent cover-up.48

Sometimes what appear to be small windows are actually indications of a systemic problem. But former NSF IG Boesz cautioned:

Unfortunately IGs must get into "internal issues" when there is a broad management failure. Inappropriate use of computers, postage and other agency resources are symptoms of such

management failure. An IG fails when he or she does not use this information to point out the broader issue. Sometimes pebbles turn into boulders—even mountains. It depends on the IG to put the story together.49

AT//IG Fails (General)

2008 IG reform act solves any issues regarding IGs.

Project On Government Oversight, 9 (Project On Government Oversight (POGO) is a nonpartisan independent watchdog that champions good government reforms. POGO's investigations into corruption, misconduct, and conflicts of interest achieve a more effective, accountable, open, and ethical federal government. 3/20/9. "Inspectors General: Accountability is a Balancing Act". http://www.pogoarchives.org/m/go/ig/accountability/ig-accountability-20090320.pdf) KW

The 2008 IG Reform Act generally buttressed IGs' independence, increased their resources, and held them more accountable for their performance. The changes to the IG law made the system a much better tool for the U.S. taxpayer; the watchdogs now had keener eyes and sharper teeth, and were to be held to tougher standards. Major provisions of the amended law of particular interest to this report are:

• The appointment of all IGs "without regard to political affiliation and solely on the basis of integrity and demonstrated ability in accounting, auditing, financial analysis, law, management analysis, public administration, or investigations."4

• The newly created council of all IGs—the Council of the Inspectors General on Integrity and Efficiency (CIGIE or IG Council)—which will now finally be given resources.5

• Compromise language that, because the Senate and Bush administration balked at the idea of dismissal of IGs only for cause, merely requires that the President notify both Chambers of Congress at least 30 days in advance before the transfer or removal of any Inspector General.6 (Appendix B)

IGs work with prosecutors and form task forces to make sure change is implemented

Project On Government Oversight, 9 (Project On Government Oversight (POGO) is a nonpartisan independent watchdog that champions good government reforms. POGO's investigations into corruption, misconduct, and conflicts of interest achieve a more effective, accountable, open, and ethical federal government. 3/20/9. "Inspectors General: Accountability is a Balancing Act". http://www.pogoarchives.org/m/go/ig/accountability/ig-accountability-20090320.pdf) KW

Since then, the mantra has largely become early cooperation and consultation. Both OIGs and prosecutors' shops have reached out to each other, and in the very best relationships the cases are worked together. POGO heard particularly good comments from prosecutors about working with investigators from the IGs at HUD, HHS, Education, and the Social Security Administration. The Small Business Administration and General Services Administration were also mentioned by one. In response to POGO's questionnaire, only one IG office said it waits until an investigation is largely completed before consulting with prosecutors.

Thus, as more than one source pointed out, the statistics of cases referred could be lower than a decade ago, but the cases are of higher quality and may be declined for prosecution less often. Nowadays the focus is on task forces, to leverage not only expertise but also scarce resources. Multi-agency task forces combining OIGs with other federal, state, and local agencies have become a force multiplier. Good examples of the task forces are the Medicare Fraud Strike Force, Gulf Coast Hurricane-related Fraud Task Force, and the National Procurement Fraud Task Force.40 The most significant joint effort by IGs

may well turn out to be the Recovery Accountability and Transparency Board (Recovery Board), chaired by a former longtime IG, to oversee the spending of the $787 billion Recovery Act.41

Solvency Common to Any Mechanism

AT//CIA Key

The CIA cannot be trusted to restrain itself

Buttar 14

Shahid Buttar, civil rights lawyer who also leads the Bill of Rights Defense committee and is the Co-director of the Rule of Law Institute, "Beyond CIA and NSA Spying: Corruption," May 19, 2014, The Huffington Post, http://www.huffingtonpost.com/shahid-buttar/beyond-cia-and-nsa-spying-corruption_b_4981558.html/NV

Even before open war erupted last week between the CIA and Senate Intelligence Committee Chair Dianne Feinstein (D-Calif.), embattled NSA officials had woven tangled skeins to downplay public crimes including lying to Congress. Many observers have noted the double standard apparent in Feinstein challenging the CIA while deferring to the NSA. Few have recognized that both the NSA's pattern of spying and then lying about it and the CIA's trajectory of first committing torture crimes, then spying on Congress to cover it up, then lying about the spying when caught, can be described in a single word: corruption. CIA: Spying on Congress to Cover Up Criminal Human-Rights Violations Sen. Feinstein knows as much about the CIA's detention and torture programs under the Bush administration -- which went well beyond the acts depicted in photographs from Abu Ghraib -- as anyone outside the CIA. She described them as "un-American and brutal," and her colleague Mark Udall (D-Colo.) called them both "brutal and ineffective." **Beyond their brutality, their ineffectiveness as an intelligence tool, and the fact that they violated fundamental American values and foreign-policy interests**, the programs were also international crimes at least partly responsible for the deaths of U.S. military servicemembers. Releasing the Senate's authoritative, 6,000-page, $40-million report to the public is long overdue -- **especially for an administration that falsely champions transparency while routinely undermining it**. While the CIA's torture program prompted Feinstein to begin her committee's investigation, it was the agency's continuing coverup that prompted her to voice her concerns on the Senate floor in a speech described by her colleague Patrick Leahy (D-Vt.) as the most important he had ever witnessed in his 40-year career in the Senate. Feinstein revealed that CIA personnel had removed files from the computers used by Senate staff to conduct their investigation, and that a CIA lawyer himself complicit in human-rights abuses has tried to intimidate Senate investigators by outrageously seeking their prosecution -- for obtaining an internal CIA document confirming facts that the agency is trying to continue covering up. Ultimately, the CIA's attempt to limit what material its congressional overseers can review smacks of self-interest and reflects an evasion of accountability for severe institutional crimes. Brennan's confirmation by the committee last spring entitled him to lead the CIA, not to place it above the law.

Internal attempts to restrain the CIA fail – empirics

Sledge 14

Matt Sledge, writer for the Huffington Post, "Mark Udall Says The CIA Is Still Lying," December 10, 2014, The Huffington Post, http://www.huffingtonpost.com/2014/12/10/mark-udall-cia-lying_n_6302894.html/NV

The CIA is still lying about its post-9/11 torture program, even in the face of a devastating Senate report, Sen. Mark Udall (D-Colo.) said Wednesday. In a dramatic floor speech during his final month in the Senate, Udall said the CIA's lies have been aided and abetted by President Barack Obama's White House and called on the president to "purge" his administration of CIA officials who were involved in the interrogation program detailed in the report. “It’s bad enough to not prosecute these officials, but to reward and promote them is incomprehensible,” Udall said. “The president needs to purge his administration.” Udall said the lies are "not a problem of the past," citing the CIA's response to the 6,000-page torture report. He said the agency took seven months to write a formal comment after the Senate Intelligence Committee approved the report in December 2012 -- and when it did, it was full of lies and half-truths meant to justify the agency's actions. "The CIA's formal response to this study under Director Brennan clings to false narratives about the CIA's effectiveness when it comes to the CIA's detention and interrogation program. It includes many factual inaccuracies, defends the use of torture and attacks the committee's oversight and findings," Udall said. "I believe its flippant and dismissive tone represents the CIA's approach to oversight, and the White House's willingness to let the CIA to do whatever it likes -- even if it's actively undermining the president's stated policies." Udall said a never-released internal CIA report begun under the agency's previous director, Leon Panetta, in fact supported many of the Senate's findings. But, he said, the CIA sought to bury it -- even taking the inflammatory step of spying on Senate staffers to find out how they gained access to it. That surveillance was the subject of a CIA inspector general report that found the agency had acted improperly. The only solution for the CIA, Udall said, is a culture change, which should start with the departure of Brennan. Udall previously called for his resignation in July. "**While the study clearly shows that the CIA detention and interrogation program itself was deeply flawed, the deeper, more endemic problem lies in the CIA,** assisted by a White House, **that continues to try to cover up the truth**," Udall said. Brennan has defended the agency and criticized the Senate report, claiming it provided "an incomplete and selective picture of what occurred." Shortly after the Senate Intelligence Committee released its summary of the report Tuesday, Obama said the interrogation program was "troubling" and included practices "contrary to our values." "That is why I unequivocally banned torture when I took office, because one of our most effective tools in fighting terrorism and keeping Americans safe is staying true to our ideals at home and abroad," the president said.

AT//Congress Key

Congress can't check the executive—polarization and ideology

Bendix and Quirk 15 (William Bendix and Paul J. Quirk , assistant professor of political science at Keene State College; Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia, "Secrecy and negligence: How Congress lost control of domestic surveillance", Issues in Governance Studies, March 2015, http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf)//DBI

We argue that Congress as an institution has **great difficulty acting in any consistent, balanced way** to protect privacy interests on surveillance issues. On one hand, when setting broad priorities in general terms, it attaches considerable weight to privacy interests. On the other hand, when faced with specific issues of investigatory authority, it readily makes sweeping, indiscriminate sacrifices of those same interests—even without distinct evidence of serious threat.¶ The lack of consistency in defending privacy interests has several sources. Most fundamental, **legislators reflect the attitudes and demands of their constituencies**. The American public has generally been quite willing to surrender privacy rights for the sake of enhanced security, against even unspecified, highly indefinite terrorist threats.1 In addition, there are generally no well-organized, powerful constituencies for privacy interests.2¶ But several factors exaggerate the effect. First, decisions on surveillance are largely about risk (for example, the probability of an abusive "fishing expedition" versus that of a major terrorist attack). Congress members have **strong temptations to defer to the executive branch on decisions that could, therefore, turn out badly**. Second, the president's party is **more interested in defending the executive than in checking its decisions**.3 Third, surveillance politics is complicated by **long-term partisan and ideological divisions** that were shaped by the particular conflicts of the Cold War era. For generations, the main targets of intelligence-agency surveillance have been mostly on the political left. This history may inhibit the response of many Republicans to the threat of intrusive government, even though the main targets and likely victims of intrusive surveillance are no longer a well-defined ideological category. Fourth, the committee system has been another impediment: overlapping jurisdictions among the Homeland Security, Intelligence, and Judiciary panels **prevent any one of them from being held accountable** for stalled policy or lapses in oversight.4¶ Finally, and very important, Congress has **particular difficulties with policies that must be decided in secret**—such as those for controlling technologically advanced surveillance methods. To prevent profuse leaks, Congress and the executive have imposed severe restrictions on members' access to information. When the full House or Senate decides policy, however, the restricted information encourages some members to opt out of serious participation, degrading the intelligence of deliberation and promoting deference to the executive.¶ Lacking any settled disposition on surveillance issues, Congress will respond to the leadership, and sometimes merely the political cover, provided by other institutions—especially the president, the intelligence agencies, and the FISA Court. It may take cues from the Justice Department or other executive agencies, and it will defer to rulings by the regular federal courts. In the end, Congress's performance in protecting privacy may depend on the design of the legislative arrangements for dealing with secret programs and on the structures and missions of relevant administrative and judicial institutions.

Congress fails

Sudha **Setty 15**, Professor at Western New England University School of Law, 2015, "Surveillance, Secrecy, and the Search for Meaningful Accountability", 51 STAN. J. INT'L L 16, http://digitalcommons.law.wne.edu/cgi/viewcontent.cgi?article=1305&context=facschol

One of the most intractable problems in the debate around maintaining¶ the rule of law while combating the threat of terrorism is the question of¶ secrecy and transparency. In peacetime,

important tenets to the rule of law¶ include transparency of the law, limits on government power, and consistency¶ of the law as applied to individuals in the polity. Yet the post-9/11 decision making¶ by the Bush and Obama administrations has been characterized by¶ excessive secrecy that stymies most efforts to hold the government¶ accountable for its abuses. Executive branch policy with regard to detention,¶ interrogation, targeted killing, and surveillance are kept secret, and that¶ secrecy has been largely validated by a compliant judicial that has¶ dismissed almost all suits challenging human and civil rights abuses resulting¶ from counterterrorism programs. Efforts by Congress to engage in¶ meaningful oversight have met with mixed results; **in the area of government¶ surveillance, such efforts have been fruitless** without the benefit of leaked¶ information on warrantless surveillance by government insiders. The¶ executive branch has generally refused to make public vital aspects of its¶ surveillance programs in ways that could give oversight efforts more muscle.¶ At the same time, the executive branch has consistently defended the legality¶ and efficacy of these surveillance programs.¶ This paper considers the nature and effect of the warrantless surveillance¶ infrastructure constructed in the United States since the terrorist attacks of¶ September 11, 2001, and discusses surveillance-related powers and¶ accountability measures in the United Kingdom and India as comparative¶ examples.

Congressional reforms lack credibility too

Eric **Posner 7**, Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

5. Congressional motivation and credibility.

Like the executive, Congress has a credibility problem. Members¶ of Congress may be well motivated or ill motivated; the public does¶ not know. Thus, when Congress passes a resolution criticizing presidential¶ action or refuses to delegate power that he seeks, observers do¶ not know whether Congress or the president is right. Ill-motivated¶ members of Congress will constrain public-spirited presidents; thus¶ the Madisonian cure for the problem of executive credibility could be¶ worse than the disease.¶ Even if members of Congress are generally well motivated, Congress¶ has a problem of institutional credibility that the president lacks.¶ Although a voter might trust the member of Congress for whom she¶ voted because she knows about his efforts on his district's behalf, she¶ will usually know nothing about other members of Congress, so when¶ her representative is outvoted, she might well believe that the other¶ members are ill motivated. And, with respect to her own representative,¶ he will often lack credibility compared to the president because he has¶ much less information. Further, the reputation of congressional leaders¶ is only very loosely tied to the reputation of the institution, while there¶ is a closer tie between the president's reputation and the presidency. As¶ a result, Congress is likely to act less consistently than the president,¶ further reducing its relative credibility. Congressional lack of credibility¶ undermines its ability to constrain the president: Congress can monitor¶ the president and tell the public that the president has acted properly or¶ improperly, but if the public does not believe Congress, then Congress's¶ power to

check the president is limited.¶ We neither make, nor need to make, any general empirical claim¶ that Congress has no control over executive discretion. That is surely¶ not the case; there is a large debate, or set of related debates, about¶ the extent of congressional dominance." We have reviewed the institutional¶ problems piecemeal; perhaps some of them are mutually offsetting,¶ although we do not see any concrete examples. Our assertion is¶ just that there is at least a real gap, and during emergencies and wars¶ an even larger gap, between the extent of executive discretion and¶ legislative capacity for monitoring. It is hard to say how great that gap¶ is, but we know of no one who thinks it is nonexistent. Within that gap,¶ the dilemma of executive credibility arises. To the extent that legislators¶ cannot monitor the executive's exercise of discretion, they must¶ either withhold discretion from an executive who might be well motivated,¶ or grant discretion to an executive who might be ill motivated.

Congressional checks on the executive fail—structural barriers

Marshall 8 (William, William Rand Kenan, Jr. Distinguished Professor of Law at UNC, J.D., University of Chicago (1977), B.A., University of Pennsylvania (1972), Deputy White House Counsel and Deputy Assistant to the President of the United States during the Clinton Administration, "Eleven Reasons Why Presidential Power Inevitably Expands and Why It Matters," Boston University Law Review, https://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/MARSHALL.pdf)//DBI

The expansion of presidential power is only part of the story. Because the constitutional commitment to separation of powers depends on a balance between the executive and legislative branches,86 the related question that must be addressed is how the expansion of presidential power relates to the powers of the Congress. In this respect, **it does not appear that any expansion in the powers of Congress have kept pace with the increasing power of the President**.87

At least two significant changes since the Founding have worked to Congress's advantage in its battles with the Presidency. First, the Supreme Court has recognized Congress's non-textual power to investigate and oversee the executive branch.88 This power is significant and, indeed, has at times been enormously effective in uncovering executive branch malfeasance.89 But the power to investigate has not, and likely cannot, fully compensate for the power the Presidency enjoys in controlling information. After all, Congress's oversight authority is not self-executing, and, as the experience of both the Clinton and Bush II presidencies have shown, frequently can be frustrated by a combative President. Moreover, even if Congress has the political will to force a recalcitrant administration to turn over information, the President's control over information may be so absolute that Congress does not even know what to ask for.90 **How can Congress, for example, request materials relating to a domestic surveillance program if it does not know that such a program exists**?

Congress fails – no expertise

Eric **Posner 7**, Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

1. Information asymmetries.¶ Monitoring the executive requires expertise in the area being¶ monitored. In many cases, Congress lacks the information necessary to¶ monitor discretionary policy choices by the executive. Although the¶ committee system has the effect, among others, of generating legislative¶ information and expertise, 2 and although Congress has a large¶ internal staff, there are domains in which no amount of legislative expertise¶ suffices for effective oversight. Prime among these are areas of¶ foreign policy and national security. Here legislative expertise is beside¶ the point, because the legislature lacks the raw information that¶ experts need to make assessments.¶ The problem would disappear if legislators could cheaply acquire¶ information from the president, but they cannot. One obstacle is a¶ suite of legal doctrines protecting executive secrecy and creating deliberative¶ privileges43 -doctrines which may or may not be justified¶ from some higher-order systemic point of view as means for producing¶ optimal deliberation within the executive branch. Although such privileges¶ are waivable, the executive often fears to set a bad institutional¶ precedent. Another obstacle is the standard executive claim that Congress¶ leaks like a sieve, so that sharing secret information with legislators¶ will result in public disclosure. The credibility dilemma becomes¶ most acute when, as in the recent controversy over surveillance by the¶ National Security Agency, the executive claims that the very scope or¶ rationale of a program cannot be discussed with Congress, because to¶ do so would vitiate the very secrecy that makes the program possible¶ and beneficial. In any particular case the claim might be right or¶ wrong; legislators have no real way to judge, and they know that the¶ claim might be made either by a well-motivated executive or an illmotivated¶ executive, albeit for very different reasons.

Congress comparatively fails--- lack of interest and ulterior motives

McGinnis 93 [John O., Assistant Professor, Benjamin N. Cardozo School of Law. From 1985-1987 1 was an attorney-adviser and from 1987-1991 Deputy Assistant Attorney General in the Office of Legal Counsel, Department of Justice. I thus participated in drafting some of the materials discussed in this article, CONSTITUTIONAL REVIEW BY THE EXECUTIVE IN FOREIGN AFFAIRS AND WAR POWERS: A CONSEQUENCE OF RATIONAL CHOICE IN THE SEPARATION OF POWERS, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp] Schloss

On the other hand, Congress's structure is so much more diffuse than the executive that it impedes the rapid decisionmaking necessary in the fluctuating world of foreign affairs.63 Thus, because of its comparative disadvantage as an institution, operational control of foreign affairs may actually be at odds with its interests because such control threatens Congress with responsibilities it is not well-equipped to handle. In determining how much interest Congress has in exercising this power as compared to the executive, one must compare this interest to other rights of governance. Spending on constituents, for example, is more highly prized by Congress since it can directly help individual members of Congress retain office.' Of course, even if Congress rationally shuns operational control of war and foreign policy matters, it may be interested in increasing its mechanisms to criticize the executive's performance after the fact, so that it can act in effect as the ululating Greek chorus that comments on the executive's tragic choices.'

Not all models are credible but most suggest that the largest check on presidential power is the president

Moe and Howell 99 [Terry and William, a professor of political science at Stanford University and a senior fellow at the Hoover Institution, Howell is a graduate student in political science at Stanford University. He is currently writing a dissertation on the politics of unilateral action, Unilateral Action and Presidential Power: A Theory, http://onlinelibrary.wiley.com/doi/10.1111/1741-5705.00070/epdf] Schloss

This is a simple model that leaves out key aspects of the power struggle. Congress, for instance, can write restrictive statutes in an effort to limit the president's ability to act unilaterally, and the courts can declare a president's actions illegal if he goes too far. If these were put to effective use—a big if, as we will see—they would obviously introduce additional constraints on the president that need to be recognized. Far and away the most important factor omitted from this model, however, and indeed from virtually all spatial models, would have the effect of expanding the scope for presidential power considerably. This is that Congress is burdened by collective action problems and heavy transaction costs that make it extremely difficult for that institution to fashion a timely, coherent response to presidential action or even to respond at all. Until spatial models can incorporate these fundamental features of Congress, they will **systematically overstate Congress's capacity for taking strategic action—and understate presidential power.**¶ We have to be wary, then, of putting too much stock in simple models. Still, the one we have employed here does help to illustrate two points that are quite central to our theoretical argument. The first is that unilateral action can make a big difference in determining what presidents are able to achieve—and this is why they value it and want more of it. The second is that, even when they can act unilaterally, they are constrained to act strategically and with moderation. They cannot have everything they want.

Executive self-restraint shapes executive powers—judicial vagueness proves courts fail

Atkinson 13 – US Department of Justice, National Security Division, JD in law (Lawrence, "The Fourth Amendment's National Security Exception: Its History and Limits", Vanderbilt Law Review, October 2013, http://www.vanderbiltlawreview.org/content/articles/2013/10/Atkinson_66_Vand_L_Rev_1343.pdf)// DBI

C. The Constitutional Gloss of Early Executive Practice

To help address the uncertainty surrounding security investigations, this Article surveys the historical boundaries of such operations. The history examined here primarily involves executive conduct, which can carry precedential weight in matters of constitutional law.44 In Youngstown Sheet & Tube Co. v. Sawyer, Justice Frankfurter explained in his concurrence how executive practice informs our constitutional understanding:

[A] systematic, unbroken, executive practice, long pursued to the knowledge of the Congress and never before questioned, engaged in by Presidents who have also sworn to uphold the Constitution, making as it were such exercise of power part of the structure of our government, may be treated as a gloss on "executive Power" vested in the President by §1 of Art. II.45

Subsequent Supreme Court decisions have embraced the probative value of longstanding executive practice.46

When identifying the constitutional parameters of the executive's power, historical moments of restraint are particularly instructive. When congressional prohibition draws executive power to its "ebb," for example, one can identify the executive's core inextinguishable powers.47 Constitutional boundaries are similarly discernible in some cases where the executive branch limits its own conduct.48 Specifically, the **executive's self-restraint is precedential** when it stems from a sense of constitutional obligation.49 Such executive branch fealty toward the Constitution might be unprompted by a coordinate branch's action, so there may be no record as evident as a judicial opinion or legislative bill. Nevertheless, where a discernible opinio juris shapes executive action, we should consider such legal opinion both for its persuasive power and for its reflection of historical understandings about what protections the Constitution establishes.50

Historical conduct is particularly important in the national security context. "National security law and foreign affairs law," Julian Mortenson explains, have a "pronounced concern for post-enactment history as a source of constitutional meaning."51 Neil Katyal and Richard Caplan note that "[i]n the crucible of legal questions surrounding war and peace, **few judicial precedents will provide concrete answers," making executive practice one of the few constitutional guides**.52

Judiciary cannot check the executive, especially on questions of surveillance – no expertise

Eric **Posner 7**, Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

The gap between the executive and the judiciary, in information¶ and expertise, is even wider than between the executive and Congress.¶ Whereas many legislators have a narrowly defined field of policy expertise,¶ particularly in the House, federal judges are mostly generalists, barring¶ a few specialized courts. Furthermore, the partial insulation from¶ current politics that federal judges enjoy, by virtue of life tenure and¶ salary protection, brings with it a kind of informational impoverishment.6¶ Legislators, who must please other people at least some of the¶ time, interact with the outside world far more systematically than generalist¶ judges, whose main source of information is the briefs and arguments¶ of litigants. The credibility dilemma thus appears quite acutely¶ in judicial proceedings. When the executive says that resolving a plaintiff's¶ claim would require disclosure of "state secrets,"61 with dangerous¶ consequences for national security, judges know that either an illmotivated¶ or a well-motivated executive might be making the claim and¶ that they have no easy means to assess whether the claim is credible.¶

Executive restraint sets a precedent as long as it is constitutional

Atkinson 13 [Rush, U.S. Department of Justice, National Security Division. A.B., University of Chicago; M.Phil., University of Cambridge; J.D., New York University, The Fourth Amendment's National Security Exception: Its History and Limits, https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2226404] Schloss

To help address the uncertainty surrounding security investigations, this Article surveys the historical boundaries of such operations. The history examined here primarily involves executive conduct, which can carry precedential weight in matters of constitutional law.44 In Youngstown Sheet & Tube Co. v. Sawyer, Justice Frankfurter explained in his concurrence how executive practice informs our constitutional understanding:

[A] systematic, unbroken, executive practice, long pursued to the knowledge of the Congress and never before questioned, engaged in by Presidents who have also sworn to uphold the Constitution, making as it were such exercise of power part of the structure of our government, may be treated as a gloss on "executive Power" vested in the President by §1 of Art. Subsequent Supreme Court decisions have embraced the probative value of longstanding executive practice.46 When identifying the constitutional parameters of the executive's power, historical moments of restraint are particularly instructive. When congressional prohibition draws executive power to its "ebb," for example, one can identify the executive's core inextinguishable powers.47 Constitutional boundaries are similarly discernible in some cases where the executive branch limits its own conduct.48 Specifically, the **executive's self-restraint is precedential when it stems from a sense of constitutional obligation.**49 Such executive branch fealty toward the Constitution might be unprompted by a coordinate branch's action, so there may be no record as

evident as a judicial opinion or legislative bill. Nevertheless, where a discernible opinion juris shapes executive action, we should consider such legal opinion both for its persuasive power and for its reflection of historical understandings about what protections the Constitution establishes.50

Executive action doesn't change the judicial recourse which preserves the constitutionality of the action

Gaziano 01 [Todd, Senior Fellow in Legal Studies and the Director of the Center for Legal and Judicial Studies at The Heritage Foundation, The Use and Abuse of Executive Orders and Other Presidential Directives, http://www.heritage.org/research/reports/2001/02/the-use-and-abuse-of-executive-orders-and-other-presidential-directives] Schloss

Some directives may not be subject to judicial review if the effect on private citizens is indirect or if the directive is implemented through agency regulations or other agency action. Both President Reagan's and President Clinton's regulatory review executive orders (Executive Orders 12291 and 12866, respectively) are examples of orders with indirect effects on private citizens. The orders required regulatory agencies to prepare certain analyses of proposed rules and to take various factors into account in their regulatory decisions, and they allowed the Office of Management and Budget to oversee the rulemaking process. However, neither order altered the statutory obligations of the regulatory agencies to issue particular substantive rules. A citizen adversely affected by a regulation (or lack thereof) has the same judicial recourse regardless of the type of executive branch review the rule underwent. Thus, the citizen may challenge the resulting substantive rule but may not challenge the type of executive branch review it received.

The lack of judicial review to challenge a regulatory review executive order does not mean that such orders have no impact on the regulations issued. Presidents Reagan and Clinton would not have altered the type of review if they did not think it mattered. But it would be highly speculative to predict ex ante (assuming it can be discerned at all) what effect OMB review will have on a particular rule in the future. More important, the type of executive branch review, in itself, does not alter the rights of the private citizens who are regulated to challenge the regulation directly in court.

Even if the order doesn't have a constitutional effect it won't be challenged on the basis of constitutionality

Posner 14 [Eric, professor at the University of Chicago Law School, Executive Orders on Immigration Is Clear, http://www.nytimes.com/roomfordebate/2014/11/18/constitutional-limits-of-presidential-action-on-immigration-12/the-constitutional-authority-for-executive-orders-on-immigration-is-clear] Schloss

Critics of the plan the president is reported to be considering argue that the Constitution obliges him to "take care that the laws be faithfully executed," an obligation that seems to give the lawmaker, Congress, the primary authority to set policy. They say that refusing to enforce immigration law against millions of illegal immigrants violates that constitutional duty.

Executive power has always included the power to allocate resources among enforcement efforts. The power has grown over the years.

Yet the Constitution also gives the president "executive power," which has always been understood to include the discretionary power to allocate resources among enforcement efforts. The significance of this power has grown over the last century, as Congress has created vast regulatory agencies and given the president control over them.

Congress typically appropriates money for regulators, gives the president some vague guidelines and enacts far more laws than he could possibly enforce, and then allows him to set enforcement priorities as he sees fit. That's why different administrations can pursue such different policies from each other without getting Congress's permission first. The Reagan administration came to power promising to deregulate the economy, which often meant not enforcing the law, whether it was antitrust, environmental or financial.

If, under the Constitution, the president must enforce much of the law but need not enforce all of it, where should the line be drawn? It might be surprising that after two centuries of constitutional experience, we don't know the answer. Probably the reason is that most of the time, the president's nonenforcement decisions are not controversial. Every day, an executive branch official decides to drop an investigation, or not to prosecute a case, because resources are scarce and the harm caused by a particular legal violation does not seem serious. We don't object because that's a sensible thing to do.

And the sensible thing to do in the area of immigration law is to bring removal proceedings against the most serious violators — typically, criminals — while leaving otherwise law-abiding noncitizens alone. Given that Congress has not appropriated nearly enough money to deport 10 million or more people, this type of priority-setting is unavoidable, and not merely wise. Indeed, the president is just following in the footsteps of his predecessors, who also focused removal efforts on dangerous aliens. Congress has acquiesced in this practice for years. The president's discretion over immigration is deeply interwoven in our law. As the Supreme Court recognized just two years ago, in the course of summarizing the statutory scheme: "A principal feature of the removal system is the broad discretion exercised by immigration officials."

The only difference between the president and his predecessors is that the president has openly declared the de facto policy of his predecessors. We might disagree about whether this move is wise, but it's not a constitutional violation.

Court rulings lead to legislation changes – causes greater decrease of executive powers.

Bellia '11 (Patricia L, Notre Dame Law School, Arizona State Law Journal, Vol. 43, No. 293, 2011, Notre Dame Legal Studies Paper No. 12-58, 2011, "Designing Surveillance Law," http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2033217) KW

Reactive statutes can take two quite different forms, depending upon whether the initial judicial decision approves or disapproves of the executive practice that preceded it. If the initial judicial decision finds existing procedures inadequate, the legislature must attempt to meet whatever constitutional bar the court sets. In a sense, the statute codifies the standards the court has articulated. If, however, the initial judicial decision finds existing procedures fully adequate (as, for example, by determining that the executive conduct in question is not a "search" for Fourth Amendment purposes), the legislature may seek to provide more procedural protections than a court has deemed the Fourth Amendment to require. We might regard the statute as **corrective** - as intended to reset the level of privacy protection to what the legislature perceives to be a more appropriate level.

The Wiretap Act and arguably FISA fit the former category. Congress adopted each statute in the wake of a Supreme Court decision that **directly limited executive discretion to use certain surveillance tactics** - in particular, to acquire communications in which a target could reasonably expect privacy. The judicial decisions left some room for legislative discretion, but made clear that the Fourth Amendment required robust constraints on executive conduct. In the case of the Wiretap Act, the protections Congress set essentially tracked those the Supreme Court outlined in Berger v. New York. n53 The statute at issue in Berger had allowed court authorization of eavesdropping activities, but the Court found the statutory procedures deficient in several respects. First, although the statute required a showing of reasonable grounds to believe that the surveillance would reveal evidence of criminal activity, the statute failed to satisfy the Fourth Amendment requirement that the crime to be investigated, the place to be searched, and the persons or things to be seized be particularly described. n54 Second, the statute imposed no limitations on which conversations could be seized or the duration of the surveillance, nor did it require termination of surveillance activities once the goals of the surveillance were met. n55 Third, the statute allowed law enforcement officials to secure renewal of a surveillance order on the basis of the initial showing. n56 Fourth, the statute did not provide for prior notice of the search [*307] to the subject of the surveillance and required no showing of exigency to justify the lack of notice. n57 Finally, the statute did not provide for a "return" on the warrant to a judge, "thereby leaving full discretion in the officer as to the use of seized conversations of innocent as well as guilty parties." n58

With the Wiretap Act, Congress sought to overcome each of these deficiencies. The Wiretap Act requires that the application specify the offense being investigated, the nature and location of the facilities where the communications are to be intercepted, and a particular description of the communications sought to be intercepted. n59 To grant the order, the court must find probable cause to believe that a particular enumerated offense is being committed and that targeting the specified facility will yield particular communications concerning that offense. n60 Congress dealt with Berger's objection to the indeterminate length of surveillance under the New York statute by providing that orders may authorize surveillance only as long as necessary for achievement of the objective, **up to thirty days**. n61 A court may grant an extension, but only subject to the same showings and findings as the original order. The statute also requires a court to order officials to "minimize" the interception of communications unrelated to criminal activity. n62

In light of Berger's objection that the New York statute required no showing of exigency to justify the lack of notice, the Wiretap Act requires a finding that normal investigative procedures are unlikely to be successful or are too dangerous, and generally requires notice to the target of the investigation within ninety days of the termination of the surveillance. n63 Finally, Congress required law enforcement officials to take a variety of steps that provide the functional equivalent of a return to a judge. For example, the Wiretap Act requires law enforcement officials to record intercepted communications and to make the recordings available to the judge. n64 The statute also authorizes a judge to require periodic reports on the progress of the surveillance. n65

The circumstances surrounding FISA's passage were slightly different, because the Supreme Court never spoke directly to the question whether warrantless national security surveillance of a foreign power or its agent [*308] violated the Fourth Amendment. n66 In Keith, however, the Court clarified that national security surveillance of a domestic target must comply with the Fourth Amendment. The Court acknowledged both that Congress could tailor specific statutory requirements to the peculiarities of national security surveillance n67 and that Congress could properly place the power to review surveillance applications in a specially designated court. n68 Although Congress never took up the Supreme Court's invitation to legislate distinct standards for national security surveillance of a domestic target, it enacted in FISA a special framework for surveillance of a foreign power or an agent of a foreign power. n69 More specifically, it established a specialized court, the FISC, to hear applications for electronic surveillance within the United States to gather foreign intelligence information. n70 In light of the Keith court's acknowledgement that special standards could be appropriate even for national security surveillance of domestic targets, FISA can be understood as Congress's attempt to map the Court's reasoning in Keith onto foreign intelligence gathering. n71

[*309] Several statutes fall within the second, "corrective" category of reactive statutes - that is, providing additional statutory protection in response to a judicial decision that approves executive conduct undertaken with few procedural protections. As noted earlier, ECPA's pen/trap provisions were in part a legislative response to the Supreme Court's decision in Smith v. Maryland. n72 The Court's holding would have permitted federal and state officials (absent statutory constraints) to use pen registers and similar devices without prior judicial authorization. The pen/trap device statute is one of several statutes in which Congress sought to restore a measure of procedural protection to activities that the Supreme Court deemed not to constitute a search for Fourth Amendment purposes. n73

Courts limit presidential powers more than Congress

Bellia ’11 (Patricia L, Notre Dame Law School, Arizona State Law Journal, Vol. 43, No. 293, 2011, Notre Dame Legal Studies Paper No. 12-58, 2011, “Designing Surveillance Law,” http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2033217) KW

Apart from these general observations about the problems of institutional competence arguments in cases where the legislature has chosen the rule that constrains the executive, it is worth making two additional points with respect to proactive statutes. First, I noted that Congress often confides important statutory questions in courts, but in the particular context of ECPA, Congress has limited courts' ability to interpret the relevant provisions by withholding a statutory suppression

remedy. Without such a remedy, statutory challenges to executive action do not arise in criminal proceedings. No doubt the omission of a suppression remedy was motivated in part by a belief that no such remedy was warranted, n154 not a specific desire to foreclose judicial interpretation. The absence of a tool for courts to evaluate the SCA's terms in a criminal context, however, can hamper not only judicial evaluation, but also legislative evaluation. To the extent that judicial decision-making exposes an executive interpretation of the law, it facilitates public and legislative oversight. The paucity of judicial decisions under the SCA makes it unsurprising that Congress has made few significant changes to the SCA. Executive interpretations of the statute are largely shielded from view in the absence of other more direct oversight mechanisms. Although Congress has updated ECPA on nearly a dozen occasions over the last twenty-five years, most of the amendments other than the Patriot Act reflect fairly technical changes to the existing statutory framework.

Limitations make it impossible for the executive to act – Wiretap Act proves

Bellia ’11 (Patricia L, Notre Dame Law School, Arizona State Law Journal, Vol. 43, No. 293, 2011, Notre Dame Legal Studies Paper No. 12-58, 2011, “Designing Surveillance Law,” http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2033217) KW

Consider the limitation that information gathered under the Wiretap Act must pertain to a crime. By statute, applications for surveillance of wire and oral communications require the approval of a high-level Justice Department official, and thus proceed through a centralized executive [*334] branch review process. n156 In theory, the effect of such a requirement is to centralize decision-making and vest it in politically accountable officials, and perhaps even to place certain executive officials in a quasi-judicial rule. By most accounts, in practice this requirement has had the effect of making the wiretap application process a fairly **burdensome** one for investigators. n157 The Wiretap Act's high-level executive review requirements no doubt contributed to the institutional evolution within the Justice Department, with the Criminal Division's Office of Enforcement Operations serving as a gatekeeper for the Title III order process. The statute, however, does not rest on executive assessment alone; it requires a judicial finding of probable cause, and at the federal level even confines that authority to district court judges (rather than magistrates). n158 Other aspects of the statute reflect a different allocation of responsibility. Law enforcement officials must "minimize" interception of communications not authorized to be intercepted, but judicial checks on whether they have done so are limited. n159 Indeed, the statute does not require judicial evaluation of whether evidence of crimes other than those set forth in the application should be disclosed, thus leaving the matter to executive discretion. n160 The statute does, however, require judicial evaluation of whether other-crimes evidence should be admitted into court. n161

It should be obvious that second-order design mechanisms will often move with first-order preferences, in the sense that a preference for greater limits on executive discretion will lead to the selection of design mechanisms that rely less on executive policy and more on other institutional arrangements. Nevertheless, many different design combinations are available to meet

first-order preferences. A goal of preventing unlawful executive surveillance, for example, might be achieved equally well through a statutory suppression mechanism and through the availability of a civil damages remedy against executive officials who authorize the surveillance.

AT//DEA Key

The DEA cannot check itself – corrupt, lies and no internal checks
Granick and Sprigman 14

Jennifer Granick, Director of Civil Liberties at the Stanford Center for Internet and Society and former director of the EFF, Christopher Sprigman, professor of law at NYU, "NSA, DEA, IRS Lie About Fact That Americans Are Routinely Spied On By Our Government: Time For A Special Prosecutor," October 14, 2013, Forbes, http://www.forbes.com/sites/jennifergranick/2013/08/14/nsa-dea-irs-lie-about-fact-that-americans-are-routinely-spied-on-by-our-government-time-for-a-special-prosecutor-2/NV

It seems that every day brings a new revelation about the scope of the NSA's heretofore secret warrantless mass surveillance programs. And as we learn more, the picture becomes increasingly alarming. Last week we discovered that the NSA shares information with a division of the Drug Enforcement Administration called the Special Operations Division (SOD). **The DEA uses the information in drug investigations. But it also gives NSA data out to other agencies** – in particular, the Internal Revenue Service, which, as you might imagine, is always looking for information on tax cheats. The Obama Administration repeatedly has assured us that the NSA does not collect the private information of ordinary Americans. Those statements simply are not true. We now know that the agency regularly intercepts and inspects Americans' phone calls, emails, and other communications, and it shares this information with other federal agencies that use it to investigate drug trafficking and tax evasion. Worse, DEA and IRS agents are told to lie to judges and defense attorneys about their use of NSA data, and about the very existence of the SOD, and to make up stories about how these investigations started so that no one will know information is coming from the NSA's top secret surveillance programs. "Now, wait a minute," you might be saying. "How does a foreign intelligence agency which supposedly is looking for terrorists and only targets non-U.S. persons get ahold of information useful in IRS investigations of American tax cheats?" To answer that question, let's review this week's revelations. Back in 2005, several media outlets reported that NSA has direct access to the stream of communications data, carried over fiber optic cables that connect central telephone switching facilities in the U.S. with one another and with networks in foreign countries. Reports suggested that the NSA had installed equipment referred to as "splitter cabinets" at main phone company offices, where they make a copy of all data traveling on the fiber optic cable and route it into a secret room where computers scan through the information – searching for names and terms that are themselves secret — as it goes by. For years, the federal government refused to comment on these reports. But on August 8, an unnamed senior administration official confirmed this practice to the New York Times. We also learned that the NSA can grab information off these fiber optic cables in near real time using a tool called XKeyscore (XKS). Searching the firehose of Internet and telephone data as it flows takes an immense amount of computing power. The XKS system dumps a portion of the communications information NSA snatches into a truly immense local storage "cache." This cache can keep network information for a few days, depending on the amount of traffic. This gives the NSA's computers time to search through what otherwise would be an unmanageable torrent of emails, phone calls, chats, social network posts, and other communications. And importantly, XKS searches do not involve just communications "metadata". The XKS system searches the contents of our Internet and telephone communications. Which is directly at odds with repeated Administration statements suggesting that NSA mass surveillance was limited to metadata. To seize and search through all of this information without a warrant, the agency must comply with just a few legal limitations. Under the FISA Amendments Act, the NSA is not allowed to intentionally collect purely domestic information. That is, the NSA can search communications it believes begin or terminate in another country, either based on the facility where the information is collected (for example, an undersea cable) or other signifier, like an IP address that suggests origination abroad. Of course, these determinations are subject to error, particularly when the surveilled facility is in the U.S. and carries a substantial amount of purely domestic traffic. To reduce the amount of purely domestic traffic that ends up on the desks of NSA analysts, the agency relies on post-seizure "minimization" procedures. For several reasons, however, these procedures are fundamentally inadequate to protect communications privacy. First, the minimization procedures are themselves secret. Moreover, by law, purely domestic communications that the NSA inadvertently collects need be deleted only if they "could not be" foreign intelligence information – a provision that requires the NSA to delete very little. Some minimization procedures have been leaked to the public, and these show that the government may

"retain and make use of "inadvertently acquired" domestic communications if they contain usable intelligence, information on criminal activity, threat of harm to people or property, are encrypted, or are believed to contain any information relevant to cybersecurity." Even otherwise privileged communications between individuals and their lawyers are not deleted. The agency merely stores those in a separate database so they are not sent to a law enforcement agency for use in a criminal case. Once the NSA identifies the subset of international or "one-end" foreign communications (i.e., those where a foreigner is either a sender or recipient), analysts are supposed to search only for "foreign intelligence" information. But since "foreign intelligence" includes anything relevant to the conduct of U.S. foreign affairs, this limitation alone imposes no real restraint on NSA's warrantless spying. Certainly, the NSA isn't limited to counterterrorism operations. In undertaking their searches, NSA analysts use either "strong" or "soft" selectors. "Soft" selectors are a broad kind of search that pulls up messages based on content or even the language in which a message is written. When the NSA uses soft selectors, it can search the vast amounts of information it collects to retrieve all Internet users' discussions of particular topics or in particular languages. The potentially very broad scope of searches using soft selectors is quite frightening, as ordinary Americans' communications are likely to show up in search results. "Strong" selectors pull up information associated with a particular known individual. The Obama Administration has repeatedly assured us that these strong selectors may only target non-U.S. persons. But screenshots of the user interface for submitting selector queries tell a different story. Published by the Guardian, they show that NSA analysts are presented with dropdown lists of preapproved factors the NSA accepts as sufficient proof that a person is a foreigner, including being "in direct contact with (a) target overseas" or the use of storage media (like a server located abroad) seized outside the U.S. So any U.S. person who talks to a foreigner that the NSA has identified as a target, or who stores data on a server outside the U.S. (as someone might well do if emailing from a foreign hotel room) may be presumed to be a foreigner. And that's not even the worst of it. Leaked NSA documents also suggest that the agency will presume that a person is a foreigner whenever there is no information suggesting otherwise. That sort of willful blindness gives the NSA a lot of leeway to target Americans. Worse, we now know that the NSA's assertion that it does not "target" U.S. persons is either a lie, or is about to become one. Leaked NSA documents show that in 2011, the NSA changed its "minimization" rules to allow its operatives to search for individual Americans' communications using their name or other identifying information. Such a change would turn "minimization" into a blanket authority to warrantlessly spy on Americans – in defiance of specific legal restrictions prohibiting this sort of domestic spying. Senator Ron Wyden has said that the law provides the NSA with a loophole potentially allowing "warrantless searches for the phone calls or emails of law-abiding Americans", and raised the issue when he met with President Obama on August 1. This is the first time we've had evidence that the NSA has — or will have — the authority to warrantlessly search its databases with the specific intent of digging up information on specific U.S. individuals. We can sum up very simply – at this moment, the NSA enjoys virtually unrestricted power to spy on Americans, without a warrant or any particular suspicion that any person spied upon has done anything wrong. Our phone, email and potentially other records are fair game for bulk collection. The contents of our communications with people overseas are also fair game, so long as there is an approved foreign intelligence purpose for the collection. The NSA does not believe that any stored emails are protected by the Fourth Amendment, so it can collect them from providers with little restraint. As far as we know, the only category of information the NSA currently believes is off limits to mass surveillance are the contents of phone calls it knows in advance are solely between Americans. This is an astonishing development in the U.S., a nation that, until recently, carefully restricted the power of its domestic spying agencies by forcing them to submit narrow requests for spying authority to a court, which would issue a warrant if the government showed probable cause to believe that the surveillance target was engaged in some sort of wrongdoing. At this point, it's clear those limits are gone. The United States is now a mass surveillance state. In last week's press conference, President Obama reassured the nation that "America isn't interested in spying on ordinary people." In other words, do not worry, because the information will only be used for narrow counterterrorism or broader foreign intelligence purposes. But the latest revelations show that these assurances too are a lie. Under current U.S. surveillance law, the NSA may share with domestic law enforcement information obtained both through authorized surveillance, and information unlawfully but unintentionally collected, if it contains evidence of a crime. This rule was worrisome when the NSA was only conducting targeted surveillance of foreign powers. It is terrifying now that the NSA scans virtually all American cross-border communications. And this is especially true in light of the recent reports showing that any number of other three-letter agencies are howling for access to NSA data for use in investigations of Americans' drug use, tax evasion, and even copyright infringement. Usually, these agencies would need at least warrants based on probable cause that an individual was committing a crime before they could obtain the contents of our communications, and would need to certify to a public court that email or phone records are relevant to an ongoing criminal investigation before it could collect such traffic data. But if they get their hands on NSA data, all these bothersome civil liberties protections simply vanish. Which brings us to the Drug Enforcement Administration (DEA). As we noted previously, the DEA has a secret division called the Special Operations Division or SOD. The SOD receives intelligence intercepts, wiretaps, informants and a massive database of telephone records from its partner agencies, of which the NSA is just one, to distribute to authorities across the nation to help them launch criminal investigations of Americans. The SOD gets information from the NSA and shares it with, among other agencies, the IRS. And this is where things get truly ugly. When agents receive SOD information and rely on it to trigger investigations, they are directed to omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use "normal investigative techniques to recreate the information provided by SOD." IRS agents receiving SOD data, which presumably can include information from the NSA, have been similarly instructed. They are instructed, in other words, to create a fake investigative file, and to lie. To lie, in particular, to defense lawyers and to judges, about the source of the evidence used in criminal prosecutions. By hiding the fact that information comes from NSA surveillance, the government both masks the extent to which NSA's domestic spying is used to trigger investigations of Americans, and prevents legal challenges to highly questionable surveillance practices like bulk phone record collection, warrantless access to American communications with friends and family overseas, and retention and use of illegally obtained domestic calls and emails. This is outrageous conduct. It is the sort of thing you expect from the Chinese government, or one of the now-vanished governments of the Warsaw Pact. And there is no stronger proof of the dangers of the NSA's domestic spying effort than the fact that the government has consistently lied about it and attempted to cover it up. Think for just a moment about the

stories J. Edgar Hoover could have plausibly concocted about Dr. Martin Luther King, Jr. or any other civil rights activist with this kind of detailed information. The Obama Administration has gone after leakers, and the journalists at outlets like the Associated Press or the New York Times who use them as sources, with unprecedented force. Think about what the current Attorney General, Eric Holder, could do to bring down these reporters who cover – sometimes in ways the Obama Administration doesn't like — the conduct of American foreign policy. **At this point, it's plain to see that the Obama Administration has no intention of honestly fixing this mess. So it's time now for Congress to act**. A good first step would be to appoint a Special Prosecutor with wide power to subpoena Administration officials, and to bring criminal indictments where appropriate. Congress should then begin the process of reforming surveillance law to make absolutely clear that the NSA has no power to conduct warrantless mass surveillance of Americans. First they came for the terrorists and the foreigners, and no one did anything. Then they came for the drug dealers. Then the tax cheats. Then the journalists. And that's just what we know about. How much worse does it have to get before we say enough is enough?

Parallel construction undermines any internal solvency – our ev is predictive

Masnick 14

Mike Masnick, is the founder and CEO of Floor64 and editor of Tech Dirt, "Parallel Construction Revealed: How The DEA Is Trained To Launder Classified Surveillance Info," February 3, 2014, Tech Dirt, https://www.techdirt.com/articles/20140203/11143926078/parallel-construction-revealed-how-dea-is-trained-to-launder-classified-surveillance-info.shtml/NV

Last summer, Reuters revealed how the NSA and other surveillance organizations would share info with the DEA and other law enforcement agencies, but then tell them to reconstruct the evidence via a process called "parallel construction," so that the surveillance would not then be discussed in court. This is highly questionable, and probably illegal, as a defendant has the right to know all of the evidence being used against him or her, and should also be told how that evidence was gathered, to make sure the collection was legal. But what's being done with parallel construction, is that the intelligence community is able to give "hints" to law enforcement, allowing them to come up with various pretenses for an investigation, avoiding ever having to reveal that the NSA or others used potentially illegal surveillance efforts. One example given in that Reuters report was how DEA agents would suddenly be given a tip like this: "Be at a certain truck stop at a certain time and look for a certain vehicle." The DEA would then have the local police come up with some pretense to stop the truck... and then when evidence is found they can claim it was a random traffic stop, when the reality is anything but that. After the Reuters report, C.J. Ciaramella used Muckrock to request all DEA training material and official policies concerning "parallel construction" and recently received nearly 300 pages of documents, much of it redacted, but still which reveals that this is common practice at the DEA and widely known. Much of it is in the form of PowerPoint presentations, complete with speaker notes, which say things like how careful DEA agents need to be around classified information because "it can screw up your investigation." Another slide notes "the devil's in the details" and explains: Our friends in the military and intelligence community never have to prove anything to the general public. They can act upon classified information without ever divulging their sources or methods to anyway [sic] outside their

community. If they find Bin Laden's satellite phone and then pin point his location, they don't have to go to a court to get permission to put a missile up his nose. We are bound, however, by different rules. Our investigations must be transparent. We must be able to take our information to court and prove to a jury that our bad guy did the bad things we say he did. No hiding here. However, we are also bound to protect certain pieces of information so as to protect the sources and methods. To use it....we must properly protect it. There are also training materials that discuss how parallel construction works, as well as the fact that in "the new post-9/11" era, a "national consensus" has been formed making it easier for the intelligence community and law enforcement to share information. **It even refers to the federal courts as the intelligence community's "nemesis**." A lot of the documentation deals with how to deal with having classified information, and the focus seems to be on keeping that information away from anyone involved in the case. There is -- I kid you not -- a special group of prosecutors called "the Taint Review Team" -- to be called in when things get... well... tainted. In one part of the presentation, they talk about all sorts of ways to try to get a judge to avoid revealing classified information to defendants, and then have a plan "if all else fails" which includes redoing the indictment or dropping the case. That same presentation shows that there should be a "see no evil" plan -- which explains why DEA agents are often just told "go to this truck stop and look for this truck" without knowing any more. That way they "saw no evil" with evil being defined as questionably obtained intelligence. It appears that much of the DEA's arguments here rely on the Supreme Court's ruling in 1938 in Scher v. United States, in which a law enforcement agent was told some things by a source, and used that information to find and arrest the defendant handling whiskey (during Prohibition). The court said that how the agent found out about the information doesn't matter, so long as the agent saw illegal acts himself. And thus, the Supreme Court "enabled" the idea of parallel construction. That case pops up repeatedly throughout the documents, basically telling DEA agents: expect information to come from intelligence sources, but do your best to never find out why they know this stuff. Another presentation asks "what is the problem with combining IC (Intelligence Community) collection efforts & LEA (Law Enforcement Agency) investigations in US courtrooms?" and then explains that it presents constitutional problems... and that "Americans don't like it!" The note on that one points out that "even though we seek to protect our citizens, generally, we can only use techniques to achieve that objective, which are acceptable to our citizens." But that's not what they're actually doing or teaching. Instead, they're teaching how to keep doing the constitutionally questionable things that Americans don't like... and then hiding it from the courts, the American public and even the law enforcement folks themselves, in order to create a sort of plausible deniability that launders the fact that potentially illegal and unconstitutional surveillance was used to create the basis of the legal case. There's some more information in the documents, but it all basically points to the same basic thing: the less that law enforcement folks know, the better. If the law enforcement knows too much, call in the "Taint Review Team" to see what they can do to clean up, and see what you can use to get the judge to exclude classified evidence. All in all, it adds up to a nice little plan to allow the NSA to illegally spy on people, tell law enforcement just enough to target people, without ever revealing how they were caught via unconstitutional means.

AT//Delay

Presidential action more effective than Congressional – based on the Constitution

Huq, 12 (Aziz, Assistant professor of law, University of Chicago Law School, "Structural Constitutionalism as Counterterrorism", 8/23/12, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2135249) KW

The first presumption derived from the Separation of Powers turns on the executive's assumed comparative advantage in national security matters. This argument for executive primacy is rooted in the textual allocation of "the" executive power in the President and the concomitant authorizations of the "Take Care" Clause and the "Commander in Chief' Clause.20 It further finds support in Founding-era writings of Alexander Hamilton, an early advocate of broad executive prerogatives. 21 In the Federalist No. 70, Hamilton famously emphasized the capacity of the President to act with "[**d]ecision, activity, secrecy, and dispatch**., 22 Modem commentators amplify the Hamiltonianposition by underscoring the functional advantages of the presidency over the legislature in matters of security. 23 They assert that the executive has "critical advantages over a multi-member legislature in reaching foreign policy and national security decisions." 24 To exploit these advantages, "**the executive branch needs the flexibility to act quickly, possibly in situations where congressional consent cannot be obtained in time to act on the intelligence.**" 25

AT//FBI Key

The FBI cannot restraint itself
Lynch 11

Jennifer Lynch, is a senior staff attorney with the Electronic Frontier Foundation, "FBI Sanctioned for Lying About Existence of Surveillance Records," November 21, 2011, Electronic Frontier Foundation, https://www.eff.org/deeplinks/2011/05/fbi-chastised-court-lying-about-existence/NV

An order from the U.S. District Court for the Central District of California has revealed the FBI lied to the court about the existence of records requested under the Freedom of Information Act (FOIA), taking the position that FOIA allows it to withhold information from the court whenever it thinks this is in the interest of national security. Using the strongest possible language, the court disagreed: "The Government cannot, under any circumstance, affirmatively mislead the Court." Islamic Shura Council of S. Cal. v. FBI ("Shura Council I"), No. 07-1088, 3 (C.D. Cal. April 27, 2011) (emphasis added). This case may prove relevant in EFF's ongoing FOIA litigation against the FBI. As discussed further below, one of the issues in Shura Council was the FBI's extensive and improper use of "outside the scope" redactions. The agency has also used these heavily in at least one of our current cases — in areas where it is highly unlikely the material blocked out is actually outside the scope of our FOIA request. (see example to the left from our case seeking records on the government's push to expand federal surveillance laws). We'll be writing more about that case in the coming weeks and posting the documents we received on this site soon. Shura Council started five years ago in May 2006, after widespread reporting on the FBI's programs targeting Muslims after September 11, 2001. At that time, several Muslim citizens and organizations in Southern California, including the Islamic Shura Council of Southern California and the Council on American Islamic Relations (CAIR), submitted a broad joint FOIA request to the FBI seeking "[a]ny records relating or referring" to themselves, "including . . . records that document any collection of information about monitoring, surveillance, observation, questioning, interrogation, investigation and/or infiltration[.]" Shura Council I at 4. In 2008, after the FBI produced only minimal records, the requesters filed a federal lawsuit. The FBI then searched for and located additional records for nine of the plaintiffs, but these records were heavily redacted, with much of the information withheld as "outside the scope" of the plaintiffs' FOIA request. The FBI attested, in documents and declarations it submitted under oath to the court, that these were all the records that existed about the plaintiffs and that the materials labeled "outside the scope" were "not responsive" to the plaintiffs' FOIA request. After court ordered the FBI to submit full versions of the records in camera, along with a new declaration about the agency's search, the FBI revealed for the first time that it had materially and fundamentally mislead the court in its earlier filings. The unaltered versions of the documents showed that the information the agency had withheld as "outside the scope" was actually well within the scope of the plaintiffs' FOIA request. The government also admitted it had a large number of additional responsive documents that it hadn't told the plaintiffs or the court about. Id. at 7-8. If these revelations weren't bad enough, the FBI also argued FOIA allows it to mislead the court where it believes revealing information would "compromise national security." Id. at 9. The FBI also argued, that "its initial representations to the Court were not technically false" because although the information might have been "factually" responsive to the plaintiffs' FOIA request, it was "legally nonresponsive." Id. at 9, n. 4 (emphasis added).

The court noted, this “argument is indefensible,” id. at 9-10, and held, “the FOIA does not permit the government to withhold responsive information from the court.” (Id.)(upheld on appeal in Islamic Shura Council of S. Cal. v. FBI, __ F.3d __, No. 09-56035, at 4280-81 (9th Cir. Mar. 30, 2011) (“Shura Council II”).1 The court stated: The Government argues that there are times when the interests of national security require the Government to mislead the Court. The Court strongly disagrees. The Government’s duty of honesty to the Court can never be excused, no matter what the circumstance. The Court is charged with the humbling task of defending the Constitution and ensuring that the Government does not falsely accuse people, needlessly invade their privacy or wrongfully deprive them of their liberty. The Court simply cannot perform this important task if the Government lies to it. Deception perverts justice. Truth always promotes it. (Shura Council I at 17) (emphasis added). This is an important opinion for FOIA requesters because sometimes the only protection a FOIA requester has from the government's potentially arbitrary withholding of information is a court's in camera review of the full versions of documents. If the government were allowed to withhold information from the court, this protection would be meaningless and the role of judicial oversight in FOIA cases would be compromised. Unfortunately for the plaintiffs in Shura Council, this seems to be a hollow victory. Although the court did not restrain itself from using the strongest possible language to criticize the government’s actions (calling the FBI’s arguments “untenable,” id. at 3, “indefensible,” id. at 10, and “not credible” id. at 17) it also held that “disclosing the number and nature of the documents the Government possesses could reasonably be expected to compromise national security.” Id. 18. Therefore it did not order the government to release the records to the plaintiffs or even to reveal how many records turned up in the second search. And on appeal, the Ninth Circuit held that neither the plaintiffs nor their attorneys had the right to see the original version of the district court’s order (filed under seal) because it contained information the FBI considered to be “national security and sensitive law enforcement information.” (Shura Council II at 4286). It seems unlikely that, five years after the plaintiffs filed their FOIA request, the release of the information the FBI has on these individuals and organizations would truly threaten national security or an ongoing criminal investigation. None of the plaintiffs appears to have been arrested or retained in conjunction with a crime or foreign terrorist plot, so it seems more likely that this is yet another example of the government valuing secrecy over transparency. The district court’s April 27, 2011 order after remand is here, and the Ninth Circuit opinion remanding the case is here. UPDATE (November 21, 2011): In a later opinion, the district court sanctioned the government for lying. In issuing monetary sanctions against the DOJ, the court held, "the Government’s deception of the Court was without any factual or legal basis and simply wrong." (p. 19). The court noted issuing sanctions was necessary to "deter the Government from deceiving the Court again." (p. 2). Unfortunately, it's not clear this practice will end any time soon. The DOJ has been attempting to change its FOIA regulations to codify the procedures it used in this case. As the court noted, even though the proposed changes were withdrawn, "**the deceptive policy and practice of the DOJ with respect to asserting and applying exclusions under FOIA apparently remains intact."** (p. 19).

Laws will do nothing to stop FBI spying
Cushing 15

Tim Cushing, writer on technology misusage for Techdirt, “New York's Top Prosecutor Says We Need New Laws To Fight iPhone/Android Encryption,” January 13, 2015, Tech Dirt,

https://www.techdirt.com/articles/20150109/06144429646/new-yorks-top-prosecutor-says-we-need-new-laws-to-fight-iphoneandroid-encryption.shtml/NV

The greatest threat to law enforcement since the motocar continues to receive attention from entities aghast at the notion that peoples' communications and data might not be instantly accessible by law enforcement. Apple's decision (followed shortly thereafter by Google) to offer default encryption for phone users has kicked off an avalanche of paranoid hyperbole declaring this effort to be a boon for pedophiles, murders and drug dealers. New laws have been called for and efforts are being made to modify existing laws to force Apple and Google into providing "law enforcement-only" backdoors, as if such a thing were actually possible. New York County's top prosecutor, Manhattan DA Cyrus Vance -- speaking at an FBI-hosted cybersecurity conference -- is the latest to offer up a version of "there ought to be a law." Federal and state governments should consider passing laws that forbid smartphones, tablets and other such devices from being "sealed off from law enforcement," Manhattan District Attorney Cyrus Vance said today in an interview at a cybersecurity conference in New York. Sure. These entities could "consider" this. And then swiftly discard the idea. There's no good reason why millions of people's data and communications should be made less secure just to make capturing criminals -- a small minority of the population -- easier. There are only law enforcement reasons. And those reasons are specious, at best. Cops have been catching criminals since long before the rise of the cellphone and they'll continue to do so long after default encryption becomes standard operating procedure. But to hear opponents of Apple's move tell it, encryption-by-default is an unfair impediment to investigative and law enforcement agencies. "It's developed into a sort of high-stakes game," Vance said. "They've eliminated accessibility in order to market the product. Now that means we have to figure out how to solve a problem that we didn't create." Vance's portrayal of this decision is dishonest and self-serving, but it's his last sentence that is the most skewed. Law enforcement (along with investigative and national security agencies) did create this problem. They abused their powers to obtain warrantless access to metadata, data, communications, and anything stored locally on the phone. Cops routinely searched phones of those they detained without a warrant, something that was finally curbed by a Supreme Court decison. The NSA, FBI and law enforcement agencies all use the Third Party Doctrine to access call records, cell site location data and anything else that can be easily had without ever approaching a judge. So, they did bring this on themselves. And that's why (as the oft-used quote goes) the "pendulum" has "swung the other way." It's not marketing. It's a very specific reaction to years of unchecked government power. It's obvious the government can't restrain itself. So, these companies have made it "easier" for the government to refrain from abusing its power by making this decision for them. Sure, there's a limited market for more security, but making it default going forward gains these companies nothing in terms of new customers. It's not an option that's only available to people who buy certain phones or certain service contracts. It's for everyone who buys a phone. Vance echoes the statements of others in his attempt to portray this as a purely mercenary decision but the only thing this does is make him look stupider. After ticking the mandatory "crimes against children/murderers" emotional-plea checkbox, Vance goes on to cross "public safety" off the list of talking points. "This is an issue of public safety," Vance said. "The companies made a conscious decision -- which they marketed -- to make these devices inaccessible. Now it's our job to figure out how we can do our job in that environment." Incredibly, Vance portrays his deployment of every anti-encryption cliche as special and unique, claiming he's "going rogue" by speaking up on the subject. (Because everyone else has been oh so silent...) But there's nothing new being said here. Again, Vance pushes the "greed" angle, but it's his last sentence that's the most ridiculous. Vance -- and others like him -- aren't "figuring out" how to do their jobs in "this environment." They have no desire to do that. What they want is to change the environment. The new environment doesn't cater to their instant access desires, but rather than deal with the limitations and approach them intelligently, they've chosen to portray encryption-by-default as Google and Apple's new plan to make a ton of money selling smartphones to child molesters and murderers. They want the laws to change, rather than law enforcement. And all they've offered in support are panic-button-mashing "arguments" and heated hyperbole. The problem is that panic buttons and hyperbole are effective legislative mobilizers. As bad as Vance's ideas are, there's a good chance he'll be able to find a number of politicians that agree with him. **In all likelihood, the environment will be forced to adapt to law enforcement, rather than the other way around.**

AT//FISA Fails

FISA is not a rubber stamp, it can check the executive
Sales 14

Nathan Alexander Sales 14, Associate Professor of Law, Syracuse University College of Law, Summer 2014, "NSA SURVEILLANCE: ISSUES OF SECURITY, PRIVACY AND CIVIL LIBERTY: ARTICLE: Domesticating Programmatic Surveillance: Some Thoughts on the NSA Controversy", LexisNexis, 10 ISJLP 523/NV

The FISA court is often derided as a rubber stamp. But there are a number of indications that it does in fact serve as a real constraint on the executive branch. Over the three month period between July and September 2013, the court refused to approve nearly a quarter of the government's surveillance requests, insisting on "substantive changes" before okaying the applications—e.g., requiring officials to submit more information to justify the monitoring or altering the scope of the authority sought.92 The FISA court may not say "no" very often, but it pretty frequently says "not yet." Recently declassified documents suggest that the FISA court has meaningfully checked NSA bulk collection in particular.93 In May 2011, the administration told the FISA court about an over-collection problem in the PRISM program. Because of the way some communications are bundled, the NSA had been collecting some purely domestic communications (which may not be intercepted under section 702) in the course of collecting communications involving persons reasonably believed to be outside the United States (which may). After a series of written submissions, meetings between court and government personnel, and a hearing, the court on October 3, 2011 issued an 81-page opinion concluding that the program violated both the Fourth Amendment and section 702, principally because the NSA's minimization procedures were inadequate.94 The government responded by developing new procedures to segregate the permissible intercepts from the impermissible ones, applying the procedures to previous acquisitions, and purging tainted records from its database. The FISA court then ruled in opinions dated November 30, 2011 and September 25, 2012 that the revised program passed muster. A 2009 episode involving the telephony metadata program followed a similar pattern—the executive's discovery of violations, disclosure to the FISA court, judicial rebuke, institution of reforms, and judicial approval of the revised program.95

Executive self-restraint solves - FISA and other oversight mechanisms ensure accountability
Sales 14

Nathan Alexander Sales 14, Associate Professor of Law, Syracuse University College of Law, Summer 2014, "NSA SURVEILLANCE: ISSUES OF SECURITY, PRIVACY AND CIVIL LIBERTY: ARTICLE: Domesticating Programmatic Surveillance: Some Thoughts on the NSA Controversy", LexisNexis, 10 ISJLP 523/NV

At one level this is a dishearteningly familiar story of government misconduct. But the deeper lesson the episode reveals is that, when confronted with such errors, the FISA court is willing to intervene and enforce basic constitutional and statutory guarantees—which is exactly what we would expect an Article III court to do. **The PRISM incident also suggests that the government takes seriously**

its obligations to self-police and disclose problems to the court. Indeed, officials have an interest in doing so. **The government's ability to persuade the FISA court to approve its surveillance requests depends in large part on its credibility** with the judges. And that goodwill would dissipate if the court independently learned, such as though leaks, about violations that officials had failed to disclose. It would be a mistake to take too much comfort from this incident, since it is impossible to say how representative it is. Still, it provides some reason for optimism that FISA court oversight—and the internal oversight on which it depends—is more than perfunctory. A third noteworthy feature of PRISM, though not the metadata program, is the unusual transparency surrounding its adoption. PRISM appears to be a straightforward application of FISA section 702, which Congress enacted in 2008. The legislation was the result of a lengthy and detailed public debate touched off by revelations in late 2005 that the Terrorist Surveillance Program was intercepting certain international communications without judicial approval. During the ensuing three year national conversation, intelligence officials repeatedly explained to Congress and the public why they thought new statutory authority was necessary, and advocacy groups and other interested parties repeatedly challenged these representations and urged Congress to reject, or at least curtail, any new surveillance powers. Newspaper editorial pages, blogs, talk radio programs, and many other media organs hashed out the legal and policy issues. FISA was front-page news. In short, the section 702 program shouldn't come as a surprise because the nation thoroughly debated it for three years before Congress expressly approved it.

AT//Future President Rollback

The counterplan's binding and causes reticent agencies to follow on Duncan '10

[Prof Law Florida A&M. "A Critical Consideration of Executive Orders" *The Vermont Law Review*, 2010 ln]

Executive orders can serve the purpose of allowing the President to generate favorable publicity, such as when President Clinton signed an executive order on ethics, n493 and when President George W. Bush signed the first of a series of executive orders to launch his Faith-Based and Community Initiatives. n494 While these orders pay off political debts and thus may seem trivial, they nevertheless **create both infrastructural and regulatory precedents for future administrations**. Hence, they create an avenue for key constituencies of each administration to influence the executive structure as a whole without necessarily permitting that influence to extend to arenas of reserved for Congress. That is, while the President can act more swiftly and precisely to satisfy political commitments, the impact of his action will fall considerably short of analogous congressional action. This in turn serves to satisfy selected constituencies without giving them undue power via the presidency.¶

Executive orders have even served to create presidential commissions to investigate and research problems, and have been instrumental in solving remedial issues. n495 **Commission reports** that result from such orders can in [*398] turn **put pressure on Congress to enact legislation to respond to those problems**. President Franklin Roosevelt pursued this process when he issued a report of the Committee on Economic Security studying financial insecurity due to "unemployment, old age, disability, and health." n496 This report led to the Social Security Act. n497

No rollback of executive orders---empirics prove

Kraus and Cohen 2000 [George and Jeffrey, Chemistry Professor at University of Southern Carolina, Ph. D. in Political Science in 1979 from the University of Michigan and his major teaching and research interests include American Political Institutions and Public Policy, more particularly the Presidency, the Mass Media, and Economic Policy, Opportunity, Constraints, and the Development of the Institutional Presidency: The Issuance of Executive Orders, 1939-96, http://www.jstor.org/stable/2647599?seq=1#page_scan_tab_contents] Schloss

We use the annual number of executive orders issued by presidents from 1939 to 1996 to test our hypotheses. Executive orders possess a number of properties that make them appropriate for our purposes. First, the series of executive orders is long, and we can cover the entirety of the institutionalizing and institutionalized eras to date.6 Second, unlike research on presidential vetoes (Shields and Huang 1997) and public activities (Hager and Sullivan 1994), which have found support for presidency-centered variables but not president-centered factors, executive orders offer a stronger possibility that the latter set of factors will be more prominent in explaining their use. One, they are more highly discretionary than vetoes.7 More critically, presidents take action first and unilaterally. In addition, Congress has tended to allow executive orders to stand due to its own collective action problems and the cumbersomeness of using the legislative process to reverse or stop such presidential actions. Moe and Howell (1998) report that between 1973 and 1997, Congress challenged only 36 of more than 1,000 executive orders issued. And only two of these 36 challenges led to overturning the president's executive order. Therefore, presidents are likely to be very successful in implementing their own agendas through such actions. In fact, the nature of executive orders leads one to surmise that idiopathic factors will be relatively more important than presidency-centered variables in explaining this form of presidential action. Finally, executive orders have rarely been studied quantitatively (see Gleiber and Shull 1992; Gomez and Shull 1995; Krause and Cohen 1997)8, so a description of the factors motivating their use is worthwhile.9 Such a

description will allow us to determine the relative efficacy of these competing perspectives on presidential behavior.10

Empirics prove there are political barriers that check future rollbacks

Branum 02 [Tara, Associate, Fulbright & Jaworski L.L.P., Houston, Texas. J.D. University of Texas; Austin, Texas (2001); B.A. Rice University; Houston, Texas (1994). Texas Review of Law & Politics; Editor-in-Chief (Spring 2000-Spring 2001), Managing Editor, PRESIDENT OR KING? THE USE AND ABUSE OF

EXECUTIVE ORDERS IN MODERN-DAY AMERICA,
http://scholarship.law.nd.edu/cgi/viewcontent.cgi?article=1163&context=jleg] Schloss

The public perception problem is not limited to promises by political candidates. Congressmen and private citizens besiege the President with demands that action be taken on various issues.273 To make matters worse, once a president has signed an executive order, he often makes it impossible for a subsequent administration to undo his action without enduring the political fallout of such a reversal. For instance, President Clinton issued a slew of executive orders on environmental issues in the weeks before he left office.274 Many were controversial and the need for the policies he instituted was debatable.7 5 Nevertheless, President Bush found himself unable to reverse the orders without invoking the ire of environmentalists across the country. 276 A policy became law by the action of one man without the healthy debate and discussion in Congress intended by the Framers. Subsequent presidents undo this policy and send the matter to Congress for such debate only at their own peril. This is not the way it is supposed to be.

AT//IRS Key

The IRS cannot check itself – corrupt, lies and no internal checks
Granick and Sprigman 14

Jennifer Granick, Director of Civil Liberties at the Stanford Center for Internet and Society and former director of the EFF, Christopher Sprigman, professor of law at NYU, "NSA, DEA, IRS Lie About Fact That Americans Are Routinely Spied On By Our Government: Time For A Special Prosecutor," October 14, 2013, Forbes, http://www.forbes.com/sites/jennifergranick/2013/08/14/nsa-dea-irs-lie-about-fact-that-americans-are-routinely-spied-on-by-our-government-time-for-a-special-prosecutor-2/NV

It seems that every day brings a new revelation about the scope of the NSA's heretofore secret warrantless mass surveillance programs. And as we learn more, the picture becomes increasingly alarming. Last week we discovered that the NSA shares information with a division of the Drug Enforcement Administration called the Special Operations Division (SOD). The DEA uses the information in drug investigations. But it also gives NSA data out to other agencies – in particular, **the Internal Revenue Service, which, as you might imagine, is always looking for information on tax cheats.** The Obama Administration repeatedly has assured us that the NSA does not collect the private information of ordinary Americans. Those statements simply are not true. We now know that the agency regularly intercepts and inspects Americans' phone calls, emails, and other communications, and it shares this information with other federal agencies that use it to investigate drug trafficking and tax evasion. Worse, DEA and **IRS agents** are told to lie to judges and defense attorneys about their use of NSA data, and about the very existence of the SOD, and to make up stories about how these investigations started so that no one will know information is coming from the NSA's top secret surveillance programs. "Now, wait a minute," you might be saying. "How does a foreign intelligence agency which supposedly is looking for terrorists and only targets non-U.S. persons get ahold of information useful in IRS investigations of American tax cheats?" To answer that question, let's review this week's revelations. Back in 2005, several media outlets reported that NSA has direct access to the stream of communications data, carried over fiber optic cables that connect central telephone switching facilities in the U.S. with one another and with networks in foreign countries. Reports suggested that the NSA had installed equipment referred to as "splitter cabinets" at main phone company offices, where they make a copy of all data traveling on the fiber optic cable and route it into a secret room where computers scan through the information – searching for names and terms that are themselves secret — as it goes by. For years, the federal government refused to comment on these reports. But on August 8, an unnamed senior administration official confirmed this practice to the New York Times. We also learned that the NSA can grab information off these fiber optic cables in near real time using a tool called XKeyscore (XKS). Searching the firehose of Internet and telephone data as it flows takes an immense amount of computing power. The XKS system dumps a portion of the communications information NSA snatches into a truly immense local storage "cache." This cache can keep network information for a few days, depending on the amount of traffic. This gives the NSA's computers time to search through what otherwise would be an unmanageable torrent of emails, phone calls, chats, social network posts, and other communications. And importantly, XKS searches do not involve just communications "metadata". The XKS system searches the contents of our Internet and telephone communications. Which is directly at odds with

repeated Administration statements suggesting that NSA mass surveillance was limited to metadata. To seize and search through all of this information without a warrant, the agency must comply with just a few legal limitations. Under the FISA Amendments Act, the NSA is not allowed to intentionally collect purely domestic information. That is, the NSA can search communications it believes begin or terminate in another country, either based on the facility where the information is collected (for example, an undersea cable) or other signifier, like an IP address that suggests origination abroad. Of course, these determinations are subject to error, particularly when the surveilled facility is in the U.S. and carries a substantial amount of purely domestic traffic. To reduce the amount of purely domestic traffic that ends up on the desks of NSA analysts, the agency relies on post-seizure "minimization" procedures. For several reasons, however, these procedures are fundamentally inadequate to protect communications privacy. First, the minimization procedures are themselves secret. Moreover, by law, purely domestic communications that the NSA inadvertently collects need be deleted only if they "could not be" foreign intelligence information – a provision that requires the NSA to delete very little. Some minimization procedures have been leaked to the public, and these show that the government may "retain and make use of "inadvertently acquired" domestic communications if they contain usable intelligence, information on criminal activity, threat of harm to people or property, are encrypted, or are believed to contain any information relevant to cybersecurity." Even otherwise privileged communications between individuals and their lawyers are not deleted. The agency merely stores those in a separate database so they are not sent to a law enforcement agency for use in a criminal case. Once the NSA identifies the subset of international or "one-end" foreign communications (i.e., those where a foreigner is either a sender or recipient), analysts are supposed to search only for "foreign intelligence" information. But since "foreign intelligence" includes anything relevant to the conduct of U.S. foreign affairs, this limitation alone imposes no real restraint on NSA's warrantless spying. Certainly, the NSA isn't limited to counterterrorism operations. In undertaking their searches, NSA analysts use either "strong" or "soft" selectors. "Soft" selectors are a broad kind of search that pulls up messages based on content or even the language in which a message is written. When the NSA uses soft selectors, it can search the vast amounts of information it collects to retrieve all Internet users' discussions of particular topics or in particular languages. The potentially very broad scope of searches using soft selectors is quite frightening, as ordinary Americans' communications are likely to show up in search results. "Strong" selectors pull up information associated with a particular known individual. The Obama Administration has repeatedly assured us that these strong selectors may only target non-U.S. persons. But screenshots of the user interface for submitting selector queries tell a different story. Published by the Guardian, they show that NSA analysts are presented with dropdown lists of preapproved factors the NSA accepts as sufficient proof that a person is a foreigner, including being "in direct contact with (a) target overseas" or the use of storage media (like a server located abroad) seized outside the U.S. So any U.S. person who talks to a foreigner that the NSA has identified as a target, or who stores data on a server outside the U.S. (as someone might well do if emailing from a foreign hotel room) may be presumed to be a foreigner. And that's not even the worst of it. Leaked NSA documents also suggest that the agency will presume that a person is a foreigner whenever there is no information suggesting otherwise. That sort of willful blindness gives the NSA a lot of leeway to target Americans. Worse, we now know that the NSA's assertion that it does not "target" U.S. persons is either a lie, or is about to become one. Leaked NSA documents show that in 2011, the NSA changed its "minimization" rules to allow its operatives to search for individual Americans' communications using their name or other identifying information. Such a change would turn "minimization" into a blanket authority to

warrantlessly spy on Americans – in defiance of specific legal restrictions prohibiting this sort of domestic spying. Senator Ron Wyden has said that the law provides the NSA with a loophole potentially allowing "warrantless searches for the phone calls or emails of law-abiding Americans", and raised the issue when he met with President Obama on August 1. This is the first time we've had evidence that the NSA has — or will have — the authority to warrantlessly search its databases with the specific intent of digging up information on specific U.S. individuals. We can sum up very simply – at this moment, the NSA enjoys virtually unrestricted power to spy on Americans, without a warrant or any particular suspicion that any person spied upon has done anything wrong. Our phone, email and potentially other records are fair game for bulk collection. The contents of our communications with people overseas are also fair game, so long as there is an approved foreign intelligence purpose for the collection. The NSA does not believe that any stored emails are protected by the Fourth Amendment, so it can collect them from providers with little restraint. As far as we know, the only category of information the NSA currently believes is off limits to mass surveillance are the contents of phone calls it knows in advance are solely between Americans. This is an astonishing development in the U.S., a nation that, until recently, carefully restricted the power of its domestic spying agencies by forcing them to submit narrow requests for spying authority to a court, which would issue a warrant if the government showed probable cause to believe that the surveillance target was engaged in some sort of wrongdoing. At this point, it's clear those limits are gone. The United States is now a mass surveillance state. In last week's press conference, President Obama reassured the nation that "America isn't interested in spying on ordinary people." In other words, do not worry, because the information will only be used for narrow counterterrorism or broader foreign intelligence purposes. But the latest revelations show that these assurances too are a lie. Under current U.S. surveillance law, the NSA may share with domestic law enforcement information obtained both through authorized surveillance, and information unlawfully but unintentionally collected, if it contains evidence of a crime. This rule was worrisome when the NSA was only conducting targeted surveillance of foreign powers. It is terrifying now that the NSA scans virtually all American cross-border communications. And this is especially true in light of the recent reports showing that any number of other three-letter agencies are howling for access to NSA data for use in investigations of Americans' drug use, tax evasion, and even copyright infringement. Usually, these agencies would need at least warrants based on probable cause that an individual was committing a crime before they could obtain the contents of our communications, and would need to certify to a public court that email or phone records are relevant to an ongoing criminal investigation before it could collect such traffic data. But if they get their hands on NSA data, all these bothersome civil liberties protections simply vanish. Which brings us to the Drug Enforcement Administration (DEA). As we noted previously, the DEA has a secret division called the Special Operations Division or SOD. The SOD receives intelligence intercepts, wiretaps, informants and a massive database of telephone records from its partner agencies, of which the NSA is just one, to distribute to authorities across the nation to help them launch criminal investigations of Americans. The SOD gets information from the NSA and **shares it with, among other agencies, the IRS. And this is where things get truly ugly. When agents receive SOD information and rely on it to trigger investigations, they are directed to omit the SOD's involvement from investigative reports,** affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use "normal investigative techniques to recreate the information provided by SOD." IRS agents receiving SOD data, which presumably can include information from the NSA, have been

similarly instructed. They are instructed, in other words, to create a fake investigative file, and to lie. To lie, in particular, to defense lawyers and to judges, about the source of the evidence used in criminal prosecutions. By hiding the fact that information comes from NSA surveillance, the government both masks the extent to which NSA's domestic spying is used to trigger investigations of Americans, and prevents legal challenges to highly questionable surveillance practices like bulk phone record collection, warrantless access to American communications with friends and family overseas, and retention and use of illegally obtained domestic calls and emails. This is outrageous conduct. It is the sort of thing you expect from the Chinese government, or one of the now-vanished governments of the Warsaw Pact. And there is no stronger proof of the dangers of the NSA's domestic spying effort than the fact that the government has consistently lied about it and attempted to cover it up. Think for just a moment about the stories J. Edgar Hoover could have plausibly concocted about Dr. Martin Luther King, Jr. or any other civil rights activist with this kind of detailed information. The Obama Administration has gone after leakers, and the journalists at outlets like the Associated Press or the New York Times who use them as sources, with unprecedented force. Think about what the current Attorney General, Eric Holder, could do to bring down these reporters who cover – sometimes in ways the Obama Administration doesn't like — the conduct of American foreign policy. **At this point, it's plain to see that the Obama Administration has no intention of honestly fixing this mess. So it's time now for Congress to act**. A good first step would be to appoint a Special Prosecutor with wide power to subpoena Administration officials, and to bring criminal indictments where appropriate. Congress should then begin the process of reforming surveillance law to make absolutely clear that the NSA has no power to conduct warrantless mass surveillance of Americans. First they came for the terrorists and the foreigners, and no one did anything. Then they came for the drug dealers. Then the tax cheats. Then the journalists. And that's just what we know about. How much worse does it have to get before we say enough is enough?

AT//No Authority

President has the authority – Congressional authorization is unnecessary and doesn't have necessary expertise.

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

Critics have argued that the NSA's electronic surveillance is illegal because the AUMF did not explicitly mention wiretapping or surveillance. ' 2 Of course it does not mention detentions, either, which the Supreme Court later upheld as authorized by Congress, in spite of a law on the books known as the Anti-Detention Act.'83 Critics essentially argue that Congress must enact a grocery list of specific powers and otherwise the President cannot fight a war. For instance, FISA prohibits electronic surveillance within the United States **without congressional permission**.' However, in the AUMF, Congress authorized the President "to use all necessary and appropriate force . . . [against those] he determines" were involved with the 9/11 attacks, or those who aid, support, or harbor those involved.'85 Individuals who are communicating with suspected al Qaeda operatives after 9/11 are likely to fall within the scope of the AUMF. The power to use force impliedly includes the power to use surveillance and intelligence to find the targets.'86 According to the critics, Congress authorized the President to pull the trigger, but also ordered him to wear a blindfold.

Obviously, Congress cannot legislate in anticipation of every circumstance that may arise in the future. That is one of the reasons, along with the executive branch's advantages in expertise and structural organization, why Congress delegates authority. Those who consider themselves legal progressives generally support the administrative state and vigorously defend broad grants of authority from Congress to the agencies of the executive branch." 7 Agencies such as the Federal Communications Commission or the Environmental Protection Agency exercise powers over broad sectors of the economy under the incredibly vague and broad congressional mandate that they regulate in the "public interest."' s These agencies make decisions with enormous effects, such as which parts of the radio spectrum to sell, s9 or how much pollution to allow into the air, 9° all with little explicit guidance or thought from Congress.

Yet, when Congress delegates broad authority to the President to defend the nation from attack, critics demand that Congress list every power it wishes to authorize.' While the threats to individual liberty may be greater in this setting, it makes little sense to place Congress under a heavier burden to describe every conceivable future contingency that might arise when we are fighting a war, perhaps the most unpredictable and certainly the most dangerous of human endeavors. Rather, we would expect and want Congress to delegate power to that branch, the Executive, which is best able to act with speed to combat threats to our national security.'92 War is too difficult to plan for with fixed, antecedent legislative rules, and war also is better run by the executive, which is structurally designed to take quick, decisive action. If the AUMF

authorized the President to detain and kill the enemy,'93 the ability to search for them is necessarily included.

Constitutional framers intentionally gave Executive more power than Congress.

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

The Framers well understood this principle. They rejected extreme republicanism, which concentrated power in the legislature, and created an executive with its own independent powers to manage foreign affairs and address emergencies which, almost by definition, cannot be addressed by existing laws."' The power to protect the nation, Hamilton wrote in the Federalist Papers, "ought to exist without limitation," because "it is impossible to foresee or define the extent and variety of national exigencies, or the correspondent extent and variety of the means which may be necessary to satisfy them."2'13 It would be foolhardy to limit the constitutional power to protect the nation from foreign threats: "[t]he circumstances that endanger the safety of nations are infinite, and for this reason no constitutional shackles can wisely be imposed on the power to which the care of it is committed."2 4

The Framers located the responsibility to respond to emergency and war in the Presidency because of its ability to act with unity, speed, and secrecy.2 "5 In the Federalist Papers, Hamilton observed that "[d]ecision, activity, secrecy, and dispatch will generally characterise [sic] the proceedings of one man, in a much more eminent degree, than the proceedings of any greater number."2 6 "Energy in the executive," said Hamilton, "is essential to the protection of the community against foreign attacks."2 7 Wartime, that most unpredictable and dangerous of human endeavors, therefore ought to be managed by the President.218 "Of all the cares or concerns of government, the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand."2'19

Congress defers to the president – Constitutional practice and action proves

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

If ever there were an emergency that Congress could not prepare for, it was the war brought upon the United States on 9/11. FISA was a law written with Soviet spies working out of their embassy in Washington, D.C. in mind. 2 ° No one then anticipated war with an international terrorist organization wielding the destructive power of a nation. The Presidency was the institution of government **best able to respond quickly to the 9/11 attacks and to take measures to defeat al Qaeda's further efforts**. While the certainty and openness of a congressional act would certainly be desirable, the success of the NSA surveillance program depends on secrecy and agility, two characteristics Congress as an institution lacks.

But, critics respond, Congress foresaw that war might increase demands for domestic wiretapping, and still prohibited the President from using electronic surveillance without its permission. Why should Con gress's view not prevail here, as it would prevail in any other domestic question? It is simply not the case that the President must carry out every law enacted by Congress. 222 The Constitution is the supreme law of the land, and neither an act of Congress nor an act of the President can supersede it.223 If Congress passes an unconstitutional act, such as a law ordering the imprisonment of those who criticize the government, the President must give force to the higher law, that of the Constitution. 24 Jefferson did just that as President when faced with the Alien and Sedition Acts. 25 He took the position that he, "believing the law to be unconstitutional, was bound to remit the execution of it, because that power has been confided to him by the Constitution. '226 That does not mean that the President is "above the law, ' 227 it only means that the Constitution is above the Congress, and the President. FISA might be unconstitutional if it were read to forbid the President from gathering information necessary to prevent attacks on the United States in wartime.2 8

If the critics were right, and Presidents are duty bound to obey any and all acts of Congress, even those involving the Commander-in-Chief power, Congress could have ordered FDR not to attempt an amphibious landing in France in World War II, Truman to attack China during the Korean War, or JFK to invade Cuba in 1962. But Presidents such as Jefferson, Jackson, Lincoln, and FDR believed that they had the right to take action, following their interpretation of the Constitution rather than the views of Congress or the Supreme Court, especially in their role as Commander-in-Chief.229 Decades of American constitutional practice **reject the notion of an omnipotent Congress**. While Congress has the sole power to declare war, neither Presidents nor Congresses have acted under the belief that a declaration of war must come before military hostilities abroad.23° Without declarations of war or any other congressional authorization, Presidents have sent troops into hostilities abroad many times.' Other conflicts, such as both Persian Gulf Wars, received "authorization" from Congress but not declarations of war.232

AT//No Empirics

CP solves--- empirics prove that self-restraint is possible especially when there could be large scale losses

Sales 10 [Nathan, Assistant Professor of Law, George Mason University School of Law, SELF RESTRAINT AND NATIONAL SECURITY, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1664610] Schloss

The wall offers a third example of how worries about excessive operational costs can produce self restraints. A good deal of information sharing between intelligence officials and criminal investigators would have been permissible under the law as it stood in the 1990s. FISA itself contained no express limits on data exchange, and a pair of Justice Department directives established a mechanism for information to flow between the department's cops and spies. From the standpoint of operators, information sharing was utility-maximizing. It enabled analysts to piece together the entire intelligence "mosaic" – the bits and pieces of information that, taken individually, might not signify much at all, but that take on new meaning when seen in light of other data points.169 Yet officials nevertheless restricted data exchange between the intelligence and law enforcement worlds. In their eyes, sharing was utility-reducing.

Consider first the decision to interpret FISA as barring surveillance unless its primary purpose was foreign intelligence, as well as their use of sharing as the metric by which the purpose of an operation was judged. Policymakers plausibly could have construed FISA as permitting "hybrid" operations – i.e., where the government has a dual purpose of collecting foreign intelligence and enforcing criminal laws against national security offenses – just as the FISA court of review did in 2002.170 Their reluctance to do so may have stemmed from a belief that the expected costs of such a reading were excessive. If the FISA court disagreed with that interpretation – i.e., if the court concluded that information sharing had so altered the nature of an operation that its primary purpose was no longer foreign intelligence – it would reject the agency's surveillance applications. The consequences would be dire indeed: DOJ's wiretaps would go dark. With those consequences looming, the expected benefits of sharing must have seemed inchoate and remote. Intelligence analysts theoretically could improve their products by "connecting the dots," but no one could point to a particular terrorist plot that had ever been disrupted as a result. By contrast, the expected costs of pursuing an aggressive interpretation of FISA were concrete and immediate – an adverse ruling from the FISA court might bring much (if not all) of the department's national security surveillance to a screeching halt.

Empirics prove the executive can establish self-restraint--- blockade on info sharing

Sales 10 [Nathan, Assistant Professor of Law, George Mason University School of Law, SELF RESTRAINT AND NATIONAL SECURITY, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1664610] Schloss

A final example of self-restraint concerns information sharing. On its face, the Foreign Intelligence Surveillance Act does nothing to restrict agencies from exchanging data with one another. Yet over the course of several decades, the Justice Department applied that statute to erect a "wall" between intelligence officials and criminal investigators. Two related developments were instrumental in the wall's construction. First, the Justice Department as a whole concluded that FISA's

surveillance tools were unavailable in situations where the government had a hybrid purpose of both collecting foreign intelligence and enforcing federal criminal laws; FISA could only be used if the government's purpose did not have a significant law enforcement element. Second, the DOJ division responsible for overseeing FISA matters began to police the flow of information between law-enforcement officers and intelligence agents. The result was to choke off information sharing and other forms of coordination between cops and spies. The USA PATRIOT Act of 2001 proverbially "tore down the wall," but the now moribund restrictions remain an illuminating example of how and why the government ties its own hands.

Enacted in 1978, FISA established a legal framework for wiretapping foreign national security threats. While the executive branch previously conducted such surveillance unilaterally, FISA required it to receive approval from a special tribunal known as the Foreign Intelligence Surveillance Court. FISA's standards for electronic surveillance are similar to Title III, the federal law that governs wiretaps in ordinary criminal investigations, but they are looser in several important respects. Perhaps the most important difference is that, while criminal investigators ordinarily must establish probable cause to believe that a crime has been, is being, or is about to be committed, FISA requires only probable cause to believe that the target is a foreign power or an agent of a foreign power.99 Because of FISA's lower standards, there was a risk that investigators might use it to circumvent Title III's more rigorous requirements.100 To minimize that danger, Congress provided that FISA tools would only be available if the government certified to the FISA court that "the purpose" of the proposed surveillance was foreign intelligence.101

The first major development in the wall's construction occurred in the 1980s, when the executive branch, along with some courts and members of Congress, began to interpret FISA as requiring that foreign intelligence be "the primary purpose" of proposed surveillance.102 How did one discern purpose? A great deal hinged on that question. If a wiretap's aim was foreign intelligence, authorities were allowed to use FISA. If not – e.g., if an intelligence-related purpose was diluted by the presence of an ancillary purpose of, say, enforcing federal narcotics laws – then FISA was off the table. Investigators would have to make do with the ordinary Title III authorities. The Justice Department answered the question by measuring the amount of information sharing between law-enforcement and intelligence officials. The more sharing there was, the less likely the primary purpose of the surveillance was to gather foreign intelligence (and the more likely the FISA court would reject the surveillance application). By contrast, the more rigidly intelligence operations were cordoned off from law enforcement, the more likely it was that the surveillance would have foreign intelligence as its primary purpose (and the more likely it was to receive the FISA court's blessing).

This reading of FISA's purpose requirement was not the only plausible way to parse that statutory language. As the Foreign Intelligence Surveillance Court of Review pointed out in 2002, enforcing criminal laws and pursuing foreign intelligence objectives are not mutually exclusive.103 Sometimes criminal prosecution will serve the government's intelligence needs; one way to neutralize the threat posed by a spy would be to indict him for espionage. One can imagine the Justice Department adopting a broad interpretation that would permit FISA tools to be used in a wide range of cases – and, derivatively, that would permit extensive information sharing. This is not to say that the court's aggressive interpretation of FISA is more persuasive than DOJ's cramped reading. What's significant is that, instead of adopting a (plausible) reading that would have maximized its discretion to coordinate

intelligence and criminal investigations, DOJ embraced an (equally plausible) interpretation that sharply limited its discretion.

By the mid-1990s the wall's foundation had been laid. The second development occurred in 1995, when the Justice Department issued a pair of internal information-sharing directives. The first, issued by Deputy Attorney General Jamie Gorelick, applied to the parallel criminal and intelligence investigations of the 1993 World Trade Center bombing. The directive's purpose was to "clearly separate the counterintelligence investigation from the more limited . . . criminal investigations" in order to "prevent any risk of creating an unwarranted appearance that FISA is being used to avoid procedural safeguards which would apply in a criminal investigation."104 Toward that end, DOJ directed that information uncovered by intelligence officials in the course of their investigation "will not be provided either to the criminal agents, the [U.S. Attorney's office], or the Criminal Division" except in special circumstances. That "include[ed] all foreign counterintelligence relating to future terrorist activities."105 DOJ was quite clear that the guidelines were not an interpretation of what was required by FISA, but rather "go beyond what is legally required."106

Though the Gorelick memo imposed severe information-sharing limits on agents working the World Trade Center investigations, they weren't supposed to be insurmountable. The directive expressly contemplated that intelligence and law-enforcement officials would share information about their parallel investigations in certain circumstances. In particular, FBI intelligence officials were ordered to notify criminal investigators if, during their investigation of the bombing, "facts or circumstances are developed that reasonably indicate that a significant federal crime has been, is being, or may be committed."107

The second set of guidelines, issued by Attorney General Janet Reno on July 19, 1995, applied to all DOJ criminal and intelligence investigations. It directed that criminal investigators "shall not . . . instruct the FBI on the operation, continuation, or expansion of FISA electronic surveillance."108 It further insisted that cops and spies must avoid "either the fact or the appearance of the Criminal Division's directing or controlling the [foreign intelligence] or [foreign counterintelligence] investigation toward law enforcement objectives."109 The Reno guidelines did not impose strong limits on information sharing between cops and spies. Instead, they were aimed squarely at the one type of coordination that was likely to raise the FISA court's hackles – criminal investigators directing an intelligence operation. Indeed, the Reno guidelines affirmatively directed cops and spies to share information in certain circumstances. Echoing the Gorelick memo, the Reno directive provided that if "facts or circumstances are developed that reasonably indicate that a significant federal crime has been, is being, or may be committed," the FBI was to share the information with the criminal division.110

Despite these escape valves, cops and spies did not in fact exchange information freely.111 A fair amount of the responsibility can be laid at the feet of the Office of Intelligence Policy and Review. OIPR is the DOJ component charged with overseeing FISA matters. Its lawyers present surveillance applications to the FISA court and otherwise represent the government in proceedings before that body. They also serve an internal screening function, reviewing proposed applications to ensure compliance with the applicable legal rules, and weeding out the ones they don't think will pass muster before the court.

OIPR took three steps that solidified its role as DOJ's information-sharing watchdog. First, almost immediately after the 1995 directives were issued, OIPR began applying the Gorelick memo's strict limits

to all foreign intelligence investigations, not merely the 1993 World Trade Center investigation. The Gorelick restrictions metastasized; rules that were adopted for a single investigation came to govern all cases. "As a result, there was far less information sharing and coordination between the FBI and the Criminal Division in practice than was allowed under the department's procedures."112 Second, OIRP played "gatekeeper,"113 policing whatever information flow did take place. Neither the Gorelick nor Reno directives mentioned any role for OIPR in regulating exchanges of information tending to suggest "that a significant federal crime has been, is being, or may be committed." But OIPR assumed responsibility for doing so, apparently on the basis of a threat. According to the 9/11 Commission, "[t]he Office threatened that if it could not regulate the flow of information to criminal prosecutors, it would no longer present the FBI's warrant requests to the FISA Court."114 OIPR used its status as the government's sole representative before the FISA court as leverage to establish a role for itself in policing internal information flow.

The office's third move was the boldest of all. At some point in late 1998, as the Justice Department was ramping up its investigation of the East Africa embassy bombings, a senior OIPR lawyer met with the chief judge of the FISA court and encouraged him to issue an order adopting the wall restrictions, solidifying them into a firm legal requirement. The judge agreed; "[t]he FISA court simply annexed the attorney general's guidelines, making the wall a matter of court order."115 The court wasn't shy about enforcing those restrictions. In 2000, the court went even further. Now assisted by the same lawyer who had lobbied it to adopt the OIPR restrictions (he'd left DOJ and now was serving as the FISA court's first clerk in several decades), the court issued a standing order that "every [FBI] agent who had access to FISA-derived intelligence would have to sign a special certification, promising that none of the information would be conveyed to criminal investigators without the FISA court's permission."116 In effect, the court had become OIPR's surrogate; it was enforcing as a matter of law the information-sharing limits that OIPR had developed and applied internally within the Justice Department.

It's now become conventional wisdom that the wall resulted in chronic information sharing failures. Yet it was not legally required – at least not until OIPR's crafty lobbying of the FISA court. FISA itself did not restrict information sharing. Neither did the Justice Department's internal directives – one applied only to the 1993 World Trade Center investigation, the other only barred prosecutors from directing intelligence investigations, and both allowed officials to share evidence that significant crimes were afoot. Instead, the wall was built by bureaucratic choice. Rather than applying FISA and the 1995 directives according to their literal terms – to say nothing of aggressively construing them to have even less bite – OIPR embraced a maximalist vision of the limits on information sharing. The wall thus represents a classic case of self restraint – one element within the government imposed restrictions on other elements' ability to conduct national security operations, restrictions that the governing law did not clearly require.

AT//Internal Restraints Fail

Distributed checks and balances solve

Bodansky, 12 (Daniel, Lincoln Professor of Law, Ethics and Sustainability Arizona State University Sandra Day O'Connor College of Law; "Book Review of Jack Goldsmith, Power and Constraint: The Accountable Presidency after 9/11"; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2296192)//JPM

Power and Constrain analyzes the system of "distributed checks and¶ balances" that led to these results – suggesting a new way of thinking about¶ who is doing the checks and balances. Goldsmith goes beyond the traditional¶ focus on the interactions between the three branches of the federal¶ government. As he describes it, **many of the checks on the President came¶ not from Congress or the Courts but from "giant distributed networks of¶ lawyers, investigators, and auditors, both inside and outside the executive¶ branch**" (xi-xii): from within the executive branch, military and national¶ security lawyers and inspector generals; from without, the press and the¶ human rights bar.

Internal checks are sufficient to solve – and external restrains fail

Johnsen 07 [Dawn - Professor of Law, Indiana University School of Law - Bloomington; Acting Assistant Attorney General (1997-98), Deputy Assistant Attorney General (1993-96), Office of Legal Counsel, U.S. Department of Justice. "SYMPOSIUM: Constitutional "Niches": The Role of Institutional Context in Constitutional Law: Faithfully Executing the Laws: Internal Legal Constraints on Executive Power", The Regents of the University of California UCLA Law Review, August 2007, lexis] BJS

The most obvious checks on the President are the other two branches of the federal government: the U.S. Congress and the courts. Our constitutional system of separate and overlapping powers creates the potential for a vibrant legislature and judiciary to check a President who transgresses legal [*1561] boundaries and violates rights in order to accomplish policy ends. n1 Debate has raged, domestically and internationally, about the details of desirable external checks on the Bush Administration's counterterrorism policies. While the Republicans controlled Congress prior to 2007, most attention understandably focused on the courts, with commentators differing passionately about the level of deference the courts should afford the political branches n2 and about the judiciary's potential to safeguard civil liberties in times of emergency. n3 Thus far, the U.S. Supreme Court has taken a relatively aggressive and nondeferential stance in favor of protecting those whose rights the President's policies may have violated. n4 The Court's approach is warranted: Regardless of the underlying policies' substantive merits, the courts as well as Congress should hold the President [*1562] accountable for attempts to implement policies with arrogant disrespect for legal constraints and for the coordinate branches' constitutional authorities. Our recent history, though, has demonstrated the **inherent inadequacies of the courts and Congress as external checks on the President. An approach of issue-by-issue review and oversight even by a vigilant judiciary and Congress will incompletely constrain a President who, in the name of national security, is willing to undermine the rule of law**. This Article therefore seeks to elevate an essential source of constraint that often is underappreciated and underestimated: legal advisors within the executive branch. The obstacles to judicial or congressional

review of particular executive branch actions on matters of war and national security - especially during times of crisis - are familiar. The courts face (and create) difficult justiciability requirements, in part out of respect for executive authority and expertise. These impediments to judicial review mean, for example, that there may be no party who ever has standing to challenge a clearly unlawful governmental action. Courts may deny or delay relief even to parties with standing because of the political question doctrine, the state secrets privilege, deferential standards of review, or years of complex litigation. With regard to Congress, oversight obviously tends to be least effective when the President's political party dominates, but even with the shift to Democratic control in 2007, significant obstacles remain to Congress's ability to check executive action. Congress tends to defer strongly to the commander-in-chief on matters of war and national security even in times of divided government. Legislative efforts face the possibility of a filibuster or a presidential veto. Perhaps the greatest challenge to legislative oversight is that Congress has already enacted legislation with regard to many of the Bush Administration's most objectionable policies. Much of the controversy in fact stems from President Bush's claimed authority to refuse to comply with congressional statutes, including the Foreign Intelligence Surveillance Act (FISA), n5 the anti-torture statute, n6 and the numerous other laws that are [*1563] the subjects of signing statements in which Bush asserts the right to refuse to enforce the laws in ways that conflict with his view of his office's constitutional authority. n7 When Congress already has legislated and the President unjustifiably threatens nonenforcement, Congress is left with the options of resource-intensive oversight to attempt to police compliance, indirect retribution (such as through appropriations and appointments), and the blunt instrument of impeachment. Executive branch secrecy further hinders both judicial and congressional review. **At times, of course, secrecy is essential to preserving national security**, but the Bush Administration has taken the level of executive branch secrecy to a new and unwarranted extreme. By its nature, secrecy undercuts the efficacy of external checks. Congress or potential litigants may not even know about unlawful executive action unless someone in the government violates administration policy, and perhaps statutory prohibitions, to leak information. Such leaks were responsible for the public disclosure of the Bush Administration's legal opinions and policies on coercive interrogations and torture, n8 the National Security Administration's domestic surveillance program that operated outside the requirements of FISA, n9 and the use of secret prisons overseas to detain and interrogate suspected terrorists. n10 Ultimately, even with the current Supreme Court's relatively strong willingness to protect rights in the face of unlawful executive action, coupled with scrutiny from the press and advocacy organizations, the Bush Administration has engaged in years of largely unconstrained illegal practices. [*1564] On a daily basis, the President engages in decisionmaking that implicates important questions of constitutionality and legality. Whether to seek congressional authorization before committing the nation to war or other hostilities, what limits, if any, to set (or when set by Congress, to respect) on torture and other coercive interrogation techniques, when to publicly release information regarding the course of war or counterterrorism efforts - all are issues over which the President exercises enormous practical control, and all can profoundly affect individual lives and the course of history. The possibility of after-the-fact external review of questionable executive action is an inadequate check on executive excesses. Presidents also must face effective internal constraints in the form of executive branch processes and advice aimed at ensuring the legality of the multitude of executive decisions. The proposition that the President's own legal advisors can provide an effective constraint on unlawful action understandably engenders a high degree of skepticism - especially in light of recent events. One of President Bush's legacies undoubtedly will be the deepening of Americans' cynicism about presidential adherence to the rule of law. The Bush

Administration, however, also provides some evidence to the contrary, for example, in the resistance to advice given by the U.S. Department of Justice's Office of Legal Counsel (OLC) regarding torture from lawyers and other advisors elsewhere in the executive branch and later from within OLC itself. n11 Internal checks alone, of course, are insufficient. But we debase our commitment to democracy and justice if we do not view legal advice from within the executive branch as an essential component of efforts to safeguard civil liberties, the constitutional allocation of governmental authority, and the rule of law. We invite failure if we allow our cynicism to excuse presidential abuses as simply expected - in effect relieving Presidents (and those who serve them) of their obligation to take care that the laws be faithfully executed, as the U.S. Constitution commands. [*1565] This Article therefore considers questions of executive branch legal interpretation. How can internal interpretive processes and standards foster or undermine adherence to the rule of law? What norms and procedures should govern executive action? What may be gleaned from recent strains and failures? How might the courts and Congress not only hold Presidents accountable for particular failures to uphold the law, but also encourage processes that generally enhance the quality of executive branch legal advice and decision making?

The executive can check itself – many mechanisms

1. Inter-agencies

Raven-Hansen 09

Peter Raven-Hansen, received his B.A. and J.D. at Harvard University and teaches national security law, counterterrorism law and civil procedure and evidence at Georgetown Washington University, "Executive Self-Controls: Madison's Other Check on National Security Initiatives By The Executive," Spring of 2009, Journal of Civil Rights and Economic Development Volume 23 Issue 4, http://scholarship.law.stjohns.edu/cgi/viewcontent.cgi?article=1051&context=jcred/NV

The first internal control or check is the check of inter-agency process. By this, I mean nothing more than sending a proposed decision out of an agency to obtain approval or input from other agencies. Inter-agency process is common across the government, but particularly common in matters of national security that fall to an iron triangle of the Defense, State, and Justice Departments, all of which ordinarily would have to be consulted on many national security decisions. The details of this internal check vary, but typically the inter-agency consultation operates at a relatively unseen and unglamorous level of inter-agency working groups. Even more prosaically, it can take the highly informal form of circulating drafts among agencies for comment. Occasionally, it will operate at a higher level in principals' committees involving Cabinet-level or subcabinet people and their deputies. The designation of U.S. citizen enemy combatants may seem an unlikely example of this check, given the seemingly haphazard way in which alien enemy combatants have been designated according to press accounts and the fitful Combatant Status Review Tribunal process. But the former designation process was described in detail by then-Attorney General Alberto Gonzales.2 Judge Gonzales told a Bar Association meeting that the process begins with a written assessment of intelligence by the CIA and its recommendation to the Department of Defense about whether a U.S. citizen should be designated an enemy combatant for purposes of military detention. The Department of Defense then makes an independent written assessment, which it forwards with the CIA package to the Attorney General. The Attorney General solicits a formal legal opinion from the

Office of Legal Counsel, based in part on the materials supplied by the CIA and Department of Defense. He also gets a factual recommendation from his Criminal Division. All of these materials are then sent back to the Secretary of Defense with a recommendation. The Secretary of Defense assembles this package and the CIA package and sends the whole thing over to the President with his final recommendation. The White House Counsel reviews the package, repackages it, and makes his own recommendation to the President. The President reviews the package (this is perhaps the least credible part of this account), gets briefed, and then makes his decision. Even if, at this remove from 9/11, you are skeptical of Bush Administration assertions about national security processes, and therefore doubt the details of this one, I would wager that something like this must go on. No administration designates U.S. citizens as enemy combatants with a dartboard, given the dire consequences (military detention and possibly trial and even execution, without the protections of the ordinary criminal process). So what? Exactly how does the inter-agency process serve as a check on the abuse of power? First, the overlap of interested agency jurisdictions brings different constituencies of lawyers and other experts into play. They supply some diversity of viewpoints, even if the involved agencies have no veto. Although the President calls the final shots, even Presidents desire consensus, which generates some pressure in the process to accommodate divergent views. A search for consensus or even more limited agreement, in turn, empowers dissidents within the agencies because it provides allies, influence, and cover. The net result is less group think and, in theory, better decisions.

2. Intra-agencies

Raven-Hansen 09

Peter Raven-Hansen, received his B.A. and J.D. at Harvard University and teaches national security law, counterterrorism law and civil procedure and evidence at Georgetown Washington University, "Executive Self-Controls: Madison's Other Check on National Security Initiatives By The Executive," Spring of 2009, Journal of Civil Rights and Economic Development Volume 23 Issue 4, http://scholarship.law.stjohns.edu/cgi/viewcontent.cgi?article=1051&context=jcred/NV

A second internal check is afforded by intra-agency process, which presumably works in much the same way and with the same consequences as the inter-agency process. The circulation of proposed decisions within the agency also empowers dissidents and harnesses diversity of thinking. And, if nothing else, it catches errors, or at least increases the odds of avoiding them. Consider, for example, the reported process for preparing and submitting an application to the Foreign Intelligence Surveillance Court (FISC) for electronic surveillance under the Foreign Intelligence Surveillance Act (FISA). The statute actually doesn't specify any internal process, other than requiring the Attorney General to sign off on an application; but the FBI and the Department of Justice have necessarily created one anyway. Oversimplifying, I understand that an application or request is made at the field agent level. A supervisor has to sign off on it. It goes up to the next layer of command. They sign off on it, and they, in turn, send it over to the National Security Law Section of the FBI or its successor for approval and to package the application. Then it goes to independent lawyers at Justice. They sign off on it and then it goes to the Attorney General for approval, before it is finally submitted to the FISC. The result is another check on the government's use of FISA,3 indeed, one that may well be more effective, as a practical matter, in policing illfounded or overbroad applications than the external check of judicial approval by the FISC itself.4

3. Agency culture
Raven-Hansen 09

Peter Raven-Hansen, received his B.A. and J.D. at Harvard University and teaches national security law, counterterrorism law and civil procedure and evidence at Georgetown Washington University, "Executive Self-Controls: Madison's Other Check on National Security Initiatives By The Executive," Spring of 2009, Journal of Civil Rights and Economic Development Volume 23 Issue 4,
http://scholarship.law.stjohns.edu/cgi/viewcontent.cgi?article=1051&context=jcred/NV

Agency culture is another internal check, perhaps the most important, but at the same time, the most nebulous. I am referring to an institutional self-awareness, almost an institutional ego about the quality of its products (decisions, opinions, etc.) and about how its professional personnel differ from (are better than) everybody else in the Executive Branch. A classic example with which most of us (lawyers) are familiar is the "officer-of-the Court" culture of Solicitor General's Office. 5 The Office of the Legal Adviser to the State Department also has a distinctive culture.6 The Legal Adviser is the highest authority in international law. The Adviser is a representative of international law in the U.S. government - a voice not just for interpreting but, consistent with U.S. national interests, for advocating international law. 7 The Office of Legal Counsel [hereinafter "OLC"] notoriously in the loop in the torture debate and other major national security initiatives by this Administration, historically had a distinctive culture, too, to which I will turn shortly. The bedrock attributes of all these agency cultures is what I would call the lawyer culture. What is it? Well, we've all in this room been trained in it, so you can answer this for yourself. But as both a long-time trainer and long-past trainee, I can attest that the number one principle that we bring out without fail in every class in every law school in the United States is competency. It's no accident that the first rule of the ABA Model Rules of Professional Conduct is that "[a] lawyer shall provide competent representation to a client." 8 A competent lawyer researches thoroughly. She anticipates contrary arguments. She deals carefully with precedent. She analyzes and advises objectively. Thus, OLC alumnae declared as first principle that the OLC provide "accurate and honest appraisals of applicable law." 9 The competent lawyer looks at the bad precedent, as well as the good, and tells the client about both. Business clients may hate their lawyers for being "nay-sayers," but the opposite of nay-sayer is "yes-man." Nay-saying objectivity is especially important in the small inner circle of presidential decisionmaking to counter the tendency towards groupthink and a vulnerability to sycophancy. Finally, a competent lawyer also respects precedent, at least so far as to explain it away when the client contemplates a departure. In national security law, where there are fewer relevant judicial precedents, prior OLC opinions may substitute, and respect for this "precedent" requires explaining away or distinguishing them. The drag of precedent may well make legal analysis inherently conservative, but that is just another way of saying that it serves as an internal check on government conduct informed by such analysis.

4. Blackmailing
Raven-Hansen 09

Peter Raven-Hansen, received his B.A. and J.D. at Harvard University and teaches national security law, counterterrorism law and civil procedure and evidence at Georgetown Washington University, "Executive Self-Controls: Madison's Other Check on National Security Initiatives By The Executive," Spring of 2009, Journal of Civil Rights and Economic Development Volume 23 Issue 4, http://scholarship.law.stjohns.edu/cgi/viewcontent.cgi?article=1051&context=jcred/NV

Fourth (and appropriately last because this is really an internal check that only comes into play when the rest have failed), is the check provided by threats to "go public" by leaking embarrassing information or publicly resigning. After 9/11, we have seen a series of leaks of OLC and Department of Defense legal analyses, and of details of legally controversial national security initiatives, such as the Terrorist Surveillance Program and coercive interrogation. While we have had almost no public protest resignations by senior government officers since the Saturday night massacre in the Watergate era, the press reported that then-Deputy Attorney General James Comey and thirty other Justice Department lawyers successfully threatened to resign in order to get the Terrorist Surveillance Program changed. 10

5. Self-interest
Raven-Hansen 09

Peter Raven-Hansen, received his B.A. and J.D. at Harvard University and teaches national security law, counterterrorism law and civil procedure and evidence at Georgetown Washington University, "Executive Self-Controls: Madison's Other Check on National Security Initiatives By The Executive," Spring of 2009, Journal of Civil Rights and Economic Development Volume 23 Issue 4, http://scholarship.law.stjohns.edu/cgi/viewcontent.cgi?article=1051&context=jcred/NV

A final answer to the Cheney objection is that many of the internal checks are imposed by the Executive in its own self-interest - the interest of avoiding an external check. The intra-agency FISA procedures which I summarized are driven by the prospect of FISC disapproval. The Executive uses the process in part to earn deference from the court. Other inter-agency and intra-agency procedures are driven by the possibility of due process review. They anticipate procedures that courts might impose. Internal checks are also put in place and enforced to forestall new legislation, should Congress eventually examine the initiatives that result. It gives the President the argument that, "We vetted this carefully and oversaw it closely, so there is no need for new legislation [that is, a statutory check]."

The executive imposes privacy barriers for communication on itself
Sales 12

Sales 2012 – Assistant Professor of Law, George Mason University School of Law (7/3, Nathan Alexander, Journal of National Security Law & Policy, 6.227, "Self-Restraint and National Security/NV

A final example of self-restraint concerns information sharing. On its face, the Foreign Intelligence Surveillance Act does not restrict agencies from exchanging data with one another. Yet over the course of several decades, Justice Department officials applied that statute to erect a "wall" between intelligence analysts and criminal investigators. Two related developments

were instrumental in the wall's construction. First, the Justice Department as a whole concluded that FISA's surveillance tools were unavailable in situations where the government had a hybrid purpose of both collecting foreign intelligence and enforcing federal criminal laws; FISA could only be used if the government's purpose did not have a significant law enforcement element. Second, the DOJ division responsible for overseeing FISA matters began to police the flow of data between the law enforcement and intelligence worlds. The result was to choke off information sharing and other forms of coordination between cops and spies. The USA PATRIOT Act of 2001 proverbially "tore down the wall," but the now moribund restrictions remain an illuminating example of how and why officials tie their own hands. Enacted in 1978, FISA established a legal framework for wiretapping foreign national security threats. While the executive branch previously conducted such surveillance unilaterally, FISA required it to receive approval from a special tribunal known as the Foreign Intelligence Surveillance Court. FISA's standards for electronic surveillance are similar to Title III, the federal law that governs wiretaps in ordinary criminal investigations, but they are looser in several important respects. Perhaps the most important difference is that, while criminal investigators ordinarily must establish probable cause to believe that a crime has been, is being, or is about to be committed, FISA requires only probable cause to believe that the target is a foreign power or an agent of a foreign power.134 To minimize the danger that investigators might use FISA to circumvent Title III's more rigorous requirements,135 Congress provided that FISA tools would only be available if the government certified to the FISA Court that "the purpose" of the proposed surveillance was foreign intelligence.136

AT//NSA Key

Self-restraint solves NSA advantages

Risen 13 [Tom, technology and business reporter for U.S. News & World Report, President Obama Proposing 'Self-Restraint' on NSA, http://www.usnews.com/news/articles/2013/12/06/president-obama-proposing-self-restraint-on-nsa] Schloss

President Barack Obama said he will propose new limits on the surveillance of the National Security Agency during an interview when he defended the national security importance of the spying while conceding it has been "more aggressive" overseas.¶ Obama in August ordered a review group of legal and technology experts to "assess whether, in light of advancement in communications technologies," national security surveillance by U.S. intelligence agencies fails to maintain the public trust. The five-member group, consisting of academics and former government officials, is scheduled to submit its final report to Obama by Dec. 15.¶ "I'll be proposing some self-restraint on the NSA, and to initiate some reforms that can give people more confidence," Obama said during an interview with MSNBC on Thursday. "The NSA actually does a very good job about not engaging in domestic surveillance, not reading people's emails, not listening to the contents of their phone calls. Outside of our borders, the NSA's more aggressive. It's not constrained by laws."¶ This interview came on the heels of the Washington Post's report on Wednesday that the NSA is collecting nearly 5 billion records each day on the location of cell phones around the world. The media has reported numerous similar examples of the NSA's extensive monitoring of Internet traffic and phone calls, citing classified documents leaked to the press by former agency contractor Edward Snowden. Since those reports began in June, the Obama administration ordered increased transparency of documents related to the surveillance, including opinions from the Foreign Intelligence Surveillance Court, which oversees requests for data from intelligence agencies. During the MSNBC interview, Obama said "we do have people who are trying to hurt us," but added that national security needs can be balanced with oversight on privacy rights from the FISC and Congress.¶ "Young people, rightly, are sensitive to the needs to preserve their privacy and to retain Internet freedom," Obama said. "And by the way, so am I."¶ Obama may announce increased transparency, along with new limits and oversight on the NSA, but that may not be enough to address the privacy concerns of the agency's bulk data collection, said Kevin Bankston, policy director of the New America Foundation's Open Technology Institute.¶ "Rather than allowing the NSA to engage in mass surveillance to collect everyone's data and then decide who to target, the president should ensure that the NSA engages only in targeted surveillance; that is, first deciding who to target and then collecting only their data," said Bankston, a privacy and free expression lawyer. "**True leadership in this moment would be for President Obama to say to the American people and to the rest of the world 'I am putting an end to the NSA's bulk collection programs**, because it is contrary to the American way to treat every person who uses the telephone or the Internet like a terrorism suspect."

The NSA cannot restrain itself
Friedersdorf 13

Conor Friedersdorf, is a staff writer at the Atlantic for national affairs and politics, “The High Likelihood That Future NSA Abuses Will Occur,” August 1, 2013, The Atlantic, http://www.theatlantic.com/politics/archive/2013/08/the-high-likelihood-that-future-nsa-abuses-will-occur/278261/NV

The Guardian's latest scoop concerns the ability of National Security Agency analysts to search vast databases of emails, online chats, and web browsing histories, among other online activity. Glenn Greenwald notes that the NSA is lawfully required to obtain a FISA warrant if the target of surveillance is

a U.S. person. But it provides analysts "the technological capability, if not the legal authority, to target even US persons for extensive electronic surveillance without a warrant," he reports, and to reveal IP addresses of everyone who visits "any website the analyst specifies." That alarms many Americans. The Guardian article doesn't provide any evidence of NSA analysts targeting U.S. persons without a warrant, as critics of the newspaper are quick to note. Yet there is still ample reason to worry. It is naive -- in fact, it is absurd -- to imagine that the scores or hundreds of NSA analysts given access to these databases will never commit abuses. There are bad apples in every human enterprise. Agencies that operate under the cover of secrecy are that much more vulnerable to abuses. U.S. surveillance agencies have a particularly sordid history of abusing the power given them. Illegal, warrantless spying on Americans was secretly conducted as recently as the Bush years, and the people responsible for the illegal abuses were granted retroactive immunity. Edward Snowden himself demonstrated that the NSA cannot predict when one of its own might suddenly abscond with top secret information that no one planned to be made public. Then there is the lesson that 9/11 taught us. In its aftermath, the U.S. government panicked. Federal officials institutionalized behavior, including the torture of other humans, that would've been unthinkable before the terrorist attack, and a traumatized nation required years of reflection to turn against the most extreme practices. Could the NSA be trusted to restrain itself after a future terrorist attack, or would the safeguards its defenders keep referencing be swept away by a new generation of panicked officials? Or what if a higher-up at the NSA didn't panic, but exploited the panic of everyone else? Unless the NSA is reined in, it is all but certain that future abuses will occur. The question its defenders ought to be asked is, "Would you support these programs even if you knew future abuses were inevitable?" True, every law-enforcement tool is abused at one time or another. But the consequences of NSA abuses are catastrophic in a way without precedent in American history because their law enforcement tool contains private information about almost every citizen. How many government officials could be blackmailed with already collected material that no one has looked at ... yet? The NSA is nevertheless out with another defense of its program. The statement, posted online Wednesday, is worth a close look. "The implication that NSA's collection is arbitrary and unconstrained is false," it begins. Recall that this is an agency that collects metadata on all phone calls. In other words, its approach to data collection isn't "arbitrary," it's virtually comprehensive. "NSA's activities are focused and specifically deployed against -- and only against -- legitimate foreign intelligence targets in response to requirements that our leaders need for information necessary to protect our nation and its interest," the NSA's statement continues. Let's read carefully. The NSA's activities may be "focused and specifically deployed against -- and only against" foreign targets. But the fact that it isn't "focused" on American citizens doesn't mean their phone data, Internet behavior, and other information isn't being collected in vast, searchable databases. If and when access to that information is abused, the focus of the program that first collected it won't matter. The NSA says: XKEYSCORE is used as part of NSA's lawful foreign signals intelligence collection system. By the nature of NSA's mission, which is the collection of foreign intelligence, all of our analytic tools are aimed at information we collect pursuant to lawful authority to respond to foreign intelligence requirements - nothing more. The analytic tools may be "aimed at" information relevant to foreign intelligence. That doesn't mean that those same tools aren't hoovering up lots of domestic information with no relevance to foreign intelligence, or that an abuse-minded NSA employee couldn't aim the tools elsewhere. NSA: Allegations of

widespread, unchecked analyst access to NSA collection data are simply not true. Access to XKEYSCORE, as well as all of NSA's analytic tools, is limited to only those personnel who require access for their assigned tasks. Those personnel must complete appropriate training prior to being granted such access - training which must be repeated on a regular basis. This training not only covers the mechanics of the tool but also each analyst's ethical and legal obligations. In addition, there are multiple technical, manual and supervisory checks and balances within the system to prevent deliberate misuse from occurring. In other words, analyst access to the data isn't "widespread and unchecked," it is widespread and checked. Given the secrecy surrounding the agency, it is actually impossible to verify the system of checks. But even presuming that there is excellent ethical training, as well as "multiple technical, manual and supervisory checks and balances within the system to prevent deliberate misuse," the same can be said of the U.S. military, the IRS, the NYPD, the prison at Gitmo -- **serious abuses happen all the time in government agencies despite government training and checks and balances. Operating as if they won't ever happen is ahistorical and reckless**. "Our tools have stringent oversight and compliance mechanisms built in at several levels," the NSA states. Similarly, there were stringent oversight and compliance mechanisms to prevent telecom companies from conspiring with the government to wiretap Americans without warrants. But it still happened after 9/11. So long as the NSA operates largely in secret, with tools that enable intrusions into privacy on an extreme scale, the odds that there will eventually be serious abuses approach 100 percent. If and when that happens, Presidents Bush and Obama, NSA Director General Keith Alexander, Senator Dianne Feinstein, and many others will share the responsibility for the totally preventable catastrophe they enabled. The annals of history encompass people who helped to build vast surveillance states. Do we think well of any of them?

Internal restraints for the NSA will not work – five warrants

Waldman 13

Paul Waldman, is a senior writer for the American Prospect who also blogs for the Washington Post and the Week, "Is It Already Too Late to Stop the NSA?" December 16, 2013, American Prospect, http://prospect.org/article/it-already-too-late-stop-nsa/NV

The revelations about the scope of National Security Agency surveillance from the documents released to the public by Edward Snowden have been so numerous and so extraordinary that I fear we may be becoming numb to them. That's partly because there's just been so much, one revelation after another to the point where the latest one doesn't surprise us anymore. It's also partly because mixed in with the genuinely distressing surveillance programs are some things that seem almost ridiculous, like the idea of NSA agents trying to unearth terrorist plots in World of Warcraft. But there are some basic facts about this whole affair that should make us all frightened. We can sum it up as follows: 1. The scope of the NSA's surveillance is far greater than almost anyone imagined. 2. Barack Obama is not only perfectly fine with that surveillance, he was perfectly fine with it being kept secret from the American public. 3. As much discussion and consternation as Snowden's revelations produced, there has been no restraint on those surveillance powers, nor is there likely to be any time soon. 4. As new technologies and techniques of surveillance are developed, the NSA will incorporate them into its arsenal, continually expanding its reach. 5. Before long, there will be a Republican president who will appoint hundreds of other Republicans to high-

ranking positions within the intelligence apparatus. Many of these will be former Bush administration officials and/or people who would like nothing more than to expand the NSA's surveillance of both foreigners and Americans as much as is technologically feasible. We may have no more than three years to do something about it. Or it may be too late already. Most of this you don't need to be reminded of. Every day, the NSA gathers information on who we call and who we email. They're exploiting browser cookies and the location-tracking information in smartphones to monitor people's movements online and in the real world. They're using social media to reconstruct Americans' social networks, to keep tabs on who they're associating with. They track text messages and credit-card purchases. They tap into phone and data lines. President Obama responded to these revelations by appointing an advisory panel to assess the situation; that panel's findings will be released soon. They're going to recommend some modest oversight, but they're not going to recommend that the NSA stop any of the surveillance it's currently doing. The administration will probably take one or two of the recommendations they find least inconvenient, then throw the rest of it in the trash. The NSA will continue to use every kind of surveillance it was using before the Snowden revelations. That brings us to the future. Imagine it's five years from now, and some new technology (or advancement in an existing technology) allows a whole new kind of data collection. For instance, let's say that face-recognition software takes a dramatic leap forward. Let's also say that new kinds of data-sorting algorithms allow the huge amount of face-recognition data available from the millions of security cameras spread throughout the country to be gathered, arranged, and analyzed, to the point where the government can assemble a comprehensive record of where much of the population of the United States is at any given time, so long as they're outside. If and when that becomes possible, do you think the NSA will say, "We really shouldn't gather this information; the privacy concerns are too great"? Not on your life. They'll say, "Just think of how valuable this will be in stopping the next terrorist attack!" We don't know how long it will be before the government can do that, but we can be all but certain that they will be able to do it eventually. Now I want you to imagine one more thing. As disappointed as many liberals are with how aggressive the Obama administration has been in conducting surveillance, what do you think will happen when the next Republican administration comes into office and finds itself in possession of all these wonderful toys? In case you've forgotten what the last Republican administration was like, you can get a nice refresher from Ryan Lizza's recent article in the New Yorker on the development of our surveillance state. I want to point to just one extraordinary excerpt:

Despite attempts at transparency, the NSA will not stop squo surveillance

Turley 15

Jonathan Turley, is a national recognized legal scholar who has lead journals from famous schools such as Harvard, Duke, Northwestern and Cornell, "NSA Abuses Never End," January 4, 2015, Jonathan Turley.com, http://jonathanturley.org/2015/01/04/nsa-abuses-never-end/NV

We do not support the ableist language in this card

The instances of reported abuse of our country's laws by our Intelligence services seems never-ending. The National Security Agency, or NSA is at the top of the list when it comes to violations of our laws and even its own rules and procedures that are allegedly designed to protect our

privacy. Pursuant to a court order in a case brought by the ACLU, the NSA is required to provide a list of its abuses on a quarterly basis. Of course, the NSA redacts most of what it puts in its own disclosures. "Every quarter, the National Security Agency generates a report on its own lawbreaking and policy violations. The reports are classified and sent to the President's Intelligence Oversight Board. It's unclear what happens once they get there. Those reports are now online dating back to late 2001. The NSA has posted redacted versions of the documents to its website. "These materials show, over a sustained period of time, the depth and rigor of NSA's commitment to compliance," the agency's self-congratulatory introduction declares. "By emphasizing accountability across all levels of the enterprise, and transparently reporting errors and violations to outside oversight authorities, NSA protects privacy and civil liberties while safeguarding the nation and our allies." These NSA characterizations are not credible. Even the uninformed observer will be suspicious of the spy agency's account upon learning that far from voluntarily releasing redacted versions of these documents, it was forced to do so by Freedom of Information Act requests filed by the ACLU. The NSA fought to continue suppressing these documents from the public, even though the redacted versions in no way harm U.S. national security. A court ordered the documents released." Reader Supported News Only in Washington, D.C., would anyone, let alone a government agency, claim it is being transparent in reporting its mistakes, when it refused to release a listing of those "errors" until a court ordered them to do so! This is the same agency that the New York Times disclosed in February of 2014 was caught spying on American attorneys working on behalf of a foreign government. Professor Turley discussed this case here. It shouldn't surprise anyone that this willful violation of the law was only learned through the Snowden document disclosures. **So much for willing transparency.** The NSA has been caught violating a client's right to discuss their legal case with their attorneys in private and numerous instances of spying on individual citizens and what repercussions have resulted? It is hard to find any substantial penalties or sanctions due to exposed or disclosed illegal activities by the NSA. To further the point that the NSA seems immune to prosecution or sanctions for its illegal activities is one case that was uncovered in the quarterly reports discussed earlier. "For the most part, the reports don't appear to contain anything especially new, but I was struck by this particular violation: The OIG's Office of Investigation initiated an investigation of an allegation than an NSA analyst had conducted an unauthorized intelligence activity. In an interview conducted by the NSA/CSS Office of Security and Counterintelligence, the analyst reported that, during the past two or three years, she had searched her spouse's personal telephone directory without his knowledge to obtain names and telephone numbers for targeting….Although the investigation is ongoing, the analyst has been advised to cease her activities. Wait a second. She was caught using NSA surveillance facilities to spy on her husband and was merely told to cease her activities? Wouldn't it be more appropriate to, say, fire her instantly and bar her from possessing any kind of security clearance ever again in her life? What am I missing here?" Mother Jones While the idea of spying on a spouse or maybe a significant other might not be a danger to National Security, it is still an obvious violation of the law, or at the least, a violation of the NSA's rules that this analyst was supposed to be working under. As the Mother Jones link above suggests, shouldn't this analyst be fired or maybe, God forbid, be prosecuted for illegally spying? Who can forget the case Professor Turley discussed in 2009 when it was discovered that the NSA was illegally attempting to wiretap members of Congress? Of course, Congress was outraged, just like Sen. Diane Feinstein was outraged when it was

discovered that the CIA has been spying on the Senate's computers. Of course heads rolled when the CIA admitted hacking into Senate computers, right? Uh, no, just a few apologies and the Senate moved on. The same immunity to the law and to common sense can be found at the NSA. What do we have to do to bring the NSA into legal bounds and prevent illegal and unauthorized spying on ordinary citizens and other agencies and branches of the government while at the same time acknowledging our need to spy on legitimate enemies? It seems obvious to this observer that the internal controls that are in place at the NSA are ineffective at best and likely useless at worst. Can The NSA or any intelligence agency investigate itself? Are internal agency watchdogs a waste of time? Would a civilian agency or board set up to oversee these rogue intelligence agencies be useful in bringing these agencies into compliance, and is that even possible in our current political climate? A quick review before the pop quiz; the NSA admits to spying illegally and not doing anything about it and there are no repercussions. How ~~stupid~~ are we to allow this to happen? Additional Source: Bloomberg "The views expressed in this posting are the author's alone and not those of the blog, the host, or other bloggers. As an open forum, weekend bloggers post independently without pre-approval or review. Content and any displays or art are solely their decision and responsibility."

Specifically the executive fails to restrain the NSA

Buttar 14

Shahid Buttar, civil rights lawyer who also leads the Bill of Rights Defense committee and is the Co-director of the Rule of Law Institute, "Beyond CIA and NSA Spying: Corruption," May 19, 2014, The Huffington Post, http://www.huffingtonpost.com/shahid-buttar/beyond-cia-and-nsa-spying-corruption_b_4981558.html/NV

NSA: Lies to Congress and the Public to Cover Up Mass Surveillance Observers from across the political spectrum have agreed that Director of National Intelligence James Clapper either misled Congress or lied outright when asked a straightforward question by Sen. Ron Wyden (D-Ore.) in a March 2013 Senate hearing. With advance notice, Clapper was asked whether the NSA collects "any type of data at all on millions ... of Americans." He answered, "No sir. Not wittingly." In June the Snowden revelations shocked the globe and proved that his statement was simply not true, not to mention self-serving. Many people have gone to prison for less-significant lies than that. Responding to Clapper's admittedly false answer to Wyden, seven Republican members of Congress wrote to the attorney general in December seeking a Justice Department investigation into potential perjury. They correctly noted, "Congressional oversight depends on truthful testimony," which is why "witnesses cannot be allowed to lie to Congress." Members of Congress from both parties and both chambers are not alone in calling for accountability: Citizens for Responsibility and Ethics in Washington called for an investigation nearly a year ago, followed by the Bill of Rights Defense Committee and grassroots activists and organizations from across the country. Obama: On the Sidelines While His Legacy Is Sealed How else might we describe demonstrably false, self-serving statements by NSA officials paid by taxpayers to perform a public service, or CIA efforts to secretly hamstring investigations into their activities by the elected officials charged with overseeing them? In any country that claims to be a democracy, the most elegant answer is a single word -- corruption -- with crucial connotations for a contemporary debate that remains limited, even after the Snowden revelations. As members of Congress have challenged executive agencies covering up their crimes, President Obama has absurdly

attempted to evade responsibility. This maneuver, like his initial decision to "look forward, not back" on torture, is what I described then as "an illegal capitulation to illegitimate political interests carrying profound consequences for human rights and freedom both in the U.S. and around the world." President Obama's evasion is the antithesis of President Truman's reminder that "the buck stops here" and undermines his own prior commitment to releasing at least parts of the Senate's torture report. Coming from an administration that has accepted poorly deserved awards for transparency in ironically appropriate secret meetings, this tacit support for executive lawlessness is a spectacular -- though entirely unsurprising -- failure.

AT//Perception/Signal Solvency Deficits

The counterplan may be process-based, but it still requires Presidential implementation of the aff – that solves any signaling args
Brzezinski '12

[Zbigniew Brzezinski, national security advisor under U.S. President Jimmy Carter, 12/3/12, Obama's Moment, www.foreignpolicy.com/articles/2012/12/03/obamas_moment]

In foreign affairs, the central challenge now facing President Barack Obama is how to regain some of the ground lost in recent years in shaping U.S. national security policy. Historically and politically, in America's system of separation of powers, it is the president who has the greatest leeway for decisive action in foreign affairs. He is viewed by the country as responsible for Americans' safety in an increasingly turbulent world. He is seen as the **ultimate definer** of the goals that the United States should pursue through its diplomacy, economic leverage, and, if need be, military compulsion. And the world at large sees him -- for better or for worse -- as the **authentic voice of America**. To be sure, he is not a dictator. Congress has a voice. So does the public. And so do vested interests and foreign-policy lobbies. The congressional role in declaring war is especially important not when the United States is the victim of an attack, but when the United States is planning to wage war abroad. Because America is a democracy, public support for presidential foreign-policy decisions is essential. But **no one in the government** or outside it **can match the president's authoritative voice when he speaks and then decisively acts for America**. This is true even in the face of determined opposition. Even when some lobbies succeed in gaining congressional support for their particular foreign clients in defiance of the president, for instance, many congressional signatories still quietly convey to the White House their readiness to support the president if he stands firm for "the national interest." And a president who is willing to do so publicly, while skillfully cultivating friends and allies on Capitol Hill, can then establish such intimidating credibility that it is politically unwise to confront him. This is exactly what Obama needs to do now.

Obama's sufficiently credible to

Goldsmith, 12 (Jack, Professor of Law at Harvard University, former assistant Attorney General to the Office of Legal Counsel under the Bush Administration; March 12, 2012; "Power and Constraint: The Accountable Presidency After 9/11"; W. W. Norton & Company; 1 edition)//JPM

the Obama team early on developed a reputation for restraint and commitment to the rule of law in its counterterrorism policies. This reputation helped legitimate the extraordinary powers the President must exercise in the long war against Islamist terrorists. The President simply cannot exercise these war powers over an indefinite period unless Congress and the courts support him. And they will not support him unless they think he is exercising his powers responsibly, under law, with real constraints, to address a real threat. The Obama administration successfully conveyed this impression and was rewarded for it. The administration's superficial changes to the military detention rationale, combined with President Obama's reputation for commitment to the rule of law, helped to make military detention relatively uncontroversial to judges. New internal procedures for employing the state secrets doctrine brought no apparent

change in the executive branch's employment of the doctrine. But it did help in the courts, one of which cited the procedures to support its conclusion that "the government is not invoking the privilege to avoid embarrassment or escape scrutiny" of its policies.50 The mall changes that Obama helped to foster in military commis-ions, combined with his robust embrace of them, put the commissions on a much stronger footing than they were under Bud . In these and other ways, the Obama administrations self-imposed checks combined with its reputation for law-abidingness and rhetoric of self-constraint to strengthen—and validate—the Bush counterterrorism program as it stood in late 2008.

Executive unilateral action solves the same signal of credibility

Eric **Posner 7**, Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

Where the executive is indeed ill motivated in any of these ways, constraining his discretion (more than the voters would otherwise choose) may be sensible. But the executive may not be ill motivated at all. Where the executive is in fact a faithful agent, using his increased discretion to promote the public good according to whatever concep- tion of the public good voters hold, then constraints on executive discretion are all cost and no benefit. Voters, legislators, and judges know that different executive officials have different motivations. Not all presidents are power maximizers or empire builders.' Of course, the executive need not be pure of heart; his devotion to the public interest may in turn be based on concern for the judgment of history. But so long as that motivation makes him a faithful agent of the principal(s), he counts as well motivated. The problem, however, is that the public has no simple way to know which type of executive it is dealing with. An ill-motivated executive will just mimic the statements of a well-motivated one, saying the right things and offering plausible rationales for policies that outsiders, lacking crucial information, find difficult to evaluate-policies that turn out not to be in the public interest. The ability of the illmotivated executive to mimic the public-spirited executive's statements gives rise to the executive's dilemma of credibility: the wellmotivated executive has no simple way to identify himself as such. Distrust causes voters (and the legislators they elect) to withhold discretion that they would like to grant and that the well-motivated executive would like to receive. Of course, the ill-motivated executive might also want discretion. The problem is that voters who would want to give discretion (only) to the well-motivated executive may choose not to do so, because they are not sure what type he actually is. The risk that the public and legislators will fail to trust a well-motivated president is just as serious as the risk that they will trust an ill-motivated president, yet legal scholars have felled forests on the second topic while largely neglecting the first.' Our aim in this Article is to identify this dilemma of credibility that afflicts the well-motivated executive and to propose mechanisms for ameliorating it. We focus on emergencies and national security but cast the analysis within a broader framework. Our basic claim is that the credibility dilemma can be addressed by executive signaling. Without any new constitutional amendments, statutes, or legislative action, law and executive practice already contain

resources to allow a wellmotivated executive to send a credible signal of his motivations, committing to use increased discretion in public-spirited ways. By tying policies to institutional mechanisms that impose heavier costs on ill motivated actors than on well-motivated ones, the well-motivated executive can credibly signal his good intentions and thus persuade voters that his policies are those that voters would want if fully informed. We focus particularly on mechanisms of **executive self-binding** that send a signal of credibility by committing presidents to actions or policies that only a well-motivated president would adopt.

Self-restraint solves credibility

Eric **Posner 7**, Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

More schematically, we may speak of formal and informal means of self-binding: 1. The president might use formal means to bind himself. This is possible in the sense that an executive order, if otherwise valid, legally binds the president while it is in effect and may be enforced by the courts. It is not possible in the sense that the president can always repeal the executive order if he can bear the political and reputational costs of doing so. 2. The president might use informal means to bind himself. This is not only possible but frequent and important. Issuing an executive rule providing for the appointment of special prosecutors, as Nixon did, is not a formal self-binding." However, there may be large political costs to repealing the order. This effect does not depend on the courts' willingness to enforce the order, even against Nixon himself. Court enforcement makes the order legally binding while it is in place, but only political and reputational enforcement can protect it from repeal. Just as a dessert addict might announce to his friends that he is going on a nodessert diet in order to raise the reputational costs of backsliding and thus commit himself, so, too, the executive's issuance of a self-binding order can trigger reputational costs. In such cases, repeal of an executive order may be seen as a breach of faith even if no other institution ever enforces it. In what follows, we will invoke both formal and informal mechanisms. For our purposes, the distinction between the authority to engage in de jure self-binding (legally limited and well-defined) and the power to engage in de facto self-binding (broad and amorphous) is secondary. So long as policies are deliberately chosen with a view to generating credibility, and do so by constraining the president's own future choices in ways that impose greater costs on ill-motivated presidents than on well-motivated ones, it does not matter whether the constraint is formal or informal.

AT//Presidential Overreach / Circumvention

Internal checks ensure a culture of compliance
Katyal '6

[Prof National Security Law @ Georgetown. "Toward Internal Separation of Powers" *Yale Law Journal* 2006 ln]

The downside of incorporating a presidential-overrule mechanism is that it may politicize the Director. The Director might fear being overruled and tailor opinions accordingly. But that dark scenario is unlikely to unfold—a rational Director would appreciate the myriad reasons why a President's formal power would not be exercised, such as fear of publicity and lack of expertise.89 Yet the formality trap looms far larger in executive power debates than it should. We do not clamor for legislation to restrict federal courts from issuing advisory opinions simply because they are the only ones to have announced this restriction on their jurisdiction. So too we do not clamor for legislation to prevent Congress from easily declaring war simply because it could. Instead, in both cases we rely on **obvious internal checks**. Here, too, publicity, expertise, and good judgment will make it **structurally difficult** for the President to overrule the Director in many instances. ¶ Government has confronted a similar problem before. The Ethics in Government Act of 1978 created something akin to a Director of Adjudication, albeit in the form of a prosecutor instead of a judge.90 The Independent Counsel lacked accountability and was often insensitive to a decision's longterm cost.91 Congress eventually let these powers return to the Justice Department. But the Department then issued regulations creating Special Prosecutors removed from the day-to-day control and influence of political actors.92 Special Prosecutors are free to conduct their investigations and, after deciding on particular courses of action, must present their proposals to the Attorney General, who retains a veto power. ¶ Critics relied on the formality trap, arguing that internal regulations would falter under the Attorney General's veto power. In response, the regulations required the Attorney General to notify Congress if he interfered with a Special Prosecutor. As a result, lines of accountability were preserved, so much that the Attorney General could be held responsible for trying to bury an investigation. Thus, the matter would receive political, though perhaps not public, oversight. Similarly, a presidential overruling of the Director of Adjudication could trigger reporting to Congress. Congress, though unlikely to begin legislating after a single override (for reasons offered in Part I), could use formal pressures of oversight hearings and informal pressures through the media to demand some accountability. While the executive would therefore be accountable to the other branches, instead of directly to the public, these mechanisms would nevertheless function as a valuable constraint. Over time, a **culture of compliance** might emerge, in which Presidents would not second-guess the opinions of the Director except in extreme instances.

No Presidential abuse of power
Raven-Hansen 09

Peter Raven-Hansen, received his B.A. and J.D. at Harvard University and teaches national security law, counterterrorism law and civil procedure and evidence at Georgetown Washington University, "Executive Self-Controls: Madison's Other Check on National Security Initiatives By The Executive," Spring of 2009, Journal of Civil Rights and Economic Development Volume 23 Issue 4, http://scholarship.law.stjohns.edu/cgi/viewcontent.cgi?article=1051&context=jcred/NV

First, neither the President nor the Vice President can systematically bypass such internal checks because neither actually does anything. They are only "Deciders." The President, after all, is not charged by the Constitution with executing the law, although we often say that in a sloppy paraphrase of the actual text. He's charged with "tak[ing] care that the laws be faithfully executed."19 The Decider is inevitably dependent on others to carry out his decision. He can issue a military order ordering trial by military commission for enemy combatants, but he must use the JAG lawyers ultimately to develop the procedures by which the commissions operate and to operate the commissions. He can order surveillance, but has to use career lawyers in the

Justice Department to implement FISA, or even to circumvent it to operate the Terrorist Surveillance Program. The result is that he necessarily is going to run into some of the internal checks I have described, no matter how bent he is on blowing through them. Secondly, while the President or Vice President, or their delegates, can try to change the architecture of decision making, (alter the inter-agency process), they cannot change the agency or lawyer culture nearly as quickly. The lawyer culture is implanted in law school and nurtured in practice, taking years and years to develop. As a result, it also takes years and years to root it out.

Internal constraints check
Metzger 09

Gillian E. Metzger, is a United States Constitutional Law scholar and a professor of law at Columbia University, "THE INTERDEPENDENT RELATIONSHIP BETWEEN INTERNAL AND EXTERNAL SEPARATION OF POWERS," October 7, 2009, Columbia Law School Public Law and Legal Theory Working Paper Group, Google Scholar/NV

Yet it does not follow that efforts to strengthen internal checking mechanisms are necessarily misdirected. The potential separation of powers benefits of such mechanisms, particularly given the limitations of external checks, makes these efforts worthwhile.85 Moreover, high profile political disputes are too narrow a frame against which to assess the effectiveness of internal constraints. Even if unable to check a determined president in contexts of deep political disagreement, internal constraints may still prove potent in more run of the mill policy disputes or in contexts in which political allegiances are more divided. Nor does this mean that internal constraints are ineffective just when it counts. To the contrary, high-profile political disputes are arguably situations in which presidents should be able to implement their policies of choice in order to ensure democratic accountability of the executive branch, assuming these policies accord with governing law. In such contexts, success and effectiveness for internal constraints may be better understood not as forestalling presidential control of policy but rather as ensuring that contentious policy choices are made by the president and that the president's role.

The Executive can check itself – incentives will stay their hand
Sales 12

Sales 2012 – Assistant Professor of Law, George Mason University School of Law (7/3, Nathan Alexander, Journal of National Security Law & Policy, 6.227, "Self-Restraint and National Security/NV

Much of the caselaw and scholarship concerning national security rests on the assumption that the executive branch is institutionally prone to overreach - that, left to its own devices, it will inch ever closer to the line that separates illegal from legal, and sometimes enthusiastically leap across it. The obvious conclusion is that external, principally judicial, checks are needed to keep the Executive in line.2 In many cases the Executive does indeed push the envelope. But not always.' **The government often has powerful incentives to stay its own hand** - to forbear from military and intelligence operations that it believes are perfectly legal. Officials may conclude that a proposed

mission - a decapitation strike on al Qaeda's leadership, say, or the use of mildly coercive interrogation techniques on a captured terrorist - is entirely permissible under domestic and international law. Yet they nevertheless might rule it out. In other words, the government sometimes adopts self-restraints that limit its ability to conduct operations it regards as legally justified; it "fight[s] with one hand behind its back," to borrow Aharon Barak's memorable phrase.4 This article tries to explain these restraints by consulting public choice theory - in particular, the notion that government officials are rationally self-interested actors who seek to maximize their respective welfare. Part I develops an analytical framework. Part II identifies four examples of self- restraint. Parts III and IV offer hypotheses for why the government adopts them. One example of self-restraint is Executive Order 13,491, which limits counterterrorism interrogations, including those conducted by the CIA, to the techniques listed in the Army Field Manual. The AFM prohibits or severely restricts a number of fairly mild interrogation methods such as low-grade threats, the "good cop, bad cop" routine, and other staples of garden-variety law enforcement investigations. A second example, sketched above, is the White House's onetime reluctance to use targeted killings against Osama bin Laden, despite its belief that doing so would be consistent with domestic and international laws against assassination. Third, lawyers in the Judge Advocate General corps sometimes reject military strikes that would be permissible under the law of war, but that they regard as problematic for moral, economic, social, or political reasons. A fourth example is the Justice Department's erection of a "wall" that restricted information sharing between intelligence officials and criminal investigators, despite the fact that the applicable statute (the Foreign Intelligence Surveillance Act of 1978) contained no such limits, and despite the fact that the governing DOJ guidelines established mechanisms for swapping such data. The question then becomes why officials adopt these restraints even when they believe them to be legally unnecessary. Public choice theory suggests two possible explanations. First, self-restraint might result from systematic asymmetries in military and intelligence officials' expected value calculations. The expected costs of a given national security operation often dwarf the expected benefits; officials have more to lose from being aggressive than they have to gain. In particular, operations – even concededly lawful ones – can inspire adversaries to launch demoralizing propaganda campaigns accusing the United States of war crimes, can sap the willingness of allies to assist this country, and can even result in criminal prosecutions or private lawsuits against the responsible officials. In addition, the resulting costs can be internalized onto the responsible officials more easily than the resulting benefits. While all national security players experience a degree of costbenefit asymmetry, some experience more than others. In particular, the senior policymakers who approve operations, and the lawyers who review them, seem even more cautious than the operators who actually carry them out. This may be because policymakers and lawyers discount some of the benefits that operators expect to gain (e.g., certain forms of psychic income), and also account for certain costs that operators overlook (e.g., ramifications for the country's broader strategic priorities). Policymakers and lawyers therefore will veto proposed missions when they calculate – as they often will – that their costs exceed their benefits. Second, self-restraint might result from bureaucratic "empire building,"5 as lawyers and other officials seek to magnify their clout by rejecting operations planned by their inter- and intra-agency competitors. Military and intelligence figures seek to maximize, among other values, the influence they hold over senior policymakers as well as autonomy to pursue the priorities they deem important. One way for an official to do that is to interfere with a rival's plans. A bureaucratic player typically gains no power by serving as a competitor's yes man. Often, it gains by saying no, because its obstruction

forces the rival to be responsive to its concerns. Reviewers in the government's national security apparatus therefore will veto operations planned by other entities when doing so will enhance their welfare.

Presidents restrict themselves – credibility
Sales 12

Sales 2012 – Assistant Professor of Law, George Mason University School of Law (7/3, Nathan Alexander, Journal of National Security Law & Policy, 6.227, "Self-Restraint and National Security/NV

My use of this analytical framework is not intended to deny the validity of other possible explanations for self-restraint. For instance, Eric Posner and Adrian Vermeule argue that Presidents have an incentive to engage in "self binding," because it will enhance their credibility and "generate support from the public and other members of the government."45 Elizabeth Magill likewise argues that bureaucrats sometimes find it advantageous to "self-regulate" – i.e., "limit their options when no source of authority requires them to do so" – **as a means of controlling subordinates**, inducing reliance by outside parties, and entrenching today's policy choices.46 Still more accounts emerge if we widen the analytical lens beyond public choice principles. One might explain self-restraints by consulting theories of bounded rationality – the notion that imperfect information, cognitive failures, and other factors prevent bureaucratic players from accurately measuring the expected costs and benefits of a given action.47 Or one might look to new institutionalism – the notion that bureaucratic outputs are determined in large part by organizations' cultures, histories, and structures.48 And, of course, there are the public interest explanations: Officials might embrace a particular restraint because they believe in good faith that it represents sound public policy. The public interest framework may actually complement, not contradict, this article's public choice story. One of the reasons officials might build their bureaucratic empires is because they calculate that doing so will position them to achieve desirable policy outcomes. In any event, the point of this article is to generate hypotheses that can account for the occasional tendency of national security figures to restrain themselves. Other frameworks are likely to yield equally plausible alternative hypotheses.

Qualified studies support out point

Sales 2012 – Assistant Professor of Law, George Mason University School of Law (7/3, Nathan Alexander, Journal of National Security Law & Policy, 6.227, "Self-Restraint and National Security/NV

This Part identifies four examples of self-restraint in military and intelligence operations – that is, circumstances in which officials vetoed a mission despite their belief that it was perfectly lawful. In 2009, the White House barred counterterrorism investigators from using any interrogation technique other than the limited methods in the Army Field Manual. In the late 1990s, Clinton administration officials rejected the CIA's plans to kill Osama bin Laden. Members of the military's JAG Corps have recommended against air strikes that might result in adverse publicity or other harms. And in the mid-1990s, Justice Department officials erected a "wall" that kept the DOJ's intelligence analysts from sharing information with its criminal investigators.49 In each instance, the government's reason for adopting these restraints was not that it believed them to be legally

necessary. To the contrary, officials – often but not always lawyers – concluded that the relevant laws allowed them to carry out the operation in question, but they nevertheless vetoed it. Self-restraints thus supplement what the law requires; officials proscribe conduct that the applicable laws do not actually reach. In other words, military and intelligence figures sometimes overenforce the relevant legal norms. I do not mean to suggest that the quantity of legal enforcement is suboptimally high – i.e., that it would be efficient or otherwise preferable for some conduct that is unlawful to go unpunished. Rather, by overenforcement I mean officials' occasional tendency to restrict themselves from acting in ways that are not in fact unlawful (or, more precisely, that they do not regard as unlawful).50 A. Interrogation The first example of self-restraint is also the most recent. On January 22, 2009, his second full day in office, President Barack Obama announced a clean break from his predecessor's interrogation policies. The George W. Bush administration had incurred widespread condemnation for authorizing the CIA to subject several captured al Qaeda leaders to aggressive questioning methods, including waterboarding, a form of simulated drowning. Executive Order 13,491 – which reportedly was the brainchild of lawyers in the White House Counsel's Office51 – directed that anyone detained by the United States in an armed conflict "shall not be subjected to any interrogation technique or approach, or any treatment related to interrogation, that is not authorized by and listed in Army Field Manual 2- 22.3."52 The AFM, the current version of which was adopted in 2006, is quite restrictive. In addition to prohibiting severe coercion like waterboarding, it rules out mildly coercive methods that are commonly used in ordinary criminal investigations in precincts throughout the country. These new limits are hailed by many as sound policy, but they probably are not legally necessary. Or, to be more precise, the Army Field Manual restrictions almost certainly go farther than what the White House believes is legally required. Administration lawyers thus supplemented the domestic and international prohibitions on torture and coercion, ruling out some relatively benign techniques that they likely do not regard as illegal.

AT//Private Sector Circumvention

The private sector is restrained and anti-surveillance

Wyatt and Miller 13 [Edward and Claire Cain, New York Times Financial Reporter, Ms. Miller is a graduate of Yale University and the University of California at Berkeley's Graduate School of Journalism., Tech Giants Issue Call for Limits on Government Surveillance of Users, http://www.nytimes.com/2013/12/09/technology/tech-giants-issue-call-for-limits-on-government-surveillance-of-users.html?pagewanted=all&_r=0] Schloss

Eight prominent technology companies, bruised by revelations of government spying on their customers' data and scrambling to repair the damage to their reputations, are mounting a public campaign to urge President Obama and Congress to set new limits on government surveillance.¶ Executive Appeal¶ Executives from prominent technology companies called for greater limits on government surveillance of their users.¶ Reports about government surveillance have shown there is a real need for greater disclosure and new limits on how governments collect information. The U.S. government should take this opportunity to lead this reform effort and make things right.¶ —Mark Zuckerberg, Facebook¶ Larry Page, chief of Google, called for reform of security laws worldwide, saying, "We urge the U.S. government to lead the way."¶ On Monday the companies, led by Google and Microsoft, presented a plan to regulate online spying and urged the United States to lead a worldwide effort to restrict it. They accompanied it with an open letter, in the form of full-page ads in national newspapers, including The New York Times, and a website detailing their concerns.¶ It is the broadest and strongest effort by the companies, often archrivals, to speak with one voice to pressure the government. The tech industry, whose billionaire founders and executives are highly sought as political donors, forms a powerful interest group that is increasingly flexing its muscle in Washington.¶ "It's now in their business and economic interest to protect their users' privacy and to aggressively push for changes," said Trevor Timm, an activist at the Electronic Frontier Foundation. "The N.S.A. mass-surveillance programs exist for a simple reason: cooperation with the tech and telecom companies. If the tech companies no longer want to cooperate, they have a lot of leverage to force significant reform."¶ The political push by the technology companies opens a third front in their battle against government surveillance, which has escalated with recent revelations about government spying without the companies' knowledge. The companies have also been making technical changes to try to thwart spying and have been waging a public-relations campaign to convince users that they are protecting their privacy.¶ "People won't use technology they don't trust," Brad Smith, Microsoft's general counsel, said in a statement. "Governments have put this trust at risk, and governments need to help restore it."¶ Apple, Yahoo, Facebook, Twitter, AOL and LinkedIn joined Google and Microsoft in saying that they believed in governments' right to protect their citizens. But, they said, the spying revelations that began last summer with leaks of National Security Agency materials by Edward J. Snowden showed that "the balance in many countries has tipped too far in favor of the state and away from the rights of the individual."¶ The Obama administration has already begun a review of N.S.A. procedures in reaction to public outrage. The results of that review could be presented to the White House as soon as this week.¶ "Having done an independent review and brought in a whole bunch of folks — civil libertarians and lawyers and others — to examine what's being done, I'll be proposing some self-restraint on the N.S.A., and you know, to initiate some reforms that can give people more confidence," Mr. Obama said Thursday on the MSNBC program "Hardball."¶ While the Internet companies fight to maintain authority over their customers' data, their business models depend on collecting the same information that the spy agencies want, and they have long cooperated with the government to some extent by handing over data in response to legal requests.¶ The new principles outlined by the companies contain little information and few promises about their own practices, which privacy advocates say contribute to the government's desire to tap into the companies' data systems.¶ "The companies are placing their users at risk by collecting and retaining so much information," said Marc Rotenberg, president and executive director of the Electronic Privacy Information Center, a nonprofit research and advocacy organization. "As long as this much personal data is collected and kept by these companies, they are always going to be the target of government collection efforts."¶ For instance, Internet companies store email messages, search queries, payment details and other personal information to provide online services and show personalized ads.¶ They are trying to blunt the spying revelations' effects on their businesses. Each disclosure risks alienating users, and foreign governments are considering laws that would discourage their citizens from using services from American Internet companies. The cloud computing industry could lose $180 billion, or a quarter of its revenue, by 2016, according to Forrester Research.¶ Telecom companies, which were not included in the proposal to Congress, have had a closer working relationship with the government than the Internet companies, such as longstanding partnerships to hand over customer information. While the Internet companies have published so-called transparency reports about government requests, for example, the telecoms have not.¶ "For the phone companies," said Tim Wu, a professor at Columbia studying the Internet and the law, "help with federal spying is a longstanding tradition with roots in the Cold War. It's another area where there's a split between old tech and new tech — the latter taking a much more libertarian position."¶ The new surveillance principles, the Internet companies said, should include limiting governments' authority to collect users' information, setting up a legal system of oversight and accountability for that authority, allowing the

companies to publish the number and nature of the demands for data, ensuring that users' online data can be stored in different countries and establishing a framework to govern data requests between countries.¶ In a statement, Larry Page, Google's co-founder and chief executive, criticized governments for the "apparent wholesale collection of data, in secret and without independent oversight." He added, "It's time for reform and we urge the U.S. government to lead the way."¶ In their open letter, the companies maintain they are fighting for their customers' privacy. "We are focused on keeping users' data secure," the letter said, "deploying the latest encryption technology to prevent unauthorized surveillance on our networks, and by pushing back on government requests to ensure that they are legal and reasonable in scope."¶ The global principles outlined by the companies make no specific mention of any country and call on "the world's governments to address the practices and laws regulating government surveillance of individuals and access to their information." But the open letter to American officials specifically cites the United States Constitution as the guidepost for new restrictions on government surveillance.¶ Chief among the companies' proposals is a demand to write "sensible limitations" on the ability of government agencies to compel Internet companies to disclose user data, forbidding the wholesale vacuuming of user information.

Executive Flexibility Net Benefit

***note: lots more link and impact work for this in the MAGS “war powers DA”

1nc Exec Flex N/B

The counterplan sufficiently curtails surveillance while maintaining crisis flexibility

Neal **Katyal 6**, prof, Georgetown law, Internal Separation of Powers: Checking Today's Most Dangerous Branch from Within, 115 Yale L.J. 2314

This Essay's proposed reforms reflect a more textured conception of the presidency than either the unitary executivists or their critics espouse. In contrast to the unitary executivists, I believe that the simple fact that the President should be in control of the executive branch does not answer the question of how institutions should be structured to encourage the most robust flow of advice to the President. **Nor does that fact weigh against modest internal checks that, while subject to presidential override, could constrain presidential adventurism** on a day-to-day basis. And in contrast to the doubters of the unitary executive, I believe a unitary executive serves important values, **particularly in times of crisis**. Speed and dispatch are often virtues to be celebrated.¶ **Instead of doing away with the unitary executive**, this Essay proposes designs that force internal checks but **permit temporary departures when the need is great**. Of course, the risk of incorporating a presidential override is that its great formal power will eclipse everything else, leading agency officials to fear that the President will overrule or fire them. But just as a filibuster does not tremendously constrain presidential action, modest internal checks, buoyed by reporting requirements, can create **sufficient deterrent costs.**¶ [*2319] Let me offer a brief word about what this Essay does not attempt. It does not propose a far-reaching internal checking system on all presidential power, domestic and foreign. Instead, this Essay takes a case study, the war on terror, and **uses the collapse of external checks and balances to demonstrate the need for internal ones**. In this arena, public accountability is low - not only because decisions are made in secret, but also because they routinely impact only people who cannot vote (such as detainees). In addition to these process defects, decisions in this area often have subtle long-term consequences that short-term executivists may not fully appreciate. n9

The alternative to executive flexibility is a laundry list of conflicts that escalate to war

Yoo 13 - Emanuel S. Heller Professor of Law at UC-Berkeley Law, visiting scholar at the American Enterprise Institute, former Fulbright Distinguished Chair in Law at the University of Trento, served as a deputy assistant attorney general in the Office of Legal Council at the U.S. Department of Justice between 2001 and 2003, J.D. from Yale and degree from Harvard (John, "Like it or not, Constitution allows Obama to strike Syria without Congressional approval," Fox News, 8-30-13, http://www.foxnews.com/opinion/2013/08/30/constitution-allows-obama-to-strike-syria-without-congressional-approval/) //AD

The most important of the president's powers are commander-in-chief and chief executive.¶ As Alexander Hamilton wrote in Federalist 74, "The direction of war implies the direction of the common strength, and the power of directing and employing the common strength forms a usual and essential part in the definition of the executive authority."¶ Presidents should conduct war, he wrote, because they could act with "decision, activity, secrecy, and dispatch." In perhaps his most famous words, Hamilton wrote: "Energy in the executive is a leading character in the definition of good government. . . It is essential to the protection of the community against foreign attacks."¶ The Framers realized the obvious. Foreign affairs are unpredictable and involve the highest of stakes, making them unsuitable to regulation by pre-existing legislation. Instead, they can demand swift, decisive action, sometimes under pressured or even emergency circumstances, that are best carried out by a branch of government that does not suffer from multiple vetoes or is delayed by disagreements. ¶ Congress is too large and unwieldy to take the swift and decisive action required in wartime. ¶ Our Framers replaced the Articles

of Confederation, which had failed in the management of foreign relations because it had no single executive, with the Constitution's single president for precisely this reason. Even when it has access to the same intelligence as the executive branch, Congress's loose, decentralized structure would paralyze American policy while foreign threats grow. ¶ Congress has no political incentive to mount and see through its own wartime policy. Members of Congress, who are interested in keeping their seats at the next election, do not want to take stands on controversial issues where the future is uncertain. They will avoid like the plague any vote that will anger large segments of the electorate. They prefer that the president take the political risks and be held accountable for failure.¶ Congress's track record when it has opposed presidential leadership has not been a happy one.¶ Perhaps the most telling example was the Senate's rejection of the Treaty of Versailles at the end of World War I. Congress's isolationist urge kept the United States out of Europe at a time when democracies fell and fascism grew in their place. Even as Europe and Asia plunged into war, Congress passed Neutrality Acts designed to keep the United States out of the conflict.¶ President Franklin Roosevelt violated those laws to help the Allies and draw the nation into war against the Axis. While pro-Congress critics worry about a president's foreign adventurism, the real threat to our national security may come from inaction and isolationism.¶ Many point to the Vietnam War as an example of the faults of the "imperial presidency." Vietnam, however, could not have continued without the consistent support of Congress in raising a large military and paying for hostilities. And Vietnam ushered in a period of congressional dominance that witnessed American setbacks in the Cold War, and the passage of the ineffectual War Powers Resolution. Congress passed the Resolution in 1973 over President Nixon's veto, and no president, Republican or Democrat, George W. Bush or Obama, has ever accepted the constitutionality of its 60-day limit on the use of troops abroad. No federal court has ever upheld the resolution. Even Congress has never enforced it.¶ Despite the record of practice and the Constitution's institutional design, critics nevertheless argue for a radical remaking of the American way of war. They typically base their claim on Article I, Section 8, of the Constitution, which gives Congress the power to "declare War." But these observers read the eighteenth-century constitutional text through a modern lens by interpreting "declare War" to mean "start war." ¶ When the Constitution was written, however, a declaration of war served diplomatic notice about a change in legal relations between nations. It had little to do with launching hostilities. In the century before the Constitution, for example, Great Britain – where the Framers got the idea of the declare-war power – fought numerous major conflicts but declared war only once beforehand.¶ Our Constitution sets out specific procedures for passing laws, appointing officers, and making treaties. There are none for waging war, because the Framers expected the president and Congress to struggle over war through the national political process.¶ In fact, other parts of the Constitution, properly read, support this reading. Article I, Section 10, for example, declares that the states shall not "engage" in war "without the consent of Congress" unless "actually invaded, or in such imminent Danger as will not admit of delay." ¶ This provision creates exactly the limits desired by anti-war critics, complete with an exception for self-defense. If the Framers had wanted to require congressional permission before the president could wage war, they simply could have repeated this provision and applied it to the executive.¶ Presidents, of course, do not have complete freedom to take the nation to war. Congress has ample powers to control presidential policy, if it wants to. ¶ Only Congress can raise the military, which gives it the power to block, delay, or modify war plans.¶ Before 1945, for example, the United States had such a small peacetime military that presidents who started a war would have to go hat in hand to Congress to build an army to fight it. ¶ Since World War II, it has been Congress that has authorized and funded our large standing military, one primarily designed to conduct offensive, not defensive,

operations (as we learned all too tragically on 9/11) and to swiftly project power worldwide. ¶ If Congress wanted to discourage presidential initiative in war, it could build a smaller, less offensive-minded military.¶ Congress's check on the presidency lies not just in the long-term raising of the military. It can also block any immediate armed conflict through the power of the purse.¶ If Congress feels it has been misled in authorizing war, or it disagrees with the president's decisions, all it need do is cut off funds, either all at once or gradually.¶ It can reduce the size of the military, shrink or eliminate units, or freeze supplies. Using the power of the purse does not even require affirmative congressional action.¶ Congress can just sit on its hands and refuse to pass a law funding the latest presidential adventure, and the war will end quickly. ¶ Even the Kosovo war, which lasted little more than two months and involved no ground troops, required special funding legislation.¶ The Framers expected Congress's power of the purse to serve as the primary check on presidential war. During the 1788 Virginia ratifying convention, Patrick Henry attacked the Constitution for failing to limit executive militarism. James Madison responded: "The sword is in the hands of the British king; the purse is in the hands of the Parliament. It is so in America, as far as any analogy can exist." Congress ended America's involvement in Vietnam by cutting off all funds for the war.¶ Our Constitution has succeeded because it favors swift presidential action in war, later checked by Congress's funding power. If a president continues to wage war without congressional authorization, as in Libya, Kosovo, or Korea, it is only because Congress has chosen not to exercise its easy check.¶ We should not confuse a desire to escape political responsibility for a defect in the Constitution. A radical change in the system for making war might appease critics of presidential power. But it could also seriously threaten American national security.¶ In order to forestall another 9/11 attack, or to take advantage of a window of opportunity to strike terrorists or rogue nations, the executive branch needs flexibility.¶ It is not hard to think of situations where congressional consent cannot be obtained in time to act. Time for congressional deliberation, which leads only to passivity and isolation and not smarter decisions, will come at the price of speed and secrecy.¶ The Constitution creates a presidency that can respond forcefully to prevent serious threats to our national security.¶ Presidents can take the initiative and Congress can use its funding power to check them. Instead of demanding a legalistic process to begin war, the Framers left war to politics.¶ As we confront the new challenges of terrorism, rogue nations and WMD proliferation, now is not the time to introduce sweeping, untested changes in the way we make war.

AT//Permutation – Do Both

Executive action ALONE is key to effective flexibility – the counterplan is *superior* to the permutation because it keeps Congress and the Courts out of the equation

Bellia 2 [Patricia, Professor of Law Notre Dame, "Executive Power in Youngstown's Shadows" Constitutional Commentary, http://scholarship.law.nd.edu/cgi/viewcontent.cgi?article=1089&context=law_faculty_scholarship] Schloss

To see the problems in giving dispositive weight to inferences from congressional action (or inaction), we need only examine the similarities between courts' approach to executive power questions and courts' approach to federal-state preemption questions. If a state law conflicts with a specific federal en- 287 actment, or if Congress displaces the state law by occupying the field,"'8 a court cannot give the state law effect. Similarly, if executive action conflicts with a specific congressional policy (reflected in a statute or, as Youngstown suggests, legislative history), or if Congress passes related measures not authorizing the presidential conduct, courts cannot give the executive action effect.289 When Congress is silent, however, the state law will stand; when Congress is silent, the executive action will stand. This analysis makes much sense with respect to state governments with reserved powers, but it makes little sense with respect to an Executive Branch lacking such powers. The combination of **congressional silence and judicial inaction** has the practical effect of creating power.¶ Courts' reluctance to face questions about the scope of the President's constitutional powers-express and implied-creates three other problems. First, the implied presidential power given effect by virtue of congressional silence and judicial inaction can **solidify into a broader claim.** When the Executive exercises an "initiating" or "concurrent" power, it will **tie that power to a textual provision or to a claim about the structure of the Constitution**. Congress's silence as a practical matter tends to **validate the executive rationale**, and the Executive Branch may then claim a power not only to exercise the disputed authority in the face of congressional silence, but also to exercise the disputed authority in the face of congressional opposition. In other words, a power that the Executive Branch claims is "implied" in the Constitution may soon become an "implied" and "plenary" one. Questions about presidential power to terminate treaties provide a ready example. The Executive's claim that the President has the power to terminate a treaty-the power in controversy in Goldwater v. Carter, where Congress was silent-now takes a stronger form: that congressional efforts to curb the power are themselves unconstitutional.29 °

The permutation links to our flexibility DA

Deats '10 (Caleb, J.D. Candidate, Columbia Law School, 7/2/10, "Obliging The Executive Branch To Control Itself," http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1633922)

2. Restraining the Executive's Interpretive Power Weakens the Government's Ability to Respond to Crises. --- Second, one might argue that restraining the executive's interpretive power might devastatingly weaken the country's ability to confront emergencies, particularly threats to national security. As Professor Goldsmith notes, "sharp disagreement over the requirements of national security law and the meaning of the imponderable phrases of the U.S. Constitution" exists even within the executive branch: "Whether and how aggressively to check the terrorist threat, and whether and how far to push the law in so doing, are rarely obvious, especially during blizzards of frightening reports, when one is blinded by ignorance and desperately worried about not doing enough."51 **Disagreement in Congress** over these issues **would** presumably **prove more intractable than that within the executive branch**. Moreover, **airing these issues in courts would likely require disclosure of classified information**. Thus, requiring the executive to defer to other branches when parsing these "imponderable phrases" prevents the swift resolution of controversy

that results from consolidating authority in the President. As Hamilton writes, "A feeble executive implies a feeble execution of the government. A feeble execution is but another phrase for a bad execution . . . ."52 However, while the this paper's proposal may prescribe procedures that cannot adequately resolve emergencies, designing procedures with emergencies in mind seems more likely to pervert normal politics than it does to adequately resolve such extraordinary situations. No set of procedures can provide for every eventuality. Moreover, as Justice Jackson wrote, dissenting in Korematsu, "if we cannot confine military expedients by the Constitution, neither would I distort the Constitution to approve all that the military may deem expedient."53 Once we incorporate emergency exceptions into the Constitution, such exceptions will increase in number until they cease to be exceptional.54 Professor Goldsmith adverts to the danger of confusing the exception with the norm when he describes the terrorist threat as a "permanent emergency."55 Thus, if we must in emergencies rely on "leaders who will be beholden to constitutional values," we should do so completely, i.e. without creating procedural justifications for doing so. A different approach might substitute "leaders" for procedures simply by making the two indistinguishable.

Unimpeded executive authority over domestic surveillance is key

Yoo, 14 (John C., Harvard alma mater, Yale Law grad, clerked for Justice Clarence Thomas of the U.S. Supreme Court, served as general counsel of the U.S. Senate Judiciary Committee from 1995-96. From 2001 to 2003, he served as a deputy assistant attorney general in the Office of Legal Counsel at the U.S. Department of Justice, where he worked on issues involving foreign affairs, national security and the separation of powers; 2014; The Legality of the National Security Agency's Bulk Data Surveillance Programs;
http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=3432&context=facpubs)//JPM

The need for executive authority over electronic intelligence gathering becomes apparent when we consider the facts of the war against al Qaeda. In the hours and days after 9/11, members of the government thought that al Qaeda would try to crash other airliners or use a weapon of mass destruction in a major East Coast city, probably Washington, D.C. In response, combat air patrols began flying above New York and Washington. Suppose a plane was hijacked and would not respond to air traffic controllers. It would be reasonable for U.S. anti-terrorism personnel to intercept any radio or cell phone calls to or from the airliner, in order to discover the hijackers' intentions, what was happening on the plane, and ultimately whether it would be necessary for the fighters to shoot down the plane. Under the civil libertarian approach to privacy, the government could not monitor the suspected hijackers' phone or radio calls unless they received a judicial warrant first-the calls, after all, are electronic communications within the United States. A warrant would be hard to get because it is unlikely that the government would then know the identities of all the hijackers, who might be U.S. citizens or permanent resident aliens. But because the U.S. is in a state of war, the military can intercept the communications of the plane to see if it poses a threat, and target the enemy if necessary-without a judicial warrant, because the purpose is not arrest and trial, but to prevent an attack. This comports far better with the principle of reasonableness that guides the Fourth Amendment. As Commander-in-Chief, the President has the constitutional power and the responsibility to wage war in response to a direct attack against the United States. In the Civil War, President Lincoln undertook several actions-raised an army,

withdrew money from the¶ treasury, launched a blockade-on his own authority in response to¶ the Confederate attack on Fort Sumter. Congress and the Supreme¶ Court later approved Lincoln's moves.8 4 During World War II, the¶ Supreme Court similarly recognized that once war began, the¶ President's authority as Commander-in-Chief and Chief Executive¶ gave him the tools necessary to effectively wage war. 5 In the wake of¶ the 9/11 attacks, Congress agreed that "the President has authority¶ under the Constitution to take action to deter and prevent acts of¶ international terrorism against the United States," which recognizes¶ the President's authority to use force to respond to al Qaeda, and any¶ powers necessary and proper to that end.86¶ Even legal scholars who argue against this historical practice¶ concede that once the United States has been attacked, the President¶ can respond immediately with force. The ability to collect intelligence¶ is intrinsic to the use of military force**. It is inconceivable that the¶ Constitution would vest in the President the powers of Commander in-Chief¶ and Chief Executive, give him the responsibility to protect the¶ nation from attack, but then disable him from gathering intelligence¶ to use the military most effectively to defeat the enemy.** All evidence of¶ the Framers' understanding of the Constitution supports the notion¶ that the government would have every ability to meet a foreign¶ danger. As James Madison wrote in The Federalist, "security against foreign danger is one of the primitive objects of civil society."8 7¶ Therefore, the "powers requisite for attaining it must be effectually¶ confided to the federal councils."88 After World War II, the Supreme¶ Court declared, "this grant of war power includes all that is necessary¶ and proper for carrying these powers into execution." Covert¶ operations and electronic surveillance are clearly part of this¶ authority.¶ During the writing of the Constitution, some Framers believed that¶ the President alone should manage intelligence because only he could¶ keep secrets. 90 Several Supreme Court cases have recognized that **the¶ President's role as Commander-in-Chief and the sole organ of the¶ nation in its foreign relations must include the power to collect¶ intelligence**.91 These authorities agree that **intelligence rests with the¶ President because its structure allows it to act with unity, secrecy, and¶ speed.**¶ Presidents have long ordered electronic surveillance without any¶ judicial or congressional participation.

Keeping congress *out* of the equation is key

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

Critics of the NSA program want to overturn American historical practice in favor of a new and untested theory about the wartime powers of the President and Congress.256 We should encourage innovation and creativity in our intelligence and military-and the NSA program is precisely that-to confront the unprecedented challenges of al Qaeda. For too long, our system retarded aggressive measures to pre-empt terrorist attacks. 257 But **seeking to give Congress the dominant hand** in setting wartime policy would render our tactics against al Qaeda **less, rather than more, effective**. It would slow down decisions, make sensitive policies and intelligence public, and encourage risk aversion rather than risk taking. Requiring the President to obtain Congressional approval prior to every important policy change **ignores the reality the al Qaeda challenge presents**.

Executive CIC powers vital to deter conflict – the plan and permutation both undermine crucial tools in the fight against terrorism

Yoo, 14 (John C., Harvard alma mater, Yale Law grad, clerked for Justice Clarence Thomas of the U.S. Supreme Court, served as general counsel of the U.S. Senate Judiciary Committee from 1995-96. From 2001 to 2003, he served as a deputy assistant attorney general in the Office of Legal Counsel at the U.S. Department of Justice, where he worked on issues involving foreign affairs, national security and the separation of powers; 2014; The Legality of the National Security Agency's Bulk Data Surveillance Programs; http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=3432&context=facpubs)//JPM

It is al Qaeda's nature as a decentralized network that pressures the normal division between military and intelligence surveillance and the warrant-based approach of the criminal justice system. The Constitution vests the President with the executive power and designates him Commander-in-Chief.2 The Framers understood these powers to place the duty on the executive to protect the nation from foreign attack and the right to control the conduct of military hostilities.3 **To exercise that power effectively, the President must have the ability to engage in electronic surveillance that gathers intelligence on the enemy**. Regular military intelligence need not follow standards of probable cause for a warrant or reasonableness for a search, just as the use of force against the enemy does not have to comply with the Fourth Amendment. During war, **military signals intelligence might throw out a broad net to capture all communications within a certain area or by an enemy nation**. Unlike the criminal justice system, which seeks to detain criminals, protection of national security need not rest on particularized suspicion of a specific individual. This approach applies to national security activity that occurs within the United States as well as outside it. In 1972, the Supreme Court refused to subject surveillance for national security purposes to the Fourth Amendment warrant requirement.4 It has extended these protections to purely domestic terrorist groups, out of concern that the government might use its powers to suppress political liberties. Lower courts, however, have found that when the government conducts a search of a foreign power or its agents, it need not meet the requirements that apply to criminal law enforcement. In a leading 1980 case, the Fourth Circuit held that "**the needs of the executive are so compelling in the area of foreign intelligence, unlike the area of domestic security, that a uniform warrant requirement would unduly frustrate the President in carrying out his foreign affairs responsibilities.**"5 **A warrant for national security searches would reduce the flexibility of the executive branch, which possesses "unparalleled expertise to make the decision whether to conduct foreign intelligence surveillance" and is "constitutionally designated as the pre-eminent authority in foreign affairs**." 6 A warrant requirement would place the national security decisions in the hands of the judiciary, which "is largely inexperienced in making the delicate and complex decisions that lie behind foreign intelligence surveillance. "7 Under this framework, Presidents had conducted national security surveillance under their executive authority for decades. President Nixon's abuses, however, led Congress to enact the FISA in 1978.s

President best suited to deal with threats – only one that can act quickly and secretly

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

Critics of the NSA program appeal to the Constitution as it works in peacetime, when Congress authorizes a policy and the President carries it out.2 " Critics imagine that the Constitution requires the President to check back with Congress on every strategy and tactic in the war on terrorism.2 5 The NSA program is thus illegal, they say, because President Bush neglected to obtain yet another amendment to FISA approving it.206 It is true that Congress offers more transparency and perhaps greater accountability to the public.0 7 But it should also be clear that, over time, the Presidency has gained the leading role in war and national security because of its superior ability to take the initiative in response to emergencies.0 8

War's unpredictability makes unique demands for decisive and often secret action. John Locke first observed that a constitution ought to give the foreign affairs power to the executive because foreign threats are "much less capable to be directed by antecedent, standing, positive [f]aws" and the executive can act to protect the "security and interest of the public .... Legislatures are too slow and its members too numerous to respond effectively to unforeseen situations."0 "Many things there are, which the [1]aw can by no means provide for; and those must necessarily be left to the discretion of him that has the [e]xecutive power in his hands, to be ordered by him as the public good and advantage shall require."2 " 1

Presidents empirically had control over intelligence gathering – any changes kills current balance of powers

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

Some of the Framers of the Constitution believed that the President needed to manage intelligence because only he could keep secrets. 5 Several Supreme Court cases have recognized that the President's role as the sole organ of the nation in foreign relations and as Commander-in-Chief must include the power to collect intelligence. 5 9 These authorities agree that intelligence rests with the President because the office's structure allows the President to act with unity, secrecy, and speed. 6 °¶ Presidents have long ordered electronic surveillance without any judicial or congressional participation. More than a year before the Pearl Harbor attacks, but with war clearly looming with the Axis powers, President Franklin Roosevelt authorized the FBI to intercept any communications, whether wholly inside the country or international, of persons "suspected of subversive activities against the Government of the United States, including suspected spies."'' FDR was concerned that "fifth columns"-those people believed to be loyalists who clandestinely undermine the nation-could wreak havoc on the war effort. 6 "It is too late to do anything about it after sabotage, assassinations and 'fifth column' activities are completed," FDR wrote in his order.'63 FDR ordered the

surveillance even though a Supreme Court decision and a federal statute at the time prohibited electronic surveillance without a warrant." FDR continued to authorize the interception of electronic communications even after Congress rejected proposals for wiretapping for national security reasons.'65¶ Until FISA, Presidents continued to monitor the communications of national security threats on their own authority, even in peacetime.'66 If Presidents could order surveillance of spies and terrorists **during peacetime**, as President Roosevelt did in 1940, or as Presidents from Truman through Carter did during the Cold War, then **executive authority is all the more certain now, after the events of September 11**. This is a view held by the Justice Departments in several recent administrations. The Clinton Justice Department, for example, held a similar view of the executive branch's authority to conduct surveillance outside the FISA framework.'67 Courts have **never** opposed a President's authority to engage in warrantless electronic surveillance to protect national security. When the Supreme Court first considered this question in 1972, it held that the Fourth Amendment required a judicial warrant if a President wanted to conduct surveillance of a purely domestic group, but it refused to address surveillance of foreign threats to national security.'68 In the years since, every federal appeals court to address the question, including the FISA Appeals Court, has "held that the President did have inherent authority to conduct warrantless searches to obtain foreign intelligence information."' 6 9 The FISA Appeals Court did not even feel that it was worth much discussion. It took the President's power to do so "for granted," and observed that "FISA could not encroach on the President's constitutional power.' 17°

The counterplan doesn't link to the terror DA – president's unique powers allow for surveillance of those believed to be agents of a foreign power like ISIS or Al Qaeda.

Yoo, 7 (John, Professor of Law, University of California at Berkeley School of Law (Boalt Hall); Visiting Scholar, American Enterprise Institute, 3/27/7, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=975333) KW

In United States v. Truong Dinh Hung, for example, the Fourth Circuit observed that "the needs of the Executive are so compelling in the area of foreign intelligence, unlike the area of domestic security, that a uniform warrant requirement would, following Keith, 'unduly frustrate,' the President in carrying out his foreign affairs responsibilities.''7 Several reasons led the Fourth Circuit to find that the warrant requirement did not apply to searches for foreign intelligence information:

(1) A warrant requirement ... would reduce the flexibility of executive foreign intelligence initiatives, in some cases delay executive response to foreign intelligence threats, and increase the chance of leaks regarding sensitive executive operations[;] (2) the executive possesses unparalleled expertise to make the decision whether to conduct foreign intelligence surveillance, whereas **the judiciary is largely inexperienced** in making the delicate and complex decisions that lie behind foreign intelligence surveillance ...[flew, if any, district courts would be truly competent to judge the importance of particular information to the security of the United States or the 'probable cause' to demonstrate that the government in fact needs to recover that information from one particular source[;] and (3) the executive branch. is also constitutionally designated as the pre-eminent authority in foreign affairs. 72

To summarize, the Fourth Circuit held that the government was relieved of the warrant requirement when the surveillance involves both a foreign power and a foreign intelligence motive. First, warrants are not required when the object of the search or surveillance is a foreign power, its agents, or its

collaborators since such cases are "most likely to call into play difficult and subtle judgments about foreign and military affairs."' 74 Second, "when the surveillance is conducted 'primarily' for foreign intelligence reasons," warrants are unnecessary for two reasons: (1) "once surveillance becomes primarily a criminal investigation, the courts are entirely competent to make the usual probable cause determination[;]" and (2) "individual privacy interests come to the fore and government foreign policy concerns recede when the government is primarily attempting to form the basis for a criminal prosecution."' 75 Several other circuits have employed a similar logic, and no federal appeals court has taken a different view.'76 The factors favoring warrantless searches for national security reasons are compelling under the current circumstances created by the war on terrorism.

After the attacks on September 11, 2001, the government interest in conducting searches related to fighting terrorism is perhaps of the highest order-to defend the nation from direct attack. "It is 'obvious and unarguable' that no governmental interest is more compelling than the security of the Nation."'77

Congress also **implicitly authorized** the President to carry out electronic surveillance to prevent further attacks on the United States.'78 Congress's September 18, 2001 Authorization for Use of Military Force ("AUMF") is sweeping; it has no limitation on time or place-the only directive is that the President pursues terrorists, such as al Qaeda.'79 Although the President did not need, as a constitutional matter, Congress's permission to pursue and attack al Qaeda after the attacks on New York City and the Pentagon, 8' AUMF's passage shows that the President and Congress fully agreed that military action would be appropriate. Congress's support for the President cannot just be limited to the right to use force, but to all the necessary subcomponents that permit effective military action. 8' Congress's approval of the killing and capture of al Qaeda must obviously include the tools to locate them in the first place.

B. A Policy Analysis Affirms the Need for the NSA Surveillance Program

AT//Executive Flex Low

No meaningful check on flexibility now

Sudha **Setty 15**, Professor at Western New England University School of Law, 2015, "Surveillance, Secrecy, and the Search for Meaningful Accountability", 51 STAN. J. INT'L L 16, http://digitalcommons.law.wne.edu/cgi/viewcontent.cgi?article=1305&context=facschol

One of the most intractable problems in the debate around maintaining¶ the rule of law while combating the threat of terrorism is the question of¶ secrecy and transparency. In peacetime, important tenets to the rule of law¶ include transparency of the law, limits on government power, and consistency¶ of the law as applied to individuals in the polity. Yet the post-9/11 decision making¶ by the Bush and Obama administrations has been characterized by¶ excessive secrecy that stymies most efforts to hold the government¶ accountable for its abuses. Executive branch policy with regard to detention,¶ interrogation, targeted killing, and surveillance are kept secret, and that¶ secrecy has been largely validated by a compliant judicial that has¶ dismissed almost all suits challenging human and civil rights abuses resulting¶ from counterterrorism programs. Efforts by Congress to engage in¶ meaningful oversight have met with mixed results; **in the area of government¶ surveillance, such efforts have been fruitless** without the benefit of leaked¶ information on warrantless surveillance by government insiders. The¶ executive branch has generally refused to make public vital aspects of its¶ surveillance programs in ways that could give oversight efforts more muscle.¶ At the same time, the executive branch has consistently defended the legality¶ and efficacy of these surveillance programs.¶ This paper considers the nature and effect of the warrantless surveillance¶ infrastructure constructed in the United States since the terrorist attacks of¶ September 11, 2001, and discusses surveillance-related powers and¶ accountability measures in the United Kingdom and India as comparative¶ examples.

AT//IG Links to Exec Flex

IG reform avoids the war powers disad

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

A final reservation might come from those who fear that strengthening IGs' capacity for rights oversight might deflect more robust attempts to constrain the executive. Indeed, some scholars who defend expanded executive national security powers view the potential for **internal institutions** to ward off external checks on the executive as a strength: Eric Posner and Adrian Vermeule have argued that executive "self-binding" mechanisms help the executive gain public trust to pursue aggressive policies without undue constraint,309 while Goldsmith argues that IGs, in particular, can enhance executive power.310 Certainly, executive officials have invoked IGs in an attempt to abate civil liberties concerns and thereby **preserve or strengthen** executive power. The Bush Administration sought to defend the National Security Agency warrantless surveillance program by claiming it had been thoroughly vetted by the Justice Department and the NSA Inspector General.311 FBI Director Mueller sought to allay senators' concerns over FBI surveillance of a peaceful antiwar rally by inviting an IG review of the matter.312 And the Obama Administration sought to reassure courts that it could be trusted in invoking the state secrets privilege by issuing a policy that, among other provisions, required the Justice Department to refer "credible allegations of government wrongdoing" to IGs.313

Politics Net Benefit

Politics N/B – ESR

The executive solves better than Congress or the Courts
Metzger 09

Gillian E. Metzger, is a United States Constitutional Law scholar and a professor of law at Columbia University, "THE INTERDEPENDENT RELATIONSHIP BETWEEN INTERNAL AND EXTERNAL SEPARATION OF POWERS," October 7, 2009, Columbia Law School Public Law and Legal Theory Working Paper Group, Google Scholar/NV

Several bases exist for thinking that internal separation of powers mechanisms may have a comparative advantage. **Internal mechanisms operate ex ante**, at the time when the executive branch is formulating and implementing policy, **rather than ex post**; they are therefore able to **avoid the delay in application that can hamper both judicial and congressional oversight**.76 Internal mechanisms often operate continuously, rather than being limited to issues that generate congressional attention or arise in the form of a justiciable challenge. Internal mechanisms 77 operate not just at the points **at which policy proposals originate and are implemented but also at higher managerial** levels, and thus can address policy and administration in both a granular and a systemic fashion. In addition, policy recommendations generated through internal checks **may face less resistance than those offered externally**, because the latter frequently arise after executive officials **have already decided upon a policy course** and are more likely to take an adversarial form. Internal mechanisms may also gain credibility with executive branch officials 78 to the extent they are perceived as contributing to more fully informed and expertise-based decisionmaking.79

CP avoids politics--- takes too long for congress to review and preserves other topics
Sovacool 10 [Ben and Kelly, Dr. Benjamin K. Sovacool is a Research Fellow in the Energy Governance Program at the Centre on Asia and Globalization. He is also an Assistant Professor at the Lee Kuan Yew School of Public Policy at the National University of Singapore., Kelly E. Sovacool is a Senior Research Associate at the Lee Kuan Yew School of Public Policy at the National University of Singapore. She received her MS in geography from the Virginia Polytechnic Institute & State University in Blacksburg, "Crisis Areas in the United States", http://www.circleofblue.org/waternews/wp-content/uploads/2010/08/sovacool-and-sovacool-water-columbia.pdf] Schloss

Executive Orders also save time in a second sense. The **President does not have to expend scarce political capital trying to persuade Congress to adopt his or her proposal**. Executive Orders thus save presidential attention for other topics. Executive Orders bypass congressional debate and opposition, along with all of the horse trading and compromise such legislative activity entails.292 Speediness of implementation can be especially important when challenges require rapid and decisive action. After the September 11, 2001 attacks on the Pentagon and World Trade Center, for instance, the Bush Administration almost immediately passed Executive Orders forcing airlines to reinforce cockpit doors and freezing the U.S. based assets of individuals and organizations involved with terrorist groups.293 These actions took Congress nearly four months to debate and subsequently endorse with legislation. Executive Orders therefore enable presidents to rapidly change law without having to wait for congressional action or agency regulatory rulemaking.

No backlash against executive action---Obama is uniquely different

Ramsey 12 [Michael, Professor of Law, University of San Diego School of Law, THE FEDERALIST SOCIETY NATIONAL LAWYERS CONVENTION--2011: MEET THE NEW BOSS: CONTINUITY IN PRESIDENTIAL WAR POWERS?, Harvard Journal of Law & Public Policy, 35 Harv. J.L. & Pub. Pol'y 863, http://www.lexisnexis.com.proxy.lib.umich.edu/hottopics/lnacademic/] Schloss

Thus there has been an escalation in the use of unconstitutional executive war power under President Obama, yet there has not been an outcry against him resembling the outcry against the Bush Administration, which was routinely attacked for exceeding the limits of executive power. n29 Although some voices have been raised against President Obama's claims of executive power, n30 they have been marginalized. They have not [*871] been taken up by the mainstream in the manner of similar criticisms of President Bush. My speculation is that there is an identification by legal and media elites with the establishment Democratic Party that makes it difficult for these criticisms to gain traction in the way they did in the Bush Administration.¶ I think this makes it easier for Democratic presidents than for Republican presidents to unconstitutionally extend executive power. Thus Obama's policies, which are much more deserving of constitutional criticism, do not generate the popular pushback that we saw, perhaps unjustifiably, against President Bush. In any event, what is most striking about executive war power under President Obama is not the commonly recognized continuity as compared to the prior administration, but rather the increased disregard of constitutional limits.

Politics N/B – IG

IG changes get implemented at the agency level – doesn't require congressional involvement

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

Revising agency rules to prevent future abuses. The ultimate objective of any system of oversight is to prevent future abuses. IGs can support prospective **reform** by recommending changes to agency **managerial or oversight processes** or new **statutory or administrative substantive rules**, such as heightened legal constraints on agency discretion. Such proposals fall within IGs' mandate to prevent future abuse by recommending **policy changes** and commenting on existing and proposed legislation and regulations.204 **Procedural reforms** might include requiring higher-level approval of actions implicating rights, **greater oversight** by agency counsel, or **improving agency databases** or systems to enable better oversight. IGs can also recommend greater **substantive constraints** on agency discretion, such as the **prohibition of a controversial practice** or a requirement of ex ante judicial approval.

Inspector General review shields the link

Sinnar, 13 (Shirin; Assistant Professor of Law, Stanford Law School; "Protecting Rights from Within? Inspectors General and National Security Oversight"; June 11, 2013; http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2025186) KW

For Congress, too, the promise of IG oversight may attract, or at least allow members to justify, support for legislation to expand executive counterterrorism powers that threaten civil liberties. In a committee hearing on the September 11 detainees report, Senator Arlen Specter argued that an aggressive IG would "ease the public concern so that when [the Attorney General] comes back for the next PATRIOT Act we do not have a wave of public opposition."314 Indeed, Congress has **often required IG reviews of national security programs** in the course of increasing government investigative or surveillance powers,315 and some members of Congress have cited these provisions, among other checks, **as enabling broader support for the legislation**.316

Competition/Theory

AT//PDCP – Top

The counterplan's competitive –

Curtail means to restrict

Oxford 15 – Oxford Dictionaries, "curtail", http://www.oxforddictionaries.com/us/definition/american_english/curtail

Definition of curtail in English:

verb

[WITH OBJECT]

1Reduce in extent or quantity; impose a restriction on:

civil liberties were further curtailed

That's distinct from the counterplan's reduction

Randall 7 (Judge – Court of Appeals of the State of Minnesota, "Dee Marie Duckwall, Petitioner, Respondent, vs. Adam Andrew Duckwall, Appellant", 3-13, http://law.justia.com/cases/minnesota/court-of-appeals/2007/opa0606 95-0313.html#_ftnref2)

[2] When referring to parenting time, the term "restriction[,]" is a **term of art** that is **not the equivalent of "reduction"** of parenting time. "A modification of visitation that **results in** a reduction of total visitation time, is not necessarily a restriction' of visitation.' Danielson v. Danielson, 393 N.W.2d 405, 407 (Minn. App. 1986). When determining **whether a reduction constitutes a restriction**, the court should consider the **reasons** for the change as well as the amount of the reduction." Anderson v. Archer, 510 N.W.2d 1, 4 (Minn. App. 1993).

It mandates that the aff *discontinue the authority or program*

Dembling, 78 – General Counsel, General Accounting Office; (Paul, "OVERSIGHT HEARING ON THE IMPOUNDMENT CONTROL ACT OF 1974" HEARING BEFORE THE TASK FORCE ON BUDGET PROCESS OF THE COMMITTEE ON THE BUDGET HOUSE OF REPRESENTATIVES NINETY-FIFTH CONGRESS SECOND SESSION JUNE 29, 1978, Hein Online)

(3) "Curtail" means to **discontinue, in whole or in part, the execution of a program**, resulting in the application of less budget authority in furtherance of the program than provided by law.

There must be a *third party restriction* on domestic surveillance – executive self-restraint *cannot be an example of the plan*

8th Circuit Court of Appeals 10

(Public Water Supply Dist. No. 3 v. City of Leb., 605 F.3d 511, Lexis)

HN9 7 U.S.C.S. § 1926(b) provides that a rural district's service shall not be curtailed or limited. In this context, the verbs "curtail" and "limit" connote something being **taken from** the current holder,

rather than something being retained by the holder to the exclusion of another. "Curtail" is defined as shorten in extent or amount; abridge; "limit" is defined as set bounds to; restrict. The available cases and fragments of legislative history all seem to have in mind **curtailment** resulting from substitution of **some third party** as a water-supplier for the rural district. Shepardize - Narrow by this Headnote

Prefer this interpretation in the context of domestic surveillance

Ackerman 14 (Spencer, national security editor for Guardian US. A former senior writer for Wired, "Failure to pass US surveillance reform bill could still curtail NSA powers," October 3rd, 2014, http://www.theguardian.com/world/2014/oct/03/usa-freedom-act-house-surveillance-powers)

Two members of the US House of Representatives are warning that a failure to pass landmark surveillance reform will result in a far more drastic curtailment of US surveillance powers – one that will occur simply by the House doing nothing at all. As the clock ticks down on the 113th Congress, time is running out for the USA Freedom Act, the first legislative attempt at reining in the National Security Agency during the 9/11 era. Unless the Senate passes the stalled bill in the brief session following November's midterm elections, the NSA will keep all of its existing powers to collect US phone records in bulk, despite support for the bill from the White House, the House of Representatives and, formally, the NSA itself. But supporters of the Freedom Act are warning that the intelligence agencies and their congressional allies will find the reform bill's legislative death to be a cold comfort. On 1 June 2015, Section 215 of the Patriot Act will expire. The loss of Section 215 will deprive the NSA of the legal pretext for its bulk domestic phone records dragnet. But it will cut deeper than that: the Federal Bureau of Investigation will lose its controversial post-9/11 powers to obtain vast amounts of business records relevant to terrorism or espionage investigations. Those are investigative authorities the USA Freedom Act leaves largely untouched. Section 215's expiration will occur through simple legislative inertia, a characteristic of the House of Representatives in recent years. Already, the House has voted to sharply **curtail domestic** dragnet **surveillance**, both by passing the Freedom Act in May and voting the following month **to ban** the NSA from warrantlessly searching through its troves of international communications for Americans' identifying information. Legislators are warning that the next Congress, expected to be more Republican and more hostile to domestic spying, is unlikely to reauthorise Section 215.

Context is key

O'Niell 45 – O'Niell, Chief Justice, Supreme Court of Louisiana, "STATE v. EDWARDS", 207 La. 506; 21 So. 2d 624; 1945 La. LEXIS 783, 2-19, Lexis

The argument for the prosecution is that the ordinance abolished the three open seasons, namely, the open season from October 1, 1943, to January 15, [*511] 1944, and the open season from October 1, 1944, to January 15, 1945, and the open season from October 1, 1945, to January 15, 1946; and that, in that way, the ordinance suspended altogether the right to hunt wild deer, bear or squirrels for the [***6] period of three years. The ordinance does not read that way, or convey any such meaning. According to Webster's New International Dictionary, 2 Ed., unabridged, the word "curtail" means "to cut off the end, or any part, of; hence to shorten; abridge; diminish; lessen; reduce." The word "abolish" or the word "suspend" is not given in the dictionaries as one of the definitions of the

word "curtail". In fact, in common parlance, or in law composition, the word "curtail" has no such meaning as "abolish". The ordinance declares that the three open seasons which are thereby declared curtailed are the open season of 1943-1944, -- meaning from October 1, 1943, to January 15, 1944; and the open season 1944-1945, -- meaning from October 1, 1944, to January 15, 1945; and the open season 1945-1946, -- meaning from October 1, 1945, to January 15, 1946. **To declare** that these three open **seasons**, 1943-1944, 1944-1945, and 1945-1946, **"are hereby curtailed", without indicating how, or the extent to which, they are "curtailed", means nothing**.¶ Conceding, for the sake of argument, that the authority given by the statute, to each parish, "to curtail the open season, but for not more than three consecutive [***7] years", includes the authority to "abolish" the open season for a continuous period not exceeding three years, the [*512] ordinance in this instance does not purport to "abolish" the open season for the three [**626] consecutive years, or to suspend the right to hunt wild deer, bear or squirrels for the continuous period of three years. If the author of the ordinance intended to abolish the open seasons for hunting wild deer, bear and squirrels for a period of three years, he need not have specified the three annual open seasons, 1943-1944, 1944-1945, and 1945-1946; nor should he have used the word "curtail", with reference to the three annual open seasons, and without indicating the **extent** of the curtailment. It would have been an easy matter to word the ordinance so as to have no open season for hunting wild deer, bear and squirrels in the parish for a period of three years, if the police jury intended -- and if the statute gave the authority to the police jury -- to suspend the right to hunt wild deer, bear and squirrels in the parish for a period of three years.

Also vital to *affirmative ground* – affs that don't terminate the authority will just lose to circumvention

Bendix & Quirk, 15 --- *assistant professor of political science at Keene State College, AND **Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia (March 2015, William Bendix and Paul J. Quirk, "Secrecy and negligence: How Congress lost control of domestic surveillance," http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf, JMP)

Even if Congress at some point enacted new restrictions on surveillance, **the executive might ignore the law and continue to make policy unilaterally**. The job of reviewing executive conduct would again fall to the FISA Court.56 In view of **this court's history of broad deference to the executive**, Congress would have a challenge to ensure that legislative policies were **faithfully implemented**.

"Substantial" means durable

Ballantine's 94 (Thesaurus for Legal Research and Writing, p. 173)

substantial [sub . *stan* . shel] *adj*. abundant, consequential, durable, extraordinary, heavyweight, plentiful ("a substantial supply"); actual, concrete, existent, physical, righteous, sensible, tangible ("substantial problem"); affluent, comfortable, easy, opulent, prosperous, **solvent**.

Ext. Curtail = Remove Authority / Terminate

Curtail means reducing the budget authority for a program – the aff is only a regulatory change

Dembling, 78 – General Counsel, General Accounting Office; (Paul, "OVERSIGHT HEARING ON THE IMPOUNDMENT CONTROL ACT OF 1974" HEARING BEFORE THE TASK FORCE ON BUDGET PROCESS OF THE COMMITTEE ON THE BUDGET HOUSE OF REPRESENTATIVES NINETY-FIFTH CONGRESS SECOND SESSION JUNE 29, 1978, Hein Online)

Application of curtailment procedure.-The review procedure is triggered by an executive branch decision to 'curtail" a program which has been made subject to the bill. The definition of "curtail" (subsection (a)(3)) requires that the executive branch decision result in a **reduction of budget authority** applied in furtherance of the program. As noted above, the level of budget authority for this purpose would be the amount so specified in an appropriation act. The reduction relates to the use of funds "in furtherance of the program." Thus, although the full amount of budget authority may be spent in some manner, e.g., to pay contract termination costs or other liabilities incident to the curtailment, such a use of funds still involves a reduction in funding for affirmative program purposes which triggers the review provisions.

Curtailment review procedure.-The review procedure would generally be similar to the procedure for reviewing deferrals of budget authority under the Impoundment Control Act, except that congressional disapproval would take the form of a concurrent resolution. The President would report a proposed curtailment decision to Congress, together with appropriate information (subsection (b)), and supplementary reports would be made for any revisions (subsection (c)(3)). The proposal, and any supplementary reports, would be printed in the Federal Register (subsection (c)(4)).

Curtailment requires a removal of authority

May and Ides 7 - James P. Bradley Professor of Constitutional Law at Loyola Law School; Professor of Law at Loyola Law School and former Chief Judge of the United States Court of Appeals for the Fourth Circuit (Christopher and Allan, Constitutional Law National Power and Federalism: Examples and Explanations, Aspen Publishers, 2007, p. 312-313)//DBI

Assigning Removal Authority to an Executive Official Other Than the President

While Congress cannot participate directly in the removal of executive or judicial officers other than through impeachment, Congress can in other ways **curtail the President's ability to remove executive officers**. One possibility is to **vest the authority to remove a particular official in some executive branch official other than the President**. For example, federal law provides that "[e]ach assistant United States attorney is subject to removal by the Attorney General" 28 U.S.C. §542(b). If the President wanted to fire an assistant US attorney, she could not dismiss that officer herself but would have to go through the attorney general. If the attorney general refused to comply with the President's wishes, the President would have to dismiss the attorney general and name a successor willing to carry out the President's wishes. By thus shielding front-line federal prosecutors from direct

removal by the President, Congress has to a limited degree insulated federal law enforcement operations from executive or political control.

To curtail means to end

Merriam-Webster, 15 ('curtail', http://www.merriam-webster.com/dictionary/curtail

Full Definition of CURTAIL

transitive verb

: to make less by or as if by **cutting off or away some part** <curtail the power of the executive branch> <curtail inflation>

Ext. Must Include 3rd Party

Curtailment must be done by a third party—prefer contextual definitions

Sugiyama and Perry 6 - *University of Michigan Law School, expected JD 2007; **University of Michigan Law School, JD 2006 (Tara and Marisa, "THE NSA DOMESTIC SURVEILLANCE PROGRAM: AN ANALYSIS OF CONGRESSIONAL OVERSIGHT DURING AN ERA OF ONE-PARTY RULE", University of Michigan Journal of Law Reform, Fall 2006, http://heinonline.org/HOL/Page?handle=hein.journals/umijlr40&div=10&g_sent=1&collection=journals) //DBI

Congress designed FISA to curtail executive authority for surveillance rather than for law enforcement purposes.6 FISA limited warrantless surveillance to "foreign powers" and surveillance under court order to situations where probable cause justified surveillance of a "foreign power" or an "agent of a foreign power."3 7 As a result, Congress approved surveillance under FISA only where its purpose was intelligence gathering. That limitation fell with the Twin Towers on September 11,2001.

It's predictable—Congress empirically curtails executive powers

Zelizer 8 - Professor of History and Public Affairs at Princeton University (Julian, "THE CONSERVATIVE EMBRACE OF PRESIDENTIAL POWER", Boston University Law Review, April 2008, http://heinonline.org/HOL/Page?handle=hein.journals/bulr88&div=23&g_sent=1&collection=journals)// DBI

Richard Nixon demonstrated how the executive could use presidential power as a force against liberalism when he relied on that power to implement budget cuts and achieve his military objectives.6 Conservative interest in presidential power accelerated between 1973 and 1978 as **Congress passed reforms to curtail the executive branch's power**. During Gerald Ford's and Jimmy Carter's presidencies, congressional reforms to constrain the extra-constitutional powers and common abuses of presidents angered many conservatives. In 1978, for example, Congress passed the Foreign Intelligence Surveillance Act ("FISA"), subjecting domestic surveillance to court supervision. 7 Given the battles of the era, conservatives saw the congressional reforms of the executive branch as a liberal objective.

Theory

The counterplan's a core question on in the context of domestic surveillance and national security

Sales 12

Sales 2012 – Assistant Professor of Law, George Mason University School of Law (7/3, Nathan Alexander, Journal of National Security Law & Policy, 6.227, "Self-Restraint and National Security/NV

With this framework in mind, we can begin to offer some preliminary hypotheses about why national security officials sometimes adopt selfrestraints. From a policymaker's standpoint, the expected benefits of a **national security operation** often will be dwarfed by its expected costs (enemy propaganda, loss of national prestige, individual criminal liability, and so on). **For rational policymakers, the welfare maximizing choice sometimes will be to avoid bold and aggressive operations**. Reviewers likewise can find inaction to be welfare maximizing. For an influence- and autonomy-maximizing reviewer, vetoing an operation proposed by a bureaucratic competitor can redistribute power and turf away from one's rival and to oneself. Operators, by contrast, are likely to have a very different cost-benefit calculus. An operator's expected benefits typically will be larger than a policymaker's or a reviewer's, because he will account for the psychic income (such as feelings of exhilaration and satisfaction) that accrues to those who personally participate in a mission. As a result, rational operators may regard a given operation as welfare-enhancing even when policymakers and reviewers regard the same mission as welfare reducing.

Executive Self-Restraint---NDI 2015

The President of the United States, through an Executive Order, should <plan>

Executive orders are the most flexible tool to change current legislation

Erica **Newland 15,** Yale Law School, J.D., April 2015, "Executive Orders in Court", Yale Law Review, http://www.yalelawjournal.org/note/executive-orders-in-court

This Note has discussed the doctrinal asymmetries that characterize the "jurisprudence" of executive orders. Just like statutory law, executive orders can impose legal obligations on citizens and create new powers for the federal government, and they can be harnessed to alter the judicially acknowledged meaning of statutory language. At least some, and possibly all, valid executive orders can preempt conflicting state law.

But unlike statutes, under current doctrine and practice, executive orders do not similarly constrain those who do the governing. Their imprecision about the sources and boundaries of their authority, especially in "[t]he absence of a framework for review," does "nothing to check the incentives of the president and his counsel to seek the widest possible construction of the president's authority."242 Indeed, the courts have generally, and generously, affirmed these capacious constructions, at least where courts lack direct guidance from other areas of the law. Meanwhile, the President can wish away many uncooperative executive orders, without risk of lawsuit, rendering these instruments fair-weather friends for everyone but the President himself.

This Note has suggested that this jurisprudence of executive orders may not derive from any coherent doctrine of presidential exceptionalism but instead from an under-theorized understanding of the role of executive orders and how they should function as part of our separation of powers. The doctrinal imbalances highlighted here should motivate further study of executive orders and of the doctrine that has developed around them. Does this doctrine, some of it quite old, suggest that the aforementioned asymmetries have become a gloss on our constitutional design? Given the diverse genealogies of different types of executive orders, is the term "executive order" itself misleadingly broad? Are courts in fact intentionally buttressing the executive order—perhaps as a tool that preserves flexibility that the modern presidency requires?243 Or have courts failed to realize that in the shadows of this inchoate doctrine, executive orders—as repeat players in the push and pull of debates over the separation of powers—have taken on a life of their own?

Executive action on surveillance involves internal checks on the executive branch which solves the aff

Nathan Alexander **Sales 14**, Associate Professor of Law, Syracuse University College of Law, Summer 2014, "NSA SURVEILLANCE: ISSUES OF SECURITY, PRIVACY AND CIVIL LIBERTY: ARTICLE: Domesticating Programmatic Surveillance: Some Thoughts on the NSA Controversy", LexisNexis, 10 ISJLP 523

In addition to oversight by outsiders, a programmatic surveillance regime also should feature a system of internal checks within the executive branch, to review collection before it occurs, after the fact, or both. As for the ex ante checks, internal watchdogs should be charged with scrutinizing proposed bulk collection to verify that it complies with the applicable constitutional and statutory rules, and also to ensure that appropriate protections are in place for privacy and civil liberties. The Justice Department's Office of Intelligence is a well known example. The unit, which presents the government's surveillance

applications to the FISA court, subjects these requests to exacting scrutiny with the goal of increasing the likelihood of surviving judicial review. n65 Indeed, the office has a strong incentive to ensure that the applications it presents are airtight, so as to preserve its credibility with the FISA court. n66 Ex post checks include such commonplace mechanisms as agency-level inspectors general, who can audit bulk collection programs, assess their legality, and make policy recommendations to improve their operation, as well as entities like the Privacy and Civil Liberties Oversight Board, which perform similar functions across the executive branch as a whole. Another important ex post check is to offer meaningful whistleblower protections to officials who know about programs that violate constitutional or statutory requirements. Allowing officials to bring their concerns to ombudsmen within the executive branch (and then eventually to Congress) can help root out lawlessness and also relieve [*539] the felt necessity of leaking information about highly classified programs to the media. These and other internal checks can achieve all three of the benefits promised by traditional judicial and legislative oversight--executive branch watchdogs can veto surveillance they conclude would be unlawful, the mere possibility of such vetoes can chill overreach, and increasing the costs of monitoring can redirect scarce resources toward truly important surveillance. External and internal checks thus operate together as a system; the two types of restraints are rough substitutes for one another. If outside players like Congress and the courts are subjecting the executive's programmatic surveillance activities to especially rigorous scrutiny, the need for comparably robust safeguards within the executive branch tends to diminish. Conversely, if the executive's discretion is constrained internally through strict approval processes, audit requirements, and so on, the legislature and judiciary may choose not to hold the executive to the exacting standards they otherwise would. In short, certain situations may have less need to use traditional interbranch separation of powers and checks and balances to protect privacy and civil liberties because the executive branch is subject to an "internal separation of powers" n67 that can accomplish much the same thing.

Mechanism

Solvency---General

Presidents use XOs to make policy and exercise emergency power – key to administrative procedures

Kenneth R. **Mayer '99**, Political science professor at the University of Wisconsin-Madison, "Executive Orders and Presidential Power", http://www.jstor.org/stable/pdf/2647511.pdf?acceptTC=true

Executive orders are important to presidents, and their use reflects much more than simple administrative routines or random noise. Presidents use them to make substantive policy, exercise emergency powers, strengthen their control over executive branch agencies and administrative processes, emphasize important symbolic stances, and maintain their electoral and governing coalitions. Their use varies in predictable ways in accordance with substantive changes in political context.

The president's power to make policy through executive orders has grown along with, and has reinforced, the expansion of executive branch responsibilities. Some of this authority has been delegated to the president by Congress, but presidents have also simply assumed unilateral policymaking powers, especially in national security and foreign policy matters (Koh 1990; Fisher 1995). The expansion of the executive branch and the institutionalization of the presidency has provided the president with increased power over policy implementation and administrative procedures. One proponent of this "Administrative Presidency" thesis is Moe (1985, 1993, 1995; see also Nathan 1983; Durant 1992), who argues that presidents have a substantial reservoir of authority that allows them to make many substantive decisions on their own. Even within the narrower confines of their executive authority, presidents can make significant policy choices. "They can organize and direct the presidency as they see fit, create public agencies, reorganize them, move them around, coordinate them, impose rules on their behavior, put their own people in top positions, and otherwise place their structural stamp on the executive branch" (Moe 1993, 366).

Executive Orders can solve for important policy issues- empirics prove

Kevin **Stack 5,** Assistant Professor of Law, Benjamin N. Cardozo School of Law, January 2005, "The Statutory President", Iowa Law Review, 90 Iowa L. Rev. 539, https://discoverarchive.vanderbilt.edu/bitstream/handle/1803/6465/Statutory%20President.pdf?sequence=1

Modern presidents have used presidential orders to initiate many of their most important policies. n20 The president may issue or repeal prior presidential orders on his own initiative, and in almost all cases, may do so without having to satisfy any procedural requirements. n21 Moreover, with appropriate constitutional or statutory authorization, these orders may have the force and effect of law. n22 As a result, presidential orders often leave other institutions, such as Congress, administrative agencies and the courts, as well as the public in the position of responding to or implementing the policy and law they embody.

Scope of Use. Presidents have asserted power unilaterally through presidential orders since the time of the Founding. n23 In 1793, Washington issued the Neutrality Proclamation, which proclaimed the neutrality of the United States in the conflict between Britain and France, without statutory authority to do so. n24 Marbury v. Madison itself arose from a challenge to the validity of an order from President

Jefferson to his Secretary of State, James Madison, to withhold William Marbury's judicial commission. n25 Executive and other presidential orders have been the source of a wide range of significant moments in national life. n26 Executive orders or proclamations [*549] declared the emancipation of slaves in confederate states, n27 the suspension of the writ of habeas corpus during the Civil War, n28 the internment of the Japanese-Americans during World War II, n29 the desegregation of the military, n30 the establishment of the government's security classification system, n31 and the imposition of centralized executive review of agency regulations. n32 Presidential orders are clearly a significant source of law and policy.

[*550] The patterns of presidents' use of executive orders have been the subject of recent empirical studies. n33 The sheer number of executive orders issued per year has declined from the peak it reached during the New Deal and World War II. n34 This decline in the gross number of orders does not, however, correspond to a diminution in the importance of executive orders as a policymaking tool. On the contrary, the significance of the president's assertions of authority through executive and other presidential orders has increased in the twentieth century. "Whereas at the turn of the century presidents issued only a handful of important executive orders in their entire term," Terry Moe and William Howell report, "now presidents can be expected to issue between 15 and 20 important orders every year." n35 Likewise, using slightly different criteria to judge significance, Kenneth Mayer concludes that since the 1970s, on average, presidents have issued about fourteen significant executive orders per year. n36 Moreover, the percentage of presidential orders that apply to the general public has increased dramatically. n37 Nor are there indications that the perceived importance of presidential orders to the president is declining. n38

Solvency---Gridlock/Effectiveness

XOs let the president enact a policy agenda despite gridlock

Megan **Covington 12**, School of Engineering, Vanderbilt University, "Executive Legislation and the Expansion of Presidential Power", http://ejournals.library.vanderbilt.edu/index.php/vurj/article/view/3556

Presidents in recent years have had more opportunities to expand their power and authority, largely through the use of executive legislation. Allowing the president to act decisively and without consulting Congress, executive orders and the other forms of executive legislation provide the president with a variety of options to enact in order to accomplish his policy agenda, especially in the event of gridlock or divided government. This expansion of presidential power comes at a time when the decline of party strength and increase in polarization have made Congress less able and less willing to respond to executive legislation. With the Supreme Court generally unwilling to overturn executive orders and the public largely ignorant of their existence – not to mention the existence of proclamations, signing statements, memoranda, or executive agreements – there is no viable way to challenge the president's increased ability to act unilaterally. Although it does not enable the president to rule as a dictator, executive legislation is dangerous in that it remains unchecked and has been used to violate the constitutional principles of separation of powers and checks and balances, principles the Founding Fathers intended to keep any one of the three branches of government from becoming more powerful than the others and thus threatening the stability of the nation. The president's ability to act unilaterally to accomplish his goals, both domestically and in terms of foreign policy, has sharply increased since the presidency of Ronald Reagan and will continue to rise, providing the potential for continued and more serious abuses of executive authority in the future.

Solvency---History/Empirics

History proves- Executive orders allow government self restraint

Nathan Alexander **Sales, 12**, Associate Professor of Law, Syracuse University College of Law, "Self restraint and National Security", http://jnslp.com/wp-content/uploads/2012/08/08__Sales_Master_6-28-12-NS.pdf

A prime example of how bureaucratic jockeying for influence and autonomy can result in self restraint is Executive Order 13491, which holds all counterterrorism interrogations to the Army Field Manual standards. During the presidential transition from late 2008 into early 2009, the incoming White House Counsel's Office prepared a draft executive order that would extend the AFM restrictions to the CIA. Officials at Langley and other intelligence agencies bitterly contested the proposal, but their arguments ultimately fell on deaf ears; the President signed the order his second full day in office.202 By successfully lobbying the President to adopt the AFM restrictions, and by vetoing the CIA's preferred interrogation practices, the lawyers in the Counsel's Office magnified their turf; their victory expanded their share of the influence pie and shrunk the CIA's by a corresponding amount. When the President sat down to chart a new course in the nation's interrogation policies, it wasn't the CIA Director or even the Director of National Intelligence, the titular head of the intelligence community, who was whispering in his ear. It was his lawyer. Indeed, the Counsel's Office managed the interagency policymaking process so tightly that Michael Hayden, then the head of the CIA, never actually saw a draft of the order before it was issued. "You didn't ask," he reportedly told the White House the morning the directive would be issued, "but this is the CIA officially nonconcurring."203 The Counsel's Office had combined a clear policy vision and savvy bureaucratic maneuvering to make itself "an instant power center" in the young administration.204

Drones

Drone Court

Executive branch National security court is the best option for curtailing drone surveillance

Neal K. **Katyal 2/22/13**, former acting solicitor general, is a professor of national security law at Georgetown and a partner at the law firm Hogan Lovells, “Who will mind the drones?”, Lexis Nexis

In the wake of revelations about the Obama administration's drone program, politicians from both parties have taken up the idea of creating a ''drone court'' within the federal judiciary, which would review executive decisions to target individuals.

But the drone court idea is a mistake. It is hard to think of something less suitable for a federal judge to rule on than the fast-moving and protean nature of targeting decisions.

Fortunately, a better solution exists: a ''national security court'' housed within the executive branch itself. Experts, not generalists, would rule; pressing concerns about classified information would be minimized; and speedy decisions would be easier to reach.

There is, of course, a role for federal courts in national security. In 2006, I argued and won Hamdan v. Rumsfeld, a Supreme Court case that struck down President George W. Bush's use of military tribunals at Guantánamo Bay. But military trials are a far cry from wartime targeting decisions.

And the Foreign Intelligence Surveillance Court, which reviews administration requests to collect intelligence involving foreign agents inside the country and which some have advocated as a model for the drone court, is likewise appropriately housed within the judicial system - it rules on surveillance operations that raise questions much like those in Fourth Amendment ''search and seizure'' cases, a subject federal judges know well.

But there is no true precedent for interposing courts into military decisions about who, what and when to strike militarily. Putting aside the serious constitutional implications of such a proposal, courts are simply not institutionally equipped to play such a role.

There are many reasons a drone court composed of generalist federal judges will not work. They lack national security expertise, they are not accustomed to ruling on lightning-fast timetables, they are used to being in absolute control, their primary work is on domestic matters and they usually rule on matters after the fact, not beforehand.

Even the questions placed before the FISA Court aren't comparable to what a drone court would face; they involve more traditional constitutional issues - not rapidly developing questions about whether to target an individual for assassination by a drone strike.

Imagine instead that the president had an internal court, staffed by expert lawyers to represent both sides. Those lawyers, like the Judge Advocate General's Corps in the military, would switch sides every few years, to develop both expertise as repeat players and the ability to understand the other point of view.

Other

PCLOB Attorney Pool

PCLOB attorney pool will solve constitutional implications of FISA court

Greg **Sargent 7/25/13**, former reporter for The New York Observer and a former columnist for New York magazine , "Reform of NSA surveillance is probably inevitable", http://www.washingtonpost.com/blogs/plum-line/wp/2013/07/25/reform-of-nsa-surveillance-is-probably-inevitable/

Here's the latest: Dem Rep. Adam Schiff of California — one of the lawmakers leading the push for NSA reform — plans to introduce a new proposal that would deal with one of the worst problems with the programs: The fact that the Foreign Intelligence Surveillance Court only hears from the government when deciding whether to authorize surveillance.

Schiff's proposal will require the Privacy and Civil Liberties Board — an agency within the Executive Branch that is supposed to monitor the balance between anti-terror policies and civil liberties — to create a pool of attorneys with experience in Fourth Amendment or national security law to argue the side of the public when the government requests a surveillance warrant. Under the proposal, the FISA court would be required to appoint a lawyer to act as a kind of "public advocate" for cases that would have broad constitutional implications.

"What we have in mind is to use the Privacy and Civil Liberties board to generate a pool of attorneys, in consultation with the Justice Department, that will be cleared and can provide a contrary view in significant FISA court cases," Schiff told me today. "The court will have the benefit of hearing contrary views and contrary case law."

"These attorneys that would have the same access to classified material and same right of appeal as would the government's attorneys," Schiff continued. He noted that the proposal was still being drafted, and key details — such as how to define the cases that would require this step, and how to ensure that the FISA court follows this directive — are still being worked out.

"There has to be a mechanism to ensure the presentation of contrary views," Schiff continued. "If it is entirely left to the FISA court there won't be a lot of public confidence in it."

Solvency

General

Executive Action Good

Solves and avoids the link to politics

Dino P. **Christenson and** Douglas L. **Kriner, 15**, Assistant Professors of Political Science, Boston University, Spring 2015, "SYMPOSIUM: EXECUTIVE DISCRETION AND THE ADMINISTRATIVE STATE: POLITICAL CONSTRAINTS ON UNILATERAL EXECUTIVE ACTION", LexisNexis, 65 Case W. Res. 897

Recent presidents have boldly acted unilaterally to effect major changes in public policy on issues ranging from the prosecution of the [*931] war on terror to overhauling the nation's immigration system. These seemingly brazen assertions of unilateral presidential power are frequently decried as evidence of presidential aggrandizement that threatens to upset the delicate balance of power between the branches carefully erected by the Framers. It is little wonder that contemporary presidents have increasingly turned to unilateral measures to pursue their policy objectives. As the dominant paradigm in the literature clearly articulates, presidents enjoy significant institutional advantages vis-à-vis the legislature when acting unilaterally. By acting first, presidents seize the initiative and force other politicalactors to overcome their own institutional barriers to overturn policy changes effected by the executive with the stroke of a pen. Given the collective action dilemma that hinders congressional efforts at institutional self-defense, a legislative process riddled with transaction costs, and the looming threat of a presidential veto, Congress has always faced long odds when endeavoring to undo a presidential unilateral action through legislation. In a highly polarized polity, in all but the rarest of circumstances Congress would appear all but incapable of doing so.

ESR solves—Obama does this all the time

Nathan Alexander **Sales 12**, Associate Professor of Law, Syracuse University College of Law, August 29, 2012, "SELF RESTRAINT AND NATIONAL SECURITY", http://www.law.gmu.edu/assets/files/publications/working_papers/1041SelfRestraintandNationalSecurity.pdf

One example of a self-imposed restraint is Executive Order 13491, which limits counterterrorism interrogations – including those conducted by intelligence agencies like the CIA – to the techniques listed in the Army Field Manual. The AFM prohibits or severely restricts a number of fairly mild interrogation methods such as shouting, low-grade threats, the "good cop bad cop" routine, solitary confinement, and other staples of garden-variety law enforcement investigations. A second example, sketched above, is the government's onetime reluctance to use targeted killings against Osama bin Laden and other figures, despite its belief that doing so would be consistent with domestic and international laws against assassination. Third, lawyers in the Judge Advocate General corps sometimes reject military strikes that would be permissible under the laws of war, but that they regard as problematic for moral, economic, social, or political reasons. A fourth example is the Justice Department's erection of a "wall" that restricted information sharing between intelligence officials and criminal investigators, despite the fact that the governing statute (the Foreign Intelligence Surveillance Act of 1978) contained no such limits, and despite the fact that the governing DOJ guidelines established mechanisms for swapping such data. The question then becomes why officials adopt these restraints even when they believe them to be legally unnecessary. Two possible explanations come to mind. First, self restraint might result from systematic risk aversion within military and intelligence agencies. This aversion stems from the asymmetry between the expected costs and benefits of national security operations; officials usually have more to lose from being aggressive than they have to gain. In particular, operations – even concededly lawful ones – can inspire (describing the "cycles of timidity and aggression" in intelligence operations). The rational choice principles applied in this article can help explain why. See infra Part II.A.2 (discussing costs of national security operations). During a crisis, officials' expected

costs of inaction can be quite significant. Policymakers justifiably worry that, if the nation's security suffers on their watch, voters will hold them accountable at the ballot box. These concerns can influence the behavior of the lawyers who review proposed national security operations. To the extent lawyers approve or reject operations based on whether they would promote policymakers' welfare, see infra Part II.C, policymaker concerns about being perceived as "weak on security" will tend to yield fewer restraints. Alternatively, to the extent lawyers issue vetoes to promote their own welfare, see infra Part III.C, policymakers' preferences for aggressive operations likewise will tend to yield fewer restraints. (A lawyer who vetoes a course of action favored by policymakers risks alienating them. See infra note 200 and accompanying text.) Absent such a crisis environment, policymakers' expected costs of inaction may seem lower. In these circumstances, we should expect to see more self restraint. 4 adversaries to launch demoralizing propaganda campaigns accusing the United States of war crimes, can sap the willingness of allies to assist this country, and can even result in criminal prosecutions or private lawsuits against the responsible officials.5 While all national security players exhibit some degree of risk aversion, some are more averse than others. In particular, the senior government officials who ultimately approve operations, and the lawyers who review them for legality, seem to have even less appetite for risk than the operators who actually carry them out. Military and intelligence lawyers therefore will veto interrogation methods, targeted killings, military strikes, or information-sharing arrangements when they calculate – as they often will – that their costs exceed their benefits. Second, self restraint might result from bureaucratic "empire building,"6 as lawyers and other officials seek to magnify their clout by vetoing operations planned by their inter-agency (and sometimes intra-agency) competitors. Military and intelligence officials seek to maximize the influence they hold over senior policymakers, as well as their autonomy to pursue the priorities they deem important. One way for an agency to do that is to interfere with rivals' plans. A bureaucratic player doesn't gain power by approving whatever mission its competitor wants. It gains power by saying no, because its obstruction forces the competitor to be responsive to its concerns. Reviewers in the government's national security apparatus therefore will tend to veto operations planned by other entities in a bid to enhance their own welfare. A few preliminary observations are needed. First, the restraints described in this article aren't simply examples of officials dutifully adhering to the legal requirements spelled out in statute books and judicial decisions. Instead, officials are supplementing those requirements. They are invoking non-legal norms such as moral and diplomatic considerations to constrain operations that the law authorizes them to conduct (or, more precisely, that they believe the law authorizes them to conduct). Second, this is not a normative analysis. I am not concerned with the question whether coercive interrogations, targeted killings, free-wheeling military strikes, or permissive information sharing arrangements represent sound policy. Nor do I express any opinion on whether self restraint in general, or any particular operational limit, is desirable. Opinions vary widely on those issues.7 The questions this article poses and tries to answer are 5 Commentators have a term for these kinds of accusations: "lawfare." The concept, which was popularized in a 2001 paper by Air Force Major General (then-Colonel) Charles Dunlap, refers to "a method of warfare where law is used as a means of realizing a military objective." Charles J. Dunlap, Jr., Law and Military Interventions: Preserving Humanitarian Values in 21st Century Conflicts 5 (2001) [hereinafter Dunlap, Military Interventions]. Lawfare is said to encompass a wide range of conduct, from mere propaganda, to using lawyers to communicate with captured combatants, to challenging military or intelligence operations in court. See GOLDSMITH, supra note 3, at 58-64; Tung Yin, Boumediene and Lawfare, 43 RICH. L. REV. 895, 879-87 (2009). To the extent that selfimposed restraints seek to preempt adversaries from making lawfare allegations, they may be thought of as a form of "friendly fire lawfare." descriptive (To what extent is the government tying its own hands?) and analytical (What accounts for the government's tendency to tie its own hands?). Third, this article ventures no opinion on whether officials are actually correct in believing that the applicable legal principles allow them to undertake the operations in question. Those conclusions are all debatable. My point of departure is that the government believes – rightly or not – that the conduct at issue is permissible. The question then becomes why officials nevertheless rule out national security operations that, by their lights, are perfectly legal.

Obama can stop enforcement of the law

Rachel E. **Barkow 15**, Segal Family Professor of Regulatory Law and Policy and Faculty Director, Center on the Administration of Criminal Law, New York University School of Law, June 2015, "CLEMENCY AND PRESIDENTIAL ADMINISTRATION OF CRIMINAL LAW", http://www.lexisnexis.com.turing.library.northwestern.edu/hottopics/lnacademic/

Several of President Obama's most important domestic policy initiatives involve decisions not to enforce federal law. n1 In 2012, the Obama Administration announced that it would not enforce removal provisions in the Immigration and Nationality Act against "certain young people who were brought to

this country as children and know only this country as home." n2 In 2014, President Obama went even further on the immigration front by issuing an executive directive that [*804] would allow up to five million people to avoid deportation. n3 President Obama also turned to his enforcement discretion to address the backlash from those who discovered they could not keep their health insurance policies for failure to meet minimal requirements under the Affordable Care Act (ACA). President Obama campaigned for the law with a pledge that under the ACA, "if you like your plan, you can keep it." n4 To keep that promise, he told insurance companies he would refuse to enforce those provisions of the law that would require cancellation of the policies, at least through 2014. Enforcement discretion has been equally important in criminal policymaking in the Obama Administration. In the wake of state legislation in Washington and Colorado to legalize marijuana, the Department of Justice (DOJ) announced that the federal government would focus its enforcement actions to prevent specific harms. n5 The DOJ suggested that if a case fell outside those areas, it would not be prosecuted even if it violated the letter of the Controlled Substances Act. n6 The DOJ provided similar guidance about what cases would be prosecuted federally in those states that have legalized medical marijuana. n7 [*805] DOJ's enforcement policies have not been limited to federalism issues. In the summer of 2013, the DOJ announced new charging policies in all drug cases that could trigger mandatory minimum sentences. n8 Whereas previous DOJ policies had required prosecutors to charge the most serious readily provable offense, n9 the current charging policy instructs prosecutors that "severe mandatory minimum penalties are reserved for serious, high-level, or violent drug traffickers" - thus, prosecutors should not charge quantities necessary to trigger mandatory minimum sentences as long as certain criteria are met. n10

Internal Checks

Plenty of internal checks means executive curtailing of surveillance solves best

Nathan Alexander **Sales 14**, Associate Professor of Law, Syracuse University College of Law, , "NSA SURVEILLANCE: ISSUES OF SECURITY, PRIVACY AND CIVIL LIBERTY: ARTICLE: Domesticating Programmatic Surveillance: Some Thoughts on the NSA Controversy", LexisNexis, 10 ISJLP 523

In addition to oversight by outsiders, a programmatic surveillance regime also should feature a system of internal checks within the executive branch, to review collection before it occurs, after the fact, or both. As for the ex ante checks, internal watchdogs should be charged with scrutinizing proposed bulk collection to verify that it complies with the applicable constitutional and statutory rules, and also to ensure that appropriate protections are in place for privacy and civil liberties. The Justice Department's Office of Intelligence is a well known example. The unit, which presents the government's surveillance applications to the FISA court, subjects these requests to exacting scrutiny with the goal of increasing the likelihood of surviving judicial review. n65 Indeed, the office has a strong incentive to ensure that the applications it presents are airtight, so as to preserve its credibility with the FISA court. n66 Ex post checks include such commonplace mechanisms as agency-level inspectors general, who can audit bulk collection programs, assess their legality, and make policy recommendations to improve their operation, as well as entities like the Privacy and Civil Liberties Oversight Board, which perform similar functions across the executive branch as a whole. Another important ex post check is to offer meaningful whistleblower protections to officials who know about programs that violate constitutional or statutory requirements. Allowing officials to bring their concerns to ombudsmen within the executive branch (and then eventually to Congress) can help root out lawlessness and also relieve [*539] the felt necessity of leaking information about highly classified programs to the media. These and other internal checks can achieve all three of the benefits promised by traditional judicial and legislative oversight--executive branch watchdogs can veto surveillance they conclude would be unlawful, the mere possibility of such vetoes can chill overreach, and increasing the costs of monitoring can redirect scarce resources toward truly important surveillance. External and internal checks thus operate together as a system; the two types of restraints are rough substitutes for one another. If outside players like Congress and the courts are subjecting the executive's programmatic surveillance activities to especially rigorous scrutiny, the need for comparably robust safeguards within the executive branch tends to diminish. Conversely, if the executive's discretion is constrained internally through strict approval processes, audit requirements, and so on, the legislature and judiciary may choose not to hold the executive to the exacting standards they otherwise would. In short, certain situations may have less need to use traditional interbranch separation of powers and checks and balances to protect privacy and civil liberties because the executive branch is subject to an "internal separation of powers" n67 that can accomplish much the same thing.

Executive action solves internal self restraint

GILLIAN E. **METZGER, 15**, Professor of Law, Columbia Law School, April 2015, "ARTICLE: The Constitutional Duty To Supervise", Yale Law Review, LexisNexis, 124 Yale L.J. 1836

These limits to congressional and judicial review do not mean that the executive branch operates essentially unconstrained in instances of crisis governance or presidential action. But the relevant constraints come largely from within the executive branch itself, through what is sometimes called the

internal separation of powers: internal review structures, involvement of multiple agencies, inspectors general, agency-generated procedural and substantive limitations, professional commitments and reputational concerns, and executive branch adherence to governing law. n84 In other words, systemic features of internal administration are again critical to ensuring accountable government. Moreover, it bears emphasizing that presidential administration and supervision themselves can be key mechanisms for ensuring executive branch accountability. Justice (then-Professor) Kagan famously emphasized the political accountability benefits of presidential administration, and others have focused on the ways that presidential or centralized review can check agency capture or excessive tunnel vision. n85 In some instances, such as the Obama Administration's instructions to agencies to grant same-sex couples equal rights in a range of contexts after United States v. Windsor, presidential direction helps enforce legal constraints. n86 Hence, assessing the constitutionality of the President's expanded role entails close attention to systemic administrative features and their full impact on how the government operates.

Threat Handling

Executive Action is necessary to handle immediate threats-Temporality of threats prevents their DAs to the Executive

Victor **Hansen 9,** Professor of Law, New England Law, Boston, 2009, "PART I: TEN QUESTIONS: RESPONSES TO THE TEN QUESTIONS", William Mitchell Law Review, 35 Wm. Mitchell L. Rev. 5041, Lexis

Assessment of national security exigencies, like their Fourth Amendment counterparts, also must consider the seriousness of the threat and the potential harm to American interests. National security threats pose various degrees of harm, and not every action to prevent future harm requires unilateral executive action. Efforts to gather evidence and information about terrorist cells and future terrorist activity may be more like normal law enforcement investigatory and evidence-gathering activities, all of which we know may be effectively accomplished within the strictures of the warrant requirement and like legal regimes.

Similarly, the fact that the United States has suffered terrorist attacks in the past does not create an ongoing exigent circumstance that lasts in perpetuity. At some point after a threat comes to fruition, the immediate danger will end. When it does, the exigency no longer exists, and the need for unilateral executive action also ends. Were this not the case, the President would enjoy unchecked authority to act unilaterally from first contact with the enemy until the President alone decided the threat no longer existed, effectively delaying any real possibility of timely assessments of the efficacy of his actions.

The freshness and credibility of the information and evidence giving rise to a national security threat should also be considered in determining whether a true exigency exists. Information that is recent and specific may justify emergency executive action. As in the Fourth Amendment context, however, stale information, evidence, or intelligence alluding to events that have already taken [*5046] place, or information that is of uncertain reliability would not justify either a warrantless search or the unilateral exercise of exigent-circumstances authority by the executive.

Further, in considering the scope of exigent circumstances, the U.S. Supreme Court has often sought to determine the availability of less intrusive alternatives to warrantless searches. Similar considerations are appropriate in respect to the President's response to national security threats. Those threats might run the spectrum from true exigencies to inconsequential information, and there are likely to be many threats which should be taken seriously, but do not rise to the level of an exigency. In these cases, the President should look for alternatives to unilateral action that allow Congress to both consult and perform its oversight functions.

In those cases in which an exigency does exist and unilateral executive action is justified, care must be taken to honor appropriate limits on the scope and proportionality of the President's actions lest the exigency exception swallow the constitutional requirements of oversight and accountability. It is equally important to ensure that unilateral actions by the President in response to national security threats are commensurate with the scope of the exigency. Police in hot pursuit of a suspect may search a home where they believe the suspect is hiding, to locate the suspect or his confederates and to eliminate potential threats to police safety. But the police may not engage in a warrantless search of the entire home to look for contraband or other possible evidence of the crime. So, too, when U.S. forces are

pursuing terrorists, their actions must be limited to ensure that the exigency does not become an excuse - or a subterfuge - to engage in actions unrelated to the exigency at hand, particularly actions that potentially infringe upon the rights and interests of American citizens.

Finally, perhaps the signal check on the executive's exigent circumstances authority is the most obvious: temporality. Once a threat in fact dissipates, for whatever reason, so too does the President's need to act unilaterally. At that point, the President must honor the requirements of our constitutional structure and seek congressional authorization and the oversight that comes with such authorization.

Speed

CP's key to speed and rapid response to national security issues

Kenneth R. **Mayer, 1**, Professor of Political Science at Wisconsin University, "With the stroke of a Pen", 2001 Pg. 75-6

The second presidential advantage in the institutional setting is the ability to act first, leaving it up to other institutions to reverse what presidents have done. Whether presidents have effective plenary executive authority or not (an open question), there is no doubt that they can take action faster and more efficiently than either Congress or the courts. Congress as a collective organization takes definitive action through the legislative process, which is cumbersome, difficult to navigate, and characterized by multiple veto points. Even when Congress can create and sustain majorities at the subcommittee, committee, floor, and conference stages, the president can use the veto power to raise the bar from a simple majority to a two-thirds majority necessary to enact legislation over the president's objection. The president, at the same time, "has a trump card of great consequence in his struggle against Congress for control of government. He can act unilaterally in many matters of structure."'' The president, in effect, can often make the first move in these disputes, forcing Congress to take positive action to undo what the president has created. Similarly, the judiciary can overturn executive actions (as it did in rejecting Clinton's 1995 replacement worker executive order[…]"

Specific Internal Links/Affs

Transparency

Transparent Executive decision making is crucial to signaling honesty and integrity as well as building presidential credibility

Eric **Posner 7,** Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

The well-motivated executive might commit to transparency as a way to reduce the costs to outsiders of monitoring his actions." The FDR strategy of inviting potential whistleblowers from the opposite party into government is a special case of this; the implicit threat is that the whistleblower will make public any evidence of partisan motivations. The more ambitious case involves actually exposing the executive's decisionmaking processes to observation. To the extent that an ill-motivated executive cannot publicly acknowledge his motivations or publicly instruct subordinates to take them into account in decisionmaking, transparency will tend to exclude those motivations from the decisionmaking process. The public will know that only a well-motivated executive would promise transparency in the first place, and the public can therefore draw an inference to credibility.

Credibility is especially enhanced when transparency is effected through journalists with reputations for integrity or with political preferences opposite to those of the president. Thus, George W. Bush gave Bob Woodward unprecedented access to White House decisionmaking and perhaps even to classified intelligence,' with the expectation that the material would be published. This sort of disclosure to journalists is not real-time transparency-no one expects meetings of the National Security Council to appear on C-SPAN-but the anticipation of future disclosure can have a disciplining effect in the present. By inviting this disciplining effect, the administration engages in signaling in the present through (the threat of) future transparency.

Executive transparency is key to develop credibility for surveillance negotiations

Sudha **Setty 15,** Professor at Western New England University School of Law, 2015, "Surveillance, Secrecy, and the Search for Meaningful Accountability", 51 STAN. J. INT'L L 16, http://digitalcommons.law.wne.edu/cgi/viewcontent.cgi?article=1305&context=facschol

These rights-protective perspectives-offered by justices with different political and theoretical perspectives-may offer a preview of a significant jurisprudential shift not only in hearing security-related cases on their merits, but in finding for plaintiffs alleging privacy and civil liberties infringements. However, the historically deferential attitude of courts toward matters of national security, a stance that has only compounded in the post-9/11 context, suggests that this may continue to be an uphill battle for civil libertarians. 105

More troubling to proponents of the efficacy of existing legislative and executive accountability mechanisms are the disclosures made by Snowden. These mechanisms were revealed to be either theoretical or passive until significant leaks forced a public discourse that demanded a more active accountability regime. In fact, the federal government exploited the lack of transparency and effective

accountability mechanisms until the start of the Snowden disclosures to secure dismissals like that in Clapper I and to circumvent efforts of criminal defendants to discover whether they had been actually surveilled. 106

Reliance on sporadic leaks to trigger genuine accountability is structurally problematic. 107 Our reliance on leaks thus far should force us to reconsider the extreme secrecy under which intelligence-gathering programs, like the NSA Metadata Program, are administered, and to consider means by which institutional actors can exert meaningful and regular oversight and control over these programs. Such change would force politicians to take ownership over secret counterterrorism programs, weighing their expediency against possible constitutional defects or the judgment of public opinion. An atmosphere in which accountability mechanisms are not merely ersatz pending an illegal leak could provide space for genuine public discourse and at least the possibility of greater protection of civil liberties.

Executive transparency is key to solve-Rebalances constitutional powers and allows media watchdog fuctions

Sudha **Setty 8,** Professor at Western New England University School of Law, Spring 2008, "THE PRESIDENT'S QUESTION TIME: POWER, INFORMATION, AND THE EXECUTIVE CREDIBILITY GAP", Cornell Journal of Law and Public Policy, 17 Cornell J. L. & Pub. Pol'y 247, Lexis

The current Administration has limited information disclosure in response to inquiries from other parts of the government in numerous ways, each of which is a small step in aggregating political power within the executive branch. Some instances relate to the Administration's efforts in the war on terror, which arguably offers a heightened justification for nondisclosure. n44 For example, the White House prevented an official inquiry into the accuracy of U.S. intelligence on Iraq's weapons programs, which had been offered as the primary justification for the invasion of Iraq; n45 President Bush refused to respond to a May 2005 letter, signed by over 100 members of Congress, n46 asking questions about the [*257] Downing Street Memo; n47 and the President refused to appear before the September 11 Commission unless accompanied by Vice President Cheney, assured that no transcript would be made of the interview, and promised that the public release of the finalized report was contingent on White House review. n48

Other examples of the current Administration's nondisclosure are unrelated or have only an attenuated connection to the war on terror: the White House refused to provide the Senate with documents regarding John Bolton during the proceedings to confirm Bolton as United Nations ambassador despite the long-standing practice granting senators access to such papers prior to voting on nominations; n49 Vice President Cheney refused to turn over documents to the Government Accountability Office (GAO) related to a White House energy task force in which he participated in 2000 and 2001, impeding the GAO from overseeing the executive branch. n50 In his refusal, Cheney asserted that his activities related to those of the executive branch and implied that he could exercise executive privilege under the Recommendations Clause. n51 In another example, the White House labeled a record number of documents "classified" to [*258] immunize them from Freedom of Information Act (FOIA) requests, n52 and rolled back the Clinton Administration policy of encouraging broader and faster disclosure in response to FOIA requests. n53

The executive branch compounds its failure to disclose information by attempting to manipulate the press into providing a favorable portrayal, undermining the media's role in increasing transparency of the political process and governmental institutions. An illustrative example was the creation and dissemination of "video news releases" by the government - pro-administration segments which looked similar to actual news reports. The GAO found that these violated the government's own policies because they "constitute covert propaganda." n54 Further, the President's public appearances are carefully controlled to weed out those who might disagree with his policies, creating an impression that little media or public opposition exists to administration policies. n55

[*259] Each of these shifts in policy or practice, taken individually, may seem insignificant. Together, however, they paint a picture of a major shift in the disclosure practices of the Administration on both the defensive and offensive fronts. Defensively, the Administration curbs the provision of information to Congress and limits the release of documents in response to FOIA requests. Offensively, unless information has already been disclosed, the Administration looks to influence the media and public perception through conventional and unconventional means.

The manipulation of information disclosure extends beyond the current administration, n56 and has not been effectively combated by the press. n57 The President, under most circumstances, is under no constitutional or legal obligation to volunteer information to the press. However, the media's perceived role as an informal "fourth branch" of government, n58 exercising a watchdog function particularly over the executive branch, is severely compromised under such circumstances. n59

The consolidation of power in the executive branch unbalances the constitutional model of co-equal branches of government. The inability of the media to consistently unearth information and documents for public scrutiny compounds this problem. Consequently, without vigorous action on the part of Congress to exercise its constitutional powers, the executive branch is able to take actions that are largely unpublicized and unchecked. Regardless of which political party holds power in the White [*260] House, this situation poses a major systemic challenge which becomes even more problematic in the case of unified government.

DHS/Immigration

Executive oversight solves DHS immigrant abuse

Maunica **Sthanki, 13**, Clinical Instructor, Immigration and Human Rights Clinic, University of the District of Columbia David A. Clarke School of Law "Deconstructing Detention: Structural Impunity and the Need for an Intervention", Lexis Nexis, 65 Rutgers L. Rev. 447

The key to establishing accountability and oversight of civil rights abuses is externalization. In the context of the NOPD reform, the externalization of investigation, prosecution, and ultimately the judicial consent decree were key factors leading to reform. Although the NOPD had a notorious reputation for abuse, local New Orleans officials had not demonstrated the political will to truly reform the system prior to Hurricane Katrina. n342 After the storm, the local New Orleans district attorney failed to prosecute officers for misconduct and the extent of officer malfeasance was only exposed after a federal investigation and prosecution. The externalization of oversight is crucial because an agency is less likely to prosecute its own agents or give an unbiased opinion of a potential act of wrongdoing. This conflict of interest is a common occurrence in police brutality cases where local law enforcement agencies are unwilling to investigate abuse within their own agency (or in some cases engage in attempts to cover up allegations of abuse). n343 For example, the district attorney in Screws "blamed his inability to prosecute" the police officers "on the fact that he had no substantial independent investigative facilities, and had to rely upon local sheriffs and policemen to conduct investigations." n344 He explained that the local sheriffs and policemen would not investigate abuse because they were either involved in the incident or [*498] sympathized with the individuals accused of abuse. In the prosecutions of police officers in the aftermath of Hurricane Katrina, several supervising NOPD officers were convicted of covering up the abusive acts of other officers. n345 The culture of the NOPD in the aftermath of Katrina was one that celebrated abuse and the misuse of power. In 2007 when the NOPD officers involved in the shooting turned themselves in, they were patted on the back and called heroes by their fellow officers. n346 A similar culture exists within DHS and immigration detention facilities. DHS cannot be relied upon to investigate and/or prosecute its own agency. n347 ICE officials have repeatedly engaged in attempts to cover up misconduct, and a culture of abuse within detention centers celebrates and even condones detainee abuse. n348 The structure of oversight and accountability within DHS only fosters the culture of abuse. Presently, cases of detainee abuse are purportedly investigated by the DHS Office of Inspector General ("OIG"). n349 In the current scheme, a detainee with a civil rights complaint would be directed to an OIG agent who would investigate the matter and consider whether to refer it to DOJ for further investigation and/or prosecution. n350 Although this is a stated purpose of DHS-OIG, they have not been effective in their mission. n351 Few prosecutions for detainee abuse have been pursued, and it is unclear how DHS-OIG determines whether or not a case is suitable for referral. For example, in the case of sexual abuse allegations at the Willacy Detention Center, it took several years from the time of the [*499] allegation to the conviction of the guard. n352 In the interim, several cases of sexual abuse were reported at the Willacy Detention Center - more than any other detention center. n353 A former Customs and Border Protection ("CBP") commissioner explained, "What happens is - and in my opinion it's disgraceful - [the DHS-OIG] get around to investigate these things, and the witnesses are gone." n354 This is particularly troubling in the context of immigrant detention where detainees are deported at a rapid pace. n355 In addition, DHS-OIG is currently being investigated for alleged acts of internal corruption and misconduct. The McAllen, Texas office of DHS-OIG is currently the subject of a federal grand jury investigation to determine whether agents "fabricated "investigative activity' to show progress on misconduct cases." n356 As a result of the grand jury investigation, DHS-OIG transferred about half of its backlog cases to internal affairs agencies at ICE and CBP. n357 The investigation and backlog are additional indicators that DHS is unable to police its own agency, and as a result, the claims of abuse by immigrant detainees are not sufficiently investigated or referred for criminal prosecution and sanction. In the case of NOPD reform, the externalization of oversight has arisen through a judicial consent decree. n358 It is highly unlikely that DHS would agree to a consent decree of oversight from the DOJ; however, alternative forms of oversight could potentially be pursued. DHS-OIG could be relocated out of DHS and either become a separate ombudsman-like agency or could be relocated to DOJ. n359 The role of DHS-CRCL could be changed to collaborate with DOJ to obtain prosecutorial power. Another option is that DOJ could unilaterally request to oversee and investigate DHS functions. While this oversight would likely be politically challenging, if DHS as an agency is harboring criminal actors and potentially

condoning (or ignoring) criminal acts, there should be no legal barrier to a DOJ led investigation. It is admittedly perilous to rely on federal agencies to [*500] act on their own volition, even when it is within the purview of their legislative mandate, and therefore, another option is for the immigrants' rights community to request oversight of DOJ through injunctive relief. n360 Prior consent decrees between police departments and municipalities have arisen through requests for injunctive relief and a similar path could be pursued in the context of immigration detention.n361

Prisons

Clemency solves prisons

Rachel E. **Barkow, 15**, Segal Family Professor of Regulatory Law and Policy and Faculty Director, Center on the Administration of Criminal Law, New York University School of Law, June 2015, "CLEMENCY AND PRESIDENTIAL ADMINISTRATION OF CRIMINAL LAW", http://www.lexisnexis.com.turing.library.northwestern.edu/hottopics/lnacademic/

Clemency is a key tool for the President to control the executive department. Those in favor of a unitary executive - the theory which [*808] holds that "all federal officers exercising executive power must be subject to the direct control of the President" n18 - should encourage its more robust employment. It is a mechanism just as powerful - if not more so - as the power to remove executive officers with whom the President disagrees as a policy matter, or as the ability to provide front-end enforcement guidance. Similarly, advocates of strong presidential administration should applaud the greater accountability and effectiveness that comes with presidential oversight of federal criminal law policy. n19 Even critics of unitary executive theory or those with concerns about robust presidential decision-making authority should embrace clemency as a mechanism of control because it is explicitly and unambiguously grounded in the Constitution's text, and it comes with an established historical pedigree. Moreover, it is a presidential tool that provides a checking mechanism that is otherwise absent in our current political environment. The clemency power is critical given the federal criminal justice system we have today. The problem of overbroad federal criminal laws and excessive charging by federal prosecutors in recent decades has been well documented. n20 At the same time, the limits of front-end enforcement guidance and a convention against removal have made it difficult for Presidents to control federal prosecutors. n21 The pathologies associated with federal criminal lawmaking have produced a federal [*809] criminal justice system of unprecedented size and scope n22 with overcrowded n23 and expensive n24 federal prisons and hundreds of thousands of individuals hindered from reentering society because of a federal record. n25 Clemency alone cannot solve these problems, of course, but it is one way to address poor enforcement decisions and injustices in this system, as well as to check disparities in how different U.S. Attorneys enforce the law.

Signaling/Credibility

Executive Self Restraint is necessary to send a signal of credibility and benignity that motivates action on the plan

Eric **Posner 7,** Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

We suggest that the executive's credibility problem can be solved by second-order mechanisms of executive signaling. In the general case, well-motivated executives send credible signals by taking actions that are more costly for ill-motivated actors than for well motivated ones, thus distinguishing themselves from their illmotivated mimics. Among the specific mechanisms we discuss, an important subset involves executive self-binding, whereby executives commit themselves to a course of action that would impose higher costs on ill-motivated actors. Commitments themselves have value as signals of benign motivations.

This departs from the usual approach in legal scholarship. Legal theory has often discussed self-binding by "government" or government officials. In constitutional theory, it is often suggested that constitutions represent an attempt by "the people" to bind "themselves" against their own future decision making pathologies, or relatedly, that constitutional prohibitions represent mechanisms by which governments commit themselves not to expropriate investments or to exploit their populations." Whether or not this picture is coherent," it is not the question we examine here, although some of the relevant considerations are similar." We are not concerned with binding the president so that he cannot abuse his powers, but with how he might bind himself or take other actions that enhance his credibility, so that he can generate support from the public and other members of the government.

Growing dissent means that the executive needs to act on removing surveillance as an act of good will-Any other actor fails to capture the same legitimacy

Edieth **Wu 6**, Associate Dean and Professor, Thurgood Marshall School of Law, Fall 2006, "DOMESTIC SPYING AND WHY AMERICA SHOULD AVOID THE SLIPPERY SLOPE", Review of Law and Social Justice, http://weblaw.usc.edu/why/students/orgs/rlsj/assets/docs/Wu_Final.pdf

Today, as the paranoia following the September 11 attacks begins to fade, a process of self-realization is again occurring in American society. Unlike years past, however, the "enemy" in the war on terror is not clearly identifiable, causing dissenters to be more vocal and widespread. For instance, unlikely combinations of interest groups, from the American Civil Liberties Union to the U.S. Chamber of Commerce, are starting to demand more limits on the government's ability to intrude on the private lives of citizens.116 And members of Congress have also stepped in—some have challenged the NSA program directly, claiming it "contradicts longstanding restrictions on domestic spying and subverts constitutional guarantees against unwarranted invasions of privacy."117 Senator Russell Feingold of Wisconsin criticized the president's usurpation of congressional authority, stating that "[t]he president believes that he has the power to override the laws that Congress has passed . . . . He is a president, not a king."118 Similarly, Senator Patrick Leahy of Vermont accused the administration of "believ[ing] it is above the law."119 This growing dissent validates the need for the president to reevaluate his

administration's recent actions and recommit to protecting civil liberties by respecting the rule of law, which "has never been more critical"120 than at this juncture in America's history.

In an age where the American public is generally aware of the restrictions on presidential powers, people are increasingly reluctant to accept that "the commander in chief clause" of the Constitution trumps all others.121 The president must remember that the commander in chief powers are at their strongest when the president acts in conjunction with congressional authorization.122 Consequently, a divided nation, and thus a divided Congress, will make it difficult for the president to act within the "expressed or implied will of Congress, [and] his power [will be] at its lowest ebb."123

Private Sector Coop

The executive best balances Private sector concerns with liberty and safety

Eric Talbot **Jensen 10,** Assistant Professor, Fordham Law School, June 2010, "Cyber Warfare and Precautions Against the Effects of Attacks", Texas Law Review, 88 Tex. L. Rev. 1533, Lexis

Second, Congress and the President should expand the current policy and authorities, such as HSPD-7, to include protection not just from terrorists, but from state parties in armed conflicts. Congress should provide the Executive specific authority to protect those privately owned industries, systems, and networks that are anticipated to come under the control of the government during times of armed conflict. Part of this authority should include methods to monitor, implement, and enforce cybersecurity and survivability measures in those specific networks, systems, and industries now.

Such action is not without precedent. Congress has authorized the President to take similar actions with communications systems in times of armed conflict in the past. n195 Current law is insufficient to do so in the current age against the current threats. n196 Former Clinton Deputy Attorney General Jamie S. Gorelick recently urged the Obama Administration to "seek legislation for comprehensive authority to deal with a cyber emergency" including monitoring or cutting off private cell phones and other communications devices. n197 President Obama has shown a reluctance to take steps that invade personal privacy. n198 These situations are not mutually exclusive. Monitoring those systems selected above and taking necessary steps to [*1565] ensure their protection does not have to include invasions of privacy. Congress can provide authority and the President can implement that authority in a way that will meet our legal obligations; protect the necessary networks, systems, and industries; and preserve our individual rights.

Third, the President, after identifying those industries, networks, and systems that will become targetable and using the additional authority granted by Congress, should establish memoranda of agreement with these private entities to ensure sufficient protection of these industries and networks. This does not mandate government intrusion in civilian networks, industries, or systems. The government can establish the standard, put in place necessary safeguards, and establish effective monitoring systems and then allow these civilian entities to provide their own protection or opt for some combination of government and private security. Whatever method is agreed upon, the government should determine the sufficiency of the protection and then monitor implementation of the protective measures and have the authority to enforce compliance if necessary.

Drones

Executive Order solves non-disclosure of drone data

Craig **Whitlock 9/26/14** , staff writer at The Washington Post, "White House plans to require federal agencies to provide details about drones", https://www.washingtonpost.com/world/national-security/white-house-plans-to-require-federal-agencies-to-provide-details-about-drones/2014/09/26/5f55ac24-4581-11e4-b47c-f5889e061e5f_story.html

The White House is preparing a directive that would require federal agencies to publicly disclose for the first time where they fly drones in the United States and what they do with the torrents of data collected from aerial surveillance.

The presidential executive order would force the Pentagon, the Justice Department, the Department of Homeland Security and other agencies to reveal more details about the size and surveillance capabilities of their growing drone fleets — information that until now has been largely kept under wraps.

The mandate would apply only to federal drone flights in U.S. airspace. Overseas military and intelligence operations would not be covered.

President Obama has yet to sign the executive order, but officials said that drafts have been distributed to federal agencies and that the process is in its final stages. "An interagency review of the issue is underway," said Ned Price, a White House spokesman. He declined to comment further.

Privacy advocates said the measure was long overdue. Little is known about the scope of the federal government's domestic drone operations and surveillance policies. Much of what has emerged was obtained under court order as a result of public-records lawsuits.

Answers

AT: Rollback

No congressional or judicial rollback

Dino P. **Christenson and** Douglas L. **Kriner, 15**, Assistant Professors of Political Science, Boston University, Spring 2015, "SYMPOSIUM: EXECUTIVE DISCRETION AND THE ADMINISTRATIVE STATE: POLITICAL CONSTRAINTS ON UNILATERAL EXECUTIVE ACTION", LexisNexis, 65 Case W. Res. 897

The dominant theoretical understanding of unilateral politics suggests that presidents have the capacity to act with veritable impunity to shift unilaterally a myriad of policies closer to their preferences, secure in the knowledge that Congress will only in the rarest of cases be able to overturn their actions legislatively. Similarly, empirical evidence suggests that the courts exercise at best a weak constraint on the use of unilateral power. For example, between 1942 and 1998, the [*907] federal courts heard only eighty-three cases challenging the legality of executive orders. Moreover, in 83 percent of those cases, the president's order was upheld. n34 Thus, presidents act unilaterally, secure in the knowledge that the probability of a legal challenge ever being heard in federal court is quite low; and if the judiciary does hear a case, the probability of the order being upheld is quite high.

AT: Congress Key---General

Congress fails—can't check the executive

William **Bendix and** Paul J**. Quirk, 15**, assistant professor of¶ political science at Keene¶ State College, Phil Lind Chair in U.S.¶ Politics and Representation¶ at the University of British¶ Columbia and a former¶ research associate at¶ the Brookings Institution, March 2014, "Secrecy and negligence:¶ How Congress lost control of domestic surveillance", http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf

In enacting the USA PATRIOT Act just weeks after the 9/11 terrorist attacks, Congress¶ sought to enhance investigations against specific, named persons suspected¶ of terrorism. As voluminous documents leaked by whistleblower Edward Snowden¶ have revealed, however, the president and the National Security Agency (NSA) have relied¶ on that law to authorize the daily, ongoing capture of all U.S. communication records.¶ These documents make clear that the Bush and Obama administrations ignored statutory¶ constraints to authorize exceptionally broad intelligence-gathering programs. But from our¶ review of legislative hearings and debates on the PATRIOT Act over the last five years,¶ along with numerous declassified documents on surveillance, we find that unilateral action¶ by the executive branch was only partly to blame for unrestrained domestic spying.¶ After the relatively balanced and cautious provisions of the 2001 PATRIOT Act, Congress¶ virtually absented itself from substantive decision making on surveillance. It failed to¶ conduct serious oversight of intelligence agencies, ignored government violations of law,¶ and worked harder to preserve the secrecy of surveillance practices than to control them.¶ Even after the Obama administration made the essential facts about phone and email¶ surveillance available in classified briefings to all members, Congress mostly ignored the¶ information and debated the reauthorizations on the basis of demonstrably false factual¶ premises. Until the Snowden revelations, only a handful of well-briefed and conscientious¶ legislators—too few to be effective in the legislative process—understood the full extent of¶ domestic intelligence gathering.

Congress can't check presidential powers—Distractions, party lines, and misinformation

NEIL **KINKOPF, 9**, Professor of Law, Georgia State University College of Law, 2009, "ARTICLE: IS IT BETTER TO BE LOVED OR FEARED? SOME THOUGHTS ON LESSONS LEARNED FROM THE PRESIDENCY OF GEORGE W. BUSH", Duke Journal of Constitutional Law & Public Policy, LexisNexis, 4 Duke J. Const. Law & Pub. Pol'y 45

One reason unilateralism is not bound to fail is that Congress is not a reliable check against presidential power. Congress capitulated on military commissions, on domestic surveillance, and on the surge in Iraq. Congress also largely capitulated on the bailout bill. Although the bailout bill Congress ultimately enacted included a few modest measures for oversight, Congress basically gave the Administration what it wanted. n40 But why doesn't Congress stand up as a check on the President? Madison's view, expressed in The Federalist and in the structure of the Constitution, was that parchment barriers and legal constraints on power would not be worth the parchment on which they were written. n41 Madison argued that the way to constrain power was to [*52] structure government so that each institution would have its own ambition, which would counteract the ambitions of the others. n42 Thus, Madison envisioned Congress' institutional ambitions counteracting the power of the Executive Branch. n43 But Madison's idealistic system of checks and balances relies on institutional loyalty, which does not take into account party loyalty. n44 Congressional members who want to get reelected, if they are from the President's own party, pursue their own ambition and self-interest by making sure the President is successful. n45 Thus, these self-interested members are less likely to check the President's power than

Madison envisioned. n46 Otherwise, the public would lose confidence in the President's decisions and in the political party he represents, which could cause Congress to change hands and which disserves the self-serving congressional party members. While this dynamic is important, for the last two years, we have had congressional majorities from a different party than the President. And yet Congress still has not acted as a significant check on presidential power. Why not? The Executive Branch enjoys three formidable institutional advantages that have undermined the capacity of Congress to act as a check on the President. First, the Executive Branch houses nearly all of the government's expertise and knowledge. This resides in the agencies of the federal government, and they are under the control of the President. So the Executive Branch controls the information collected by agencies and can, and over the last eight years certainly has, manipulated that information by disclosing what is useful and withholding what is not. n47 [*53] Second, members of the House of Representatives are perpetually campaigning for reelection, and therefore the institution is chronically distracted. Members of the House of Representatives have to run for reelection every two years and must constantly fundraise and campaign. They never stop running, so they always have one foot in their home district to campaign, and the other foot back in Washington to engage in policy deliberations. But that is a serious disadvantage. The demands of campaigning seriously impair the ability of even conscientious legislators to engage in continuing, rather than sporadic, oversight. A third factor that is sometimes undervalued is a competing ambition of many members of Congress. Their ambition is not to be powerful as members of Congress or as part of a coequal institution that checks the President's power, but to be powerful period. Ten senators considered running for President this time around, plus several Representatives. n48 So what position should these presidential hopefuls take while serving in the Congress? Because they may hold the Executive Office in the near future, they may be unwilling to limit the President's powers that they themselves may hope someday to employ. It is unlikely that Congress can act as a check on presidential power when so many of its members hope to one day hold the office of President, or would be happy to give up their current job to serve in a President's cabinet.

AT: Congress Key---Backlash/Circumvention

Congressional attempts at circumvention/restrictions on the executive fail

Kenneth R. **Mayer, 1**, Professor of Political Science at Wisconsin University, "With the stroke of a Pen", 2001 Pg. 55

Moreover, efforts to check presidential power through legislative restrictions often have had the counterproductive effect of legitimizing the very powers that Congress has tried to limit. I treat this problem in more detail in chapter two, but two examples highlight the problem that Congress faces. When Congress tried to limit the president's ability to carry out covert intelligence operations by imposing reporting requirements in the Hughes-Ryan amendments to the Foreign Assistance Act and the Intelligence Oversight Act in 1980, it inadvertently provided legislative recognition of the president's covert operations authority. The mere fact that Congress required the president to report on such activities was read by the courts as a congressional recognition of the president's right to conduct them. "So once again," concludes Gordon Silverstein, "Congress' attempt to control the executive's actions in foreign policy only provided fresh and unprecedented explicit authorization for executive prerogative. 11112 A similar dynamic occurred in 1977 when Congress tried to limit the way in which presidents exercised emergency economic powers. Since 1917, when Congress passed the Trading with the Enemy Act (TWEA), the president has had the legal authority to regulate aspects of foreign trade in emergency or wartime circumstances. Over the[…]

Obama doesn't listen to congress

Suzanne **Spaulding, 8,** Under Secretary for the National Protection and Programs Directorate (NPPD) at the Department of Homeland Security. She oversees the coordinated operational and policy functions of the Directorate's subcomponents, Fall 2008, "Building Checks and Balances¶ for National Security Policy:¶ The Role of Congress", http://www.acslaw.org/files/9%20Spaulding.pdf

There are many factors contributing to the failure of Congress in recent years to¶ exercise a robust and effective check on the executive branch in the area of national¶ security. Certainly the incentive for challenging executive assertions of power was reduced¶ when Congress and the White House were controlled by the same party.¶ Moreover, national security is traditionally an area in which both Congress and the¶ courts tend to be more deferential to the President, particularly during wartime.¶ Perhaps most significant, then, is the effect of the attacks of 9/11 and the constant reminders¶ that we are engaged in a "Global War on Terrorism" ("GWOT"). This climate¶ of fear puts tremendous pressure on Congress to be "tough" on national security;¶ describing the threat as a "war" implies that Congress can only be tough on¶ national security by deferring to the President as Commander in Chief.¶ The current Administration argues that with regard to this GWOT, the President's¶ authority cannot be constrained by Congress. His lawyers maintain that the President¶ is free to ignore laws that he decides infringe upon his Article II power, particularly his¶ power as Commander in Chief during wartime. This constitutional argument, most¶ clearly articulated in the now infamous August 2002 Department of Justice memo on¶ torture,1¶ has never been repudiated and has been repeated often since then.¶ The August 2002 memo asserts that, "Congress may no more regulate the President's¶ ability to detain and interrogate enemy combatants than it may regulate his ability to¶ direct troop movements on the battlefield. Accordingly, we would construe [the U.S.¶ law prohibiting torture] to avoid this constitutional difficulty, and conclude that it¶ does not apply to the President's detention and interrogation of enemy combatants¶ pursuant to his Commander-in-Chief authority." Similar arguments were made in the¶ Justice Department memo written after the National Security Agency ("NSA") warrantless¶ surveillance program was revealed.¶ The potential scope of this Commander-in-Chief authority to do whatever the¶ President believes necessary to protect the nation is breathtaking, particularly in the¶ context of the Global War on Terrorism ("GWOT"). The GWOT extends, by definition,¶ worldwide. The battlefield is wherever the terrorists are, or—for purposes of "preparing¶ the battlefield"—wherever they might be in the

future, including inside the¶ United States (U.S.). And, of course, the "enemy" against which this unchecked authority¶ can be exercised includes not just foreign terrorist suspects, but U.S. citizens as well.¶ Until very recently, the Administration used signing statements to signal its determination¶ to ignore the laws that Congress passed if the President decided they were¶ inconsistent with his authority. This growing practice has generated significant criticism.¶ Thus, when Congress hurriedly passed a bill in 2007 to expand the Foreign¶ Intelligence Surveillance Act ("FISA") just before leaving town for the August recess,¶ the President's signing statement contained no such qualification. Nevertheless, officials¶ have made it clear that the President still maintains the prerogative to ignore this¶ law if he decides it impermissibly interferes with his authority. The only thing that has¶ changed, apparently, is that the President's lawyers no longer feel the need to express¶ this in the signing statement.¶ So much for Congress's legislative authority acting as a check on executive¶ authority.

The executive will circumvent congressional action-Courts will uphold the circumvention-Means only the CP solve

John **McGinnis 93,** Professor at Northwestern University School of Law, Fall 1993, "Constitutional Review by the Executive in Foreign Affairs and War Powers: A Consequence of Rational Choice in the Separation of Powers", 56 Law and Contemporary Problems 293, http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp

Thus, although the executive branch has adopted a more subtle strategy of noncompliance with respect to the War Powers Resolution than in response to section 102(c) of the Foreign Relations Act, the effect is much the same: the statute is effectively nullified. In both instances, the president defies Congress's attempt to place a condition on the exercise of a core power (presidential power to choose negotiators or commit troops). By doing so, the president sends a signal to the Court of the importance attached to this right of governance. The model of separation of powers offered here suggests that the Court would weigh that signal heavily, particularly when Congress does not take concrete steps to confront the president.

The model also suggests that many of the reforms proposed for the War Powers Resolution will be ineffective because they cannot reorder the institutional interests that militated against the Resolution's efficacy in the first place. For instance, Dean Ely's proposal to grant one or more members of Congress standing to bring suit to start the sixty-day clock would not likely change the practices under the Resolution.1 " Despite this reform, the bargaining model predicts that the executive branch would act in the same manner as before, attempting both to raise the stakes by asserting its own prerogatives and providing Congress with information but no declaration that would unambiguously start the clock. Although members of Congress could attempt to sue the executive, the courts would have to entertain the suit on its merits for the proposal to be successful. Indeed, the Supreme Court has never recognized congressional standing,"' and its hesitancy about doing so is readily understandable within the separations of powers model offered here. Giving standing to members of Congress not only would risk the ire of the executive, but would also provide Congress with a mechanism for increasing the Court's docket of separation of powers disputes, a class of disputes the Court may well be less interested in adjudicating than those involving the Bill of Rights. 132 Moreover, the congressional standing would give Congress substantial control over the timing of court decisions, thus detracting from the Court's autonomy. 133

Even aside from indicating that the Court may be disinclined to permit congressional standing, the model of separation of powers offered here suggests that the judiciary may paradoxically be more likely

to invoke a justiciability doctrine and refuse to hear the merits of a suit based on a congressional standing provision. By enacting the standing provision, Congress would signal its weakness and relative unwillingness to spend its own political capital on obtaining more rights of governance in this area through direct confrontation with the executive in the hope that the Court would do its work for it." Thus, if the original accommodation was created by the Court's understanding that war powers are more important to the executive than to Congress, the introduction of a standing provision may reinforce rather than disturb the Court's calculus.13

AT: Congress Key---Secrecy/National Security

Secrecy and dispatch dealt with best by executive branch

John O. **McGinnis 93**, Professor in Constitutional Law at Northwestern Law School, former clerk on U.S. Court of Appeals for the District of Columbia, August 1993, "Constitutional Review By The Executive In Foreign Affairs And War Powers: A Consequence Of Rational Choice In The Separation Of Powers," http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp

The output under the model depends on the relative interests and aptitudes of the institutions that will bargain with and accommodate each other. 8 These are partly defined by the textual provisions whose core is less likely to be disputed. 9 The president's power as commander-in-chief is relevant to his interests both because this gives him some power of initiative of action in war powers and because it creates the expectation that the president is immediately responsible for protecting the security of the nation and the safety of its citizens.' Given these expectations, the president will want to acquire the rights of governance over areas, such as diplomacy, which imminently affect the exercise of this responsibility. Additionally, the structure of the presidency as a single office possessed by one person also gives the executive unique capabilities of acting with "secrecy and dispatch,, 61 giving him a comparative advantage in carrying out these functions. Thus, because of the president's constitutional powers and because of expectations that have developed about his responsibilities in the area of foreign affairs and war powers, the president generally places a very high value on control of the rights of governance in foreign affairs.62

On the other hand, Congress's structure is so much more diffuse than the executive that it impedes the rapid decisionmaking necessary in the fluctuating world of foreign affairs.63 Thus, because of its comparative disadvantage as an institution, operational control of foreign affairs may actually be at odds with its interests because such control threatens Congress with responsibilities it is not well-equipped to handle. In determining how much interest Congress has in exercising this power as compared to the executive, one must compare this interest to other rights of governance. Spending on constituents, for example, is more highly prized by Congress since it can directly help individual members of Congress retain office.' Of course, even if Congress rationally shuns operational control of war and foreign policy matters, it may be interested in increasing its mechanisms to criticize the executive's performance after the fact, so that it can act in effect as the ululating Greek chorus that comments on the executive's tragic choices.'

AT: Courts Key

Independent Executive Actions are better than the Courts-Information and court decentralization

Eric **Posner 7,** Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

The gap between the executive and the judiciary, in information and expertise, is even wider than between the executive and Congress. Whereas many legislators have a narrowly defined field of policy expertise, particularly in the House, federal judges are mostly generalists, barring a few specialized courts. Furthermore, the partial insulation from current politics that federal judges enjoy, by virtue of life tenure and salary protection, brings with it a kind of informational impoverishment.6 Legislators, who must please other people at least some of the time, interact with the outside world far more systematically than generalist judges, whose main source of information is the briefs and arguments of litigants. The credibility dilemma thus appears quite acutely in judicial proceedings. When the executive says that resolving a plaintiff's claim would require disclosure of "state secrets,"61 with dangerous consequences for national security, judges know that either an illmotivated or a well-motivated executive might be making the claim and that they have no easy means to assess whether the claim is credible.

2. Collective action problems and decentralization. If congressional monitoring of executive discretion is hampered by collective action problems, judicial monitoring is hampered by a similar condition, the decentralized character of the federal judiciary. The judiciary really is a "they," not an "it," and is decentralized along mainly geographic lines. Different judges on different courts will have different prior estimates of the executive's credibility, and hence different views of the costs and benefits of oversight and of the appropriate level of monitoring. The Supreme Court is incapable of fully resolving these structural conflicts. Because the Court presides over a large institutional system and lacks the capacity to review more than a fraction of cases submitted to it, its role is restricted by necessity to the declaration of general principles of law and episodic, ad hoc intervention in the system.6

The Executive needs to act independently of the courts-Legitimacy and Judicial Credibility

Eric **Posner 7,** Professor of Law at The University of Chicago Law School, 8/10/2007, "The Credible Executive", University of Chicago Law Review, 74 U. Chi. L. Rev. 865, http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2737&context=journal_articles

In the federal system, appointed judges are not overtly partisan, though they are sometimes covertly so. The very condition that enables this relative lack of overt politicization-that federal judges are, at least in one familiar conception, legal technocrats appointed for their expertise rather than elected on a partisan basis-also creates a serious legitimacy deficit for the judiciary, understanding legitimacy in a strictly sociological sense." Aroused publics concerned about issues such as national security sometimes have little tolerance for robust judicial oversight of executive discretion, which can always be condemned as "activism" by "unelected judges." This charge sometimes succeeds and sometimes fails, but for the judges it is always a concern that acts as a drag on attempts to monitor executive behavior.

4. Judicial credibility. Judges rely on executive officials to carry out their orders and Congress to fund them, and thus ultimately rely on the public to impose sanctions on the political branches when the political branches do not obey a court order. But the public will support the judiciary only if the public believes that the judiciary is well motivated rather than ill motivated. Such is often the case, but the credibility of judges is not infinite.6' Lingering public suspicion of elite decisionmaking places a cap on judicial credibility, and indeed the evidence suggests that judges are often motivated by ideology, at least when it comes to opinion assignment.6 Thus, in extreme cases, as between a presidential determination that an emergency requires a course of action and a judge's claim to the contrary, the public might well believe the president.

Here too, we do not claim that judicial oversight is a total failure. Doctrinal lawyers focus, sometimes to excess, on a handful of great cases in which judges have checked or constrained discretionary executive action, even in domains involving foreign policy or national security. Cases such as Youngstown,6 the Pentagon Papers case,6 and recently Hamdanso head this list. Undoubtedly, however, there is a large gap between executive discretion and judicial capacities, or even between executive discretion and the sum of congressional and judicial capacities working in tandem. In times of emergency, especially, both Congress and the judiciary defer to the executive." Legislators and judges understand that the executive's comparative institutional advantages in secrecy, force, and unitariness are all the more useful during emergencies, so that it is worthwhile transferring more discretion to the executive even if it results in an increased risk of executive abuse. The result is that cases such as the ones we have listed are the exception, not the rule, at least during the heat of the emergency

AT: Circumvention/Rogue Exec

A2 circumvention

Nathan Alexander **Sales, 14**, Associate Professor of Law, Syracuse University College of Law, Summer 2014, "NSA SURVEILLANCE: ISSUES OF SECURITY, PRIVACY AND CIVIL LIBERTY: ARTICLE: Domesticating Programmatic Surveillance: Some Thoughts on the NSA Controversy", LexisNexis, 10 ISJLP 523

This sort of oversight by the courts and Congress provides an obvious, first-order level of protection for privacy and civil liberties--an external veto serves as a direct check on possible executive [*538] misconduct. Judicial and legislative checks also offer an important second-order form of protection. The mere possibility of an outsider's veto can have a chilling effect on executive misconduct, discouraging officials from questionable activities that would have to undergo, and might not survive, external review. n64 Moreover, external checks can channel the executive's scarce resources into truly important surveillance and away from relatively unimportant monitoring. This is so because oversight increases the administrative costs of collecting bulk data--e.g., preparing a surveillance application, persuading the judiciary to approve it, briefing the courts and Congress about how the program has been implemented, and so on. These increased costs encourage the executive to prioritize collection that is expected to yield truly valuable intelligence and, conversely, to forego collection that is expected to produce information of lesser value.

AT: Overreach

No overreach

Nathan Alexander **Sales, 12**, Associate Professor of Law, Syracuse University College of Law, August 29, 2012, "SELF RESTRAINT AND NATIONAL SECURITY", http://www.law.gmu.edu/assets/files/publications/working_papers/1041SelfRestraintandNationalSecurity.pdf

Much of the caselaw and scholarship concerning national security rests on the assumption that the executive branch is institutionally prone to overreach – that, left to its own devices, it will inch ever closer to the line that separates illegal from legal, and sometimes enthusiastically leap across it. The obvious conclusion is that external, principally judicial, checks are needed to keep the executive in line.2 In many cases the executive does indeed push the envelope. But not always. The government often has powerful incentives to stay its own hand – to forbear from military and intelligence operations that it believes are perfectly legal.3 Officials may conclude that a proposed mission – a decapitation strike on al Qaeda's leadership, say, or the use of mildly coercive interrogation techniques on a captured terrorist – is entirely permissible under domestic and international law. Yet they nevertheless might rule it out. In other words, the government sometimes adopts self restraints on its ability to conduct operations it regards as legally justified; it "fight[s] with one hand behind its back," to borrow Aharon Barak's memorable phrase.4 This article considers the reasons for that tendency by consulting rational choice theory – the notion that government officials are rationally self interested actors who seek to maximize their respective utility. Part I identifies four examples of self restraint in national security operations. Parts II and III then discuss possible explanations for why the government adopts them.

No overreach-The executive branch can balance internally, and the other branches also prevent presidential power grabs

Dawn **Johnsen 7,** Walter W. Foskett Professor of Constitutional law at Maurer School of Law, 1/1/2007, "Faithfully Executing the Laws: Internal Legal Constraints on Executive Power", UCLA Law Review, 54 UCLA LAW REVIEW 1559, http://www.repository.law.indiana.edu/cgi/viewcontent.cgi?article=1297&context=facpub2

Public cynicism notwithstanding, it is both possible and necessary for executive branch lawyers to constrain unlawful executive branch action. Ultimately, though, the President's own attitude toward the rule of law will go a long way toward setting the tone for the administration. If the President desires only a rubberstamp, OLC will have to struggle mightily to provide an effective check on unlawful action. In addition to being prepared to say no, therefore, the assistant attorney general for OLC and other top Department of Justice officials must also be prepared to resign in the extraordinary event the President persists in acting unlawfully or demands that OLC legitimize unlawful activity. Even from within the Bush Administration, some cause for optimism can be found in reports of internal opposition to extreme interrogation policies, as well as in the threatened resignation of up to thirty Department of Justice officials if Bush had persisted in a domestic surveillance program the Department had determined was unlawful.'69 This is as it should be: Commitment to the rule of law must not be a partisan issue. Congress, the courts, and the public should all work to empower principled executive branch legal advisors-in administrations of both political parties-to safeguard our constitutional democracy.

AT: No Authority

Judicial precedent grants the executive the authority to surveillance activities- definitions of emergencies and deference

Landon **Magnusson 9,** J.D. from Brigham Young University, 2009, "Note and Comment: Forget the Whales: Expanding the Twilight and Diminishing the Nadir of Youngstown", BYU Journal of Public Law, 24 BYU J. Pub. L. 149, http://digitalcommons.law.byu.edu/cgi/viewcontent.cgi?article=1428&context=jpl

It may be tempting to brush Winter aside because the Supreme Court did not reach a decision on the merits due to the nature of the suit, but one should remember that fifty years ago, another case, more explicitly concerning the limits of presidential powers, sought after the same remedy. n108 Both cases occurred during a period when the United States was at war. n109 In each case, the Executive's actions were directly contrary to congressional will. n110 Most importantly, in both situations, because of emergency circumstances, the Executive Branch justified its actions as necessary in defense of the public good. n111

Nevertheless, in Winter, the Supreme Court departs from the standard set half a century ago in Youngstown. By finding in favor of the Navy, the Court altered the accepted Jackson taxonomy by expanding its zone of twilight, and diminishing its nadir. Winter accomplished this by first revising the definition of an emergency - eliminating its requirement of unforeseeability and permitting an Executive to seek the protection of emergency powers for manufactured emergencies caused by the reckless disregard of the law or negligence of that Executive. Second, the Winter decision allows the Executive to "be the judge in [its] own case," n112 [*165] deferring to [it] for a determination of when emergency circumstances are present, creating an incentive for Executives to call upon those powers more often and under circumstances that are less than public emergencies.

Executive branch has the ability to limit itself

L. Rush **Atkinson 10/13**, Attorney U.S. Department of Justice, "The Fourth Amendment's National Security Exception: Its History and Limits", LexisNexis, 66 Vand. L. Rev. 1343

When identifying the constitutional parameters of the executive's power, historical moments of restraint are particularly instructive. When congressional prohibition draws executive power to its "ebb," for example, one can identify the executive's core inextinguishable powers. n47 Constitutional boundaries are similarly discernible in some cases where the executive branch limits its own [*1354] conduct. n48 Specifically, the executive's self-restraint is precedential when it stems from a sense of constitutional obligation. n49 Such executive branch fealty toward the Constitution might be unprompted by a coordinate branch's action, so there may be no record as evident as a judicial opinion or legislative bill. Nevertheless, where a discernible opinio juris shapes executive action, we should consider such legal opinion both for its persuasive power and for its reflection of historical understandings about what protections the Constitution establishes. n50

AT: "For Cause" Takes out Solvency

Even though the President does not have the ability to remove officers without cause, pressure and loyalty make enhorcement of executive action assured

Richard **Pierce 9,** Lyle T. Alverson Professor of Law at the George Washington University, "Saving the Unitary Executive Theory from Those Who Would Distort and Abuse it: A Review of the Unitary Executive, by Steven G. Calabresi and Christopher Yoo", George Washington Law Review, http://scholarship.law.gwu.edu/cgi/viewcontent.cgi?article=1951&context=faculty_publications

Calabresi and Yoo emphasize repeatedly their strong belief that the President has, and must have, an unqualified power to remove an executive branch subordinate.20 I agree that the President must have the power to remove any executive branch officer and that Congress cannot be allowed to give itself any role in the removal process. I am pleased that the Supreme Court has acted in a manner consistent with that view. I disagree with Calabresi and Yoo, however, to the extent that they argue that Congress cannot impose a for cause limit on the President's power to remove some executive branch officers and to the extent that they argue that the President can remove without cause executive branch employees who have no policy making responsibility. I believe that the President can control policy making within the executive branch even though he does not have plenary power to remove every executive branch subordinate.

In three cases, the Court has held that Congress can limit the president's power to remove an executive branch officer by requiring the president to state a cause for removal if Congress identifies an adequate functional rationale to support such a limitation, e.g., the agency adjudicates disputes involving private rights,21 the agency provides advice to Congress,22 or the agency has responsibility to investigate and/or prosecute alleged criminal wrongdoing at a high level in the executive branch.23 I do not believe that the for cause limits the Court upheld in those cases are inconsistent with the unitary executive theory or preclude the president from controlling policy making within the executive branch. In fact, I think they have little, if any, effect on the president's ability to control executive branch policy making.

The vast majority of executive branch officers have three reasons to act in accordance with the president's policy preferences that are independent of the president's removal power. All were either appointed or nominated by the president because of some combination of three characteristics – agreement with the president on policy issues related to their areas of responsibility, long-time loyalty to the president's political party, and/or personal loyalty to the president. As a result, presidents rarely need to resort to explicit or implicit threats to remove an officer to persuade the officer to act in accordance with the president's policy preferences. On the unusual occasion when an officer feels so strongly about a policy issue that the president is unable to persuade the officer to act in accordance with the president's policy preferences, I do not believe that the legal requirement that the president must state a cause for removing the officer has any effect at all on the president's ability to use the threat of removal as an added inducement to the officer to act in accordance with the president's policy preferences.

AT: Any DA to the CP

Non-unique---executive self-restraint happens all the time

Nathan Alexander **Sales 12**, Associate Professor of Law, Syracuse University College of Law, "Self restraint and National Security", http://jnslp.com/wp-content/uploads/2012/08/08__Sales_Master_6-28-12-NS.pdf

Why does the government sometimes tie its own hands in national security operations? Much of the caselaw and scholarship concerning national security rests on the assumption that the executive branch is institutionally prone to overreach – that, left to its own devices, it will inch ever closer to the line that separates illegal from legal, and sometimes enthusiastically leap across it. The obvious conclusion is that external, principally judicial, checks are needed to keep the Executive in line.2 In many cases the Executive does indeed push the envelope. But not always.3 The government often has powerful incentives to stay its own hand – to forbear from military and intelligence operations that it believes are perfectly legal. Officials may conclude that a proposed mission – a decapitation strike on al Qaeda's leadership, say, or the use of mildly coercive interrogation techniques on a captured terrorist – is entirely permissible under domestic and international law. Yet they nevertheless might rule it out. In other words, the government sometimes adopts self-restraints that limit its ability to conduct operations it regards as legally justified; it "fight[s] with one hand behind its back," to borrow Aharon Barak's memorable phrase.4

Topicality

1NC---T-Curtail

Curtail means cutting away the authority

Merriam-Webster, 15 ('curtail', http://www.merriam-webster.com/dictionary/curtail

Full Definition of CURTAIL

transitive verb

: to make less by or as if by cutting off or away some part <curtail the power of the executive branch> <curtail inflation>

That requires a third party restriction – executive self-restraint isn't topical

8th Circuit Court of Appeals 10

(Public Water Supply Dist. No. 3 v. City of Leb., 605 F.3d 511, Lexis)

HN9 7 U.S.C.S. § 1926(b) provides that a rural district's service shall not be curtailed or limited. In this context, the verbs "curtail" and "limit" connote something being **taken from** the current holder, rather than something being retained by the holder to the exclusion of another. "Curtail" is defined as shorten in extent or amount; abridge; "limit" is defined as set bounds to; restrict. The available cases and fragments of legislative history all seem to have in mind **curtailment** resulting from substitution of **some third party** as a water-supplier for the rural district. Shepardize - Narrow by this Headnote

Vote neg for limits and ground---the objects of surveillance are potentially unlimited, which means restricting the mechanism the aff can use is essential to a manageable topic, and the ESR counterplan is a core negative generic necessary to check unlimited affs

Exts---Curtail = Limit

Curtail is a rule limiting action

Gibbons 99 – PhD in Statistics

(Jean, "Selecting and Ordering Populations: A New Statistical Methodology," p 178)

In general, **curtailment** is defined with respect to any **rule** as terminating the drawing of observations at a number smaller than n as soon as the final decision is determined; here n is the maximum number of observations that one is allowed to take. Thus curtailment is an "early stopping rule" and it yields a saving in the number of observations taken. Therefore we now discuss curtailment with respect to our sampling rule of looking for the cell with the highest frequency in n observations; we wish lo evaluate the amount of saving that may result for various values of k and n.

Exts---Curtail = Impose Restriction

Curtail means impose a restriction

Oxford Dictionaries, 15 ("curtail", http://www.oxforddictionaries.com/us/definition/american_english/curtail)

Definition of curtail in English:

verb

[WITH OBJECT]

1Reduce in extent or quantity; impose a restriction on: **civil liberties were further curtailed**

Curtail means place restrictions on

Vocabulary.com, 15 ('curtail' http://www.vocabulary.com/dictionary/curtail

DEFINITIONS OF:

curtail

v place restrictions on

"curtail drinking in school"

Synonyms:

curb, cut back, restrict

Competition/Net Benefit

AT: Perm do the CP (Against Courts/Congress Affs)

The perm severs the mechanism of the aff---executive self-restraint is obviously a distinct policy from passing a bill or having the court take an action---that's a voting issue because it destroys neg ground---all counterplans become uncompetitive

AT: Perm do the CP (Against General Affs)

The perm severs curtail---that means to cut away authority

Merriam-Webster, 15 ('curtail', http://www.merriam-webster.com/dictionary/curtail

Full Definition of CURTAIL

transitive verb

: to make less by or as if by cutting off or away some part <curtail the power of the executive branch> <curtail inflation>

That requires a third party restriction---executive self-restraint isn't a curtailment of surveillance

8th Circuit Court of Appeals 10

(Public Water Supply Dist. No. 3 v. City of Leb., 605 F.3d 511, Lexis)

HN9 7 U.S.C.S. § 1926(b) provides that a rural district's service shall not be curtailed or limited. In this context, the verbs "curtail" and "limit" connote something being **taken from** the current holder, rather than something being retained by the holder to the exclusion of another. "Curtail" is defined as shorten in extent or amount; abridge; "limit" is defined as set bounds to; restrict. The available cases and fragments of legislative history all seem to have in mind **curtailment** resulting from substitution of **some third party** as a water-supplier for the rural district. Shepardize - Narrow by this Headnote

Voting issue---allowing affs to sever the mechanism of the plan destroys neg ground---most of the literature around curtailing surveillance involves how it should be done and by whom---means the counterplan is a necessary test of the aff and a key part of the negative arsenal

AT: Links to Politics---Leverage

Executive orders allow the president to gain leverage on the rest of the agenda- Altering strategy, Symbolic stands, and Authority

Kenneth **Mayer 1,** Government professor, University of Wisconsin-Madison, 2001, "With the Stroke of a Pen: Executive Orders and Presidential Power", Princeton University Press, p 31, http://press.princeton.edu/chapters/s7095.pdf

At the third level, presidents use their unilateral authority as a bargaining tool in an effort to shape the strategic context in which they operate. By taking symbolic stands, placing issues and policies on the public agenda, and providing political benefits to important constituencies, presidents can dramatically alter the strategic environment in which bargaining takes place. This type of authority comes closest to Neustadt's "persuasion" model of presidential power. Two recent examples are Clinton's 1995 order that barred government contractors from hiring replacement workers and a 1997 order prohibiting smoking in government buildings. In the first case Clinton was trying to mend the breach with organized labor that arose over his support of the North American Free Trade Agreement (which unions strongly opposed).Even though the president ultimately lost in the courts, he still gained considerable leverage by making the attempt. In the second case, the president's action was largely symbolic, and part of an effort to gain public credit by getting on the "right side" of an important public heath issue.

My focus is on the second and third categories of presidential action. Although presidents face limits on their ability to mandate direct change—indeed, in a separated system the lack of such limits would be, as Montesquieu put it, the very definition of tyranny—the focus in the presidency literature on the limits of command has obscured the president's ability to use executive authority to gain control of institutions, processes, and agendas. Even within this more narrow area presidents are not free to do whatever they want, and in any case Congress or the courts may step in to reverse what the president has done. I argue, though, that the president will win more of these battles than he loses, as Congress fails to overcome the collective dilemma and institutional inertia that make quick and decisive action difficult. Before I turn to the task of analyzing how presidents have used this power in particular policy areas, though, it is necessary first to define with more precision what the law says about executive orders, and provide an accurate and systematic account of the patterns of overall use.

AT: Links to Politics---No Debate/Backlash

Executive Orders don't link-speed of passage, difficulty to challenge, and avoidance of rulemaking

Phillip **Cooper 2,** Professor of Public Administration, Mark O. Hatfield School of Government, 2002, "By Order of the President: The Use and Abuse of Executive Direct Action", p 58-59

Executive orders are often used because they are quick, convenient, and relatively easy mechanisms for moving significant policy initiatives. Though it is certainly true that executive orders are employed for symbolic purposes, enough has been said by now to demonstrate that they are also used for serious policymaking or to lay the basis for important actions to be taken by executive branch agencies under the authority of the orders. Unfortunately, as is true of legislation, it is not always possible to know from the title of orders which are significant and which are not, particularly since presidents will often use an existing order as a base for action and then change it in ways that make it far more significant than its predecessors. The relative ease of the use of an order does not merely arise from the fact that presidents may employ one to avoid the cumbersome and time-consuming legislative process. They may also use this device to avoid sometimes equally timeconsuming administrative procedure, particularly the rulemaking processes required by the Administrative Procedure Act. Because these procedural requirements do not apply to the president, it is tempting for executive branch agencies to seek assistance from the White house to enact by executive order that which might be difficult for the agency itself to move through the process. Moreover, there is the added plus from the agency's perspective that it can be considerably more difficult for potential adversaries to obtain standing to launch a legal challenge to the president's order than it is to move an agency rule to judicial review. There is nothing new about the practice of generating executive orders outside the White house. President Kennedy's executive order on that process specifically provides for orders generated elsewhere.

AT: Links to Politics---No Accountability

Doesn't link to politics---Congress can't hold the executive accountable

Sudha **Setty 8,** Professor at Western New England University School of Law, Spring 2008, "THE PRESIDENT'S QUESTION TIME: POWER, INFORMATION, AND THE EXECUTIVE CREDIBILITY GAP", Cornell Journal of Law and Public Policy, 17 Cornell J. L. & Pub. Pol'y 247, Lexis

Significantly heightened access to the Executive would create a stronger culture of accountability and would work against the diffusion of responsibility within the bureaucracy of the administration. n144 Such diffusion often allows the President to dissociate with unsuccessful or controversial activities of the executive branch by claiming a lack of direct oversight or a lack of reporting by the various offices to him. n145 [*275] Further, a President's Question Time would assist in improving the function of the Legislature by allowing representatives to elevate issues of importance beyond House floor debates. Important issues could be aired before the President, addressed by the executive branch, and evaluated by the public in a relatively timely fashion, n146 even if the White House and both branches of Congress are controlled by one party. n147

The organization and role of political parties in the United States is significantly different than in the United States. The presidential system in the United States has no formal institution akin to the "opposition rights" that are found in parliamentary systems. n148 The difference in the role of parties, however, should not operate as an impediment to establishing a system by which members of a minority political party have a public forum enabling direct dialogue with the President.

In the case of unified government, the function of a Question Time is obvious and remarkably similar to that of the Prime Minister's Question Time in Britain: to restore a sense of balance in government in accordance with the Madisonian ideal promulgated at the time the Constitution was drafted. Although the framers of the Constitution hoped that political parties would never take root in the United States, n149 the modern reality is that the strength of political parties at times of unified government makes the U.S. system remarkably similar to the Westminster parliamentary system of a linked executive and legislative branch. n150 As such, similar measures should be considered to restore a greater degree of accountability of the executive branch.

FISA CP

1NC

The United States Congress should require all-existing and future [plan object] be approved by the FISA courts before being implemented. FISA should modify its operating procedure including but not limited to:

*** increase transparency of the court proceedings**

*** ensure those affected by surveillance are represented during and in the proceedings,**

*** allow individuals to challenge surveillance programs in regular federal courts,**

*** require intelligence collection meet the rubric under 'foreign intelligence' and national security standards,**

*** and establish constitutional standards during criminal investigations.**

FISA has slowly crept and expanded to justify broad surveillance – they need to be reined in and reformed to save their original purpose and credibility.

Goitein & Patel 15 - ***Served as counsel to Sen. Russell Feingold, Chairman of the Constitution Subcommittee of the Senate Judiciary Committee, **Has testified before Congress opposing the dragnet surveillance of Muslims, organized advocacy efforts against state laws designed to incite fear of Islam, and developed legislation creating an independent Inspector General for the NYPD (Elizabeth, Faiza, What went wrong WITH THE FISA COURT, Brennan Center for Justice is a nonpartisan law and policy institute, http://litigation.utahbar.org/assets/materials/2015FedSymposium/3c_What_Went_%20Wrong_With_The_FISA_Court.pdf) NAR**

The FISA Court is a unique creature within the federal judiciary. Established by Congress in 1978 as part of the Foreign Intelligence Surveillance Act **(FISA),2** the court's original mandate was to review the government's **applications to collect "foreign intelligence" — information relating to foreign affairs and external threats — in individual cases. Its judges, who are drawn from among federal trial judges and selected by the Chief Justice of the United States, generally hear from just one party: the government.** Proceedings are closed and the court's decisions are classified. Most targets receive no notice of the surveillance, even after investigative activity has ceased. **At the time of its creation, many lawmakers** saw constitutional problems in a court that operated **in total secrecy and outside the normal "adversarial" process (i.e., with both parties present).** But the majority of Congress was reassured by similarities between FISA Court proceedings and the hearings that take place when the government seeks a search warrant in a criminal investigation. **Moreover,** the rules governing who could be targeted for "foreign intelligence" purposes were **narrow** enough to mitigate concerns that the FISA Court process might be used to suppress political dissent in the U.S. **— or to avoid the stricter standards that apply in domestic criminal cases.** In the years since **then, however,** changes in technology and the law **have altered the constitutional calculus. Technological advances have revolutionized communications.** People are communicating at a scale unimaginable **just a few years ago.** International phone calls**, once difficult and expensive,** are now as simple as flipping a light switch, **and**

the Internet provides countless additional means of international communication. Globalization makes such exchanges as necessary as they are easy. As a result of these changes, the amount of information about Americans that the NSA intercepts, **even when targeting foreigners overseas,** has exploded. Instead of increasing safeguards for Americans' privacy as technology advances, **the law has evolved in the opposite direction since 9/11**. It increasingly leaves Americans' information outside its protective shield. While surveillance involving Americans previously required individualized court orders, it now happens through massive collection programs (known as "programmatic surveillance") **involving no case-by-case judicial review.** The pool of permissible targets is no longer limited to foreign powers — such as foreign governments or terrorist groups — and their agents. Furthermore, the government may invoke the FISA Court process even if its primary purpose is to gather evidence for a domestic criminal prosecution rather than to thwart foreign threats. Much has been written about the effect of these developments on Americans' privacy, not to mention the lawfulness of the NSA's actions. But these developments also have had a profound effect **on the role exercised by the FISA Court**. They have caused the court to **veer off course**, departing from its traditional role of ensuring that the government has **sufficient cause** to intercept communications or obtain records in particular cases and instead authorizing broad surveillance programs. It is questionable whether the court's new role comports with Article III of the Constitution, which mandates that courts must adjudicate concrete disputes rather than issuing advisory opinions on abstract questions. The constitutional infirmity is compounded by the fact that the court generally hears only from the government, while the people whose communications are intercepted have no meaningful opportunity to challenge the surveillance, even after the fact. Moreover, under current law, the FISA Court **does not provide the check on executive action that the Fourth Amendment demands.** Interception of Americans' communications generally requires the government to obtain a warrant based on **probable cause** of criminal activity. Although some courts have held that a traditional warrant is not needed to collect foreign intelligence, they have imposed strict limits on the scope of such surveillance and have emphasized the importance of close judicial scrutiny in policing these limits. The FISA Court's **minimal involvement** in overseeing programmatic surveillance **does not meet these constitutional standards**. **Fundamental changes are needed to fix these flaws.** Following Snowden's disclosures, several bills were introduced to try to ensure that the court would hear the other side of the argument, generally from some type of public advocate. Other bills addressed the court's secrecy by requiring the executive branch to declassify significant opinions or release summaries. These proposals would make important improvements, but they do not address the full range of constitutional deficiencies resulting from the changes in law and technology detailed in this report. The problem with the FISA Court is far broader than a particular procedure or rule. **The problem with the FISA Court is FISA.**

Net Benefit

Politics NB

The senate will pass anything FISA-related

Antle 12 (Jim Antle is editor of the Daily Caller News Foundation and senior editor at The American Spectator, and the author of Devouring Freedom: Can Big Government Ever Be Stopped? He is a former associate editor at TAC and his work has appeared at The Guardian, Politico, and Taki Mag, What the Senate Doesn't Know about FISA, December 31, 2012, http://www.theamericanconservative.com/articles/what-the-senate-doesnt-know-about-fisa/ accessed 6/22/15) //CS

Nancy Pelosi once said that we had to pass Obamacare to see what's in it. Last week, Congress said we shouldn't ask what's in the federal surveillance law even after we've passed it. That's the most charitable way to interpret the Senate's votes reauthorizing expiring provisions of the Foreign Intelligence Surveillance Act (FISA) without any major changes or new checks and balances. The FISA amendments package of 2008 allows the kind of general warrants the Fourth Amendment was intended to prevent, giving the government a blank check for snooping on Americans. It's not so much that senators voted by lopsided margins to continue Bush-era warrantless wiretapping nearly five years into the age of hope and change (with the Obama administration's blessing, of course). More surprising is their lack of interest in how many people are being spied on and how likely irrelevant data belonging to innocent citizens is to be ensnared in terrorism investigations. FISA courts operate in secret, which is to be expected. What is not to be expected is that the elected branches of the federal government will conduct a debate about the proper scope of the law without knowing how the law is actually interpreted in practice. We might as well have a debate about the Constitution with a secret Supreme Court. (Well, that probably wouldn't be all that different from the current state of affairs.) Sen. Jeff Merkley asked that we be given some window into what the important rulings and precedents of the secret court might be, with the understanding that nothing endangering national security would be declassified. If we are going to discuss these issues, it would be awfully sporting to know what we are talking about. Nah, the Senate decided. Merkley's amendment was defeated by a vote of 54 to 37. Who needs to know these things anyway? That's why the government hires national-security professionals, who will always act in our interests.

Improving FISA transparency has bipartisan support

Peterson 13 (Andrea Peterson covers technology policy for The Washington Post, with an emphasis on cybersecurity, consumer privacy, transparency, surveillance and open government, The House is divided over almost everything. But FISA Court reform might be able to unite it, October 01, 2013, http://www.washingtonpost.com/blogs/the-switch/wp/2013/10/01/the-house-is-divided-over-almost-everything-but-fisa-court-reform-might-be-able-to-unite-it/ accessed 6/22/15)//CS

While the government remains shut down because Congress can't agree to keep it funded, a Democrat and a Republican are asking their colleagues to support legislation to bring more transparency to the process for approving NSA surveillance programs. Rep. Chris Van Hollen (D-Md.) and Jim Jordan (R-Ohio) sent a letter to their colleagues Tuesday asking them to join in co-sponsoring companion legislation to the FISA Court Reform Act (S.1467) introduced in the upper chamber by Sen. Richard Blumenthal (D-Conn.) this summer. Their legislation would create an Office of the Constitutional Advocate led by a citizen's advocate appointed by the judicial branch who would argue for civil liberties in the FISA Court process. It was also incorporated into the bipartisan proposal introduced by Blumenthal and Sens. Rand Paul (R-Ky.), Mark Udall (D-Colo.) and Ron Wyden (D-Ore.). "The basic idea behind the bill is that both sides of an argument should be represented before the FISA court," explained Van Hollen. "We believe the FISA court should head the position advanced by the intelligence agencies, but they should also hear from a citizen's advocate whose main purpose is to determine if individual's rights are being adequately protected." Similarly, Jordan argued that an "adversarial" approach with checks and balances was an appropriate reform approach for the FISA Court consistent with the "American system." The constitutional advocate In theory, the advocate would analyze all requests before the notoriously secret court and provide assistance to communications companies on request. But FISA judges would have the discretion to exclude the advocate from some cases. The advocate would also have the ability to appeal decisions made by the FISA Court to the FISA Court of Review, which would be required to decide on every appeal by the advocate. The Office of the Constitutional Advocate would also be required to make annual reports to Congress on its activities and proposals for legislation to improve the effectiveness of the FISA system. Click here for more information! This would clearly be a change from the current setup in the FISA Court, but it might not be enough to materially change the outcomes of the process. Former NSA chief Michael Hayden, one of the architects of current spying programs, recently called this particular type of reform a "cosmetic" change that would "make people feel better" but might not result in any actual changes to programs. And since the court itself complained in a since-declassified order that the NSA mislead it repeatedly about the extent and nature of surveillance, changes at that level might not make a difference. Jordan disagreed with Hayden's assessment of the advocate approach, saying "he can have his opinion, but the way we structured the legislation was not purely symbolic." Jordan also indicated that he was looking at a broader array of legislative responses to privacy concerns raised by the Edward Snowden leaks. Asked whether he would support a broader approach similar to the one proposed by Wyden, Paul, Blumenthal and Udall in the Senate, Van Hollen said he would "certainly look" at that kind of bill. But he said he was focused on taking it one step at a time. "This a very important piece of the overall issue and it signals important bipartisan cooperation in the House on this issue," he said. Van Hollen believes it's more important

to control who has access to data than to regulate how it's collected. "I really think that's the key issue when it comes to protecting civil liberties: What are the standards that apply when people are trying to search the data and do you have an advocate to protect individual liberties in that process," Van Hollen added. The legislation Van Hollen and Jordan are co-sponsoring would also require the Attorney General to declassify or summarize significant FISA Court decisions. That would fulfill a request some congressional civil liberties watchdogs including Wyden and Udall have been making since long before the Snowden leaks. Bipartisan support

Van Hollen and Jordan's bill is not the only legislative proposal to rein in the surveillance state. In July, an amendment offered by Michigan Reps. Justin Amash (R) and John Conyers Jr. (D) that would have defunded the NSA's practice of collecting domestic call records. It attracted support from both sides of the aisle with 94 Republican votes (including Jordan's) along with 111 Democratic votes — despite opposition by leadership on both sides and the White House. Its success shows that there's interest from members of both parties in changing the status quo, even if it's unpopular with leadership. As the ranking minority member on the House Budget Committee and a former chairman of the Democratic Congressional Campaign Committee, Van Hollen is often touted as a rising star in his party by the media. It's possible that his support of this FISA Court transparency initiative might be a signal that feelings on the Hill are changing.

Warrants with FISA is political cover

*this card isn't so good.

Rothschild 8 – (Matthew, Obama's FISAL Betrayal,

http://www.progressive.org/mag_wx0602408**, June 24th 2008) NAR**

Barack Obama's rightward sprint is nowhere more obvious than in his betrayal on the FISA bill. This bill allows the President to grab all incoming and outgoing international communications without a warrant. The ACLU says it represents "an unprecedented extension of governmental surveillance over Americans." Obama, sounding on Friday a lot like Bush, said: "Given the legitimate threats we face, providing effective intelligence collection tools with appropriate safeguards is too important to delay." Here's what Bush said the same day as Obama: The bill "allows our intelligence professionals to quickly and effectively monitor the plans of terrorists abroad, while protecting the liberties of Americans here at home." But it doesn't protect our liberties, and Obama ought to know that. Obama said it "firmly reestablishes basic judicial oversight over all domestic surveillance." But the ACLU notes that the bill "permits only minimal court oversight. The FISA Court only reviews general procedures for targeting and minimizing the use of information that is collected. The court may not know who, what, or where will actually be tapped, thereby undercutting any meaningful for the court and violating the Fourth Amendment." What's more, in the incredibly rare instances where the FISA Court denies a warrant to the President, under the new bill the President can go ahead and do the wiretapping anyway while the appeals process continues, a process that the ACLU says can take two months. Russ Feingold calls the idea that this is a good compromise "a farce" and "political cover.

Terrorism DA NB

FISA stopped overseas terrorism

Sullivan 13 (Sean Sullivan, NSA head: Surveillance helped thwart more than 50 terror plots, June 18, 2013, accessed 6/22/15)//CS

Joyce also said that the use of a FISA business record provision helped officials with an investigation involving an individual who was communicating with an overseas terrorist. "The NSA, using the business record FISA, tipped us off that this individual had indirect contacts with a known terrorist overseas," said Joyce. "We were able to reopen this investigation, identify additional individuals through a legal process and were able to disrupt this terrorist activity."

FISA surveillance has stopped terrorism in the past—it prevented a suicide bombing in a New York Subway

WP 13 (The Washington Post, US defends surveillance tactics in war on terrorism, http://www.scmp.com/news/world/article/1264602/us-defends-surveillance-tactics-war-terrorism accessed 6/22/15) //CS

In November 2008, Abid Naseer, a Pakistani student living in Manchester, England, began to e-mail a Yahoo account ultimately traced to his home country. The young man's e-mails appeared to be about four women - Nadia, Huma, Gulnaz and Fozia - and which one would make a "faithful and loving wife". Investigating terrorism is not an exact science. It's like a mosaic SEAN JOYCE, FBI DEPUTY DIRECTOR British investigators later determined that the four names were code for types of explosives. And they ascertained that a final April 2009 e-mail announcing a "marriage to Nadia" between the 15th and the 20th was a signal that a terrorist attack was imminent, according to British court documents. It is unclear exactly how British intelligence linked the Pakistani e-mail address to a senior al-Qaeda operative who communicated in a kind of code to his distant allies. But the intelligence helped stop the plot in England, and the address made its way to the US National Security Agency (NSA). A few months later, the NSA was monitoring the Yahoo user in Pakistan when a peculiar message arrived from a man named Najibullah Zazi, an Afghan American living in Colorado. He asked about "mixing of [flavor and ghee oil] and I do not know the amount, plz right away." Soon after, on September 9, 2009, a second message arrived that echoed the code used in the British plot: "The marriage is ready," Zazi wrote. The e-mails led the NSA to alert the FBI, which obtained a court order to place Zazi under more extensive surveillance. Officials learned that he had visited Pakistan in 2008, the same time as one of the British plotters. In the end, the e-mails and additional surveillance foiled a plot by Zazi and two others to conduct suicide bombings in the New York subway system just days after he sent the "marriage is ready" e-mail. In recent days, US intelligence and law enforcement officials, as well as congressional officials, have pointed to the authority that allowed them to target the Yahoo account - Section 702 of the Foreign Intelligence Surveillance Act (FISA) - as a critical tool in identifying and disrupting terrorist plots in the US and abroad. But some critics of NSA surveillance suggested that the collection of data under a programme called Prism was not essential to Zazi's capture because the British first obtained the critical e-mail address. Still, the case study provides a rare glimpse of how the broad surveillance practices of the United States, often in concert with allies, are deployed. "The 702 programme has been enormously useful in a large number of terrorist cases," said a US official who has access to classified records on NSA programmes. "It's beyond dispute that it is highly effective. It operates exactly as anyone paying attention would have expected it to operate based on floor debate and plain reading of law." Passage of Section 702 as an amendment to FISA in 2008 gave the government the authority to request information from US telecommunications companies on foreign targets located overseas without a court order for each individual case. The broad authority is reviewed and renewed annually by the FISA court, although the law does not preclude making a specific request for surveillance.

FISA Is Vitally Important To National Security

Kris, 2011

Assistant Attorney General, National Security Division, U.S. Department of Justice

We often hear that before 9/11, the United States took a “law enforcement approach” to counterterrorism. There is some truth in that, but I think it oversimplifies the situation. In fact, the 9/11 Commission found that before 9/11, “the CIA was plainly the lead agency confronting al Qaeda”; law enforcement played a “secondary” role; and military and diplomatic efforts were “episodic.” I was involved in national security before 9/11, and that seems roughly accurate to me. After 9/11, of course, all of our national security agencies ramped up their counterterrorism activities. As our troops deployed to foreign battlefields and the Intelligence Community expanded its operations, the Department of Justice (DOJ) and the Federal Bureau of Investigation (FBI) also evolved. We began with the important legal change of tearing down the so-called “FISA wall,” under which law enforcement and intelligence were largely separate enterprises and law enforcement was correspondingly limited as a counterterrorism tool. The Foreign Intelligence Surveillance Act, or FISA, is a federal statute enacted by Congress in 1978 that governs electronic surveillance and physical searches of foreign intelligence targets in the United States. It is an extremely powerful investigative tool, and one that is vitally important to our national security. FISA does not allow, and never has allowed, surveillance or searches of ordinary criminals like Bonnie and Clyde. It applies only to foreign intelligence threats, such as Robert Hanssen or Osama bin Laden.

Lone Wolf Provision Will Be Used Against International Terrorists
Woods, 2005

Senior Executive Vice President for Legal Affairs with MZM

Critics of FISA's new "lone wolf' provision argue it is a dangerous expansion of authority, allowing the application of FISA to individuals lacking any connection to foreign powers. The language actually enacted, however, integrates a definition of "international terrorism' that preserves a sufficiently strong foreign nexus requirement. Therefore, the statute's parts, taken together and read in context, contain adequate safeguards to ensure that the lone wolf provision will be used against its intended targets—international terrorists. Before the lone wolf provision, there were two principal paths to obtain FISA surveillance of an international terrorist: first, by demonstrating probable cause that the target acts in the U.S. as a "member' of an international terrorist group (found in FISA section 101(b)(1)(A)); and second, by demonstrating probable cause that the target "knowingly engages in sabotage or international terrorism, or activities that are in preparation therefor, for or on behalf of a foreign power' (section 101(b)(2)(C)). The first option is difficult to establish given the informality of terrorist organizations and is not available where the target is a U.S. person. The second is the stock from which the present "lone wolf' provision is cut, and provides the conceptual foundation for the new provision.

FISA stops terrorism
Savage, 2013

Charlie Savage, 6/18/13, NY Times. “N.S.A. Chief Says Surveillance Has Stopped Dozens of Plots” Journalist at NY Times. http://www.nytimes.com/2013/06/19/us/politics/nsa-chief-says-surveillance-has-stopped-dozens-of-plots.html?_r=0

WASHINGTON - Top **national security officials** on Tuesday **promoted two newly declassified examples of what they portrayed as "potential terrorist events" disrupted by government surveillance.** The cases were made public as Congress and the Obama administration stepped up a campaign to explain and defend programs unveiled by recent leaks from a former intelligence contractor. **One case involved a group of men in San Diego convicted of sending money to an extremist group in Somalia. The other was presented as a nascent plan to bomb the New York Stock Exchange,** although its participants were not charged with any such plot. Both were describe by Sean Joyce, deputy director of the Federal Bureau of Investigation, at a rare public oversight hearing by the House Intelligence Committee. At the same hearing, Gen. Keith B. Alexander, the head of the National Security Agency, said that American surveillance had helped prevent "potential terrorist events over 50 times since 9/11," including at least 10 "homeland-based threats." But he said that a vast majority of the others must remain secret. "In the 12 years since the attacks on Sept. 11, we have lived in relative safety and security as a nation," General Alexander said. "That security is a direct result of the intelligence community's quiet efforts to better connect the dots and learn from the mistakes that permitted those attacks to occur on 9/11."

FISA stops two cases of terrorism
Savage, 2013

Charlie Savage, 6/18/13, NY Times. “N.S.A. Chief Says Surveillance Has Stopped Dozens of Plots” Journalist at NY Times. http://www.nytimes.com/2013/06/19/us/politics/nsa-chief-says-surveillance-has-stopped-dozens-of-plots.html?_r=0

Mr. Joyce also **invoked two cases officials have previously linked to surveillance conducted under the FISA Amendments Act - a plot to bomb the New York City subway and the discovery that David Headley, a Chicago man, was working on a plot to bomb a Danish newspaper that published cartoon depictions of the Prophet Muhammad.** Representative Jim Himes, Democrat of Connecticut, told General Alexander that he was "more troubled" by the domestic calling log program, which he called "historically unprecedented in the extent of the data that is being collected on potentially all American citizens," than with the gathering of foreign data. He pressed the officials to say how many attacks were stopped by it. Mr. Joyce replied that it was "an almost impossible question," but that "I can tell you, every tool is essential and vital. And the tools, as I outlined to you, and the uses today have been valuable to stopping some of those plots."

Legal Credibility/Hegemony

Opaque FISA proceedings destroy America's legal credibility.
Blumenthal 13 – Senator of the greatest state in the union, Connecticut (Richard, http://www.politico.com/story/2013/07/fisa-court-process-must-be-unveiled-94127.html**, FISA court secrecy must end, 7/14/13) NAR**

On any given day **in Washington,** 11 judges **— all designated by Chief Justice John Roberts,** without congressional advice or consent — convene to hear surveillance applications **from the United States government. Behind closed doors and** without checks or scrutiny**, they balance the threats of espionage and terrorism with Fourth Amendment protections from unreasonable searches and seizures. But the** odds are stacked strongly in favor of the federal government**. Last year alone, the Foreign Intelligence Surveillance Court, known as** the FISA court, heard nearly 1,800 **such** applications from the U.S. government; **not a single request was denied. In its entire 33-year history, the FISA court has rejected just 11 of 34,000 requests. Until recently, few Americans had heard of the FISA court. Yet this federal body, created by the Foreign Intelligence Surveillance Act of 1978 and expanded under the PATRIOT Act, wields tremendous power. FISA requires the government to obtain a judicial warrant prior to commencing particular kinds of intelligence operations within the United States, and the FISA court is empowered to provide these warrants. FISA court judges decide whether the government can tap phone calls, access business records and sweep up a wide array of data that can be used to map the contours of our daily lives.** After the court rules, its findings are almost never made public. **Americans whose privacy may be compromised by FISA court rulings cannot read those rulings, much less contest or appeal them. Created in the wake of Watergate-era revelations about executive-branch spying on domestic dissidents, the FISA court today operates in the shadows without public oversight. Members of most federal courts are selected by the president and confirmed by the Senate with public hearings and an extended opportunity for the public to comment. Members of the FISA court are selected by the chief justice alone, and the American people rarely learn their names or anything about their judicial philosophies until a scandal thrusts them into the public eye. This secretive process has given us a FISA court in which, at the very least, the appearance of effective, nonpolitical justice is gone, as 10 of 11 members were nominated by Republican presidents, and the executive branch almost never loses. The FISA court reviews domestic surveillance requests through a secretive process that denies the public an opportunity to influence or even understand opinions with immense implications for our privacy. In the domestic criminal context, the contours of Fourth Amendment limitations have been developed through a process in which advocates, officials and the public have a chance to identify flaws in the government's reasoning.**

While domestic criminal warrants are issued after proceedings in which only the government is able to make its case, the legal principles governing the decision to issue these warrants come from judicial decisions regarding their admissibility — decisions issued after public proceedings where both sides have a chance to be heard. By contrast, in the FISA **court context,** drastic expansions in government surveillance can occur without any party other than the government having an opportunity to know, much less to weigh in**. This has to stop. I am already working on legislation to reform the FISA court so it can perform effectively its crucial function as a check on the executive branch, while still allowing light to shine upon its proceedings. My proposal, which I plan to introduce this month, will bring transparency to the process for selecting FISA court judges and ensure a broader diversity of views on the bench. It also will ensure that FISA court rulings are the product of a process in which both sides have the opportunity to be heard, a process designed to keep the government honest and allow for balanced consideration of difficult issues. This process will include a special advocate with the power and responsibility to ensure that privacy rights are considered in FISA court opinions, and an opportunity for civil society organizations to weigh in before the court issues a ruling that substantially alters the balance between liberty and security in federal policy.** The FISA court serves a critical purpos**e in our national security apparatus, ensuring timely consideration of surveillance requests when seconds matter most.** But the court in its current form — **unaccountable, secretive, one-sided** — is broken. It not only lacks **any genuine** transparency and accountability, but it also **deprives the entire system of trust and credibility** in the eyes of the American people. The **FISA court is exactly the type of secret tribunal that fanned the flames of revolution we celebrate each July 4. It's time to change that.**

Credibility will make the difference in maintaining hegemonic standing

APSA 9 (American Political Science Association, The American Political Science Association is the leading professional organization for the study of political science and serves more than 15,000 members in over 80 countries. With a range of programs and services for individuals, departments and institutions, APSA brings together political scientists from all fields of inquiry, regions, and occupational endeavors within and outside academe in order to expand awareness and understanding of politics, " U.S. Standing in the World: ¶ Causes, Consequences, ¶ and the Future," Task Force Report, October 2009, http://www.apsanet.org/media/PDFs/APSAUSStandingShortFinal.pdf p. 3-4)

Unlike something a nation possesses and can easily measure, like wealth or military ¶ might, standing is an attribute assigned to the United States by actors beyond its ¶ borders—such as foreign leaders and peoples, international organizations, and transnational ¶ groups—and assessed by citizens within them. U.S. standing has both an absolute and a ¶ relative quality. It is absolute in the sense that it can be high or low and can vary over time. It ¶ is relative in that U.S. standing could be better or worse than that of other countries or actors, ¶ such as China or the European Union.¶ Standing has two major facets: credibility and esteem. Credibility refers to the U.S. ¶ government's ability to do what it says it is going to do—to "stand up" for what it believes, ¶ and to "stand against" threats to its interests and ideals. Esteem refers to America's stature, ¶ or what America is perceived to "stand for" in the hearts and minds of foreign publics and policymakers. Credibility and esteem can be mutually reinforcing, but they can also be ¶ difficult to pursue in tandem—a trade-off implied by Machiavelli's famous dictum: "it is much ¶ safer to be feared than loved." ¶ Standing is densely interwoven with U.S. "hard power"—the nation's material military ¶ and economic capabilities. U.S. capabilities help the nation

realize its interests, and a modern ¶ military and robust economy breed appeal and respect. Power and standing, however, are not ¶ the same thing. U.S. standing may vary even if U.S. hard power does not, as we have seen since ¶ 2000: standing has declined (see Figure 3), but relative American power has been steady (see ¶ Figure 5 below).. Likewise with "soft power": a country's standing can rise and fall even as the ¶ attractiveness of its system remains relatively constant. And unlike pro- or anti-Americanism, ¶ standing is not about whether others are ¶ for or against the United States, but instead ¶ whether they view the United States as a ¶ credible actor with traits that should be ¶ admired or emulated. ¶ Why should policymakers—or political scientists—care about standing at all?¶ First, recent history suggests that standing can play a fundamental role in the shaping ¶ of strategy. In the wake of the 9/11 attacks, President George W. Bush initiated a new ¶ national strategy for the United States that favored the credibility dimension of standing—¶ emphasizing a policy package of assertive unilateralism, preventive use of force, and aggressive ¶ democratization. The administration achieved some initial successes, swiftly toppling the ¶ Taliban in Afghanistan, securing dismantlement of Libya's nuclear program, and encouraging ¶ an apparent halt or slow-down in Iran's nuclear program. ¶ Yet, over time, despite the lack of further terrorist attacks on U.S. soil, American ¶ standing declined. The Bush administration's single-minded approach lost significant ¶ support at home and abroad, as the United States grew mired in Iraq, was accused of ¶ violations of international law, and drew international criticism and resentment—even as ¶ Osama bin Laden remained at large. This decline in standing only made it harder for the ¶ United States to be effective in foreign affairs—prompting the Bush administration to take ¶ what some saw as a reverse course after 2005 and return to the typical pattern of American ¶ internationalism since World War II. ¶ More distant history speaks to the significance of standing as well. In the long ¶ competition with the Soviet Union, the United States was anxious that its reputation to ¶ protect its allies, especially those in Europe, be seen as credible by both Soviet leaders and ¶ Europeans. U.S. participation in the Korean and Viet Nam wars was spurred by the fear that a ¶ perception of diminished U.S. credibility would lead others to join a rising Communist tide. ¶ As Lyndon Johnson explained to Martin Luther King, Jr. in early 1965, "If I pulled out [of ¶ Vietnam] ... I think the Germans would be scared to death that our commitment to them was ¶ no good, and God knows what we'd have in other places in the world...."¶ Standing is the everyday currency of America's existence in the world. Political standing ¶ is akin to long-term political capital (or "goodwill" in accounting). It has intrinsic value, ¶ including in the self-understanding of Americans, even when it has no readily observable ¶ behavioral implications.

Hegemony good- multiple scenarios for global war

Brooks et al. 13 (Stephen, Associate Professor of Government at Dartmouth College, John Ikenberry is the Albert G. Milbank Professor of Politics and International Affairs at Princeton University in the Department of Politics and the Woodrow Wilson School of Public and International Affairs, William C. Wohlforth is the Daniel Webster Professor in the Department of Government at Dartmouth College "Don't Come Home America: The Case Against Retrenchment," International Security, Vol. 37, No. 3 (Winter 2012/13), pp. 7–51)

A core premise of **deep engagement** is that it prevents the **emergence** of a far more dangerous global security environment. For one thing, as noted above, the United States' overseas presence gives it the **leverage** to restrain partners from taking provocative action. Perhaps more important, its core **alliance commitments** also deter states with aspirations to regional hegemony from contemplating expansion and make its partners more secure, reducing their incentive to adopt solutions to their security problems that threaten others and thus stoke security dilemmas. The contention that engaged **U.S. power dampens the** baleful **effects of anarchy** is consistent with influential variants of realist theory. Indeed, arguably the scariest portrayal of the war-prone world that would emerge absent the "American Pacifier" is provided in the works of John Mearsheimer, who forecasts dangerous multipolar regions replete with security competition, arms races, nuclear proliferation and associated preventive war temptations, regional rivalries, and even runs at regional hegemony and **full-scale great power war.** 72 How do retrenchment advocates, the bulk of whom are realists, discount this benefit? Their arguments are complicated, but two capture most of the variation: (1) U.S. security guarantees are not necessary to prevent dangerous rivalries and conflict in Eurasia; or (2) prevention of rivalry and conflict in Eurasia is not a U.S. interest. Each response is connected to a different theory or set of theories, which makes sense given that the whole debate hinges on a complex future counterfactual (what would happen to Eurasia's security setting if the United States truly disengaged?). Although a certain answer is impossible, each of these responses is nonetheless a weaker argument for retrenchment than advocates acknowledge. The first response flows from defensive realism as well as other international relations theories that discount the conflict-generating potential of anarchy under contemporary conditions. 73 Defensive realists maintain that the high expected costs of territorial conquest, defense dominance, and an array of policies and practices that can be used credibly to signal benign intent, mean that Eurasia's major states could manage regional multipolarity peacefully without the American pacifier. Retrenchment would be a bet on this scholarship, particularly in regions where the kinds of stabilizers that nonrealist theories point to—such as democratic governance or dense institutional linkages—are either absent or weakly present. There are three other major bodies of scholarship, however, that might give decisionmakers pause before making this bet. First is regional expertise. Needless to say, there is no consensus on the net security effects of U.S. withdrawal. Regarding each region, there are optimists and pessimists. Few experts expect a return of intense great power competition in a post-American Europe, but many doubt European governments

will pay the political costs of increased EU defense cooperation and the budgetary costs of increasing military outlays. 74 The result might be a Europe that is incapable of securing itself from various threats that could be destabilizing within the region and beyond (e.g., a regional conflict akin to the 1990s Balkan wars), lacks capacity for global security missions in which U.S. leaders might want European participation, and is vulnerable to the influence of outside rising powers. What about the other parts of Eurasia where the United States has a substantial military presence? Regarding the Middle East, the balance begins to swing toward pessimists concerned that states currently backed by Washington— notably Israel, Egypt, and Saudi Arabia— might take actions upon U.S. retrenchment that would intensify security dilemmas. And concerning East Asia, pessimism regarding the region's prospects without the American pacifier is pronounced. Arguably the principal concern expressed by area experts is that Japan and South Korea are likely to obtain a nuclear capacity and increase their military commitments, which could stoke a destabilizing reaction from China. It is notable that during the Cold War, both South Korea and Taiwan moved to obtain a nuclear weapons capacity and were only constrained from doing so by a still-engaged United States. 75 The second body of scholarship casting doubt on the bet on defensive realism's sanguine portrayal is all of the research that undermines its conception of state preferences. Defensive realism's optimism about what would happen if the United States retrenched is very much dependent on its particular—and highly restrictive—assumption about state preferences; once we relax this assumption, then much of its basis for optimism vanishes. Specifically, the prediction of post-American tranquility throughout Eurasia rests on the assumption that security is the only relevant state preference, with security defined narrowly in terms of protection from violent external attacks on the homeland. Under that assumption, the security problem is largely solved as soon as offense and defense are clearly distinguishable, and offense is extremely expensive relative to defense. **Burgeoning** research across the social and other sciences, however, undermines that core assumption: states have preferences not only for security but also for prestige, status, and other aims, and they engage in trade-offs among the various objectives. 76 In addition, they define security not just in terms of territorial protection but in view of many and varied milieu goals. It follows that even states that are relatively secure may nevertheless engage in highly competitive behavior. Empirical studies show that this is indeed sometimes the case. 77 In sum, a bet on a benign postretrenchment Eurasia is a bet that leaders of major countries will never allow these nonsecurity preferences to influence their strategic choices. To the degree that these bodies of scholarly knowledge have predictive leverage, U.S. retrenchment would result in a significant deterioration in the security environment in at least some of the world's key regions. We have already mentioned the third, even more alarming body of scholarship. Offensive realism predicts that **the withdrawal of** the **America**n pacifier **will yield** either a competitive regional **multipolarity complete with** associated insecurity, arms racing, **crisis instability, nuclear proliferation, and** the like, or bids for regional hegemony, which may be beyond the capacity of local great powers to contain (and which in any case would generate intensely competitive behavior, possibly including regional **great power war**). Hence it is unsurprising that retrenchment advocates are prone to focus on the second argument noted above: that avoiding wars and security dilemmas in the world's core regions is not a U.S. national interest. Few doubt that the United States could survive the return of insecurity and conflict among Eurasian powers, but at what cost? Much of the work in this area has focused on the economic externalities of a renewed threat of insecurity and war, which we discuss below. Focusing on the pure security ramifications, there are two main reasons why decisionmakers may be rationally reluctant to run the retrenchment experiment. First, overall higher levels of conflict make the world a more dangerous place. Were Eurasia to return to higher levels of interstate military competition, one would see overall higher levels of military spending and innovation and a higher likelihood of competitive regional **proxy wars and arming of client states**—all of which would be concerning, in part because it would promote a faster diffusion of military power away from the United States. Greater regional insecurity could well feed proliferation cascades, as states such as Egypt, Japan, South Korea, Taiwan, and Saudi Arabia all might choose to create nuclear forces. 78 It is unlikely that proliferation decisions by any of these actors would be the end of the game: they would likely generate pressure locally for more proliferation. Following Kenneth Waltz, many retrenchment advocates are proliferation optimists, assuming that nuclear deterrence solves the security problem. 79 Usually carried out in dyadic terms, the debate over the stability of proliferation changes as the numbers go up. Proliferation optimism rests on assumptions of rationality and narrow security preferences. In social science, however, such assumptions are inevitably probabilistic. Optimists assume that most states are led by rational leaders, most will overcome organizational problems and resist the temptation to preempt before feared neighbors nuclearize, and most pursue only security and are risk averse. Confidence in such probabilistic assumptions declines if the world were to move from nine to twenty, thirty, or forty nuclear states. In addition, many of the other dangers noted by analysts who are concerned about the destabilizing effects of nuclear proliferation—including the risk of accidents and the prospects that some new nuclear powers will not have truly survivable forces—seem prone to go up as the number of nuclear powers grows. 80 Moreover, the risk of "unforeseen crisis dynamics" that could **spin out of control** is also higher as the number of nuclear powers increases. Finally, add to these concerns the enhanced danger of nuclear leakage, and a world with overall higher levels of security competition becomes yet more worrisome. The argument that maintaining Eurasian peace is not a U.S. interest faces a second problem. On widely accepted realist assumptions, acknowledging that U.S. engagement preserves peace dramatically narrows the difference between retrenchment and deep engagement. For many supporters of retrenchment, the optimal strategy for a power such as the United States, which has attained regional hegemony and is separated from other great powers by oceans, is offshore balancing: stay over the horizon and "pass the buck" to local powers to do the dangerous work of counterbalancing any local rising power. The United States should commit to onshore balancing only when local balancing is likely to fail and a great power appears to be a credible contender for regional hegemony, as in the cases of Germany, Japan, and the Soviet Union in the midtwentieth century. The problem is that China's rise puts the possibility of its attaining regional hegemony on the table, at least in the medium to long term. As Mearsheimer notes, "The United States will have to play a key role in countering China, because its Asian neighbors are not strong enough to do it by themselves." 81 Therefore, unless China's rise stalls, "the United States is likely to act toward China similar to the way it behaved toward the Soviet Union during the Cold War." 82 It follows that the United States should take no action that would compromise its capacity to move to onshore balancing in the future. It will need to maintain key alliance relationships in Asia as well as the formidably

expensive military capacity to intervene there. The implication is to get out of Iraq and Afghanistan, reduce the presence in Europe, and pivot to Asia— just what the United States is doing. 83 In sum, **the argument that U.S.** security **commitments are unnecessary** for peace **is countered by a lot of scholarship**, including highly influential realist scholarship. In addition, the argument that Eurasian peace is unnecessary for U.S. security is weakened by the potential for a large number of nasty security consequences as well as the need to retain a latent onshore balancing capacity that dramatically reduces the savings retrenchment might bring. Moreover, switching between offshore and onshore balancing could well be difªcult. Bringing together the thrust of many of the arguments discussed so far underlines the degree to which **the case for retrenchment misses the** underlying **logic of** the **deep engagement** strategy. By supplying reassurance, deterrence, and active management, the United States lowers security competition in the world's key regions, thereby preventing the emergence of a hothouse atmosphere for growing new military capabilities. Alliance ties dissuade partners from ramping up and also provide leverage to prevent military transfers to potential rivals. On top of all this, the United States' formidable military machine may deter entry by potential rivals. Current great power military expenditures as a percentage of GDP are at historical lows, and thus far other major powers have shied away from seeking to match top-end U.S. military capabilities. In addition, they have so far been careful to avoid attracting the "focused enmity" of the United States. 84 All of the world's most modern militaries are U.S. allies (America's alliance system of more than sixty countries now accounts for some 80 percent of global military spending), and the gap between the U.S. military capability and that of potential rivals is by many measures growing rather than shrinking. 85

FISC reform is key to increase credibility

ACLU, no date, https://www.aclu.org/support-oversight-secret-fisa-court

Under the Foreign Intelligence Surveillance Act (most commonly known as FISA), a secret intelligence court was created to authorize government wiretaps in foreign intelligence investigations. Since its initial enactment, FISA has been steadily expanded in ways that pose an increasing threat to individual rights. **Under FISA procedures, all hearings and decisions are conducted in secret. The Department of Justice has not disclosed even the most basic information about the court's activities despite repeated requests from Congress, the American Civil Liberties Union and other advocacy groups**. Furthermore, by skirting reports of illegal warrants and unlawful surveillance by the FISA court itself, the FISA Court of Appeals and the U.S. Supreme Court have failed to address several fundamental issues. **It is critical that the Congress ensure our judicial system is lawful and proper by providing proper oversight of this secret court.** A bipartisan group of Senators, including Charles Grassley (R-IA) and Patrick Leahy (D-VT), have introduced legislation called the FISA Oversight Bill (S. 436) that would ensure our elected officials are able to provide appropriate oversight over the secret FISA court. **This** bill **would not hinder law enforcement but instead would simply require the public accounting of basic information** such as the number of Americans subjected to surveillance under FISA and the number of times that FISA information has been used for law enforcement purposes. Take Action! Urge your Members of Congress to support the FISA Oversight Bill Secret intelligence courts should not be without appropriate oversight People from across the political spectrum agree that secret courts need oversight to prevent illegal surveillance and other invasions of our rights. FISA powers are broad, and the secrecy of the proceedings makes FISA powers susceptible to abuse. **Without oversight there is no accountability and this secret court could rampantly issue improper and illegal warrants.** Without this legislation, the government will not disclose appropriate information The government has not been forthcoming with even the most basic information about the operation of this secret court. **Without this** legislation, **the government will continue to operate in secret, in contradiction to traditions of fairness and open government that have been the hallmark of our democracy.** This legislation will prevent abuse and ensure democratic principles, without hindering law enforcement This bill does not undercut the effective and efficient operation of the FISA court. Instead it requests basic information about the scope of the court's activities, such as the number of American citizens under surveillance and the number of times that FISA information has been used for law enforcement purposes.

Solvency

A2: FISC Will Still Say Yes

Appeals solvency.

Goitein & Patel 15 - *Served as counsel to Sen. Russell Feingold, Chairman of the Constitution Subcommittee of the Senate Judiciary Committee, **Has testified before Congress opposing the dragnet surveillance of Muslims, organized advocacy efforts against state laws designed to incite fear of Islam, and developed legislation creating an independent Inspector General for the NYPD (Elizabeth, Faiza, What went wrong WITH THE FISA COURT, Brennan Center for Justice is a nonpartisan law and policy institute,

http://litigation.utahbar.org/assets/materials/2015FedSymposium/3c_What_Went_%20Wrong_With_The_FISA_Court.pdf**) NAR**

Several existing reform proposals would address the lack of a party opposing the government in FISA Court proceedings by establishing a permanent public interest advocate (or slate of advocates) to represent the interests of people affected by government surveillance.272 President Obama and two former judges of the court publicly support the appointment of such an attorney, commonly referred to as the "Special Advocate."273 An alternative approach would allow the FISA Court to hear from certain individuals or interest groups as amici curiae. 274 The court could call upon these outside representatives to weigh in on potential privacy and civil liberties concerns raised by a government application.275 The latter approach would not resolve the Article III problem, particularly if participation were left to the court to decide. The FISA Court already has discretion to solicit or permit amicus participation, and with few exceptions, has preferred to rely on the government's submissions alone.276 Article III would be best served by strengthening the special advocate concept to the greatest extent possible, including by ensuring that special advocates are notified of cases pending before the court, have the right to intervene in cases of their choosing, and are given access to all materials relevant to the controversy in which they are intervening. In addition, there must be a mechanism for appeal in cases where the court rules against the special advocate. Legitimate questions arise as to whether a special advocate would have standing to bring an appeal, given the advocate's lack of a personal stake in the outcome.277 Various solutions to this problem have been proposed: for example, the special advocate could serve as a guardian ad litem for third parties affected by the surveillance (such as those incidentally in communication with the target), or the court could be required to certify particular types of decisions to the FISA Appeals Court for review.278 The standing problem, while real, is not insurmountable.

Civil lawsuits and transparency.

Goitein & Patel 15 - *Served as counsel to Sen. Russell Feingold, Chairman of the Constitution Subcommittee of the Senate Judiciary Committee, **Has testified before Congress opposing the dragnet surveillance of Muslims, organized advocacy efforts against state laws designed to incite fear of Islam, and developed legislation creating an independent Inspector General for the NYPD (Elizabeth, Faiza, What went wrong

WITH THE FISA COURT, Brennan Center for Justice is a nonpartisan law and policy institute,

http://litigation.utahbar.org/assets/materials/2015FedSymposium/3c_What_Went_%20Wrong_With_The_FISA_Court.pdf**) NAR**

A defining feature of the FISA Court is that nearly all of its decisions are classified. This hampers democratic self-government and sound policymaking. It also has Article III implications: secret decisions cannot be challenged, and the opportunity to challenge a FISA Court order in collateral proceedings is critical to the legitimacy of the process. A number of existing proposals would introduce some transparency by requiring the executive branch to release full copies, redacted versions, or summaries of FISA Court opinions containing significant legal opinions.279 For both constitutional and policy reasons, Congress should establish a non-waiveable requirement that the government issue public versions of FISA Court opinions or summaries containing certain minimum information — including the legal questions addressed, as well as the construction or interpretation given to any legal authority on which the decision relies. Transparency alone cannot address the Article III defects in the FISA Court. Congress also must facilitate collateral challenges. One key step would be to prohibit the practice of "parallel construction," in which the government builds a criminal case based on FISA-derived evidence but then reconstructs the evidence using other means. This allows the government to avoid notifying defendants of the FISA surveillance and thus makes it impossible for them to challenge it. Any time the government uses the tools of FISA as part of an investigation, the subject of any resulting legal proceedings should be notified, and should be entitled to challenge any evidence that resulted either directly or indirectly from that surveillance. The special procedures governing a defendant's access to FISA application materials, under which a defendant is almost never given any hint of their contents, should be jettisoned. Instead, the process under the Classified Information Procedures Act (CIPA)280 — which has been used successfully in the most sensitive national security and espionage cases, and which allows the government to use summaries or admissions of fact in place of classified information — should apply.281 Finally, the government's attempt to shut down every civil lawsuit that has been brought to challenge the constitutionality of foreign intelligence surveillance must end. Even where plaintiffs have had reasonable grounds to fear that they were being surveilled282 — indeed, even where they have had irrefutable proof283 — the government has tried to have the lawsuit dismissed, arguing that the plaintiffs lacked evidence or that the evidence contained state secrets. Today, after Snowden's disclosures, many secret programs are public knowledge and dismissing plaintiffs' fears of surveillance as "speculative" is increasingly disingenuous. Moreover, warrantless surveillance is no longer a secret, it is the law — and, given the broad scope of collection, acknowledging that a plaintiff has standing to challenge FISA surveillance does not reveal the identity of any investigation's target. If ever the government's jurisdictional and national security defenses had merit, they no longer do.

A2: Judges Are Corrupt

The FISA court is stacked by a brigade of informed Judges – but the organizations function creep is threatening democracy.

Robertson 15 - Served on the U.S. District Court for the District of Columbia from 1994 to 2010. He also served on the Foreign Intelligence Surveillance Court from 2002 to 2005, resigning the day after The New York Times reported that the administration of President George W. Bush was conducting warrantless surveillance of Americans' electronic communications (James, What went wrong WITH THE FISA COURT, Brennan Center for Justice is a nonpartisan law and policy institute,

http://litigation.utahbar.org/assets/materials/2015FedSymposium/3c_What_Went_%20Wrong_With_The_FISA_Court.pdf**) NAR**

Many people are surprised to learn that there is no "right to privacy" in the Constitution. Privacy is more of a cultural construct than a legal one in this country, and we are aiding and abetting its steady erosion with our dependence on the Internet**, our credit cards** and **smartphones,** our flirtation with **social media, and our capitulation to commercial exploitation of** Big Data. **In a sense, we are all under surveillance, all the time — our whereabouts, activities, and transactions reduced to metadata and available to anyone who can break the code — and we have brought it upon ourselves. Surveillance by the government, however, is another matter. Distrust or at least wariness of a government that collects data about us lies deep in the amygdala of our civic consciousness. This administration may be operating lawfully and with full regard to our rights and privileges, but what about that one? Have we been reading too many novels, or is there a real threat of tyranny? Here, of course, is where the Constitution comes in, with the Fourth Amendment's guarantee of "[t]he right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures." And here is where concern about** the Foreign Intelligence Surveillance Act comes in. **Title III of the Omnibus Crime Control and Safe Streets Act of 1968 established the rules for domestic government wiretaps.** FISA**, enacted ten years later,** focused on foreign intelligence. But it is the use **(or misuse)** of FISA, and FISA's potential allowance of unreasonable domestic searches and seizures, that **the reporting of James Risen and Eric Lichtblau and the disclosures of Edward** Snowden have brought into sharp focus**. I have no criticism of the FISA Court**. I know and deeply respect every one of its presiding judges for the last 30 years, and I am well acquainted with many of the other FISA judges who have served. They are, every one of them, careful and scrupulous custodians of the extraordinary and sensitive power entrusted to them. **The staff that supports the FISA Court, the Justice Department lawyers who appear before the FISA Court, and the FBI, CIA and NSA personnel who present applications to the FISA Court are superb, dedicated professionals.** **What I do criticize is the mission creep of the statute** all of those people are implementing. This Brennan Center report makes an enormous contribution **to our understanding of that mission creep. It explains** clearly the history and development of FISA from its enactment following the Church Committee's exposure of uncontrolled domestic spying by the FBI**, through the Patriot Act amendments in the turbulent wake of the 9/11 attacks, to its present form. It explains, with a simplicity and clarity accessible to the layman but supported by a level of detail and citation of authority that will satisfy students of the subject, why** in its present form FISA is disturbing to civil libertarians and to constitutional scholars. And it distills its argument into plain, powerful recommendations for FISA's amendment. It is time**, and past time, for Congress to give serious attention to the FISA problems that are so clearly documented here, and to act. The Brennan Center's recommendations are not the only ones that have been put forth, but they are not doctrinaire, my-way-or-the-highway demands. They invite discussion, debate, and even (Heaven forfend) compromise. They need to be carefully considered.**

Theory Debate

A2: No Solvency Advocate

Here is one.

Goitein & Patel 15 - *Served as counsel to Sen. Russell Feingold, Chairman of the Constitution Subcommittee of the Senate Judiciary Committee, **Has testified before Congress opposing the dragnet surveillance of Muslims, organized advocacy efforts against state laws designed to incite fear of Islam, and developed legislation creating an independent Inspector General for the NYPD (Elizabeth, Faiza, What went wrong WITH THE FISA COURT, Brennan Center for Justice is a nonpartisan law and policy institute, http://litigation.utahbar.org/assets/materials/2015FedSymposium/3c_What_Went_%20Wrong_With_The_FISA_Court.pdf) NAR

The report proposes a set of key changes to FISA to help restore the court's legitimacy. • Congress should end programmatic surveillance and require the government to obtain **judicial approval** whenever it seeks to obtain communications or information involving Americans. This would resolve many constitutional concerns. • Congress should shore up the Article III soundness of the FISA Court by ensuring that the interests of those affected by surveillance are **represented in court proceedings**, **increasing transparency, and facilitating the ability of affected individuals to challenge surveillance programs in regular federal courts**. • Finally, Congress should address additional Fourth Amendment concerns by ensuring that the collection of information under the rubric of "foreign intelligence" actually relates to our national security and does not constitute an end-run around the constitutional standards for criminal investigations. Under today's foreign intelligence surveillance system, the government's ability to collect information about ordinary Americans' lives has increased exponentially while **judicial oversight has been reduced to near-nothingness**. **Nothing less than a fundamental overhaul of the type proposed here is needed to restore the system to its constitutional moorings.**

Executive CP-WSDI

1NC

The President of the United States, through executive order, should publically declare that domestic drone surveillance will no longer be carried out without a warrant. The President of the United Stats should comply with this declaration.

Solves the case and avoids politics

Cooper-prof public administration Portland State**- 2** [Phillip, By Order of the President: The Use and Abuse of Executive Direct Action" p.59

Executive orders are often used because they are **quick, convenient, and relatively easy mechanisms for moving significant policy initiatives**. Though itis certainly true that executive orders are employed for symbolic purposes, enough has been said by now to demonstrate that they are also used for **serious policymaking** or to lay the basis for important actions to be taken by executive branch agencies under the authority of the orders. Unfortunately, as is true of legislation, it is not always possible to know from the title of orders which are significant and which are not, particularly since presidents will often use an existing order as a base for action and then change it in ways that make it far more significant than its predecessors.¶ The relative ease of the use of an order does not merely arise from the fact that presidents may employ one to **avoid the cumbersome and time consuming legislative process**. They may also use this device to avoid some times equally time-consuming administrative procedures, particularly the rulemaking processes required by the Administrative Procedure Act.84 Because those procedural requirements do not apply to the president, it is tempting for executive branch agencies to seek assistance from the White House to enact by executive order that which might be difficult for the agency itself to move through the process. Moreover, there is the added plus from the agency's perspective that it can be considerably **more difficult for potential adversaries to obtain standing to launch a legal challenge** to the president's order than it is to move an agency rule to judicial review. There is nothing new about the practice of generating executive orders outside the White House. President Kennedy's executive order on that process specifically provides for orders generated elsewhere.

2NC – Solvency

Executive orders solves for policymaking—that's Cooper—it's and easy solution to initiate reforms

Obama executive order can solve drone surveillance issues—solves and avoids the presidential powers link

Craig **Whitlock, 9-26-2014**, White House plans to require federal agencies to provide details about the drones they fly," Washington Post, http://www.washingtonpost.com/world/national-security/white-house-plans-to-require-federal-agencies-to-provide-details-about-drones/2014/09/26/5f55ac24-4581-11e4-b47c-f5889e061e5f_story.html, Accessed: 5-28-2015, /Bingham-MB

The White House is preparing a directive that would require federal agencies to publicly disclose for the first time where they fly drones in the United States and what they do with the torrents of data collected from aerial surveillance. **The presidential executive order would force the Pentagon**, the Justice Department, the Department of Homeland Security and other agencies to reveal more details about the size and surveillance capabilities of their growing drone fleets — information that until now has been largely kept under wraps. The mandate would apply only to federal drone flights in U.S. airspace. Overseas military and intelligence operations would not be covered. President Obama has yet to sign the executive order, but officials said that drafts have been distributed to federal agencies and that the process is in its final stages. "An interagency review of the issue is underway," said Ned Price, a White House spokesman. He declined to comment further. Privacy advocates said the measure was long overdue. Little is known about the scope of the federal government's domestic drone operations and surveillance policies. Much of what has emerged was obtained under court order as a result of public-records lawsuits. "We're undergoing a quiet revolution in aerial surveillance," said Chris Calabrese, legislative counsel for the American Civil Liberties Union. "But we haven't had all in one place a clear picture of how this technology is being used. Nor is it clear that the agencies themselves know how it is being used." Most affected by the executive order would be the Pentagon, which conducts drone training missions in most states, and Homeland Security, which flies surveillance drones along the nation's borders round-the-clock. It would also cover other agencies with little-known drone programs, including NASA, the Interior Department and the Commerce Department. Military and law enforcement agencies would not have to reveal sensitive operations. But they would have to post basic information about their privacy safeguards for the vast amount of full-motion video and other imagery collected by drones. Until now, the armed forces and federal law enforcement agencies have been reflexively secretive about drone flights and even less forthcoming about how often they use the aircraft to conduct domestic surveillance. Security officials are generally reluctant to disclose operational methods and techniques. But drones are in a special category of sensitivity, given the top-secret role they've long played in CIA and military counterterrorism missions. There's also evidence that federal agencies simply have been unable to develop internal guidelines and policies quickly enough to keep up with rapid advances in drone technology. "Federal use of drones has gone way up, but it's hard to document how much," said Jennifer Lynch, a lawyer with the Electronic Frontier Foundation, a San Francisco-based group that has sued the Federal Aviation Administration for records on government drone operations. "It's been in-cred-ibly difficult." Even Congress has struggled to uncover the extent to which the federal government uses drones as a surveillance tool in U.S. airspace. In March 2013, lawmakers directed the Defense Department to produce a report, within 90 days, describing its policies for sharing drone surveillance imagery with law enforcement agencies. Eighteen months later, the Pentagon still has not completed the report. Air Force Lt. Col. Thomas Crosson, a Defense Department spokesman, said officials hoped to provide an interim response next week and a full version "in the coming months." Department of Justice officials have also been reluctant to answer queries from lawmakers about their drone operations. The FBI first disclosed its use of small, unarmed surveillance drones to Congress in June 2013 and subsequently revealed that it had been flying them since 2006. The Justice Department inspector general reported last fall that the FBI had not developed new privacy guidelines for its drone surveillance and was relying instead on old rules for collecting imagery from regular aircraft. Since then, Justice officials have said they are reviewing their drone surveillance policies but have not disclosed any results. An FBI spokesman did not respond to a request for comment. The FBI has resisted other attempts to divulge details about the size of its drone fleet and its surveillance practices. Citizens for Responsibility and Ethics in Washington (CREW), a nonprofit group that pushes for transparency in government, sued the FBI last year under the Freedom of Information Act for records on its drone program. Although the FBI has turned over thousands of pages of documents, many have been redacted or provide only limited insights. "They've been dragging their feet from the outset, and it's been enormously frustrating," said Anne Weismann, CREW's chief counsel. "I don't know if it's because they don't want to expose the fact that they've been operating without any clear guidance or if they just don't like to talk about it." Another section of Obama's draft **executive order** would instruct the Commerce Department to help develop voluntary privacy guidelines for private-sector drone flights. The intent is to **shape nonbinding industry standards** for commercial surveillance instead of imposing new regulations by law. The executive order is an attempt to cope with a projected surge in drone flights in the United States.

De Facto and De Jure self-binding create accountability from the courts and risk political alienation for going back on promises

Posner and Vermeule 2010 [Eric A. , Professor of Law at the University of Chicago Law School and Editor of The Journal of Legal Studies; Adrian , Harvard Law Professor, The Executive Unbound: After the Madisonian Republic, Oxford Press, p. 138-139//wyo-sc]

Many of our mechanisms are unproblematic from a legal perspective, as they involve presidential actions that are clearly lawful. But a few raise legal questions; in particular, those that involve self-binding.59 Can a president bind himself to respect particular first-order policies? With qualifications, the answer is "yes, at least to the same extent that a legislature can." Formally, a duly promulgated executive rule or order binds even the executive unless and until it is validly abrogated, thereby establishing a new legal status quo.60 The legal authority to establish a new status quo allows a president to create inertia or political constraints that will affect his own future choices. In a practical sense, presidents, like legislatures, have great de facto power to adopt policies that shape the legal landscape for the future**. A president might commit himself to a long-term project of defense procurement** or infrastructure **or foreign policy**, narrowing his own future choices and generating new political coalitions that will act to defend the new rules or policies. More schematically, we may speak of formal and informal means of selfbinding: 1. **The president might use formal means to bind himself**. This is **possible in** the sense that **an executive order**, if otherwise valid, legally binds the president while it is in effect **and may be enforced by the courts. It is not possible** in the sense **that the president can always repeal the executive order if he can bear the political and reputational costs of doing so**. 2. **The president might use informal means to bind himself**. This is not only possible but frequent and important. **Issuing an executive rule providing for the appointment of special prosecutors**, as Nixon did, **is not a formal self-binding**.61 **However**, **there may be political costs to repealing the order**. This effect does not depend on the courts' willingness to enforce the order, even against Nixon himself. **Court enforcement makes the order legally binding** while it is in place, **but only political and reputational enforcement can protect it from repeal**. Just as a dessert addict might announce to his friends that he is going on a no-dessert diet in order to raise the reputational costs of backsliding and thus commit himself, so too the repeal of an executive order may be seen as a breach of faith even if no other institution ever enforces it. In what follows, we will invoke both formal and informal mechanisms. For our purposes, the distinction between the authority to engage in de jure self-binding (legally limited and well-defined) and the power to engage in de facto self-binding (broad and amorphous) is secondary. **So long as policies are deliberately chosen with a view to generating credibility**, **and** do so by **constrain**ing **the president's** own **future choices in ways that impose greater costs on ill-motivated presidents** than on well-motivated ones, **it does not matter whether the constraint is formal or informal.**

Obama key to signal and sustainability

Singer 2013, director – Center for 21st Century Security and Intelligence @ Brookings, and Wright, senior fellow – Brookings, 2/7/'13

(Peter W. and Thomas, "Obama, own your secret wars", www.nydailynews.com/opinion/obama-secret-wars-article-1.1265620)

It is time for a new approach. And **all that is required** of the President is to do the thing that he does perhaps best of all: to speak. Obama has a unique opportunity — in fact, an urgent obligation — to create a new doctrine, unveiled in a major presidential speech, for the use and deployment of these new tools of war. While the Republicans tried to paint the President as weak on security issues in the 2012 elections, history will record instead that his administration pushed into new frontiers of war, most especially in the new class of technologies that move the human role both geographically and chronologically further from the point of action on the battlefield. The U.S. military's unmanned systems, popularly known as "drones," now number more than 8,000 in the air and 12,000 on the ground. And in a parallel development, the U.S. Cyber Command, which became operational in 2010, has added an array of new (and controversial) responsibilities — and is set to quintuple in size. This is not just a military matter. American intelligence agencies are increasingly using these technologies as the tips of the spear in a series of so-called "shadow wars." These include not only the more than 400 drone strikes that have taken place from Pakistan to Yemen, but also the deployment of the Stuxnet computer virus to sabotage Iranian nuclear development, the world's first known use of a specially designed cyber weapon. Throughout this period, the administration has tried to have it both ways — leaking out success stories of our growing use of these new technologies but not tying its hands with official statements and set policies. This made great sense at first, when much of what was happening was ad hoc and being fleshed out as it went along. But that position has become unsustainable. The less the U.S. government now says about our

policies, the more that vacuum is becoming filled by others, in harmful ways. By acting but barely explaining our actions, we're creating precedents for other states to exploit. More than 75 countries now have military robotics programs, while another 20 have advanced cyber war capacities. Rest assured that nations like Iran, Russia and China will use these technologies in far more crude and indiscriminate ways — yet will do so while claiming to be merely following U.S. footsteps. In turn, international organizations — the UN among them — are pushing ahead with special investigations into potential war crimes and proposing new treaties. Our leaders, meanwhile, stay mum, which isolates the U.S. and drains its soft power. The current policy also makes it harder to respond to growing concerns over civilian casualties. Indeed, Pew polling found 96% levels of opposition to U.S. drones in the key battleground state of Pakistan, a bellwether of the entire region. It is indisputable than many civilians have been harmed over the course of hundreds of strikes. And yet it is also indisputable that various groups have incentives to magnify such claims. Yet so far, U.S. officials have painted themselves into a corner — either denying that any collateral losses have occurred, which no one believes, or reverting to the argument that we cannot confirm or deny our involvement, which no one believes, either. Finally, the domestic support and legitimacy needed for the use of these weapons is in transition. Polling has found general public support for drone strikes, but only to a point, with growing numbers in the "not sure" category and growing worries around cases of targeting U.S. citizens abroad who are suspected of being terrorists. The administration is so boxed in that, even when it recently won a court case to maintain the veil of semi-silence that surrounds the drone strike program, the judge described the current policy as having an "Alice in Wonderland" feel. The White House seems to be finally starting to realize the problems caused by this disconnect of action but no explanation. After years of silence, occasional statements by senior aides are acknowledging the use of drones, while lesser-noticed working level documents have been created to formalize strike policies and even to explore what to do about the next, far more autonomous generation of weapons. These efforts have been good starts, but they have been disjointed and partial. Most important, they are missing the **much-needed stamp of the President's voice and authority**, which is essential to turn tentative first steps into established policy. Much remains to be done — and said — out in the open. This is why it's time for Obama's voice to ring loud and clear. Much as Presidents Harry Truman and Dwight Eisenhower were able keep secret aspects of the development of nuclear weapons, even as they articulated how and when we would use them, Obama should publicly lay out criteria by which the United States will develop, deploy and use these new weapons. The President has a strong case to make — if only he would finally make it. After all, the new weapons have worked. They have offered new options for military action that are more accurate and proportionate and less risky than previously available methods. But they have also posed many new complications. Explaining our position is about embracing both the good and the bad. It is about acknowledging the harms that come with war regardless of what technology is being used and making clear what structures of accountability are in place to respond. It's also about finally defining where America truly stands on some of the most controversial questions. These include the tactics of "signature" strikes, where the identity is not firmly identified, and "double tap" strikes, where rescuers aiding victims of a first attack are also brought under fire. These have been reported as occurring and yet seem to run counter to the principles under which the programs have been defended so far. The role of the President is not to conduct some kind of retrospective of what we have done and why, but to lay out a course of the future. What are the key strategic goals and ethical guidelines that should drive the development and use of these new technologies? Is current U.S. and international law sufficient to cover them? There are also crucial executive management questions, like where to draw the dividing line between military and civilian intelligence agency use of such technologies, and how to keep a growing range of covert actions from morphing into undeclared and undebated wars. And, finally, the President must help resolve growing tensions between the executive branch and an increasingly restive Congress, including how to handle situations where we create the effect of war but no U.S. personnel are ever sent in harm's way. Given the sprawling complexity of these matters, only the President can deliver an official statement on where we stand. If only we somehow had a commander in chief who was simultaneously a law professor and Nobel Peace Prize winner! The President's voice on these issues won't be a cure-all. But it will lay down a powerful marker, shaping not just the next four years but the actions of future administrations.

2NC – AT: Roll Back

President can show credibility by self-binding, and it puts heavy costs on future presidents for not representing public interests

Posner and Vermeule 2010 [Eric A. , Professor of Law at the University of Chicago Law School and Editor of The Journal of Legal Studies; Adrian , Harvard Law Professor, The Executive Unbound: After the Madisonian Republic, Oxford Press, p. 101-103//wyo-sc]

Where the executive is indeed ill-motivated in any of these ways, constraining his discretion (more than the voters would otherwise choose) may be sensible. But **the executive may not be ill-motivated** at all. Where the executive would in fact be a faithful agent, **using** his increased **discretion to promote the public good** according to whatever conception of the public good voters hold, **then constraints on executive discretion are all cost and no benefit.** Voters, legislators, and judges know that different executive officials have different motivations. Not all presidents are power maximizers or empire-builders.20 Of course, the executive need not be pure of heart; his devotion to the public interest may in turn be based on concern for the judgment of history. But so long as that motivation makes him a faithful agent of the principal(s), he counts as well-motivated. The problem, however, is that the public has no simple way to know which type of executive it is dealing with. An ill-motivated executive will just mimic the statements of a well-motivated one, saying the right things and offering plausible rationales for policies that outsiders, lacking crucial information, find difficult to evaluate—policies that turn out not to be in the public interest. The ability of the ill-motivated executive to mimic the public-spirited executive's statements gives rise to the executive's dilemma of credibility: **the well-motivated executive has no simple way to identify himself as such.** Distrust causes voters (and the legislators they elect) to withhold discretion that they would like to grant and that the well-motivated executive would like to receive. Of course the ill-motivated executive might also want discretion; the problem is that voters who would want to give discretion (only) to the well-motivated executive may choose not to do so, because they are not sure what type he actually is. The risk that the public and legislators will fail to trust a well-motivated president is just as serious as the risk that they will trust an ill-motivated president, yet legal scholars have felled forests on the second topic while largely neglecting the first.21 Indeed, legal scholars assume (without evidence) that the executive's interests lead it to keep too many secrets, and thus endlessly debate how it should be compelled to disclose information that should be made public. It has not occurred to them that their premise might be wrong22—that **excessive secrecy undermines the executive by ruining its credibility** and thus does not serve its interest. Scholars of presidentialism have addressed credibility problems in general and anecdotal terms,23 but without providing social-scientific microfoundations for their analysis. Our basic claim is that **the credibility dilemma is best explored from the perspective of executive signaling. Without** any new constitutional amendments, **statutes, or** legislative action, **law** and **executive practice** already contain resources to **allow a well-motivated executive to send a credible signal of his motivations, committing to use increased discretion in public spirited ways. By tying policies to institutional mechanisms that impose heavier costs on ill-motivated actors** than on well-motivated ones, **the well-motivated executive can credibly signal his good intentions and** thus **persuade voters that his policies are those that voters would want if fully informed. We focus particularly on mechanisms of executive self-binding that send a signal of credibility by committing presidents to actions or policies that only a well-motivated president would adopt.**

2NC – AT: Signal/Trust

The executive action solves a signal of trust

Michael **Aaronson 13**, Professorial Research Fellow and Executive Director of cii – the Centre for International Intervention – at the University of Surrey, and Adrian Johnson, Director of Publications at RUSI, the book reviews editor for the RUSI Journal, and chair of the RUSI Editorial Board, "Conclusion," in Hitting the Target?: How New Capabilities are Shaping International Intervention, ed. Aaronson & Johnson, http://www.rusi.org/downloads/assets/Hitting_the_Target.pdf

The Obama administration faces some tough dilemmas, and analysts should be careful not to downplay the security challenges it faces. It must balance the principles of justice and accountability with a very real terrorist threat; and reconcile the need to demonstrate a credibly tough security policy with the ending of a long occupation of Afghanistan while Al-Qa'ida still remains active in the region. Nevertheless, more transparency would provide demonstrable oversight and accountability without sacrificing the necessary operational secrecy of counter-terrorism. It might also help assuage the concern of allies and their publics who worry about what use the intelligence they provide might be put to. A wise long-term vision can balance the short-term demands to disrupt and disable terrorist groups with a longer-term focus to resolve the grievances that give rise to radicalism, and also preclude inadvertently developing norms of drone use that sit uneasily with the civilised conduct of war. Drones are but one kinetic element of a solution to terrorism that is, ultimately, political.

The counterplan solves global legitimacy—simply stating our policy goes a long way to solving the perception it is lawful

Kenneth **Anderson 10**, Professor of International Law at American University, 3/8/10, "Predators Over Pakistan," The Weekly Standard, http://www.weeklystandard.com/print/articles/predators-over-pakistan

But a thorough reading of the Predator coverage calls to mind how the detention, interrogation, and rendition debates proceeded over the years after 9/11. As Brookings scholar Benjamin Wittes observes, those arguments also had elements of both legal sense and sensibility. Ultimately the battle of international legal legitimacy was lost, even though detention at Guantánamo continues for lack of a better option. It is largely on account of having given up the argument over legitimacy, after all, that it never occurred to the Obama administration not to Mirandize the Christmas Bomber. Baseline perceptions of legitimacy have consequences. ¶ Nor is the campaign to delegitimize targeted killing only about the United States. Legal moves in European courts have already been made against Israeli officials involved in targeted killing against Hamas in the Gaza war. Unsavory members of the U.N. act alongside the world's most fatuously self-regarding human rights groups to press for war crimes prosecutions. All of this is merely an opening move in a larger campaign to stigmatize and delegitimize targeted killing and drone attacks. What can be done to Israelis can eventually be done to CIA officers. Perhaps a London bookmaker can offer odds on how soon after the Obama administration leaves office CIA officers will be investigated by a court, somewhere, on grounds related to targeted killing and Predator drone strikes. And whether the Obama administration's senior lawyers will rise to their defense—or, alternatively, submit an amicus brief calling for their prosecution. ¶ Thus it matters when the U.N. special rapporteur on extrajudicial execution, Philip Alston, demands, as he did recently, that the U.S. government **justify the legality of its targeted killing program.** Alston, a professor at New York University, is a measured professional and no ideologue, and he treads delicately with respect to the Obama administration—but he treads. Likewise it matters when, in mid-January, the ACLU handed the U.S. government a lengthy FOIA request seeking extensive information on every aspect of targeted killing through the use of UAVs. The FOIA request emphasizes the legal justification for the program as conducted by the U.S. military and the CIA. ¶ Legal justification matters, partly for reasons of legitimacy and partly because the United States is, and wants to be, a polity governed by law. This includes international law, at least insofar as it means something other than the opinions of professors and motley member-states at the U.N. seeking to extract concessions. International law, it is classically said, consists of what states consent to by treaty. Add to this "customary law"—as evidenced by how states actually behave and as provided in their statements, their so-called opinio juris. Customary law is evidenced when states do these things because they see them as binding obligations of law, done from a sense of legal obligation—not merely habit, policy, or convenience, practices that they might change at any moment because they did not engage in them as a matter of law. ¶ What the United States says regarding the lawfulness of its targeted killing practices matters. It matters both that it says it, and then of course it matters what it says. The fact of its practices is not enough, because they are subject to many different legal interpretations: **The United States has to assert those practices as lawful**, and declare its understanding of

the content of that law. This is for two important reasons: first to preserve the U.S. government's views and rights under the law; and second, to make clear what it regards as binding law not just for itself, but for others as well. ¶ Other states, the United Nations, international tribunals, NGOs, and academics can cavil and disagree with what the United States thinks is law. But no Great Power's consistently reiterated views of international law, particularly in the field of international security, can be dismissed out of hand. It is true of the United States and it is also true of China. It is not a matter of "good" Great Powers or "bad." Nor is it merely "might makes right." It is, rather, a mechanism that keeps international law grounded in reality, and not a plaything of utopian experts and enthusiasts, departing this earth for the City of God. It remains tethered to the real world both as law and practice, conditioned by how states see and act on the law. ¶ The venerable U.S. view of the "law of nations" is one of moderate moral realism—the world "as it is," as the president correctly put it in his Nobel Prize address. It is not the vision of radical utopians and idealists; neither is it that of radical skeptics about the very existence of law in international affairs. On the contrary, the time-honored American view has always been pragmatic about international law (thereby acting to preserve it from radical internationalism and radical skepticism). But upholding the American view requires more than simply dangling the inference that if the United States does it, it means the United States must intend it as law. Traditional international law requires more than that, for good reason. The U.S. government should provide an affirmative, aggressive, and uncompromising defense of the legal sense and sensibility of targeted killing. The U.S. government's interlocutors and critics are not wrong to demand one, even those whose own conclusions have long since been set in stone. ¶ A clear statement of legal position need not be an invitation to negotiate or alter it, even when others loudly disagree. In international law, a state's assertion that its policies are lawful, particularly such an assertion from a great power in matters of international security, **is an important element all by itself in making it lawful**, or at least not unlawful. But in vast areas of security, self-defense, and the use of force, the U.S. government has in recent years left a huge deficit as to how its actions constitute a coherent statement of international law. ¶ For once, Washington should move to get ahead of a contested issue of international legal legitimacy and "soft law." Why else have an Obama administration, if not to get out in front on a practice that it has ramped up on grounds of both necessity and humanitarian minimization of force? The CIA has taken a few baby steps by selectively leaking some collateral damage data to a few reporters. But the CIA is going to have to say more. The U.S. government needs to defend targeted killings as both lawful, and as an important step forward in the development of more sparing and discriminating—more humanitarian—weaponry.

2NC – AT: Cheating

Threat of publicity and backlash ensures internal compliance – solves signaling advantages

Radsan and Murphy 11 (Afsheen – Professor of Law, William Mitchell College of Law, former assistant general counsel at the Central Intelligence Agency, "MEASURE TWICE, SHOOT ONCE: HIGHER CARE FOR CIA-TARGETED KILLING", 2011, 11 U. Ill. L. Rev. 1201, lexis)

Notwithstanding the agency's reputation for playing fast and loose with the law, CIA officials have strong reasons to **ensure compliance** with IHL. One reason is that someday the CIA's targeted killings by drone, like other embarrassing "family jewels," will become **public**. n156 A stronger reason is that CIA officials must be acutely aware that, for many members of the **U**nited **S**tates and **international public**, targeted killings come close to prohibited acts of assassination. To stay on the safe side on controversial programs, CIA officials seek both **political** and **legal** cover. n157 From past lessons on other covert actions, CIA officials have learned to obtain presidential authorization in writing, to brief the oversight committees, and to obtain legal opinions. It is safe to bet that President Obama has blessed the CIA drone strikes; that the oversight committees have not been kept completely in the dark; that the CIA has developed internal procedures on targeted killing it hopes will withstand scrutiny; and that the agency has presented these procedures to the Justice Department's Office of Legal Counsel for approval. n158

2NC – AT: Perm Do Both

Links to the net benefit—

(___) Links to politics—forces congressional debates over the plan

(___) Links to pres powers—counterplan is non binding executive initiated action—the choice to do the counterplan means the executive is not legally constrained to act in the future, and avoids the precedent of other branches controlling the executive

Doesn't solve prez powers - congressional silence is key

Bellia 2

[Patricia, Professor of Law @ Notre Dame, "Executive Power in Youngstown's Shadows" Constitutional Commentary, , 19 Const. Commentary 87, Spring, Lexis]

To see the problems in giving dispositive weight to inferences from congressional action (or inaction), we need only examine the similarities between courts' approach to executive power questions and courts' approach to federal-state preemption questions. If a state law conflicts with a specific federal enactment, n287 or if Congress displaces the state law by occupying the field, n288 a court cannot give the state law effect. Similarly, if executive action conflicts with a specific congressional policy (reflected in a statute or, as Youngstown suggests, legislative history), or if Congress passes related measures not authorizing the presidential conduct, courts cannot give the executive action effect. n289 When Congress is silent, however, the state law will stand; when Congress is silent, the executive action will stand. This analysis makes much sense with respect to state governments with reserved powers, but it makes little sense with respect to an Executive Branch lacking such powers. **The combination of congressional silence and judicial inaction has the practical effect of creating power.** Courts' reluctance to face questions about the scope of the President's constitutional powers - express and implied - creates three other problems. First, **the implied presidential power given effect by virtue of congressional silence and judicial inaction can solidify into a broader claim. When the Executive exercises an "initiating"** or "concurrent" **power, it will tie that power to a textual provision or to a claim about the structure of the Constitution. Congress's silence as a practical matter tends to validate the executive rationale, and the Executive Branch may then claim a power not only to exercise the disputed authority in the face of congressional silence, but also to exercise the disputed authority in the face of congressional opposition**. In other words, a power that the Executive Branch claims is "implied" in the Constitution may soon become an "implied" and "plenary" one. Questions about presidential power to terminate treaties provide a [*151] ready example. The Executive's claim that the President has the power to terminate a treaty - the power in controversy in Goldwater v. Carter, where Congress was silent - now takes a stronger form: that congressional efforts to curb the power are themselves unconstitutional. n290

School activities are being curtailed due to a lack of funds.

Curtail means rulemaking by congress to regulate an action

MEDICAID State Financing Schemes Again Drive Up Federal Payments Statement of Kathryn G. **Allen**, Associate Director Health Financing and Public Health Issues Health, Education, and Human Services Division, GAO Testimony Before the Committee on Finance, U.S. Senate, For Release on Delivery Expected at 10:00 a.m. Wednesday, September 6, **2000**, http://www.gao.gov/archive/2000/he00193t.pdf, /Bingham-MB

In our view, this financing practice violates the integrity of Medicaid's federal/state partnership. By receiving part of the money back from the provider and keeping the federal share associated with it, the state is—in effect—able to lower its own Medicaid contribution substantially below the share specified in federal law. We have not yet been able to specifically determine how much of an effect this current practice will have in any one state. However, our analysis of previous financing schemes showed that the effect can be substantial. For example, in 1994 we analyzed Michigan's use of similar funding mechanisms (including excessive payments to county nursing homes) and found they had the effect of raising the federal share for Medicaid expenditures from 56 percent to 68 percent. When related schemes came to light in years past, **steps were taken to curtail them** and restore the federal/state partnership as intended. HCFA has drafted a regulation that would curtail this scheme, but the draft has not moved far in the rulemaking process. We urge the Administration to finalize this regulation and reiterate a recommendation to the Congress, first made in 1994, that would close the door on financing practices that inflate the federal share by making excessive payments to government owned facilities.

Violation: The affirmative doesn't curtail power, they just lessen it

Prefer our interpretation:

Limits—if they are allowed to just stop doing a kind of surveillance it unlimits the topics, teams would read a don't do X aff every week

Ground—they don't link to any core disads, terror and pres powers require a restriction to hamper executive discretion—they skirt core debates in the literature

Voting issue for fairness

And here's more evidence to establish competition

Curtail means legislative restrictions

David W. **Opderbeck**, Professor of Law, Seton Hall University Law School, and Director, Gibbons Institute of Law, Science & Technology. The author wishes to thank Jonathan Haefetz, Edward Hartnett, and Barry Cushman for valuable comments on an earlier draft of this Article. Copyright (c) **2014** Rutgers School of Law-Camden Rutgers Law Journal Spring, 2014 Rutgers Law Journal 44 Rutgers L. J. 413 LENGTH: 27584 words ARTICLE: DRONE COURTS, Lexis, /Bingham-MB

Along parallel lines, in 1972, the Supreme Court held that surveillance could not be conducted against American citizens without a warrant. n269 The Court noted, however, that "this case involves only the domestic aspects of national security. We have not addressed, and express no opinion as to, the issues which may be involved with respect to activities of foreign powers or their agents." n270 The Court invited Congress **to consider legislation dealing with foreign surveillance**. [*455] These developments led to the enactment of the Foreign Intelligence Surveillance Act ("FISA"), **which sought to curtail such programs by imposing warrant-like restrictions** upon foreign surveillance activities. n271 FISA established the Foreign Intelligence Surveillance Court ("FISC"), comprised of sitting federal judges, to evaluate requests to conduct surveillance of foreign powers or agents. n272 Under the original FISA statute, the government was required to show that "the purpose" of the requested surveillance was to acquire foreign intelligence. n273

Curtail is legislative power to reduce jurisdiction

(BY Sam J. **Ervin**, Jr., of Morganton, N. C., a Former Justice of the North Carolina Supreme Court and a former United States Senator from North Carolina.) THE POWER OF CONGRESS UNDER THA CONSTITUTION TO DEFINE, LIMIT, OR CURTAIL THE APELLATE JURISDICTION OF TRE SUPREME COURT AND THE JURISDICTION OF FEDERAL COURTS INFERIOR TO IT, **No Date**, http://www.samervinlibrary.org/writings/Power%20of%20Congress%20to%20Limit%20Courts.pdf

Provisions 01' Articles I and I11 of the Constitution clearly reveal that Congress has the legislative power to define, limit, or curtail the appellate jurisdiction of the Supreme Court and the Jurisdiction of the federal courts inferior to it. They are as follows : 1. Article I, Section I, declares "all legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

2NC – Net Benefit – Pres Powers

Presidential power is zero-sum- the branches compete

Barilleaux and Kelley 2010 [Ryan J. , Professor of Political Science at Miami, OH; and Christopher S. , Lecturer (Political Science) at Miami, OH, The Unitary Executive and the Modern Presidency, Texas A&M Press, p. P 196-197, 2010// wyo-sc]

In their book *The Broken Branch*, Mann and Ornstein paint a different view. They discuss a wider range of public policy areas than just uses of force. Their argument is that although party is important as a conditioning factor for times when Congress might try to restrain an aggressive or noncompliant executive, **there has** also **been a broad**er **degrading of institutional power that has allowed, in a zero-sum context**, **the president to expand executive power at the expense of Congress**. Mann and Ornstein thus posit that congressional willingness to subordinate its collective power to that of the president has occurred across domestic politics and foreign affairs. They argue that a variety of factors are at fault for this trend, including the loss of institutional identity, the willingness to abdicate responsibility to the president, the demise of "regular order," and most importantly that **Congress has lost its one key advantage as a legislative body—the decay of the deliberative process.** Thus, they do recognize that party politics has played an important role in the degrading of congressional power, but they see a larger dynamic at work, one that reaches beyond partisanship. While we agree with Howell and Pevehouse that Congress retains important mechanisms for constraining the president, we tend to agree with the Mann and Ornstein view that there has been a significant and sustained decline in Congress's willingness to use these mechanisms to challenge presidential power. This tendency has been more prevalent in foreign affairs but has occurred noticeably across the spectrum of public policy issues. Building from both of those perspectives, and others, we argue that it is helpful to understand the pattern of congressional complicity in the rise of presidential power by viewing Congress's aiding and abetting as the logical outcomes of a collective action problem.31 By constitutional design, **the legislative** branch **is in competition with the president for** institutional **power**, **yet Congress is less than** ideally **suited for** such **a political conflict**. **Congress's** comparative **disadvantage begins with its 535 "interests**" **that are** very **rarely aligned,** and if so, only momentarily. **Because** individual **reelection overshadows all** other **goals**, members of Congress naturally seek to take as much credit and avoid as much blame from their constituencies as possible.32 The dilemma this creates for members is how to use or delegate its collective powers in order to maximize credit and minimize blame in the making of public policy. Congress can choose to delegate power internally to committees and party leaders or externally to the executive branch. **One can conceptualize** the strategic situation of members of **Congress in** terms of **a prisoner's dilemma**.33 **If members cooperate** (that is, in Mann and Ornstein's parlance, if members identify with the institution), **they could** maintain and **advance Congress's** institutional **power**. **But they would have to bypass** some potential **individual payoffs that could come from defection**, **such as "running against Congress" as an electoral strategy**. **A stronger institution should make** all members of **Congress better off, but it** also **makes them responsible for policymaking**. **If members defect** from the institution, **they** thus seek to **maximize constituency interests** either by simply allowing power to fall by the wayside or by simply **delegating it to the president**. **As more** and more **members choose to defect** over time, **the "public good" of a strong Congress is not provided** for or maintained—and **Congress's** institutional **authority erodes and presidential power fills in the gap**. Why, in other words, is congressional activism so often "less than meets the eye," as Barbara Hinckley maintained in her book by that title? Or why has the "culture of deference" that Stephen Weissman identified developed as it has?34 We argue that the collective action problem that exists in Congress leads to the development of these trends away from meaningful congressional stewardship of foreign policy and spending.

2NC – Net Benefit – Politics

CP is executive action—obviously avoids Congressional fights

Fine 12

Jeffrey A. Fine, assistant professor of political science at Clemson University. He has published articles in the Journal of Politics, Political Research Quarterly, and Political Behavior. Adam L. Warber is an associate professor of political science at Clemson University. He is the author of Executive Orders and the Modern Presidency, Presidential Studies Quarterly, June 2012, " Circumventing Adversity: Executive Orders and Divided Government", Vol. 42, No. 2, Ebsco

We also should expect presidents to prioritize and be strategic in the types of executive orders that they create to **maneuver around a hostile Congress**. There are a variety of reasons that can drive a president's decision. For example, presidents can use an executive order to move the status quo of a policy issue to a position that is closer to their ideal point. By doing so, presidents are able to pressure Congress to respond, perhaps by passing a new law that represents a compromise between the preferences of the president and Congress. Forcing Congress's hand to enact legislation might be a preferred option for the president, if he perceives Congress to be unable or unwilling to pass meaningful legislation in the first place. While it is possible that such unilateral actions might spur Congress to pass a law to modify or reverse a president's order, **such responses by Congress are rare** (Howell 2003, 113-117; Warber 2006, 119). Enacting a major policy executive order allows the president to move the equilibrium toward his preferred outcome **without having to spend time lining up votes or forming coalitions with legislators**. As a result, and since reversal from Congress is unlikely, presidents have a greater incentive to issue major policy orders **to overcome legislative hurdles.**

Unilateral action circumvents congressional gridlock and shields the president by allowing them to frame the debate over the policy

Barilleaux and Kelley 2010 [Ryan J. , Professor of Political Science at Miami, OH; and Christopher S. , Lecturer (Political Science) at Miami, OH, The Unitary Executive and the Modern Presidency, Texas A&M Press, p. 192, 2010// wyo-sc]

However, the literature on presidential power has begun to expand beyond Neustadt's dominant framework by focusing on unilateralism. Modern **presidents have** increasingly **relied upon unilateral tools not penned in the Constitution**, **especially when the president's ability to persuade** or cajole **Congress has been diminished**.14 **Presidents can** use such tools to "**go it alone**" in order **to change the** policy **status quo in the face of congressional gridlock**. For example, this new literature has shown that **presidents** increasingly **use unilateral actions like executive orders**, proclamations, **national security directives**, **executive agreements, and signing statements to achieve their policy objectives**.15 The **tools of unilateral action offer presidents advantages in power** that are quite different from the powers derived from Neustadt's framework. For one, **unilateral action allows the president to** act alone by **initiat**ing **new policy commitments without congressional cooperation**.16 **By doing so, the president is able** not only to establish a new policy status quo but also **to frame the debate surrounding such policy moves. Once a new policy commitment is made** through unilateral action, **Congress is faced with the choice of acquiescing or taking on the collective burden of a statutory response**. **The latter is**, more often than not, **very difficult for Congress** to do, **given** the **limited time and resources** that must be dedicated to an ever-more demanding agenda. Of course, if Congress takes the path of least resistance by acquiescing, then the president succeeds in not only moving the policy status quo but also (re)creating the precedent of expanded presidential power.

ICJ-CP

1NC Text

The President of the United States should submit the US policy to [x] for binding and sole compulsory adjudication by the International Court of Justice. The President should ask that the case take priority.

Competes – it's not curtailment of surveillance

Solvency – General

Counterplan solves domestic and internationally – it's enforced and perceived

Casey 9 – JD, performs appellate work for clients, while also maintaining a practice in the areas of administrative law, compliance counseling, and foreign-related litigation. He works with companies to ensure compliance with federal and international regulations and agencies and develops the best strategies to avoid or fight litigation

(Lee, "ConUNdrum," Google book)

> For the time being, therefore, ICJ decisions are not directly binding on American courts. However, they do stand as **internationally recognized** statements indicating whether the **U**nited **S**tates and other countries have complied with their international **obligations**, and they are often cited as evidence of what international law requires. In this regard, they can be especially **powerful** and **persuasive** (even if not binding) in common law jurisdictions like the United States, where lawyers and judges are trained to seek authoritative statements of what the law is, or shall be, in judicial opinions and judgments.

Solvency – Courts follow

International courts are comparatively more valuable for shaping international norms

Romano 9 - Professor of Law, Loyola Law School Los Angeles. Co-Director, Project on International Courts and Tribunals

(Stephen, "THE NORMALIZING OF ADJUDICATION IN COMPLEX INTERNATIONAL GOVERNANCE REGIMES: PATTERNS, POSSIBILITIES, AND PROBLEMS: DECIPHERING THE GRAMMAR OF THE INTERNATIONAL JURISPRUDENTIAL DIALOGUE," 41 N.Y.U. J. Int'l L. & Pol. 755)

> C. Third Corollary: **National courts are no authority**¶ While the distinction between international and national courts has significant formal and practical significance, it obscures the fact that judicial dialogue on international law takes place also **between international and national courts**, and between various national courts. 65 Moreover, one could argue that when national courts apply international law to decide cases they are de facto acting as international courts, too. 66 If a truly viable theory of international jurisprudence ought to include all judicial institutions, national and international, what hypothesis can be articulated about how international courts will regard the decisions of national courts?¶ Much like the decisions of international courts, decisions of national courts are just a documentary source that can be used to provide evidence of a rule generated by one of the primary sources. 67 But while decisions of international courts do add to, or change, the fabric of international law, the impact on substantive international law of decisions by national courts is **limited** by several factors. First, domestic courts are relatively rarely called upon to apply rules of international law. 68 To the extent they do, often those rules have been incorporated [777] into the domestic legal system. At least formally, therefore, they are **no longer "international**." It follows that the jurisprudence of domestic courts can **rarely** offer much help to international courts in determining the content of specific rules of international law. They are a more useful source when it comes to searching for general principles of law, or for evidence of state practice when determining the content of a rule of customary international law.¶ Decisions by national courts, thus, will be considered purely as a last resort, to **be looked at only when international sources do not help.** One judge explains:¶ National case law will come into play mostly when international sources don't give an answer. For example, when there is a matter of what is impartiality, there is no need to go to a Canadian or German Supreme Court and find out what impartiality is when you have established case law at the global and regional level. So it becomes more subsidiary. But when it comes to, say, the question of a rather procedural issue that has never been dealt with in human rights case law, and which is very criminal law-oriented, then, why not look at the national level and try to distill, to find out what is the common denominator here, or what is the best solution, even if it is not the common denominator? 69

ICJ rulings force US judicial review – spills up to precedent

Murphy 8 - Professor of Law, George Washington University

(Sean, "The United States and the International Court of Justice: Coping with Antinomies," in THE UNITED STATES AND INTERNATIONAL COURTS AND TRIBUNALS)

The formal means for mediating antimonies have been largely unchanged since the inception of the Court: the Court has jurisdiction over many disputes, but that jurisdiction is circumscribed (as recognized in Yugoslavia's Legality of Use of Force cases); the judges reflect the global community, but also the major powers; etc. Yet, the Court may have entered a phase where it is more likely to resist the constraints on its power contained within those formal means and less likely to attempt to reconcile antinomies. Although only states may appear before the Court, the Court now finds that a non-state entity (Palestine) may do so if a dispute is submitted in the guise of an advisory opinion. While its jurisdiction is circumscribed, the Court is comfortable engaging in an extended review of the legality of the use of military force by the United States based on a treaty that the Court has found was not violated. While the Vienna Convention on Consular Relations, and other relevant treaties, contain no provisions regarding the effect of violations of the Convention upon national court proceedings, the Court sees no difficulty in determining that **U.S. courts must engage in further judicial review** of criminal convictions and sentences, **trumping local procedural rules**. One gets the impression that the Court —fifty years after its creation— is tired of some of the formal constraints that applied earlier in its life and —looking around at the robustness of dispute resolution in other international fora— is **ready to expand** the reach of its power. Moreover, it may be that some of the informal means for mediating antimonies have been lost in the past twenty years. While the Court's concern with its reputation and legitimacy in the first thirty years of its existence served as important political constraint in the Court's relationship with all states, including the United States, over the past twenty years that same concern has lead to several clashes with the United States foremost, but also the UK and France. Having stood up to the United States in the Nicaragua case, the Court became a hero to the states of the developing world, and ushered in a period of increased activity on its docket. Of the cases filed before the International Court since its inception, approximately forty percent were filed in the last fifteen years.167 Thus, while from 1947 to 1989, the Court received on its docket approximately two cases per year, after 1990 the Court received more than three cases per year. The U.S. withdrawal from the Court's compulsory jurisdiction has far from crippled the Court; arguably, it has enhanced the Court's stature as a place of authority in interstate relations unbeholden to the major powers. For the Court, the lesson may be not to tread lightly with respect to the United States but, rather, to tread heavily unless doing so would be viewed generally as bias. In its foreign policies, contemporary America appears to be going a different route than much of the world, even its former close allies in Europe. The consequence is that the judges of the ICJ now reflect predominantly the views of states with whom the United States often disagrees. Perhaps this reflects success in the prescription for the Court made by Richard Falk in his 1986 book, Reviving the World Court.168 Falk argued for the Court to turn away from what he viewed as Anglo-American and West European ways of thinking, and move more toward reflecting the viewpoints associated with non-Western legal traditions (including, at that time, Marxist outlooks on law). Arguably, this is now what has happened, which has strengthened the Court's position among most states of the world, but seriously alienated the United States. The antinomies identified in Part II are unlikely to be resolved through the further development of formal or informal techniques for mediation. While the United States is not happy with the decisions being rendered by the Court, there is no support in the global community for altering the formal mechanisms by which the Court operates. If the United States saw concrete benefits in being more closely associated with the Court, it might look for ways to improve relationships, but

for the world's premier superpower the benefits appear slim while the costs appear quite high. Consequently, the United States may take steps to further remove itself from the reach of the ICJ's jurisdiction, through terminating some or all of the outstanding treaties that provide for the Court's jurisdiction. In the near term, U.S. policymakers will seek to avoid any involvement in matters before the ICJ, while the Court may well welcome opportunities to speak to the legality of U.S. actions.

Solvency – President follows

CP is binding – ensures it solves- we submit to compulsory jurisdiction- that's what that means

The consent of the counterplan ensures it's binding

West's 8

(West's encyclopedia of law, "International Court of Justice," 2nd edition)

Many states have accepted the court's jurisdiction under the Optional Clause. A few states have done so with certain restrictions. The United States, for instance, has invoked the so called self-judging reservation, or Connally Reservation. This reservation allows states to avoid the court's jurisdiction previously accepted under the Optional Clause if they decide not to respond to a particular suit. It is commonly exercised when a state determines that a particular dispute is of domestic rather than international character, and thus domestic jurisdiction applies. If a state invokes the self-judging reservation, another state may also invoke this reservation against that state, and thus a suit against the second state would be dismissed. This is called the rule of reciprocity, and stands for the principle that a state has to respond to a suit brought against it before the ICJ only if the state bringing the suit has also accepted the court's jurisdiction.¶ Under the ICJ Statute, the ICJ must decide cases in accordance with International Law. This means that the ICJ must apply (1) any international conventions and treaties; (2) international custom; (3) general principles recognized as law by civilized nations; and (4) judicial decisions and the teachings of highly qualified publicists of the various nations.¶ One common type of conflict presented to the ICJ is treaty interpretation. In these cases the ICJ is asked to resolve disagreements over the meaning and application of terms in treaties formed between two or more countries. Other cases range from nuclear testing and water boundary disputes to conflicts over the military presence of a foreign country.¶ The ICJ is made up of 15 jurists from different countries. No two judges at any given time may be from the same country. The court's composition is static but generally includes jurists from a variety of cultures.¶ Despite this diversity in structure, the ICJ has been criticized for favoring established powers. Under articles 3 and 9 of the ICJ Statute, the judges on the ICJ should represent "the main forms of civilization and … principal legal systems of the world." This definition suggests that the ICJ does not represent the interests of developing countries. Indeed, few Latin American countries have acquiesced to the jurisdiction of the ICJ. Conversely, most developed countries accept the compulsory jurisdiction of the ICJ.¶ The judgment of the ICJ is **binding** and (technically) cannot be appealed (arts. 59, 60) once the parties have consented to its jurisdiction and the court has rendered a decision. However, a state's failure to comply with the judgment violates the U.N. Charter, article 94(2). Noncompliance can be appealed to the U.N. Security Council, which may either make recommendations or authorize other measures by which the judgment shall be enforced. A decision by the Security Council to enforce compliance with a judgment rendered by the court is subject to the Veto power of permanent members, and thus depends on the members' willingness not only to resort to enforcement measures but also to support the original judgment.

New icj ruling solves their warrants---the failure of the 96 opinion to bind states only proves that we need to revitalize international law on disarmament

Burroughs, Executive Director-Lawyers' Committee on Nuclear Policy, **7**

http://lcnp.org/wcourt/memoreturnICJhead.pdf

6) More than a decade after the 1996 opinion, a return to the Court would demonstrate that the 1996 opinion is not an anomaly, to be discarded in the dustbin of history, but rather a living reality. **It would revitalize the role of law in disarmament.** It should be remembered that the Court's affirmation that South Africa was obligated to terminate its occupation of Namibia and the accompanying legal condemnation of apartheid came only after a series of cases were brought to the Court.5 Thus the role of the Court in the disarmament process should be viewed as ongoing.

Solvency- Courts Take Nukes Cases

Previous nuclear weapons case proves the icj will accept jurisdiction even if there is adamant opposition from member states

Falk, Emeritus Professor of International Law—Princeton, **97**

(91 A.J.I.L. 64, January)

Also of great importance is the near-unanimity of the Court on the matter of complying with the request of the General Assembly for an advisory opinion on the legality of a threat or use of nuclear weapons. The judges voted thirteen to one in favor, with only Judge Shigeru Oda opposed, not on jurisdictional grounds but through reliance on the discretionary power of the Court to decline to respond. n13 The majority opinion convincingly explains the importance of responding to questions properly put to it by UN organs, as provided for by Article 96(1) and (2) of the Charter, and disregards the strongly argued objections of several states, including the United States, that the question was too vague and abstract, too fraught with political baggage, and too obstructive of other, more appropriate diplomatic efforts to control the dangers posed by the existence of nuclear weapons. The approach of the Court to the delimitation of its advisory role gains in clarity because of the reasoned refusal to respond in the companion case arising out of a request by the World Health Organization for an advisory opinion on the legality of using nuclear weapons, which was treated by an eleven-to-three majority as an inappropriate question, given the proper scope of WHO concerns. n14

The acceptance of the General Assembly's request in this instance is also important as an expression of judicial independence by the Court. After all, such an outcome was strongly opposed by all of the permanent members of the Security Council except China, [*67] both in the debates on the General Assembly resolution and in the written and oral pleadings before the Court. Not only did all but one of the judges support jurisdiction and refuse to use their discretion to refrain from issuing a response, but the Court as a whole **substantively affirmed the applicability of international law to the status of nuclear weapons**. n15 Part of the common ground among the judges, then, is a broad duty to respond to appropriate requests for advisory opinions, despite the objections of leading states and the political difficulties arising from the poor prospects that the advice proffered will be accepted, or even treated by affected governments with seriousness and respect.

Court explicitly stated its intentions to revisit the issue in the 96 opinion

Nagan, Director-Project for Advanced Studies and Research in Peace and HR-UF Law, **99**

(24 Yale J. Int'l L. 485, Summer)

The fifth major substantive holding makes a critical point about the continuing relevance of the rules relating to the ius in bello, especially the rules of humanitarian law. Here the court concludes that in general the threat or use of nuclear weapons would "be contrary to the rules of international law applicable in armed conflict." n163 A second part of this holding, however, is most vital. Here the court states:

in view of the current state of international law, and of the elements of fact at its disposal, the Court cannot conclude definitively whether the threat or use of nuclear weapons would be lawful or unlawful in an extreme circumstance of self-defence, in which the very survival of a State would be at stake. n164

This could be seen as avoiding a core issue. Certainly it is possible to impute such a characterization to the slim majority role in this issue. However, the crucial interpretive word in this sentence is "and." This word supplies a conjunctive rather than disjunctive meaning to the words "international law" and "fact." Read conjunctively, the "and" suggests that the construction and interpretation of international law is not a purely doctrinal exercise, but its meaning, scope, and salience are often a function of context. This suggests that the central legal issue involves the construction and interpretation of fact and law. In this posture, the confirmation or modification of an international legal norm represents the challenge of managing change in the adjudicatory process of the ICJ, whether "molecular" or "molar." This point is important because it defines the prudential scope of judicial versus administrative, political, or executive competence. The deft gloss of this statement on the scope of the court's reviewing competence lies in the fact that the court has sought to exercise a degree of deference, which is subtly delimited. The implications are that **it cannot decide the issue now, but it is a matter that could be juridically determined in the future, under the right juridical circumstances**. This might include accounting for changing expectations regarding both treaty law and customary law, as well as making a clearer delineation of crucial factual contingencies, viewed as an important (expectation-creating) discourse. All of these factors **might in the future move the court to an outright declaration of illegality, consistent with major expectations of the international community as a whole**. In other words, this part of the holding does not need to be categorically construed as non liquet. In this I agree with Professor Burns H. Weston's characterization of the [*524] holding. n165 The language and context suggest a more subtle calculation of the judicial role in this advisory opinion.

Solvency – Congress follows

Congress follows

Brecher 12 - JD Candidate, University of Michigan Law

(Aaron, "Cyberattacks and the Covert Action Statute: Toward a Domestic Legal Framework for Offensive Cyberoperations," October, http://www.michiganlawreview.org/assets/pdfs/111/3/Brecher.pdf)

> Cyberattacks present a challenge for U.S. policymakers: they are difficult to locate within a clear legal category and there is a significant risk of uncontrollable consequences associated with their use. As a result, policymakers must choose a paradigm to govern their use that will ensure that the executive branch is held accountable and shares information with legislators. This Part argues that the federal government should adopt the presumption that cyberattacks will be carried out under the covert action statute, and that the **best way forward** is for the president to issue an executive order making the covert action regime the presumptive framework for cyberattacks. It includes a brief discussion of why **a president might willingly constrain her discretion** by issuing the proposed executive order. It also shows that while the internal executive processes associated with both military and intelligence legal frameworks help mitigate the risk of cyberattacks' misuse by the executive, only the covert action regime provides an adequate role for Congress. Finally, this Part argues that the executive order option is preferable to one alternative proposed by scholars—enacting legislation—because of the practical difficulties of passing new legislation. The covert action regime is the best approach for committing cyberattacks under the current law, as it would facilitate cooperation among executive agencies. The debate over which agency and set of legal authorities govern cyberattacks has caused no small amount of confusion.145 Apparently, an Office of Legal Counsel ("OLC") memorandum declined to decide which legal regime should govern the use of cyberattacks, and the uncertainty has led to interagency squabbles, as well as confusion over how cyberattacks are to be regulated.146 Establishing a presumptive answer would go far toward resolving this dispute. Most importantly, adopting the covert action framework as the presumptive legal regime would be a principled way to help ensure constitutional legitimacy when the president orders a cyberattack.147 There is also reason to believe that presidential power is intimately bound up in credibility, which in turn is largely dependent on the perception of presidential compliance with applicable domestic law.148 A practice of complying with the covert action regime for cyberattacks, both when they do not constitute a use of force and when it is unclear whether they do, is most likely to be in compliance with the law. Compliance with the covert action regime would also encourage covert action procedures in close cases without unduly restricting the executive's choice to use military authorities in appropriate circumstances. The executive might also issue the proposed order, even though it would limit her freedom in some ways, because of the possible benefits of constraining **future administrations** or preempting legislative intervention.149 For example, in this context, an administration may choose to follow the finding and reporting requirements in order to convince Congress that legislative intervention is unnecessary for proper oversight. This is acceptable if the covert action regime is in fact adequate on its own. Moreover, if greater statutory control over cyberattacks is needed, **the information** shared with Congress **may give Congress the tools** and knowledge of the issue necessary **to craft related legislation**.150 Additionally, while executive orders are hardly binding, the inertia following adoption of an order may help **constrain future**

administrations, which may be more or less trustworthy than the current one. Creating a presumption through an executive order also **establishes a stable legal framework** for cyberattacks that **allows law to follow policy** in this new field, and permits decisionmakers to learn more about the nature of cyberoperations before passing detailed statutes that may result in unintended consequences.

Solvency – ICJ Followed

A respected ICJ will be followed – their decisions will be perceived as binding

--prefer our ev, longitudinal quantitative analysis

Schultz 5 – PhD, Graduate School of Public Administration and Management, Hamline University

(David, Vol. 15 No.4, pp.282-285)

Similarly, the International Court of Justice (ICJ) is also a **major player** in world politics. Created in 1945 under the Charter of the United Nations, it was conceived as the principal judicial body entrusted with adjudicating international law disputes. It is the successor to the Permanent Court of International Justice (1922 -1946), created by the League of Nations. As of 2004, the ICJ was busy, with more than 20 cases on its docket, addressing issues ranging from territorial questions, criminal cases, to treaty disputes. While critics often argue that the ability of international law and the ICJ to bind state actors is weak, and that the dualist nature of many legal regimes limits the enforcement of international norms, Constanze Schulte seeks to set the record straight and investigate the history of compliance with this tribunal. One of the major surprises to emerge is that **the ICJ actually has a great record of securing compliance**, despite some notable failures.¶ To study compliance with decisions of the ICJ, Schulte examines all of the final judgments and interim orders issued by the Court from 1946 until 2003. Chapter One describes her methodology. Excluded from the study are advisory opinions and interlocutory decisions. Chapter Two is a detailed discussion of the legal framework surrounding the ICJ, mandatory compliance, and enforcement. The basis for mandatory compliance with decisions (final judgments) of the ICJ was first located in Article 13 (4) of the League of Nations Covenant. Schulte describes the process of how Australia and Cuba took the original language of 13 (4) and fashioned it into Article 94 of the current UN Charter, mandating that parties, both member states as well as non-members to the UN under 93 (2)—if the latter wish—are to comply with orders of the ICJ. Similarly, interim orders are considered decisions under Article 94 and are also binding upon UN member states and upon non-members who opt to resolve their disputes with the ICJ.¶ Primary enforcement of ICJ orders is covered by Article 94 (2), giving the [*283] Security Council a range of options to compel or encourage compliance. These options, as Schulte points out, are recommendations for specific measures that may include simple appeals for compliance and other peaceful options—a request to the World Bank to withdraw funds from a country, for example. The author also argues that the Security Council's enforcement options are purely peaceful, such that it would appear to rule out authorizing the use of force. Hence, had the United States sought an ICJ directive to Iraq to comply with orders to let UN inspectors in, Bush would not have been able to rely upon Security Council authority to use military force to enforce the court's decision.¶ In addition, the enforcement options of the General Assembly, the Secretary-General, the winning party in the case, and third parties are also examined. In light of Iraq, one wishes the author had spent more time examining these issues, but they were beyond the scope of the book's project. Finally, Schulte's Security Council-ICJ discussion also provides an interesting analysis of whether the former could modify or refuse to enforce the decisions of the latter.¶ How might losing parties avoid compliance with ICJ orders? The author offers some suggestions that include feigning compliance or delaying it. But otherwise, strictly speaking, ICJ orders are binding, and parties who ascent to its jurisdiction must comply with its directives. This means that the only effective way to defeat compliance resides in a party's modifying its ascent to the jurisdiction of the ICJ under Article 36 of the Statutes of the Court. This is exactly what the United States did in 1984 when it refused to recognize the ICJ's authority to hear the dispute brought by Nicaragua, contesting the legality of the CIA's activities against it, including the mining of its harbors and the aiding of the Contras. Eventually, the United States lost its argument that the ICJ lacked jurisdiction to hear the case, it refused to participate in arguments on the merits, and finally lost. Efforts to secure compliance proved futile, and it was only with the change of regime in Nicaragua with the 1991 election of President Chamorro and her decision to withdraw the complaint from the Court, that the matter was settled.¶ Chapter Three is over 300 pages long! This is the heart of the compliance study, where the author undertakes a detailed examination of all the final orders and interim measures. A total of 27 cases with final orders are examined, as well as 11 provisional measures. The discussion in is historically rich in detail and law, producing some surprises and questions. First the surprise: Only one case where the ICJ issued a final order is listed as one where non-compliance occurred. This is the 1949 Corfu Channel case, growing out of a 1946 incident where two British destroyers struck land mines off of Albania. The UK held Albania responsible, the ICJ ruled for the former, and ordered compensation to be paid. Albania refused, and the case was unresolved for more forty years. It was only in 1992—after the fall of its communist regime—that Albania agreed to terms, eventually resolving the case in 1996. With that resolution, Schulte considers compliance to have been secured—47 years later!¶ For most readers, two other cases of [*284] dubious compliance with final orders stand out. **First**, as noted above, is the United States-Nicaragua dispute. Schulte places this case in the unresolved category; whereas most might consider it a clear instance of non-compliance. Second, she considers the 1979 ICJ decision arising out of the taking of American embassy personnel by Iran as one eventually resulting in compliance. Schulte supports that conclusion by noting how the two countries in the long run reached agreement on the return of the hostages and for a settlement regarding US freezing of Iranian assets. Many might argue that Iran did not comply with the decision, but Schulte notes that the noncompliance was with an interim measure and not the final order. In fact, of the 11 provisional measures, only one secured compliance. Thus, unlike the final orders, provisional ones seem to be ignored with relative impunity.¶ What do we learn from this analysis? First, the **Nicaragua** case **is** seen as **a turning point for the ICJ.** Schulte argues that simply refusing to participate in ICJ proceedings became the **favorite tool of noncompliance**. Second, delaying is another tool frequently invoked to defeat acquiescence. Third, highly political cases were those most likely to involve noncompliance. But surprisingly, form of government—democratic or not—was not a significant variable in determining compliance, and the same was true with UN membership. Instead, Schulte argues that the attitude of the parties toward the Court was the single most important factor affecting compliance. If countries wanted to resolve a dispute and turned to the ICJ for decision, they complied, almost whatever the political repercussions or costs. For the interim measures, greater noncompliance may, as Schulte argues, rest simply in the fact that they were provisional and that a party to the dispute saw disobeying as perhaps a way of gaining leverage prior to a final judgment. Overall, Schulte's conclusion is that there is relatively high compliance with the ICJ, and such a record deserves to be publicized and noted.¶ COMPLIANCE WITH DECISIONS OF THE INTERNATIONAL COURT OF JUSTICE fills a major void in the scholarly literature in international law. It provides rich legal detail on the ICJ and the issues of enforcement, and it also offers a wealth of historical information on the decisions it has issued and reaction to them by the parties and the international community. Finally, the assessment of variables saffecting compliance is an important contribution to the international law literature, yet the conclusion that attitude toward the tribunal is the critical variable in determining compliance might not impress critics. But to show that the ICJ has a high record of compliance success is surely a surprise, and suggests that more studies of compliance with other international bodies are in order.

Solvency – AT: ICJ Useless

That's our uniqueness

Their rulings will be followed

Sofaer 4 – Senior Fellow, The Hoover Institution, Stanford University. Legal Adviser, U.S. Department of State, 1985-1990

(Abraham, "The International Court of Justice and Armed Conflict?," NU Journal of International Human Rights, 1.1)

Everyone agrees the ICJ is important. Its role is **especially important** when it ¶ comes to the use of force. Though it rarely makes a statement about the use of force, ¶ certainly a ruling about the use of force, when States submit to the ICJ's jurisdiction and ¶ do it deliberately, **they abide by what the ICJ tells them to do**. It's almost like night ¶ follows day. In addition to that, States and lawyers refer to ICJ rulings repeatedly as ¶ guides to their conduct. They don't always follow the Court's rulings, but they look at ¶ them and they consider them. If they find a decision lacking in logic and practicality, ¶ they make a judgment to that effect, and sometimes engage in conduct inconsistent with ¶ such a ruling. But that doesn't mean states—and the U.S. in particular—don't **take** those ¶ **rulings seriously**. So, when the ICJ speaks, each occasion is a great opportunity to ¶ influence those ends that are served potentially by an ICJ decision—peace, justice, and ¶ humanitarian rights.

Generic

Mass surveillance violates international law

Simon 6/17(Joel Simon, 6-17-2015, [executive director of the Committee to Protect Journalists and the author of The New Censorship: Inside the Global Battle for Media Freedom.] "Why Mass Surveillance Violates International Law," Slate Magazine, http://www.slate.com/articles/news_and_politics/foreigners/2015/06/mass_surveillance_violates_international_law_david_kaye_s_report_to_the.html)

Around the world repressive governments are trying to stop Internet users from either posting anonymously or using encryption to communicate securely. Russia requires bloggers with more than 3,000 visitors to register with the state and identify themselves; pseudonyms are outlawed in Vietnam; Ecuador requires commenters on websites to use their real name; Pakistan's government must grant approval for the use of encryption; and Ethiopia convicted members of the dissident blogging collective Zone 9 on terrorism charges based in part on participation in an online encryption workshop. In a groundbreaking report that was formally presented to the United Nation's Human Rights Council on Wednesday (and is already available on its website now), David Kaye, the U.N.'s special rapporteur for the freedom of expression, has determined that such actions violate international law. Kaye's argument is simple and elegant and basically goes like this: The ability to seek and receive information is a fundamental human right enshrined in international law. In order to fully exercise this right—particularly in an environment of growing state surveillance and targeted violence perpetrated by criminal and militant groups—people must be able to communicate securely. A government may only breach this private realm when its actions are established in law; when they serve to achieve a legitimate state objective, such as thwarting a terror plot or investigating criminal activity; when they are necessary to achieving this objective; and when they are a proportionate response, meaning the objective cannot be achieved through some less intrusive means. The opinions of the Special Rapporteur are non-binding, but highly influential. While Kaye's report won't stop repressive governments from doing whatever they want to do to restrict speech, it makes clear that such actions are neither legitimate nor legal. In the best-case scenario, his findings will spur countries committed to international legal principles to loosen restrictions on the use of anonymous speech and encryption to bring themselves into compliance. But what is not stated explicitly in Kaye's report may be the most consequential finding. The legal reasoning that Kaye uses to conclude encryption and anonymity are necessary to the exercise of freedom of expression leads pretty much in a straight line to the conclusion that mass surveillance violates international law. "The right to hold opinions without interference also includes the right to form opinions," Kaye notes. "Surveillance systems, both targeted and mass, may undermine the right to form an opinion." Targeted surveillance—in which governments monitor the communication of a specific individual—may be necessary and proportionate to thwart an identifiable threat. But mass surveillance by its nature is not proportionate because it involves governments sucking up vast quantities of information in response to vague threats in the hope of finding useful intelligence at some point in the future.

“Foreign” spying is a violation of international law—Brazil’s president says so

Bevins 6/16(Vincent Bevins, 6-16-2015, [Los Angeles Times’ Brazil correspondent] "Why Did Brazil’s President Change Her Tune on Spying?," Foreign Policy, http://foreignpolicy.com/2015/06/16/brazil-nsa-spying-surveillance-economy-dilma-rousseff-barack-obama/)

After Rousseff canceled her planned 2013 meeting with Obama, she took her case to the United Nations. During that September’s General Assembly, she delivered a lengthy scolding against a “global electronic spying network” based in the United States. “Meddling this way in the lives of other countries violates international law and is an affront to the principles that should govern relations among nations, especially allies…. [T]he security of one country’s citizens can never be guaranteed by violating the fundamental human and civic rights of citizens in other countries,” she said from the podium in Turtle Bay. “We have informed the U.S. government of our protest, demanding explanations, apology, and guarantees that these actions will not be repeated.”

NSA surveillance programs violate international law

Newman 14(Zak Newman,, 4-17-2014, "NSA Surveillance Unravels International Law," American Civil Liberties Union, https://www.aclu.org/blog/nsa-surveillance-unravels-international-law)

The NSA's surveillance programs fly in the face of that commitment. And, more critically, they violate international law. A recent ACLU and Amnesty International submission to the Privacy and Civil Liberties Oversight Board (PCLOB) explains that Section 702 of FISA—enacted by Congress in 2008 to codify the Bush administration's warrantless wiretapping program—authorizes surveillance that is not only unconstitutional but that violates the long-established human right to privacy. The International Covenant on Civil and Political Rights (ICCPR), which the U.S. ratified in 1992, has four primary requirements relevant to national surveillance programs. Surveillance must be: limited by statute and clearly defined in nature and scope; narrowly tailored to address legitimate governmental objectives, such as threats to national security; subject to independent oversight systems to prevent abuse; and applied equally irrespective of nationality. Section 702 of FISA fails each of these requirements. Section 702, as our submission explains, "provides US officials an extremely broad grant of authority and effectively unfettered discretion to secretly collect, store, and use protected communications." Meanwhile, Section 702 programs – like PRISM – provide virtually no "protection of the privacy interests of non-US persons outside US territory." That means there are few clear boundaries, little oversight, and no meaningful protections against surveillance for noncitizens. That's not just the position of civil liberties and human rights groups. In its recent Concluding Observations on U.S. compliance with the ICCPR, the U.N. Human Rights Committee agreed:

Prism

PRISM violates international law

Joergenson 14(Internet Policy Review, 1-18-2014, "Can human rights law bend mass surveillance?," http://policyreview.info/articles/analysis/can-human-rights-law-bend-mass-surveillance)

Based on the application of the above test, Sheinin argued that the surveillance architecture of the NSA violates the legal obligations of the US under the ICCPR. Firstly, the surveillance has been based on vague and broad provisions of the Foreign Intelligence Surveillance Act (FISA), thereby lacking a legal basis. The requirement of a legal basis for restrictions cannot be extended to a situation where neither the publicly available law - in this case FISA - nor the secret case law by a secret court provide to individuals precise information about the situations where their privacy and correspondence might be subject to surveillance (Ibid: 4). In line with the principles from the ECtHR mentioned above, accessibility and foreseeability of the legal basis are fundamental elements of the requirement of a proper legal basis so that individuals are able to adjust their conduct to the requirements of the law. Second, the sophistication of the PRISM programme suggests that the degree of intrusion through the mass collection of metadata has affected the inviolable core of privacy. Equally important, the surveillance was not limited to metadata, but instead metadata analysis was used to identify persons whose content data would also then be accessed (Ibid). Third, it has not been justified that the degree of intrusion employed under the PRISM programme is necessary for preventing terrorism or other serious crime in a democratic society. The failures to provide any privacy protection to non-citizens as well as the large numbers of innocent people being targeted, support the conclusion that the programme fails under the proportionality requirement. Moreover, the absence of a legitimate aim is highlighted as FISA authorises surveillance not only for the prevention of terrorism, but also for the purpose of serving the 'conduct of the foreign affairs' of the US. "This is a legitimate national interest to be pursued by lawful means that do not interfere with human rights but not a pressing social need that would justify interference with the privacy of ordinary people." (Ibid:4-5) Fourth, there has been a lack of both judicial and parliamentary mechanisms of oversight that could prevent abuses. Moreover, since the operation was based on broad and vague laws, it was open for discriminatory application resulting in interference with other human rights such as the right to non-discrimination, freedom of expression, and freedom of association without proper justification. As a final issue, the question of extraterritoriality was addressed, since the territorial scope of the state's obligation under ICCPR is crucial in the current context. ICCPR Article 2, paragraph 1, establishes the general obligation of a state party "to respect and to ensure to all individuals within its territory and subject to its jurisdiction the rights recognised in the present Covenant." According to the practice of the Human Rights Committee, this formulation entails an extraterritorial effect, implying that the state has a duty to protect not only individuals within its territory but also individuals that are subject to its control irrespective of the territory14. The committee has codified this practice in the General Comment on Article 2, in 2004. "10. States Parties are required by article 2, paragraph 1, to respect and to ensure the Covenant rights to all persons who may be within their territory and to all persons subject to their jurisdiction. This means that a State party must respect and ensure the rights laid down in the Covenant to anyone within the power or effective control of that State Party, even if not situated within the territory of the State Party"15. In Scheinin's intervention, these examples are used to argue a U.S violation of Article 17 for both US citizens and foreigners, since the US government de facto has had control over - and thus means to violate – the privacy rights of individuals outside the US territory. As stressed in Burgos[see footnote 13], the key issue is not the place

where the violation occurs, but rather the relationship between the individual and the state in relation to a violation of any of the rights set forth in the Covenant, wherever they occurred. The question of extraterritorial effect, however, is legally complex and Scheinin's interpretation is largely contested, not least by the US government16.

Drones

FBI's use of drones calls into question civil liberties

Gallagher 13(Ryan Gallagher, 7-26-2013, "FBI Fesses Up: We've Used Domestic Drones 10 Times," Slate Magazine, http://www.slate.com/blogs/future_tense/2013/07/26/fbi_admits_in_letter_to_rand_paul_that_it_s_used_domestic_drones_10_times.html)

In a recent letter to Paul, published on the senator's website Thursday, the FBI acknowledges that it has used drones domestically in 10 cases in response to a "specific, operational need." The bureau says that, since late 2006, it has used unmanned planes for surveillance to support missions related to kidnappings, search and rescue operations, drug interdictions, and fugitive investigations. On eight occasions the drones were used as part of criminal cases, and two in national security-related operations. In none of these cases, the bureau says, did it apply for a warrant to conduct the drone surveillance. The letter states that the FBI will seek a warrant when using a drone only if it is attempting "to acquire information in which individuals have reasonable expectations of privacy under the Fourth Amendment." But it does not clarify exactly what kind of information it believes individuals have a reasonable expectation of privacy over. Paul has requested that the FBI provide more details, saying he is concerned that the bureau may be adopting an "overbroad" interpretation of the rules in order to conduct warrantless surveillance. The FBI also told Paul in its letter, dated July 19, that none of its drones are armed with either lethal or nonlethal weapons, adding that it does not use the aircraft to conduct "bulk surveillance." And the bureau confirmed reports earlier this year that the it used a drone in Alabama to support the rescue of a 5-year-old child being held hostage in an underground bunker. However, the bureau declined to publicly provide details on the other nine cases in which drones were used, saying that this information is "law enforcement sensitive." The secret operational details were disclosed to Paul in a separate, classified addendum. Paul has been a vocal critic of domestic drone use, raising concerns about how the controversial aircraft could be used to target and kill American citizens on their home soil. In March, the Kentucky lawmaker staged a 12-hour filibuster in the Senate, delaying the confirmation of John Brennan to lead the CIA, after he received a letter from Attorney General Eric Holder that refused to rule out domestic drone strikes in "extraordinary circumstances." Last month, Paul said that he would launch another filibuster—this time to delay the nomination of James Comey to lead the FBI—unless the bureau explained how it was using drones. The threat came after FBI Director Robert Mueller told the Senate Judiciary Committee that the FBI had been using the aircraft in a "very minimal way" for surveillance purposes. Drones have been used domestically in the United States since 2004 by the Department of Homeland Security, predominantly in border zones in Arizona and Texas. However, in some isolated cases the aircraft have been used for wider domestic law enforcement purposes. In one bizarre incident in 2011, for instance, a Predator drone was called in over a farming dispute in North Dakota. The expansion of drones into domestic airspace continues to raise unresolved privacy and civil liberties questions, particularly as military-style drones like the Predator are capable of flying beyond sight at high altitude, carrying powerful cameras that can zoom in and covertly monitor the ground below. Recently disclosed documents have compounded these concerns, revealing that the Customs and Border Patrol agency has considered equipping its fleet of domestic Predators with "non-lethal" weapons and eavesdropping equipment to pick up phone calls on the ground below. (The FBI did not disclose in its letter to Paul whether it uses large military-style drones like the Predator, or smaller, commercially available drones like the Octocopter.).

215/702

Section 215, Section 702, and PRISM violate international law

Weissmann 13(Andrew Weissmann, 12-18-2013, ""“We don’t export our law to other countries – that would be hubris”," Verfassungsblog, http://www.verfassungsblog.de/en/we-dont-export-our-law-to-other-countries-that-would-be-hubris-2/)

Germany has just co-sponsored a UN General Assembly Resolution affirming the right to privacy on the internet. German scholars have argued that the surveillance program violates international law, namely the human right to privacy in Art. 17 of the Intl Covenant on Civil and Political Rights, sovereignty, the NATO treaty und the Vienna Convention on Diplomatic Relations. Did international law matter in any way in the legal discussions at the FBI and within the intelligence community? Is PRISM legal under international law? Section 702 is a congressional statute that the FBI has to deal with. If international law is raised in the proceedings against its constitutionality, then the Department of Justice will deal with it. In the two public FISC decisions regarding section 215, the court did not address international law. I’m confident that given the creativity of groups like the ACLU, they will raise international law questions in litigation to come against the constitutionality of sections 215 and 702. And certainly the discussion is ongoing whether constitutional privacy rights should be extended to foreigners abroad by statute.

Border/Drone

Border and drone surveillance leads to snooping calls

Gallagher 13(Ryan Gallagher, 3-1-2013, "DHS Considers Eavesdropping Tech for Spy Drones on Border," Slate Magazine, http://www.slate.com/blogs/future_tense/2013/03/01/eavesdropping_drones_may_be_next_for_border_surveillance_efforts_in_texas.html)

EPIC, which obtained the documents after filing a Freedom of Information Act request, says it is now concerned about how electronic surveillance of communications could be conducted by DHS Customs and Border Patrol Agency drones to indiscriminately snoop on calls. "This raises questions about compliance with federal privacy laws and the scope of surveillance," Ginger McCall, director of EPIC's open government project, said in an email. Michael Friel, a CBP spokesman, said that the agency currently was "not deploying signals interception capabilities on its [drone] fleet." However, because the aircraft have a long anticipated lifespan, an eavesdropping capability is being considered by the agency for future deployment. According to Friel, any use of signals surveillance gear on border drones would be implemented in line with "civil rights/civil liberties and privacy interests and in a manner consistent with the law and long standing law enforcement practices." Back in 2008, Predator drones used for combat overseas were kitted out with sensors for "signals intelligence." But the prospect of drones used domestically for eavesdropping is a far more contentious issue, even if only conducted at the border. The government has argued that the border in fact extends 100 miles inland and is exempt from the search and seizure protections of the Fourth Amendment, meaning it would be legally easier for border drones to scoop up communications from anyone in the area without a warrant.

Drone Surv. Not legal

US Domestic Drone Surveillance violates international law and the UDHR
Adams et al '13

(Elliott Adams, Creating a Culture of Peace, Chairperson Meta Peace Team, Training Committee member, Veterans for Peace – Past President Judy Bello – Upstate (NY) Coalition to Ground the Drones and End the Wars Medea Benjamin – Co-founder CODEPINK Toby Blome – CODEPINK – San Francisco Steve Fenichel, MD, Ocean City, NJ Joy First – National Campaign for Nonviolent Resistance, Mt. Horeb, WI Margaret Flowers – Popular Resistance.org. *No specific date listed – cites quotes from articles in February of 2013. Ban Honeywell, "Call to Boycott and Divest Honeywell," http://www.badhoneywell.org/blog_index.html SM)

Honeywell International Inc., through its manufacturing of the engine and certain navigational, guidance and targeting equipment for the MQ-9 Reaper drone, is deeply complicit in, and profits from, United States drone surveillance and drone attacks that have resulted in the deaths of a total of more than 4,000 children, women and men in Afghanistan, Pakistan, Yemen, Somali and the Philippines. These killings are war crimes because they violate provisions of international law that require commitment to due process, the protection of life and rights to privacy, freedom of assembly and freedom of association, among other obligations. They also violate the U.S. Constitution and the U.S. War Crimes Act in a variety of ways, including violating prohibitions again assassination. They also violate the United Nations Universal Declaration of Human Rights (UDHR), to which the United States is a signatory. Drone killing often looks like this, as reported in a New York Times article published on February 6, 2013: "After the drone strike (in Yemen), villagers were left to identify two dead relatives from identity cards, scraps of clothing and the license plate of Mr. Jamal's Toyota; the seven bodies were shredded beyond recognition, as cellphone photos taken at the scene attest. 'We found eyes, but there were no faces left,' said Abdullah Faqih, a student who knew both of the dead cousins." Continuous drone surveillance by the United States, on which drone attacks are based, also violates international law and the UDHR. For example, the highly regarded study Living Under Drones reports: "Drones hover twenty-four hours a day over communities in northwest Pakistan, striking homes, vehicles, and public spaces without warning. Their presence terrorizes men, women and children, giving rise to anxiety and psychological trauma…" All the above information is notorious and well- known to the Honeywell management. In addition, Honeywell manufactures, and profits from the T-Hawk surveillance drone intended for use by the United States military and law enforcement agencies, a weapon that threatens life, privacy, freedom of assembly and free speech.

Drone Surveillance Violates I law
Rosen '13

(Frederik – research fellow at the Danish Institute for international Studies. Published widely on international security and warfare. OUPB 11/4/2013 "Drone technology and international law" http://blog.oup.com/2013/11/drone-technology-international-humanitarian-human-rights-law/ SM)

The legal controversies about the use of drones in armed conflicts primarily spring from the disputed lawfulness of targeted and signature killings, including constitutional and sovereignty issues. Yet the debates have failed to address the legal implications arising from the increasing surveillance capabilities of drone technology. Let's take proximity and transparency as our main point of departure to discuss drones and law. Drone technology triggers international humanitarian law obligations regarding

precaution in attack. Belligerents have affirmed the obligation to take due care in attack for a long time, and it is enshrined in Article 57 of Add. Protocol 1 from 1977. The principle of precaution is considered customary international law. It forms a most critical component in international humanitarian law and in the military manuals of most states. If military commanders have drones, then under international humanitarian law they are required to use them to the greatest possible extent for taking due care in attack. If a state possesses drone technology, and if the deployment of this technology may potentially reduce unnecessary harm from armed attacks, the state is obliged to employ the technology. This is not at all different from the obligation to pick up the binoculars before firing the shells. The obligation to use drones for precaution is logically not limited to drone attacks. It applies across all weapon systems. Even in the near future, ground attacks may no longer be lawful without engaging available drone technology for the purpose of precaution. But it does not end here. The availability of drone technology for precaution also bears implications as to how the principle of precaution should be applied. The humanitarian legal obligation to take "feasible precautions" depends on what "feasible" is balanced against. The three conventional parameters here are: (1) precautionary measures vs. strategy considerations, i.e. the time to gather and process information, or whether precautionary steps may reveal tactics; (2) precautionary measures vs. personnel considerations, i.e. the risk to the soldiers and the operators of weapon systems; (3) the precautionary measures vs. materiel considerations, i.e. the risk to the weapon systems. Since drone technology can be stealthy, quickly deployed, or deployed well ahead of an attack (as it mostly is when used for targeted and signature killings), most situations of weapon engagement by drones leave us with only the material considerations. Yet the price tag difference between a US$3 billion B2 bomber, the US$17 million Reaper, and the US$100,000 ScanEagle, is considerable and should make a difference for such calculations. In another branch of international law, human rights law, the growing surveillance capability of drone technology also has implications. The European Court of Human Rights has several times found the convention applicable in situations where European states have exercised control over territories or persons in places remote from Europe. Combined with sophisticated weapon systems, drone technology suggests a capability for exercising a degree of control over territories and persons, which easily mirrors some of the cases where the Court has applied its convention. To be sure, drone technology sometimes allows for more effective control than boots on the ground. Drone technology will develop at great speed. We will soon see surveillance capabilities and weapon technologies that we cannot yet imagine the full scope of. It is, however, certain that drone technology will become an increasingly powerful tool for controlling territories and persons, and will bring still greater transparency to armed conflicts. Drones will be increasingly robotized. Autonomous weapon systems raise many questions, yet notwithstanding the weapon aspect, the mere surveillance advantage of robotized drones flows directly into the main argument about how "seeing and knowing triggers obligations."

Drone Surv Legal

Domestic Surveillance with drones is the ONLY legal use
O'Connell '10

(Mary Ellen O'Connell, an ASIL member, is Robert and Marion Short Chair in Law and Research Professor of International Dispute ResolutionâKroc Institute, University of Notre Dame, Vice President of the American Society of International Law, and Chair of the Use of Force Committee of the International Law Association.. American Society of International Law. 11/12/2010. "The International Law of Drones," http://www.asil.org/insights/volume/14/issue/37/international-law-drones SM)

In determining what international law rules govern drone use, the most salient feature is not the fact that drones are unmanned. The fact drones carry no human operator may be the most important new technological breakthrough, but the key feature for international law purposes is the type of weaponry drones carry. Drones are currently configured to launch missiles and drop bombs. The missiles and bombs carried by drones are not the type of weaponry permitted in law enforcement efforts. Lawful resort to lethal force in law enforcement is too restricted by international human rights law to permit the use of such heavy firepower. The limitation on the arbitrary deprivation of life, in particular, regulates a stateâ☐™s resort to lethal force.[9] During law enforcement operations, resort to lethal force is permissible when needed immediately to save human life.[10] Civilian police forces are acquiring drones, but to date they are using them for surveillance purposes. **This is the only lawful use** until drones are equipped with rifles, side arms, or other law enforcement-appropriate weaponry.

Surveillance Drones are legal in international law – UN use, and non-targeting protects from court ruling
Alberstadt '14

(Rachel, Masters in Public International Law, Writer for the Open Journal of Political Science. OJPS, 8/2/2014, "Drones under International Law," www.scirp.org/journal/PaperDownload.aspx?paperID=50570 SM)

The lower cost of production, the resource efficiency, and the overall capabilities of drones provide several key reasons why many States now seek to increase their drone arsenals. Indeed, for these same reasons, drones appeal to non-State actors as well. For instance, the United Nations (UN) has employed drones to facilitate humanitarian missions, such as aerial surveillance in the Democratic Republic of the Congo (UN Launches, 2014) (UN Starts, 2013). These operations exist in parallel to conflict operations with the practical usage of using drones to drop humanitarian supplies in troubled (e.g. natural disasters, armed conflict) areas as briefly discussed earlier. Increasing popularity for this method predicates upon the drone's allowance for greater surgical precision for the drops in difficult or dangerous flying areas. It also lowers mission costs as the troops do not need to be deployed as the aircraft can be remotely piloted. Alternatively, many speculations about drones, which this author argues have resulted to an extent in misinformation, point to the US or even Israel as the two main users of drones. The US and Israel are perhaps the two States most speculated as the sole users of drones (Israel's Defence, 2014), however, while they are possibly the two primary users, there are more than 40 other countries competitively developing and employing drone technology (Alston, 2010). As a result, discussions on drone development largely pertain to assessment of drone legality as linked with the main uses of drones. Drones are thought to be inherently unlawful as they are directly associated with targeted killing policies advocated by States such as the US, Russia, and Israel generally as responses against terrorist attacks (Matthews & McNab, 2011). Thus, the inherent problem associated with the legality of drones—as is with all weapons—is when they can be lawfully employed and against whom. If States employ drones as a counter-terrorism policy,

this proves problematic in light of the nebulous legal minefield associated with the discourse of terrorism itself. While this paper will not address the use of drones in these contexts (contexts which are outside of international warfare), it does point out that these remain imperative issues which, nonetheless, continue to be governed by domestic and human rights laws. 3. Jus in Bello and IHL **Drones, by themselves, are not illegal**. They do not qualify as banned military instruments under regulations of armed conflict nor under Article 8 of the Rome Statute as they do not exhibit banned qualities such as causing indiscriminate harm or unnecessary suffering (Schmitt, 2011). However, lawful action of drones rests upon customary principles such as military necessity and proportionality—with due regard for protection of civilians and civilian objects (Vogel, 2011; Military Commander, 2012; Air Force Operations, 2009). As mentioned earlier, in linkage to their common usage, the lawful firing of drone missiles predicates upon the status of the target (Schmitt, 2011). In addition to the general prohibition on the use of force, there exist established rules which govern warfare in the event of conflict. For example, under customary laws, indiscriminate weapons are prohibited, an issue that affects the implementation of drones rather than the weapon itself (Military Commander, 2012). Applicable rules which govern conflict activities are international humanitarian laws codified in the 1946 Geneva Conventions, the 1907 Hague Conventions, the 1977 Additional Protocols, and interlinked to the three aforementioned, customary international law (Cryer, Friman, Robinsin, & Wilmshurst, 2007). Legal regulations allowing use of drones appear fairly straightforward1 —if in compliance with international laws regulating force, deployment of drones is allowed. Otherwise, the legal uncertainty follows from case law where few courts have expressly or consistently issued judgments on drones, for instance in relation to targeted killing. If employed as a weapon (as opposed to surveillance or intelligence usages) the legality of the use of drones largely predicates on targeting restrictions. Overall, the dichotomy between combatant and non-combatant or civilian status, and collateral damage in relation to proportionality exemplify several IHL restrictions which inform the lawfulness of targeting (Cryer, Friman, Robinsin, & Wilmshurst, 2007). In addition, restrictions on launching missiles extend from civilian protection of humans to protection of civilian objects as well, such as churches or cultural buildings (Kalshoven & Zegveld, 2011).

ICJ Prioritizes ICCPR

The ICJ enforces ICCPR first without extraterritorial exception – Israel proves Bekker ‘4

(Pieter H.F. Bekker, is a partner in the International Dispute Resolution (IDR), Chair on the international division of the American Arbitration Association, and professor of international law at Fordham University. “The World Court Rules that Israel's West Bank Barrier Violates International Law,” American Society of International Law, 7/15/2004, http://www.asil.org/insights/volume/8/issue/17/world-court-rules-israels-west-bank-barrier-violates-international-law SM)

V. Scope of applicable treaties (Paras. 107-113) Regarding the scope of application of the applicable treaties, the ICJ concluded that the ICCPR and the Convention on the Rights of the Child are applicable both to territories over which a state has sovereignty and to those over which that state exercises jurisdiction outside sovereign territory. [11] While the ICESCR lacks a provision specifying its scope of application, the ICJ found that it is not to be excluded that this treaty applies also to acts carried out by a state in the exercise of its jurisdiction outside its own territory. [12] Observing that "the territories occupied by Israel have for over 37 years been subject to its territorial jurisdiction as the occupying Power," the ICJ concluded that Israel is bound by the provisions of these treaties and "is under an obligation not to raise any obstacle to the exercise of such rights in those fields where competence has been transferred to Palestinian authorities." (Para. 112) VI. Question of breach (Paras. 114-134) Turning to the question of whether the construction of the wall has violated the rules and principles identified by it, the ICJ noted that Israel has argued that the wall's sole purpose is to enable it effectively to combat terrorist attacks launched from the West Bank and that the wall is a temporary measure. The Court recalled that both the General Assembly and the Security Council in their resolutions have referred, with regard to Palestine, to the customary rule of the inadmissibility of the acquisition of territory by war. In the Court's view, it is apparent that the wall's sinuous route has been traced in such a way as to include within the "Closed Area" between the Green Line and the wall the great majority of the Israeli settlements (and about 80% of the Israeli settlers) in the Occupied Palestinian Territory (including East Jerusalem). According to the ICJ, the Israeli settlements in the Occupied Palestinian Territory (including East Jerusalem) have been established in breach of international law, in particular Article 49(6) of the Fourth Geneva Convention [13] and binding Security Council resolutions. The Court considered that the construction of the wall and its associated regime of measures create a "fait accompli" on the ground that could well become permanent, in which case it would be tantamount to de facto annexation. In the Court's view, the wall's construction, along with measures taken previously, "severely impedes the exercise by the Palestinian people of its right to self-determination, and is therefore a breach of Israel's obligation to respect that right." (Para. 122.) The ICJ found that the construction of the wall has led to the destruction or requisition of Palestinian properties under conditions that contravene the requirements of Articles 46 and 52 of the 1907 Hague Regulations and Article 53 of the Fourth Geneva Convention. [14] In its view, the wall's construction, the establishment of the Closed Area, and the creation of enclaves have imposed substantial restrictions on the freedom of movement of the inhabitants of the Occupied Palestinian Territory (with the exception of Israeli citizens) and have had serious repercussions for Palestinian agricultural production, access to health services, educational establishments and primary sources of water, and have changed the demographic composition of the territory concerned in violation of applicable provisions of international

humanitarian law, [15] human rights treaties, [16] and Security Council resolutions. [17] VII. Applicability of exceptions (Paras. 135-142) With regard to the question whether the applicable international humanitarian law contains provisions enabling account to be taken of "military exigencies," the ICJ pointed out that the exception to Article 49(1) of the Fourth Geneva Convention prohibiting forcible transfers of population and deportations (except when "the security of the population or imperative military reasons so demand") does not apply to Article 49(6), which prohibits the occupying Power from deporting or transferring parts of its own civilian population into the territories it occupies. Although Article 53 of the Fourth Geneva Convention concerning the destruction of personal property includes an exception "where such destruction is rendered absolutely necessary by military operations," the ICJ was not convinced that the destructions carried out by Israel contrary to the prohibition in Article 53 were rendered absolutely necessary by military operations. As regards the applicable human rights conventions, **the ICJ noted that Israel is bound to respect all the provisions of the ICCPR** with the exception only of Article 9 relating to the right to freedom and security of the person. [18] It said that although Article 12 permits some restrictions on freedom of movement, the restrictions not only must be directed to the ends authorized (i.e., the protection of national security, public order, public health or morals), but also must be necessary for the attainment of those ends. Moreover, they must conform to the principle of proportionality and must be the least intrusive instrument available. The ICJ concluded that these conditions were not met in this case. Moreover, the restrictions on the economic, social and cultural rights of the affected Palestinians were not implemented "solely for the purpose of promoting the general welfare in a democratic society," as required by Article 4 of the ICESCR.

NSA Surv. Illegal - ICCPR

No International legality for NSA surveillance – ICCPR proves

(Alex G. Fellow, Human Rights Watch and the American Civil Liberties Union. ". All research and writing for this paper took place before my affiliation with HRW or the ACLU began, and the views expressed here do not necessarily reflect the positions of either organization." "NSA Surveillance Since 9/11 and the Human Right to Privacy," http://www.aaron-zimmerman.com/wp-content/uploads/2014/01/Privacy-Supplement-1-Sinha.pdf SM)

In the end, however, entertaining this argument is more a matter of completeness than a matter of serious legal analysis. All along, we have made charitable assumptions toward the position of the United States, specifically to ensure a conservative and compelling series of conclusions. But there are only so many times that we can take the position favorable the United States and keep the results plausible, and by now we seem to have exhausted that supply. The more promising indicator for the United States is the deference of the ECtHR in cases where state parties assert national security as the justification for their interference with the right to privacy. Recall that the ECtHR places substantial weight on the existence of "formal legality and procedural guarantees,"347 as well as access to remedies.348 If those conditions are met, then the ECtHR is likely to defer in the face of interference with the right to privacy (under Article 8 of the European Convention). Even here, however, **the United States would struggle**. For much of its life, the NSA program lacked formal legality, and even now it has weak procedural guarantees. Further, in light of Clapper, access to remedies is severely restricted. Perhaps it would be possible for the United States to modify the NSA program in a way that allowed it to retain its breadth while also complying with the sort of criteria valued by the ECtHR, but until and unless that were to happen, **a favorable verdict by analogy for the legality of the NSA program under the ICCPR is unlikely**. In sum, it is obviously difficult to reach conclusive opinions about the legality of the NSA program (or its various constituent parts) under the ICCPR in part because some of our analysis is built on credible but disputed or unsubstantiated reporting on the program itself. At the very least, we need additional, concrete information about how the government executes the program. Further, the arguments on either side are relatively complicated, and can develop in a range of different ways. But at a minimum, even on conservative assumptions about the nature of the program and the scope of the ICCPR, we face the legitimate and frightening prospect that the United States is systematically and massively violating the human right to privacy. What happens now? Cherry-picked leaks from individuals like Edward Snowden help to shed light on parts of the program, but the government is unlikely to turn over any more comprehensive information voluntarily. The limited Congressional oversight that occurred shortly after the program became known fell far short of the public accountability created by investigations into spying abuses in the mid-1970's. Despite a string of recent revelations, the political climate now is even less likely to lead to oversight than it was in 2005 and 2006, since administrations of both parties have formally endorsed the FAA, thereby illustrating their commitment to the NSA program. But suppose we look at the issue from another angle. Why is it that the arguments on both sides are so complicated and uncertain? In part, the reason is that international human rights bodies have not paid enough attention to the risks posed to privacy by government surveillance programs. We have inferred the various points of illicit contact between the NSA program and the ICCPR by carefully reading both news reports about the program and commentaries on the treaty. But the Human Rights Committee's General Comment on the right to privacy is 25-years old and no more than two-pages long, and it does not specifically address surveillance practices that are certain to be in wide use around the world. This paper essentially presents a case study about the human right to privacy in the United States, as implicated by a single—albeit major—national security initiative. The NSA has multiple surveillance programs, and it is not the only agency within the government that conducts surveillance here. Most importantly, other countries conduct their own surveillance, making this a global issue. Governments can discern the basic form of their human rights obligations, and cannot be excused for ignoring them simply because it is possible to obscure their activities behind the cloak of national security policy. Nevertheless, it is much easier for them to duck their obligations when they can claim ambiguity in the law, and when human rights bodies abstain from explicit criticism of their problematic programs. If human rights bodies were to take the matter seriously, papers like this one would not be necessary. Notwithstanding the impulse of governments to protect information about surveillance activities, emphasis by human rights bodies on the significance of the right to privacy, and the elaboration of clear standards for compliance with it in an age of increasing government surveillance, would constitute crucial steps in making sure that states do not trample on this core human right.

US extraterritoriality exception violates international law and ICJ opinion – creates ICCPR confusion

(Alex G. Fellow, Human Rights Watch and the American Civil Liberties Union. ". All research and writing for this paper took place before my affiliation with HRW or the ACLU began, and the views expressed here do not necessarily reflect the positions of either organization." "NSA Surveillance Since 9/11 and the Human Right to Privacy," http://www.aaron-zimmerman.com/wp-content/uploads/2014/01/Privacy-Supplement-1-Sinha.pdf SM)

There has been some debate about how to interpret "within its territory and subject to its jurisdiction." The Human Rights Committee ("HRC")—the committee of experts tasked with monitoring implementation of the ICCPR202—interprets the phrase to mean that "a State party must respect and ensure the rights laid down in the Covenant to anyone within the power or effective control of that State Party, even if not situated within the territory of the State Party."203 Moreover, the HRC holds the view that the ICCPR extends to non-citizens—indeed, "all individuals, regardless of nationality or statelessness, such as asylum seekers, refugees, migrant workers and other persons—who for whatever reason find themselves either within the territory of a state party, or within the power or effective control of that state party outside its own territory.204 The **International Court of Justice has taken a similar view,** as have prominent commentators like Manfred Nowak.205 The United States, rather notoriously, takes a different view: "The United States in its prior appearances before the Committee has articulated the position that article 2(1) would apply only to individuals who were both within the territory of a State Party and within that State Party's jurisdiction. The United States is mindful that in General Comment 31 (2004) the Committee presented [a different view]. . . . The United States is also aware of the jurisprudence of the International Court of Justice ('ICJ'), which has found the ICPR 'applicable in respect of acts done by a State in the exercise of its jurisdiction outside its own territory," as well as positions taken by other States Parties.'206 Though the United States appears to be the outlier here, that fact alone would not necessarily render its view invalid. If it is fair to say that the United States has consistently maintained this position on the scope of the ICCPR, then perhaps as a persistent objector to the more common stance, the United States' view could be taken as applicable—at least for its own obligations under the ICCPR, if not for other parties. Moreover, most of the reporting on the NSA program has focused on its effects for those who are within the United States, so for present purposes, it may not matter a great deal which view we adopt. Nevertheless, the right to privacy (whatever that ultimately entails) illustrates in some of the starkest terms the counterintuitive implications of the United States' position. Essentially, the stance of the United States reduces to the view that the ICCPR permits states to conduct illegal or arbitrary surveillance on anyone outside of their own territory or outside of their jurisdiction. Presumably that is indeed the position of the United States, which after all originally established the NSA specifically to conduct foreign surveillance, and has since developed an extremely powerful surveillance apparatus that continues to collect substantial information abroad. But surveillance is particularly troublesome in this respect because much of it can be done from a distance—via satellite, for example, or through the interception of communications that travel through other countries. (By contrast, the United States reading produces much less counterintuitive results in the case of the right to peaceful assembly, which other governments might have a much harder time violating from afar.) If we were to generalize the United States position, then the ICCPR might secure the privacy of Americans only against arbitrary and illegal intrusion by the

United States, but leave them vulnerable to intrusion by every other government in the world. Similarly, Canadians would be secure as against their own government, but vulnerable to intrusion by all other governments. The same would be true again for people within the territory and jurisdiction of each other state. The right to privacy under the ICCPR would amount to very little on such a view. At the same time, it is not obvious that a broader reading of the scope of the treaty would be prohibitive for effective intelligence purposes, barring only illegal and arbitrary interference with privacy. 207 Further, whatever the geographic scope of the treaty, each state must do more than simply abstain from intruding on the privacy rights of those within its territory and jurisdiction. The general rule is that **states must respect, protect and fulfill the rights of those who fall within the scope of a binding treaty**.208 But without a duty on states not to engage in broad surveillance of those outside their territory or jurisdiction, the responsibility of each state to protect its own subjects from the prying of dozens of other states would be impossible to meet. To the extent that states literally could not protect their own from violations by other countries—violations that on the United States' view would not actually contravene the treaty—the number of privacy intrusions that the ICCPR would countenance on such a reading is extraordinary, and might be so large as to defeat the object and purpose of the treaty as concerns the right to privacy.209 These worries are worth raising here because privacy introduces **distinctive concerns about the United States' preferred reading of the treaty**. If even a subset of the rights guaranteed in the ICCPR cannot be protected in any meaningful way as a result of a particular reading of the treaty, then there are strong reasons for doubting the adequacy of that reading. Nevertheless, if only to yield less controversial results from our inquiry, we can stipulate to conducting our analysis under the United States' own position on the reach of the ICCPR.

NSA Surveillance violates I law

NSA Surveillance Violates Ilaw –

ICCPR inconsistencies

(Ilina, Research Associate at Public International Law & Policy Group, Peer Reviewed "The Right to Privacy under Fire – Foreign Surveillance under the NSA and the GCHQ and Its Compatibility with Art. 17 ICCPR and Art. 8 ECHR," Urtrecht Journal of International and European Law, 2/27/2015, http://www.utrechtjournal.org/articles/10.5334/ujiel.cr/ SM)

-ICCPR=The International Covenant on Civil and Political Rights – VCLT=The Vienna Convention on the Law of Treaties

http://www.utrechtjournal.org/articles/10.5334/ujiel.cr/

1. The Territorial Reference in Art. 2 (1) ICCPR The ICCPR defines its territorial scope in Art. 2 (1) and obliges every State Party to ensure the rights recognized in the Covenant to all individuals within its territory and subject to its jurisdiction. This somewhat 'awkwardly formulated'34 provision has been widely understood to mean that Covenant rights are to be guaranteed to all individuals within a state's territory and to all individuals subject to its jurisdiction.35 The US is one of the few states that read this provision in a different manner. a. The US Position In the opinion of the US, persons who are not both within the respective territory and subject to the state's jurisdiction do not benefit from the treaty's protection.36 In an attempt to substantiate its position and to present it as a long-established understanding and practice of the Covenant's applicability, the US argues using the travaux préparatoires and refers to its earlier statements before the HRC.37 The US further relies on the ordinary meaning of the two conditions in Art. 2 (1) ICCPR connected by the conjunctive 'and'. **This position, however, has been contested from the very moment of its articulation**38 **and raises substantial problems**. These shall be explored in the following sub-sections. b. Rules of Treaty Interpretation in the VCLT The Vienna Convention rules on treaty interpretation are considered declarations of pre-existing customary international law.39 Arts. 31 to 33 VCLT covers the interpretation doctrines in international law. The first approach centers on the actual text of the provision in question, emphasizing the analysis of the words used.40 The second approach considers the intention of the parties adopting the agreement, while the third approach looks at the object and purpose of the treaty as the most important tool in resolving ambiguities.41 Thus, Art. 31 (1) VCLT requires in the first place a reading of the Covenant in good faith and consistent with the ordinary meaning of the terms used.42 Following this rule of interpretation, the US position seems to be the most natural one, considering the literal meaning of the 'and' as a conjunction between 'within its territory' and 'subject to its jurisdiction'. However, what appears superficially to be the right answer leads to unsustainable results when considering some of the further norms in the ICCPR. The provision regarding the right to return to one's state43 and the right not to be tried in absentia44 presume exactly that individuals can be outside the territory of their state when exercising the rights in question. As Margulies45 rightfully points out, these provisions would become a nullity if they would not protect persons at least temporarily outside a state's territory. Additionally, it would exclude from its reach individuals who are outside the state's jurisdiction but within its territory, such as foreign diplomats or members of foreign armed forces stationed on the territory pursuant to international agreements between the receiving and the sending

state.46 Thus, it makes more sense that Art. 2 (1) has to be read interpreted within the context of all of the substantive rights in Art. 6–27 ICCPR.47 Otherwise, one would reach an interpretation that is inconsistent with the object and purpose of the treaty in the sense of Art. 31 (1) VCLT or to a result which, as Art. 32 (b) VCLT puts it, is manifestly absurd or unreasonable. It seems more logical to deem that Art. 2 (1) permits and requires a different construction.48 This conclusion allows turning to the preparatory work and drafting history of the Covenant as a further means of interpretation, Art. 32 VCLT. While the provision might have been drafted in a different manner that would have avoided the ambiguity, interestingly, the travaux préparatoires indicate that attempts to delete 'within its territory' and to replace 'or' for 'and' failed for different reasons.49 One finds in the official records of the drafting process statements of the chief US delegate50 that clearly show that including a reference to 'territory' in Art. 2 (1) ICCPR aimed at avoiding obligations to 'ensure' the rights of individuals in the territories occupied by the Allies after the Second World War. The obligation to respect, on the other hand, was not considered problematic. The US eschewed the responsibility to guarantee rights within the states with only recently recovered democratic institutions.51 Potential inconsistencies with the international law of occupation had to be considered as well.52 The facts illustrated above show a very different position by the US Government and a diverse meaning of the terms. Thus, the reading of the US cannot be considered a long-established practice. In addition it should be also noted that **the International Court of Justice has endorsed the extraterritorial applicability of human rights obligations** in its 'Wall' Advisory Opinion.53 c. Why **the Narrow View is not Persuasive in the Surveillance Context** Although the stance of the US was reviewed and conceived as inconsistent with effective international law in general, in order to strengthen this finding it is important to see how the US position would perform in the surveillance context. As the HRC has stressed in its General Comment ('GC') on the nature of legal obligations imposed by the Covenant,54 every State party has a legal interest in the performance by every other State party of its obligations. Bearing this in mind, the US reading of the territorial scope of the ICCPR brings a couple of interesting consequences along. The first one is that **it allows states to perform illegal or arbitrary surveillance on anyone outside of their own territory or outside of their jurisdiction**.55 This automatically means that the Covenant secures the privacy of i.e. Americans only against arbitrary and illegal interferences by their own state, but would leave them unprotected against intrusions by every other state agency in the world.56 However, this result most certainly conflicts with the very nature of human rights, to which every human being is entitled by the simple fact of being human and a bearer of human dignity.57 Human Rights cannot be assimilated to social compacts, nor depend for their applicability on 'morally arbitrary criteria' such as the mere accident of birth.58 In the words of Ronald Dworkin, '[t]he domain of human rights has no place for passports'.59 The second consequence to consider is that with this reading, the task of each state to protect its own subjects from the spying activities conducted by all other states would be **impossible to accomplish**. This is true to the extent that privacy intrusions would become something ordinary, potentially defeating the object and purpose of the treaty with regards to the right to privacy. **Such an understanding of** Art. 2 (1) **ICCPR would** not only offer very little protection with regards to privacy, but **most the protection offered for most of the other ICCPR rights would be undermined**. And here is where the line must be drawn – where even a small part of the Covenant's guarantees cannot be fulfilled in any reasonable way as a result of a particular understanding of the treaty, then this understanding is most certainly inadequate.60 The illustrated points make it clear that the advocated understanding of the Covenant's territorial scope by **the US is unsustainable under international law**. The reference to a state's territory in Art. 2 (1) ICCPR is not to be read as excluding extraterritorial application per se.

I law courts reject US extraterritorial exception – violates sovereignty and collapses human rights – HRC and ECtHR proves

- HRC=Human Rights Campaign. ECtHR= European Human Rights Court

2. State Jurisdiction under Art. 1 ECHR and Art. 2 (1) ICCPR The next challenge is to establish what exactly being under a state's jurisdiction means and entails. In order to elaborate the concept, which would be applicable to foreign surveillance activities, the following section outlines the major findings of the HRC and the ECtHR on extraterritoriality. Both bodies have had the opportunity to decide on whether the human rights treaties in question apply outside of a State's party territory. a. First Extraterritorial Steps For the simple reason that 'jurisdiction' has emerged as the basis of sovereignty and state's sovereign powers, the original notion of jurisdiction is necessarily linked with the idea of territorial powers.61 That is why jurisdiction is closely related to the national territory.62 However in the interventionist age63 we live, with the growth of operations conducted abroad and the ever-increasing number of individuals brought under some form of foreign de facto control, the question of human rights treaties' applicability although vague in terms of the exact guarantees' scope **is quite significant**. Taking this in account, the ECtHR has only accepted in exceptional cases that acts carried out by the Member States outside their territories can be an exercise of jurisdiction in the sense of Art. 1 ECHR.64 The territorial scope of the ECHR has been a point of contention for quite some time. Although Art. 1 ECHR has received some fair attention in the Court's case law; the ECtHR's position is far from uniform. It had a promising start with the Loizidou case,65 where the Court accepted that the treaty has a certain degree of extraterritorial effect, coupling the Convention's application with the requirement of effective control employed by a State Party in a certain area. What mattered was the question of effective control, regardless of whether it was based on an unlawful act, i.e. violation of the territorial state's sovereignty.66 In the later judgement of Cyprus v Turkey, the justices of the Grand Chamber reaffirmed their position, adding to the previous argumentation the need to reject the otherwise resulting **'regrettable vacuum in the system of human-rights protection'.**67 In a similar cautious manner, the early HRC only ruled in favour of extraterritorial application in 'exceptional circumstances', such as when states acted against their own citizens living abroad.68 However, it must be also acknowledged that in comparison to the ECtHR, the Committee's degree of practice in the matter of extraterritoriality is more limited by the simple fact that it receives fewer complaints than its European counterpart. As will be illustrated below, the consequence is that the Committee often turns to the judgements delivered by the ECtHR for interpretation help. In the so called Passport cases,69 the HRC found that States parties are responsible for infringements of the Covenant committed by their foreign diplomatic representatives. Further, considering the cases of individuals kidnapped by Uruguayan agents in neighbouring countries, the Committee held that States parties are liable for the actions of their agents on foreign territory.70 The HRC thus accepted the extraterritorial application of the ICCPR in cases where state agents exercised authority and control over individuals, rather than over areas. This same approach used by the ECtHR in one of its early Cyprus cases,71 where it had found that States parties are 'bound to secure the rights and freedoms to all persons under their actual authority'. In other words, what mattered was the relationship between the individual and the state and not where the alleged violation occurred.72 b. Jurisdictional Approaches after Bankovic What looked like an auspicious (although not entirely uniform) beginning that kept pace with recent developments in the international community, took a step back with the Bankovic admissibility decision.73 In this case, the ECtHR found that the victims of an air strike on a TV station in Belgrade had never been 'within the jurisdiction' of the NATO Member States. The Court observed that only effective control – an exercise of all or some public power – over a territory and its inhabitants due to a military occupation or an explicit agreement could bring the situation within the jurisdiction of the 'occupying' state. The mere repercussions of States parties' actions, i.e. dropping bombs over Belgrade, would not trigger control over the territory or individuals in question.74 This approach, clearly leaning towards the pronouncement of the Convention's extraterritorial application as an exception, has casted quite some doubt on the Court's reasoning, which has been a point of critique and discussion ever since. The decision in the Issa case75 led to further confusion with its observation that 'Art. 1 of the Convention cannot be interpreted so as to allow a State party to perpetrate violations of the Convention on the territory of another State, which it could not perpetrate on its own territory'. The Court stipulated that even short-term military operations in a territory brought the individuals there under the jurisdiction of the acting state. In the Ilascu case,76 the Court affirmed the triggering effect of military control in an area, but this time it reduced the requirement to 'overall control'. This so-called 'more generous approach'77 was later followed in the Al-Skeini78 judgement as well, where the Court explained that the test of jurisdiction could be met either through control over an individual or over a certain area. In addition, a state can exercise effective control either directly, through its own armed forces, or by means of a 'subordinate local administration'.79 Thus, it would seem that the ECtHR was moving away from the view that jurisdiction is an all-or-nothing matter,80 trying to correct to some extent the Bankovic findings by reducing the degree of control required over a territory. A further development in the Court's approach was brought by the case of Öcalan v Turkey,81 a case involving the handing-over of a suspect of terrorist-related crimes to Turkish officials in Kenya. The ECtHR noted that the suspect was 'effectively under Turkish authority and therefore within the jurisdiction of Turkey' after the handing-over was completed.82 Simplifying this statement means that the State party in question does not need to exercise all public powers, for even some exercise of public powers is sufficient to trigger jurisdiction, although not in an exclusive manner with regard to all other states and their rights. In the meantime, the HRC, which from its very inception has sought a way to provide a reading of Art. 2 (1) ICCPR that renders appropriate legal protection and had therefore followed the disjunctive interpretation, extended the application of the Covenant to actions of state authorities in occupied territories as well.83 For example, as the Committee has stated in its recent comments on Israel, the latter bears responsibility for implementation of the ICCPR within Israel, as well as the Occupied Palestinian Territories in the West Bank and Gaza84 where Israel exercised effective jurisdiction and effective control. The HRC's line of arguments appears to follow Bankovic, that is, it is based on an 'effective control' approach.85 The Committee has applied this approach in a number of different contexts where the state acts or takes measures on the territory of another state and these have an effect on persons within that other state's territory.86 In GC 31 the Committee reaffirmed its position, asserting that a State Party

must provide for the Covenant's rights to anyone within its power or effective control, even if not situated within its respective national borders and without concern for the circumstances in which such power or effective control was obtained.87 In other words, in the view of the Committee, states are always bound to both respect and ensure that individuals receive maximum protection of their human rights.88 Through this position the HRC has officially developed a case law that some scholars have criticized for being purposive89 and rather goal-oriented. While this presumption may or may not be true and could be the topic of an entirely different investigation, it demonstrates one of the core problems of extraterritoriality – namely that human rights protections are necessarily extraterritorial. This issue will be addressed in a moment under 2. d). c. The Test of 'Subject to its Effective Control' in the Surveillance Context As it was illustrated above, the effective control over territory or over individuals test represents the best synthesis of the ECtHR's current extraterritorial jurisprudence, supported by the HRC as well. However, this approach was put into place long before one could even consider the issue of foreign surveillance and its impact on the discussion. The 'effective control' notion is adequate to analyse the actions in real time taken abroad by state agents,90 but in the cyber domain, the physical control over persons or territory is not very useful.91 The NSA has the capacity to remotely control and filter much of the communications of a foreign national abroad and, as indicated in the press, the agency can break different forms of encryptions thanks to so-called 'back-doors' it has engineered in many software systems.92 In addition, the implantation of tiny radio transmitters in most of the computers produced in the US grants the NSA the capacity to gain control over computers not connected to the Internet.93 Considering also that much of the Internet traffic is routed through the US, makes the picture complete – physical control does not play a role at all. That is why in order to answer the question how surveilling a foreign national's communications renders that person subject to the surveilling state's jurisdiction,94 the concept needs to be adapted to the cyber context. A narrow standard does not do justice to the rapidly evolving technology, but an official solution has not been established yet, although one of the first cases concerning external communications' interception is already being dealt with in Strasbourg.95 In this regard, Margulies suggests the virtual control test as an approach that at least for now can meet this challenge.96 Applying this standard has two advantages: first, it works closely with the notion of control developed and required in the jurisprudence discussed above; second, it considers and bridges the changing technological circumstances that any practitioner would face when dealing with questions of jurisdiction triggering human rights obligations in surveillance cases. The intelligence agencies under scrutiny are perfectly capable of controlling lives and private information with the press of a button. **Without a proper assimilation of the effective control test in cyberspace these intrusions would remain unaddressed and would run counter to substantial human rights principles**. Privacy rights should be protected even when interferences have been initiated in a place different than the affected individuals' abode. The virtual control test is thus preferable when assessing the extraterritorial application of privacy interests in cases of foreign surveillance. d. Type of State Obligations in the Extraterritorial Application What has become clear from the above sub-sections is that both the ECtHR and the HRC, certainly not uninfluenced from each other's findings and interpretations, apply the treaties in question outside of the national borders of the States parties. The current stance of both bodies is to answer in affirmative the question of jurisdiction where some kind of public power has a controlling effect over an area or an individual abroad. What needs a point of clarification, however, is what exactly states are obliged to do when their jurisdiction is triggered. In this regard it is important to turn again to the original treaty provisions. While the ICCPR text requires states to 'respect and ensure'97 the rights in the Covenant and, as it was illustrated above, the Committee has gladly taken up this wording in its demands for effective rights protection, Art. 1 ECHR speaks of 'securing' the respective rights and freedoms. However, despite the differences in the wording of these treaty provisions, it has become customary to apply the tripartite typology of respect – protect – fulfil when assessing state's obligations under a human right treaty.98 One can also categorize the duty to respect as closely corresponding to negative obligations,99s and the other two dimensions (protect and fulfil) to positive obligations.100 Since 'to secure' in Art. 1 ECHR and 'to respect and to ensure' in Art. 2 (1) ICCPR encompass both negative and positive obligations, it can be acted on the assumption that both treaties

mean the same. Now, the problem with the extraterritorial application is constituted by the fact that interventions abroad take place in forms other than extensive and long-term military operations and occupations. In many cases, there are actions that can and are accomplished in a matter of days or even hours. Under these circumstances, the foreign state acting abroad cannot be expected to also positively ensure or protect human rights, for it does not have the respective powers to adopt any legislative, judicial or administrative or other appropriate measures in order to fulfil its positive legal obligations. It can only make sure to respect and not to interfere with the rights of the individuals. A further difficulty arises out of the fact that the bodies entrusted with the application and interpretation of the provisions have either left the question of the exact nature of the obligation unaddressed or have opted for an 'all- or nothing' approach. In other words, the approach is everything but conclusive.

Solvency- Tech Backdoors

The tech backdoors of NSA Mass Surveillance violates I law
WB '14

(Washington's Blog – quotes UN high commissioner and UN reports from the United Nations General Assembly, 7/19/2014. "UN High Commissioner: Mass Surveillance Violates International Law … and Snowden Should NOT Be Prosecuted," http://www.washingtonsblog.com/2014/07/un-mass-surveillance-violates-international-law.html SM)

UN High Commissioner: Mass Surveillance Violates International Law … and Snowden Should NOT Be Prosecuted Posted on July 19, 2014 by WashingtonsBlog Mass Surveillance Violates U.S. Law Despite the fancy footwork of government lawyers, mass surveillance undoubtedly violates the U.S. Constitution. See this, this and this. After all: Mass spying by the NSA violates our freedom of association It violates our Fourth Amendment right against unreasonable search and seizure And our Sixth Amendment right to face our accusers (and see this). By way of background, the information gained through spying is shared with federal, state and local agencies, and they are using that information to prosecute petty crimes such as drugs and taxes. The agencies are instructed to intentionally "launder" the information gained through spying, i.e. to pretend that they got the information in a more legitimate way … and to hide that from defense attorneys and judges And the right not to have digital troops quartered in our homes Experts say that the type of spying being carried out by the NSA and other agencies is exactly the kind of thing which King George imposed on the American colonists … which led to the Revolutionary War Moreover: NSA started spying on journalists in 2002 … in order to make sure they didn't report on mass surveillance There is no real oversight by Congress, the courts, or the executive branch of government. And see this and this. Indeed, most Congress members had no idea what the NSA is doing. Even staunch defenders of the NSA – and congress members on the intelligence oversight committees – now say they've been kept in the dark A Federal judge who was on the secret spying court for 3 years says that it's a kangaroo court Even the current judges on the secret spying court now admit that they're out of the loop and powerless to exercise real oversight. When these judges raised concerns about NSA spying, the Justice Department completely ignored them A former U.S. president says that the spying program shows that we no longer have a functioning democracy Indeed, the NSA itself admitted that similar surveillance which it conducted in the 1970s was probably illegal: During the Vietnam war, the NSA spied on two prominent politicians – Senators Frank Church and Howard Baker – as well as critics of government policy Muhammad Ali, Martin Luther King, and a Washington Post humorist. A recently declassified history written by the NSA itself called the effort "disreputable if not outright illegal." (And that's just surveillance. The NSA might also be involved in dirtier tricks.) Mass Surveillance Violates International Law **The U.N high commissioner for human rights released a report this week saying that mass surveillance may violate international law**. EFF summarizes: The report is issued in response to a resolution passed with unanimous approval by the United Nations General Assembly in November 2013. That resolution was introduced by Brazil and Germany and sponsored by 57 member states. *** Forget The "Haystack" The report issues a powerful condemnation of the "collect-it-all" justification that an infinitely large "haystack" of personal data must be accumulated in order to find the needles. The report points out that few "needles" that have been uncovered, and that in any event: Mass or "bulk" surveillance programmes may thus be deemed to be arbitrary, even if they serve a legitimate aim and have been adopted on the basis of an accessible legal regime. In other words, it will not be enough that

the measures are targeted to find certain needles in a haystack; the proper measure is the impact of the measures on the haystack, relative to the harm threatened; namely, whether the measure is necessary and proportionate. The second part of that passage, emphasis added, is critical: it gives guidance that the proper measure of a mass surveillance program is not its effectiveness in a vacuum, but whether the surveillance is both necessary and proportionate. Metadata Matters EFF has long called for moving beyond the fallacy that information about communications is somehow inherently less privacy-sensitive than the communications themselves. *** The report agrees, debunking the argument that "interception or collection of data about a communication, as opposed to the content of the communication, does not on its own constitute an interference with privacy." It argues, "From the perspective of the right to privacy, **this distinction is not persuasive**" The aggregation of information commonly referred to as 'metadata' may give an insight into an individual's behaviour, social relationships, private preferences and identity that go beyond even that conveyed by accessing the content of a private communication." Monitoring Equals Surveillance Much of the expansive state surveillance revealed in the past year depends on confusion over whether actual "surveillance" has occurred and thus whether human rights obligations apply. Some suggest that if information is merely collected and kept but not looked at by humans, no privacy invasion has occurred. Others argue that computers analyzing all communications in real-time for key words and other selectors is not "surveillance" for purposes of triggering legal protections again, unless the analysis is by human eye. [But the U.N.] report makes clear that: "any capture of communications data is potentially an interference with privacy and, further, that the collection and retention of communications data amounts to an interference with privacy whether or not those data are subsequently consulted or used. Even the mere possibility of communications information being captured creates an interference with privacy, with a potential chilling effect on rights, including those to free expression and association." (Again, emphasis added.) Mandatory Data Retention Is Unnecessary and Disproportionate EFF has long held that government mandated data retention impacts millions of ordinary users, compromising the online anonymity that is crucial for whistle-blowers, investigative journalists, and others engaging in political speech. The report calls data retention mandates unlawful, saying: Mandatory third party data retention, a recurring feature of surveillance regimes in many States, where Governments require telephone companies and Internet service providers to store metadata about their customers' communications and location for subsequent law enforcement and intelligence agency access appears neither necessary nor proportionate." Shut the Backdoor: Re-use of Data As EFF has noted here,here and in the legal background to the 13 Principles , many national frameworks lack "use limitations," allowing data collected for one legitimate aim, to be subsequently used for others. The report also emphasized that point. The report explained that the absence of effective use limitations has been exacerbated since September 11, 2001, with the line between criminal justice and protection of national security blurring significantly. The resultant sharing of data between law enforcement agencies, intelligence bodies and other State organs risks violating Article 17 of the Covenant on Civil and Political Rights, because surveillance measures that may be necessary and proportionate for one legitimate aim may not be so for the purposes of another. No Secret Law EFF has long held that the basis and interpretation of surveillance powers must be on the public record, and that rigorous reporting and individual notification (with proper safeguards) must be required. *** The report agreed: Secret rules and secret interpretations even secret judicial interpretations of law do not have the necessary qualities of "law". Neither do laws or rules that give the executive authorities, such as security and intelligence services, excessive discretion; the scope and manner of exercise of authoritative discretion granted must

be indicated (in the law itself, or in binding, published guidelines) with reasonable clarity. A law that is accessible, but that does not have foreseeable effects, will not be adequate. The secret nature of specific surveillance powers brings with it a greater risk of arbitrary exercise of discretion which, in turn, demands greater precision in the rule governing the exercise of discretion, and additional oversight. Human Rights Law Does Not Discriminate For "Foreigners" This new report underscore the value that the UN places on "measures to ensure that any interference with the right to privacy complies with the principles of legality, proportionality and necessity regardless of the nationality or location of individuals whose communications are under direct surveillance." Again this position is supported by our previous submissions, available here and here and here. In the words of the report: If a country seeks to assert jurisdiction over the data of private companies as a result of the incorporation of those companies in that country, then human rights protections must be extended to those whose privacy is being interfered with, whether in the country of incorporation or beyond. This holds whether or not such an exercise of jurisdiction is lawful in the first place, or in fact violates another State's sovereignty. We have seen precisely these questions raised, and not always answered satisfactorily, in cases like the demands to Twitter for information on Wikileaks supporters or Chevron's demands for email data to Twitter, Google and Yahoo. Right to an Effective Remedy and Notification Quite impressively, the report lays out four characteristics that effective remedies for surveillance-related privacy violations must display. Those remedies must be "known and accessible to anyone with an arguable claim." This means that notice is critically important, and that people must be to challenge the legality of the surveillance program without having to prove that their particular communication was monitored or collected. EFF has always said that the notification principle is essential in fighting illegal or overreaching surveillance. Individuals should be notified of authorization of communications surveillance with enough time and information to enable them to appeal the decision, except when doing so would endanger the investigation at issue. The report continues, stressing the importance of a "prompt, thorough and impartial investigation"; a need for remedies to actually be "capable of ending ongoing violations"; and noting that "where human rights violations rise to the level of gross violations…as criminal prosecution will be required". **No Tech Backdoors** EFF has said no law should impose security holes in our technology in order to facilitate surveillance. Diminishing the security of hundreds of millions of innocent people who rely on secure technologies in order to ensure surveillance capabilities against the very few bad guys is both overbroad and short-sighted.

Immigration

ICJ Ruled US border surveillance company Elbit is illegal
Kilpatrik '14

(Kate, Staff writer for AlJazeera America, 9/6/2014, "Immigration seen as bonanza for slumping global defense industry" http://america.aljazeera.com/articles/2014/9/6/elbit-systems-bordermilitarizationusmexico.html SM)

A desolate patch of terrain in southern Arizona — crossed mostly by coyotes, jackrabbits and Border Patrol agents — is one of the planned sites for a 120-foot-tall lattice-steel tower. Located two miles from the U.S.-Mexico border, the tower will be outfitted with sensors to allow Customs and Border Patrol to detect and record the movement of migrants and smugglers up to 7.5 miles away. The simple structure will contain advanced technology that has been already used halfway across the globe in Israel, where its makers, Israeli defense company Elbit Systems Ltd., have deployed their border security products for more than a decade. The towers being erected in Arizona shed light on the fierce and ongoing debate over U.S. border strategy where they symbolize efforts to adopt a more militaristic policy. At the same time the presence of a foreign company at the heart of such a project also highlights a booming niche in the global defense industry: one where hefty profits can be made by fortifying international frontiers. While environmental assessments have been done to prepare the sites, project hasn't yet broken ground due to a protest filed by a competing bidder, a Customs and Border Protection spokesperson confirmed. But that's not the only controversy. In the wake of Israel's increased military campaign in Gaza this summer, Elbit Systems has drawn fire from protesters in England and Australia who criticize the company for profiting from the Israeli occupation and separation wall, which **the International Court of Justice has declared illegal under international law.** "No company is more deeply embedded in Israel's brutal architecture, occupation and segregation than Elbit," journalist Naomi Klein wrote in her 2008 book, The Shock Doctrine: The Rise of Disaster Capitalism. Elbit's No. 1 client outside Israel is the United States and the towers in the Arizona desert are part of a 9-year, $145 million contract the Department of Homeland Security awarded the firm's American subsidiary, Elbit Systems of America, in February. Elbit beat bids from U.S. competitors including Lockheed Martin, General Dynamics and Raytheon.

AT: ICJ bad

Non-unique'd by 40 years

Liptak 5 – analyst @ NYT

("U.S. cuts World Court's jurisdiction," http://www.nytimes.com/2005/03/10/world/americas/10iht-judge.html?_r=0)

Prompted by a World Court decision last year ordering new hearings for 51 Mexicans on death row in the United States, the State Department has said that the United States has withdrawn from a protocol that gave the court jurisdiction to hear such disputes. The withdrawal announced Wednesday followed a Feb. 28 memorandum from President George W. Bush to Alberto Gonzales, the U.S. attorney general, directing state courts to abide by the World Court decision regarding the Mexican inmates. The International Court of Justice, in The Hague had ruled that U.S. courts should grant "review and reconsideration" to claims that the inmates' cases had been hurt by the failure of local authorities to allow them to contact consular officials. The memorandum, issued in connection with a case the U.S. Supreme Court is scheduled to hear this month, puzzled state prosecutors, who said it seemed inconsistent with the administration's general hostility to international institutions and the White House's support for the death penalty. The withdrawal announced Wednesday helps explains the administration's position. Darla Jordan, a State Department spokeswoman, said the administration was troubled by foreign interference in the domestic capital justice system, but intended to fulfill its obligations under an international agreement the United States had signed. But, Jordan said, "we are protecting against future International Court of Justice judgments that might similarly interfere in ways we did not anticipate when we joined the optional protocol." Peter Spiro, a law professor at the University of Georgia, said the withdrawal was unbecoming: "It's a sore-loser kind of move," he said. "If we can't win, we're not going to play." Jordan stressed that the United States was not withdrawing from the Vienna Convention on Consular Relations itself, which gives people arrested abroad the right to contact their home countries' consulates. But the United States is withdrawing, she said, from an optional protocol that gives the World Court, the principal judicial organ of the United Nations, jurisdiction to hear disputes under the convention. "While roughly 160 countries belong to the consular convention," she said, "less than 30 percent of those countries belong to the optional protocol. By withdrawing from the protocol, the United States has joined the 70 percent of the countries that do not belong. For example, Brazil, Canada, Jordan, Russia and Spain do not belong." Countries that have signed the protocol include Australia, Germany, Japan and the United Kingdom. Jordan said Condoleezza Rice, the U.S. secretary of state, informed Kofi Annan, the secretary general of the United Nations, of the move on Monday. Harold Hongju Koh, dean of the Yale Law School and a former State Department official in the Clinton administration, said the Bush administration's strategy was counterproductive. "International adjudication is an important tool in a post-cold-war, post-9/11 world," Koh said. For **40 years**, from 1946 to 1986, the United States accepted the general jurisdiction of the World Court in all kinds of cases against other nations that had also agreed to the court's jurisdiction. After an unfavorable ruling from the court in 1986 over the mining of Nicaragua's harbors, the United States withdrew from the court's general jurisdiction.

AT: ICJ fails

ICJ fails because of limited jurisdiction – the plan resolves that

Lu 4 – LL.M, law librarian, Transnational Law and Business University (TLBU), Seoul

(Bingbin, "3. Reform of the International Court of Justice – A Jurisdictional Perspective," http://www.oycf.org/Perspectives2/25_063004/3.pdf)

The ICJ has been criticized for its limited effectiveness and the many failures it has experienced. ¶ These circumstances have many reasons, such as the time consuming nature of ICJ proceedings, ¶ but the **most important reason** is the extent of the ICJ's jurisdiction. If we want to see a more ¶ efficient ICJ, some reform steps must be taken to solve the jurisdictional problem. But what can ¶ the Court do under the Statute as it is now in order to limit its shortcomings? Reforming a World ¶ Court is not an easy matter. The goal should be achieved step by step. In my opinion the ICJ can ¶ construe its jurisdiction broadly when there are differences as to what the scope of its jurisdiction ¶ is. Of course the relevant provisions or Optional Clause declaration must be interpreted in a ¶ natural and reasonable way, as in the Fisheries Jurisdiction Case.33 To extend the construction of ¶ the ICJ's jurisdiction does not mean there should be a license to misuse it. I am sure the World ¶ Court can do a much better job of exercising its competence under the current ICJ Statute and in ¶ an environment of proliferating international courts and tribunals, if it chooses to interpret its ¶ jurisdiction broadly. So we can hope that the Peace Palace will heat up and the World Court will ¶ be in business again.

2NC A2: Doesn't Solve Signal/Perception

Delegation better captures their signal arguments

Alter, Political Science-Northwestern, **3**

(Journal of Asian and Pacific Studies, Vol. 25, P. 51-74)

6) Delegating authority to international courts may be attractive because it lessons the role of power in dispute resolution. The strongest powers can use unilateralism to enforce agreements while cheating when they want. Strong powers thus are less likely to want to create a system of third-party enforcement. But weaker powers may demand third-party enforcement so that everyone will be held accountable to the same rules, including strong powers. And strong powers **may need to create a legal system to get others to sign on to the agreement** (McCall Smith 2000, 148).

7) Delegation may be a good way to signal a commitment to an agreement without really binding a state or committing real resources to enforce the agreement. Argument 1 assumed that delegation did in fact increase the credibility of an agreement. But in most cases states have created international courts while refusing to give international legal bodies tools to enforce legal rulings. If courts do not in fact make commitments more credible, then it may be that **states delegate to courts to capture the benefits of the signal**. For example, when governments want to reinforce key values, creating a legal system may **enhance the perception,** if not the reality, that these values confer genuine rights for individuals. Gary Bass who seeks to explain why war crimes tribunals have been created on an ad hoc basis across time offers a non-cynical argument in this vein. Bass argues that empirically speaking, liberal countries are more likely to create war crimes tribunals. He explains this finding by arguing that liberal countries create ad hoc tribunals to uphold their values (and perhaps because since they almost never commit gross atrocities, they will not called to account in front of the court.) (Bass 2000) A cynical argument in this vein comes from Giulio Gallarotti who claims that international institutions may provide a cheap way to demonstrate that a government is doing something to address an international issue, while in practice it is not expending any significant resources to realize an international objective (Gallarotti 1991).

2NC Spills Over/A2: Not Effect All States

ICJ ruling would have spillover effects on other countries

Burroughs, Executive Director-Lawyers' Committee on Nuclear Policy, **7**

http://lcnp.org/wcourt/memoreturnICJhead.pdf

4) The Court would likely confirm that the disarmament obligation applies to all states, including those outside the NPT, Israel, India, and Pakistan. While the latter two states accept the obligation in their votes on UNGA resolutions,4 it still would be useful to have an ICJ statement on this point. It could help point towards integration of those states into a disarmament/non-proliferation regime. It would also help dispel any perception that the proposed U.S.-India deal is certifying India as a member of a permanent nuclear weapons club. Since Israel does not officially acknowledge possessing nuclear weapons, it is in a different position than India and Pakistan. NPT Article VI applies to all NPT parties, not only those with nuclear arsenals. Thus an ICJ conclusion that the disarmament obligation founded upon Article VI applies universally would confirm that Israel is bound by the obligation regardless of how Israel is classified. It would support Israel's joining the NPT as a NNWS or its participation in the creation of additional instruments to create a nuclear-weapon-free world.

2NC A2: Hegemony DA- Undermines All War Powers

Counterplan does not submit all future war powers decisions to compulsory jurisdiction- only a small subset that the aff has already said we shouldn't do- means there is no risk of an impact or solvency deficit

Counterplan exchanges unilateral war powers for multilateral- makes future war fighting sustainable

Harvard Journal on Legislation, "Protecting National Sovereignty in an Era of International Meddling: An Increasingly Difficult Task" Representative Bob Barr, **2002**. 39 Harv. J. on Legis. 299. Lexis.

> The U.N. Charter proscribes "non-pacific" conduct unless necessary to counter threats to peace, breaches of peace, acts of aggression, or to act in self-defense. [28] By potentially giving the ICJ the compulsory jurisdiction to adjudicate "all legal disputes concerning treaties," the United States has effectively tied its hands to resolve such disputes in a manner deemed to be in accord with the ICJ-- and within the general proscriptions of the Charter to forego the use of force in such disputes. The Senate never should have agreed to such a provision, as it presents a potential conflict with the United States Constitution, 29 which grants Congress alone the power to declare war 30 and gives the President the sole power as Commander-in-Chief to wage war on behalf of our sovereign nation. 31 The Constitution does not grant the federal governm, ent the power to cede such authority. So long as the United States had the power, the understanding, and the will to restrict the U.N. provisions to the supremacy of our Constitution, such a problem may have been tolerable. Now, however, the understanding and will are largely absent from national debates, and a serious problem presents itself.
>
> The most dramatic and recurrent example of the United Nations exerting powers reserved by the United States Constitution is the de facto transfer of war powers from our government to the mechanism of the [*305] U.N. [32] Constitutional grant to Congress to declare war and to the President to wage that war [33] is thwarted when international organizations attempt to interject their views on when and where such combat is legitimate. For example, the U.N. Charter mandates that, "all Members . . . undertake to make available to the Security Council, *on its call* . . . armed forces, assistance, and facilities . . . ." [34] This provision of the charter usurps congressional power to declare war by allowing the Security Council to have direct influence and/or control over America's fighting forces and resources. [35] By allowing the U.N. to interpret when United States troops are to be made available on its own beckoning, the *unilateral* and *sovereign* power of the United States becomes diluted and weakened. It is into these muddy waters that the United States has been repeatedly pulled or led in the last years of the twentieth century, and into the beginning years of the twenty-first, with little or no long-term forethought to the consequences or bases for such action by the United States.

US leadership is unsustainable without a highly visible commitment to multilateralism- answers all your DA's

Lake, 10– Professor of Social Sciences, distinguished professor of political science at UC San Diego (David A., "Making America Safe for the World: Multilateralism and the Rehabilitation of US authority", http://dss.ucsd.edu/~dlake/documents/LakeMakingAmericaSafe.pdf

The safeguarding of US authority requires multilateralism that is broader and certainly deeper than in the 1990s—more like NATO than the ad hoc coalitions of the new world order. Indeed, absent the constraints exerted by competition with the Soviet Union, the institutional fetters through which the United States must bind its own hands will have to be even stronger than those in NATO. 47 The great paradox of contemporary international politics is that the unprecedented international power of the United States requires even more binding constraints on its policy is fit to preserve the authority that it has built over the last half-century and extend it to new areas of the globe.

The advanced military capabilities of the United States will make it a key actor in any such multilateral institution and will allow it to set the collective agenda. Since it is highly unlikely that anything will happen in the absence of US involvement, as in Bosnia where the Europeans dithered until the United States stepped to the fore, 48 Americans need not be overly concerned about "runaway" organizations or global mission creep. At the same time, if any organization is to be an effective restraint on the United States, other countries will have to make serious and integral contributions to the collective effort. Both sides to this new multilateral bargain will need to recognize and appreciate the benefits of a stable international order to their own security and prosperity and contribute to its success - 480 Making America Safe for the World. The United States will need to continue to play a disproportionate role in providing international order, even as it accepts new restraints on its freedom of action. Other countries, however, must also contribute to the provision of this political order so that they can provide a meaningful check on US authority.

Americans are likely to resist the idea of tying their hands more tightly in a new multilateral compact. After six decades, US leadership and its fruits— security, free trade, economic prosperity—have developed a taken-for-granted quality. It is hard for average Americans to tally the myriad benefits they receive from the country's position of authority, but it is relatively easy for them to see multilateral institutions constraining the country's freedom of action. Precisely because unipolarity makes coercion and unilateralism possible, and for some attractive, any constraints on US foreign policy may appear too high a price to bear. 49

But if the United States is to remain the leader of the free world and possibly beyond, it must make its authority safe for others. To sustain US authority over the long term, it must be embedded in new, more constraining multilateral institutions. Americans trust their government only because of its internal checks and balances. Although there may be disagreements on exactly where the appropriate scope of government authority ends, nearly all Americans agree that limited government is the best form of government. This same principle extends abroad. If the United States is to exercise authority over other states, and enjoy its fruits, that authority must be **checked and balanced** as well. The height of hubris is not that the United States might govern the world, at least in part. This is a fact of international politics. Rather, hubris arises in the belief that the virtue of its people and leaders will restrain the United States sufficiently such that other peoples will voluntarily cede a measure of their sovereignty to it. 50 Politicians and peoples may occasionally be saintly, but it would be folly to rely on this quality at home or abroad. Recognizing the universal need to restrain authority, the United States should, in its own self-interest, lead the way to a new world order.

Only **the counterplan solves hegemony- binding the US's authority is critical**

David A. **Lake**, UC San Diego June 10, **2009**, Making America Safe for the World: Multilateralism and the Rehabilitation of U.S. Authority, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1417667

Over the last century, the United States has built and sustained informal empires over states on the Caribbean littoral, spheres of exclusive political and economic influence over countries in South America, and after 1945 protectorates over key "allies" in Western Europe and Northeast Asia. In pursuit of a New World Order, the United States has in recent decades attempted to expand its authority over other states into Eastern Europe, with a measure of success, and the Middle East, which has been far more problematic. The authority wielded by the United States over its subordinates, despite occasional abuses, has been enormously beneficial. This order provides **security** both internally and externally and permits unprecedented **prosperity**. Americans, in turn, gain from writing the rules of that order and, especially, from turning possible rivals into reliable subordinates that largely comply with its rules. The key foreign policy task is not to diminish U.S. authority but to safeguard that authority and its preserve its benefits into the future. To secure the international order that has been so beneficial in the last century – and to succeed in **extending that order** to countries that do not yet enjoy its fruits – requires a new, more restraining, multilateral solution that binds the hands of the United States far more tightly than in the past. To rule legitimately requires tying the suzerain's hands.

2NC A2: It's Just Once

Submitting any major decision to the ICJ for compulsory jurisdiction is a major signal of support- the US has previously completely denied the ICJ's jurisdiction- totally reshapes the debate about international law's domestic relevance and they rule against the US's use of force, which makes it an extra big deal

And---refusal to be bound by the court's rulings on nukes will render it ineffective at enforcing international law

Kahn, Law—Yale, **99**

(31 N.Y.U. J. Int'l L. & Pol. 349, Winter/Spring)

The Court's interest in furthering legal interpretations that support these values is linked to its conception of itself as an international institution independent of the states that are responsible for its own origin and the selection of new judges. n68 Nevertheless, the Court as a political institution in a world of sovereign states cannot get too far ahead of a state's understanding of its own consent. Were it to do so, it would render itself politically irrelevant. The history of adjudication before the Court is filled with instances in which states simply refused to appear. n69 If states decline to listen, the Court faces [*373] the danger of **making its own voice the equivalent of another scholarly voice.** Indeed, scholars may become its primary audience. **The threat of irrelevance is particularly prominent in the nuclear weapons case**, in which none of the nuclear weapons states supported the General Assembly's decision to request an advisory opinion.

Doesn't answer our other net benefits---a single act of delegation is necessary to make the commitment credible and to prevent political backlash.

2NC A2: CP=Cheating

The counterplan is good:

a.) Tests unilateral versus multilateral solutions to conflict resolution- that's one of the core debates in political science since the formation of the League of Nations

b.)

2NC A2: Perm DB

Compulsory jurisdiction means that only the ICJ has the authority to rule on ____- simultaneously submitting the plan area to the Supreme Court would not grant the ICJ compulsory jurisdiction, it would retain US compulsory jurisdiction- doesn't solve either net benefit

Coleman, Asia-Pacific Centre for Military Law--University of Melbourne, **3**

(http://mjil.law.unimelb.edu.au/issues/archive/2003(1)/02Coleman.pdf)

Voluntary jurisdiction in contentious matters has been described as the ICJ's greatest weakness. In my view this is not an exaggeration, since in real terms the **Court's ability to function,** indeed its very existence, is **totally dependent upon the consent of states.** If not a single state granted consent, then, with the exception of delivering advisory opinions, the Court would not have a function.

Furthermore, not all states have given their consent, and there is nothing to prevent a state from withdrawing its consent after making the declaration. When these difficulties are combined with the use of reservations by states when accepting jurisdiction, the potential for non-appearance or non-participation by parties when the Court seeks to invoke its jurisdiction in accordance with art 36(2) is significant. Indeed, as noted by Janis, there were many incidents of non-appearance in cases involving the application of art 36(2) during the 1970s and 1980s (eg Iceland in the Fisheries Jurisdiction Cases, France in the Nuclear Tests Cases, Turkey in Aegean Sea Continental Shelf (Greece v Turkey) (Jurisdiction) and Iran in United States Diplomatic and Consular Staff in Tehran (US v Iran) (Order)). In highly political matters, non-appearance may be a tempting proposition for states that feel that they can achieve more advantageous outcomes through a purely political solution. The non-appearance of parties in contentious cases (as opposed to those cases where jurisdiction is granted by a compromis or special agreement) poses a difficult problem. Regardless of which action the Court takes—to proceed or not proceed — one party will be disadvantaged. This may raise concerns that justice has not been done in two ways. First, when a party fails to appear, it may allow that party 'to profit from their absence'. If the matter were not to proceed to judgment, then the claim of the party which did appear would be defeated not because of a deficiency in the merits of its claim, but because of the recalcitrance of the other party whose own claims may actually be insupportable. States could easily abuse this as a particularly useful tactic when the legal merits of their claims are dubious or weak at best, or when their national interest would not be served by having the matter adjudicated by the ICJ. Second, if the matter were to proceed to judgment, then the non-appearing party would be unable to counter any of the arguments presented or examine any of the witnesses, and would also be unable to present its claim. It could be argued that the disadvantages caused by non-appearance where the case proceeds to judgment are a concern only for the non-appearing party and are entirely self-inflicted. What non-appearance does, however, is raise a perception in the broader international community of the irrelevance of the ICJ in resolving international disputes. If it is perceived that a party is the victor simply by virtue of its appearance in the absence of the other party, rather than due to the strength of its claim, then this raises serious concerns about the validity of the Court's findings, **undermining the Court's credibility in the eyes of the international community. Credibility is important to all courts, given the problems of enforceability that it faces**.

Mootness--the icj wouldn't rule on the permutation---the unilateral enactment of the plan prior to the ruling means the court would rule that the issue is moot—prior nuclear testing cases prove

Amerasinghe, PhD and LLD-University of Cambridge and Fmr. UN Administrative Judge, **3**

(Jurisdiction of International Tribunals, P. 228-229)

Mootness or absence of object in adjudication **is another fundamental reason for a tribunals' not assuming jurisdiction in a particular case.** In both the Nuclear Tests Cases and the Northern Cameroons Case the ICJ held that it could not proceed with the merits of the case because the issues raised **were moot** and there was no purpose served by doing so. In the former two cases the claimants in effect requested the Court to find that the carrying out of the nuclear tests in the South Pacific Region giving rise to radioactive fall out was a violation of international law. After the filing of the applications the respondent by unilateral declaration undertook not to carry out atmospheric nuclear tests in the South Pacific Ocean. Even though in both cases only a declaratory judgment was sought, because the Court found that the **dispute had ceased to exist by the time it was ready to give its decision as a result of**

the unilateral declaration made by the respondent, so that the object of the claim had been achieved by other means, it decided that **no further judicial action was required.**

2NC A2: Perm---submit plan to icj and do the plan no matter what

1. it's intrinsic—it adds the element of doing the plan after submitting the case to the icj—this element of time is not in the counterplan. That's illegitimate because they can add elements to ensure that no counterplan competes.

2. it must be binding---only a genuine commitment to rulings can restore credibility to the icj

Tranel, JD-American University Law, **5**

(20 Am. U. Int'l L. Rev. 403)

While the United States has submitted to the jurisdiction of the ICJ for disputes arising under the Vienna Convention, n223 the United States has not incorporated the ICJ's authority in domestic procedures and law. n224 The tension between international law and [*452] domestic law with regard to the Vienna Convention right to consular notification demands recognition and the Avena decision obviates resolution of this tension. n225 The United States is under a legal obligation both to comply with its duties under the Vienna Convention and to comply with any ICJ decision interpreting the Vienna Convention. n226 As noted above, the United States has consented to the jurisdiction of the ICJ for disputes arising out of the Vienna Convention. n227 By way of submitting to the ICJ's jurisdiction, the United States has an obligation to comply with decisions like LaGrand and Avena that interpreted the Vienna Convention. n228 While the United States continues to violate international law, there is very little the international community may do in order to ensure U.S. compliance with its international obligations. n229 The method by which the United States implements the ICJ rulings is entirely up to the United States. n230 While no international stronghold will invade the United States and begin enforcing Vienna [*453] Convention rights, the methods by which the United States could choose to enforce Article 36 rights under the Vienna Convention are multitudinous. n231

B. Suggestions of Methods Through Which the United States Can Effectively and Efficiently Implement Avena as Binding Authority

1. Judicial Implementation U.S. Supreme Court reliance on Avena as controlling authority is the most effective way to incorporate the ICJ's ruling from Avena to U.S. domestic law. n232 Most commentators agree that the judicial system is the best solution for ensuring implementation of Vienna Convention obligations. n233 This solution remains stifled because lower courts deny defendants relief in suits regarding the Vienna Convention, thereby precluding those defendants from ever reaching the U.S. Supreme Court. n234 Thus, the more substantive issue is the [*454] question of whether lower courts can directly rely on ICJ decisions as binding authority absent a ruling by the U.S. Supreme Court. n235

a. U.S. Courts Should Rely on Avena to Find that There is a Remedy to the Right Established in LaGrand

Because the United States has consented to the jurisdiction of the ICJ for "disputes arising out of the interpretation or application of the Convention," n236 it has consensually bound itself to the rulings of the ICJ for disputes over the Convention. n237 Thus, since the ICJ issued a ruling on the merits of the LaGrand and Avena cases, these decisions should be controlling in U.S. courts. n238 Despite these obligations, U.S. courts have declined the opportunity to follow the LaGrand decision and instead have relied primarily on the U.S. Supreme Court decision from Breard. n239

[*455] Notably, the U.S. Supreme Court stated in Breard that the Vienna Convention "arguably confers on an individual the right to consular assistance following arrest." n240 However, the ICJ unequivocally held in LaGrand that Article 36(1) of the Vienna Convention "creates individual rights, which ... may be invoked in this Court by the national State of the detained person." n241 If U.S. courts were treating the ICJ decision from LaGrand as binding precedent, then under the doctrine of stare decisis they could not deny that the Vienna Convention creates individual rights. n242 By relying on Supreme Court precedent rather than ICJ precedent, however, U.S. courts have held that the Vienna Convention does not create individually enforceable rights. n243

[*456] Nonetheless, the courts should rule that the Convention creates individual rights. n244 There is a chasm between what U.S. courts consider to be the rule of individual rights under treaties (treaties generally do not create individually enforceable rights) n245 and what international courts believe to be the rule of individual rights under treaties (that treaties do create individual rights). n246 One could go so far as to infer that U.S. courts may never conclude that an ICJ decision interpreting the Vienna Convention is binding authority n247 given that they have declined to decide the issue of whether the Vienna Convention creates individual rights, even after LaGrand. n248The Avena decision, however, facilitates U.S. judicial implementation of Vienna Convention rights because it provides for a remedy that U.S. courts have already stated is appropriate in the case of a violation of Article 36. n249 U.S. federal courts have used a "prejudice" standard to conclude, without deciding the individual rights issue, that a defendant must show prejudice resulting from the denial of his Vienna Convention rights in order to receive a remedy. n250 By implementing the Avena remedy, courts will effectively acknowledge an individual right to consular access under [*457] the Vienna Convention. n251 Creating an individual right to consular access is not inconsistent with the Constitution. n252 Providing for an individual right in U.S. courts would establish a right on par with a federal or statutory right. n253 If U.S. courts apply the remedy established in Avena, they would comply both with the Avena decision and with the LaGrand decision. n254

b. U.S. Courts Should Implement the Avena Decision by Granting Meaningful Review and Reconsideration Through Vacating the Death Penalties

In the case where a court determines that there has been an Article 36 violation that resulted in actual prejudice, the ICJ stated in Avena that "review and reconsideration should be both of the sentence and conviction." n255 Review and reconsideration in the form of vacating [*458] the death sentences is the remedy that concretely reconciles the obligation of review and reconsideration from LaGrand with the more refined remedy presented in Avena. n256 The invocation of the death penalty is both a violation of one's individual rights under the Vienna Convention and is a violation of international due process rights. n257 If U.S. courts vacated the death sentences, that decision would comply more directly with international law in this area given that international law generally disfavors the use of the death penalty. n258

Calling for vacatur of the death sentences would further allow U.S. domestic courts to reassess the appropriateness of the death penalty without needing to negotiate new trials, evidence, or the guilt of the defendants. n259 Furthermore, vacating the death sentences would [*459] require only a re-sentencing hearing, which reduces the burden on U.S. courts and does not require them to conduct new trials for each defendant. n260 In some cases, U.S. courts may find that the right to speak to a consulate would have made a significant difference in the case and therefore would merit further reconsideration or even a retrial. n261 Judges would have the discretion to impose life sentences, however, if a particularly egregious case required it. n262

Such a result would not be disproportionate to the "limited character of the rights in issue," n263 but would address the fact that the Mexican nationals are still alive and therefore merit some form of practical relief. n264 An appropriate and meaningful interpretation of review and reconsideration, with an eye to determine whether actual prejudice occurred, would compel U.S. courts to grant vacatur of the sentences to the death penalty. n26 [*460] c. Violations Are Likely to Cease as U.S. Jurisprudence Relies More Heavily on International Law

The United States has already interpreted international law as binding on domestic courts. n266 For example, as early as 1900 the U.S. Supreme Court acknowledged that "international law is part of our law." n267 The president also has the authority to make a binding agreement with a foreign state even when the agreement requires a change in state law. n268 The United States cannot avoid its international obligations by asserting its domestic law because international law can require domestic law to change. n269

As U.S. courts look more frequently upon decisions from international jurisdictions when making their decisions, n270 it becomes more likely that the judicial system will respond to the need to enforce ICJ decisions in the courts. n271 Logically, the courts' adoption of international norms is the most critical factor towards U.S. [*461] adoption of ICJ rulings and fulfillment of Vienna Convention obligations. n272

Evidence supports the suggestion that federal courts implement international law in their decisions. n273 The U.S. Supreme Court has also shown a willingness to look at international law in some of its more recent opinions. n274 Justices Stevens and Breyer have further expressed an interest in complying with an ICJ decision in the Avena case. n275 Some lower courts held that the Vienna Convention is enforceable, even without controlling Supreme Court case law to guide the lower courts' holdings. n276 Thus, hope exists that U.S. courts will independently incorporate the ICJ decisions into their rulings. n277

2. Non-Judicial Implementation of Avena to Ensure the United States' Cessation of Article 36 Violations

a. ABA Guidelines are a Workable Enforcement Mechanism for the Vienna Convention Rights

One particularly compelling idea to ensure cessation of Article 36 violations has arisen through the ABA's adaptation of revised Guidelines for the Appointment and Performance of Defense [*462] Counsel in Death Penalty Cases. n278 Importantly, these Guidelines are important because they refer specifically to the obligation to apply international law on the domestic court level in the United States. n279 The Guidelines require counsel "at every stage of the case [to] make appropriate efforts to determine whether any foreign country might consider the client to be one of its nationals;" defense counsel would also have an affirmative duty to inform his or her client immediately of the right to speak to the appropriate consulate and to gain the client's consent to speak to the consulate. n280

Placing the burden on defense counsel to inform the client of his right to speak to the relevant consulate would relieve many of the problems that domestic courts have with enforcement of international norms. n281 It would also relieve problems of timing because once the defendant receives counsel, under the ABA Guidelines, he also would have information about his right to consular notification. n282

Furthermore, this approach would convert a violation of Article 36 into an issue of adequate counsel, and courts have been positively inclined to consider Article 36 violations in this context. n283 The placement of the duty to inform a defendant of his consular access [*463] rights on counsel would also allow the defendant to bring a claim of inadequate counsel at later stages of judicial proceedings and he would not be barred from bringing a claim because of the procedural default rule. n284

CONCLUSION

This case note has observed that ICJ decisions are binding authority in the United States when they interpret conflicts arising out of the Vienna Convention on Consular Relations. n285 The United States has recognized the importance of the Vienna Convention n286 and it cannot circumvent its obligation to implement this treaty. n287 With the ruling of the Avena case, the United States gains ever more responsibility to fulfill its obligations under the Vienna Convention. n288

The United States must carefully consider its role in the international legal system and how it will effectively and successfully implement international law on the domestic plane. n289 **If the United States wishes to participate in and benefit from international law, then it must be willing to recognize this body of law as cogent, binding authority**. n290 An excellent beginning would be . [*464] to acknowledge the gravity of the Avena decision and implement the ruling in domestic courts. n291

And the permutation can’t avoid this---their intention to do the plan no matter what would be leaked

Newsom, Professor of diplomacy at UVA, **92**

[*The Allies and Arms Control*]

*the signal leak. Information is sometimes given out unofficially in order to warn another country of a possible reaction to policies or deployments. Secretary of State Kissinger, according to several sources, anonymously briefed reporters on reports that Cuba was building a base for Russian submarines at Cienfuegos and subsequently blamed the Pentagon for the leak. His purpose, according to Seymour Hersh in *The Price of Power*, was to send signals to both the Cubans and the Russians that the United States would not tolerate this intrusion of Soviet military power in the Caribbean.

This is true in the context of obama

Hoover 9

(J. Nicholas Hoover 9, InformationWeek, June 3, 2009)

A highly sensitive document that details some of the nation's nuclear secrets mistakenly showed up on a government Web site. On May 5, President Obama sent a draft list of nuclear sites that the United States intended to declare to the International Atomic Energy Agency to Congress, noting in his transmittal letter that the document was "Sensitive" and that the document was exempt from disclosure. A little more than two weeks later, that very document appeared online. The 267-page document, a draft of "The List of Sites, Locations, Facilities, and Activities Declared to the International Atomic Energy Agency," contains addresses and descriptions of civilian nuclear sites around the country, such as a Westinghouse site in Pittsburgh used for the enrichment of nuclear material and details on some programs at places like Oak Ridge National Laboratory. It also contains maps of some of the more sprawling nuclear locations, and the square footage of many. Though it is unclassified and doesn't detail weapons programs, the document contains information the IAEA labels "Highly Confidential Safeguards Sensitive," words that show up on every page -- except maps -- of the disclosure document itself. In a speech about cybersecurity last week, President Obama noted that the United States was "renewing American leadership to confront unconventional challenges" that include "nuclear proliferation." The disclosure, first noted by the Federation of American Scientists' Secrecy News newsletter, appears to have been

put into motion on May 6, but it's unclear just how. A House of Representatives transmittal letter said that the president's letter and the attached documents were "referred to the Committee on Foreign Affairs and ordered to be printed." The communications director for the House Committee on Foreign Affairs wasn't immediately available for comment but told The New York Times that the committee hadn't published or controlled the publication of the document. A GPO spokesman noted that the GPO publishes about 160 House documents each session, adding that this document had been received "in the normal process and produced under routine operating procedures." The document has since been permanently removed from the Government Printing Office Web site, where it had been published, upon consultation with the White House and Congress. "Somebody screwed up," Federation of American Scientists' Steven Aftergood, an advocate of open government who described the document's disclosure as a "net plus" from a public policy standpoint, said in an e-mail. "When the president declares a document to be sensitive on May 5, it is not supposed to show up on a government Web site on May 22. But that's what happened." This isn't anywhere near the first time the government has incautiously published sensitive documents and represents a classic example of why insider threats are just as dangerous as those from outsiders. Several Web sites, including Cryptome, FAS Secrecy News, and Wikileaks, are dedicated to finding and publishing such documents.

3. the permutation severs topical action---it violates 'substantial' which requires immediate action

Words and Phrases 64

(40W&P 759)

The words" outward, open, actual, visible, substantial, and exclusive," in connection with a change of possession, mean substantially the same thing. They mean **not concealed**; not hidden; exposed to view; free from concealment, dissimulation, reserve, or disguise; in full existence; denoting that which not merely can be, but is opposed to potential, apparent, constructive, and imaginary; veritable; genuine; certain: absolute**: real at present time**, as a matter of fact, not merely nominal; opposed to fonn; actually existing; true; not including, admitting, or pertaining to any others; undivided; sole; opposed to inclusive.

Severing topical action is bad because it negates the resolution and allows the aff to selectively defend topical requirements to avoid counterplans grounded in the resolution that are core negative ground.

4. Tacit consent---The credibility of international law depends on explicit consent of states.

Kahn, Law—Yale, **99**

(31 N.Y.U. J. Int'l L. & Pol. 349, Winter/Spring)

There is an immediate problem with this argument: The nuclear-weapons states do not themselves believe that they have consented to such a prohibition. Their practice for decades has indicated that they perceive no such legal contradiction in their behavior. Thus, the analogy to the volunteer army does not carry us very far. The soldier who does not consent presently and does not believe that he ever expressed his consent looks more like a conscript than a volunteer. At most [*408] we could offer a theory of tacit consent, by which we could seek to prove that by consenting to some other proposition, he also consented to military service without fully realizing it. Tacit consent arguments are always weak, and this is the weakest version of such arguments. n164 As the demands on the consenter become

greater, **more - not less - should be demanded of the clarity and explicitness of consent**. This is true at least as long as consent is the normative ground of the obligation.

and---This issue is critical---the source of consent is more important to legitimacy than the actual implementation

Kahn, Law—Yale, **99**

(31 N.Y.U. J. Int'l L. & Pol. 349, Winter/Spring)

One approach understands international law as the product of consensual actions by states. On this view, the legitimate authority of international law arise out of the consent of the states that bear the legal obligation. Accordingly, to understand the content of the law, we need to trace the character and implications of state consent. I will generally call this the perspective of "legitimacy," because its primary concern is with the **source of the claim of legal obligation**, **rather than with the justice of those obligations**. Interpretation of law, on this view, must link the content of law to its origin in state consent. Legal claims that extend beyond that consent are illegitimate. This is not to suggest that consent must be interpreted narrowly; it is only to identify the conceptual parameters of the interpretive debate within this approach to legal obligation. n53

2NC A2: Perm Do CP

This isn't a consult counterplan

The counterplan is textually competitive---it doesn't include the unilateral reduction that the plan mandates---it simply submits our status quo policy to the icj

2NC A2: Perm "Consult on Other Issue"

Perm is functionally intrinsic- adds a context outside of the resolution- the counterplan doesn't consult on other issues- it substitute's the plan's [Congressional/Judicial] restriction for an international restriction- directly tests the relevance of the topic- allowing intrinsicness allows them to add any scenario to the counterplan that solves the net benefit

Linear net benefit to submitting more issues for ICJ arbitration- means there is still a reason to prefer to counterplan over the perm, since the aff allows the US to maintain

Doesn't solve either net benefit- only binding the US on a major issue of sovereignty solves- that means use of force- proves the plan is a core issue- that's (Lake or Murphy)

2NC A2: Rollback

Delegation best way to avoid rollback by future administrations

Alter, Political Science-Northwestern, **3**

(Journal of Asian and Pacific Studies, Vol. 25, P. 51-74)

1) States delegate to increase the credibility of a commitment**.** The number one given reason to delegate is to **make a commitment more credible**. For example, Giandomenico Majone argues that governments agree to transfer to independent central banks the power to set interest rates, and to courts the power interpret international rules, because businesses believe that central banks and courts are less likely to be swayed by electoral imperatives, and thus governments will be forced to follow through on their promises (Majone 2001). Andrew Moravcsik makes a similar claim arguing that Central European countries signed on to the European Convention of Human Rights and agreed to delegate interpretation to the European Court of Human Rights, to demonstrate to their citizens the government's commitment to democracy (Moravcsik 2000). Lloyd Gruber sees another attraction to delegating to commit; ruling parties may sign on to an international agreement and intentionally lock in their commitment so that subsequent leaders cannot back away (Gruber 2000, 81-88). It is not clear in Majone or Moravcsik's arguments if states mainly want to imply that a commitment is more credible, or if delegation in fact impedes governments' ability to walk away from commitments. I will separate the idea of a signal from reality in argument seven—take the first argument as meaning that states delegate enforcement authority to international courts because **when there is an international court to enforce an agreement it is harder for states to walk away from their commitments.**

2NC At: Hurts Negotiations

International court ruling best preserves negotiating credibility

Downs, Professor of Politics-NYU, **9**

http://ejil.oxfordjournals.org/cgi/content/full/20/1/59

Faced with the prospect that their judicial space would continue to shrink as the result of an ever greater proportion of domestic regulatory policy being determined by international institutions and increased competition from international tribunals, it would have been surprising if the national courts had not felt a sense of jeopardy regarding their ability to fulfill their traditional constitutional role. However, they also possessed a variety of resources that they could potentially use to address these potential threats. Better insulated than their political branches from both domestic and foreign special-interest pressure, the courts could pressurize their governments to seek legislative approval of their actions, or block certain policies as incompatible with constitutional and international legal texts. By creating clearer boundaries which placed limits on executive unilateralism in the area of foreign policy, they could better safeguard domestic democratic processes and reinforce their own autonomy. Moreover, they had reason to believe that these stricter demands on their executive would not necessarily jeopardize the latter's bargaining position vis-à-vis its negotiating partners but might actually **provide credibility to the government's reluctance to succumb to external pressures demanding compliance with certain policies.** Pressure exerted on a certain government by its disapproving court can, in fact, result in greater **bargaining leeway for that government**, as it uses that pressure as an explanation of its inability to bow to the pressure of the foreign negotiators.14

2NC A2 Accountability

Icj justices are accountable

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

Conversely, the costs of independent tribunals are far less than they may at first appear. Just as in the domestic setting, judicial independence does not mean that judges face no constraints on their behavior. Judges in the United States, for example, are appointed for life at a fixed salary. But they are influenced by the views of their brethren and of the bar, by the desire to preserve their political legitimacy as nonmajoritarian institutions, by strong institutionalized professional norms, and by their hope of personal career advancement or achievement of a particular judicial legacy. As we demonstrate below, "independent" international judges face an even greater host of structural, political, and discursive constraints, many of which can be manipulated by states themselves. The result is an international legal system in which independent tribunals are unlikely to overstep their bounds and are far more likely to advance states' long-term interests.

2NC A2: Posner and Yoo

Posner and yoo's arguments are flawed---methodological errors and bias

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

To their credit, Posner and Yoo test their claims against a wealth of empirical data regarding the organizational structures and actual operations of international courts and tribunals. But the data the authors use as evidence to support their theory are flawed. To begin with, they fail to accurately describe the empirical landscape, omitting dozens of independent tribunals and quasi-judicial review bodies from their analysis and diminishing the universe of potential observations relevant to testing their theory. Second, and more significantly, they commit selection bias by analyzing a subset of tribunals in a nonrandom manner. Finally, they engage in omitted variable bias by failing to control for judicial design features and political and discursive constraints that affect the correlation between their explanatory variable (tribunal (in)dependence) and their dependent variable (tribunal effectiveness).33 These methodological errors undermine their analysis and, ultimately, their conclusions.

2NC A2 ICJ DA's

All of their disads are not unique---huge number of international court cases now

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

Within the past decade, the world has witnessed an **explosion of international adjudication**. This explosion can be documented in at least three distinct ways. First, states are creating new international courts and tribunals which exhibit many formal attributes of independence. Second, states are recognizing the jurisdiction of both new and existing independent tribunals in increasing numbers. Third, several highly independent tribunals are actively used, a fact demonstrated by their swelling dockets and the large number of decisions they issue. These three trends reveal a strikingly different empirical landscape than the one portrayed in *Judicial Independence in International Tribunals*. These trends undermine the authors' hypothesis. If independent tribunals were ineffective in the ways that Posner and Yoo assert, we would expect to observe a decline in their number, in their caseloads, and in states' willingness to submit themselves to the tribunals' jurisdiction. Yet, as we demonstrate below, the revealed preferences of states in all three areas is strikingly to the contrary. This evidence presents an insoluble problem for the theory of dependence that Posner and Yoo offer. Either states are acting highly irrationally—an explanation inconsistent with the rational choice framework the authors employ—or independent tribunals are serving states' interests in ways that their model fails to capture.

International tribunals experiencing high caseloads now

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

3. Rising Caseloads of International Courts and Tribunals Independent international tribunals have also witnessed a corresponding increase in their caseloads. The rise in judicial activity has been most striking for the ECHR and ECJ, but is true as well for tribunals as diverse as the IACHR and the ICJ. Aggregating the output of all independent tribunals reveals a similar trend. According to a recent study by Karen Alter based on cases decided through 2002, "more than 80% of the total international judicial activity (14,946 out of 18,277 cases heard by international tribunals) occurred in the last 13 years alone." These figures are particularly striking given that the dockets of international tribunals often take years or even decades to reach anything close to full capacity.

2NC A2: Recognizing jursidiction of intl courts bad

not unique---states are increasingly recognizing the jurisdiction of international legal bodies

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

Posner and Yoo also fail to notice the marked increase in state recognition of the jurisdiction of both new and existing independent courts and tribunals. Such recognition takes two principal forms. First, states are increasingly ratifying treaties that require dispute resolution in international courts. Rising ratification rates are especially pronounced in the case of the WTO Agreement, the ICC statute, and regional tribunals. Second, states are recognizing the jurisdiction of independent courts and tribunals even where the decision to do so is optional. This latter trend is especially pronounced for human rights tribunals, and to a lesser degree, for tribunals whose competence covers trade and economic law — areas in which international jurists possess broad authority to review laws and practices lying at the core of national sovereignty. Admittedly, not all tribunals can boast of such expansions. The compulsory jurisdiction of the ICJ and ITLOS, for example, has not been widely accepted. As elaborated in Part I above, domestic politics—and in particular the political pressures generated by tribunals to which private parties have direct or indirect access—may explain some of these discrepancies. Regardless, a clear trend is evident toward greater state recognition of independent tribunals, an empirical observation that undermines a central premise of *Judicial Independence in International Tribunals*.

***ICJ Cred NB

***1NC Shell

Solves – ICJ will rule against illegal surveillance– ruling against the US boosts credibility

Murphy 8 - Professor of Law, George Washington University

(Sean, "The United States and the International Court of Justice: Coping with Antinomies," in THE UNITED STATES AND INTERNATIONAL COURTS AND TRIBUNALS)

The formal means for mediating antimonies have been largely unchanged since the inception of the Court: the Court has jurisdiction over many disputes, but that jurisdiction is circumscribed (as recognized in Yugoslavia's Legality of Use of Force cases); the judges reflect the global community, but also the major powers; etc. Yet, the Court may have entered a phase where it is more likely to resist the constraints on its power contained within those formal means and less likely to attempt to reconcile antinomies. Although only states may appear before the Court, the Court now finds that a non-state entity (Palestine) may do so if a dispute is submitted in the guise of an advisory opinion. While its jurisdiction is circumscribed, the Court is comfortable engaging in an **extended review** of the legality of the use of military force by the United States based on a treaty that the Court has found was not violated. While the Vienna Convention on Consular Relations, and other relevant treaties, contain no provisions regarding the effect of violations of the Convention upon national court proceedings, the Court sees **no difficulty** in determining that U.S. courts must engage in further judicial review of criminal convictions and sentences, trumping local procedural rules. One gets the impression that the Court —fifty years after its creation— is tired of some of the formal constraints that applied earlier in its life and —looking around at the robustness of dispute resolution in other international fora— is **ready to expand** the reach of its power. Moreover, it may be that some of the informal means for mediating antimonies have been lost in the past twenty years. While the Court's concern with its reputation and legitimacy in the first thirty years of its existence served as important political constraint in the Court's relationship with all states, including the United States, over the past twenty years that same concern has lead to several clashes with the United States foremost, but also the UK and France. **Having stood** up to the United States in the Nicaragua case, the Court **became a hero to the states of the developing world**, and ushered in a period of increased activity on its docket. Of the cases filed before the International Court since its inception, approximately forty percent were filed in the last fifteen years.167 Thus, while from 1947 to 1989, the Court received on its docket approximately two cases per year, after 1990 the Court received more than three cases per year. The U.S. withdrawal from the Court's compulsory jurisdiction has far from crippled the Court; arguably, it has enhanced the Court's stature as a place of authority in interstate relations unbeholden to the major powers. For the Court, the lesson may be not to tread lightly with respect to the United States but, rather, to tread heavily unless doing so would be viewed generally as bias. In its foreign policies, contemporary America appears to be going a different route than much of the world, even its former close allies in Europe. The consequence is that **the judges of the ICJ now reflect predominantly the views of states with whom the United States often disagrees**. Perhaps this reflects success in the prescription for the Court made by Richard Falk in his 1986 book, Reviving the World Court.168 Falk argued for the Court to turn away from what he viewed as Anglo-American and West European ways of thinking, and move more toward reflecting the

viewpoints associated with non-Western legal traditions (including, at that time, Marxist outlooks on law). Arguably, this is now what has happened, which has strengthened the Court's position among most states of the world, but seriously alienated the United States. The antinomies identified in Part II are unlikely to be resolved through the further development of formal or informal techniques for mediation. While the United States is not happy with the decisions being rendered by the Court, there is no support in the global community for altering the formal mechanisms by which the Court operates. If the United States saw concrete benefits in being more closely associated with the Court, it might look for ways to improve relationships, but for the world's premier superpower the benefits appear slim while the costs appear quite high. Consequently, the United States may take steps to further remove itself from the reach of the ICJ's jurisdiction, through terminating some or all of the outstanding treaties that provide for the Court's jurisdiction. In the near term, U.S. policymakers will seek to avoid any involvement in matters before the ICJ, while the Court may well welcome opportunities to speak to the legality of U.S. actions.

ICJ credibility solves Asian territorial disputes and leads to Asian regionalism

Strachan 9 – Research Intern, IPCS, New Delhi

(Anna Louise, "Resolving Southeast Asian Territorial Disputes: A Role for the ICJ," http://www.ipcs.org/pdf_file/issue/IB133-SEARP-AnnaICJ_(Read-Only).pdf)

Southeast Asia is currently embroiled in a number ¶ of territorial disputes, the resolution of which ¶ would greatly increase progress towards regional ¶ integration. This essay argues that the ICJ has the ¶ potential to play a **much greater role** in resolving ¶ these disputes and that action should be taken to ¶ **increase the court's credibility** among Southeast ¶ Asian nations. It is important to note that China is ¶ involved in a number of territorial disputes with ¶ countries in Southeast Asia. The Spratly Islands is ¶ the most notable of these, although there are also ¶ issues relating to the land borders between China ¶ and Vietnam and China and Laos. ¶ ROLE OF THE ICJ: A CRITIQUE ¶ In 2002, sovereignty over both Pulau Ligitan and ¶ Pulau Sipadan was awarded to Malaysia by the ¶ ICJ. The dispute over the territories was brought ¶ before the ICJ in 1998 by the governments of both ¶ parties to the dispute. However, the ICJ did not ¶ determine the maritime boundaries between ¶ Malaysia and Indonesia in the area around the two ¶ islands. As a result one could argue that the dispute ¶ has not been settled completely. It is important to ¶ note that the sole reason for this was that the ICJ ¶ was not requested to resolve that particular issue by ¶ the parties involved in the dispute. ¶ In May 2008, sovereignty over Pedra Branca was ¶ awarded to Singapore, Middle Rock was awarded ¶ to Malaysia and South Ledge was split between ¶ both countries according to their territorial waters. ¶ Both Malaysia and Singapore accepted the ICJ's ¶ ruling, with the Singaporean Deputy Prime Minister ¶ S. Jayakumar stating that Singapore was pleased ¶ with the judgment and the Malaysian Foreign ¶ Minister Rais Yatim describing the outcome as a ¶ "win-win" judgment. This was to be expected as the ¶ two countries had jointly submitted the request for ¶ the ICJ to resolve the dispute in 2003. It is however ¶ important to note that despite this ruling, ¶ outstanding issues remain. Singapore and Malaysia ¶ have yet to decide how the territorial waters ¶ around Pedra Branca and Middle Rocks will be ¶ delimited. A joint technical committee will be ¶ responsible for this. ¶ In both the cases mentioned above, the ICJ has¶ only resolved half the issue. This is certainly a step ¶ in the right direction, but years of negotiation ¶ remain to fully resolve the disputes, even after the ¶ outcome of the lengthy ICJ hearings. It is however ¶ important to note that the ICJ fulfilled its remit in ¶ both the aforementioned cases as it was not ¶ asked to determine maritime boundaries in either ¶ case. The time-consuming process of starting fresh ¶ negotiations after the ICJ has presented its ruling ¶ does however suggest that alternative means of ¶ conflict resolution, preferably in the form of ¶ bilateral negotiations, may be more effective in ¶ resolving territorial disputes than referring cases to ¶ the ICJ. ¶ In 2003, Singapore and Malaysia also referred a ¶ territorial dispute to the International Tribunal for ¶ the Law of the Sea (ITLOS) in Hamburg for ¶ arbitration. The dispute related to Singapore's land ¶ reclamation projects which Malaysia alleged ¶ encroached on Malaysian territorial waters. Once ¶ again the Tribunal, as arbitrator, only played a ¶ partial role in the resolution of the conflict. Several ¶ rounds of negotiations took place before the ¶ dispute was finally resolved by the signing of the ¶ Settlement Agreement on 26 April 2005. ¶ The majority of territorial disputes in Southeast Asia ¶ have not been resolved this way, confirming that ¶ for the majority of nations in the region, the ICJ ¶ and other international courts like the ITLOS remain ¶ something of a last resort. Bilateral dispute ¶ resolution is more common. Brunei and Malaysia, ¶ for example, reached agreements to resolve a ¶ number of territorial disputes regarding both land ¶ and sea boundaries in August 2008. ¶ II ¶ UNRESOLVED DISPUTES ¶ The Preah Vihear Temple dispute between ¶ Thailand and Cambodia has shown signs of ¶ **escalation** despite a period of calm since the ¶ latter half of 2008. On 19 September 2009, a mob¶ raised by the People's Alliance for Democracy ¶ (PAD) clashed with riot police and local villagers ¶ who were blocking their way to the temple, on the ¶ Cambodian side of the Thai-Cambodian border. ¶ The conflict was initially thought to have been ¶ resolved in 1962, when the temple was awarded ¶ to Cambodia by the ICJ. However the problem ¶ with the 1962 ruling was that much of the territory ¶ surrounding the temple remained a part of ¶ Thailand. The way in which the territory was ¶ divided has arguably facilitated the recent rise in ¶ hostilities between the two parties to the dispute. ¶ The territorial dispute over Sabah also remains ¶ unresolved. The Philippines claims Sabah on the ¶ basis that all land on the Northeastern part of ¶ Borneo was once subject to the Sultanate of Sulu, ¶ which is part of the Philippines. The Philippines first ¶ staked their claim to the territory in 1962, when the ¶ Malaysian Federation was being formed. Bilateral ¶ relations between Malaysia and the Philippines ¶ were restored in 1969, but the Philippines has yet ¶ to officially renounce its claim to Sabah. Bilateral ¶ relations between the two countries have ¶ improved dramatically in recent years and it is ¶ hoped that the Philippines' dormant claim to the ¶ territory will eventually be renounced completely. ¶ According to the 2008 issue of the Heidelberg ¶ Conflict Barometer, there are outstanding ¶ territorial disputes between Cambodia and ¶ Vietnam, Singapore and Malaysia, and Thailand ¶ and Myanmar. Other sources list many more ¶ regional territorial disputes. According to Amer, ¶ Vietnam alone was embroiled in five different ¶ territorial disputes with other Southeast Asian ¶ nations in 2005. These include disputes with ¶ Cambodia,

Thailand, Malaysia, the Philippines and ¶ Brunei. Differences in dispute classification are one ¶ of the factors responsible for this data diversity. ¶ Regardless of the exact figures there can be no ¶ doubt that a **significant number** of territorial ¶ disputes in Southeast Asia remain unresolved. ¶ One of the reasons behind the plethora of ¶ territorial disputes in Southeast Asia relates to the ¶ fact that land borders have yet to be ¶ demarcated in many parts of the region. ¶ Cambodia and Laos have taken steps in this ¶ regard and Thailand has suggested that it is ¶ interested in taking steps to demarcate its border ¶ with Cambodia in order to prevent an escalation ¶ in hostilities between the two countries. Indonesia ¶ and Timor-Leste also took steps to demarcate their ¶ joint border in 2004. All these initiatives are a step ¶ towards eliminating territorial disputes within the ¶ region.

Senkaku conflict escalates – extinction

Khan 10 – Financial Express

(Maswood, September 22, "An islet straining China and Japan" http://www.thefinancialexpress-bd.com/more.php?news_id=112447&date=2010-09-22)

ONE thing leads to another. Tensions between neighbours flare up at the **slightest provocation** mostly on a trivial issue sparking first a regional conflict leading ultimately **to a World War**. Such is the history of the First World War and the Second World War. The explosives that had blasted during the First World War had been long in the stockpiling. But the spark that detonated the first explosive of the First World War was the assassination of Archduke Franz Ferdinand, heir to the Austro-Hungarian throne, in Sarajevo on 28 June 1914. A six-year long Second World War was brewing up when Adolf Hitler was planning to grab more land, especially in the east, to expand Germany according to the Nazi policy of lebensraum. But the spark of the Second World War was ignited on the night of August 31, 1939, when Nazis took an unknown prisoner from one of their concentration camps, dressed him in a Polish uniform, took him to the town of Gleiwitz (on the border of Poland and Germany), and then shot him. The staged scene with the dead prisoner dressed in a Polish uniform was made to appear as a Polish attack against a German radio station. Hitler used the staged attack as the excuse to invade Poland that started the full-scale World War II. With bitter and horrific experiences of the two World Wars all nations and superpowers are extraordinarily circumspect in dealing with tussles among rivals to make sure that a small conflict does not flare into a global conflagration leading to a World War because a Third World War this time must result in "Mutual Assured Destruction", a doctrine known by its most suitable acronym MAD. "Mutual Assured Destruction" is a policy in which a full-scale use of nuclear weapons by two opposing sides would effectively result in the destruction of both the attacker and the defender. The necessity of a conventional World War however seems to have been obviated by a new strategy that contains a regional war from being flared into a World War but serves the purpose of a World War---the purpose of selling arms and ammunitions, flexing muscles of power and establishing economic and military supremacy. Such wars, sometimes in the name of peacekeeping, sometimes for ensuring energy security and at times on the pretext of ousting a terrorist, are continually being waged here and there at different strategic locations in the world---the latest one being in Iraq for fear of Saddam Hussein possessing 'weapons of mass destructions' (WMD) and the ongoing one in Afghanistan for vanishing Osama bin Laden, the Al-Qaeda leader, though both the fear of Saddam possessing WMD or the trace of Osama bin Laden in Afghanistan have been proven dismally false. America is still "Number One" superpower in the world---both militarily and economically. China is also one of the superpowers in terms of military and economic strength though the country still claims itself as a developing country considering a low per capita income on the law of average for its 1.3 billion people. After their defeat in the Second World War Japan is no more a military power but till the other day it was the second economic superpower before the country was humbled by China which is now the second strongest economy in the world and is poised to become "Number One" in a matter of years. Anti-Japanese sentiment in China is historically very old and still raw. A defeat of Japan at the hands of China in the economic front must have bolstered the Chinese who had suffered many military defeats at the hands of Japan and the defeat must have humiliated Japan which used to boast about many of their miracles that reshaped the behavior and strategy of modern global business. Now a new dispute has cropped up which may re-ignite anti-Japanese sentiment in China and which may turn out to be an ominous spark to ignite explosives that have been stockpiled in the minds of the Chinese since their military defeat at the hands of the Japanese about eighty years back. A row between China and Japan erupted since September 7th, when the Japanese authorities arrested the crew of a Chinese fishing boat which Japan claimed had rammed into one or two Japanese patrol boats that were attempting to shoo the fishing vessel away. The row has become emotive in China as Japanese authorities detained the fishing boat's captain though the rest of the crew was released. The row would not have been so serious had the ramming not taken place near an islet Japan named Senkaku and China Diaoyu---an uninhabitable islet that both countries claim as their own and regard as important not only as a marker for their wider territorial claims but also for its mining potentials as the small mass of land is perched on the oil-rich East China Sea. It is not yet clear why and how the ramming took place and why Japan has still been detaining the captain of the fishing vessel in spite of China's repeated calls for his release. Was the ramming a deliberate attempt by a Chinese citizen to flaunt his country's newly achieved status of second economic superpower? Was the detention of the captain of the fishing vessel a semblance of revenge Japan took to assuage pains of their recent defeat at the hands of China in the economic race? Was the captain of the fishing vessel drunk? Or, was the whole incident something called "staged"? China has suspended all bilateral talks with Japan. Japan however has called for calm in the wake of China's apparent decision to suspend top-level ties. The incident has also sparked resentment among the Chinese public, which still has strong feelings about atrocities committed by Japanese forces when they occupied swathes of China before and during the Second World War. Demonstrations in Beijing, diatribes on the internet and fulminations in some Chinese newspapers over the incident with anti-Japan chants, talks and banners mysteriously coincided with a politically sensitive anniversary of an incident occurred about eighty years back on September 18. It was on 18 September in 1931 when an incident called "Mukden Incident" took place that led to the Japanese occupation of China's northeast and eventually the invasion and conquest of much of China. The "Mukden Incident" was an early event in the Second Sino-Japanese War. Somewhat similar to 9/11 attack in 2001 in New York, on 9/18 in 1931, near Mukden (now Shenyang) in southern Manchuria, a section of railroad owned by Japan's South Manchuria Railway was dynamited as an act of sabotage. While the responsibility for this act of sabotage remains a subject of controversy, the prevailing view is that Japanese militarists staged the explosion in order to provide a pretext for war. One thing leads to another. If the new row between China and Japan is allowed to simmer for long a war in the pacific, if not a

war engulfing the whole world, may be in the offing---this time China showing its muscle to Japan the way America showed its muscle to Iraq.

2NC A2: Perm DB- ICJ Cred

Binding opinions needed to restore support for the icj

Vachon, JD-Denver, **98**

(26 Denv. J. Int'l L. & Pol'y 691, Summer)

Countries have been moving towards disarmament and denuclearization as part of the nation-states' search for a national identity consistent with development and peace. n282 Since, the ICJ considered itself able to address several aspects of the nuclear weapons legality debate; does it make sense that it could not render the ultimate decision of total legality of nuclear weapons when the survival of a nation-state is at stake? The ICJ identified the role of the ICCPR and United Nations Charter in times of peace and war (leaving out the ICESCR); n283 yet failed to consider the binding Covenants in its final analysis, considering only the law of armed conflict. Surely, if the Court considered these documents, it would have found itself capable to render an ultimate decision. By not making a determination as to the legality of the threat or use of nuclear weapons when the survival of a state is at stake, the Court impliedly admits to its doubt of the effectiveness of its determinations and ultimately of international law in general. For if the Court was certain that by declaring nuclear weapons completely illegal, that all states would comply; there would be no reluctance to indicate that there is no use of nuclear weapons. n284

Cyclically, if the ICJ does not make conclusive opinions it **diminishes the stability of globalization and in turn a decrease in globalization decreases the support for the ICJ**. Military technology is constantly changing. n285 The principle of sovereignty constantly changes. n286 Global threats grow and the world recognizes the increasing need to act as a community. The ICJ should accept this change, and in fact advocate change to improve the global community and environment. "In a world whose only constant is change and a perpetual realignment of forces based on response to change, failure to accept the view that nation-states are not like pieces on a chessboard "with specified roles, set objectives and fixed configurations' seems imprudent." n287 Although acknowledging the international standard to take measures toward the ultimate extinction of the nuclear weapon, the ICJ failed to take the strongest step of all, declaring the weapons illegal.

Submitting cases to the icj key to it’s credibility

Matheson, Law—GWU, **8**

(6 Geo. J.L. & Pub. Pol'y 129, Winter)

Now, the U.S. system, of course, relies primarily on the Executive Branch to take the necessary action to enforce U.S. treaty obligations; the President is responsible for foreign relations, including the resolution of disputes over treaties. n70 The President has many sources of constitutional authority to carry [*141] out that responsibility, including his rights and responsibilities under the so-called "Take Care" clause of the Constitution. n71 And I think the same logically is true with respect to the enforcement of binding decisions of international tribunals. In many cases, implementation by U.S. courts, including state courts, is necessary to comply with our obligations and thereby preserve the treaty regime. n72

As a practical matter, I think the United States will usually have significant interests in complying with binding tribunal decisions. Such compliance may be necessary to avoid damage to a treaty regime that

the United States thought was in its interests, to protect the interests of private U.S. nationals, or to avoid damage to bilateral relations with the other country in question. All these are interests that the President invoked as reasons for compliance by state courts with the Avena decision of the ICJ. n73

u.s. defiance of the icj will devastate it's ability to be an effective enforcer of international law

Scott, Political Science-Portland State University, **87** (81 A.J.I.L. 57, January)

Whatever one thinks of the impact of these cases on the Court itself, defiance and withdrawal by these two major powers surely augurs ill for the international legal system. The U.S. defiance in the Nicaragua case seems particularly harmful because the Court was placed in the position of carrying through with its Judgment even after the American withdrawal and after statements were issued in January 1985 by the current U.S. administration that it would "defy the Court and ignore further proceedings in the case." n53 Furthermore, immediately following the announcement of the Judgment on June 27, 1986, a State Department spokesman announced that the United States was rejecting the Court's verdict because the Court was "not equipped to judge complex military issues." n54 Thus, the United States stood in clear defiance of the Court and, apparently, above international law. Such behavior appears not only injurious to the efficacy of the Court's compulsory jurisdiction under Article 36(2), but detrimental to the development of international lawfulness as well. Such lawfulness cannot develop as long as states are inclined to place themselves above the law. It may be asserted with some accuracy that United States prestige may suffer somewhat from this unlawful behavior; but given contemporary political and economic realities, the effect on the world's ranking nuclear superpower will scarcely be noticed. The Court, on the other hand, is far more vulnerable to the effects of defiance of its compulsory jurisdiction and of its judgments. The development of lawful behavior and of compulsory jurisdiction itself is significantly impeded by such behavior. The Nicaragua case further demonstrates that the optional clause can only work when states are willing to abide by their earlier commitment, i.e., when they give contemporaneous consent to the Court's jurisdiction. It also suggests that the efficacy of the Court remains threatened as long as the optional clause exists. In the two cases involving the optional clause where the decision on both the preliminary objections and the merits went against the respondent state (Category IV), the record of compliance is only 50 percent. Compromissory Clauses Some middle ground in the acceptance of the Court's compulsory jurisdiction is to be found in compromissory clauses in treaties. Although such clauses suffer from some of the same problems as optional clause acceptances, they do have two advantages over these acceptances. First, they are confined to disputes concerning a particular treaty, and thus the subject matter of any dispute that may arise is limited. Second, because most of these clauses are contained in bilateral treaties, n55 the other party to the possible dispute is usually known. Those clauses found in multilateral and global treaties widen the field of possible litigants considerably, but the subject matter remains limited. [*67] Nonetheless, the two other incidents of major defiance in the post-1961 period involved jurisdiction granted in compromissory clauses in earlier treaties. n56 The defiance of the Court by Iceland in the Fisheries Jurisdiction n57 case rested on its noncompliance with an exchange of notes with the Federal Republic of Germany and the United Kingdom on July 19 n58 and March 11, 1961, n59 respectively. In United States Diplomatic and Consular Staff in Tehran, n60 the Court's jurisdiction was based on compromissory clauses in certain treaties between the United States and Iran. n61 Though we are primarily concerned here with compulsory jurisdiction as conferred by the optional clause, the major conclusions of our argument are supported as well by these two cases. Since they, too, evoked defiance of the Court, it seems that the only safe way to get states before the Court is by their agreement at the time of the actual dispute. Other methods all carry a reasonable probability of failure. It is interesting to note that in recent years, two of the successfully resolved cases involved the allegedly lawless state of Libya. Both disputes were brought before the Court by special agreement between Libya and another state. n62 We think these cases demonstrate that the legal system can serve a useful function and that the Court has a role in the system as a dispute settlement mechanism if it is approached in the consensual mode. Can anyone doubt that Libya would have refused to participate had these cases been an attempt to force the Court's jurisdiction upon it? It is axiomatic that problems of jurisdiction or compliance rarely arise when states make a special agreement to submit their dispute to the Court. n63 [*68] Only in this way can states maintain the necessary control over dispute settlement that is part of their raison d'etre Chambers The recent Gulf of Maine case, n64 the first adjudicated in Chambers, raises the possibility that the Court's compulsory jurisdiction under Article 36(2) might be given new vigor if applied only to cases using Chambers. Presumably, this could be done either through reservations to individual state acceptances of the optional clause or, less likely, through appropriate changes in the wording of the Statute. Changes in the Statute in 1972, designed to facilitate recourse to Chambers, might relieve the anxiety of some states about submitting to the compulsory jurisdiction of the present Court. n65 The Court has always suffered because states feared that they would not be dealt with fairly. In the early years of the ICJ, many Third World states felt that a court dominated by developed states would not do them justice. Ironically, today's more eclectic Court seems not to engender confidence in either First or Third World states. The new provisions, which allow Chambers to be selected after consultation with the parties, might alleviate this problem sufficiently for states again to have little difficulty in accepting the Court's compulsory jurisdiction under Article 36(2). As we have noted above, there may have been no significant problems involving Article 36(2) in the 1945-1961 period largely because the Court was dominated by "Western" judges and it adjudicated disputes primarily between Western states. Certainly, in the Gulf of Maine case, the United States and Canada should have been comfortable with judges from France, West Germany and Italy, in addition to the two judges of their own nationality, constituting the Chamber. It is also true that this case was handled smoothly and to the reasonable satisfaction of both parties. n66 Moreover, since it was adjudicated shortly before the U.S. refusal to submit to the Court's jurisdiction in Nicaragua v. United States, this case also adds credibility to the claim that the institution of Chambers may help overcome states' reluctance to accept third-party adjudication. Some aspects of Gulf of Maine are worth considering if we are to assess the possible value of compulsory jurisdiction when applied solely to Chambers. First, while the changes in the Statute facilitating recourse to Chambers occurred in 1972, it was nearly a decade before any case was brought before the Court in this way. Second, the two states that did finally make use of Chambers enjoyed a rather special bilateral relationship marked by a long history of peaceful dispute resolution. The United States and Canada are among the most likely pairs of states to seek peaceful methods (both political [*69] and legal) to resolve problems between them. Third, this particular dispute, though important economically, was a "low politics" issue, i.e., it did not directly involve national security, and thus recourse to third-party settlement was more acceptable. Moreover, while the dispute had a loong history of unsuccessful negotiation, both parties clearly desired a settlement. Finally, this case was submitted jointly to the Court through Special Agreement, n67 so it is evident that the parties had decided early on to conceptualize the dispute in legal terms. To what extent, then, does this case hold promise for strengthening Article 36(2) by using it only with recourse to Chambers? Since the institution of Chambers probably will alleviate some of the uncertainty about going to court, states that agree to compulsory jurisdiction solely with respect to Chambers will be less likely to defy the Court if called upon to appear before it. If the point is to insulate the Court from future defiance related to its compulsory jurisdiction, then recourse to Chambers might help. On the other hand, the initial problem and its attendant logic remain. If, at the time of the actual dispute, a state really does not wish to have the dispute settled by the Court, it will still refuse the Court's jurisdiction. n68 For example, it seems highly unlikely that recourse to Chambers would have changed France's behavior in the Nuclear Tests Cases. Conversely, if a state is willing to go to court, it will probably do so with or without Article 36(2); and recourse to Chambers is always a choice, as it was in Gulf of Maine. Thus, we are faced with the following question: does the increased probability of adherence to Article 36(2) jurisdiction outweigh the continued possibility of defiance when states find it in their interests not to adhere to the Court's jurisdiction? III. INTERNATIONAL LAW AND THE IDEA OF LAWFULNESS If we think of the Court's history in terms of the evolution of international law, our review of the Court's activities will cause concern for two reasons. First, the Court seems to be in a period of decline in terms of its adjudicatory activity. This fact alone is hardly troubling; it only becomes so when studied against the background of international politics. The Court's decline in activity does not coincide with a similar decline in the frequency of international conflict. Thus, the Court's decline in activity is not due to the increased lawfulness or civility of the nations of the world. Disputes, even violent disputes, remain a constant theme of international life; consequently, the declining use of the Court to pursue peaceful and principled methods of dispute resolution indicates that states are turning away from third-party adjudication rather than towards this mode of dispute resolution. There is nothing new or shocking, however, about cataloging the decline [*70] in the Court's activities. n69 Interestingly, one proposed remedy for this decline suggests doing away with the optionality of the Court's compulsory jurisdiction. Many international lawyers insist that the Court's place and prestige in the international system can best be strengthened by making the Court's jurisdiction truly compulsory. n70 This, it is argued, would have the salutary effect of ending the decline in judicial activity and making the ICJ more nearly resemble domestic courts; and it would symbolize an international effort to "get serious" about international law. Yet the second cause for concern to emerge from our case review calls the logic of this position into question. Defiance of the Court is the **most serious impediment to the evolution of the Court's efficacy**. It suggests that at least some states are unwilling to see international disputes in predominantly legal terms, preferring instead to conceptualize these disputes in more traditional political terms. A change in this perspective cannot be brought about simply by making the Court's jurisdiction truly compulsory, which means that any such attempt would likely lead to further defiance of the Court. The continued and expanded defiance of the Court would have a **crippling effect on the evolution of international law.** Powerful states would have a pronounced advantage over weaker states under compulsory jurisdiction because of their ability to defy Court decisions and any methods devised to enforce those decisions. Truly compulsory jurisdiction would allow the stronger states an even greater opportunity to posture in favor of lawfulness in international dealings and still defy the Court when they perceive it to be politically desirable. Though it is also possible for small states to defy the Court while posturing in favor of international law (as Iceland and Iran seem to have done), it is more difficult for small states to make a general practice of defiance. One need hardly belabor the cost of such a scenario to

the efficacy of the Court and the legitimacy of international law. **A double standard of justice would generate cynicism**, or at best skepticism, about international law in the weaker states and it would make international law into little more than an extension of power politics. But there is a second and perhaps even more telling reason for rejecting strict compulsory jurisdiction. A system of [*71] international law should embody, and take seriously, some (if not all) of the principles and ideals that lend credibility and integrity to domestic legal systems. The principle of equal justice is perhaps the first virtue of any legal system. n72 Any putative system of law that permits a double standard of justice thus fails in an important sense to qualify as a legal system. Tinkering with the Court's jurisdiction should be undertaken only if proposed alterations can feasibly be calculated to enhance (rather than defeat) equal justice. In light of the Court's history, it seems a virtual certainty that strict compulsory jurisdiction would have the opposite of this desired effect. Though it may sound strange to legal scholars accustomed to thinking that courts of law should have compulsory jurisdiction, we believe that a better method for promoting the efficacy of the Court (and consequently the gradual development of international law) is to remove the Court's powers of compulsory jurisdiction under Article 36(2). Even a brief review of the history of the western legal tradition is sufficient to make clear that legal systems cannot be implemented overnight. The legal systems employed in the West have evolved over centuries. n73 Their formal machinery is perhaps the least significant element of their success as systems of law. Legal positivists are quick to point out that the authority of these systems depends upon their general acceptance by those subject to them. n74 There is no reason to think things should be different when we turn to international law. General acceptance of international law, and the concurrent realization that international law and the ICJ, in particular, are important contributors to the process of international dispute resolution, are **fundamental to the evolution of an international legal system.**

Us resistance to the icj undermines it's authority

Alexandrov, Frmr. Deputy Foreign Minister for Republic of Bulgaria, **95**

(33 Colum. J. Transnat'l L. 41)

This strategy [non-appearance and eventual non-compliance] may also backfire. The "no-appearance technique" of litigation may suffer a setback, once its absurdity and overall uselessness are correctly perceived. Likewise, overt defiance of the Court by a great power over a case won by a small one may prove to be an unattractive example - a disincentive - for other states. It is hard to complain with Goliath after he has been trounced by David. n127

2NC ICJ NB O/V

Try or die flips neg – Credible ICJ solves all hot spots

Cassel 3 – Professor of Law @ NU

(Doug, "Is There a New World Court?," ND Law School Faculty Publications)

> One factor appears to be growing state confidence in the ICJ. This is evidenced by the continued flow of border demarcation cases, in which the ICJ role in peaceful resolution is an **important alternative** to potential (or in some cases actual) **armed conflict**. It is further evidenced by the geographical spread of such cases, which have been filed in recent years by states in **Latin America**, **Africa**, **Southeast Asia**, and the **Middle East**.¶ Another factor is that filing cases involving ongoing armed conflict is an attractive alternative for weak states which cannot defeat stronger adversaries by military means. Serbia sued NATO member states against whose bombing it had no effective military defense, while Congo sued neighboring states whose forces it could not oust from its vast territory. **An ICJ lawsuit may be war by another means**.

2NC CP Key to ICJ Cred

The u.s. is critical to the credibility of the icj---delegating policies to the court necessary to strengthen international law and instill multilateralism

Henson, Sr. Lecturer-International Relations-Vanderbilt, 8/31/**6**

(Power in the Judicial Balance: United States Hegemony, Judicial Independence, and the International Court of Justice, Paper presented at the annual meeting of the American Political Science Association)

The International Court of Justice (ICJ) remains an enigma to many scholars in international law and political science. Founded as the judicial organ of the United Nations in 1947, the Court began with great promise to become the legal arbitrator of peaceful settlements between nations and legal advisor to the powerful Security Council. The hope that great power wars could be avoided through the just application of principles in law and the emerging institutions of cooperation among states included high expectations on the new World Court. Nearly forty years later, **the Court operates on the fringes of international politics neglected and criticized at times by the States that created it**. The Court has accepted 111 contentious cases and issued 25 advisory opinions involving 80 nations, yet few scholars include the ICJ in studies of important international institutions or mine its extensive records for insight into the contentious issues it has adjudicated over its nearly half century of work. Critics of the Court argue that cases lack salience in international politics because nations are willing to delegate only insignificant issues to the legal process reserving the important issues for traditional settlements such as force or diplomatic negotiations. This view is challenged by the list of issues brought before the Court including territorial disputes, testing nuclear weapons, attacks on warships, immigration, and covert interventions in conflicts. Critics counter that nations reject decisions of the Court when issues are important and Court rulings are unfavorable. Records show that nations adhere to Court decisions most of the time, nearly eighty to ninety percent depending on how you measure compliance, considerably more than generally acknowledged (Schulte 1 Unless otherwise cited, references to International Court of Justice (ICJ) cases and information concerning the proceedings of the ICJ are taken from electronic archives on the official website of the Court at www.icj-cij.org. Pleadings, judgments, and case backgrounds are publicly available for every contentious case and advisory opinion.

One notable exception is the United States rejection of the Court's jurisdiction in the 1984 case brought by Nicaragua. This case marks a significant change in the Court's role and will be discussed in more detail. Nevertheless states have shown a remarkable willingness to respect the Court and work vigorously to win the Court's affirmation on issues important to national interests. The Court also provides scholars with two interesting and unique avenues of research in international relations. First, the Court examines cases involving international conflicts through the strict application of principles in international law. It is a major source of interpretation and application of international law in relations among states. It is unique and extensive in this respect. The Court is secondly a place where broad issues concerning international relations get rehearsed in a controlled environment. The structure of law and format of the Court sets up a micro-experiment in which researchers can observe nations engaging in power politics, waging the Cold War, exercising hegemonic powers, demanding equity, reorganizing post-colonial borders, struggling with the question of nuclear weapons, and a host of other overarching issues on the international political stage. While Court decision have not significantly transformed these situations and problems, Court proceedings enlighten our understanding of the positions held by nations and the issues at stake for them. Two illustrative cases provide insight into the role of the World Court and its evolution alongside major changes in world politics over the last five decades since World War II. The 1947 Corfu Channel and 1984 Nicaragua cases also introduce the theoretical and empirical components of this study.

The first case brought before the newly formed International Court was initiated by the United Kindgom against Albania in 1947. Two British warships patrolling in the North Corfur Channel on October 22, 1946 were heavily damaged by mines. The incident resulted in the deaths of forty-four sailors and extensive damage to the ships. Great Britain alleged that Albania was responsible for this intentional act of aggression and violence. As one of the victorious allies in World War II and a major naval power, Great Britain had every capability to respond with military retribution. Interestingly, the British decided instead to get a lawyer and sue Albania for damages in a basic tort case. The case was not an ordinary tort before a civil court but involved two nations on opposite sides of an emerging divide between Western and Eastern Europe with the potential to inflict extreme violence. It was in a sense the test of Great Power restraint and credence to international civility in the wake of a devastating world war. Reference of the case to the International Court of Justice signaled the support of international institutions designed to provide stability and growth to a new system of world politics envisioned by the victorious allied powers. Over the first 12 years of the Court, the United Kingdom, United States, and France brought 20 cases, 53 percent of all cases before the ICJ.

The Court decided in favor of United Kingdom and ordered Albania to pay a fine of 843,947 British pounds. Albania accepted the Court's jurisdiction and decision but argued against the Court's authority to fix compensation. No compensation was ever paid. Contrast the Corfu case with another incident involving sea mines in the complaint brought by Nicaragua against the United States in 1984. Nicaragua argued to the Court that the United States violated international laws against invention in internal political affairs of another nation by aiding the Contra rebels in their struggle against the Sandinista government. Included in the allegations were reports of mining Nicaraguan harbors and providing military advice and aid to rebel forces. The United States refused to answer the complaint and withdrew from compulsory participation in ICJ cases. The Court proceeded with case and ruled in favor of Nicaragua. The Court also indicated that reparations of 370 million dollars were appropriate on an interim basis to be decided in finality by a later decision. Nicaragua discontinued the case in 1991 and no reparations were ever paid. There are striking parallels and contrasts in these cases. Together the Corfu Channel and Nicaragua cases illustrate the changing nature of international politics in relation to international law and courts. Both cases involved issues of Cold War politics and the use of force. The cases also have two very different characteristics. The Corfu case was initiated by a world power against a relatively small nation while the Nicaragua case was brought by the smaller nation against the world power. Court rulings also followed this reversal. The circumstances and merits of the cases are unique. However, they do highlight questions concerning the choices by participants to utilize the Court. These cases also introduce the idea that distinct patterns exist in usage and decisions of the Court. In order to pursue these questions, theoretical perspectives are useful concerning world circumstances and national interests influencing the decisions of participant nations. The United States emerged from World War II as the economic power in the world. While all the allied nations enjoyed benefits of victory, it was the United States that had suffered the least destruction and national distress. Industrial expansion of the economic base established during the war years propelled the United States to a dominant economic position. The post-war period initiated the rise of a new global hegemon. While the Soviet Union eventually rose to challenge United States supremacy and interests in world affairs, the United States became the clear leader in rebuilding the international political and economic systems. The establishment of the United Nations, implementation of the Bretton Woods agreements, and formations of the International Monetary Fund and World Bank are examples of the institutions created to facilitate a new world order. This order included the dominant role of capitalism and leadership of democratic regimes. The rapid development of international law and a series of conferences resulting in new legal regimes established international norms along the principles of rule of law and national sovereignty. The new system was predictably favorable to the interests of the United States and its partners. From these circumstances derived a theory of economic stability and leadership commonly referred as hegemonic stability. Conceptual development of the idea that economic stability provided by the leadership and dominance of the United States increased economic growth, trade, and wealth worldwide is in many respects attributable to the work of Charles Kindleberger. Kindleberger's work in political economics is extensive and it oversimplifies his views to identify hegemonic stability as his most prominent contribution; however, Kindleberger is a formative advocate for the idea that stable economic conditions depend on the leadership of a dominant hegemonic power. "Without a stablizer," Kindleberger says, "the system in my judgment is unstable" (Kindleberger 1981, 253). Leadership from a powerful nation establishes rules that stabilize the economic system, force cooperation among nations, maintain order, and form international regimes. The concept that United States leadership and dominant influence largely determined future trajectory was not limited to economics. The idea of hegemonic international law follows a similar logic attributing elements of the potency and development of international law to the role of the hegemon in defining, interpreting, and implementing principles of law in international relations. Detlev Vagt addresses the legal implications of hegemonic influence on international law. In his analysis, Vagt reviews issues such as choice of treaty interpretation, intervention, and prominence of custom. Vagt also makes the point that a "body of law to work with" has historically

benefited hegemonic interests and provided a convenient reference point and set of expectations for nations to follow in order to participate in the benefits of international transactions such as trade (Vagt 2001, 845). The theoretical implications of hegemonic stability and hegemonic international law are applicable to the International Court of Justice in several ways. The Court as an organ of the United Nations and institution for establishing the rule of law among nations was a key component of the strategies employed by powerful nations to restructure the international system. According to hegemonic theory, the interests of the United States and its allies were served by solidifying influence over the creation of stable rules governing international interactions. Stability facilitates growth in capital and production of goods from which the United States as hegemon was the greatest beneficiary. Rules developed from a customary system of law based heavily on the most active, vested, and involved nations. Western powers served this stabilizing function while preserving their interests in the status quo. This is clearly illustrated in economic terms through the dominance of the dollar in world currency markets and Western corporations and governments in trade markets such as oil. This dominance extended into international agreements and legal regimes with stability and status quo characterizing international law through custom and treaty. In this environment it was easy to view the International Court of Justice as an instrument of international hegemonic law. The Court's dependence on customary international law and mandate under the United Nations charter favored the maintenance of status quo, peace, and stability. The bedrock concept of national sovereignty in law and politics provided additional support for the pursuit of national interests by powerful nations. Interestingly, the principle of sovereignty and related concept of non-intervention rebutted the interests of the United States in the Nicaragua case. International leadership and dominance through United States hegemony provides a compelling explanation for the actions toward the International Court of Justice by powerful countries. As mentioned earlier, the United Kingdom, France, and United States brought a large proportion of the cases adjudicated by the Court in its early years. Issues at stake in many of these cases indicated a desire to maintain stability and status quo in international politics and economics. The Corfu Channel case emphasized free passage of ships through vital waterways. This was important to global policing by the British Navy as well as safe trade and transportation. Additional cases brought by major powers focused on fisheries, air space, rights of nationals abroad, corporate interests, and other issues involving freedom of transnational movement and operations. Powerful nations seeking to maintain the advantages of the status quo viewed the ICJ based in customary norms as a useful instrument. The post-war aversion to armed conflict and the economic advantage of stabilization and peace made the Court a desirable recourse. This pattern is evident in the records of contentious cases initiated in the ICJ. Over thirty years ago, William Coplin and Martin Rochester published an article that examined empirically the ICJ and its predecessor Permanent Court of International Justice along with the League of Nations and United Nations (Coplin and Rochester 1972). They attempted to move away from normative and prescriptive analyses of the Court and focus on compiling data that could be used by researcher for statistical evaluation. Their study

examined issues such as who participates in the court and how frequently, as well as attributes of participants and their relationships to one another. The Coplin and Rochester study showed that the majority (64%) of initiating states were at least 25% larger based on GDP than the respondent state. The ICJ data examined by Coplin and Rochester ranged from 1947 to 1968. These findings suggest the question of whether the initiation of cases by stronger states is the pattern that continued after 1968. The short answer is that it does not. Data from later periods show a swing in the power differentials between participants toward weaker state initiations. This change can be partially explained within the literature concerning hegemonic theory by the decline of United States influence and control over the international system. Robert Keohane discusses extensively the decline of hegemonic influence in terms of regime coherence and cooperation. Keohane argues that hegemonic stability explains many aspects of post-World War II economic and political cooperation under the leadership of the United States and its close allies, but hegemonic leadership cannot explain every aspect of cooperation. Cooperation exists in a variety of forms and for diverse interests; however, there are clear indications of changes in international cooperation coinciding with a decline in hegemonic control of regimes in money, trade, and oil. Keohane asserts that the oil regime controlled largely by the United States and Great Britain had broken down by the late 1960's, discord over international monetary policy was strongly evident by 1971, and government trade controls in opposition to GATT principles rose sharply by the 1970's (Keohane 1984). The general propositions of Keohane's view of declining hegemony focus on the period 1967-1980. While Keohane emphasizes the persistence of international cooperation, he is quite clear and persuasive in describing a decline in the United States and its powerful allies influence and control over the international economic system. Economic factors are not the only indications of the United States waning hegemonic influence over world affairs. The war in Vietnam, Nixon scandals, Iran hostage crisis, and other political events also eroded United States influence around the world. Holsti and Rosenau point to a loss of consensus in United States foreign policy that contributed to deterioration in leadership (Holsti and Rosenau 1984). These events place the decline of United States hegemonic leadership within the same time period as Keohane's economic arguments. The gradual decrease in influence and control over world economic markets, institutions, and systems coincides with a decreased use of the Court by the United States and allies such as the United Kingdom and France. Fragmentation of interests and development of diversity and competition within political and economic regimes weakened the ability of the United States to hold together a hegemonic coalition. While the threat of the Soviet Union maintained unity within the North Atlantic Treaty Organization, other regimes such as the Bretton Woods monetary system, GATT, and oil regime began to crumble. Keohane's analysis places the demise of the hegemonic regime in the mid-1970's. In this period, the Vietnam War and Nixon scandals also diminished United States influence in world affairs. The year 1975 is used as the date to demarcate this change for the purposes of empirical analysis. The hegemonic models provide an explanation of the initial utilization of the Court by powerful nations and the later decline in cases coinciding with a decline in hegemonic solidarity in economic and political world affairs. The models do not provide a rationale for the trends evident in subsequent periods. The neglect of the Court by world powers suggests that few cases would be submitted to the Court. However, the utilization of the Court actually accelerates from 1.6 cases per year in the period 1947-1975 to 2.3 cases per year 1976-2005. In order to explain this increase, it is useful to look again at the Corfu Channel and Nicaragua cases. While Corfu Channel illustrates the motivation of powerful nations to maintain the status quo, Nicaragua represents a different type of motivation. The complaint brought by this small nation against the United States challenges the hegemonic position of the United States by attempting to restrict its power to promote United States interests in the Western Hemisphere. In the context of Cold War politics, the United States desired the success of anti-Communist regimes. Nicaragua and the Court interpreted United States actions as a violation of the principles of sovereignty and non-intervention. The Nicaragua case reversed the efficacy of the principle of sovereignty for small nations and the power relationship between participants in the Court. This case was not the first occasion that a less powerful nation initiated a complaint before the Court, but it was a high profile moment when the Court was forced into a standoff with the world superpower. The United States refusal to submit to the Court's jurisdiction, defiance of the Court decision, and withdrawal from compulsory participation pitted the interests of a powerful state against the credibility of the Court. It represents a turning point in the Court's dealings with non-compliance (Schulte 2004, 403-404). Establishing credibility as a Court is dependent on many factors including competence and impartiality, but at the core of the issue of credibility is independence. Laurence Helfer offers a concise and useful definition of independence referring to "insulation" but not necessarily "isolation" from political pressures (Helfer 2006, 2). A demonstration of independence in the face of severe political pressure from the United States is clear in the Nicaragua case. Helfer states, "As a matter of practical judicial decision-making, independence denotes the willingness of judges to decide cases based on generally applicable legal principles rather than political expediency, even where this requires ruling against powerful states" (Helfer 2006, 3). 2 The ruling against the United States in the 1984 case petitioned by Nicaragua gives a strong indication that the ICJ judges were willing to assert their independence from political influence from powerful states. Stephen Krasner relates a similar description of institutional regimes asserting independence stating, "Regimes may assume a life of their own, a life independent of the basic causal factors that led to their creation in the first place" (Krasner 1983). This change in the function of an institution is aligned with the classic dilemma of principal/agent. Delegation by a principal of certain duties and functions carries the risk that the agent will execute those duties contrary to the intent and interests of the principal (Shapiro 2005). The delegation of judicial responsibilities to the ICJ by the powerful nations that instigated the creation of the United Nations carried that risk. The United States administration believed in the Nicaragua case that the ICJ was operating outside of its mandate for political motives, and in a manner contrary to United States interests. In light of the Court's strong stance, it is likely that increased perception of independence invited more participation by nations challenging the status quo. The Court's willingness to rule in favor of a small nation and against intense political pressure from the world's most powerful nation established a favorable precedent for other nations seeking to challenge more powerful nations through the judicial process. Records of contentious cases after 1984 show an increase in several characteristics including total number of cases submitted to the Court, number of new participant nations, and number of cases initiated by the less powerful nation. For the empirical analyses of power differentials this study uses the National Material Capabilities measurement. The statistical model chosen to measure changes in participants' characteristics is a contingency table (two by two) with four quadrants. The first quadrant at the upper left represents cases before 1976 initiated by the more powerful nation of the two case participants. The lower left represents cases initiated by the less powerful state. The pattern is repeated on the right for cases after 1976. The test statistic applied to the ratios is a chi square distribution. This is a standard measurement for determining the probability function for a contingency table. The chi square measurement of 16.6 indicates that there is less than or equal to .001 chance that the null hypothesis is true and the distribution pattern is a random outcome. This is a very significant result and strongly supports the hypothesis that case initiators before 1976 were predominantly more powerful than the target nation but after 1976 initiators were predominantly less powerful than the target nation. Closer analysis of the data shows that while 1975 is a good central point in the transition, overall Court activity remained low until the Nicaragua case in 1984 with only 6 cases initiated from 1975-1984. This buttresses theoretical explanations of the gap between hegemonic decline and assertion of judicial independence in initiation of new Court cases. Court decisions provide a second approach to analysis of the Court's interaction with states. Examining the power differential based on favorable decisions rendered by the Court reinforces the concept of a Court in transition from maintenance of the status quo to equity in international relationships. Using the same statistical test, it is evident that a distinct shift occurs in the same time period from favoring stronger states to favoring weaker states in the Court's decisions. The following table shows that the level of significance is even slightly stronger in this case. Although the earlier period has more cases of powerful states initiating cases and receiving favorable decisions, the correlation between initiating a case and receiving a favorable decision is not significant. The Court's apparent bias toward the more powerful state in the earlier period is not a factor of favoring the initiator. The same is true of weaker states in the later period.

Judicial independence for the ICJ does not necessarily benefit only less powerful nations who challenge the status quo. In his concept of "constrained independence" Helfer identifies advantages that powerful states gain through support of a credible judicial institution. Focusing on international tribunals, Helfer argues that subtle control mechanisms drawn from a variety of political options can, "allow states to **capture the credibility-enhancing benefits** of delegation to formally independent international tribunals while minimizing, although not eliminating, the potential for judicial excesses" (Helfer 2006, 3). Even with limited controls, states that submit authority to independent judicial bodies such as the ICJ are foregoing some sovereign control and potentially sacrificing self-interests. Helfer offers as a rationale for states to forego some control and support independent tribunals based on an argument for **increased credibility to international law commitments.** Increased credibility to commitments has clear advantages in multilateral negotiations where cooperation depends on mutual trust. In a world of declining hegemonic control, the United States is more dependent on multilateral cooperation in order

to enhance its interests and obtain foreign policy goals. **Renewed support for the ICJ through compulsory participation without reservations would improve the United States credibility towards international law commitments and build trust in multilateral cooperation.** There are indications of United States willingness to move in this direction in the case of Avena and other Mexican Nationals Mexico v. United States of America 2003. The United States chose not to reject the case and actually filed pleadings to the Court. The ICJ eventually ruled in favor of Mexico. Although the United States strongly opposed this decision, it did not retaliate with political threats in the manner evident during the Nicaragua case in 1984. This is not to say that current United States policy toward international law commitments has taken a strong turn to the positive. Concerns over the newly instituted International Criminal Court and questions about the judicial procedures in cases of international detainees have created new problems for United States credibility to commitments in international law. However, the International Court of Justice offers the United States an opportunity to support international institutional cooperation while avoiding controversial and sensitive legal issues involving criminality and national security. Willingness to follow a model closer to Helfer's "constrained independence" would also **improve credibility in respect to other important institutions** such as the World Trade Organization and its system for dispute settlement and compliance.

Delegation to the icj is necessary to make the u.s commitment credible

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

First we describe a long line of political science scholarship which explains why independent tribunals in fact serve the interests of governments. We then expand upon this settled theoretical framework and offer our own hypotheses. Our basic conjecture is that, as a first order of regime design, states choose independent tribunals over dependent ones when they face multilateral, as opposed to bilateral, cooperation problems. We identify three types of multilateral cooperation problems that independent tribunals are especially well suited to resolve, and then we explain why bilateral disputes permit effective dispute resolution through arbitration or dependent tribunals. This theory, while subject to further refinement and empirical testing, provides a more accurate explanation of the existing legal landscape than does *Judicial Independence in International Tribunals*. The theory also resolves the apparent paradox of how independent tribunals can flourish in an international legal system in which enforcement authority resides predominantly in states themselves.

A. Delegation Enhances the Credibility of International Commitments Many political scientists have argued that delegating dispute settlement authority to independent judicial decision makers can further government interests. Although such delegations may at first seem counterintuitive, they are explained by the functions that courts and tribunals perform. For Posner and Yoo, international tribunals play only a limited role: they provide information that reduces decision-making costs for states involved in a dispute.106 In exercising this function, the tribunal members are agents and the disputing states are principals. The dilemma facing the principals is how to ensure that the agents remain faithful to the principals' instructions as set forth in a treaty, customary international law, or an arbitration agreement. In the parlance of principal-agent theory, this is "the problem of agency slack."107 Independent courts and tribunals do far more, however, than simply settle disputes between contesting parties. In the domestic realm, independent courts reduce policy ambiguities, stabilize policy outcomes, manage electoral uncertainty, and discipline other political actors.108 In the international context, independent tribunals serve related functions.109 In particular, they **act as trustees that enhance the credibility of the promises that governments make to one another.**110 By interpreting those promises and identifying behavior that violates them, independent tribunals **increase the likelihood that states will comply with their obligations** in situations where compliance generates short-term political losses but long-term political gains.111 This claim should not be read to suggest that dependent tribunals are incapable of bolstering the credibility of state commitments. To the contrary, even dependent decision makers—such as ad hoc arbitral bodies— provide a measure of credibility enhancement as compared to purely political modes of negotiation and dispute settlement.

It might be argued, however, that our claim—that delegation to independent tribunals enhances the credibility of international commitments— is circular. Just as there is no coercive authority to enforce a state's initial promise to cooperate, there is also no such authority to compel adherence to the judgments of a tribunal which interprets that promise. Seen from this perspective, Posner and Yoo's theory implies that independent international tribunals can do nothing to enhance the credibility of commitments, since states can as easily disregard the tribunal's rulings as they can ignore the obligations of the treaty that establishes it. This argument misses the mark in several key respects. First, it ignores the informational functions that international tribunals perform and their effect on a state's reputation for honoring its promises to other nations. Not all compliance disputes are

clear cut. To the contrary, it is often difficult for a state to monitor the conduct of its treaty partners and to evaluate whether that conduct violates the treaty. These monitoring and evaluation costs reduce the risk that arguably nonconforming conduct will be detected or, if detected, will be accurately labeled as a breach. International tribunals reduce these monitoring and evaluation costs. They create a mandatory process by which plausible rule violations are investigated and, at the conclusion of the case, they publicly identify the state that has violated its commitments. In short, tribunals increase the probability that violations of international obligations will be detected and correctly labeled as noncompliance. The higher probability of detecting and accurately labeling violations creates two sets of costs for a state considering violating its international commitments. First, it increases the likelihood that other states will impose sanctions as a penalty for breach. These sanctions may be authorized by the tribunal itself (as in the case of monetary awards issued by the ECHR) or by a multilateral process connected to it (as in the case of the WTO's Dispute Settlement Body).117 Sanctions may also be imposed unilaterally through reductions in trade, aid, or other privileges previously granted by the adversely affected state.118 Second, and perhaps more importantly, the higher probability of correctly identifying violations and branding violators increases the reputation costs of noncompliance.119 "Being identified as having violated international law is costly for a state because it leads to a loss of reputation in the eyes of both its counterparty and other states," a loss that, in turn, makes it more difficult to enter into future agreements with other nations.121 By increasing the probability of both material sanctions and reputational harm, international tribunals raise the cost of violations, thereby increasing compliance and enhancing the value of the agreement for all parties.122 States can thus foresee that shirking compliance will be more difficult when a tribunal can be called upon to monitor their conduct and interpret their promises than when it cannot. As a result, when states delegate authority to an international tribunal, the commitments they entrust to **it will be viewed as more credible than commitments not subject to judicial scrutiny.**

2NC Cred Key

Even if the ICJ is never used, restoring its credibility means states settles disputes outside of the court

Mitchell 6

Sara McLaughlin Mitchell, Department of Political Science, The University of Iowa, "Cooperation in World Politics:

The Constraining and Constitutive Effects of International Organizations", 2006

Institutionalist scholars (e.g. Keohane, 1984) argue that institutions **promote cooperation** between member states by increasing information, **decreasing uncertainty**, enhancing legal liability, and raising the reputational stakes for reneging on agreements.2 They also stress the active role that international organizations play in the **conflict management process**, serving as mediators or adjudicators to help member countries resolve international conflicts (e.g. Abbott and Snidal, 1998; Russett and Oneal, 2001). International organizations may facilitate cooperation among member states **passively** (Mitchell and Hensel, 2006), something **long recognized** in the international law literature. For example, if two countries recognize the jurisdiction of the International Court of Justice (ICJ), then the ability for both sides to take disputes to the ICJ may enhance the chances that **they will reach agreements out of court** (Bilder, 1998). A similar process has been observed in the World Trade Organization and the European Court of Justice: the strong legal dispute mechanisms in these institutions **deter countries** from making frivolous claims (Allee, 2003; Burley and Mattli, 1993). International organizations may also promote cooperation among members indirectly, by promoting democratization among members (Pevehouse, 2002), which in turn strengthens interstate peace because democracies do not fight wars against other democracies (Russett and Oneal, 2001).

2NC ICJ Cred Good- Environment

Weakening the court prevents sustainable development

Stein 5—Former Judge of the New South Wales Court of Appeal and the New South Wales Land and Environment Court [Justice Paul Stein (International Union for Conservation of Nature (IUCN) Specialist Group on the Judiciary), "Why judges are essential to the rule of law and environmental protection," Judges and the Rule of Law: Creating the Links: Environment, Human Rights and Poverty, IUCN Environmental Policy and Law Paper No. 60, Edited by Thomas Greiber, 2006]

The Johannesburg Principles state:

"We emphasize that the **fragile state** of the global environment requires the judiciary, as the **guardian of the Rule of Law**, to boldly and fearlessly implement and enforce applicable international and national laws, which in the field of environment and sustainable development will assist in **alleviating poverty** and **sustaining an enduring civilization**, and ensuring that the present generation will enjoy and improve the quality of life of all peoples, while also ensuring that the **inherent rights** and interests of succeeding generations are not compromised."

There can be no argument that environmental law, and sustainable development law in particular, are vibrant and dynamic areas, both internationally and domestically. Judge Weeramantry (of the ICJ) has reminded us that we judges, as **custodians of the law**, have a major obligation to contribute to its development. Much of sustainable development law is presently making the journey from soft law into hard law. This is happening internationally but also it is occurring in many national legislatures and courts.

Fundamental environmental laws relating to **water, air**, our **soils and energy** are critical to narrowing the widening gap between the rich and poor of the world. Development may be seen as the bridge to narrow that gap but it is one that is riddled with dangers and contradictions. We cannot bridge the gap with materials stolen from future generations. Truly sustainable development can only take place in harmony with the environment. Importantly we must not allow sustainable development to be duchessed and bastardized.

A role for judges?

It is in striking the balance between development and the environment that the courts have a role. Of course, this role imposes on judges a significant trust. The balancing of the rights and needs of citizens, present and future, with development, is a delicate one. It is a balance often between powerful interests (private and public) and the voiceless poor. In a way **judges are the meat in the sandwich** but, difficult as it is, we must not shirk our duty. Pg. 53-54

Extinction of all complex life

Barry 13—Political ecologist with expert proficiencies in old forest protection, climate change, and environmental sustainability policy [Dr. Glen Barry (Ph.D. in "Land Resources" and Masters of Science in "Conservation Biology and Sustainable Development" from the University of Wisconsin-Madison), "ECOLOGY SCIENCE: Terrestrial Ecosystem Loss and Biosphere Collapse," Forests.org, February 4, 2013, pg. http://forests.org/blog/2013/02/ecology-science-terrestrial-ec.asp

Blunt, Biocentric Discussion on Avoiding Global Ecosystem Collapse and Achieving Global Ecological Sustainability

Science needs to do a better job of considering worst-case scenarios regarding continental- and **global-scale ecological collapse**. The loss of biodiversity, ecosystems, and landscape connectivity reviewed here shows clearly that ecological collapse is occurring at spatially extensive scales. The collapse of the biosphere and complex life, or eventually even all life, is a possibility that needs to be better understood and mitigated against. A tentative case has been presented here that terrestrial **ecosystem loss is at or near a planetary boundary**. It is suggested that a 66% of Earth's land mass must be maintained in terrestrial ecosystems, to maintain critical connectivity necessary for ecosystem services across scales to continue, including the biosphere. Yet various indicators show that around 50% of Earth's terrestrial ecosystems have been lost and their services usurped by humans. Humanity may have already destroyed more terrestrial ecosystems than the biosphere can bear. There exists a major need for further research into how much land must be maintained in a natural and agroecological state to meet landscape and bioregional **sustainable development** goals while maintaining an operable biosphere.

It is proposed that a critical element in determining the threshold where terrestrial ecosystem loss becomes problematic is where landscape connectivity of intact terrestrial ecosystems erodes to the point where habitat patches exist only in a human context. Based upon an understanding of how landscapes percolate across scale, it is recommended that 66% of Earth's surface be maintained as ecosystems; 44% as natural intact ecosystems (2/3 of 2/3) and 22% as agroecological buffer zones. Thus nearly half of Earth must remain as large, connected, intact, and naturally evolving ecosystems, including old-growth forests, to provide the context and top-down ecological regulation of both human agroecological, and reduced impact and appropriately scaled industrial activities.

Given the stakes, it is proper for political ecologists and other Earth scientists to willingly speak bluntly if we are to have any chance of averting global ecosystem collapse. A case has been presented that Earth is already well beyond carrying capacity in terms of amount of natural ecosystem habitat that can be lost before the continued existence of healthy regional ecosystems and the global biosphere itself may not be possible. Cautious and justifiably conservative science must still be able to rise to the occasion of global ecological emergencies that may threaten our very survival as a species and planet.

Those knowledgeable about planetary boundaries—and abrupt climate change and terrestrial ecosystem loss in particular—must be more bold and insistent in conveying the range and possible severity of threats of global ecosystem collapse, while proposing sufficient solutions. It is not possible to do controlled experiments on the Earth system; all we have is observation based upon science and trained intuition to diagnose the state of Earth's biosphere and suggest sufficient ecological science–based remedies.

If Gaia is alive, she can die. Given the strength of life-reducing trends across biological systems and scales, there is a need for a rigorous research agenda to understand at what point the biosphere may perish and Earth die, and to learn what configuration of ecosystems and other boundary conditions may prevent her from doing so. We see death of cells, organisms, plant communities, wildlife populations, and whole ecosystems all the time in nature—extreme cases being desertification and ocean dead zones. There is no reason to dismiss out of hand that the **Earth System could die if critical thresholds**

are crossed. We need as Earth scientists to better understand how this may occur and bring knowledge to bear to avoid global ecosystem and biosphere collapse or more extreme outcomes such as biological homogenization and the loss of most or even all life. To what extent can a homogenized Earth of dandelions, rats, and extremophiles be said to be alive, can it ever recover, and how long can it last?

The risks of global ecosystem collapse and the need for strong response to achieve global ecological sustainability have been **understated for decades**. If indeed there is some possibility that our shared biosphere could be collapsing, there needs to be further investigation of what sorts of sociopolitical responses are valid in such a situation. Dry, unemotional scientific inquiry into such matters is necessary—yet more proactive and evocative political ecological language may be justified as well. We must remember we are speaking of the potential for a **period of great dying** in species, ecosystems, humans, and perhaps all being. It is not clear whether this global ecological emergency is avoidable or recoverable. It may not be. But we must follow and seek truth wherever it leads us.

Planetary boundaries have been quite anthropocentric, focusing upon human safety and giving relatively little attention to other species and the biosphere's needs other than serving humans. Planetary boundaries need to be set that, while including human needs, go beyond them to meet the needs of ecosystems and all their constituent species and their aggregation into a living biosphere. Planetary boundary thinking needs to be more biocentric.

I concur with Williams (2000) that what is needed is an Earth System–based conservation ethic—based upon an "Earth narrative" of natural and human history—which seeks as its objective the "complete preservation of the Earth's biotic inheritance." Humans are in no position to be indicating which species and ecosystems can be lost without harm to their own intrinsic right to exist, as well as the needs of the biosphere. For us to survive as a species, logic and reason must prevail (Williams 2000).

Those who deny limits to growth are unaware of biological realities (Vitousek 1986). There are strong indications humanity may undergo societal collapse and pull down the biosphere with it. The longer dramatic reductions in fossil fuel emissions and a halt to old-growth logging are put off, the worse the risk of abrupt and irreversible climate change becomes, and the less likely we are to survive and thrive as a species. Human survival—entirely dependent upon the natural world—depends critically upon both keeping carbon emissions below 350 ppm and maintaining at least 66% of the landscape as natural ecological core areas and agroecological transitions and buffers. Much of the world has already fallen below this proportion, and in sum the biosphere's terrestrial ecosystem loss almost certainly has been surpassed, yet it must be the goal for habitat transition in remaining relatively wild lands undergoing development such as the Amazon, and for habitat restoration and protection in severely fragmented natural habitat areas such as the Western Ghats.

The human family faces an unprecedented global ecological emergency as reckless growth destroys the ecosystems and the biosphere on which all life depends. Where is the sense of urgency, and what are proper scientific responses if in fact Earth is dying? Not speaking of worst-case scenarios—the collapse of the biosphere and loss of a living Earth, and mass ecosystem collapse and death in places like Kerala—is **intellectually dishonest**. We must consider the real possibility that we are pulling the biosphere down with us, setting back or **eliminating complex life**.

The 66% / 44% / 22% threshold of terrestrial ecosystems in total, natural core areas, and agroecological buffers gets at the critical need to maintain large and expansive ecosystems across at least 50% of the

land so as to keep nature connected and fully functional. We need an approach to planetary boundaries that is more sensitive to deep ecology to ensure that habitable conditions for all life and natural evolutionary change continue. A terrestrial ecosystem boundary which protects primary forests and seeks to recover old-growth forests elsewhere is critical in this regard. In old forests and all their life lie both the history of Earth's life, and the hope for its future. The end of their industrial destruction is a global ecological imperative.

Much-needed dialogue is beginning to focus on how humanity may face systematic social and ecological collapse and what sort of community resilience is possible. There have been ecologically mediated periods of societal collapse from human damage to ecosystems in the past (Kuecker and Hall 2011). What makes it different this time is that the human species may have the scale and prowess to pull down the biosphere with them. It is fitting at this juncture for political ecologists to concern themselves with both legal regulatory measures, as well as revolutionary processes of social change, which may bring about the social norms necessary to maintain the biosphere. Rockström and colleagues (2009b) refer to the need for "novel and adaptive governance" without using the word revolution. Scientists need to take greater latitude in proposing solutions that lie outside the current political paradigms and sovereign powers.

Even the Blue Planet Laureates' remarkable analysis (Brundtland et al. 2012), which notes the potential for climate change, ecosystem loss, and inequitable development patterns neither directly states nor investigates in depth the potential for global ecosystem collapse, or discusses revolutionary responses. UNEP (2012) notes abrupt and irreversible ecological change, which they say may impact life-support systems, but are not more explicit regarding the profound human and ecological implications of biosphere collapse, or the full range of sociopolitical responses to such predictions. More scientific investigations are needed regarding alternative governing structures optimal for pursuit and achievement of bioregional, continental, and global sustainability if we are maintain a fully operable biosphere forever. An economic system based upon endless growth that views ecosystems necessary for planetary habitability primarily as resources to be consumed cannot exist for long.
Planetary boundaries offer a profoundly difficult challenge for global governance, particularly as increased scientific salience does not appear to be sufficient to trigger international action to sustain ecosystems (Galaz et al. 2012). If indeed the safe operating space for humanity is closing, or the biosphere even collapsing and dying, might not discussion of revolutionary social change be acceptable? Particularly, if there is a lack of consensus by atomized actors, who are unable to legislate the required social change within the current socioeconomic system. By not even speaking of revolutionary action, we dismiss any means outside the dominant growth-based oligarchies.

In the author's opinion, it is shockingly irresponsible for Earth System scientists to speak of geoengineering a climate without being willing to academically investigate revolutionary social and economic change as well. It is desirable that the current political and economic systems should reform themselves to be ecologically sustainable, establishing laws and institutions for doing so. Yet there is nothing sacrosanct about current political economy arrangements, particularly if they are collapsing the biosphere. Earth requires all enlightened and knowledgeable voices to consider the full range of possible responses now more than ever.

One possible solution to the critical issues of terrestrial ecosystem loss and abrupt climate change is a massive and global, natural ecosystem protection and restoration program—funded by a carbon tax—to

further establish protected large and connected core ecological sustainability areas, buffers, and agro-ecological transition zones throughout all of Earth's bioregions. Fossil fuel emission reductions must also be a priority. It is critical that humanity both stop burning fossil fuels and destroying natural ecosystems, as fast as possible, to avoid surpassing nearly all the planetary boundaries.

In summation, we are witnessing the collective dismantling of the biosphere and its constituent ecosystems which can be described as ecocidal. The loss of a species is tragic, of an ecosystem widely impactful, yet **with the loss of the biosphere all life may be gone**. Global ecosystems when connected for life's material flows provide the all-encompassing context within which life is possible. The miracle of life is that life begets life, and the tragedy is that across scales when enough life is lost beyond thresholds, living systems die.

2NC ICJ Cred Good- Resource Wars

Credible ICJ solves resource wars

Tiefenbrun 97 – PhD, Director of International Law Programs and Adjunct Professor at Hofstra University School of Law

(Susan, "The Role of the World Court in Settling International Disputes: A Recent Assessment," 20 Loy. L.A. Int'l & Comp. L.J. 1, Lexis)

Despite these issues, the World Court should play a greater role in the future because adjudication as a means of dispute resolution is dispositive and final. The Court is usually principled, impartial and orderly. It can provide time for parties that are in a protracted dispute to reach an agreement that is mutually beneficial. It settles disputes and provides advisory opinions, and as an impartial tribunal, it can "depoliticize" a dispute and reinforce the rule of law.¶ The World Court may be especially helpful in certain types of disputes in which governments are not particularly concerned about the outcome but are, nevertheless, unable to compromise the issue in negotiations. 187 The Court has proven to be an ideal forum for the reconciliation of serious, local problems like **boundary disputes**. 188 Furthermore, if a dispute involves difficult factual or technical issues, the Court can provide impartial assistance.¶ The World Court should also play a greater role in the future because of the increasing demand for the resolution of **environmental disputes**. It is in a unique position to settle such disputes because it has created a special chamber to deal with **each environmental dispute** brought to it. 189

ICJ Cred Good – Warming

ICJ credibility solves warming

Strauss 8 – Professor of Law at Widener University School of Law

(Andrew, "Give the International Court of Justice Compulsory Advisory Jurisdiction on Matters Concerning Climate Change and the Needs and Interests of Future Generations," CLI RECOMMENDATION NO. 16)

This underdevelopment has significant implications for future generations. Some of the more extreme but still ¶ credible scenarios suggest a global climate that could make civilization as it has developed over the past five thousand ¶ years unsustainable.7¶ Even less dramatic scenarios that have been predicted by climate scientists with much higher ¶ degrees of certainty will dramatically alter the natural environment with significant implications for future generations.8¶¶ While the effort to deal seriously with the climate problem will involve far more than application of law, international ¶ law is clearly necessary for both **constraining** and **coordinating** state action. Climate change—and the contours ¶ of intergenerational justice in relation to it—is only one of the more pressing examples of global problems whose ¶ **amelioration** could be furthered through involvement of the **I**nternational **C**ourt of **J**ustice. If **jurisdictional barriers** could ¶ be overcome, the Court could play a **significantly enhanced role** in both settling international law generally and resolving ¶ individual disputes, particularly those of large ecological import with implications across time as well as across space.

ICJ Cred Good– HR

A strong ICJ leads to enforcement and mainstreaming of human rights norms

Simma 12 – Professor of Law @ U Michigan

(Bruno, "Human Rights Before the International Court of Justice: Community Interest Coming to Life, In Coexistence, Cooperation, and Solidarity, edited by H. Hestermeyer et al. (Zeist, The Netherlands: Martinus Nijhoff, 2012), I: 577-603)

In my view, the most valuable contribution the ICJ can make to the international protection of human rights–a role for which it is par- ticularly well equipped and has almost no competition–consists of what could be called the juridical "mainstreaming" of human rights, in the sense of integrating this branch of the law into the fabric of both general international law and its various other branches.65 By way of exemplifying what the Court can do, and is already doing, to fulfill that task, it can render human rights arguments more readily acceptable to international law generalists by interpreting and applying substantive provisions of human rights treaties in a state-of-the-art way, compared, for instance, to the reading given to such provisions by certain general Comments issued by un human rights treaty bodies, all too often marked by a dearth of proper legal analysis compensated for by an overdose of wishful thinking. Further, the Court is **singularly capable** of devising solutions for practical, more technical, legal problems which arise at the interface between human rights and more traditional international law, thus **paving the way** for the acceptance of human rights arguments and, more generally, supporting and developing the framework of human rights protection.

2NC Ilaw Cred Solves Extinction

Credible commitment to international law necessary to stop extinction

Ferencz, JD Harvard Law and Chief Prosecutor for the US at Nuremburg – 11/08/**2**

(Coming International Order; http://www.benferencz.org/coming.htm)

The most fundamental of all human rights is the right of all human beings to live in peace and dignity without the constant fear and threat of imminent extinction. Yet, as we approach the twenty-first century, the world continues to face acts of aggression, genocide, apartheid, terrorism and other crimes against humanity. It is a bleak historical record but in the race between civilization and disaster, the eager and discerning eye may still find room for hope. The history of humankind has been a chronicle of bloodshed and violence among peoples with competing needs, ideologies and aspirations. The contemporary scene merely confirms the historical pattern. The recent invasion of Afghanistan by Soviet military forces was condemned by many states as an act of aggression – the gravest of all international crimes. A Security Council resolution calling for withdrawal of foreign troops was blocked by a Soviet veto. The admonition of a hundred nations was rejected by the USSR. In Iran, fifty American citizens have been held hostage despite months of effort by the international community. A non-enforceable order by the International Court at the Hague, calling for the immediate release of the captives, has been ignored. An investigative commission appointed by the United Nations was not even allowed to see the prisoners. n Bogota, the ambassadors from many States were held hostage by other militant groups. The Archbishop of San Salvador was the victim of political murder while saying Mass. Judges and other officials are gunned down regularly in Italy and Spain. Terrorists find easy asylum in friendly foreign States. In under-developed lands and areas of conflict millions of innocent people face starvation while limited planetary resources are squandered on armaments that cannot ensure the peace. Surely something is dangerously awry in the international legal order. In the face of the calamitous historical record one might be tempted to conclude that the ingrained practices of the past are inexorable and unalterable. But I am not ready to believe that **humankind** is destined to **self-destruction**. People can and must learn to settle their differences legally rather than lethally. The many people who inhabit the earth are in varying stages of economic, social and political development. The infinite variety of their problems and needs must inevitably give rise to international ferment and conflict. It is **vital for humankind** that such conflicts be settled peacefully. The creation of an effective peace keeping machinery is thus of consummate importance. Global ethics must supplant national ethics. If society could agree upon a code of establishing minimum standards of international behavior and upon a court whose judgments would be enforced, it would be as significant to maintaining international peace as legal codification, adjudication and enforcement are to protecting the tranquility of every independent national State. But there can be no peace without justice, no justice without law, and no meaningful law without a court to decide what is just and lawful under any given circumstance. There is no State in the world that does not have a system of domestic criminal law to help maintain the tranquility of its nationalsociety. Those who violate the established code of conduct are subject to sanctions in the name of the community whose peace has been disturbed. In contemporary international society no such system exists. Sovereign States are bound only by such restraints as they may willingly accept. They can and do arrogate to themselves the authority to act in any way they see fit to protect their own national interests. The General Assembly of the United Nations is a political and consultative body with no enforcement powers. The International Court of Justice can sit in judgment only on such disputes as States may voluntarily submit to it. There is no international court with jurisdiction to deal with international crimes or international criminals. In a world torn by upheaval and ferment there is clearly need for a new system to help maintain international law and order. New norms of international behavior are being born. There is a growing recognition that all human beings, regardless of race, color, creed, or location, should be entitled to certain fundamental and minimum standards of life. Thus, the destruction, waste or withholding of resources needed to sustain human existence may, one day, be prohibited as a criminal act. So too, endangering the environment, or violating disarmament agreements, or refusing to settle disputes by arbitration, adjudication or other peaceful means, should also be outlawed as crimes for which states and individuals may be held to account. Consideration of new norms has already begun, and in time, there will have to be plans for the establishment of new mechanisms for interpreting and enforcing the new international legal standards. Acts that cause death and suffering on an international scale must be prohibited as international crimes against world order. Progress has already been made toward the establishment of a more effective juridical system. However, much work remains to be done. New institutions capable of resolving obdurate problems should not be expected to spring to life full-grown. The effort to define international crimes is less than a century old – hardly a blink in the eye of time. The fact that great difficulties still lie ahead is no reason for inaction. Quite the contrary – the sooner the problems are faced the sooner they will be resolved. It is my thesis that it is possible to replace the law of force by the force of law. The Evolution of International Criminal Law **Since humans first took to the sea in ships certain acts have been condemned as international crimes against humankind. The pirate was subject to punishment whenever he was apprehended. Those engaged in the slave trade often faced a similar fate. The supremacy of the principle of law was imbedded in the very conception of the United States, and the young nation would soon inspire new concepts in the old world. When the thirteen colonies declared their independence in 1776, they agreed to be bound in a Federation with a single Supreme Court that would adjudicate disputes between the States** The Hague conferences of 1899 and 1907 looked to compulsory jurisdiction of arbitration tribunals to replace the armaments race among opposing Powers, but their efforts failed, and the principle remaining alternative was to continue to settle their differences by armed combat. The need for an international tribunal was recognized, but sovereign States, steeped in the tradition of war, were not ready to entrust their vital interests to the decision of any impartial third body. The price for their folly was paid by inordinate suffering and by the lives of ten million soldiers and ten million civilians killed in the first World War. The end of the "war to make the world safe for democracy" brought forth a renewed public outcry for an improved world order. Victors and victims demanded that those who had caused the war and violated humanitarian codes of warfare should be tried as criminals. A Permanent Court of Justice was planned to settle future disputes among States. The hopes for a better world were to rest on the twin pillars of a League of Nations and the rule of law. In fact, the planned trial of the Kaiser for having initiated wars of aggression was never carried out – despite the clear obligations of Articles 228, 229 and 230 of the Versailles Treaty. War crimes trials, held in 1921 in the Criminal Chamber of the Reich Court at Leipzig, charging German commanders with atrocities, turned out to be a farce. In the US Senate an isolationist minority prevented the United States from becoming a member of the League. The new International Court that was finally created lacked the compulsory jurisdiction to settle the disputes that might lead to war. The edifice for a new world order was built on pillars made of sand. US Secretary of State Elihu Root, and many other distinguished experts recommended, in 1920, that a High Court of International Justice be created "to try crimes against international public order and the universal law of nations." The proposal was brushed aside by diplomats trained to focus primarily on the immediate interests of their own country. The Kellogg-Briand Pact of 1928 was ratified by almost all nations. It purported to outlaw war as a means of settling disputes, but it left each State free to decide for itself when it could legally resort to self-defense of its own vital interests. Despite the world-wide economic depression of the late 1920's, there was little recognition that new international perceptions were required. The 1934 assassination of King Alexander of Yugoslavia by Croatian nationalists brought forth a world-wide demand that terrorism be punishable by an international court. When the self-styled "civilized States" assembled for that purpose, the desire for unanimity meant that the most conservative views would ultimately prevail. It was easier to adhere to the past than to embark on new experiments. By 1937 passions had cooled, and India was the only State to ratify the Convention for the Suppression of Terrorism. Hitler's defiance of treaty obligations, Italy's aggression against Ethiopia, Germany's invasion of its neighbors and the Soviet invasion of Finland brought little more than verbal denunciation by States too frightened to organize in any effective way to preserve the peace. The inability to act collectively in imposing economic or military sanctions led to the disintegration of the League that had been created to maintain the peace. Nations should have learned from the first world war that military alliances could not prevent combat and that without an enforcement mechanism, rules of warfare could not prevent atrocities. Refusal to suppress terrorism could only encourage terrorism and willingness to block aggression could only stimulate further aggression. Having failed to learn the lessons of the past, nations would soon begin to list world wars by Roman numerals. World War II brought fifty-seven "independent States" into armed conflict. The enormity of the losses and the misery endured between 1939 and 1945 by countless millions can never be calculated. At least fifteen million combatants were killed. "Total War" became a new concept in which all humanitarian considerations were subordinated to the drive for victory. Nations that sought power and glory ended in ruins. Six million Jews were either worked to death or sent helplessly to gas chambers for extermination and cremation, in factories erected for the sole purpose of consuming human beings. Nazi opponents of all nationalities and religions were tortured and imprisoned. Three million Soviet prisoners died in captivity. By the time the war was over, man had learned to immolate whole cities with atomic bombs that could destroy all living things and damage the genes of future generations. Once more victorious nations assembled to plan for a new international organization of States. Once more there were demands that those responsible for aggression and atrocities be placed before an international criminal court. Under American stimulus the four Allied powers agreed to create an International Military Tribunal for the trial of Axis war criminals. It was never intended that the Nuremberg court should serve merely as a mask of justice to hide the face of vengeance. Nor was it conceived as a legal instrument to enshrine the *status quo* in a changing world. The Nuremberg Charter, drawing upon historical precedents, was to mark a step forward in the codification and development of international law. Legal precepts that had slowly been evolving were to be reconfirmed, and a new era of humanity was to be encouraged. The Nuremberg judgments made it clear that the massive abuse by a State of its own citizens was the legitimate concern of all humankind. The concept of "crimes against humanity" became a living legal reality because sovereign States had become perpetrators of outrageous assaults against human beings, including their own nationals. Those who were persecuted because of their ethnic origin, religion or political persuasion were promised the protection of the community of States by punishment of the offenders, regardless of their rank or station. The Nuremberg trials were also to confirm that launching a war of aggression was punishable by the international community, that superior orders would be no excuse for murder and cruelty, and that even the Head of State would be answerable to all of humankind for major acts of inhumanity that offended the human conscience. The war crimes trial at Tokyo followed the Nuremberg precedent. The Nuremberg principles were affirmed by the General Assembly of the new United Nations in resolution 95 (1) of 11 Dec. 1946, and people were encouraged to believe that a universal rule of law was on the horizon. The UN Charter called for an International Court of Justice but, unfortunately, States were still unwilling to invest it with the necessary binding authority to resolve disputes that might lead nations to war. Further, no criminal jurisdiction against individuals was provided for. Jurists were beginning to recognize that certain acts of international immorality should be treated as international crimes, but it was only a beginning. American Ambassador Bernard Baruch proposed that any violation of an agreement to control atomic energy be punished as an international crime. The world is still paying for its failure to accept that sage advice. The General assembly, in Resolution 260 (III) of 9 Dec. 1948, confirmed that genocide was a crime under international law, but nations were unwilling to create any international court to deal with the offense. Traditions that had endured for thousands of years

could not be erased quickly, and it would take time to gain acceptance for new values and concepts, before new institutions for the maintenance of world peace could win widespread acceptance. New Lights on the Horizon At the end of 1948, a renewed determination to protect those who were oppressed inspired the UN Universal declaration of Human rights. The European convention on Human Rights, signed in 1950, contained the dramatic innovation of a European Court of Human Rights where individuals could hold even their own governments to account before an international tribunal. It demonstrated that sovereign States could voluntarily agree to surrender a portion of their sovereignty in order that certain fundamental rights might be protected in a court of law. It would serve as a model for the creation of a similar court in South America in 1979. An International Law Commission of independent experts was appointed by the General assembly to draw upon a statute listing acts that should be treated as offenses against the peace and security of humankind. In their 1950 report (General Assembly Off. Records; Fifth Sess. Supp. 12A/1316), they recognized that a code would have to go hand in hand with a court capable of enforcing it. But the outbreak of hostilities in Korea brought the super-powers into confrontation, and plans and hopes for the development of an international law of peace were pout into the deep-freeze for the duration of the cold war. A distinguished lawyer and diplomat, Ricardo Alfara of Panama, expressed the views of many legal experts when he said: "If the rule of law is to govern the community of States and protect it against violations of the international public order, it can only be satisfactorily established by the promulgation of an international penal code and by the permanent functioning of an international criminal jurisdiction." The vast majority of the International Law Commission agreed that an international judicial organ was both possible and desirable, but many powerful States, including the Soviet Union, the United Kingdom and the United States, were still not prepared to surrender any part of their sovereignty to any impartial agency. While the idea of an international peace code and an international criminal court remained on ice, the UN began to recognize new international crimes. The General Assembly condemned racial discrimination, apartheid, and violations of "economic and political rights of the indigenous population" in South Africa, as "crimes against humanity." Other violations of human rights were also beginning to be characterized as criminal acts. When aerial piracy threatened the safety of civil aviation it was denounced as an international crime. Although enforcement machinery was still lacking, acts of politically-motivated terrorism again evoked demands for a punitive international response. The Vietnam War and the atrocities it evoked brought calls for retribution and challenged whether any nation was competent to judge the legality of its own acts. It was only when that war was winding down that the warming breezes of détente began to thaw the ideas for an international court that had been frozen for nearly two decades. Formulation of a code of offenses against peace had been stymied by the absence of any agreed definition of what acts would constitute the crime of aggression. Until the code was ready no court was required, and thus there was a convenient excuse for international inaction. In 1973, a definition of aggression was finally adopted by consensus of the General assembly. Some States insisted that the definition could not restrain the use of force by those seeking self-determination. Although it contained such loopholes, the presence of such a definition eliminated the stated obstacle to further work on an international criminal code and an international criminal court. On the 25th anniversary of the UN, the Secretary-General, decrying acts of aerial hijacking, called for "an international tribunal defending the interests of all peoples and nations." Those who sought to justify the use of force pointed to the misery and frustration that gave rise to acts of violence. In their view, every conceivable means was legitimate to overthrow what they perceived to be a form of terrorism by the oppressive State. The absence of any clear agreement by the international community setting forth what acts would not be permissible, regardless of the nobility of the goal, and the failure to create any independent agency to determine whether there had been a violation of the agreed standard of conduct, could only lead to additional acts of violence. The victims would describe the deeds as criminal terrorism, and the perpetrators would hail their own actions as justified by the struggle for freedom, self-determination, national liberation or some other apparently laudable objective. One person's terrorism was another person's heroism, and without a code and a court, there was no way of determining which was which. Many statesmen were beginning to recognize that if there was to be a peaceful international community the conduct of all groups, be theycountries, militants or corporations, would have to conform to moral standards that were acceptable to the commonwealth of humankind. A

group of twenty "eminent persons" began to prepare a code of conduct for multi-national corporations, and its work formed a basis for a UN Commission on Transnational Corporations that, according to ECOSOC Res. 1913 (LVII) of 5 December, 1974, was to meet annually and report to the Economic and Social Council of the UN. These, activities, admittedly still fraught with controversy, evidenced the beginning of a new sense of corporate morality that was to be imposed via a code of conduct established by the international community. In 1973, in Resolution 3068 (XXVIII), ninety-one States declared apartheid to be an international crime "irrespective of the motive involved." Thus, for certain offenses the loopholes were to be closed, but not for all international crimes. A Convention on the Prevention and Punishment of Crimes against International Protected Persons, including Diplomatic Agents, Resolution 3166 (XXVIII), was adopted by consensus at the end of 1973. The draft that had been prepared by the International Law Commission stipulated that offenders were to be extradited or tried by the arresting State "without exception whatsoever." Furthermore, the outcome of such trials was to be reported to the Secretary-General for public dissemination. Most states would have accepted the ILC draft, but at the last moment a new clause was added, exempting from its restrictions, "peoples struggling against colonialism, alien domination, foreign occupation, racial discrimination and apartheid in the exercise of their legitimate rights to self-determination and independence." In order to reach consensus, the exculpatory provisions wereadopted. Some groups were unwilling to see that if the means employed to attain a just goal failed to respect human life, all of humankind would live in jeopardy. Diplomats, having agreed to undercut the Convention to Protect Diplomats, should not have been surprised to find themselves among the victims. The Conventions that gave the appearance of controlling international lawlessness, such as the Friendly Relations Declaration, (Res. 2625 (XXV), 24 October, 1970), the Hijacking Conventions of Tokyo in 1963 and Montreal in 1971, the Convention to Protect Diplomats of 1973 and the 1974 definition of aggression, all contained opaque clauses that allowed nations to interpret the consensus agreements in ways that would best suit their own particular goals. The Convention Against the Taking of Hostages, (Res. 34/146), that was adopted by consensus in December 1979 contained a general condemnation of the crime but left the same old loopholes, exempting those who seek self-determination by every available means. A Convention to Prevent International Terrorism, (Res. 34/145), is still in the drafting stage while nations and groups argue about their different perceptions of permissible and impermissible international behavior. It might have been anticipated that although terrorism would be condemned in principle, the failure to agree in substance and the unwillingness to create any enforcement mechanism would mean that the crime would not be deterred. The humanitarian right of asylum from *persecution* was being distorted to grant asylum from *prosecution* to those who had disregarded all humanitarian considerations. Failure to act effectively against terrorism produces more terrorism. Inability to stop aggression stimulates new aggression. As long as sovereign States are not prepared to take the steps logically required to produce an international anarchy can be expected to continue. Yet there are many positive signs that the old order is changing. The lights of progress flicker and grow dim from time to time, but as one studies the historical evolution of ideas, there can be little doubt that the general trend illuminates a brighter future. The very fact that the subjects are being debated is itself an encouraging sign. It proves that unbridled sovereignty is being replaced by a determination to find solutions to problems that are now recognized to be the legitimate concern of the entire family of nations. A Brighter Future In only the past quarter of a century the world has witnessed the dissolution of a colonial system that carried within it the seeds of its own destruction. This major upheaval of international society brought many new States into being, eliminated the automatic majorities formerly commended by the western world and fragmented the structure of the United Nations. Within the newly developing nations, rival religious, ethnic, political or religious factions fought to obtain power or control. They demanded a more equitable share of the bounty enjoyed by the developed world. Their political allegiances became the target of competing social systems – one stressing the civil and political rights of individual freedom, and the other focusing on economic stability and the security of the State. Both superpowers, the Soviet Union and the United States, sought a world order based on their own models. It is not surprising that in the search for accommodation, there have been pitfalls and setbacks. International society is still an undeveloped community, and it is moving slowly along its difficult and winding road. Nevertheless in the struggle between socialism and capitalism we must now allow humanitarianism to become the victim. As we scan the horizon, in the fields of economics, human rights and law, significant progress is clearly visible. The worst excesses of laissez-faire economics have gradually been reduced. Many States now tax a portion of private and corporate wealth according to ability to pay for the common welfare. The dispute is not whether there should be State controls but the extent of those controls. A multitude of international agencies have been created to cope with the economic needs of the underdeveloped regions. The efforts to deal with the world's monetary system, development loans, transfer of technology, the conduct of multi-national corporations, the elimination of trade barriers, and the creation of norms of economic behavior, all reflect the growing movement toward cooperation among States. International economic problems are far from being resolved, but they are increasingly being dealt with on a world-wide basis. The distribution of natural and national resources is no longer a matter of purely domestic concern. It is increasingly being recognized that no nation can be an economic entity unto itself and that it must act in concert with other countries if it is to enhance the interests of its own people. Nations are beginning to think about a Charter of Economic Rights and Duties and a New International Economic Order. Reform of the UN system and charter in order to improve the functioning of international society is already

under consideration. The special committee on the charter of the United Nations and on strengthening the role of the Organization has had a series of meetings since being established in 1975, and has made a number of proposals for strengthening the UN system. The rising cost of armaments, estimated at over a billion dollars a day, is directly related to the economic problems of the world. Admittedly, the cost of defense is consuming the very resources needed to diminish the privation that gives rise to the threats that jeopardize the social order. Yet agreements have been reached in areas that could

never have been imagined even a few years ago. United Nations Peace-Keeping Forces have played an important peace-keeping role in Egypt, Lebanon and other parts of the world as reported by the Secretary-general in his report of Sept. 11, 1979 (A/34/1). Treaties have banned the testing of nuclear weapons in outer-space and on the ocean floor. Non-proliferation treaties are in force. A new treaty seeks to govern the activities of States on the moon and other celestial bodies. Despite the current difficulties with Salt II, the efforts to limit strategic arms have made some progress even thought they are far from adequate. It will take time but people are slowly coming to realize that unless we destroy all weapons of mass destruction the weapons will destroy us all. Growing awareness of the link between economic and human rights can be seen in other dramatic developments of recent years. It was only in 1967 that Arvid Pardo of Malta gave expression to the inspiring dream that the resources of the ocean should be used as "the common heritage of humankind" so that its immense wealth could benefit those most in need. It now appears that there is growing support for a Common Heritage Fund, for a Sea-Bed Authority and for an advanced dispute-settlement system through judicial-type procedures. It is expected that a Law of the Sea Treaty will be adopted by most of the nations in the world in the not-

too distant future. If such substantial progress can be recorded regarding governance of four-fifths of the surface of the planet can the remaining one-fifth be far behind? States are learning that the voluntary surrender of part of their sovereignty is not only in their own interest but is also an essential prerequisite for a **peaceful life in the 21st century.** New values of caring and sharing will have to be learned as part of the process of adapting national needs to international needs. Today, too often, slogans replace reason and politics displace principle. Too often innocent persons are subjected to cruelties and deprivation because they do not share the color, religion or political conviction of those in power. Universal tolerance and compassion must be learned, and is being learned through such new institutions as the courts of human rights, the European Parliament, the Helsinki accords, and all of the agencies of the United Nations that deal problems of world health,

conditions of labor, refugees, children, the rights of women, and the myriad other problems that affect the lives of every human being. None of these new programs is complete. People are still persecuted and millions still cry for their fair share of humanity. But the significant change in recent years is the widespread recognition that evil and intolerable conditions should be charged. Moral obligations widely acclaimed have a way of eventually attracting sufficient public support to make flouting them a perilous adventure for any government. The Road Ahead Legal agreements and law provide the framework in which international society balances its inconsistent and conflicting interests. In an interdependent world there are limits to the extent that any group can determine its own destiny**. A legal system that allows the parties to interpret the law as they see fit is unworthy of respect because it is no system at all.** Until all people are secure in their rights no people will be secure.

The Nuremberg Tribunals held forth the promise that all people would, in future, be accountable to the law, and that aggression and crimes against humanity would not go unpunished. Many acts were condemned as international crimes but no permanent international court was ever created to punish the guilty. Efforts to extend the compulsory jurisdiction of the International Court at the Hague have been intensified but that court has no authority over individuals or their crimes. The creation of an international criminal court was debated in meticulous detail at the United Nations over twenty years ago, but the "time was not yet ripe." It's getting riper every day. The United Nations has on its agenda for the end of 1980 the long-delayed *Code of Offenses against the Peace and Security of Mankind.* The fundamental rights and duties of States

will have to be reconsidered. The parties will have to think about providing compulsory and binding authority to an international criminal court as well as more effective procedures for international law enforcement. National security of States depends not on **weapons that are suicidal** but upon the peaceful, just and binding settlement of conflicts. It is not a matter of idealism but of self-interest and **survival**. As nations resume the debate about a code for peace and a court to enforce it they will, hopefully, begin to understand each other better. Even if, as is to be expected in these formative years, the resolutions seeking to define international crimes against world order are faulty or ignored, the process of debate and drafting will be a learning experience. Learning is the

beginning of wisdom, and wisdom, not force, is the road to enduring peace. Conclusion No one can say with certainty whether **civilization will win its race with disaster.** Without law and order in international affairs there will be chaos. Despair is not a viable alternative to hope, and, at the risk of being branded

an optimist, I have noted the movement, however hesitant, toward universal human standards that are slowly beginning to supplant the selfish sovereignty that has governed this planet for centuries. The next two decades will see changes that are today unforeseeable. New mechanisms will be created to cope with international crimes that now disrupt international society and its inhabitants. It may be anticipated that the technology that brought men to the moon and created the awesome capability of thermonuclear annihilation will, some day, be applied to the cause of peace. Those who cherish life on earth must encourage governments and decision-makers to act in accordance with humanitarian rather than political considerations. Those who yearn for the welfare of all human beings must combine their efforts in a vast multinational network of like-minded individuals and organizations to replace the existing values of violence and greed with new rules for a more just and tranquil world community, where law and order is the practice rather than only a distant dream.

Credible international law solves all their war scenarios

Courier-Journal 1/3/**3**

Nuclear war is now thinkable. India and Pakistan, both nuclear powers, dispute control of Kashmir, while North Korea, an emerging nuclear power, threatens South Korea and Japan. The United States threatens nuclear war against Iraq, should Iraq attempt to defend itself with its own weapons of mass destruction. All three of these confrontations are potential wars that have been actual wars in the recent past. The difference now is the growing presence of nuclear weapons, and stated intentions to use them. Nuclear war in the present generation is highly likely, but not inevitable. Peace also is thinkable. There are two things that everyone can do to make war less likely. The first is to think globally. **We need a permanent system of enforced international law to resolve conflicts between nations**. This may conflict with the supposed sanctity of national sovereignty, but **it is the only way to prevent nuclear warfare** in the 21st Century. We need to create and support global institutions to resolve global problems.

2NC ICJ Solves Ilaw Cred

Credible icj necessary for the smooth functioning of international law

Vachon, JD-Denver, **98**

(26 Denv. J. Int'l L. & Pol'y 691, Summer)

New security concerns emanate from global threats to human security such as devastation of the environment. n42 Acting alone, individual nation-states can no longer expect to overcome current national and international problems. n43 This process, described as a crisis for nation-states, challenges a state's sovereignty and requires a change from the old way. n44 Globalization requires greater cooperation among nation-states. n45 The World Bank's recent reaffirmation of its commitment to improving the global environment provides evidence of continuing globalization. Pursuant to its articles of incorporation, the World Bank should not take human rights concerns into account when lending money. However, the World Bank indicated that improvements in the global environment directly affect a country's development. n46 Similarly, the recent international effort to save the troubled Asian economies demonstrates the necessity of global aid to secure a country from crisis. As the Asian economies went into a "free fall," the international financial community cringed in fear. n47 The Asian economies ability to pull themselves back together requires international financial assistance. n48 Going forward it is anticipated that the international community, especially foreign banks, will continue to play an impressive role in the Asian economies. n49

Globalization increases the need for international institutions to [*697] implement limitations and regulations. n50 These institutions assist in a smooth transition from a collection of sovereign states to a global community by establishing universal rules. n51 Judicial institutions, such as the **ICJ are key to the development of an international rule of law**. n52 The judicial institutions must be able to reliably resolve disputes using the international rule of law. n53 Through resolution of disputes, judicial institutions will also develop new aspects of the rule of law. n54

2NC US Key

US leadership is the only way to revive international law

Spiro, Law-Hofstra, 2K

(Foreign Affairs, Nov/Dec)

For now, however, the New Sovereigntist grip over Washington imposes significant costs by retarding the advance of international law. **The United States** may be increasingly vulnerable to international pressure, but it **is still the biggest kid on the block. Persistent** American **rejection will hurt the progress of even well-established international regimes by giving cover to other nonparticipants, and incipient norms will lose the boost that** would otherwise come **with American acceptance.** And **U.S. noncompliance** with international **accords saps its authority to press other nations to respect the rule of international law.** Above all, the United States compromises its own interests by formally refusing to adopt widely accepted international regimes. Treaty committees and other international institutions usually extend participation rights only to member states**. America** thereby **forfeits any right to help shape those regimes that it rejects. It has no voice in shaping international norms at a critical stage of their development,** even as its ability to resist their imposition diminishes. It plays the part of the complaining, unregistered voter on the international stage, refusing to participate in processes that nevertheless bind him. Sure to lose in the long run, New Sovereigntism also hurts America in the here and now.

Us support for icj jurisdiction necessary to restore credibility to the court

Charnovitz, Law—GWU, **8**

(102 A.J.I.L. 551, July)

In conclusion, the continuing U.S. delinquency in the Avena matter could have been avoided if the Supreme Court had given more respectful consideration to the Supremacy Clause. The world community is now watching to see whether Congress will act to implement the ICJ judgment. If it fails to act, that inaction would confirm the Court's skepticism about the political acceptability of giving ICJ judgments direct effect in U.S. law. This essayist hopes that Congress is up to the task of implementing the UN Charter. As Edward S. Corwin noted nearly a century ago, "[T]he United States cannot afford to multiply the occasions of its accountability before the world's tribunal by the crassest sort of negligence to provide the proper legal machinery for carrying its treaty obligations into effect." n78

2NC A2- CP Causes backlash that undermines international law

Risk of international backlash against the decision is small---erosion of international law now

Burroughs, Executive Director-Lawyers' Committee on Nuclear Policy, **7**

http://lcnp.org/wcourt/memoreturnICJhead.pdf

A third concern is that the Court could issue an opinion that would subsequently be ignored, to the detriment of the Court's institutional standing and international law generally. Some would say undermining of the Court's stature has been an outcome of the 1996 opinion on nuclear weapons as well as the 2004 opinion on the Israeli wall built in Palestinian territory. However, the Court issues judgments and opinions on many matters. In most, there is clear-cut compliance. That the Court occasionally grapples with difficult, politically charged, and prominent issues adds to its visibility and does not limit its utility in other settings. Regarding the erosion of international law, **that is already taking place; the question is how to reverse it**. Generally, in IALANA's opinion, in view of the serious challenges facing the world in multiple sectors, we must act as if international law and institutions will be central to meeting those challenges, because that is what is needed. Further, in the words of U.S. Chief Justice Marshall in the landmark 1803 opinion, Marbury v. Madison,9 words which have shaped the evolution of constitutional law in the United States: "It is emphatically the province and duty of the judicial department to say what the law is." Conclusion Return to the International Court of Justice on questions of compliance with the nuclear disarmament obligation is a feasible project within the control of non-nuclear weapon states. It most probably would make a significant contribution to advancing the disarmament process. **The risks of undermining existing law on disarmament and nuclear weapons are negligible.** IALANA urges non-nuclear weapon states to start preparing now for a UNGA resolution to be adopted in the 2008 session.

***Multilateral Institutionalism NB

***1NC Shell

Counterplan exchanges unilateral surveillance for multilateral approaches- makes future international relations sustainable

Harvard Journal on Legislation, "Protecting National Sovereignty in an Era of International Meddling: An Increasingly Difficult Task" Representative Bob Barr, **2002**. 39 Harv. J. on Legis. 299. Lexis.

> The U.N. Charter proscribes "non-pacific" conduct unless necessary to counter threats to peace, breaches of peace, acts of aggression, or to act in self-defense. [28] By potentially giving the ICJ the compulsory jurisdiction to adjudicate "all legal disputes concerning treaties," the United States has effectively tied its hands to resolve such disputes in a manner deemed to be in accord with the ICJ-- and within the general proscriptions of the Charter to forego the use of force in such disputes. The Senate never should have agreed to such a provision, as it presents a potential conflict with the United States Constitution, 29 which grants Congress alone the power to declare war 30 and gives the President the sole power as Commander-in-Chief to wage war on behalf of our sovereign nation. 31 The Constitution does not grant the federal governm, ent the power to cede such authority. So long as the United States had the power, the understanding, and the will to restrict the U.N. provisions to the supremacy of our Constitution, such a problem may have been tolerable. Now, however, the understanding and will are largely absent from national debates, and a serious problem presents itself.
>
> The most dramatic and recurrent example of the United Nations exerting powers reserved by the United States Constitution is the de facto transfer of war powers from our government to the mechanism of the [*305] U.N. [32] Constitutional grant to Congress to declare war and to the President to wage that war [33] is thwarted when international organizations attempt to interject their views on when and where such combat is legitimate. For example, the U.N. Charter mandates that, "all Members . . . undertake to make available to the Security Council, *on its call* . . . armed forces, assistance, and facilities . . . ." [34] This provision of the charter usurps congressional power to declare war by allowing the Security Council to have direct influence and/or control over America's fighting forces and resources. [35] By allowing the U.N. to interpret when United States troops are to be made available on its own beckoning, the *unilateral* and *sovereign* power of the United States becomes diluted and weakened. It is into these muddy waters that the United States has been repeatedly pulled or led in the last years of the twentieth century, and into the beginning years of the twenty-first, with little or no long-term forethought to the consequences or bases for such action by the United States.

US leadership is unsustainable without a highly visible commitment to multilateralism- answers all your DA's

Lake, 10– Professor of Social Sciences, distinguished professor of political science at UC San Diego (David A., "Making America Safe for the World: Multilateralism and the Rehabilitation of US authority", http://dss.ucsd.edu/~dlake/documents/LakeMakingAmericaSafe.pdf

The safeguarding of US authority requires multilateralism that is broader and certainly deeper than in the 1990s—more like NATO than the ad hoc coalitions of the new world order. Indeed, absent the constraints exerted by competition with the Soviet Union, the institutional fetters through which the United States must bind its own hands will have to be even stronger than those in NATO. 47 The great

paradox of contemporary international politics is that the unprecedented international power of the United States requires even more binding constraints on its policy is fit to preserve the authority that it has built over the last half-century and extend it to new areas of the globe.

The advanced military capabilities of the United States will make it a key actor in any such multilateral institution and will allow it to set the collective agenda. Since it is highly unlikely that anything will happen in the absence of US involvement, as in Bosnia where the Europeans dithered until the United States stepped to the fore, 48 Americans need not be overly concerned about "runaway" organizations or global mission creep. At the same time, if any organization is to be an effective restraint on the United States, other countries will have to make serious and integral contributions to the collective effort. Both sides to this new multilateral bargain will need to recognize and appreciate the benefits of a stable international order to their own security and prosperity and contribute to its success - 480 Making America Safe for the World. The United States will need to continue to play a disproportionate role in providing international order, even as it accepts new restraints on its freedom of action. Other countries, however, must also contribute to the provision of this political order so that they can provide a meaningful check on US authority.

Americans are likely to resist the idea of tying their hands more tightly in a new multilateral compact. After six decades, US leadership and its fruits— security, free trade, economic prosperity—have developed a taken-for-granted quality. It is hard for average Americans to tally the myriad benefits they receive from the country's position of authority, but it is relatively easy for them to see multilateral institutions constraining the country's freedom of action. Precisely because unipolarity makes coercion and unilateralism possible, and for some attractive, any constraints on US foreign policy may appear too high a price to bear. 49

But if the United States is to remain the leader of the free world and possibly beyond, it must make its authority safe for others. To sustain US authority over the long term, it must be embedded in new, more constraining multilateral institutions. Americans trust their government only because of its internal checks and balances. Although there may be disagreements on exactly where the appropriate scope of government authority ends, nearly all Americans agree that limited government is the best form of government. This same principle extends abroad. If the United States is to exercise authority over other states, and enjoy its fruits, that authority must be **checked and balanced** as well. The height of hubris is not that the United States might govern the world, at least in part. This is a fact of international politics. Rather, hubris arises in the belief that the virtue of its people and leaders will restrain the United States sufficiently such that other peoples will voluntarily cede a measure of their sovereignty to it. 50 Politicians and peoples may occasionally be saintly, but it would be folly to rely on this quality at home or abroad. Recognizing the universal need to restrain authority, the United States should, in its own self-interest, lead the way to a new world order.

Reliance on unilateralism will collapse US leadership and cause global wars with weapons of mass destruction

Montalván, 10 - a 17-year veteran of the U.S. Army including multiple combat tours in Iraq, master's of science from Columbia University's Graduate School of Journalism (Luis, "Multilateralism is Essential

for Peace in the 21st Century" Huffington Post, 4/23, http://www.huffingtonpost.com/luis-carlos-montalvan/multilateralism-is-essent_b_550332.html)

Unilateralism is the wrong approach for American Diplomacy. There is nothing to suggest its efficacy since 9/11. There is nothing to suggest its usefulness for future conflict. In allowing the US to go it alone, America's partners and allies risk the havoc and catastrophic consequences that will accompany "Imperial Overstretch." The residue of overstretch will include loss of US leadership in the world, an economy whose decline affects billions of dollars in international markets, and certainly emboldens rogue states. The whole world will pay the price if we let unilateralism pervade this century.

As the bloodiest 100 years in recorded history, the 20th Century is replete with examples of how policy and practice intersect to foment war. The proliferation of nuclear, biological and chemical weapons and the constantly mutating dynamic of terrorism inform our current, dangerous reality.

Amidst this backdrop of destruction, there are lessons for those who are looking for them. Seeds of peacemaking and conflict resolution were planted which we must germinate in order to halt and then reverse the trend toward violence and chaos. Perhaps the 21st Century could be the first 100 years in which nations invest more in building peace than in making war.

In the 20th Century, local conflicts ignited global tensions and genocide on an unprecedented scale, costing incalculable life and treasure. The two world wars and other explosive conflicts erupted over such issues as ethnic disputes, the securing of natural resources, corporate interests, ideology and religion. The international business of war produced economies of scale prompted by the industrial, technological, and communications revolutions.

The assassination of Archduke Franz Ferdinand of Austria and his wife in Sarajevo by anarchist Gavrilo Princip was the spark that ignited WWI. In time, some 15 million people would be killed. The sheer brutality of that war led Woodrow Wilson to issue his "Fourteen Points" in 1918, which included the establishment of a League of Nations "for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike." Just like our present-day difficulties in pursuing compromise, the US Congress politicized the concept, bucked the President, and did not support that initiative. The subsequent failure of the League of Nations to prevent WWII may have galvanized our culture's distrust of multilateralism.

Throughout the 20th Century and until today, nations and other entities have invested precious financial, intellectual, social, institutional and political capital into arming themselves with weaponry, instead of building their capacity for peace. Technologies change and improve with increasing rapidity, but those advances have included improvements in how to kill more people more efficiently and with smaller devices.

WWII was the shining example of multilateralism and its power. Vietnam and Korea were examples of its limitations. South Africa and India demonstrated that the support of the international community could enable countries to pull themselves up by their own bootstraps. All these contribute and form the basis of the state of nations today.

The 20th Century left us at a crossroads: will we perpetuate the machinery and culture of war or surpass our greatest dreams by encouraging and enforcing peace policies and practices worldwide?

The 21st Century began ominously with the attacks of September 11, 2001, which ushered in a new era of US foreign policy and global response to war, conflict and terrorism. Rather than engage a sympathetic world in developing multilateral and inclusive strategies similar to the precursors to the 2003 Iraq War and as was done before the Persian Gulf War, the US squandered its global capital to pursue "pre-emptive" unilateral military action. The equal and increasingly matching reaction is a global culture of **military aggression and war**.

The resulting disintegration of the international community contributed to the most serious economic disaster since the Great Depression. Already struggling to survive amidst broken economies, the proliferation of nuclear, biological and chemical weapons and global terrorism strains multilateralism when it should embolden it. If it is true that every weapon invented is eventually used, we have much to fear if we do not reverse this lethal trend.

Since national conflicts frequently spill over into regional and world-wide conflict, multilateral organizations have been very strong supporters of Truth and Reconciliation Commissions. Even the US found a way to first investigate and then come to terms with its terrible policy of putting Japanese-Americans in internment camps during WWII and apologized and paid reparations to survivors and their children. There were important Truth and Reconciliation Commissions in South Africa, supported by the international community. Victims and perpetrators of Apartheid who participated in Truth and Reconciliation Commissions demonstrated in compelling ways the healing and restorative power of those gatherings. Perhaps more importantly, they showed the world that a nonviolent response to unthinkable oppression and injustice can foster the peaceful development of a society intent upon making amends for the past and embarking upon a brighter, shared future. Since conflict-resolution and peacemaking at the local or national level work, why not apply it multilaterally?

Concerned about the resurgence of unilateralism in the US's current Marjeh and Kandahar operations in Afghanistan, former Assistant Secretary of State Gene Dewey recently noted that "it's been very lonely being a leading multilateralist in Washington over the last nine years. Too few policy-makers have sensed where our unilateralism has led, and is leading."

Saudi Arabia and other authoritarian Islamic countries generated the seeds that not only birthed the terrorists who carried out 9/11, but also attacks in Madrid, London, Mumbai and Chechnya. No matter where terrorists are determined to attempt to disrupt the lives of others, it's time for countries to realize that the only way to confront contemporary terrorism is through multilateralism. This must be a multilateralism that is thoroughly infused with peacemaking and conflict-resolution, instead of only "joint forces."

At this crossroads, we can use the knowledge economy, social network and the international community to turn the rhetoric of hope into reality. We sit upon an historical precipice of policies and practices of sustainable, culturally responsive peace-building and violence prevention within and beyond our borders.

Despite their faults, the institutions set up after in response to WWII (UN) and the Cold War (NATO) can be the 21st Century's vehicles for peace. We can use those instruments of multilateralism to build the peacekeeping, disaster relief, and conflict resolution forces that bring countries together.

"Actually, I believe we have strategically shifted from that of a global war on terror (GWOT) to containing violent extremism (CVE). That said, the reason extremists do what they do is because they recruit from amongst the most desperate people on the earth. And, the reasons for desperation are strategic---but not necessarily military in nature. In fact, we have the capability to wage peace that is just as sophisticated as our capability to make war. Water, AIDS, mass migration of people, desertification, poverty, hunger, and disease---What would happen if our National Security Strategy became a **multilateral one** of economic engagement, and used the brain power and resources available to mitigate these issues?" -- Lt. Col. Matthew Canfield, U.S. Army (Currently on his second tour in Iraq)

Concerns over economic stability, limited resources and security have divided us. Now is the time to create rather than divide common ground.

2NC A2: Perm- Multilat Institution Version

Compulsory jurisdiction means that only the ICJ has the authority to rule on ____- simultaneously submitting the plan area to the Supreme Court would not grant the ICJ compulsory jurisdiction, it would retain US compulsory jurisdiction

Only the counterplan's submission of surveillance to compulsory jurisdiction is a sufficient structural change to transition to multilateral institutionalism- the perm is just an empty gesture that retains domestic and unilateral authority

David A. **Lake**, UC San Diego June 10, **2009**, Making America Safe for the World: Multilateralism and the Rehabilitation of U.S. Authority, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1417667

Unipolarity and the excesses of the Bush administration it permitted have finally ¶ brought the authority of the United States into public discourse – and into question. The ¶ "American empire" discussed in the mainstream media for the first time since at least the ¶ Vietnam War is an exaggeration, but the new use of the term reveals the increasingly ¶ problematic status of American rule.4¶ The Obama administration is moving quickly to ¶ reverse the assertive unilateralism of its predecessor. This may help reinforce the ¶ crumbling foundations of U.S. authority. **Yet, the problem is deeper, more structural, and ¶ cannot be solved simply by a change of diplomatic tone or adopting more collaborative policies**. To secure the international order that has been so beneficial in the last century – ¶ and to succeed in extending that order to countries that do not yet enjoy its fruits – ¶ requires a new, more restraining, multilateral solution that binds the hands of the United ¶ States **far more tightly than in the past**. To rule legitimately requires **tying** the suzerain's ¶ hands.

Only the counterplan is sufficiently binding to solve the net benefit- internal checks and balances are no longer sufficient because we already our allies with decades of unilateralism and bullying- only true compulsory jurisdiction solves

David A. **Lake**, UC San Diego June 10, **2009**, Making America Safe for the World: Multilateralism and the Rehabilitation of U.S. Authority, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1417667

These natural restraints were reinforced by a self-imposed strategy of ¶ multilateralism, the hallmark of American foreign policy since 1945.17 Multilateralism ¶ gives other states a voice over American policy. It also creates a set of "fire alarms" that ¶ can be pulled should the United States transgress the limits to its authority. By its need to ¶ hold coalitions together, the United States constrains its ability to abuse those same ¶ subordinates. Finally, by its willingness to give other countries a voice and an ability to ¶ monitor and sanction its policies, the United States signals its willingness to operate ¶ within the bounds of international consensus on its rightful role as leader. ¶ In the absence of great power competition, a dominant state is restrained only by ¶ its internal checks and balances and its willingness to restrain itself through multilateralism. This self-restraint depends upon virtue, a recognition of limits, and a ¶ concern for sustaining the authority of the dominant state over the long term. **Yet, virtue ¶ is a weak fetter**. As James Madison, architect of the division of powers in the U.S. ¶ Constitution wrote, "the truth is that all men having power ought to be mistrusted." ¶ President George W. Bush and his advisors were seduced by the condition of ¶ unipolarity and the unprecedented coercive power of the United States.18

Frightened by ¶ the first significant attack on the United States in 50 years, Americans demanded that the ¶ administration "do something." Responding to this pressure, Congress and even the ¶ courts failed to exert their normal checks on the executive branch. Fearing that they ¶ would be held responsible for any future attacks, the administration eschewed ¶ multilateralism and insisted upon unrestricted unilateral action in pursuit of the nation's ¶ interests. Believing that other states would fall into line once they observed the ¶ overwhelming coercive power of the United States, the administration asserted new rights ¶ of intervention and regime change in the Persian Gulf **that went far beyond what others ¶ were prepared to accept**. In essence, the Bush administration followed its predecessors in ¶ seeking to extend America's authority to new regions of the globe, but broke with the ¶ practice of embedding that authority in multilateral institutions. ¶ By untying the nation's hands in an attempt to smash and intimidate foreign ¶ opponents, President Bush did more to weaken the carefully cultivated authority of the ¶ United States over other states than perhaps **any other leader in our nation's history**. ¶ Confronted with the country's unfettered coercive power and the administration's ¶ assertion of bold new rights, other states – including many long term subordinates who ¶ would normally legitimate American actions -- reacted predictably by opposing the war, refusing to participate in the peacemaking, and denying all claims to new authority by the ¶ United States. By breaking the restraints that had previously limited America's ¶ international authority, the administration caused many to question whether the United ¶ States could be trusted to abide by its existing social contracts. Americans reacted with ¶ new calls to restore the legitimacy of their country – and elected a new president who ¶ promised to take foreign policy in a new direction. ¶ How to Bind a Giant ¶ How then can America's authority be made safe for the world? **Once broken, can ¶ a country retie its own fetters?** To the extent that the international authority of the United ¶ States is important for the maintenance and possible expansion of international order, to ¶ simply allow America's authority to wither would have serious consequences not only for ¶ the United States but for other states as well. **But now that its hands are free, it is hard to ¶ mask their power simply by slipping the old ropes back on**. Knowing that coercion can ¶ still be used, other countries will be far less likely to grant the United States authority ¶ over their affairs. With less authority, the United States will be more tempted to resort to ¶ coercion to achieve its ends. **The authority of the United States**, and the political orders ¶ its supports, **threaten to unravel in a vicious circle**. ¶ President Barack Obama and his administration appear to recognize the need to ¶ bolster the authority and legitimacy of the United States in the world. But virtue alone ¶ cannot provide credible guarantees against future American opportunism. Unipolarity is ¶ an enabling condition that persists. The problem of credibility is **structural**, and not one ¶ that a new administration can solve simply by a new style or approach to foreign policy. ¶ Ironically, **to safeguard its authority requires that the United States embed its coercive capabilities even deeper into multilateral institutions that can provide real checks on ¶ potential opportunism**.

2NC Only CP Solves Heg/Binding Critical

Only **the counterplan solves hegemony- binding the US's authority is critical**

David A. **Lake**, UC San Diego June 10, **2009**, Making America Safe for the World: Multilateralism and the Rehabilitation of U.S. Authority, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1417667

Over the last century, the United States has built and sustained informal empires over states on the Caribbean littoral, spheres of exclusive political and economic influence over countries in South America, and after 1945 protectorates over key "allies" in Western Europe and Northeast Asia. In pursuit of a New World Order, the United States has in recent decades attempted to expand its authority over other states into Eastern Europe, with a measure of success, and the Middle East, which has been far more problematic. The authority wielded by the United States over its subordinates, despite occasional abuses, has been enormously beneficial. This order provides **security** both internally and externally and permits unprecedented **prosperity**. Americans, in turn, gain from writing the rules of that order and, especially, from turning possible rivals into reliable subordinates that largely comply with its rules. The key foreign policy task is not to diminish U.S. authority but to safeguard that authority and its preserve its benefits into the future. To secure the international order that has been so beneficial in the last century – and to succeed in **extending that order** to countries that do not yet enjoy its fruits – requires a new, more restraining, multilateral solution that binds the hands of the United States far more tightly than in the past. To rule legitimately requires tying the suzerain's hands.

Submission of war powers authority to binding international jurisdiction solves multilateralism- generates an international social contract and is the only way to make US leadership attractive

David A. **Lake**, UC San Diego June 10, **2009**, Making America Safe for the World: Multilateralism and the Rehabilitation of U.S. Authority, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1417667

The handmaiden of authority is **restraint by the ruler**. Within the United States, ¶ the Constitution divides power and creates checks and balances such that each branch of ¶ government will restrain the others. **International authority is no different**. Checks and ¶ balances are necessary to constrain the authority of the dominant state. ¶ A state's decision to subordinate itself to another is one of the most profound ¶ choices it can make. Not only does it thereby agree to follow the rules of the dominant ¶ state, but it opens itself to the possibility of costly punishments if it does not comply with ¶ those commands. Equally, once vested, a dominant state can use its authority to encroach ¶ further on the rights of its subordinates over time. To enter and remain in such a ¶ relationship requires confidence by subordinates that the authority they grant to dominant states will not be used to violate the social contract by making illegitimate demands or ¶ expanding authority further in the future. In domestic politics, this is known as the ¶ problem of tying the hands of the sovereign.15 In international politics, the problem is ¶ how to tie the suzerain's hands. ¶ Throughout the Cold War, the authority of the United States was restrained ¶ naturally by the competition with the Soviet Union, which created an alternate pole ¶ around which abused subordinates, like Cuba, or states that feared American opportunism ¶ could rally. The United States was also restrained by its own democratic institutions, ¶ which revealed its intentions to other states and made deviations from current policy ¶ more difficult. Together, these natural constraints had the paradoxical effect of making ¶ America's domination **far more attractive**

than it otherwise would have been. So ¶ constrained, the United States enjoyed what Gier Lundestad once called an "empire by ¶ invitation."16

2NC ICJ=Key to International Binding

Delegation bolsters the credibility of u.s. committments

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

The benefits that states derive from independent tribunals far exceed the provision of information to the disputing parties. Independent tribunals act as trustees to **enhance the credibility of international commitments in specific multilateral contexts**. They do so by raising the probability that violations of those commitments will be detected and accurately labeled as noncompliance. Such violations create short-term material and reputational costs for the state in default. But detection of these violations also **encourages future compliance**, maximizing the long-term value of the agreement to all parties to the multilateral regime, including the defecting state.

delegation promotes cooperation and spurs international compliance

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

Nearly eight years ago, in Toward a Theory of Effective Supranational *Adjudication*, we wrote that supranational adjudication in Europe was a remarkable and surprising success.[15] To a world growing ever more interdependent, the prospect that any group of nations could create genuinely effective supranational tribunals held enormous promise for **promoting interstate cooperation**. With national borders increasingly permeable to people, goods, and information, governments faced a growing and diverse array of regulatory problems that required multilateral solutions. Effectuating those solutions, however, **required states to comply with their international commitments**. This question of compliance has plagued generations of international lawyers and political theorists who understand the constraints of an international legal system that lacks the coercive enforcement authority of domestic law. In this relatively anarchic environment, the creation of adjudicatory and dispute settlement mechanisms often bears little relationship to their efficacy. Yet the nations of Europe have somehow managed to establish not one but two supranational courts—the ECJ and the ECHR—with active dockets, extensive and well-reasoned case law, and, most importantly, judgments with which governments have habitually complied. If the factors that contributed to the success of the ECJ and ECHR **could be isolated and replicated** in other parts of the globe, **they could significantly enhance the compliance opportunities for international law in general and for international adjudication in particular**.

2NC Multilat Solves War

Multilateralism prevents nuclear war with rising Asian powers

Kugler, 6– Professor of World Politics at Claremont Graduate University (Jacek, "The Asian Ascent: Opportunity for Peace or Precondition for War?", http://sobek.colorado.edu/~lewiso/Kugler%20-%20The%20Asian%20Ascent.pdf)//NG
