Given the fundamental importance of demographic and economic forces in establishing the roster of states capable of fundamentally affecting the structure of world politics, whatever resolution there might be to the Global War on Terror will not alter the major challenge faced by the United States. In the long run, China's demographic and hence economic power cannot be denied. By the same reasoning, the Middle East has no long-run demographic or economic power. The U.S. courts long-term peril by being obsessively distracted by short-term objectives. To ensure real peace, the U.S. would be much better advised to preserve strong links with the EU, maintain and improve cordial relations with Russia, and most importantly, open a sincere dialogue with India and China designed to maximize their support for the existing status quo. To be sure, positive, but limited, steps have been taken by the United States. American support for China's entry into the World Trade Organization was important because it helps integrate China's growing economy more fully into the capitalist world economy. Similar recognition for India, not to mention support for Indian membership on the United Nations Security Council, would also be beneficial. Because Taiwan and Korea have replaced the Cold War's Berlin as focal points for potential Great Power conflict, finding an accommodation that meets the desires of the main parties with respect to them is central to the preservation of long-term peace. The economic, demographic, and political science research summarized above suggests that American foreign policy attention must center on China and India as the major future contenders for global leadership. Although China retains a political ideology inconsistent with democracy, there are good reasons to expect and thus to work toward change to a participatory system based on increasing prosperity (Feng 2003; Feng and Zak 2003). India is the largest democracy in the world, but like China it is still not a major partner of the Western world. While these relationships may develop and prosper on their own, the relative amount of attention paid to these rising giants compared with the Global War on Terror is simply insupportable. Neither convergence arguments nor power transition theory suggests that future Great Power war between Asia and the West is inevitable. The research described here offers evidence about probabilistic relationships between parity and status quo evaluations on the one hand, and war on the other. Thus, while China's overtaking of the U.S. may be relatively certain, the result of that overtaking is not. Power transition research supports claims that overtakings are dangerous when policy makers fail to accommodate them. A conflict between China or India and the United States as the Asian giants emerge from the shadows of underdevelopment is not inevitable. Rather, the political negotiations among contenders determine whether potential challengers can be made satisfied with the rules and norms governing world politics. If the declining dominant state is able to engineer a satisfactory compromise between the demands of the rising state and its own requirements (as Britain and the U.S. did when peacefully passing the mantle of international leadership), war is not expected. If the two sides remain intransigent, war is expected. It is clear that such a war in the twenty-first century would have a very high probability of involving nuclear weapons. A clear counterexpectation can be drawn from classical nuclear deterrence arguments. They involve a fundamental assumption that as the costs of war increase, the probability of war decreases. Nuclear weapons are then alleged to alter calculations substantially because they raise the expected costs of war so high that war becomes unthinkable. According to this logic, a global war

between a newly predominant China and a declining U.S. will never occur thanks to the pacifying influence of the balance of terror. A new Cold War is anticipated by this nuclear deterrence argument. Consistent with this theory, various scholars have advocated the proliferation of nuclear weapons as one method to prevent wars (Intriligator and Brito 1981; Waltz 1981; Bueno de Mesquita and Riker 1982). An odd paradox is raised by the fact that many world leaders accept nuclear deterrence claims, such as that about the stability of mutual assured destruction (MAD), while rejecting the logical concomitant that proliferation of nuclear weapons to more and more states is desirable. What follows logically has stubbornly resisted practical implementation. Thus, using some other logic, leaders of nuclear nations seem to agree that deterrence is stable under MAD but nevertheless also agree that nuclear proliferation must be prevented in order to preserve peace. If decision makers really believed MAD is stable, it is impossible to understand why they would oppose nuclear proliferation to Iran, thereby creating stable nuclear parity in the Middle East. This inconsistency was noted years ago by Rosen (1977), but subsequently conveniently overlooked. Theory and policy may frequently be at odds, but seldom when the costs of such logical inconsistency are so high. Power transition theorists are inherently suspicious of MAD arguments about nuclear stability because they essentially resurrect traditional balance of power arguments. Rather than focusing on conventional balance as a pacifying influence, nuclear deterrence proponents of MAD suggest that a nuclear balance will maintain the peace. Given a fortuitous absence of wars among nuclear states thus far, it is impossible to test arguments such as that about MAD. But what we can observe is not promising. It is not only policy makers who doubt the veracity of MAD when they deny the logical consequence of ''beneficial'' proliferation. Recent formal presentations of deterrence arguments strongly suggest that a preponderance of nuclear capabilitiesFspecifically in the possession of satisfied statesFis more amenable to peace than is MAD (Zagare and Kilgour 2000). Power transition theorists, informed by their own as well as by decades of demographic and economic research, strongly doubt that nuclear parity between the U.S. and a risen but dissatisfied China could preserve the peace. Conclusions It is entirely reasonable to anticipate that Asia will dominate world politics by the end of the century. The most important issue facing American decision makers is how to handle the anticipated overtaking. The research summarized here indicates that the one element of Asia's ascent that Western decision makers can manipulate is Asia's relative acceptance of the international system's existing norms and values. War is not an inevitable certainty. The opportunity for peace is at hand. If Western decision makers can persuade Chinese and Indian leaders through word and deed to join with the current global status quo, peace and prosperity should endure. If, on the other hand, China and India cannot be persuaded to join the existing structure of relations, then the chances for conflict increase around mid-century. The research summarized here suggests this is true even in the face of the enormous costs that reasonably would be anticipated from a nuclear war

Multilateralism solves war

Dyer '4– independent journalist, cites Frans de Waal, Ph. D in biology, works at Yerkes National Primate Center (Gwynne, "The End of War: Our Task Over the Next Few Years is to Transform the World of Independent States into a Genuine Global Village", http://www.commondreams.org/views04/1230-05.htm)//NG

About 20 years ago, a disaster struck the Forest Troop of baboons in Kenya. There was a tourist lodge within their range, and the biggest and toughest males in the troop would regularly go to the garbage dump there to forage for food. Subordinate males, however, did not go so when the brutal and despotic alpha males of Forest Troop all ate meat infected with bovine tuberculosis at the dump and promptly died, the less aggressive 50 per cent of the group's males survived. And the troop's whole culture changed. Male baboons are so obsessed with status that they are always on a hair-trigger for aggression and it isn't just directed at male rivals of equal status. Lower-ranking males routinely get bullied and terrorized, and even females (who weigh half as much as males) are frequently attacked and even bitten. You really would not want to live your life as a baboon. Yet after the biggest, baddest males of Forest Troop all died off at once, the whole social atmosphere changed. When it was first studied by primatologists in 1979-82, it was a typical, utterly vicious baboon society, but after the mass die-off of the bullies the surviving members relaxed and began treating one another more decently. The males still fight even today they are baboons, after all but they quarrel with other males of equal rank rather than beating up on social inferiors, and they don't attack the females at all. Everybody spends much more time in grooming, huddling close together, and other friendly social behavior, and stress levels even for the lowest-ranking individuals (as measured by hormone samples) are far lower than in other baboon troops. Most important of all, these new behaviors have become entrenched in the troop's culture. Male baboons rarely live more than 18 years: The low-status survivors of the original disaster are all gone now. All the current adult males of the Forest Troop are baboons who joined it as adolescents after 1982, so by now the range of male personalities in Forest Troop must have returned to the normal baboon distribution. But the level of aggression has not returned to baboon-normal. "We don't yet understand the mechanism of transmission," said Robert Sapolsky, a biology and neurology professor at Stanford University who co-authored the 2004 report on the Forest Troop phenomenon, "but the jerky new guys are obviously learning: We don't do things like that around here.'" Human beings are less aggressive and more co-operative than baboons or even chimpanzees, and a thousand times more flexible in our cultural arrangements: Most of us now live quite comfortably in pseudo-bands called nations that are literally a million times bigger than the bands our ancestors lived in until the rise of civilization. War is deeply embedded in our history and our culture, probably since before we were even fully human, but weaning ourselves away from it should not be a bigger mountain to climb than some of the other changes we have already made in the way we live, given the right incentives. And we have certainly been given the right incentives: The holiday from history that we have enjoyed since the early '90s may be drawing to an end, and another great-power war, fought next time with nuclear weapons, may be lurking in our future. The "firebreak" against nuclear weapons use that we began building after Hiroshima and Nagasaki has held for well over half a century now. But the proliferation of nuclear weapons to new powers is a major challenge to the stability of the system. So are the coming crises, mostly environmental in origin, which will hit some countries much harder than others, and may drive some to desperation. Add in the huge impending shifts in the great-power system as China and India grow to rival the United States in GDP over the next 30 or 40 years and it will be hard to keep things from spinning out of control. With good luck and good management, we may be able to ride out the next half-century without the first-magnitude catastrophe of a global nuclear war, but the potential certainly exists for a major die-back of human population. We cannot command the good luck, but good management is something we can choose to provide. It depends, above all, on preserving and extending the multilateral system that we have been building since the end of World War II. The rising powers must be absorbed into a system that emphasizes co-operation and makes room for them, rather

than one that deals in confrontation and raw military power. If they are obliged to play the traditional great-power game of winners and losers, then history will repeat itself and everybody loses. Our hopes for mitigating the severity of the coming environmental crises also depend on early and concerted global action of a sort that can only happen in a basically co-operative international system. When the great powers are locked into a military confrontation, there is simply not enough spare attention, let alone enough trust, to make deals on those issues, so the highest priority at the moment is to keep the multilateral approach alive and avoid a drift back into alliance systems and arms races. And there is no point in dreaming that we can leap straight into some never-land of universal brotherhood; we will have to confront these challenges and solve the problem of war within the context of the existing state system. The solution to the state of international anarchy that compels every state to arm itself for war was so obvious that it arose almost spontaneously in 1918. The wars by which independent states had always settled their quarrels in the past had grown so monstrously destructive that some alternative system had to be devised, and that could only be a pooling of sovereignty, at least in matters concerning war and peace, by all the states of the world. So the victors of World War I promptly created the League of Nations. But the solution was as difficult in practice as it was simple in concept. Every member of the League of Nations understood that if the organization somehow acquired the ability to act in a concerted and effective fashion, it could end up being used against them, so no major government was willing to give the League of Nations any real power. Instead, they got World War II, and that war was so bad – by the end the first nuclear weapons had been used on cities – that the victors made a second attempt in 1945 to create an international organization that really could prevent war. They literally changed international law and made war illegal, but they were well aware that all of that history and all those reflexes were not going to vanish overnight. It would be depressing to catalogue the many failures of the United Nations, but it would also be misleading. The implication would be that this was an enterprise that should have succeeded from the start, and has failed irrevocably. On the contrary; it was bound to be a relative failure at the outset. It was always going to be very hard to persuade sovereign governments to surrender power to an untried world authority which might then make decisions that went against their particular interests. In the words of the traditional Irish directions to a lost traveler: "If that's where you want to get to, sir, I wouldn't start from here." But here is where we must start from, for it is states that run the world. The present international system, based on heavily armed and jealously independent states, often exaggerates the conflicts between the multitude of human communities in the world, but it does reflect an underlying reality: We cannot all get all we want, and some method must exist to decide who gets what. That is why neighboring states have lived in a perpetual state of potential war, just as neighboring hunter-gatherer bands did 20,000 years ago. If we now must abandon war as a method of settling our disputes and devise an alternative, it only can be done with the full co-operation of the world's governments. That means it certainly will be a monumentally difficult and lengthy task: Mistrust reigns everywhere and no nation will allow even the least of its interests to be decided upon by a collection of foreigners. Even the majority of states that are more or less satisfied with their borders and their status in the world would face huge internal opposition from nationalist elements to any transfer of sovereignty to the United Nations. The good news for humans is that it looks like peaceful conditions, once established, can be maintained. And if baboons can do it, why not us? The U.N. as presently constituted is certainly no place for idealists, but they would feel even more uncomfortable in a United Nations that actually worked as was originally intended. It is an association of poachers turned game-keepers, not an assembly of saints, and it would not make its decisions according to some impartial standard of justice. There is no impartial concept of

justice to which all of mankind would subscribe and, in any case, it is not "mankind" that makes decisions at the United Nations, but governments with their own national interests to protect. To envision how a functioning world authority might reach its decisions, at least in its first century or so, begin with the arrogant promotion of self-interest by the great powers that would continue to dominate U.N. decision-making and add in the crass expediency masquerading as principle that characterizes the shifting coalitions among the lesser powers in the present General Assembly: It would be an intensely political process. The decisions it produced would be kept within reasonable bounds only by the need never to act in a way so damaging to the interest of any major member or group of members that it forced them into total defiance, and so destroyed the fundamental consensus that keeps war at bay. There is nothing shocking about this. National politics in every country operates with the same combination: a little bit of principle, a lot of power, and a final constraint on the ruthless exercise of that power based mainly on the need to preserve the essential consensus on which the nation is founded and to avoid civil war. In an international organization whose members represent such radically different traditions, interests, and levels of development, the proportion of principle to power is bound to be even lower. It's a pity that there is no practical alternative to the United Nations, but there isn't. If the abolition of great-power war and the establishment of international law is truly a hundred-year project, then we are running a bit behind schedule but we have made substantial progress. We have not had World War III, and that is thanks at least in part to the United Nations, which gave the great powers an excuse to back off from several of their most dangerous confrontations without losing face. No great power has fought another since 1945, and the wars that have broken out between middle-sized powers from time to time • Arab-Israeli wars and Indo-Pakistani wars, mostly • seldom lasted more than a month, because the U.N.'s offers of ceasefires and peacekeeping troops offered a quick way out for the losing side. If you assessed the progress that has been made since 1945 from the perspective of that terrifying time, the glass would look at least half-full. The enormous growth of international organizations since 1945, and especially the survival of the United Nations as a permanent forum where the states of the world are committed to avoiding war (and often succeed), has already created a context new to history. The present political fragmentation of the world into more than 150 stubbornly independent territorial units will doubtless persist for a good while to come. But it is already becoming an anachronism, for, in every other context, from commerce, technology, and the mass media to fashions in ideology, music, and marriage, the outlines of a single global culture (with wide local variations) are visibly taking shape. It is very likely that we began our career as a rising young species by exterminating our nearest relatives, the Neanderthals, and it is entirely possible we will end it by exterminating ourselves, but the fact that we have always had war as part of our culture does not mean that we are doomed always to fight wars. Other aspects of our behavioral repertoire are a good deal more encouraging. There is, for example, a slow but quite perceptible revolution in human consciousness taking place: the last of the great redefinitions of humanity. At all times in our history, we have run our affairs on the assumption that there is a special category of people (our lot) whom we regard as full human beings, having rights and duties approximately equal to our own, and whom we ought not to kill even when we quarrel. Over the past 15,000 or 20,000 years we have successively widened this category from the original hunting-and-gathering band to encompass larger and larger groups. First it was the tribe of some thousands of people bound together by kinship and ritual ties; then the state, where we recognize our shared interests with millions of people whom we don't know and will never meet; and now, finally, the entire human race. There was nothing in the least idealistic or sentimental in any of the previous redefinitions. They occurred because they were useful in advancing

people's material interests and ensuring their survival. The same is true for this final act of redefinition: We have reached a point where our moral imagination must expand again to embrace the whole of mankind. It's no coincidence that the period in which the concept of the national state is finally coming under challenge by a wider definition of humanity is also the period that has seen history's most catastrophic wars, for they provide the practical incentive for change. But the transition to a different system is a risky business: The danger of another world war which would cut the whole process short is tiny in any given year, but cumulatively, given how long the process of change will take, it is extreme. That is no reason not to keep trying. Our task over the next few generations is to transform the world of independent states in which we live into some sort of genuine international community. If we succeed in creating that community, however quarrelsome, discontented, and full of injustice it will probably be, then we shall effectively have abolished the ancient institution of warfare. Good riddance.

This diplomatic approach prevents conflict escalation. Only the AFF can access a large war impact

Wright 10 – Executive director of studies at The Chicago Council on Global Affairs (Thomas, "Strategic Engagement's Track Record," The Washington Quarterly)//NG

The obstacles to a new international order are not just due to free-riding, barriers to coordination, misunderstandings, or relatively minor differences, which can eventually be overcome in pursuit of the common good. There are also significant divergences in preferences and perceived interests. In the Western order of the Cold War, the closest economic partners of the United States were also its political allies. These allies not only shared the same problems but also had a broadly similar view about how to tackle the problem. In today's global order, however, the United States needs the support of countries with which it not only disagrees but also views international politics as a relative-sum game. Unlike the geopolitical competition between the United States and the Soviet Union or European great power competition of the first half of the twentieth century, today's competition takes place within the framework of the existing international order. It is a competition bound by limitsa struggle for influence within the order, over the rules, and even limited disputes over borders and boundaries, rather than a struggle against a belligerent revisionist power intent on overthrowing the status quo in its entirety. Henry Kissinger noted this distinction in his book, A World Restored:

A legitimate order does not make conflicts impossible, but it limits their scope. Wars may occur, but they will be fought in the name of the existing structure and the peace which follows will be justified as a better expression of the 'legitimate,' general consensus. Diplomacy in the classic sense, the adjustment of differences through negotiation, is possible only in 'legitimate' international orders.49

2NC Multilat Solves Laundry List

Multilateralism is failing now and solves the economy, crime, and global warming

Legler, 10– Professor of Political Science at Universidad Iberoamericana, Mexico City (Thomas, "Multilateralism and Regional Governance in the Americas", http://www.iadb.org/intal/intalcdi/PE/2010/06396.pdf)//NG

In the absence of world or regional governments, multilateralism is an anchor for diverse governance schemes, from addressing international economic crisis to combatting transnational crime to countering global warming. In theory, as the main embodiment of multilateralism, formal international organizations contribute in practical ways to governance challenges, such as the ability to centralize collective activities for member states or to serve as independent and neutral thirdparty arbiters in conflict resolution. Informal and formal multilateral groupings can promote the creation of new norms and the construction of new international regimes, as well as enhance communications, share knowledge, and coordinate approaches among member states. Nonetheless, the multilateral base for Latin American and Caribbean regional governance remains relatively weak. Before LAC leaders can truly seize this historic opportunity, they must address a series of multilateral challenges, six of which are identified here. Briefly, multilateral governance in the Americas is impeded by: a tradition of defensive multilateralism; the lack of strong regional identity; problems of competition and overlapping mandates caused by multilateral proliferation; the question of who foots the bill; a club mentality; and the reluctance to delegate national authority to international organizations.

Multilateralism solves Iran and North Korean Proliferation

Hinderdael, 11– M.A. candidate at SAIS Bologna Center (Klaas, "Breaking the Logjam: Obama's Cuba Policy and a Guideline for Improved Leadership", http://bcjournal.org/volume-14/breaking-the-logjam.html?printerFriendly=true)//NG

Conclusion

The two countries' histories have long been intertwined, particularly after the Monroe Doctrine of 1823 gave rise to the American belief that it would become the hemisphere's protector. Until the immediate aftermath of Fidel Castro's revolution, Cuba provided a testing ground for the promotion of American ideals, social beliefs, and foreign policies.

In the context of Raúl shifting course in Cuba, the Obama administration has the opportunity to highlight the benefits of both the use of soft power and a foreign policy of engagement. As evidence mounts that the United States is ready to engage countries that enact domestic reforms, its legitimacy and influence will grow. Perhaps future political leaders, in Iran or North Korea for example, will be more willing to make concessions knowing that the United States will return in kind.

The United States should not wait for extensive democratization before further engaging Cuba, however. One legacy of the Cold War is that Communism has succeeded only where it grew out of its

own, often nationalistic, revolutions. As it has with China and Vietnam, the United States should look closely at the high payoffs stemming from engagement. By improving relations, America can enhance its own influence on the island's political structure and human rights policies.

At home, with the trade deficit and national debt rising, the economic costs of the embargo are amplified. Recent studies estimate that the US economy foregoes up to $4.84 billion a year and the Cuban economy up to $685 million a year.50While US-Cuban economic interests align, political considerations inside America have shifted, as "commerce seems to be trumping anti-Communism and Florida ideologues."51 Clearly, public opinion also favors a new Cuba policy, with 65 percent of Americans now ready for a shift in the country's approach to its neighboring island.52

At this particular moment in the history of US-Cuban relations, there is tremendous promise for a breakthrough in relations. In a post-Cold War world, Cuba no longer presents a security threat to the united States, but instead provides it with economic potential. American leaders cannot forget the fact that an economic embargo, combined with diplomatic isolation, has failed to bring democracy to Cuba for over 50 years.

American policymakers should see Cuba as an opportunity to reap the political, economic, and strategic rewards of shifting its own policies toward engagement. By ending the economic embargo and normalizing diplomatic relations with the island, President Obama would indicate that he is truly willing to extend his hand once America's traditional adversaries unclench their fists.

Multilateralism solves every conceivable debate impact

Tharoor, 3– Minister of State for Human Resources Development (Shashi, "Why America Still Needs the United Nations", p. 67)//NG

The UN's relevance does not stand or fall on its conduct on any one issue. When the crisis has passed, the world will still be left with, to use Annan's phrase, innumerable "problems without passports" -- threats such as the proliferation of weapons of mass destruction (WMD), the degradation of our common environment, contagious disease and chronic starvation, human rights and human wrongs, mass illiteracy and massive displacement. These are problems that no one country, however powerful, can solve alone. The problems are the shared responsibility of humankind and cry out for solutions that, like the problems themselves, also cross frontiers. The UN exists to find these solutions through the common endeavor of all states. It is the indispensable global organization for a globalizing world.

Large portions of the world's population require the UN's assistance to surmount problems they cannot overcome on their own. As these words are written, civil war rages in Congo and Liberia and sputters in Cote d'Ivoire, while long-running conflicts may be close to permanent solution in Cyprus and Sierra Leone. The arduous task of nation building proceeds fitfully in Afghanistan, the Balkans, East Timor, and Iraq. Twenty million refugees and displaced persons, from Palestine to Liberia and beyond, depend on the UN for shelter and succor. Decades of development in Africa are being wiped out by the scourge of hiv-aids (and its deadly interaction with famine and drought), and the Millennium Development Goals --

agreed on with much fanfare in September 2000, at the UN's Millennium Summit, the largest gathering of heads of government in human history -- remain unfulfilled. Too many countries still lack the wherewithal to eliminate poverty, educate girls, safeguard health, and provide their people with clean drinking water. If the UN did not exist to help tackle these problems, they would undoubtedly end up on the doorstep of the world's only superpower.

The UN is also essential to Americans' pursuit of their own prosperity. Today, whether one is from Tashkent or Tallahassee, it is simply not realistic to think only in terms of one's own country. Global forces press in from every conceivable direction; people, goods, and ideas cross borders and cover vast distances with ever greater frequency, speed, and ease. The Internet is emblematic of an era in which what happens in Southeast Asia or southern Africa -- from democratic advances to deforestation to the fight against aids -- can affect Americans. As has been observed about water pollution, we all live downstream now.

Thus U.S. foreign policy today has become as much a matter of managing global issues as managing bilateral ones. At the same time, the concept of the nation-state as self-sufficient has also weakened; although the state remains the primary political unit, most citizens now instinctively understand that it cannot do everything on its own. To function in the world, people increasingly have to deal with institutions and individuals beyond their country's borders. American jobs depend not only on local firms and factories, but also on faraway markets, grants of licenses and access from foreign governments, international trade rules that ensure the free movement of goods and persons, and international financial institutions that ensure stability. There are thus few unilateralists in the American business community. Americans' safety, meanwhile, depends not only on local police forces, but also on guarding against the global spread of pollution, disease, terror, illegal drugs, and WMD. As the World Health Organization's successful battle against the dreaded sars epidemic has demonstrated, "problems without passports" are those that only international action can solve.

Fortunately, the UN and its broad family of agencies have, in nearly six decades of life, built a remarkable record of expertise and achievement on these issues. The UN has brought humanitarian relief to millions in need and helped people rebuild their countries from the ruins of war. It has challenged poverty, fought apartheid, protected the rights of children, promoted decolonization and democracy, and placed environmental and gender issues at the top of the world's agenda. These are no small achievements, and represent issues the United States cannot afford to neglect.

The United Nations is a valuable antidote to the tendency to disregard the problems of the periphery -- the kinds of problems Americans may prefer not to deal with but that are impossible to ignore. Handling them multilaterally is the obvious way to ensure they are tackled; it is also the only way. Americans will be safer in a world improved by the UN's efforts, which will be needed long after Iraq has passed from the headlines.

KEEPING GULLIVER ON BOARD

The exercise of American power may well be the central issue in world politics today, but that power is only enhanced if its use is perceived as legitimate. Ironically, although many in Washington distrust the world body, many abroad think the Security Council is too much in thrall to its most powerful member. The debates over Iraq proved that that is not always the case; but even if it were, it is far better to have a world organization that is anchored in geopolitical reality than one that is too detached from the

verities of global power to be effective. A UN that provides a vital political and diplomatic framework for the actions of its most powerful member, while casting them in the context of international law and legitimacy (and bringing to bear on them the perspectives and concerns of its universal membership) is a UN that remains essential to the world in which we live.

The goals of the charter, however, cannot be met without embracing the fundamental premise that President Harry Truman enunciated in 1945:

We all have to recognize that no matter how great our strength, we must deny ourselves the license to do always as we please. No one nation ... can or should expect any special privilege which harms any other nation. ... Unless we are all willing to pay that price, no organization for world peace can accomplish its purpose. And what a reasonable price that is!

The UN, from the start, assumed the willingness of its members to accept restraints on their own short-term goals and policies by subordinating their actions to internationally agreed rules and procedures, in the broader long-term interests of world order. This was an explicit alternative to the model of past centuries, when strong states developed their military power to enforce their politics, and weak states took refuge in alliances with stronger ones. This formula guaranteed large-scale warfare; as Franklin Roosevelt put it to both houses of Congress after the Allied conference at Yalta, the UN would replace the arms races, military alliances, balance-of-power politics, and "all the arrangements that had led to war" so often in the past. The UN was meant to help create a world in which its member states would overcome their vulnerabilities by embedding themselves in international institutions, where the use of force would be subjected to the constraints of international law. Power politics would not disappear from the face of the earth but would be practiced with due regard for universally upheld rules and norms. Such a system also offered the United States -- then, as now, the world's unchallenged superpower -- the assurance that other countries would not feel the need to develop coalitions to balance its power. Instead, the UN provided a framework for them to work in partnership with the United States.

This is the system to which the world must now rededicate itself. Votaries of the UN have long argued that if the world body did not exist, we would have to invent it. Sadly, it is hard to believe that today's leaders could manage such a feat. Hammarskjold once described the UN as an adventure -- a Santa Maria battling its way through storms and uncharted oceans to a new world, only to find that the people on shore blamed the storms on the ship itself. Five decades later, Hammarskjold's metaphor stillholds true: the UN continues to sail in turbulent waters and is still blamed for the squalls that assail it.

This brings to mind another metaphor: if international institutions serve principally as ropes that tie Gulliver down, then Gulliver will have every interest in snapping the ropes and breaking free of the constraints imposed on him. If, however, these institutions constitute a vessel sturdy enough for Gulliver to sail, and the Lilliputians cheerfully help him man the bridge and hoist the mainsail because they want to travel to the same destination, then Gulliver is unlikely to jump ship and try to swim on alone. So the world should similarly hold fast to its determination to live by shared values and common rules and to steer together the multilateral institutions that the enlightened leaders of the last century bequeathed to us. Only by doing so will our ship best the storm -- with Gulliver still on board.?

Multilateralism solves international frameworks that prevent extinction

Masciulli 11—Professor of Political Science at St Thomas University (Joseph, "The Governance Challenge for Global Political and Technoscientific Leaders in an Era of Globalization and Globalizing Technologies," Bulletin of Science, Technology & Society February 2011 vol. 31 no. 1 pg. 3-5)//NG

What is most to be feared is enhanced global disorder resulting from the combination of weak global regulations; the unforeseen destructive consequences of converging technologies and economic globalization; military competition among the great powers; and the prevalent biases of short-term thinking held by most leaders and elites. But no practical person would wish that such a disorder scenario come true, given all the weapons of mass destruction (WMDs) available now or which will surely become available in the foreseeable future. As converging technologies united by IT, cognitive science, nanotechnology, and robotics advance synergistically in monitored and unmonitored laboratories, we may be blindsided by these future developments brought about by technoscientists with a variety of good or destructive or mercenary motives. The current laudable but problematic openness about publishing scientific results on the Internet would contribute greatly to such negative outcomes.

To be sure, if the global disorder-emergency scenario occurred because of postmodern terrorism or rogue states using biological, chemical, or nuclear WMDs, or a regional war with nuclear weapons in the Middle East or South Asia, there might well be a positive result for global governance. Such a global emergency might unite the global great and major powers in the conviction that a global concert was necessary for their survival and planetary survival as well. In such a global great power concert, basic rules of economic, security, and legal order would be uncompromisingly enforced both globally and in the particular regions where they held hegemonic status. That concert scenario, however, is flawed by the limited legitimacy of its structure based on the members having the greatest hard and soft power on planet Earth.

At the base of our concerns, I would argue, are human proclivities for narrow, short-term thinking tied to individual self-interest or corporate and national interests in decision making. For globalization, though propelled by technologies of various kinds, "remains an essentially human phenomenon . . . and the main drivers for the establishment and uses of disseminative systems are hardy perennials: profit, convenience, greed, relative advantage, curiosity, demonstrations of prowess, ideological fervor, malign destructiveness." These human drives and capacities will not disappear. Their "manifestations now extend considerably beyond more familiarly empowered governmental, technoscientific and corporate actors to include even individuals: terrorists, computer hackers and rogue market traders" (Whitman, 2005, p. 104).

In this dangerous world, if people are to have their human dignity recognized and enjoy their human rights, above all, to life, security, a healthy environment, and freedom, we need new forms of comprehensive global regulation and control. Such effective global leadership and governance with robust enforcement powers alone can adequately respond to destructive current global problems, and prevent new ones. However, successful human adaptation and innovation to our current complex environment through the social construction of effective global governance will be a daunting collective task for global political and technoscientific leaders and citizens. For our global society is caught in "the

whirlpool of an accelerating process of modernization" that has for the most part "been left to its own devices" (Habermas, 2001, p. 112). We need to progress in human adaptation to and innovation for our complex and problematical global social and natural planetary environments through global governance. I suggest we need to begin by ending the prevalent biases of short-termism in thinking and acting and the false values attached to the narrow self-interest of individuals, corporations, and states.

I agree with Stephen Hawking that the long-term future of the human race must be in space. It will be difficult enough to avoid disaster on planet Earth in the next hundred years, let alone the next thousand, or million. . . . There have been a number of times in the past when its survival has been a question of touch and go. The Cuban missile crisis in 1962 was one of these. The frequency of such occasions is likely to increase in the future. We shall need great care and judgment to negotiate them all successfully. But I'm an optimist. If we can avoid disaster for the next two centuries, our species should be safe, as we spread into space. . . . But we are entering an increasingly dangerous period of our history. Our population and our use of the finite resources of planet Earth, are growing exponentially, along with our technical ability to change the environment for good or ill. But our genetic code still carries the selfish and aggressive instincts that were of survival advantage in the past. . . . Our only chance of long term survival is not to remain inward looking on planet Earth, but to spread out into space. We have made remarkable progress in the last hundred years. But if we want to continue beyond the next hundred years, our future is in space." (Hawking, 2010)

Nonetheless, to reinvent humanity pluralistically in outer space and beyond will require securing our one and only global society and planet Earth through effective global governance in the foreseeable future. And our dilemma is that the enforcement powers of multilateral institutions are not likely to be strengthened because of the competition for greater (relative, not absolute) hard and soft power by the great and major powers. They seek their national or alliance superiority, or at least, parity, for the sake of their state's survival and security now. Unless the global disorder-emergency scenario was to occur soon—God forbid—the great powers will most likely, recklessly and tragically, leave global survival and security to their longer term agendas. 2NC Multilat K/T Heg

Even if heg decline is inevitable, multilateralism solves your transition war arguments

He, 10—Professor of Political Science at Utah State University (Kai He, "The hegemon's choice between power and security: explaining US policy toward Asia after the Cold War," Review of International Studies (2010), 36, pg. 1121–1143)//NG

When US policymakers perceive a rising or a stable hegemony, the anarchic nature of the international system is no longer valid in the mind of US policymakers because the preponderant power makes the US immune from military threats. In the self-perceived, hierarchic international system with the US on the top, power-maximisation becomes the strategic goal of the US in part because of the 'lust for power' driven by human nature and in part because of the disappearance of the security constraints imposed by anarchy. Therefore, selective engagement and hegemonic dominion become two possible strategies for the US to maximise its power in the world. The larger the power gap between the US and others, the more likely selective engagement expands to hegemonic dominion. When US policymakers perceive a declining hegemony in that the power gap between the hegemon and others is narrowed rather than widened, US policymakers begin to change their hierarchic view of the international system. The rapid decline of relative power causes US policymakers to worry about security imposed by anarchy even though the US may remain the most powerful state in the system during the process of decline. Offshore balancing and multilateralism, therefore, become two possible policy options for the US to maximise its security under anarchy. The possible budget constraints during US decline may lead to military withdrawals from overseas bases. In addition, the US becomes more willing to pay the initial 'lock-in' price of multilateral institutions in order to constrain other states' behaviour for its own security.

US foreign policy towards Asia preliminarily supports the power-perception hegemonic model. When President George H. W. Bush came to power, the US faced 'dual deficits' even though the US won the Cold War and became the hegemon by default in the early 1990s. The domestic economic difficulty imposed a declining, or at least uncertain, hegemony to the Bush administration. Consequently, Bush had to withdraw troops from Asia and conducted a reluctant offshore balancing strategy in the early 1990s. Although the US still claimed to keep its commitments to Asian allies, the US words with the sword became unreliable at best.

During President Clinton's first tenure, how to revive US economy became the first priority of the administration. The perception of a declining hegemon did not totally fade until the middle of the 1990s when the US economy gradually came out of the recession. Multilateral institutions, especially APEC, became Clinton's diplomatic weapon to open Asia's market and boost US economy. In addition, the US also endorsed the ARF initiated by the ASEAN states in order to retain its eroding political and military influence after the strategic retreats in the early 1990s.

However, the US 'new economy' based on information technology and computers revived policymakers' confidence in US hegemony after the Asian miracle was terminated by the 1997 economic crisis. The second part of the 1990s witnessed a rising US hegemony and the George W. Bush administration reached the apex of US power by any measure in the early 21st century. Therefore, since Clinton's second tenure in the White House, US foreign policy in general and towards Asia in particular has

become more assertive and power-driven in nature. Besides reconfirming its traditional military alliances in Asia, the US deepened its military engagement in the region through extensive security cooperation with other Asian states.

The selective engagement policy of the US in the late 1990s was substantially expanded by the Bush administration to hegemonic dominion after 9/11. The unrivalled hegemony relieved US of concerns over security threats from any other states in the international system. The 'lust for power' without constraints from anarchy drove US policymakers to pursue a hegemonic dominion policy in the world. The 'pre-emption strategy' and proactive missile defence programs reflected the power-maximising nature of the hegemonic dominion strategy during the George W. Bush administration.

What will the US do in the future? The power-perception hegemonic model suggests that the US cannot escape the fate of other great powers in history. When US hegemony is still rising or at a stable stage, no one can stop US expansion for more power. When its economy can no longer afford its power-oriented strategy, the US will face the same strategic burden of 'imperial overstretch' that Great Britain suffered in the 19th century. However, the power-perception hegemonic model also argues that US foreign policy depends on how US policymakers perceive the rise and fall of US hegemony.

If historical learning can help US policymakers cultivate a prudent perception regarding US hegemony, the early implementation of offshore balancing and multilateralism may facilitate the soft-landing of declining US hegemony. More importantly, the real danger is whether the US can make a right choice between power and security when US hegemony begins to decline. If US policymakers cannot learn from history but insist on seeking more power instead of security even though US hegemony is in decline, the likelihood of hegemonic war will increase. However, if US policymakers choose security over power when US hegemony is in decline, offshore balancing and multilateralism can help the US maximise security in the future anarchic, multipolar world. Pg. 1141-1143

Multilat leads to global coop and power sharing

Pouliot 11—Professor of Political Science at McGill University (Vincent Pouliot, "Multilateralism as an End in Itself," International Studies Perspectives (2011) 12, 18–26)//NG

Because it rests on open, nondiscriminatory debate, and the routine exchange of viewpoints, the multilateral procedure introduces three key advantages that are gained, regardless of the specific policies adopted, and tend to diffuse across all participants. Contrary to the standard viewpoint, according to which a rational preference or functional imperative lead to multilateral cooperation, here it is the systematic practice of multilateralism that creates the drive to cooperate. At the theoretical level, the premise is that it is not only what people think that explains what they do, but also what they do that determines what they think (Pouliot 2010). Everyday multilateralism is a self-fulfilling practice for at least three reasons. First, the joint practice of multilateralism creates mutually recognizable patterns of action among global actors. This process owes to the fact that practices structure social interaction (Adler and Pouliot forthcoming).2 Because they are meaningful, organized, and repeated, practices generally convey a degree of mutual intelligibility that allows people to develop social relations over time. In the field of international security, for example, the practice of deterrence is premised on a

limited number of gestures, signals, and linguistic devices that are meant, as Schelling (1966:113) put it, to ''getting the right signal across.'' The same goes with the practice of multilateralism, which rests on a set of political and social patterns that establish the boundaries of action in a mutually intelligible fashion. These structuring effects, in turn, allow for the development of common frameworks for appraising global events. Multilateral dialog serves not only to find joint solutions; it also makes it possible for various actors to zoom in on the definition of the issue at hand—a particularly important step on the global stage. The point is certainly not that the multilateral procedure leads everybody to agree on everything—that would be as impossible as counterproductive. Theoretically speaking, there is room for skepticism that multilateralism may ever allow communicative rationality at the global level (see Risse 2000; Diez and Steans 2005). With such a diverse and uneven playing field, one can doubt that discursive engagement, in and of itself, can lead to common lifeworlds. Instead, what the practice of multilateralism fosters is the emergence of a shared framework of interaction—for example, a common linguistic repertoire—that allows global actors to make sense of world politics in mutually recognizable ways. Of course, they may not agree on the specific actions to be taken, but at least they can build on an established pattern of political interaction to deal with the problem at hand—sometimes even before it emerges in acute form. In today's pluralistic world, that would already be a considerable achievement. In that sense, multilateralism may well be a constitutive practice of what Lu (2009) calls ''political friendship among peoples.'' The axiomatic practice of principled and inclusive dialog is quite apparent in the way she describes this social structure: ''While conflicts, especially over the distribution of goods and burdens, will inevitably arise, under conditions of political friendship among peoples, they will be negotiated within a global background context of norms and institutions based on mutual recognition, equity in the distribution of burdens and benefits of global cooperation, and power-sharing in the institutions of global governance rather than domination by any group'' (2009:54–55). In a world where multilateralism becomes an end in itself, this ideal pattern emerges out of the structuring effects of axiomatic practice: take the case of NATO, for instance, which has recently had to manage, through the multilateral practice, fairly strong internal dissent (Pouliot 2006). While clashing views and interests will never go away in our particularly diverse world, as pessimists are quick to emphasize (for example, Dahl 1999), the management of discord is certainly made easier by shared patterns of dialog based on mutually recognizable frameworks. Second, the multilateral procedure typically ensures a remarkable level of moderation in the global policies adopted. In fact, a quick historical tour d'horizon suggests that actors engaged in multilateralism tend to avoid radical solutions in their joint decision making. Of course, the very process of uniting disparate voices helps explain why multilateralism tends to produce median consensus. This is not to say that the multilateral practice inevitably leads to lowest common denominators. To repeat, because it entails complex and often painstaking debate before any actions are taken, the multilateral procedure forces involved actors to devise and potentially share similar analytical lenses that, in hindsight, make the policies adopted seem inherently, and seemingly ''naturally,'' moderate. This is because the debate about what a given policy means takes place before its implementation, which makes for a much smoother ride when decisions hit the ground. This joint interpretive work, which constitutes a crucial aspect of multilateralism, creates outcomes that are generally perceived as inherently reasonable. Participation brings inherent benefits to politics, as Bachrach (1975) argued in the context of democratic theory. Going after the conventional liberal view according to which actors enter politics with an already fixed set of preferences, Bachrach observes that most of the time people define their interests in the very process of participation. The argument is not that interests formed in the course of social interaction are in any sense more altruistic. It rather is that

the nature and process of political practices, in this case multilateralism, matter a great deal in shaping participants' preferences (Wendt 1999). In this sense, not only does the multilateral practice have structuring effects on global governance, but it is also constitutive of what actors say, want, and do (Adler and Pouliot forthcoming). Third and related, multilateralism lends legitimacy to the policies that it generates by virtue of the debate that the process necessarily entails. There is no need here to explain at length how deliberative processes that are inclusive of all stakeholders tend to produce outcomes that are generally considered more socially and politically acceptable. In the long run, the large ownership also leads to more efficient implementation, because actors feel invested in the enactment of solutions on the ground. Even episodes of political failure, such as the lack of UN reaction to the Rwandan genocide, can generate useful lessons when re-appropriated multilaterally—think of the Responsibility to Protect, for instance.3 From this outlook, there is no contradiction between efficiency and the axiomatic practice of multilateralism, quite the contrary. The more multilateralism becomes the normal or self-evident practice of global governance, the more benefits it yields for the many stakeholders of global governance. In fact, multilateralism as an end in and of itself could generate even more diffuse reciprocity than Ruggie had originally envisioned. Not only do its distributional consequences tend to even out, multilateralism as a global governance routine also creates self-reinforcing dynamics and new focal points for strategic interaction. The axiomatic practice of multilateralism helps define problems in commensurable ways and craft moderate solutions with wide-ranging ownership—three processual benefits that further strengthen the impetus for multilateral dialog. 2NC Leadership Impact

***Note: Only read this if they don't say the counterplan destroys leadership- otherwise it doesn't really get you much

US primacy prevents global conflict – diminishing power creates a vacuum that causes transition wars in multiple places

Brooks et al 13 [Stephen G. Brooks is Associate Professor of Government at Dartmouth College.G. John Ikenberry is the Albert G. Milbank Professor of Politics and International Affairs at Princeton University in the Department of Politics and the Woodrow Wilson School of Public and International Affairs. He is also a Global Eminence Scholar at Kyung Hee University.William C. Wohlforth is the Daniel Webster Professor in the Department of Government at Dartmouth College. "Don't Come Home, America: The Case against Retrenchment", Winter 2013, Vol. 37, No. 3, Pages 7-51,http://www.mitpressjournals.org/doi/abs/10.1162/ISEC_a_00107, GDI File]

A core premise of deep engagement is that it prevents the emergence of a far more dangerous global security environment. For one thing, as noted above, the United States' overseas presence gives it the leverage to restrain partners from taking provocative action. Perhaps more important, its core alliance commitments also deter states with aspirations to regional hegemony from contemplating expansion and make its partners more secure, reducing their incentive to adopt solutions to their security problems that threaten others and thus stoke security dilemmas. The contention that engaged U.S. power dampens the baleful effects of anarchy is consistent with influential variants of realist theory. Indeed, arguably the scariest portrayal of the war-prone world that would emerge absent the "American Pacifier" is provided in the works of John Mearsheimer, who forecasts dangerous multipolar regions replete with security competition, arms races, nuclear proliferation and associated preventive wartemptations, regional rivalries, and even runs at regional hegemony and full-scale great power war. 72 How do retrenchment advocates, the bulk of whom are realists, discount this benefit? Their arguments are complicated, but two capture most of the variation: (1) U.S. security guarantees are not necessary to prevent dangerous rivalries and conflict in Eurasia; or (2) prevention of rivalry and conflict in Eurasia is not a U.S. interest. Each response is connected to a different theory or set of theories, which makes sense given that the whole debate hinges on a complex future counterfactual (what would happen to Eurasia's security setting if the United States truly disengaged?). Although a certain answer is impossible, each of these responses is nonetheless a weaker argument for retrenchment than advocates acknowledge. The first response flows from defensive realism as well as other international relations theories that discount the conflict-generating potential of anarchy under contemporary conditions. 73 Defensive realists maintain that the high expected costs of territorial conquest, defense dominance, and an array of policies and practices that can be used credibly to signal benign intent, mean that Eurasia's major states could manage regional multipolarity peacefully without theAmerican pacifier. Retrenchment would be a bet on this scholarship, particularly in regions where the kinds of stabilizers that nonrealist theories point to—such as democratic governance or dense institutional linkages—are either absent or weakly present. There are three other major bodies of scholarship, however, that might give decisionmakers pause before making this bet. First is regional expertise. Needless to say, there is no consensus on the net security effects of U.S. withdrawal. Regarding each region, there are optimists and pessimists. Few experts expect a return of intense great power competition in a post-American Europe, but many doubt European governments will pay the political costs of increased EU defense cooperation and the budgetary costs of increasing military outlays. 74 The result might be a Europe that is incapable of securing itself from various threats that could be destabilizing within the region and beyond (e.g., a regional conflict akin to the 1990s Balkan wars), lacks capacity for global security missions in which U.S. leaders might want European participation, and is vulnerable to the influence of outside rising powers. What about the other parts of Eurasia where the United States has a substantial military presence? Regarding the Middle East, the balance begins toswing toward pessimists concerned that states currently backed by Washington— notably Israel, Egypt, and Saudi Arabia—might take actions upon U.S. retrenchment that would intensify security dilemmas. And concerning East Asia, pessimismregarding the region's prospects without the American pacifier is pronounced. Arguably the principal concern expressed by area experts is that Japan and South Korea are likely to **obtain a nuclear capacity** and increase their military commitments, which could stoke a **destabilizing reaction from China**. It is notable that during the Cold War, both South Korea and Taiwan moved to obtain a nuclear weapons capacity and were only constrained from doing so by astill-engaged United States. 75 The second body of scholarship casting doubt on the bet on defensive realism's sanguine portrayal is all of the research that undermines its conception of state preferences. Defensive realism's optimism about what would happen if the United States retrenched is very much dependent on itsparticular—and highly restrictive—assumption about state preferences; once we relax this assumption, then much of its basis for optimism vanishes. Specifically, the prediction of post-American tranquility throughout Eurasia rests on the assumption that security is the only relevant state preference, with security defined narrowly in terms of protection from violent external attacks on the homeland. Under that assumption, the security problem is largely solved as soon as offense and defense are clearly distinguishable, and offense is extremely expensive relative to defense. Burgeoning research across the social and other sciences, however,undermines that core assumption: states have preferences not only for security but also for prestige, status, and other aims, and theyengage in trade-offs among the various objectives. 76 In addition, they define security not just in terms of territorial protection but in view of many and varied milieu goals. It follows that even states that are relatively secure may nevertheless engage in highly competitive behavior. Empirical studies show that this is indeed sometimes the case. 77 In sum, a bet on a benign postretrenchment Eurasia is a bet that leaders of major countries will never allow these nonsecurity preferences to influence their strategic choices. To the degree that these bodies of scholarly knowledge have predictive leverage, U.S. retrenchment would

result in a significant deterioration in the security environment in at least some of the world's key regions. We have already mentioned the third, even more alarming body of scholarship. Offensive realism predicts that the withdrawal of the American pacifier will yield either a competitive regional multipolarity complete with associated insecurity, arms racing, crisis instability, nuclear proliferation, and the like, or bids for regional hegemony, which may be beyond the capacity of local great powers to contain (and which in any case would generate intensely competitive behavior, possibly including regional great power war).

2NC Warming Mod

Multilateralism creates international cooperation to solve warming

Lee et al 10 –Research Director, Energy, Environment and Resource Governance at Chatham House (Bernice, "The United States and climate change: from process to action," 2-23, http://www.chathamhouse.org.uk/files/16489_us0510_lee_grubb.pdf)//NG

Despite the crucial importance of national and regional initiatives, the world ultimately cannot solve the climate problem without an effective multilateral approach. Ironically, the election of a more multilateralist US president and the events of 2009 culminating with the Copenhagen Accord have only served to increase debate around the form it might take and how inclusive it needs to be. In reality, any major deal is always built upon smaller coalitions **of powerful actors**. Many proposals have been made for a core of US leadership, bilateral or trilateral leadership by variants of the US–EU–China/Japan/Asia nexus, the G8, the G8+5, the G20, or the Major Economies Forum (MEF). Doubtless, action by most of these groupings is necessary, though it is also of interest that the MEF process did not reach any specific deal until the relationships fostered during the year were put under the pressure of the Copenhagen summit. Ultimately all such efforts face serious limitations if there is no recognition of the need for a truly multilateral framework. This is for three main reasons: scope, competitiveness and political legitimacy. First, carbon emissions are so widespread geographically that any subset of countries becomes increasingly unable to solve the problem unless others are involved. The dominance of US, EU and Chinese emissions today would be swamped by 2050 if these countries delivered steep reductions while others did not. And none of these are significant contributors to land-use emissions (such as deforestation), which involve a wholly different group of countries. Moreover, models which centre upon innovative solutions by a 'critical mass' of the private sector diffusing technology and investment globally without government incentives can founder – carbon capture and storage (CCS), which inevitably involves significant extra costs over and above coal plants without CCS, is a case in point. Second, a partial solution that encompassed the big emitters would not solve the perceived risks of loss of competitiveness in energy-intensive sectors vis-à- vis non-participants (to smaller economies such as Singapore, for example). Third, a deal between the big emitters only is unlikely to secure global legitimacy. In no legal or moral system can a solution be imposed by those inflicting the damage, without at some level engaging those that would most suffer the consequences of inadequate action. Thus **all roads ultimately lead back to the need for a global deal**. That was perhaps the most difficult, but ultimately completed, journey for the Bush administration, as it conceded at the G8 Heiligendamm summit in June 2007 the need for solutions to be negotiated under UN auspices. Notwithstanding the relative success of the Bali negotiations, most of the key difficulties, fault lines and questions that arose in the 1990s remained unresolved. A commentary by David Sandalow23 argued that the Bali battle over emission targets showed that the EU has learned nothing about realistic engagement with the United States; Japan sat uneasily in its seat as a potential but never actual mediator on the transatlantic divide; and a resurgent Russia remained largely apart.

It's real and anthropogenic –emissions reductions are key to avoid dangerous climate disruptions

Somerville 11 – Professor of Oceanography @ UCSD

(Richard Somerville, Distinguished Professor Emeritus and Research Professor at Scripps Institution of Oceanography at the University of California, San Diego, Coordinating Lead Author in Working Group I for the 2007 Fourth Assessment Report of the Intergovernmental Panel on Climate Change, 3-8-2011, "CLIMATE SCIENCE AND EPA'S GREENHOUSE GAS REGULATIONS," CQ Congressional Testimony, Lexis)//BB

1n early 2007, at the time of the publication of WG1 of AR4, the mainstream global community of climate scientists already understood from the most recent research that the latest observations of climate change were disquieting. In the words of a research paper published at the same time as the release of AR4 WG1, a paper for which I am a co-author, "observational data underscore the concerns about global climate change. Previous projections, as summarized by IPCC, have **not exaggerated** but may in some respects even have **underestimated the change**" (Rahmstorf et al. 2007). Now, in 2011, more recent research and newer observations have demonstrated that climate change continues to occur, and in several aspects the magnitude and rapidity of observed changes frequently **exceed the estimates of earlier projections**, including those of AR4. In addition, the case for attributing much observed recent climate change to human activities is **even stronger now** than at the time of AR4. Several recent examples, drawn from many aspects of climate science, but especially emphasizing atmospheric phenomena, support this conclusion. These include temperature, atmospheric moisture content, precipitation, and other aspects of the hydrological cycle. Motivated by the rapid progress in research, a recent scientific synthesis, The Copenhagen Diagnosis (Allison et al. 2009), has assessed recent climate research findings, including: -- Measurements show that the Greenland and Antarctic ice-sheets are losing mass and contributing to sea level rise. -- Arctic sea-ice has melted far beyond the expectations of climate models. -- Global sea level rise may attain or exceed 1 meter by 2100, with a rise of up to 2 meters considered possible. -- In 2008, global carbon dioxide emissions from fossil fuels were about 40% higher than those in 1990. -- At today's global emissions rates, if these rates were to be sustained unchanged, after only about 20 more years, the world will **no longer have a reasonable chance of limiting warming** to less than 2 degrees Celsius, or 3.6 degrees Fahrenheit, above 19th-century pre-industrial temperature levels, This is a much- discussed goal for a maximum allowable degree of climate change, and this aspirational target has now been formally adopted by the European Union and is supported by many other countries, as expressed, for example, in statements by both the G-8 and G-20 groups of nations. The Copenhagen Diagnosis also cites research supporting the position that, in order to have a reasonable likelihood of avoiding the risk of **dangerous climate disruption**, defined by this 2 degree Celsius (or 3.6 degree Fahrenheit) limit, global emissions of greenhouse gases such as carbon dioxide must peak and then start to **decline rapidly** within the next five to ten years, reaching near zero well within this century.

Warming is an existential risk – quickening reductions is key to avoiding extinction

Mazo 10 – PhD in Paleoclimatology from UCLA

(Jeffrey Mazo, Managing Editor, Survival and Research Fellow for Environmental Security and Science Policy at the International Institute for Strategic Studies in London, 3-2010, "Climate Conflict: How global warming threatens security and what to do about it," pg. 122)//BB

The best estimates for global warming to the end of the century range from 2.5-4.~C above pre-industrial levels, depending on the scenario. Even in the best-case scenario, the low end of the likely range is 1.goC, and in the worst 'business as usual' projections, which actual emissions have been matching, the range of likely warming runs from 3.1--7.1°C. Even keeping emissions at constant 2000 levels (which have already been exceeded), global temperature would still be expected to reach 1.2°C (O'9""1.5°C)above pre-industrial levels by the end of the century." **Without early and severe reductions** in emissions, the effects of climate change in the second half of the twenty-first century are **likely to be catastrophic**for the stability and security of countries in the developing world - not to mention the associated human tragedy. Climate change couldeven undermine the strength and stability of emerging and advanced economies, beyond the knock-on effects on security of widespread state failure and collapse in developing countries.' And although they have been condemned as melodramatic and alarmist, many informed observers believe that unmitigated climate change beyond the end of the century could pose an **existential threat**to civilisation." What is certain is that there is **no precedent** in human experience for such rapid change or such climatic conditions, and even in the best case adaptation to these extremes would mean profound social, cultural and political changes.

2NC A2: Everyone Doesn't Get on Board

Don't have to win that to win the net benefit- our multilateralism argument is about retaining authority over our existing sphere of influence- that's areas like Europe and Latin America, who will get on board if the US does. Europe has empirically proven its willingness to surrender sovereignty to international organizations.

Other countries will follow us- IR isn't anarchic

David A. **Lake**, UC San Diego June 10, **2009**, Making America Safe for the World: Multilateralism and the Rehabilitation of U.S. Authority, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1417667

In the modern era, the right of one country to rule in whole or part over another ¶ derives not from tradition, divine right, or any normative consensus but from an exchange ¶ or social contract.9¶ The dominant state produces a political order that protects persons, ¶ property, and promises. It secures individuals in a subordinate state from bodily harm at ¶ the hands of both fellow citizens and other countries, defends their property from challenges that are constant or without limit at home or abroad, and ensures that ¶ promises, once made, will be kept. In return, the subordinates comply with the rules and ¶ the extractions necessary to produce that order and accept as legitimate the position of the ¶ dominant state. The dominant state gains from writing and enforcing rules that are biased ¶ in its favor, subject to the willingness of subordinates to comply with those rules. ¶ Subordinates gain from the security provided by the political order and the attendant ¶ opportunity to invest, specialize, and prosper. Subordinates escape a Hobbesian state of ¶ nature in which life is "solitary, poor, nasty, brutish, and short" and enter an international ¶ civil society. In contemporary practice, this means that the United States produces ¶ political order within and between subordinate states in return for their compliance with ¶ its rules and recognition of its special position in international relations. The authority exercised by the United States produces a syndrome of unique ¶ foreign policy behaviors. Protected in part from external threats, states subordinate to the ¶ United States spend substantially less on defense as a share of GDP than non-subordinate ¶ states. Having committed to their defense, in return, the United States is significantly ¶ more likely to come to the aid of its subordinates in international crises. Protected under ¶ its security umbrella and following rules set down by the United States for the ¶ international economy, subordinate states are more open to trade (measured by ¶ trade/GDP) and especially more likely to trade more with countries also subordinate to ¶ the United States. In implicit acknowledgement of their status, subordinate states join ¶ U.S.-led multinational coalitions more often than non-subordinates, calling into question ¶ the notion of a "coalition of the willing." Finally, exercising its right of enforcement, the ¶ United States is more likely to intervene militarily in subordinate states.10 All of these patterns are hard to explain if relations between states really are anarchic and, more ¶ important, are consistent with the existence of a social contract. ¶ The social contract, in turn, has been enormously beneficial for both dominant ¶ and subordinate states.11 Under American rule, Latin America, Western Europe, and ¶ Northeast Asia have emerged as zones of peace and prosperity, with some variation. ¶ Although Latin American states often rattle their sabers at one another, few crises ¶ actually result in military clashes.12 Western Europe, and the North Atlantic area more ¶ generally, is perhaps the only example of what Karl Deutsch originally called a pluralistic ¶ security community in which the use of force is ruled out in relations between states.13 ¶ Japan's relations with its neighbors and its foreign policy in general are legendarily ¶ pacific. Overall, the regions

dominated by the United States look very different politically ¶ and economically than, say, Africa or South Asia where Washington possesses relatively ¶ little authority.

This is critical to stopping global proliferation---pure unilateralism will be greeted with resistance and skepticism but a credible commitment can marshal the support of all nations

Cirincione, 6/11/**5**

http://www.carnegieendowment.org/static/npp/Rome_Conference_Paper.pdf

However, if stopping the spread of nuclear weapons requires more international resolve than previous administrations could muster, it also demands more genuine international teamwork than the Bush administration recognizes. Nuclear weapons and fissile materials are problems wherever they are, not just in a handful of "evil" states. The threat cannot be eliminated by removing whichever foreign governments the United States finds most threatening at any given time. History has repeatedly shown that today's ally can become tomorrow's problem state. Moreover, terrorists will seek nuclear weapons and materials wherever they can be found, irrespective of a state's geopolitical orientation. The United States cannot defeat the nuclear threat alone, or even with small coalitions of the willing. **It needs sustained cooperation** from dozens of diverse nations— including the leading states that have forsworn nuclear weapons, such as Argentina, Brazil, Germany, Japan, South Africa, and Sweden—in order to broaden, toughen, and stringently enforce nonproliferation rules. To obtain that cooperation, the nuclear weapon states must show that tougher nonproliferation rules not only benefit the powerful, but constrain them as well. **Success will depend on the United States' ability to marshal legitimate authority that motivates others to follow**. As Francis Fukuyama notes, "**Other people will follow the American lead if they believe it is legitimate; if they do not, they will resist, complain, obstruct, or actively oppose what we do.**"Recent events, most dramatically the war in Iraq, have undermined America's legitimacy. With societies bristling at U.S. government rhetoric and action, elected leaders in key countries continue to distance themselves from U.S. initiatives. Even when others share U.S. views of the nuclear threat, they may balk at following U.S. policies because they do not see Washington acting on *their* priorities, for example, the Comprehensive Test Ban Treaty, the International Criminal Court, actions to minimize climate change, or other measures affecting global security. In Robert Kagan's words, "The United States can neither appear to be acting only in its self-interest, nor can it, in fact, act as if its own national interest were all that mattered."5

***Politics NB

1NC/2NC NB

Politics is a net benefit---delegating to international courts doesn't cause domestic political backlash and allows the president to avoid getting involved

Alter, Political Science-Northwestern, **3**

(Journal of Asian and Pacific Studies, Vol. 25, P. 51-74)

2) Delegating to courts may be an attractive way to commit when a government wants to play on uncertainty for political reasons. Because having full information is key in shaping any rational decision, rational choice explanations see the lack of information, or manipulation of information, as a factor shaping political decision-making. From this insight comes the notion that delegation itself may be a tool to play on or manipulate information and thereby shape the political outcome. By intentionally committing to a fairly vague rule, and delegating responsibility to a court to apply the rule on a case-by-case basis, a government **can fool those actors who might oppose a given rule to tacitly support the international agreement.** By committing through delegation, the government locks-in its larger objective, and has someone else to blame when the costs of the commitment become clear and domestic actors complain (Moravcsik 1998, 74).

3) When issues are technically complex, and thus less amenable to political negotiation and political control, legal systems may be attractive. Governments may want to shield themselves from having to master and negotiate minutia after minutia—turning the issue over to seemingly neutral technocrats (perhaps a supra-national administrator or a specialized courts) to resolve (Moravcsik 1998, 69). Or, having courts fill in the blanks can seem more efficient than bringing together all parties to specify an agreement, especially if any such agreement would require formal state ratification (Abbott and Snidal 2000, 430-431; Pollack 1997, 104).

4) When governments want to remove certain issues from the domestic or international political process, an international legal system may be helpful. Here the argument is not that it is attractive to play on uncertainty, but rather **politicians may believe that the political process leads to sub-optimal outcomes or that having an issue actively debated in the political process is itself destructive**. For example, Beth Simmons found that one reason states turned territorial over disputes over to a third-party to resolve was to neutralize the contested issue by **removing it from domestic political debate** (Simmons 2001). Robert Hudec notes that governments may decide to turn a problem over to an international legal body to **appease and thus demobilize domestic political actors, to buy time, or to avoid being directly involved in resolving an issue yet still be seen as doing something** (Hudec 1987). Governments may also simply want to get rid of disputes that aggravate a bi- lateral relationship. For example, according to a negotiator of the North American Free Trade Agreement, NAFTA's chapter 19 was added because the US did not want to harmonize its law with Canada, nor did it want to turn disputes over countervailing duties into an inter-governmental issue.7 By delegating to bi-national panels the authority to resolve these disputes, **governments could remove a politically divisive issue** in US-Canadian relations and escape the pressure of domestic firms.8

2NC A2- CP Links to Politics

1. the counterplan avoids the link and solves the turns--

A) Stops dissent---it allows policymakers to blame international courts for requiring that they take the action---it quells opposition from people who would oppose the unilateral implementation of the plan—that's alter

B) mobilizes interest groups---delegation spurs domestic constituencies to defend the policy which saves capital

Slaughter, Dean-Woodrow Wilson School at Princeton, **5**

(http://www.princeton.edu/~slaughtr/Articles/IntlTribunals.pdf)

The circularity objection described above also fails to account for domestic politics. The informational and reputational consequences of establishing a tribunal operate principally on an interstate level. However, tribunals and the decisions they issue also make international law more salient for domestic interest groups and political actors. By clarifying the meaning of an agreement, finding facts, and determining whether a particular course of conduct is justified, **tribunal rulings can mobilize compliance constituencies to press governments to adhere to their treaty obligations.** This effect is most pronounced for those supranational tribunals where private parties may invoke the tribunal's jurisdiction directly, since no "political filter" exists to screen out cases that are legally meritorious but diplomatically or politically embarrassing.125 But the effect can also operate in purely interstate adjudication, if the tribunal's rulings benefit domestic interest groups who are motivated to lobby governments in favor of compliance.126 In either case, the domestic political costs of international adjudication make it more difficult for states to shirk compliance. Anticipating this result, states will view international agreements superintended by tribunals (especially supranational tribunals) as more credible than agreements that do not provide for judicial review. This conception of international tribunals as credibility enhancers is inconsistent with the theory of dependent adjudication that Posner and Yoo adopt. Indeed, international tribunals can *only* make state commitments more credible if they are independent. If a tribunal were dependent—that is, if it were susceptible to pressure to conform its decisions to state interests at the time a dispute arises—the credibility enhancement flowing from the initial act of delegation would vanish. States would anticipate that the dependent tribunal would bow to these pressures and, as a result, that they could elude their international law obligations with relative ease. As a consequence, defections would increase and the long-term benefits of interstate cooperation would quickly unravel.

2. the initial step is bipartisan---no backlash from increasing our commitment to international legal institutions

Charnovitz, Law—GW, **8**

http://opiniojuris.org/2008/11/12/after-medellin-a-proposed-icj-decisions-implementation-act/

Fifth, the legislative pathway provides a fast track procedure but not one as automatic as the one used in international trade. Although I still support the trade fast track model for future US trade agreements and perhaps for other agreements, such as climate, I would not propose it for ICJ implementation

purposes. Rather I have borrowed an expedited procedure available for budget issues and incorporated it by reference into my proposal. I have also included a specific provision requiring bipartisan leadership support for the legislation before it could gain use of these procedures. In my view, international law is not a partisan issue, so I don't see why there would be a problem in getting bipartisan support for holding a Congressional vote on complying with U.S. obligations on US treaty commitments.

US may consent but not enforce an icj decision

Coleman 3

Andrew, The International Court of Justice and highly political matters., Melbourne Journal of International Law, Lexis

It could be argued that the disadvantages caused by non-appearance where the ease proceeds to judgment are a concern only for the non-appearing party and are entirely self-inflicted. What non-appearance does, however, is raise a perception in the broader international community of the irrelevance of the ICJ in resolving international disputes. If it is perceived that a party is the victor simply by virtue of its appearance in the absence of the other party, rather than due to the strength of its claim, then this raises serious concerns about the validity of the Court's findings, undermining the Court's credibility in the eyes of the international community. Credibility is important to all courts, but particularly to the ICJ **given the problems of enforceability** that it faces. **Even if states do consent to the ICJ's jurisdiction,** who or **what enforces the Court's decision**? Whilst provision is made in both the Statute of the ICJ and the UN Charter for the Court's judgments and advisory opinions to be enforced through resolutions of the Security Council, (58) there is no international police force that will actually ensure compliance with the resolution itself. As Couvreur notes, in municipal orders, the court, whose jurisdiction is compulsory, acts on behalf of and in the capacity of ... the fully integrated sovereign state; the latter is responsible for the continuity and efficacy of the peacemaking process initiated by the court ... The case is patently quite different in the international order: ... this community, which is not integrated, or scarcely so, and which itself is entirely based on a juxtaposition of sovereignties, is in no wise [sic] comparable to a sovereign state. (59)

Historically likely- we already did that once

Ereli 9

Anthony, Deputy Chief of Mission at the U.S. Embassy in Doha, Qatar, THE UNITED STATES' WITHDRAWAL FROM INTERNATIONAL COURT OF JUSTICE JURISDICTION IN CONSULAR CASES: REASONS AND CONSEQUENCES, Duke Journal of Int'l Law, Lexis

On 7 March 2005, the Secretary-General received from the Government of the United States of America, a communication notifying its withdrawal from the Optional Protocol. The communication reads as follows: ". . . the Government of the United States of America [refers] to the Optional Protocol to the Vienna Convention on Consular Relations Concerning the Compulsory Settlement of Disputes, done at Vienna April 24, 1963. This letter constitutes notification by the United States of America that it hereby withdraws from the aforesaid Protocol. As a consequence of this withdrawal, the United States will no longer recognize the jurisdiction of the International Court of Justice reflected in that Protocol."

War powers authority cannot be submitted for compulsory jurisdiction to the ICJ- that's unconstitutional and gets rolled back and tanks hegemony

Harvard Journal on Legislation, "Protecting National Sovereignty in an Era of International Meddling: An Increasingly Difficult Task" Representative Bob Barr, **2002**. 39 Harv. J. on Legis. 299. Lexis.

The U.N. Charter proscribes "non-pacific" conduct unless necessary to counter threats to peace, breaches of peace, acts of aggression, or to act in self-defense. [28] By potentially giving the ICJ the compulsory jurisdiction to adjudicate "all legal disputes concerning treaties," the United States has effectively tied its hands to resolve such disputes in a manner deemed to be in accord with the ICJ-- and within the general proscriptions of the Charter to forego the use of force in such disputes. The Senate never should have agreed to such a provision, as it presents a potential conflict with the United States Constitution, [29] which grants Congress alone the power to declare war [30] and gives the President the sole power as Commander-in-Chief to wage war on behalf of our sovereign nation. [31] The Constitution does not grant the federal governm, ent the power to **cede such authority.** So long as the United States had the power, the understanding, and the will to restrict the U.N. provisions to the supremacy of our Constitution, such a problem may have been tolerable. Now, however, the understanding and will are largely absent from national debates, and a serious problem presents itself.

The most dramatic and recurrent example of the United Nations exerting powers reserved by the United States Constitution is the de facto **transfer of war powers** from our government to the mechanism of the [*305] U.N. [32] Constitutional grant to Congress to declare war and to the President to wage that war [33] is thwarted when international organizations attempt to interject their views on when and where such combat is legitimate. For example, the U.N. Charter mandates that, "all Members . . . undertake to make available to the Security Council, *on its call* . . . armed forces, assistance, and facilities . . . ." [34] This provision of the charter usurps congressional power to declare war by allowing the Security Council to have direct influence and/or control over America's fighting forces and resources. [35] By allowing the U.N. to interpret when United States troops are to be made available on its own beckoning, the *unilateral* and *sovereign* power of the United States becomes diluted and weakened. It is into these muddy waters that the United States has been repeatedly pulled or led in the last years of the twentieth century, and into the beginning years of the twenty-first, with little or no long-term forethought to the consequences or bases for such action by the United States.

Strong icj sets a terrible precedent against use of force – prevents the ability to deter global conflict

Sofaer 3

Abraham, Senior Fellow, The Hoover Institution, Stanford University. Legal Adviser, U.S. Department of State, The International Court of Justice and Armed Conflict, http://www.law.northwestern.edu/journals/jihr/v1/4/#note

The Court has in fact carved out a potentially significant role in the area of use of force in international security. I will go through informally a series of points that show where the ICJ has indicated through some ruling or some practice that it intends to keep itself in the game when it comes to use of force

decisions. ¶ 4 First, the ICJ has insisted on the right to decide its own jurisdiction. That in itself gives the Court great power to become involved in these kinds of questions. Second, the Court has broadly construed treaties to assume power over use of force situations. The Oil Platforms case2 is an example: the Court took a Friendship, Commerce, and Navigation treaty and found that even though this treaty did not address the issue of use of force directly—because the parties used the treaty to engage in commerce and be friends—the preliminary words of the treaty were enough of a ground to take jurisdiction. And this decision was made even though a separate treaty between Iran and the United States—the Agreement of Cooperation of 19593—actually dealt with the use of force and reserved to each party the right to do whatever it needed to do in its national security interests. So, the Court has shown a willingness, and indeed maybe an eagerness, to construe treaties that are before it broadly to take jurisdiction over use of force issues. ¶ 5 Next, the Court in the Nicaragua case broadly construed the concept of customary international law to assume authority over use of force decisions—even where the states involved took reservations from a multi-lateral treaty covering the same area of the law that "customary law" covered.4 The Court also has broadly construed its advisory opinion jurisdiction, as it did in the Nuclear Weapons case,5 to take an active role in deciding the legality of possessing or using nuclear weapons. Furthermore, in the Lockerbie case the Court took jurisdiction to decide the legality of Security Council resolutions bearing upon international security as it did in 1998.6 ¶ 6 In taking jurisdiction over these cases, the Court has disregarded or treated lightly doctrines limiting the ICJ's power or discretion to avoid political questions.7 The Court has swept aside any indication in the earlier jurisprudence of the Permanent Court of International Justice, and in scholarly work, urging the Court to be reluctant to exercise jurisdiction in use of force cases.8 ¶ 7 In the area of provisional measures, the Court has shown its willingness to assert itself, even in a use of force or security context, or at least to retain the right to assert itself.9 This is very significant not only because now provisional measures must be treated as mandatory rules, but because the Court has no tradition of applying the provisional measures doctrine in a manner similar and analogous to the way the U.S. or Britain applies preliminary injunctive law with strong emphasis on likelihood of success. The ICJ in the Paraguay case10 declined even to address the issue of likelihood of success. The language the Court used, and the way the Court went about issuing preliminary relief, explicitly avoided an evaluation of the meaning of the treaty at issue, causing the United States to feel that it could disregard the preliminary order. ¶ 8 The combined effect of these positions (and others) gives the Court a substantial set of opportunities to speak out on use of force issues. Keeping in mind that the Court, while now over fifty-years-old, has only relatively recently become activist on use of force questions, we should expect that in the next twenty-years we will see opinions that will deal with use of force questions that could have a major impact either in terms of articulating principles that are followed by states (and therefore a major impact in shaping the law on conduct of states), or undermining the Court's credibility and status by articulating principles that fail to serve well the practical and conceptual needs of international security. ¶ 9 Therefore, the important jurisdiction that the Court has carved out for itself, based on all the principles that I have just described, is neither good nor bad. Much depends on how the jurisdiction is used. The law on the use of force is in transition and it is unclear whether the ICJ will develop a set of rules that has a positive impact on the world. I find evidence that the Court has started off on the wrong foot and much must be done to improve the chances that the ICJ will play a constructive and meaningful role going forward. ¶ 10 First, the Court's basic approach to the use of force **is flawed**. International lawyers tend to take a "push button" approach in applying U.N. Charter rules. They look at Article 2.4,11 and conclude that force may not be used without Security Council approval even to advance Charter purposes. They look at Article 5112 and international lawyers in general and most international decisions that bear on this issue conclude that self-defense may be exercised only in response to an "attack", even though that provision states that nothing in the Charter should be read to limit that "inherent" right.13 The push-button approach then leads to the conclusion that, if a particular use of force does not satisfy one of those bases for using force, it's illegal.14 If it does, then it's legal. ¶ 11 This approach conflicts with the process we know rational human beings really go through when they decide whether to act in a certain manner. People do not appraise the wisdom of conduct by looking at each of the factors and doctrines relevant to that question in isolation. Rather, we consider what evidence there is that bears on whatever the criteria are that we believe should be looked at to determine propriety (including legality). And if on balance we conclude that a strong case exists for using force, we say it should be lawful. If on balance we conclude that it's a weak case on using force, we conclude that force should be prohibited. In this regard, if you look at Article 2.4 of the Charter,15 it isn't at all something that would justify anyone saying, "This is a clear prohibition on the use of force for any purpose whatsoever." The article is quite complex and parts of it are substantively significant. By that I mean parts of it signify a preference with a regard to values, and this of course has been anathema in most international law scholarship. The idea that you could use force more justifiably for purpose "A" as opposed to purpose "B" has been something, especially during the Cold War, that has been treated as inappropriate and wrong. ¶ 12 But Article 2.4 at one point refers to the purposes of the Charter as a relevant factor in evaluating the use of force.16 And we know what the Charter stands for, it's not a mystery, it's written there. The Charter stands for human rights. The Charter stands for equal treatment of women and men. The Charter stands for religious freedom. The Charter stands for states not being able to acquire other territory through the use of force. The Charter suggests specific moral and ethical principles, and those principles have in fact been developed in subsequent treaties. ¶ 13 I have argued that the Charter's language supports the use of force approach of the United States, which is based in part on an early Abe Chayes' article, in which he called for a "common lawyer" approach to the use of force, and which he wrote while he was Legal Adviser.17 I have been a big advocate of the early Abe Chayes, though Chayes changed his position after leaving office. I investigated whether other Legal Advisers advocated the "common lawyer" approach while in office, and found a few articles written while they were Legal Advisers advocating the same approach.18 But most Legal Advisers who served before me never speak up in favor of this approach once they leave office. ¶ 14 Kosovo created a major problem for international lawyers who supported the push-button approach. Those who favored intervening could not secure Security Council approval of a resolution saying that force could be used. Some Security Council resolutions demanded a cessation of the grotesque treatment of 800,000 Muslim Kosovars. But they did not authorize force. Nor could the U.S. justify the use of force on the basis of self-defense, collective or individual. We couldn't call the flood of three-quarters of a million people coming into the territories of NATO allies an "attack". They were just people trying to find safety. Finally, the U.S. could not contend on the basis of any respectable doctrine that a decision by NATO was the equivalent of a decision by the Security Council. Clearly it is not. ¶ 15 NATO nonetheless went ahead and stopped the monstrous treatment of the Kosovars. NATO did so, moreover, without giving any legal rationale for its conduct. NATO couldn't simply create a new category for using force legitimately based on what NATO claimed was lawful. Furthermore, the doctrine of humanitarian intervention had not been accepted broadly as an independent basis for using force in Kosovo. What we were left with was a series of factors that taken together made an overwhelming case for intervening in Kosovo, though no single factor taken alone could have justified the action. I went through those factors in an article in the Stanford International Law Journal.19 ¶ 16 First, the Security Council had acted under Chapter 7 of the Charter, and had found that the situation in Kosovo posed a threat to international peace and security. Under the push-button approach, the fact that the Council had found a threat to international peace and security is not merely an insufficient ground in itself for using force, it is worth nothing. Under the push button approach one couldn't consider that action even as a factor to weigh with all the other factors to determine whether to use force. ¶ 17 The same thing was true of other factors that clearly motivated NATO's action. While the doctrine of humanitarian intervention could not be relied upon as an independently acceptable basis for action, the fact is that the humanitarian crisis was triggered by conduct that violated several widely accepted norms incorporated into treaties. These include probably the Genocide Convention,20 certainly the Laws of War,21 the Geneva Convention,22 and some other provisions that established that the Yugoslav government was violating international law. ¶ 18 Another factor was that the NATO states unanimously considered the situation a threat to the stability of Europe. Several U.N. Security Council resolutions relating to Yugoslavia had found that Yugoslavia had already violated international law and was violating international law within its territory in its treatment of Muslims. An International Criminal Court had been created, which had jurisdiction over international crimes committed by officials of the Yugoslav government. Thus, even though the Security Council had not authorized the use of force,23 very strong moral and legal case existed for its use. ¶ 19 Now, what happened? International lawyers in general concluded that what NATO did in Kosovo was illegal by accepted principles, but that it was necessary and morally justifiable. It was necessary and moral, but nonetheless illegal! Most international lawyers concluded that Kosovo should be treated as a particular situation, limited to its special facts. I would be satisfied with that rationale, as long as I could cite what was done in Kosovo in future cases if the same factors once again appeared in another situation. This would represent the common lawyer technique in determining the propriety of using force. This is a process where you're not going to blind yourself to a factor just because it alone does not establish authority to act. ¶ 20 The same limited approach is applied under Article 51.24 The greatest evil of all evils, Professor Louis Henkin wrote in an article based on a debate at the New York City Bar Association,25 is using force, even in self-defense. In the Nicaragua case,26 the ICJ interpreted an attack in a way that **significantly narrowed** the inherent right of self-defense. Anything short of a full-fledged attack, such as providing arms, strategic advice or tactical assistance to a country that was trying to overthrow a government of another country, cannot be considered an attack under Article 51 for purposes of collective self-defense. That served the Soviet Union's purposes very well. They were assisting communist groups and governments around the world in trying to undermine elected governments. So long as they did not engage in an all-out attack, the U.S. and other allies could not use force to counter their efforts. ¶ 21 Under long-accepted traditional principles, what rule should be applied when you have a lesser attack? Well, it would seem that if you have a lesser attack you can only respond in a lesser way; you can only respond with lesser, proportionate measures, individually or collectively. But in Nicaragua, the Court created a new category of attacks that denied the collective use of force. It also purported to establish formalistic requirements of notice of requests for cooperative defense that no one had ever heard of,27 and limited collective self-defense to military action on the territory of the state that had been attacked.28 ¶ 22 In retrospect, several writers and the former President of the Court, Stephen Schwebel, have concluded that the authority of the Nicaragua decision is questionable.29 I agree. That decision certainly has not facilitated the defense of sovereign states or the respectability of international law. ¶ 23 The threat of terrorism has led the U.N. Security Council, at least, to interpret self-defense in a manner that is far more robust than the ICJ's approach. Security Council resolutions adopted after 9/11 did not explicitly authorize the use of force in Afghanistan. But they do say that the U.S. is justified in exercising self-defense, and call on all states to act to assure that the Taliban regime will perform its obligations under international law.30 Resolution 1373 details, like a statute, the obligations of states vis-a-vis terrorists that operate within their borders.31 ¶ 24 Many, if not most international lawyers, have reacted to the need to use force in self-defense and in the defense of humanitarian rights by seeking to preserve what they consider the purity of international law. Tom Franck, whom I admire greatly, wrote a little piece in Foreign Affairs entitled "Break It, Don't Fake It."32 In other words, break international law if you have to, go ahead, but don't fake it, don't make up international law to justify your conduct. It would be like people in the 1930's dealing with Constitutional issues in the U.S. saying "Don't make up new constitutional law, it's going to mess up our Constitution. Just break the Constitution, violate the Constitution, with no explanation, and that way we will keep the purity of this rigid Constitution that the pre-New Deal Supreme Court was insisting on applying. Everything will be fine someday when we all return to the purity of the intended words." ¶ 25 Well, the international legal system should not be immune to the development of moral, workable rules dealing with humanity's problems going forward. The international lawyers who contend that the military actions in Kosovo and Afghanistan were illegal based their position on their understanding of the purpose of the Charter. How they got that understanding is difficult to understand. Why did the League of Nations collapse? Why did we have that horrendous Second World War? Because we did not use force against the Nazis when we still had an opportunity to stop them. To think that Harry Truman and Franklin Roosevelt and all the other great statesmen that participated in drafting the Charter would have favored narrow interpretations of use of force doctrine in the Charter is baseless. Read what they have written, look at what they did, and you know what kind of people they were.33 They were determined to bring about freedom, to advance the protection of human rights, to seek to establish justice in the world. ¶ 26 Lawyers, as Dean Acheson said, are not noted for their capacity to make strategic judgments.34 While the use of the criminal law is a proper part of any effort to end international crimes, states have to use force to stop people

determined to engage in terrorism or major violations of human rights. The same is true of monsters like Milosevic.35 Criminal prosecution is fine, but to be effective one must sometimes bomb and destroy military factions, in order to save the non-combatants at risk—such as the 800,000 human beings who were being pushed out of Kosovo and treated as cattle as they were driven away from their homes. ¶ 27 The bias against the use of force explains many of the most damaging practices and policies of the United Nations over the last decade. The threats, the rhetoric, not followed up by force, have led people, led states, led evil leaders to feel that they can do horrible things to human beings with impunity. Measured uses of force applied early can have a tremendously positive effect on the world and may well be far more morally justifiable than measures like the economic sanctions in Iraq, where hundreds of thousands of people suffered because of Saddam Hussein. ¶ 28 The use of force in Rwanda would have prevented the single most monstrous act of disregard of human suffering that has happened since the Cambodian mass murders. President Clinton went to Africa and apologized to the African people for what he had failed to do. Allowing those people to die without using force to protect them was disgraceful, even though it was clear that acting without Security Council approval to stop that genocide would have violated the Charter. ¶ 29 I will end with this comment. Humanitarian law and the defense of human rights are bound up with the rules governing the use of force. The ICJ's reluctance to embrace human rights stems ultimately from the same moral neutrality in interpreting international law that underlies its use of force attitudes. The use of force is necessary sometimes to preserve life and human rights. So long as some states' area is controlled by thugs, force must be given its proper position in law if human rights are to be taken seriously and made a universal reality.

Overemphasis on victims' rights tanks cred

Walton 8

Patrick, John Tait Memorial Lecture in Law and Public Policy, http://www.justice.gc.ca/eng/dept-min/pub/jtml-cmjt/kir2.html

And then there are the victims. The Court gives victims a special, privileged role for some very good reasons. In ad hoc tribunals, victims have been used as tools of the prosecution or the defence rather than being given due consideration in light of their own circumstances. The International Criminal Court has therefore set up an extensive guidance and counselling system for victims of physical violence, with specialized services for cases involving sexual crimes and those involving children, for example. Victims can participate in every stage in the proceedings, from the Pre-Trial Chamber on. There are systems providing financial compensation for victims, based on assets used by the War Crimes Commission, and a trust fund as well. So the victims will play a major role, but the Court must make sure that it is not paralyzed by large numbers of victims and the generous treatment they receive. In cases involving crimes against humanity, war crimes, and genocide, we can expect thousands of victims to appear before the Court, so the proceedings will be difficult to manage. To establish its credibility, the Court will not only have to act fairly and effectively but also appear to be doing so.

2AC Solvency Deficit - General

War powers authority cannot be submitted for compulsory jurisdiction to the ICJ- that's unconstitutional and gets rolled back and tanks hegemony

Harvard Journal on Legislation, "Protecting National Sovereignty in an Era of International Meddling: An Increasingly Difficult Task" Representative Bob Barr, **2002**. 39 Harv. J. on Legis. 299. Lexis.

The U.N. Charter proscribes "non-pacific" conduct unless necessary to counter threats to peace, breaches of peace, acts of aggression, or to act in self-defense. [28] By potentially giving the ICJ the compulsory jurisdiction to adjudicate "all legal disputes concerning treaties," the United States has effectively tied its hands to resolve such disputes in a manner deemed to be in accord with the ICJ-- and within the general proscriptions of the Charter to forego the use of force in such disputes. The Senate never should have agreed to such a provision, as it presents a potential conflict with the United States Constitution, [29] which grants Congress alone the power to declare war [30] and gives the President the sole power as Commander-in-Chief to wage war on behalf of our sovereign nation. [31] The Constitution does not grant the federal governm, ent the power to **cede such authority.** So long as the United States had the power, the understanding, and the will to restrict the U.N. provisions to the supremacy of our Constitution, such a problem may have been tolerable. Now, however, the understanding and will are largely absent from national debates, and a serious problem presents itself.

The most dramatic and recurrent example of the United Nations exerting powers reserved by the United States Constitution is the de facto **transfer of war powers** from our government to the mechanism of the [*305] U.N. [32] Constitutional grant to Congress to declare war and to the President to wage that war [33] is thwarted when international organizations attempt to interject their views on when and where such combat is legitimate. For example, the U.N. Charter mandates that, "all Members . . . undertake to make available to the Security Council, *on its call* . . . armed forces, assistance, and facilities . . . ." [34] This provision of the charter usurps congressional power to declare war by allowing the Security Council to have direct influence and/or control over America's fighting forces and resources. [35] By allowing the U.N. to interpret when United States troops are to be made available on its own beckoning, the *unilateral* and *sovereign* power of the United States becomes diluted and weakened. It is into these muddy waters that the United States has been repeatedly pulled or led in the last years of the twentieth century, and into the beginning years of the twenty-first, with little or no long-term forethought to the consequences or bases for such action by the United States.

2AC ICJ Bad- Deterrence

Strong icj sets a terrible precedent against use of force – prevents the ability to deter global conflict

Sofaer 3

Abraham, Senior Fellow, The Hoover Institution, Stanford University. Legal Adviser, U.S. Department of State, The International Court of Justice and Armed Conflict, http://www.law.northwestern.edu/journals/jihr/v1/4/#note

The Court has in fact carved out a potentially significant role in the area of use of force in international security. I will go through informally a series of points that show where the ICJ has indicated through some ruling or some practice that it intends to keep itself in the game when it comes to use of force decisions. ¶ 4 First, the ICJ has insisted on the right to decide its own jurisdiction. That in itself gives the Court great power to become involved in these kinds of questions. Second, the Court has broadly construed treaties to assume power over use of force situations. The Oil Platforms case2 is an example: the Court took a Friendship, Commerce, and Navigation treaty and found that even though this treaty did not address the issue of use of force directly—because the parties used the treaty to engage in commerce and be friends—the preliminary words of the treaty were enough of a ground to take jurisdiction. And this decision was made even though a separate treaty between Iran and the United States—the Agreement of Cooperation of 19593—actually dealt with the use of force and reserved to each party the right to do whatever it needed to do in its national security interests. So, the Court has shown a willingness, and indeed maybe an eagerness, to construe treaties that are before it broadly to take jurisdiction over use of force issues. ¶ 5 Next, the Court in the Nicaragua case broadly construed the concept of customary international law to assume authority over use of force decisions—even where the states involved took reservations from a multi-lateral treaty covering the same area of the law that "customary law" covered.4 The Court also has broadly construed its advisory opinion jurisdiction, as it did in the Nuclear Weapons case,5 to take an active role in deciding the legality of possessing or using nuclear weapons. Furthermore, in the Lockerbie case the Court took jurisdiction to decide the legality of Security Council resolutions bearing upon international security as it did in 1998.6 ¶ 6 In taking jurisdiction over these cases, the Court has disregarded or treated lightly doctrines limiting the ICJ's power or discretion to avoid political questions.7 The Court has swept aside any indication in the earlier jurisprudence of the Permanent Court of International Justice, and in scholarly work, urging the Court to be reluctant to exercise jurisdiction in use of force cases.8 ¶ 7 In the area of provisional measures, the Court has shown its willingness to assert itself, even in a use of force or security context, or at least to retain the right to assert itself.9 This is very significant not only because now provisional measures must be treated as mandatory rules, but because the Court has no tradition of applying the provisional measures doctrine in a manner similar and analogous to the way the U.S. or Britain applies preliminary injunctive law with strong emphasis on likelihood of success. The ICJ in the Paraguay case10 declined even to address the issue of likelihood of success. The language the Court used, and the way the Court went about issuing preliminary relief, explicitly avoided an evaluation of the meaning of the treaty at issue, causing the United States to feel that it could disregard the preliminary order. ¶ 8 The combined effect of these positions (and others) gives the Court a substantial set of opportunities to speak out on use of force issues. Keeping in mind that the Court, while now over fifty-years-old, has only relatively recently become activist on use of force questions, we should expect that in the next twenty-years we will see opinions that will deal with use of force questions that could have a major impact either in terms of articulating principles that are followed by states (and therefore a major impact in shaping the law on conduct of states), or undermining the Court's credibility and status by articulating principles that fail to serve well the practical and conceptual needs of international security. ¶ 9 Therefore, the important jurisdiction that the Court has carved out for itself, based on all the principles that I have just described, is neither good nor bad. Much depends on how the jurisdiction is used. The law on the use of force is in transition and it is unclear whether the ICJ will develop a set of rules that has a positive impact on the world. I find evidence that the Court has started off on the wrong foot and much must be done to improve the chances that the ICJ will play a constructive and meaningful role going forward. ¶ 10 First, the Court's basic approach to the use of force **is flawed**. International lawyers tend to take a "push button" approach in applying U.N. Charter rules. They look at Article 2.4,11 and conclude that force may not be used without Security Council approval even to advance Charter purposes. They look at Article 5112 and international lawyers in general and most international decisions that bear on this issue conclude that self-defense may be exercised only in response to an "attack", even though that provision states that nothing in the Charter should be read to limit that "inherent" right.13 The push-button approach then leads to the conclusion that, if a particular use of force does not satisfy one of those bases for using force, it's illegal.14 If it does, then it's legal. ¶ 11 This approach conflicts with the process we know rational human beings really go through when they decide whether to act in a certain manner. People do not appraise the wisdom of conduct by looking at each of the factors and doctrines relevant to that question in isolation. Rather, we consider what evidence there is that bears on whatever the criteria are that we believe should be looked at to determine propriety (including legality). And if on balance we conclude that a strong case exists for using force, we say it should be lawful. If on balance we conclude that it's a weak case on using force, we conclude that force should be prohibited. In this regard, if you look at Article 2.4 of the Charter,15 it isn't at all something that would justify anyone saying, "This is a clear prohibition on the use of force for any purpose whatsoever." The article is quite complex and parts of it are substantively significant. By that I mean parts of it signify a preference with a regard to values, and this of course has been anathema in most international law scholarship. The idea that you could use force more justifiably for purpose "A" as opposed to purpose "B" has been something, especially during the Cold War, that has been treated as inappropriate and wrong. ¶ 12 But Article 2.4 at one point refers to the purposes of the Charter as a relevant factor in evaluating the use of force.16 And we know what the Charter stands for, it's not a mystery, it's written there. The Charter stands for human rights. The Charter stands for equal treatment of women and men. The Charter stands for religious freedom. The Charter stands for states not being able to acquire other territory through the use of force. The Charter suggests specific moral and ethical principles, and those principles have in fact been developed in subsequent treaties. ¶ 13 I have argued that the Charter's language supports the use of force approach of the United States, which is based in part on an early Abe Chayes' article, in which he called for a "common lawyer" approach to the use of force, and which he wrote while he was Legal Adviser.17 I have been a big advocate of the early Abe Chayes, though Chayes changed his position after leaving office. I investigated whether other Legal Advisers advocated the "common lawyer" approach while in office, and found a few articles written while they were Legal Advisers advocating the same approach.18 But most Legal Advisers who served before me never speak up in favor of this approach once they leave office. ¶ 14 Kosovo created a major problem for international lawyers who supported the push-button approach. Those who favored intervening could not secure Security Council approval of a resolution saying that force could be used. Some Security Council resolutions demanded a cessation of the grotesque treatment of 800,000 Muslim Kosovars. But they did not authorize force. Nor could the U.S. justify the use of force on the basis of self-defense, collective or individual. We couldn't call the flood of three-quarters of a million people coming into the territories of NATO allies an "attack". They were just people trying to find safety. Finally, the U.S. could not contend on the basis of any respectable doctrine that a decision by NATO was the equivalent of a decision by the Security Council. Clearly it is not. ¶ 15 NATO nonetheless went ahead and stopped the monstrous treatment of the Kosovars. NATO did so, moreover, without giving any legal rationale for its conduct. NATO couldn't simply create a new category for using force legitimately based on what NATO claimed was lawful. Furthermore, the doctrine of humanitarian intervention had not been accepted broadly as an independent basis for using force in Kosovo. What we were left with was a series of factors that taken together made an overwhelming case for intervening in Kosovo, though no single factor taken alone could have justified the action. I went through those factors in an article in the Stanford International Law Journal.19 ¶ 16 First, the Security Council had acted under Chapter 7 of the Charter, and had found that the situation in Kosovo posed a threat to international peace and security. Under the push-button approach, the fact that the Council had found a threat to international peace and security is not merely an insufficient ground in itself for using force, it is worth nothing. Under the push button approach one couldn't consider that action even as a factor to weigh with all the other factors to determine whether to use force. ¶ 17 The same thing was true of other factors that clearly motivated NATO's action. While the doctrine of humanitarian intervention could not be relied upon as an independently acceptable basis for action, the fact is that the humanitarian crisis was triggered by conduct that violated several widely accepted norms incorporated into treaties. These include probably the Genocide Convention,20 certainly the Laws of War,21 the Geneva Convention,22 and some other provisions that established that the Yugoslav government was violating international law. ¶ 18 Another factor was that the NATO states unanimously considered the situation a threat to the stability of Europe. Several U.N. Security Council resolutions relating to Yugoslavia had found that Yugoslavia had already violated international law and was violating international law within its territory in its treatment of Muslims. An International Criminal Court had been created, which had jurisdiction over international crimes committed by officials of the Yugoslav government. Thus, even though the Security Council had not authorized the use of force,23 very strong moral and legal case existed for its use. ¶ 19 Now, what happened? International lawyers in general concluded that what NATO did in Kosovo was illegal by accepted principles, but that it was necessary and morally justifiable. It was necessary and moral, but nonetheless illegal! Most international lawyers concluded that Kosovo should be treated as a particular situation, limited to its special facts. I would be satisfied with that rationale, as long as I could cite what was done in Kosovo in future cases if the same factors once again appeared in another situation. This would represent the common lawyer technique in determining the propriety of using force. This is a process where you're not going to blind yourself to a factor just because it alone does not establish authority to act. ¶ 20 The same limited approach is applied under Article 51.24 The greatest evil of all evils, Professor Louis Henkin wrote in an article based on a debate at the New York City Bar Association,25 is using force, even in self-defense. In the Nicaragua case,26 the ICJ interpreted an attack in a way that **significantly narrowed** the inherent right of self-defense. Anything short of a full-fledged attack, such as providing arms, strategic advice or tactical assistance to a country that was trying to overthrow a government of another country, cannot be considered an attack under Article 51 for purposes of collective self-defense. That served the Soviet Union's purposes very well. They were assisting communist groups and governments around the world in trying to undermine elected governments. So long as they did not engage in an all-out attack, the U.S. and other allies could not use force to counter their efforts. ¶ 21 Under long-accepted traditional principles, what rule should be applied when you have a lesser attack? Well, it would seem that if you have a lesser attack you can only respond in a lesser way; you can only respond with lesser, proportionate measures, individually or collectively. But in Nicaragua, the Court created a new category of attacks that denied the collective use of force. It also purported to establish formalistic requirements of notice of requests for cooperative defense that no one had ever heard of,27 and limited collective self-defense to military action on the territory of the state that had been attacked.28 ¶ 22 In retrospect, several writers and the former President of the Court, Stephen Schwebel, have concluded that the authority of the Nicaragua decision is questionable.29 I agree. That decision certainly has not facilitated the defense of sovereign states or the respectability of international law. ¶ 23 The threat of terrorism has led the U.N. Security Council, at least, to interpret self-defense in a manner that is far more robust than the ICJ's

approach. Security Council resolutions adopted after 9/11 did not explicitly authorize the use of force in Afghanistan. But they do say that the U.S. is justified in exercising self-defense, and call on all states to act to assure that the Taliban regime will perform its obligations under international law.30 Resolution 1373 details, like a statute, the obligations of states vis-a-vis terrorists that operate within their borders.31 ¶ 24 Many, if not most international lawyers, have reacted to the need to use force in self-defense and in the defense of humanitarian rights by seeking to preserve what they consider the purity of international law. Tom Franck, whom I admire greatly, wrote a little piece in Foreign Affairs entitled "Break It, Don't Fake It."32 In other words, break international law if you have to, go ahead, but don't fake it, don't make up international law to justify your conduct. It would be like people in the 1930's dealing with Constitutional issues in the U.S. saying "Don't make up new constitutional law, it's going to mess up our Constitution. Just break the Constitution, violate the Constitution, with no explanation, and that way we will keep the purity of this rigid Constitution that the pre-New Deal Supreme Court was insisting on applying. Everything will be fine someday when we all return to the purity of the intended words." ¶ 25 Well, the international legal system should not be immune to the development of moral, workable rules dealing with humanity's problems going forward. The international lawyers who contend that the military actions in Kosovo and Afghanistan were illegal based their position on their understanding of the purpose of the Charter. How they got that understanding is difficult to understand. Why did the League of Nations collapse? Why did we have that horrendous Second World War? Because we did not use force against the Nazis when we still had an opportunity to stop them. To think that Harry Truman and Franklin Roosevelt and all the other great statesmen that participated in drafting the Charter would have favored narrow interpretations of use of force doctrine in the Charter is baseless. Read what they have written, look at what they did, and you know what kind of people they were.33 They were determined to bring about freedom, to advance the protection of human rights, to seek to establish justice in the world. ¶ 26 Lawyers, as Dean Acheson said, are not noted for their capacity to make strategic judgments.34 While the use of the criminal law is a proper part of any effort to end international crimes, states have to use force to stop people determined to engage in terrorism or major violations of human rights. The same is true of monsters like Milosevic.35 Criminal prosecution is fine, but to be effective one must sometimes bomb and destroy military factions, in order to save the non-combatants at risk—such as the 800,000 human beings who were being pushed out of Kosovo and treated as cattle as they were driven away from their homes. ¶ 27 The bias against the use of force explains many of the most damaging practices and policies of the United Nations over the last decade. The threats, the rhetoric, not followed up by force, have led people, led states, led evil leaders to feel that they can do horrible things to human beings with impunity. Measured uses of force applied early can have a tremendously positive effect on the world and may well be far more morally justifiable than measures like the economic sanctions in Iraq, where hundreds of thousands of people suffered because of Saddam Hussein. ¶ 28 The use of force in Rwanda would have prevented the single most monstrous act of disregard of human suffering that has happened since the Cambodian mass murders. President Clinton went to Africa and apologized to the African people for what he had failed to do. Allowing those people to die without using force to protect them was disgraceful, even though it was clear that acting without Security Council approval to stop that genocide would have violated the Charter. ¶ 29 I will end with this comment. Humanitarian law and the defense of human rights are bound up with the rules governing the use of force. The ICJ's reluctance to embrace human rights stems ultimately from the same moral neutrality in interpreting international law that underlies its use of force attitudes. The use of force is necessary sometimes to preserve life and human rights. So long as some states' area is controlled by thugs, force must be given its proper position in law if human rights are to be taken seriously and made a universal reality.

2AC CIL Turn

The decision of the CP would have to be based on customary international law.

Hugh **Thirlay '5, Principle Legal Secretary-ICJ, 2005**, Interrogating the Treaty: Essays in the Contemporary law of Treaties, ed. M. Craven & M. Fitzmaurice, p. 12-3

In its advisory opinion on *Legality of the Threat or Use of Nuclear Weapons*, the Court examined "whether there is any prohibition of recourse to nuclear weapons as such" in international law, and indicated that it would "first ascertain whether there is a conventional prescription in treaty law, "to this effect." It examined the provisions of a number of multilateral and plurilateral conventions; none of them were universally binding, and many contained provisions reserving the possibility of recourse to nuclear weapons in certain circumstances. There was thus no universal "conventional" rule, rule of treaty law, prohibiting recourse to nuclear weapons. The Court then turned "to an examination of customary international law" to determine whether such a prohibition flowed from that source of law, in this context it examined in particular the argument that General Assembly resolutions embodied or represented customary law on the question. However, before expressly turning to its examination of custom, the Court dealt with the argument of a number of States that the multilateral treaties cited "bear witness, in their own way, to the emergence of a rule of complete legal prohibition of all uses of nuclear weapons." Its conclusion on the point was that: "these treaties could…be seen as foreshadowing a future general prohibition of the use of such weapons, but they do not constitute such a prohibition by themselves." The Court thus dealt with this contention in the context of treaty law (conventional law); but given the express terms of the treaties cited, the argument was surely not that the parties to the treaties had already committed themselves to a total prohibition, but rather that the treaties constituted, or evidenced, a trend of State practice justifying the conclusion that a rule of *customary law* had emerged. This indeed was the sense of the Court's finding just quoted that, to apply the wording of the *North Sea* judgment: "this process is a perfectly possible one and does from time to time occur; it constitutes indeed one of the recognized methods by which new rules of *customary* international law may be formed. At the same time this result is not lightly to be regarded as having been attained," and had not, *in casu*, been attained. The structure of the Court's judgment is thus confused: having clearly distinguished treaty law (*droit conventionnel*), the obligations imposed by treaties, from general international law of customary nature, it proceeded to discuss under the former heading a question of possible custom-formation. While not of any profound significance, this anomaly does indicate the ways in which treaty law and custom may become intellectually intertwined.

Internal link turn – cil kills international institution cred and turns the net benefit

J. Patrick **Kelly, Law Professor Widener University Law, 2000,** Virginia Journal of International Law, Winter, 40 Va. J. Int'l L. 449, p. 540-2

In addition to these specific concerns, there are several overarching systemic reasons why CIL should be eliminated as a source of international law in the modern era. First, the continued use and abuse of CIL has promoted cynicism and disenfranchisement of many nations and peoples. The nations excluded from this process are well aware of CIL's historic failure. n361 CIL undermines the integrity of the international legal system which in turn encourages disrespect for the entire system of international law.

Second, the CIL process does not encourage compliance. With few effective means of enforcing norms, the international system relies on commitment and reciprocal self-interest for compliance. Nations that played no role in the formation of norms nor had their interests considered are unlikely to honor such norms. Third, CIL creates inconsistency and exceptionalism. CIL theory is used by powerful nations to conjure up exceptions to fundamental norms such as the prohibition on the use of force in the Charter of the United

Nations. n362 Similarly, less powerful nations and advocacy scholars use non-binding resolutions to promote their own vision of a just order removed from actual agreement or effective action. Neither form of manipulation of legal material will contribute to a viable international order. Fourth, there are a variety of other means of developing international norms that are more effective and more likely to promote a vital legal order. The ozone and trade regimes demonstrate that the world possesses a wealth of possible trade-offs, incentives, and other means of encouraging participation and compliance. Nations that perceive that it is in their interest to sign an environmental treaty or human rights convention will participate. Even nations that do not consider a treaty in their interest can be motivated to participate: China and India have reversed their positions and signed the treaty to protect the ozone layer. China, contrary to its earlier expressed will, is slowly entering into consensual human rights relationships in order to fully participate in and exercise a leadership role on the world stage. n363 Indeed, China cannot afford to not participate. Over time the powerful levers of World Bank and International Monetary Fund resources, as well as the inducement of foreign aid, have enticed nations to hold democratic elections, release political prisoners, and consider environmental protection measures. The pressure of world opinion and the changing attitudes of a country's citizens, impacted by satellite television and the Internet, will make participation in important treaties irresistible for most nations. Patience, as well as vision, is a virtue. Finally, the fundamental question for international society is: Through what processes will international law be made? The CIL process cannot generate norms perceived as legitimate when there is conflict about these norms or their formulation. Domestic legislatures find it difficult to resolve normative conflicts even in relatively homogenous societies. The CIL process encourages posturing and the hardening of positions, not the development of general law with majority support. In fact, this process, as it now stands, may engender bitterness and noncompliance. Wide participation, trade-offs, and negotiations are necessary to resolve differences in values and interests in a manner that engenders legitimacy, promotes commitment to agreed norms, and ultimately encourages compliance. CIL provides only "paper", and not viable, norms, which vary from culture to culture.

2AC FDI DA

Alien torts claims don't cover the environment now because CIL isn't binding

Emeka Duruigbo, Stanford Law School and Research Fellow, 2004, Minnesota Journal of Global Trade, Winter, 14 Minn. J. Global Trade 1, p. 35-6

Further, subject matter jurisdiction under the statute is limited to a small number of norms of customary international law and jus cogens, and does not cover all human rights and environmental abuses. n212 In particular, courts have been reluctant to extend the ATS to environmental harms. n213 Foreign claimants must explore other bases for subject matter jurisdiction, even when human rights and environmental abuses are involved. n214 The importance of environmental claims is highlighted by the fact that many of the allegations of corporate misdeeds center on environmental abuses. Some scholars believe that the ATS should cover environment-related cases on the grounds that a right to a clean environment exists in international law. n215 Even cases that fit the ATS rarely make their way to U.S. courts because of financial costs and other constraints. Thus, many victims are left without an effective remedy.

COURTS WILL DETERMINE CIL RIGHT TO HEALTHY ENVIRONMENT

John Lee, 2000, Columbia Journal of Environmental Law, 25 Colum. J. Envtl. L. 283, p. 305-6

A right to a healthy environment will probably find its acceptance as a principle of customary international law. This right has not been explicitly recognized in a multilateral treaty or convention that legally binds the nations of the world to that recognition, nor is there any indication that anytime soon it will be. n101

That could destroy international FDI

Donald J. Kochan, Law Professor Chapman, 2006, Fordham International Law Journal, February, 29 Fordham Int'l L.J. 507, p. 550-1

Finally, economic development and its concomitant contribution to the advancement of human rights and democracy can be threatened when the judiciary meddles in foreign and international law. n180 If corporate investment is chilled because of potential international "law" liability, then economic development, democracy, and the enhancement of human rights are chilled as well. If courts have **free reign** to adopt foreign and international laws, the certainty and **predictability** of law are unsettled and thus may cause detrimental concerns. After all, people need to know the rules they are playing by in order to be fully willing and able to play the game. That effort is much easier if there is a corpus of law that is identifiable. It is identifiable when companies or individuals know the source of lawmaking authority - at home and abroad. Recognizing that judges might invoke precedents from extraterritorial sources makes this process difficult and indeterminate, necessarily creating investment risks that will affect market and development activities. For example, when private companies become subject to ATS suits, such suits threaten to discourage the very overseas investment and development that help expand individual liberty, human rights, and democracy abroad. New liabilities will discourage foreign investment, handicapping the advancement of human rights in developing countries. The uncertainties of applicable law that arise when judges intonate that they can look outside our borders when deciding cases have the same effect on investment predictability both within and outside the walls of the United States.

The result would be no more global growth

E. Borenszteina, IMF Research Department J. De Gregoriob, Center for Applied Economics at Universidad de Chile, and J-W. Leec, Economics Department, Korea University, 1998 "How Does Foreign Direct Investment Affect Economic Growth?" Journal of International Economics 45

Technology diffusion plays a **central role in the process of economic development**. In contrast to the traditional growth framework, where technological change was left as an unexplained residual, the recent growth literature has highlighted the dependence of growth rates on the state of domestic technology relative to that of the rest of the world. Thus, growth rates in developing countries are, in part, explained by a 'catch-up' process in the level of technology. In a typical model of technology diffusion, the rate of economic growth of a backward country depends on the extent of adoption and implementation of new technologies that are already in use in leading countries. Technology diffusion can take place through a variety of channels that involve the transmission of ideas and new technologies. Imports of high-technology products, adoption of foreign technology and acquisition of human capital through various means are certainly important conduits for the international diffusion of 3 technology. Besides these channels, foreign direct investment by multinational corporations (MNCs) is considered to be a **major channel** for the access to advanced technologies by developing countries. MNCs are among the most technologically advanced firms, accounting for a substantial part of the world's research and development (R and D) investment. Some recent work on economic growth has highlighted the role of foreign direct investment in the technological progress of developing countries. Findlay (1978) postulates that foreign direct investment increases the rate of technical progress in the host country through a 'contagion' effect from the more advanced technology, management practices, etc. used by the foreign firms. Wang (1990) incorporates this idea into a model more in line with the neoclassical growth framework, by assuming that the increase in 'knowledge' applied to production is determined as a function of foreign direct investment (FDI). The purpose of this paper is to examine empirically the role of FDI in the process of technology diffusion and economic growth in developing countries. We motivate the empirical work by a model of endogenous growth, in which the rate of technological progress is the main determinant of the long-term growth rate of income. Technological progress takes place through a process of 'capital deepening' in the form of the introduction of new varieties of capital goods. MNCs possess more advanced 'knowledge', which allows them to introduce new capital goods at lower cost. However, the application of this more advanced technologies also requires the presence of a sufficient level of human capital in the host economy. The stock of human capital in the host country, therefore, limits the absorptive capability of a developing country, as in Nelson and Phelps (1966), and Benhabib and Spiegel (1994). Hence, the model highlights the roles of both the introduction of more advanced technology and the requirement of absorptive capability in the host country as determinants of economic growth, and suggests the empirical investigation of the complementarity between FDI and human capital in the process of productivity growth. We test the effect of FDI on economic growth in a framework of cross-country regressions utilizing data on FDI flows from industrial countries to 69 developing 5 countries over the last two decades. Our results suggest that FDI is in fact an important vehicle for the transfer of technology, contributing to growth in larger measure than domestic investment. Moreover, we find that there is a strong complementary effect between FDI and human capital, that is, the contribution of FDI to economic growth is enhanced by its interaction with the level of human capital in the host country. However, our empirical results imply that FDI is more productive than domestic investment only when the host country has a minimum threshold stock of human capital. The results are robust to a number of alternative specifications, which control for the variables usually identified as the main determinants of economic growth in cross-country regressions. This sensitivity analysis along the lines of Levine and Renelt (1992) shows a **robust relationship** between economic growth, FDI and human capital.

The impact is extinction

Michael G. Zey, executive director of the Expansionary Institute, Professor at Montclair State,1998, Seizing the Future, p. 34, pp. 39-40

> However, no outside force guarantees the continued progress of the human species, nor does anything mandate that the human species must even continue to exist. In fact, history is littered with races and civilizations that have disappeared without a trace. So, too, could the human species. There is no guarantee that the human species will survive even if we posit, as many have, a special purpose to the species' existence. Therefore, the species innately comprehends that it must engage in purposive actions in order to maintain its level of growth and progress. Humanity's future is conditioned by what I call the Imperative of Growth, a principle I will herewith describe along with its several corollaries. The Imperative of Growth states that in order to survive, any nation, indeed, the human race, must grow, both materially and intellectually. The Macroindustrial Era represents growth in the areas of both technology and human development, a natural stage in the evolution of the species' continued extension of its control over itself and its environment. Although 5 billion strong, our continued existence depends on our ability to continue the progress we have been making at higher and higher levels. Systems, whether organizations, societies, or cells, have three basic directions in which to move. They can grow, decline, or temporarily reside in a state of equilibrium. These are the choices. Choosing any alternative to growth, for instance, stabilization of production/consumption through zero-growth policies, could have alarmingly pernicious side effects, including **extinction**.

2AC A2: Cred NB- Defense

One issue isn't key – the us will backslide in the future

Ereli 9

Anthony, Deputy Chief of Mission at the U.S. Embassy in Doha, Qatar, THE UNITED STATES' WITHDRAWAL FROM INTERNATIONAL COURT OF JUSTICE JURISDICTION IN CONSULAR CASES: REASONS AND CONSEQUENCES, Duke Journal of Int'l Law, Lexis

Because, precisely because, we respect the international system, because we respect the authorities and the jurisdictions of international institutions when we sign up to those international—when we sign up and submit ourselves to those jurisdictions. So it shows that, look, even though we don't like something, even though we think it's wrong, if we submitted ourselves to that jurisdiction freely and according to international obligations, then we will honor those international obligations. I mean, that's why we are complying with the case. But we're also saying in the future we're going to find other ways to resolve disputes that come under the Vienna Convention **other than submitting them to the ICJ**. We'll do something else. So we're still committed to the Vienna Convention. We're still committed to upholding its principles and fulfilling our obligations under that convention. What we are saying is when there are questions about that, we'll seek to resolve them in a venue other than the ICJ. Given that the ICJ in this case, as well as the Lagrand case, established a precedent of using this mechanism to affect our domestic legal system

Overemphasis on victims' rights tanks cred

Walton 8

Patrick, John Tait Memorial Lecture in Law and Public Policy, http://www.justice.gc.ca/eng/dept-min/pub/jtml-cmjt/kir2.html

And then there are the victims. The Court gives victims a special, privileged role for some very good reasons. In ad hoc tribunals, victims have been used as tools of the prosecution or the defence rather than being given due consideration in light of their own circumstances. The International Criminal Court has therefore set up an extensive guidance and counselling system for victims of physical violence, with specialized services for cases involving sexual crimes and those involving children, for example. Victims can participate in every stage in the proceedings, from the Pre-Trial Chamber on. There are systems providing financial compensation for victims, based on assets used by the War Crimes Commission, and a trust fund as well. So the victims will play a major role, but the Court must make sure that it is not paralyzed by large numbers of victims and the generous treatment they receive. In cases involving crimes against humanity, war crimes, and genocide, we can expect thousands of victims to appear before the Court, so the proceedings will be difficult to manage. To establish its credibility, the Court will not only have to act fairly and effectively but also appear to be doing so.

2AC US Doesn't Enforce

US may consent but not enforce an icj decision

Coleman 3

Andrew, The International Court of Justice and highly political matters., Melbourne Journal of International Law, Lexis

It could be argued that the disadvantages caused by non-appearance where the ease proceeds to judgment are a concern only for the non-appearing party and are entirely self-inflicted. What non-appearance does, however, is raise a perception in the broader international community of the irrelevance of the ICJ in resolving international disputes. If it is perceived that a party is the victor simply by virtue of its appearance in the absence of the other party, rather than due to the strength of its claim, then this raises serious concerns about the validity of the Court's findings, undermining the Court's credibility in the eyes of the international community. Credibility is important to all courts, but particularly to the ICJ **given the problems of enforceability** that it faces. **Even if states do consent to the ICJ's jurisdiction,** who or **what enforces the Court's decision**? Whilst provision is made in both the Statute of the ICJ and the UN Charter for the Court's judgments and advisory opinions to be enforced through resolutions of the Security Council, (58) there is no international police force that will actually ensure compliance with the resolution itself. As Couvreur notes, in municipal orders, the court, whose jurisdiction is compulsory, acts on behalf of and in the capacity of ... the fully integrated sovereign state; the latter is responsible for the continuity and efficacy of the peacemaking process initiated by the court ... The case is patently quite different in the international order: ... this community, which is not integrated, or scarcely so, and which itself is entirely based on a juxtaposition of sovereignties, is in no wise [sic] comparable to a sovereign state. (59)

Historically likely- we already did that once

Ereli 9

Anthony, Deputy Chief of Mission at the U.S. Embassy in Doha, Qatar, THE UNITED STATES' WITHDRAWAL FROM INTERNATIONAL COURT OF JUSTICE JURISDICTION IN CONSULAR CASES: REASONS AND CONSEQUENCES, Duke Journal of Int'l Law, Lexis

On 7 March 2005, the Secretary-General received from the Government of the United States of America, a communication notifying its withdrawal from the Optional Protocol. The communication reads as follows: ". . . the Government of the United States of America [refers] to the Optional Protocol to the Vienna Convention on Consular Relations Concerning the Compulsory Settlement of Disputes, done at Vienna April 24, 1963. This letter constitutes notification by the United States of America that it hereby withdraws from the aforesaid Protocol. As a consequence of this withdrawal, the United States will no longer recognize the jurisdiction of the International Court of Justice reflected in that Protocol."

Can't just rely on int'l pressure

Coleman 3

Andrew, The International Court of Justice and highly political matters., Melbourne Journal of International Law, Lexis

The lack of an overall sovereign means there is no real means of enforcement other than 'peer group pressure' from other nation states. (60) Indeed, Ojo writes that '[t]here is no independent international legal system, capable of enforcing agreements and international law. The system is defective because it depend [sic] so much on the behavior and attitude of those it is suppose [sic] to regulate.' (61)

Large history of non-comliance

Coleman 3

Andrew, The International Court of Justice and highly political matters., Melbourne Journal of International Law, Lexis

This dependency provides states with the ability, unheard of in domestic legal systems, to avoid the ICJ's authority (62) to a degree that leads some to argue that the expectations placed upon international adjudication as an instrument of international dispute resolution have been unable to be realised. (63) The history of noncompliance with the Court's rulings strengthens this already substantial argument.

India

Text

The United States federal government should condition sustaining nuclear power deals and weapon sales to India if and only if India shuts down its Central Monitoring System.

The counterplan solves – nuclear deals are a top priority in the US-India partnership

The Editorial Board 14 -- (The Editorial Board @ The New York Times, 2014, "India's Role in the Nuclear Race," New York Times, July 5th, Available Online at http://www.nytimes.com/2014/07/06/opinion/sunday/indias-role-in-the-nuclear-race.html?_r=0, Accessed 07-21-15) PMG

India has long sought to carve out a special exception for itself in the nuclear sphere. For many years, the country was barred from nuclear trade by the United States and other major states after it tested its first nuclear weapon in 1974 with materials and equipment acquired from Canada and the United States, ostensibly for peaceful purposes, and tested again in 1998. It has refused to sign the Nuclear Nonproliferation Treaty, which commits all states (except the United States, Britain, France, Russia and China) to forsake nuclear weapons.

That situation started to change in 2008 when the United States signed a **civilian nuclear trade deal** with India, a rising economic power with a huge need for energy.

President George W. Bush was so eager to use the agreement as the centerpiece of a **new India-America relationship** that he cut a weak deal. India did not have to limit its nuclear weapons, stop producing bomb-making material or forsake nuclear testing. Even India's promise that American business would benefit from nuclear technology contracts has not been fulfilled because of an Indian liability law that imposes hefty financial responsibility on contractors if there is an accident.

India already has a partnership arrangement with the suppliers group, and membership would advance its status as a nuclear weapons state, even though it has not signed the nonproliferation treaty. Moreover, since the group operates on consensus, membership would give India a veto over decision making, including any decision involving Pakistan, which is not being considered for membership.

To enhance its membership bid, India recently said it was ratifying a long-promised agreement that lets the International Atomic Energy Agency do more oversight on India's civilian nuclear program. But the agreement carries fewer obligations than those agreed to by other major states, and there would still be no verification or check on India's growing military-related nuclear program.

According to IHS Jane's, a defense research group, India is expanding a uranium enrichment plant that could support the development of nuclear bombs. That is sure to make Pakistan, which has the world's fastest growing nuclear arsenal, more anxious than ever. India is believed to have 90-110 nuclear weapons; Pakistan, about 100-120; and China, about 250.

India's new prime minister, Narendra Modi, who plans to visit President Obama at the White House in September, has made economic growth a **priority**. **The Americans are eager to capitalize on tha**t, as are other Western powers, with a **focus** on winning Indian defense and nuclear energy contracts. If India

wants to be part of the nuclear suppliers group, it needs to sign the treaty that prohibits nuclear testing, stop producing fissile material, and begin talks with its rivals on nuclear weapons containment.

India Wants the Deal

The nuclear deal hits the center of the US-India partnership – now's key to secure ties – other countries are moving in and India's nuclear hungry

Baru 7/21 -- (Sanjaya Baru, Director for Geo-economics and strategy at the International Institute of Strategic Studies, member of India's National Security Advisory Board in the Prime Minister's Office, Professor at the Indian Council for Research on International Economic Relations in New Delhi, Ph.D and Master's Degree in economics from Jawaharlal Nehru University in New Delhi, 2015, "An agreement that was called a deal," The Hindu, July 21st, Available Online at http://www.thehindu.com/opinion/lead/indiausa-stand-in-nuclear-deal/article7444348.ece, Accessed 07-22-15) PMG

Ten years ago, on the morning of July 19, 2005, the readers of The Hindu would have seen a boxed news item next to the front page lead story with an innocuous headline that read "Manmohan expresses satisfaction over talks". It was not just the byline of the writer (N. Ravi, the newspaper's former Editor-in-Chief) that justified the placement of that report, but its stunning opening line: "In a significant development after the meeting that Prime Minister Manmohan Singh had with American President George Bush at the White House, the United States, acknowledging that India is a nuclear weapons power, agreed to cooperate with it in the area of civilian nuclear energy."

Thus began the long, rocky and uncertain journey of the "Agreement for Cooperation Between the Government of the United States of America and the Government of India Concerning Peaceful Uses of Nuclear Energy" that finally secured the Indian Parliament's imprimatur three years later. The agreement came to be called a "deal" because it was viewed in transactional terms by many in both countries. One U.S. Congressman put it bluntly during a meeting with Dr. Singh, "it's 123 for 126" — the reference being to the 123 Agreement that had to be signed and the 126 fighter jets that the United States hoped India would buy from it. Others rejected such a transactional interpretation and viewed the agreement as the key that enabled both countries to open the door to a longer term strategic partnership.

The 10th anniversary

Interestingly, a decade later it was left to a think tank in Washington DC to bring together a group of some of the former U.S. and Indian officials, associated in various capacities and to varying degrees, with the negotiation of the agreement. There has been no similar high level celebration of the 10th anniversary of the Bush-Singh "deal" in India. Even the Congress Party has remained silent, not making any statement so far to remind the people of an important achievement of its own government. For a party that observes so many ritual anniversaries, it is indeed puzzling that there has been no celebration of such a historic achievement of its last Prime Minister. Of all his achievements in the Prime Minister's Office (PMO), Dr. Singh will be remembered for the nuclear deal.

" Neither the Congress nor the BJP has been willing to openly endorse the fact that the deal was made possible by the actions of successive Congress and BJP Prime Ministers"

In the U.S., on the other hand, given the bipartisan support for the agreement, the gathering last week in Washington DC was addressed by U.S. Vice President Joseph Biden. It may be recalled that as a member of the U.S. senate at the time, President Barack Obama had actually voted against the 123

agreement. In government, Mr. Obama has not only endorsed the agreement entered into between Mr. Bush and Dr. Singh but also joined hands with Prime Minister Narendra Modi to complete the journey begun a decade ago by endorsing a mutually agreed fudge on India's civil nuclear liability law.

Political reading

Despite the fact that the Congress and the Bharatiya Janata Party (BJP) are implicitly on the same side as far as the civil nuclear agreement and the strategic partnership with the U.S. are concerned, neither party has been willing to openly endorse the fact that this agreement was made possible by the actions of successive Congress and BJP Prime Ministers — P.V. Narasimha Rao, Atal Bihari Vajpayee, Manmohan Singh and Narendra Modi. As I recorded in my book, The Accidental Prime Minister, on completing the 123 agreement with the U.S., Dr. Singh told Mr. Vajpayee, "I have only completed what you began." In tying up the loose ends of the civil nuclear liability law, Mr. Modi can say much the same to Dr. Singh! **While the Bush-Singh agreement was not just about nuclear energy, but also about defining a new relationship between two great democracies, the immediate considerations that defined the timetable of the agreement getting finalised had as much to do with Mr. Bush's tenure coming to an end as it had with uranium shortage in India and the falling capacity utilisation at nuclear power plants.** With some nuclear power plants on the verge of shutdown and with even friendly countries like Russia insisting that India needed the approval of the Nuclear Suppliers Group (NSG) before any fresh export of uranium could be authorised, getting the 123 agreement done became **important in itself**, and not just as a step towards a U.S.-India strategic partnership.

An energy initiative

An important reason why the agreement was projected as an energy initiative was because many in government believed that politically it would be difficult to sell to the public a complex technical agreement without giving it a popular basis. Some political leaders like Lalu Prasad and Sharad Pawar recalled how the Narasimha Rao government was put on the defensive during the Uruguay Round of world trade negotiations because the Opposition projected the "Dunkel Draft", a draft agreement authored by Arthur Dunkel (the last director-general of GATT — General Agreement on Tariffs and Trade) as anti-farmer. Few in India may have actually read the Dunkel Draft but millions of farmers agitated against an imaginary enemy named "Uncle Dunkel".

It was for this reason that a document was prepared explaining how the nuclear deal was all about delivering electricity to people, especially power starved rural India. The document was translated into all languages and copies made available to members of Parliament and State legislatures. The media campaign that followed generated adequate public support for the nuclear deal so that every public opinion poll conducted during the period 2006-2008 showed majority opinion supporting the government on the deal.

This is not to say that India was not serious about increasing generation of nuclear energy. It is not widely known that for years the plan target for nuclear energy generation was that it would constitute a mere 3.0 per cent of total energy generation at home. In actual fact, in the mid-2000s it was not even 2.0 per cent. The proponents of the nuclear deal hoped that with easier access to uranium and new nuclear plants, India could try double nuclear generation capacity by 2020. No more.

The counterplan boosts cooperation and India loves it – 5 reasons

Mohan 7/21 -- (C. Raja Mohan, consulting editor on foreign affairs for The Indian Express, distinguished fellow at the Observor Research Foundation in New Delhi, , Dehli, nonresident Senior Associate in Carnegie's South Asia Program with a focus on international security, defense, and Asian strategic issues, Ph.D from Jawaharlal Nehru University in New Delhi, 2015, "Transformation of the bilateral relationship is the real big deal," The Indian Express, July 20th , Available Online at http://indianexpress.com/article/explained/10-yrs-of-indo-us-civil-nuclear-deal-transformation-of-the-bilateral-relationship-is-the-real-big-deal/1/, Accessed 07-22-15) PMG

Although the full potential of the civil nuclear initiative is yet to be realised, there is no denying the broader transformation of the bilateral relationship over the last decade. Few could predict how far and how fast the India-US engagement has moved since July 2005. Consider the following five developments over the last decade:

One, the US has removed many high technology sanctions imposed on India since 1974. If Delhi was prevented by law from importing anything for its nuclear programme over the last few decades, it is **boosting atomic power generation** in India through imported uranium and is negotiating with multiple vendors for purchase of new reactors.

Two, the US has become India's largest trading partner in goods and services; and the two sides have set an ambitious goal of **half a trillion dollars for future trade.** The growing commercial engagement has been reinforced by an intensification of people-to-people contact and the presence of the 3 million strong Indian diaspora in America.

Three, **cooperation on counter-terrorism and intelligence-sharing have expanded** rapidly over the last decade. The US has become one of India's major suppliers of arms, and the two sides are discussing ideas that would once have been dismissed as inconceivable — for example, US support in the development of India's next generation aircraft carrier.

Four, in refusing to extend the civil nuclear initiative to Islamabad, Washington removed the hyphen in its relations with Delhi and Islamabad. Since 2005, America has also discarded the idea of mediating between India and Pakistan, especially on the Kashmir question.

Equally significant has been America's decision to view India as a potential great power in the same league as China, assist in the **expansion of India's comprehensive national power,** and encourage Delhi to play a larger role in **stabilising the Asian balance of power.**

Five, while traditional differences between Delhi and Washington on global issues have endured, the two sides are now avoiding confrontation in multilateral fora dealing with **trade and climate change.**

None of these developments would have been possible without the civil nuclear initiative that generated **greater trust** and provided the enabling environment for **broadening the partnership.** As India reflects on the decade of transformation in its relations with the US, it must also wonder how Delhi made such heavy weather of an agreement so patently in India's favour.

India's looking to expand nuclear capabilities now

Farley 15 -- (Robert Farley, Assistant Professor at the Patterson School, Ph.D from the University of Washington Department of Political Science, specialization in military diffusion, maritime affairs, and

national security, 2015, “India’s Mighty Nuclear Weapons Program: Aimed at China and Pakistan?,” National Interest, January 3rd, Available Online at http://nationalinterest.org/feature/indias-mighty-nuclear-weapons-program-aimed-china-pakistan-11956, Accessed 07-21-15) PMG

India’s nuclear weapons program is a cornerstone of New Delhi’s security strategy for the 21st century. For most of the post-war period, India badly trailed the established nuclear powers in weapon quality, quantity, and the sophistication of delivery systems. In recent years, however, India has indicated a **willingness** to take the steps necessary to becoming a **first rate nuclear power.**

This article examines the development of the nuclear program over history, the current state of the program and its associated delivery system projects, the strategic rationale of India’s nuclear efforts, and the likely future contours of the program. The current balance of nuclear power in South and East Asia is unstable, and likely to result in a nuclear arms race involving Pakistan, India, and China.

History of the Program:

Indian work on nuclear technology began even prior to independence from the United Kingdom, but a period of instability and insecurity beginning in 1960 accelerated development. Indian defeat in the Sino-Indian War demonstrated conventional vulnerability, which the inconclusive 1965 Indo-Pakistani exacerbated. US efforts to intimidate New Delhi during the 1971 war with Pakistan also played a role.

India detonated its first nuclear device in 1974, in a “peaceful” nuclear demonstration. Yielding between 6 and 15 kilotons, the test drew widespread international criticism. Indian nuclear development progressed through fits and starts over the next two decades, with New Delhi reaching an uneasy accommodation with the world’s nuclear community to keep the program in the shadows. Ballistic missile development continued alongside the nuclear program.

This accommodation broke down in May, 1998, when India tested five devices (four fission, and one thermonuclear device that likely failed). Driven by domestic politics and deteriorating relations with Pakistan, the tests strained India’s relations with the United States, and with the international non-proliferation community. However, they did indicate India’s commitment to a future nuclear defense profile, and confirmed India’s progress with weapons design over the previous two decades.

How Many Nukes Does India Have?

According to the Arms Control Association, India likely possesses around 100 nuclear weapons, mostly of a low yield fission variety. However, reports indicate that India has **stepped up** its **production** of fissile material, in conjunction with its nuclear submarine program. This could give India the ability to produce more and larger weapons in a relatively short time frame. It is certainly within India’s means to vastly increase the size of its arsenal, and plans to construct four ballistic missile submarines (each carrying twelve missiles) almost certainly indicates an **intention to expand.**

The US-India nuclear deal is the center of their partnership

Desai 14 -- (Ronak D. Desai, Affiliate at the Belfer Center’s India and South Asia Program at Harvard University and a Fellow at the Truman National , 2014, “Understanding Richard Verma’s Swift Senate Confirmation as U.S. Ambassador to India,” Huffington Post, December 12th, Available Online at http://www.huffingtonpost.com/ronak-d-desai/understanding-richard-ver_b_6312120.html, Accessed 07-20-15) PMG

Verma has spent more than two decades shaping U.S. foreign policy at the highest levels. His experience both inside and outside the government is exhaustive, and includes his time as an Assistant Secretary of State under Hillary Clinton, and as National Security Advisor, Counsel, and Foreign Policy Advisor to Senate Majority Leader Harry Reid (D-NV). During his tenure in the Senate, Verma played a quiet but crucial role in securing passage of the landmark U.S.-India civilian nuclear deal. **The historic accord is considered the centerpiece of the U.S.-India strategic partnership.** Verma's nomination was met with virtually universal acclaim across the diplomatic, national security, business, and trade communities. The prospect of Verma becoming the first Indian-American ambassador to India also ignited fierce pride within the Indian diaspora in the United States.

This portended a smooth confirmation process for Verma. The Senate Foreign Relations Committee (SFRC) wasted little time scheduling a confirmation hearing for him on December 2 during the final days of the Congressional lame duck session. During the hearing, Verma provided keen insights about the multidimensional strategic partnership and President Obama's upcoming visit to India. He expertly fielded questions on a host of complex topics ranging from gender violence and intellectual property rights, to South Asian geopolitics and the **unconsummated civilian nuclear deal**. His performance garnered widespread praise from the Committee's members, who voted unanimously to send Verma's confirmation for a full Senate vote just two days after the hearing. One short week later, the United States Senate confirmed Verma by a voice vote, providing unanimous consent to his nomination.

Nuclear power in India has potential

Biswas 15 -- (Soutik Biswas, India Online Editor at BBC for 12 years, Dehli correspondent, 2015, "Will the India-US nuclear deal work?," BBC News, January 26th, Available Online at http://www.bbc.com/news/world-asia-india-30978152, Accessed 07-20-15) PMG

Despite new reactors, nuclear power is on the decline. It is generating less than 11% of the world's electricity production, the lowest level since 1982, according to the International Atomic Energy Agency (IAEA) in its latest report. (Coal is still the fuel of choice.) On the one hand, Germany plans to phase out nuclear power by 2022; on the other, China plans to treble nuclear power capacity by 2020.

"Nuclear power is at a paradoxical stage," says the IAEA. "On the one hand, it appears to have entered an era of declining expectations. Yet a wave of countries is poised to introduce nuclear power, and the long-term potential remains high." Economic, technological, and political changes, as we have seen, can influence the spread of nuclear power. **India is not an exception.**

Relations High

US-India relations are high and durable – boosts counterplan solvency -- litany of examples including nuclear deals and surveillance prove

Desai 14 -- (Ronak D. Desai, Affiliate at the Belfer Center's India and South Asia Program at Harvard University and a Fellow at the Truman National , 2014, "U.S.-India Relations Will Endure Despite the Khobragade Controversy," Huffington Post, January 13th, Available Online at http://www.huffingtonpost.com/ronak-d-desai/devyani-khobragade_b_4578443.html, Accessed 07-16-15) PMG

But is the U.S.-India strategic partnership really so fragile? Although the heated rhetoric surrounding the Khobragade episode would suggest otherwise, the United States and India have confronted other challenges far more formidable than the ongoing diplomatic row that has erupted between the two countries over the young diplomat's arrest and the circumstances surrounding it.

India's close relationship with Iran, for example, long constituted a major irritant in ties between Washington and New Delhi. At a time when the United States was leading international efforts to isolate Iran over its disputed nuclear program, American officials were chagrined to see India continue to import Iranian oil to meet its voracious energy demands. Some experts predicted an inevitable train wreck in U.S.-India relations over New Delhi's relationship with Tehran, which would lead to long-term damage in U.S.-India ties. The train wreck never occurred. On the contrary, American and Indian officials collaborated closely together in a manner consistent with Washington's goals regarding Iran's nuclear program, while accommodating India's legitimate concerns about its energy supply.

The stringent liability legislation enacted by India's parliament shortly after passage of the landmark U.S.-India civilian nuclear deal has also posed a potent challenge to bilateral relations for more than five years.

Inconsistent with governing international standards on nuclear liability, the Indian law effectively precludes American companies from entering India's lucrative nuclear market and realizing the benefits of the historic nuclear accord. While some observers worried that the liability legislation would derail U.S.-India ties by rendering the centerpiece of the strategic partnership fundamentally irrelevant, these fears proved to be unfounded. Officials in both capitals refused to allow the relationship to be hijacked by one single issue, focusing instead on other opportunities for cooperation, **including within the nuclear energy arena**.

More recently, documents leaked by former National Security Agency contractor Edward Snowden revealed that India was among one of the NSA's top surveillance targets and that its United Nations mission in New York and embassy in Washington were bugged and monitored by the agency. While similar revelations of American surveillance on other friends and allies abroad provoked outrage and condemnation in capitals around the world, New Delhi's tepid response highlighted its resolve **not to let the disclosures impact U.S.-India ties.**

Each one of these challenges implicated equities more central to core American and Indian national interests than the ones supposedly affected by the Khobragade arrest. Officials in both capitals, however, remembered the larger value of the strategic partnership to both countries and found a way to move it forward. In fact, profound differences continue to exist between the United States and India

on a host of issues, including climate change, intellectual property protection for American pharmaceuticals sold in India, and global trade, for instance. But while these differences are serious ones unlikely to be resolved anytime soon, decision-makers in Washington and New Delhi have so far not allowed them to compromise the overall integrity and forward momentum of the relationship.

Viewed within this context, dire predictions regarding the future of U.S.-India relations appear exaggerated and inconsistent with the history of the strategic partnership. Ultimately, the overall trajectory of the U.S.-India ties is unlikely to be affected by the brewing controversy in the long-term. The underlying strategic logic of bilateral ties remains unchanged despite Khobragade's arrest and the ongoing spat between the two countries. Robust U.S.-India ties remain as important as ever with issues like the pending withdrawal of American troops from Afghanistan, regional stability, terrorism, and managing China's rise continuing to top the agenda for both countries. American and Indian leaders would be wise to remember this as tensions continue to persist even after Khobragade's departure from the United States.

To be sure, the current diplomatic dispute is a significant one that has put genuine strain on the strategic partnership. But **U.S.-India relations have proven remarkably durable and resilient in the face of even more daunting challenges.** The Khobragade controversy is unlikely to change that.

Singh and Obama prove relations are high now – 10 years of democratic ties and cooperation on various policies

Desai 14 -- (Ronak D. Desai, Affiliate at the Belfer Center's India and South Asia Program at Harvard University and a Fellow at the Truman National , 2014, "Dr. Singh Goes to Washington: Why US-India Relations Still Matter," Huffington Post, September 27th, Available Online at http://www.huffingtonpost.com/ronak-d-desai/dr-singh-goes-to-washington_b_3999664.html, Accessed 07-26-15) PMG

With President Obama and Indian Prime Minister Manmohan Singh scheduled to meet today in Washington regarding a host of different issues, expectations surrounding their bilateral talks are modest at best. Although the meeting constitutes the culmination of a series of high-level exchanges that have taken place between the two countries over the past year, neither side expects the upcoming talks to result in any significant breakthroughs or substantive developments in the U.S.-India relationship.

The meeting comes at a time when the president and prime minister are confronting profound challenges both at home and abroad. In the United States, President Obama's agenda continues to be stymied by a recalcitrant, polarized Congress threatening to shut down the government while the country's economic recovery remains uneven. Chemical weapons use in Syria and a potential diplomatic opening with Iran have forced him to reorient Washington's foreign policy back toward the Middle East despite the administration's initial efforts to "pivot" toward Asia.

In India, Singh's governing Congress Party has been hobbled by a series of unending corruption scandals while the unprecedented plunge in the value of the rupee in conjunction with rising inflation have further compounded the country's mounting economic woes. Foreign policy officials in New Delhi are preparing for the prime minister's UN meeting with his Pakistani counterpart, Nawaz Sharif, as the decades-old Kashmir dispute continues to simmer.

Simply put, the United States and India are each focused elsewhere. There is a growing sense that ties between the two countries have markedly cooled, and the feeling of unlimited opportunity that pervaded the relationship just four years ago has palpably waned. Several differences have emerged between the two countries, including a multitude of increasingly acrimonious trade disputes, the adequacy of New Delhi's current patent protection regime, the impact of India's nuclear liability legislation, proposed changes to U.S. immigration rules, and the impending withdrawal of American troops from Afghanistan. As a result, a rather large chasm seems to exist between the rhetoric and reality surrounding the so-called U.S.-India "strategic partnership."

Against such a backdrop, one might be tempted to conclude that neither country should make the strategic partnership a priority at present, or worse, that U.S.-India relations have plateaued, are adrift, or were oversold as some critics have alleged.

This would be a mistake. Despite the challenges facing the bilateral relationship, a few simple, but undeniable, truths remain regarding the strategic partnership. **First**, US-India relations are stronger now than they ever have been in their history, multidimensional in character and multifaceted in scope. Unprecedented progress has been seen in virtually every area of cooperation including defense, trade, development, education, space, energy, and **security**. The U.S. military relationship with India is arguably the fastest growing one in the world as evidenced recently by Deputy Secretary of Defense Ashton Carter's highly lauded trip to India earlier this month. Bilateral trade and investment has quadrupled since 2006 to nearly $100 billion. One need only look back 10 years to the state of U.S.-India relations to understand just how far -- and fast -- bilateral ties have come and grown.

Second, the underlying strategic logic of the relationship remains sound even in light of all the difficulties currently vexing U.S.-India ties. Unveiled in 2005, the strategic partnership was predicated on the premise that a closer, deeper bilateral relationship with New Delhi advanced U.S. interests in several different ways. Architects of the partnership viewed **India as a stabilizing force and critical partner in South Asia**, particularly one that could help manage China's own unpredictable rise and counter a bevy of enduring global threats such as terrorism and nuclear proliferation. Additionally, cultivating stronger economic ties with one of the world's largest economies and fastest growing middle classes also compelled a greater degree of cooperation. The two countries had already commenced greater engagement in this arena, and embarking upon a strategic partnership would serve to accelerate this trend. And perhaps most importantly, the United States and India both recognized that they shared many of the key values so critical to the strength and durability of their respective democracies: secularism, pluralism, and genuine respect for the rule of law. These key motivating principles animating U.S.-India ties are no less true now than they were almost a decade ago.

Finally, the potential for what the United States and India can achieve together remains significant, even in light of the obstacles afflicting bilateral ties at the moment. The two countries are witnessing a convergence of interests in an increasing number of critical and diverse arenas. The momentum behind the relationship -- while undoubtedly stalled at times -- appears to have become irreversible. Ultimately, what binds the two countries together far exceeds those differences that drive them apart.

The meeting between President Obama and Prime Minister Singh today represents a powerful demonstration of their commitment to the U.S.-India strategic partnership. At a time when many are questioning the value and importance of ties between Washington and New Delhi, the talks serve as critical reminder of the importance that both leaders -- and their respective governments -- attach to

the relationship. Along with their recent predecessors, both President Obama and Prime Minister Singh have built a solid foundation for U.S.-India relations that will endure long after they have left office. Their meeting tomorrow is one more important step toward ensuring that remains the case.

AT: Nuclear Deals DA

No impact – cooperation is high and conflicts are minor – their evidence reflects Western bias

Mashru 13 -- (Ram Mashru, South Asia analyst and freelance journalist published in a range of leading publications on Indian politics, social affairs, human development and international relations, 2013, "Rethinking India-Pakistan Relations," October 15th, Available Online at http://thediplomat.com/2013/10/re-thinking-india-pakistan-relations/1/, Accessed 07-22-15) PMG

The story of an enduring Indo-Pakistan rivalry is a familiar one, in which the neighboring states, born of a bloody partition, are trapped in an endless cycle of conflict. But this narrative perpetuates two false habits. The first is **a static understanding** of Indo-Pakistan relations, pessimistic in its fixation on their violent history. The second is a reductive understanding, in which the emphasis on security obscures the long and successful record of cooperation. In the context of increasingly adverse domestic political environments – with India's jingoistic right wing and Pakistan's irredentist military hindering the diplomatic process – there is an even greater need to re-think India- Pakistan relations.

The (in)Security Complex

The two countries have maintained a patchy ceasefire over the de facto border in Kashmir – the "Line of Control" – since 2003. This year's ceasefire violations began in January with the beheading of an Indian soldier, with a further 150 breaches since then, far exceeding last year's total of 117. Things came to a head last month when, on the eve of high-profile talks between Nawaz Sharif and Manmohan Singh in New York, militants who had secretly crossed the Pakistani border killed eight Indian security personnel and a civilian. The attack was deliberately timed, and follows a pattern of attempts by terrorists to frustrate the bilateral peace process.

These latest attacks prompted uncompromising statements by Manmohan Singh who chose his speech at the UN General Assembly to denounce Pakistan as the "epicenter of terrorism." India's President Pranab Mukherjee, on a foreign trip to Belgium, echoed these words, condemning Pakistan for failing to apprehend terrorists operating on its soil. These warring words were fodder to journalists keen to report on "growing tensions." But the timing and venues are significant: international visits, far removed from governmental roundtables, are opportunities for leaders to send policy-free signals. Singh and Mukherjee's bold declarations were aimed therefore not at their Pakistani counterparts, but were placatory statements calculated to appease increasingly hawkish elements in India's domestic politics.

Both sides face powerful obstacles to bilateral talks. In Pakistan, Nawaz Sharif must wrestle control over foreign policy from the army, the institution that toppled him in a coup in 1999, and his ability to tame militant groups, who threaten to jeopardize Pakistan's security policy, remains in doubt. Across the border, there is a sense of stasis. Singh can do little between now and next year's national election, when his term as prime minister will end. The ascendant BJP – India's ultra-nationalist party – advocates a zero-tolerance approach to (alleged) Pakistan-sponsored terrorism. Though the foreign policy of Narendra Modi, the BJP's prime ministerial candidate, remains unclear, many fear he betrayed his position after his vociferous criticism of Singh's decision to go ahead with talks.

But this preoccupation with cross-border terrorism masks a number of important facts. First, **the emphasis on low intensity conflict is the result of Indo-Pakistan relations being largely peaceful**.

Second, attributing militant attacks to Pakistan is almost impossible. Pakistan is experiencing a "sorcerer's apprentice problem": having once funded and trained combatants, militant groups have turned renegade and now act according to their own interests. Third, as recent bomb blasts in Peshawar prove, of the two it is Pakistan is acutely vulnerable to sectarian, extremist and terrorist violence. Lastly, though low intensity conflict persists, **figures show a consistent decline in violence between India and Pakistan** since the 1990s.

Some insist that the theater of war has moved from Kashmir to Afghanistan. In a provocative essay for Brookings, "A Deadly Triangle," William Dalrymple argued that Afghanistan had become the site of an Indo-Pakistan proxy war. Pakistan's attitude to India, he explained, is shaped by its fear of being caught in an Indian "nutcracker": trapped between an age-old enemy to the south and a war-ridden, pro-Delhi state to the north. But such analyses quickly collapse under scrutiny.

India has many interests in Afghanistan, none of which pose existential threats to Pakistan. First, stability in Afghanistan is necessary for regional stability and so preventing the establishment of terror networks in Afghanistan is India's security priority. Second, in addition to many historical and cultural links, India and Afghanistan's social and economic ties run deep. They have signed a Strategic Partnership Agreement, which commits India to a host of post-conflict nation-building efforts. It is for this reason that India is among Afghanistan's largest aid donors. For India, Afghanistan also represents a prestige project: India takes on the role of a generous ally, assumes the mantle of a democracy promoter and wins credit for its assistance with institution building. India's activities are not entirely benign – Afghanistan's mineral deposits are worth trillions of dollars and the country serves as a market for Indian goods and services – but nor are they an attempt to encircle Pakistan.

Water, Trade & Talks

Most problematic however, is the tendency **to observe the region through Anglo-American spectacles**, **a distorting lens** that emphasizes conflict, militarism and terrorism. This **reductive understanding** obscures a successful record of co-operation on, among other things, trade, resources and post-conflict strategies.

India and Pakistan have cooperated, long and successfully, over rights to the crucial water-flow from the Indus river system, a treaty that has remained intact since 1960. The two countries have also maintained ties through SAARC, a regional body that encourages interaction in relation to commerce, culture and technology. People-to-people contact is facilitated by India's granting of ten thousand visas per month. And in the past decade bilateral trade has increased almost six-fold, from $370 million per year to $2.4 billion. Most importantly, the two continue to cooperate on confidence building measures (CBMs) in Kashmir. Singh and Sharif reaffirmed their commitment to CBMs and also agreed, for the first time, to bring senior military officials to the table in the effort to restore the ceasefire.

Cooperation over water, trade and talks has survived changes in government, of various political stripes, on both sides of the border. Analysts are therefore confident of resource and trade-led rapprochement. Economic ties are underpinned by India's granting of most favored nation status to Pakistan – a conferral of trade benefits – and though unimplemented, Pakistan has pledged to do the same. **Conflict risks severing these economic ties, something Pakistan's economy can ill afford**.

Points of contention remain: India and Pakistan persist in a foolish territorial war over the uninhabitable Siachen Glacier and Pakistan's failure to bring to justice the perpetrators of the 2008 Mumbai terror attacks leaves many in doubt about its willingness or ability to combat home-grown terrorists. But these aside, the recent Singh-Sharif talks in New York are a significant achievement. The talks represented a return on the vast political capital both leaders have invested in making Indo-Pakistan relations durable, the two met in the face of shrill domestic opposition and the inclusion of senior military officials in the Kashmir peace process marks major strategic progress. Underpinned by strengthening trade ties, **these** incremental **advances promise** the long-awaited **return to good relations**.

Recent meetings disprove – there are agreements

Thompson 14 -- (Julia Thompson, research associate at the Stimson Center, a nonprofit and nonpartisan international security think tank, 2014, "High-Level Military Meetings Between India and Pakistan Could Cool Down Regional Tensions," January 17th, Available Online at http://www.ibtimes.com/high-level-military-meetings-between-india-pakistan-could-cool-down-regional-tensions-1543565, Accessed 07-22-15) PMG

Nuclear-armed neighbors India and Pakistan have the opportunity to lower cross-border tensions this year, but it's uncertain whether the Indian government can take meaningful steps to improve ties before elections later this spring and how far a cautious leadership in Islamabad is prepared to go. A meeting between high-ranking military leaders held Dec. 24 and follow-up meetings between flag officers across the Kashmir divide – including one held on Friday– could pave the way for new measures that strengthen stability in the region or at least affirm existing measures, but only if political leaders are determined to improve relations.

Pakistan and India once again exchanged lists of nuclear installations and facilities earlier this month in a confidence-building measure that has been repeated annually since 1992, pursuant to a 1988 agreement prohibiting attacks on nuclear installations. The exchange, while undoubtedly a positive act for India-Pakistan relations, did not expand the scope or significance of the non-attack agreement.

The downward slide in Pakistan-India relations, marked by increased firing and other incidents across the disputed Kashmir border, seems to have been halted as a result of the Dec. 24 meeting between the Indian and Pakistani directors-general of military operations. The recent meetings stem from the September meeting between Indian Prime Minister Manmohan Singh and Pakistani Prime Minister Nawaz Sharif in New York on the periphery of the U.N. General Assembly meeting.

The prime ministers promised to reinstitute the 2003 cease-fire along the Line of Control dividing Kashmir, but these pledges had little effect. Now, at last, this downward slide seems to have stopped. The December meeting ended a 14-year hiatus from in-person India-Pakistan military leaders' meetings – a pause initiated by the 1999 Kargil War in Kashmir. Since then, regular use of military hotlines, rather than direct meetings, has been the norm for communication between the two states' armies.

However, weekly use of the hotline has proved insufficient to maintain the cease-fire along the Kashmir divide, build confidence, or reduce nuclear risks between Pakistan and India. Instead, crisis management had been contracted out to the United States during the Kargil War and after the 2008 terrorist attacks in Mumbai.

Indian National Security Adviser Shivshankar Menon reported that both leaders had tasked senior military officials with seeking mechanisms for strengthening the ceasefire along the Line of Control. Pakistan's Sharif termed the September meeting a "new beginning." However, this unusual in-person meeting does not necessarily foreshadow significant, long-term movement for the countries' strategic relationship.

The situation along the Line of Control in Kashmir had deteriorated significantly in 2013, with repeated violations of the cease-fire by both India and Pakistan. Tensions first flared in January last year, with the deaths of two Indian and three Pakistani soldiers attributed to cross-border attacks.

The situation deteriorated further over the summer, when Indian and Pakistani soldiers were killed in June, July, and August as a result of shelling and cross-border attacks. Deaths and cease-fire violations continued in October – after the prime ministers' meeting in New York. These incidents come on top of repeated cross-border shooting incidents and incursions that did not result in soldiers' deaths.

The Dec. 24 meeting marked an important step towards calming the Line of Control. It also revealed an understanding on both sides that the increase in cease-fire violations and flare-ups had gone too far. According to a statement by both sides, delegations led by Indian Lt. Gen. Vinod Bhatia and Pakistani Maj. Gen. Aamer Riaz met in "a cordial, positive and constructive atmosphere," agreed "to re-energize the existing mechanisms" for maintaining the cease-fire, and reached a consensus to make their military hotline contact more **"effective and result oriented."** However, this meeting, like the exchange earlier this month, reaffirms previous agreements rather than forges new ones.

Importantly, in order "to carry forward the positive spirit of [the] meeting," the delegations agreed that two 'flag meetings' between brigade commanders would be held on the Line of Control in the near future. The first was held Friday.

The Stimson Center's recent publication, Deterrence Stability and Escalation Control in South Asia, found that when compared to military and nuclear advances in South Asia, diplomacy has accomplished little, and has completely stalled since the 2008 Mumbai attacks. Over the past 15 years, four agreements stand out as having notable impact on strategic stability: the 1999 Lahore Memorandum of Understanding, the 2003 ceasefire along the Line of Control, the 2005 agreement on ballistic missile flight-test pre-notification, and the 2007 agreement to reduce the risk from accidents relating to nuclear weapons. Nearly eight years have passed since the latest accord.

The Dec. 24 and Friday meetings have shown leadership's desire to restore the cease-fire in Kashmir and could **halt the deterioration in bilateral relations.** It remains to be seen whether leadership in India and Pakistan can build upon this progress prior to the Indian elections.

The United States federal government should condition withdrawing support for Ukrainian independence to Russia if and only if Russia ___ (insert internal link).

Failure to give up Ukraine is the root cause of US - Russia conflicts, guarantees war

Parry 15 - Investigative reporter and founder of the Consortium for Independent Journalism (CIJ), a non-profit US-based independent news service. [Robert Parry (Broke the Iran-Contra stories for The Associated Press and Newsweek in the 1980s.), "Ready for Nuclear War over Ukraine?" *Consortiumnews.com*, February 23, 2015, pg. http://tinyurl.com/qbp5pr7

A senior Ukrainian official is urging the West to risk a nuclear conflagration in support of a "full-scale war" with Russia that he says authorities in Kiev are now seeking, another sign of the extremism that pervades the year-old, U.S.-backed regime in Kiev. In a recent interview with Canada's CBC Radio, Ukraine's Deputy Foreign Minister Vadym Prystaiko said, "Everybody is afraid of fighting with a nuclear state. We are not anymore, in Ukraine — we've lost so many people of ours, we've lost so much of our territory."

Prystaiko added, "However dangerous it sounds, we have to stop [Russian President Vladimir Putin] somehow. For the sake of the Russian nation as well, not just for the Ukrainians and Europe." The deputy foreign minister announced that Kiev is preparing for "full-scale war" against Russia and wants the West to supply lethal weapons and training so the fight can be taken to Russia.

"What we expect from the world is that the world will stiffen up in the spine a little," Prystaiko said.

Yet, what is perhaps most remarkable about Prystaiko's "Dr. Strangelove" moment is that it produced almost no reaction in the West. You have a senior Ukrainian official saying that the world should risk nuclear war over a civil conflict in Ukraine between its west, which favors closer ties to Europe, and its east, which wants to maintain its historic relationship with Russia.

Why should such a pedestrian dispute justify the possibility of vaporizing millions of human beings and conceivably ending life on the planet? Yet, instead of working out a plan for a federalized structure in Ukraine or even allowing people in the east to vote on whether they want to remain under the control of the Kiev regime, the world is supposed to risk nuclear annihilation.

The Ukraine situation is the only scenario that risks total extinction

Baum 14 - Executive Director @ Global Catastrophic Risk Institute [Seth Baum (Ph.D. in Geography @Pennsylvania State University and a Post-Doctoral Fellowship @ Columbia University Center for Research on Environmental Decisions), "Best And Worst Case Scenarios for Ukraine Crisis: World Peace And Nuclear War," *Huffington Post*, Updated: 05/07/2014 5:59 am EDT, pg. http://tinyurl.com/lxx49og

Here's the short version: The best case scenario has the Ukraine crisis being resolved diplomatically through increased Russia-Europe cooperation, which would be a big step towards world peace. The worst case scenario has the crisis escalating into **nuclear war** between the United States and Russia, causing **human extinction**.

Let's start with the worst case scenario, nuclear war involving the American and Russian arsenals. How bad would that be? Put it this way: Recent analysis finds that a "limited" India-Pakistan nuclear war could kill two billion people via agricultural declines from nuclear winter. This "limited" war involves just 100 nuclear weapons. The U.S. and Russia combine to possess about 16,700 nuclear weapons. **Humanity may not survive** the aftermath of a U.S.-Russia nuclear war.

It seems rather unlikely that the U.S. and Russia would end up in nuclear war over Ukraine. Sure, they have opposing positions, but neither side has anywhere near enough at stake to justify such extraordinary measures. Instead, it seems a lot more likely that the whole crisis will get resolved with a minimum of deaths. However, the story has already taken some surprising plot twists. We **cannot rule out** the possibility of it ending in direct nuclear war.

A nuclear war could also occur **inadvertently**, i.e. when a false alarm is misinterpreted as real, and nuclear weapons are launched in what is believed to be a counterattack. There have been several alarmingly close calls of inadvertent U.S.-Russia nuclear war over the years. Perhaps the most relevant is the 1995 Norwegian rocket incident. A rocket carrying scientific equipment was launched off northern Norway. Russia detected the rocket on its radar and interpreted it as a nuclear attack. Its own nuclear forces were put on alert and Boris Yeltsin was presented the question of whether to launch Russia's nuclear weapons in response. Fortunately, Yeltsin and the Russian General Staff apparently sensed it was a false alarm and declined to launch. Still, the disturbing lesson from this incident is that nuclear war could begin even during periods of calm.

Traditional deterrence doesn't apply to Russia's nuclear arsenal absent the counterplan- even the threat of conventional warfare would trigger nuclear retaliation, 5 warrants (This card is killer)

-Paranoid political culture

-Hairtrigger nuclear Arsenal

-Collapsing Economy

-National Grievance

-A vulnerable antagonist

Thompson 15 –[Loren Thompson, focus on the strategic, economic and business implications of defense spending as the Chief Operating Officer of the non-profit Lexington Institute and Chief Executive Officer of Source Associates. Previously Director of the Security Studies Program at Georgetown University, taught courses in strategy, technology and media affairs at Georgetown. Professor at Harvard University's Kennedy School of Government. Doctoral and masters degrees in government from Georgetown University and a bachelor of science degree in political science from Northeastern University.] N.H

Like the stock market crashes that periodically wipe out so many fortunes, military crises are hard to predict. Washington's track record as a seer of future threats is remarkably poor. From the bombing of Pearl Harbor in the 1940s to North Korea's invasion of the South in the 1950s to the Cuban Missile Crisis in the 1960s to the collapse of South Vietnam in the 1970s to the breakup of the Soviet empire in the 1980s to Iraq's invasion of Kuwait in

the 1990s to the 9-11 attacks and rise of ISIS in the new millennium, America's policy elite never seems to see looming danger until it is too late.

So don't be surprised if the economic sanctions Washington has led the West in imposing on Russia look like a bad idea a year from now. At the moment, a combination of sanctions and plummeting oil prices seems to be dealing the government of President Vladimir Putin a heavy blow — just retribution, many say, for its invasion of Ukraine and annexation of Crimea last year. But as Alan Cullison observed in the Wall Street Journal this week, sanctions sometimes provoke precisely the opposite response from what policymakers hope. In Russia's case, that could mean a threat to America's survival. Let's briefly consider how Russia's current circumstances could lead to dangers that dwarf the challenges posed by ISIS and cyber attacks.

A paranoid political culture. Russia's moves on Ukraine look to many Westerners like a straightforward case of aggression. That is not the way they look to Vladimir Putin's inner circle of advisors in Moscow, nor to most Russians. That inner circle is drawn mainly from the Russian security services — Putin himself spent 16 years in the KGB — and to them the revolution in Ukraine was a U.S.-backed coup aimed at weakening Russia. Putin describes the Crimea as a birthplace of Russian culture, and his government has repeatedly warned against the expansion of Western economic and political influence into a region historically regarded as Moscow's sphere of influence. Putin relies heavily on the Kremlin bureaucracy to provide him with intelligence (he avoids the Internet), so his briefings tend to reinforce the view that Moscow was forced to intervene in Ukraine by Western subversion aimed at undermining his rule.

A nuclear arsenal on hair trigger. Between the two of them, Russia and America control over 90% of the world's nuclear weapons. However, Moscow is far more dependent on its nuclear arsenal for security, because it cannot afford to keep up with U.S. investments in new warfighting technology. So Russian military doctrine states that it might be necessary to use nuclear weapons to combat conventional attacks from the West. Many Russians think that attacks on their country are a real possibility, and that their nuclear deterrent — which consists mainly of silo-based missiles in known locations — might have to be launched quickly to escape a preemptive strike. Moscow staged a major nuclear exercise during last year's Ukraine crisis in which it assumed missiles would have to be launched fast on warning of a Western attack. A senior Russian officer has stated that 96% of the strategic rocket force can be launched within minutes.

A collapsing economy. Much of Putin's popularity within Russia is traceable to the impressive recovery of the post-Soviet economy on his watch. Since he came to power in 2001, the country's gross domestic product has grown sixfold, greatly increasing the size and affluence of the Russian middle class. But that growth has been based in large part on the export of oil and gas to neighboring countries at a time when energy prices reached record highs. Now the price of oil has fallen at the same time that economic sanctions are beginning to bite. The ruble lost nearly half its value against the dollar last year, and the economy has begun to

shrink. Putin blames sanctions for 25-30% of current economic hardships. Many Westerns believe a prolonged recession would weaken Putin's support, but because he can blame outsiders, economic troubles might actually strengthen his hand and accelerate the trend toward authoritarian rule.

A deep sense of grievance. Blaming outsiders for domestic troubles has a long pedigree in Russian political tradition, and it feeds into a deep-seated sense that Russia has been deprived of its rightful role in the world by the U.S. and other Western powers. Russia may have little past experience with democracy, but it was a major power for centuries prior to the collapse of communism. Like authoritarian rulers in other nations, Putin has built his political base by appealing to nationalism, fashioning a revisionist view of recent events in which Russia is the victim rather that the author of its own misfortunes. He has called the break-up of the Soviet Union a tragedy of epic proportions, and apparently really believes it. By tapping into a deep vein of resentment in Russian political culture, Putin has created a broad constituency for standing up to outsiders even if it means prolonged economic hardship and the danger of war.

A vulnerable antagonist. Federal Reserve chair Janet Yellen says America faces little danger from Russia's current troubles, but that's because she thinks in economic terms. In a broader sense, America potentially is in great danger because Putin and his advisors really believe they are the target of a Western plot to weaken their country. The biggest concern is that some new move by Russia along its borders degenerates into a crisis where Moscow thinks it can improve its tactical situation by threatening local use of nuclear weapons, and then the crisis escalates. At that point U.S. policymakers would have to face the reality that (1) they are unwilling to fight Russia to protect places like Ukraine, and (2) they have no real defenses of the American homeland against a sizable nuclear attack. In other words, the only reason Washington seems to have the upper hand right now is because it assumes leaders in Moscow will act "rationally."

2NC/1NR

Ukraine Negotiations Key

Russia and the U.S are uniquely open to co-op now but Ukraine remains an issue

VOA 15 – [Voice of America News, News organization covering complete coverage of the U.S, Asia, Africa and the Mideast, July 4 2015 "Putin: US-Russian Relations Key for Solving Global Crises" Voice of America, http://www.voanews.com/content/putin-us-russian-relations-global-crisis-resolution/2848840.html

Russian President Vladimir Putin has said relations between Moscow and Washington remain the most important factor in ensuring stability and security in the world. In a congratulatory message to U.S. President Barack Obama Saturday on the U.S. Independence Day, Putin said that despite the differences, Russia and the U.S. could find solutions for the most difficult international problems and meet the global challenges together, if they engage in a dialogue based on equality and respect for each other's interests. Putin has also offered cooperation to the Obama administration to fight the threat of terrorism from the Islamic State group. According to the Kremlin, Putin has tasked Foreign Minister Sergei Lavrov to discuss a joint anti-terrorism strategy with the U.S. Secretary of State John Kerry. U.S.-Russian relations have reached the lowest point since the post-Cold War era because of the conflict in eastern Ukraine and the Russian annexation of Crimea in 2014. Russia has been increasingly antagonistic in its remarks toward the United States ever since claiming that Western sanctions against Moscow are the result of U.S. pressure on EU countries. The West has leveled accusations against Russia for supporting the insurgency in eastern Ukraine, which Russia has denied, saying that Russians fighting alongside separatists in the Donbas region are volunteers.

Putin and Obama agree: cooperation is possible

RBH 15 – [Russia beyond the headlines, News on Russian politics, economics, international news, society, opinion, "Russian-U.S. relations remain crucial factor of world stability – Putin, http://rbth.com/news/2015/07/04/russian-us_relations_remain_crucial_factor_of_world_stability_-_putin_47470.html, July 4th 2015]

Despite some disagreements existing between Russia and the U.S., relations between the two countries remain a crucial factor of international stability, Russian President Vladimir Putin said in a message of greetings to U.S. President Barack Obama on the occasion of Independence Day celebrated in the U.S. on Saturday, the Kremlin press service reports.

"In his greetings telegram, the Russian chief of state noted that Russian-American relations, despite disagreements existing between the two countries, remain a crucial factor of world stability and security," it said.

Putin said he was convinced that, "by maintaining dialogue based on principles of equitability and mutual respect for each other's interests, Russia and the U.S. are capable of finding solutions to the most complicated international problems and efficiently opposing global challenges and threats," it said.

Russia wants freedom to deal with Ukraine

Chance 15 – [Matthew Chance, CNN Senior International Correspondent in Moscow, "What does Russia's President Putin really want?" February 11, 2015, CNN, http://www.cnn.com/2015/02/11/world/chance-putin-analysis/] N.H

Putin, though, Is an enigma His unflinching support for rebel separatists in Eastern Ukraine, despite their alleged excesses, has plunged Russia's relations with the West into their worst crisis since the end of the Cold War. Even in the face of mounting international sanctions that have isolated Russia and helped hobble its fragile economy, Western officials say weapons and manpower continue to flow across the border, although the Kremlin insists it is supplying neither. Clearly, Putin is determined to get his way in Ukraine. We already know, essentially, what this means in terms of a peace deal -- a truce was signed last September, although it didn't hold. The Minsk Protocol agreed that, among other things, autonomy would be granted to Ukraine's southeastern regions. The Russian language would be given official status. A buffer zone would be established along the front lines and heavy weapons would be pulled back from civilian areas. But Putin may actually want much more. On an official visit to Egypt this week, the Russian president dropped a large hint -- and not for the first time. In an interview with the Al-Ahram newspaper he rejected Russian responsibility for the crisis in Ukraine. "It emerged in response to the attempts of the U.S.A. and its Western allies, who considered themselves winners of the Cold War, to impose their will everywhere," Putin told the newspaper.

US-Russia conflict stems from interventionist policies -- specifically Ukraine

Krastev 14 - [Ivan Krastev, Bulgarian political scientist. He is the Chairman of the Centre for Liberal Strategies in Sofia, and permanent fellow at the IWM, Institute of Human Sciences in Vienna, "What does Russia want and why?" Prospect Magazine, March 6, 2014,] N.H

This might be what Russia hopes to gain in terms of territory and influence, but the question of why Putin appears so resistant to the West still needs to be addressed. The popular assumption is that the Russian President behaves as he does simply because he can. He is convinced that the Ukraine is more important to Russia than it is to the West and that any Western retaliation would be noisy but ineffective. Putin is aware that the EU is crippled by its economic problems and nervous about the rise of right-wing populist parties in many of its member states. And, crucially, he has judged on the evidence of the US's decision to avoid intervention in Syria that the American public will oppose any military adventure far away from its borders.

But Putin's opposition to Europe and the US can't be reduced to realpolitik arguments such as the strategic importance of the Sevastopol naval base or the need to retain control over the gas pipeline that runs through Ukraine**.** If prior to the crisis Putin was unhappy with the behaviour of the United States and Europe towards Russia, now his disappointment is with the decadent and, as he sees it, immoral state of modern Europe and the destabilising role he believes the United States is playing in world politics. An analysis of Putin's recent statements shows that Russian president sees his mission not as Russia's integration in to Europe but as a defence of traditional Russian values against the EU's post-modernism**.** "Europeans are dying out…same sex marriage cannot produce children" Putin said last September during the meeting of the Valdai Club which meets to analyse Russia's political, cultural and

economic future. The recent anti-gay and anti-lesbian legislation passed by the Russian parliament is a clear expression of the new conservatism of Putin's elites who feel threatened by more liberal European societies.

Russia has its sights set on Ukraine

Motyl 11 – [Alexander J. Motyl, Professor of political science at Rutgers University-Newark, A specialist on Ukraine, Russia, and the USSR, and on nationalism, revolutions, empires, and theory, "A Russian Threat to Ukraine?" World Affairs, Oct 28 2011, http://www.worldaffairsjournal.org/blog/alexander-j-motyl/russian-threat-ukraine] N.H

According to Pipes, the Russians "do pose a threat to their ex-republics. They have no problem with Central Asia, because those [states] are rather docile. But they can't reconcile themselves to the loss of the three Baltic Republics [Estonia, Latvia, and Lithuania] and Ukraine and Georgia. I feel fairly confident that if Georgia or the Ukraine were to join NATO, as they would like to, the Russians would invade and destroy their independence."

According to Trenin, **"**Russia's remarkable disinterest in its former empire has been paralleled by the other former Soviet republics distancing themselves from the former imperial center**.** Several have proclaimed a European vision or vocation. Others reaffirmed Muslim roots and focused on their neighborhoods. A couple have gone into isolation."

So, who's right—the Harvard historian or the director of the Carnegie Moscow Center? If Pipes is right, then the Ukrainians should be building a Maginot Line on their eastern frontier. If Trenin is right, they should be pulling out the corks and drinking to Mother Russia's eternal health.

The answer is: neither. Pipes's mistake is to suggest that Russia has the capacity to invade a country the size of Ukraine. It doesn't. Trenin's mistake is to suggest that Russia no longer has the desire to in-gather its former imperial lands. It does.

The reality is both simpler and more complex. Russia is a post-imperial state with post-imperial aspirations and post-imperial capacities**.** On the one hand, many Russian policymakers and significant segments of the Russian public continue to think of their country as unjustly robbed of their empire and would be happy to correct that perceived wrong. On the other hand, the Russian-led Soviet Union wouldn't have fallen apart if it had been a strong state, and the post-Soviet Russian Federation, having inherited many of the USSR's weaknesses, is as incapable of reestablishing full imperial control as the Soviet Union was capable of maintaining it.

US-Russia War

U.S Russia conflict leads to extinction

Barrett et al. 13—PhD in Engineering and Public Policy from Carnegie Mellon University, Fellow in the RAND Stanton Nuclear Security Fellows Program, and Director of Research at Global Catastrophic Risk Institute—AND Seth Baum, PhD in Geography from Pennsylvania State University, Research Scientist at the Blue Marble Space Institute of Science, and Executive Director of Global Catastrophic Risk Institute—AND Kelly Hostetler, BS in Political Science from Columbia and Research Assistant at Global Catastrophic Risk Institute (Anthony, 24 June 2013, "Analyzing and Reducing the Risks of Inadvertent Nuclear War Between the United States and Russia," Science & Global Security: The Technical Basis for Arms Control, Disarmament, and Nonproliferation Initiatives, Volume 21, Issue 2, Taylor & Francis)

War involving significant fractions of the U.S. and Russian nuclear arsenals, which are by far the largest of any nations, could have **globally catastrophic effects** such as severely **reducing food production** for years, [1] potentially leading to **collapse of modern civilization** worldwide, and [even] the **extinction** of humanity. [2] Nuclear war between the United States and Russia could occur by various routes, including accidental [or] unauthorized launch; deliberate first attack by one nation; and inadvertent attack. In an accidental or unauthorized launch or detonation, system safeguards or procedures to maintain control over nuclear weapons fail in such a way that a nuclear weapon or missile launches or explodes without direction from leaders. In a deliberate first attack, the attacking nation decides to attack based on accurate information about the state of affairs. In an inadvertent attack, the attacking nation mistakenly concludes that it is under attack and launches nuclear weapons in what it believes is a counterattack. 3 (Brinkmanship strategies incorporate elements of all of the above, in that they involve intentional manipulation of risks from otherwise accidental or inadvertent launches. 4) Over the years, nuclear strategy was aimed primarily at minimizing risks of intentional attack through development of deterrence capabilities, and numerous measures also were taken to reduce probabilities of accidents, unauthorized attack, and inadvertent war. For purposes of deterrence, both U.S. and Soviet/Russian forces have maintained significant capabilities to have some forces survive a first attack by the other side and to launch a subsequent counter-attack. However, concerns about the extreme disruptions that a first attack would cause in the other side's forces and command-and-control capabilities led to both sides' development of capabilities to detect a first attack and launch a counter-attack before suffering damage from the first attack. [5] Many people believe that with the end of the Cold War and with improved relations between the United States and Russia, the risk of East-West nuclear war was significantly reduced. [6] However, it also has been argued that inadvertent nuclear war between the United States and Russia has continued to present a **substantial risk**. [7] While the United States and Russia are not actively threatening each other [with war,] they have **remained ready** to **launch nuclear missiles** in response to indications of attack. [8] False indicators of nuclear attack could be caused in several ways. First, a wide range of events have already been mistakenly interpreted as indicators of attack, including weather phenomena, a faulty computer chip, wild animal activity, and control-room training tapes loaded at the wrong time. [9] Second, **terrorist groups** or other actors might **cause attacks** on either the United States or Russia that **resemble** some kind of **nuclear attack by the other nation** by actions such as exploding a stolen or improvised nuclear bomb, [10] especially if such an event occurs during a crisis between the United States and Russia. [11] A variety of nuclear terrorism scenarios are **possible**. [12] Al Qaeda has sought to obtain or construct nuclear weapons and to use them against the United States. [13] Other methods could involve attempts to circumvent nuclear weapon launch control safeguards or exploit holes in their security. [14] It has long been argued that the probability of inadvertent nuclear war is significantly higher during U.S.–Russian crisis conditions, [15] with the Cuban Missile Crisis being a prime historical example. It is possible that U.S.–Russian relations will significantly deteriorate in the future, increasing nuclear tensions. There are a variety of ways for a third party to raise tensions between the United States and Russia, making one or both nations more likely to misinterpret events as attacks. [16]

US-Russia War leads to nuclear winter

Helfand 12 -[Ira Helfand is co-president of International Physicians for the Prevention of Nuclear War and recipient of the 1985 Nobel Peace Prize, December 18, Inter Press Service News Agency, "The Frightening Scenario of the Nuclear War," http://www.ipsnews.net/2012/12/the-frightening-scenario-of-the-nuclear-war/, accessed July 7, 2014,]

Since 2008, we have gained a fuller understanding of the dangers posed by nuclear weapons. For decades we have known that a large-scale war between the U.S. and Russia would have catastrophic humanitarian consequences for the whole world**.**

We now understand that even a much more "limited", regional nuclear war, as might take place in South Asia, would also pose a threat to all of humanity. Studies by Alan Robock, Owen Brian Toon, and their colleagues have looked at a scenario in which India and Pakistan each use 50 Hiroshima sized bombs – only 0.4 percent of the world's nuclear arsenal of more than 25,000 warheads - against urban targets in the other country. The consequences would be beyond our comprehension**.**

The explosions, firestorms and radiation would kill 20 million people over the first week. But the worldwide consequences would be even more catastrophic. The firestorms would loft five million tonnes of soot into the upper atmosphere, blocking out sunlight and reducing temperatures around the world by an average of 1.3 degrees Celsius for an entire decade. This sudden drop in temperature, and the resulting decline in precipitation and shortening of the growing season, would cut food production in areas far removed from South Asia.

According to a study by Mutlu Ozdogan, U.S. corn production would fall an average of 12 percent for an entire decade. A study by Lili Xia has shown that Chinese middle season rice would decline15 percent over a full decade. Recent preliminary studies have shown even larger shortfalls for other grains.

The world is not prepared to deal with a decline in food production of this magnitude**.** World grain reserves currently equal less than three months' consumption and would provide an inadequate buffer against these shortfalls. Further, according to the most recent data from the United Nations, there are currently more than 870 million people in the world who are malnourished. An additional 300 million people receive adequate nutrition today but live in countries that import much of their food. All of these people, more than one billion in all, would be at risk of starvation in the aftermath of this "limited" war.

A large-scale war between the U.S. and Russia would be even more catastrophic. Hundreds of millions of people would be killed directly; the indirect climate effects would be even greater. Global temperatures would drop an average of eight degrees Celsius, and more than 20 degrees Celsius in the interior of North America and Eurasia. In the Northern Hemisphere, there would be three years without a single day free of frost. Food production would stop and the vast majority of **the human race would starve**.

Since the end of the Cold War we have acted as though this kind of war simply can't happen. But it can: the two nuclear superpowers still have nearly 20,000 nuclear warheads; more than two thousand of them are maintained on missiles that can be fired in less than 15 minutes, destroying the cities of the other power 30 minutes later.

Nuclear winter guarantees extinction

Masters, no date [Jeff Masters, Ph.D. in Meteorology, co-founded The Weather Underground, Inc., “The Effect of Nuclear War on Climate” Weather Underground, http://www.wunderground.com/resources/climate/nuke.asp] N.H

In the 1980s and early 1990s, a series of scientific papers published by Soviet scientists and Western scientists (including prominent scientists Dr. Carl Sagan, host of the PBS "Cosmos" TV series, and Nobel Prize winner Paul Crutzen) laid out the dire consequences on global climate of a major nuclear exchange between the U.S. and Soviet Union. The nuclear explosions would send massive clouds of dust high into the stratosphere, blocking so much sunlight that a nuclear winter would result. Global temperatures would plunge 20°C to 40°C for several months, and remain 2 - 6°C lower for 1-3 years. Up to 70% of the Earth's protective stratospheric ozone layer would be destroyed, allowing huge doses of ultraviolet light to reach the surface. This UV light would kill much of the marine life that forms the basis of the food chain, resulting in the collapse many fisheries and the starvation of the people and animals that depend it. The UV light would also blind huge numbers of animals, who would then wander sightlessly and starve. The cold and dust would create widespread crop failures and global famine, killing billions of people who did not die in the nuclear explosions. The "nuclear winter" papers were widely credited with helping lead to the nuclear arms reduction treaties of the 1990s, as it was clear that we risked catastrophic global climate change in the event of a full-scale nuclear war.

Even a limited nuclear exchange can cause a climate disaster

Well, it turns out that this portrayal of nuclear winter was overly optimistic, according to a series of papers published over the past few years by Brian Toon of the University of Colorado, Alan Robock of Rutgers University, and Rich Turco of UCLA. Their most recent paper, a December 2008 study titled, "Environmental Consequences of Nuclear War", concludes that "1980s predictions of nuclear winter effects were, if anything, underestimates". Furthermore, they assert that even a limited nuclear war poses a significant threat to Earth's climate. The scientists used a sophisticated atmospheric/oceanic climate model that had a good track record simulating the cooling effects of past major volcanic eruptions, such as the Philippines' Mt. Pinatubo in 1991. The scientists injected five terragrams (Tg) of soot particles into the model atmosphere over Pakistan in May of 2006. This amount of smoke, they argued, would be the likely result of the cities burned up by a limited nuclear war involving 100 Hiroshima-sized bombs in the region. India and Pakistan are thought to have 109 to 172 nuclear weapons of unknown yield.

Figure 1. Global average temperature departure from normal since 1880 (top) and A.D. 1000 (bottom) in black, and those projected after a limited nuclear exchange between Pakistan and India of 100 Hiroshima-sized weapons in 2006 (in red). Temperatures are forecast to plunge 1.2°C (2.2°F) after such a war, reaching levels colder than anything

seen in the past 1000 years. The 1815 eruption of Tambora in Indonesia produced a similar cooling, and led to the notorious "Year Without a Summer". Image credit: "Climatic consequences of a regional nuclear conflict" by Robock et al., Atmospheric chemistry and Physics, 7, 2003-2012, 2007.

The intense heat generated by the burning cities in the models' simulations lofted black smoke high into the stratosphere, where there is no rain to rain out the particles. The black smoke absorbed far more solar radiation than the brighter sulfuric acid aerosol particles emitted by volcanic eruptions. This caused the smoke to heat the surrounding stratospheric air by 30°C, resulting in stronger upward motion of the smoke particles higher into the stratosphere. As a result, the smoke stayed at significant levels for over a decade (by contrast, highly reflective volcanic aerosol particles do not absorb solar radiation and create such circulations, and only stay in the stratosphere 1-2 years). The black soot blocked sunlight, resulting in global cooling of over 1.2°C (2.2°F) at the surface for two years, and 0.5°C (0.9°F) for more than a decade (Figures 1 and 2). Precipitation fell up to 9% globally, and was reduced by 40% in the Asian monsoon regions.

This magnitude of this cooling would bring about the coldest temperatures observed on the globe in over 1000 years (Figure 1). The growing season would shorten by 10-30 days over much of the globe, resulting in widespread crop failures. The effects would be similar to what happened after the greatest volcanic eruption in historic times, the 1815 Tambora eruption in Indonesia. This cooling from this eruption triggered the infamous Year Without a Summer in 1816 in the Northern Hemisphere, when killing frosts disrupted agriculture every month of the summer in New England, creating terrible hardship. Exceptionally cold and wet weather in Europe triggered widespread harvest failures, resulting in famine and economic collapse. However, the cooling effect of this eruption only lasted about a year. Cooling from a limited nuclear exchange would create two to three consecutive "Years Without a Summer", and over a decade of significantly reduced crop yields. The authors found that the smoke in the stratosphere cause a 20% reduction in Earth's protective ozone layer, with losses of 25-45% over the mid-latitudes where the majority of Earth's population lives, and 50-70% ozone loss at northern high latitude regions such as Scandinavia, Alaska, and northern Canada. A massive increase in ultraviolet radiation at the surface would result, capable of causing widespread and severe damage to plants and animals. Thus, even a limited nuclear exchange could trigger severe global climate change capable of causing economic chaos and widespread starvation.

Figure 2. Top: Time variation of global average surface air temperature and precipitation for a limited nuclear exchange between Pakistan and India of 100 Hiroshima-sized weapons, assuming they inject 5 Tg of Black Carbon (BC) into the stratosphere. The global average precipitation is 3 mm/yr, so the changes in years 2-4 represent a 9% global average reduction in precipitation. Bottom: Time variation of sunlight (shortwave

radiation) at the surface, in watts per meter squared, due to the 1991 eruption of Mt. Pinatubo in the Philippines (blue line) and the limited nuclear war between India and Pakistan (black line). The effects of a limited nuclear war are far more severe and long lasting than the eruption of Pinatubo, the greatest eruption of the 20th century. Image credit: "Climatic consequences of a regional nuclear conflict" by Robock et al., Atmospheric chemistry and Physics, 7, 2003-2012, 2007.

Climate change and the Doomsday Clock

It is sobering to realize that the nuclear weapons used in the study represented only 0.3% of the world's total nuclear arsenal of 26,000 warheads. Fortunately, significant progress was made in the 1990s and 2000s to reduce the threat of nuclear war. If the 2002 Strategic Offensive Reductions Treaty (SORT) is fully implemented by the U.S. and Russia as planned, by 2012 the world's stockpile of nuclear weapons will be just 6% of the 70,000 warheads that existed at the peak of the cold war in 1986. However, the threat of a more limited regional nuclear war has increased in recent decades, since more countries have been joining the nuclear club--an average of one country every five years. The 2007 move by the Bulletin of the Atomic Scientists to move the hands of their Doomsday Clock two minutes closer to midnight--the figurative end of civilization--helped call attention to this increased threat. In addition, they also mentioned climate change for the first time as part of the rationale for moving the clock closer to midnight. The twin disasters of a limited nuclear war, coupled with the devastating global climate change it could wreak, should remind us that there is no such thing as a small scale nuclear war. Even a limited nuclear war is a huge threat to Earth's climate. Thus, there is no cause more important to work for than peace.

Terror Add On

Failure to act on Ukraine leads to terrorist acquisition of nuclear weapons- empirics

Cohen 15 –[Josh Cohen, former USAID project officer involved in managing economic reform projects in the former Soviet Union, May 26 2015, "Breakdown in U.S.-Russia relations raises risk of nuclear-armed jihadists" Reuters, http://blogs.reuters.com/great-debate/2015/05/26/why-a-breakdown-in-u-s-russia-relations-increases-the-risk-of-nuclear-armed-jihadists/] N.H

In the last several years, a number of troubling events have revealed weaknesses in Russian nuclear security. A Russian general in command of nuclear weapon storage sites was fired due to massive corruption. A colonel in the Russian Ministry of Interior in charge of nuclear security inspections was arrested for soliciting bribes to overlook security violations. One American researcher visiting a nuclear facility was told it would take merely $100 to bribe his way in.

Graft in Russia is rife, and corruption plus available uranium is a troubling combination. This vulnerability is heightened by the fact that at many nuclear sites the accounting systems to track uranium and plutonium could not sufficiently identify thefts of newly manufactured or older stored fissile materials. More broadly, Russia does not possess a master baseline inventory of all nuclear materials produced in the former Soviet Union — and where all of it is today.

At a 2010 summit of world leaders, President Barack Obama described nuclear terrorism as "the single biggest threat to U.S. security." He's right — but as the crisis in Ukraine festers, recent U.S. actions have unraveled decades of successful cooperation with Russia to reduce the risk.

While some argue that the United States needs to "punish" Russia due to Moscow's contribution to the crisis in Ukraine, this is akin to cutting off our nose to spite our face. Given the threat from "loose nukes" to our national security, the United States should take steps to jump-start U.S.-Russian nuclear security cooperation.

When the Soviet Union collapsed in 1991, American policymakers suddenly faced a frightening new threat: Poverty and chaos caused a complete breakdown in security throughout the former Soviet nuclear complex. Insiders at top-secret Russian nuclear weapons plants tried to steal and sell nuclear materials on the black market. Unpaid guards at nuclear sites left their posts to search for food. A senior White House science adviser even discovered more than 150 pounds of highly enriched uranium — enough for several nuclear bombs — sitting unguarded in lockers in the middle of Moscow.

In response to this threat, the United States spent billions of dollars under the Cooperative Threat Reduction (CTR) program to help Russia secure its nuclear materials and facilities. From the deactivation of almost 8,000 Russian nuclear warheads to the building of a massive storage facility for 27 tons of fissile materials, CTR was arguably the most successful American foreign aid program in history.

Following the conclusion of the CTR program in 2013, the U.S. Department of Energy (DOE) and Russia's state-owned nuclear company Rosatom signed a comprehensive

nuclear cooperation agreement. This agreement, which was designed to build trust between the two countries, called for projects ranging from the development of advanced nuclear security and safety technologies, to visits by each side's scientists to the other's most sensitive nuclear labs and facilities.

Less than seven months after the agreement was signed, however, the DOE dealt a devastating blow to Russian-American nuclear security cooperation, banning Russian nuclear scientists from visiting the United States while also banning DOE nuclear scientists from visiting Russia.

The current defense budget, passed seven months after the DOE's action, also bars all funding for nuclear nonproliferation activities and assistance in Russia.

Its pride wounded, Russia retaliated, first announcing it would boycott the 2016 nuclear security summit in Chicago and then informing U.S. officials it would no longer accept American aid to help secure Russia's weapons-grade uranium and plutonium — a significant blow to U.S. national security.

Nuclear security in Russia is undoubtedly better than it was in the 1990s. Guards at nuclear sites are paid on time. Perimeter fences surrounding these sites no longer have holes. Fissile materials are no longer stored in lockers. That's the good news.

The bad news is that while physical security at nuclear sites is greatly improved, real problems still remain. Russia continues to have the world's largest nuclear stockpile and there are more than 200 buildings and bunkers where highly enriched uranium or separated plutonium is stored. Sophisticated criminals could still exploit the remaining weaknesses in Russian nuclear security.

We know that Osama bin Laden considered a nuclear attack targeting American civilians to be a legitimate action, and last year Islamic State stole 88 pounds of non-enriched uranium compounds from a university in Mosul. With nearly 2,000 Russian citizens fighting with Middle East extremist groups, if fissile material does end up in the hands of militants, it is quite possible it will have originated from Russia.

The DOE should work with Rosatom to restart the September 2013 agreement and implement the reciprocal nuclear site visits, scientist-to-scientist cooperation and joint-research the agreement envisions. The personal relationships developed over decades of cooperation between Russian and American scientists are too important to jeopardize — we are only shooting ourselves in the foot by cutting these off.

The United States should also understand that the narrative from the 1990s whereby the United States is a donor and Russia is an aid recipient is no longer acceptable in Moscow. Going forward, nuclear cooperation must be reframed as a partnership of equals, with both sides contributing to the conversation about how and why to strengthen security. Republicans and Democrats should put aside partisan differences and fully fund U.S.-Russian nuclear security cooperation — whatever that ultimately involves. The Obama administration is

proposing to spend $348 billion upgrading the U.S. nuclear arsenal over the next ten years. It's worth spending a tiny fraction of that money to prevent loose nukes.

All of these steps require that the United States end the linkage between nuclear security cooperation with Russia and the crisis in Ukraine. While the current political environment makes this difficult, not doing so is foolhardy.

Nuclear terrorism is a new internal link to U.S Russian nuc war- acquisition leads to nuclear spoofing

Barrett et al. 13—PhD in Engineering and Public Policy from Carnegie Mellon University, Fellow in the RAND Stanton Nuclear Security Fellows Program, and Director of Research at Global Catastrophic Risk Institute—AND Seth Baum, PhD in Geography from Pennsylvania State University, Research Scientist at the Blue Marble Space Institute of Science, and Executive Director of Global Catastrophic Risk Institute—AND Kelly Hostetler, BS in Political Science from Columbia and Research Assistant at Global Catastrophic Risk Institute (Anthony, 24 June 2013, "Analyzing and Reducing the Risks of Inadvertent Nuclear War Between the United States and Russia," Science & Global Security: The Technical Basis for Arms Control, Disarmament, and Nonproliferation Initiatives, Volume 21, Issue 2, Taylor & Francis)

War involving significant fractions of the U.S. and Russian nuclear arsenals, which are by far the largest of any nations, could have **globally catastrophic effects** such as severely **reducing food production** for years, [1] potentially leading to **collapse of modern civilization** worldwide, and [even] the **extinction** of humanity. [2] Nuclear war between the United States and Russia could occur by various routes, including accidental [or] unauthorized launch; deliberate first attack by one nation; and inadvertent attack. In an accidental or unauthorized launch or detonation, system safeguards or procedures to maintain control over nuclear weapons fail in such a way that a nuclear weapon or missile launches or explodes without direction from leaders. In a deliberate first attack, the attacking nation decides to attack based on accurate information about the state of affairs. In an inadvertent attack, the attacking nation mistakenly concludes that it is under attack and launches nuclear weapons in what it believes is a counterattack. 3 (Brinkmanship strategies incorporate elements of all of the above, in that they involve intentional manipulation of risks from otherwise accidental or inadvertent launches. 4) Over the years, nuclear strategy was aimed primarily at minimizing risks of intentional attack through development of deterrence capabilities, and numerous measures also were taken to reduce probabilities of accidents, unauthorized attack, and inadvertent war. For purposes of deterrence, both U.S. and Soviet/Russian forces have maintained significant capabilities to have some forces survive a first attack by the other side and to launch a subsequent counter-attack. However, concerns about the extreme disruptions that a first attack would cause in the other side's forces and command-and-control capabilities led to both sides' development of capabilities to detect a first attack and launch a counter-attack before suffering damage from the first attack. [5] Many people believe that with the end of the Cold War and with improved relations between the United States and Russia, the risk of East-West nuclear war was significantly reduced. [6] However, it also has been argued that inadvertent nuclear war between the United States and Russia has continued to present a **substantial risk**. [7] While the United States and Russia are not actively threatening each other [with war,] they have **remained ready** to **launch nuclear missiles** in response to indications of attack. [8] False indicators of nuclear attack could be caused in several ways. First, a wide range of events have already been mistakenly interpreted as indicators of attack, including weather phenomena, a faulty computer chip, wild animal activity, and control-room training tapes loaded at the wrong time. 9 Second, **terrorist groups** or other actors might **cause attacks** on either the United States or Russia that **resemble** some kind of **nuclear attack by the other nation** by actions such as exploding a stolen or improvised nuclear bomb, [10] especially if such an event occurs during a crisis between the United States and Russia. [11] A variety of nuclear terrorism scenarios are **possible**. [12] Al Qaeda has sought to obtain or construct nuclear weapons and to use them against the United States. 13 Other methods could involve attempts to circumvent nuclear weapon launch control safeguards or exploit holes in their security. 14 It has long been argued that the probability of inadvertent nuclear war is significantly higher during U.S.–Russian

crisis conditions, 15 with the Cuban Missile Crisis being a prime historical example. It is possible that U.S.–Russian relations will significantly deteriorate in the future, increasing nuclear tensions. There are a variety of ways for a third party to raise tensions between the United States and Russia, making one or both nations more likely to misinterpret events as attacks. 16

Yes loose nukes---Ukraine crisis destroys US-Russian cooperation

Matthew **Bunn** is a professor at Harvard Kennedy School's Belfer Center for Science and International Affairs and is co-principal investigator with the Belfer Center's Project on Managing the Atom. He is a former adviser on nonproliferation in the White House Office of Science and Technology Policy, where he focused on control of nuclear weapons and materials, "The Real Nuclear Nightmare When It Comes to U.S.-Russian Ties," **1/24/'15**, http://nationalinterest.org/feature/the-real-nuclear-nightmare-when-it-comes-us-russian-ties-12102

In the dark days at the turn of the year, all but a few bits of U.S.-Russian cooperation to strengthen nuclear security in Russia came to a halt. No longer, for now at least, will U.S. experts work with counterparts at major Russian nuclear facilities to implement better means to prevent insiders from stealing fissile material, or to improve accounting, so a theft would be quickly detected. The crisis in Ukraine, adding to issues that have chilled relations with Moscow for years, provoked a **deep freeze** in U.S.-Russian relations. A two-decade era in which the United States and Russia worked together to dismantle and secure the deadly legacies of the Cold War appears to have drawn almost **entirely** to a close. **The danger of nuclear bomb material falling into terrorist hands will be higher as a result of this downturn in cooperation – putting** U.S., Russian, and **global security at greater risk.**

Russian insider threat is real

Matthew **Bunn** is a professor at Harvard Kennedy School's Belfer Center for Science and International Affairs and is co-principal investigator with the Belfer Center's Project on Managing the Atom. He is a former adviser on nonproliferation in the White House Office of Science and Technology Policy, where he focused on control of nuclear weapons and materials, "The Real Nuclear Nightmare When It Comes to U.S.-Russian Ties," **1/24/'15**, http://nationalinterest.org/feature/the-real-nuclear-nightmare-when-it-comes-us-russian-ties-12102

But nuclear security is never "finished." It must be **constantly improving** in the face of evolving threats. There are still weaknesses in nuclear security in Russia that thieves could exploit – particularly corrupt insiders who understand how security systems work. And no one knows whether Russia will devote the resources necessary to sustain the levels of security that are now in place. **The insider threat is real**: in 2012, for example, the director and two of the deputy directors of one of Russia's largest plutonium and highly enriched uranium facilities were arrested for millions of dollars' worth of corruption (though not stealing nuclear material).

China Add On

Russian instability draws in Great Powers like China

David 99 – [Steven David, Professor of Political Science at Johns Hopkins, "Saving America from the Coming Civil Wars", 1999, Foreign Affairs, http://www.foreignaffairs.com/articles/54626/steven-r-david/saving-america-from-the-coming-civil-wars]

If internal war does strike Russia, economic deterioration will be a prime cause. From 1989 to the present, the GDP has fallen by 50 percent. In a society where, ten years ago, unemployment scarcely existed, it reached 9.5 percent in 1997 with many economists declaring the true figure to be much higher. Twenty-two percent of Russians live below the official poverty line (earning less than $ 70 a month). Modern Russia can neither collect taxes (it gathers only half the revenue it is due) nor significantly cut spending. Reformers tout privatization as the country's cure-all, but in a land without well-defined property rights or contract law and where subsidies remain a way of life, the prospects for transition to an American-style capitalist economy look remote at best. As the massive devaluation of the ruble and the current political crisis show, Russia's condition is even worse than most analysts feared. If conditions get worse, even the stoic Russian people will soon run out of patience. A future conflict would quickly draw in Russia's military. In the Soviet days civilian rule kept the powerful armed forces in check. But with the Communist Party out of office, what little civilian control remains relies on an exceedingly fragile foundation -- personal friendships between government leaders and military commanders. Meanwhile, the morale of Russian soldiers has fallen to a dangerous low. Drastic cuts in spending mean inadequate pay, housing, and medical care. A new emphasis on domestic missions has created an ideological split between the old and new guard in the military leadership, increasing the risk that disgruntled generals may enter the political fray and feeding the resentment of soldiers who dislike being used as a national police force. Newly enhanced ties between military units and local authorities pose another danger. Soldiers grow ever more dependent on local governments for housing, food, and wages. Draftees serve closer to home, and new laws have increased local control over the armed forces. Were a conflict to emerge between a regional power and Moscow, it is not at all clear which side the military would support. Divining the military's allegiance is crucial, however, since the structure of the Russian Federation makes it virtually certain that regional conflicts will continue to erupt. Russia's 89 republics, krais, and oblasts grow ever more independent in a system that does little to keep them together. As the central government finds itself unable to force its will beyond Moscow (if even that far), power devolves to the periphery. With the economy collapsing, republics feel less and less incentive to pay taxes to Moscow when they receive so little in return. Three-quarters of them already have their own constitutions, nearly all of which make some claim to sovereignty. Strong ethnic bonds promoted by shortsighted Soviet policies may motivate non-Russians to secede from the Federation. Chechnya's successful revolt against Russian control inspired similar movements for autonomy and independence throughout the country. If these rebellions spread and Moscow responds with force, civil war is likely. Should Russia succumb to internal war, the consequences for the United States and Europe will be severe. A major power like Russia -- even though in decline -- does not suffer civil war quietly or alone. **An embattled Russian Federation might provoke opportunistic attacks from enemies such as China.** Massive flows of refugees would pour into central and western Europe. Armed struggles in Russia could easily spill into its neighbors. Damage from the fighting, particularly attacks on nuclear plants, would poison the environment of much of Europe and Asia. Within Russia, the consequences would be even worse. Just as the sheer brutality of the last Russian civil war laid the basis for the privations of Soviet

communism, a second civil war might produce another horrific regime. Most alarming is the real possibility that the violent disintegration of Russia could lead to loss of control over its nuclear arsenal. No nuclear state has ever fallen victim to civil war, but even without a clear precedent the grim consequences can be foreseen. Russia retains some 20,000 nuclear weapons and the raw material for tens of thousands more, in scores of sites scattered throughout the country. So far, the government has managed to prevent the loss of any weapons or much material. If war erupts, however, Moscow's already weak grip on nuclear sites will slacken, making weapons and supplies available to a wide range of anti-American groups and states. Such dispersal of nuclear weapons represents the greatest physical threat America now faces. And it is hard to think of anything that would increase this threat more than the chaos that would follow a Russian civil war.

Brazil

Text

The United States federal government should condition removing all restrictions on Brazilian ethanol exports if and only if Brazil ends ____(insert program)___.

Ethanol

Brazil wants ethanol exports now but U.S tariff removes possibility

Hanson 12 – Stephanie Hanson is associate director and coordinating editor at CFR.org, the website of the Council on Foreign Relations. She manages the editorial production of the website and covers economic and political development in Africa and Latin America, 2012 ("Brazil on the International Stage", Council on Foreign Relations, July 2, 2012, available at http://www.cfr.org/brazil/brazil-international-stage/p19883 // Date accessed - 7/20/12 K.K)

The United States and Brazil have agreements aimed at increasing ethanol use throughout Latin America and creating a global market for biofuels, but frictions persist about the U.S. tariff on Brazilian ethanol. The 54-cent per gallon tariff protects the U.S. domestic, corn-based ethanol industry from Brazilian sugar-based ethanol, which is produced at a lower cost. Though some U.S. legislators have proposed ending the tariff, segments of the U.S. agriculture lobby oppose such a measure. The Brazilian government has threatened to file a complaint with the World Trade Organization if the tariff is not reassessed, but Obama has signaled that he plans to continue the tariff. Experts are split on how serious this disagreement is and what implications it has for the broader relationship. Some policymakers, including U.S. Assistant Secretary of State Thomas Shannon, have highlighted U.S.-Brazil cooperation on ethanol as grounds for a wider partnernship. The cooperation currently is based on a 2007 memorandum of understanding and an announcement one year later that both countries would help Guatemala, Honduras, Jamaica, Guinea-Bissau, and Senegal create biofuel industries. Some experts say these initiatives are too narrow. "This limited dialogue is not broad enough to help address U.S. energy needs, climate change, or to build a global market for ethanol," writes Kellie Meiman. She recommends that the United States reduce its ethanol tariff.

Solvency

Now is key – brazil appeasement sustains relations

Weisbrot 13 - Mark Weisbrot is co-director of the Center for Economic and Policy Research, in Washington, D.C, 2013, ("U.S. Relations with Brazil and South America Still Worsening", CEPR, 2013, available at http://www.cepr.net/publications/op-eds-columns/us-relations-with-brazil-and-south-america-still-worsening // date accessed 7/21/15 K.K)

The only thing missing from Brazilian President Dilma Rousseff's speech at the U.N. General Assembly in September was "it still smells like sulfur." For those who don't remember, these were the immortal words of then-President Hugo Chávez of Venezuela in 2006, describing the podium where "the devil" – his name for President George W. Bush – had spoken the day before. Chávez's speech received hearty applause and prompted some New Yorkers to hang a banner from a highway overpass that said "Wake Up and Smell the Sulfur." Dilma's speech also got a lot of applause at the General Assembly, and because she spoke immediately before President Obama, her remarks were even more pointed. She presented a stinging rebuke to the Obama administration's mass surveillance operations, at home and abroad: "As many other Latin Americans, I fought against authoritarianism and censorship, and I cannot but defend, in an uncompromising fashion, the right to privacy of individuals and the sovereignty of my country. In the absence of the right to privacy, there can be no true freedom of expression and opinion, and therefore no effective democracy. In the absence of the respect for sovereignty, there is no basis for the relationship among Nations." "We face, Mr. President, a situation of grave violation of human rights and of civil liberties; of invasion and capture of confidential information concerning corporate activities, and especially of disrespect to national sovereignty." Dilma also took a swipe at Obama's previously-planned – and then cancelled due to popular demand – bombing of Syria: "[W]e repudiate unilateral interventions contrary to International Law, without Security Council authorization." Her remarks were a reminder, and for some a new discovery, that the differences between the newly independent governments of South America on hemispheric and foreign policy issues were mostly a matter of style and rhetoric, not of substance. The speech came in the wake of the cancellation of Dilma's scheduled October state visit to the White House, which would have been the first by a Brazilian president in nearly two decades. It was another blow to the Obama administration's tepid efforts to improve relations with Brazil, and with South America in general. At this moment U.S.-South American relations are probably even worse than they were under the George W. Bush administration, despite the huge advantage that President Obama has in terms of media image, and therefore popularity, in the hemisphere. This illustrates how deeply structural the problem in hemispheric relations has become, and how unlikely they are to become warmer in the foreseeable future. The fundamental cause of the strained relationship is that Washington refuses to recognize that there is a new reality in the region, since left governments have been elected by the vast majority of South America. In Washington's foreign policy establishment – including most think tanks and other sources of analysis and opinion – there has been almost no acknowledgement that a new strategy might be necessary. Of course, most of the foreign policy establishment doesn't care much about Latin America. And there is no electoral price to be paid for stupidity that leads to worsening relations with the region. On the contrary, the main electoral pressure on the White House comes from the far right, including neocons and old guard Cuban Americans. And Obama is not above caving to these interests when the White House and State Department are not already on their side. But among those who do care about Latin America – from an imperial point of view -- the lack of imagination is breathtaking. The establishment has, over the past 15

years, sometimes adopted a "good left, bad left" strategy that sought first and foremost to try and isolate Venezuela, often lumping in Bolivia, Ecuador, and sometimes Argentina as the "bad left." But in the halls of power, they really don't like any of the left governments and are hoping to get rid of them all. In 2005, according to State Department documents obtained under the Freedom of Information Act, the U.S. government promoted legislation within Brazil that would have weakened the Workers' Party. So it is not surprising that Brazil has, according to the documents revealed by former NSA contractor and whistleblower Edward Snowden, been the top Latin American target for U.S. spying. It's a lot like all the other left governments that Washington would like to get rid of, only bigger. It is true that countries with U.S.-allied governments like Mexico were also targeted, but in the context of Brazil's alliance with other left governments, the large-scale espionage there – which reportedly included monitoring of Dilma's personal phone calls and emails -- takes on a different meaning. In the past decade of Workers' Party government, Brazil has lined up fairly consistently with the other left governments on hemispheric issues and relations with the United States. When the Bush administration tried to expand its military presence in Colombia, Brazil was there with the rest of the region in opposition. The same was true when Washington aided and abetted the overthrow of "targets of opportunity" among the left governments: Honduras in 2009 and Paraguay in 2012 – although in these cases the U.S. and its allies still prevailed. Brazil also supported other efforts at regional integration and independence, including UNASUR (the Union of South American Nations), which has played an important role in defending member countries from right-wing destabilization attempts: as in Bolivia in 2008; or the April elections in Venezuela, where the Obama administration supported opposition efforts to overturn the results with obviously false claims of electoral fraud. (A CEPR study showed that the probability of getting the April 14 election day audit results confirming Nicolás Maduro's win, if the vote had actually been stolen, was less than one in 25 thousand trillion.) Lula made a conscious decision that Brazil would look more to the south and less to the United States as a leader in its foreign and commercial policy. In a recent interview with the Argentine daily Pagina/12, he explained how important the turning point of Mar del Plata was, when the proposed Free Trade Area of the Americas was finally buried at the Summit of the Americas in 2005: "It was fundamental that we had stopped this proposal to form the FTAA, at Mar del Plata. It was not a true project of integration, but one of economic annexation. With its sovereignty affirmed, South America looked for its own path and a much more constructive one … When we analyze this history of South America we can see that it is one great conquest. If we had not avoided the FTAA, the region would not have been able to take the economic and social leap forward that it did in the past decade. Argentina, Brazil, and Venezuela played a central role in this process. Néstor Kirchner and Hugo Chávez were two great allies in accomplishing this." In 2002, when Lula was elected, Brazil's exports to the U.S. were 26.4 percent of its total exports. By 2011, they were down to 10.4 percent. Meanwhile, China's economy is by some measures already bigger than the U.S. economy, and it will probably double in size over the next decade. The United States will become increasingly less important to Brazil, and to South America generally. Given that Washington still does not respect Latin American sovereignty, much less the goals and aspirations of its democratic governments, that has to be seen as a good thing for the region.

Ethanol

Brazil leading in Ethanol exports

Parker No Date – Mario Parker is a reporter for Bloomberg News in Chicago, ("Strong Dollar Threatens U.S. Ethanol Exporter Gains Over Brazil", Bloomberg news, available at http://www.bloomberg.com/news/articles/2015-04-14/strong-dollar-threatens-u-s-ethanol-exporters-gains-over-brazil // date accessed 7/22/15 K.K)

Over the last four years, the title of world's top ethanol exporter has changed hands three times: The U.S. took it from Brazil in 2011, lost it back a year later and retook it again in 2014. The fourth title change -- back over to Brazil -- may be taking place already. The soaring dollar is making U.S. ethanol more expensive in overseas markets while a tumble in Brazil's currency, the real, is giving a lift to exporters there. The South Americans are winning sales in the Middle East and Asia, two growing markets. The greenback has jumped as much as 24 percent against the real in 2015 to a 12-year high, and is currently up 15 percent at 3.0351 reais. "The dollar and the weakness in the real could wash out some of the exports from America," Jordan Fife, a trader at Biourja Trading LLC in Houston, said in a telephone interview. "The Arabian Gulf is the biggest swing" market, he said. Americans captured the export crown last year as the Brazilians, hobbled by a severe drought that hurt output, saw sales drop by more than 50 percent. Shipments abroad are key to U.S. producers even though they made up only 5.9 percent of total sales in 2014 because domestic demand is stagnant. U.S. ethanol capacity has grown almost threefold in the last decade on the back of a 2005 law championed by then-President George W. Bush to use the fuel as a way to reduce dependence on foreign oil. The Renewable Fuels Standard has required refiners to blend increasing amounts of gasoline with ethanol. Dollar's Rise Denatured ethanol for May delivery gained 2.8 cents to settle at $1.591 a gallon on the Chicago Board of Trade. Brazil, which uses sugarcane to make ethanol, increased exports 16 percent in January from December, while the U.S., which uses corn, saw sales decline 9 percent, according to government data. Brazilians sent ethanol to the United Arab Emirates, the U.S.'s third-largest market in 2014, and their exports to South Korea were triple the amount of U.S. shipments to that country. Last year, the U.S. exported 847.4 million gallons of the fuel additive, while the Brazilians shipped just 369 million. Government estimates show the challenge facing U.S. distillers. They'll produce 14.4 billion gallons of ethanol this year and next. Projected gasoline demand will be 139 billion gallons in 2015 and 137.9 billion in 2016. That means when ethanol is blended at the 10 percent ratio to gasoline required by federal law, there will be at least 500 million gallons of the additive left over each year.

Brazil ethanol is cheaper and sustains Brazilian economy

Parker No Date – Mario Parker is a reporter for Bloomberg News in Chicago, ("Strong Dollar Threatens U.S. Ethanol Exporter Gains Over Brazil", Bloomberg news, available at http://www.bloomberg.com/news/articles/2015-04-14/strong-dollar-threatens-u-s-ethanol-exporters-gains-over-brazil // date accessed 7/22/15 K.K)

Averting Glut The only way to avert a glut or to keep plants from shutting is for exports to make up the difference, Ann Duignan, an analyst at JPMorgan Chase & Co., wrote in a March report. With 867 million gallons of ethanol in storage, U.S. inventories are about 29 percent higher than a year ago. Now the strength in the dollar is making it harder to reduce the excess supply, said Will Babler, a broker at Atten

Babler Risk Management in Galena, Illinois. Meanwhile, Brazil's economic woes are creating the conditions that will help its ethanol producers ramp up exports. With Brazilian growth sputtering and a political scandal deepening, the currency is likely to remain weak, making the country's ethanol competitive for the foreseeable future, Christoph Berg, managing director at F.O. Licht GmbH, in Ratzeburg, Germany, said in a March telephone interview. Brazilian Fuel Ethanol in Sao Paulo has fallen 19 percent in dollar terms this year, making it cheaper than in two of four key U.S. regions, data compiled by Bloomberg show. The fuel cost $1.63 a gallon last week in Sao Paulo, 8 cents cheaper than ethanol on the U.S. West Coast. Brazilian prices in March touched $1.58 a gallon, the lowest since July 2009. America may still benefit from Brazil's decision this year to boost the level of ethanol in its gasoline to 27 percent from 25 percent because more of it will be needed domestically, Marcus Ludtke, vice president of Commodity Marketing Company Inc., an Albert Lea, Minnesota-based brokerage, said in an April 9 telephone interview. The impact of the stronger dollar will be "minimal" in the export market because of Brazil's increased domestic consumption and America's cheaper cost of production, Bob Dinneen, president of the Washington-based Renewable Fuels Association, which represents U.S. ethanol-producing companies, said in a telephone interview April 13. U.S. ethanol export data for February and March aren't yet available from the Energy Department. Brazilian figures show its shipments for February and March were 9 percent and 43 percent higher than a year ago, respectively. Brazil may be poised to snatch the export lead back, Jim Damask, a trader at StarFuels Inc. in Jupiter, Florida, said. "Some of these guys in Brazil may be picking up the phone and saying, 'Hey, we have some stuff sitting around, what price would you want to take it?'," Damask said.

Brazil Ethanol sustains U.S biofuels

Wisner 12 – Dr. Robert Wisner University Professor Emeritus, Iowa State University and Biofuels Economist, 2012, ("brazil ethanol developments & implications for the u.s. ethanol industry", Agricultural Marketing Resource Center, October 2012, available at http://www.agmrc.org/renewable_energy/ethanol/brazil-ethanol-developments--implications-for-the-us-ethanol-industry/ // date accessed 7/22/15 K.K)

For many years, Brazil was the world's largest producer of fuel ethanol. The U.S. is now the No.1 ethanol producer but Brazil's ethanol policies, production, and exports are an important influence on the U.S. biofuels industry. Through government incentives, Brazil's ethanol industry became a major source of bio-based motor fuel in the 1990s and in recent years has been a major ethanol exporter. Brazilian ethanol is produced from sugar cane, a low-cost feedstock that also allows processors to use the cane stalks as fuel for processing plants after the juice has been removed for ethanol or cane sugar production. Sugar cane is a perennial crop that needs to be replanted only every 6 to 8 years. The sugar marketing year in Brazil's major center-south sugar producing region runs from May through April, although crushing of sugar cane has sometimes started as early as late March. In the northeastern Brazil sugar area, the marketing year runs from September through August. Brazil sources indicate 90% of the crop is produced in the center-south region. With large ethanol production, Brazil's government has been able to mandate ethanol-gasoline average blends of 18% to 25%. The percentage blend can vary from time to time, depending on the available supply of ethanol. In October 2011, it was lowered from 25% to 20%, due to tight sugar and ethanol supplies. In August 2012, it was expected to remain at that level until at least the start of the 2013-14 sugar marketing year. (1) In recent years before June 2012,

Brazil had a federal tax on gasoline but not on ethanol, thus helping to provide an economic advantage for ethanol. In June 2012, the gasoline tax was removed, thus tending to reduce the advantage of ethanol relative to gasoline. Individual states continue to tax gasoline at varying levels. (2) The number of flex-fuel vehicles in Brazil's automobile fleet has increased rapidly in the last few years and now accounts for most new car sales. As a result, Brazil has a large fleet of vehicles that can be powered by hydrous ethanol, a mixture that includes a small amount of water in ethanol and no gasoline. Alternatively, anhydrous ethanol can be blended with gasoline to create the 20 or 25 percent ethanol-gasoline blends. Motorists in Brazil have indicated to us that E-100 needs about a 30% price discount per liter to offset its lower fuel mileage than gasoline. This year, the U.S. faces a drought-reduced corn crop and tight U.S. domestic ethanol feedstock supplies. U.S. ethanol production is projected to decline from last season. The impact of reduced domestic production on supplies and cost of ethanol for U.S. motorists, profitability of domestic ethanol processors, corn use for ethanol, and corn and distillers grain and solubles (DGS) prices will be influenced partly by potential imports from Brazil and the amount of competition U.S. ethanol exports face from Brazilian ethanol. factors affecting the economics of brazilian ethanol production The economics of ethanol production, exports, and use for motor fuel in Brazil depend on a number of factors including (1) the world sugar price, (2) the exchange rate of the Brazilian currency (the real) vs. the dollar and other major currencies, (3) the size of Brazil's sugar crop, (4) its government-controlled domestic gasoline price, and (5) tax policies. Brazil is the world's largest sugar producer. The size of its crop and that of India (the No. 2 sugar producer) have a major impact on world refined sugar cane prices. Those prices influence Brazil's sugar processors in determining how much of its production should be refined as sugar vs. processed into ethanol. In the last two years, sugar cane crops in Brazil and India have been disappointing because of less than ideal weather. World sugar prices have been high, signaling to Brazilian processors to increase the percentage of the crop devoted to sugar production rather than ethanol. This tendency has been reinforced by at least two other developments. Brazil's governmental petroleum company, Petrobras, has kept gasoline prices artificially low during the last few years to help restrain inflation. Low domestic prices for gasoline have kept domestic ethanol prices low, thus discouraging increased use of sugar cane for ethanol. That tendency has been reinforced by removal of the federal gasoline tax. Also, attractive returns for corn and soybeans have encouraged farmers to place greater emphasis on those crops. As a result, part of Brazil's sugar cane crop is becoming aged and in need of replanting. After reaching peak production, productivity of sugar cane plants tends to decline in the last few years before replanting. Early indications are that Brazil's early 2012 sugar crop was near or slightly below last season. However, availability of sugar for ethanol production in the 2012-13 U.S. corn marketing year is still uncertain and will depend strongly on the size of Brazil's spring 2013 sugar crop.

Brazil is the leading exporter of ethanol

Voegele 14 – Erin Voegele currently serves as an Associate Editor for Ethanol Producer Magazine, Biomass Magazine, and Pellet Mill Magazine, and has written for several other BBI International publications in the past. She aims to provide members of the biorefining industry with accurate, timely, and relevant information that is vital to operating their businesses. Voegele has been with BBI International since 2008. She earned a bachelor's degree in Mass Communication from North Dakota State University, 2014, ("UNICA: Brazilian ethanol production up, exports down", December 19, 2014,

available at http://ethanolproducer.com/articles/11760/unica-brazilian-ethanol-production-up-exports-down // date accessed 7/22/15 K.K)

UNICA, the Brazilian sugarcane energy association, has announced ethanol production from the start of the current season through the end of November is up 3.54 percent when compared to last year. According to UNICA, mills in the south-central region of Brazil crushed 15.75 million tons of sugarcane during the second half of November, up 40 percent from the same period of last year. From the start of the current season through the end of November, approximately 554.09 million tons have been crushed, down 3 percent from the same period of last year. UNICA reported that 136 mills in the south-central region of the country had wrapped up the current season by the end of November, compared to 73 mills last year. When compared to last year, the volume of total recoverable sugars is up slighting. From the start of the current season through the end of November, total recoverable sugars averaged 137.14 kilograms per ton of sugarcane, up 2.66 percent when compared to the same period of last year. Of the sugarcane processed during the second half of November, 60.03 percent went to ethanol production, up from 56.17 percent during the same period of last year. According to UNICA, 56.49 percent of the sugarcane harvest has went to ethanol production since the beginning of the current season. During the second half of November, ethanol production totaled 803.36 million liters (212.23 million gallons), including 295.6 million liters of anhydrous ethanol and 507.76 million liters of hydrous ethanol. When compared to the same period of last year, ethanol production was down 28.79 percent. Ethanol production from the start of the season through the end of November, however, is up 3.54 percent compared to last year, reaching 25.18 billion liters. The production of hydrous ethanol was up 6.12 percent, with the production of hydrous ethanol increasing by only 0.18 percent. According to UNICA, producers in the south-central region of Brazil sold 2.05 billion liters of ethanol in November, up 2.06 percent from the same period of last year. Only 137.73 of that volume was destined for export, with 1.92 billion liters supplying Brazil's domestic market. From the start of the current season through the end of November, ethanol sales totaled 16.33 billion liters, down 6.89 percent compared to last year. UNICA indicated the drop reflects a 55 percent reduction in exports, which have totaled only 957.78 million liters this year, down from 2.15 billion liters last year. From April through November, sales into the domestic Brazilian market totaled 15.37 billion liters, down slightly from 15.39 million liters during the same period of last year.

The ethanol tariff hurts both brazil and u.s economic policy

Hofstrand 9 – Don Hofstrand is a retired professor of agriculture at iowa state and an agriculture specialist, 2009, ("Brazil's ethanol exports", Iowa State University Extension and Outreach, May 2009, available at https://www.extension.iastate.edu/agdm/articles/hof/HofMay09.html May 2009 // date accessed 7/22/15 // K.K)

U.S. Ethanol Import Tariffs Ethanol consumed in the United States receives a subsidy of 51 cents per gallon. The subsidy (Volumetric Ethanol Excise Tax Credit) is provided to the blender of the ethanol with gasoline. For example, a ten percent blend of ethanol (10% ethanol and 90% gasoline) receives a subsidy of 51 cents per gallon of ethanol or 5.1 cents per gallon of blended fuel. The subsidy was implemented to help the fledgling U.S. ethanol industry develop. However, the subsidy is available for all blended ethanol regardless of whether the ethanol is domestically produced or imported. To offset the subsidy for imported ethanol so U.S. taxpayers are not subsidizing foreign ethanol production, an import duty

was imposed. The import duty is 54 cents per gallon, slightly larger than the current subsidy of 51 cents. So, the "actual" import duty is 3 cents (54 cents less 51 cents = 3 cents). When the subsidy is reduced to 45 cents the actual import duty will be 9 cents. The tariff on ethanol imports is scheduled to expire in 2010, unless extended. The import tariff is imposed on all countries except the Caribbean Basin Initiative (CBI) countries. The CBI consists of nineteen qualifying countries in the Caribbean and Central America. These countries can export ethanol to the U.S. duty free. To export to the U.S. under this rule, the ethanol must be produced from the country's domestic feedstocks. In other words, they cannot import Brazilian sugar, convert it into ethanol, and sell it duty free to the U.S. However, there is another twist to the rules. A CBI country can import the feedstock, process it into ethanol, and sell it into the U.S. duty free if the total amount sold by all of the CBI countries to the U.S. does not exceed an amount equal to seven percent of the U.S. annual ethanol consumption. For example, in 2006 the U.S. consumed 4.86 billion gallons. So the seven percent limit was 340 million gallons. This is advantageous for CBI countries like Jamaica and Trinidad. Policy decisions by the new U.S. administration and congress could have significant repercussions for Brazil and the CBI countries. The CBI comes up for renewable in 2010. A movement to further protect the U.S. ethanol industry by not renewing the CBI would be detrimental to both the CBI countries and Brazil. Conversely, a movement to open up ethanol trade by removing the 54 cent import tariff would be advantageous to Brazil at the expense of the CBI countries. Why doesn't the U.S. import Brazilian sugar and process it into ethanol domestically? Brazil would get the benefit of a market for the sugar feedstock that is sold into the U.S market duty free. However, the U.S. has long had import quotas on foreign sugar. The quotas were designed to protect the U.S. sugar beet industry from competition by lower-cost foreign sugar cane. These quotas keep U.S. sugar prices substantially above world sugar prices. In addition to the 54 cent import duty, an "ad valorem" tax is also placed on ethanol imports. The tax is equal to 2.5 percent of the value of the imported ethanol. For example, $2.00 ethanol would be taxed 5 cents per gallon ($2.00 X .025 = 5 cents). Adding the 5 cent tax to the 54 cent duty will result in a total cost of 59 cents per gallon of $2.00 ethanol.

Foreign biofuels key to national industrialization and combating emissions

Fahey and Mayfrowitz 15 – Jonathan Fahey and Scott Mayfrowitz are AP Business Writers, 2015, ("Airlines turning to biofuels to meet emissions rules, capitalize on growth in air travel", AP/USNews, July 21, 2015, available at http://www.usnews.com/news/business/articles/2015/07/21/why-airlines-keep-pushing-biofuels-they-have-no-choice // date accessed 7/22/15 K.K)

NEW YORK (AP) — The number of global fliers is expected to more than double in the next two decades. In order to carry all those extra passengers, airlines are turning to a technology very few can make work on a large scale: converting trash into fuel. They have no other choice. As people in countries such as China, India and Indonesia get wealthier they are increasingly turning to air travel for vacation or business, creating an enormous financial opportunity for the airlines. The number of passengers worldwide could more than double, to 7.3 billion a year, in the next two decades, according to the International Air Transport Association. But many in the industry believe that without a replacement for jet fuel, that growth could be threatened by forthcoming rules that limit global aircraft emissions. "It's about retaining, as an industry, our license to grow," says Julie Felgar, managing director for environmental strategy at plane maker Boeing, which is coordinating sustainable biofuel research programs in the U.S., Australia, China, Brazil, Japan and the United Arab Emirates. Cars, trucks and trains

can run on electricity, natural gas, or perhaps even hydrogen someday to meet emissions rules. But lifting a few hundred people, suitcases and cargo 35,000 feet into the sky and carrying them across a continent requires so much energy that only liquid fuels can do the trick. Fuel from corn, which is easy to make and supplies nearly 10 percent of U.S. auto fuel, doesn't provide enough environmental benefit to help airlines meet emissions rules. "Unlike the ground transport sector, they don't have a lot of alternatives," says Debbie Hammel, a bioenergy policy expert at the Natural Resources Defense Council. That leaves so-called advanced biofuels made from agricultural waste, trash, or specialty crops that humans don't eat. United Airlines last month announced a $30 million stake in Fulcrum Bioenergy, the biggest investment yet by a U.S. airline in alternative fuels. Fulcrum hopes to build facilities that turn household trash into diesel and jet fuel. FedEx, which burns 1.1 billion gallons of jet fuel a year, promised Tuesday to buy 3 million gallons per year of fuel that a company called Red Rock Biofuels hopes to make out of wood waste in Oregon. Southwest Airlines had already agreed to also buy some of Red Rock's planned output. These efforts are tiny next to airlines' enormous fuel consumption. U.S. airlines burn through 45 million gallons every day. But airlines have little choice but to push biofuels because the industry is already in danger of missing its own emissions goals, and that's before any regulations now being considered by the U.S. Environmental Protection Agency and international agencies. The industry's international trade group has pledged to stop increasing emissions by 2020 even as the number of flights balloons. By 2050, it wants carbon dioxide emissions to be half of what they were in 2005. Like airlines, the U.S. military is also supporting development of these fuels for strategic and financial reasons. For biofuels makers, it is a potentially enormous customer: The military is the biggest single energy consumer in the country. Making biofuels at large, commercial scale is difficult and dozens of companies have gone belly up trying. The logistics of securing a steady, cheap supply of whatever the fuel is to be made from can take years. Financing a plant is expensive because lenders know the risks and demand generous terms. A sharp drop in the price of crude oil has made competing with traditional fuels on price more difficult.

Solvency

Brazil wants to reform and sustain diplomatic ties

Sotero 6/23 - Paulo Sotero is the Director of the Brazil Institute and the Woodrow Wilson International Center for Scholars, 2015, ("In Trouble at Home, Rousseff Travels to Washington", Huffington Post, 6/23/15, available at http://www.huffingtonpost.com/paulo-sotero/in-trouble-rousseff-seeks_b_7639204.html // date accessed 7/21/15 K.K)

Brazilian President Dilma Rousseff's visit to the United States at the end of this month will be the fourth attempt in four years to transform a shallow dialogue marked by unfulfilled expectations, suspicion, and mutual frustrations, into the productive relationship both governments say they want to build. It may also be the most promising. It will take place at a particularly inauspicious moment for the Brazilian leader. Her popularity is at an all-time low,, and the June 19 arrests of the CEOs and senior executives of Brazil largest construction companies has deepened the crisis brought by economic mismanagement and revelations of widespread corruption at state oil giant Petrobras. Discredited and politically isolated at home, Rousseff, who was narrowly reelected last October, has only to gain from engaging President Barack Obama in initiatives to expand and deepen Brazil's ties with the United States and turn them into solutions to the crisis of confidence - mostly self-inflicted - she confronts at home and abroad. If it is true that you know who your friends are in times of trouble, this is the time to affirm the friendship between the two largest democracies in the Americas. The role economics played in the planning of the three-day visit suggests the Brazilian leader sees the meetings she will have in Washington, New York and San Francisco as the way to convey her understanding that rapprochement with the U.S. now is not only important, but also urgent. Rousseff actually turned down an offer by the White House to upgrade her official trip to Washington to a state visit, like the one cancelled two years ago after disclosures of National Security Agency spying in Brazil, if she could wait until next year. She could not. Fundamentally, the visit is the message. New context favors opens for a private sector driven agenda A changed context makes Rousseff's trip to the U.S. more promising than previous efforts - assuming she survives the crisis, and expectations are kept in check. The largest investor in Brazil and principal destination of the country's value added exports, the U.S. is recovering from its own self-inflicted crisis, the 2008 financial meltdown, while China, Brazil's top trading partner since 2009, had slowed down. The likelihood of approval by the US Congress of Trade Promotion Authority to advance trade liberalization agreements in the Pacific and the Atlantic, will add to the pressure on Brazil to abandoned its protectionist policies or risk further economic isolation. It will certainly strengthen Obama's international legacy, which already already encompasses the historic initiative to normalize relations between Washington and Havana, and the expected conclusion, at the end of the month, of a U.S.-led nuclear agreement with Iran. In this new context, Rousseff's visit should contribute to improve the political atmosphere in which Brazil and the U.S. will explore anew the enormous potential of their relationship. As U.S. envoy to Brasilia, Liliana Ayalde recently observed, "Brazil and the U.S. have much in common and no unsurmountable differences." Rousseff's situation is politically precarious. Having started her second term as a virtual lame duck, she has practically no room to maneuver and may not be able to use the visit to strengthen her position at home and advance a new, market-oriented economic policy needed to rebuild investor's confidence. Nonetheless, her government new economic policy narrative is expressed in the mobilization of private sector leaders in both countries to focus the visit on an agenda of investment opportunities in infrastructure, human capital technology development, education, and innovation. These issues have gained ground as the crisis has exposed Brazil's obstacles to growth - they signal a

return to structural and regulatory reforms abandoned after the exit of Antonio Palocci from the Finance Ministry, in 2006. There is also a renewed focus on promoting greater economic openness and integration of Brazil into the global economy. These steps are essential to improve current conditions and to move the economy to a sustainable long-term growth path, one that envisages shared prosperity under the more demanding realities of the post-commodities boom. It is also the message Rousseff will hear when leading business executives in New York, Washington and San Francisco gather to exchange views on productive U.S.-Brazil engagement.

Existing trilateral cooperation proves Brazil and U.S relations possible but the counterplan necessary for bilateral cooperation

BWHA 12 - The Bureau of Western Hemisphere Affairs is headed by Assistant Secretary of State Roberta Jacobson, who is responsible for managing and promoting U.S. interests in the region by supporting democracy, trade, and sustainable economic development, and fostering cooperation on issues such as citizen safety, strengthening democratic institutions and the rule of law, economic and social inclusion, energy, and climate change, 2012, ("The United States and Brazil: Trilateral Cooperation", U.S Department of State, April 9, 2012, available at http://www.state.gov/p/wha/rls/fs/2012/187613.htm // date accessed 7/22/15 K.K)

The United States and Brazil have developed a record of effective partnership in jointly delivering development assistance to maximize resources. Under the 2010 Memorandum of Understanding (MOU) for the Implementation of Technical Cooperation Activities in Third Countries, we have collaborated successfully on dynamic initiatives in countries that face serious poverty challenges, particularly in Africa and Latin America. Current initiatives improve health and food security in Africa, combat and prevent child labor in Haiti, partner with Bolivia on counternarcotics cooperation, and promote biofuels in Central America, the Caribbean, and Africa. The United States and Brazil are exploring new trilateral cooperation initiatives, including programs to combat AIDS in Mozambique, promote domestic resource mobilization in partner countries, expand biofuels cooperation in Africa and Asia, as well as joint projects in Central America and the Caribbean under the Feed the Future program. We are also exploring additional trilateral cooperative projects on labor and employment issues under an MOU to advance "decent work." Examples of U.S.-Brazil trilateral assistance programs include: Cooperation in Food Security: Brazil is a Feed the Future Strategic Partner country and a leader in the region on food security issues. The United States and Brazil have developed a MOU on food security cooperation in third countries. In Mozambique, USAID and the Brazilian Cooperation Agency (ABC) help farmers increase the productivity of their vegetable crops and to improve post-harvest packing, storage, and processing of produce. USAID Mozambique and Brazil's agricultural research corporation, EMBRAPA, funded the development of the Mozambique Platform for Agricultural Research and Technology Innovation (PARTI), which brings the expertise of agricultural research centers around the world to work on specific problems in Mozambique. The United States and Brazil are commencing new trilateral cooperation to improve food security in Haiti. The three governments will work to increase agricultural yield and farmers' incomes, and to improve nutrition for rural farmers. Combating HIV/AIDS: Under the auspices of the Department of State's Global AIDS Coordinator, negotiations are proceeding on an MOU on HIV/AIDS cooperation in Mozambique. Programs would include monitoring and evaluation, civil society strengthening, communication activities aimed at changing public perceptions, and improving the supply chain of AIDS drugs. Combating Child and Forced Labor: As part of the State of Bahia's decent

work strategy, the United States is assisting Bahia to become the first state in Brazil free of child labor. The Department of Labor and the Government of Brazil provide complementary funding to combat child labor in several South American countries, including Ecuador, Bolivia, and Paraguay, and in Lusophone Africa. The United States has also funded programs to support law enforcement and to provide assistance to workers rescued from forced labor in Brazil. An initiative on decent work supports the International Labor Organization/International Program for the Elimination of Child Labor (ILO/IPEC) project to combat child labor in Haiti. . Biofuels Cooperation: Under the 2007 U.S.-Brazil MOU on Biofuels, the United States and Brazil have agreed to engage in third-party cooperation with member countries El Salvador, Honduras, Guatemala, the Dominican Republic, Haiti, Jamaica, and Senegal. Through independent projects focused on the same goal, Brazil has created high-level, detailed feasibility studies for biofuels implementation in the member countries. The United States has contributed through targeted projects, including technical support for the development of biofuels blending legislation in El Salvador, pilot validation studies to test ethanol blends in Guatemala and El Salvador, and a pilot bioethanol plant in Honduras. Environment and Conservation: The United States and Brazil have informal trilateral cooperative arrangements regarding forest conservation. The U.S. Forest Service (USFS), through collaboration with USAID, is working with the Brazilian Forest Service (SFB), the Chico Mendes Institute for the Conservation of Biodiversity (ICMBio), and the Brazilian Environment Institute (IBAMA) to share expertise and experiences with the Government of Peru's Forest Sector Initiative. USFS, USAID, SFB, ICMBio, and IBAMA have provided technical expertise in areas such as national forest inventory, sustainable forest management, and forest monitoring and timber tracking. Counternarcotics Cooperation: In January 2012, Bolivia, Brazil, and the United States agreed to a one-year pilot program to improve Bolivia's ability to measure excess coca cultivation and verify progress in meeting coca eradication targets. As part of the project, the United States will provide global positioning equipment and Brazil will provide satellite imagery and technical training.

Now is uniquely key, Brazil internet circumvention of the united states is eminent without appeasement

Trinkunas 13 - Harold Trinkunas is the Charles W. Robinson Chair and senior fellow and director of the Latin America Initiative in the Foreign Policy program. His research focuses on Latin American politics, particularly on issues related to foreign policy, governance and security. He is currently studying Brazil's emergence as a major power, and Latin American contributions to global governance on issues including energy policy, drug policy reform and internet governance. Trinkunas has also written on terrorism financing, borders and ungoverned spaces, 2103, ("U.S.-Brazil Relations and NSA Electronic Surveillance", Brookings, September 18, 2013, available at http://www.brookings.edu/blogs/up-front/posts/2013/09/18-us-brazil-nsa-surveillance-trinkunas // date accessed 7/22/15 K.K)

The Rousseff administration's immediate proposals to address the espionage revelations indicate that it is concerned to be seen as defending Brazilian sovereignty and its citizens. These include a government investigation of allegations that private telecommunications firms working in Brazil were conduits for NSA espionage. The administration has requested accelerated congressional consideration of legislation requiring that data collected by internet and social media companies be stored inside Brazil's borders. The Brazilian government has also proposed that the postal service create an encrypted national email system. They have even announced talks between the Argentine and Brazilian ministers of defense on combined cyber defense. Admittedly, some of these proposals have been made in haste, and there are few governments anywhere with a record of creating successful social media and internet alternatives.

Taken together, they indicate that the Rousseff administration wants to quickly get on the right side of public opinion on this issue, particularly since its popularity has only just begun to rebound after recent social unrest. The revelations of NSA intelligence collection are particularly bitter pill for President Rousseff and her advisors to swallow because they thought they had built a better relationship with the United States than their predecessors in the da Silva administration. The Obama and Rousseff administrations have pursued a highly ambitious bilateral agenda since 2010 characterized by four presidential-level dialogues and a large number of high-level working groups on economics and finance, education, science and technology, defense and security and global partnership. It is unlikely that this intense effort to improve relations would be cast aside permanently over revelations of espionage. In fact, the postponement may have the positive consequence of allowing bilateral working groups and meetings to complete their work under less fraught circumstances. It is in the U.S. interest for President Rousseff's state visit to take place at a time when Brazilian public opinion is more favorable to negotiations with the U.S., which would give President Rousseff more flexibility to cut deals and clear sticking points. On the other hand, it seems likely that cooperation on defense and security issues, closely linked in the public mind to intelligence, will suffer. For example, Brazilian politicians have already observed that Boeing's proposal to equip the Brazilian air force with F/A-18 E/Fs will be negatively affected, although this sale was likely to be postponed in any event due to budget cuts. It will also become even more difficult to secure Brazilian congressional approval of pending defense and security agreements with the United States, including the Defense Cooperation Agreement (DCA) and the General Security of Military Information Agreement (GSOMIA). These agreements, both of which have been awaiting legislative action since they were signed in 2010, are essential precursors to deeper collaboration on security and sharing of sensitive technologies between the two states. In the long run, revelations of NSA intelligence collection in Brazil are likely to have an impact on the ongoing debate over the international structure and governance of the internet. There are already a number of countries in Europe that require that data generated by their citizens be stored within their national boundaries, and Brazil has announced that it is moving in this direction. It already has strict privacy and data protection laws on the books and these are likely to be tightened and enforced more aggressively, at least for the moment. It is advocating the creation of networks in Brazil and South America that route around the U.S.-based systems that currently handle most of Brazil's internet traffic. A number of observers have already warned that this would decrease the functionality and effectiveness of the global internet. Beyond this, we should keep in mind that the current international structure and governing institutions for the global internet are highly favorable to the United States, which has played a central role since its inception. Large amounts of global internet traffic flow through U.S. territory, and U.S. public and private entities maintain a dominant voice in global internet governance. Brazil has now added itself to the list of countries that are exploring new ways to route their telecommunications data around the United States. It may also redouble the efforts of its highly professional diplomatic corps to work with the entities and countries that have advocated a reformed global internet governance structure for the past decade. The consequences of such a reform, if successful, would doubtfully favor U.S. interests.

Surveillance policies have angered Brazil, appeasement necessary for effective bilateral relations

Meacham 13 - Carl Meacham is director of the Americas Program at the Center for Strategic and International Studies (CSIS) in Washington, D.C. Michelle Sinclair, staff assistant with the Americas Program, provided research assistance, 2013, ("The Non-State Visit: What's Next for U.S.-Brazil Relations?", CSIS, October 22, 2013, available at http://csis.org/publication/non-state-visit-what-next-us-brazil-relations // date accessed 7/22/15 K.K)

In the short term, Rousseff's decision to indefinitely postpone the state visit and excoriate U.S. espionage on the international and domestic stages may appear wise. Her snub of the United States appears to have reinvigorated her support base within Brazil—and may have earned her respect as a resilient regional leader—all of which she desperately needs after the months of civil discontent. Her reelection prospects were further threatened by the recent Marina Silva–Eduardo Campos alliance of the Sustainability Network and Socialist Party earlier this month, whose political staying power presents an unprecedentedly unified left to challenge Rousseff in the impending electoral cycle—likely dashing her earlier hopes of sweeping electoral victory. The long term, however, is more complicated. Rousseff must proceed cautiously, aware that setting too strong an anti-U.S. precedent now will likely prove a stopping block to salvaging the bilateral relationship down the line. More NSA accusations could come to light as Brazil approaches its FX-2 decision, forcing Rousseff to forgo Boeing's offer in favor of another company, pushing the United States still further away. In short, Brazil must be wary—and try, to the extent possible, to position its firm stance on the NSA allegations in the broader context of regional and global relations. A failure to do so would only risk undermining its growing position on the world stage—a position that, more likely than not, would benefit from a strong relationship with the United States. Even in the face of the NSA controversy and the postponed state visit, the U.S. government has demonstrated its commitment to maintaining its relationship with Brazil. But with the FX-2 decision pending and the future of the bilateral relationship in the balance, the ball is firmly in Brazil's court. Will Rousseff let the opportunity fly by?

Escalating tensions risks collapse of bilateral relations – now is key

Meacham 13 - Carl Meacham is director of the Americas Program at the Center for Strategic and International Studies (CSIS) in Washington, D.C. Michelle Sinclair, staff assistant with the Americas Program, provided research assistance, 2013, ("The Non-State Visit: What's Next for U.S.-Brazil Relations?", CSIS, October 22, 2013, available at http://csis.org/publication/non-state-visit-what-next-us-brazil-relations // date accessed 7/22/15 K.K)

On October 23, Brazilian president Dilma Rousseff was scheduled to visit the White House in what would have been the first state visit of a Brazilian head of state in almost 20 years. But on September 27, Rousseff indefinitely postponed the trip in response to mounting domestic discontent over alleged NSA spying on the Brazilian government. Since the allegations first came to light in July, Rousseff has taken center stage in demanding answers from the United States—even using her position as opening speaker of the UN General Assembly to blast U.S. surveillance as a violation of international law and human rights. And domestically, she has pushed legislation to secure her country's servers to prevent such information gathering moving forward. Immediately following her postponement of the state visit, the approval ratings of Rousseff's government began to increase, after months of popular disapproval

following months of domestic political turmoil. But the spying allegations and Rousseff's response to them have come at a difficult moment for U.S.-Brazil relations. Just as the two countries began to come together and forge a closer partnership, the developments over the past four months have driven a wedge between the two powers. Given the mutual value of a "strategic partnership," what can the governments do to get their relationship back on track? Q1: What do Snowden's NSA accusations have to do with U.S.-Brazil relations? A1: Since July, American journalist Glenn Greenwald has been publishing highly classified documents leaked by former NSA contractor Edward Snowden—documents that indicate, among other things, large-scale NSA surveillance in Brazil. According to reports, NSA programs targeted the telecommunications of Brazilian citizens, intercepted Rousseff's private communications, and hacked the computer network of Petrobras, Brazil's state-run oil firm. Just last week, Greenwald spoke to the Comissão Parlamentar de Inquérito (CPI), the group of senators Rousseff assembled to investigate the espionage accusations. During the session, Greenwald insinuated that Brazil's best bet for learning the full extent of NSA surveillance operations would be to grant Snowden political asylum. Currently the CPI is pursuing permission from the Russian government to set up teleconferencing sessions with Snowden, who is currently residing in Russia under a temporary asylum grant. And though Greenwald has flatly refused to hand over documents sent to him by Snowden, CPI members are pushing for the legal authority to seize the documents in Greenwald's possession should they fail to establish a direct line of communication with Snowden himself. In the meantime, the Rousseff administration has made the investigation a top priority, demonstrating that Brazil cannot move forward in its relations with the United States until the issue is cleared. Q2: How have these surveillance developments affected the bilateral relationship? A2: The most obvious result of the spying allegations was, of course, the postponement of the state visit. But the effects to do not end there. Before the fallout over Snowden's revelations, it seemed likely that Chicago-based Boeing would win a US$4 billion deal to supply Brazil with 36 fourth-generation FX-2 fighter jets, intended to replace the Brazilian Air Force's aging fleet. In September, however, Rousseff announced that she would defer the FX-2 decision until 2015, after the presidential elections. To be sure, the mounting tensions between the United States and Brazil—tensions only worsened by the proliferation of NSA allegations—largely motivated that decision. And, as a result, the other contenders for the contract—primarily Dassault, Saab, and even Russia's Sukhoi—may well benefit from the delay. Just last week, Russian military officials visited Brazil, sparking speculation that Sukhoi was pulling ahead in the FX-2 competition. Closing the FX-2 deal could build the foundations for an institutional interdependence between the United States and Brazil—much as the Mérida Initiative, a joint U.S. Department of Defense and Mexican government cooperative security agreement, did for the United States and Mexico.

U.S appeasement of Brazil key to restore trust and increase bilateralism

Winter 13 – Brian Winter is a foreign relations reporter for Reuters, 2013, ("Analysis: Brazil and U.S., like star-crossed lovers, foiled again", Reuters, Sep 18, 2013, available at http://www.reuters.com/article/2013/09/18/us-brazil-us-diplomacy-analysis-idUSBRE98H11G20130918 // date acessed 7/22/15 K.K)

Every time Brazil and the United States get to the altar, the roof of the church seems to collapse. In 1982, U.S. President Ronald Reagan traveled to Brazil for a dinner banquet meant to herald a new era in ties between the Americas' two biggest countries. But when Reagan raised his wine glass and toasted "the people of Bolivia," it seemed to confirm his hosts' worst fears: that the United States saw Brazil as just another poor country in its so-called backyard. This week, hopes for a breakthrough fell apart once

again, in even more dramatic fashion. President Dilma Rousseff's decision to call off her upcoming state visit to the White House, the only formal event of its kind planned in Washington this year, is an embarrassing setback that will probably stymie cooperation on trade, regional affairs and other issues for years to come. Rousseff, a pragmatic leftist, was outraged over recent revelations that the U.S. National Security Agency spied on her private communications, as well as her top aides. While the two countries will retain generally cordial ties, Rousseff plans to take some retaliatory measures, including onerous new taxes and rules for U.S. Internet companies operating in Brazil, and ruling out a purchase of fighter jets from Chicago-based Boeing Co., officials told Reuters. She said the espionage is "incompatible" with a relationship among allies, and told aides it was pointless to go ahead with a trip whose ostensible purpose was to symbolize growing respect. The cancellation of such a high-profile visit despite two last-minute, personal appeals to Rousseff by President Barack Obama upset officials from both countries. It also caused a familiar sense of disappointment among observers who have long rooted for better ties between two giant democracies with similar histories as multiracial melting pots. In another recent example of a promising moment gone somewhat awry, Obama made a big show in 2011 of taking his wife and daughters on a trip to Brazil, heralding "even greater cooperation for decades to come." But many Brazilian officials felt that, when Obama showed up late at the presidential palace because he was coordinating U.S. missile strikes on Libya, it was a classic sign of a distracted imperial power. Moises Naim, a senior associate at the Carnegie Endowment for International Peace in Washington, said the state visit would have been a great opportunity to put such episodes firmly in the past and overcome a long legacy of mistrust. "We were so close this time," he lamented. "There are no two countries that could create so much progress so quickly as Brazil and the United States," Naim said. He cited potential for bilateral and regional trade deals, cooperation on Latin American political hotspots like Venezuela, and U.S. interest in Brazil's recent offshore oil discoveries. "But they don't know how to deal with each other," he added. "There are reasons this keeps happening." TRADE WAS WASHINGTON'S FOCUS Each country had big hopes for the October 23 event, which would have included a black-tie dinner at the White House and a military salute for Rousseff. For Brazil, the visit offered validation that after an economic boom over the past 20 years, their country had arrived as a global power worthy of Washington's highest formal honor. Rousseff hoped the trip would open up a new wave of U.S. investment in Latin America's largest economy, which has struggled since she took office in 2011. A photo-op with Obama would also have brandished her moderate credentials as she prepares for a likely re-election bid next year. For its part, Washington hoped that rolling out the red carpet for Rousseff would help bend her ear on several issues, above all in securing better access for U.S. firms to a huge market with 200 million increasingly voracious consumers. Because of high tariffs, Brazil has the most closed economy to trade in the Western Hemisphere. When U.S. Vice President Joe Biden visited in May, he urged Brazil to drop those barriers if it wants to become a strategic U.S. ally. "It's up to Brazil to decide whether to pursue this path and seize the opportunities," Biden said. In retrospect, that comment may have reflected an issue that has plagued Brazil-U.S. ties: Unrealistic expectations. Like most Brazilian politicians, Rousseff harbors a deep mistrust of free trade, particularly on Washington's terms. On several occasions, she has accused the United States of unfairly boosting its exports through expansionary monetary policy. As the visit grew closer, some Brazilian officials expressed concerns that Washington was placing too much emphasis on trade. It also became clear the trip would not yield breakthroughs on two long-time Brazilian goals: Visa-free travel for its citizens to the United States and U.S. support for Brazil's push to have a permanent seat on the United Nations Security Council.

Lack of bilateral relations hurts overall foreign policy

Winter 13 – Brian Winter is a foreign relations reporter for Reuters, 2013, ("Analysis: Brazil and U.S., like star-crossed lovers, foiled again", Reuters, Sep 18, 2013, available at http://www.reuters.com/article/2013/09/18/us-brazil-us-diplomacy-analysis-idUSBRE98H11G20130918 // date acessed 7/22/15 K.K)

'THE GHOSTS CAME BACK' Diplomats hoped the trip would at least give leaders a chance to build lasting personal bonds at the formal dinners that are part of state visits. There was a problem with this plan, though, which goes back to another longstanding obstacle. "They're two countries that just fundamentally don't understand each other," said Dan Restrepo, who until a year ago was Obama's top adviser on Latin America. Restrepo said that, with the possible exception of Argentina, there is no other country in Latin America whose senior leaders have spent so little time in the United States. Brazilian officials voice a similar complaint: that, outside of a few key positions, Latin America policy in Washington is dominated by Spanish-speaking Cold War veterans who know about Cuba or Guatemala, but don't understand the nuances of their continent-sized country. In that context, the NSA revelations seemed to exploit each country's worst suspicions of the other. Brazil saw the espionage, which also included U.S. monitoring of state-run oil company Petrobras, as another sign that the United States is an entrenched superpower that will do anything to block the rise of others. Meanwhile, many in Washington saw Rousseff's reaction to the revelations - which included a demand for an apology and a full accounting of U.S. intelligence activities - as further evidence of Brazil's exaggerated sense of self-importance and naivete about what it means to be a major world power. "All the ghosts came back," said Carlos Eduardo Lins da Silva, editor of Politica Externa, a foreign policy magazine. Nevertheless, both governments valued the visit enough to push for a solution until the bitter end. Despite other priorities, namely Syria, Obama spent 45 minutes with Rousseff at a September 5 summit in Russia to try to ease her concerns. He also made a last-minute plea by phone for 20 minutes on Monday. Rousseff, too, searched for a solution. But she believed she needed a stronger, public gesture of contrition from Obama to make the trip politically viable - to prevent the powerful left wing of her Workers' Party from attacking her as weak. "The Americans have no idea how hard it is to be pro-American in Brazil," one official close to Rousseff said. THE FALLOUT The last-minute push raised the stakes even more, and helps explain why the bad blood could linger for a while. In the short-term, there will be consequences for both sides. Rousseff has pushed new legislation that seeks to force Google Inc, Microsoft Corp and other foreign Internet companies to store locally gathered data on servers in Brazil. The bill is designed to improve Internet security and also retaliate for U.S. spying, Brazilian officials have said. Rousseff is likely to become an even more vocal opponent of U.S. espionage, including at this month's meeting of the United Nations, officials say. Meanwhile, Rousseff's handling of the episode has solidified impressions that she is unable to insert Brazil more fully into the world both economically and strategically. That's an impression that could linger among foreign companies looking to invest in Brazil, as well as other governments. "Brazil looked petulant," said Christopher Sabatini, editor of Americas Quarterly magazine. "That's not how major powers are supposed to act." Restrepo, the former Obama aide, said he thought Brazilian politics were the main reason the trip fell apart. But he also said the episode may finally bury the "wildly simplistic" idea that the two countries are suited for a diplomatic marriage because they share some common traits. "A lot of what gets people to the altar is all that superficial

understanding," Restrepo said. "And then they look and each other and say, 'Hmm, maybe we don't have that much in common after all.'"

AT: Deforestation Turn

Even if there is deforestation- no external impact and ethanol is the only viable choice- alt options are too expensive

Garner 9 - Timothy Gardner covers U.S. energy and environment policy and climate change, 2009, ("Land use emissions should not hurt ethanol" Reuters, Apr 21, 2009, available at http://www.reuters.com/article/2009/04/21/us-ethanol-clark-idUSTRE53K34820090421 // date accessed 7/26/15 K.K)

Making ethanol in Brazil does not cause new greenhouse gas emissions from deforestation and should not slow blending of the fuel in the United States, said retired U.S. Army General Wesley Clark, the co-chairman of an ethanol industry group. This week California is slated to approve a Low Carbon Fuel Standard in which the state with the most cars will try to regulate carbon dioxide emissions, not just over the life cycle of making and burning ethanol and other biofuels, but also any indirect emissions that arise when forests are cleared to grow crops that are feedstocks for the fuels. The concern is greatest about any increased emissions from Brazil, which is the world's second largest producer of ethanol after the United States. Making ethanol out of Brazil's sugarcane is more efficient than making it from corn, the main U.S. feedstock for ethanol. But as U.S. mandates call for increasing the amount of traditional ethanol to be blended into gasoline to 15 billion gallons by 2015, scientists are concerned that some of the Brazilian rain forest could be chopped down to grow soybeans displaced by sugar cane fields. Clark, the co-chairman of Growth Energy, disagreed. "Even if you produce no ethanol in the United States, you would still have Brazil operating on its rain forest," he told reporters at the Alternative Fuels and Vehicles conference in Orlando on Monday. "That causal linkage is way out of line as a matter of public policy." He said it was up to the governments of each country to regulate their own emissions and natural resources. A report this month, produced jointly by Greenpeace, other environmental groups, and the Brazilian soy industry, found that the beef industry is a bigger culprit in causing deforestation in Brazil than soy farming. The United States places tariffs on imports of ethanol, which Growth supports. But even with the tariff, Brazil exports to the United States because sugar cane fuel is cheaper to make than corn fuel. Growth is pushing for the U.S. government to approve the blending of 15 percent ethanol into gasoline that can be burned in regular cars, up from current levels of up to 10 percent. Clark said that would increase the production of cellulosic ethanol, which can be made from crop waste. Cellulosic, however, is currently more expensive than traditional ethanol, which is helping to delay its commercialization.

Ethanol production doesn't cause deforestation and solves the environment

Economist 9 - The Economist offers authoritative insight and opinion on international news, politics, business, finance, science, technology and the connections between them, 2009, ("Maized and confused", Aug 10th 2009, available at http://www.economist.com/node/14205727 // date accessed 7/26/15 K.K)

HOW green is ethanol? The Renewable Fuels Association (RFA), an American lobby for the stuff, obviously wants voters and politicians to think it is very green indeed. The association's cool-coloured website plays down claims that ethanol may actually harm the environment. The biggest target of those claims these days is that growing maize to make ethanol causes indirect changes in land use by altering

the incentives of other, often foreign, farmers. Adding ethanol to the traditional markets for maize (food and fodder) inevitably pushes the price up. That encourages farmers, including those in poor countries, to boost production. If some of those farmers plough up savannah or cut down forest to grow the extra crops, the carbon dioxide released from the plants destroyed and soil ploughed up reduce the benefits of substituting the ethanol produced for petrol. If forests that are still growing are cleared, the environment loses the effect of their future uptake of carbon dioxide, too. The benchmark paper on this, published in Science in February 2008, argues that, if such changes in land use are taken into account, ethanol is twice as carbon-intensive as petrol in the short run. Making ethanol and burning it in a car (without land changes) emits 20% less carbon dioxide than refining and burning petrol. But planting a hectare of ethanol causes someone to clear land for food crops elsewhere. That ethanol crop must provide that modest 20% reduction for 167 years to achieve a net carbon reduction. By then, of course, it is far too late to mitigate climate change. Bob Dinneen, the RFA's head, calls these worries “crying wolf” and a “big lie”. A video on the association's home page has a narrator, brow furrowed, looking puzzled while explaining land-use concerns—how could ethanol cause deforestation “halfway around the world”?—while the text on screen says flatly that ethanol has “no impact on rainforests”. In more sober language, the RFA says that crop yields will increase to meet the maize diverted to ethanol, and points to United Nations' estimates that there are still billions of hectares of unused arable land around the world. The latest row is over an investigation by America's Environmental Protection Agency (EPA) into the question of land-use changes. In June, the RFA asked for the EPA's data and models so that it could attempt to replicate any study that assigned land-use-change carbon to ethanol's overall green “score”. The EPA provided spreadsheets, but the RFA shot back last week that it still did not have the models that brought the data together, and that it wants to run its own sensitivity analysis. Despite Mr Dineen's hot language, it is clear that some changes of land-use are happening, but Mr Dineen argues that deforestation thousands of miles from American shores should not be pinned on Midwestern farmers. Is he right? Perhaps, in a narrow moral sense. The American farmer can understandably disclaim responsibility for what a Brazilian logger does. But the RFA's attitude borders on being in denial. Crop yields almost certainly cannot increase fast enough to make up for the diverted maize, and any tilling of virgin land does release carbon dioxide in large quantities. As much as the ethanol lobby claims to be surrounded by deceitful enemies (among them the oil industry), it is in fact protected by powerful congressmen. Indeed, existing mandates for ethanol production look set to get bigger in climate-change legislation coming through America's Congress. The House of Representatives' agriculture committee stripped changes in land use from consideration in the American Clean Energy and Security Bill that is now under scrutiny there, at least pending further study. Now the RFA looks as if it may want to muck about with that study. Asking for the EPA's models so it can run its own sensitivity analysis could be a way to run a blizzard of competing numbers past congressmen who are not scientifically equipped to tell who is right. A bigger problem, though, is the unstoppable desire of politicians to pick green winners—and not necessarily for green reasons. Ethanol, like “clean coal”, has a habit of being among them not because of its inherent virtues, but rather its political geography. Maize grows in crucial states, some of them “swing” states like Iowa and Ohio. Barack Obama thus recently renewed his support for American, maize-based ethanol. Letting Brazilian ethanol, made from sugarcane, into the market tariff-free would be cheaper and probably greener. But that, of course, is not on. Eventually, new crops such as switchgrass and new technologies that allow whole plants to be converted into ethanol, rather than just their sugar- or starch-rich parts, will change the equation by boosting yields. In the meantime, the truth about ethanol is murky.

Brazil ethanol production doesn't cause deforestation and turns the impact – solves warming and biodiversity decline

UNICA 9 - UNICA is a a partnership launched in January of 2008 between the Brazilian Sugarcane Industry Association and the Brazilian Export Promotion Agency, within the Federal Development, Industry and International Trade Ministry. The main objective of the partnership is to promote Brazilian sugarcane ethanol throughout the world as a clean, renewable energy source, 2009, ("Brazil's Sugar-Energy Industry Offers Realistic Solution to Mitigate Climate Change", UNICA, May 25th, 2009, available at http://english.unica.com.br/news/4112404592034358577O/brazil-por-centoE2-por-cento80-por-cento99s-sugar-energy-industry-offers-realistic-solution-to-mitigate-climate-change/ // date accessed 7/26/15 K.K)

Brazil's long-running, successful biofuels program is an example of how concrete results can be obtained in the effort to combat greenhouse gas emissions that threaten to worsen the effects of climate change. That was the key message brought to the World Business Forum in Copenhagen, on May 25th, by Brazilian Sugarcane Industry Association President Marcos Jank. In his speech, he detailed how Brazil's sugar-energy industry remains on a path of sustainable development, while offering a practical solution to avoid GHG that's available today and can be adopted by several countries around the world. "The sugar and energy industry is an example of how developing countries can generate both economic growth and benefit the health of the planet", he explained during a working group on Forestry and Terrestrial Carbon. "Several studies confirm that sugarcane ethanol reduces the GHG emission by 90% compared to gasoline. No other biofuel does that", stressed Jank. The fact that the increasing production of sugarcane ethanol does not impact food safety was another argument the president of UNICA used, outlining that only 1% of arable land in Brazil is occupied by cane intended for the production of ethanol. "The expansion of sugarcane plantations to meet the growing demand of ethanol does not cause deforestation in the Amazon or other sensitive biotopes. As much as 87% of the sugarcane production is located in the South-Central region of the country and the other 13% in the Northeast." The modernizing of the cattle industry has led to substantial quantities of land being freed for crops. "At the moment, the productivity of cattle raising has been 0.9 heads/ha, but the tendency is for that to increase to 1.4 heads/ha. By doing so, 70 million hectares could be freed for the expansion of crops, which would mean an area 20 times greater than the area currently used for the production of ethanol", foresees Jank. Indirect Land Use Change Currently, the potential of biofuels to reduce GHG emissions is being questioned because of possible indirect effects of the expansion of energy crops. The reasoning behind that argument is that expanding biofuels production would supposedly relocate other crops to more sensitive areas and through that cause greater carbon emissions into the atmosphere. Jank refutes the criticism arguing that the annual deforestation rate in Brazil has actually decreased since 2004, which covers the exact time period in which the cultivation of sugarcane has expanded in Brazil. "Although these types of arguments have awakened the interest of the scientific community, it should be recognized that it is not possible to determine the indirect effects of land use changes by considering only biofuels. Any human activity supposedly generates indirect effects", Jank stated, explaining that models focusing only on biofuels tend to draw false conclusions. "As the factors causing deforestation result from a complex set of combined elements, it takes ambitious public policy and awareness to address and eliminate deforestation." Jank pointed to the lack of formal land ownership titles as a cause for deforestation in Brazil, which is exacerbated by the illegal relocation of agriculture to

certain areas. The fragile legal system, poverty, an absence of environmental education, low value attributed to forestry products and the precarious governance structure of settlements in the Amazon are additional key background factors causing deforestation in the Rainforest. The president of UNICA called for establishing a consistent policy to combat deforestation, an initiative which the Brazilian sugar-energy sector strongly supports. He also recommended generating further value for the forests, considering, for example, carbon credits achieved through the preservation of forests. UNICA also encourages planned land use and stimulating the production and consumption of high-performance biofuels that have less of an impact on the use of land. Over 700 business leaders took part in the event, which was also attended by representatives of governments and international organizations, such as U.N. Secretary General Ban Ki-Moon, and former U.S. Vice President Al Gore. The CEO of BP, Tony Hayward, was also present, as well as high-level executives from Shell, who confirmed that biofuels are part of their alternative energy strategy.

1NC Nullification CP

Text

The fifty states should invoke their nullification power in order to

The counterplans assertion of state nullification power is an effective check on federal authority and is key to revitalizing decentralized federalism

Real Federalism Includes Taking Interposition and Nullification Seriously

Crucially **missing in this debate** is recognition of the importance of **States checking federal authority** so as to protect their constitutional autonomy and generally **maintain themselves as vibrant political entities rather than mere federal lackeys** (i.e., self-interested seekers of the Federal Government's largesse). Both authors miss these points. Greve's call for "national scale" makes this obvious, but he even explicitly denounces nullification in a separate essay on that topic. Moreover, Reinsch's refusal to advocate interposition and nullification is also telling. In the sections that follow, I will elucidate the following: (1) why Calhoun's doctrine of nullification is a constitutional means of preserving the States' local liberty; (2) **how the lack of nullification** and interposition **has damaged the States viability as independent political entities** that do not need federal largesse; and (3) some final thoughts about the importance of interposition and nullification as well as the need to dismiss ad hominem arguments against these doctrines.[1] I. Calhoun's Doctrine of Nullification as a Constitutional Means of Preserving the States' Local Liberty: Professor Adam Tate has argued that John C. Calhoun's advocacy of nullification was crucially focused on maintaining the American union in a manner that preserved the liberty of the States. Liberty here is a State's political autonomy to self-govern its internal affairs within the framework of reserved powers that it retains via the 1789 Constitution. Calhoun desired union, but he opposed its pursuit via unconstitutional conceptions of federal supremacy that inevitably tended toward the Federal Government usurping powers reserved by the States. He implied his vision for both union and local liberty (and his opposition to federal dominance within the union) in his famous toast at the Jefferson Day Dinner in 1830: "The Union, next to our liberty, most dear." Nullification, then, is not aimed at disunion; rather, it seeks to maintain a union of States that protects the liberty (i.e., the constitutional political autonomy) of each State via allowing a State to defend itself against federal encroachments. With respect to Calhoun's constitutional theory, it is important to realize that he viewed the people of each State as a sovereign entity (even after they had ratified the 1789 Constitution) and, hence, capable of (at a minimum) revoking the delegation of powers granted to the Federal Government.[2] Sovereignty includes having supreme, ultimate, and unified power and authority over the internal affairs of people within established territorial boundaries. This is the first and primary issue with respect to federalism, for it elucidates where ultimate authority resides when a dispute arises between a State and the Federal Government. If the people of each State retain sovereignty within its borders, despite delegating powers to the Federal Government via ratifying the Constitution (i.e., a State's sovereignty is something separate from the sovereign powers it delegates), then a State People can decide to revoke its delegation of powers (to the Federal Government) via secession. With respect to nullification, which is a specific and strong mode of interposition, Calhoun believed that the same State sovereignty issues applied, but nullification is aimed at maintaining union in a manner that appropriately recognizes a State to be the unit-of-sovereignty that has justifiable unilateral authority to determine whether a federal law is unconstitutional (unless and until a State's nullification is overruled through the Article V amendment process). Calhoun believed that each State People had this ultimate legal authority through their role as original parties to the Constitutional Compact.[3] It was the State People who gave the Constitution life via their ratification; as many of the Framers' maintained, the Philadelphia Convention merely proposed a new system of union, but it was the States who had the authority to make it fundamental law. Moreover, with respect to the Constitution and its amendments as a constitutional compact, since the State Peoples were original contracting parties (or equivalent in sovereign status to the State Peoples who were the historical contracting parties) and since no higher authority existed to determine whether the Constitution was being appropriately followed by the Federal Government (i.e., whether the Federal Government stays within the scope of its delegated powers), final judgment about whether or not a federal law was constitutional was left to each State People and not a department within the Federal Government (e.g. the federal judiciary) whose very life and authority is a creature-level product granted by creator-level State Peoples.[4] It is also important to note that Calhoun did not view nullification as an act that would make a law unconstitutional throughout the union; rather, the judgment by each State People would only apply within the boundaries of its own State. Furthermore, the judgment of each State People could be reversed via the other States passing a constitutional amendment that was contrary to the decision of the State People in question. If this occurred, a nullifying State People would have to either (1) abide by the new amendment; or (2) secede from the union.[5] Readers can further consider Calhoun's theory in my article on his Confederation thesis in the 2010 Political Science Reviewer. With respect to the constitutional appropriateness of the compact theory and its concomitant principles of

interposition, nullification, and secession, it is appropriate to elaborate on how these were part of the original constitutional tradition, rather than something merely concocted by Calhoun in response to the tariff crisis. First, there is important evidence suggesting that interposition was employed by the States in response to perceived unconstitutional enactments by the Confederation Congress (e.g., its acceptance of the Treaty of Paris of 1783).[6] Second, interposition and secession (and de facto nullification) were understood and endorsed during the ratification debate about the proposed Constitution. [7] Federalists, such as Madison and Hamilton for example, were noted voices for interposition as a means of checking hypothetical federal usurpations. Secession was considered and endorsed as being constitutional by many during the ratification period, and a State's right to secession ultimately became a de facto part of the Constitution via Congress's acceptance of the ratifications of New York, Virginia, and Rhode Island, that were all qualified with secession statements. As I have argued elsewhere, such qualifications to the original compact legally inserted recognition of secession as a State reserved power into the Constitution's terms. Although Calhoun's elaborate development of nullification doctrine was not explicitly recognized during the Founding, an almost de facto version of it was intended by Virginia's ratifying convention.[8] Moreover, as Reinsch shows in his above-mentioned first essay, Madison "pen[ed a letter] to Thomas Jefferson in the fall of 1787 that the state governments will stand ready in the case of violations of their reserved powers under the Constitution to retake said powers." Moreover, a third relevant consideration is the fact that Madison and Jefferson invoked (respectively) interposition and nullification during the Alien and Sedition Act crisis in 1798. Madison drafted the Virginia Resolution, and Jefferson anonymously authored the Kentucky Resolution. The Virginia Resolution was issued by the State's General Assembly, and it included the following language: That this Assembly doth explicitly and peremptorily declare, that it views the powers of the federal government, as resulting from the compact, to which the states are parties; as limited by the plain sense and intention of the instrument constituting the compact; as no further valid that they are authorized by the grants enumerated in that compact; and that in case of a deliberate, palpable, and dangerous exercise of other powers, not granted by the said compact, the states who are parties thereto, have the right, and are in duty bound, to interpose for arresting the progress of the evil, and for maintaining within their respective limits, the authorities, rights and liberties appertaining to them. Near the end of the document, the Virginia Resolution "declares" the federal laws in question (i.e., the Alien and Sedition Acts) "unconstitutional": the General Assembly doth solemenly appeal to the like dispositions of the other states, in confidence that they will concur with this commonwealth in declaring, as it does hereby declare, that the acts aforesaid, are unconstitutional; and that the necessary and proper measures will be taken by each, for co-operating with this state, in maintaining the Authorities, Rights, and Liberties, referred to the States respectively, or to the people. This has been considered an example of interposition (i.e., a State protesting and/or combating a federal law it deems to be unconstitutional without affecting its applicability and enforcement within the State), but Jefferson's Kentucky Resolution goes even further by suggesting that the States can nullify a federal law: That the several states who formed that instrument, being sovereign and independent, have the unquestionable right to judge of its infraction; and that a nullification, by those sovereignties, of all unauthorized acts done under colour of that instrument, is the rightful remedy: That this commonwealth does upon the most deliberate reconsideration declare, that the said alien and sedition laws, are in their opinion, palpable violations of the said constitution; and however cheerfully it may be disposed to surrender its opinion to a majority of its sister states in matters of ordinary or doubtful policy; yet, in momentous regulations like the present, which so vitally wound the best rights of the citizen, it would consider a silent acquiescence as highly criminal: That although this commonwealth as a party to the federal compact; will bow to the laws of the Union, yet it does at the same time declare, that it will not now, nor ever hereafter, cease to oppose in a constitutional manner, every attempt from what quarter soever offered, to violate that compact: AND FINALLY, in order that no pretexts or arguments may be drawn from a supposed acquiescence on the part of this commonwealth in the constitutionality of those laws, and be thereby used as precedents for similar future violations of federal compact; this commonwealth does now enter against them, its SOLEMN PROTEST. Without considering the implications of the Kentucky Resolution's "nullification" language (i.e., whether it was also a mere act of interposition that took the added step of recognizing the legitimacy of nullification), it is sufficient for our purposes to merely note that Jefferson and Madison employed State interposition and (in Jefferson's case) the notion of nullification that had been part of a standing constitutional tradition, which dated back to at least 1783 when new States interposed, to some degree, to protest Congress exceeding its authority in authorizing the Treaty of Paris. This tradition was also alive and well during the 1787–89 ratification debate.[9] Fourth, interposition was invoked by New England politicians during the War of 1812 in protest to the federal embargo and, then, its call for conscription. In response to the latter, Daniel Webster, the future nationalist opponent of all things states' rights, argued: It will be the solemn duty of the State Governments to protect their own authority over their own militia, and to interpose between their citizens and arbitrary power. These are among the objects for which the State Governments exist; and their highest obligations bind them to the preservation of their own rights and the liberties of the people.[10] As Forrest McDonald elucidates, the Hartford Convention took a more moderate course than what was originally expected when it "adopted a resolution endorsing interposition and proposed a number of constitutional amendments to meet New England's persistent complaints."[11] Fifth and finally, de facto nullification and interposition was practiced and called for in Northern States during the antebellum period to mitigate undesirable effects of federal fugitive slave laws. Wisconsin, for example, practiced nullification via its State judiciary by repeatedly thwarting the incarceration of Sherman Booth for violating the Fugitive Slave Act via him "aiding in the rescue of a runaway slave from a federal marshall" After his arrest, "Booth requested a writ of habeas corpus from a judge of the Wisconsin supreme court, who granted the writ on the ground that the federal act was unconstitutional." Although the United States Supreme Court ordered reincarceration, the State supreme court released Booth again. This chain repeated itself from 1855 until the beginning of Civil War.[12] Here it is also worth noting how future anti-states' rights, pro-union Republicans found their states rights' mojo when arguing against attempts to expand the federal judiciary's jurisdiction in various cases related to federal officers who enforced the Fugitive Slave Act. Benjamin Wade, for example, said: "I am no advocate for Nullification, but in the nature of things, according to the true interpretation of our institutions, a State, in the last resort, crowded to the wall by the General Government seeking by the strong arm of its power to take away the rights of the State, is to judge of whether she shall stand on her reserved rights."[13] This broad swath of constitutional history suggests that Calhoun was systematically developing upon a well-established, constitutionally-grounded tradition of interposition and nullification. Arguably, he developed the most constitutionally-grounded mode of these doctrines in his Discourse on the Constitution and Government of the United States via demonstrating exactly how nullification should be understood according the text of the Constitution as a whole. Moreover, his argument that the people of a State (i.e., the authorities that ratified the Constitution and, hence, gave the Federal Government its delegated powers) should form nullification conventions that represented the State People in its sovereign capacity (i.e., the same institutional arrangement that State Peoples employed to ratify the Constitution) was more constitutionally persuasive than previous articulations of, and attempts at, interposition and nullification. Additionally, one should also note that there is no way to avoid either the Federal Government or a State People being the judge of its own cause in boundary disputes about the scope and limits of federal

delegated powers and a State's reserved powers. The conventionally accepted solution for federalism disputes (i.e., providing one or more departments in the Federal Government—e.g., the Supreme Court or Congress—with the authority to resolve such disputes) will (and has) result(ed) in the Federal Government winning most of these contests. Whereas, viewing each State as the ultimate authority in federalism disputes would likely **shift this bias in favor of the States**. Although bias, then, is inevitable, State nullification (rather than, for example, federal judicial supremacy) is still appropriate because it is grounded in a more sound understanding of the nature of the Constitution as a compact among States possessing the same sovereign status as those original States who were party to the Constitution's formation. **Accepting the authority of a State, as a final unilateral arbiter for judging the constitutionality of federal laws within their own boundaries**, is a far more intellectually intuitive solution than assigning this function to the federal judiciary, which is a mere creature-level institution whose powers are wholly derivative from what has been delegated to it by the States and whose historical performance has entailed prejudicially defending the questionable expansion of the Federal Government's very limited delegated powers. II. The Lack of Nullification and Interposition Has Damaged the States Viability as Political Entities That Do Not Need Federal Largesse: The general problem that both Greve and Reinsch identify, the travesty system of "cartel federalism" (i.e., States compete with one another to obtain federal revenue to fund programs and conduct operations that they could not afford independently), probably would not have arisen if Calhoun's confederation thesis, which allowed for nullification (and, hence, interposition), had been further incorporated and maintained within the constitutional system. Reincsh (in concession to Greve) complains, for example, about the States not challenging FDR's New Deal and their willingness to act as irresponsible political actors in search of federal funding. But there are straightforward explanations for why such undesirable characteristics have arisen. First, States were empowered more by the New Deal Court's willingness to defer to their regulations via the Court's presumption of the constitutionality of State regulations. As Randy Barnett shows, such deference to the State laws began with West Coast Hotel v. Parish (1937).[14] This was a remarkable turn from the pre-New Deal Court's willingness to strike down the States' attempts to regulate business and industry within their own borders. Although the pre-New Deal Court's record on federalism is mixed, for it both defended the States' reserved power as well as allowed federal usurpation, the Court of the late nineteenth century (from the late 1880s forward) and early twentieth century functioned with a pro-nationalist industry bent.[15] When State reserved powers were supportive of industry and commerce, the Court protected them from federal regulation; United States v. E.C. Knight and Hammer v. Dagenhart are good examples. When States regulated and, hence, impeded industry and commerce, the Court was less hospital to their constitutionally retained powers; examples of this are legion—e.g., Santa Clara County v. Southern Pacific Railroad Company, Wabash, St. Louis & Pacific Railroad Co. v. Illinois, Smyth v. Ames, and Lochner v. New York. Second, in a desperate move to challenge plutocracy that dominated the political system during the late nineteenth and early twentieth centuries, the imprudent doctrines of Populism and, then, Progressivism finally gained the upper hand in national politics. This prompted events such as the passage of the Sixteenth and Seventeenth Amendments, which ultimately weakened the States' political autonomy by removing their diplomatic checks on federal legislation and ultimately creating a low ceiling on the degree that the States could raise revenue by taxing their citizens. Such constitutional changes contributed significantly to the States becoming federal clients who seek to manipulate the disbursement of federal revenue. Without Senators who were beholden to State legislatures, they were now unhinged to directly appeal to the uninformed majorities in their States, which easily co-opted to support nationalist pet-policies rather than serious issues that affected their States' autonomy. With the creation of the income tax, the Federal Government seriously limited the States' ability to raise revenue; hence, they ultimately became dependent upon federal grant-in-aid, block grants, etc. As income taxes eventually have increased to significant levels, States were (and are) limited in how much they could (and can) collect in taxes from their citizens because, beyond a certain total tax-level threshold, people will seriously consider relocating to other States with lower taxes. It is important to ascertain the causal connection between these and the lack of interposition and nullification that had been effectively purged from the federal system via the Federal Government's triumph in the Civil War, which derailed the efficacy and acceptability of the historically correct compact theory of union. If nullification had still been viable after the Civil War, States could have (and many would have) defended themselves from Congressional and Court imposed dominance of nationalist business interests. In such an alternative historical reality, States could have better maintained their hold on regulating businesses that were operating within their borders, as well as protecting internal labor interests. This, in turn, would have allowed farmers, workers, and other such groups to lobby for appropriate State laws and policies, rather than making them feel compelled to compete for reform at the federal level in a manner that ultimately resulted in the rise of Populism and, later, Progressivism. Furthermore, it is important to see how Madison's Federalist #10 extended-republic-solution-to-majority-factions was not able to preclude various majority-faction crises, some of which resulted in weakening the States. As Adam Tate has observed, Madison's Federalist 10 solution has often failed to protect the liberty of minority entities (e.g., one or more States with contrary interests to a larger group of States), and Calhoun saw this. Madison thought that the difficulties entailed in forming national majorities, given the "multiplicity and diversity of interests," would largely preclude the formation and empowerment of majority factions. The history of the United States, however, has demonstrated that this is often not the case; instead, Madison's Federalist 10, extended-republic scheme has not protected minorities from national majorities imposing unconstitutional federal policies that illegally transgressed upon such minority interests. Moreover, some of these cases, especially during and after the Civil War, resulted in the States becoming weaker entities. During the Antebellum period, Madison's Federalist 10 solution did not preclude the formation of majority factions that unconstitutionally harmed minorities—i.e., a lone State or a minority section of States, but these tended not to significantly impair the overall strength of States as independent political entities. Interestingly, these instances coincided with a period in which nullification was still viable. Clyde Wilson argues that the imposition of the protective tariff was unconstitutional. The protective tariff sacrificed the Southern Atlantic States (i.e., a minority in the federal union) to the majority interests of the Northeastern and Western States; albeit, South Carolina's nullification showdown with President Andrew Jackson significantly contributed to resolving this problem in a manner that ultimately reduced the tariff to acceptable levels. The Civil War and Postbellum periods, however, severely damaged the viability of nullification, and this coincided with cases where States became weaker political entities as a result of majority-faction crises. When the Northern States developed an anti-slavery majority faction (i.e., the Republican Party) against the Southern States and were able to begin dominating the Federal Government, the Southern States sensed that

their liberty within the union would become increasingly compromised; thus, many elected to protect their liberty by seceding. Such Southern-State resistance through secession had severe consequences for this sectional minority in terms of its States' viability as independent political entities. In fact, the Southern States were reduced to economically impoverished (and, for a time, politically powerless and dependent) entities once the final conflict, due to their resistance, had passed. Another notable instance of a Postbellum majority-faction crisis that weakened the States occurred when the liberal progressive majority became dominant and both imposed crippling (and unconstitutional) regulations on businesses and significantly encroached upon constitutional State-powers via the New Deal. Here, again, nullification was not an option for dissenting States, and here again States ultimately became weaker, less independent entities as a result. This weakening of the States, however, was not just limited to a sectional minority like it had been for the South after the Civil War; it plagued all of the States. In these Postbellum cases, federal supremacy was used to enforce federal laws that were a boon to the majority faction coalition and a bane to the minorities who suffered under such legislation.[16] Moreover, such examples entailed questionable expansions of federal powers beyond their delegated limits for the sake of advancing the interests of the majority de jour. Finally, these examples illustrate the history of States becoming vulnerable to national majorities during a time in which they ultimately lost their vibrant autonomous status and, hence, had to begin acting as federal clients. Aside from the constitutional argument for nullification, acceptance of Calhoun's theory—especially his notion of concurrent majorities—would have greatly aided the ability of minorities to protect themselves against the factional policy of the various ruling coalitions. South Carolina's nullification of the protective tariff had already prompted Congress to enact legislation in order to reduce the tariff from levels that had threatened Southern economic interests. Nullification could have continued this function within the federal union if its acceptability had persisted into the late nineteenth and, then, twentieth centuries. Think, for example, how it might have been used to protect the States where the Grange movement had gained prominence. Think about how States could have challenged questionable Court doctrines like the personal status of corporations. On the other hand, imagine how the prudent States could have used nullification to challenge FDR's New Deal regulations upon industries operating within their borders. Reinsch's failure to see the effectiveness of interposition and nullification is somewhat remarkable given his awareness (seen in Part I of his above mentioned federalism essay) of Madison's position that the "people, not as composing one entire nation, but as composing distinct and independent states to which they respective belong" was the ultimate ratifying authority and that the State governments of these State Peoples could reclaim "said [delegated] powers" within the constitutional system. Reinsch recognizes Madison's position on these issues within the following passages: But listen to Madison in Federalist 39 on the states and the foundation of the new government: "the constitution is to be founded on the assent and ratification of the people of America, given by deputies elected for the special purpose; but on the other, that this assent and ratification is to be given by the people, not as individuals composing one entire nation, but as composing the distinct and independent states to which they respectively belong. It is to be the assent and ratification of the several states, derived from the supreme authority in each state . . . the authority of the people themselves. The act, therefore, establishing the constitution, will not be a national, but a federal act." Now join Madison's argument here in Federalist 39 with a letter he pens to Thomas Jefferson in the fall of 1787 that the state governments will stand ready in the case of violations of their reserved powers under the Constitution to retake said powers. Madison said something remarkably similar in Federalist 44 that should one or more branches of the national government use power beyond constitutional bounds, the state legislatures will mark the violation. The states will "sound the alarm to the people," Madison says. As the presentation of Calhoun's theory above suggests, the sovereign nature of each State Peoples is the ultimate basis of the constitutionality of secession, interposition, and nullification. But it was not just Calhoun who understood the importance of interposition and nullification doctrines: (1) the States had interposed against the Confederation Congress; (2) interposition, nullification, and secession had been considered a solution to Federal usurpation during the Founding period; (3) Jefferson and Madison were employing, respectively, nullification and interposition in response to the Alien and Sedition Acts; (4) interposition was invoked by New England politicians during the War of 1812; and (5) nullification and interposition were employed and invoked in reaction to the federal Fugitive Slave Act. Reinsch is fairly close to the compact theory, but Greve is a devout defender of nationalist-oriented capitalism that is a hallmark of neoconservatives and nationalist libertarians, etc. Those cohorts will not recognize the constitutional principles of States' rights until all hope is lost about controlling the center in order to implement their ideologies. Well-funded representatives of these groups currently operate in the cat-bird's seat—i.e., District of Columbia based think-tanks—where their ideologies can be advanced through access to and influence upon centralized power; thus, any decrease in central control would be a bane upon their current opportunity to shape public policy for the federal union as a whole. In addition to the essays and books cited within the above mentioned exchange with Reinsch, Greve has co-authored a book with Richard Epstein about federal preemption of the States' regulation of commerce. Greve has also advocated the Court vigorously defending a "'commercial Constitution'" aimed at advancing industry and commerce, and he has lambasted nomocratic justices like Scalia and Thomas for allowing their originalism to get in the way of this telocratic vision. While I tend to agree with Greve about the imprudent regulation of business, I cannot condone his willingness to practice ideological constitutionalism that sacrifices the Constitution's Rule of Law. III. Conclusion: Final Thoughts About the Importance of Interposition Nullification, and the Need to Avoid Bad Arguments Against These Doctrines The above point about well positioned nationalist groups seeking to control federal public policy calls for further reflection about the two main reasons why interposition and nullification are often disparaged by elites and "respectable" citizens: (1) these doctrines are a significant threat to unconstitutional centralization that has taken root during the past 150+ years (especially during the twentieth century); (2) nullification and interposition are frequently associated with their past advocates who have had problematic racial positions (e.g., John C. Calhoun's strong endorsement of slavery and, then, mid-twentieth century Southern State opposition to federal intervention against their segregation policies). These two reasons often operate as a vicious tag-team: elites who are interested in maintaining centralized control to advance their ideologies will scare "respectable" citizens into rejecting interposition and nullification by emphasizing instances where these doctrines have been associated with racism (and by ignoring the instances where the doctrines were employed to combat slavery, unfair economic policy, and unconstitutional war policy). Given the force of such opposition, the future of interposition and nullification is (in the short-term) in for some rough sledding. Nevertheless, honest, non-racist advocates of these doctrines can effectively begin to counter such bad propaganda by revealing its obvious absurdity–i.e., holding a good constitutional position hostage due to its past associations. Interposition and nullification in and of themselves are not racist. They were used by Northern States during the Antebellum period to avoid enforcement of undesirable federal fugitive slave laws. They were used by the New England States in 1814 to avoid unconstitutional federal policies during the War of 1812. They were used by Jefferson and Madison to protest unconstitutional violations of the First Amendment in the Alien and Sedition Acts. Thus, there is simply no moral problem with taking these doctrines seriously in our own day. Furthermore, it is also quite silly to discount John C. Calhoun's brilliant constitutional development of interposition and nullification doctrines because he also held problematic views concerning slavery. Doing so would entail committing the ad hominem logical fallacy of undermining an argument by attacking the person who makes the

argument, rather than focusing on the merits of the argument independently. Calhoun's legal analysis regarding the Constitution merits independent evaluation even if, for the sake of argument, his critics are correct that his problematic views on slavery motivated the development of his constitutional analysis. Even if scientists working to operationalize nuclear fission during the Second World War were motivated by a need to create a nuclear bomb that would annihilate an entire city population, this does not mean that the facts about atomic physics, which they discover, should be discounted as inherently evil. The scientific facts and truths discovered stand on their own merits, regardless of the motivations that prompted their development. Since the rationale and conclusions of the latter case can be and are widely accepted, logic demands the same treatment for the former case—i.e., recognizing the independent merit of Calhoun's constitutional analysis. In our America where vast portions of federal policy is technically illegal because it involves the Federal Government exceeding its constitutionally delegated powers, State interposition and nullification may be the only way to arrest such federal usurpation. Without these States' rights doctrines, Americans and their States will be virtually powerless as establishment elites continue to invent new creative case law and false constitutional theories that justify the amassing of even more power at the federal level. Without such doctrines of resistance, the current electoral status quo will persist; citizens will continue having to choose between two political parties that are both aimed at maintaining a Congress and President who often support (and definitely do not seriously seek to roll-back) central-level aggrandizement. These considerations (and conclusions from the above analysis) are why real **federalism demands taking** interposition and **nullification seriously**. The most plausible path for returning to true constitutional federalism, or even just preserving our current status quo, is through the States defending their reserved powers and the constitutional rights of their citizens by voiding unconstitutional federal laws within their borders. If such a practice became widespread and accepted, **the Federal Government would quickly scale back its reach for new powers**, if not even begin to return its current power-holdings back to those parties with rightful legal claims to them.

American federalism is modeled globally.

The **U**nited **S**tates has been both an importer and an exporter of constitutional structure since at least the Federal Convention in 1787, at which the Framers considered a variety of foreign constitutional models, including both contemporary and ancient, when fashioning the Constitution.' Although Great Britain's unwritten constitution pro- vided the most obvious template, it was by no means the only available model.2 By 1787, most states had extensive experience with constitu- tional design.3 The adoption of the Declaration of Independence in 1776 led to a spate of new constitution-making at the state level, as the newly independent former colonies felt it necessary to establish new constitutions for their independent republics.4 The Articles of Confed- eration, drafted in 1776-1777, ratified in 1781, and now largely forgot- ten, also served as the first blueprint for federal governance.5 Thus, as Professor Paul (Harrington correctly states, "[w]hile the idea of a written constitution enforced by national courts was an American novelty, it was less novel than many may suppose."6 Of course, the Framers did not completely abandon the British model of constitutional structure.7 Congress, a bicameral institution, is loosely modeled on the British Parliament, which was—and still is— comprised of two chambers, the House of Commons and the House of Lords.8 Although the manner of selection and underlying purposes differ, the adoption of a bicameral legislature plainly reflects an hom- age to the British model.9 Similarly, specific provisions of the U.S. Con- stitution reflect longstanding British constitutional practices such as the Speech and Debate Clause10 and the Jury Trial Clause." To be sure, the Framers departed from the British model and did so in significant ways.12 The Framers' major structural innovations in- clude a written constitution (as opposed to the unwritten, or only par- tially written, British Constitution), a judiciary vested with the power to review legislative and executive acts for consistency with the Constitu- tion, **federalism featuring shared sovereignty between the states and the national government**, and the separation of powers between the legisla- tive, executive, and judicial branches of government.13 To this list one could add, by way of amendments quickly adopted by the first Congress and ratified by the states shortly thereafter, a written Bill of Rights.14 Most of these innovations in constitutional design have become commonplace; when other nations turn to the task of drafting a new constitution, the resulting product more often than not includes one or more of these elements.15 The Spanish Constitution, for example, adopted a federalist principle in order to overcome persistent difficul- ties with the status of Catalunya and the Basque Region.16 The South African (Constitution vests the judiciary with a power of judicial review and a duty to enforce entrenched human rights against the more de-mocratically accountable branches of government.17 Moreover, even common law jurisdictions that long maintained the principle of par-liamentary supremacy have moved closer to the U.S. model of en- trenched, judicially enforceable human rights.18 Canada, for example, adopted its (Charter of Rights and Freedoms in 1982, and vested the Canadian judiciary with a qualified power of judicial review.19 Even in the United Kingdom itself, adoption of the Human Rights Act of 1998 reflects a decision to adopt a junior varsity version of the U.S. model of entrenched, judicially enforceable human rights.20 Thus, the U.S. Constitution has provided a persuasive model for

other nations engaged in the task of writing a constitution. Judicial re- view and entrenched human rights are, if not a universal aspect of con- stitutions adopted after World War II, quite nearly so.21 As Robert Badinter, former President of the French Conseil Constituuonnel, and Associate Justice of the U.S. Supreme (Court Stephen Breyer have apdy observed, "[t]oday almost all Western democracies have come to be- lieve that independent judiciaries can help to protect fundamental human rights through judicial interpretation and application of written documents containing guarantees of individual freedom."22 Thus, the U.S. constitutional model has proven to be a very successful legal export in many important respects.23 In two significant respects, however, the U.S. template has not garnered many takers: separation of legisla- tive and executive powers, and strict judicial definition and enforce- ment of the boundaries between legislative and executive power.24

Prevents global violence and wars-best studies

Lawoti-prof poli sci, Western Michgian-9- Professor of Political Science at Western Michigan University (Mahendra, "Federalism for Nepal", Telegraph Nepal, 3/18, http://www.telegraphnepal.com/backup/telegraph/news_det.php?news_id=5041)//MC

Cross-national studies covering over 100 countries have shown that federalism minimizes violent conflicts whereas unitary structures are more apt to exacerbate ethnic conflicts. Frank S. Cohen (1997) analyzed ethnic conflicts and inter-governmental organizations over nine 5-year —periods (1945-1948 and 1985-1989) among 223 ethnic groups in 100 countries. He found that federalism generates increases in the incidence of protests (low-level ethnic conflicts) but stifles the development of rebellions (high-level conflicts). Increased access to institutional power provided by federalism leads to more low-level conflicts because local groups mobilize at the regional level to make demands on the regional governments. The perceptions that conflicts occur in federal structure is not entirely incorrect. But the conflicts are low-level and manageable ones. Often, these are desirable conflicts because they are expressions of disadvantaged groups and people for equality and justice, and part of a process that consolidates democracy. In addition, they also let off steam so that the protests do not turn into rebellions. As the demands at the regional levels are addressed, frustrations do not build up. It checks abrupt and severe outburst. **That is why high levels of conflicts are found less in federal countries**. On the other hand, Cohen found high levels of conflicts in unitary structures and centralized politics. According to Cohen (1997:624): Federalism moderates politics by expanding the opportunity for victory. The increase in opportunities for political gain comes from the fragmentation/dispersion of policy-making power… the compartmentalizing character of federalism also assures cultural distinctiveness by offering dissatisfied ethnic minorities proximity to public affairs. Such close contact provides a feeling of both control and security that an ethnic group gains regarding its own affairs. In general, such institutional proximity expands the opportunities for political participation, socialization, and consequently, democratic consolidation. Saidmeman, Lanoue, Campenini, and Stanton's (2002: 118) findings also support Cohen's analysis that federalism influences peace and violent dissent differently. They used Minority at Risk Phase III dataset and investigated 1264 ethnic groups. According to Saideman et al. (2002:118-120): Federalism **reduces the level of ethnic violence.** In a federal structure, groups at the local level can influence many of the issues that matter dearly to them- education, law enforcement, and the like. Moreover, federal arrangements reduce the chances that any group will realize its greatest nightmare: having its culture, political and educational institutions destroyed by a hostile national majority. **These broad empirical studies support** the earlier **claims** of Lijphart, Gurr, and Horowitz **that power sharing and autonomy** granting institutions **can foster peaceful accommodation and prevent violent conflicts among different groups in culturally plural societies**. Lijphart (1977:88), in his award winning book Democracy in Plural Societies, argues that "Clear boundaries between the segments of a plural society have the advantage of limiting mutual contacts and consequently of limiting the chances of ever-present potential antagonisms to erupt into actual hostility". This is not to argue for isolated or closed polities, which is almost impossible in a progressively globalizing world. The case is that when quite distinct and self-differentiating cultures come into contact, antagonism between them may increase. Compared to federal structure, unitary structure may bring distinct cultural groups into intense contact more rapidly because more group members may stay within their regions of traditional settlements under federal arrangements whereas unitary structure may foster population movement. Federalism reduces conflicts because it provides autonomy to groups. Disputants within federal structures or any mechanisms that provide autonomy are better able to work out agreements on more specific issues that surface repeatedly in the programs of communal movement (Gurr 1993:298-299). Autonomy agreements have helped dampen rebellions by Basques in Spain, the Moros in the Philippines, the Miskitos in Nicaragua, the people of Bangladesh's Chittagong Hill Tracts and the affairs of Ethiopia, among others (Gurr 1993:3190) The Indian experiences are also illustrative. Ghosh (1998) argues that India state manged many its violent ethnic conflicts by creating new states (Such as Andhra Pradesh, Gujurat, Punjab, Harayana, Arunachal Pradesh, Goa, Himachal Pradesh, Meghalaya, Mizoram and Nagaland) and autonomous councils (Such as Darjeeling Gorkha Hill Council, Bodoland Autonomous Council, and Jharkhand Area autonomous Council, Leh Autonomous Hill Development Council). The basic idea, according to Ghosh (1998:61), was to devolve powers to make the ethnic/linguistic groups feel that their identity was being respected by the state. By providing autonomy, federalism also undermines militant appeals. Because effective autonomy provides resources and institutions through which groups can make significant progress toward their objectives, many ethnic activities and supporters of ethnic movements are engaged through such arrangements. Thus it builds long-term support for peaceful solutions and undermines appeals to militant action (Gurr 1993:303). Policies of regional devolution in France, Spain and Italy, on the other hand, demonstrate that establishing self-managing autonomous regions can be politically and economically less burdensome for central states than keeping resistant peoples in line by force: autonomy arrangements have transformed destructive conflicts in these societies into positive interregional competition". Federalism for Nepal Federalism is essential in plural countries like

Nepal because it provides cultural autonomy to different cultural groups within a country. By allowing ethnic groups to govern themselves in cultural and developmental matters, it lessens their conflicts with the central state. Many of the conflicts of the identity movements are in cultural issues like religion, language, education and so on. Once regional governments are established, either the contesting parties from their own governments at the regional level, and decides in those matters, and/or influence the outcome because their proportional presence at the regional level is more than in the national level. Thus, many ethnic and linguistic groups can effectively put more pressure to the regional governments. Under unitary system, numerous regionally concentrated groups have not been able to put pressure on the central government because their population and voice are small at the central context. Even if they are not, their nature will become different. Some of the conflicts will be regionally focussed. Hence, many of the conflicts will **decrease in intensity** and strength at the central level. The bureaucracy will also increasingly reflect the regional composition because the regional governments would hire local people in the administration. Bureaucrats with knowledge of local languages and specific local problems will be able to provide relatively more efficient administration. This will also reduce conflicts. Inclusion of more ethnic members into regional politics and administration will ensure more public politics directed toward regional needs, instead of irrelevant policies directed by the center. This will contribute to reducing conflicts arising out of mal-distribution of resources. If minorities want some form of autonomy to protect and promote their culture, develop their people and regions, and self-determine their future, they are likely to struggle for it unless some autonomy is provided. The struggle might take different form in different periods due to varying circumstances. Even if unfavorable circumstances may lead to non-actions during some periods, favorable conditions for mobilizations in other periods may lead to more activities, perhaps in violent ways. The growth of ethnic movements in Nepal after 1990 is an example. Thus, to address the conflicts arising out of issues of identity and cultural rights that are inherent human aspirations, autonomy is essential. Granting of federalism would in all likelihood bring an end to ethnic insurgencies like the Khambuwan Mukti Morcha because it meets their major demand. It will also prevent the possibilities of other ethnic insurgencies with demand for federalism. Territorial federalism can work for the benefit of large ethnic groups concentrated regionally but may not be able to address problems of the numerous low populated ethnic groups or groups that are not concentrated because they may not form majorities anywhere. For these groups, non-territorial federalism, as in Belgium, Austria etc. may address their needs. In non-territorial federalism, members of ethnic groups have rights to decide about their culture, education, language and so on by electing councils who have jurisdiction over cultural, social and developmental realms. The problems of the dalit and small ethnic groups can be addressed through non-territorial federalism. Federalism and its critics in Nepal The dominant group in Nepal often argues against federalism by raising the fear of secession. I have argued elsewhere that this fear is misplaced. In demanding only a few of the rights that mainly deal with cultural and social issues, the minority groups acknowledge that advantages of staying within the existing nation-state. On the other hand, devolution helps to avert separatism because granting of devolution meets substantial demand of the minorities. However, power has to be devolved in ways that make the state and minorities perceive benefit form it. Large numbers of ethnic groups with small population further minimize the secessionist possibilities in Nepal, if any. The lack of resources and difficult topography of settlement in may cases make the creation and sustenance of smaller independent nations difficult, more so when the groups are in a state of under development. On the other hand, experience elsewhere demonstrates that **absence of autonomy may lead to secessionist movements.** Federalism was considered "slippery" in the 60s in Sri Lanka when the Tamils demanded autonomy. Today, autonomy does not satisfy the demands of the movement that arouse out of its denial (Stepan 1999). Hence **federalism**, in fact, **may contribute in keeping a country together by satisfying communities have power over themselves, there is less need to secede**; hence, a federal structure can keep different communities united within a nation-state framework. **Where cultural autonomy has not been provided, many countries have seceded or are undergoing civil war or violent ethnic conflicts**. Many in Nepal ignorantly argue that a small country like Nepal does not need a federal structure. However, federal countries like Belgium, Switzerland, Israel, Papua New Guinea, Holland and Austria have less population than Nepal. This belies the widespread fallacy that 'small' country like Nepal does not require federalism. The difficult geographic terrain and the problems of transportation and communication, on the other hand, make Nepal effectively larger than its area and population indicates. The perception that Nepal is a small country is due to its sandwiched position between the world's two most populous countries. In terms of real and effective population, geography and cultural diversity, Nepal is not a small country. In fact, it is the 40th populous country among 227 countries in the world as of 2002 (US Census Bureau 2002). Federalism in not only in the interests if the marginalized groups, however. It is also in the interests of the dominant community because it lessens the underlying reasons for conflicts. Conflicts are more costly to the privilege sections of the society; hence as a toll for lessening the conflicts, federalism can serve the interests of the dominant community as well. Excerpts from the book "Nepal Tomorrow: Voices and visions" edited by D.B. Gurung.

2NC CP Legitimate

---The issue of nullification is intrinsic to the topic-the question of how to best curtail federal authority cannot leave out the counterplan

Woods 10

Nullification : how to resist Federal tyranny in the 21st century Google Books
Thomas E. "Tom" Woods, Jr. is an American historian, political analyst, and author. Woods is a New York Times best-selling author and has published eleven books

It is not clear what the alternative to Jefferson's remedy of nullification might be. Unconstitutional laws have indeed been passed, in very great abundance, so the question he poses about what to do in such a situation **is not merely academic**. Should people gather petitions, asking those who drafted the objection- able law to change their minds? Good luck with that They could instead appeal to the courts. Although it would be nice if the courts were to grant us relief, what if they do not? The federal courts have, for all intents and purposes, ceased to police the federal government. We cannot be expected to believe that the matter is settled, and an odious law to be complied with merely because a handful of politically well-connected lawyers whom we are urged to treat with superstitious awe have solemnly informed us that all is well. It is not difficult to find support in history for the general principle that an unconstitutional law is void. Alexander Hlamilton contended in Federalist #78 that "there is no position which depends on clearer principles, than that every act of a delegated authority contrary to the tenor of the commission under which it is exercised, is void. No legislative act, therefore, contrary to the constitution, can be valid, lb deny this, would be to affirm that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to the people themselves; that men, acting by virtue of powers, may do not only what their powers do not authorize, but what they forbid." This principle should be beyond debate. The controversy arises when we consider how and by whom an unconstitutional law should be declared void (and thus not enforced). It was Hamilton's view that the courts would put things right. But what if they didn't? And since the federal courts are themselves a branch of the federal government, how can the people be expected to consider them impartial arbiters? The Supreme Court itself, after all, although usually pointed to as the monopolistic and infallible judge of the constitutionality of the federal government's actions, is itself a branch of the federal government **So in a dispute between the states and the federal government, the resolution is to come from...the federal government**? Jefferson refused to accept that answer. Under that arrangement, the states would inexorably be eclipsed by the federal government. It was impossible for Jefferson to believe that the states would have agreed to a system that assured their unjust subordination. Spencer Roane, a Virginia judge who would have been appointed Chief Justice of the United States by Thomas Jeffer- son had John Adams not chosen John Marshall in the waning hours of his presidency, noted that if the federal judiciary were to arbitrate such a dispute between itself and the states, it would be presiding over its own case, a clear absurdity: It lias, however, been supposed by some that... the right of the State governments to protest against, or to resist encroachments on their authority is taken away, and transferred to the Federal judiciary, whose power extends to all cases arising under the Constitution; that the Supreme Court is the umpire to decide between the States on the one side, and the United States on the other, in all questions touching the constitutionality of laws, or **acts of the Executive**. There are many cases which can never be brought before that tribunal, and I do humbly conceive that the States never could have committed an act of such egregious lolly as to agree thai their umpire should he altogether appointed and paid by the other party. The Supreme Court may be a perfectly impartial tribunal to decide between two States, but cannot be considered in that point of view when the contest lies between the United States and one of its members—The Supreme Court is but a department of the general government. A department is not competent to do that to which the whole government is inadequate____They cannot do it unless we tread underfoot the principle which forbids a party to decide Ins own cause. Joseph Desha, governor of Kentucky, identified the very same problem in 182>: When the general government encroaches upon the rights of the State, is it a safe principle to admit that a portion of the encroaching power shall have the right to determine finally whether an encroachment has been made or not? in fact, most of the encroachments made by the general gov- ernment flow through the Supreme Court itself, the very tri- bunal which claims to be the final arbiter of all such disputes. What chance for justice have the States when the usurpers of their rights are made their judges? Just as much as individuals when judged by their oppressors. Desha concluded that it is "believed to be the right, as it may hereafter become the duty of the State governments, to protect themselves from encroachments, and their citizens from oppres- sion, by refusing obedience" to "unconstitutional mandates/ Once we accept the underlying premise that an unconstitu- tional law is ipso facto void, it is not a long way to Jefferson's commonsense conclusion that someone ought to protect the people from the enforcement of such a law, and that the state governments, each one speaking only for itself, arc the logical choice to do so.9

---<u>Counter-interpretation. Domestic Actor Model</u>. Fiat should be limited to domestic political actors in the United States. Debate is best understood as an adjunct to democratic decision making. This explains why we always select topics where we have at least some fractional impact on. This provides a fair limit on negative fiat as state or local action as an alternative to federal action is a recurrent issue in American politics.

---<u>Search for best policy justifies</u>. Net benefits checks abuse and is a warrant for voting negative. No rational decision-maker would reject the counterplan if it is a superior policy option to the affirmative.

---<u>Reciprocity isn't an argument</u>. First, the states are treated as a collective in the literature comparing state versus federal action. This checks against their infinite regression impact and proves the counterplan is reciprocal. Second, numerical standard is flawed since one state is clearly not equal to the federal government.

---<u>Solvency advocate isn't an argument</u>. First, all of our solvency evidence for the counterplan is a solvency advocate. Their interpretation is arbitrary. Second, At best this is a solvency argument.

---<u>Advocacy skills</u>---being forced to defend the federal government as the best actor teaches the aff how to defend their policy choice from all angles and encourages through research before deciding to read it, that kind of education outweighs because it is more portable.

Mutually exclusive-the plan removes the authority that the counterplan nullifies-Nullification literally requires authority to invalidate

Wolverton-prof American Government, Chattanooga State-5/7/12 The Case for Nullification

http://thenewamerican.com/usnews/constitution/item/11158-the-case-for-nullification

Americans who wish to reverse the growing power of the federal government only need to remember that any federal law that is unconstitutional has no legal effect. As the United States of America is manipulated closer and closer to an economic and social abyss, the concomitant consequences of this decline are becoming familiar to all citizens. In fact, many of the youth, whose future is being mortgaged by those determined to perpetuate never-ending war and ever-expanding national debt, are awakening to a sense of this dire situation. And they are recurring to the brief history of our nation to locate a lever for braking the runaway train hurtling toward the ruin of our Republic. This generation is subjected as none before them to the painful injection of government into every fiber of the body politic. On what seems like a daily schedule, the Congress passes and the President signs into law measures ostensibly permitting the manhandling of people at airports, the suspension of the requirements of due process, and the monitoring by the never-blinking eye of a surveillance state into the virtual and actual behavior of anyone believed to one day possibly pose a threat to the security of "the homeland." As they sift among the various legal methods available to them for the civil combat against economic enslavement and the federal government's intrusions into every aspect of our lives, they have stumbled across a timeless principle of self-defense used by our Founding Fathers to fight their own battle against the forces of federal oppression - nullification. Simply stated, nullification is a concept of legal statutory construction that endows each state with the right to nullify, or invalidate, any federal measure **that a state deems unconstitutional. Nullification is founded on the assertion that the sovereign states formed the union, and as creators of the compact, they hold** ultimate authority as to the limits of the power of the central government **to enact laws that are applicable to the states and the citizens thereof.**

It links to the net benefits:

A. Politics-still includes immediate legislative battles in congress over the plan that derail the agenda

B. Federalism-The actual nullification of authority is key to restoring the states as "vibrant political entities"---That's our Haworth evidence from the 1NC. Only the counterplan has the states challenge federal power-the plan literally removes the issue by bringing the states and federal government into alignment.

Our net benefit is about the process of nullification changing federal policy---fighting over the authority and winning is key to the federalism signal

Warbiany-contributor liberty papers-10

http://www.thelibertypapers.org/2010/08/17/point-nullification-is-the-civil-disobedience-of-federalism/

Point: Nullification Is The Civil Disobedience of Federalism

In federal politics, states are party to an uneasy compact with other states under the guise of a superior government. This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding. As such, they cede many powers to that national government, but one must think that they do not cede all of their own powers. Something must be held in reserve. The question is what? After all, this "Supremacy Clause" Constitution only grants supremacy to those laws made in pursuance of the Constitution itself — anything not permitted by the Constitution must not be considered to be Supreme. The real question, then, is who decides what is Constitutional? Since 1803 and John Marshall, half of that question has been decided. The US Supreme Court is the arbiter of what is, and what is not, Constitutional. Further, a critical tool of state protection against the overreaches of the national government, the state appointment of Senators, was stricken in 1913 by the Seventeenth Amendment. Thus, the only legal method of appeal to Constitutionality available to the States is appeal to the Supreme Court, a body that hasn't found many overreaches of national government since the New Deal.

Nullification, the doctrine that states can disregard federal laws, declaring them unconstitutional, is a provocation somewhere between fighting a battle at the Supreme Court level and secession. Appeal to the Supreme Court is basic and need not be addressed here. Secession is a far more drastic measure, far more controversial, and an area where I believe Doug and I disagree, so it does require some treatment. Secession is often equated with violence, and treated as "violent revolution", but I would say that most instances of violence were continued by the government trying to retain their subjects, not by those trying to withdraw. In the American Revolution, nothing that I've seen suggests that had the British peacefully withdrawn their troops, the colonists would have had any cause for continuation of violence. Even in the US Civil War, it is unlikely that, had the North allowed the South to secede, that the South would have ridden on Washington to impose slavery back upon the North. Secession is not overthrow of the government, it is withdrawal therefrom. Of course, Doug and I agree that, whether they had the right or not, the South's secession was for morally unconscionable reasons — the continuance of the despicable practice of slavery. But the South's secession was no different than the American Revolution in that they were NOT attempts to overthrow a government outside of the territories that wanted their freedom, they could have been peaceful separations. The breakup of the Soviet Union is a good example. While it was only peaceful because the Russians didn't have the power to hold it together, it was a peaceful secession nonetheless. So at this point we've sketched out two responses to potentially unconstitutional overreaches by a national government. The first is the relatively weak appeal to the Supreme Court — asking the government to self-regulate. This is a difficult option. A Senate prior to the Seventeenth Amendment might take seriously their "Advice and Consent" role in judicial nominations to only nominate those who would respect state sovereignty and Constitutional limits, but that ship has sailed. In its wake, it's left a court with an expansive view of national government authority. Secession, on the other hand, is all-or-nothing. And while it may not be a violent act, history has shown that it often will be. As Doug pointed out in all three posts I read of his referencing secession, Jefferson in the Declaration of Independence said that taking to arms should not be done "for light and transient causes". Leaving only these two options is a fool's game. Secession will only be legitimate in the face of absolutely unconscionably abuse, and appeal to the judiciary is impotent and unlikely to succeed [and further, the structure of the direct election of Senate and the Supreme Court nomination process makes it unlikely this will change]. If one wants to give the national government limitless power, asking only that it police itself, having only these two options is the roadmap… …**which is why we need nullification**. **Nullification is the civil disobedience of Federalism**. Is it legal? No. After all, the Supremacy Clause and judicial review see to that. But it wasn't legal for Rosa Parks to sit at the front of the bus, or for black students to sit at a "Whites-only" counter at Woolworth's. Sometimes, the law is a ass. Sometimes, you need to disobey to make a point. I'll give an example. Here in California, we have legalized marijuana for medical purposes. This is in DIRECT contradiction to the Controlled Substances Act, an act that empowered the regulation to be written that declares marijuana a Schedule I drug — with no medical use whatsoever. This is nullification in action. This is civil disobedience. California is not denying the Federal government's power to enforce the drug laws — but it is denying its compliance with those laws and its assistance to the Feds in such power. What will the result of this action be? Well, this (and potentially the follow-on Proposition 19) forces the people of California address the question of marijuana. Several states have followed on with their own medical marijuana laws. We now have a body of medical marijuana users which can be called upon to testify that marijuana does have medical use. We have families who have watched their loved ones, battling horrible diseases which sap their appetite, who have been able to eat enough to keep their strength. Hopefully the result of this action will be the government backing down and taking marijuana off Schedule I. Viewed this way, nullification is less about disobedience as it **is about changing policy**. Nullification is a tactic in a wider strategy. It is a way to register unhappiness with federal dictates without necessarily going full-bore and threatening secession. Further, it is a way to demonstrate, by direct example, that changes in policy are preferable to the way Washington demands.

More ev--Only the counterplan by itself solves—gives states *future leverage* and forces political tradeoffs in favor of the states—only that preserves federalism

Young 14 (Ernest Young; Oct. 28th 2014; Alston & Bird Professor of Law at Duke University, where he teaches constitutional law, federal courts, and foreign relations law. He is one of the nation's leading authorities on the constitutional law of federalism; "Federalism as a Constitutional Principle"; William Howard Taft Lecture on Constitutional Law;
http://chicago.ssrn.com/delivery.php?ID=584095096086109103085118077000008127032069023053024057123008012026070121029099118025037027038012044049023031013121092120010114119094030029067029093001121087066093036048114017027107101070084078080089012125102001075019122071065071066004084088092&EXT=pdf&TYPE=2) jskullz

19 To be sure, if federal officials don't like the ways that state officers are implementing federal program, they can generally take over the entire program and implement it with federal personnel and resources. But this is so burdensome as to be impracticable most of the time. One student of mine, who wrote a lovely paper on the EPA's ability to take over Clean Air Act i mplementation, concluded that much as the U.S. military tries to have a one-and-a-half war capability, the EPA has a one-and-a-half state capability. EPA could, in other words, fire

one medium-sized state (say North Carolina) and maybe a little bitty one (say New Hampshire) and implement the Act on its own in those states. But forget about taking over for California or Texas, or for more than a couple of smaller states at once. It seems unlikely that Congress would support the massive expansion of resources that it would take to alter this situation. So you can see why state implementation gives state officials a lot of leverage over the way that federal law is enforced and interpreted on the ground. Sometimes, as in the case of Colorado's marijuana policy, a state's decision not to cooperate in furthering a federal policy may simply mean that federal policy can't be pursued. 94 What the Colorado example makes clear is that, even when state and federal executive officers work closely in tandem (as state and fe deral law enforcement often do), state officials remain accountable to the state legislature and the state electorate. **This is a big part of what it means for a state to be "sovereign" in the modern regulatory environment**. 95 At the end of the day, state officials don't work for the federal government, and this translates into meaningful policy autonomy in a number of areas.

2NC Perm-Do CP

Severs out of USFG-this is the states' counterplan for crying out loud-severance is illegitimate because no counterplan would compete if the 2AC could pick which parts of the plan to defend

Dictionary of Government and Politics 1998
(PH Collin, pg 292)

United States of America (USA) [ju:'naitid 'steits av e'merike] noun independent country, a federation of states (originally thirteen, now fifty in North America; the United States Code = book containing all the permanent laws of the USA, arranged in sections according to subject and revised from time to time COMMENT: the federal government (based in Washington D.C.) is formed of a legislature (the Congress) with two chambers (the Senate and House of Representatives), an executive (the President) and a judiciary (the Supreme Court). Each of the fifty states making up the USA has its own legislature and executive (the Governor) as well as its own legal system and constitution

---Severs the unconditional adoption of the plan-it is analogous to the difference between Congress passing legislation and the President asking Congress to pass legislation.

---One actor directing another to act does not on face curtal

Marcus-Brandeis Center for Human Rights Under Law-9
Race & Social Problems, Vol. 1, No. 1, pp. 36-44, March 2009
http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1678008

The post-9/11 surge in America's Muslim prison population has stirred deep-seated fears, including the specter that American prisons will become a breeding system for "radicalized Islam." With these fears have come restraints on Muslim religious expression. Some mistreatment of Muslim prisoners violates the Religious Land Use and Institutionalized Persons Act of 2000 (RLUIPA), which Congress passed in part to protect prisoners from religious discrimination. Despite RLUIPA, many Muslim prisoners still face the same challenges that preceded the legislation. Ironically, **while Congress directed courts to apply strict scrutiny to these cases, courts continue to reject most claims**. One reason is that many courts are applying a diluted form of the legal standard. Indeed, the "war on terror" has justified increasing deference to prison administrators to the determine of incarcerated Muslims and religious freedom.

---Severs "should" it means "must" and requires immediate legal effect

Summers 94 (Justice – Oklahoma Supreme Court, "Kelsey v. Dollarsaver Food Warehouse of Durant", 1994 OK 123, 11-8,
http://www.oscn.net/applications/oscn/DeliverDocument.asp?CiteID=20287#marker3fn13)

¶4 The legal question to be resolved by the court is whether the word "should"[13] in the May 18 order connotes futurity or may be deemed a ruling *in praesenti*.[14] The answer to this query is not to be divined from rules of grammar;[15] it must be governed by the age-old practice culture of legal professionals and its immemorial language usage. To determine if the omission (from the critical May 18 entry) of the turgid phrase, "and the same hereby is", (1) makes it an in futuro ruling - i.e., an expression of what the judge will or would do at a later stage - or (2) constitutes an in in praesenti resolution of a disputed law issue, the trial judge's intent must be garnered from the four corners of the entire record.[16]
[CONTINUES – TO FOOTNOTE]
13 "*Should*" not only is used as a "present indicative" synonymous with *ought* but also is the past tense of "shall" with various shades of meaning not always easy to analyze. See 57 C.J. Shall § 9, Judgments § 121 (1932). O. JESPERSEN, GROWTH AND STRUCTURE OF THE ENGLISH LANGUAGE (1984); St. Louis & S.F.R. Co. v. Brown, 45 Okl. 143, 144 P. 1075, 1080-81 (1914). For a more detailed explanation, see the Partridge quotation infra note 15. Certain contexts mandate a construction of the term "should" as **more** than merely indicating preference or desirability. Brown, supra at 1080-81 (jury instructions stating that jurors "should" reduce the amount of damages in proportion to the amount of contributory negligence of the plaintiff was held to imply an *obligation and to be more than advisory*); Carrigan v. California Horse Racing Board, 60 Wash. App. 79, 802 P.2d 813 (1990) (one of the Rules of Appellate Procedure requiring that a party "should devote a section of the brief to the request for the fee or

expenses" was interpreted to mean that a party is under an *obligation* to include the requested segment); State v. Rack, 318 S.W.2d 211, 215 (Mo. 1958) ("should" would mean the same as "shall" or "must" when used in an instruction to the jury which tells the triers they "should disregard false testimony"). 14 *In praesenti* means literally "at the present time." BLACK'S LAW DICTIONARY 792 (6th Ed. 1990). In legal parlance the phrase denotes that which in law is *presently* or ***immediately effective***, as opposed to something that *will* or *would* become effective *in the future* *[in futurol*]. See Van Wyck v. Knevals, 106 U.S. 360, 365, 1 S.Ct. 336, 337, 27 L.Ed. 201 (1882).

The Counterplan causes norm cascading that changes federal policy-it also avoids politics by building constituencies for the plan

Robinson-JD Yale-7 40 Akron L. Rev. 647

ARTICLE: Citizens Not Subjects: U.S. Foreign Relations Law and the Decentralization of Foreign Policy

4. Laws and actions that influence the nation's foreign policy Localities' actions often attempt to influence national foreign policy. Some of these actions merely help reinforce and support preexisting federal foreign policy. The most prominent example of this is localities' support of the U.S. military in their operations abroad. 305 However, localities' actions may also be in protest to U.S. foreign policy or designed to change it. The Central American sanctuary movement grew out of dissatisfaction with the U.S.'s policy towards Central America in the 1980's and the belief that refugees from El Salvador and Guatemala were politically persecuted despite U.S. support for these regimes. In all, "more than 20 cities and two states declared themselves sanctuaries for Central American refugees." 306 During this same period, 87 cities created sister city type relationships with communities in Nicaragua, in part to show solidarity against U.S. policy there. 307 U.S. sanctions on Cuba have similarly been a target of state and local action both on political and economic grounds. The Illinois and Texas state legislatures have passed resolutions in support of normal relations between the U.S. and Cuba. 308 Some cities in the United States have established "Sister City" type relations with Cuban cities to express their support for more normal relations between the United States and Cuba. 309 After lobbying by agricultural interests, Illinois Governor Ryan [*708] led a mission to Cuba in 1999 to promote trade and deliver aid. 310 During the trip he met with Cuban President Fidel Castro. 311 Shortly after returning he stated, "My hope is there will be other state delegations that go, and hopefully we'll lift this embargo." 312 In 2002, Havana hosted governors and other representatives from seven states at a Food and Agribusiness Exhibition. 313 Over one hundred cities passed resolutions calling for the end of the Iraq War. 314 In early 2005 during the annual town hall day in Vermont, 49 cities and towns passed a resolution that asked the state legislature to investigate what the impact of National Guard deployments to Iraq are having on the state. 315 Several cities across the country have passed resolutions calling on their states to withdraw their National Guard troops from Iraq. 316 Dozens of local ballot initiatives in communities across the country called on the federal government to bring the troops home from Iraq in the November 2006 elections. 317 State governors have also been openly critical of the U.S.'s involvement in the conflict in Iraq. 318 In March 2007, several towns in Vermont passed resolutions calling for the impeachment of President Bush and Vice President Cheney. In April 2007, the Vermont State Senate in a non-binding resolution called on members of the U.S. House of Representatives to begin impeachment proceedings against the President and Vice President because of their actions in the United States and abroad, including Iraq. These calls for [*709] impeachment, which highlight a deep internal divide within the United States over its policy in Iraq, were reported upon by media around the world. 319 States and localities have pushed to change U.S. foreign policy more broadly as well. For example, after the failure of SALT II during the Carter administration, the unwillingness of Reagan to support a nuclear test ban treaty, and the development of the Strategic Defense Initiative, citizens banded together to promote a freeze on the production of nuclear weapons in the 1980s. Through town meetings, local referenda, resolutions, or other initiatives, more than 900 local governments acted on the freeze issue. 320 After the end of the Cold War, at least 70 mayors in the United States as well as hundreds of mayors from over 100 countries have signed a statement in support of a nuclear free world. 321 State assemblies have similarly passed resolutions calling for the end of nuclear weapons. 322 Some states have taken a different approach towards this national defense issue with at least 10 states having passed resolutions calling upon the national government to deploy a missile defense system since 1997. 323 States have also urged the United States to sign and ratify international agreements. For example, several state governments have passed resolutions in support of the Convention on the Elimination of Discrimination Against Women (CEDAW). 324 Often state and local action arises out of dissatisfaction with the perceived inadequacy or incorrectness of a federal policy towards a foreign policy issue. Catherine Powell calls the impact of state and local [*710] laws on national foreign policy "dialogic federalism." 325 She argues that **enough local ordinances can create a norm cascade that affects federal policy**. 326 The U.S. federal sanctions against South Africa passed by Congress over President Reagan's veto in 1986 were arguably in part a result of just such a norm cascade created by anti-apartheid resolutions and laws at the state and local level. 327 In many ways, it is the mobilization of citizens around, more than the passage of a resolution or act on a foreign policy issue that leads to a norm cascade which changes federal policy. The effort required to convince legislators and their fellow citizens to support a locality's official action gives citizens a tangible and reachable local goal to focus their efforts on. This helps organize constituencies locally that can develop into a national coalition. For example, someone who has worked continuously to garner support for a local divestment initiative on Sudan is also more likely to call their Congressperson to urge them to pass the Darfur Accountability Act. Norm cascades created by localities' actions do not only impact the policy they are directed at, but have a wider impact as well. For instance, the South Africa or Sudan divestment campaigns can be seen as national human rights moments. These are moments in which a segment of the American public becomes unusually organized to promote a human rights-based foreign policy goal. Most voters remain generally unaware of how U.S. foreign policy implicates human rights in

other countries. Further, most voters do not base their vote on foreign policy human rights issues. **The signal given** by these human rights moments, however, creates an environment in which sympathetic legislators and policymakers can prioritize human rights concerns in other areas of foreign policy, knowing there is a **constituency that generally supports this type of action.**

2NC Enforcement

Nullification is a stronger check on authority than the plan

Woods 10

Nullification : how to resist Federal tyranny in the 21st century Google Books
Thomas E. "Tom" Woods, Jr. is an American historian, political analyst, and author. Woods is a New York Times best-selling author and has published eleven books

Nullification begins with the axiomatic point that a federal law that violates the Constitution is no law at all. It is **void and of no effect**. Nullification simply pushes this uncontroversial point a step further: if a law is unconstitutional and therefore void and of no effect, it is up to the states, the parties to the federal compact, to declare it so and thus **refuse to enforce it**. It would be foolish and vain to wait for the federal government or a branch thereof to condemn its own law. Nullification provides a shield between the people of a state and an unconstitutional law from the federal government. The central point behind nullification is that the federal government cannot be permitted to hold a **monopoly on constitutional interpretation**. If the federal government has the exclusive right to judge the extent of its own powers, warned James Madison and Thomas Jefferson in 1798, it will continue to grow- regardless of elections, the separation of powers, and other much-touted limits on government power. A constitution is, after all, only a piece of paper. It cannot enforce itself. Checks and balances among the executive, legislative, and judicial branches, a prominent feature of the Constitution, provide little guarantee of limited government, since these three federal branches can simply unite against the independence of the states and the reserved rights of the people. That is precisely what Jefferson warned William Branch Giles was already happening in 1825: "It is but too evident, that the three ruling branches of [the Federal government] are in combination to strip their colleagues, the State authorities, of the powers reserved by them, and to exercise themselves all functions for- eign and domestic."6 Much more important than the feeble restraint of "checks and balances" is the ability of the states to interpose to prevent the enforcement of unconstitutional laws. **That is a real check on federal power**.

The counterplan mobilizes the public as an effective check on executive power

Robinson-JD Yale-7 40 Akron L. Rev. 647

ARTICLE: Citizens Not Subjects: U.S. Foreign Relations Law and the Decentralization of Foreign Policy

Second, federalism provides a check on the over-centralization of power. Federalism embraces a "conception of justice" that implies that a diffuse political ordering is both "necessary and desirable." 175 In Federalist 51, James Madison reassures his readers that a federalist [*681] republic provides a "double security" against usurpations of power because power is not only divided between the different branches of the federal government, but also between the federal and state governments. 176 Justice O'Connor picks up this theme in Gregory v. Ashcroft where she remarks that "just as the separation and independence of the coordinate branches of the Federal Government serve to prevent the accumulation of excessive power in any one branch, a healthy balance of power between the States and the Federal Government will reduce the risk of tyranny and abuse from either front." 177 As areas of traditional local governance increasingly become objects of international concern there is an increased danger that localities will be weakened in their ability to act as a counterweight to federal and international power. Further, localities can play an **active role in checking abuses of federal foreign policy** in areas not traditionally associated with local governance. For example, localities may be able to resist perceived misuses of federal power that touch on foreign relations if they require the assistance of local authorities to implement. Several cities, such as San Francisco and Detroit, have passed resolutions denouncing the U.S. Patriot Act, and some cities have even gone so far as to decline to provide assistance to federal authorities in any instance where civil liberties might be jeopardized. 178 As will be discussed in the next section, localities have also taken a number of actions to oppose or attempt to **change federal foreign policy**, such as passing resolutions condemning the war in Iraq or adopting "Buy America" laws. These actions in and of themselves may have questionable impact on any perceived abuses of foreign policy decision-making power in Washington D.C., but they mobilize citizens around foreign policy issues at a local level. This mobilization of citizens is perhaps the **greatest check on usurpations of power by the federal government** and leads to the third justification for federalism in foreign relations: federalism creates control and independence at a local and state level which encourages [*682] citizen participation and empowerment. 179

Although fewer people vote in local elections than in national elections (in part because local elections tend to be more lop-sided affairs), more people try to influence local politics than national politics. 180 State and local politicians are usually more accessible than national ones. It is also often easier to create local and state constituencies. Sometimes these state or local constituencies are connected with or develop into national constituencies, but it is the chance to participate locally and impact the governance of one's locality that often mobilizes those involved. The idea that local action may then turn into a national movement can create synergetic inspiration. State and local democracy leads to large reservoirs of engaged and committed citizens participating in a diverse array of political communities. Not every citizen will take the opportunity to engage with the governments of their localities, but many will. Local political communities' involvement in questions of foreign relations ensures that debates around these topics will occur at multiple levels of government and in multiple forums. With pools of active and committed citizens, it is then more likely these citizens can and will **check an overzealous Congress or executive**. The involvement of engaged political classes in localities who also participate in national politics makes it more likely that the potential for tyranny in the federal government's policies will be checked both here and abroad.

Nullification effectively blocks federal action

10th amendment Center 14

NDAA: Indefinite Detention

http://tracking.tenthamendmentcenter.com/issues/ndaa/

The federal government, under the 2012 National Defense Authorization Act (NDAA) and the 2001 Authorization to Use Military Force (AUMF), claims the power to arrest and detain people within the US and deny them access to courts, attorneys and more. In short, this is little more than government-sanctioned kidnapping. To learn more about the 2012 NDAA and indefinite detention, use the links in the sidebar of this page. The Liberty Preservation Act – and local ordinance – bans participation with or assistance in any way with any federal act which purports to authorize the indefinite detention of a person within the United States. Passage of the Liberty Preservation Act in your state, county, city and town will create obstacles to implementation that will help thwart the unconstitutional indefinite detention efforts of the federal government. State laws and local ordinances and resolutions are all important pieces of the puzzle to resist and nullify NDAA "indefinite detention." (model legislation here) MADISON'S BLUEPRINT James Madison, known as the Father of the Constitution, gave us a **blueprint for stopping federal overreach**. In Federalist 46, he argued that a "refusal to comply with officers of the Union" along with other actions at the state and local level would create a situation where the federal government would have an **almost impossible time enforcing their acts**. When several states join together and do the same, Madison said **it would "present obstructions which the federal government would hardly be willing to encounter.**" In the Virginia Resolutions of 1798, Madison wrote that "in case of a deliberate, palpable, and dangerous exercise" of power by the federal government, states "have the right, and are in duty bound, to interpose for arresting the progress of the evil." Thomas Jefferson, in the Kentucky Resolutions of 1798, wrote that "where powers are assumed which have not been delegated, a nullification of the act is the rightful remedy" "that every State has a natural right in cases not within the compact to nullify of their own authority all assumptions of power by others within their limits: that without this right, they would be under the dominion, absolute and unlimited, of whosoever might exercise this right of judgment for them" **Indefinite Detention** represents just the kind of dangerous, palpable evil Madison was talking about, and the assumptions of power that Jefferson was talking about. Our model legislation is based on the principles and advice of James Madison and Thomas Jefferson. It's not going to be easy, and there's no guarantee of success. But, if we sit back and wait for the federal government to stop its own indefinite detention programs, we'll wait forever. So, as those founders advised, we're taking action without the feds, and taking every step possible to create "obstructions," and a "refusal to comply with officers of the Union," as Madison advised. The goal is to get enough states and localities on board so that **indefinite detention** is rendered null and void, as Jefferson advised. INDEFINITE DETENTION REPEALED? While some believe that the 2013 NDAA eliminated indefinite detention, it did not. Dianne Feinstein introduced a very weak amendment to 2013 – and it failed anyway. 2012 indefinite detention provisions remain intact – and the Obama administration is aggressively defending them in court today. Last year, Federal Judge Katherine Forrest struck down these indefinite detention powers as unconstitutional and issued a temporary court order blocking their use. That order was revoked by an appeals court and indefinite detention powers remain while the case is currently on appeal but not decided. Additionally, when Judge Forrest asked Obama administration attorneys if the federal government was using indefinite detention in violation of her temporary order blocking it, they refused to confirm, leaving the door open for potential use of these powers in secret, even in outright defiance of an order from the federal courts. All attempts to stop indefinite detention on a federal level – in **courts and the congress** – have so far failed. It remains the so-called "law of the land" and deserves to be nullified. SUPREMACY CLAUSE

Some opponents of these efforts claim that the U.S. Constitution's "supremacy clause" prevents your local community from taking action. But this is a complete misunderstanding, not only of the supremacy clause, but of the local legislation as well.

The Federal Government will give in---Noncompliance creates strong pressure to accept the mandates of the counterplan

Boldin-founder 10th amendment center-12

http://tenthamendmentcenter.com/2012/12/01/what-would-rosa-parks-do/#.UusrQPko4qg

Recently, as state and local governments have been passing legislation requiring non-compliance with the kidnapping provisions of the 2012 **NDAA,** a number of people who oppose NDAA have begun to attack these efforts to resist it – as little more than a sham. Vince Brown, for example, gets the ball rolling with this: "I don't find the appeal here, isn't all it says is that they will simply just sit back and watch the feds do what they want?" Brian Ryman goes a little deeper: "While the state of Virginia has passed what many feel to be the first significant blow against the NDAA , I have a few reservations about what is purported by some to be a victory. My main concern is that the bill has no provisions for Virginia state agencies to interpose themselves between the federal authorities and its citizens. This should be the focus of the legislation…." The implication here is that unless there's a state law passed requiring conflict – a state agency standoff vs a federal agency – which is dangerous indeed – then somehow there's little to no value. But is that really the case? Of course not. More later. Tom Rankin takes it a step further, insisting that anything but physical pushback on the feds is not only worthless, but some kind of a political trick. Here's what he had to say: "Just how does this stop the Feds from enforcing NDAA. All it says is you can enforce NDAA in my state but I will not help you. This is pure bull. It is just feel good legislation that gets the public off the politicians ass. I am very disappointed in The Tenth Amendment Center and question it's motives." Interesting. I've often heard that converts to a new religion are commonly known to be more zealous than people raised in those same beliefs. I guess here at the TAC we're finding the same thing in our own movement – for nullification. The problem, though, is this – these people, while probably quite well-intentioned, are either being misdirected, or are just misinformed about the big picture. **NON-COMPLIANCE IS A BIG DEAL** To clarify, we should first define the word nullification. It is "any act or set of acts which has as its end result a particular law being rendered null, void, or unenforceable in a specific area." Thomas Jefferson referred to nullification as the "moderate middle ground" – the effective path that lies between violent and bloody revolution on one hand and unlimited submission on the other. With that in mind, we can recognize that a nullification of a federal act can take on all kinds of different forms. It often requires an entire puzzle – and each piece of that puzzle plays an important part. There's education, outreach, non-compliance, and more. It doesn't always require a physical interposition by local agents – standing between you and the federal government. And while it sure gets the testosterone boiling, an O.K. Corral-style standoff is not needed, and is almost never effective. Consider the state-level resistance to the 2005 Real ID act. Over the past five years, we've learned that a **federal law can be effectively** held at bay or even **pushed back through non-compliance alone.** When Virginia's HB1160 was being debated, Delegate Bob Marshall gave a perspective on the importance of non-compliance when he said: "During World War II, the federal government incarcerated tens of thousands of loyal Japanese Americans in the name of national security. By this bill, Virginia declares that it will not participate in similar modern-day efforts." The federal government most certainly needs compliance, if not outright assistance, from the states when it does its dirty deeds. Information-sharing, logistics assistance, access to infrastructure, help from sheriffs blocking roads, and the like. They can rarely pull things off without help from state and local officials. Just ask the DEA when they come to California. They're never able to pull off a raid without the help of the local sheriff or police departments. Refusing compliance is a big deal – and it will set the stage for others to do the same.

General

Doesn't involve federal action and empirically works—Medical marijuana proves.

Sheriff 12 (Derek Sheriff; Nov. 14th 2012; "research analyst for the Tenth Amendment Center"; Nullification in One Lesson; Tenth Amendment Center; http://tenthamendmentcenter.com/2012/11/14/nullification-in-one-lesson/) jskullz

¶But in order to best-understand what Nullification IS, you should first understand some things nullification is NOT.¶¶Nullification is not secession or insurrection, but neither is it unconditional or unlimited submission. Nullification is not something that requires any decision, statement or action from any branch of the federal government. Nullification is not the result of obtaining a favorable court ruling. Nullification is not the petitioning of the federal government to start doing or to stop doing anything. **Nullification doesn't depend on any federal law being repealed**. Nullification does not require permission from any person or institution outside of one's own state.¶¶So just what IS nullification and how does it happen?¶¶Nullification is any act or set of acts, which has as its end result, a particular federal law being rendered null and void, or just plain unenforceable in your area.¶¶Nullification often begins with members of your state legislature declaring a federal act unconstitutional and then committing to resist its implementation. It usually involves a bill, passed by both houses and signed by your governor. In some cases, it might be approved by the voters of your state directly, in a referendum. It may change your state's statutory law, or it might even amend your state constitution. In this case, it is quite simply a refusal on the part of your state government to cooperate with, or enforce a particular federal law it deems unconstitutional.¶¶The same process can happen on a local level too. Your county board of commissioners or city council might take up a measure that rejects or resists a federal law. Once it gets passed, all local agencies might be required to refuse compliance with any federal agents trying to enforce the federal act in question.¶¶In either case, Nullification carries with it the force of state or local law. It cannot be legally repealed by Congress without amending the U.S .Constitution. It cannot be lawfully abolished by an executive order. It cannot be overruled by the Supreme Court if the people in the state reject the Court's opinion. It is the people of a state or local commnunity asserting their rights, acting as a political society in its highest sovereign capacity. It is the moderate, middle way that wisely avoids harsh remedies like secession on the one hand, and slavish, unlimited submission on the other.¶¶It is the constitutional remedy for unconstitutional federal laws.¶¶With the exception of a constitutional amendment, the federal government cannot oppose (except perhaps rhetorically), these actions to nullify an unconstitutional federal law without resorting to extra-legal measures or violence. But such measures would more than likely backfire, since most Americans still believe might does not make right.¶¶There is no question as to whether or when such "official" nullification will happen: It has ALREADY HAPPENED.¶¶In fact, not only has it happened recently, it has been a success! Perhaps this is why the federal government hopes you will never hear about it.¶¶With Massachusetts voters approving Question 3 on November 6, 2012, there are now 18 states that have legalized marijuana use for limited medicinal purposes – in flat out defiance of the Congress, the Executive Branch and the Supreme Court.

Nullification ensures the protection of liberty for states—only way to certainly check unconstitutionality and overreach

Haworth 13 (Peter Haworth; Sep. 9th 2013; Ph.D. in Government from Georgetown University in 2008, writes often on American Political Development, Traditionalist Thought, Constitutional Law, Southern Americana, Virtue Ethics, Natural Law, Political Theology, and many other topics within the history of political theory; "Real Federalism Includes Taking Interposition and Nullification Seriously,"; Nomocracy in Politics http://nomocracyinpolitics.com/2013/09/25/real-federalism-includes-taking-interposition-and-nullification-seriously/) jskullz

Crucially missing in this debate is recognition of the importance of States checking federal authority so as to protect their constitutional autonomy and generally maintain themselves as vibrant political entities rather than mere federal lackeys (i.e., self-interested seekers of the Federal Government's largesse). Both authors miss these points. Greve's call for "national scale" makes this obvious, but he even explicitly denounces nullification in a separate essay on that topic. Moreover, Reinsch's refusal to advocate interposition and nullification is also telling. In the sections that follow, I will elucidate the following: (1) why Calhoun's doctrine of nullification is a constitutional means of preserving the States' local liberty; (2) how the lack of nullification and interposition has damaged the States viability as independent political entities that do not need federal largesse; and (3) some final thoughts about the importance of interposition and nullification as well as the need to dismiss ad hominem arguments against these doctrines.[1]¶ I. Calhoun's Doctrine of Nullification as a Constitutional Means of Preserving the States' Local Liberty:¶ Professor Adam Tate has argued that John C. Calhoun's advocacy of nullification was crucially focused on maintaining the American union in a manner that preserved the liberty of the States. Liberty here is a State's political autonomy to self-govern its internal affairs within the framework of reserved powers that it retains via the 1789 Constitution. Calhoun desired union, but he opposed its pursuit via unconstitutional conceptions of federal supremacy that inevitably tended toward the Federal Government usurping powers reserved by the States. He implied his vision for both union and local liberty (and his opposition to federal dominance within the union) in his famous toast at the Jefferson Day Dinner in 1830: "The Union, next to our liberty, most dear." Nullification, then, is not aimed at disunion; rather, it seeks to maintain a union of States that protects the liberty (i.e., the constitutional political autonomy) of each State via allowing a State to defend itself against federal encroachments.¶ With respect to Calhoun's constitutional theory, it is important to realize that he viewed the people of each State as a sovereign entity (even after they had ratified the 1789 Constitution) and, hence, capable of (at a minimum) revoking the delegation of powers granted to the Federal Government.[2] Sovereignty includes having supreme, ultimate, and unified power and authority over the internal affairs of people within established territorial boundaries. This is the first and primary issue with respect to federalism, for it elucidates where ultimate authority resides when a dispute arises between a State and the Federal Government. If the people of each State retain sovereignty within its borders, despite delegating powers to the Federal Government via ratifying the Constitution (i.e., a State's sovereignty is something separate from the sovereign powers it delegates), then a State People can decide to revoke its delegation of powers (to the Federal Government) via secession.¶ With respect to nullification, which is a specific and strong mode of interposition, Calhoun believed that the same State sovereignty issues applied, but nullification is aimed at maintaining union in a manner that appropriately recognizes a State to be the unit-of-sovereignty that has justifiable unilateral authority to determine whether a federal law is unconstitutional (unless and until a State's nullification is overruled through the Article V amendment process). Calhoun believed that each State People had this ultimate legal authority through their role as original parties to the Constitutional Compact.[3] It was the State People who gave the Constitution life via their ratification; as many of the Framers' maintained, the Philadelphia Convention merely proposed a new system of union, but it was the States who had the authority to make it fundamental law. Moreover, with respect to the Constitution and its amendments as a constitutional compact, since the State Peoples were original contracting parties (or equivalent in sovereign status to the State Peoples who were the historical contracting parties) and since no higher authority existed to determine whether the Constitution was being appropriately followed by the Federal Government (i.e., whether the Federal Government stays within the scope of its delegated powers), final judgment about whether or not a federal law was constitutional was left to each State People and not a department within the Federal Government (e.g. the federal judiciary) whose very life and authority is a creature-level product granted by creator-level State Peoples.[4]

Nullification Good – key to prevent tyranny or revolution and leads to modeling

10th Amendment Center, 14 ("NDAA: Indefinite Detention", 10th amendment center, http://tenthamendmentcenter.com/2012/12/01/what-would-rosa-parks-do/#.UusrQPko4qg)//BW

To clarify, we should first define the word nullification. It is "any act or set of acts which has as its end result a particular law being rendered null, void, or unenforceable in a specific area." Thomas Jefferson referred to nullification as the "moderate middle ground" – the effective path that lies between violent and bloody revolution on one hand and unlimited submission on the other. With that in mind, we can recognize that a nullification of a federal act can take on all kinds of different forms. It often requires an entire puzzle – and each piece of that puzzle plays an important part. There's education, outreach, non-compliance, and more. It doesn't always require a physical interposition by local agents – standing between you and the federal government. And while it sure gets the testosterone boiling, an O.K. http://chicago.ssrn.com/delivery.php?ID=584095096086109103085118077000008127032069023053024057123008012026070121029099118025037027038012044049023031013121092120010114119094030029067029093001121087066093036048114017027107101070084078080089012125102001075019122071065071066004084088092&EXT=pdf&TYPE=2) jskullz

But we can also look closer to home. High-profile contemporary American conflicts about healthcare, immigration, and even climate change have all played out on the legal terrain of federalism, with individual states like Virginia, Arizona, and California, respectively, wanting to go their own way out of dissatisfaction with national policy. Or consider the legalization of recreational marijuana use in Washington and Colorado. I was taught in school that Andrew Jackson put to rest any suggestion that individual states have the power to "nullify" federal laws, but Colorado's new version of "Rocky Mountain High" is demonstrating that a state may establish an extensive legal regime and "a vibrant new industry predicated on the legality of an activity that federal law forbids.'2 The reason this works is that enforcement of national drug laws effectively depends, in most instances, on the cooperation and resources of state and local law enforcement. If a state opts out, there's not a whole lot the Feds can do a massive commitment of federal resources. Whatever one thinks of legalizing marijuana, there is no doubt that federalism is, literally, ripped from today's headlines.

NSA

Nullification solves surveillance—NSA data centers and programs require state and local governments to provide resources—the counterplan pulls those resources out.

OffNow No Date (OffNow; Last Accessed: July 1, 2015; advocacy group dedicated to surveillance nullification; "The Plan"; http://www.offnow.org/plan) jskullz

FACT: The spy agency needs resources like water and electricity. It simply cannot operate its facilities without these essential resources. State and local governments often supply them. For instance, the NSA storage facility in Bluffdale, Utah, will reportedly use up to 1.7 million gallons of water every single day when fully operational. The city holds the contract to supply that water. It doesn't have to. Nothing requires state or local governments to help the federal government violate your rights! Under the legal principle known as the anti-commandeering doctrine, the Supreme Court has consistently held that the federal government cannot force states to help implement or enforce federal acts or programs. It rests primarily on four Supreme Court cases: Prigg v. Pennsylvania (1842), New York v. US (1992), Printz v. US (1997) and National Federation of Businesses v. Sebelius (2012). Printz serves the cornerstone. "The Federal Government may neither issue directives requiring the States to address particular problems, nor command the States' officers, or those of their political subdivisions, to administer or enforce a federal regulatory program…such commands are fundamentally incompatible with our constitutional system of dual sovereignty." 1. RESOURCES Instead of relying on the federal government to reform its own spy program, the OffNow plan involves working at the state level to create an environment that makes it politically and logistically impossible for the NSA and other federal agencies to continue illegal surveillance programs. The strategy centers around state and local legislation designed to deprive the NSA and other agencies engaged in warrantless spying of the resources and cooperation they need to operate and accomplish their goals. The short version? We intend to pull the rug out from under them, box them in and shut them down. This model legislation (HERE), ready for introduction in any state, would ban a state (and all its political subdivisions) from providing assistance or material support in any way to federal spying programs. Within the scope of current jurisprudence, state law cannot prevent the federal government from bringing in its own supplies. But, the 2006 power grid issue indicates that in many situations, the federal government simply cannot do this on its own. As a legal matter, contracts for water, electricity and other resources and services are simply voluntary agreements made between the federal government (or its agents) and the state or local government. States legitimately can and should decide whether to honor the request based on the state's own set of priorities. The states and local communities should simply turn it off. In fact, Nevada took this path against the powerful **D**epartment **o**f **E**nergy, and won.

Empirics—New Hampshire

Mac Donald 3/6 (Steve Mac Donald; June 3rd 2015; producer and co-host for GrokTALK!, political activist, and journalist; "It's not just Congress: New Hampshire taking steps to limit warrantless tracking"; Watchdog Arena; http://watchdog.org/222441/new-hampshire-warrantless-tracking-surveillance/) jskullz

At least one state is taking steps to curtail surveillance inside its borders: New Hampshire, which has a history of restricting arbitrary electronic data collection. The introduction of radio frequency identification (RFID) technology and license plate readers for use in automatic toll collection triggered a series of laws to limit how and where the data could be collected. These laws made New Hampshire the only state to ban license plate readers in the nation. But that is not the only way for the government to track you. Millions of smartphones, tablets, and other wireless devices make it possible to trace the physical movements of anyone using them. So starting in 2011, New Hampshire produced two pieces of

legislation to restrict access to this data. One bill prohibited the use of electronic devices to track an individual without their consent or a court order. The second bill prohibited a person from gathering geolocation information from an electronic communications device without the express consent of the person using the device. But legislators, uncomfortable with the language, set them aside to study and never picked them up again. The very next year, Edward Snowdon made domestic spying and bulk data collection a kitchen table issue. So in 2014, the New Hampshire Legislature took another look at addressing violations of personal privacy at the state level. House Bill 592, like the bills before it, would have also restrained warrantless tracking of personal electronic devices. But this version was voted down by the House after tech companies convinced legislators that the language would prevent "NH entrepreneurs (from) carving out a space in the growing app economy, which is based on these electronics." A 2014 bill has fared better than its predecessors. House Bill 468 has passed the New Hampshire House and is waiting on a vote in the state Senate, which states: No government entity shall place, locate, or install an electronic device on the person or property of another, or obtain location information from such an electronic device, without a warrant issued by a judge based on probable cause and on a case-by-case basis. There are noteworthy exceptions, many of which appeared in previous iterations. Tracking is permitted without a warrant with the informed consent of a device owner, unless the owner knowingly loaned it to a third party. You can track calls for 911 emergencies. A parent or legal guardian can provide informed consent to locate a missing child. The government can track its own property or employees in possession of that property. And alcohol ignition interlock control devices placed by court order would also be traceable without a warrant. But this is a state-level bill. While it is critical to limit state agencies and law enforcement from warrantless tracking or data collection, the bill would not prevent federal intrusion. HB 468 "shall not apply to a federal government agency to the extent that federal statute preempts such application." After last Sunday, of course, this is largely a moot point. Congress failed to reauthorize those portions of the Patriot Act that allow bulk data collection by the NSA. And just last week a U.S. Court of appeals ruled that the NSA's collection of metadata based on its interpretation of the Patriot Act provisions was unlawful. The USA Freedom Act hints at eliminating the bulk collection of meta-data altogether but Judge Andrew Napolitano, in an opinion piece at Fox News, says this is not the case:The Freedom Act gets the NSA physically out of the telecoms' offices, but lets them come back in digitally whenever one of these secret FISA courts says so, and the standard for saying so is not probable cause as the Constitution requires. It is whatever the government wants and whenever it wants it. The so-called Freedom Act would actually legitimize all spying all the time on all of us in ways that the Patriot Act fails to do. If New Hampshire passes HB 468, it will place important limits on bulk or warrantless tracking. But if they are truly interested in protecting their citizens' privacy, that bill is a small toe in a very deep, dark pond still teeming with secret FISA warrants and NSA sharks, a pond Congress has no intention of draining anytime soon. The state will need to make a stronger case for Fourth Amendment rights and privacy, even if it means a state challenge to federal law.

The counterplan solves domestic surveillance policy

Wolverton, 14 (Joe II J.D., correspondent for The New American and travels frequently nationwide speaking on topics of nullification, the NDAA, and the surveillance state, "Nullification vs. Constitutional Convention: How to Save Our Republic", The New American, http://www.thenewamerican.com/usnews/constitution/item/17892-nullification-vs-constitutional-convention-how-to-save-our-republic)//BW

Nullifying unconstitutional federal laws is very achievable, if constitutionalists were to inform themselves of this approach and then pursue it. Because the understanding is better in some states than it is in the nation as a whole, it is very possible for states to win victories via nullification to stop

unconstitutional federal laws that could not now realistically be repealed on the national level. Although only a relatively small number of states have so far nullified unconstitutional federal laws in the areas of gun control, ObamaCare, NSA surveillance, indefinite detention of civilians, etc., a string of state nullification victories would not only create a bandwagon effect encouraging other states to join the nullification movement, but also contribute to the overall national awakening — shortening the time it otherwise would take to create a constitutionalist U.S. Congress. A string of nullification victories would also cause Washington to tread more carefully than otherwise in how it might respond to the nullification efforts. But enacting a string of nullification bills in states across the nation — particularly bills possessing teeth that will be enforced by state officials — will not happen without creating the necessary understanding and activism to get state legislators on board. And improving Congress to the point where most congressmen begin abiding by their oaths of office will not happen without a national awakening — or at least an awakening in most congressional districts. But when this national understanding is created, watch out! Congress will begin terminating and phasing out all unconstitutional programs, and the resulting drop in spending will bring the budget into balance without any balanced budget amendment. In the meantime, a growing number of states will be holding the line against the federal juggernaut at their borders. The solution outlined above is not a "quick fix." But the price of liberty is eternal vigilance, not quick fixes. Let's therefore join together to create the understanding that will force elected officials to enforce the Constitution. And let's avoid the more dangerous route of trying to restore constitutional government by "revising" the Constitution.

Works for NSA—movement now

Mellon, 14 (Donald, "State Nullification Has an Undeserved Bad Reputation", Tea Party 911, http://www.teaparty911.com/blog/state-nullification-has-an-undeserved-bad-reputation/)//BW
State nullification can be defined as an act by a state legislature that prevents a federal law from effectively being implemented in that state. Can this be done legally and constitutionally against any federal law? Clearly if a federal law is unconstitutional it can be nullified by a state but what about laws that may be constitutional but unpopular in a state? There is a nullification process that is being used effectively across the nation to nullify federal laws that have not been declared unconstitutional. It is called "non-compliance". It is based on the Supreme Court approved "anti-commandeering doctrine" which explains that the federal government may not force or commandeer state officials or state resources to aid in the implementation of any federal laws. Any federal law, meaning laws both constitutional and unconstitutional, they just have to be sufficiently unpopular in the state to allow state legislators to pass non-compliance laws. Under non-compliance, state legislatures pass laws preventing state agents, resources, and perhaps companies licensed in the state from taking any action to implement or aid the implementation of a particular federal law. Without state compliance most federal laws can not be implemented because of the lack of necessary federal resources. Imagine how few guns would be registered if a federal agent had to be present to register a gun every time one is sold at a store or at a gun show. Bills using the process of non-compliance to preserve the second amendment have been introduced in 19 states, passed in 3 and will be introduced in several more states in the next session, including in Texas. Action is being taken in 18 states to protect the 4th amendment by limiting the use of NSA surveillance data against their citizens. Similar numbers exist for actions concerning nullifying Obamacare, common core, NDAA, drones and marijuana laws. All of these actions are legal and effective and if passed into law will not likely be overturned by the Supreme Court even if the law being nullified is constitutional.

Immigration

Immigration nullification solves—sanctuary jurisdictions prove.

Ramakrishnan and Gulasekarem 14 (Karthick Ramakrishnan and Pratheepan Gulasekaram; Ramakrishnan is a professor of public policy and political science at the University of California, Riverside. His research focuses on civic participation, immigration policy, and the politics of race, ethnicity, and immigration in the United States. He also holds a PhD in Politics; Gulasekarem teaches Constitutional Law and Immigration Law and is well published on the topics of immigration federalism and the constitutional rights of noncitizens. His research currently focuses on the political and legal dynamics of state and local immigration regulations, including their constitutionality and their effect on federal immigration lawmaking; "Understanding Immigration Federalism in the United States"; Center for American Progress; https://www.americanprogress.org/wp-content/uploads/2014/03/StateImmigration-reportv2.pdf) jskullz

For a few decades now, several localities have conspicuously positioned themselves as "sanctuary" cities. 65 This is a broad term intended to describe jurisdic-tions that have placed limits on the efforts of local law enforcement officials to discover and investigate immigration status and the amount of assistance they will provide to federal enforcement authorities to enforce immigration laws, though they cannot limit Immigration and Customs Enforcement itself from operating in these localities.66One of the primary goals of sanctuary, or noncooperation, policies is to enhance community policing efforts and improve relationships between local law enforcement and immigrant communities who would otherwise be reluctant to contact the police for fear of their immigration status.67 While sanctuary jurisdictions have been present for some time, more recent federal enforcement efforts have spurred newer forms of noncooperation and enforcement-resistance policies in the past few years. While these attempts to remove immigration enforcement functions from local law enforcement have gained support from various quarters, including a range of associations of law enforcement officers, 68they have also encountered resistance in some states and from the federal government. States such as Arizona and Alabama have passed laws forbidding localities from implementing sanctuary ordinances. 69 Perhaps more significantly, the federal government recently completed rollout of its Secure Communities Program, effectively co-opting local law enforcement authorities into providing federal immigration authorities with information regarding undocumented people. 70Initiated by the U.S. Department of Homeland Security in 2008 and then tested and implemented nationwide over the past six years, S-Comm is an information-leveraging program that forwards information about every arrestee in a local jurisdiction to a federal database that checks for lawful status. 71 When local law enforcement authorities enter information about an arrestee into the Federal Bureau of Investigation's national crime database to check for outstanding warrants or past criminal history, that criminal background check will also result in an immigration status check. Thus, even if local officers, pursuant to a sanctuary policy, endeavor not to investigate or discover the immigration status of an individual they take into custody, the federal immigration authorities will still receive information about that individual's immigration status. At that point, federal officials may decide to further investigate or prosecute the individual in question, often beginning their process by issuing a "hold request" or "immigration detainer" requesting that the local agency hold the individual in custody until federal enforcement officials can interview or otherwise take custody of the individual. Understanding Immigration Federalism in the United States Although the federal government has declared the program mandatory, 73 some states and localities have resisted aspects of S-Comm. Specifically, a detainer-resistance movement, or anti-cooperation trend, has been developing across several jurisdictions in the past two years. Santa Clara County in California, for example, has passed resolutions that effectively decline to honor immigration detainer requests from ICE. 74 These jurisdictions offer varied policy reasons for resisting ICE hold requests, including the high costs of detention, the desire to focus on more pressing public safety priorities, and

the risk to law enforcement's relationship with immigrant communities, who might be less willing to come forward and contact the police if they fear they could be put into removal proceedings for doing so.75

Drones

The counterplan solves for drone control best

10th Amendment Center, 14 ("State of the Nullification Movement 2014", 10th Amendment Center, http://tenthamendment.wpengine.netdna-cdn.com/wp-content/uploads/2014/06/state-of-the-nullification-movement-2014.pdf)//BW

Currently, the federal government serves as the primary financial engine behind the expansion of drone surveillance carried out by states and local communities. The Department of Homeland Security issues large grants to local governments so they can purchase drones. Those grants, in and of themselves, represent an unconstitutional expansion of power. Digging deeper, we find that the feds are essentially funding a network of drones around the country and placing the operational burden on the states. Once they create a web over the whole country, DHS steps in with requests for 'information sharing' as provided for by ISE. The FBI could theoretically use the same process to couple its new facial recognition database, which is expected to become "smarter" by leaps and bounds in coming years, with state and local drone networks. That's why the most effective way to prevent mass-surveillance by drones is to prohibit or restrict how they're used in the states. Without the states and local communities operating the drones today, it will be far more difficult for any future national program to ever get off the ground. Since early 2013, ten states have passed bills into law that take important first steps to prohibit state and local governments from using drones without a warrant signed by a judge. They include Florida, Idaho, Illinois, Indiana, Oregon, Tennessee, Texas, Utah, Virginia, and Wisconsin. A bill in California is moving forward towards the governor's desk at the time of this writing. And while it is expected to pass the state legislature, previous actions from Gov. Brown indicate he is likely to veto any bills restricting police surveillance powers. Each of these state laws create significant hurdles for warrantless drone surveillances by governments on the state and local level. More complex follow-up legislation should be introduced and supported, taking into account more challenging issues such as the status of information collected incidentally to lawful drone use, how long law enforcement can hold on to drone-collected data, and how to handle government access to information collected by third-party drones.

2NC Court Strike Down

Court will uphold the counterplan
10th amendment Center 14

NDAA: Indefinite Detention
http://tracking.tenthamendmentcenter.com/issues/ndaa/

The federal government, under the 2012 National Defense Authorization Act (NDAA) and the 2001 Authorization to Use Military Force (AUMF), claims the power to arrest and detain people within the US and deny them access to courts, attorneys and more. In short, this is little more than government-sanctioned kidnapping. To learn more about the 2012 NDAA and indefinite detention, use the links in the sidebar of this page. The Liberty Preservation Act – and local ordinance – bans participation with or assistance in any way with any federal act which purports to authorize the indefinite detention of a person within the United States. Passage of the Liberty Preservation Act in your state, county, city and town will create obstacles to implementation that will help thwart the unconstitutional indefinite detention efforts of the federal government. State laws and local ordinances and resolutions are all important pieces of the puzzle to resist and nullify NDAA "indefinite detention." (model legislation here) MADISON'S BLUEPRINT James Madison, known as the Father of the Constitution, gave us a **blueprint for stopping federal overreach**. In Federalist 46, he argued that a "refusal to comply with officers of the Union" along with other actions at the state and local level would create a situation where the federal government would have an **almost impossible time enforcing their acts**. When several states join together and do the same, Madison said **it would "present obstructions which the federal government would hardly be willing to encounter.**" In the Virginia Resolutions of 1798, Madison wrote that "in case of a deliberate, palpable, and dangerous exercise" of power by the federal government, states "have the right, and are in duty bound, to interpose for arresting the progress of the evil." Thomas Jefferson, in the Kentucky Resolutions of 1798, wrote that "where powers are assumed which have not been delegated, a nullification of the act is the rightful remedy" "that every State has a natural right in cases not within the compact to nullify of their own authority all assumptions of power by others within their limits: that without this right, they would be under the dominion, absolute and unlimited, of whosoever might exercise this right of judgment for them" **Indefinite Detention** represents just the kind of dangerous, palpable evil Madison was talking about, and the assumptions of power that Jefferson was talking about. Our model legislation is based on the principles and advice of James Madison and Thomas Jefferson. It's not going to be easy, and there's no guarantee of success. But, if we sit back and wait for the federal government to stop its own indefinite detention programs, we'll wait forever. So, as those founders advised, we're taking action without the feds, and taking every step possible to create "obstructions," and a "refusal to comply with officers of the Union," as Madison advised. The goal is to get enough states and localities on board so that **indefinite detention** is rendered null and void, as Jefferson advised. INDEFINITE DETENTION REPEALED? While some believe that the 2013 NDAA eliminated indefinite detention, it did not. Dianne Feinstein introduced a very weak amendment to 2013 – and it failed anyway. 2012 indefinite detention provisions remain intact – and the Obama administration is aggressively defending them in court today. Last year, Federal Judge Katherine Forrest struck down these indefinite detention powers as unconstitutional and issued a temporary court order blocking their use. That order was revoked by an appeals court and indefinite detention powers remain while the case is currently on appeal but not decided. Additionally, when Judge Forrest asked Obama administration attorneys if the federal government was using indefinite detention in violation of her temporary order blocking it, they refused to confirm, leaving the door open for potential use of these powers in secret, even in outright defiance of an order from the federal courts. All attempts to stop indefinite detention on a federal level – in **courts and the congress** – have so far failed. It remains the so-called "law of the land" and deserves to be nullified. SUPREMACY CLAUSE Some opponents of these efforts claim that the U.S. Constitution's "supremacy clause" prevents your local community from taking action. But this is a complete misunderstanding, not only of the supremacy clause, but of the local legislation as well. There is absolutely **ZERO serious dispute** about the fact that the federal government cannot "commandeer" the states (or their political subdivisions, local governments) to carry out its laws. None. Even **the Supreme Court has affirmed this multiple times.** In the 1842 case, Prigg v. Pennsylvania, the Supreme Court ruled that States couldn't be required to help the feds carry out programs to capture and return runaway slaves. In the 1992 case, New York v. United States, the Supreme Court ruled that Congress couldn't require states to enact specified waste disposal regulations. In the 1997 case, Printz v. United States, the Supreme Court ruled that the federal government could not command state law enforcement authorities to conduct background checks on prospective handgun purchasers. In the 2012 case, National Federation of Independent Business v. Sebelius, the Supreme Court ruled that a significant expansion of Medicaid was not a valid exercise of Congress's spending power, as it would coerce states to either accept the expansion or risk losing existing Medicaid funding. In each case, the Supreme Court made it quite clear that, in their opinion, the federal government cannot require the

states to act, or even coerce them to act through a threat to cut funding. Their opinion is correct. If the feds pass a law, they can sure try to enforce it if they want. But the states, and your local communities, absolutely do not have to help them in any way.

Nullification is legal

Haworth 13, (Peter, Ph.D. in Government from Georgetown University, "Real Federalism Includes Taking Interposition and Nullification Seriously", Nomocracy in Politics, http://nomocracyinpolitics.com/2013/09/25/real-federalism-includes-taking-interposition-and-nullification-seriously/)//BW

It is also important to note that Calhoun did not view nullification as an act that would make a law unconstitutional throughout the union; rather, the judgment by each State People would only apply within the boundaries of its own State. Furthermore, the judgment of each State People could be reversed via the other States passing a constitutional amendment that was contrary to the decision of the State People in question. If this occurred, a nullifying State People would have to either (1) abide by the new amendment; or (2) secede from the union.[5] Readers can further consider Calhoun's theory in my article on his Confederation thesis in the 2010 Political Science Reviewer. With respect to the constitutional appropriateness of the compact theory and its concomitant principles of interposition, nullification, and secession, it is appropriate to elaborate on how these were part of the original constitutional tradition, rather than something merely concocted by Calhoun in response to the tariff crisis. First, there is important evidence suggesting that interposition was employed by the States in response to perceived unconstitutional enactments by the Confederation Congress (e.g., its acceptance of the Treaty of Paris of 1783).[6] Second, interposition and secession (and de facto nullification) were understood and endorsed during the ratification debate about the proposed Constitution. [7] Federalists, such as Madison and Hamilton for example, were noted voices for interposition as a means of checking hypothetical federal usurpations. Secession was considered and endorsed as being constitutional by many during the ratification period, and a State's right to secession ultimately became a de facto part of the Constitution via Congress's acceptance of the ratifications of New York, Virginia, and Rhode Island, that were all qualified with secession statements. As I have argued elsewhere, such qualifications to the original compact legally inserted recognition of secession as a State reserved power into the Constitution's terms. Although Calhoun's elaborate development of nullification doctrine was not explicitly recognized during the Founding, an almost de facto version of it was intended by Virginia's ratifying convention.[8] Moreover, as Reinsch shows in his above-mentioned first essay, Madison "pen[ed a letter] to Thomas Jefferson in the fall of 1787 that the state governments will stand ready in the case of violations of their reserved powers under the Constitution to retake said powers."

Nullification is legal and successful—vital to preserving federalism

Wolverton, 14 (Joe II J.D., correspondent for The New American and travels frequently nationwide speaking on topics of nullification, the NDAA, and the surveillance state, "Nullification vs. Constitutional Convention: How to Save Our Republic", The New American, http://www.thenewamerican.com/usnews/constitution/item/17892-nullification-vs-constitutional-convention-how-to-save-our-republic)//BW

The constitutional convention approach surveyed above is based on changing the Constitution. It is risky because the changes could end up being as radical as altering the fundamental structure of our government — and could even entail an entirely new Constitution. It is not as risky as seceding from the union and starting anew, but it is risky nonetheless. On the other hand, nullification is based not on altering the Constitution but on enforcing it. States that nullify congressional acts or presidential decrees that violate the Constitution would not only be stopping the federal juggernaut at their state borders, they would also be signaling that the Constitution is so vitally important that it must be enforced. In the Kentucky Resolution of 1799, Thomas Jefferson called

nullification the "rightful remedy" for any and all unconstitutional acts of the federal government. The federal government may exercise only those powers that were delegated to it. This is made clear by the 10th Amendment: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Simply stated, nullification recognizes each state's reserved power to nullify, or invalidate, any federal measure that a state deems unconstitutional. Nullification is founded on the fact that the sovereign states formed the union, and as creators of the contract, they retain ultimate authority to enforce the constitutional limits of the power of the federal government. There are several benefits for applying this understanding via nullification: It is a far safer approach for remedying problems caused by violating the Constitution than a constitutional convention; it is based on upholding the Constitution and the founding principles of the Republic; and it can be implemented by individual states, without having to first get two-thirds of the states on board. Despite the benefits, there are those who insist that nullification is unconstitutional. They argue that the so-called Supremacy Clause of Article VI of the Constitution puts federal laws above state laws and that the Supreme Court has the final say on the constitutionality of federal laws. Both of these claims can be easily dismissed. Regarding the first claim, the Supremacy Clause does not declare that all laws passed by the federal government are the supreme law of the land, period. A closer reading reveals that it declares the "laws of the United States made in pursuance" of the Constitution are the supreme law of the land. In pursuance thereof, not in violation thereof. None of the provisions of ObamaCare, for example, is permissible under any enumerated power given to Congress in the Constitution. They were not passed in pursuance of the Constitution, therefore they are not the supreme law of the land, and they may be declared null and void by the states. Alexander Hamilton provided the rationale for this interpretation of this part of Article VI when he wrote in The Federalist, No. 33: If a number of political societies enter into a larger political society, the laws which the latter may enact, pursuant to the powers intrusted [sic] to it by its constitution, must necessarily be supreme over those societies and the individuals of whom they are composed.... But it will not follow from this doctrine that acts of the larger society which are not pursuant to its constitutional powers, but which are invasions of the residuary authorities of the smaller societies, will become the supreme law of the land. These will be merely acts of usurpation, and will deserve to be treated as such. [Emphasis in original.] But how about the claim that the Supreme Court has the final say regarding the constitutionality of federal laws or edicts? Thomas Jefferson had something to say about the matter. In 1804, he wrote that giving the Supreme Court power to declare unconstitutional acts of the legislature or executive "would make the judiciary a despotic branch." He noted that "nothing in the Constitution" gives the Supreme Court that right. Even Abraham Lincoln, who as president unconstitutionally used his executive power to deny habeas corpus, recognized the lack of constitutional authority for the Supreme Court's assumption of the role of ultimate arbiter of an act's conformity with the Constitution. Lincoln said that if the Supreme Court were afforded the power to declare whether an act of the federal government was constitutional, "the people will have ceased to be their own masters, having to that extent resigned their government into the hands of that eminent tribunal." Consider also the opinion of eminent constitutional scholar Von Holtz: "Violations of the Constitution may happen and the injured cannot, whether states or individuals, obtain justice through the court. Where the wrongs suffered are political in origin the remedies must be sought in a political way." He continues, regarding this "aristocracy of the robe": "That our national government, in any branch of it, is beyond the reach of the people; or has any sort of 'supremacy' except a limited measure of power granted by the supreme people is an error." How can anyone read these statements, or the 10th Amendment for that matter, and honestly conclude that any branch of the federal government is intended to be the surveyor of the boundaries of its own power? Every department of the federal government was created by the Constitution — therefore, by the states — and has no natural sovereignty. No branch can define its own authority. Such a thought is ridiculous and contrary to any theory of popular sovereignty ever enunciated. If the courts, Congress, or the president possessed such power, it would make them judge, jury, and executioner in every case in which their own act of exceeding constitutional authority is at bar. Look at it this way: If the federal government was "the decider," what purpose would the 10th Amendment serve? If he's being honest, even the most sanguine political observer would have to admit that the federal government will continue to expand its powers so long as it is allowed to decide the scope of those powers. It will even declare its usurpations constitutional, as was the case with the Supreme Court decision on ObamaCare. Think about it; if forcing Americans to buy a particular product — health insurance — is constitutional, what areas of human endeavor could possibly fall outside the scope of the Constitution?

AT: Supremacy Clause

Supremacy clause doesn't negate nullification—only mandates states follow actions explicitly laid out in the constitution for the federal government

McClanahan 10 (Brion McClanahan; Mar. 29th 2010; Ph.D. in American History from the University of South Carolina and a faculty member at Tom Woods' Liberty Classroom. Co-author of four books, The Founding Fathers Guide to the Constitution, Forgotten Conservatives in American History (with Clyde Wilson), The Politically Incorrect Guide to the Founding Fathers, and The Politically Incorrect Guide to Real American Heroes; "Who's Supreme? The Supremacy Clause Smackdown"; 10th Amendment Center; http://tenthamendmentcenter.com/2010/03/29/whos-supreme-the-supremacy-clause-smackdown/) jskullz

The so-called "supremacy clause" of the Constitution, found in Article 6, states, "This Constitution, and the Laws of the United States which shall be made *in Pursuance thereof*; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding [emphasis added]."

The key, of course, is the italicized phrase. All laws made in pursuance of the Constitution, or those clearly enumerated in the document, were supreme, State laws notwithstanding. In other words, the federal government was supreme in all items clearly listed in the document.

A quick reading of the Constitution illustrates that national healthcare is not one of the enumerated powers of the federal government, so obviously Engstrom's blanket and simplistic statement is blatantly incorrect, but his distortion of the supremacy clause goes further.

The inclusion of such a clause in the Constitution was first debated at the Constitutional Convention on 31 May 1787. In Edmund Randolph's initial proposal, called the Virginia Plan, the "national" legislature had the ability to "legislate in all cases to which the separate states are incompetent" and "to negative all laws passed by the several states contravening, in the opinion of the national legislature, the Articles of Union." John Rutledge, Pierce Butler, and Charles Pinckney of South Carolina challenged the word "incompetent" and demanded that Randolph define the term. Butler thought that the delegates "were running into an extreme, in taking away the powers of the states" through such language.

Randolph replied that he "disclaimed any intention to give indefinite powers to the national legislature, declaring that he was entirely opposed to such an inroad on the state jurisdictions, and that he did not think any considerations whatever could ever change his determination [emphasis added]." James Madison, the author of the Virginia Plan, was not as forthcoming as to his sentiment. Ultimately, Madison preferred a negative over State law and wished the national legislature to be supreme in call cases. But he was not in the majority.

The Convention again broached a federal negative on State law on 8 June 1787. Charles Pinckney, who presented a draft of a constitution shortly after Randolph offered the Virginia Plan, believed a national negative necessary to the security of the Union, and Madison, using imagery from the solar system and equating the sun to the national government, argued that without a national negative, the States "will continually fly out of their proper orbits, and destroy the order and harmony of the political system." Such symbolism made for a beautiful picture, but it belied reality.

To most of the assembled delegates, the national government was not the center of the political universe and the States retained their sovereignty. Hugh Williamson of North Carolina emphatically stated he "was against giving a power that might restrain the states from regulating their internal police."

Elbridge Gerry of Massachusetts was against an unlimited negative, and Gunning Bedford of Delaware believed a national negative was simply intended "to strip the small states of their equal right of suffrage." He asked, "Will not these large states crush the small ones, whenever they stand in the way of their ambitious or interested views?"

When the negative power was put to a vote, seven States voted against it and three for it, with Delaware divided (and Virginia only in the affirmative by one vote). Roger Sherman of Connecticut summarized the sentiment of the majority when he stated he "thought the cases in which the negative ought to be exercised might be defined." Since the negative did not pass, such a definition was unnecessary.

Thus, the federal government was supreme only in its enumerated powers and it did not have a negative over State law. Supremacy had limits.

By the time the Constitution was debated in the several State ratifying conventions in 1787 and 1788, the "supremacy clause" galvanized opponents of the document. The Constitution, they said, would destroy the States and render them impotent in their internal affairs. The

response from proponents of ratification illuminates the true intent of the clause. William Davie, a delegate to the Constitutional Convention from North Carolina and proponent of the Constitution, responded to attacks levied on the "supremacy clause" by stating that:

This Constitution, as to the powers therein granted, is constantly to be the supreme law of the land. Every power ceded by it must be executed without being counteracted by the laws or constitutions of the individual states. Gentlemen should distinguish that it is not the supreme law in the exercise of power not granted. It can be supreme only in cases consistent with the powers specially granted, and not in usurpations [emphasis added].

Davie wasn't alone in this opinion. Future Supreme Court justice James Iredell of North Carolina argued that, "This clause [the supremacy clause] is supposed to give too much power, when, in fact, it only provides for the execution of those powers which are already given in the foregoing articles.If Congress, under pretence of executing one power, should, in fact, usurp another, they will violate the Constitution [emphasis added]."

Furthermore, in a foreshadowing of nullification, Iredell argued that, "It appears to me merely a general clause, the amount of which is that, when they [Congress] pass an act, if it be in the execution of a power given by the Constitution, it shall be binding on the people, otherwise not [emphasis added]. Other ratifying conventions had similar debates, and proponents of the Constitution continually reassured wavering supporters that the Constitution would only be supreme within its delegated authority.

Most bought their assurances, though to staunch opponents, the Constitution still vested too much power in the central authority. The States would lose their sovereignty, they argued, and as a result, these men demanded an amendment to the Constitution that expressly maintained the sovereignty of the States and placed limits on federal power. Even several moderate supporters of the Constitution embraced this idea.

Ultimately, the three most powerful States in the Union, New York, Massachusetts, and Virginia, demanded that a bill of rights be immediately added to the Constitution; near the top of those recommended amendments on every list, a State sovereignty resolution. These ultimately became the Tenth Amendment to the Constitution, which reads, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Clearly the intent of this amendment was to mitigate any design the federal government had on enlarging its powers through the "supremacy clause." If the power was not enumerated in the Constitution and the States were not prohibited by the Constitution from exercising said power, then that power was reserved to the States.

Several other constitutional "scholars" have weighed in on the debate in the last week, and each has invoked the "supremacy clause" to defend their opposition to State action against healthcare. Duke Law Professor Neil Siegel went so far as to suggest that the States are not reading the Tenth Amendment correctly. In perhaps the most outlandish statement of the debate, he also said, "Any talk of nullification bothers me because it's talk of lawlessness."

I guess Mr. Siegel has failed to consider that Idaho bill HO391 was passed by a legitimate legislative body elected by the people of the State. That would make it lawful.

Of course, this debate ultimately boils down to loose interpretation verses strict construction. Thomas Jefferson had the best line on this issue. When asked to read between the lines to "find" implied powers, Jefferson responded that he had done that, and he "found only blank space."

The original intent of both the "supremacy clause" and the Tenth Amendment indicate that Idaho and the other States challenging Obamacare are justified and correct and that the legal profession is either in the tank for the federal government or has not read either the debates of the Constitutional Convention and/or the State ratifying debates. This should make people like Engstrom and Siegel, rather than legitimate State law directed at unconstitutional authority, irrelevant.

AT: Cooper v. Aaron

Unconstitutional laws do not receive the same protections

Rufino 13 (Diane Rufino; Aug. 27th 2013; molecular biologist-turned constitutional attorney.She heads the Eastern NC Tea Party (Pitt County area), is the legislative chair for the Republican Women of Pitt County, and volunteers with the Beaufort County chapter of the National Center for Constitutional Studies; "The Supremacy Clause and Proper Constitutional Bounds"; Tenth Amendment Center; http://blog.tenthamendmentcenter.com/2013/08/the-supremacy-clause-and-proper-constitutional-bounds/) jskullz

Critics are quick to point out that the doctrine of nullification has never been legally upheld. In fact, the Supreme Court expressly rejected it – in Ableman v. Booth, 1959, and Cooper v. Aaron, 1958.¶ They say that the courts have spoken on the subject, and under the Supremacy Clause, federal law is superior to state law. Further, they argue that under Article III of the Constitution, the federal judiciary has the final power to interpret the Constitution. Therefore, the critics conclude, that the power to make final decisions about the constitutionality of federal laws lies with the federal courts, not the states, and the states do not have the power to nullify federal laws but rather, are duty-bound to obey them.¶ The fatal flaw in their arguments, however, is that they believe that the judiciary, a branch of the same federal government that tends to overstep their constitutional bounds, is somehow above the law and not subject to the remedy of nullification as the other branches are.¶ Another fatal flaw in their argument is that somehow, the Supremacy Clause is a rubber stamp that labels every federal law, every federal court decision, and every federal action "supreme." They, and especially the justices of the Supreme Court, refer to the Supremacy Clause as if it were the Midas Touch – a magical power that turns EVERYTHING the federal government does, including by all three branches, to gold. Nothing is farther than the truth. The Supremacy Clause states simply: "This Constitution, and the laws of the United States which shall be made in pursuance thereof; …shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby…"¶ There is no debate that the Constitution, as originally drafted and defended, and as intended and ratified, designed a government of limited powers. Therefore it follows that only laws passed to legislate for the limited functions listed in the Constitution are supreme. Regarding objects and designs not expressly listed in the Constitution, the Ninth and Tenth Amendment remind us that they are reserved to the People or the States, respectively, and the federal government can claim no such supremacy. The Supremacy Clause states a preemptive doctrine that asserts sovereignty just as equally as the Ninth and Tenth Amendments assert sovereignty.

NSA=Unconstitutional

NSA is unconstitutional—violates existing precedents

Donohue 13 (Laura K. Donohue; June 21st 2013; professor at Georgetown University Law Center and director of Georgetown's Center on National Security and the Law; "NSA surveillance may be legal — but it's unconstitutional"; The Washington Post; http://www.washingtonpost.com/opinions/nsa-surveillance-may-be-legal--but-its-unconstitutional/2013/06/21/b9ddec20-d44d-11e2-a73e-826d299ff459_story.html) jskullz

The National Security Agency's recently revealed surveillance programs undermine the purpose of the Foreign Intelligence Surveillance Act, which was established to prevent this kind of overreach. They violate the Fourth Amendment's guarantee against unreasonable search and seizure. And they underscore the dangers of growing executive power.¶ The intelligence community has a history of overreaching in the name of national security. In the mid-1970s, it came to light that, since the 1940s, the NSA had been collecting international telegraphic traffic from companies, in the process obtaining millions of Americans' telegrams that were unrelated to foreign targets. From 1940 to 1973, the CIA and the FBI engaged in covert mail-opening programs that violated laws prohibiting the interception or opening of mail. The agencies also conducted warrantless "surreptitious entries," breaking into targets' offices and homes to photocopy or steal business records and personal documents. The Army Security Agency intercepted domestic radio communications. And the Army's CONUS program placed more than 100,000 people under surveillance, including lawmakers and civil rights leaders.¶ After an extensive investigation of the agencies' actions, Congress passed the 1978 Foreign Intelligence Surveillance Act (FISA) to limit sweeping collection of intelligence and create rigorous oversight. But 35 years later, the NSA is using this law and its subsequent amendments as legal grounds to run even more invasive programs than those that gave rise to the statute.¶ We've learned that in April, the Foreign Intelligence Surveillance Court (FISC) ordered Verizon to provide information on calls made by each subscriber over a three-month period. Over the past seven years, similar orders have been served continuously on AT&T, Sprint and other telecommunications providers.¶ Another program, PRISM, disclosed by the Guardian and The Washington Post, allows the NSA and the FBI to obtain online data including e-mails, photographs, documents and connection logs. The information that can be assembledabout any one person — much less organizations, social networks and entire communities — is staggering: What we do, think and believe.¶ The government defends the programs' legality, saying they comply with FISA and its amendments. It may be right, but only because FISA has ceased to provide a meaningful constraint.¶ Under the traditional FISA, if the government wants to conduct electronic surveillance, it must make a classified application to a special court, identitying or describing the target. It must demonstrate probable cause that the target is a foreign power or an agent thereof, and that the facilities to be monitored will be used by the target.¶ In 2008, Congress added section 702 to the statute, allowing the government to use electronic surveillance to collect foreign intelligence on non-U.S. persons it reasonably believes are abroad, without a court order for each target. A U.S. citizen may not intentionally be targeted.¶ To the extent that the FISC sanctioned PRISM, it may be consistent with the law. But it is disingenuous to suggest that millions of Americans' e-mails, photographs and documents are "incidental" to an investigation targeting foreigners overseas.¶ The telephony metadata program raises similar concerns. FISA did not originally envision the government accessing records. Following the 1995 Oklahoma City bombing, Congress allowed applications for obtaining records from certain kinds of businesses. In 2001, lawmakers further expanded FISA to give the government access to any business or personal records. Under section 215 of the Patriot Act, the government no longer has to prove that the target is a foreign power. It need only state that the records are sought as part of an investigation to protect against terrorism or clandestine intelligence.¶ This means that FISA can now be used to gather records concerning individuals who are neither the target of any investigation nor an agent of a foreign power. Entire databases — such as telephony metadata — can be obtained, as long as an authorized investigation exists.¶ Congress didn't pass Section 215 to allow for the wholesale collection of information. As Rep. F. James Sensenbrenner Jr. (R-Wis.), who helped draft the statute, wrote in the Guardian: "Congress intended to allow the intelligence communities to access targeted information for specific investigations. How can every call that every American makes or receives be relevant to a specific investigation?"¶ As a constitutional matter, the Supreme Court has long held that, where an individual has a reasonable expectation of privacy, search and seizure may occur only once the government has obtained a warrant, supported by probable cause and issued by a judge. The warrant must specify the places to be searched and items to be seized.

2NC Congressional Restrictions Key

The CP captures their congressional authorization arguments-it restores congressional authority over war powers

Bulman-Pozen-Attorney-Adviser, Office of Legal Counsel, **Department of Justice-12**
http://columbialawreview.org/federalism-as-a-safeguard-of-the-separation-of-powers/
Federalism as a Safeguard of the Separation of Powers

States frequently administer federal law, yet scholars have largely overlooked how the practice of cooperative federalism affects the balance of power across the branches of the federal government. This Article explains how **states check the federal ––executive in an era of expansive executive power** and how they **do so as champions of Congress**, both relying on congressionally conferred authority and casting themselves as Congress's faithful agents. By inviting the states to carry out federal law, Congress, whether purposefully or incidentally, counteracts the tendency of statutory ambiguity and broad delegations of authority to enhance federal executive power. **When states disagree with the federal executive** about how to administer the law, **they force attention back to the underlying statute**: Contending that their view is consistent with Congress's purposes, **states compel the federal executive to respond in kind.** States may also reinvigorate horizontal checks by calling on the courts or Congress as allies. Cooperative federalism schemes are a more practical means of checking federal executive power than many existing proposals because such schemes do not fight problems commentators emphasize— a vast administrative state, broad delegations, and polarized political parties—but rather harness these realities to serve separation of powers objectives.

The states can bolster congressional authority in relation to executive

Bulman-Pozen-Attorney-Adviser, Office of Legal Counsel, **Department of Justice-12**
http://columbialawreview.org/federalism-as-a-safeguard-of-the-separation-of-powers/
Federalism as a Safeguard of the Separation of Powers

As these examples suggest, one reason we may overlook how federalism affects the separation of powers is that our dominant understanding of federalism obscures key features of state challenges. Judicial opinions and legal scholarship tend to envision the states as separate sovereigns, resisting federal action from a position entirely outside the federal government. But a prevalent mode of federalism is cooperative federalism, in which states are charged by Congress with administering federal law. 8 [*462] When we turn our attention to cooperative federalism, we can see the distinctive way states may safeguard the separation of powers. Cohabiting a statutory scheme with the federal executive, **states frequently challenge not the raw exercise of federal power**, as traditional accounts of federalism would have it, but rather the faithfulness of the executive to the statutory scheme. And, in so doing, they rely on authority granted to them by Congress. States need not actually be Congress's faithful agents for them to claim this mantle and to force the federal executive to respond in kind. By assigning states a role in executing federal law, Congress has - often unwittingly - empowered them to provide the sort of **check on executive power that it is often unable, or unwilling, to provide directly.**

2NC Judicial Restrictions Key

Nullification comparatively stronger check on executive than Court-the plan is the fox guarding the hen house

Woods-10

Nullification : how to resist Federal tyranny in the 21st century Google Books
Thomas E. "Tom" Woods, Jr. is an American historian, political analyst, and author. Woods is a New York Times best-selling author and has published eleven books

It is not clear what the alternative to Jefferson's remedy of nullification might be. Unconstitutional laws have indeed been passed, in very great abundance, so the question he poses about what to do in such a situation **is not merely academic**. Should people gather petitions, asking those who drafted the objection- able law to change their minds? Good luck with that They could instead appeal to the courts. Although it would be nice if the courts were to grant us relief, what if they do not? The federal courts have, for all intents and purposes, ceased to police the federal government. We cannot be expected to believe that the matter is settled, and an odious law to be complied with merely because a handful of politically well-connected lawyers whom we are urged to treat with superstitious awe have solemnly informed us that all is well. It is not difficult to find support in history for the general principle that an unconstitutional law is void. Alexander Hlamilton contended in Federalist #78 that "there is no position which depends on clearer principles, than that every act of a delegated authority contrary to the tenor of the commission under which it is exercised, is void. No legislative act, therefore, contrary to the constitution, can be valid, lb deny this, would be to affirm that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to the people themselves; that men, acting by virtue of powers, may do not only what their powers do not authorize, but what they forbid." This principle should be beyond debate. The controversy arises when we consider how and by whom an unconstitutional law should be declared void (and thus not enforced). It was Hamilton's view that the courts would put things right. But what if they didn't? And since the federal courts are themselves a branch of the federal government, how can the people be expected to consider them impartial arbiters? The Supreme Court itself, after all, although usually pointed to as the monopolistic and infallible judge of the constitutionality of the federal government's actions, is itself a branch of the federal government **So in a dispute between the states and the federal government, the resolution is to come from...the federal government**? Jefferson refused to accept that answer. Under that arrangement, the states would inexorably be eclipsed by the federal government. It was impossible for Jefferson to believe that the states would have agreed to a system that assured their unjust subordination. Spencer Roane, a Virginia judge who would have been appointed Chief Justice of the United States by Thomas Jeffer- son had John Adams not chosen John Marshall in the waning hours of his presidency, noted that if the federal judiciary were to arbitrate such a dispute between itself and the states, it would be presiding over its own case, a clear absurdity: It lias, however, been supposed by some that... the right of the State governments to protest against, or to resist encroachments on their authority is taken away, and transferred to the Federal judiciary, whose power extends to all cases arising under the Constitution; that the Supreme Court is the umpire to decide between the States on the one side, and the United States on the other, in all questions touching the constitutionality of laws, or **acts of the Executive**. There are many cases which can never be brought before that tribunal, and I do humbly conceive that the States never could have committed an act of such egregious lolly as to agree thai their umpire should he altogether appointed and paid by the other party. The Supreme Court may be a perfectly impartial tribunal to decide between two States, but cannot be considered in that point of view when the contest lies between the United States and one of its members—The Supreme Court is but a department of the general government. A department is not competent to do that to which the whole government is inadequate____They cannot do it unless we tread underfoot the principle which forbids a party to decide Ins own cause. Joseph Desha, governor of Kentucky, identified the very same problem in 182>: When the general government encroaches upon the rights of the State, is it a safe principle to admit that a portion of the encroaching power shall have the right to determine finally whether an encroachment has been made or not? in fact, most of the encroachments made by the general gov- ernment flow through the Supreme Court itself, the very tri- bunal which claims to be the final arbiter of all such disputes. What chance for justice have the States when the usurpers of their rights are made their judges? Just as much as individuals when judged by their oppressors. Desha concluded that it is "believed to be the right, as it may hereafter become the duty of the State governments, to protect themselves from encroachments, and their citizens from oppres- sion, by refusing obedience" to "unconstitutional mandates/ Once we accept the underlying premise that an unconstitu- tional law is ipso facto void, it is not a long way to Jefferson's commonsense conclusion that someone ought to protect the people from the enforcement of such a law, and that the state governments, each one speaking only for itself, arc the logical choice to do so.9

2NC Politics Net Benefit

The Counterplan causes norm cascading that changes federal policy-it also avoids politics by building constituencies for the plan

Robinson-JD Yale-7 40 Akron L. Rev. 647

ARTICLE: Citizens Not Subjects: U.S. Foreign Relations Law and the Decentralization of Foreign Policy

4. Laws and actions that influence the nation's foreign policy Localities' actions often attempt to influence national foreign policy. Some of these actions merely help reinforce and support preexisting federal foreign policy. The most prominent example of this is localities' support of the U.S. military in their operations abroad. 305 However, localities' actions may also be in protest to U.S. foreign policy or designed to change it. The Central American sanctuary movement grew out of dissatisfaction with the U.S.'s policy towards Central America in the 1980's and the belief that refugees from El Salvador and Guatemala were politically persecuted despite U.S. support for these regimes. In all, "more than 20 cities and two states declared themselves sanctuaries for Central American refugees." 306 During this same period, 87 cities created sister city type relationships with communities in Nicaragua, in part to show solidarity against U.S. policy there. 307 U.S. sanctions on Cuba have similarly been a target of state and local action both on political and economic grounds. The Illinois and Texas state legislatures have passed resolutions in support of normal relations between the U.S. and Cuba. 308 Some cities in the United States have established "Sister City" type relations with Cuban cities to express their support for more normal relations between the United States and Cuba. 309 After lobbying by agricultural interests, Illinois Governor Ryan [*708] led a mission to Cuba in 1999 to promote trade and deliver aid. 310 During the trip he met with Cuban President Fidel Castro. 311 Shortly after returning he stated, "My hope is there will be other state delegations that go, and hopefully we'll lift this embargo." 312 In 2002, Havana hosted governors and other representatives from seven states at a Food and Agribusiness Exhibition. 313 Over one hundred cities passed resolutions calling for the end of the Iraq War. 314 In early 2005 during the annual town hall day in Vermont, 49 cities and towns passed a resolution that asked the state legislature to investigate what the impact of National Guard deployments to Iraq are having on the state. 315 Several cities across the country have passed resolutions calling on their states to withdraw their National Guard troops from Iraq. 316 Dozens of local ballot initiatives in communities across the country called on the federal government to bring the troops home from Iraq in the November 2006 elections. 317 State governors have also been openly critical of the U.S.'s involvement in the conflict in Iraq. 318 In March 2007, several towns in Vermont passed resolutions calling for the impeachment of President Bush and Vice President Cheney. In April 2007, the Vermont State Senate in a non-binding resolution called on members of the U.S. House of Representatives to begin impeachment proceedings against the President and Vice President because of their actions in the United States and abroad, including Iraq. These calls for [*709] impeachment, which highlight a deep internal divide within the United States over its policy in Iraq, were reported upon by media around the world. 319 States and localities have pushed to change U.S. foreign policy more broadly as well. For example, after the failure of SALT II during the Carter administration, the unwillingness of Reagan to support a nuclear test ban treaty, and the development of the Strategic Defense Initiative, citizens banded together to promote a freeze on the production of nuclear weapons in the 1980s. Through town meetings, local referenda, resolutions, or other initiatives, more than 900 local governments acted on the freeze issue. 320 After the end of the Cold War, at least 70 mayors in the United States as well as hundreds of mayors from over 100 countries have signed a statement in support of a nuclear free world. 321 State assemblies have similarly passed resolutions calling for the end of nuclear weapons. 322 Some states have taken a different approach towards this national defense issue with at least 10 states having passed resolutions calling upon the national government to deploy a missile defense system since 1997. 323 States have also urged the United States to sign and ratify international agreements. For example, several state governments have passed resolutions in support of the Convention on the Elimination of Discrimination Against Women (CEDAW). 324 Often state and local action arises out of dissatisfaction with the perceived inadequacy or incorrectness of a federal policy towards a foreign policy issue. Catherine Powell calls the impact of state and local [*710] laws on national foreign policy "dialogic federalism." 325 She argues that **enough local ordinances can create a norm cascade that affects federal policy**. 326 The U.S. federal sanctions against South Africa passed by Congress over President Reagan's veto in 1986 were arguably in part a result of just such a norm cascade created by anti-apartheid resolutions and laws at the state and local level. 327 In many ways, it is the mobilization of citizens around, more than the passage of a resolution or act on a foreign policy issue that leads to a norm cascade which changes federal policy. The effort required to convince legislators and their fellow citizens to support a locality's official action gives citizens a tangible and reachable local goal to focus their efforts on. This helps organize constituencies locally that can develop into a national coalition. For example, someone who has worked continuously to garner support for a local divestment initiative on Sudan is also more likely to call their Congressperson to urge them to pass the Darfur Accountability Act. Norm cascades created by localities' actions do not only impact the policy they are directed at, but have a wider impact as well. For instance, the South Africa or Sudan divestment campaigns can be seen as national human rights moments. These are moments in which a segment of the American public becomes unusually organized to promote a human rights-based foreign policy goal. Most voters remain generally unaware of how U.S. foreign policy implicates human rights in

other countries. Further, most voters do not base their vote on foreign policy human rights issues. **The signal given** by these human rights moments, however, creates an environment in which sympathetic legislators and policymakers can prioritize human rights concerns in other areas of foreign policy, knowing there is a **constituency that generally supports this type of action.**

The CP doesn't require congress to fight with the President over the legislation-our follow on arguments are after the DA

Not legislation which is the key internal link-Legislation like the plan crowds out the agenda

Mark Seidenfeld, Associate Professor, Florida State University College of Law, 1994 (80 Iowa L. Rev. 1)

The **cumbersome process of enacting legislation** interferes with the President's ability to get his legislative agenda through Congress much as it hinders direct congressional control of agency policy-setting. n196 A President has a limited amount of political capital he can use to press for a legislative agenda, and **precious little time to get his agenda enacted**. n197 These constraints prevent the President from marshalling through Congress all but a handful of statutory provisions reflecting his policy [*39] vision. Although such provisions, if carefully crafted, can significantly alter the perspectives with which agencies and courts view regulation, such judicial and administrative reaction is not likely to occur quickly. Even after such reaction occurs, a substantial legacy of existing regulatory policy will still be intact.In addition, the propensity of congressional committees to engage in special-interest-oriented oversight might seriously undercut presidential efforts to implement regulatory reform through legislation. n198 On any proposed regulatory measure, the President could face opposition from powerful committee members whose ability to modify and kill legislation is well-documented. n199 This is not meant to deny that the President has significant power that he can use to bring aspects of his legislative agenda to fruition. The President's ability to focus media attention on an issue, his power to bestow benefits on the constituents of members of Congress who support his agenda, and his potential to deliver votes in congressional elections increase the likelihood of legislative success for particular programs. n200 Repeated use of such tactics, however, will impose economic costs on society and concomitantly consume the President's political capital. n201 At some point the price to the President for pushing legislation through Congress exceeds the benefit he derives from doing so. Thus, a President would be unwise to rely too heavily on legislative changes to implement his policy vision.

Legislation is the link—has to pass too many hurdles which drag down the agenda

Paul Light, Founder of the Brookings Institution Center for Public Service, 1999 (The President's Agenda, p53-4)

Congressional Limits. Presidents face several structural limits on agenda size, but the congressional calendar involves the greatest institutional restrictions. Though Congress can act quickly during a crisis, most **legislation must pass through a series of decision points en route to enactment**. According to John Kennedy, the process contains **a number of hurdles**: It is very easy to defeat a bill in the Congress. It is much more difficult to pass one. To go through a subcommittee… and get a majority vote, the full committee and get a majority vote, go to the Rules Committee and get a rule, go to the Floor of the House and get a majority, start all over in the Senate, subcommittee and full committee, and in the Senate there is **unlimited debate**, so you can never bring a matter to a vote if there is enough determination on the part of the opponents, even if they are a minority, to go through the Senate with the bill. And then unanimously get a conference between the House and Senate to adjust the bill, or if one member objects, to have it go back through the Rules Committee, back through the Congress, and have this done on a controversial piece of legislation where powerful groups are opposing it, that is an extremely difficult task (transcript of television interview, in *Public Papers of The Presidents, 1963*, pp 892, 894) Kennedy's complaint came long before the rise of subcommittee government and the increased complexity within the legislative process. Past Presidents and their staffs generally have been sensitive to the demands of the congressional process. "The liaison office always walks a tight line," one Nixon officer suggested. "If you press too hard, you're likely to anger the committees. They have a heavy work load and won't take too much White House pressure. But if you don't press hard enough , the Congress will put your agenda on the back burner."

State action avoids Washington partisan gridlock

Etizen and Sage, 09- *Professor Emeritus of Sociology at Colorado State University and **Professor Emeritus of Sociology and Kinesiology at the University of Northern Colorado (D. Stanley Etizen and George H. Sage, Solutions to social problems: lessons from state and local governments, p.2-4)

These social problems have solutions, but the federal government rarely acts decisively to ameliorate them. Often there is gridlock in Washington, DC, as ideologues from the right and left refuse to work out compromise legislation ("partisanship-on-crack") (Grunwald, 2007). The role of government is at the heart of this ideological divide. Conservatives are hostile to the New Deal legacy of what they call "big government." They value individualism, freedom, and the market economy, believing fundamentally that government action interferes with each. Conservatives see social problems as the consequence of bad people making bad decisions. Most significantly, conservatives seek to reduce taxes, which consequently reduces government. Progressives counter these ideas by arguing that a laissez-faire approach guarantees exaggerated inequality. Moreover, they aver that it is not bad people but social structural

impediments that doom some to fail. Thus, progressive government policies such as a reliable safety net, reducing extreme income/wealth disparities, education for preschool and school children from high-risk situations, and stiffer laws and penalties for reducing the use of hydrocarbons are needed to attack social problems (Eitzen & Sage, 2007, pp. 219223). But these government programs are expensive, possibly requiring higher taxes to implement and sustain them. Added to the ideological gridlock is the power of interest groups and their extraordinary lobbying efforts to influence legislation. The United States, for example, does not have universal health insurance because of the power of the pharmaceutical and health insurance industries to prevent legislation that would undermine their enormous advantages under the current system. A final source of federal inaction against social problems is caution by many members of Congress and presidents to attempt new and bold plans. If bold initiatives fail, the public knows who to blame, and their wrath will be felt in the next election. Thus, inaction is often preferred over action and the status quo is preserved. With Washington often immobilized, some states and local governments are filling the social policy vacuum with bold initiatives. As Forbes, the conservative business magazine, editorialized: *Raise the minimum wage. Attack global warming. Negotiate lower prescription drug prices. Extend health coverage to the uninsured. Protect consumers from identity theft. A to-do list for Democrats taking over Congress? Nope, a sample of what states are up to. (Forbes, 2006, p.54)* These state actions are in contrast to federal inaction caused by the reasons noted, as well as other developments. First, the George W. Bush two-term presidency, three-fourths of which was with a Republican-dominated Congress, opted consistently for a conservative agenda-lower taxes, less government regulation of business, and the like. This agenda enhanced social problems. Second, the huge federal debt increased mightily with the Iraq War, and major tax cuts made policymakers shy about adding new and expensive programs. Third, the conservative agenda largely in force since the 1980s trumpeted a renewed federalism, handing off some federal powers to the states, giving away power over everything from welfare to Medicaid. According to political analyst Ezra Klein: "States can't deficit spend, so handing them once-federal responsibilities under the rubric of restored federalism promised to shrink the expansiveness, generosity, and responsiveness of government services" (2007, p. 24). However, governors, whether Republican or Democrat, find that it is not easy being a service-slashing ideologue on the state level, where they are closer than politicians in Washington to the people. Klein continued: "Governors can see the consequences of federal cutbacks and unfunded federal mandates. They see the consequences of letting cities deteriorate. They have to pay for the Medicaid patients. They have to pay for the consequences of housing cuts" (p. 24). Those states hit especially hard have even more incentive to take action to solve social problems. For example, states dependent on manufacturing, such as Michigan and Ohio, have been crushed by the dramatic loss of manufacturing jobs. Ohio, for instance, lost one-fifth of its manufacturing jobs from 2000 to 2006, resulting in a declining economy, many downwardly mobile families, and droves of young people leaving the state. Faced with this disaster the Ohio governor and legislature targeted investment in new industries (e.g., investing $250 million a year in the renewable energy industry) and funded an adult education system to retrain workers (Klein, 2007). What appears to be happening in some states and cities (certainly not all) is that Republicans and Democrats, unlike at the federal level, sometimes join in common cause to legislate for the common good. With Washington in gridlock, mayors and governors and their policymaking bodies are shedding rigid partisanship and taking on such social problems as undemocratic practices, inadequate health care, poverty, lack of affordable housing, inadequate schools, carbon emissions, global warming, excessive prescription drug costs, decaying infrastructure, and the lack of a living wage. This book explores local and state initiatives that demonstrate possible solutions to social problems, with the hope that the successful ones will "bubble up" to the federal level.

Federalism

IL-Nullification

Nullification promotes effective model of federalism-is a middle ground between centralization and secessionism

Warbiany-contributor liberty papers-10

http://www.thelibertypapers.org/2010/08/17/point-nullification-is-the-civil-disobedience-of-federalism/

Point: Nullification Is The Civil Disobedience of Federalism

In federal politics, states are party to an uneasy compact with other states under the guise of a superior government. This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding. As such, they cede many powers to that national government, but one must think that they do not cede all of their own powers. Something must be held in reserve. The question is what? After all, this "Supremacy Clause" Constitution only grants supremacy to those laws made in pursuance of the Constitution itself — anything not permitted by the Constitution must not be considered to be Supreme. The real question, then, is who decides what is Constitutional? Since 1803 and John Marshall, half of that question has been decided. The US Supreme Court is the arbiter of what is, and what is not, Constitutional. Further, a critical tool of state protection against the overreaches of the national government, the state appointment of Senators, was stricken in 1913 by the Seventeenth Amendment. Thus, the only legal method of appeal to Constitutionality available to the States is appeal to the Supreme Court, a body that hasn't found many overreaches of national government since the New Deal.

Nullification, the doctrine that states can disregard federal laws, declaring them unconstitutional, is a provocation somewhere between fighting a battle at the Supreme Court level and secession. Appeal to the Supreme Court is basic and need not be addressed here. Secession is a far more drastic measure, far more controversial, and an area where I believe Doug and I disagree, so it does require some treatment. Secession is often equated with violence, and treated as "violent revolution", but I would say that most instances of violence were continued by the government trying to retain their subjects, not by those trying to withdraw. In the American Revolution, nothing that I've seen suggests that had the British peacefully withdrawn their troops, the colonists would have had any cause for continuation of violence. Even in the US Civil War, it is unlikely that, had the North allowed the South to secede, that the South would have ridden on Washington to impose slavery back upon the North. Secession is not overthrow of the government, it is withdrawal therefrom. Of course, Doug and I agree that, whether they had the right or not, the South's secession was for morally unconscionable reasons — the continuance of the despicable practice of slavery. But the South's secession was no different than the American Revolution in that they were NOT attempts to overthrow a government outside of the territories that wanted their freedom, they could have been peaceful separations. The breakup of the Soviet Union is a good example. While it was only peaceful because the Russians didn't have the power to hold it together, it was a peaceful secession nonetheless. So at this point we've sketched out two responses to potentially unconstitutional overreaches by a national government. The first is the relatively weak appeal to the Supreme Court — asking the government to self-regulate. This is a difficult option. A Senate prior to the Seventeenth Amendment might take seriously their "Advice and Consent" role in judicial nominations to only nominate those who would respect state sovereignty and Constitutional limits, but that ship has sailed. In its wake, it's left a court with an expansive view of national government authority. Secession, on the other hand, is all-or-nothing. And while it may not be a violent act, history has shown that it often will be. As Doug pointed out in all three posts I read of his referencing secession, Jefferson in the Declaration of Independence said that taking to arms should not be done "for light and transient causes". Leaving only these two options is a fool's game. Secession will only be legitimate in the face of absolutely unconscionably abuse, and appeal to the judiciary is impotent and unlikely to succeed [and further, the structure of the direct election of Senate and the Supreme Court nomination process makes it unlikely this will change]. If one wants to give the national government limitless power, asking only that it police itself, having only these two options is the roadmap… …**which is why we need nullification**. **Nullification is the civil disobedience of Federalism**. Is it legal? No. After all, the Supremacy Clause and judicial review see to that. But it wasn't legal for Rosa Parks to sit at the front of the bus, or for black students to sit at a "Whites-only" counter at Woolworth's. Sometimes, the law is a ass. Sometimes, you need to disobey to make a point. I'll give an example. Here in California, we have legalized marijuana for medical purposes. This is in DIRECT contradiction to the Controlled Substances Act, an act that empowered the regulation to be written that declares marijuana a Schedule I drug — with no medical use whatsoever. This is nullification in action. This is civil disobedience. California is not denying the Federal government's power to enforce the drug laws — but it is denying its compliance with those laws and its assistance to the Feds in such power. What will the result of this action be? Well, this (and potentially the follow-on Proposition 19) forces the people of California address the question of marijuana. Several states have followed on with their own medical marijuana laws. We now have a body of medical marijuana users which can be called upon to testify that marijuana does have medical use. We have families who have watched their loved ones, battling horrible diseases which sap their appetite, who have been able to eat enough to keep their strength. Hopefully the result of this action will be the government backing down and taking marijuana off Schedule I. Viewed this way, nullification is less about disobedience as it **is about changing policy**. Nullification is a tactic in a wider strategy. It is a way to register unhappiness with federal dictates without necessarily going full-bore and

threatening secession. Further, it is a way to demonstrate, by direct example, that changes in policy are preferable to the way Washington demands.

Only nullification solves federalism—gives certain power to the states and avoid federal overreach

Martin 12 (Scott Martin; Nov. 23rd 2012; State Chapter Coordinator for the South Carolina Tenth Amendment Center; "Nullification: The means to reestablish federalism"; Tenth Amendment Center; http://blog.tenthamendmentcenter.com/2012/11/nullification-the-means-to-reestablish-federalism/) jskullz

Judging by the size and power of the central government, the reach of the laws it passes, and the accelerating rate of increase in all of the above, expecting the Congress and president to voluntarily stop doing what they've been doing for the past 100 years, or so, is [impractical] insanity. It doesn't matter which party wrests control of the system, the federal government continues to grow. Don't expect the Supreme Court to side with Liberty, either.¶ Yes, the states must assert federalism.¶ The means to do so is Nullification.¶ Any single state, on any issue not delegated to the central government by all the states, retains the obligation to stave off intrusion into its jurisdiction. It does this with legislation, at the state level. The law may not use the word, 'nullification.' It may state that said federal law shall not have effect, shall be ignored, is illegal, is unconstitutional, or, yes, is null and void in that state.

History proves—Nullification key to states rights

Haworth 13, (Peter, Ph.D. in Government from Georgetown University, "Real Federalism Includes Taking Interposition and Nullification Seriously", Nomocracy in Politics, http://nomocracyinpolitics.com/2013/09/25/real-federalism-includes-taking-interposition-and-nullification-seriously/)//BW

The Civil War and Postbellum periods, however, severely damaged the viability of nullification, and this coincided with cases where States became weaker political entities as a result of majority-faction crises. When the Northern States developed an anti-slavery majority faction (i.e., the Republican Party) against the Southern States and were able to begin dominating the Federal Government, the Southern States sensed that their liberty within the union would become increasingly compromised; thus, many elected to protect their liberty by seceding. Such Southern-State resistance through secession had severe consequences for this sectional minority in terms of its States' viability as independent political entities. In fact, the Southern States were reduced to economically impoverished (and, for a time, politically powerless and dependent) entities once the final conflict, due to their resistance, had passed. Another notable instance of a Postbellum majority-faction crisis that weakened the States occurred when the liberal progressive majority became dominant and both imposed crippling (and unconstitutional) regulations on businesses and significantly encroached upon constitutional State-powers via the New Deal. Here, again, **nullification was not an option for dissenting States**, and here again States ultimately became weaker, less independent entities as a result. This weakening of the States, however, was not just limited to a sectional minority like it had been for the South after the Civil War; it plagued all of the States. In these Postbellum cases, federal supremacy was used to enforce federal laws that were a boon to the majority faction coalition and a bane to the minorities who suffered under such legislation.[16] Moreover, such examples entailed questionable expansions of federal powers beyond their delegated limits for the sake of advancing the interests of the majority de jour. Finally, these examples illustrate the history of States becoming vulnerable to national majorities during a time in which they ultimately lost their vibrant autonomous status and, hence, had to begin acting as federal clients. Aside from the constitutional argument for nullification, acceptance of

Calhoun's theory—especially his notion of concurrent majorities—would have greatly aided the ability of minorities to protect themselves against the factional policy of the various ruling coalitions. South Carolina's nullification of the protective tariff had already prompted Congress to enact legislation in order to reduce the tariff from levels that had threatened Southern economic interests. Nullification could have continued this function within the federal union if its acceptability had persisted into the late nineteenth and, then, twentieth centuries. Think, for example, how it might have been used to protect the States where the Grange movement had gained prominence. Think about how States could have challenged questionable Court doctrines like the personal status of corporations. On the other hand, imagine how the prudent States could have used nullification to challenge FDR's New Deal regulations upon industries operating within their borders.

Nullification key to check federal power

Haworth 13, (Peter, Ph.D. in Government from Georgetown University, "Real Federalism Includes Taking Interposition and Nullification Seriously", Nomocracy in Politics, http://nomocracyinpolitics.com/2013/09/25/real-federalism-includes-taking-interposition-and-nullification-seriously/)//BW

In our America where vast portions of federal policy is technically illegal because it involves the Federal Government exceeding its constitutionally delegated powers, State interposition and nullification may be the only way to arrest such federal usurpation. Without these States' rights doctrines, Americans and their States will be virtually powerless as establishment elites continue to invent new creative case law and false constitutional theories that justify the amassing of even more power at the federal level. Without such doctrines of resistance, the current electoral status quo will persist; citizens will continue having to choose between two political parties that are both aimed at maintaining a Congress and President who often support (and definitely do not seriously seek to roll-back) central-level aggrandizement. These considerations (and conclusions from the above analysis) are why real federalism demands taking interposition and nullification seriously. The most plausible path for returning to true constitutional federalism, or even just preserving our current status quo, is through the States defending their reserved powers and the constitutional rights of their citizens by voiding unconstitutional federal laws within their borders. If such a practice became widespread and accepted, the Federal Government would quickly scale back its reach for new powers, if not even begin to return its current power-holdings back to those parties with rightful legal claims to them.

Modern day "Cartel Federalism" harms state agency only constitutional federalism can solve

Reinsch, 13 (Richard, the editor of the Library of Law and Liberty, "A Fistful of Federalism, Part I", Library of Law and Liberty, http://www.libertylawsite.org/2013/09/16/a-fistful-of-federalism-part-i/)//BW

Greve's competitive federalism also telegraphs why many states are refusing Obamacare funds. While the states were empowered to do so by the Medicaid portion of the Supreme Court's Obamacare decision, many of the states also sense that they'll be left holding the fiscal bag in a few years when the Feds no longer foot the bill. So we might say that certain states already know that our current federalism can't continue much longer. The point, however, is will the village be destroyed before we can save it? Greve's federalism also observes that contrary to mountains of spilled conservative ink, the states aren't the little lambs who must be protected from a voracious nationalist government bent on bringing them low. They've wanted to be brought low or rather to be repeat players in a game that treats federal tax revenues as an open commons that all can exploit. Greve calls this cartel federalism, we might also call it musical chairs federalism, before the music has stopped make sure you've grabbed

your state's share of the federal till. Convincingly, as Greve also notes, the major suits against New Deal expansionist government weren't brought by the states. In fact, I'm unaware of any of the states challenging this revolution under a vertical federalism theory. But let me state where I think Greve's federalism, if not wrong, leads us away from a proper approach to American federalism. In the interest of taking up the important question of "What Kind of Federalism?" let me argue that we cannot merely see the states as just revenue maximizing authorities or view federalism as only worthwhile if it leads to chastened fiscal policies and market-based regulatory programs in the states. These are certainly good things and we certainly need more states who follow this course of action. But, to get federalism right, we have to get politics right. So while the competition/cartel federalism dichotomy Greve provides gives us an abundance of insights regarding the depraved state of our federalism, it also elides over what we might call the truth about American Federalism.

Nullification key to state sovereignty

Haworth 13, (Peter, Ph.D. in Government from Georgetown University, "Real Federalism Includes Taking Interposition and Nullification Seriously", Nomocracy in Politics, http://nomocracyinpolitics.com/2013/09/25/real-federalism-includes-taking-interposition-and-nullification-seriously/)//BW

Crucially missing in this debate is recognition of the importance of States checking federal authority so as to protect their constitutional autonomy and generally maintain themselves as vibrant political entities rather than mere federal lackeys (i.e., self-interested seekers of the Federal Government's largesse). Both authors miss these points. Greve's call for "national scale" makes this obvious, but he even explicitly denounces nullification in a separate essay on that topic. Moreover, Reinsch's refusal to advocate interposition and nullification is also telling. In the sections that follow, I will elucidate the following: (1) why Calhoun's doctrine of nullification is a constitutional means of preserving the States' local liberty; (2) how the lack of nullification and interposition has damaged the States viability as independent political entities that do not need federal largesse; and (3) some final thoughts about the importance of interposition and nullification as well as the need to dismiss ad hominem arguments against these doctrines.[1] Professor Adam Tate has argued that John C. Calhoun's advocacy of nullification was crucially focused on maintaining the American union in a manner that preserved the liberty of the States. Liberty here is a State's political autonomy to self-govern its internal affairs within the framework of reserved powers that it retains via the 1789 Constitution. Calhoun desired union, but he opposed its pursuit via unconstitutional conceptions of federal supremacy that inevitably tended toward the Federal Government usurping powers reserved by the States. He implied his vision for both union and local liberty (and his opposition to federal dominance within the union) in his famous toast at the Jefferson Day Dinner in 1830: "The Union, next to our liberty, most dear." Nullification, then, is not aimed at disunion; rather, it seeks to maintain a union of States that protects the liberty (i.e., the constitutional political autonomy) of each State via allowing a State to defend itself against federal encroachments. With respect to Calhoun's constitutional theory, it is important to realize that he viewed the people of each State as a sovereign entity (even after they had ratified the 1789 Constitution) and, hence, capable of (at a minimum) revoking the delegation of powers granted to the Federal Government.[2] Sovereignty includes having supreme, ultimate, and unified power and authority over the internal affairs of people within established territorial boundaries. This is the first and primary issue with respect to federalism, for it elucidates where ultimate authority resides when a dispute arises between a State and the Federal Government. If the people of each State retain sovereignty within its borders, despite delegating powers to the Federal Government via ratifying the Constitution (i.e., a State's sovereignty is something separate from the sovereign powers it delegates), then a State People can decide to revoke its delegation of powers (to the Federal Government) via

secession. With respect to nullification, which is a specific and strong mode of interposition, Calhoun believed that the same State sovereignty issues applied, but nullification is aimed at maintaining union in a manner that appropriately recognizes a State to be the unit-of-sovereignty that has justifiable unilateral authority to determine whether a federal law is unconstitutional (unless and until a State's nullification is overruled through the Article V amendment process). Calhoun believed that each State People had this ultimate legal authority through their role as original parties to the Constitutional Compact.[3] It was the State People who gave the Constitution life via their ratification; as many of the Framers' maintained, the Philadelphia Convention merely proposed a new system of union, but it was the States who had the authority to make it fundamental law. Moreover, with respect to the Constitution and its amendments as a constitutional compact, since the State Peoples were original contracting parties (or equivalent in sovereign status to the State Peoples who were the historical contracting parties) and since no higher authority existed to determine whether the Constitution was being appropriately followed by the Federal Government (i.e., whether the Federal Government stays within the scope of its delegated powers), final judgment about whether or not a federal law was constitutional was left to each State People and not a department within the Federal Government (e.g. the federal judiciary) whose very life and authority is a creature-level product granted by creator-level State Peoples.[4]

A2: Alt Cause Federalism/Uniqueness

The CP is a massive boost to decentralized federalism---Nullification re-invigorates states as "vibrant political entities" by asserting authority to challenge the constitutionality of federal laws-that's Haworth-it overcomes their uniqueness and alt cause arguments

Nullification sets the precedent for a new decentralized federalism

Warbiany-contributor liberty papers-10

http://www.thelibertypapers.org/2010/08/17/point-nullification-is-the-civil-disobedience-of-federalism/

Point: Nullification Is The Civil Disobedience of Federalism

In federal politics, states are party to an uneasy compact with other states under the guise of a superior government. This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding. As such, they cede many powers to that national government, but one must think that they do not cede all of their own powers. Something must be held in reserve. The question is what? After all, this "Supremacy Clause" Constitution only grants supremacy to those laws made in pursuance of the Constitution itself — anything not permitted by the Constitution must not be considered to be Supreme. The real question, then, is who decides what is Constitutional? Since 1803 and John Marshall, half of that question has been decided. The US Supreme Court is the arbiter of what is, and what is not, Constitutional. Further, a critical tool of state protection against the overreaches of the national government, the state appointment of Senators, was stricken in 1913 by the Seventeenth Amendment. Thus, the only legal method of appeal to Constitutionality available to the States is appeal to the Supreme Court, a body that hasn't found many overreaches of national government since the New Deal.

Nullification, the doctrine that states can disregard federal laws, declaring them unconstitutional, is a provocation somewhere between fighting a battle at the Supreme Court level and secession. Appeal to the Supreme Court is basic and need not be addressed here. Secession is a far more drastic measure, far more controversial, and an area where I believe Doug and I disagree, so it does require some treatment. Secession is often equated with violence, and treated as "violent revolution", but I would say that most instances of violence were continued by the government trying to retain their subjects, not by those trying to withdraw. In the American Revolution, nothing that I've seen suggests that had the British peacefully withdrawn their troops, the colonists would have had any cause for continuation of violence. Even in the US Civil War, it is unlikely that, had the North allowed the South to secede, that the South would have ridden on Washington to impose slavery back upon the North. Secession is not overthrow of the government, it is withdrawal therefrom. Of course, Doug and I agree that, whether they had the right or not, the South's secession was for morally unconscionable reasons — the continuance of the despicable practice of slavery. But the South's secession was no different than the American Revolution in that they were NOT attempts to overthrow a government outside of the territories that wanted their freedom, they could have been peaceful separations. The breakup of the Soviet Union is a good example. While it was only peaceful because the Russians didn't have the power to hold it together, it was a peaceful secession nonetheless. So at this point we've sketched out two responses to potentially unconstitutional overreaches by a national government. The first is the relatively weak appeal to the Supreme Court — asking the government to self-regulate. This is a difficult option. A Senate prior to the Seventeenth Amendment might take seriously their "Advice and Consent" role in judicial nominations to only nominate those who would respect state sovereignty and Constitutional limits, but that ship has sailed. In its wake, it's left a court with an expansive view of national government authority. Secession, on the other hand, is all-or-nothing. And while it may not be a violent act, history has shown that it often will be. As Doug pointed out in all three posts I read of his referencing secession, Jefferson in the Declaration of Independence said that taking to arms should not be done "for light and transient causes". Leaving only these two options is a fool's game. Secession will only be legitimate in the face of absolutely unconscionably abuse, and appeal to the judiciary is impotent and unlikely to succeed [and further, the structure of the direct election of Senate and the Supreme Court nomination process makes it unlikely this will change]. If one wants to give the national government limitless power, asking only that it police itself, having only these two options is the roadmap… …**which is why we need nullification**. **Nullification is the civil disobedience of Federalism**. Is it legal? No. After all, the Supremacy Clause and judicial review see to that. But it wasn't legal for Rosa Parks to sit at the front of the bus, or for black students to sit at a "Whites-only" counter at Woolworth's. Sometimes, the law is a ass. Sometimes, you need to disobey to make a point. I'll give an example. Here in California, we have legalized marijuana for medical purposes. This is in DIRECT contradiction to the Controlled Substances Act, an act that empowered the regulation to be written that declares marijuana a Schedule I drug — with no medical use whatsoever. This is nullification in action. This is civil disobedience. California is not denying the Federal government's power to enforce the drug laws — but it is denying its compliance with those laws and its assistance to the Feds in such power. What will the result of this action be? Well, this (and potentially the follow-on Proposition 19) forces the people of California address the question of marijuana. Several states have followed on with their own medical marijuana laws. We now have a body of medical marijuana users which can be called upon to testify that marijuana does have medical use. We have families who have watched their loved ones, battling horrible diseases which sap their appetite, who have been able to eat

enough to keep their strength. Hopefully the result of this action will be the government backing down and taking marijuana off Schedule I. Viewed this way, nullification is less about disobedience as it **is about changing policy**. Nullification is a tactic in a wider strategy. It is a way to register unhappiness with federal dictates without necessarily going full-bore and threatening secession. Further, it is a way to demonstrate, by direct example, that changes in policy are preferable to the way Washington demands.

Yes Modeled

The CP will be modeled-constitutional arrangements key

Calabresi 95 –Associate Professor at Northwestern University School of Law- (Steven, "Symposium: Reflections On United States V. Lopez: "A Government Of Limited And Enumerated Powers": In Defense Of United States V. Lopez," Michigan Law Review, December 1995, Lexis)

> At the same time, U.S.-style constitutional federalism has become the order of the day in an extraordinarily large number of [*760] very important countries, some of which once might have been thought of as pure nation-states. Thus, the Federal Republic of Germany, the Republic of Austria, the Russian Federation, Spain, India, and Nigeria all have decentralized power by adopting constitutions that are significantly more federalist than the ones they replaced. Many other nations that had been influenced long ago by American federalism have chosen to retain and formalize their federal structures. Thus, the federalist constitutions of Australia, Canada, Brazil, Argentina, and Mexico, for example, all are basically alive and well today. As one surveys the world in 1995, American-style federalism of some kind or another is everywhere triumphant, while the forces of nationalism, although still dangerous, seem to be contained or in retreat. The few remaining highly centralized democratic nation-states like Great Britain, France, and Italy all face serious secessionist or devolutionary crises. Other highly centralized nation-states, like China, also seem ripe for a federalist, as well as a democratic, change. Even many existing federal and confederal entities seem to face serious pressure to devolve power further than they have done so far: thus, Russia, Spain, Canada, and Belgium all have very serious devolutionary or secessionist movements of some kind. Indeed, secessionist pressure has been so great that some federal structures recently have collapsed under its weight, as has happened in Czechoslovakia, Yugoslavia, and the former Soviet Union.

The U.S. is a global federalist model

Mallat '03

(Chilibi, PhD – U London, Case Western Reserve Journal of International Law, Winter, p. 21

Laurence Tribe, in *Constitutional Choices*, summarized what he calls the underlying political ideas of the American system into a list of six categories: representative republicanism, federalism, separation of powers, equality before the law, individual autonomy and procedural fairness. America has shared many of these traits with other democracies for a long time, but two constitutional features stand out on a world level as typically American -- federalism and the Supreme Court. The American people deserve credit for both inventions which brought new dimensions to democracy and the rule of law for the rest of the planet. Perhaps America does not know it, but the world has been a consistently better place wherever her two home-grown intellectual products have found anchor.

2NC Impact Overview

We control the case impacts---federalism is a structural constraint on international conflict

Calabresi 95 – Associate Professor at Northwestern University School of Law
(Steven G., "'A Government Of Limited And Enumerated Powers': In Defense Of United States V. Lopez," Michigan Law Review, Dec, 94 Mich. L. Rev. 752, pg lexis)

Small state federalism is a big part of what keeps the peace in countries like the United States and Switzerland. It is a big part of the reason why we do not have a Bosnia or a Northern Ireland or a Basque country or a Chechnya or a Corsica or a Quebec problem. 51 American federalism in the end is not a trivial matter or a quaint historical anachronism. American-style federalism is a thriving and vital institutional arrangement - partly planned by the Framers, partly the accident of history - and it prevents violence and war. It prevents religious warfare, it prevents secessionist warfare, and it prevents racial warfare. It is part of the reason why democratic majoritarianism in the United States has not produced violence or secession for 130 years, unlike the situation for example, in England, France, Germany, Russia, Czechoslovakia, Yugoslavia, Cyprus, or Spain. There is nothing in the U.S. Constitution that is more important or that has done more to promote peace, prosperity, and freedom than the federal structure of that great document. There is nothing in the U.S. Constitution that should absorb more completely the attention of the U.S. Supreme Court. So far, I have focused on the advantages of American-style small-state federalism in defusing centrifugal devolutionary tendencies, alleviating majority tyranny, and accentuating crosscutting social cleavages. But what about the advantages of international federalism; what are the ad- [*771] vantages of consolidating states into larger federal entities, as happened in North America in 1787 or in Europe in 1957? A first and obvious advantage is that consolidation reduces the threat of war. Because war usually occurs when two or more states compete for land or other resources, a reduction in the number of states also will reduce the likelihood of war. This result is especially true if the reduction in the number of states eliminates land boundaries between states that are hard to police, generate friction and border disputes, and that may require large standing armies to defend. In a brilliant article, Professor Akhil Amar has noted the importance of this point to both to the Framers of our Constitution and to President Abraham Lincoln. 52 Professor Amar shows that they believed a Union of States was essential in North America because otherwise the existence of land boundaries would lead here - as it had in Europe - to the creation of standing armies and ultimately to war. 53 The Framers accepted the old British notion that it was Britain's island situation that had kept her free of war and, importantly, free of a standing army that could be used to oppress the liberties of the people in a way that the British navy never could. These old geostrategic arguments for federalist consolidation obviously hold true today and played a role in the forming of the European Union, the United Nations, and almost every other multinational federation or alliance that has been created since 1945. Sometimes the geostrategic argument is expanded to become an argument for a multinational defensive alliance, like NATO, against a destabilizing power, like the former Soviet Union. In this variation, international federalism is partly a means of providing for the common defense and partly a means of reducing the likelihood of intra-alliance warfare in order to produce a united front against the prime military threat. Providing for the common defense, though, is itself a second and independent reason for forming international federations. It was a motivation for the formation of the U.S. federation in 1787 and, more recently, the European Union. A third related advantage is that international federations can undertake a host of governmental activities in which there are significant economies of scale. This is one reason why federations can provide better for the common defense than can their constituent parts. Intercontinental ballistic missiles, nuclear-powered aircraft [*772] carriers and submarines, and B-2 stealth bombers tend to be expensive. Economies of scale make it cheaper for fifty states to produce one set of these items than it would be for fifty states to try to produce fifty sets. This is true even without factoring in the North American regional tensions that would be created if this continent had to endure the presence of fifty nuclear minipowers, assuming that each small state could afford to own at least one Hiroshima-sized nuclear bomb. Important governmental economies of scale obtain in other areas, as well, however, going well beyond national defense. For example, there are important economies of scale to the governmental provision of space programs, scientific and biomedical research programs, the creation of transportation infrastructure, and even the running of some kinds of income and wealth redistribution programs. A fourth and vital advantage to international federations is that they can promote the free movement of goods and labor both among the components of the federation by reducing internal transaction costs and internationally by providing a unified front that reduces the costs of collective action when bargaining with other federations and nations. This reduces the barriers to an enormous range of utility-maximizing transactions thereby producing an enormous increase in social wealth.

Many federations have been formed in part for this reason, including the United States, the European Union, and the British Commonwealth, as well as all the trade-specific "federations" like the GATT and NAFTA. A fifth advantage to international federations is that they can help regulate externalities that may be generated by the policies and laws of one member state upon other member states. As I explain in more detail below, these externalities can be both negative and positive, 54 and, in both situations, some type of federal or international action may sometimes be appropriate. A well-known example of a problematic negative externality that could call for federal or international intervention occurs when one state pollutes the air or water of another and refuses to stop because all the costs of its otherwise beneficial action accrue to its neighbor. 55 [*773] Sixth and finally, 56 an advantage to international federation is that it may facilitate the protection of individual human rights. For reasons Madison explained in the Federalist Ten, 57 large governmental structures may be more sensitive than smaller governmental structures to the problems of abuse of individual and minority rights. 58 Remote federal legislatures or courts, like the U.S. Congress and Supreme Court, sometimes can protect important individual rights when national or local entities might be unable to do so. 59 As I have explained elsewhere, this argument remains a persuasive part of the case for augmented federal powers. 60 Some of the best arguments for centripetal international federalism, then, resemble some of the best arguments for centrifugal devolutionary federalism: in both cases - and for differing reasons - federalism helps prevent bloodshed and war. It is no wonder, then, that we live in an age of federalism at both the international and subnational level. Under the right circumstances, federalism can help to promote peace, prosperity, and happiness. It can alleviate the threat of majority tyranny - which is the central flaw of democracy. In some situations, it can reduce the visibility of dangerous social fault lines, thereby preventing bloodshed and violence. This necessarily brief comparative, historical, and empirical survey of the world's experience with federalism amply demonstrates the benefits at least of American-style small-state federalism. 61 In light of this evidence, the United States would be foolish indeed to abandon its federal system. [*774]

Prefer our impact-Best studies conclude federalism is key to prevent ethnic conflicts around the globe-that's Lawoti- –And, Secession escalates to global nuclear war.

Kamal **Shehadi,** Research Associate at the **International Institute for Strategic Studies,** 19**93**, Ethnic Self-Determination and the Break-Up of States, p. 81-82_

This paper has argued that self-determination conflicts have direct adverse consequences on international security. As they begin to tear nuclear states apart, the likelihood of nuclear weapons falling into the hands of individuals or groups willing to use them, or to trade them to others, will reach frightening levels. This likelihood increases if a conflict over self-determination escalates into a war between two nuclear states. The Russian Federation and Ukraine may fight over the Crimea and the Donbass area; and India and Pakistan may fight over Kashmir. Ethnic conflicts may also spread both within a state and from one state to the next.

2NC Climate

States solve warming—better track record and political will

Kincaid 8 – John, Robert B. & Helen S. Meyner Professor of Government and Public Service and Director of the Meyner Center for the Study of State and Local Government, Lafayette College, "CONTEMPORARY U.S. FEDERALISM: COERCIVE CHANGE WITH COOPERATIVE CONTINUITY"

In turn, liberal activists responding to conservative Supreme Court¶ rulings and to deregulation since the Reagan era have also stimulat-¶ ed considerable state policy-activism. For example, several multi-¶ state lawsuits have been initiated against the U.S. Environmental¶ Protection Agency alleging lax enforcement or lack of enforcement¶ of federal environmental standards. State officials have pursued liti-¶ gation and regulation in many policy areas, especially environmental¶ and consumer protection. Connecticut's attorney general, Richard¶ Blumenthal, expressed a leading justification for such activism: "Our¶ action is the result of federal inaction" (Quoted in Masters 2005). Also,¶ in an effort to compete with the conservative American Legislative¶ Exchange Council (ALEC), several hundred state legislators launched¶ the Progressive Legislative Action Network (PLAN) in 2005. According¶ to the policy dir¶ ector of the liberal Center for Policy Alter¶ natives, "states¶ are now the vanguard of the progressive movement" (Quoted in¶ Cauchon 2003).¶ State action on environmental protection captured considerable¶ media attention in 2006-07, especially when California's governor,¶ Arnold Schwarzenegger, joined Prime Minister Tony Blair of the United¶ Kingdom to sign an accor¶ d on global warming in August 2006. In¶ September¶ , Schwarzenegger signed a bill to reduce California's green-¶ house gas emissions by 25 per¶ cent by 2020. In 2004, Califor¶ nia imple¶ -¶ mented r¶ ules on vehicular gr¶ eenhouse gases that ar¶ e stricter than¶ the federal standards. Ten other states have adopted California's rules,¶ which limit the amount of carbon dioxide and other gases that auto-¶ mobiles can expel into the atmospher¶ e. In addition, California, New¶ York, and eight other states sued the U.S. Environmental Protection¶ Agency for failing to r¶ egulate carbon dioxide emissions fr¶ om power¶ plants. Some 23 states have set standar¶ ds requiring utilities to gener-¶ ate up to 33 per¶ cent of their energy from renewable sources by 2020.¶ In short, using their still considerable powers retained within the¶ U.S. constitutional system, the states ar¶ e major actors in domestic¶ policy-making and, occasionally, minor actors in foreign policy-mak-¶ ing, such as economic sanctions against various countries (Kincaid¶ 1999). As such, it should be noted that many U.S. states are huge¶ polities individually. California, for example, with 37.7 million resi-¶ dents, has a larger population than Canada and all but 34 countries¶ in the world. Accor¶ ding to the U.S. Central Intelligence Agency,¶ Califor¶ nia'¶ s economy ranked tenth in the world in 2005 (with Spain's¶ John Kincaid¶ 30¶ REAF, núm. 6, abril 2008, p. 10-36¶ economy being fourteenth), though the California Legislative Analyst's¶ Office contended that the Golden State's economy ranked eighth in¶ the world in 2005 (with Spain's economy being ninth). In January 2008,¶ Governor Schwarzenegger proposed to the legislature an austere $141¶ billion (¶ E¶ 94.8 billion) 2008-09 state operating budget that includes a¶ 10 percent reduction in state spending in order to cope with an ex-¶ pected $14.5 billion (¶ E¶ 9.7 billion) deficit. Indeed, most U.S. states have¶ larger economies, revenues, and government budgets than the ma-¶ jority of the world's nation-states.

Warming causes extinction. Action now is our last hope—prioritize this impact—by the time symptoms start showing it will already be too late—we have the shortest timeframe for action.

Kirsch No Date (Steve Kirsch; Last Accessed: July 6, 2015; Entrepreneur and holds a BA and MS in Electrical Engineering and Computer Science, citing the IPCC consensus report, "Global and regional drivers of accelerating CO2 emissions" by Michael R. Raupach, Gregg Marland, Philippe Ciais, Corinne Le Quéré, Josep G. Canadell, Gernot Klepper, and Christopher B. Field, and "6 Degrees" by Mark Lynas; "How it will End"; http://www.skirsch.com/politics/globalwarming/Extinction.htm) jskullz

Ostensibly, **we will die due to the effects of global warming**. By 2100, according to the IPCC consensus report (see Table SPM.3 on page 13 and footnote 5 on page 2 which explains the ranges in the table), there is a 5% chance that the average temperature of the planet will rise by more than 6.4ºC. That's in the report, clear as day, but nobody talks about it because only a few people understand exactly what that means to our planet. But one guy from the UK (who has hardly gotten any press in the US) Mark Lynas, has done the research on what this means. Lynas spent 3 years of his life poring over 10,000 scientific papers and found that, although it doesn't sound like a lot, a 6ºC temperature rise will pretty much wipe out just about every life form on the planet, us included. Although IPCC scientists had

previously projected that there was only a 5% chance of more than a 6.4ºC warming by 2100, the assumptions on which those projections are based have already been exceeded, which is pointed out in this paper in the Proceedings of the National Academy of Sciences. The paper points out that the assumptions in all 6 emission scenarios considered by the IPCC have already been exceeded. So that's why I am using the numbers from the A1FI scenario, which gave a 5% chance of exceeding 6.4ºC by 2100. If it doesn't happen by 2100, it will not be long after. I wrote a short web page "Why global warming should be every candidate's #1 priority" describing this in detail.¶ The bottom line is this: unless we change our ways, there is more than a 5% chance of a mass human extinction in less than 100 years. I'm just telling you what the overwhelming scientific consensus is. Whether or not you choose to believe it is, of course, up to you. If you do disagree, what is the scientific basis for your disagreement? Do you know something the scientists don't?¶ For some it will come much sooner. Australia will likely be mostly uninhabitable in 50 years from now (see Sydney 50 years to live Features The First Post).¶ So what really will kill us? Greed, fear, short sightedness, and an inability to create a government that serves the public interest.¶ Much as we may hate to admit it, our own government, which we empower to make decisions for us, is essentially no smarter than the frog in Gore's movie. Special interests, driven by short-term greed, control government decisions in America. Politicians, fearing they will be not be re-elected, pay attention to the people who are willing to spend big money to get their way. And despite all the awareness about global warming that has been generated to date, the public is still shortsighted and doesn't demand change. That lack of public outrage is why top staffers in the House complain that they can't pass even the simplest of measures to combat climate change, such as a bill to increase mileage standards for cars.¶ It's likely that we are not outraged because we will not feel the full impact of the ecological catastrophe we are creating today for another 30 to 50 years due to the thermal inertia of the ocean. The climate changes we are seeing today are just the tip of the iceberg; they are from our emissions from more than 30 years ago. Our emissions today are much higher than 30 years ago. But most people don't know that. They look out the window and things look fine. It seems just too impossible to believe that we could all be dead in less than 100 years. So we choose to ignore what the scientists tell us. The most unequivocal and important scientific consensus in our lifetime, and we choose to ignore it. How smart is that?¶ **We are also too easily distracted by other seemingly more immediate issues such as terrorism, Iraq, healthcare and immigration** to worry about things such as the survival of humanity. We think we can worry about that later. But we can't. **By the time global warming has caused mass devastation, it will be way to late to do anything about it**. The public can complain all they want...but it will be too late to make changes because the same "time delay" that has protected us for decades (the thermal inertia of the oceans) works the other way to make it impossible to reverse things quickly, even if we stopped all greenhouse gas emissions completely. Our climate is like a battleship: it's direction can not change quickly. Today, we are like mariners in a fog heading straight for disaster. By the time we can clearly see the iceberg ahead, it will be too late to turn the battleship to avoid hitting it.¶ Think I'm kidding? This is starting to happen already in Australia. Australia is experiencing the worst drought on record with a lot of areas that haven't had decent rain for 7 years forcing them to have to import food to survive. Australian Prime Minister John Howard doesn't believe in global warming. Howard refused to meet with Gore when Gore came to Australia and he continues to believe that destroying the jobs of coal miners would be bad for the Australian economy. So what is his plan? He tells Australians to "pray for rain." I wish I were joking about this. I'm not. This brilliant political leadership of denying the science and not ratifying the Kyoto protocol is costing Australians $3.8B in lost investment opportunities alone. 76% of Australians think climate change is a major problem and they booted Howard out in recent elections.¶ We're seeing the effect in America too. We are seeing a record-breaking drought in Georgia. Los Angeles normally gets 15 inches of rain per year, but there has only been 3.2 inches since July, making this the driest year on record. Florida is also experiencing the worst drought in its history, with Lake Okeechobee water levels shrinking to near-record lows, and the entire watershed of the Everglades drying out fast. In other parts of the US, extreme downpours are up 24 percent, according to an independent analysis by Environment America. The Pew Center on Global Climate Change has just issued a report Regional Impacts of climate change, four case studies including heatwaves in the midwest and wildfires in the west.

XT Federalism Solves Climate

Federalism solves climate change comparatively better—more innovation and resistance to lobbying

Deans No Date (Bob Deans; Last Accessed: July 3, 2015; author of Reckless: the Political Assault on the American Environment (2012) and The River Where America Began: A Journey Along the James (2007). He also coauthored In Deep Water: The Anatomy of a Disaster, the Fate of the Gulf, and How to End Our Oil Addiction (2010) and Clean Energy Common Sense: An American Call to Action on Global Climate Change (2009). The Richmond, Virginia, native spent 25 years as a correspondent for the Atlanta Journal-Constitution and other Cox newspapers. He is a former president of the White House Correspondents' Association; "NRDC VOICES: The New Climate Federalism"; onEarth; http://www.onearth.org/magazine/nrdc-voices-new-climate-federalism) jskullz

"We know humanity is facing an existential threat," Bill de Blasio said in his September 23 remarks. "The cause is how we heat our homes, how we transport ourselves, the reckless way in which we live. This is an issue we all face. No one is spared."¶ Our nation's mayors aren't waiting to follow the lead of others—not Washington, not the U.N. In 2005, the U.S. Conference of Mayors drafted a forward-leaning Climate Protection Agreement calling for sharp reductions in carbon dioxide emissions. The accord focuses on a sound and assertive mix of energy efficiency, renewable power, public transit options, and the use of methane released from landfills to generate electricity. The agreement has been signed by 1,060 mayors from every corner of the country, from Atlanta, Anchorage, Boston, and San Diego to Cleveland, Charlotte, and Des Moines. ¶ Prairie Village, Kansas, is in. So are Dallas, Salt Lake City, and Baton Rouge.¶ It's troubling that the U.S. Congress has been unwilling to take similar action, but there's never been any real doubt as to why. Between 2009 and 2013, the oil, gas, coal, and electric utility industries spent $1.6 billion lobbying in Washington. They've spent millions more in campaign contributions.¶ The leaders who run our cities, though, answer more directly to the public they serve than to industries that want to mire our future in the dirty fuels of the past. "At the local level, this is not seen as a partisan issue," former Miami mayor Manny Diaz explained to a roomful of NRDC staffers in Washington last spring. "Mayors said, 'We're not going to sit back and wait for those idiots in Washington to figure this out'—you can quote me on that. 'We're going to do it ourselves.' "¶ This is a good thing. Because apart from the vision our city leaders have shown, national efforts to cut carbon pollution ultimately depend on local actions. Here's why: In June, President Obama laid out the single most important step we've ever taken to shrink our carbon footprint. In the States, the power plants that generate our electricity kick out 38.1 percent of the dangerous carbon pollution that is driving climate change. Astonishingly, there are no limits as to how much of this pollution these plants may cough into our atmosphere. The Clean Air Act gives the president the authority, and the responsibility, to change this, and that's what he's doing. Under his proposal, the United States will cut power-plant carbon pollution 26 percent by 2020—compared with 2005 levels—and 30 percent by 2030. In fact, we can do better than that, and we should. Still, by placing the first-ever limits on power-plant carbon pollution, the president's plan moves us in the right direction. And it does so in a way that puts states in the driver's seat: The reduction targets of individual states will reflect their specific energy mix. States will then work with their local power companies to identify the most cost-effective way to hit the target.¶ The cheapest and quickest way to reduce carbon pollution, for example, is to increase energy efficiency so that we do more with less waste. That's exactly what hundreds of mayors have been doing in their cities for years, and these local efforts add up. Nationally, we've cut energy consumption in half—as a portion of our economic output—over just the past 35 years. We can do even better in the years to come. That's how technology works. Success builds on itself.¶ Mayors and governors in more than 30 states have backed policies to promote renewable energy. As a result, wind turbines and solar facilities accounted for 44 percent of all the new electricity-generating capacity installed in our country during 2012 and 2013. During the first seven months of this year, that figure rose to 51 percent. And, as of mid-2014, we're getting 5.5 percent of our electricity from the wind and sun. That's a pretty good start.¶ Cutting carbon pollution is a national goal, but achieving it requires local action. Our mayors and governors have shown they have the wisdom—and the will—to get the job done. All of us, including the president, are counting on them to keep leading us forward.

2NC Iraq

Continued federalism key to modeling—empirically true

Calabresi 95 –Associate Professor at Northwestern University School of Law- (Steven, "Symposium: Reflections On United States V. Lopez: "A Government Of Limited And Enumerated Powers": In Defense Of United States V. Lopez," Michigan Law Review, December 1995, Lexis)

The fifty years since then have seen the birth of the United Na- tions, the North Atlantic Treaty Organization (NATO), the Euro- pean Union, the European Convention on Human Rights, the British Commonwealth, the Confederation of Independent States (CIS), the GATT, the NAFTA, and countless other transnational "federal" entities of varying degrees of importance.24 Many of these were openly inspired by the success story of American feder- alism, which, for example, led many Europeans to want to build a Common Market that could become a "United States of Europe." While many of these new democratic transnational entities are very weak, they nonetheless have developed important powers: they have helped to keep the peace, and in some instances, as with the European Union, they show real potential for some day attaining essentially all the attributes of sovereignty commonly associated with a federal nation-state, like the United States. The growth and success of transnational confederal forms since 1945 is truly aston- ishing and rightly is viewed by many - either with alarm or with hope - as holding out the eventual prospect of a future global fed- eral government or at least the prospect of several continental-sized federal governments. At the same time, U.S.-style constitutional federalism has be- come the order of the day in an extraordinarily large number of very important countries, some of which once might have been thought of as pure nation-states. Thus, the Federal Republic of Germany, the Republic of Austria, the Russian Federation, Spain, India, and Nigeria all have decentralized power by adopting consti- tutions that are significantly more federalist than the ones they re- placed.25 Many other nations that had been influenced long ago by American federalism have chosen to retain and formalize their fed- eral structures. Thus, the federalist constitutions of Australia, Can- ada, Brazil, Argentina, and Mexico, for example, all are basically alive and well today.

That federalism is key to Iraqi stability—solves ISIL

Biden 8/22/**14** – Joe, "Iraqis must rise above their differences to rout terrorists" http://www.washingtonpost.com/opinions/vice-president-biden-iraqis-can-rout-isil-by-rising-above-differences/2014/08/22/0dcfdc06-2a12-11e4-958c-268a320a60ce_story.html

For Iraq, success will require genuine compromise from all sides and a new government in Baghdad capable of responding to the needs of all of Iraq's communities. We cannot want that more than Iraqis do. Unless Iraq can do this, no amount of outside intervention will matter — nor will it continue indefinitely.¶ That's why government formation is so critical. As prime minister-designate, Abadi is working to put forward a new lineup of cabinet ministers and a road map that will set the agenda for Iraq's new government. We are encouraging Iraqi leaders to complete this process as soon as possible. We are hopeful that the road map Iraq's parliament endorses will sketch a vision for harnessing the resources of the state to benefit all communities and take the fight to ISIL.¶ We are also encouraging Iraq's neighbors to refrain from fueling sectarian divisions, which only plays into ISIL's hands, and instead to treat this shared challenge as an opportunity to begin a new chapter in their relations with Iraq and with each other.¶ Iraq's security efforts, like its politics, must harness the energy and cooperation of all communities. This new spirit of cooperation was evident this week in northern Iraq, where Iraqi and Kurdish forces worked together to retake the Mosul dam from ISIL. Notwithstanding U.S. support, this operation could not have succeeded without cooperation between the Kurdish pesh merga and Iraqi security forces. This was the first joint operation of its kind, and we believe it is a model to build upon.¶ Another approach that is emerging is a "functioning federalism" under the Iraqi constitution, which would ensure equitable revenue-sharing for all provinces and establish locally rooted security structures, such as a national guard, to protect the population in cities and towns and deny space for ISIL while protecting

Iraq's territorial integrity. The United States would be prepared to offer training and other forms of assistance under our Strategic Framework Agreement to help such a model succeed.

ISIS causes catastrophic grid blackout—Kills millions

Bedard 9/3/**14** – Paul, columnist at the Washington Examiner, "New ISIS threat: America's electric grid; blackout could kill 9 of 10" http://washingtonexaminer.com/new-isis-threat-americas-electric-grid-blackout-could-kill-9-of-10/article/2552766

"By one estimate, should the power go out and stay out for over a year, nine out of 10 Americans would likely perish," said Frank Gaffney, founder and president of the Center for Security Policy in Washington.¶ ¶ At the afternoon press conference, Gaffney dubbed the potential crisis the "grid jihad."¶ ¶ A lack of electricity would shut off water systems, impact city transportation services and shutdown hospitals and other big facilities. Fresh and frozen foods also would be impacted as would banks, financial institutions and utilities.¶ ¶ Pry provided details of recent attacks on electricity systems and said that ISIS could easily team with Mexican drug cartels to ravage America.¶ ¶ He told Secrets, for example, that the Knights Templar drug gang blacked out the electric grid of the Mexican state of Michoacan in 2013 to provide cover for killing those fighting the drug trade.¶ ¶ "The Knights Templars and other criminal gangs in Mexico will do anything for money, and ISIS, the richest terrorist organization in history, has hundreds of millions of dollars at its disposal," said Pry.¶ ¶ "ISIS could hire one of the Mexican cartels, or one of their criminal gangs already in the U.S., or activate jihadist terror cells already in the U.S., and inflict a multi-state blackout immediately, within days or weeks. Perhaps even a nationwide blackout," Pry explained to Secrets.

XT Iraqi Federalism Key

Non-Federal approach causes radicalization and Kurdish failure—massive regional instability

Khalilzad 7/13/**14** – Zalmay, Counselor at CSIS, served as US Ambassador to Iraq, Afghanistan, and the United Nations, "Get Ready for Kurdish Independence"
http://www.nytimes.com/2014/07/14/opinion/iraqs-urgent-need-for-unity.html?_r=0
In the wake of ISIS advances, Kurdistan now shares a 600-mile border with a terrorist entity that proclaims itself the new Islamic Caliphate. In order to defend itself, the Kurds must be able to acquire their own arms and maintain security relations with other nations. Baghdad has suspended budget payments to Kurdistan. To pay its bills, Kurdistan must therefore sell its oil.¶ For years, Iraq's Shiite-led government has failed to treat Sunnis or Kurds as equal partners. Many Sunnis now so profoundly oppose the government that they have aligned themselves with a terrorist organization that even Al Qaeda considers extremist. The Sunnis demand federalization and autonomy for their provinces, an end to de-Ba'athification, and the delegation of local security to local forces.¶ For their part, the Kurds were incorporated into Iraq against their will, and endured much of the 20th century under repressive, often murderous, rule. In recent weeks, Kurdish leaders have launched a major diplomatic initiative, both regionally and internationally, to promote their dual-track approach to independence.¶ As Washington adapts to the new reality on the ground, it would do well to adopt a similar two-pronged strategy: continue to help Iraq's leaders forge a unity government, but prepare for the failure of those efforts.¶ Prime Minister Nuri Kamal al-Maliki, whose parliamentary bloc emerged victorious in the April 30 election, has no intention of giving up power. The major obstacle to the formation of a unity government is the vehement opposition of Sunni Arabs, Kurds, and some Shiite parties to prolonging Mr. Maliki's rule. Iraq's senior Shiite cleric, Grand Ayatollah Ali al-Sistani, has also signaled his preference for change.¶ As the American ambassador to Iraq, I worked directly with Mr. Maliki, and I know that he will stubbornly resist attempts to replace him. If he ultimately agrees to step down, he will likely demand a guarantee that his successor be chosen from among a small, trusted circle; he may also insist on a position elsewhere in the government.¶ Absent the formation of a unity government, Iraq's civil war will continue unabated. Sectarian conflict, and chaos in the Sunnis areas, will grow — and so will ISIS. Shiites will become more reliant on sectarian militias, and on Iran.¶ This trajectory threatens America's security. The United States must continue to work for a unity government in Iraq, and extend limited assistance in the fight against ISIS. But it should also step up relations with Kurdistan by deploying a team to assess Kurdistan's needs and coordinate security strategies to protect the region against ISIS. To help Kurdistan pay it bills, Washington should soften its opposition to direct Kurdish oil sales while increasing humanitarian assistance for refugees and displaced persons there.¶ The coming weeks will be decisive. The best-case scenario would be the establishment of a decentralized Iraq with a federal system in the Arab-majority areas, operating in confederation with Kurdistan. **The alternative is civil war** between Shiites and Sunnis, and the emergence of an independent Kurdistan.¶ Although Washington shouldn't abandon its efforts to help Iraq form a unity government yet, it must think seriously about realistic alternatives if Iraq falls apart.

2NC Econ

Only federalism can cause long-term economic recovery

Bruce **Katz 12**, VP at Brookings and Mark Muro, senior fellow and policy director at Brookings Metropolitan Policy Program, "Remaking Federalism | Renewing the Economy", November, www.brookings.edu/~/media/research/files/papers/2012/11/13%20federalism/13%20federalism%20budget%20economy.pdf

Where will the impetus for progress come from? In a different era, the federal government might have launched decisive ¶ initiatives on its own to restructure the economy, address the budget, and renew governance. Today, however, gridlock in ¶ Washington precludes such intervention.¶ And yet, there is hope in another quarter. As befits a federal republic, cities, metropolitan areas, and their states are stepping ¶ up to develop new solutions and point the way to renewal. Increasingly, metropolitan areas and their states are acting like ¶ the engines of prosperity and change they are and—through their own initiative—leading. Together with their states, metro ¶ areas are stepping up as never before and pursuing game-changing initiatives to create jobs in the near term and restructure ¶ their economies for the long haul.¶ Attuned to the localism of the economy, these centers of economic dynamism are working hard to develop a new growth ¶ model focused on advancing innovation and advanced industries, providing crucial infrastructure, and improving education ¶ and skills training. ¶ In so doing they are suggesting a needed direction for Washington and for the agenda of the second ¶ o¶ bama administration.¶ All of which suggests why President ¶ o¶ bama should look beyond Washington as he shapes his governing agenda and adopt a ¶ set of focused, astute initiatives that would at once lead the nation toward economic renewal while supporting regional and ¶ state empowerment.

Current geo-political climate creates multiple scenarios for global conflict Duncan 12

Richard Duncan, former World Bank specialist and chief economist in Blackhorse Asset Management, in 2012 (Richard, chief economist at Singapore-based Blackhorse Asset Management, former financial sector specialist at the World Bank and global head of investment strategy at ABN AMRO Asset Management, studied literature and economics at Vanderbilt University (1983) and international finance at Babson College (1986), "The New Depression: The Breakdown of the Paper Money Economy", http://www.amazon.com/The-New-Depression-Breakdown-ebook/dp/B007GZOYI6, 2/24/12)

The consequences of a New Great Depression would extend far beyond the realm of economics. Hungry people will **fight to survive**. Governments will use force to maintain internal order at home. This section considers the geopolitical repercussion of economic collapse, beginning with the United States. First, the U.S. government's tax revenues would **collapse** with the depression. Second, because global trade would **shrivel up**, other countries would no longer help finance the U.S. budget deficit by buying government bonds because they would no longer have the money to do so. At present, the rest of the world has a $500 billion annual trade surplus with the United States. The central banks of the United States' trading partners accumulate that surplus as foreign exchange reserves and invest most of those reserves into U.S. government bonds. An economic collapse would cause global trade to plummet and drastically reduce (if not eliminate altogether) the U.S. trade deficit. Therefore, this source of foreign funding for the U.S. budget deficit would dry up. Consequently, the government would have to sharply curtail its spending, both at home and abroad. Domestically, social programs for the old, the sick, and the unemployed would have to be slashed. Government spending on education and infrastructure would also have to be curtailed. Much less government spending would result in a dramatic increase in poverty and, consequently, in crime. This would combine to produce a crisis of the current two-party political system. Astonishment, frustration, and anger at the economic breakdown would **radicalize politics**. New parties would form at both extremes of the political spectrum. Given the great and growing income inequality going into the crisis, the hungry have-nots would substantially outnumber the remaining wealthy. On the one hand, a hard swing to the left would be the outcome most likely to result from democratic elections. In that case, the tax rates on the top income brackets could be raised to 80 percent or more, a level last seen in 1963. On the other hand, the possibility of a right-wing putsch could not be ruled out. During the Great Depression, the U.S. military was tiny in comparison with what it became during World War II and during the decades of hot, cold, and terrorist wars that followed. In this New Great Depression, it might be the **military** that ultimately determines how the country would be governed. The political battle over America's future would be bitter, and quite possibly bloody. **It cannot be guaranteed that the U.S. Constitution would survive**. Foreign affairs would also confront the

United States with enormous challenges. During the Great Depression, the United States did not have a global empire. Now it does. The United States maintains hundreds of military bases across dozens of countries around the world. Added to this is a fleet of 11 aircraft carriers and 18 nuclear-armed submarines. The country spends more than $650 billion a year on its military. **If the U.S. economy collapses** into a New Great Depression, the United States could not afford to maintain its worldwide military presence or to continue in its role as global peacekeeper. Or, at least, it **could not finance its military in the same way it does at present**. Therefore, either the United States would have to find an alternative funding method for its global military presence or else it would have to radically scale it back. Historically, empires were financed with plunder and territorial expropriation. The estates of the vanquished ruling classes were given to the conquering generals, while the rest of the population was forced to pay imperial taxes. The U.S. model of empire has been unique. It has financed its global military presence by issuing government debt, thereby taxing future generations of Americans to pay for this generation's global supremacy. **That would no longer be possible if the economy collapsed.** Cost–benefit analysis would quickly reveal that much of America's global presence was simply no longer affordable. Many—or even most—of the outposts that did not pay for themselves would have to be **abandoned**. Priority would be given to those places that were of vital economic interests to the United States. The Middle East oil fields would be at the top of that list. The United States would have to maintain control over them whatever the price. In this global depression scenario, the price of oil could collapse to **$3 per barrel**. Oil consumption would fall by half and there would be no speculators left to manipulate prices higher. Oil at that level would impoverish the oil-producing nations, **with extremely destabilizing political consequences.** Maintaining control over the Middle East oil fields would become much more difficult for the United States. It would require a much larger military presence than it does now. On the one hand, it might become necessary for the United States to **reinstate the draft** (which would possibly meet with violent resistance from draftees, as it did during the Vietnam War). On the other hand, America's all-volunteer army might find it had more than enough volunteers with the national unemployment rate in excess of 20 percent. The army might have to be employed to keep order at home, given that mass unemployment would inevitably lead to a sharp spike in crime. Only after the Middle East oil was secured would the country know how much more of its global military presence it could afford to maintain. If international trade had broken down, would there be any reason for the United States to keep a military presence in Asia when there was no obvious way to finance that presence? In a global depression, the United States' allies in Asia would most likely be unwilling or unable to finance America's military bases there or to pay for the upkeep of the U.S. Pacific fleet. Nor would the United States have the strength to force them to pay for U.S. protection. Retreat from Asia might become unavoidable. And Europe? What would a cost–benefit analysis conclude about the wisdom of the United States maintaining military bases there? What valued added does Europe provide to the United States? Necessity may mean Europe will have to defend itself. Should a New Great Depression put an end to the Pax Americana, **the world would become a much more dangerous place**. When the Great Depression began, Japan was the rising industrial power in Asia. It invaded Manchuria in 1931 and conquered much of the rest of Asia in the early 1940s. Would China, Asia's new rising power, behave the same way in the event of a new global economic collapse? Possibly. China is the only nuclear power in Asia east of India (other than North Korea, which is largely a Chinese satellite state). However, in this disaster scenario, it is not certain that China would survive in its current configuration. Its economy would be in **ruins**. Most of its factories and banks would be closed. Unemployment could exceed 30 percent. There would most likely be starvation both in the cities and in the countryside. The Communist Party could lose its grip on power, in which case the country could **break apart**, as it has numerous times in the past. It was less than 100 years ago that China's provinces, ruled by warlords, were at war with one another. United or divided, China's nuclear arsenal would make it Asia's undisputed superpower if the United States were to withdraw from the region. From Korea and Japan in the North to New Zealand in the South to Burma in the West, all of Asia would be at China's mercy. And hunger among China's population of 1.3 billion people could necessitate territorial expansion into Southeast Asia. In fact, the central government might not be able to prevent mass migration southward, even if it wanted to. In Europe, severe economic hardship would revive the centuries-old struggle between the left and the right. During the 1930s, the Fascists movement arose and imposed a police state on most of Western Europe. In the East, the Soviet Union had become a communist police state even earlier. The far right and the far left of the political spectrum converge in totalitarianism. It is difficult to judge whether Europe's democratic institutions would hold up better this time that they did last time. England had an empire during the Great Depression. Now it only has banks. In a severe worldwide depression, the country— or, at least London—could become ungovernable. Frustration over poverty and a lack of jobs would erupt into anti-immigration riots not only in the United Kingdom but also across most of Europe. The extent to which Russia would menace its European neighbors is unclear. On the one hand, Russia would be impoverished by the collapse in oil prices and might be too preoccupied with internal unrest to threaten anyone. On the other hand, it could provoke a **war** with the goal of maintaining internal order through emergency wartime powers. Germany is very nearly demilitarized today when compared with the late 1930s. Lacking a nuclear deterrent of its own, it could be subject to Russian intimidation. While Germany could appeal for protection from England and France, who do have nuclear capabilities, it is uncertain that would buy Germany enough time to remilitarize before it became a victim of Eastern aggression. As for the rest of the world, its prospects in this disaster scenario can be summed up in only a couple of sentences. Global economic output could fall by as much as half, from $60 trillion to $30 trillion. Not all of the world's seven billion people would survive in a $30 trillion global economy. Starvation would be widespread. Food riots would provoke political upheaval and myriad big and small conflicts around the world. It would be a humanitarian catastrophe so extreme as to be unimaginable for the current generation, who, at least in the industrialized world, has known only prosperity. Nor would there be reason to hope that the New Great Depression would end quickly. The Great Depression was only ended by an even more calamitous global war that killed approximately 60 million people.

2NC Heg

Federalism allows for a division of labour that solves for hegemony—prevents governmental overload

Pietro S. **Nivola**, 200**7**; Vice President and Director of Governance Studies at The Brookings Institution. Issues in Governance Studies, July 2007, Rediscovering Federalism, http://mavdisk.mnsu.edu/parsnk/2011-12/Pol680-fall11/POL%20680%20readings/federalism-wk%202/07governance_nivola.pdf

This paper stipulates that federalism can offer ¶ government a helpful division of labor. The essay ¶ argues that the central government in the United ¶ States has grown inordinately ¶ preoccupied with concerns ¶ better left to local authorities. The result is an ¶ overextended government, too often distracted from ¶ higher priorities. To restore ¶ some semblance of so-called ¶ "subsidiarity"—that is, a more¶ suitable delineation of ¶ competences among levels of government—the essay ¶ takes up basic principles that ought to guide that quest. ¶ Finally, the paper advances several suggestions for how ¶ particular policy pursuits might be devolved.¶ Whatever else it is supposed to do, a federal system ¶ of government should offer policy-makers a division of ¶ labor.¶ 1¶ Perhaps the first to fully apprec¶ iate that benefit was Alexis de ¶ Tocqueville. He admired the federated re¶ gime of the United States because, ¶ among other virtues, it enabled its ce¶ ntral government to focus on primary ¶ public obligations ("a small number of¶ objects," he stressed, "sufficiently ¶ prominent to attract its attention"), leaving what he called society's countless "secondary affairs" to lowe¶ r levels of administration.¶ 2¶ Such a system, in other ¶ words, could help officials in Washingt¶ on keep their priorities straight. ¶ It is this potential advantage, above all others, that warrants renewed ¶ emphasis today. America's national government has its hands full coping with ¶ its continental, indeed global, security responsibilities, and cannot keep ¶ expanding a domestic policy agenda that¶ injudiciously dabbles in too many ¶ duties best consigned to local authorities. ¶ Indeed, in the habit of attempting to do ¶ a little of everything, rather than a few ¶ important things well, our overstretched ¶ government suffers a kind of attention de¶ ficit disorder. Although this state of ¶ overload and distraction obviously is not a ¶ cause¶ of catastrophes such as the ¶ successful surprise attacks of September 11, 2001, the ferocity of the insurgency ¶ in Iraq, or the submersion of a historic American city ¶ inundated by a hurricane in ¶ 2005, it may render such tragedies ¶ harder to prevent or mitigate.

Great power war

Zhang et al., Carnegie Endowment researcher, 2011

(Yuhan, "America's decline: A harbinger of conflict and rivalry", 1-22, http://www.eastasiaforum.org/2011/01/22/americas-decline-a-harbinger-of-conflict-and-rivalry/, ldg)

This does not necessarily mean that the US is in systemic decline, but it encompasses a trend that appears to be negative and perhaps alarming. Although the US still possesses incomparable military prowess and its economy remains the world's largest, the once seemingly indomitable chasm that separated America from anyone else is narrowing. Thus, the global distribution of power is shifting, and the inevitable result will be a world that is less peaceful, liberal and prosperous, burdened by a dearth of effective conflict regulation. Over the past two decades, no other state has had the ability to seriously challenge the US military. Under these circumstances, motivated by both opportunity and fear, many actors have bandwagoned with US hegemony and accepted a subordinate role. Canada, most of Western Europe, India, Japan, South Korea, Australia, Singapore and the Philippines have all joined the US, creating a status quo that has tended to mute great power conflicts. However, as the hegemony that drew these powers together withers, so will the pulling power behind the US alliance. The result will be an international order where power is more diffuse, American interests and influence can be more readily challenged, and conflicts or wars may be harder to avoid. As history attests, power decline and redistribution result in military confrontation. For example, in the late 19th century America's emergence as a regional power saw it launch its first overseas war of conquest towards Spain. By the turn of the 20th century, accompanying the increase in US power and waning of British power, the American Navy had begun to challenge the notion that Britain 'rules the waves.' Such a notion would eventually see the US attain the status of sole guardians of the Western Hemisphere's security to become the order-creating Leviathan shaping the international system with democracy and rule of law. Defining this US-centred system are three key characteristics:

enforcement of property rights, constraints on the actions of powerful individuals and groups and some degree of equal opportunities for broad segments of society. As a result of such political stability, free markets, liberal trade and flexible financial mechanisms have appeared. And, with this, many countries have sought opportunities to enter this system, proliferating stable and cooperative relations. However, what will happen to these advances as America's influence declines? Given that America's authority, although sullied at times, has benefited people across much of Latin America, Central and Eastern Europe, the Balkans, as well as parts of Africa and, quite extensively, Asia, the answer to this question could affect global society in a profoundly detrimental way. Public imagination and academia have anticipated that a post-hegemonic world would return to the problems of the 1930s: regional blocs, trade conflicts and strategic rivalry. Furthermore, multilateral institutions such as the IMF, the World Bank or the WTO might give way to regional organisations. For example, Europe and East Asia would each step forward to fill the vacuum left by Washington's withering leadership to pursue their own visions of regional political and economic orders. Free markets would become more politicised — and, well, less free — and major powers would compete for supremacy. Additionally, such power plays have historically possessed a zero-sum element. In the late 1960s and 1970s, US economic power declined relative to the rise of the Japanese and Western European economies, with the US dollar also becoming less attractive. And, as American power eroded, so did international regimes (such as the Bretton Woods System in 1973). **A world without American hegemony is one where great power wars re-emerge**, the liberal international system is supplanted by an authoritarian one, and trade protectionism devolves into restrictive, anti-globalisation barriers. This, at least, is one possibility we can forecast in a future that will inevitably be devoid of unrivalled US primacy.

2NC Terror

Only federalism can develop necessary local solutions to counterterrorism—"one size fits all" approaches are inefficient and dangerous.

Mayer 12 (Matt Mayer; Mar. 26th 2012; Chief operating officer at the Liberty Foundation of America and writer at the Heritage foundation, as well as former director of homeland security for Lockheed Martin and Counselor to the Deputy Secretary for Homeland Security, former executive director of the office of state and local government preparedness; "Federalism Allows Law Enforcement to Determine Counterterrorism Policies That Work Best"; Heritage Foundation; http://www.heritage.org/research/reports/2012/03/federalism-and-its-vital-role-in-counterterrorism) jskullz

With an increase in the national response to terrorism, many people believe the principle of federalism has little utility today or that states do not have much to contribute in counterterrorism policy or activity. When it comes to domestic security, however, federalism is more relevant than ever, and the states have a vital role to play in counterterrorism. Local law enforcement agencies have the flexibility and authority to design counterterrorism programs that best fit their respective jurisdictions. With that flexibility and authority, our cities are more secure.

One-Size-Fits-All Usually Fits Few Well

The 10th Amendment of the U.S. Constitution simply states: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Those 28 words confirm that states possess the ability to tailor policies that best address the issues they confront. Because of the various demographic differences among the states, a one-size-fits-all policy may not work or may not work most effectively and efficiently in a particular state.

When the federal government nationalizes an inherently state or local issue, it ensures that whatever policy it produces will fail to solve the problems. We know from the welfare reforms in the 1990s that a policy solution in one state may not work well in another state, which demonstrated the importance of states maintaining the flexibility and authority to tackle issues as they see fit. A robust policy competition among the states will enable America to find out what works and what does not. Domestic counterterrorism policy is no different.

Each Community Presents Unique Challenges Requiring Unique Solutions

America, thankfully, does not have a national police force. The Federal Bureau of Investigation (FBI) has authority over federal crimes, including terrorism, and exercises its authority by investigating and arresting suspected terrorists. With only 15,000 agents for the entire United States, the FBI lacks the resources to protect every American city. Because of this inherent limitation, outside of constitutional and legislative protections, America's law enforcement community is not covered by a one-size-fits-all policy on how best to protect U.S. cities.

State and local law enforcement entities are not displaced by federal authorities (except in some very narrow areas of national control) and instead retain their inherent sovereign authority to design counterterrorism programs that are tailored to the needs of each community. These needs are typically defined by demographics, risk assessments, community norms, and other factors unique to each jurisdiction. The ideal outcome for Americans is one where there is strong cooperation and true partnering between the FBI and other federal law enforcement agencies and state and local law enforcement entities. We are getting closer to that ideal with each passing year.

Terrorism causes extinction---better response key

Nathan **Myhrvold '13**, Phd in theoretical and mathematical physics from Princeton, and founded Intellectual Ventures after retiring as chief strategist and chief technology officer of Microsoft Corporation , July 2013, "Stratgic Terrorism: A Call to Action," The Lawfare Research Paper Series No.2, http://www.lawfareblog.com/wp-content/uploads/2013/07/Strategic-Terrorism-Myhrvold-7-3-2013.pdf

Several powerful trends have aligned to profoundly change the way that the world works. Technology ¶ now allows stateless groups to organize, recruit, and fund ¶ themselves in an unprecedented fashion. That, coupled ¶ with the extreme difficulty of finding and punishing a stateless group, means that stateless groups are positioned to be ¶ lead players on the world stage. They may act on their own, ¶ or they may act as proxies

for nation-states that wish to ¶ duck responsibility. Either way, stateless groups are forces ¶ to be reckoned with.¶ At the same time, a different set of technology trends ¶ means that small numbers of people can obtain incredibly ¶ lethal power. Now, for the first time in human history, a ¶ small group can be as lethal as the largest superpower. Such ¶ a group could execute an attack that could kill millions of ¶ people. It is technically feasible for such a group to kill billions of people, to end modern civilization—perhaps even ¶ to drive the human race to extinction. Our defense establishment was shaped over decades to ¶ address what was, for a long time, the only strategic threat ¶ our nation faced: Soviet or Chinese missiles. More recently, ¶ it has started retooling to address tactical terror attacks like ¶ those launched on the morning of 9/11, but the reform ¶ process is incomplete and inconsistent. A real defense will ¶ require rebuilding our **military and intelligence capabilities** from the ground up. Yet, so far, strategic terrorism has ¶ received relatively little attention in defense agencies, and ¶ the efforts that have been launched to combat this existential threat seem fragmented.¶ History suggests what will happen. The only thing that shakes America out of complacency is a direct threat from a determined adversary that confronts us with our shortcomings by **repeatedly attacking** us or hectoring **us for decades**.

2NC Tyranny

Federal overreach turns the aff—causes tyranny and destroys political power.

Maharrey 7/1 (Mike Maharrey; July 1, 2015; Communications Director for the Tenth Amendment Center. He is the author of the book, Our Last Hope: "Rediscovering the Lost Path to Liberty"; "If the Feds Rule the States, Who Rules the Feds?" ; Tenth Amendment Center; http://tenthamendmentcenter.com/2015/07/01/if-the-feds-rule-the-states-who-rules-the-feds/) jskullz

Under the constitutional system, federal authority remains constrained by specific enumerated powers. All other authority was left to the states and the people. While the founding generation recognized the fact that states could impose tyranny, it emphatically rejected federal control over state governments – for better or for worse.¶ The constitutional system was predicated on a very simple premise – **centralized, government power ultimately poses the greatest threat to liberty**, therefore we should guard against consolidation of government into one great body.¶ During the Massachusetts ratifying convention, Fisher Aims argued for the inclusion of an amendment that would later become the Tenth.¶ "A consolidation of the States would subvert the new Constitution, and against which this article is our best security. Too much provision cannot be made against consolidation. The State Governments represent the wishes and feelings, and the local interests of the people. They are the safeguard and ornament of the Constitution; they will protect the period of our liberties; they will afford a shelter against the abuse of power, and will be the natural avengers of our violated rights."¶ The states were always intended to serve as a bulwark against federal overreach. The founders never conceived of a federal government policing the states.¶ When I make this argument, I almost always run up against the following objection.¶ Wait…So, are you saying that it was intended that states can deprive their citizens of basic rights, and that when this happens there is no recourse for those being oppressed, because it's a state's rights issue? I mean, doesn't someone have to step in and protect the minority from mob rule?¶ This leaves me scratching my head. If the feds take on the role of protecting the minorities from state tyranny, who protects those same people from the feds? ¶ Yes. Of course states can deprive people of their rights. All governments can do that. And they do.¶ But that doesn't mean we want to empower the federal government to rule over 350 million people. You end up with absurdities like federal judges telling people in some small town in Iowa that they can't put up a nativity scene in their city park.¶ And just because we don't turn the federal government into a liberty enforcement squad doesn't leave the people in an oppressive state "without recourse." They can pressure their state legislature to change state laws. They can sue in state court. They can amend their state constitutions. And if all else fails, they have 49 states they can move to as an escape.¶ Aren't these the same actions federal supremacists suggest as recourse when the federal government fails to protect our rights?¶ But individuals can exercise more control over a state or local government than they can the federal government. This becomes manifestly evident in the response you get when you call a state representative as opposed to your Congressman or U.S. senator. The political class in D.C. only listens to people with money and/or influence. But a few dedicated individuals can actually impact the legislative process in a state legislature. I've seen it happen on numerous occasions.¶ "Doesn't someone have to step in and protect the minority from mob rule?"¶ Stop and seriously consider this objection. These people suggest we elevate the federal government to the top of the food chain to lord over the states. As a result, it ultimately has the power to deprive all 350 million people in America of their rights, and when this happens, by their own reasoning, the people have no recourse because the federal government stands supreme.¶ All the federal supremacists have done is move things one level higher and centralized power. Instead of 50 competing governments serving as a check on federal authority, we get a consolidated government governing through the judiciary.¶ Do you really want five politically-connected lawyers defining and protecting your rights?¶ This all leaves us with an important question: who protects us from the feds? If we follow this out to its logical conclusion, shouldn't we establish an international government to protect people the federal government violating their rights?

Federalism key to efficient and just governance

Reinsch, 13 (Richard, the editor of the Library of Law and Liberty, "A Fistful of Federalism, Part I", Library of Law and Liberty, http://www.libertylawsite.org/2013/09/16/a-fistful-of-federalism-part-i/)//BW

If the great truth of our political order is that the Constitution constrains the government and that the people are sovereign over the Constitution, then the federalism of our constitutional experiment means that the citizens are not alone before the might of the federal government, but are gathered in by their state governments who hold the crucial responsibility of ensuring that their reserved powers are not lost to either the lie of wholesale centralization or the lie of intergovernmental power sharing or cartel federalism. Fundamentally, Madison's arguments challenge the notion that state governments are inherently revenue maximizing authorities or beings with interests who occupy political office. While it is

true that they can function in this capacity, and as Greve has demonstrated, do function in such a capacity, it isn't the whole story. We might note that self-interested political actors might get it wrong, as much as they get it right. Competition among branches and governments could result in the warding off of dangerous encroachments from other governmental entities, but it could just as easily lead among repeat government players in collusion, revenue sharing, and a redistributionist politics. Maintaining free government requires more than self-interest; it requires courage, responsibility, generosity, sacrifice, love, qualities that are the opposite of self-interest. And I think that our American political history bears me out on this point

Centralized power is wildly tyrannical—courts only consolidate power further

Reinsch, 13 (Richard, the editor of the Library of Law and Liberty, "A Fistful of Federalism, Part II", Library of Law and Liberty, http://www.libertylawsite.org/2013/09/18/a-fistful-of-federalism-part-ii/)//BW

Here we must temper our very American tendencies, somewhat. We are now prone to think that our liberties must be protected from the tyranny of the majority, which has increasingly meant what 5 lawyers in robes say is majority tyranny and individual liberty. But is tyranny of the majority the final concern for American federalism and the liberty it is to protect? I would argue that the deeper challenge to our liberties consists not only in tyranny of the majority but in the democratic individualism that Alexis de Tocqueville equated with the slow bleeding away of authority from intermediate associations and local and state departments of government to a central government. In short, under democratic individualism, America regresses to the modern norm of centralized government and atomized individuals. Tocqueville's deeper point here is not power for power's sake exercised at levels that are closer to individual citizens, command is not the issue, but rather it is in the debating, the conferring, and decision-making on different courses of action in different layers of society that we actually can see ourselves in the society that we inhabit. We practice self government. So democracy without real federalism is wrong, not just because of debt and unaccountable government, but because it never connects with who we are as human persons who are defined by our relationships: familial, social, and civic that reveal us to one another. Self-governing citizens are citizens who freely determine themselves in any number of pursuits and projects. This freedom isn't that of the isolated individual, but freedoms of communities to be self determining apart from the totalizing standards of national superintendence that operates under egalitarian ideology. We might call this, diversity, properly understood. So if you fail at this basic level of understanding the personal worth of federalism as an opportunity for the positive development of the human spirit and a check on the leveling tendencies of democracy, then it stands to reason that all manner of untoward consequences will follow. For these, you must read The Upside-Down Constitution. Vincent Ostrom gave voice to this when he said Those who continue to assume that the national government, because of its "federal form," is competent to determine all matters that pertain to the governance of American society have fallen into two errors: that of neglecting the limited capabilities of those occupying positions of national authority; and that of considering citizens to be "more than kings and less than men," so that they are presumed to be competent to select their national rulers, but incompetent to govern their own local affairs. The "federal form" of the national government is no substitute for a federal system of governance.

2NC Immigration

Decentralized state federalism is key to produce de-facto liberal immigration reform

O'Neil 7/11/**14** – Shannon, Senior Fellow for Latin America Studies at the Council on Foreign Relations (CFR), an independent, nonpartisan membership organization, think tank, and publisher, "Immigration Reform is Happening"
http://www.foreignpolicy.com/articles/2014/07/11/immigration_reform_states_cities_undocumented_immigrants_mexico

With all the mudslinging and acrimony in Washington over unaccompanied minors and unauthorized immigrants, you might have missed it. **Immigration reform has already happened** -- in fact, hundreds of times. With the federal government incapacitated, **states, cities, and municipalities have stepped into the fray.** In 2013 alone, 45 of the 50 state legislatures passed over 400 laws and resolutions on everything from law enforcement and employment to education and public benefits. Among this flurry were a few in the Arizona SB 1070 style -- bills making life more miserable for undocumented immigrants. These laws ranged from blocking access to health care and schools to criminalizing common activities such as driving cars or buying homes. But the majority are actually designed to find ways to **integrate undocumented immigrants** -- funding English language and citizenship classes and providing access to medical care and other social services. Remember the 2008 presidential campaign debate angst over driver's licenses? Eight states passed laws opening up the DMV to undocumented immigrants. Four more gave unauthorized students the right to pay in-state tuition, bringing the number of states opening up their colleges and universities to all residents to 15. Several others established "trust laws," which ensure **police won't pass undocumented migrants along to immigration authorities unless charged with or convicted of the most serious crimes**. California -- granted, an outlier -- decided that undocumented immigrants can even practice law. Cities, too, have embraced migrants. New York's City Council just approved the creation of municipal identification cards that can be used to open bank accounts, use clinics, sign leases, or borrow books from public libraries. Affecting upwards of half a million New Yorkers, the Big Apple joins Los Angeles, San Francisco, and New Haven, Connecticut, among others, in providing IDs to its residents -- regardless of the color of their passport. And while the cameras have been trained on communities such as Murrieta, California, where residents have lined the streets to protest the arrival of migrant kids, more than 30 cities -- some in red states, some in blue, and home to 25 million Americans -- have joined the "Welcoming America" network, embracing rather than rejecting new entrants. In others, citizens and officials have taken matters into their own hands, including Dallas County's promise to shelter 2,000 of the undocumented children who have crossed the border so far this year. These shifts reflect many undercurrents, starting with basic values. As immigration policies increasingly kick out children and tear families apart, it sits uneasily with the Sunday school lessons urging compassion and hospitality. In fact some of the most active voices for comprehensive immigration reform have come from those of the cloth, including leading evangelical churches and the Conference of Catholic Bishops. Other seemingly unlikely supporters of local change have been cops. Over 100 prominent police chiefs, along with the Police Foundation -- a nonpartisan, nonprofit research organization -- have come out against what have become known as 287(g) programs that deputize local officials to enforce immigration laws. The added responsibilities, these police chiefs have found, both **stretch finite resources and are often counterproductive to their core public-safety mission**. Scared of drawing attention, unauthorized workers, parents, and siblings are reluctant to report crimes or serve as witnesses, breaking down the trust fundamental to community-policing models that have proved effective in keeping city streets safe. **And the economic repercussions of punishing anti-immigration laws have quieted some of their would-be champions**. Pronounced has been the fallout from omnibus anti-immigrant legislation -- laws, adopted by 11 states since 2010, that require officers to check immigration status and criminalize basic activities by undocumented immigrants, including working, signing contracts, or moving about without identification. In Arizona, for instance, the number of undocumented immigrants fell by an estimated third in the wake of passing SB 1070. Concurrent **B**ureau of **L**abor **S**tatistics data show that **agricultural employment, the rate of business creation, and housing prices all plummeted, both in absolute terms and more tellingly vis-à-vis neighboring states, which did not implement similar legislation**. One study by economists at the Center for Business and Economic Research at the University of Alabama, led by Samuel Addy, estimates Alabama's business **losses in the billions of dollars**. In nearly every state that adopted less-than-friendly migrant policies, businesses -- particularly those in agriculture, construction, hospitality, and food preparation -- **have struggled to find workers.** These outcomes complement what other academic analyses repeatedly show -- that **immigrants create jobs, boost tax revenues, and make**

communities safer. One study using U.S. census data and American Community Survey data finds that for every 1,000 immigrants in a county, **46 manufacturing jobs are created or preserved**. It also found that **local housing wealth increased by nearly $100,000 for each new immigrant**. This is in part because immigrants are much **more likely to file a patent or start a business than native-born Americans.**

liberal immigration laws reduce the U.S. carbon footprint and produce the impetus for structural reforms in the U.S.

McKibben 13 – Bill, founder of 350.org and a professor at Middlebury College, "Immigration reform -- for the climate" http://articles.latimes.com/2013/mar/14/opinion/la-oe-mckibben-immigration-environment-20130314

For environmentalists, population has long been a problem. Many of the things we do wouldn't cause so much trouble if there weren't so many of us. It's why I wrote a book some years ago called "Maybe One: An Argument for Smaller Families." Heck, it's why I had only one child. And many of us, I think, long viewed immigration through the lens of population; it was another part of the math problem. I've always thought we could afford historical levels of immigration, but I understood why some other environmentalists wanted tougher restrictions. More Americans would mean more people making use of the same piece of land, a piece that was already pretty hard-used. In recent years, though, **the math problem has come to look very different to me**. It's one reason I feel it's urgent that we get **real immigration reform**, allowing millions to step out of the shadows and on to a broad path toward citizenship. **It will help, not hurt, our environmental efforts, and potentially in deep and powerful ways.** One thing that's changed is the nature of the ecological problem. Now that global warming is arguably the **greatest danger we face**, it matters a lot less where people live. Carbon dioxide mixes easily in the atmosphere. It makes no difference whether it comes from Puerto Vallarta or Portland. It's true that the typical person from a developing nation would produce more carbon once she adopted an American lifestyle, but she also probably would have **fewer children**. A December report from the Pew Research Center report showed that birthrates in the U.S. were dropping faster among Mexican American women and women who immigrated from Mexico than among any other group. This is a trend reflected among all Latinas in the U.S. As an immigrant mother of two from the Dominican Republic told the New York Times: "Before, I probably would have been pressured to have more, [but] living in the **U**nited **S**tates, I don't have family members close by to help me, and it takes a village to raise a child. So the feeling is, keep what you have right now." Her two grandmothers had had a total of 27 children. The carbon math, in other words, may well be a wash. But there's a higher math here that matters much more. At this point, there's no chance we're going to deal with global warming one household at a time — scientists, policy wonks and economists have concluded it will also require structural change. We may need, for example, things such as a **serious tax on carbon**; that will require **mustering political will to stand up to the fossil fuel industry.** And that's precisely where white America has fallen short. Election after election, native-born and long-standing citizens pull the lever for **climate deniers**, for people who want to shut down the Environmental Protection Agency, for the politicians who take huge quantities of cash from the Koch brothers and other oil barons. By contrast, a 2012 report by the Sierra Club and the National Council of La Raza found that Latinos were **eager for environmental progress**. Seventy-seven percent of Latino voters think climate change is already happening, compared with just 52% of the general population; 92% of Latinos think we have "a moral responsibility to take care of God's creation here on Earth." These numbers reflect, in part, the reality of life for those closer to the bottom of our economy. Latinos are 30% more likely to end up in the hospital for asthma, in part because they often live closer to sources of pollution. But immigrants, by definition, are full of hope. They've come to a new place determined to make a new life, risking much for opportunity. They're confident that new kinds of prosperity are possible. The future beckons them, and so changes of the kind we'll need to deal with climate change are **easier to conceive.** Republicans think immigrants are a natural fit for their party, and I hope they're at least partly right — some force needs to help ease the Republicans out of their love affair with ideology and back into a relationship with reality. As commentator Bill O'Reilly put it as he watched Mitt Romney lose despite gaining a huge majority of white votes, "it's not a traditional America anymore." He's right. And for the environment, that's good news. **We need immigrants to this nation engaged in public life, as soon and as fully as possible. It's not just the moral thing to do, it's a key to our future.**

Failure to solve warming causes extinction – geological history proves

Bushnell, NASA Langley Research Center chief scientist, 2010 (Dennis M. has a MS in mechanical engineering, won the Lawrence A. Sperry Award, AIAA Fluid and Plasma Dynamics Award, the AIAA Dryden Lectureship, and is the recipient of many NASA Medals for outstanding Scientific Achievement and Leadership, "Conquering Climate Change," The Futurist 44. 3, May/Jun 2010, ProQuest)

Unless we act, the next century could see increases in species extinction, disease, and floods affecting one-third of human population. But the tools for preventing this scenario are in our hands. Carbon-dioxide levels are now greater than at any time in the past 650,000 years, according to data gathered from examining ice cores. These increases in CO2 correspond to estimates of man-made uses of fossil carbon fuels such as coal, petroleum, and natural gas. The global climate computations, as reported by the ongoing Intergovernmental Panel on Climate Change (IPCC) studies, indicate that such man-made CO2 sources could be responsible for observed climate changes such as temperature increases, loss of ice coverage, and ocean acidification. Admittedly, the less than satisfactory state of knowledge regarding the effects of aerosol and other issues make the global climate computations less than fully accurate, but we must take this issue very seriously. I believe we should act in accordance with the precautionary principle: When an activity raises threats of harm to human health or the environment, precautionary measures become obligatory, even if some cause-and-effect relationships are not fully established scientifically. As paleontologist Peter Ward discussed in his book Under a Green Sky, several "warming events" have radically altered the life on this planet throughout geologic history. **Among the most significant** of these **was the Permian extinction**, which took place some 250 million years ago. **This event resulted in a decimation of animal life**, **leading many scientists to refer to it as the Great Dying**. The Permian extinction is thought to have been caused by a sudden increase in CO2 from Siberian volcanoes. **The amount of CO2 we're releasing** into the atmosphere **today**, through human activity, **is 100 times greater than what came out of those volcanoes**. **During the Permian extinction**, a number of chain reaction events, or "**positive feedbacks**," **resulted in oxygen-depleted oceans**, **enabling overgrowth of** certain **bacteria**, **producing** copious amounts of **hydrogen sulfide, making the atmosphere toxic, and decimating the ozone layer**, **all producing species die-off**. The positive feedbacks not yet fully included in the IPCC projections include the release of the massive amounts of fossil methane, some 20 times worse than CO2 as an accelerator of warming, fossil CO2 from the tundra and oceans, reduced oceanic CO2 uptake due to higher temperatures, acidification and algae changes, changes in the earth's ability to reflect the sun's light back into space due to loss of glacier ice, changes in land use, and extensive water evaporation (a greenhouse gas) from temperature increases. The additional effects of **these feedbacks increase the projections** from a 4°C-6°C temperature rise by 2100 **to a 10°C**-12°C **rise**, according to some estimates. At those temperatures, beyond 2100, essentially all the ice would melt and the ocean would rise by as much as 75 meters, flooding the homes of one-third of the global population. Between now and then, ocean methane hydrate release could cause major tidal waves, and glacier melting could affect major rivers upon which a large percentage of the population depends. We'll see increases in flooding, storms, disease, droughts, species extinctions, ocean acidification, and a litany of other impacts, all as a consequence of man-made climate change. Arctic ice melting, CO2 increases, and ocean warming are all occurring much faster than previous IPCC forecasts, so, as dire as the forecasts sound, they're actually conservative.

A2: Immigration Turn

State decentralization on immigration now

Rodriguez 14 – Cristina M., Professor of Law @ Yale, "Negotiating Conflict Through Federalism: Institutional and Popular Perspectives" http://www.yalelawjournal.org/essay/negotiating-conflict-through-federalism-institutional-and-popular-perspectives#_ftnref11

Second, in this same work, I have sought to highlight how decentralized ferment **helps constitute our national debate on the subject of immigration**. I have de-centered the national from the federal to explore how "national" issues—those whose salience cuts across state lines and constituencies—are not always or necessarily best served by a federal monopoly,10 and how state and local debate and regulation **can serve national interests**. In more recent work on federalism generally, I highlight these same dynamics of decentralized ferment and inter-institutional negotiation in other contexts of highly charged social policy—same-sex marriage, drug policy, and gun regulation—and argue that among the most significant values of our federal system is its utility in **managing social conflict across policy domains**.11 In line with the overarching frame of this Feature, I show how decentralized decision-making can **promote national integration and national problem solving in a world of deep demographic and ideological diversity**. But I also emphasize that integration does not depend on the achievement of a clear national consensus, though decentralized debate can **certainly result in the consolidation of national norms or policies**. Instead, integration can emerge through the achievement of an equilibrium that contains within it the possibility of ongoing debate—a picture of federalism I hope to illuminate here.

1nc- offsets (policy)

1NC CP (policy) – The United States federal government should [do the plan] and substantially increase its domestic surveillance of terrorist organizations.

The plan decreases surveillance. The Counterplan increases surveillance. Any permutation would sever out of the part of the plan that requires a substantial curtailment. Severance destroys negative ground by undermining the ability of any counterplan to compete.

Curtail means to limit

MacMillan Dictionary, 15 ('curtail',
http://www.macmillandictionary.com/dictionary/american/curtail

curtail VERB [TRANSITIVE] FORMAL to reduce or limit something, especially something good *a government attempt to curtail debate*

A substantial curtailment must occur across the board

Anderson 5 – Brian Anderson, Becky Collins, Barbara Van Haren & Nissan Bar-Lev, Wisconsin Council of Administrators of Special Services (WCASS) Committee Members. 2005 WCASS Research / Special Projects Committee* Report on: A Conceptual Framework for Developing a 504 School District Policy
http://www.specialed.us/issues-504policy/504.htm#committee

The issue "Does it **substantially** limit the major life activity?" **was clarified by the US Supreme Court decision** on January 8th, 2002 , "**Toyota v. Williams**". In this labor related case, **the** Supreme **Court noted that to meet the "substantially limit" definition, the disability must occur across the board in multiple environments, not only in one environment or one setting.** The implications for school related 504 eligibility decisions are clear: The disability in question must be manifested in all facets of the student's life, not only in school.

New surveillance critical to quell terror threats

Sulmasy, 13 --- Professor of Law and Governmental Affairs Officer at Coast Guard Academy
(6/10/2013, Glenn, "Why we need government surveillance,"
http://www.cnn.com/2013/06/10/opinion/sulmasy-nsa-snowden/, JMP)

The current threat by al Qaeda and jihadists is one that requires aggressive intelligence collection and efforts. One has to look no further than the disruption of the New York City subway bombers (the one being touted by DNI Clapper) or the Boston Marathon bombers to know that the war on al Qaeda is coming home to us, to our citizens, to our students, to our streets and our subways. This 21st century war is different and requires new ways and methods of gathering information. As technology has increased, so has our ability to gather valuable, often actionable, intelligence. However, the move toward "home-grown" terror will necessarily require, by accident or purposefully, collections of U.S. citizens' conversations with potential overseas persons of interest. An open society, such as the United States, ironically needs to use this technology to protect itself. This truth is naturally uncomfortable for a country with a Constitution that prevents the federal government from conducting "unreasonable searches and seizures." American historical resistance towards such activities is a bedrock of our laws, policies and police procedures. But what might have been reasonable 10 years ago is not the same any

longer. The constant armed struggle against the jihadists has adjusted our beliefs on what we think our government can, and must, do in order to protect its citizens.

Terrorist attacks escalate – killing billions

Myhrvold 2014 (Nathan P [chief executive and founder of Intellectual Ventures and a former chief technology officer at Microsoft]; Strategic Terrorism: A Call to Action; cco.dodlive.mil/files/2014/04/Strategic_Terrorism_corrected_II.pdf; kdf)

Technology contains no inherent moral directive—it empowers people, whatever their intent, good or evil. This has always been true: when bronze implements supplanted those made of stone, the ancient world got scythes and awls, but also swords and battle-axes. The novelty of our present situation is that modern technology can provide small groups of people with much greater lethality than ever before. We now have to worry that private parties might gain access to weapons that are as destructive as—or possibly even more destructive than— those held by any nation-state. A handful of people, perhaps even a single individual, could have the ability to kill millions or even billions. Indeed, it is possible, from a technological standpoint, to kill every man, woman, and child on earth. The gravity of the situation is so extreme that getting the concept across without seeming silly or alarmist is challenging. Just thinking about the subject with any degree of seriousness numbs the mind. The goal of this essay is to present the case for making the needed changes before such a catastrophe occurs. The issues described here are too important to ignore. Failing nation-states—like North Korea—which possess nuclear weapons potentially pose a nuclear threat. Each new entrant to the nuclear club increases the possibility this will happen, but this problem is an old one, and one that existing diplomatic and military structures aim to manage. The newer and less understood danger arises from the increasing likelihood that stateless groups, bent on terrorism, will gain access to nuclear weapons, most likely by theft from a nation-state. Should this happen, the danger we now perceive to be coming from rogue states will pale in comparison. **The ultimate response to a nuclear attack is a nuclear counterattack**. Nation states have an address, and they know that we will retaliate in kind. Stateless groups are much more difficult to find which makes a nuclear counterattack virtually impossible. As a result, they can strike without fear of overwhelming retaliation, and thus they wield much more effective destructive power. Indeed, in many cases the fundamental equation of retaliation has become reversed. Terrorists often hope to provoke reprisal attacks on their own people, swaying popular opinion in their favor. The aftermath of 9/11 is a case in point. While it seems likely that Osama bin Laden and his henchmen hoped for a massive overreaction from the United States, it is unlikely his Taliban hosts anticipated the U.S. would go so far as to invade Afghanistan. Yes, al-Qaeda lost its host state and some personnel. The damage slowed the organization down but did not destroy it. Instead, the stateless al-Qaeda survived and adapted. The United States can claim some success against al-Qaeda in the years since 9/11, but it has hardly delivered a deathblow. Eventually, the world will recognize that stateless groups are more powerful than nation-states because terrorists can wield weapons and mount assaults that no nationstate would dare to attempt. So far, they have limited themselves to dramatic tactical terrorism: events such as 9/11, the butchering of Russian schoolchildren, decapitations broadcast over the internet, and bombings in major cities. Strategic objectives cannot be far behind.

1nc- offsets (kritikal)

Text: The United States federal government should [do the plan] and substantially increase its domestic surveillance of White supremacist terrorist organizaions.

The plan decreases surveillance. The Counterplan increases surveillance. Any permutation would sever out of the part of the plan that requires a substantial curtailment. Severance destroys negative ground by undermining the ability of any counterplan to compete.

Curtail means to limit

MacMillan Dictionary, 15 ('curtail', http://www.macmillandictionary.com/dictionary/american/curtail

curtail VERB [TRANSITIVE] FORMAL to reduce or limit something, especially something good *a government attempt to curtail debate*

A substantial curtailment must occur across the board

We need more surveillance to check white supremacist groups

Robinson 6/23 (Eugene Robinson - Pulitzer Prize winning journalist, June 23, 2015, The Courier Journal, 'We need to go beyond speeches and symbols', http://www.courier-journal.com/story/opinion/columnists/2015/06/23/robinson-need-go-beyond-speeches-symbols/29151157/) //JS

If American racism were a thing of the past, nine men and women who went to church last Wednesday evening would be alive. What happened in Charleston is not unfathomable or even ambiguous. It's a story much older than the nation, a story that began when the first Africans were brought to Jamestown in 1619: the brutalizing and killing of black people because of the color of their skin. The weekend displays of multiracial unity throughout the saddened city were inspiring, but they cannot be taken as a sign that the country has moved beyond its troubled racial past. The young man who so coldly killed those innocent worshipers at Emanuel African Methodist Episcopal Church did not exist in a vacuum. He inhaled deeply of the race hatred that constantly bubbles up like foul gas from a sewer. The alleged assassin, Dylann Roof, left behind a manifesto that said he drew inspiration from the website of the Council of Conservative Citizens, a prominent white supremacist group. The organization's proudly racist "statement of principles" declares that "the American people and government should remain European in their composition and character" and opposes "all efforts to mix the races of mankind." The Southern Poverty Law Center, which tracks hate groups, describes the council as a modern-day incarnation of the "White Citizens Councils" throughout the South that fought so tenaciously against desegregation during the civil rights era. The council's membership is thought to be small but its reach is vast, thanks to the Internet. Like hateful jihadists, white supremacists use cyberspace as a bulletin board and

a meeting place. Come on in, young Mr. Roof, and let us tell you how those black people and those brown people are responsible for everything that's going wrong in your life. Some conservatives have been quick to absolve society of blame by pointing out that the Charleston shooter was mentally disturbed. But of course he was mentally disturbed; normal, well-adjusted individuals do not commit mass murder. And the fact is that the Charleston killings were intended to advance a specific cause. To look past Roof's racism would be like ignoring the fact that the Tsarnaev brothers, who committed the Boston Marathon bombing, believed in a violent, twisted version of Islam. "You rape our women and you're taking over our country," Roof reportedly said to his victims before opening fire. This sick narrative comes straight from the Council of Conservative Citizens website, which inflates isolated incidents of black-on-white crime into some kind of race war and portrays the nation's "European heritage" as being in dire peril. President Obama chose an unusual forum -- a podcast with comedian Marc Maron -- to deliver his most candid remarks to date since the Charleston massacre. Race relations have clearly improved in our lifetimes, he said, but "we are not cured" of racism "and it's not just a matter of it not being polite to say 'nigger' in public." Slavery and Jim Crow discrimination cast "a long shadow and that's still part of our DNA that's passed on." Obama's election in 2008 undoubtedly marked a milestone, one I never dreamed I'd live to see. I wrote at the time that it felt like morning in America. What I didn't fully appreciate at the time was the extent to which the mere fact of a black family living in the White House would, at least in the short term, heighten racial anxieties and conflicts. I didn't see that the spectacle of African-Americans in power would apparently lead some whites to feel powerless, aggrieved and victimized. In the long run, I'm an optimist. But a post-racial future will not just appear. There is urgent work to do. By all means, South Carolina, get rid of the Confederate flag, which has become an emblem of the white supremacist movement. The flag first flew over the statehouse in Columbia in 1961, not 1861; it was essentially an act of defiance, a raised middle finger toward a federal government that was forcing the end of Jim Crow. But we need to go beyond speeches and symbols. Law enforcement should subject white racist organizations to the same surveillance and scrutiny as groups devoted to jihad. Governments at all levels should enforce fair housing and employment laws as vigorously as they enforce the Patriot Act. Police departments and court systems must be compelled to administer justice equally -- with African-Americans, too, considered innocent until proven guilty.

Right-wing terrorists are racist af (if the aff has a racism impact, retag this and don't read the last card)

Iyer 6/19/**2015** (Deepa; Charleston Shooting is domestic terrorism; america.aljazeera.com/opinions/2015/6/charleston-shooting-is-domestic-terrorism.html; kdf)

A gun rampage. A hate crime. An act of domestic terrorism. The shooting deaths of nine people in the historic Emanuel African Methodist Episcopal Church in downtown Charleston, South Carolina, on Wednesday night must be characterized as all three. While we await further information about the suspect, Dylann Roof, and as we mourn with the families of the victims, it is important that we categorize this tragedy accurately. Roof, apprehended by police on Thursday, is a 21-year-old white man. Before he opened fire on a group of adults and children who had gathered for Bible study, Roof apparently told the congregation, "You rape our women and you're taking over our country. And you have got to go." According to his roommate Dalton Tyler, he had planned something like this attack for six months. "He was big into segregation and other stuff," Tyler told ABC News. "He said he wanted to start a civil war. He said he was going to do something like that and then kill himself." **The Charleston shooting is a violent act of racial hatred, intended to terrorize and intimidate black people**. It exists on the alarming spectrum of other acts of hate in places of worship, including the bombing of the 16th Street Baptist Church in Birmingham, Alabama, in 1963; the spate of arsons against African-American churches in the late 1990s in the South; the anti-Semitic graffiti regularly sprawled on the walls of synagogues and murders at Jewish community centers; the burning of Korans and throwing of Molotov cocktails at mosques; the vandalism of Hindu temples; and the 2012 shooting of six Sikh worshippers at a gurdwara in Oak Creek, Wisconsin, by a white supremacist. Indeed, acts of violence are perpetrated regularly in this country, on the streets and in places of worship, and on the basis of racial bias, sexual orientation, religious bias, ethnicity, disability, gender bias and gender identity. Annual reports from the Federal Bureau of Investigation (FBI) and the Bureau of Justice Statistics (BJS) sketch a national landscape filled with hate crimes against people, including assaults and homicides, and property, including vandalism to places of worship or cross-burnings. The BJS reports that the percentage of hate crimes involving violence increased from 78 percent in 2004 to 90 percent in 2011 and 2012. Meanwhile, the Southern Poverty Law Center has been tracking the organized activities of anti-immigrant, anti-gay, anti-Muslim and anti-government "patriot" groups, many of which are forming in response to changing American racial demographics, immigration patterns and the election of a black president. They are motivated by the belief that the balance of power will shift away from white Americans — a sentiment apparently voiced by Roof when he said "you are taking over," before opening fire at the church. These domestic right-wing hate groups should not be taken lightly. Their ideologies of white

supremacy and white nationalism are seeping into mainstream political activity and rhetoric, and influencing “lone wolves” who are committing the majority of hate violence in the country.

Racism should be the impact filter for this debate

Barndt 91 (Joseph R. Barndt co-director of Ministry Working to Dismantle Racism "Dismantling Racism" p. 155)

To study racism is to study walls. We have looked at barriers and fences, restraints and limitations, ghettos and prisons. The prison of racism confines us all, people of color and white people alike. It shackles the victimizer as well as the victim. The walls forcibly keep people of color and white people separate from each other; in our separate prisons we are all prevented from achieving the human potential God intends for us. The limitations imposed on people of color by poverty, subservience, and powerlessness are cruel, inhuman, and unjust; the effects of uncontrolled power, privilege, and greed, which are the marks of our white prison, will inevitably destroy us as well. But we have also seen that the walls of racism can be dismantled. We are not condemned to an inexorable fate, but are offered the vision and the possibility of freedom. Brick by brick, stone by stone, the prison of individual, institutional, and cultural racism can be destroyed. You and I are urgently called to join the efforts of those who know it is time to teardown, once and for all, the walls of racism. The danger point of self-destruction seems to be drawing even more near. The results of centuries of national and worldwide conquest and colonialism, of military buildups and violent aggression, of overconsumption and environmental destruction may be reaching a point of no return. A small and predominantly white minority of the global population derives its power and privilege from the sufferings of vast majority of peoples of all color. For the sake of the world and ourselves, we dare not allow it to continue.

at: perm do the cp

Mutually exclusive with "curtail"- they need to be a net reduction in overall surveillance- prefer definitional support. Calling for a decrease in current levels of surveillance means there's something happening now that they have to decrease from. [would we insert definitions here, or in the 1nc?]

Proves the resolution is insufficient- arguing we should reduce surveillance in some areas, but not overall means they've failed to affirm the resolution and you should vote neg.

Perms have to be net-topical- perms against other CPs or Ks are extra topical- they prove resolutional action is good, but that we can do other good things at the same time- anti-topical perms are different because they prove we shouldn't increase government surveillance.

Substantial requires an expansion of current curtailment

Words & Phrases '64 (40 W&P 759)

The words outward, open, actual, visible, substantial, and exclusive, in connection with a change of possession, mean substantially the same thing. They mean not concealed; not hidden; exposed to view; free from concealment, dissimulation, reserve, or disguise; in full existence; denoting that which not merely can be, but is opposed to potential, apparent, constructive, and imaginary; veritable; genuine; certain; absolute; real at present time, as a matter of fact, not merely nominal; opposed to form; actually existing; true; not including, admitting, or pertaining to any others; undivided; sole; opposed to inclusive.

Its means existing

Butler '8 (Annemarie-, April, Hume Studies, "Natural Instinct, Perceptual Relativity, and Belief in the External World in Hume's Enquiry", Vol. 34 # 1, Project Muse)

DTA concludes from perceptual relativity that the visual perception of the table is caused by and resembles an externally existing table. One might try to hold that the representational thesis is tacked on at the end, as one of the "obvious dictates of reason."24 But it seems clear that the possessive pronoun "its" in the description of the perception ("its image") is intended to refer to the externally existing table. So the phenomenon of perceptual relativity is somehow supposed to lead to the conclusion that there exist perceiver-independent objects over and above perceiver-dependent perceptions, where the latter are caused by and resemble the former.

Substantial means having importance.

Merriam-Webster Dictionary of Law, © **1996**

http://dictionary.reference.com/search?q=substantial

Main Entry: sub·stan·tial Pronunciation: s&b-'stan-ch&l Function: adjective 1 a : of or relating to substance b : not illusory : having merit <failed to raise a substantial constitutional claim> c : having importance or significance : MATERIAL <a substantial step had not been taken toward commission of the crime —W. Railroad LaFave and A. W. Scott, Junior> 2 : considerable in quantity : significantly great <would be a substantial abuse of the provisions of this chapter —U.S. Code> —compare DE MINIMIS — sub·stan·ti·al·i·ty /-"stan-chE-'a-l&-tE/ noun —sub·stan·tial·ly adverb

The permutation severs out of substantial by rendering it a meaningless term. A substantial curtailment has literally no meaning if the aff can advocate a decrease of any amount, a change, or an increase in surveillance

at: perm do the plan then cut other things

The perm's intrinsic- it adds the element of delay. Intrinsic perms are a voting issue- they make every CP or K competitive and allow the aff to isolate contrived net benefits to perms that the neg can never beat.

Delay DA- the threat from [insert whatever the internal net benefit it] is time sensitive- the risk increases every moment we don't ask.

Functionally the same as perm do both- distinctions are arbitrary and the perm still results in a net decrease- all our answers to perm do both apply.

at: perms don’t have to be topical

Our interpretation is that perms have to be net topical- perms against Ks or other CPs prove we should do things in addition to resolutional action, not that we should do the opposite of the resolution. It’s the aff’s burden to affirm that the resolution is a good idea- untopical perms do the opposite.

answers to answers

offsets edu good- surveillance specific

Surveillance policy is complicated- we need increases in some areas, and decreases in others

Newswise, 2013- quotes Neil M. Richards, a privacy law expert and professor of law at Wash U (12/19/13, "Spot-on NSA ruling rightfully questions effectiveness of phone surveillance, says privacy law expert," accessed: 6/26/15 in lexis, fg)

"It's exactly the sort of information that should require a warrant before the government obtains it." Richards was struck by Judge Leon's willingness to question whether this surveillance program was effective. "All too often over the past decade we've seen politicians, judges, and citizens take the government at its vague word that surveillance is useful without asking the hard questions about how useful particular kinds of surveillance are, and what we are losing in exchange," he says. "Asking hard questions may seem disrespectful or like it is getting in the way of officials doing their job, but it is essential. In a democracy, the people (and their elected and appointed representatives) have a duty to ask what the government is doing in their name, and what the costs of those actions are."The Snowden revelations started a conversation in this country and around the globe about what kinds of government surveillance are appropriate in a democracy, and I think this case (which will likely end up in the Supreme Court) will be an essential part of that conversation. Richards says that it is unfortunate that the spectre of terrorism has caused most people to be highly deferential to any question of national security at the same time that the digital revolution is permitting kinds of surveillance that would have been politically and technically impossible as recently as fifteen years ago. "It's also revealed -as Judge Leon noted- that many of our legal rules and precedents presuppose a non-digital, analog world," Richards says. "I'm hopeful that our conversation about these questions will produce not just lihe mtigation but legislation that is tailored to our new technologies. These new laws should allow government surveillance where it is appropriate, but place meaningful constraints on the government's ability to peer into the lives of ordinary people. These sorts of issues are exactly why we have laws - a set of rules that allow the government limited powers to do its job, but which protect the vital civil liberties our system of self-government is supposed to cherish."

Offsets tests the core controversy in the resolution- how much surveillance is too much, and how much isn't enough?

McManus, 2013- former editorial writer at the New York Post (Bob McManus, 6/12/13, "Terror & Surveillance Of balance - and trust," accessed: 6/26/15 in lexis, fg)

Today's enemies don't wear uniforms, an unremarkable observation except for what it implies: namely, that effective self-defense in these high-tech times necessarily brings fundamental American privacy principles into conflict with the need to protect against threats of a perhaps near-existential nature. **How much surveillance is too much, and how much is not enough?** Certainly, Edward Snowden's revelations have re-energized a debate that had been on low boil; for better or for worse, it will proceed at its own pace. For better, because such matters are always worth discussing. For worse, because too many participants long ago decided that prospective anti-terrorism policing may be acceptable in principle, but never in practice - and many of them find the relatively benign efforts of the NYPD to be particularly offensive. Some are slippery-slopeists - folks for whom surreptitious police work of any sort is the same as climbing into that handbasket to hell. Others just hate the police. They resent authority, or they believe cops are stupid and venal and not to be trusted. And still others object because Ray Kelly and his intelligence division - acting entirely within the law, and with specific approval from a federal judge - have been searching in the city's Islamic community for Islamist threats. Resentment of such attention is understandable, but is it reasonable? Where else are the cops to look? Or should they not be looking in the first place? Yet that track would essentially leave counterterrorism to the same national-

security apparatus that - despite multiple warnings from the Russians - was caught flat-footed in Boston on Patriots' Day. A reasonable wariness of the power of the state is wise, even necessary. And none of the prejudices listed above are totally unreasonable. But taken in their totality, they amount to pernicious nonsense - and a prescription for inactivity that most New Yorkers, steeped in 9/11, probably would find unacceptable if they fully understood the potential consequences. As it is, the national debate over Snowden, the National Security Agency and related issues is occurring in the context of an equally urgent examination of egregious privacy abuses within the Internal Revenue Service, and a growing public awareness of just how intrusive the Obama administration's health-care program is going to be.

"How much" is the central question of the resolution

Ball 13 (James Ball - leading data journalist and editor at the guardian, lecturer at City University of London, and published "WikiLeaks: news in the networked era", and "The Infographic History of the World", http://www.theguardian.com/guardian-us-press-office/james-ball-joins-guardian-us-office) //JS

In the case of phone records – who you call, when, for how long, but not the contents of the messages – that means collecting data on every customer of the networks, which then sits unexamined until there's a reason to look for a particular individual. For the intelligence agencies, this avoids a frustration: when the NSA want to know more about a person, they can get the appropriate authorisation (for a US citizen, a secret court order; for foreigners, far less) and obtain their history, their associates, and their location from the data. This prevents a previous frustration: by the time the NSA or intelligence bodies identified a suspect, their previous phone data (and more) had already been wiped. Mass surveillance and storage solves a real problem. So too, of course, would a camera in every home; a bug in every computer. The question becomes: how much is too much? When it comes to metadata, the defences are simple: the information collected is basic; your data almost certainly won't ever be looked at; and even if it is, unless you're a terrorist, it'll be completely innocuous. None are necessarily that satisfying. One example that's been cited for the significance of metadata runs like this. Location records obtained from phones show the following people have been at a certain address: Person A made a short visit, and then a few days later returned for four hours. Person B spends eight hours at the address, on a Saturday. Person C spends 10 hours at the address each day. Person D visits for a short period, weekly. In this hypothetical, the address is an abortion clinic. A has had a consultation followed by an abortion. B works at the clinic, C is a protester, and D is a trans person who needs to visit regularly for hormones. Even a single piece of basic location detail can reveal some of the most sensitive secrets a person may have. The affair of the former head of the CIA, General David Petraeus, was revealed through email metadata. Metadata is also the "signature" of signature strikes – enough information to authorise a fatal drone strike. Metadata matters. What might be found within yours? It might not take much for the NSA to seek an order to pull up your information: a misdialled call from an overseas terror suspect; a misfiring algorithm suggesting you're acting oddly; an acquaintance from 10 years ago who's now up to something shady. The intelligence services are working to get information to prevent potential atrocities. That's a serious task, and so collection is important. What could be in your records that help that? Phone calls with a pot dealer, evidence of file sharing, or more, are all things that generally intelligence agencies would ignore. But if you're caught in the dragnet, even wrongly, they could be applied as pressure to get your co-operation. Either could be enough to begin a process ending in a lengthy prison sentence. If you've got nothing to hide, you've got nothing to fear. But everyone has a few little secrets. Mass collection ensures that intelligence agencies have the skeletons in everyone's closets stored away in case they ever become useful. That's without even going into the free speech implications of large-scale surveillance. We talk differently when we're being watched: after all, who talks about their job in exactly the same way when their boss is in the room and listening? This is just what one small aspect of the NSA's activities revealed over the course of a week. In time, we may know more. But this is the debate the NSA whistleblower Edward Snowden wanted to start. What's being collected, what's allowed under the law, and how much is being done? Scrutiny so far has been limited: some question whether senators understand the full extent of what's permitted under anti-terror laws they have passed, given the technical knowledge needed to know what is possible. Others worry some congressmen fear to vote in any way which could have them painted as soft on security. Others point to generous campaign contributions from large security contractors – with no comparably generous donors in the privacy lobby. Snowden's hope is that debate gets wider, more details, more informed, and moves the public. Perhaps one of the most famous historical quotations on surveillance is attributed to the brutal French 17th-century clergyman and politician Cardinal Richelieu. "If one would give me six lines written by the hand of the most honest man," he wrote. "I would find something in them to have him hanged." The NSA, we now know thanks to Snowden's leak, collects more than 200bn pieces of intelligence from computer and phone networks every month. How many could Richelieu hang with that?

CP vital to surveillance discussions

Baker 98 (Garry Baker - former international relations and U.N correspondent for Herald and Weekly times, Technology editor at The Age (Melbourne), October 10, 1998, The Age, Every move you make, someone is watching you; Be careful: in the electronic information age, your personal life may not be your own, and the right to privacy may be the victim. Just ask Monica Lewinsky, Lexis, //js)

The wired-up world is beginning to look like a spyfest at the height of the Cold War - there are eyes and ears everywhere. And, in most cases, there is nowhere to hide. In the modern digital age, everyone leaves electronic footprints and fingerprints wherever they go - physically or in cyberspace. Monica Lewinsky discovered that when technicians easily retrieved from her Pentagon computer copies of e-mails she had sent to President Clinton. Never mind that she had hit the delete button on her mail browser; the messages remained on the hard disk and, indeed, at several points on the Internet where they had been stored, then retransmitted to the Oval Office. But surveillance doesn't stop with computers. Networks such as Telstra and Optus can track and record the position of mobile phones; data can be traced as it moves over local and wide-area networks; and any Internet service provider could, if they chose, keep track of every site visited by any of their subscribers. Many companies keep track of telephone numbers dialled by their employees. Stockbrokers, for instance, do it so that verbal deals cannot later be denied. Even the keystrokes you make on your computer keyboard and the movements you make with your mouse may be remotely tracked and recorded. One software surveillance system, by Omniquad, is available for just a few dollars as shareware on the Internet. If you use an automatic teller or an Eftpos machine, the transaction is recorded. If you use a swipe card to gain access to a part of the building where you work, that entry is recorded. Couple that with the usual surveillance video camera and you're a fly in a web. Faxes can be monitored remotely, so don't bother making a trip to the shredder. Someone else may already have a copy. Now legislators in Australia and elsewhere are asking how much of this surveillance is acceptable and whether new laws are needed to protect individual rights. The transducers that will be used to digitally pay tolls on the CityLink expressways and tunnels record a car's passage under the sensor rails. But they could, equally well, be used to track a vehicle anywhere with no more trouble than setting up a system of video-surveillance cameras similar to that used by VicRoads to keep an eye on the state's traffic lights and roads.

at: 2ac additions

1 - Stable aff advocacy key -- alternative kills strategy and makes it impossible to be negative
2 - No justification for changes -- don't privilege unprepared teams
3 - Infinitely regressive -- justifies subtractions in the 2NC -- turns their plan focus and breath over depth key args
4 - If you spot them this, they accept our interpretation of theory -- means reject them on aff conditionality, (severance and/or Intrinsicness)

at: aff right to select ground is destroyed

1. **Nope- they chose their ground, the status quo plus the plan.**
2. **The resolution determines ground- the core question on the topic is whether we should curtail domestic surveillance or not. Increasing or maintaining levels of surveillance is neg ground. The question in debate isn't whether the plan is good or bad, it's whether the resolution as a whole is good or bad. Plans just act as examples of why it's good.**
3. **The aff has no right to select ground- they can't determine what CPs are competitive or what Ks or DAs link.**

at: can't quantify overall level

1 - Net benefit proves this is untrue - CP demonstrates large increase in surveillance
2 - Double Bind - either the aff cannot prove they are substantial increase, and we win on T or the CP results in the same increase as they curtail
3 - Hold the CP to the same standard as the aff - no precise numerical values for Substantial increase -- rough measures are the best estimate

at: curtail =/= net curtailment

1. **Yes it does- the aff has to prove that a reduction in overall surveillance is more desirable than the status quo. Any risk we need to increase surveillance from status quo levels disproves thesis of the resolution and means you vote neg.**
2. **Their interpretation destroys neg ground- it makes affs that just change how surveillance works while maintaining existing levels topical, which takes out all core neg ground based on a reduction in surveillance.**
3. **Yes it does- extend the 1nc Anderson 5 evidence from the 1nc- the word curtail means a decrease across the board. That means the plan, or the perm, needs to result in a net decrease in curtailment.**

at: depth over breadth

1 - The CP increases depth - the core question is "how much" domestic surveillance
2 - Depth inevitable - every debate discusses some facet of the topic

3 - False depth - their form of debate results in discussions of minutia -- like how many senators backlash against the plan -- causes stale debate and kills discussions about actual surveillance policy
4 - Breath good -- key to argument innovation and better research skills
5 - If the affirmative cannot defend themselves against "Surveillance good" args -- like the CP -- then their education isn't superior

at: forces the aff to defend the status quo

1. **Obviously not- the aff has to defend the world post-plan.**
2. **If it's true, it's their fault- the impact of their plan is too small to prove that the resolution as a whole is a good idea. A bigger aff could leverage against offsets by proving that an overall reduction in surveillance is good.**
3. **No impact- we're defending an increase in surveillance- plenty of offense and defense against that.**
4. **Non-unique- the CP doesn't force them to defend the status quo, the nature of politics does. Obviously no policy changes every aspect in the status quo.**

at: forces us to debate ourselves

Fundamentally untrue- you beat offsets by beating the internal net benefit- you can win offense against it, proving that type of surveillance shouldn't be increased, or if you read defense and prove there's zero risk of the net benefit, the judge votes neg on presumption.

at: includes the aff

1 - Not true, excludes "curtail" -- if the plan doesn't curtail vote neg on T.
2 - No impact to this
- **Structural side biases, infinite prep, and large topic mean CPs which include the aff are core negative ground**
- **Clear affirmative offense - impact turning the net benefit, or defending the thesis of the resolution**

at: narrow logic

1 - This is untrue -- the question of how much surveillance should be curtailed is the center of this debate - just because resources are centered on the bigger picture doesn't make them insufficient
2 - Aff could curtail surveillance in different categories, results in expansion in topic areas being covered

at: not textually competitive

1 - The counterplan textually competes with the word “curtail” -- CP results in a net increase in surveillance

2 - Textual competition is a horrible standard --

- A - its infinitely regressive - no brightline -- changing the order of letters could compete - leading to artificial explosion of negative ground which makes debate impossible
- B - Doesn’t text exclusivity - things like Ban the Plan CP wouldn’t compete because the aff could put “not” into their perm block
- C - their interpretation encourages vague plan writing to avoid counterplan debates

3 - CP doesn’t lessen the amount of surveillance -- reject any permutation on T

4 - CP sets the best standard - their interpretation makes debate into a game of scrabble - kills topic specific education - prefer debates regarding nuanced approach to surveillance policy

at: offense = arbitrary/self-serving

1. **So are their arguments against the CP- obviously everyone’s specific points support their overall position.**
2. **Not true- our argument is based on the role the resolution plays in determining the topic of debate. Logically, the team affirming the resolution needs to prove that it represents a good idea by providing specific examples of how. Saying the opposite of the resolution is core neg ground.**

at: pics bad

PICs are good--

1. **Resolutional testing- the plan isn’t a policy in a vacuum, it’s an attempt to prove the resolution is true. The plan can be a good idea, but that doesn’t mean topical action as a whole is.**
2. **Real world policy-making- the question the CP asks would be part of a policy discussion about domestic surveillance. Excluding it because it does the aff would be arbitrary and ignores part of the topic.**
3. **Side-bias checks- they get the first and last speech and time to refine their 2ac blocks.**
4. **Competition determines legitimacy- if we win the CP is mutually exclusive with the plan any theoretical objections to it are contrived.**

at: resolution focus bad

1 - No difference -- plan focus is only a subset of the resolution
2 - CP is plan focused -- judge is questioning the desirability and topicality of the plan
3 - Duality is best -- Resolution focus results in better understanding of specific policy issues surround surveillance, no loss in the advantages of plan focus

[AT: Counterwarrants]
2 - CP doesn't justify Counterwarrants -- purpose of the CP is to say that the plan doesn't prove the resolution true.

[AT: Hypotesting]
3 - Hypotesting isn't unique to resolution focus -- plan focused debate demonstrates conditional advocacies

at: too many possibilities

1 - Isn't true - default to specific Net Benefit - the CP focuses on core aspects of surveillance
2 - Reciprocal -- "infinite" number of programs the affirmative could curtail
3 - Lit checks -- only a limited number of things the neg could increase that have substantial lit basis
4 - They should be prepared anyway -- they can read any number of DAs to increasing surveillance, which the aff should be prepared to debate given their burden to be topical

net benefit

new surveillance good

1nc -- terror (vs. policy)

New surveillance critical to quell terror threats

Sulmasy, 13 --- Professor of Law and Governmental Affairs Officer at Coast Guard Academy (6/10/2013, Glenn, "Why we need government surveillance," http://www.cnn.com/2013/06/10/opinion/sulmasy-nsa-snowden/, JMP)

The current threat by al Qaeda and jihadists is one that requires aggressive intelligence collection and efforts. One has to look no further than the disruption of the New York City subway bombers (the one being touted by DNI Clapper) or the Boston Marathon bombers to know that the war on al Qaeda is coming home to us, to our citizens, to our students, to our streets and our subways. This 21st century war is different and requires new ways and methods of gathering information. As technology has increased, so has our ability to gather valuable, often actionable, intelligence. However, the move toward "home-grown" terror will necessarily require, by accident or purposefully, collections of U.S. citizens' conversations with potential overseas persons of interest. An open society, such as the United States, ironically needs to use this technology to protect itself. This truth

is naturally uncomfortable for a country with a Constitution that prevents the federal government from conducting "unreasonable searches and seizures." American historical resistance towards such activities is a bedrock of our laws, policies and police procedures. But what might have been reasonable 10 years ago is not the same any longer. The constant armed struggle against the jihadists has adjusted our beliefs on what we think our government can, and must, do in order to protect its citizens.

2nc - surveillance good

The threat from terrorist groups is only growing- increased domestic surveillance is the only way to prevent an attack

Inserra, 6/8/15- research associate in The Heritage Foundation's Allison Center for Foreign and National Security Policy (David Inserra, 6/8/15, "69th Islamist Terrorist Plot: Ongoing Spike in Terrorism Should Force Congress to Finally Confront the Terrorist Threat," http://www.heritage.org/research/reports/2015/06/69th-islamist-terrorist-plot-ongoing-spike-in-terrorism-should-force-congress-to-finally-confront-the-terrorist-threat, accessed: 6/29/15, fg)

On June 2 in Boston, Usaamah Abdullah Rahim drew a knife and attacked police officers and FBI agents, who then shot and killed him. Rahim was being watched by Boston's Joint Terrorism Task Force as he had been plotting to behead police officers as part of violent jihad. A conspirator, David Wright or Dawud Sharif Abdul Khaliq, was arrested shortly thereafter for helping Rahim to plan this attack. This plot marks the 69th publicly known Islamist terrorist plot or attack against the U.S. homeland since 9/11, and is part of a recent spike in terrorist activity**. The U.S. must redouble its efforts to stop terrorists before they strike, through the use of properly applied intelligence tools.** The Plot According to the criminal complaint filed against Wright, Rahim had originally planned to behead an individual outside the state of Massachusetts,[1] which, according to news reports citing anonymous government officials, was Pamela Geller, the organizer of the "draw Mohammed" cartoon contest in Garland, Texas.[2] To this end, Rahim had purchased multiple knives, each over 1 foot long, from Amazon.com. The FBI was listening in on the calls between Rahim and Wright and recorded multiple conversations regarding how these weapons would be used to behead someone. Rahim then changed his plan early on the morning of June 2. He planned to go "on vacation right here in Massachusetts…. I'm just going to, ah, go after them, those boys in blue. Cause, ah, it's the easiest target."[3] Rahim and Wright had used the phrase "going on vacation" repeatedly in their conversations as a euphemism for violent jihad. During this conversation, Rahim told Wright that he planned to attack a police officer on June 2 or June 3. Wright then offered advice on preparing a will and destroying any incriminating evidence. Based on this threat, Boston police officers and FBI agents approached Rahim to question him, which prompted him to pull out one of his knives. After being told to drop his weapon, Rahim responded with "you drop yours" and moved toward the officers, who then shot and killed him. While Rahim's brother, Ibrahim, initially claimed that Rahim was shot in the back, video surveillance was shown to community leaders and civil rights groups, who have confirmed that Rahim was not shot in the back.[4] Terrorism Not Going Away This 69th Islamist plot is also the seventh in this calendar year. Details on how exactly Rahim was radicalized are still forthcoming, but according to anonymous officials, online propaganda from ISIS and other radical Islamist groups are the source.[5] That would make this attack the 58th homegrown terrorist plot and continue the recent trend of ISIS playing an important role in radicalizing individuals in the United States. It is also the sixth plot or attack targeting law enforcement in the U.S., with a recent uptick in plots aimed at police. **While the debate** over the PATRIOT Act and the USA FREEDOM Act **is taking a break, the terrorists are not.** The result of the debate has been the reduction of U.S. intelligence and counterterrorism capabilities, meaning that the U.S. has to do even more with less

when it comes to connecting the dots on terrorist plots.[6] Other legitimate intelligence tools and capabilities must be leaned on now even more. Protecting the Homeland To keep the U.S. safe, Congress must take a hard look at the U.S. counterterrorism enterprise and determine other measures that are needed to improve it. Congress should: Emphasize community outreach. Federal grant funds should be used to create robust community-outreach capabilities in higher-risk urban areas. These funds must not be used for political pork, or so broadly that they no longer target those communities at greatest risk. Such capabilities are key to building trust within these communities, and if the United States is to thwart lone-wolf terrorist attacks, it must place effective community outreach operations at the tip of the spear. Prioritize local cyber capabilities. Building cyber-investigation capabilities in the higher-risk urban areas must become a primary focus of Department of Homeland Security grants. With so much terrorism-related activity occurring on the Internet, local law enforcement must have the constitutional ability to monitor and track violent extremist activity on the Web when reasonable suspicion exists to do so. Push the FBI toward being more effectively driven by intelligence. While the FBI has made high-level changes to its mission and organizational structure, the bureau is still working on integrating intelligence and law enforcement activities. Full integration will require overcoming inter-agency cultural barriers and providing FBI intelligence personnel with resources, opportunities, and the stature they need to become a more effective and integral part of the FBI. Maintain essential counterterrorism tools.Support for important investigative tools is essential to maintaining the security of the U.S. and combating terrorist threats. **Legitimate government surveillance programs are** also **a vital component of U.S. national security and should be allowed to continue.** The need for effective counterterrorism operations does not relieve the government of its obligation to follow the law and respect individual privacy and liberty. In the American system, the government must do both equally well. Clear-Eyed Vigilance The recent spike in terrorist plots and attacks should finally awaken policymakers—all Americans, for that matter—to the seriousness of the terrorist threat. Neither fearmongering nor willful blindness serves the United States. Congress must recognize and acknowledge the nature and the scope of the Islamist terrorist threat, and take the appropriate action to confront it.

New surveillance critical to quell terror threats

Sulmasy, 13 --- Professor of Law and Governmental Affairs Officer at Coast Guard Academy (6/10/2013, Glenn, “Why we need government surveillance,” http://www.cnn.com/2013/06/10/opinion/sulmasy-nsa-snowden/, JMP)

The current threat by al Qaeda and jihadists is one that requires aggressive intelligence collection and efforts. One has to look no further than the disruption of the New York City subway bombers (the one being touted by DNI Clapper) or the Boston Marathon bombers to know that the war on al Qaeda is coming home to us, to our citizens, to our students, to our streets and our subways. This 21st century war is different and requires new ways and methods of gathering information. As technology has increased, so has our ability to gather valuable, often actionable, intelligence. However, **the move toward "home-grown" terror will necessarily require**, by accident or purposefully, **collections of U.S. citizens' conversations with potential overseas persons of interest**. An open society, such as the **U**nited **S**tates, ironically needs to use this technology to protect itself. This truth is naturally uncomfortable for a country with a Constitution that prevents the federal government from conducting "unreasonable searches and seizures." American historical resistance towards such activities is a bedrock of our laws, policies and police procedures. But what might have been reasonable 10 years ago is not the same any longer. **The constant armed struggle against the jihadists** has adjusted our beliefs on what we think our government can, and must, do in order to protect its citizens.

2nc- isis

Only expanding surveillance solves ISIS threat

Perez and Prokupecz May 30 (Evan and Shimon; FBI struggling with surge in homegrown terror cases; www.cnn.com/2015/05/28/politics/fbi-isis-local-law-enforcement/; kdf)

The New York Police Department and other law enforcement agencies around the nation are increasing their surveillance of ISIS supporters in the U.S., in part to aid the FBI which is struggling to keep up with a surge in the number of possible terror suspects, according to law enforcement officials. The change is part of the fallout from the terrorist attack in Garland, Texas earlier this month. The FBI says two ISIS supporters attempted a gun attack on a Prophet Mohammad cartoon contest but were killed by police. One of the attackers, Elton Simpson, was already under investigation by the FBI but managed to elude surveillance to attempt the foiled attack. FBI Director James Comey told a group of police officials around the country in a secure conference call this month that the FBI needs help to keep tabs on hundreds of suspects. As a result, some police agencies are adding surveillance teams to help the FBI monitor suspects. Teams of NYPD officers trained in surveillance are now helping the FBI's surveillance teams to better keep track of suspects, law enforcement officials say. Why ISIS is winning, and how to stop it NYPD Commissioner William Bratton has said he wants to add 450 officers to the force's counterterrorism unit, partly to counter the increasing domestic threat posed by ISIS sympathizers. The same is happening with other police departments around the country. The Los Angeles Police Department's counterterrorism unit is also beefing up its surveillance squads at the request of the FBI, law enforcement officials say. Comey said at an unrelated news conference Wednesday that he has less confidence now that the FBI can keep up with the task. "It's an extraordinarily difficult challenge task to find -- that's the first challenge -- and then assess those who may be on a journey from talking to doing and to find and assess in an environment where increasingly, as the attorney general said, their communications are unavailable to us even with court orders," Comey said. "They're on encrypted platforms, so it is an incredibly difficult task that we are enlisting all of our state, local and federal partners in and we're working on it every single day, but I can't stand here with any high confidence when I confront the world that is increasingly dark to me and tell you that I've got it all covered," he said. "We are working very, very hard on it but it is an enormous task." On Saturday, an FBI spokesman said the bureau doesn't have a shortage of resources and the Garland attack wasn't the result of lack of surveillance personnel. If agents had any indication that Simpson was moving toward an attack, they would have done everything to stop it, the spokesman said. The appeal for local help isn't intended to seek more surveillance, but more broadly to encourage local law enforcement to increase vigilance given the heightened threat, the FBI said. The Garland attack prompted a reassessment for FBI officials. Simpson's social media and other communications with known ISIS recruiters drew the FBI's interest earlier this year. The Americans linked to ISIS FBI agents in Phoenix began regular surveillance of Simpson, though it was not round-the-clock monitoring, according to a U.S. official. The agents watching Simpson noticed he disappeared for a few days. Investigators looked into his communications and found social media postings making reference to the Garland cartoon contest. That discovery is what prompted the FBI to send a bulletin to the joint terrorism task force that was monitoring the Garland event. The bulletin arrived about three hours before the attack. Comey told reporters this month the FBI had no idea Simpson planned to attack the event or even that he had traveled from his home in Phoenix to Texas.

at: can still surveil terrorists

Surveillance of known terrorists doesn't solve- unknown terrorists inflict the greatest harm

Lewis, 2014- Director and Senior Fellow of the Strategic Technologies Program at CSIS with a PhD from the University of Chicago (James Andrew Lewis, December 2014, "Underestimating Risk in the Surveillance Debate," http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf, accessed: 6/29/15, fg)

The echoes of September 11 have faded and the fear of attack has diminished. We are reluctant to accept terrorism as a facet of our daily lives, but major attacks—roughly one a year in the last five years—are regularly planned against U.S. targets, particularly passenger aircraft and cities. America's failures in the Middle East have spawned new, aggressive terrorist groups. These groups include radicalized recruits from the West—one estimate puts the number at over 3,000—who will return home embittered and hardened by combat. Particularly in Europe, the next few years will see an influx of jihadis joining the existing population of homegrown radicals, but the United States itself remains a target. America's size and population make it is easy to disappear into the seams of this sprawling society. Government surveillance is, with one exception and contrary to cinematic fantasy, limited and disconnected. That exception is communications surveillance, which provides the best and perhaps the only national-level solution to find and prevent attacks against Americans and their allies. Some of the **suggestions for alternative approaches to surveillance**, such as the recommendation that NSA only track "known or suspected terrorists," **reflect** both **deep ignorance and wishful thinking. It is the unknown terrorist who will inflict the greatest harm.**

1nc -- terror (vs. k)

We need more surveillance to check white supremacist groups

Robinson 6/23 (Eugene Robinson - Pulitzer Prize winning journalist, June 23, 2015, The Courier Journal, 'We need to go beyond speeches and symbols', http://www.courier-journal.com/story/opinion/columnists/2015/06/23/robinson-need-go-beyond-speeches-symbols/29151157/) //JS

If American racism were a thing of the past, nine men and women who went to church last Wednesday evening would be alive. What happened in Charleston is not unfathomable or even ambiguous. It's a story much older than the nation, a story that began when the first Africans were brought to Jamestown in 1619: the brutalizing and killing of black people because of the color of their skin. The weekend displays of multiracial unity throughout the saddened city were inspiring, but they cannot be taken as a sign that the country has moved beyond its troubled racial past. The young man who so coldly killed those innocent worshipers at Emanuel African Methodist Episcopal Church did not exist in a vacuum. He inhaled deeply of the race hatred that constantly bubbles up like foul gas from a sewer. The alleged assassin, Dylann Roof, left behind a manifesto that said he drew inspiration from the website of the Council of Conservative Citizens, a prominent white supremacist group. The organization's proudly racist "statement of principles" declares that "the American people and government should remain European in their composition and character" and opposes "all efforts to mix the races of mankind." The Southern Poverty Law Center, which tracks hate groups, describes the council as a modern-day incarnation of the "White Citizens Councils" throughout the South that fought so tenaciously against desegregation during the civil rights era. The council's membership is thought to be small but its reach is vast, thanks to the Internet. Like hateful jihadists, white supremacists use cyberspace as a bulletin board and a meeting place. Come on in, young Mr. Roof, and let us tell you how those black people and those brown people are responsible for everything that's going wrong in your life. Some conservatives have been quick to absolve society of blame by pointing out that the Charleston shooter was mentally disturbed. But of course he was mentally disturbed; normal, well-adjusted individuals do not commit mass murder. And the fact is that the Charleston killings were intended to advance a specific cause. To look past Roof's racism would be like ignoring the fact that the Tsarnaev brothers, who committed the Boston Marathon bombing, believed in a violent, twisted version of Islam. "You rape our women and you're taking over our country," Roof reportedly said to his victims before opening fire. This sick narrative comes straight from the Council of Conservative Citizens website, which inflates isolated incidents of black-on-white crime into some kind of race war and portrays the nation's "European heritage" as being in dire peril. President Obama chose an unusual forum -- a podcast with comedian Marc Maron -- to deliver his most candid remarks to date since the Charleston massacre. Race relations have clearly improved in our lifetimes, he said, but "we are not cured" of racism "and it's not just a matter of it not being polite to say 'nigger' in public." Slavery and Jim Crow discrimination cast "a long shadow and that's still part of our DNA that's passed on." Obama's election in 2008 undoubtedly marked a milestone, one I never dreamed I'd live to see. I wrote at the time that it felt like morning in America. What I didn't fully appreciate at the time was the extent to which the mere fact of a black family living in the White House would, at least in the short term, heighten racial anxieties and conflicts. I didn't see that the spectacle of African-Americans in power would apparently lead some whites to feel powerless, aggrieved and victimized. In the long run, I'm an

optimist. But a post-racial future will not just appear. There is urgent work to do. By all means, South Carolina, get rid of the Confederate flag, which has become an emblem of the white supremacist movement. The flag first flew over the statehouse in Columbia in 1961, not 1861; it was essentially an act of defiance, a raised middle finger toward a federal government that was forcing the end of Jim Crow. But we need to go beyond speeches and symbols. Law enforcement should subject white racist organizations to the same surveillance and scrutiny as groups devoted to jihad. Governments at all levels should enforce fair housing and employment laws as vigorously as they enforce the Patriot Act. Police departments and court systems must be compelled to administer justice equally -- with African-Americans, too, considered innocent until proven guilty.

2nc - white supremacist

White supremacists are the largest threat -- need more surveillance

Kruzman and Schanzer June 16, **2015** (Charles and David; The Growing Right-Wing Terror Threat; www.nytimes.com/2015/06/16/opinion/the-other-terror-threat.html?_r=0

THIS month, the headlines were about a Muslim man in Boston who was accused of threatening police officers with a knife. Last month, two Muslims attacked an anti-Islamic conference in Garland, Tex. The month before, a Muslim man was charged with plotting to drive a truck bomb onto a military installation in Kansas. If you keep up with the news, you know that a small but steady stream of American Muslims, radicalized by overseas extremists, are engaging in violence here in the United States. But headlines can mislead. **The main terrorist threat in the United States is** not from violent Muslim extremists, but **from right-wing extremists**. Just ask the police. In a survey we conducted with the Police Executive Research Forum last year of 382 law enforcement agencies, 74 percent reported anti-government extremism as one of the top three terrorist threats in their jurisdiction; 39 percent listed extremism connected with Al Qaeda or like-minded terrorist organizations. And only 3 percent identified the threat from Muslim extremists as severe, compared with 7 percent for anti-government and other forms of extremism. The self-proclaimed Islamic State's efforts to radicalize American Muslims, which began just after the survey ended, may have increased threat perceptions somewhat, but not by much, as we found in follow-up interviews over the past year with counterterrorism specialists at 19 law enforcement agencies. These officers, selected from urban and rural areas around the country, said that radicalization from the Middle East was a concern, but not as dangerous as radicalization among right-wing extremists. An officer from a large metropolitan area said that "militias, neo-Nazis and sovereign citizens" are the biggest threat we face in regard to extremism. One officer explained that he ranked the right-wing threat higher because "it is an emerging threat that we don't have as good of a grip on, even with our intelligence unit, as we do with the Al Shabab/Al Qaeda issue, which we have been dealing with for some time." An officer on the West Coast explained that the "sovereign citizen" anti-government threat has "really taken off," whereas terrorism by American Muslim is something "we just haven't experienced yet." Last year, for example, a man who identified with the sovereign citizen movement — which claims not to recognize the authority of federal or local government — attacked a courthouse in Forsyth County, Ga., firing an assault rifle at police officers and trying to cover his approach with tear gas and smoke grenades. The suspect was killed by the police, who returned fire. In Nevada, anti-government militants reportedly walked up to and shot two police officers at a restaurant, then placed a "Don't tread on me" flag on their bodies. An anti-government extremist in Pennsylvania was arrested on suspicion of shooting two state troopers, killing one of them, before leading authorities on a 48-day manhunt. A right-wing militant in Texas declared a "revolution" and was arrested on suspicion of attempting to rob an armored car in order to buy weapons and explosives and attack law enforcement. These individuals on the fringes of right-wing politics increasingly worry law enforcement officials. Law enforcement agencies around the country are training their officers to recognize signs of anti-government extremism and to exercise caution during routine traffic stops, criminal investigations and other interactions with potential extremists. "**The threat is real,**" says the handout from one training program sponsored by the Department of Justice. Since 2000, the handout notes, 25 law enforcement officers have been killed by right-wing extremists, who share a "fear that government will confiscate firearms" and a "belief in the approaching collapse of government and the economy." Despite public anxiety about extremists inspired by Al Qaeda and the Islamic State, the number of violent plots by such individuals has remained very low. Since 9/11,

an average of nine American Muslims per year have been involved in an average of six terrorism-related plots against targets in the United States. Most were disrupted, but the 20 plots that were carried out accounted for 50 fatalities over the past 13 and a half years. In contrast, right-wing extremists averaged **337 attacks per year** in the decade after 9/11, causing a total of 254 fatalities, according to a study by Arie Perliger, a professor at the United States Military Academy's Combating Terrorism Center. The toll has increased since the study was released in 2012. Other data sets, using different definitions of political violence, tell comparable stories. The Global Terrorism Database maintained by the Start Center at the University of Maryland includes 65 attacks in the United States associated with right-wing ideologies and 24 by Muslim extremists since 9/11. The International Security Program at the New America Foundation identifies 39 fatalities from "non-jihadist" homegrown extremists and 26 fatalities from "jihadist" extremists. Meanwhile, terrorism of all forms has accounted for a tiny proportion of violence in America. There have been more than 215,000 murders in the United States since 9/11. For every person killed by Muslim extremists, there have been 4,300 homicides from other threats. Public debates on terrorism focus intensely on Muslims. But this focus does not square with the low number of plots in the United States by Muslims, and it does a disservice to a minority group that suffers from increasingly hostile public opinion. As state and local police agencies remind us, right-wing, anti-government extremism is the leading source of ideological violence in America.

Surveillance prevents Charleston like situations - senator Graham

Krayewski 6/19 (Ed Krayewski - M.S. in journalism from Columbia and former editor for Fox News and Fox Business, June 19, 2015, Lindsey Graham: 'Being Able to Track People, Put Them Into Systems' One Way to Prevent Mass Shootings, Jun. 19, 2015, Reason, http://reason.com/blog/2015/06/19/lindsey-graham-being-able-to-track-peopl) //JS

The mass shooting at an AME church in Charleston, S.C., Wednesday night perpetrated by a white man who confessed he was trying to start a race war has led to the predictable emotional appeals to old party lines, from gun control to more salvation and less government, especially in a 24 hour news cycle. South Carolina Sen. Lindsey Graham (R), who's running for president, says his niece attended school with Dylann Roof, and that he seemed like an "Adam Lanza" type. While Graham didn't refer to other seemingly obvious motivations, like trying to start a race war, he did offer a solution that matches the response to radical Islamist terrorism more closely policy-wise, if not rhetorically. Graham's comments, via CBS News: "I bet there were some indicators early on that this guy was not quite there. Just being able to track people - put them into systems where they can be deterred or stopped. But it's very complicated in a nation of 300 million people where you have freedom of movement and freedom of thought. 300 million of us and unfortunately every now and then, something like this happens. And we'll see." The perceived treatment of white suspects as mentally ill "lone wolves" by the media where non-white suspects are treated as terrorists and thugs is a common complaint in the wake of mass shootings by white men. Lindsey Graham goes both ways here, using the lone wolf rhetoric, offering a counter-terrorism solution—tracking people in systems, and then almost dismissing it as the price of free society. Were Dylann Roof interested in joining ISIS, Lindsey Graham would be ready to blow him up just for thinking the thought. For a government looking to get people to trade more liberty for the promise of more security and looking to expand its domestic policing and surveillance apparatuses, it's easy to acquiesce to demands Roof and the threat of white supremacist terrorism be treated more like the threat of radical Islamist terrorism. And such demands make it harder to realize that the threat posed by free people, white or non-white, Christian, Muslim, whatever, is exaggerated and exploited toward the end of more surveillance, more policing, at home and abroad, and more control.

The United States federal government should:

publicly announce that it will << plan >>

not << plan >>

and apply enhanced Insider Threat Program and Continuous Evaluation protections to << area of the plan >>.

Solves their perception internals – sufficient to prevent their impacts

Eoyang, National Security Director @ Third Way, 14 (Mieke Eoyang, director of the National Security Program at Third Way, previously served on the staff of the House Intelligence and Armed Services Committees, as Defense Policy Advisor to Senator Edward M. Kennedy, and subcommittee staff director on the House Permanent Select Committee on Intelligence, "A Modest Proposal: FAA Exclusivity for Collection Involving U.S. Technology Companies," Lawfare, http://www.lawfareblog.com/modest-proposal-faa-exclusivity-collection-involving-us-technology-companies)//ET

Others may argue that FAA provides inadequate civil liberties protections. This proposal says nothing about the adequacy of that statute. What it says is that for data held by an American company about a target that is not a US person, the checks within FAA are stronger than those under 12333 acting alone. I'm also **not** suggesting that this **reform** will **shut down** all **surveillance activities** – something I'd personally oppose---nor will it address the full range of civil liberties concerns. It's **not intended to**. It simply aims to **restore the belief** that when American companies are acting overseas, they bring with them American values, including those of **privacy protections**.

BUT, re-establishing secrecy over surveillance programs is essential to bolster counter-intelligence capability and threat detection

Van Cleave, former U.S. counter-intel czar, 13 (Michelle Van Cleave, served as the head of US counterintelligence under President George W. Bush, now a principal with the Jack Kemp Foundation, "What It Takes: In Defense of the NSA," World Affairs, November/December 2013, http://www.worldaffairsjournal.org/article/what-it-takes-defense-nsa)

Freedom must be won anew by every generation." I was reminded of the truth behind these words of my old boss, Jack Kemp, in considering the current debate over Edward Snowden and the collection programs of the National Security Agency. The wars that have been fought in freedom's defense—the deep sacrifices of lives and treasure by generations of Americans, including those serving today—are one measure of that truth. But it does not stop there. It also means that America's democracy is a great experiment in governance. Our obligation as citizens is to conserve what is good and enduring while changing and improving what we must. Those choices are not always easy, especially when they involve making decisions about things that must by their nature be secret in order to help keep us free.

Contrast this with the seemingly boundless instant commentary about Snowden, who used his access as a nondescript contractor at an NSA facility in Hawaii to propel himself into the number one news story overnight. All it took were a few well-placed leaks to the Guardian and the Washington Post and a quick getaway to China, thumb drive in hand. Early polls showed that sixty percent of people in their twenties believed that Snowden's disclosures were in the public interest. Perhaps they have forgotten why we have these collection programs in the first place. Highest on the list of "lessons learned" from the September 11th terrorist attack was the need for a retooled intelligence enterprise that could "connect the dots" and keep us safe. The intelligence apparatus in place on September 10th was not built for that purpose. The imperatives of the Cold War were to deter conflict and maintain the peace; the overarching challenge, which US intelligence met so brilliantly, was to collect ever more refined insights about a known antagonist. Today, the collection targets are unknown (what are the indicators of terrorist activities that we should be watching?), and our principal objective is to take action to defeat and dismantle threats in order to keep us safe. The urgent post-9/11 intelligence directive became: "Do more, do better, do it differently, and do it now." In the wake of the Boston Marathon bombing—a scant two months before Snowden's first leaks—the FBI was accused of not doing enough to track suspected terrorist sympathizers (even though those suspicions had come from the Russian intelligence service formerly known as the KGB). Two events, two contradictory reactions by the American public: one demanding that the government take action to identify and defeat terrorist threats, the other wary and untrusting of that same government. Don't intrude but keep me safe. How to square such a circle? Today, when a personal video can "go viral" in an instant, five hundred million people have a follow-me-right-this-second Twitter account, and some two billion people have access to the Internet, the digital records of US citizens are comingled with the rest of the world in a maze of activity that is **a fount of intelligence information**. I confess, when the Snowden leaks first appeared my reaction was, "Of course NSA is acquiring metadata of US telephony. Haven't these people been paying attention?" Recall the public debates in 2005 when details about the early Terrorist Surveillance Program were leaked to the New York Times, or again the next year when Congress extended the Patriot Act, including its provisions authorizing metadata collection (Section 215). Simply put, if you want to know who the terrorists are talking to, you've got to check the phone logs. Dot-connecting 101. Here is how the law works. The telephone companies store vast databases of transactional information for billing, customer service, and other business purposes. The government may "query" those business records only when there is a "reasonable suspicion, based on specific and articulated facts," that specific foreign terrorist organizations are involved. (In practice, that amounts to fewer than three hundred queries a year.) In order to follow up on any leads—in other words, to get the locations or names of individual subscribers in the United States—the FBI has to go back to the court and get a warrant. Is our privacy being violated when computers churn through billions of strings of digital data looking for signals of terrorist activity? Or is that something that we need the government to do to keep us safe? Consider the related case of potential **cyber attacks** against **critical US infrastructure** systems, such as telecommunications, transportation, **power generation and distribution**, banking, and so forth. Part of a national cyber defense would need to include **automated access** to those computer pathways to **detect** and **warn** of anomalous activity in the **split second** needed to take action. If these privately owned and operated networks **must be monitored to enable their protection**, is that an intrusion into their customers' autonomy, or an inherent duty of government to provide for the common defense? To my mind, far from being "Stasi-like," as some overheated critics have charged, such automated systems analyzing digits (not people) are non-intrusive public safety responsibilities of the US government, subject to careful internal checks as well as both judicial and congressional oversight to ensure they do not go beyond those clear boundaries. I find the loss of privacy in today's digital world very troubling—but not because of the US government. It's the cookies that enable some Web merchant to track what I buy online and send me tailored ads to buy more. It's the manner in which the Apple cloud insists on scooping up all of my personal calendar and contact information—and I can't opt out if I want my cell phone to work. It's the ever-vigilant, ever-ready Chinese microchip in my laptop computer, including the little extra that takes over the video camera and watches the room. Where is the public outrage about all of that? To call Snowden a "whistleblower" demeans the dignity of the term. As for the public's right to know about these collection activities, we already knew. As for the decisions of our democracy whether these activities were right and proper and necessary, those decisions had been and continue to be made by the executive, the Congress, and the courts acting in accordance with their constitutional responsibilities and the authorities we the people have entrusted to them. As for the worth of the collection activities themselves, we subsequently learned of their indispensable role in tracking or disrupting more than a dozen terrorist operations in the US and another forty abroad. But now their worth has been severely degraded. Even though what NSA does for a living is known to the world, some **significant part** of its **success** depends on a simple **lack of awareness**, or the bad guys just **letting their guard down**, which is one reason why the huge publicity given to these collection activities has been so harmful. Across the globe, al-Qaeda networks and virtually every other terrorist group have changed their communications practices in response to Snowden's leaks. To make matters worse, the more that sophisticated adversaries understand about how NSA works, the better they will

be able to hide. You can't connect invisible dots. For my old business of US counterintelligence, the Snowden case is something of an unraveling nightmare. At this stage, there is no telling whether or not he acted alone, or what he compromised. Four months isn't much time on-site, yet he used his access to identify and download highly classified information that would be of particular use to him. How did he decide what was of value to snatch? Where did he find it? How did he take it without getting caught? He admitted that he took the NSA contractor job in March of this year in order to gain access to this material, so his preparations had been under way for quite a while. The deeper question is at what point along the way he started to get outside help and direction, and from whom. At a minimum, the press leaks were very well scripted to provide cover for the rest of the operation, which has received far less attention. Snowden passed documents allegedly showing US and UK surveillance of Russian and Turkish representatives at a Group of 20 meeting. He passed ostensible records of US signals intelligence operations in Hong Kong and elsewhere, as well as Britain's signals intelligence arm, GCHQ. He passed information about top-secret plans to counter Chinese cyber-attack capabilities, and about joint intelligence undertakings among Western allies, including US and German cooperation. That's just what has been reported publicly. Then of course there is whatever else he stole. Whether or not there are audit trails for IT administrators like Snowden we can only guess. If not, there may be no way of bounding the potential damage. And since we don't know what secrets may have been lost, we won't know what or who may now be at risk. That uncertainty alone is an intelligence bonanza for our adversaries. Whatever else Snowden may be, he has been a voice of disinformation. For example, here's an excerpt from his Guardian interview: "Any analyst at any time can target anyone, any selector, anywhere. . . I sitting at my desk certainly had the authorities to wiretap anyone from you or your accountant to a federal judge to even the president if I had a personal e-mail." If that were true, it would be an outrageous abuse of authority. But it is not true, not a whit. Now maybe Snowden is just delusional. Or maybe someone is coaching him a little, the better to inflame public opinion. But who would know, when there is an immediate rush to judgment to pronounce the man a "hero" or a "conscientious objector" or "deeply idealistic" or whatever other bouquets of virtue were thrown his way. By such means, some of the West's best and brightest (looking less bright all the time) become part of the disinformation campaign directed against America's moral standing in the world. That campaign has a long history. Two inherent qualities make US intelligence unique among the world's intelligence services. The first is its accountability and unparalleled openness to public scrutiny and the rigorous oversight of the political process. The fact that we measure these things against civil liberties, and bring them under the careful checks and balances of our Constitution, is the bedrock of their strength. Even more fundamentally, US intelligence is part of the great experiment in governance that is our democratic republic. Beginning with George Washington's first State of the Union Address, in which he requested a secret fund for clandestine activities, intelligence has been an instrument to achieve the broad goals of the American people and the policies advanced by their duly elected representatives. That is why any rupture between public confidence and the US intelligence enterprise is so destructive. It is also why America's adversaries have long sought to provoke one. During the Cold War, the KGB expended a great deal of energy and treasure in undermining the credibility and effectiveness of US intelligence in general and the CIA in particular. Soviet disinformation campaigns included some breathtaking lies, deceptions, and fantastic tales (e.g., forged documents, planted news reports, and grotesque accusations that the CIA was responsible for trafficking in baby parts, assassinating President Kennedy, and inventing AIDS). It took decades for the CIA to recover from the Church Committee investigations of the 1970s—years that the Soviets used to advantage in undermining pro-Western governments, supporting insurgencies, and implanting spies. And here we go again. Whatever Snowden may have had in mind when he decided to break his oath, the secrets he disclosed have been used to **discredit US intelligence** among the very democratic populations that depend most on the American defense umbrella. Across Europe, there have been **lawsuits to stop NSA operations**. Round two of Snowden's leaks included purported US collection activities directed against members of the European Union, so the EU, the French, the Germans, and others lodged diplomatic complaints and suspended trade and other talks and loudly proclaimed their indignation. (This is more than a little hypocritical, given their own intelligence activities against one another—not to mention the value they derive from ours.) To make matters worse, a whole series of damaging leaks in recent years, ranging from WikiLeaks to include some from the highest levels of the US government, have **called into question America's reliability as an intelligence partner**. For friendly intelligence services, trusting the Americans to keep secrets secret has become a far riskier proposition. In fact, our **stock as an intelligence partner** has **never been lower**, which is exceedingly worrisome in an era when we **rely** so **heavily** on **liaison services** for **essential intelligence** about terrorist targets. For American intelligence personnel, doing their jobs has become that much more difficult and that much more thankless. You can be sure that the Russians, the Chinese, and others, knowing about the demoralizing effects of the Snowden leaks, are working overtime pursuing new recruitment prospects within US intelligence ranks. They know from long experience that low morale is a key factor in persuading Americans to spy on their own country. Today, there are more **Russian**

intelligence personnel **operating in the U**nited **S**tates than there were at the height of the Cold War, and they are far from alone. By some counts, **China** is here in even greater numbers, and even more active against us through cyber means. Add to that the **Cubans**, the **Iranians**, and **most of the rest** of the world's governments—plus some **thirty-five** suspected **terrorist organizations**—all here, taking advantage of the freedom of movement, access, and anonymity afforded by American society. And then there is the phenomenon of the hacker culture and virtual anarchists like "Anonymous," which is hard at work to set the conditions for what it calls a "global secrets meltdown." Their ostensible plan is to recruit individuals to infiltrate governments to steal classified information or enable Anonymous hackers to steal it. Then, when the message "do it now" goes out, they will simultaneously reveal all of the world's secrets (but of course mostly concentrated in the West because that's where the access is). It may sound ridiculous until you realize just how many disaffected, cynical youth like Snowden are drawn to these circles to find some sense of belonging and self-importance. The United States has built a global intelligence apparatus because it has global interests and global responsibilities. We have taken seriously the duties of leader of the free world, as two world wars, Korea, Vietnam, Afghanistan, Iraq, and freedom fighters in many parts of the world can attest. None of these duties in the last sixty years could have been met without the exceptional resources of NSA. Successive **presidents** and **Congresses**, entrusted with preserving and defending our freedom, have judged these investments to be vital to our nation's security. They **have protected the core secrets that enable collection programs to succeed**, as have those in US business and **industry** who have been integral to their success. The unquestioned qualitative edge of US intelligence has been as essential to defending this country and preserving our freedom as have the forces we have built to arm and equip our military. But time has not stood still. China is attacking computer systems throughout the world, stealing information and implanting features to enable future control. China's prominence in IT commercial markets means that they are in the supply chain, and their market share is growing as part of a purposeful, state-run program for strategic position. A long roll call of spies from Russia, China, Cuba, and other nations have targeted the essential secrets of US intelligence capabilities in order to be able to defeat them. And now they have the Snowdens and the WikiLeakers of the world helping them out. **Interconnected global networks of digital data** have become the **single most important source** of **intelligence warning of threats**, **enabling our defense** at home and the advancement of freedom abroad. To say "**hands off**," as some shortsighted privacy advocates have been doing, will not preserve our liberties, it will **endanger** them. It should be possible for an enlightened citizenry to empower government action in that sphere without forfeiting the very rights that our government exists to secure. That challenge is, at the very least, a part of the continuing experiment that is our democracy.

Effective technical intelligence collection prevents a variety of existential threats AND filters the probability and magnitude of all impacts

Johnson, Poli Sci Prof @ Georgia, 9 (Loch Johnson, Regents Professor of Political Science, University of Georgia, former special assistant to the chair of the Senate Select Committee House Subcommittee on Intelligence Oversight, former staff director of the House Subcommittee on Intelligence Oversight, former visiting scholar at Yale University, won the Josiah Meigs Prize, the highest teaching honor at the University of Georgia in addition to the Owens Award, its highest honor for research, editor of Intelligence and National Security, Ph.D. political science, University of California at Riverside, "Evaluating "Humint": The Role of Foreign Agents in U.S. Security", Peer reviewed conference paper. 2/15/9. http://citation.allacademic.com//meta/p_mla_apa_research_citation/3/1/0/6/6/pages310665/p310665-14.php)//ET

Abstract Intelligence is considered the **first line of defense** in U.S. security against foreign and domestic threats. A **key intelligence mission** is the **collection** of information that can be handed on to analysts, who in turn assess its value in determining global threats and opportunities. Among the most important methods of information collection is human intelligence, known by the abbreviation "humint." Surveys inside the American intelligence community, as well as interviews with leading intelligence professionals and the top consumers of humint, indicate that this approach to intelligence gathering contributes significantly to the government's understanding of world affairs. Introduction The world is a dangerous place, plagued by the presence of **terrorist** cells; **failed** or failing **states**; competition for **scarce resources**, such as **oil**, **water**,

uranium, and **food**; chemical, **biological**, and **nuclear weapons**, not to mention bristling arsenals of conventional **armaments**; and deep-seated animosities between rival nations and factions. For self-protection, if for no other reason, government officials leaders seek information about the capabilities and—an especially elusive topic—the intentions of those overseas (or subversives at home) who can inflict harm upon the nation. That is the core purpose of espionage: to gather information about threats, whether external or internal, and to warn leaders about perils facing the homeland. Further, the secret services hope to provide leaders with data that can help advance the national interest—the opportunity side of the security equation. Through the practice of espionage—spying or clandestine human intelligence: whichever is one's favorite term—the central task, stated baldly, is to steal secrets from adversaries as a means for achieving a more thorough understanding of threats and opportunities in the world. National governments study information that is available in the public domain (Chinese newspapers, for example), but knowledge gaps are bound to arise. A favorite metaphor for intelligence is the jigsaw puzzle. Many of the pieces to the puzzle are available in the stacks of the Library of Congress or on the Internet; nevertheless, there will continue to be several missing pieces—perhaps the most important ones. They may be hidden away in Kremlin vaults or in caves where members of Al Qaeda hunker down in Pakistan's western frontier. The public pieces of the puzzle can be acquired through careful research; but often discovery of the missing secret pieces has to **rely on** spying, if they can be found at all. Some things— "mysteries" in the argot of intelligence professionals—are unknowable in any definitive way, such as who is likely to replace the current leader of North Korea. Secrets, in contrast, may be uncovered with a combination of luck and skill—say, the number of Chinese nuclear-armed submarines, which are vulnerable to satellite and sonar tracking. Espionage can be pursued by way of human agents or with machines, respectively known inside America's secret agencies as human intelligence ("humint," in the acronym) and technical intelligence ("techint"). Humint consists of spy rings that rely on foreign agents or "assets" in the field, recruited by intelligence professionals (known as case officers during the Cold War or, in more current jargon, operations officers). i Techint includes mechanical devises large and small, including **satellites** the size of Greyhound buses, equipped with fancy cameras and listening devices that can see and hear acutely from orbits deep in space; reconnaissance **aircraft**, most famously the U-2; unmanned aerial vehicles (UAVs) or **drones**, such as the Predator—often armed with Hellfire missiles, allowing the option to kill what its handlers have just spotted through the lens of an onboard camera); enormous **ground-based listening** antennae, aimed at enemy territory; **listening devices** clamped surreptitiously on fiber-optic communications **cables** that carry **telephone** conversations; and miniature listening "bugs" concealed within sparkling cut-glass chandeliers in **foreign embassies** or palaces. Techint attracts the most funding in Washington, D.C. (machines are costly, especially heavy satellites that must be launched into space), by a ratio of some nine-to-one over humint in America's widely estimated $50 billion annual intelligence budget. Human spies, though, continue to be recruited by the United States in most every region of the globe. Some critics contend that these spies contribute little to the knowledge of Washington officials about the state of international affairs; other authorities maintain, though, that only human agents can provide insights into that most vital of all national security questions: the intentions of one's rivals—especially those adversaries who are well armed and hostile. The purpose of this essay is to examine the value of humint, based on a review of the **research lit**erature on intelligence, **survey data**, and the author's **interviews** with individuals in the espionage trade. The essay is organized in the following manner: it opens with a primer on the purpose, structure, and methods of humint; then examines some **empirical data** on its value; surveys more broadly the pros and cons of this approach to spying; and concludes with an overall judgment about the value of agents for a nation's security.

--a2 perm

Counterplan is mutually exclusive – bans the plan – means any permutation is severance – that's a voter – makes leveraging any stable offense impossible

AND, banning the plan is key to avoid the link to the net benefit – only counterplan keeps status quo legal authorities in place and ensures the free flow of intelligence

--a2 theory

CP bans the plan – gold standard for competition and structurally guarantees them easy offense – no warrant for abuse

It's predictable and clearly grounded in the status quo's approach to surveillance policy – resolves ground and clash concerns

Setty 15 (Sudha Setty, Professor of Law and Associate Dean for Faculty Development & Intellectual Life, Western New England University School of Law, J.D., Columbia Law School, A.B., Stanford University, "Surveillance, Secrecy, and the Search for Meaningful Accountability," Stanford Journal of International Law, 51 STAN. J. INT'L L 16 (2015), http://digitalcommons.law.wne.edu/cgi/viewcontent.cgi?article=1305&context=facschol)

One of the most intractable problems in the debate around maintaining the rule of law while combating the threat of terrorism is the question of secrecy and transparency. In peacetime, important tenets to the rule of law include transparency of the law, limits on government power, and consistency of the law as applied to individuals in the polity. Yet the post-9/11 decisionmaking by the Bush and Obama administrations has been characterized by excessive secrecy that stymies most efforts to hold the government accountable for its abuses. Executive branch policy with regard to detention, interrogation, targeted killing, and surveillance are kept secret, and that secrecy has been largely validated by a compliant judiciary that has dismissed almost all suits challenging human and civil rights abuses resulting from counterterrorism programs. Efforts by Congress to engage in meaningful oversight have met with mixed results; in the area of government surveillance, such efforts have been fruitless without the benefit of leaked information on warrantless surveillance by government insiders. The executive branch has generally refused to make public vital aspects of its surveillance programs in ways that could give oversight efforts more muscle. At the same time, the executive branch has consistently defended the legality and efficacy of these surveillance programs.

Central to topic literature and education – secrecy is a key surveillance policy question that directly implicates debates over executive authority

ACLU 8 (American Civil Liberties Union, "ACLU COMMENDS SENATOR FEINGOLD FOR HEARING ON SECRET LAW," 4-30-2008, https://www.aclu.org/news/aclu-commends-senator-feingold-hearing-secret-law?redirect=national-security/aclu-commends-senator-feingold-hearing-secret-law)

The ACLU noted that the Bush administration's track record on government secrecy has been dismal at best. Memos from the Office of Legal Counsel (OLC) outlining legal opinions on torture and wiretapping remain classified despite several congressional calls for disclosure. The administration has also frequently issued executive orders only to amend those policies without publicly acknowledging the changes, removed public documents from the National Archives and created an unusual system of retroactive secrecy by reclassifying previously public information. One of the most public debates on executive power and secrecy has been rooted in the executive's ability to conduct surveillance. Since the revelation of the president's warrantless

wiretapping program by the New York Times in December of 2005, that debate has been held publicly in Congress. However a missing piece of that debate is a still-secret OLC memo.

Debating this counterplan is particularly key

Williams 13 (Juan Williams, Fox News political analyst, and Chris Wallace, host, Fox News Sunday, "Former Vice President Dick Cheney talks NSA surveillance program," 6-16-2013, http://www.foxnews.com/on-air/fox-news-sunday-chris-wallace/2013/06/16/former-vice-president-dick-cheney-talks-nsa-surveillance-program#p//v/2482865656001)

WALLACE: Yes. The Pentagon thing. WILLIAMS: You're hurting me, buddy. Yes. But I mean the Pentagon -- he was the one who orchestrated the release of the Pentagon papers to Neil Sheehan at "The New York Times." But, you know, the difference here is this was not about revealing corruption or lies by government or anything like that. He was revealing secrets that had to do with effective programs to battle terrorists. In this age of anti-terrorism. So, to me, I think this is a guy who took an oath when he said that he was going to work as a government contractor for NSA and he broke that oath. So, I don't think that's a martyr or a hero. I think that's more in the category of traitor. He should be extradited, and he should be prosecuted. If the point is that we need a debate -- yes, we need a debate about secrecy and the balance between civil liberties and national security. That's the debate, I think, should have taken place with far more energy back in 2002 when we passed the Patriot Act. And I think there was only one senator who voted against it, and I think that was Russ Feingold of Wisconsin. So, you imagine, to me, at that time, there was such emotion. Yeah, we need to fight terrorists. But we sacrifice some civil liberties. Now to go back and say, oh, you know what? We aren't sure. We didn't know about it. Baloney. We knew about this all along. We have known about it clearly since 2006. Everybody knows about it. And to pretend -- oh, gosh, we didn't know, this is a shock. I mean that's ridiculous.

--a2 lying bad

Governmental lies – particularly about surveillance – are inevitable, good, and the public forgives them

John **Blake 13**--- CNN journalist. John Blake has been honored by the Society of Professional Journalists, the Associated Press, and The American Academy of Religion. He is the author of "Children of the Movement." (Blake, "Of course presidents lie", CNN. 11/24/13. http://www.cnn.com/2013/11/24/politics/presidents-lie/)//ET

Well, guess what? That story about Washington and the cherry tree is a lie. Never happened. And the notion that a good president doesn't lie to the American people -- that's an illusion as well. Historians say many of our greatest presidents were the biggest liars -- and duplicity was part of their greatness. "**Every president** has **not only lied** at some time, but **needs to lie to be effective**," says Ed Uravic, a former Washington lobbyist, congressional chief of staff and author of "Lying Cheating Scum." Presidential lying is a hot topic because of a promise made by President Obama. While promoting Obamacare, Obama told Americans that they could keep their health insurance if they wanted to. That turned out to not be true for some, and Obama has been accused of lying. Some political pundits warn that Obama's "lie" will undo his second term. They say Americans won't forgive a president who violates their trust. It's a good sound-bite, but it's bad history. A great leader must "be a great pretender and dissembler," Machiavelli said in "The Prince." And so should a president, some historians say. You might say lying is the verbal lubricant that keeps the Oval Office engine running. Some of our most popular presidents told the biggest whoppers, say historians, including Benjamin Ginsberg, author of "The American Lie: Government by the People and other Political Fables." While preparing the country for World War II, Franklin Roosevelt told Americans in 1940 that "your boys are not going to be sent into any foreign wars." President John F. Kennedy declared in 1961 that "I have previously stated, and I repeat now, that the United States plans no military intervention in Cuba." All the while, he was planning an invasion of Cuba. Ronald Reagan told Americans in 1986, "We did not, I repeat, did not trade weapons or anything else [to Iran] for hostages, nor will we," four months

before admitting that the U.S. had actually done what he had denied. Even "Honest Abe," whose majestic "Gettysburg Address" the nation commemorated this week, was a skillful liar, says Meg Mott, a professor of political theory at Marlboro College in Vermont. Lincoln lied about whether he was negotiating with the South to end the war. That deception was given extended treatment in "Steven Spielberg" recent film "Lincoln." He also lied about where he stood on slavery. He told the American public and political allies that he didn't believe in political equality for slaves because he didn't want to get too far ahead of public opinion, Mott says. "He had to be devious with the electorate," Mott says. "He played slave-holders against abolitionists. He had to lie to get people to follow him. Lincoln is a great Machiavellian." 6 things presidents wish they hadn't said Forgivable vs. unforgivable lies Presidential lies fall into two categories: forgivable vs. unforgiveable. **Forgivable lies** are those meant to keep the nation from harm. Some consider the **N**ational **S**ecurity **A**gency's lies about the scope of domestic spying to be in this category because they protect us from terrorists, says Uravic, author of "Lying, Cheating Scum." Unforgivable lies fall into the Nixonian "I am not a crook" category, Uravic says. Those are lies meant to cover up crimes, incompetence or protect a president's political future. President Lyndon Johnson, for example, kept the full cost of spending on the Vietnam War from Congress and the public to preserve his political power, Uravic says. "The American people remain forgiving of their politicians, as long as those politicians put the people first and deliver tangible benefits for all of us," says Uravic, who also teaches at the Harrisburg University of Science and Technology in Pennsylvania. The ultimate test of whether the American public will accept a lie from a president is if the nation determines that the lie serves the national interests. That distinction is why Bill Clinton remains popular, and George W. Bush remains reviled for his "lie," says Allan Cooper, a political scientist and historian at Otterbein University in Ohio. In a nationally televised address in 2003, Bush said that invading Iraq was necessary "to eliminate weapons of mass destruction." "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised," Bush said. Clinton told the nation that he did "not have sexual relations with that woman." I did not have sexual relations with that woman. President Bill Clinton "Clinton's lies about a sexual affair were understandable given his interest to protect his marriage and to shield the nation's children from having to ask their parents to explain the phenomenon of oral sex," Cooper says. "Bush's lies led to the death and injuries of thousands of Americans." Obama's statement will be judged by the same standard: Did it help the country, or did he say it just to save his bacon? Obama apologized for saying people could keep their insurance if they like it. But some Americans who buy policies on the private market recently received cancellation notices because their plans don't meet Obamacare requirements for more comprehensive care. Americans may forgive Obama if Obamacare improves their lives, says Christopher J. Galdieri, who teaches a course on the U.S. presidency at Saint Anslem College in New Hampshire. "Ultimately, this is going to come down to whether the federal [health care] exchange improves, and whether people come to view that as a successful and viable option for buying insurance for themselves and their families," Galdieri says. Will George W. Bush's reputation ever recover from the accusation that he led the nation into war under false pretenses? It's hard to say from history. Several presidents were accused of deceiving the American public to sell military action, says David Contosta, a history professor at Chestnut Hill College in Pennsylvania. President James Polk lied to Congress in 1846 -- claiming Mexico had invaded the United States -- because he was determined to take the Southwest from Mexico. That lie led to the Mexican-American War, Contosta says. President William McKinley lied to the American public in 1898 when he insisted that Spain had blown up the USS Maine warship in Havana Harbor, Cuba, although he had no evidence. That lie led to the Spanish-American war. Every president has not only lied at some time, but needs to lie to be effective. Ed Uravic, former Washington lobbyist and author of "Lying Cheating Scum." One popular president got caught telling a lie about a failed military action but his popularity remains intact. "President Dwight Eisenhower denied that the United States was flying U-2 spy planes over the Soviet Union, until the Soviets shot down one of the planes, capturing the pilot, and he was forced to admit the truth," Contosta says. Some presidents were so deceitful that they even lied to their friends. Franklin Roosevelt was such a president. Roosevelt led the nation out of the Great Depression and through World War II. But even his allies couldn't bank on honesty. Roosevelt told three different men that he wanted them to be his next vice president during the Democratic national convention in 1944. Then he picked a fourth man, Harry Truman, for the office, says David Barrett, a political science professor at Villanova University in Pennsylvania. "He did it with such skill that all three men were completely convinced that Roosevelt was behind him." The lost art of the quotable speech Why we need a president who lies Roosevelt's deceitfulness hasn't stopped historians from widely picking him as one of nation's three greatest presidents, along with Lincoln and Washington. Perhaps they and ordinary Americans forgive presidents who lie because there's something in human nature that believes a leader needs to be cunning.

Any ethical objection is personal and isn't relevant to policy decisions – risk of the net benefit trumps

Goodin 95 – professor of government at the University of Essex, and professor of philosophy and social and political theory at Australian National University (Robert E., "Utilitarianism as a Public Philosophy," Cambridge University Press, Print)BC

As, an Account of the peculiar role responsibilities of public officials (and, by extension, of ordinary individuals in their public capacities as citizens) that **vice becomes a virtue**, though. Those agents, too, have to come from somewhere, bringing with them a whole raft of baggage of personal attachments, commitments, principles and prejudices. In their public capacities, however, we think it only right and proper that they should stow that baggage as best they can. Complete neutrality might be an impossible ideal. That is another matter." But it seems indisputable that that is an ideal which people in their public capacities should strive to realize as best they are able. That is part (indeed, a central part) of what it is to be a public official ,it all. It is the essence of public service as such that public servants should serve the public at large. Public servants must not play favorites. Or consider, again, criticisms revolving around the theme that utilitarianism is a coldly calculating doctrine.23 In personal affairs that is an unattractive feature. There, we would like to suppose that certain sorts of actions proceed immediately from the heart, without much reflection much less any real calculation of consequences. Among intimates it would be extremely hurtful to think of every kind gesture as being contrived to produce some particular effect. The case of public officials is, once again, precisely the opposite. There, it is the **height of irresponsibility to proceed careless of the consequences**. Public officials are, above all else, obliged to take care: not to go off half cocked, not to let their hearts rule their heads. In Hare's telling example, the very worst thing that might be said of the Suez misadventure was not that the British and French did some perfectly awful things (which is true, too) but that they did so utterly unthinkingly.24 Related to the critique of utilitarianism as a calculating doctrine is the critique of utilitarianism as a consequentialist doctrine. According to utilitarianism, the effects of an action are everything. There are no actions which are, in and of themselves, morally right or wrong, good or bad. The only things that are good or bad are the effects that actions produce.25 That proposition runs counter to certain ethical intuitions which, at least in certain quarters, are rooted deeply. Those who harbor a Ten Commandments view of the nature of morality see a moral code as being essentially a list of "thou shalts" and "thou shall nots" a list of things that are right or wrong in and of themselves, quite regardless of any consequences that might come from doing them.2" That may or may not be a good way to run one's private affairs.1Even those who think it is, however, tend to concede that it is no way to run public affairs. It is in the nature of public officials' role responsibilities that they are **morally obliged** to "dirty their hands" - make hard choices, **do things that are wrong** (or would ordinarily be wrong, or would be wrong for ordinary private individuals) in the service of some **greater public good**.2 It would be simply irresponsible of public officials (in any broadly secular society, at least) to adhere mindlessly to moral precepts read off some sacred list, literally "whatever the consequences."3 Doing right though the heavens may fall is not (nowadays, anyway) a particularly attractive posture for public officials to adopt.

--a2 secrecy bad

Zero uniqueness – other issues thump and secrecy is inherent in democracy

Posner 13 (Eric Posner, Law Professor @ University of Chicago, "Secrecy and Freedom," New York Times, 6-9-2013, http://www.nytimes.com/roomfordebate/2013/06/09/is-the-nsa-surveillance-threat-real-or-imagined)

The question raises a real paradox. If government can keep secrets, then the public cannot hold it to account for its actions. But if government cannot keep secrets, then many programs — including highly desirable ones — are impossible. Many commentators seem to think that the answer is to keep secrecy to an absolute minimum, but this

response is far too easy. One reason it is too easy is that it implies that secrecy can be exceptional. Government secrecy in fact is ubiquitous in a range of uncontroversial settings. To do its job and protect the public, the government must promise secrecy to a vast range of people — taxpayers, inventors, whistle-blowers, informers, hospital patients, foreign diplomats, entrepreneurs, contractors, data suppliers and many others. But that means that the basis of government action, which relies on information from these people, must be kept secret from the public. Economic policy is thought to be open, but we saw during the financial crisis that government officials needed to deceive the public about the health of the financial system to prevent self-fulfilling runs on banks. Then there are countless programs that are not secret but that are too complicated and numerous for the public to pay attention to — from E.P.A. regulation to quantitative easing. N.S.A. surveillance blends into this incessant, largely invisible background buzz of government activity; there is nothing exceptional about it. And this puts even more pressure on the first prong of the paradox. If much (most?) of government activity remains invisible to the public, how can democratic accountability work? The answer, I think, is that political accountability in modern, large-scale democracies rarely takes place through informed public monitoring of specific government programs and policies. A few discrete issues (abortion, same-sex marriage) aside, and not counting political scandals, the public largely votes on the basis of its pocketbook and its feeling of security. The political consequences of war, terrorist attacks and economic distress — all of which are publicly observable — keep officeholders in line, but they retain vast discretion to choose among means. Because some government officials are ill-motivated and others are incompetent, government abuse is inevitable, but it is the price we pay for a government large and powerful enough to regulate 300 million people. Think of the N.S.A. program as the security equivalent of the Affordable Care Act (which will unavoidably involve government monitoring of people's medical care on the basis of bureaucratic procedures that no one understands): in both cases, we must prepare ourselves for the inevitable abuses that accompany a large, unwieldy, hard-to-monitor program, in order to obtain the (promised) benefits. Objections to the secrecy of the N.S.A. program are thus really objections to our political system itself, and, for all its flaws, there are no obviously superior alternatives.

No internal link – the counterplan's limited secrecy doesn't implicate democracy

Jaffer 13 (Jameer Jaffer, fellow, Open Society Foundations, "Secrecy and Freedom," New York Times, 6-9-2013, http://www.nytimes.com/roomfordebate/2013/06/09/is-the-nsa-surveillance-threat-real-or-imagined)

Your claim about the pervasiveness and banality of government secrecy elides the fact that there are many kinds of secrecy. Not all of them present the same threat to democracy. I don't think our democracy is made weaker by the government's withholding of information about the technical means it uses to effect surveillance. I don't think our democracy is made weaker by the government's withholding of information about the specific targets of its surveillance — so long as the surveillance is in fact limited to specific targets and so long as there is some mechanism that permits the public to evaluate the government's conduct after the investigation is complete.

No reason to believe their rejection of secrecy – AND bureaucracy is resilient to criticism anyway

Shafer 13 (Jack Shafer, Reuters, "Daniel Patrick Moynihan's 1998 lesson on the price of secrets," 12-27-2013, http://blogs.reuters.com/jackshafer/2013/12/27/daniel-patrick-moynihans-1998-lesson-on-the-price-of-secrets/)

Moynihan's critique of the century-long expansion of institutional secrecy didn't convince the bureaucracy that secrecy has failed to make the United States secure, or that it would continue to fail. The book, and Moynihan's investigation, attracted positive reviews and approving editorials in the Washington Post and the New York Times, plus feature coverage in the

Los Angeles Times, as Judge Robert A. Katzmann noted in his book Daniel Patrick Moynihan: The Intellectual in Public Life. But for all Moynihan's pungent anecdotes, his thesis that secrecy makes us less secure isn't very testable. Too much information remains classified for us to judge the effectiveness of secrecy; too little material has been declassified for any counterfactual histories built from them to be persuasive. His book plots no strategy for the repeal of the secrecy state, and he didn't rally civil libertarians, journalists, academics, and politicians to advance the reforms his commission proposed. He was like a doctor who diagnosed a malady, suggested a round of medication, and then moved on to the next patient. Secrecy barely changed the policy debate and did no lasting damage to the secrecy culture. The book hasn't been forgotten, just dismissed, with its most visible proponent in recent months being columnist George F. Will, who has referred to it twice. Any residual optimism Moynihan's book may have created expired on the morning of September 11, 2001. Since that catastrophe, the intelligence bureaucracy has acquired greater powers and bigger budgets to chase foreign and domestic enemies, and gained a whole new set of secrets and secrecy tools. As Moynihan repeatedly points out, war and the threat of domestic disorder, is the health of the secrecy state. "We make policy by crisis, and we particularly make secrecy policy by crisis," scholar Mary Graham told the New York Times in early 2003, predicting that the temporary emergency powers then being approved would last at least for 20 years, "just as we lived with the Cold War restrictions for years after it was over." To read Secrecy now is to despair. As long as threats exist against America and opportunistic legislators hold office, there appears no practical way to roll back the secrecy bureaucracy. In the summer of 2013, when emotions against the NSA intrusions were highest, a bill to limit the agency's powers to collect electronic information was voted down in the House of Representatives. Maybe I'm impatient, but if Snowden's revelations aren't enough to convince Congress to sand a corner off the secrecy establishment, I doubt if anything on his computer drives could.

--a2 leaks

No leaks – our 1NC Van Cleave evidence says empirics prove Congress, the Executive, and industry will all act to prevent leaks out of self-interest – PLUS counterplan applies enhanced security measures AND they're effective – multiple warrants:

First, deterrence – chilling effect is too strong – swamps any whistleblower incentives

Higham 14 (Scott Higham, Washington reporter for The Washington Post, "Intelligence security initiatives have chilling effect on federal whistleblowers, critics say," 7-23-2014, https://www.washingtonpost.com/world/national-security/intelligence-security-initiatives-have-chilling-effect-on-federal-whistleblowers-critics-say/2014/07/23/c9dfd794-0ea0-11e4-8341-b8072b1e7348_story.html)JB

The Insider Threat Program and a continuous monitoring initiative under consideration in the intelligence community were begun by the Obama administration after the leaks of classified information by former NSA contractor Edward Snowden and Army Pvt. Chelsea Manning, and the Navy Yard shootings by Aaron Alexis, who used his security clearance to gain access to the base. The programs are designed to prevent leaks of classified information by monitoring government computers and employees' behavior. Grassley said the episode with the FBI illustrates how federal agencies are setting up internal security programs without giving careful consideration to whether they could **dissuade whistleblowers** from coming forward. "The **I**nsider **T**hreat **P**rogram has the potential for **taking the legs out from underneath all** of the whistleblower protections we have," Grassley said in a recent interview. Greg Klein, the head of the FBI's Insider Threat Program, and McDonough, the congressional affairs agent, did not return calls seeking comment. An FBI spokesman said the bureau does not plan to register whistleblowers. He said there was a misunderstanding about the nature of the briefing with staff members for Grassley, Judiciary Committee Chairman Patrick J. Leahy (D-Vt.) and a law enforcement official who is assigned to the Senate panel. The spokesman noted that the FBI has a whistleblower training program for employees and a whistleblower protection office. "We recognize the importance of protecting the rights of whistleblowers," FBI spokesman Paul Bresson said. Grassley is part of a growing chorus of lawmakers on Capitol Hill and attorneys for whistleblowers who warn that the **I**nsider **T**hreat **P**rogram and the potential intelligence community initiative threaten to undermine federal workers' ability to report wrongdoing without retaliation. Together, the programs cover millions of federal workers and contractors **at every government agency**. In February, Director of National Intelligence James R. Clapper Jr. testified before the Senate Armed Services Committee that a system was being considered to continuously monitor the behavior of employees with security clearances "on the job

as well as off the job." A senior intelligence official said a continuous monitoring program, mandated under the Intelligence Authorization Act and signed into law by President Obama on July 7, is being set up and initially will include federal employees who hold top-secret security clearances. The official said there are no plans to monitor employees after hours while they are using non-government computer systems. "I think **it's time to put up the caution light here,"** said Sen. Ron Wyden (D-Ore.), a member of the Senate Intelligence Committee. While Wyden included a provision in the most recent Intelligence Authorization Act that would prohibit retaliation against whistleblowers, he said he remains concerned about the impact of the threat programs. "This really has the potential for abuse, and I think it **could have a chilling effect on the public's right to know and effective oversight of our government**," Wyden said. Dan Meyer, the head of the Intelligence Community Whistleblowing & Source Protection program, created last year as part of the Office of Intelligence Community Inspector General, said he is working to ensure that employees who want to report wrongdoing can do so anonymously and without reprisal. "The critical thing is to maintain confidentiality," Meyer said. He said he is preparing training materials for intelligence officers and spreading the word that employees can come to him anonymously through third parties. If an employee has verifiable information about wrongdoing, a presidential directive takes effect, providing employees with protection against retaliation. "We are in the process of making a systematic, cultural change and getting everyone on board," Meyer said. After Manning's disclosures to WikiLeaks four years ago, Obama signedExecutive Order 13587, directing government agencies to assess how they handle classified information. On Nov. 28, 2010, the Office of the National Counterintelligence Executive issued a memo to senior government agency officials, advising them to identify insider threats. The memo suggested using psychiatrists and sociologists to assess changes in employees' behavior. "What metrics do you use to measure 'trustworthiness' without alienating employees?" the counterintelligence office asked the agency chiefs. "Do you use a psychiatrist or sociologist to measure: relative happiness as a means to gauge trustworthiness? Despondence and grumpiness as a means to gauge waning trustworthiness?" "It will only increase hostility between the government and really serious federal employees who are trying to improve the system," said Lynne Bernabei, a partner at Bernabei & Wachtel in Washington who has been representing whistleblowers for nearly 30 years. "Turning the security apparatus against its own people is not going to work." Whistleblower lawyers said they understand the need to protect classified information but think some of the new programs go too far. "There are legitimate reasons for employers to be on the lookout for people who might be leaking classified information, but **this will obviously have a chilling effect on employees who might want to blow the whistle**," said Jason Zuckerman, who served as the senior legal adviser to the U.S. Office of Special Counsel, the federal agency charged with protecting whistleblowers, and now represents whistleblowers nationwide. Michael German, a former undercover FBI agent and whistleblower, called the Insider Threat Program a "dangerous" initiative.

Second, interception – constant monitoring using humans and machines means nothing gets out

MacKenzie 14 (Drew MacKenzie, Newsmax, "Report: US May Take Years to Prevent Another Snowden," 8-18-2014, http://www.newsmax.com/Newsfront/security-Edward-Snowden-NSA-surveillance/2014/08/18/id/589383/)

A pilot program called "**Continuous Evaluation**" has been created to **keep tabs** of social media and message board postings by people who have access to classified documents. The aim is to **curb insider threats**, such as the Snowden **leaks**, the embarrassing WikiLeaks cables disclosure, and the deadly shooting at a Navy Yard by contractor Aaron Alexis, the Beast said. The intelligence community has taken measures to prevent more Snowden-type cases, including an order that **two staffers must be present** when sensitive files are accessed in some agencies, and to encourage employees to **report suspicious activity** by their colleagues. Special: The National Counterintelligence Executive has also drawn up new guidelines for its **Insider Threat Policy**. As part of the changes, the Office of the Director of National Intelligence next year plans to start checking the names of 1.5 million employees with top-secret clearances against public and government databases, such as those that show recent arrests, credit scores, and cash transactions of $10,000 or more, according to the Beast. The agency will eventually **monitor the online activity** of **all 5 million people** cleared to see secret U.S. government documents. "To a large extent, it's not only smart, it's long overdue," said Steven Aftergood, who directs the Federation of American Scientists' Project on Government Secrecy. "The way the existing process works, they look at you every 5 to 10 years ... and then they forget about you until the next review is due years later." But Aftergood noted there could be some backlash over government officials monitoring online activity outside work, saying, "It needs to be demonstrated in practice that the triggers won't lead to ... a paranoid workplace. They can't push it too far or it will backfire." Republican Sen. Chuck Grassley of Iowa and Democratic Sen. Ron Wyden of Oregon have pointed out the monitoring could result in a negative effect on the confidentiality of whistleblowers to Congress or inspectors general. In a letter to Director of National Intelligence James Clapper in June, they wrote, "If **whistleblower communications** with Inspectors General or with Congress **are routinely monitored** and conveyed to agency leadership, it would **defeat the ability to make protected disclosures confidentially**."

Third, automation – replacing sys-admins with computers means there's no people to leak

RT '13--- Russian news source with outlets all over the globe. (RT, "NSA head: Replace would-be Snowdens with computers to stop future leaks", RT. 7/9/13. http://www.rt.com/usa/nsa-snowden-former-job-future-257/)//ET

The director of the NSA announced that the secretive intelligence agency plans to prevent future security breaches by replacing the position once held by whistleblower and former NSA contractor Edward Snowden with computers. The National Security Agency plans to drastically cut back on the number of people employed as systems administrators, Gen. Keith Alexander said during a cyber security conference in New York City on Thursday. Snowden, a former employee of government-contracted consulting firm Booz Allen Hamilton, worked for the NSA for more than a year before his role changed to systems administrator. It was while holding this position that he leaked classified details about previously undisclosed surveillance programs to the media. "What we're in the process of doing – not fast enough – is **reducing our systems administrators by about 90 per cent,**" Alexander said. The NSA currently employs approximately 1,000 systems administrators. "We've put people in the loop of transferring data, securing networks and doing things that machines are probably better at doing," he said, going on to describe how technology will make NSA secrets "**more defensible and more secure."** While Snowden has been referred to as a systems administrator, he told the Guardian that his job was actually to work as an "infrastructure analyst," spending his days searching for new methods to infiltrate internet and telephone networks. Alexander also defended the NSA's conduct, claiming the agency's actions have been "grossly mischaracterized" by the media. "No one has willfully or knowingly disobeyed the law or tried to invade your civil liberties or privacies. There were no mistakes like that at all," he said. The NSA director said the plan to nearly eliminate the systems administrator position was in place before Snowden made his disclosures but that the leak and ensuing media firestorm has advanced the process. "We trust people with data. At the end of the day it's about people and trust," Alexander said. "And people who have access to data as part of their missions, if they misuse that trust they can cause huge damage." After fleeing to Hong Kong, Snowden told the South China Morning Post that he was happy to take a pay cut from $200,000 to $122,000 when he took the Booz Allen Hamilton position, due to the opportunity it afforded him. "My position with Booz Allen Hamilton granted me access to lists of machines all over the world the NSA hacked," he said in June. "That's why I accepted that position about three months ago." Alexander told the Senate Intelligence Committee in June that the NSA was implementing a "two-person" system to **halt any future leaks of classified information**. The so-called two-person rule is similar to what the Army instituted after Bradley Manning leaked more than 700,000 diplomatic cables, battlefield reports, and helicopter video footage in 2010. The rule requires anyone copying classified data onto a portable device from a secure network to do so with a second person, thereby **ensuring against the possibility of a single whistleblower**. "I think what he's doing is reasonable. There are all kinds of things in life that have two-man rules," former chief intelligence officer for the director of national intelligence, Dale Meyerrose, told The New York Times. "We've had a two-man rule ever since we had nuclear weapons. And when somebody repairs an airplane, an engineer has to check it."

AND, even if there are leaks, there's no impact:

First, slow-drip context conditions an apathetic response

Dykes 15 (Melissa Dykes, writer, researcher, and analyst for The Daily Sheeple, co-creator of Truthstream Media, "Another Snowden Leak, but Be Honest America, Do You Even Care Anymore???" The Daily Sheeple, 6-5-2015, http://www.thedailysheeple.com/another-snowden-leak-but-be-honest-america-do-you-even-care-anymore_062015)

More government overreach, more trampling on the Constitution, more walking all over our freedoms without a warrant, more 1984 in your face… The government surveillance apparatus has been turned against the people. The entire system is more about us than some nebulous foreign boogeymen which were used to justify its creation in the first place. But let's be honest with ourselves for a moment. I put Snowden's name in the title of this article, so it's frankly surprising anyone is even reading it. Why is that, do you think? Because Snowden's **slow-drip leaks** are expertly timed to do exactly what they were always designed to as the psyop against the American people that they are:

get you **slowly accustomed** to the government overreach piecemeal while providing a steam valve for your anger against a tyrannical system that is here to stay. We are being socially engineered, here. Slowly **conditioned to accept** our own big brother enslavement. In that way, Snowden is doing his job. Jon Rappoport explained this perfectly (his emphasis, followed by mine): It's all about keeping the NSA story alive, in order that people know they're being spied on 24/7. That's the social engineering aspect. That's the game. And in that regard, the slow-drip method of releasing Snowden files is quite useful. It appears to be a smart journalistic strategy, to "keep the issue before the public so that a true debate about government secrecy and spying can take place." But **the debate isn't effective**. The **NSA isn't being curbed**. If one of its channels of snooping is cut back, another one will emerge. No, the actual op is: keep reminding people they're being spied on; that will make them more cautious; that will make make them conform in action, speech, and thought. Meanwhile, they're continuing to drag this out longer than the credits for a Pirates of the Caribbean movie, the bottom line is **nothing. Ever. Changes**. By design. You have to admit… if Snowden's leaks are so detrimental to the public debate on government spying, why not release it all at once? It has been over two years now. Can this really all be chalked up to sensationalism and journalistic strategy this many years on when the very thing we're still "debating" is our rights and freedoms against government snooping? Against the death of our Fourth Amendment? Remember how outraged people were in the beginning, the summer of 2013, when the first leaks came out? And has much changed in that time? Yes, but not in the way of our freedom… Look at how **desensitized** the country is to it now, two years later. Now when a Snowden **leak comes out**, they don't even bother to put the word "shocking" in the article title… Now you can put Snowden's name in an article title and rest assured people will see it, yawn, stretch, maybe scan the info, but **ultimately and quietly accept this is just how things are now**. Again… by design.

Second, people will believe the lie, NOT the leak – overwhelming empirics

Lewandowsky 12 (Stephan Lewandowsky, Ullrich K.H. Ecker, Collen M. Seifert, Norbert Schwarz, and Jock Cook of the University of Western Australia, University of Michigan, and University of Queensland APS Association for Psychological Science, Psychological Science in the Public Interest "Misinformation and Its Correction: Continued Influence and Successful Debiasing" 2012, Page 109)

https://dornsife.usc.edu/assets/sites/780/docs/12_pspi_lewandowsky_et_al_misinformation.pdf

In the lead-up to the U.S.-led invasion of Iraq in 2003, U.S. government officials proclaimed there was no doubt that Saddam Hussein had weapons of mass destruction (WMDs) and was ready to use them against his enemies. The Bush administration also juxtaposed Iraq and the 9/11 terrorist attacks, identifying Iraq as the frontline in the "War on Terror" (Reese & Lewis, 2009) and implying that it had intelligence linking Iraq to al-Qaida. Although no WMDs were ever found in Iraq and its link to al-Qaida turned out to be unsubstantiated, large segments of the U.S. public continued to believe the administration's earlier claims, with some 20% to 30% of Americans believing that WMDs had actually been discovered in Iraq years after the invasion (Kull, Ramsay, & Lewis, 2003; Kull et al., 2006) and around half of the public endorsing links between Iraq and al-Qaida (Kull et al., 2006). These mistaken beliefs persisted even though all tentative media reports about possible WMD sightings during the invasion were followed by published corrections, and even though the nonexistence of WMDs in Iraq and the absence of links between Iraq and alQaida was eventually widely reported and became the official bipartisan U.S. position through the Duelfer report. Politicians were also a primary source of misinformation during the U.S. health care debate in 2009. Misinformation about the Obama health plan peaked when Sarah Palin posted a comment about "death panels" on her Facebook page. Within 5 weeks, 86% of Americans had heard the death-panel claim. Of those who heard the myth, fully half either believed it or were not sure of its veracity. Time magazine reported that the single phrase "death panels" nearly derailed Obama's health care plan (Nyhan, 2010). Although Sarah Palin's turn of phrase may have been spontaneous and its consequences unplanned, analyses have revealed seemingly systematic efforts to misinform the public—for example, about climate change

(McCright & Dunlap, 2010). During the administration of President George W. Bush, political appointees demonstrably interfered with scientific assessments of climate change (e.g., Mooney, 2007), and NASA's inspector general found in 2008 that in previous years, the agency's "Office of Public Affairs managed the topic of climate change in a manner that reduced, marginalized, or mischaracterized climate change science made available to the general public" (Winters, 2008, p. 1). The public seems to have some awareness of the presence of politically motivated misinformation in society, especially during election campaigns (Ramsay, Kull, Lewis, & Subias, 2010). However, when asked to identify specific instances of such misinformation, people are often unable to differentiate between information that is false and other information that is correct (Ramsay et al., 2010). Thus, public awareness of the problem is no barrier to widespread and lasting confusion.

New NSA counter leaks programs implemented in 2013—two person rule

Andy **Greenberg** 20**13---** Writer for Forbes the author of the book This Machine Kills Secrets, a chronicle of the history and future of information leaks, from the Pentagon Papers to WikiLeaks and beyond. M.A in Journalism and Business from New York University. **(**Greenberg, "NSA Implementing 'Two-Person' Rule To Stop The Next Edward Snowden". Forbes. 6/18/13. http://www.forbes.com/sites/andygreenberg/2013/06/18/nsa-director-says-agency-implementing-two-person-rule-to-stop-the-next-edward-snowden/)//ET

On Tuesday, National Security Agency Director Keith Alexander told a congressional hearing of the Intelligence Committee that the agency is implementing a "**two-person" system** to prevent future leaks of classified information like the one pulled off by 29-year-old Booz Allen contractor Edward Snowden, who exfiltrated "thousands" of files according to the Guardian, to whom he has given several of the secret documents. "We have to learn from these mistakes when they occur," Representative Charlies Ruppersberger said to Alexander in the hearing. "What system are you or the director of national intelligence administration putting into place to make sure that if another person were to turn against his or her country we would have an alarm system that would not put us in this position?" "Working with the director of national intelligence what we're doing is working to come up with a two-person rule and oversight for those and ensure we have a way of blocking people from taking information out of our system." That "two-person rule," it would seem, will be something similar to the one implemented in some cases by the military after Army private Bradley Manning was able to write hundreds of thousands of secret files to CDs and leak them to WikiLeaks. The rule required that anyone copying data from a secure network onto portable storage media does so with a second person who ensures he or she isn't also collecting unauthorized data. It may come as a surprise that the NSA doesn't already have that rule in place, especially for young outside contractor employees like Snowden. But Alexander emphasized that Snowden was one of close to a thousand systems administrator–mostly outside contractors–who may have had the ability to set privileges and audit conditions on networks."This is a very difficult question when that person is a systems administrator," Alexander responded. "When one of those persons misuses their authority it's a huge problem." Alexander added that the system is still a work in progress, and that the NSA is working with the FBI to collect more facts from the Snowden case and to implement new security measures in other parts of the U.S. intelligence community. When asked how Snowden had gained such broad access to the NSA's networks despite only working for Booz Allen for three months, Alexander said that he had in fact held a position at the NSA for the twelve months prior to taking that private contractor job.

NSA "two-person" system will prevent future leaks

Greenberg 13 (Andy Greenberg, Technology, Privacy and Information security reporter, Author of This Machine Kills Secrets, Forbes "NSA Implementing 'Two-Person' Rule to Stop the Next Edward Snowden, 6/18/13, http://www.forbes.com/sites/andygreenberg/2013/06/18/nsa-director-says-agency-implementing-two-person-rule-to-stop-the-next-edward-snowden/)

The next Edward Snowden may need a partner on the inside. On Tuesday, National Security Agency Director Keith Alexander told a congressional hearing of the Intelligence Committee that the agency is implementing a "two-person" system to prevent future leaks of classified information like the one pulled off by 29-year-old Booz Allen contractor Edward Snowden, who exfiltrated "thousands" of files according to the Guardian, to whom he has given several of the secret documents. "We have to learn from these mistakes when they occur," Representative Charlies Ruppersberger said to Alexander in the hearing. "What system are you or the director of national intelligence administration putting into place to make sure that if another person were to turn against his or her country we would have an alarm system that would not put us in this position?" "Working with the director of national intelligence what we're doing is working to come up with a two-person rule and oversight for those and ensure we have a way of blocking people from taking information out of our system." That "two-person rule," it would seem, will be something similar to the one implemented in some cases by the military after Army private Bradley Manning was able to write hundreds of thousands of secret files to CDs and leak them to WikiLeaks. The rule required that anyone copying data from a secure network onto portable storage media does so with a second person who ensures he or she isn't also collecting unauthorized data. It may come as a surprise that the NSA doesn't already have that rule in place, especially for young outside contractor employees like Snowden. But Alexander emphasized that Snowden was one of close to a thousand systems administrator–mostly outside contractors–who may have had the ability to set privileges and audit conditions on networks."This is a very difficult question when that person is a systems administrator," Alexander responded. "When one of those persons misuses their authority it's a huge problem." Alexander added that the system is still a work in progress, and that the NSA is working with the FBI to collect more facts from the Snowden case and to implement new security measures in other parts of the U.S. intelligence community. When asked how Snowden had gained such broad access to the NSA's networks despite only working for Booz Allen for three months, Alexander said that he had in fact held a position at the NSA for the twelve months prior to taking that private contractor job. The questions about the NSA's lack of leak protections came in the midst of a conversation that largely focused on the NSA's justification for the broad surveillance those leaks revealed. In the hearing, Alexander claimed that more than 50 attacks have been foiled with some help from the NSA's surveillance programs such the collection of millions of Americans' cell phone records and the collection of foreigners' Google-, Facebook-, Microsoft- and Apple-held data known as "PRISM," both disclosed in Snowden's documents. One newly-revealed bombing plot targeted the New York Stock Exchange, and another involved an American donating money to a Somalian terrorist group. Of those more than 50 total cases, ten of those plots involved domestic collection of phone records, according to Alexander. But when Representative Jim Himes questioned in how many cases that collection was "essential," his question went unanswered. Alexander also fended off criticisms that the Foreign Intelligence Surveillance Act court system, which oversees the NSA's requests to use data it's collected–often from Americans–is a "rubber stamp process" that approves nearly all of the NSA's actions. That court reported in April that it had received 1,789 applications for electronic surveillance in an annual report to Congress. One request was withdrawn, and forty were approved with some changes. The other 1,748 others were approved without changes. "I believe the federal judges on that court are superb," Alexander told Congress. "There is, from my perspective, no rubber stamp." But a significant portion of the hearing also focused on the NSA's security vulnerabilities highlighted by Snowden's leaks, rather than its surveillance. Representative Michelle Bachmann emphasized that the NSA should answer "how a traitor could do something like this to the American people," and how to "prevent this from ever happening again." She asked Alexander how damaging the leaks were to the NSA's mission, and he responded that they were "significant and irreversible." Snowden has taken refuge in Hong Kong, where he conducted a live Q&A on the*Guardian's* website Monday. In that conversation, he wrote that "the consent of governed is not consent if it is not informed," and that "truth is coming, and it cannot be stopped."

--xt no leaks – data tagging

Security measures were fast tracked--- new system for tagging data

Lori **Grisham '14---**Grisham is a multimedia journalist with USA TODAY Network's Nation Now team. (Grisham, "4 things that changed since Snowden leaks". USA Today. 6/5/14.

http://www.usatoday.com/story/news/nation-now/2014/06/05/changes-since-snowden-leaks/9978561/)//ET

One year ago, former National Security Agency contractor Edward Snowden turned the world on its head after classified documents he provided to media organizations revealed a widespread surveillance program. USA TODAY Network looks at four notable changes that have come about in the year since Snowden's bombshells. An encrypted future Google released code Tuesday for a new "end-to-end" encryption tool for its users. Demand has been high for e-mail that's coded to allow only authorized parties to read it from popular providers like Google and Microsoft, and increased after Snowden spoke at SXSW in March. End-to-end encryption means that each e-mail is encrypted from the time it leaves the owner's Web browser until the receiver gets the e-mail and decodes it. An e-mail sent with this technology cannot be intercepted in transit or gathered from an Internet provider with a court order. A third party would have to hack into the individual's computer to access the communication. End-to-end encrypted e-mail has existed for some time, but only from lesser-known companies. At SXSW, Snowden said end-to-end encryption should be available to every user and considered a "basic protection," not something that's just understood and used by the tech-savvy. It's not only software that's being developed. Silent Circle, a company that specializes in encrypted communications, received a $30 million investment in May to develop an encrypted smartphone called "Blackphone." Changing the debate Love him or hate him, there is no doubt that Snowden's leaks changed the public debate. The ongoing discussion over privacy, how far the government should be able to go in the name of security and how changing technology factors into all this is, in large part, a direct result of the firestorm set off by Snowden. And it's a debate that's likely not going away anytime soon, as the 2014 midterm elections heat up and, soon after, the 2016 presidential campaign begins to take shape. What's more, this issue does not always fall along clear partisan lines. For example, Vermont Sen. Bernie Sanders, an independent and self-described Democratic Socialist, and Kentucky Sen. Rand Paul, a Tea Party-aligned Republican, have both argued for some form of leniency in sentencing for Snowden. Strained relations One of the most damaging revelations to the Obama administration that emerged from the Snowden leaks was news that the NSA had spied on world leaders, including many close American allies, such as German Chancellor Angela Merkel. Reports surfaced that the United States had sought to monitor Merkel's phone calls as far back as 2002. It was reported that President Obama had been unaware that the program of surveillance against world leaders included allies. The disclosure by Snowden caused an uproar in many allied nations and prompted the White House to take steps to limit eavesdropping on allied leaders. Renewed focus on NSA's internal security The NSA increased its own internal security to prevent future leaks. The organization has implemented a **new system of "tagging" data** to ensure only authorized personnel are able to access it, NPR reported in an interview with Lonny Anderson, the NSA's chief information officer, in September 2013. The changes had been in the works for a long time, according to Anderson, but were **put into action quickly** following the leaks.

--xt no leaks – automation

NSA plans to replace 90% of its workforce with computers to avoid leaks

Hollister 13 (Sean Hollister, staff writer for The Verge, The Verge "How the NSA plans to avoid future leaks: replace employees with machines" 8/8/13, http://www.theverge.com/2013/8/8/4604048/nsa-chief-wants-to-replace-employees-with-machines)

NSA director Gen. Keith Alexander might have had a difficult time recruiting hackers at the Def Con and Black Hat security conferences, but he might not need to recruit again anytime soon. Speaking at a cybersecurity conference in New York City — where he sat down with the heads of the FBI and CIA — he told an audience that he'd like to replace the vast majority of his employees and contractors with machines. No joke. "What we're in the process of doing - not fast enough - is reducing our system administrators by about 90 percent," he said, according to a Reuters report. "What we've done is put people in the loop of transferring data, securing networks and doing things that machines are probably better at doing," he added. *The Huffington Post,* also in attendance, reports that Alexander said he could replace employees with a "thin virtual cloud structure." Alexander previously testified that the NSA has 1,000 system administrators. "WHAT WE'VE DONE IS PUT PEOPLE IN THE LOOP" While the publication said that Alexander didn't mention whistleblower Edward Snowden by name — one such NSA system administrator,

and the man who revealed the extent of the US government's surveillance efforts — it seems likely the comments were directed at keeping future would-be whistleblowers from walking away with sensitive data, which certainly makes sense. "We trust people with data. At the end of the day it's all about trust. And people who have access to data as part of their missions, if they misuse that trust they can cause huge damage," Alexander reportedly said. But as society continues to discuss in the context of weaponized drones and self-driving cars, should we trust machines instead?

--xt no impact

Over a short amount of time we believe fictional components of TV programs such as broadcasts- means the vast majority of the population would believe NSA has truly reformed

Jacobs 2011 (Tom Jacobs, writer for Alternet and previous Journalist for Los Angales Daily News, Santa Barbara News-Press, LA Times, Chicago Tribune, and Ventura Country Star, Alternet "How Television Can Make You Believe Things That Aren't True" 10/12/11 http://www.alternet.org/story/152710/how_television_can_make_you_believe_things_that_aren't_true)

Newly published research suggests nuggets of misinformation embedded in a fictional television program can seep into our brains and lodge there as perceived facts. What's more, this troubling dynamic seems to occur even when our initial response is skepticism. That's the conclusion of a study published in the journal *Human Communication Research.* It asserts that, immediately after watching a show containing a questionable piece of information, we're aware of where the assertion came from, and take it with an appropriate grain of salt. But this all-important skepticism diminishes over time, as our memory of where we heard the fact or falsehood in question dims.

A research team led by the University of Utah's Jakob Jensen conducted an experiment in which 147 students watched a specific episode of the David E. Kelley drama *Boston Legal.* Immediately afterward, they completed a survey in which they revealed how strongly they related to the characters, how closely they felt the show reflected reality, and the degree to which they felt transported into the narrative of the show. Half also completed a separate set of questions, including their opinion on the effectiveness of EpiPens — devices that deliver a measured dose of ephinephrine to counter the effects of a severe allergic reaction. In the episode, use of the device failed to stop such a reaction, resulting in a child's sudden death — a highly unlikely scenario that outraged an advocacy group. The study participants were emailed a follow-up survey two weeks after watching the show. Those who did not receive the second set of questions, including the one on the effectiveness of EpiPens, filled it out at that time. The results: "Individuals queried two weeks after exposure to the television program were more likely to endorse the false belief than those queried immediately after exposure." These findings are consistent with those of a 2007 study, which similarly found the persuasive effects of fictional narratives increase over time. In that case the misinformation was embedded in a written story. "Two studies have now shown that fiction (written and televised) can produce a delayed message effect," Jensen and his colleagues write. This is troubling, they add, noting, "People are bombarded by mass media every day all over the world, and a sizeable (and growing) body of mass communication research has demonstrated that much of this content is distorted in a multitude of ways." Indeed, ABC — the same network that ran *Boston Legal* — was widely criticized in 2008 when an episode of another legal drama, *Eli Stone*,suggested a link between autism and a vaccine. While this link has been definitively debunked, this research points to one reason it and other falsehoods continue to circulate. The "sleeper effect" — the notion we can hold onto a piece of information while gradually forgetting it came from an unreliable source — was first proposed in the late 1940s, and a meta-analysis in 2004 confirmed its validity. Importantly, Jenkins notes that in both his study (featuring misinformation conveyed in a fictional television program) and the 2007 paper (where a falsehood was presented as part of a written work of fiction), the size of this effect was greater than that found in the 2004 meta-analysis. This suggests to him that delayed-message effects "may be larger and meaningfully different" in cases where the misinformation is presented in fictional form. In other words, we may be particularly susceptible to believing falsehoods originally conveyed to us through fiction, perhaps because the context — the TV episode or short story in question — is more likely to fall from our minds.

We believe what we hear on TV or read - it's easier than questioning it

Davis 12 (Adam Davis, LifeHacker "Why You Believe Most Everything You Read of Watch on TV" 10/22/12, http://lifehacker.com/5953837/why-you-believe-most-everything-you-read-or-watch-on-tv)

The saying goes "don't believe everything you read" (or read on the internet or watch on TV) because we often do and we generally shouldn't. How are we so easily duped when we supposedly know better? Psychologist Dr. Douglas LaBier points to a study that posits our brains are just that lazy: So, what happens within our minds and emotions that make us receptive to lies, and then resistant to information that exposes the truth? A study led by Stephan Lewandowsky of the University of Western Australia explains part of what may happen. The researchers found that "Weighing the plausibility and the source of a message is cognitively more difficult than simply accepting that the message is true — it requires additional motivational and cognitive resources." Basically, when presented with the option of fact-checking every statement made by a politician or newscaster, our brains just make a snap decision because it's easier. If the argument seems convincing, our brains like to believe it. Of course, we have our biases, and that plays into the problem as well. We like to be right and hear things that affirm our existing beliefs—another fun problem known as confirmation bias. David McRaney, author of the book and blog You Are Not So Smart, explains: You know those moments when you get an idea, or make a decision, and everything you see seems to… Confirmation bias is seeing the world through a filter, thinking selectively. The real trouble begins when confirmation bias distorts your active pursuit of facts. Punditry is a whole industry built on confirmation bias. Rush Limbaugh and Keith Olbermann, Glenn Beck and Arianna Huffington, Rachel Maddow and Ann Coulter – these people provide fuel for beliefs, they pre-filter the world to match existing world-views. If their filter is like your filter, you love them. If it isn't, you hate them. So how do you make your brain actually care about taking the truth? That's not good news, either, as it involves making you brain work—something it clearly hates to do. The easiest method, however, is to consider a person's perspective in addition to their opinion or advice. This way you can at least consider a bias. Additionally, it helps to hear multiple sides of the argument so you have many perspectives. Of course, if you want to fact-check any controversial statements, we've got a guide to help you out. None of these options are easy, but if you want the truth you have to force your brain to work a little harder.

--xt doesn't turn perception

Foreign customers only started to become weary of the US tech industry only after the Snowden leaks- Proves NSA secrecy was the better option

Smith 14 (Gerry Smith, staff writer for Huffington Post, Huffington post "'Snowden effect' Threatens U.S. Tech industry's Global ambitions" 01/24/15 http://www.huffingtonpost.com/2014/01/24/edward-snowden-tech-industry_n_4596162.html)

Election officials in India canceled a deal with Google to improve voter registration. In China, sales of Cisco routers dropped 10 percent in a recent quarter. European regulators threatened to block AT&T's purchase of the wireless provider Vodafone. The technology industry is being roiled by the so-called Snowden Effect, as disclosures by former National Security Agency contractor Edward Snowden about the extent of American spying worldwide prompt companies to avoid doing business with U.S. firms. The recent setbacks for Google, Cisco and AT&T overseas have been attributed, in part, to the international outcry over the companies' role in the NSA scandal. Fred Cate, a law professor at Indiana University, said criticism over Silicon Valley's involvement in the government surveillance program was initially limited to European politicians "taking advantage of this moment to beat up

on the U.S." "But the reports from the industry are showing that it is more than that," he added. "This is more than just a flash in the pan. This is really starting to hurt." The impact of the Snowden leaks could threaten the future architecture of the modern Internet. In recent years, computing power has shifted from individual PCs to the so-called cloud -- massive servers that allow people to access their files from anywhere. The Snowden revelations undermined trust in U.S.-based cloud services by revealing how some of the largest American tech companies using cloud computing -- including Google and Yahoo -- had their data accessed by the NSA. About 10 percent of non-U.S. companies have canceled contracts with American cloud providers since the NSA spying program was disclosed, according to a survey by the Cloud Security Alliance, an industry group. U.S. cloud providers could lose as much as $35 billion over the next three years as fears over U.S. government surveillance prompt foreign customers to transfer their data to cloud companies in other countries, according to a study by the Information Technology and Innovation Foundation, a nonpartisan think tank based in Washington, D.C. "If European cloud customers cannot trust the United States government, then maybe they won't trust U.S. cloud providers either," Neelie Kroes, European commissioner for digital affairs, said last summer after the NSA revelations were made public. "If I am right, there are multibillion-euro consequences for American companies. If I were an American cloud provider, I would be quite frustrated with my government right now." European officials and companies have been especially troubled by the Snowden leaks because European privacy laws are more stringent than those in the United States. After documents from Snowden revealed that the NSA had tapped German Chancellor Angela Merkel's phone calls, she said Europeans should promote domestic Internet companies over American ones in order to avoid U.S. surveillance. German Interior Minister Hans-Peter Friedrich has suggested that people who are worried about government spying should stop using Google and Facebook altogether. "Whoever fears their communication is being intercepted in any way should use services that don't go through American servers," Friedrich said after Snowden leaked the NSA documents.

Chris Lamoureux, the executive vice president of the company Veriday, told The WorldPost that some of his customers have requested that the company avoid storing their information in U.S.-based data centers, hoping to make it more difficult for the NSA to gain access. "They've said, 'We don't want you to put our data in the U.S. because we're worried about what we're seeing and hearing over there right now,'" said Lamoureux, whose Ottawa-based company develops web applications for banks, governments and retailers. Some argue that President Barack Obama has added to the tech industry's troubles abroad by emphasizing how the NSA surveillance program focused on people outside the United States, where most of Silicon Valley's customers are located. "Those customers, as well as foreign regulatory agencies like those in the European Union, were being led to believe that using US-based services meant giving their data directly to the NSA," journalist Steven Levy wrote in a recent article in Wired magazine. Hoping to reassure overseas customers, major tech companies (including AOL, which owns The Huffington Post Media Group) have asked the Obama administration for permission to be more open about how they responded to past requests for data from the U.S. government. They argue the government snooped on their networks without their knowledge. Recent reports based on documents provided by Snowden revealed that the NSA spied on Google and Yahoo customers, unbeknownst to the companies, by secretly tapping cables that connect data centers around the world. "The impression is that the tech industry is in league with the U.S. government," Cate said. "But the industry would like to give the impression that they're victims of the U.S. government, too." On Wednesday, Microsoft said it would offer customers who are wary about NSA surveillance the ability to store their data outside the United States. Meanwhile, some foreign tech companies are trying to capitalize on the distrust between U.S. tech firms and their customers around the world. Swisscom, a cloud provider in Switzerland, is developing a service that would attract customers looking to store data under the country's strict privacy laws and away "from the prying eyes of foreign intelligence services," Reuters reported. Germany's three largest email providers have also created a new service, called "Email Made in Germany," designed to thwart the NSA by encrypting messages through servers located within the country, The Wall Street Journal reported. But Cate said that any businesses that try to avoid surveillance by boycotting U.S. tech companies are not really protecting their data from the NSA. After all, intelligence agencies in France and Spain also spied on their own citizens, and passed on that information to the NSA, according to documents from Snowden. "It doesn't make a difference what you do with your data -- the NSA is going break into it," Cate said. "But that doesn't mean U.S. industry isn't going to get hurt along the way."

2nc nb – terror / intel

Public knowledge about NSA's activities hurts counter-terror measures- Snowden proves

Cooper 15 (Aaron Cooper, Producer at Turner and at CNN, CNN politics "NSA: Snowden leaks hurt ability to track terrorists" 2/23/25, http://www.cnn.com/2015/02/23/politics/nsa-surveillance-north-korea/)

The head of the National Security Agency expressed deep concerns about terrorists' ability to avoid NSA surveillance, explaining that Edward Snowden's revelations of surveillance techniques and capabilities have had a "material impact" on NSA ability to prevent and detect terror plots. "I would say that it has had a material impact in our ability to generate insights as to what counterterrorism, what terrorist groups around the world are doing," Adm. Michael Rogers told a group gathered in Washington for a cybersecurity summit hosted by the New America think tank. "Do you have new blind spots that you didn't have prior to the revelation," moderator and CNN National Security correspondent Jim Sciutto asked. "Have I lost capability that we had prior to the revelations? Yes," Rogers responded. "Anyone who thinks this has not had an impact I would say doesn't know what they're talking about." Snowden himself remains free in Russia. A film about him won an Academy Award on Sunday evening. Rogers says he knew U.S. infrastructure would likely come under cyber-attack on his watch, but the target of Sony Pictures was a surprise. "I fully expected, sadly in some ways, that in my time as the commander of United States Cyber Command the Department of Defense would be tasked with attempting to defend the nation against those kind of attacks," he said. "I didn't realize that it would be against a motion picture company, to be honest." North Korea is widely believed to be behind the hack in response to Sony's production of the film "The Interview," which depicts a comedic plot to kill leader Kim Jong-un Rogers declined to respond to a question if the United States was behind a retaliatory online attack that took down North Korea's Internet access. When asked which nations had the ability to strike U.S. cyber interests Rogers declined to provide assessments of most countries. "It's a matter of record, we've talked about China and our concerns about what they have been doing in cyber. Clearly the Russians and others have capabilities, we are mindful of that," he said. One major topic of discussion was encryption and if developers should build a "golden key" or other ability for governments, including the United States, to access data that otherwise would be security. Rogers was challenged by vocal NSA critic and current Yahoo! chief information security officer Alex Stamos, who asked if Internet companies were required to allow "back door" access to the U.S. government, should similar access be given to other governments around the world. "Do you believe we should build back doors for other countries?" Stamos asked. "It needs to be done within a framework. I'm the first to acknowledge that," Rogers said. "You don't want the FBI and you don't want the NSA unilaterally deciding, 'so, what are we going to access and what are we not going to access?' That shouldn't be for us." Rogers said it would be a process, though. "We'll have to work our way through it. And I'm the first to acknowledge there are international implications," he said. "I think we can work our way through this." "I'm sure the Chinese and Russians are going to have the same opinion," Stamos responded.

2nc nb – pres power

Executive power is a net benefit – secrecy

Friedersdorf 13 (Conor Friedersdorf, The Atlantic, "Secrecy Undermines the Ability of Congress to Function as the Framers Intended," 6-7-2013, http://www.theatlantic.com/politics/archive/2013/06/secrecy-undermines-the-ability-of-congress-to-function-as-the-framers-intended/276641/)

This gave me a thought. Congress **cannot** act as a **check** on the **executive** branch in the way the Framers intended when hugely consequential policies it is overseeing are treated as **state secrets**. The Senate, intended as a deliberative body, cannot deliberate when **only the folks on the right committees are fully briefed**, and the

Ron Wyden types among them think what's happening is horribly wrong, but can't tell anyone why because **it's illegal just to air the basic facts**. Our senators have literally been reduced to giving dark hints. And the House of Representatives? Members are up for reelection every two years because the body is supposed to respond to the will of the people. But by some accounts, the people are only now finding out about surveillance that some House members signed off on three or four election cycles in the past. Not that we know all the details even now. It's one thing to keep the identities of CIA agents and the location of our nuclear arsenal classified. But this is something different. The national-security state, as currently constituted, is removing many of the most important moral and strategic policy questions we face from the realm of democratic debate and accountability. In a real sense, our current approach is preventing our system of government from functioning in very basic ways that the Framers intended.

Presidential lies over the NSA are key to preserve strong pres powers

John **Blake 13**--- CNN journalist. John Blake has been honored by the Society of Professional Journalists, the Associated Press, and The American Academy of Religion. He is the author of "Children of the Movement." (Blake, "Of course presidents lie", CNN. 11/24/13. http://www.cnn.com/2013/11/24/politics/presidents-lie/)//ET

Well, guess what? That story about Washington and the cherry tree is a lie. Never happened. And the notion that a good president doesn't lie to the American people -- that's an illusion as well. Historians say many of our greatest presidents were the biggest liars -- and duplicity was part of their greatness. "Every president has not only lied at some time, but needs to lie to be effective," says Ed Uravic, a former Washington lobbyist, congressional chief of staff and author of "Lying Cheating Scum." Presidential lying is a hot topic because of a promise made by President Obama. While promoting Obamacare, Obama told Americans that they could keep their health insurance if they wanted to. That turned out to not be true for some, and Obama has been accused of lying. Some political pundits warn that Obama's "lie" will undo his second term. They say Americans won't forgive a president who violates their trust. It's a good sound-bite, but it's bad history. A great leader must "be a great pretender and dissembler," Machiavelli said in "The Prince." And so should a president, some historians say. You might say **lying is the verbal lubricant that keeps the Oval Office** engine **running**. Some of our most popular presidents told the biggest whoppers, say historians, including Benjamin Ginsberg, author of "The American Lie: Government by the People and other Political Fables." While preparing the country for World War II, Franklin Roosevelt told Americans in 1940 that "your boys are not going to be sent into any foreign wars." President John F. Kennedy declared in 1961 that "I have previously stated, and I repeat now, that the United States plans no military intervention in Cuba." All the while, he was planning an invasion of Cuba. Ronald Reagan told Americans in 1986, "We did not, I repeat, did not trade weapons or anything else [to Iran] for hostages, nor will we," four months before admitting that the U.S. had actually done what he had denied. Even "Honest Abe," whose majestic "Gettysburg Address" the nation commemorated this week, was a skillful liar, says Meg Mott, a professor of political theory at Marlboro College in Vermont. Lincoln lied about whether he was negotiating with the South to end the war. That deception was given extended treatment in "Steven Spielberg" recent film "Lincoln." He also lied about where he stood on slavery. He told the American public and political allies that he didn't believe in political equality for slaves because he didn't want to get too far ahead of public opinion, Mott says. "He had to be devious with the electorate," Mott says. "He played slave-holders against abolitionists. He had to lie to get people to follow him. Lincoln is a great Machiavellian." 6 things presidents wish they hadn't said Forgivable vs. unforgivable lies Presidential lies fall into two categories: forgivable vs. unforgiveable. Forgivable lies are those meant to keep the nation from harm. Some consider the National Security Agency's lies about the scope of domestic spying to be in this category because they protect us from terrorists, says Uravic, author of "Lying, Cheating Scum." Unforgivable lies fall into the Nixonian "I am not a crook" category, Uravic says. Those are lies meant to cover up crimes, incompetence or protect a president's political future. President Lyndon Johnson, for example, kept the full cost of spending on the Vietnam War from Congress and the public to preserve his political power, Uravic says. "The American people remain forgiving of their politicians, as long as those politicians put the people first and deliver tangible benefits for all of us," says Uravic, who also teaches at the Harrisburg University of Science and Technology in Pennsylvania. The ultimate test of whether the American public will accept a lie from a president is if the nation determines that the lie serves

the national interests. That distinction is why Bill Clinton remains popular, and George W. Bush remains reviled for his "lie," says Allan Cooper, a political scientist and historian at Otterbein University in Ohio. In a nationally televised address in 2003, Bush said that invading Iraq was necessary "to eliminate weapons of mass destruction." "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised," Bush said. Clinton told the nation that he did "not have sexual relations with that woman." I did not have sexual relations with that woman. President Bill Clinton "Clinton's lies about a sexual affair were understandable given his interest to protect his marriage and to shield the nation's children from having to ask their parents to explain the phenomenon of oral sex," Cooper says. "Bush's lies led to the death and injuries of thousands of Americans." Obama's statement will be judged by the same standard: Did it help the country, or did he say it just to save his bacon? Obama apologized for saying people could keep their insurance if they like it. But some Americans who buy policies on the private market recently received cancellation notices because their plans don't meet Obamacare requirements for more comprehensive care. Americans may forgive Obama if Obamacare improves their lives, says Christopher J. Galdieri, who teaches a course on the U.S. presidency at Saint Anslem College in New Hampshire. "Ultimately, this is going to come down to whether the federal [health care] exchange improves, and whether people come to view that as a successful and viable option for buying insurance for themselves and their families," Galdieri says. Will George W. Bush's reputation ever recover from the accusation that he led the nation into war under false pretenses? It's hard to say from history. Several presidents were accused of deceiving the American public to sell military action, says David Contosta, a history professor at Chestnut Hill College in Pennsylvania. President James Polk lied to Congress in 1846 -- claiming Mexico had invaded the United States -- because he was determined to take the Southwest from Mexico. That lie led to the Mexican-American War, Contosta says. President William McKinley lied to the American public in 1898 when he insisted that Spain had blown up the USS Maine warship in Havana Harbor, Cuba, although he had no evidence. That lie led to the Spanish-American war. Every president has not only lied at some time, but needs to lie to be effective. Ed Uravic, former Washington lobbyist and author of "Lying Cheating Scum." One popular president got caught telling a lie about a failed military action but his popularity remains intact. "President Dwight Eisenhower denied that the United States was flying U-2 spy planes over the Soviet Union, until the Soviets shot down one of the planes, capturing the pilot, and he was forced to admit the truth," Contosta says. Some presidents were so deceitful that they even lied to their friends. Franklin Roosevelt was such a president. Roosevelt led the nation out of the Great Depression and through World War II. But even his allies couldn't bank on honesty. Roosevelt told three different men that he wanted them to be his next vice president during the Democratic national convention in 1944. Then he picked a fourth man, Harry Truman, for the office, says David Barrett, a political science professor at Villanova University in Pennsylvania. "He did it with such skill that all three men were completely convinced that Roosevelt was behind him." The lost art of the quotable speech Why **we need a president who lies** Roosevelt's deceitfulness hasn't stopped historians from widely picking him as one of nation's three greatest presidents, along with Lincoln and Washington. Perhaps they and ordinary Americans forgive presidents who lie because there's something in human nature that believes a leader needs to be cunning.

DDI Executive Self Restraint CP

CP+DA 1NC

Text: The United States executive branch should substantially curtail the United States federal government's surveillance of data stored in the United States including requiring surveillance agencies to provide proof of reasonable suspicion against an individual target.

Executive self-restreaint solves surveillance – post hoc review can solve credibility

Bellia '11 (Patricia L, Notre Dame Law School, Arizona State Law Journal, Vol. 43, No. 293, 2011, Notre Dame Legal Studies Paper No. 12-58, 2011, "Designing Surveillance Law," http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2033217)

1. Executive Rule-Selection I begin with disputes focusing on executive rule selection—that is, where the executive branch adopts a surveillance practice **in the absence of any legislative action or outside the contours of existing statutes.** In other words, Congress has not specifically spoken with respect to the particular practice at issue (or so the executive claims). Rather, it is left to the executive in the first instance to decide whether the practice is **sufficiently privacy-invasive to require judicial authorization** (and, if so, what kind of authorization to seek) **or whether it can risk proceeding without judicial involvement.** When the executive seeks judicial authorization under a too-weak standard, it runs the risk that the authorizing court will reject the request or that a target will successfully challenge the standard after the fact. When the executive does not seek such authorization, it runs the risk that a target will challenge the practice and claim that prior judicial authorization was necessary. Instances of executive rule-selection that ultimately triggered judicial decisions on the constitutionality of executive conduct include the following: certain wiretapping and eavesdropping activities until the Court's decisions in Katz (and Berger v. New York48 in the immediately preceding term); 49 **warrantless national security surveillance** of purely domestic targets in the era prior to the Keith decision; the use of pen registers and similar devices before the Supreme Court's decision in Smith v. Maryland; 50 the use of **covert video surveillance tactics** in the absence of specific legislative authorization; 51 and the implementation of the NSA's **terrorist surveillance program** outside of FISA's requirements. 52

Limiting the President's intelligence capabilities though aggressive oversight kill presidential powers

Deats '10 (Caleb, J.D. Candidate, Columbia Law School, 7/2/10, "Obliging The Executive Branch To Control Itself," http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1633922)

2. Restraining the Executive's Interpretive Power Weakens the Government's Ability to Respond to Crises. --- Second, one might argue that restraining the executive's interpretive power might devastatingly weaken the country's ability to confront emergencies, particularly threats to national security. As Professor Goldsmith notes, "sharp disagreement over the requirements of national security law and the meaning of the imponderable phrases of the U.S. Constitution" exists even within the executive branch: "Whether and how aggressively to check the terrorist threat, and whether and how far to push the law in so doing, are rarely obvious, especially during blizzards of frightening reports, when one is blinded by ignorance and desperately worried about not doing enough."51 Disagreement in Congress over these issues would presumably prove more intractable than that within the executive branch. Moreover, airing these issues in courts would likely require disclosure of classified information. Thus, requiring the executive to defer to other branches when parsing these "imponderable phrases" prevents the swift resolution of controversy that results from consolidating authority in the President. As Hamilton writes, "A feeble executive implies a feeble execution of the government. A feeble execution is but another phrase for a bad execution . . . ."52 However, while the this paper's proposal may prescribe procedures that cannot adequately resolve emergencies, designing procedures with emergencies in mind seems **more likely to pervert normal politics** than it does to adequately resolve such extraordinary situations. No set of procedures can provide for every eventuality. Moreover, as Justice Jackson wrote, dissenting in Korematsu, "if we cannot confine military expedients by the Constitution, neither would I distort the Constitution to approve all that the military may deem expedient."53 Once we incorporate emergency exceptions into the Constitution, such exceptions will increase in number until they cease to be exceptional.54 Professor Goldsmith adverts to the danger of confusing the exception with the norm when he describes the terrorist threat as a "permanent emergency."55 Thus, if we must in emergencies rely on "leaders who will be beholden to constitutional values," we should do so completely, i.e. **without creating procedural justifications** for doing so. A different approach might substitute "leaders" for procedures simply by making the two indistinguishable.

Prespowers solves multiple scenarios for war

South China Morning Post 2K ("Position of Weakness" 12-11-00, p. L/N)

A weak president with an unclear mandate is **bad news for the rest of the world**. For better or worse, the person who rules the United States influences events far beyond the shores of his own country. Both the global economy and international politics will feel the effect of political instability in the US. The first impact will be on American financial markets, which will have a ripple effect on markets and growth across the world. A weakened US presidency will also be felt in **global hotspots across the world**. The **Middle East**, the conflict between **India and Pakistan**, peace on the **Korean peninsula**, and even the way relations between **China and Taiwan** play out, will be influenced by the authority the next US president brings to his job. There are those who would welcome a weakening of US global influence. Many Palestinians, for example, feel they would benefit from a less interventionist American policy in the Middle East. Even within the Western alliance, there are those who would probably see opportunities in a weakened US presidency. France, for example, might feel that a less assertive US might force the European Union to be more outward looking. But the dangers of having a weak, insecure US presidency **outweigh any benefits** that it might bring. US global economic and military power cannot be wished away. A president with a shaky mandate will still command great power and influence, only he will be constrained by his domestic weakness and less certain about how to use his authority. This brings with it the **risks of miscalculation** and the use of US power in a way that **heightens conflict**. There are very few conflicts in the world today which can be solved without US influence. The rest of the world needs the United States to use its power deftly and decisively.

*****Solvency*****

2NC Solvency – A2: No Precedent/Future Admins

Political barriers check future rollback – new, stronger constituencies

Branum 2 [Tara L, Associate, Fulbright & Jaworski L.L.P, "President or King? The Use and Abuse of Executive Orders in Modern Day America" Journal of Legislation]

> Congressmen and private citizens besiege the President with demands [*58] that action be taken on various issues. [n273] To make matters worse, once a president has signed an executive order, he often makes it **impossible for a subsequent administration to undo his action** without enduring the political fallout of such a reversal. For instance, President Clinton issued a slew of executive orders on environmental issues in the weeks before he left office. [n274] Many were controversial and the need for the policies he instituted was debatable. [n275] Nevertheless, President Bush found himself unable to reverse the orders without invoking the ire of environmentalists across the country. [n276] A policy became law by the action of one man without the healthy debate and discussion in Congress intended by the Framers. Subsequent presidents undo this policy and send the matter to Congress for such debate only at their own peril. This is not the way it is supposed to be.

Yes precedent – constitutional obligation

Atkinson '13 (L Rush, Center on the Administration of Criminal Law, U.S. Department of Justice, National Security Division, law clerk to the Honorable Julia Smith Gibbons, U.S. Court of Appeals for the Sixth Circuit, J.D., New York University; M.Phil., University of Cambridge, A.B., The University of Chicago, fellow at the Center for the Administration of Criminal Law at New York University School of Law, 10/1/13 forthcoming, Vanderbilt Law Review, "The Fourth Amendment's National Security Exception: Its History and Limits," https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2226404)

> C. The Constitutional Gloss of Early Executive Practice The history examined here primarily involves executive conduct, which can carry **precedential weight**, even in matters of constitutional law.42 In Youngstown Sheet & Tube Co. v. Sawyer, Justice Frankfurter explained how executive practice informs our constitutional understanding: [A] systematic, unbroken, executive practice, long pursued to the knowledge of the Congress and never before questioned, engaged in by Presidents who have also sworn to uphold the Constitution, making as it were such exercise of power part of the structure of our government, may be treated as a gloss on "executive Power" vested in the President

by §1 of Art. II.43 Subsequent Supreme Court decisions embrace the probative value of executive practice.44 Historical conduct is particularly important in the **national security** context. "National security law and foreign affairs law," Julian Mortenson explains, has a "pronounced concern for post-enactment history as a source of constitutional meaning."45 Neil Katyal and Richard Caplan note that "[i]n the crucible of legal questions surrounding war and peace, few judicial precedents will provide concrete answers," **making executive practice one of the few constitutional guides**.46 When identifying constitutional parameters for the executive, it is particularly instructive to look at historical moments when the executive is restrained. When congressional prohibition draws executive power to its "ebb," for example, one can identify the executive's core inextinguishable powers.47 Constitutional boundaries are similarly discernible in some cases **where the executive branch limits its own conduct**. Specifically, the **executive's self-restraint is precedential when it stems from a sense of constitutional obligation**.48 Such fealty towards the Constitution might be **unprompted by judicial command or legislative action**, and there may be no record as obvious as a judicial opinion or legislative bill. Nevertheless, where a discernible opinio juris has shaped executive action, such legal opinion should be considered both for its persuasive power and a historical understanding about what protections the Constitution establishes.49

Executive has powerful incentives to tie its hands

Sales '12 (Nathan Alexander, Assistant Professor of Law at George Mason University where he teaches national security law, administrative law, and criminal law, J.D. magna cum laude, Duke University, A.B., Miami University, former Deputy Assistant Secretary for Policy Development at the U.S. Department of Homeland Security, served at the Office of Legal Policy at the U.S. Department of Justice, recipient of the Attorney General's Award for Exceptional Service for his role in drafting the USA PATRIOT Act, formerly clerked for the Honorable David B. Sentelle of the U.S. Court of Appeals for the D.C. Circuit, practiced at the Washington, DC law firm Wiley Rein LLP, John M. Olin Fellow at the Georgetown University Law Center, Journal of National Security Law & Policy, Vol. 6, No. 1, 8/24/12, pp. 227-289, "Self-Restraint and National Security," http://jnslp.com/wp-content/uploads/2012/08/08__Sales_Master_6-28-12-NS.pdf)

Why does the government sometimes tie its own hands in national security operations? Much of the case law and scholarship concerning national security rests on the assumption that the executive branch is institutionally prone to overreach – that, left to its own devices, it will inch ever closer to the line that separates illegal from legal, and sometimes enthusiastically leap across it. The obvious conclusion is that external, principally judicial, checks are needed to keep the Executive in line.2 In many cases the Executive does indeed push the envelope. But not always.3 The government often has **powerful incentives to stay its own hand** – to forbear from military and intelligence operations that it believes are perfectly legal. Officials may conclude that a proposed mission – a decapitation strike on al Qaeda's leadership, say, or the use of mildly coercive interrogation techniques on a captured terrorist – is entirely permissible under domestic and international law. Yet they nevertheless might rule it out. In other words, the government sometimes adopts self-restraints that limit its ability to conduct operations it regards as legally justified; it "**fight[s] with one hand behind its back,**" to borrow Aharon

Barak's memorable phrase.4 This article tries to explain these restraints by consulting public choice theory – in particular, the notion that government officials are rationally self interested actors who seek to maximize their respective welfare. Part I develops an analytical framework. Part II identifies four examples of selfrestraint. Parts III and IV offer hypotheses for why the government adopts them. One example of self-restraint is Executive Order 13,491, which **limits counterterrorism interrogations**, including those conducted by the CIA, to the techniques listed in the Army Field Manual. The AFM prohibits or severely restricts a number of fairly mild interrogation methods such as low-grade threats, the "good cop, bad cop" routine, and other staples of garden-variety law enforcement investigations. A second example, sketched above, is the White House's onetime **reluctance to use targeted killings** against Osama bin Laden, despite its belief that doing so would be consistent with domestic and international laws against assassination.

2NC Solvency – A2: Doesn't Solve Credibility

Obama sould take the lead – key to cred

Wu '06 (Edieth,- Associate Dean and Professor, Thurgood Marshall School of Law "DOMESTIC SPYING AND WHY AMERICA SHOULD AVOID THE SLIPPERY SLOPE")

The recent revelations regarding domestic spying have led to much criticism, skepticism and suspicion, forcing President Bush to defend his decision.101 Bush insists that he has not broken any laws in authorizing the surveillance of Americans suspected of having ties to terrorism.102 Further, the president said he would continue to approve the program, despite concern that it eroded civil liberties.103 But as the president attempts to maneuver through the criticism to better position himself, he subjects himself to further attack. For example, the president has recently come under severe bipartisan attack for "using scores of 'signing statements' to reserve the right to ignore or reinterpret provisions of measures that he has signed into law."104 In effect, the president is attempting to "cherry-pick the provisions he likes and exclude the ones he doesn't like."105 Due to "the scope and aggression of Bush's [defense] that he can bypass laws," many fear that the president's actions "represent a concerted effort to expand his power at the expense of Congress, upsetting the balance between the branches of government."106 Consequently, the U.S. government must establish itself, **with the president taking the lead**, as a supporter of the rule of law in order to retain the country's support. Failure to do so may have devastating ramifications for the country as a whole.

A2: Congress Key

Executive solves better – efficiency and precedent

McGinnis '93 (John O, George C. Dix Professor in Constitutional Law at Northwestern Law School, JD magna cum laude from Harvard Law School where he was an editor of the Harvard Law Review, BA magna cum laude from Harvard College, MA degree from Balliol College, Oxford, in philosophy and theology, former clerk on U.S. Court of Appeals for the District of Columbia, past winner of Paul Bator Award given by the Federalist Society to an outstanding academic under 40, Law and Contemporary Problems Vol. 56, No. 4, August 1993, "Constitutional Review By The Executive In Foreign Affairs And War Powers: A Consequence Of Rational

Choice In The Separation Of Powers," http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp)

> Additionally, the structure of the presidency as a single office possessed by one person also gives the executive unique capabilities of **acting with "secrecy and dispatch** giving him a **comparative advantage** in carrying out these functions. Thus, because of the president's constitutional powers and because of expectations that have developed about his responsibilities in the area of foreign affairs and war powers, the president generally places a **very high value on control of the rights of governance in foreign affairs**.62 On the other hand, Congress's structure is **so much more diffuse** than the executive that it **impedes the rapid decisionmaking necessary in the fluctuating world of foreign affairs**.63 Thus, because of its **comparative disadvantage** as an institution, operational control of foreign affairs may actually be at odds with its interests because **such control threatens Congress with responsibilities it is not well-equipped to handle.** In determining how much interest Congress has in exercising this power as compared to the executive, one must compare this interest to other rights of governance. Spending on constituents, for example, is more highly prized by Congress since it can directly help individual members of Congress retain office.' Of course, even if Congress rationally shuns operational control of war and foreign policy matters, it may be interested in **increasing its mechanisms to criticize the executive's performance after the fact,** so that it can act in effect as the ululating Greek chorus that comments on the executive's tragic choices.'

Congressional checks on national security powers fail – inefficient, politically unfeasible, and reactionary

Kelly '93 (Michael, Major, Judge Advocate General's Corps, US Army, 1993, "Fixing the War Powers", Military Law Review, from Lexis Nexis, 141 Mil. L. Rev. 83)

> The Constitution arms Congress with several powerful checks. Within the **war powers arena**, these checks have proven to be **unwieldy**, **time consuming** to use, and **dependent on normally nonexisting bipartisan support**. These checks have lacked consistent effectiveness. Congress, when using its checks, has not always exercised sound discretion and self-restraint. Congress typically uses its checks in a **reactionary mode**. For example, in the latter stages of the Vietnam War, after the United States' main withdrawal, Congress aggressively used its checks and "legislated peace in Indochina." Congress was reacting to what it perceived as presidential abuse of the war powers. Congress's acts unduly interfered with the President's war powers and may have contributed to the **unsatisfactory outcome** by restricting the use of funds to support the war.

A2: Rollback Ext.

Most exos aren't overturned

Murray '99 (Frank, "Clinton's Executive Orders are Still Packing a Punch: Other Presidents Issued More, but His are Still Sweeping" Washington Times http://www.englishfirst.org/13166/13166wtgeneral.html)

> Clearly, Mr. Clinton knew what some detractors do not: Presidential successors of the opposite party **do not lightly wipe the slate clean of every order**, or even most of them. Still on the books 54 years after his death are 80 executive orders issued by Franklin D. Roosevelt. No less than 187 of Mr. Truman's orders remain, including one to end military racial segregation, which former Joint Chiefs of Staff Chairman Colin Powell praised for starting the "Second Reconstruction." "President Truman gave us the order to march with Executive Order 9981," Mr. Powell said at a July 26, 1998 ceremony marking its 50th anniversary. Mr. Truman's final order, issued one day before he left office in 1953, created a national security medal of honor for the nation's top spies, which is still highly coveted and often revealed only in the obituary of its recipient.

0.2% risk of an overturn

Krause and Cohen 2K (George and David, Professors of Political Science @ South Carolina, "Opportunity, Constraints, and the Development of the Institutional Presidency: The Issuance of Executive Orders" The Journal of Politics, Vol. 62, No. 1, February 2000, JSTOR)

> We use the annual number of executive orders issued by presidents from 1939 to 1996 to test our hypotheses. Executive orders possess a number of properties that make them appropriate for our purposes. First, the series of executive orders is long, and we can cover the entirety of the institutionalizing and institutional-ized eras to date.6 Second, unlike research on presidential vetoes (Shields and Huang 1997) and public activities (Hager and Sullivan 1994), which have found support for presidency-centered variables but not president-centered factors, ex-ecutive orders offer a stronger possibility that the latter set of factors will be more prominent in explaining their use. One, they are more highly discretionary than vetoes.7 More critically, presidents take action first and unilaterally. In addition, Congress has **tended to allow executive orders to stand** due to its own **collective action problems** and the **cumbersomeness of using the legislative process** to reverse or stop such presidential actions. Moe and Howell (1998) report that between 1973 and 1997, Congress challenged **only 36 of more than 1,000 executive orders issued**. And **only two of these 36 challenges led to overturning** the president's executive order. Therefore, presidents are likely to be **very successful** in implementing their own agendas through such actions. In fact, the nature of executive orders leads one to surmise that idiopathic factors will be relatively more important than presidency-centered variables in explaining this form of presidential action. Finally, executive orders have rarely been studied quantitatively (see Gleiber and Shull 1992; Gomez and Shull 1995; Krause and Cohen 1997)8, so a description of the factors motivating their use is worth-while.9 Such a description will allow us to determine the relative efficacy of these competing perspectives on presidential behavior.10

Congress won't roll back decisions

Howell '3 (William G, Assistant Professor of Gov't @ Harvard, Powers without Persuasion: The Politics of Direct Presidential Action pg. 112)

> The real world, obviously, is much more complicated than the unilateral politics model supposes. Uncertainties abound, and presidents frequently set policies without any assurance of congressional acquiescence. It is worth considering then, how presidents fare on those occasions when Congress does respond to a presidential directive. Do presidents tend to win most of the time? Or does Congress consistently crack the legislative whip, effectively enervating imperialistic presidents? Our theoretical expectation are relatively clear. Because the president has access to more (and better) information about goings-on in the executive branch, members of Congress will try to **change only a small fraction of all status quo policies** in any legislative session, and we should anticipate that members will **leave alone the majority of unilateral directives** that the president issues. While the president may occasionally overreach on a particularly salient issue, provoking a congressional response, in most instances Congress either will **do nothing at all or will endorse the president's actions.**

2NC A2: Perm

Congressional silence key to presidential power

Bellia 2 [Patricia, Professor of Law @ Notre Dame, "Executive Power in Youngstown's Shadows" Constitutional Commentary, , 19 Const. Commentary 87, Spring, Lexis]

> To see the problems in giving dispositive weight to inferences from congressional action (or inaction), we need only examine the similarities between courts' approach to executive power questions and courts' approach to federal-state preemption questions. If a state law conflicts with a specific federal enactment, n287 or if Congress displaces the state law by occupying the field, n288 a court cannot give the state law effect. Similarly, if executive action conflicts with a specific congressional policy (reflected in a statute or, as Youngstown suggests, legislative history), or if Congress passes related measures not authorizing the presidential conduct, courts cannot give the executive action effect. n289 When Congress is silent, however, the state law will stand; when Congress is silent, the

executive action will stand. This analysis makes much sense with respect to state governments with reserved powers, but it makes little sense with respect to an Executive Branch lacking such powers. The combination of congressional silence and judicial inaction has the practical effect of creating power. Courts' reluctance to face questions about the scope of the President's constitutional powers - express and implied - creates three other problems. First, the implied presidential power given effect by virtue of congressional silence and judicial inaction can solidify into a broader claim. When the Executive exercises an "initiating" or "concurrent" power, it will tie that power to a textual provision or to a claim about the structure of the Constitution. Congress's silence as a practical matter tends to validate the executive rationale, and the Executive Branch may then claim a power not only to exercise the disputed authority in the face of congressional silence, but also to exercise the disputed authority in the face of congressional opposition. In other words, a power that the Executive Branch claims is "implied" in the Constitution may soon become an "implied" and "plenary" one. Questions about presidential power to terminate treaties provide a [*151] ready example. The Executive's claim that the President has the power to terminate a treaty - the power in controversy in Goldwater v. Carter, where Congress was silent - now takes a stronger form: that congressional efforts to curb the power are themselves unconstitutional. n290

No cooperation or balancing – the perm means congress' power always wins out

Lisa M. **Ivey,** 20**03**, Cumberland Law Review, 33 Cumb. L. Rev. 107

The third "zone" of presidential power occurs when the President's actions are "incompatible with the [express] or implied will of Congress." In the Youngstown Sheet & Tube Co. case itself, Jackson found President Truman's actions in seizing steel mills was incompatible with Congressional will because Congress had not been silent on the subject of seizure of private property. Thus, there was no "open field" in which the President could operate. Similarly, in enacting the Executive Order establishing military tribunals, the President is probably operating in the third "zone." Congress has specifically indicated its intention to exercise its constitutional powers and enact anti-terrorist legislation. Where Congress has indicated an intention to occupy the field of legislation and exercise its full power, none is left over for the President. In the case of the Executive Order, **Congress has already covered the playing field, and the President's power is at its lowest ebb.**

Only unilateral executive action solves the DA.
Moe and Howell, Fellow for the Hoover Institution and Harvard Professor, 99

Terry M. Moe and William G. Howell, senior fellow for the Hoover Institution and Associate Professor for the Government Department at Harvard University, "Unilateral Action and Presidential Power: A theory", LexisNexus.com 12-99

> If the president had the power to act unilaterally in this same situation, as depicted in Figure 1B, things would turn out much more favorably. He would not have to accept Congress's shift in policy from [SQ.sub.2] to [SQ.sub.2*] and could take action on his own to move the status quo from [SQ.sub.2*] to V--using his veto to prevent any movement away from this point. V would be the equilibrium outcome (as it was in the earlier case of unilateral action). And although the president would still lose some ground as policy moves from the original [SQ.sub.2] to V, unilateral action allows him to keep policy much closer to his ideal point--and farther from Congress's ideal point--than would otherwise have been the case. He clearly has more power over outcomes when he can act unilaterally.

Doesn't solve presidential power – simultaneous legislative and executive action creates a mixed precedent, undermining presidential authority

Bellia 2 [Patricia, Professor of Law @ Notre Dame, "Executive Power in Youngstown's Shadows" Constitutional Commentary, , 19 Const. Commentary 87, Spring, Lexis]

> Second, courts' failure to resolve the contours of the President's constitutional powers creates uncertainty about whether some forms of constitutionally based executive action have the same legal force as a federal statute. Returning to Dames & Moore, the fact that the Court rested the President's authority on grounds of congressional approval rather than implied constitutional authority avoided the difficult question of how the President could by his sole authority displace the application of the federal statutes that had provided the basis for Dames & Moore's original cause of action against the Iranian enterprises. 291 Similar questions arise with respect to the displacement of state law by operation of sole executive agreements. The result is confusion about whether sole executive agreements are the "supreme Law of the Land," 292 with the available precedents suggesting that they are 293 and the weight of recent commentary suggesting that they are not.

1NC Off Case Shell

Text: The United States federal government should propose <the plan> to the Privacy and Civil Liberties Oversight Board for review. The board should solicit input from all relevant stakeholders. The board should recommend that the United States federal government <do plan>.

The board works, doesn't link to politics, and builds momentum for effective curtailment of NSA activities.

Setty, Professor of Law and Associate Dean for Faculty Development & Intellectual Life, Western New England University School of Law, 2015 Sudha, SYMPOSIUM: Surveillance, Secrecy, and the Search for Meaningful Accountability, 51 Stan. J Int'l L. 69

One promising move **with regard to oversight and transparency** has been the establishment and staffing of the **Privacy and Civil Liberties Oversight Board** (PCLOB). 186 This board, tasked with assessing many aspects of the government's national security apparatus both for efficacy and for **potentially unnecessary incursions into civil liberties, has a broad mandate and**, compared with many national security decision makers, **significant independence from the executive branch**. 187 Retrospectively, the PCLOB has, among other things, issued the highly critical report of the NSA Metadata Program in January 2014 **that led to further public pressure on the Obama administration to curtail this program; it is promising that the PCLOB's** prospective agenda includes further analysis of various surveillance programs. 188 However, the PCLOB's potential influence in protecting civil rights may be limited by its position: The PCLOB is an advisory body that analyzes existing and proposed programs and possibly recommends changes, but it cannot mandate that those changes be implemented. The ability to have a **high level of access to information surrounding counterterrorism surveillance programs** and to **recommend changes** in such programs **is important** and should be lauded, but over-reliance on the PCLOB's non-binding advice to the intelligence community to somehow solve the accountability and transparency gap with regard to these programs would be a mistake. For example, on prospective matters, it is likely that intelligence agencies would consult the PCLOB only if the agency itself considers the issue being faced new or novel, as the NSA metadata program was labeled prior to its inception. In such cases, **decision makers within an agency generally ask whether the contemplated program is useful or necessary, technologically feasible, and legal**. If all three questions are answered affirmatively, the program **can be implemented.** Now that the PCLOB is fully operational, it seems likely that if a contemplated program is considered new or novel, an intelligence agency would consult the PCLOB at some stage of this process for its guidance on implementing the program. **This nonpartisan external input may improve self-policing** within the [*102] intelligence community and help intelligence agencies **avoid implementing controversial programs or, even if implemented, set better parameters around new programs. 189** If the PCLOB is able to exert some degree of soft power in influencing national security decision-making, then the judiciary represents hard power that could be used to force the protection of civil liberties where it might not otherwise occur. The FISC should be reformed to include a public advocate lobbying on behalf of privacy concerns, making the process genuinely adversarial and strengthening the FISC against charges that it merely rubber stamps applications from the intelligence community. 190 Article III courts need to follow the lead of Judge Leon in Klayman in conceptualizing privacy as broad and defensible, even in a world where electronics-based communication is dominant and relatively easy for the government to collect. If the judicial defense of privacy were combined with the possibility of liability for violations of that privacy, it is likely that this would incentivize increased self-policing among the members of the intelligence community. The creation of an active PCLOB and a more adversarial process before the FISC will not provide a perfect solution to the dilemmas posed by the government's legitimate need for secrecy and the protection of the public against potential abuse. Yet **because these changes are institutional and structural, they are well-placed to improve the dynamic between the intelligence community, oversight mechanisms, and the public.**

Solvency

Overview – 2NC

This isn't your run of the mill commissions' cp but rather a nuanced and highly specific version which the 2AC hasn't responded effectively to. The counterplan has the fed request the Privacy and Liberties Oversight Board, which is an independent bipartisan group to review the plan and to recommend it to congress. The counterplan does NOT fiat that congress will implement the plan but rather due the board's recommendation will build enough momentum in congress to create effective institutionalized reform. – That's Setty.

Have a high threshold for a solvency deficit – any reason why congressional action won't be enough applies to the aff too.

Evaluate solvency via a lens of sufficiency. Even if the counterplan isn't as optimal as the aff it's sufficient to solve their advantages.

Say Yes – 2NC – Big Stick Aff

The counterplan causes the plan to be adopted by congress – recent momentum proves – PCLOB reports garner massive public attention which allows for effective lobbying by the board and parties to get the plan done – That's Setty. Prefer our evidence it's the most recent which is the golden standard in determining how this congress will respond to our counterplan.

Recommendations will pass:

a) The board will specifically be effective at causing the NSA to curtail surveillance – unique knowledge over policies, capital, and recent leaks are a game changer for increasing their influence over congress.

Levy, 2013 Pema, International Business Times Correspondent, "NSA Spying Controversy: The New Agency That Could Change Government Surveillance" http://www.ibtimes.com/nsa-spying-controversy-new-agency-could-change-government-surveillance-1342409

You've probably never heard of it, but there is a new agency in Washington that is **working to make sure the government's anti-terrorism efforts do not ride roughshod over Americans' civil liberties.** These days, when a sharply divided Congress struggles to get nearly anything accomplished, there is little evidence that such an agency, armed only with the mandate to offer advice, can influence lawmakers. **But the Privacy and Civil Liberties Oversight Board may have a better chance at reforming the national security apparatus than many assume**. In fact, the board is in a **unique position to shape the legislative debate over the government's spying abilities -- and has powerful allies to make sure Congress takes up its recommendations.** Referred to as the PCLOB (sounds like 'pee-klawb'), the new agency has the job of advising the president, federal agencies and Congress on how to balance the government's national security efforts with civil liberties concerns. **Board members have top-secret clearances, and agency heads are expected to turn over any documents the board requests**. If the board needs information from the private sector, **the attorney general can issue a subpoena on its behalf.** Created in 2004 at the recommendation of the 9/11 Commission, the PCLOB did not get off to an auspicious start. It was originally located within the Executive Office of the President, and its first report to Congress was edited by the Bush White House, prompting one Democratic member to resign. In response, in 2007 the new Democratic Congress made the board an independent agency within the executive branch. Then-President George W. Bush clashed with Senate Democrats over board nominees, and ultimately none were confirmed. President Barack Obama dragged his feet in choosing nominees and when they finally did come, Republicans refused to approve them. Four part-time members were finally approved in the last nine months. The board's chairman, David Medine, was not formally installed on until May 29, 2013. One week later, the Guardian newspaper published its first scoop, based on leaked National Security Agency documents, showing the government collected and stored metadata on the phone calls of millions of Americans. Over the next few days, the documents leaked by Edward Snowden revealed that the government went further, collecting and storing metadata on the phone calls of virtually all Americans. The government was also scooping up an untold amount of Americans' electronic communications as part of its foreign surveillance operations. These revelations thrust the board **into the middle of the most important debate over privacy and civil liberties in years.** Sen. Tom Udall, D-N.M., sent a letter to the board asking it to "**make it an urgent priority to investigate the programs"** and provide an unclassified report on their legality and whether they take the "necessary precautions to protect the privacy and civil liberties of American citizens under the Constitution." Twelve additional senators, including two Republicans, signed Udall's letter. On June 21, **the board met with Obama**. All this before its office space was even ready or emails set up. The full board's first public appearance came Tuesday at a workshop in Washington, D.C., where the five members -- three Democrats and two Republicans -- queried three separate panels of experts on how the surveillance programs might be brought more in line with civil liberties concerns. Civil liberties advocates appear cautiously **optimistic about the new board, whose opinion could help determine whether Congress decides to take on the massive**

surveillance programs. Advocates are also aware of the board's ability to actually move their cause backward and entrench these programs. "If it blesses these programs, they are likely to continue," privacy rights advocate Greg Nojeim, who participated in one of Tuesday's panels, said in an interview Wednesday. Whether the board deems the phone metadata collection is unlawful or not will be "one of the most significant tests of PCLOB," said Nojeim, a lawyer at the Center for Democracy and Technology. But whatever its recommendations ultimately are, the PCLOB is armed by circumstance with the **power to shape the laws governing the surveillance state**, particularly Section 215 of the USA Patriot Act, also known as the "business records" provision, under which the government claims the authority to collect Americans' call data. During Tuesday's workshop, panelist Michael Davidson, former legal counsel to the Senate Intelligence Committee, hinted at the board's potential for influence. "Can I suggest a focus for the board, and that is the Congress will turn to the many important questions that have been discussed through the day when it has to," Davidson said. "And it will have to when, initially, when the sunset for business records [provision] is reached in the middle of 2015." In other words, the government's authority to carry out the phone metadata collection will expire on June 1, 2015, absent congressional action – a situation the board can use to shape the debate and even push its recommendations. On June 1, 2017, the portion of the Foreign Intelligence Surveillance Act under which the NSA conducts electronic foreign intelligence sweeps that also snag domestic communications will expire without reauthorization, as well. Privacy advocates don't want the board or Congress to wait years to address the surveillance programs they believe are illegal. But at the end of the day, the sunset dates guarantee that a debate over these programs will take place -- and when it does, **the PCLOB can have its reports and recommendations ready to shape that conversation**. Moreover, because the issues in are so complex from a legal, practical and technological point of view, **lawmakers who want to put forward serious reforms may not have the ability to craft adequate proposals before the sunset deadline. The board can help in that practical function to make sure that lawmakers have reforms ready to be implemented when the debate begins.** Nojeim also **sees this as an "advantage" unique to the PCLOB**. "The board has a **guaranteed congressional audience that other boards don't have because it's making recommendations** on statutes that will expire unless acted on," he said Wednesday. Despite the leverage the PCLOB has in 2015 and 2017, the civil liberties community believes it has a popular mandate to move reforms -- at least more basic changes like releasing more classified materials -- **while the public is engaged on the issue**. The NSA leaks are **"a game-changer**," said Michelle Richardson, a legislative counsel at the American Civil Liberties Union, noting that members of Congress on both sides of the aisle have indicated that the NSA's programs need to be reined in. "This certainly seems like our best opportunity yet." Whether or not Congress takes up a range of proposals put forward in the last month to reform the intelligence system, the board has **allies in Congress who will have the power to make sure its recommendations are debated**, even if it takes until 2015 for that to happen. "There are senators and representatives, including [Vermont Democratic Sen. Patrick] Leahy, who chairs the Senate Judiciary Committee, who **struggled and pushed and cajoled until the PCLOB members were nominated and approved**," Nojeim said Wednesday. "**They are not going to ignore the recommendations of the board they fought for."**

b) The counterplan uniquely positions the PCLOB to be effective in drafting national policy issues.

Dalal, J.D. Yale Law, 2014 Anjali, ARTICLE: SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE, 2014 Mich. St. L. Rev. 59

Despite these congressional efforts to force internal interagency oversight on intelligence issues, from 2007 until 2012, no members were ever appointed to the PCLOB. 284 In mid-2013, after significant pressure from both within and outside the Administration, the full board was nominated and confirmed. 285 Time will ultimately tell how effective the PCLOB will be as a **source of productive tension** within **the national security arena**. Working against it is the fact that "[f]our of the board members technically must be part time under the law; only [David] Medine, the fifth, can work on a full-time basis as chairman. The oversight body also lacks much of a workforce: At the moment it's mostly staff members on loan from other agencies." 286 Assuming PCLOB is capable of taking on such a huge responsibility, [*123] **its success will be contingent on its members being included in national security related decision making and its ability to effectively wield power and influence on these issues.**

c) Consensus building

Glassman and Straus 13—*analyst at the Congressional Research Service AND **analyst at the Congressional Research Service *Matthew Eric AND **Jacob R., "Congressional Commissions: Overview, Structure, and Legislative Considerations," Congressional Research Service, 1/22, http://fas.org/sgp/crs/misc/R40076.pdf

Legislators seeking policy changes may be confronted by an array of political interests, some in favor of proposed changes and some against. When these interests clash, the resulting legislation may encounter gridlock in the highly structured political institution of the modern Congress.**28 By creating a commission, Congress can place policy debates in a potentially more flexible environment, where congressional and public attention can be developed over time**.29

This is empirically proven on the third rail of politics which beats every aff warrant

Fiscal Times 10 [Edmund Andrews, February 18, 2010, "Deficit Panel Faces Obstacles in Poisonous Political Atmosphere" http://www.thefiscaltimes.com/Issues/Budget-Impact/2010/02/18/Fiscal-Commission-Faces-Big-Obstacles.aspx]

Supporters of a bipartisan deficit commission note that at least two previous presidential commissions succeeded at breaking through **intractable political problems when Congress was paralyzed**. The 1983 Greenspan commission, headed by Alan Greenspan, who later became chairman of the Federal Reserve, reached an historic agreement to gradually **raise Social Security taxes** and gradually increase the minimum age at which workers qualify for Social Security retirement benefits. **Those recommendations passed** both **the House and Senate**, and averted a potentially catastrophic financial crisis with Social Security.

d) Political cover: Since the commission's recommendation is final, no one in Congress has to take the blame

The Telegraph 10 "Deficit-cutting panel a missed opportunity," The Telegraph, 2/14, http://www.nashuatelegraph.com/opinion/editorials/612140-263/deficit-cutting-panel-a-missed-opportunity.html

At one time, closing a military base in this country seemed as unlikely as meaningful efforts toward deficit reduction. Any proposal by the Pentagon for base closure was met by congressional resistance, **until the creation of the Base Realignment and Closure Commission gave Congress political cover**. The commission and its staff conducted extensive research, held public hearings and managed to get three rounds of base closures through Congress. Hundreds of out-of-date military installations of all sorts were closed, many of which had long since lost their strategic value and were little more than local jobs programs. **The base closure process was a great success, largely because Congress did not have the power to nitpick its recommendations.** The entire list had to be accepted or rejected. This model may now be **the only practical way for our government to tackle any issue** with negative political fallout.

Say Yes – 2NC – Sarbanes-Oxley

The counterplan causes the plan to be adopted by congress – recent momentum proves – PCLOB reports garner massive public attention which allows for effective lobbying by the board and parties to get the plan done – That's Setty. Prefer our evidence it's the most recent which is the golden standard in determining how this congress will respond to our counterplan.

Recommendations will pass:

a) The commission will be able to do necessary reviews to get congress to promptly repeal.

Addington, 2011 David, Group Vice President at the Heritage Foundation, "Congress Should Repeal or Fix Section 404 of the Sarbanes–Oxley Act to Help Create Jobs" http://www.heritage.org/research/reports/2011/09/congress-should-repeal-or-fix-section-404-of-the-sarbanes-oxley-act-to-help-create-jobs

Congress waited patiently from 2007 to 2010 for the SEC and the Public Company Accounting Oversight Board (PCAOB), whose rules the SEC approves, to change rules in a way that would solve the problem of unwarranted costs imposed on the private sector by the rules implementing section 404 of the Sarbanes–Oxley Act.[7] While the SEC tinkered with the rules, it did not solve the problem to the satisfaction of Congress.[8] Congress took action in 2010 to address part of the problem, granting by statute to companies whose stock is publicly traded and whose aggregate worldwide value is $75 million or more an exemption from the requirement in section 404(b) for the company to have the registered public accounting firm that does the company's audit attest to, and report on, management's assessment of the company's internal control structure and procedures.[9] While Congress took a **laudable first step** in exempting the smaller companies from section 404(b), **Congress should complete promptly the job of reviewing the full impact of section 404, including on medium-sized and large-sized companies, and repealing section 404** or fixing it to eliminate unwarranted costs. Companies could use freed funds, no longer absorbed by section 404 implementation, to invest in their lines of business, creating much-needed jobs. Congress Should Re-examine Whether Section 404 Is Needed and, If So, How to Cut Its Costly Burden on Businesses Congress should reconsider carefully the requirements in section 404 for company management to assess the effectiveness of its internal control structure and procedures and then for the company's registered public accounting firm to attest to that management assessment. Given the traditional role of each state in regulating the corporate governance of corporations incorporated in that state,[10] **Congress should first examine anew whether federal law should address those subjects**, or whether they should be left to state law. In a society based on limited government and free enterprise, and in light of the traditional role of the states in our federal system, **Congress should start its examination with a presumption in favor of repealing section 404 and leaving the subjects addressed by section 404 to the states**.

b) Empirically proven boards can be effective at altering Sarbanes-Oxley

Norris, 2009 Floyd, NYTimes "Goodbye to Reforms of 2002" http://www.nytimes.com/2009/11/06/business/06norris.html?_r=0

But this Congress has made clear that independence for the accounting rule writers can go too far — particularly if the rules force banks to reveal the horrid mistakes they previously made. This year, a **subcommittee of the House Financial Services Committee** held a hearing at which legislators sought no facts but instead **threatened dire action** if the chairman of the financial accounting board did not promptly make it easier for banks to ignore market values of the toxic securities they owned. **The board caved in, which may be one reason why banks are reporting fewer losses these days.**

c) Commissions are already used to make modifications to Sarbanes-Oxley, and can be used to cause repeal.

Schoenthaler, 2011 Vanessa, Qashu and Schoenthaler law co-founder, "How will the Dodd-Frank Wall Street Reform and Consumer Protection Act Impact Non-Financial Institutions?" Note: No Actual Date given but last cites legislation passed in 2011, http://www.qsllp.com/InsightIdeas/ArticleDetails/tabid/85/ArticleId/4/-strong-How-will-the-Dodd-Frank-Wall-Street-Reform-and-Consumer-Protection-Act-Impact-Non-Financial.aspx

Section 413 also **requires that the Commission undertake an initial review** of the definition of accredited investor, as it applies to natural persons**,** to determine whether adjustments or modifications, excluding adjustments or modifications to the revised net worth standard, are appropriate. Thereafter, the Commission is required, at least once every four years, to review of the definition of accredited investor, as it applies to natural persons, in its entirety, to determine whether further adjustments or modifications are appropriate.

d) The counterplan uniquely positions the PCLOB to be effective in drafting national policy issues.

Dalal, J.D. Yale Law, 2014 Anjali, ARTICLE: SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE, 2014 Mich. St. L. Rev. 59

Despite these congressional efforts to force internal interagency oversight on intelligence issues, from 2007 until 2012, no members were ever appointed to the PCLOB. 284 In mid-2013, after significant pressure from both within and outside the Administration, the full board was nominated and confirmed. 285 Time will ultimately tell how effective the PCLOB will be as a **source of productive tension** within **the national security arena**. Working against it is the fact that "[f]our of the board members technically must be part time under the law; only [David] Medine, the fifth, can work on a full-time basis as chairman. The oversight body also lacks much of a workforce: At the moment it's mostly staff members on loan from other agencies." 286 Assuming PCLOB is capable of taking on such a huge responsibility, [*123] **its success will be contingent on its members being included in national security related decision making and its ability to effectively wield power and influence on these issues.**

e) Unique knowledge over policies, capital, and recent leaks are a game changer for increasing their influence over congress.

Levy, 2013 Pema, International Business Times Correspondent, "NSA Spying Controversy: The New Agency That Could Change Government Surveillance" http://www.ibtimes.com/nsa-spying-controversy-new-agency-could-change-government-surveillance-1342409

You've probably never heard of it, but there is a new agency in Washington that is **working to make sure the government's anti-terrorism efforts do not ride roughshod over Americans' civil liberties.** These days, when a sharply divided Congress struggles to get nearly anything accomplished, there is little evidence that such an agency, armed only with the mandate to offer advice, can influence lawmakers. **But the Privacy and Civil Liberties Oversight Board may have a better chance at reforming the national security apparatus than many assume**. Say Yes – 2NR

Empirics prove – commissions have created effective reform in times of tight Congressional gridlock.

Andrews 10—economics reporter for The New York Times Edmund, "Deficit Panel Faces Obstacles in Poisonous Political Atmosphere," The Fiscal Times, 2/18, http://www.thefiscaltimes.com/Articles/2010/02/18/Fiscal-Commission-Faces-Big-Obstacles?page=0%2C1

Supporters of a bipartisan deficit commission note that at least **two previous presidential commissions succeeded at breaking through intractable political problems when Congress was paralyzed**. The 1983 Greenspan commission, headed by Alan Greenspan, who later became chairman of the Federal Reserve, reached an historic agreement to gradually raise Social Security taxes and gradually increase the minimum age at which workers qualify for Social Security retirement benefits. **Those recommendations passed both the House and Senate, and averted a potentially catastrophic financial crisis with Social Security.**

Commission solves – creates compromise by shielding both parties from taking the blame.

Brookings Fiscal Seminar 09—a group of scholars who meet on a regular basis, under the auspices of The Brookings Institution and The Heritage Foundation, to discuss federal budget and fiscal policy issues Brookings Fiscal Seminar, "THE POTENTIAL ROLE OF ENTITLEMENT OR BUDGET COMMISSIONS IN ADDRESSING LONG-TERM BUDGET PROBLEMS," June 2009, http://www.brookings.edu/~/media/research/files/papers/2009/6/commissions%20sawhill/06_commissions_sawhill

In contrast, the Greenspan Commission provided a forum for developing a political compromise on a set of politically unsavory changes. In this case, the political parties shared a deep concern about the impending insolvency of the Social Security system but feared the exposure of promoting their own solutions. **The commission created political cover for the serious background negotiations that resulted in the ultimate compromise**. The structure of the commission reflected these concerns and was composed of fifteen members, with the President, the Senate Majority Leader, and the Speaker of the House each appointing five members to the panel.

Perceived immediacy and magnitude of the aff means that the recommendation will pass.

Brookings Fiscal Seminar 09—a group of scholars who meet on a regular basis, under the auspices of The Brookings Institution and The Heritage Foundation, to discuss federal budget and fiscal policy issues (Brookings Fiscal Seminar, "THE POTENTIAL ROLE OF ENTITLEMENT OR BUDGET COMMISSIONS IN ADDRESSING LONG-TERM BUDGET PROBLEMS," June 2009, http://www.brookings.edu/~/media/research/files/papers/2009/6/commissions%20sawhill/06_commissions_sawhill)

The success of the Greenspan Commission seems to have been due to three things: 1) the problem that the commission had been set up to deal with, the insolvency of Social Security, **was real, imminent and well-defined**; 2) the costs of failing to resolve the problem would have been too great for either party; and 3) the membership of the commission included trusted representatives of the leaders of the two political parties as well as enough pragmatic panelists **to offer a high likelihood of eventual compromise**. But despite this consensus amongst the panel members about the imminence and seriousness of the problem, the panel came close to reporting without recommendations. It was only because of the work of a subgroup of the commissioners working with high-ranking officials in the Administration that a set of recommendations finally emerged.4

Commission recommendations get passed by Congress – reduce partisanship

Glassman and Straus 13—*analyst at the Congressional Research Service AND **analyst at the Congressional Research Service *Matthew Eric AND **Jacob R., "Congressional Commissions: Overview, Structure, and Legislative Considerations," Congressional Research Service, 1/22, http://fas.org/sgp/crs/misc/R40076.pdf

Solutions to policy problems produced within the normal legislative process may also suffer politically from charges of partisanship.30 Similar charges may be made against investigations conducted by Congress.31 **The non-partisan or bipartisan character of most congressional commissions may make their findings and recommendations less susceptible to such charges and more politically acceptable to a diverse viewpoints**. The bipartisan or nonpartisan arrangement can potentially give their recommendations strong credibility, both in Congress and among the public, even when dealing with divisive issues of public policy.32 Commissions may also give political factions space to negotiate compromises in good faith, bypassing the short-term tactical political maneuvers that accompany public negotiations.33 Similarly, **because commission members are not elected, they may be better suited to suggesting unpopular, but necessary, policy solutions.34**

It's Effective – 2NC

The board's unique makeup and stature ensures it can operate effectively without external pressures

Mishkin, J.D. New York University, 2013 Benjamin, NOTE: FILLING THE OVERSIGHT GAP: THE CASE FOR LOCAL INTELLIGENCE OVERSIGHT x88 N.Y.U.L. Rev. 1414

2. The Privacy and Civil Liberties Oversight Board (PCLOB) The PCLOB, on the other hand, is a truly **independent overseer**. Congress created the PCLOB in 2004 to "ensure that concerns with respect to privacy and civil liberties are appropriately considered in the implementation of laws, regulations, and executive branch policies related to efforts to protect the Nation against terrorism." 128 Nearly three years later, in the face of concerns about the independence and [*1437] effectiveness of the PCLOB, Congress made modifications to the Board's authority and its position within the executive branch. 129 As presently structured, the PCLOB enjoys independent agency status and, in accordance with its enabling statute, "shall be composed of a full-time chairman and 4 additional members, who shall ... be selected solely on the basis of their professional qualifications, achievements, public stature, expertise in civil liberties and privacy, and relevant experience." 130 The President appoints and the Senate confirms the PCLOB's members. 131 Broadly speaking, the PCLOB is tasked with **providing advice and counsel on policy development and implementation, continually reviewing terrorism-related policies and practices, building relationships with privacy and civil liberties officers, and testifying before Congress "upon request**." 132 The Board must also submit periodic reports at least twice a year **to the relevant congressional committees** and the President regarding its activities, findings, conclusions, and **recommendations**. 133 And, to the greatest extent possible, the PCLOB should make its reports available to the public. 134 To accomplish its mission, the PCLOB is authorized to have access "from any department, agency, or element of the executive branch ... to all relevant records, reports, audits, reviews, documents, papers, recommendations, or other relevant material, **including classified information** consistent with applicable law." 135 The Board's power to subpoena persons to produce these materials bolsters its access. 136 The Attorney General may modify or deny a PCLOB subpoena request, but, in doing so, she must notify the House and Senate Judiciary Committees. 137 This statutory framework equips the PCLOB with the potential to achieve key intelligence oversight goals. And, in theory, the [*1438] PCLOB's narrow mission, independence, and duty to report all promote robust, proactive intelligence oversight with regard to privacy and civil liberties issues. Unlike members of the congressional intelligence committees who juggle many responsibilities, members of the PCLOB have a singular oversight task. Moreover, because of the confirmation process, PCLOB members are more likely to possess and develop the requisite level of expertise. **They are less susceptible to political pressures and electoral concerns, as they are appointed for six-year terms, and they must regularly provide updates regarding their activities and findings**. In other words, the PCLOB appears to not be prone to some of the challenges that hinder congressional oversight of the federal intelligence community. These factors, along with the fact that members of the PCLOB are compensated for their work, 138 also make the PCLOB better **positioned than the PIAB to effectively oversee the federal intelligence community.**

And any reason why the board's recommendation will be watered down and ineffective applies to the aff too and means you vote neg on presumption.

AT: Section

AT: PCLOB Says No

1. It won't agree with the NSA – the board will prioritize liberties – empirically proven.

Schlanger, Henry M. Butzel Professor of Law, University of Michigan, 2015 Margo, ARTICLE: Intelligence Legalism and the National Security Agency's Civil Liberties Gap, 6 Harv. Nat'l Sec. J. 112

Of the oversight institutions thus far described, only NSA's brandnew Civil Liberties and Privacy Office engages in policy-type weighing of civil liberties interests against the security benefits offered by particular surveillance methods. The one office that remains to be discussed is the Privacy and Civil Liberties Oversight Board (PCLOB), **an independent bipartisan agency nominally within the executive branch**. 240 As will be seen, and as one would expect from what is essentially a blue-ribbon-commission type organization with no enforcement or other executive function, the PCLOB seems so far to **be functioning at least partially free of the role constraints of an executive agency.** In its first incarnation, as part of the Executive Office of the President, 241 the PCLOB was an unimportant player in NSA's operations. In [*167] its second, **independent, incarnation**, 242 it started operations only recently. President Obama was slow to name the Board's members, and the Senate was even slower to confirm them 243 Its budget is tiny; it has only a handful of full-time staff members (one on a detail from the Department of Justice), in addition to its full-time chair and part-time members. 244 But after David Medine's long-awaited confirmation as chair in May 2013, 245 the Snowden disclosures, one week later, **prompted the Board to undertake a review of FISA, the first part of which it completed in January 2014. 246 The board's statute commits it firmly to a policy**, not compliance, function, **requiring it to:** (1) analyze and review actions the executive branch **takes to protect the Nation from terrorism, ensuring that the need for such actions is balanced with the need to protect privacy and civil liberties**; and (2) **ensure that liberty concerns are appropriately considered in the development and implementation of laws, regulations, and policies related to efforts to protect the Nation against terrorism**. 247 Nonetheless, in its review of the telephony metadata program, the board began with the language of law. Three of its five members--the three Democrats--found that Section 215 "does not provide an adequate legal basis to support the program," and that the program also violates the Electronic Communications Privacy Act. 248 The Board acknowledged that the FISA Court had approved the program many times, but explained that it found that approval unpersuasive: "Having independently examined this statutory question, the Board disagrees with the conclusions of the government and the FISA court." 249 Pointing out that the program long predated its authorization by the FISA Court under Section 215, the Board concluded, after forty-five pages of statutory analysis: "It may have been a laudable goal for the executive branch to bring this program under the [*168] supervision of the FISA court. Ultimately, however, that effort represents an unsustainable attempt to shoehorn a preexisting surveillance program into the text of a statute with which it is not compatible." 250 Accordingly, **it wrote, the program should be halted**. 251 The Board also analyzed the constitutional law issues raised by the telephony metadata program. It explained that under the Supreme Court's existing doctrine, a Fourth Amendment challenge would fail. "It is possible that the third--party doctrine or its scope will be judicially revised," the Board wrote--making clear its own view that this revision would be very welcome. "To date, however, the Supreme Court has not modified the third-party doctrine or overruled its conclusion that the Fourth Amendment does not protect telephone dialing records. Most courts continue to follow those precedents, and government lawyers are entitled to rely on them, including in their formulation and defense of the Section 215 program." 252 On First Amendment associational rights, the Board noted that standing doctrine had so far obstructed full court testing of the rights, but that the challenge was far from trivial. 253 It should be evident, then, that the PCLOB's perspective on "the law" **was quite different from that of any federal agency staff.** In its first report, its members, among them a retired federal court of appeals judge, assumed much more the stance of court of appeals judges. Holdings by courts that are not the Supreme Court were treated as potentially persuasive, but not binding. And even Supreme Court holdings were deemed potentially undermined by subsequent changes of circumstances or surrounding doctrine. The PCLOB members obviously **felt far freer than agency counsel do with respect to legal analysis and interpretation; the analysis is not only of precedent** but also, **in more typically judicial mode, of the policy pros and cons. The result was that the board took advantage of the authority of the law/compliance frame, without many of the constraints that frame usually imposes on executive branch officials**. Its pronouncement that the telephony metadata program is illegal, beyond the statutory authority of the administration, is what got by far the most attention. 254

2. Err neg – their evidence was written before congress voted to change the PCLOB's structure to make it fully independent and is written in the context of the Bush administration which clearly doesn't apply anymore

Dalal, J.D. Yale Law, 2014 Anjali, ARTICLE: SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE, 2014 Mich. St. L. Rev. 59

[*122] Congress **responded** quickly **by passing legislation** in August **2007 to significantly restructure the PCLOB**. 280 Under the new statute, the PCLOB **is an independent agency** to be composed of five members, **four of whom are part time from outside the government and the fifth, the chairperson, is the full time member**. 281 All five members are appointed by the President and confirmed by the Senate **for a term of six years to prevent wholesale capture by a given Administration**. 282 Its authorizing statute mandates **that no more than three members can be from one political party** with the other two chosen **by the White House under consultation with Senate and House minority leadership**. 283

3. Recent debates prove – the board is more likely to engage in dissent due to public outrage than otherwise.

AT: Delay

1. No impact to delay – none of the affs impacts are short term and even if they are the aff can't solve quick enough either then.

2. Err neg – all of their delay evidence is in the context of the process of setting up the PCLOB which is already done and isn't about their ability to review.

The Grant County Beat, 2013 Online News Service, "Udall Backs Bill to Protect Constitutional Rights, Reform Surveillance Program" http://www.grantcountybeat.com/news/non-local-news-releases/12473-udall-backs-bill-to-protect-constitutional-rights-reform-surveillance-program

Earlier this year, at a hearing before the Senate Appropriations Committee, Udall challenged the director of the NSA to become more transparent about the surveillance programs. Udall also led a bipartisan push to ask for an independent investigation of these programs by the Privacy and Civil Liberties Oversight Board (PCLOB), **which was fully constituted in May with the Senate confirmation of the board's chairman.** As chairman of the Appropriations subcommittee with jurisdiction over the PCLOB, Udall included $4.1 million in the fiscal year 2014 legislation for the board. These resources, $3.2 million above the fiscal year 2013 enacted level, **will enable the PCLOB to hire staff and pursue its mission without delay.**

3. Recent debates prove – the board quickly gathered information on the NSA after the Snowden leaks and released a report.

4. No delay or inefficiency

Campbell, 2002 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 20

There are a number of ways in which Congress performs its policymaking functions. Ad hoc commissions are one device at its disposal. Despite criticisms that these entities are inefficient and frequently evade the issues, commissions provide a flexible option, the variation in their composition and organization reflecting the specific mandates that establish them.79 Commissions can provide expert advice in matters of public policy within a definite time frame. By virtue of their ad hoc status, they can bypass normal bureaucratic channels. Commissions are a public relations device designed to draw attention to certain issues, to elicit public support, and to achieve consensus in a fragmented Congress. Commissions also allow for the direct representation of functional consistencies in the advisory process by seeking the advice of holders of diverse points of view.80 It is this list of advantages that has encouraged the recent use of commissions and led to their becoming a stable feature of public policies.

AT: NSA Secrecy

1. This is a solvency take out to the aff and not the cp – the PCLOB has unique access to information which allows for better policies which congress alone doesn't.

2. Not true – your evidence is in the context of abstract congressional committees and not the PCLOB which has been given unique access to NSA information. That's Setty.

3. Even if the NSA won't give them the information they can draft a subpoena for it – which they will b/c the cp text fiats that they solicit all relevant information

Levy, 2013 Pema, International Business Times Correspondent, "NSA Spying Controversy: The New Agency That Could Change Government Surveillance" http://www.ibtimes.com/nsa-spying-controversy-new-agency-could-change-government-surveillance-1342409

Referred to as the PCLOB (sounds like 'pee-klawb'), the new agency has the job of advising the president, federal agencies and Congress on how to balance the government's national security efforts with civil liberties concerns. **Board members have top-secret clearances, and agency heads are expected to turn over any documents the board requests**. If the board needs information from the private sector, **the attorney general can issue a subpoena on its behalf.**

4. The board has the most independence and access to info out of all the agencies

Schlanger, Henry M. Butzel Professor of Law, University of Michigan, 2015 Margo, ARTICLE: Intelligence Legalism and the National Security Agency's Civil Liberties Gap, 6 Harv. Nat'l Sec. J. 112

Of the oversight institutions thus far described, only NSA's brandnew Civil Liberties and Privacy Office engages in policy-type weighing of civil liberties interests against the security benefits offered by particular surveillance methods. The one office that remains to be discussed is the Privacy and Civil Liberties Oversight Board (PCLOB), **an independent bipartisan agency nominally within the executive branch**. 240 As will be seen, and as one would expect from what is essentially a blue-ribbon-commission type organization with no enforcement or other executive function, the PCLOB seems so far to **be functioning at least partially free of the role constraints of an executive agency.** In its first incarnation, as part of the Executive Office of the President, 241 the PCLOB was an unimportant player in NSA's operations. The PCLOB members obviously **felt far freer than agency counsel do with respect to legal analysis and interpretation; the analysis is not only of precedent** but also, **in more typically judicial mode, of the policy pros and cons. The result was that the board took advantage of the authority of the law/compliance frame, without many of the constraints that frame usually imposes on executive branch officials**. Its pronouncement that the telephony metadata program is illegal, beyond the statutory authority of the administration, is what got by far the most attention. 254

Theory

CP's Legitimate – 2NC

Our counterplan is uniquely legitimate –

Literature - our evidence proves that it is grounded making it predictable and a valuable discussion for curtailing NSA surveillance programs.

Net Benefits check abuse and provide a germane policy warrant for voting negative

Doesn't undermine affirmative offense-There is ample solvency ground based around the possibility the commission recommendation doesn't become law and other defenses of certain curtailment.

Reject the argument not the team – the punishment does not fit the crime—making the debate hard for the AFF is the NEGs job—have a high threshold to avoid substance crowd out.

Policy Making--Commissions are a well established alternative to traditional policymaking—proves the CP is predicable and germane

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 129

Ad hoc commissions as instruments of government **have a long history**. They are used by almost all units and levels of government for almost **every conceivable task**. Ironically, the use which Congress makes of commissions— preparing the groundwork for legislation, bringing public issues into the spotlight, whipping legislation into shape, and giving priority to the consideration of complex, technical, and critical developments—receives relatively little attention from political scientists. As noted in earlier chapters, following the logic of rational choice theory, individual decisions to delegate are occasioned by imperfect information; legislators who want to develop effective policies, but who lack the necessary expertise, often delegate fact-finding and policy development. Others contend that some commissions are set up to shift blame in order to maximize benefits and minimize losses.

Perm Do Both – 2NC

Doing both links to politics and doesn't solve---

a) Congressional debates---the CP means Congress won't debate the merits of the plan---they give an up-or-down vote to a commission report. The perm forces debate on the substance of the plan now---electoral pressure and fights over the plan trigger the link---that's all our politics net-benefit ev.

b) Secrecy---the commission's deliberations aren't public, but the plan forces the issue onto Congress's radar immediately---ensures backlash

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 13-14

Life on Capitol Hill has frequently become acrimonious because of **escalating partisanship** between parties.48 Increasing polarization in Congress49 has led to gridlock50 and stimulated the use of message politics,51 thereby limiting both the flexibility and the creativity of congressional action through normal legislative channels. The logic of commissions is that leaders of both parties, or their designated representatives, can meet to negotiate a deal **without the media**, the public, **or interest groups present**. When **deliberations are private**, parties can make offers **without being denounced** either **by their opponents** or by affected constituency groups; there is less chance to use an offer from the other side to curry favor with constituents. Agreement to bipartisan commissions and adherence to their logic are consequential because they **represent a tacit promise not to attack the opponent**. On some issues, for instance, the promise might imply **letting the commission pick the solution** and relying on party discipline to encourage lawmakers to go along even if their districts are disadvantaged by the solution; on others it might involve nothing more than a bipartisan admission that a commission is the next step Congress should take, without any understanding that all the players are bound ex ante by the commission's resolution.52 Commissions also mean **eschewing partisan attacks** and suggest a strong preference for reaching an agreement.53

Doing both links to politics---only giving the commission time generates political support---the perm's not a genuine recommendation and doesn't allow any time for negotiation

Biggs 9 [Andrew Biggs is a Social Security analyst and assistant director of the Cato Institute's Project on Social Security Privatization, "Rumors Of Obama Social Security Reform Commission," Feb 17 http://www.frumforum.com/rumors-of-obama-social-security-reform-commission]

One problem with President Bush's 2001 Commission was that it didn't represent the reasonable spectrum of beliefs on Social Security reform. This didn't make it a dishonest commission; like President Roosevelt's Committee on Economic Security, it was designed to put flesh on the bones laid out by the President. In this case, the Commission was tasked with designing a reform plan that included personal accounts and excluded tax increases. That said, **a commission only builds political capital toward** enacting **reform if it's seen as building a consensus through a process in which all views have been heard**. In both the 2001 Commission and the later 2005 reform drive, Democrats didn't feel they were part of the process. They clearly will be a central part of the process this time, but the goal will now be to include Republicans. Just as Republicans shouldn't reflexively oppose any Obama administration reform plans for political reasons, so Democrats shouldn't seek to exclude Republicans

from the process. Second, a reform task force should include a variety of different players, including members of government, both legislative and executive, representatives of outside interest groups, and experts who can provide technical advice and help ensure the integrity of the reforms decided upon. The 2001 Bush Commission didn't include any sitting Members of Congress and only a small fraction of commissioners had the technical expertise needed to make the plans the best they could be. A broader group would be helpful. Third, any task force or commission needs time. The 2001 Commission ran roughly from May through December of that year and had to conduct a number of public hearings. This was simply **too much** to do **in too little time**, and as a result the plans were fairly **bare bones**. There is plenty else on the policy agenda at the moment, so there's no reason not to give a working group a year or more to put things together.

Only the CP gets perceived as considering options from both sides before recommending one action---the perm looks like the commission favoring one side from the beginning---triggers politics and turns the case

Hoyer 10 [Steny, Senator, "Building Momentum for Fiscal Responsibility," 3/1 http://www.brookings.edu/events/2010/0301_fiscal_responsibility.aspx]

I hope congressional Republicans will take the work as sincerely and seriously as the chairmen take it—that they will come to the table without preconditions, ready to contribute their ideas and not just their criticism from the sideline. The commission has a bipartisan pedigree, and it won the votes of 16 Republicans in the Senate. But I was disappointed to see that seven Republican supporters of the commission bill, including Minority Leader McConnell, decided they were against it as soon as President Obama said he was for it.

President Reagan and Speaker O'Neill's work on Social Security reform in the '80s, and the Republican reaction to the Medicare changes in the health care bill, both teach the same lesson: the real work of cutting deficits is so easy to demagogue that it **rarely succeeds without support from both sides**. That's one of the reasons why the fiscal commission must not take any option off of the table, from raising revenues to cutting entitlement spending. And that's why both parties have a duty to appoint members who are willing to compromise and make tough decisions.

It's also clear to me that **if the commission takes a one-handed approach**, it will fail, **both politically and substantively.** Congressman Ryan's thoughtful budget proposal shows what an approach looks like when it relies entirely on cutting spending. He should be commended for putting together a serious and detailed plan to tackle the deficit. It doesn't raise a single tax. But as a consequence, it significantly changes Medicare.

Presumption stays neg---the CP's less change than the plan because it's indefinite---tie goes to the runner, and use an offense/defense frame because if the CP solves the case there's no offensive reason to risk the DA.

Perm Do the Plan Through The Process of the CP – 2NC

The perm's illegitimate:

a) Intrinsic---adds an element of delay that's not in the counterplan--- the CP only fiats the asking of the recommendation over the plan – Intrinsicness is illegitimate because it makes the affirmative a moving target

b) Severance---if the commission process is genuine and independent then the plan isn't certain to be done until the end of the process---severs 'should' which requires immediacy-severance is illegitimate because no counterplan would compete if the affirmative can pick and choose which parts of the plan to defend

Summers 94 - Justice, Supreme Court of Oklahoma, 11-8-1994, "Kelsey v. Dollarsaver Food Warehouse of Durant," online: http://www.oscn.net/applications/oscn/DeliverDocument.asp?CiteID=20287#marker3fn14

Certain contexts mandate a construction of the term "should" as **more than merely indicating preference or desirability**. Brown, supra at 1080-81 (jury instructions stating that jurors "should" reduce the amount of damages in proportion to the amount of contributory negligence of the plaintiff was held to imply an **obligation and to be more than advisory**); Carrigan v. California Horse Racing Board, 60 Wash. App. 79, 802 P.2d 813 (1990) (one of the Rules of Appellate Procedure requiring that a party "should devote a section of the brief to the request for the fee or expenses" was interpreted to mean that a party is **under an obligation** to include the requested segment); State v. Rack, 318 S.W.2d 211, 215 (Mo. 1958) ("should" would mean the same as "shall" or "must" when used in an instruction to the jury which tells the triers they "should disregard false testimony").

c) No offense---if the CP fiated that the plan happens in the future their perm would be legit---this excludes abusive delay and condition CPs. It's key to test the necessity of doing the plan---if only recommending it is better, then the aff should lose.

The perm doesn't solve politics---the commission process has to be independent---perm means Congress has its mind made up from the beginning, the decision to do the plan is made immediately even if it's not implemented until after the commission makes its recommendations.

The perception that the commission is a congressional proxy causes political battles

Brookings Fiscal Seminar 9 – The Brookings Institution Fiscal Seminar, group of scholars who meet on a regular basis, under the auspices of The Brookings Institution and The Heritage Foundation, to discuss federal budget and fiscal policy issues, June 2009, "The Potential Role of Entitlement or Budget Commissions in Addressing Long-Term Budget Problems," online: http://www.brookings.edu/~/media/Files/rc/papers/2009/06_commissions_sawhill/06_commissions_sawhill.pdf

The use of commissions or advisory councils has a long history in the United States. In the early 1900s, the National Monetary Commission examined the nation's distressed financial system and recommended establishing a central banking structure, a recommendation that was soon translated into

the Federal Reserve System. From 1937 to 1996, Social Security policy-making was heavily influenced by the findings and recommendations of periodic advisory councils, including the National Commission on Social Security Reform (the Greenspan Commission) which helped to rescue the program from insolvency in 1983. The 1960s saw the Warren Commission investigate the assassination of President Kennedy and the Kerner Commission examine the causes of civil disorders. The Base Closure and Realignment Commission (BRAC) provided an effective mechanism over the past two decades for **overcoming the political hurdles** inhibiting the restructuring of U.S. defense facilities across the country. And the recent National Commission on Terrorist Attacks upon the United States (the 9/11 Commission) delved into the numerous facets of the 2001 terrorist attacks and potential changes in homeland security.

Commissions can be used for a variety of purposes that suit the needs of the President or the Congress. The role of some commissions is to develop a knowledge base about certain policies or problems **free from the political machinations** that are an unavoidable part of the legislative process. They can also develop policy options that members of Congress and their staff have too little time or expertise to formulate. They can serve as **consensus-building vehicles** from which members of Congress may garner **political protection** while addressing contentious issues. At other times, commissions appear simply to serve as delaying measures that can be employed to defuse a political issue until a more opportune time for action develops.

Leaks trigger the link to politics:

a) Immigration reform legislation in 2010 included a proposal for a commission

Waslin 10 – Michele, Senior Policy Analyst at the Immigration Policy Center, May 24, 2010, "Hammering Out Future Immigration Flows: Immigration Commissions in Context," online: http://immigrationimpact.com/2010/05/24/hammering-out-future-immigration-flows-immigration-commissions-in-context/

Today the Washington Post reported that Senate Democrats are working on a plan to **create an immigration commission** to help determine future levels of employment-based immigration as part of a comprehensive immigration reform bill. While some disagree as to how future immigration flows should be regulated, immigration advocates agree that planning for future flows of legal immigration is among the most critical elements that comprehensive immigration reform must include.

b) That document leaked immediately and caused GOP backlash---proves likelihood of Congress leaking their decision to do the plan

Anderson 10 – Stuart Anderson, adjunct scholar at the Cato Institute and executive director, National Foundation for American Policy, May 2010, "A Look at the Senate Democratic Proposal for Immigration Reform: Is the Glass Half Empty, Half Full or Shattered on the Ground?," online: http://www.cato.org.offcampus.lib.washington.edu/pubs/irb/irb_may2010.pdf

While the new immigration law in Arizona has attracted most of the press attention, a 26-page "Conceptual Proposal for Immigration Reform" released in May by Democratic senators may be a more relevant policy development in the long run.1 The Democratic Senate document is important in two ways. First, it could be the legislative vehicle put forward in the U.S. Senate in 2010 and, as such, has a chance of becoming law. Second, even if the proposal does not become law this year it serves as an important benchmark for current and future thinking in the immigration policy debate. Senators Harry Reid (D-NV), Charles Schumer (D-NY) and Robert Menendez (DNJ) took ownership of the proposal and discussed the document at a Capitol Hill press conference in May. **Copies of the document were soon leaked to the press** and began being emailed around Washington, DC. One significant development is that Senator Lindsey Graham (R-SC) **criticized the proposal**, even though a month before he had co-authored an op-ed piece with Senator Schumer in the Washington Post that included a number of **the same elements** contained in the proposal. 2 Although there is no legislative language yet to accompany the summary, there is sufficient detail to analyze the current policy direction in some key areas.

Perm Do the CP – 2NC

a) The permutation is severance – the board is a commission that only inputs review when it is requested to do so making it not normal means.

Mishkin, J.D. New York University, 2013 Benjamin, NOTE: FILLING THE OVERSIGHT GAP: THE CASE FOR LOCAL INTELLIGENCE OVERSIGHT x88 N.Y.U.L. Rev. 1414

2. The Privacy and Civil Liberties Oversight Board (PCLOB) The PCLOB, on the other hand, is a truly independent overseer. Congress created the PCLOB in 2004 to "ensure that concerns with respect to privacy and civil liberties are appropriately considered in the implementation of laws, regulations, and executive branch policies related to efforts to protect the Nation against terrorism." 128 Nearly three years later, in the face of concerns about the independence and [*1437] effectiveness of the PCLOB, Congress made modifications to the Board's authority and its position within the executive branch. 129 As presently structured, the PCLOB enjoys independent agency status and, in accordance with its enabling statute, "shall be composed of a full-time chairman and 4 additional members, who shall ... be selected solely on the basis of their professional qualifications, achievements, public stature, expertise in civil liberties and privacy, and relevant experience." 130 The President appoints and the Senate confirms the PCLOB's members. 131 Broadly speaking, the PCLOB is tasked with **providing advice and counsel on policy development and implementation, continually reviewing terrorism-related policies and practices, building relationships with privacy and civil liberties officers, and testifying before Congress "upon request**." 132 The Board must also submit periodic reports at least twice a year to the relevant congressional committees and the President regarding its activities, findings, conclusions, and recommendations. 133 And, to the greatest extent possible, the PCLOB should make its reports available to the public. 134 To accomplish its mission, the PCLOB is authorized to have access "from any department, agency, or element of the executive branch ... to all relevant records, reports, audits, reviews, documents, papers, recommendations, or other relevant material, including classified information consistent with applicable law." 135 The Board's power to subpoena persons to produce these materials bolsters its access. 136 The Attorney General may modify or deny a PCLOB subpoena request, but, in doing so, she must notify the House and Senate Judiciary Committees. 137 This statutory framework equips the PCLOB with the potential to achieve key intelligence oversight goals. And, in theory, the [*1438] PCLOB's narrow mission, independence, and duty to report all promote robust, proactive intelligence oversight with regard to privacy and civil liberties issues. Unlike members of the congressional intelligence committees who juggle many responsibilities, members of the PCLOB have a singular oversight task. Moreover, because of the confirmation process, PCLOB members are more likely to possess and develop the requisite level of expertise. They are less susceptible to political pressures and electoral concerns, as they are appointed for six-year terms, and they must regularly provide updates regarding their activities and findings. In other words, the PCLOB appears to not be prone to some of the challenges that hinder congressional oversight of the federal intelligence community. These factors, along with the fact that members of the PCLOB are compensated for their work, 138 also make the PCLOB better positioned than the PIAB to effectively oversee the federal intelligence community.

b) It severs the requirement that the plan should happen:

"Should" means immediate

Summers 94 - Justice, Supreme Court of Oklahoma, 11-8-1994, "Kelsey v. Dollarsaver Food Warehouse of Durant," online: http://www.oscn.net/applications/oscn/DeliverDocument.asp?CiteID=20287#marker3fn14

The legal question to be resolved by the court is whether the word "should"13 in the May 18 order connotes futurity or may be deemed a ruling in praesenti.14 ***TO FOOTNOTES In praesenti means literally "**at the present time**." BLACK'S LAW DICTIONARY 792 (6th Ed. 1990). **In legal parlance** the phrase denotes that which in law is presently or **immediately effective**, as opposed to something that will or would become effective in the future [in futurol]. See Van Wyck v. Knevals, 106 U.S. 360, 365, 1 S.Ct. 336, 337, 27 L.Ed. 201 (1882). ***END FOOTNOTES The answer to this query is not to be divined from rules of grammar;15 it must be governed by the age-old practice culture of legal professionals and its immemorial language usage. To determine if the omission (from the critical May 18 entry) of the turgid phrase, "and the same hereby is", (1) makes it an in futuro ruling - i.e., an expression of what the judge will or would do at a later stage - or (2) constitutes an in in praesenti resolution of a disputed law issue, the trial judge's intent must be garnered from the four corners of the entire record. Nisi prius orders should be so construed as to give effect to every words and every part of the text, with a view to carrying out the evident intent of the judge's direction.17 The order's language ought not to be considered abstractly. The actual meaning intended by the document's signatory should be derived from the context in which the phrase to be interpreted is used.18 When applied to the May 18 memorial, these told canons impel my conclusion that the judge doubtless intended his ruling as an in praesenti resolution of Dollarsaver's quest for judgment n.o.v. Approval of all counsel plainly appears on the face of the critical May 18 entry which is [885 P.2d 1358] signed by the judge.19 True minutes20 of a court neither call for nor bear the approval of the parties' counsel nor the judge's signature. To reject out of hand the view that in this context "should" is impliedly followed by the customary, "and the same hereby is", makes the court once again revert to medieval notions of ritualistic formalism now so thoroughly condemned in national jurisprudence and long abandoned by the statutory policy of this State.

c) It also means mandatory---introducing uncertainty severs

Summers 94 - Justice, Supreme Court of Oklahoma, 11-8-1994, "Kelsey v. Dollarsaver Food Warehouse of Durant," online: http://www.oscn.net/applications/oscn/DeliverDocument.asp?CiteID=20287#marker3fn14

Certain contexts mandate a construction of the term "should" as **more than merely indicating preference or desirability**. Brown, supra at 1080-81 (jury instructions stating that jurors "should" reduce the amount of damages in proportion to the amount of contributory negligence of the plaintiff was held to imply an **obligation and to be more than advisory**); Carrigan v. California Horse Racing Board, 60 Wash. App. 79, 802 P.2d 813 (1990) (one of the Rules of Appellate Procedure requiring that a party "should devote a section of the brief to the request for the fee or expenses" was interpreted to mean that a party is **under an obligation** to include the requested segment); State v. Rack, 318 S.W.2d 211, 215 (Mo. 1958) ("should" would mean the same as "shall" or "must" when used in an instruction to the jury which tells the triers they "should disregard false testimony").

c) This is true of the CP---it's a non-binding recommendation and The CP's fundamentally distinct from the normal legislative process---it's not USFG action

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. xv

So why and when does Congress **formulate policy by commissions rather than by the normal legislative process?** Lawmakers have historically **delegated authority to others** who could **accomplish ends they could not**. Does this form of congressional delegation thus reflect the particularities of an issue area? Or does it mirror deeper structural reasons such as legislative organization, time, or manageability? In the end, what is the impact on representation versus the effectiveness of delegating discretionary authority to temporary entities composed largely of unelected officials, or are both attainable together?

Severance is illegitimate-no counterplan would compete if the affirmative can pick and choose which parts to defend

PCLOB Isn't Binding – 2NC

The Board can't make binding suggestions

Thompson, Previous Ranking Member of the Committee on Homeland Security, 2006

Bennie, previous representative from the Second District of Mississippi, ARTICLE: THE NATIONAL COUNTERTERRORISM CENTER: FOREIGN AND DOMESTIC INTELLIGENCE FUSION AND THE POTENTIAL THREAT TO PRIVACY, 6 PGH. J. Tech. L. & Pol'y 6

P24 Unlike the DHS Privacy Office, however, the PCLOB has no mandate to inform, educate, or lead privacy practice among those executive branch components involved in war on terror-related intelligence and law enforcement activities. It likewise **has no power to help develop consistent, comprehensive, and effective privacy guidelines within those components**. Instead, **the PCLOB can only "advise" the President and agency and department heads to ensure that privacy and civil liberties "are appropriately considered" and advise when adequate guidelines are lacking.** 70 Unlike the DHS Privacy Office, moreover, the PCLOB has practically no independence from the White House. For example, the PCLOB consists of five members (1) all of whom are appointed by the President, and only two of whom, the chairman and vice-chairman, require Senate approval; (2) all of whom serve "at the pleasure of the President"; (3) none of whom need be of different political parties; and (4) none of whom need have any expertise in civil liberties matters. 71 The PCLOB's oversight ability, moreover, is severely constrained because it lacks the subpoena power. 72

AT: Should=Desirable

This clearly doesn't apply---"should" only allows conditions when used in that context---i.e., "If the USFG had known, it should have acted differently"---the plan and topic use the word in a different sense---mandating unconditional obligation

AHID 2009 (American Heritage Dictionary, "should", http://dictionary.reference.com/browse/should)

Usage Note: Like the rules governing the use of shall and will on which they are based, the traditional rules governing the use of should and would are largely ignored in modern American practice. Either should or would can now be used in the first person to express conditional futurity: If I had known that, I would (or somewhat more formally, should) have answered differently. But in the second and third persons only would is used: If he had known that, he would (not should) have answered differently. Would cannot always be substituted for should, however. Should is used in all three persons in a conditional clause: if I (or you or he) should decide to go. Should is also used in all three persons to express duty or obligation (the equivalent of ought to): I (or you or he) should go. On the other hand, would is used to express volition or promise: I agreed that I would do it. Either would or should is possible as an auxiliary with like, be inclined, be glad, prefer, and related verbs: I would (or should) like to call your attention to an oversight. Here would was acceptable on all levels to a large majority of the Usage Panel in an earlier survey and is more common in American usage than should. · Should have is sometimes incorrectly written should of by writers who have mistaken the source of the spoken contraction should've. See Usage Notes at if, rather, shall.

Politics Net Benefit

Doesn't Link – 2NC

1. The counterplan doesn't link to politics –

a) The board is a third party organization and completely independent which allows for them to garner support and coalition for the plan in congress and shields controversy. But acting first is key to prevent bias.

b) The board's reports will create public support for the plan which alters representative's decision making calculus which quells opposition.

That's Setty.

c) The board will be used as a point to coalesce support around

Wyden, 2014 Ron, Senator for Oregon, "Wyden Statement on PCLOB Report on Bulk Collection"
http://www.wyden.senate.gov/news/press-releases/wyden-statement-on-pclob-report-on-bulk-collection

"The privacy board's findings closely mirror **many of the criticisms made by surveillance reform advocates.** The bulk collection program was built on a murky legal foundation that raises many constitutional questions and has been proven to be an ineffective tool for collecting unique intelligence information. Moreover, as the board wrote in its report, a program where the government collects the telephone records of millions of law-abiding Americans "fundamentally shifts the balance of power between the state and its citizens." The board goes on to say that with the government's "powers of compulsion and criminal prosecution," collection of data on its own citizens "poses unique threats to privacy," and is expected to have a "chilling effect on the free exercise of speech and association." The board's recommendations extend to reforms to the FISA court and the kind of increased transparency that is necessary for a democratic government to function. The reforms to the court do not go as far toward a true and independent civil liberties advocate as many pro-reformer would like. However, they would extend privacy protections beyond the legality of any particular program, into the kind of systemic protections of privacy that should have been available in the first place. The board made several arguments against the legality of the bulk collection program under Section 215 all of which deserve significant consideration. The board came to the same conclusion as myself and many other pro-reformers that surveillance precedent set by previous Supreme Court rulings – namely Smith v. Maryland – do not "fully answer whether the Section 215 telephone records is constitutionally sound" and do not reflect the effects of significant technological advances in telecommunications since that time. There have now been two in-depth studies of these programs by **unimpeachable government entities that have come to the same conclusion:** the bulk collection program should be effectively ended. As the President announced last week, the Administration and the Congress will decide the fate of this problematic program in the coming weeks and it is my belief that **reports such as those from the PCLOB** and the President's Review Group **should play a major role in any reform effort."**

d) The board can draw support from industry and civil society

Swire, 6/8/2015 Peter, Privacy perspectives correspondent, "The USA FREEDOM Act, the President's Review Group and the Biggest Intelligence Reform in 40 Years"

Passage of any legislation such as USA FREEDOM has innumerable parents, each of whose support turns out to be vital to eventual enactment. For this law, important support came from President Obama, the intelligence community and the Obama administration generally; the members of Congress who brought together a unique coalition in both the House and the Senate; the Privacy and Civil Liberties Oversight Board, whose detailed report on Section 215 raised numerous compelling concerns with the program, and **coalitions of outside supporters from the political left and right, including industry and civil society.**

That support is the key factor in getting NSA reforms passed and avoiding opposition – the industry will lobby

Blunden, 2/9/2015 Bill, Alternet correspondent, "Clear Proof Obama's Surveillance Oversight Board Is a Pathetic Sideshow"
http://www.alternet.org/news-amp-politics/clear-proof-obamas-surveillance-oversight-board-pathetic-sideshow

All told **there are over 1,300 billionaires in the United States and the politically minded members of this demographic**—both Democrats and Republicans—**have essentially succeeded in state capture. The two-party system of the United States is actually a one-party system: the corporate party**. And U.S. spies are the Praetorian Guard of these "deciders." So if it seems like nothing on the whole is being done to rein in mass interception, that

assessment would be accurate. The NSA's all-seeing Eye of Providence, and the even larger **corporate surveillance apparatus that supports it, are incredible tools of control**. The easiest way for leaders to manage public outcry is to put on an elaborate performance of mock reform. It appeases Main Street without offending the deep sources of wealth and power that tread the corridors of the Deep State.

e) Cross apply the say yes debate here – they all act as reasons why the cp will build support over the plan.

f) Even if the counterplan links, it links substantially less than the plan does by building support – that should be threshold for determining net benefits.

g) If it does link presumption still goes neg – the cp's less change than the aff bcause it doesn't make a binding decision.

h) Prefer our evidence over theirs – their Chapman evidence is from a news article which utilizes hyperbolic language to attract readers while ours is from a law professor who conducted multiple studies on commissions.

2. And the process of the CP resolves the link to the substance of the plan:

a) Commissions reduce partisanship – they are bipartisan and thus not attached to a specific political party.

Glassman and Straus 13—*analyst at the Congressional Research Service AND **analyst at the Congressional Research Service (*Matthew Eric AND **Jacob R., "Congressional Commissions: Overview, Structure, and Legislative Considerations," Congressional Research Service, 1/22, http://fas.org/sgp/crs/misc/R40076.pdf)

Solutions to policy problems produced within the normal legislative process may also suffer politically from charges of partisanship.30 Similar charges may be made against investigations conducted by Congress.31 **The non-partisan or bipartisan character of most congressional commissions may make their findings and recommendations less susceptible to such charges and more politically acceptable to a diverse viewpoints**. The bipartisan or nonpartisan arrangement can potentially give their recommendations strong credibility, both in Congress and among the public, even when dealing with divisive issues of public policy.32 Commissions may also give political factions space to negotiate compromises in good faith, bypassing the short-term tactical political maneuvers that accompany public negotiations.33 Similarly, **because commission members are not elected, they may be better suited to suggesting unpopular, but necessary, policy solutions.34**

b) Deliberations are private---prevents politics from getting in the way

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 13-14

Life on Capitol Hill has frequently become acrimonious because of **escalating partisanship** between parties.48 Increasing polarization in Congress49 has led to gridlock50 and stimulated the use of message politics,51 thereby limiting both the flexibility and the creativity of congressional action through normal legislative channels. The logic of commissions is that leaders of both parties, or their designated representatives, can meet to negotiate a deal **without the media**, the public, **or interest groups present**. When **deliberations are private**, parties can make offers **without being denounced** either **by their opponents** or by affected constituency groups;

there is less chance to use an offer from the other side to curry favor with constituents. Agreement to bipartisan commissions and adherence to their logic are consequential because they **represent a tacit promise not to attack the opponent**. On some issues, for instance, the promise might imply **letting the commission pick the solution** and relying on party discipline to encourage lawmakers to go along even if their districts are disadvantaged by the solution; on others it might involve nothing more than a bipartisan admission that a commission is the next step Congress should take, without any understanding that all the players are bound ex ante by the commission's resolution.52 Commissions also mean **eschewing partisan attacks** and suggest a strong preference for reaching an agreement.53

c) Congress can use the commission as a shield for backlash.

Brookings Fiscal Seminar 9 – The Brookings Institution Fiscal Seminar, group of scholars who meet on a regular basis, under the auspices of The Brookings Institution and The Heritage Foundation, June 2009, "The Potential Role of Entitlement or Budget Commissions in Addressing Long-Term Budget Problems," online: http://www.brookings.edu/~/media/Files/rc/papers/2009/06_commissions_sawhill/06_commissions_sawhill.pdf

¶ Commissions can be used for a variety of purposes that suit the needs of the President or ¶ the Congress. The role of some commissions is to develop a knowledge base about ¶ certain policies or problems free from the political machinations that are an unavoidable ¶ part of the legislative process. They can also develop policy options that members of ¶ Congress and their staff have too little time or expertise to formulate. They can serve as ¶ consensus-building vehicles from which members of Congress may garner political ¶ protection while addressing contentious issues. At other times, commissions appear ¶ simply to serve as delaying measures that can be employed to defuse a political issue ¶ until a more opportune time for action develops. The best structure for a commission – i.e. its membership, duties, duration, voting rules, ¶ etc. – will often vary depending on that commission's purpose, and therefore on the ¶ nature of the problem that the commission is addressing, the state of scientific or ¶ analytical development of the topic, and the political sensitivity of the subject matter. ¶ Those factors may also influence the nature and the standing of the commission's ¶ recommendations. ¶ ¶ For example, in 1988, Congress established the National Commission on Acquired ¶ Immune Deficiency Syndrome (AIDS) to determine the dimensions of a new and rapidly ¶ spreading communicable disease, assess the degree of understanding about the disease, ¶ and lay out steps toward ultimately controlling and treating the disease. The commission ¶ focused on the science and largely ignored the potential politics surrounding the issue.

d) Commissions arrange concessions and tradeoffs that solve the link

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 11

As participants in an incremental decision making process, ad hoc commissions perform three important functions: they formulate policy recommendations, they **garner support for policy proposals**, and they **offer concessions to appease the policy demands of various political interests**.35 Commissions, therefore, are instruments of policy incrementalism and vehicles for problem solving and conflict management, because they define problems, initiate new responses, and mobilize public opinion.36 They themselves become part of the governance process, playing an independent role in articulating constituents' concerns to the extent of forcing new issues on to the political agenda, a perspective borne out in the work of the Commission on Civil Rights and the National Commission on Disorders. The reports of the Civil Rights Commission transformed the civil rights debate from a concern about whether a pattern of voting discrimination actually existed to a consideration of the merits of various proposals to halt discriminatory practices. Similarly, the conclusions of the Commission on Disorders (the "Kerner Commission") about white racism shifted the focus of discourse about the causes of black unrest in America. In both instances, these changes in orientation generated new pressures for action and altered the evaluation context of subsequent policy deliberations.37

e) Debate won't even occur on the merits of the commission's recommendations---empirics prove

Brookings Fiscal Seminar 9 – The Brookings Institution Fiscal Seminar, group of scholars who meet on a regular basis, under the auspices of The Brookings Institution and The Heritage Foundation, to discuss federal budget and fiscal policy issues, June 2009, "The Potential Role of Entitlement or Budget Commissions in Addressing Long-Term Budget Problems," online: http://www.brookings.edu/~/media/Files/rc/papers/2009/06_commissions_sawhill/06_commissions_sawhill.pdf

Political. In some cases, reliance on the recommendations of commissions may have political ramifications as well. There are some instances where the recommendations of a commission have the effect of **limiting debate in the Congress**. (Indeed, that may be the intent.) For example, the Greenspan Commission's set of recommendations was approved in part because proponents made a persuasive argument that the package was of a **take-it-or-leave-it** form. That is, to change or substitute a different proposal for one of those recommended by the commission could lead to the collapse of a delicately balanced compromise. Similarly, because amending the package was considered dangerous to the passage of a legislative response to the looming Social Security insolvency, even the **debate on the merits** of the package and its components was **largely muted**. The use of commissions can also be seen as a means of **taking an issue outside of the political arena** where unelected nonpartisan experts can be free to produce recommendations or findings based upon sound and reasoned analysis **rather than partisan gains**. More technical issues increase the desirability that a panel be comprised of unelected experts rather than elected representatives.2

f) Legislators only backlash against the plan if they perceive they'll be held personally responsible---Commission delegation depersonalizes the process

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 29-30

Modern theories of legislative behavior begin with David R. Mayhew's book, Congress: The Electoral Connection, which suggests that congressional action has a **direct electoral connection**, in which legislators are **single-minded seekers of reelection**, motivated primarily by self-interest.1 Individuals may enter Congress with altruistic intentions, but their behavior in office is best explained by the "electoral connection": the need for reelection. As a consequence lawmakers consider the preferences of their voters, especially on issues of potentially **high salience**, that is, issues visible **to the public**.2 Congress is thus organized to promote the goal of reelection. Members follow conservative strategies to capitalize upon particularized benefits, to respond to organized groups, to claim as much credit as possible, and to mobilize only when they can claim credit.3 The incentive to delegate, therefore, must have some sort of electoral connection. Follow Mayhew's line of thought, others have developed what has come to be known as the distributive theory of legislative organization.4 According to this view, the decision to delegate is a function of the political costs and benefits for which elected officials will be held **electorally accountable**. Legislative action reflects a desire to maximize net benefits to districts in order to increase the chances for reelection. Delegation enables individual legislators to protect favored constituents5 or to **shift blame for political costs**6 onto other organizations, but makes them unable to claim full credit for any perceived benefits. Delegation is a function of this trade-off. Thus, congressional decisions to delegate occur when the decrease in attributable costs is greater than the decrease in attributable benefits. R. Douglas Arnold notes that legislators are ever mindful of the direct correlation between their individual performance and the voting booth. According to what he calls the "incumbent performance rule," voters tend to punish legislators for undesirable effects **only if there are both identifiable governmental actions and visible individual contributions**. Responsibility for unpleasant decisions is therefore **frequently delegated** to the president, bureaucrats, regulatory commissions, judges, state and local officials, or temporary **commissions** as a procedural strategy for **"masking" legislators' individual contributions**.7 Such delegation is especially prevalent when there is a desire to shed policymaking tasks that are too onerous or when dealing with issues that are likely to provoke disputes with voters. Challengers will take full advantage of reminding citizens about issues as traceable as legislative salaries, for example.

Prefer Our Ev – 2NC

Prefer our ev – political science data proves Congress appoints commissions to avoid political fallout

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. xv

There is no easy answer to why Congress creates ad hoc commissions, because the circumstances of their creation are quite complex and vary widely. Many variables go into the decision to entrust those bodies to render nonpartisan recommendations: to pacify, to promote incremental decision making, to build support for proposals, **or to obtain consensus among different interests**. Commissions are often hybrids that result from a multitude of congressional incentives. While disputes over the desirable or proper extent of delegation are commonplace, our understanding of such congressional action is arguable. The literature contains several variations on the theme that policymaking is sometimes so costly—both in terms of expertise and **for political reasons**—**that it must be delegated to others**. A number of **political scientists and economists** share the assumption that people's motives in the political arena are essentially the same as their motives in the marketplace, **resting on rational calculations of self-interest**.8 The problem of delegation is frequently derived from economic models,9 portraying delegation as an advantageous way for lawmakers to favor constituents,10 to **minimize political losses**,11 or to **shift blame**.12 Also considered important are the relationships that are assumed to exist between means and ends, which enable the lawmaker to choose the most rational means to the specified end, as well as the relationships between the costs and benefits involved, in the interest of efficiency.

CP Captures Link Turns – 2NC

Commission action captures their link turns---anyone in Congress who supports the plan will claim credit from the commission---it just takes the negative politics out of base closures

Campbell 2 – Colton C. Campbell, Associate Professor of Political Science at Florida International University, visiting Professor of Political Science at American University, 2002, Discharging Congress: Government by Commission, p. 123-124

Any congressional action which reduces and relocates functions and civilian personnel positions involves the most conspicuous long-run allocations of resources. Because it necessarily means clear winners and losers, the policymaking process is marked by **a high degree of visibility, conflict, and compromise** among a broad spectrum of political actors. Congress responds to this sort of redistributive dilemma by **masking legislators' individual contributions and delegating responsibility for making unpleasant decisions to a commission**. In this case delegating is a technique devised to transfer responsibility **but still make it possible for beneficial outcomes to be attributed to individual legislators**. Members avoid blame by saying the decision is out of their hands; they protect themselves from **going on record in favor of something negative** to their district. "Handing over federal authority to the **Base Closure and Realignment Commission** to **downsize the military infrastructure** was clearly **a way to take the politics out of the issue**," a Hill staffer commented. "**Base closing is a political hot potato**, and the last thing somebody wants to do is to vote to have a base closed in their district. By letting Congress deny the commission's recommendations, rather than support it, members can cover their backsides." Shifting the blame for any negative side effects disguises the pain to constituents. This method enables lawmakers to **vote for the general benefit** of the country **without ever having to support specific costs** to their constituents. In the strong words of Representative Don Young (R-Alaska), "Placing the national interest ahead of the wishes of a particular congressional district is socialism."44

AT: Obama Gets the Blame

You're wrong –

a) Your evidence assumes that the PCLOB is still under the authority of the executive which isn't the case anymore – that means that Obama won't be responsible.

Dalal, J.D. Yale Law, 2014 Anjali, ARTICLE: SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE, 2014 Mich. St. L. Rev. 59

[*122] Congress **responded** quickly **by passing legislation** in August **2007 to significantly restructure the PCLOB**. 280 Under the new statute, the PCLOB **is an independent agency** to be composed of five members, **four of whom are part time from outside the government and the fifth, the chairperson, is the full time member**. 281 All five members are appointed by the President and confirmed by the Senate **for a term of six years to prevent wholesale capture by a given Administration**. 282 Its authorizing statute mandates **that no more than three members can be from one political party** with the other two chosen **by the White House under consultation with Senate and House minority leadership**. 283

b) And blame vs influence – even if congress blames Obama it doesn't link because he didn't have to lobby for votes and expend his capital which is what our disad is about.

Specter Proposal CP – HJPV

Negative

1nc

The United States Federal government should amend the FISA Amendments Act of 2008 to remove blanket immunity provisions for telecommunications companies. The United States federal government should oversight of the Planning Tool for Resource Integration, Synchronization, and Management (PRISM) program to the Terrorist Surveillance Program.

The CP allows for FISA effectiveness and Congressional oversight- solves all sqou NSA overstretch and the terror DA

HLR, 09 (Harvard Law Review, Student run publication with articles from professors, judges, practitioners, and students; February 2009; Harvard Law Review, Vol. 122, No. 4 (Feb., 2009), pp. 1271-1278; "Electronic Surveillance — Congress Grants Telecommunications Companies Retroactive¶ Immunity from Civil Suits for Complying with NSA Terrorist Surveillance Program. — Fisa¶ Amendments Act of 2008, Pub. L. No. 110-261, 122 Stat. 2436"; JSTOR)//JPM

¶Senator Specter subsequently proposed an amendment that would¶ "substitute the U.S. Government as a party defendant for the telephone¶ companies," thereby shielding them from liability while still allowing¶ courts to rule on the legality of the TSP and the constitutional¶ questions raised by the President's assertions of executive authority.25¶ Government substitution would be dependent upon a finding by the¶ FISA court that the telecommunications companies acted "in good¶ faith."26 The Senate rejected this amendment by a vote of sixty-eight¶ to thirty.27 Ultimately, the Senate passed the bill and sent it back to¶ the House with the blanket immunity provision intact.28¶ ¶ On June 19, 2008, Representative Silvestre Reyes introduced the¶ FISA Amendments Act of 2008[29] in the House.30 This bill was substantially¶ the same as the version passed by the Senate.31 On June 20,¶ the House voted to pass the bill.32 The Senate subsequently considered¶ the House bill and rejected three more amendments that would¶ have altered or eliminated the retroactive immunity provision.33 On¶ July 9, the Senate passed the House bill by a vote of sixty-nine to¶ twenty-eight.34 The President signed the bill into law the next day.35¶ The final version of the immunity provision states that courts¶ should dismiss any suit against an electronic service provider alleged¶ to have provided assistance "in connection with an intelligence activity¶ involving communications that was . . . designed to detect or prevent a¶ terrorist atack .. . against the United States"36 if the Attorney General¶ certifies that one of two conditions imet. Suits should be dismissed if¶ the Attorney General certifies either that the company was acting pursuant¶ to a "written request or directive" from the government indicating¶ that such activity was "(i) authorized by the President; and (ii) determined¶ to be lawful,"37 or else that the company "did not provide the¶ alleged assistance."38 The Act provides for a "substantial evidence"¶ standard for judicial review of the Attorney General's certifications.39¶ Additionally, the Act provides that courts may limit public disclosure¶ of any certificationr supplemental materials that would prove harmful¶ to national security.40¶ ¶ The blanket immunity provision retroactively validates presidential¶ directives to private parties that ordered them to conduct potentially¶ illegal actions.41 This result is problematic for several reasons. First,¶ it undermines the statutory framework that Congress originally established¶ in FISA. Second, it undermines the ability of Congress to play a¶ meaningful role in determining the proper procedures for gathering intelligence,¶ as it weakens the requirement that the Administration get¶ statutory approval before fundamentally changing surveillance policy.¶ Finally, it greatly reduces the chances that a court will be able to review¶ the legality of the TSP and the constitutionality of the President's¶ assertions of executive authority. Proponents of the blanket immunity¶ provision argued that it was necessary for a number of reasons, including¶ fairness and national security.42 However, **the amendment proposed by Senator Specter would have addressed most of these concerns**¶

while avoiding many of the problems of the blanket immunity provision.¶ Congress should have adopted this amendment instead.¶¶ When Congress enacted FISA, it attempted to establish a clear and¶ exclusive framework for all parties to follow when the government¶ seeks the aid of private companies in conducting electronic surveillance.[43]¶ Members of the Bush Administration appear to have acknowledged¶ that the TSP operated outside this statutory framework,[44]¶ but they argue that the TSP was nevertheless legally justified both by¶ the Authorization for Use of Military Force[45] (AUMF) passed by Congress¶ in 2001 and by the President's inherent authority under Article II¶ of the Constitution.[46] **The blanket immunity provision undermines¶ FISA by granting retroactive immunity to telecommunications companies¶ without requiring any showing that they reasonably believed that¶ assisting the intelligence agencies was legal;**[47] the Attorney General¶ merely has to certify that the company was told by the government¶ that its actions were legal.[48] Since the Administration appears to have¶ based its legal reasoning upon executive authority rather than compliance¶ with FISA,[49] neither the companies nor the President needed to¶ believe they were complying with FISA in order for the companies to¶ receive immunity. Congress has therefore allowed the Administration¶ and private companies to act outside of the statutory framework that¶ Congress created. The effectiveness of FISA as a comprehensive¶ scheme governing electronic surveillance is undermined if the President¶ can circumvent its procedures simply by asserting that he has the¶ executive authority to act outside of its framework. **FISA's effectiveness¶ will be further undermined if telecommunications companies are¶ willing to cooperate with intelligence agencies even when FISA procedures¶ have not been followed.**¶¶ Furthermore, as the intelligence community increasingly relies on¶ the help of private companies to conduct electronic surveillance, it is¶ essential that a range of government actors - including Congress -¶ gets to weigh in on important policy considerations, including the¶ proper balance between individual privacy rights and national security.[50]¶ **Congress can and should serve as a check on the executive, as¶ the executive branch may be "institutionally predisposed" to value security¶ over civil liberties.**[51] It is therefore important that Congress establish¶ the proper procedures for the Administration to follow when it¶ works with the private sector to conduct electronic surveillance, and¶ that Congress then makes sure that these procedures are followed.¶ When the Administration and private parties act outside of the statutory¶ framework, they should pay a price, even if Congress would have¶ approved of their actions had its approval been sought; in this case,¶ that price should be civil liability. There is nothing wrong with Congress¶ changing FISA at the request of the Administration; in other¶ provisions of the Act, Congress does just that - it updates and¶ changes the procedures for conducting electronic surveillance.[52] However,¶ **in order for Congress to play a meaningful role in determining¶ surveillance policy, the Administration should have to seek Congress's¶ approval before making a major policy change and acting outside the¶ statutory framework.** Despite its intention to limit extralegal abe able to determine the validity of the Administration's argument¶ that the President has the inherent constitutional authority to conduct¶ electronic surveillance without congressional approval and that this¶ authority is supplemented by the AUMF.[55] Regardless of whether the¶ Administration's arguments would hold up in court, a decision one¶ way or the other would provide more certainty to all parties involved:¶ **the Administration would know whether it has to follow FISA under¶ all circumstances; Congress would know to what extent it can limit the¶ President's ability to conduct surveillance; and the telecommunications¶ companies would know whether they can rely on the Administration's¶ assertions that providing assistance is legal.** Also, since any pending¶ lawsuits will almost certainly be dismissed, individuals whose privacy¶ rights were violated will be

unable to vindicate those rights in court.[56] ¶ Because of these problems, Congress should not have enacted the blanket immunity provision unless it was absolutely necessary, which it was not. Proponents of blanket immunity argued that it was necessary both to prevent unfairly punishing telecommunications companies that tried to assist the government **in preventing another terrorist attack**[57] and to ensure the cooperation of telecommunications companies in the future.[58] However, **The amendment proposed by Senator Specter would have accomplished both of these goals while avoiding some of the problems inherent in the blanket immunity provision**. Under this amendment, any telecommunications company that complied with the government and acted in good faith would be shielded from liability. If the FISA court found that a company did act in good faith, then the government would take its place in any lawsuits.[59] According to Senator Sheldon Whitehouse, it would be proper to hold the government accountable because "if the companies acted reasonably and in good faith at the direction of the Government but ended up breaking the law, the Government truly is the morally proper party to the case."[60] ¶ Furthermore, some companies had threatened that if they were not given immunity, they would refuse to cooperate with the government in the future "except under strict compulsion."[61] The Specter amendment would enable most carriers to escape liability through a showing arrangements, Congress has signaled to both the Administration and the telecommunications companies that they can ignore the statutory framework without suffering adverse consequences. As a result, the Administration is likely to rely more on informal agreements with telecommunications companies,[53] and Congress's role in making policy and providing oversight will be diminished. ¶ Finally, the blanket immunity provision will also likely prevent any judicial rulings on the underlying legal issues at stake.[54] No court will of good faith, thereby providing them with the desired immunity and encouraging their future cooperation. ¶ ¶ In addition to addressing many of the concerns of the proponents of blanket immunity, the Specter amendment would also have reduced some of the problems caused by the blanket immunity provision. First, by protecting companies only after a judicial finding that they acted in reasonable good faith, Congress would have sent a clear signal to private companies that they must determine for themselves whether a government request for assistance is legal. Congress would also have sent a message to the President that he cannot ignore existing statutes and authorize private parties to commit potentially unlawful actions without being subjected to intense judicial scrutiny. Congress would therefore have encouraged both the Administration ad the private sector to comply with FISA. As a result, Congress would have reasserted its role in determining the proper surveillance procedures by holding parties accountable for circumventing those procedures. The Specter amendment may also have allowed courts to rule directly on the legality of several aspects of the TSP. Finally, the amendment would have given private citizens the "ability to vindicate their rights in court regarding wiretapping abuses of the past."[62] ¶ Senator Specter's amendment presented Congress with an opportunity to encourage both the executive branch and the private sector to follow the law, to provide some accountability for what appear to be extensive violations of the law, and to reassert itself as an important player in the debate over how to conduct electronic surveillance. Congress could have achieved these goals without making any major sacrifices in terms of fairness or national security. Yet Congress, at the behest of the Administration and the telecommunications industry, instead chose to provide blanket immunity to the telecommunications companies and virtually ensure that important legal questions about the TSP will remain unanswered.[63] Although it is important to encourage

cooperation between telecommunications companies and the intelligence agencies, it is also important for Congress to play a role in determining the proper balance between security and civil liberties rather than leaving such a determination to the Administration.64 By allowing the Administration and telecommunications companies to ignore FISA with impunity, Congress has abdicated this responsibility.

Solves: PRISM

Blanket immunity is the biggest problem facing domestic surveillance – pre-req to aff solvency

EFF, 2008 (Electronic Frontier Foundation, leading nonprofit organization defending civil liberties in the digital world; 2008; "Archive: The Case Against Retroactive Amnesty for Telecoms"; https://www.eff.org/pages/case-against-retroactive-amnesty-telecoms)//JPM

The litigation against AT&T and other companies is based upon clear, first-hand whistleblower documentary evidence¶ – authenticated in court by AT&T itself in the course of unsuccessfully trying to protect the documents as trade secrets – that¶ for years on end every e-mail, every text message, and every phone call carried over the massive fiber-optic links of sixteen separate¶ companies routed through AT&T's Internet hub in San Francisco – hundreds of millions of private, domestic communications¶ – have been illegally copied in their entirety by AT&T and knowingly diverted wholesale by means of multiple "splitters"¶ into a secret room controlled exclusively by the NSA. The whistleblower also discovered that there were at least five other such¶ rooms in San Diego, Los Angeles, San Jose, Seattle and Atlanta. Any filtering of the information took place only after the¶ entire fiber-optic data stream was copied and diverted into the secret room.¶ **As Judge Walker has held, it** simply **cannot be** credibly **suggested that the Government's telephone company partners in¶ a massive, ongoing, wholesale dragnet of millions upon millions of domestic e-mail, text message and phone communications¶ were under the excusable "misimpression" that this surveillance dragnet only "incidentally" might sweep in the¶ occasional domestic-to-domestic communications**. To the contrary, the AT&T whistleblower who installed and maintained¶ the "splitter" technology (and whose documents and affidavit are at the core of the case against AT&T) has made it¶ clear that the system clearly was designed to capture – and did in fact capture – hundreds of millions of ordinary domestic¶ communications, and had the technical capability to analyze them in real time.¶ Furthermore, independent experts have confirmed that the location of these splitters in San Francisco is inconsistent with¶ surveillance aimed solely at international or foreign traffic. There are apparently no foreign communications cables that¶ emerge from the sea near San Francisco or near another of the secret room locations confirmed in the whistleblower's documents,¶ hundreds of miles from the seashore in Atlanta, Georgia! **A federal court should weigh these facts.**

Solves: NSA Overreach

Blanket amnesty allows the government to retroactively exempt telecommunications companies from legal consequences to conducting mass surveillance – means even if the plan can solve for NSA surveillance, they will be circumvented by companies, only the CP solves.

Amnesty provisions for the telecom industry are a prereq to combating NSA overreach

-Indicting blanket amnesty was what originally led to the creation of the FISC

In this article, we provide a framework for demonstrating the illegality of the NSA surveillance programmes by arguing that these activities should be considered acts of state-facilitated state-corporate crime. That is, we contend that the broad and blanket surveillance of US citizens (Americans) who are not suspected of any criminal offence should be considered criminal activity that is occurring through the collusion of state and corporate entities. Specifically, we maintain that the NSA's spying on Americans' electronic communications, in partnership with Verizon, Google, and other telecommunications companies, is (1) in violation of the right to privacy, as outlined by numerous international human rights treaties; (2) unlawfully secretive and thus lacks the transparency guaranteed by international human rights treaties and (3) antithetical to democracy by unlawfully attacking and seeking to punish whistle-blowers, thereby silencing discourse, shirking accountability and ultimately undermining the rule of law. In addition, we maintain that it is the weak system of checks and balances offered by the FISA Court, and specifically the changes made to it as a result of the USA PATRIOT Act 2001, that has facilitated the state and corporate mass surveillance system. Using the definition of state-corporate crime developed by Aulette and Michalowski (1993), we intend to highlight the dangers of these relationships for liberty, justice and democracy.¶ State-Corporate Crime¶ Given that this issue is devoted to examining state-corporate crime, we offer only a brief review of the concept of state-corporate crime and the two types outlined by Michalowski and Kramer (2006). Michalowski and Kramer (2006: 20) define state-corporate crime as¶ illegal or socially injurious actions that result from a mutually¶ reinforcing interaction between (1) policies and/or practices in¶ pursuit of goals of one or more institutions of political¶ governance and (2) policies and/or practices in pursuit of the¶ goals of one or more institutions of economic production and¶ distribution.¶ Michalowski and Kramer distinguish between state-initiated and state-facilitated corporate crime and stress the importance of closely examining the interrelationships between state and corporate actors. They argue,¶ State-initiated corporate crime occurs when corporations employed by a government engage in organizational deviance at the direction of, or with the tacit approval of, that government. State-facilitated corporate crime occurs when government institutions of social control are guilty of clear failure to create regulatory institutions capable of restraining deviant business activities, either because of direct collusion between business and government or because they adhere to shared goals whose

attainment would be hampered by aggressive regulation. (Michalowski and Kramer 2006: 21)¶ Although the NSA surveillance can be seen as an example of both types, we focus here on examining the mass surveillance of telecommunications data as state-facilitated, documenting the direct collusion between telecommunications companies and the government and the weak legislative privacy protections that allow such companies to collect large amounts of personal, private data about individuals.¶ The NSA, Telecommunications Companies and Illegal Spying: A Brief History¶ The NSA has long coupled with the corporate sector to conduct warrantless surveillance of Americans. As Bamford (2008) wrote, the "rocky marriage" between the NSA and telecommunications companies began in the days following World War I, when cable companies turned over telegraph messages to the NSA. Project Minaret was a programme of the 1970s in which Radio Corporation of America (RCA), Western Union and other companies gave the NSA all incoming and outgoing US telephone calls and telegrams (Chaterjee 2013b). For decades, telecommunications leaders like AT&T "... have had a very secret, very cozy relationship with the NSA through the National Security Agency Advisory Board (NSAAB), made up of top company executives" (Bamford 2008).¶ Project Minaret, and others like it, led to a series of congressional hearings in 1975. The Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities, which was chaired by Frank Church of Idaho, resulted in the creation of the FISA. FISA created a special court, known as the FISA Court, which approves actions to gain intelligence via electronic surveillance of foreign powers or agents of foreign powers (Chaterjee 2013b). Eleven federal circuit judges, appointed by the Chief Justice of the Supreme Court, make up the FISA Court, which meets in secret. Proceedings from the FISA Court are not made public. Targets of FISA-approved searches are not notified that they have been targeted unless they are to be prosecuted. Thus, any searches that result from FISA Court approval remain unknown to the public, and even to much of the Congress (Bamford 2008). They are not so secret, however, to the many private corporations with whom the NSA collaborates for intelligence gathering. FISA has been amended several times, each time weakening its provisions. The USA PATRIOT Act (1) eliminated the requirement that gathering foreign intelligence be the primary purpose of a warrant, replacing it with the language that it be a "significant purpose" (Keenan 2005). Keenan (2005: 104) explained, "When foreign-intelligence gathering needs to be merely 'a significant purpose', it is more likely that the government will be able to use the lower standard to end-run the privacy protections of the Constitution."¶ As a result of the USA PATRIOT Act changes to FISA, there has been a dramatic increase in warrants issued by the court. The number of warrants requested and granted increased 75 per cent between 2000 and 2004, and in 2002, FISA warrants outnumbered traditional federal search warrants for the first time (Keenan 2005). Bamford (2008) describes how, by 2008, the NSA was not only the largest and the costliest spy organization in the world but it had also become the most intrusive. No longer a "backwater agency whose director had to fight to sit at the same table with the CIA chief', the NSA currently has tens of thousands of employees and more than 50 buildings equipped with the most sophisticated technology (Bamford 2008: 13). Every day the NSA intercepts and stores 1.7 billion emails, phone calls, texts and other electronic information. Its new data centre in Utah is 5.7 times the size of the US Capitol (Kelley 2012).¶ As early as the summer of 2002, AT&T technician Mark Kline noted that the NSA was doing something illegal. Kline explained, "it appears the NSA is capable of conducting what amounts to vacuum-cleaner surveillance of all the data crossing the Internet--whether that be people's email, Web surfing, or any other data ... A lot of this was domestic" (in Bamford 2008: 191). **Much of this huge volume of data collected through the NSA's NARUS system located at AT&T's San Francisco office came from the telecommunications company's partners, like Sprint and Qwest** (Electronic Frontier Foundation n.d.). Moreover, "**America's two major telecom companies, AT&T and Verizon, have outsourced the bugging of their entire networks--carrying billions of American**

communications every day--to two mysterious companies with very troubling foreign connections" (Bamford 2008: 236), both formed in Israel and having no oversight by Congress.¶ NSA-Corporate Programmes as State-Facilitated State-Corporate Crime¶ In this section, we demonstrate how the NSA's spying programmes meet the criteria to be considered state-facilitated state-corporate crime.¶ Facilitated by state through weakening of checks and balances¶ Post 9/11, the growth in the amount of data being collected, as well as technological advancements, overwhelmed the NSA and prompted the need for more private contractors to do the increasing amount of data analysis. According to retired Air Force General and former director of the NSA, Michael V. Hayden, "the government's massive data collection and surveillance system was largely built not by professional spies or Washington bureaucrats but by Silicon Valley and private defense contractors" (quoted in Hirsh 2013). As Bamford (2008: 197) noted, "The NSA's new willingness to outsource eavesdropping, plus the warrantless eavesdropping and other new programs, thus became a giant boon to a growing fraternity of contractors who make their living off the NSA." The fact that the US national security functions have been delegated increasingly to corporations reflects a wider pattern of privatization and deregulation that has been gaining momentum since the Reagan administration. Not only has the national intelligence apparatus increasingly relied on private contractors, but the leadership of the national intelligence agencies is essentially the same as those with whom the government has contracted for surveillance services. These people are "... ideological allies", who are "**sympathetic to industry's interests. In this new environment, corporations and private entities of all sorts enjoy a new measure of sovereignty and the capacity to determine for themselves what they will and will not disclose to the public**" (Gup 2007: 24). Put simply, this is the "power elite" about whom sociologist Mills (1956) cautioned as having disproportionate power and influence. For example, Booz Allen Hamilton, a privately owned consulting company located in Virginia worth an estimated $5 billion annually, is one of the largest of the companies that contracts with the government to conduct surveillance. The current Director of National Intelligence (DNI), James Clapper, is a former Booz Allen executive. The company's current vice chairman, Mike McConnell, was the DNI in the George W. Bush administration (Goldman 2013).¶ There seems to be no end to the expansion of the government-corporate spying programme. A 2012 investigative report by Wired magazine revealed that the NSA is building a massive supercomputing facility in the Nevada desert (Bamford 2012, 2013). Former NSA employees who have examined the FISA order asking Verizon to provide information to the NSA note that as few as 40 and as many as 79 companies likely received similar orders in 2013 alone (Eisler and Page 2013). In November 2013, Snowden revealed additional documentation demonstrating that the NSA relies on relationships with corporations to obtain the vast amount of data it collects from fibre-optic cables (MacAskill and Rushe 2013). In a presentation prepared by the NSA's Special Source Operations Division, the opening section states the agency's goal to "Leverage unique key corporate partnerships to gain access to high-capacity international fiber-optic cables, switches and/or routes throughout the world" (MacAskill and Rushe 2013).

--Ext. Congressional Oversight Solvency

Solely executive control of surveillance ineffective- invades privacy and needs legislative checks

How Congress lost control of domestic surveillance"; Issues in Governance Studies Vol. 68;
http://www.brookings.edu/~/media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf)//JPM

¶During the last five years of legislative debates over the PATRIOT Act, Congress has failed to define¶ or control surveillance policy. Prior to the Snowden leaks, most members had little awareness of¶ NSA activities and Congress had little capacity to impose constraints. Now, more than 18 months¶ after Snowden exposed the mass seizure of phone records, not much has changed. To a great¶ extent, the source of difficulty has been the inadequacy of the institutional arrangements for¶ legislative deliberation on secret programs. Some members have declined opportunity to learn about¶ domestic-spying practices, while others have opposed placing restrictions on the NSA for fear of¶ giving terrorists any tactical advantage.¶¶ If Congress had conducted thorough, informed deliberations at all stages, we suspect it would have¶ endorsed extensive collection of communication records, but it would have also imposed limitations¶ and constraints to minimize the harm to privacy interests. Instead, it gave the executive branch¶ essentially unfettered authority to operate a massively intrusive program.¶

Congressional oversight fills in for FISA failures

HLR, 08 (Harvard Law Review, Student run publication with articles from professors, judges, practitioners, and students; June 2008; Vol. 121, No. 8; "NOTE: SHIFTING THE FISA PARADIGM: PROTECTING CIVIL LIBERTIES BY ELIMINATING EXANTE JUDICIAL APPROVAL"; http://www.harvardlawreview.org/wp-content/uploads/pdfs/shifting_the_FISA_paradigm.pdf)//JPM

¶The testimony during the initial FISA hearings of two former Attorneys¶ General, themselves responsible for authorizing foreign intelligence¶ surveillance in the pre-FISA arrangement, is instructive. Former¶ Attorney General Ramsey Clark observed that "we greatly¶ exaggerate the safety and value of" a requirement that "all wiretaps¶ . . . be approved by a judicial officer." Arguing that "[t]he idea¶ that there can be a meticulous review of these applications by the Judiciary¶ is contrary to our experience," he put primary emphasis on political¶ checks through reporting requirements and congressional oversight¶ and standard-setting.91 Additionally, former Attorney General¶ Elliot Richardson noted the "important role in assuring that this sensitive¶ tool is not abused" to be played by the Senate, via both direct¶ oversight and the confirmation of the Attorney General and Director¶ of the FBI.92¶ ¶ More importantly, the legislative history suggests that the most¶ consequential element of FISA is not its judicial review provisions.¶ Rather, FISA's crucial move was to institute a reliance on the use of¶ "public laws, publicly debated and adopted, which specify under what¶ circumstances and under what restrictions electronic surveillance for¶ foreign intelligence purposes can be conducted."93 The reliance on political¶ checks proposed in this Note avoids the problem identified by¶ Congress when it initially enacted FISA and raised by the TSP — that¶ "the substantial safeguards respecting foreign intelligence electronic¶ surveillance [then] embodied in classified Attorney General procedures" were not enough to overcome "the inappropriateness of relying¶ solely on executive branch discretion to safeguard civil

liberties."[94] Here, the Executive is subject not merely to internally created standards that it might change or ignore at will, but also to those set down by the statute, which were themselves created through the public "weighing of important public policy concerns" that Congress performs.[95] **Congress is better situated constitutionally and better equipped institutionally to make the sort of value judgments and political determinations that are necessary to fulfill FISA's purposes. If "[t]he government may abuse FISA in situations like that involving the L.A. Eight, when intrusive electronic surveillance is undertaken based on political activities, rather than on support for terrorist activities,"[96] it seems that Congress will be much better than courts at sniffing out such violations and fashioning broader and more flexible remedies.** If one hopes to realize the core purpose of FISA — as described by the ACLU, "to prevent future presidents from intercepting the 'international communications of American citizens whose privacy ought to be protected under [our] Constitution' ever again"[97] — then a new approach is needed.

--Ext. FISA Effectiveness Solvency

An effective FISA court threads the needle between stopping terror attacks and maintaining civil liberties

Blum, 08 (Stephanie, attorney for the Transportation Security Administration,¶ Department of Homeland Security. She is currently on a detail to the Department of¶ Justice. Ms. Blum holds a M.A. in security studies from the U.S. Naval Postgraduate¶ School's Center for Homeland Defense and Security, a J.D. from The University of Chicago¶ Law School, and a B.A. in political science from Yale University. She would like to thank Professor Robert¶ Chesney and the participants at the annual national security law junior faculty workshop for¶ their suggestions. The views in this article are the author's and do not necessarily represent¶ the views of the U.S. Government to include the Department of Homeland Security and¶ Department of Justice; 2008; "WHAT REALLY IS AT STAKE WITH THE FISA¶ AMENDMENTS ACT OF 2008 AND IDEAS FOR¶ FUTURE SURVEILLANCE REFORM"; http://128.197.26.34/law/central/jd/organizations/journals/pilj/vol18no2/documents/18-2BlumArticle.pdf, HeinOnline)//JPM

FISA does provide some added protection for U.S. citizens and permanent¶ resident aliens (referred to as "U.S. persons" in FISA). To obtain a FISA warrant¶ targeting a U.S. person, there must also be probable cause to believe that¶ the person is "knowingly" engaged in activities that "involve or may involve a¶ violation of the criminal statutes of the United States."48 In other words, while¶ suspicion of illegal activity is not required in the case of aliens who are not¶ permanent residents – as applied to them, membership in a terrorist group or Applications for FISA warrants go to federal judges that comprise the Foreign¶ Intelligence Surveillance Court (FISC). Like a grand jury proceeding, the¶ FISC conducts its business ex parte, meaning the government is the only party¶ present at its proceedings. Appeals from the FISC go to the FISCR. The FISC¶ has jurisdiction to hear applications for, and to grant court orders approving,¶ electronic surveillance or physical searches anywhere in the United States to¶ obtain foreign intelligence information under FISA.¶ In order for an executive official to get a FISA warrant to conduct "electronic¶ surveillance," the FISC must approve several requirements: (1) probable¶ cause that the target is an agent of a foreign power or a foreign power (and the¶ additional requirements discussed above if the target is a U.S. person);50 (2)¶ probable cause that the target is using or about to use the "facility" to be monitored;51¶ (3) applicable "minimization procedures" designed to minimize the acquisition¶ and retention, and to prevent the dissemination, of information concerning¶ U.S. persons that is unrelated to foreign-intelligence;52 (4) a¶ certification that the information sought "cannot reasonably be obtained by normal¶ investigative techniques,"53 and (5) the Attorney General must approve the¶ application and a high-ranking intelligence official must certify that a "significant¶ purpose" of the surveillance is to gain foreign intelligence information.54¶ If the target is a U.S. person, the basis for the aforementioned review is subject¶ to review for clear error.55

--Ext. Removing Blanket Immunity Solvency

Blanket immunity provisions allow for companies to hide NSA overreach – prereq to aff solvency

Masnick, 14 (Mike, founder and CEO of Floor64 and editor of the Techdirt blog; Jul 9th 2014; "Senate Intelligence Committee Approves Dangerous Cybersecurity Bill"; https://www.techdirt.com/articles/20140708/18003227819/senate-intelligence-committee-approves-dangerous-cybersecurity-bill.shtml)//JPM

We've written about the Senate's dangerous CIPA bill -- which is Congress' latest (bad) attempt to help increase the NSA-led surveillance state by giving companies blanket immunity if they share private information with the government... all in the name of overhyped "cybersecurity." We, of course, have been through this fight before, with the CISPA bill, which passed in the House a few times, but couldn't get any traction in the Senate. This time around, the (really bad) Senate version passed out of the Senate Intelligence Committee by a 12-3 vote (held in secret, of course). Not surprisingly, two of the three who voted against it are Ron Wyden and Mark Udall. ¶ By now you should know: if Ron Wyden and Mark Udall are against something related to surveillance, you should be against it too (and the opposite is true as well). ¶ The "good" news is that despite the overwhelming support by the NSA's biggest cheerleaders on the rest of the Senate Intelligence Committee, it seems unlikely that the bill will have enough support in the overall Senate. And it will hopefully remain that way. This bill is a dangerous one, that is solely designed to give the NSA and some companies additional legal "cover" for aiding the NSA's surveillance efforts. Thanks to Snowden's revelations, companies are, in general, a lot less willing to do that these days anyway, but giving those companies blanket liability to do so is a bad, bad idea. ¶ And while there's still little to no evidence that the "cybersecurity threat" is anywhere close to as big as what the FUDmongers insist it is, even if that is true, no one has yet explained what laws actually get in the way of having companies share critical cybersecurity information as needed. And, if such laws really do exist, any solution should to just be narrowly focused on fixing those laws, rather than granting broad immunity for sharing just about any info.

AT: Signal/Perception Solvency Deficits

Congressional oversight is a stronger IL to NSA perception and legitimacy

Schneier, 15, fellow at the Berkman Center for Internet and Society at Harvard Law School, a program fellow at the New America Foundation's Open Technology Institute, a board member of the Electronic Frontier Foundation, an Advisory Board Member of the Electronic Privacy Information Center, and the Chief Technology Officer at Resilient Systems, Inc (Bruce, Data and Goliath: the Hidden Battles to Collect Your Data and Control Your World, Ch. 13)//AK

More members of Congress must commit to meaningful NSA reform. We need comprehensive strategic oversight by independent government agencies, based on full transparency. We need meaningful rules for minimizing data gathered and stored about Americans, rules that require the NSA to delete data to which it should not have access. In the 1970s, the Church Committee investigated intelligence gathering by the NSA, CIA, and FBI. It was able to reform these agencies only after extensive research and discovery. We need a similar committee now. We need to convince President Obama to adopt the recommendations of his own NSA review group. And we need to give the Privacy and Civil Liberties Oversight Board real investigative powers.¶ Those recommendations all pertain to strategic oversight of mass surveillance. Next, let's consider tactical oversight. One primary mechanism for tactical oversight of government surveillance is the warrant process. Contrary to what many government officials argue, warrants do not harm security. They are a security mechanism, designed to protect us from government overreach.¶ Secret warrants don't work nearly as well. The judges who oversee NSA actions are from the secret FISA Court. Compared with a traditional court, the FISA Court has a much lower standard of evidence before it issues a warrant. Its cases are secret, its rulings are secret, and no one from the other side ever presents in front of it. Given how unbalanced the process it is, it's amazing that the FISA Court has shown as much backbone as it has in standing up to the NSA (despite almost never rejecting a warrant request).¶ Some surveillance orders bypass this process entirely. We know, for example, that US Cellular received only two judicially approved wiretap orders in 2012—and another 10,801 subpoenas for the same types of information without any judicial oversight whatsoever. All of this needs to be fixed.¶ Start with the FISA Court. It should be much more public. The FISA Court's chief judge should become a position that requires Senate confirmation. The court should publish its opinions to the extent possible. An official public interest advocate should be assigned the task of arguing against surveillance applications. Congress should enact a process for appealing FISA rulings, either to some appellate court or to the Supreme Court.¶ But more steps are needed to put the NSA under credible tactical oversight. Its internal procedures are better suited to detecting activities such as inadvertent and incorrect surveillance targeting than they are to detecting people who deliberately circumvent surveillance controls, either individually or for the organization as a whole. To rectify this, an external auditor is essential. Making government officials personally responsible for overreaching and illegal behavior is also important. Not a single one of those NSA LOVEINT snoops was fired, let alone prosecuted. And Snowden was rebuffed repeatedly when he tried to express his concern internally about the extent of the NSA's surveillance on Americans.¶ Other law enforcement agencies, like the FBI, have their own internal oversight mechanisms. Here, too, the more transparency, the better. We have always given the police extraordinary powers to investigate crime. We do this knowingly, and we are safer as a society because of it, because we regulate these actions and have some recourse to ensure that the police aren't abusing them. We can argue about how well these are working in the US and other countries, but the general idea is a sound one.

Ext. Terror Net Benefit

The CP doesn't decrease domestic surveillance, clearly we don't link to the Terror DA.

CP resurrects the TSP- solves terror attacks

Sessions, 5/20/15 (Jeff, Senator from Alabama, former practicing attorney in Russellville, Alabama, United States Attorney for Alabama's Southern District, a position he held for 12 years. Sessions was elected Alabama Attorney General in 1995, serving as the state's chief legal officer until 1997, when he entered the United States Senate; "Why Should Terrorists Be Harder to Investigate than Routine Criminals?"; http://www.nationalreview.com/article/418675/why-should-terrorists-be-harder-investigate-routine-criminals-jeff-sessions)//JPM

The 9/11 attacks exposed the dangerous wall separating the intelligence and law-enforcement communities. In response, Congress developed a number of tools to eliminate those barriers so that critical information could be timely and appropriately shared to address radical Islamic terrorism. Among them was Section 215 of the USA Patriot Act.¶ In 2006, the National Security Agency transitioned the bulk telephone-metadata acquisition program authorized under **the president's Terrorist Surveillance Program** to the business-records court-order authority of Section 215**. Since shortly after 9/11, this program has been helping to keep Americans safe by acquiring non-content call records, i.e., telephone numbers and the date, time, and duration of a call. This program has yielded invaluable intelligence that has helped prevent attacks and uncovered terrorist plots.**

The TSP in its current form (PRISM) **won't stop attacks – a revival of the original program is needed**

Taylor, 13 (Robert, writer for PolicyMic; 7/19/13; "PRISM Probably Never Stopped — and Never Will Stop — a Terrorist Attack"; http://mic.com/articles/49449/prism-probably-never-stopped-and-never-will-stop-a-terrorist-attack)//JPM

Thanks to NSA whistleblower Edward Snowden, we now know many of the dirty details behind the U.S. government's surveillance programs and the creation of a vast surveillance and data storage system.¶ Not only has Snowden helped further unturn the rock of secrecy behind these surveillance programs but his revelations and leaks have helped spark the debate about the proper balancing of freedom and security. If we are to supposedly accept these unprecedented powers and violations of civil liberties, does this type of mass surveillance at least actually keep us safe?¶ While the official party line, repeated ad nauseum, is that the NSA surveillance program has helped stop "dozens" of terrorist attacks, a closer look at the claims made by the White House and the program's defenders cast serious doubt about the program's actual effectiveness.¶ In a recent congressional hearing, Senators Mark Udall and Ron Wyden released a joint statement calling on NSA head General Keith Alexander — "Emperor Alexander" of the covert national security state — to be more forthcoming about the surveillance program. The senators argue that the attacks Alexander claims were thwarted "appear to have been identified using other collection methods. The public deserves a clear explanation." They also could have been one of the FBI's many, many "terrorism" sting operations.¶ Washington's Blog cites numerous sources — including an NSA veteran, Fortune Management, Wired, and constitutional and military law expert Jonathan Turley — which show that the NSA PRISM program, and other Orwellian surveillance programs, are useless and ineffective,

resulting in false information and are actually hindering the process of good police work and intelligence gathering. It didn't stop the Boston Bombing or 9/11 either.¶ Apparently the more eyes Big Brother has, the less he actually sees. The surveillance state is, after all, a massive centrally-planned government bureaucracy so one shouldn't be surprised by incompetence. Do we really want to entrust the government this type of surveillance power "to keep us safe" when it doesn't even know who it's killing with drone strikes?

Ext. Politics Net Benefit

Blanket immunity provisions unpopular in Congress

McGarity et al 13 (Thomas O., CPR Member Scholar, Prof. at UT, Editor of the Texas Law Review, leading scholar in the fields of both administrative law and environmental law; Sidney A. Shapiro, Prof. Law at Wake Forest, Frank U. Fletcher Chair of Administrative Law; Nicholas Vidargas, former Policy Analyst with the Center for Progressive Reform, honors attorney fellow at the U.S. Environmental Protection Agency, Region 9, Office of Regional Counsel, in San Francisco, where he worked on enforcement of the Comprehensive Environmental Response, Compensation, and Liability Act and on Clean Water Act rulemaking, and where he initiated the first enforcement action under the Clean Air Act General Duty Clause in Region 9, Stanford University Grad; March 2013; "Sweeping Corporate Immunity¶ for the Fuel Industry:¶ The Next Front in the¶ 'Corporate Accountability' Wars"; http://www.progressivereform.org/articles/Corporate_Immunity_Fuel_Industry_1303.pdf)//JPM

The latest battle in the corporate accountability wars is an effort to persuade Congress to¶ grant blanket immunity to entire industries that might face litigation for defective products¶ or corporate negligence that endangers human health, imperils the environment, and¶ damages private property. The concept of sweeping corporate immunity from state tort law¶ – a twisted cousin of federal preemption legislation that also dismisses the rights of victims of¶ corporate negligence – was born in response to the hugely successful tobacco litigation of the¶ 1980s and 1990s, and later attempts at comprehensive litigation against gun manufacturers¶ and the fast food industry.

Blanket immunity provisions specifically unpopular in Congress- Specter and Feinstein

Nakashima, 07 (Ellen, writer for The Washington Post, national security reporter for The Washington Post. She focuses on issues relating to intelligence, technology and civil liberties. She previously served as a Southeast Asia correspondent for the paper. She wrote about the presidential candidacy of Al Gore and co-authored a biography of Gore, and has also covered federal agencies, Virginia state politics and local affairs. She joined the Post in 1995; Nov. 1, 2007; "Roadblock for Telecom Immunity"; http://www.washingtonpost.com/wp-dyn/content/article/2007/10/31/AR2007103103126.html)//JPM

In a blow to the Bush administration, the Senate Judiciary Committee's top Democrat and Republican expressed reluctance yesterday to granting blanket immunity to telecommunications carriers sued for assisting the government's warrantless surveillance program.¶ Committee Chairman Patrick J. Leahy (D-Vt.) and the ranking Republican, Sen. Arlen Specter (Pa.), had said that before even considering such a proposal, they would need to see the legal documents underpinning the program, which began after Sept. 11, 2001, and were put under court oversight in January.¶ On Tuesday, the committee was given access to some of the documents. But Leahy said yesterday that he had a "grave concern" about blanket immunity, saying that "it seems to grant . . . amnesty for telecommunications carriers for warrantless surveillance activities."¶ The activities seem to be "in violation of the privacy rights of Americans" and of federal domestic surveillance law, he said, noting that he is still "carefully considering" what is in the documents.¶ The immunity provision sought by the White House would wipe out about 40 lawsuits that accuse AT&T, Verizon Communications and Sprint Nextel of invading Americans' privacy and constitutional rights by assisting the government in domestic surveillance without a warrant.¶ The Senate intelligence committee approved the provision two weeks ago as part of a larger bill to amend the Foreign Intelligence Surveillance Act, which governs some aspects of domestic surveillance. The Judiciary Committee will take up the bill next.¶ Immunity "is designed to shield this administration from accountability for conducting surveillance outside the law," Leahy said. Dismissing the lawsuits would eliminate "perhaps the only avenue" for "an honest

assessment" of the legality of the warrantless surveillance program, he said.¶ Specter agreed that the "courts ought not to be closed" to such lawsuits. "If, at this late date, the Congress bails out whatever was done before -- and we can't even discuss what has been done -- that is just an open invitation for this kind of conduct in the future," he said.¶ Specter added that he thinks the carriers "have a strong, equitable case" but that his inclination is toward indemnification, where the government would assume any financial penalties.¶ Sen. Dianne Feinstein (D-Calif.) said the immunity provision was one of "two big issues" she had with the bill, and she suggested that limiting damages might be an alternative. She noted that the lawsuits could cost carriers as much as $30 billion in penalties -- a problem if taxpayers were to pick up the tab.¶ Assistant Attorney General Kenneth L. Wainstein told the committee that immunity was a question of "fairness" for the carriers. He also said that proceeding with the cases risks the divulgence of classified information. The government has invoked a claim of state secrets to stop the litigation. "If we don't prevail with state secrets," Wainstein said, "then there's no guarantee that that information is not going to get out. In fact, even just the filing of lawsuits and the allegations made can actually end up . . . compromising sensitive sources and methods."

Blanket amnesty for telecommunications companies are unpopular in Congress- Blue America lobby

Klein, 08 (Howie, writer for HuffPo; 7/18/2008; "Blue America Thanks Some Of The Patriots Who Stood Up For The Constitution"; http://www.huffingtonpost.com/howie-klein/blue-america-thanks-some_b_111919.html)//JPM

"The House of Representatives, with the support of Republican Scott Garrett, recently passed a bill that would grant President Bush and future administrations unprecedented powers to spy on American citizens without a warrant or review by any judge or court. The new law would also let our nation's largest telecom companies off the hook for knowingly violating the law and releasing their customers' private information at the behest of George Bush.¶ "Our constitutional right to protection against unsupervised searches was written into our Bill of Rights for good reason by Founders whom we rightly celebrate.¶ "Neither President Bush nor Scott Garrett are as wise as James Madison.¶ "It is unfortunate that it appears that the telecom industry has managed to falsely conflate its quest for retroactive immunity for lawbreaking with the issue of national security. The Founding Fathers understood that our safety as a nation depended on our being a nation of laws. Retroactive immunity undermines the rule of law, and therefore undermines our principles and security as a nation.¶ "The President, his advisers, and his rubber stamps in Congress, including Scott Garrett, have demonstrated a pattern of disregard for the laws of the United States. This bill not only immunizes telecom companies from lawsuits, but it would also block the American people from ever knowing the full extent of the Bush Administration's illegal behavior.¶ "I urge my fellow Democrats in the Senate to vote against this unnecessary and deeply troubling law.¶ "I believe that Congress must protect the rights of citizens and the laws of our country from career politicians in Washington too willing to cave to special interests and endanger the fundamental rights that we, as Americans, hold so dear."¶ State Senator Andrew Rice (D-OK) is running a strong campaign against one of the most extremist members of the U.S. Senate, James Inhofe, who raked in $12,550 from the Telecoms this year and was determined to grant them retroactive immunity -- and positively giddy about giving the government the right to listen in to all phone conversations and read all e-mails without a court order. Andrew disagrees -- strongly:¶ "Congress must remain vigilant in order to protect Americans from another terrorist attack. However, the bill that is before Congress this week bargains away the privacy of law-abiding American citizens while protecting the companies that allegedly participated in the President's illegal

wiretapping program. The Senate should stick to the narrow fix it set out to accomplish by making it clear that the government does not have to obtain a warrant to listen to foreign-to-foreign communications. Instead, this bill allows a significant expansion of the Foreign Intelligence Surveillance Act so that government can eavesdrop on the international communications of innocent American citizens. Since losing my brother on 9/11, I have vowed to improve America's anti-terrorism capability without sacrificing the freedoms that so many Americans have died to protect."¶ Rick Noriega is running in that big ole state just south of Oklahoma. His opponent, rubber stamp corporate shill John Cornyn has taken $15,250 from the Telecom industry this year and he is as eager as Inhofe to grant them retroactive immunity. Rick has thought about the issue more seriously and from a different perspective than just helping out campaign contributors.¶"Many times throughout my lifetime I have sworn an oath to protect and defend the Constitution of the United States . This isn't a part-time Constitution. We as a nation cannot grant anyone sweeping amnesty if they break the rules. It's appalling that my opponent, John Cornyn, puts his special interest campaign contributors ahead of the Constitution. Texans have had enough.¶Americans will not accept an abuse of power, and they will not accept corporations getting away with breaking the law.¶ We already have a law in place that balances national security concerns while adhering to the Constitution. This is not the time to compromise the privacy of the American people and not the time to disregard the Constitution of United States. I regret that the Senate has voted this way."¶Jim Himes is standing firmly with his state's senior senator, Chris Dodd on this issue. Fake moderate Chris Shayes is once again eager to rubber stamp the Bush-Cheney agenda, somehow trying to say that granting Bush the ability to wiretap all American citizens without a court order makes us "safe." Jim sees right through that craven, partisan posturing:¶ "In Congress, I will always stand up for the fundamental American belief that no man, and no corporation, is above the law. As always, this is a matter for the courts to decide-- not for Congress, and absolutely not for the same Bush Administration who may have violated the law in the first place. It is great to see so many American citizens of all backgrounds coming together to stand up for the rule of law and in opposition to retroactive immunity for telecommunications companies who may have illegally spied on American citizens at the Bush Administration's request. I am disappointed that Chris Shays and so many others continue to stand with President Bush by refusing to stand up for this most fundamental of American principles."¶ Jon Tester (D-MT) was a populist underdog who ran for the Senate in 2006 against an Insider Democrat backed by Chuck Schumer and the Beltway Establishment. He beat him in the primary, beat an entrenched Republican incumbent in November and has gone on to represent the interests of regular Montana folks in DC. His statement about the this fight was an inspiration and may well have influenced his Montana colleague: "It deals with the freedoms that so many people have fought and died for. If we want to get serious about the War on Terror, we need to make the investments to fight the war on terror. We ought not be taking rights away from honest citizens. If we've got terror cells around the world, then let's invest in human intelligence. Let's invest in our Special Forces. Let's go after 'em, and let's be serious, and not get sidetracked by Iraq. Right now, we're taking rights away from honest people. If they think you fall into their list, you're a target. By the time they figure out there's a terror cell, they can get a warrant.... The government ought not be taking away our freedoms."¶ Darcy Burner is running against a corporate hack and rubber stamp in Washington, Dave Reichert, who is all about rewarding his corporate donors with retroactive immunity. Reichert took $6,000 for the Telecoms so far this year and thinks they should not be accountable for crimes they may have committed. Darcy has been one of the most outspoken opponents of this bill; watch the 30 second video. After the bill passed in the House, she didn't despair; she start rallying for action:¶ Like many of you, I'm incredibly disappointed with today's vote on retroactive immunity for the telecommunications companies. I've made my position on this issue very clear, and I've been happy to be fighting to ensure that we uphold the Constitution through all of this. But the real question is what we do going forward. We need to make sure that we elect people to Congress who are going to defend the Constitution

--A2: Sqou Solves

Blanket immunity and the other problems of the 2008 FAA exist in the sqou

Byellin, 7/10/15 (Jeremy, attorney practicing in the areas of family law and estate planning; "Today in 2008: the FISA Amendments Act of 2008 are signed into law; http://blog.legalsolutions.thomsonreuters.com/legal-research/today-in-2008-the-fisa-amendments-act-of-2008-are-signed-into-law/#sthash.eBlylnoM.dpuf)//JPM

The U.S. Government's mass surveillance programs have become increasingly visible to the public over the past several years, thanks in part to disclosures by parties such as Wikileaks and Edward Snowden. Just because the public is more aware of these programs doesn't mean that they have stopped operating, or that the laws purported to authorize them aren't still fully in effect.¶ In fact, one such law, the FISA Amendments Act of 2008, is marking the seventh anniversary of its enactment and has since that time even survived a Supreme Court challenge. The amendments, signed into law by President George W. Bush on July 10, 2008, provide a slew of tools to further facilitate the operation many of these surveillance programs.¶ For example, the act releases telecommunication companies from any legal liability for furnishing information to or otherwise assisting the "Attorney General or the Director of National Intelligence." Furthermore, the act prevents the states from investigating or requiring disclosure from telecommunication companies over any such assistance provided to the federal government.¶ Beyond protecting telecoms, the act also allows the government to destroy any records of the searches and surveillance it performs, whereas government agencies are normally required to retain records for a period of ten years.¶ While the act allows for the surveillance of foreigners who are abroad, most pertinent to the surveillance of U.S. citizens, the Amendments Act authorizes the wiretapping of Americans who are also overseas. These last two provisions were the primary subject of the aforementioned Supreme Court case challenging the act's constitutionality: 2013's Clapper v. Amnesty International.¶ In Clapper, a group of attorneys with clients who have faced or are facing terrorism charges, a group of journalists, and a human rights organization (Amnesty International), all sued challenging the constitutionality of the amendments, claiming that they all engaged and continue to engage in sensitive communications with individuals believed to be the target of surveillance under the act.

The CISA* bill will maintain sqou blanket immunity and government overreach – only the CP checks

*The CISA bill has been introduced but not passed the Senate or House

-The argument is that even though it's marketed as a cyber security bill, it's really more of a surveillance bill, so if the opponent asks you why it's relevant say that

Jaycox, 3/19/15 (Mark, Legislative Analyst for EFF, educated at Reed College, spent a year abroad at the University of Oxford (Wadham College), and concentrated in Political History, Former legislative research assistant for Lexis Nexis; "Senate Intelligence Committee Advances Terrible ~~"Cybersecurity" Bill~~ Surveillance Bill in Secret Session"; https://www.eff.org/deeplinks/2015/03/senate-intelligence-committee-advances-terrible-cybersecurity-bill-surveillance)//JPM

The Senate Intelligence Committee advanced a terrible cybersecurity bill called the Cybersecurity Information Sharing Act of 2015 (CISA) to the Senate floor last week. The new chair (and huge fan of transparency) Senator Richard Burr may have set a record as he kept the bill secret until

Tuesday night. Unfortunately, the newest Senate Intelligence bill is one of the worst yet.¶ Cybersecurity bills aim to facilitate information sharing between companies and the government, but their broad immunity clauses for companies, vague definitions, and aggressive spying powers make them secret surveillance bills. CISA marks the fifth time in as many years that Congress has tried to pass "cybersecurity" legislation. Join us now in killing this bill.¶ The newest Senate Intelligence bill joins other cybersecurity information sharing legislation like Senator Carper's Cyber Threat Sharing Act of 2015. All of them are largely redundant. Last year, President Obama signed Executive Order 13636 (EO 13636) directing the Department of Homeland Security (DHS) to expand current information sharing programs. In February, he signed another Executive Order encouraging regional cybersecurity information sharing and creating yet another Cyber Threat Center. Despite this, members of Congress like Senators Dianne Feinstein and Richard Burr continue to introduce bills that would destroy privacy protections and grant new spying powers to companies.¶ New Countermeasures and Monitoring Powers¶ Aside from its redundancy, the Senate Intelligence bill grants two new authorities to companies. First, the bill authorizes companies to launch countermeasures (now called "defensive measures" in the bill) for a "cybersecurity purpose" against a "cybersecurity threat." "Cybersecurity purpose" is so broadly defined that it means almost anything related to protecting (including physically protecting) an information system, which can be a computer or software. The same goes for a "cybersecurity threat," which includes anything that "may result" in an unauthorized effort to impact the availability of the information system.¶ Even with the changed language, it's still unclear what restrictions exist on "defensive measures." Since the definition of "information system" is inclusive of files and software, can a company that has a file stolen from them launch "defensive measures" against the thief's computer? What's worse, the bill may allow such actions as long as they don't cause "substantial" harm. The bill leaves the term "substantial" undefined. If true, the countermeasures "defensive measures" clause could increasingly encourage computer exfiltration attacks on the Internet—a prospect that may appeal to some "active defense" (aka offensive) cybersecurity companies, but does not favor the everyday user.¶ Second, the bill adds a new authority for companies to monitor information systems to protect an entity's hardware or software. Here again, the broad definitions could be used in conjunction with the monitoring clause to spy on users engaged in potentially innocuous activity. Once collected, companies can then share the information, which is also called “cyber threat indicators,” freely with government agencies like the NSA.¶ Sharing Information with NSA¶ Such sharing will occur because under this bill, DHS would no longer be the lead agency making decisions about the cybersecurity information received, retained, or shared to companies or within the government. Its new role in the bill mandates DHS send information to agencies—like the NSA—"in real-time." The bill also allows companies to bypass DHS and share the information immediately with other agencies, like the intelligence agencies, which ensures that DHS's current privacy protections won’t be applied to the information. The provision is ripe for improper and over-expansive information sharing.¶ Overbroad Use of Information¶ Once the information is sent to any government agency (including local law enforcement), it can use the information for reasons other than for cybersecurity purposes. The provisions grant the government far too much leeway in how to use the information for non-cybersecurity purposes. The public won’t even know what information is being collected, shared, or used because the bill will exempt all of it from disclosure under the Freedom of Information Act.¶ In 2012, the Senate negotiated a much tighter definition in Senator Lieberman's Cybersecurity Act of 2012. The definition only allowed law enforcement to use information for a violation of the Computer Fraud and Abuse Act, an imminent threat of death, or a serious threat to a minor. The Senate Intelligence Committee's bill—at the minimum—should've followed the already negotiated language.¶ Near-Blanket Immunity¶ The bill also retains near-blanket immunity for companies to monitor information systems

and to share the information as long as it's conducted according to the act. Again, "cybersecurity purpose" rears its overly broad head since a wide range of actions conducted for a cybersecurity purpose are allowed by the bill. The high bar immunizes an incredible amount of activity. Existing private rights of action for violations of the Wiretap Act, Stored Communications Act, and potentially the Computer Fraud and Abuse Act would be precluded or at least sharply restricted by the clause**. It remains to be seen why such immunity is needed when just a few months ago, the FTC and DOJ noted they would not prosecute companies for sharing such information.** It's also unclear because we continue to see companies freely share information among each other and with the government both publicly via published reports, information sharing and analysis centers, and private communications.

--A2: Circumvention

CP avoids circumvention- civil justice system

McGarity et al 13 (Thomas O., CPR Member Scholar, Prof. at UT, Editor of the Texas Law Review, leading scholar in the fields of both administrative law and environmental law; Sidney A. Shapiro, Prof. Law at Wake Forest, Frank U. Fletcher Chair of Administrative Law; Nicholas Vidargas, former Policy Analyst with the Center for Progressive Reform, honors attorney fellow at the U.S. Environmental Protection Agency, Region 9, Office of Regional Counsel, in San Francisco, where he worked on enforcement of the Comprehensive Environmental Response, Compensation, and Liability Act and on Clean Water Act rulemaking, and where he initiated the first enforcement action under the Clean Air Act General Duty Clause in Region 9, Stanford University Grad; March 2013; "Sweeping Corporate Immunity¶ for the Fuel Industry:¶ The Next Front in the¶ 'Corporate Accountability' Wars"; http://www.progressivereform.org/articles/Corporate_Immunity_Fuel_Industry_1303.pdf)//JPM

The civil justice system not only serves as a backstop for federal regulation, it supports¶ federal regulation and makes it more effective. Professor Thomas McGarity describes the¶ informational interactions between regulatory agencies and the courts as "feedback loops ...¶ in which each institution draws on information, experience and different incentives of the¶ other."62 Immunity legislation eliminates this possibility that the civil justice system will¶ make the regulatory system more effective.¶ As a result of tort actions, Congress is informed of problems in the regulatory system.¶ Consider, for example, how the civil justice system prompted legislation and regulation¶ in response to the Ford Explorer/Firestone tire problem. In 2000, Congress passed the Transportation Recall Enhancement, Accountability and Documentation (TREAD) Act,¶ which required NHTSA to develop a new system for gathering and analyzing reports¶ of tire, equipment, and motor vehicle defects.63 Regulatory agencies obtain technical data,¶ analyses of the state of the science from the relevant literature, and other information¶ that can inform subsequent regulatory decisions. At the same time, the courts look to the¶ agencies for analysis of the risks and benefits of regulated products, as well as regulatory¶ standards that can factor into decisions about whether regulated parties have met their duty¶ of care. Feedback loops "have unquestionably improved the quality of decision-making¶ in both institutions."64¶ Immunity legislation destroys the feedback loop, unwisely limiting the useful information¶ that is obtained from the tort system. Tort claims filed in state courts are a primary source¶ of information for agencies about potential holes or gaps in the regulatory protection system.¶ Simply by virtue of a claim having been filed, the tort system provides signals that defects¶ may exist or existing safety standards may be inadequate. "The availability of damages in state¶ tort lawsuits can give injured citizens the incentive to come forward and share potentially¶ valuable information."65¶ At each successive step in the litigation process, tort suits provide additional opportunities¶ for the development of information that could be useful to federal agencies.66 Pre-trial¶ discovery can turn up technical data about the risks posed by a product or practice.¶ The discovery process can also uncover useful information about decisions made¶ by manufacturers concerning safety and environmental decisions, thereby adding a level¶ of public accountability. Regulatory agencies may also be informed by expert testimony¶ given in discovery or at trial when the testimony is bolstered by the experts' analysis of the¶ state of the science. In addition, expert analysis of the specific facts that give rise to tort¶ claims sheds light on how injuries actually occur in the real world.67 Finally, jury decisions,¶ whether in favor of injured plaintiffs or manufacturer defendants, provide insight about¶ evolving social norms, information that can be useful to agencies when they analyze¶ the potential impacts of proposed regulations.¶ Immunity legislation would destroy this vital source of information about corporate¶ misconduct in areas subject to the immunity shield. Attorneys for the plaintiffs in the¶ MTBE litigation, for example, uncovered dozens of "smoking gun" documents showing¶ that the petroleum companies knew full well that MTBE was contaminating groundwater,¶ that it caused that water to be unfit for drinking, and that they had not disclosed information¶ to EPA. If Congress passes the DFA, there will be no civil justice actions to ferret out¶ evidence of corporate misconduct relating to ethanol and future fuel additives.¶ Adequate protection of public health depends on the continued existence of state common¶ law as a complement to federal regulation. Common law has a unique

ability to provide¶ corrective justice and is a useful way to fill regulatory gaps caused by outdated or imperfect¶ regulation. States have traditionally enjoyed primary authority to protect the health, safety,¶ and welfare of their citizens. Federal immunity legislation such as sweeping fuel immunity¶ efforts weaken this fundamental principle of American government in a simplistic effort¶ to relieve corporate defendants of liability for producing dangerous products.

---A2: Companies Protected under SSD

Federal judges agree- SSD doesn't stop the telecom. Industry from presenting defenses in courts

EFF, 2008 (Electronic Frontier Foundation, leading nonprofit organization defending civil liberties in the digital world; 2008; "Archive: The Case Against Retroactive Amnesty for Telecoms"; https://www.eff.org/pages/case-against-retroactive-amnesty-telecoms)//JPM

The federal judge who is considering all of the lawsuits against communications carriers has already held that the common law state secrets privilege does not prevent phone companies like AT&T from presenting their defenses to the court, in camera and ex parte. To the extent that Congress wants to ensure this result, EFF urges Congress to clarify that FISA's existing security procedures, codified at 18 USC §1806(f), already permit defendants in the pending cases to present all relevant evidence in their defense. EFF has shared such draft language with key Members of Congress and staff.

---A2: President has the Authority

Judicial branch checks the executive – simple checks and balances

EFF, 2008 (Electronic Frontier Foundation, leading nonprofit organization defending civil liberties in the digital world; 2008; "Archive: The Case Against Retroactive Amnesty for Telecoms"; https://www.eff.org/pages/case-against-retroactive-amnesty-telecoms)//JPM

The courts should be allowed to determine whether the President has exceeded his powers by obtaining wholesale access¶ to the domestic communications of millions of ordinary Americans from AT&T and the other communications companies,¶ based on the claim that Article II of the Constitution and the Authorization for Use of Military Force in Afghanistan allowed¶ both the President and the companies to ignore the Fourth Amendment, FISA, and multiple other privacy statutes.

---A2: Common Law Doctrines Shield Defendants

Common law doesn't overrule specific Congressional rules like Blanket Amnesty

EFF, 2008 (Electronic Frontier Foundation, leading nonprofit organization defending civil liberties in the digital world; 2008; "Archive: The Case Against Retroactive Amnesty for Telecoms"; https://www.eff.org/pages/case-against-retroactive-amnesty-telecoms)//JPM

Generally in law, common law immunities do not trump specific legal duties imposed by statute, such as the specific statutory¶ duties Congress has long imposed on telecommunications companies to protect their customer's privacy and records. Specifically,¶ in the pending case against AT&T, the judge – consistent with this venerable hierarchy of legal authority – already¶ has ruled unequivocally that: "AT&T cannot seriously contend that a reasonable entity in its position could have believed that¶ the alleged domestic dragnet was legal." Even so, the communications company defendants can and should have the opportunity¶ to present these defenses to the courts, and the courts – not Congress preemptively – should decide whether they are¶ sufficient. Again, the court should decide.

---A2: Hurts Companies Reputation/Consumer Base

Won't hurt companies- risk already exists, no empirics

EFF, 2008 (Electronic Frontier Foundation, leading nonprofit organization defending civil liberties in the digital world; 2008; "Archive: The Case Against Retroactive Amnesty for Telecoms"; https://www.eff.org/pages/case-against-retroactive-amnesty-telecoms)//JPM

There is no evidence that this litigation has or will reduce the defendant companies' bottom lines or customer base, and¶ vague assertions that the pending litigation might result in "reputational" damage to the defendant companies is utterly¶ belied by the facts. Despite nearly two years of very public litigation in which AT&T has lost motions at every turn, AT&T¶ just announced record profits for the third quarter of 2007: a 41% increase over the previous year. AT&T publicly attributed¶ its success to signing a record number of new customers. As to possible threats faced by the companies and their personnel¶ here and abroad, permitting the litigation to proceed will not increase such risk as already may exist. Ironically, telecommunications¶ companies' recent hand-in-glove participation in national security surveillance has been perhaps most¶ effectively broadcast around the globe by the Administration, including statements by the Director of National Intelligence,¶ along with other senior Bush Administration officials. Silencing the pending suits will not expunge these admissions from¶ the public record. Further, it strains credulity to suggest that the foreign enemies of the nation have not been aware for¶ decades of this obviously necessary partnership

---A2: Legal In-Roads Check

The attorney general's check on blanket amnesty is a rubber stamp

Single, 08 (Ryan, blogger and journalist covering tech business, tech policy, civil liberty and privacy issues. His work has appeared extensively in Wired.com, and Singel co-founded the Threat Level blog; 6/19/08; "Dems Agree to Expand Domestic Spying, Grant Telecoms Amnesty"; http://www.wired.com/2008/06/dems-agree-to-e/)//JPM

Under the longstanding rules of the Foreign Intelligence Surveillance Act, the government was free to engage in dragnet wiretapping outside the United States, but in order to tap communications inside the country, the government needed court approval and individualized warrants if an American's communications would be caught.¶ Additionally, the bill grants amnesty to the nation's telecoms that are being sued for allegedly breaking federal wiretapping laws by turning over billions of Americans' call records to government data-mining programs and giving the government access to internet and phone infrastructure inside the country. The bill strips the right of a federal district court to decide whether the companies violated federal laws prohibiting wiretapping without a court order.¶ Instead, the attorney general would need only certify to the court either that a sued company did not participate, or that the government provided some sort of written request to the companies that said that the president authorized the program and that his lawyers deemed it to be legal. That would be presented to federal district court Judge Vaughn Walker, who is overseeing the more than 40 consolidated cases against the telecoms. Walker's authority would be limited to judging whether the preponderance of the evidence is that the companies did get a written request, and if he finds that to be true – as the Senate Intelligence Committee has already publicly stated – he must dismiss the cases.¶ That's immunity, and it's unconstitutional, according to the ACLU's Caroline Fredrickson.¶ "The telecom companies simply have to produce a piece of paper we already know exists, resulting in immediate dismissal," Fredrickson said in a written statement. "That's not accountability. Loopholes and judicial theater don't do our Fourth Amendment rights justice."¶ Hoyer, under pressure from so-called Blue Dog Democrats wanting to avoid being labeled soft on terrorism in the fall campaigns, justified the bill as a necessary compromise.¶ "It is the result of compromise, and like any compromise is not perfect, but I believe it strikes a sound balance," Hoyer said in a press release announcing the deal.¶ That's a significant change for Hoyer, who in March in a House floor speech opposed blanket immunity, saying "I submit that a reasonable — responsible — Congress would not seek to immunize conduct without knowing what conduct or misconduct it is immunizing."¶ The bill itself oddly admits that the government's surveillance activities included more than the previously admitted "Terrorist Surveillance Program." That program, admitted by the president after The New York Times revealed it in December 2005, targeted Americans to intercept their international phone calls and e-mails without getting court approval. In a provision authorizing an oversight investigation, the bill refers to the "President's Surveillance Program," of which the so-called TSP was just one part.¶ That all but confirms what many have reported and suspected: that there was much more unilateral surveillance than the president or his lawyers have ever admitted.

State Courts Counterplan – HJPV

1nc

Text: The Fifty United States State Supreme Courts should <plan>

That solves the aff – state courts can interpret the constitution and sufficiently check expansive domestic surveillance

Gardner '03 --- professor of law @ State University of New York (James A, "State Constitutional Rights as Resistance to National Power: Toward a Functional Theory of State Constitutions," Georgetown Law Journal, June 2003, 91 Geo. L.J. 1003)//Mnush

When we think about tyranny perpetrated by the national government, we tend to think about rights-invasive congressional measures, such as the Alien and Sedition Acts of 1798, n143 or presidential high-handedness, such as the military internment of Japanese-Americans during World War II n144--abuses, that is to say, by the legislative and executive branches. But liberty can also be abused by the judicial branch, most notably when federal courts refuse to acknowledge and protect individual rights. Abusively stingy readings of the U.S. Constitution not only may deny litigants their rights in individual cases, but generally also authorize other organs of government to invade liberties that they should be required to respect. While a state might combat this brand of judicial tyranny by invoking any of the forms of resistance mentioned earlier, state courts are especially well-suited to play a role in resisting abuse of national judicial power, and to do so through entirely peaceful and fully legal means. A powerful weapon state courts may wield in such a struggle is their authority to interpret state constitutions to provide more generous protection for individual rights than the U.S. Supreme Court has chosen to provide under the national Constitution.

2nc Solvency – General

State court interpretation of the constitution resists federal power and tyranny

Gardner '03 --- professor of law @ State University of New York (James A, "State Constitutional Rights as Resistance to National Power: Toward a Functional Theory of State Constitutions," Georgetown Law Journal, June 2003, 91 Geo. L.J. 1003)//Mnush

Let me briefly review my argument. I have claimed to this point that state courts are capable of serving as agents of federalism. Should they occupy such a role, state courts would stand alongside the state executive and legislative branches when necessary by deploying judicial power for the purpose of resisting national tyranny. The principal tool that state courts possess to resist national power is their superintendency of the state constitution -that is, their power to interpret its provisions. State courts can wield this power against the national government by interpreting the state constitution both to assure vigorous, effective resistance to national power by the state executive and legislative branches, and to provide more protection for individual rights than does the national Constitution. Thus, my account of state judicial power is "functional" n280 in that it conceives of state judicial power as serving a distinct purpose in a complex federal system of overlapping powers and responsibilities. I have defended this account of state judicial power against strict constructionist theoretical objections, and I have shown that the actual record of state courts in resisting national power, supplemented by any of a range of reasonable assumptions about institutional constraints on judicial power, provides a sound basis for a state polity to invest its courts with a degree of trust or distrust that might reasonably vary across a broad range. This degree of trust or distrust in turn prompts a state polity to charge its courts-or not to charge them, or to charge them only to some limited degree, as the case may be-with serving as agents of federalism.

State courts, specifically those as agents of federalism are best at securing liberty

Gardner '03 --- professor of law @ State University of New York (James A, "State Constitutional Rights as Resistance to National Power: Toward a Functional Theory of State Constitutions," Georgetown Law Journal, June 2003, 91 Geo. L.J. 1003)//Mnush

In contrast, courts that have been authorized to serve as strong agents of federalism will have been given a special kind of institutional responsibility to oversee the state constitution for the purpose of assuring that it serves as an effective charter for the deployment of state power to resist invasions of liberty by the national government. Judges who possess this responsibility would then have some degree of freedom to consult their own views about how state power and effective state public policy can best be structured and deployed to serve the protection of liberty. Courts operating under such instructions would thus be authorized, in appropriate circumstances, to engage in a comparatively open, free-wheeling kind of constitutional interpretation n281 that might more closely resemble the process of state common-law adjudication than it would th

e strict originalism to which their distrusted counterparts would be confined. n282 The state polity would still retain ultimate responsibility for the content of the state constitution, but [*1798] this responsibility would in all likelihood be exercised infrequently, and invoked for the most part to correct judicial interpretations of the constitution that stray too far afield from the rough plan of state self-governance contemplated by the state polity.

2nc Solvency – Aerial Surveillance

The state courts should restrict domestic drone use

Hudson 2/1 --- professor of law @ Vanderbilt University (David L, "How should states regulate drones and aerial surveillance?" ABA Journal, February 1st, 2015, http://www.abajournal.com/magazine/article/how_should_states_regulate_drones_and_aerial_surveillance/)//Mnush

One question that may arise from drone regulation is the difference between state and federal privacy protection. For example, the New Mexico Court of Appeals interpreted the state constitution as more protective of privacy than the U.S. Constitution. "**It would be better for states to legislate in this area**," says Vacek. "Perhaps we will have a conflict that could eventually wind up before the U.S. Supreme Court. Current Supreme Court law says surveillance from the public airspace is OK. **But the court could provide a different answer with respect to drones.**" Adds Chemerinsky: "It is unclear how the Fourth Amendment applies to drones. The technology is too new for the courts to have ruled." In Florida v. Riley, the Supreme Court ruled in 1989 that the police may use low-flying aircraft to gather information without a warrant or probable cause. The court said that this was not a search within the meaning of the Fourth Amendment, Chemerinsky says. "If the court follows this with regard to surveillance by drones, there would be no constitutional limit on their use." "Technology has outpaced law in this area," Whitehead says. "Traditional search warrants won't work with drones. They have the ability to hack into Wi-Fi and use scanning devices from airspace. They represent the essence of a surveillance-police state." Experts are still unclear how often drones are now being used. "We haven't been able to determine the amount of domestic drone use. Much of that information is confidential," Morris says. "Many police departments have bought drones and many of them are ramping up for their use in the future," he says. "I think the trend is going to continue. I don't know if I have ever seen such a hot-button issue with the public—as far as law enforcement surveillance with drones. People are really concerned about it." "Domestic drones are being used," says Whitehead. "We don't know how many, but we know that the Department of Homeland Security has used them and some police departments have used them. They will be used far more frequently in the near future." Whitehead is dubious about the future. "**The Fourth Amendment is on life support**," he asserts. "The [National Security Agency] is downloading 227 million text messages a day. This violates the Fourth Amendment. We have moved into a new paradigm. Many sci-fi movies are coming true. "Nearly every technology in the [2002] movie The Minority Report is available today. It's like those guys are prophets. By 2025 to 2030, we are going to be in a cyborg kind of reality. It sounds preposterous to most people, but it is reality."

The state courts should restrict aerial surveillance

Olivito '13 --- J.D. candidate @ Ohio State University (Jonathon, "Beyond the Fourth Amendment: Limiting Drone Surveillance Through the Constitutional Right to Informational Privacy," Ohio State Law Journal, June 26th, 2013, http://moritzlaw.osu.edu/students/groups/oslj/files/2013/12/8-Olivito.pdf)//Mnush

To remedy these privacy concerns, **courts should adjudicate cases involving drone surveillance under the constitutional right to informational privacy.** As already recognized by most courts applying the right, the constitutional right to privacy creates a right of action against the government.177 This right of action stands independent of the Fourth Amendment, augmenting the Fourth Amendment's protections rather than replacing them.

When courts confront the claim that drone surveillance has invaded an individual's constitutional right to privacy, courts should apply the following test. First, courts should require a claimant to establish a threshold requirement: that a government action has implicated a privacy interest. Once this threshold criterion is met, the court should engage in a balancing test that weighs the individual's privacy interests against the government's interests in conducting the challenged drone surveillance. Courts should consider five factors when applying the balancing test: (a) the duration of the surveillance; (b) the invasiveness of the technologies used; (c) the thoroughness of the surveillance; (d) the individualized nature of the surveillance; (e) and the presence of a warrant or probable cause. If the

individual's privacy interests outweigh the government's interests, then the court would, as a remedy, prohibit the government from storing, aggregating, transferring, or distributing any information gathered in the challenged surveillance. The court's remedy would apply both to any information that the government had already gathered and to information that the government might observe through the challenged drone surveillance in the future.179 The subsequent discussion elucidates the elements of this balancing test.

States solve aerial surveillance – most drone surveillance in the US is regulated by the states

Hudson 2/1 --- professor of law @ Vanderbilt University (David L, "How should states regulate drones and aerial surveillance?" ABA Journal, February 1st, 2015, http://www.abajournal.com/magazine/article/how_should_states_regulate_drones_and_aerial_surveillance/)//Mnush

States are taking notice and considering regulation. According to the National Conference of State Legislators, more than 20 states have passed laws related to drones. Some limit law enforcement's use of drones or other unmanned aircraft. For example, in Idaho, a law signed in 2013 provides that, except for emergencies "for safety, search-and-rescue or controlled substance investigations," no person or agency may use a drone to conduct surveillance of private property without a warrant. Tennessee has a similar law known as the Freedom from Unwarranted Surveillance Act. The law allows aggrieved individuals the right to sue law enforcement agencies in civil court for violations. It also provides that "no data collected on an individual, home or areas other than the target that justified deployment may be used, copied or disclosed for any purpose," and that such data must be deleted within 24 hours of collection. "The legislation doesn't eliminate the use of drones," says Austin, Texas-based attorney Gerry Morris, co-chair of the National Association of Criminal Defense Attorneys' Fourth Amendment Committee. They "require some sort of showing of probable cause. This is something that is constantly overlooked. Just because government officials are required to go get a warrant doesn't mean they won't be able to use the drones. It just means that they are required to follow the Constitution when they use them." However, in California, Gov. Jerry Brown vetoed a measure in September that would have required law enforcement to obtain a warrant for the vast majority of uses of drones. Brown claimed the bill, AB 1327, would put greater standards on law enforcement than those required by the U.S. and state constitutions. "AB 1327 would have been the first law in California to regulate drones," says constitutional law expert Erwin Chemerinsky, dean of the University of California at Irvine School of Law. "Drones may be a very valuable tool for investigation in some cases. Under AB 1327, the police still could use drones if they demonstrated to a judge that there was probable cause. I strongly favored AB 1327 and was very disappointed when Gov. Brown vetoed it." On the other hand, states have passed laws related to drones that fund the technology or encourage the development of testing sites. For example, the North Dakota legislature passed a law funding a drone test site. Legal experts believe that at some point courts will need to address the constitutionality of these measures and of law enforcement's use of the technology. "I do think more legislation is needed," Morris says. "I don't think the court opinions at this point have caught up with the technology. Legislators have to address the issue and get out in front of it." On the federal level, the 2012 Federal Aviation Administration Modernization and Reform Act governs the rules regulating drones' domestic use. "The FAA has the responsibility of drafting a set of rules for integrating unmanned aircraft systems into the airspace," says Joseph Vacek, a lawyer and aviation professor at the University of North Dakota. "It has taken more time than expected because there has been no industry consensus. I predict that by 2016 we will have the rules in place."

2nc Federal Follow-On

The Supreme Court models state court decisions ***do not read if going for a "court stripping" net benefit

Gardner '03 --- professor of law @ State University of New York (James A, "State Constitutional Rights as Resistance to National Power: Toward a Functional Theory of State Constitutions," Georgetown Law Journal, June 2003, 91 Geo. L.J. 1003)//Mnush

State judicial rejection of excessively narrow Supreme Court precedents concerning the scope of individual rights helps check national power in at least four ways. First, whenever a state court dissents from the reasoning of a U.S. Supreme Court decision, it offers a forceful and very public critique of the national ruling, which can in the long run influence the formation of public and, eventually, official opinion on the propriety of the federal ruling. Second, state rulings that depart from or criticize U.S. Supreme Court precedents can contribute to the establishment of a nationwide legal consensus at the state level, a factor which the Supreme Court sometimes considers in the course of constitutional decision making. Third, generous state interpretations of individual rights can more directly check national power by prohibiting state and local governments from exercising authority permitted them under the U.S. Constitution to suppress certain kinds of private behavior. In so doing, state courts create spaces in which otherwise prohibitable behavior may flourish. Finally, rights-protective rulings by state courts can help ameliorate the harm to liberty caused by narrow national rulings by providing protection for second-best alternatives to the types of behavior that such national rulings permit governments to suppress.

AT//Bad Appointments

Fiat solves this…the ruling of the counterplan ensures that the state courts interpret the constitution in a way sufficient to solve their advantages.

The state courts are sufficiently independent

Gardner '03 --- professor of law @ State University of New York (James A, "STATE COURTS AS AGENTS OF FEDERALISM: POWER AND INTERPRETATION IN STATE CONSTITUTIONAL LAW," William & Mary Law Review, March 2003, 44 Wm. & Mary L. Rev. 1725)//Mnush

The trustworthiness of courts as guardians of liberty is usually defended on one of two grounds. The first is that courts are insulated from politics and basically unresponsive to popular sentiment. The other is that they are not. Has been applied most frequently to federal courts-though it is equally applicable to state courts that follow the national model-and is based upon the institutional arrangement under which federal judges are appointed rather than elected, and hold office for life. n166 The belief that unelected, politically unaccountable judges are the best guardians of liberty goes back as far as the founding, if not all the way back to Plato's Republic. n167 In a well-known essay, Alexander Hamilton argued that only an independent judiciary could be counted on to dispense justice, and that the necessary independence could be secured only by lifetime appointment. n168 "[J]udges who hold their offices by a temporary commission," Hamilton claimed, can hardly be counted on for "inflexible and uniform adherence to the rights of the Constitution." n169 On this view, the judiciary's lack of political accountability enables it to resist majoritarian pressure, n170 the very thing that makes it a reliable defender of liberty. Hamilton's [*1776] position dominated American political thought for the republic's first few decades: the first twenty-nine states admitted to the Union all created nonelective judiciaries on the national model. n171¶ Recent empirical studies provide some limited support for the intuition that electorally unaccountable judges will be more willing to defend liberty from popular passion than judges who must satisfy the voters to gain or retain office. One comparative study, for example, found that judges in nonelective state judicial systems are significantly more likely than their elected counterparts not only to hear challenges to controversial state laws but, when they hear them, to invalidate the laws. n172 Another study found that elected state judges are less likely to dissent in controversial cases when their constituents agree ideologically with the outcome of the case. n173

AT//Circumvention

State court rulings don't get circumvented

Gardner '03 --- professor of law @ State University of New York (James A, "State Constitutional Rights as Resistance to National Power: Toward a Functional Theory of State Constitutions," Georgetown Law Journal, June 2003, 91 Geo. L.J. 1003)//Mnush

It is true, of course, that a more rights-protective state constitutional ruling cannot prevent federal FBI and DEA agents operating in the state from using the looser, federally authorized search practices. Nevertheless, the impact of the state ruling may be **considerable**. In most states, the likelihood that any person will come in contact with federal law enforcement officials is minuscule in comparison to the likelihood of contact with state or local police who **are subject to the restrictions of the state constitution**. n232 The state constitutional ruling, then, creates a space--a public sphere of potentially considerable scope--in which citizens of the state may enjoy a freedom from police searches that, in the view of the state polity, creates a more appropriate relationship between private conduct and official power.

AT//Dissent

People listen to state court rulings

Gardner '03 --- professor of law @ State University of New York (James A, "STATE COURTS AS AGENTS OF FEDERALISM: POWER AND INTERPRETATION IN STATE CONSTITUTIONAL LAW," William & Mary Law Review, March 2003, 44 Wm. & Mary L. Rev. 1725)//Mnush

It is certainly plausible-indeed, it is virtually certain-that the people of a state would wish to have a state government that is capable of fulfilling its role in the federal system as a potential check on national tyranny; that is why the national polity, of which each state polity is a part, adopted a constitutional system of federalism. If the state polity further believes that the judicial branch should stand alongside the executive and legislative branch when resistance to national authority becomes necessary, it is by no means inherently self-contradictory to ask whether the people might directly charge state courts with the responsibility to do what they can to make such resistance effective, including issuing facilitative interpretations of the state constitution. In these circumstances, state courts would not really be "using" the state constitution instrumentally, but "interpreting" it according to conventional understandings of positive constitutional law. Their method of interpretation would, to be sure, include in the inter-pretational mix a factor that plays no role in the federal judicial analysis, but state courts are not federal courts and their actions cannot necessarily be judged by the same criteria.

AT//Signal/Perception Solvency Deficits

State court rulings solve *better* than the Supreme Court – constitutional rejectionism influences the public's understanding of the constitution

Gardner '03 --- professor of law @ State University of New York (James A, "State Constitutional Rights as Resistance to National Power: Toward a Functional Theory of State Constitutions," Georgetown Law Journal, June 2003, 91 Geo. L.J. 1003)//Mnush

Whenever a state's highest court, by constitutional ruling, recognizes a level of protection for individual rights that exceeds levels of protection for those rights established under parallel provisions of the national Constitution, it registers a forceful and often very public dissent from rulings of the U.S. Supreme Court. This kind of state constitutional rejectionism makes news--not merely among members of the bar or those who follow legal affairs, but in the mainstream press as well--and such publicity inevitably influences long-term public understandings of the appropriate content of constitutionally guaranteed rights.

AT//Supreme Court Key

State courts can check back national power

Gardner '03 --- professor of law @ State University of New York (James A, "STATE COURTS AS AGENTS OF FEDERALISM: POWER AND INTERPRETATION IN STATE CONSTITUTIONAL LAW," William & Mary Law Review, March 2003, 44 Wm. & Mary L. Rev. 1725)//Mnush

I think not. State law is capable of controlling something poten-tially significant to any struggle by states to resist national power: other state officials. Through their control over state law, and in particular through their control over the state constitution, state [*1731] courts are capable of exercising some influence over the manner and forcefulness with which state governments may wage the kinds of struggles against national authority contemplated by federalism. By construing the provisions of the state constitutions that both empower and restrict the state legislative and executive branches, state courts can influence the facility with which state government responds to threats originating at the national level; the tools that state actors have at their disposal to resist encroachments by national power; and the ways in which state officials may deploy those tools in intergovernmental power struggles.

State courts check national courts – state constitution implementation leads to resistance of national power

Gardner '03 --- professor of law @ State University of New York (James A, "STATE COURTS AS AGENTS OF FEDERALISM: POWER AND INTERPRETATION IN STATE CONSTITUTIONAL LAW," William & Mary Law Review, March 2003, 44 Wm. & Mary L. Rev. 1725)//Mnush

In a recent article, I explain how state courts can resist and counteract liberty-invasive abuses of national judicial power by giving a more generous construction to individual rights found in the state constitution than national courts give to similar provisions appearing in the Constitution. n93 Here, I want to focus on a different [*1751] method by which the state constitution can be deployed to resist national power. This method derives its force from the fact that the state constitution is the legal document that ultimately grants, allocates, and structures any powers possessed by state officials in other branches of state government. To put this proposition in its bluntest form, state courts may participate in state resistance to national power by construing the state constitution in such a way as to assure, insofar as possible, that the state legislative and executive branches have powers adequate to resist abuses of national authority.

The counterplan solves *internal self-restraint*, which protects liberty

Gardner '03 --- professor of law @ State University of New York (James A, "STATE COURTS AS AGENTS OF FEDERALISM: POWER AND INTERPRETATION IN STATE CONSTITUTIONAL LAW," William & Mary Law Review, March 2003, 44 Wm. & Mary L. Rev. 1725)//Mnush

If state courts generally have the authority under state constitutions to advance liberty by using their powers to achieve the public good directly, they also universally have the constitutional authority to use their power of judicial review to protect liberty in another way: by serving as a force for state governmental self- restraint. If a state government is to advance the public good, it must possess a certain amount of power. The more power a state government possesses, however, the more capable it is of threat-ening the liberties of its people. This threat may be restrained to a [*1745] degree by institutionalizing some form of internal self-restraint, such as horizontal separation of powers, creation of a bill of rights, and establishment of judicial review. State courts play a significant role in the exercise of power to achieve this kind of **internal self-restraint**.

Court Stripping Net Benefit

State courts don't link to court stripping

Devins and Mansker '03 --- (Neal and Nicole, Upenn Law University, 2003, http://scholarship.law.upenn.edu/cgi/viewcontent.cgi?article=1081&context=jcl)//Mnush

Differences between state constitutional systems and the federal system are so dramatic that the models political scientists employ to discuss the relationship between the U.S. Supreme Court and the American people have no application to democratically accountable state systems. Consider, for example, the argument that Supreme Court Justices simply vote their policy preferences and need not **take into account public or lawmaker backlash**. Political scientists who make this argument point to life tenure, docket control, and the near-impossibility of amending the Constitution to override a Court ruling.11 Most state supreme court justices are without any of these protections and, consequently, state justices are apt to take backlash risks into account. At the same time, **there are dramatic differences among state courts**. There is a wide range of appointment and retention schemes, mechanisms for amending state constitutions are highly varied, and docket control is dramatically different among the states. **In other words, some state justices are especially vulnerable to democratic checks and others are protected from most types of political retaliation.**

State courts are protected

Devins and Mansker '03 --- (Neal and Nicole, Upenn Law University, 2003, http://scholarship.law.upenn.edu/cgi/viewcontent.cgi?article=1081&context=jcl)//Mnush

Unlike the U.S. Supreme Court, where assessments of backlash risks are often a "shot in the dark,"92 state justices (in states with contested elections) **are well versed in state politics because of their direct connections to political parties, voters, campaign contributors, and interest groups**.93 Yet, even in states without contested elections, state justices typically know a great deal about state politics. Most state supreme courts, as discussed in Part I, are subject to significant democratic checks (and sometimes cannot steer clear of political ontroversy because of limits on their docket control). In direct democracy states, for example, state justices may render advisory opinions about the legality of initiatives, decide legal challenges to initiatives, and sometimes have their handiwork overturned by initiatives.94 More generally, "state judges are systematically exposed to and experienced in the legal institutions of their states," they "spend their professional lives dealing with state legislation and administrative regulation," and "[t]hey are much more likely than are their federal counterparts to know or be able to learn readily what is out there, how it came to be, and how well or badly it works."95 State supreme court justices echo this sentiment, noting that "state courts are closer to politics than their federal colleagues, whether . . . elected or appointed"96 and are "generally closer to the public, to the legal institutions and environments within the state, and to the public policy process."97 A state supreme court justice is almost certainly a longtime resident of her state, presumably reads state newspapers, likely sits and lives in the state capitol, has professional and social interactions with state officials, hears about state officials, hears about goings-on from numerous sources, and is generally well-informed with respect to the in-state political climate.98 As of 2000, 65.7% of state supreme court justices were born in the state in which they serve, and 60.5% received their law degrees from a school in that state.

States CP

Text: The fifty states and relevant territories should prohibit the provision of material support, participation, or assistance in any form with any federal agency which collects electronic data or metadata of any US person to any action not based on a warrant.

States can ban material assistance to intelligence agencies – this curtails domestic surveillance by forcing compliance

Daniel **Jennings**, **2015**, Off the Grid News, "This brilliant new plan may finally stop the NSA's spying," http://www.offthegridnews.com/privacy/this-brilliant-new-plan-may-finally-stop-the-nsas-spying/, mm

Legislators in eight **states have introduced laws designed to literally pull the plug from the National Security Agency by choking off the resources the organization needs to organize within a state's borders.**¶ **The bills are part of an effort to** end what critics see as **the NSA's systematic violation of the** Fourth Amendment to the US **Constitution**.¶ "We're saying, 'No, it's inappropriate.' We have a Fourth Amendment to the Constitution," Washington State Representative David Taylor (R-Moxee) told USA Today. "And if you violate that there's going to be civil penalties and jail time."¶ Taylor is **a** co-sponsor of **state** House **Bill** 1473, which **would make it a misdemeanor punishable** by up to a year in jail and a fine of up to $5,000 **for state officials or state contractors that "provide material support, participation, or assistance in any form" with any federal agency which collects "electronic data or metadata of any person pursuant to any action not based on a warrant**."¶ **The idea** behind the law **is to prevent any company from doing business with the NSA**. Among other things, **the proposed law would prohibit utilities from providing water, natural gas and electricity and tech companies like Microsoft and Amazon.com from doing business with the NSA. It would also stop contractors from delivering food to federal facilities and end service like trash collection**.¶ This is the second time that Taylor has sponsored legislation to stop the NSA from operating within his state. Last year he sponsored a similar law, which did not receive a vote.¶ An organization called OffNow.org is encouraging state legislators to introduce similar bills. **The group's mission is** a bold but **simple** one: **Make it impossible for the NSA to operate in the United States by barring companies and local governments from doing business with it.**¶ "The short version?" the group's website proclaims. "We intend to pull the rug out from under them, box them in and shut them down."¶ The website contains model legislation called the Fourth Amendment Protection Act and details the group's strategy to bypass Congress and assert state's rights against federal surveillance. The model legislation is at the heart of the plan.¶ "This model legislation, ready for introduction in any state, would ban a state (and all its political subdivisions) from providing assistance or material support in any way to federal spying programs," the OffNow website states.¶ This would include, but is not limited to:¶ Refusing to supply water or electricity.¶ Ending NSA partnerships with public universities and colleges.¶ Prohibiting state officials from using warrantless data given to them by federal agencies.¶ OffNow's lawyers believe a legal principle known as **the anti-commandeering doctrine gives state and local governments the right to refuse to cooperate with federal agencies**. **They cited several US Supreme Court decisions in which the doctrine has been upheld**.¶ Laws based on the model legislation have been introduced in state legislatures in Indiana, South Carolina, Oklahoma, Mississippi, Missouri, Oklahoma and Alaska as well as Washington State, USA Today reported. Some of the laws go further than OffNow's model and ban evidence from warrantless surveillance from being used in state courts.¶ OffNow's website reported that 171 universities nationwide operate National Centers of Academic Excellence in partnership with the National Security Agency's Central Security Service.

Solvency

Banning material support strikes at the Achilles Heel of the intelligence community – states can solves independent of federal action

Off Now, 2014, "the surveillance state has an achilles heel," http://www.offnow.org/, mm

How can average people like you and I confront a massive surveillance-state with the power to spy on virtually everybody in the world?¶ With cameras peering down at nearly every street corner, and the NSA vacuuming up and storing away staggering amounts of data, it can seem very daunting. And it continues to grow. Primarily funded, nurtured and operated from the federal level, mass surveillance trickles down to your community at a staggering pace.¶ But **the American surveillance-state has an Achilles Heel.¶ It needs help and resources**.¶ **These spy-programs cannot continue to expand without participation and assistance from the state and local level**.¶ **We can turn it off**.¶ **By passing legislation - state by state – we can thwart mass surveillance without relying on Congress or Supreme Court**.¶ Legislatively, **OffNow focuses on** four main areas¶ **Banning material support**. **This includes stopping the flow of state supplied resources** like water and electricity **to federal agencies conducting mass, warrantless surveillance**. See video below.¶ Prohibiting warrantless data sharing. In the Bush-era, the federal government enacted numerous laws largely turning state and local law enforcement agents into warrantless data transmitters for the national surveillance state, primarily via SOD and Fusion Centers. OffNow works to pass laws via ballot measures and regular legislation to prohibit such activities.¶ Ending warrantless location tracking. Through the use of "Stingrays" and other similar tools, federal and local agencies illegally collect location information from your cellphone. Once collected, these agencies share this information back and forth. Police at the local level also use license-plate readers as tracking devices. OffNow supports legislation to restrict and eventually eliminate these practices.¶ Stopping warrantless drone spying. Drones can serve as valuable tools, but in the hands of law enforcement, they can quickly become a tool of abuse. OffNow works to support legislation restricting or eliminating the use of drones by state and local entities.

Prohibiting access to utilities ends warrantless surveillance

Mike **Maharrey**, 3/16/**2015**, Tenth Amendment Center, "texas bill would turn off power to massive nsa surveillance facility," http://blog.tenthamendmentcenter.com/2015/03/texas-bill-would-turn-off-power-to-massive-nsa-surveillance-facility/, mm

In practice, **HB3916 would prohibit state or local-owned utilities from supplying water or electric service to NSA facilities in the state**. The bill does include a provision allowing for the municipality to repay any bonds payable from pledged revenue from water or electric service before discontinuing such service. A political subdivision would be able to fulfill any contractual obligations currently in place, but would prohibit any contract extensions.¶ **Passage into law would be a powerful step towards ending the bulk, warrantless surveillance of all electronic communication**s.¶ HB3916 will first be assigned to a House committee, where it will need to pass by majority vote to move forward.

Denying access to public utilities solves the aff – that either forces compliance from surveillance agencies or it shuts them down

Mike **Maharrey**, 3/16/**2015**, Tenth Amendment Center, "texas bill would turn off power to massive nsa surveillance facility," http://blog.tenthamendmentcenter.com/2015/03/texas-bill-would-turn-off-power-to-massive-nsa-surveillance-facility/, mm

A Texas legislator introduced a **bill** that **would stop the** independent Texas **power grid from being used to power mass, warrantless surveillance by the NSA**.¶ Rep. Jonathan Stickland (R) introduced House Bill 3916 (HB3916) on March 13. **The legislation would prohibit any political subdivision in Texas from providing water or electricity to any federal agency "involved in the routine surveillance or collection and storage of bulk telephone or e-mail records or related metadata concerning any citizen of the United States and that claims the legal authority to collect and store the bulk telephone or e-mail records or metadata concerning any citizen of the United States without**

the citizen's consent or a search warrant that describes the person, place, or thing to be searched or seized."¶ "No water and no electricity means no super-computers. **That will shut down NSA operations** in Texas. If Congress doesn't want to reform the NSA then we'll just turn it off," OffNow founder and associate director Michael Boldin said.¶ IMMEDIATE EFFECT¶ If passed, HB3916 would ultimately turn off water and electric service to the massive Texas Cryptologic Center in San Antonio.¶ In 2006, the Baltimore Sun reported that the NSA had maxed out capacity of the Baltimore-area power grid via Baltimore Gas and Electric. Insiders reported that "The NSA is already unable to install some costly and sophisticated new equipment. **At minimum, the problem could produce disruptions leading to outages and power surges. At worst, it could force a virtual shutdown of the agency.**"

Prohibiting material support from state and local agencies will force compliance from spying agencies

Steven **Nelson**, 1/28/**2015**, US News and World Report, "NSA's Water, Power Supply under threat in state legislatures," http://www.usnews.com/news/articles/2015/01/28/nsas-water-power-supply-under-threat-in-state-legislatures, mm

Congress failed to agree last year on a measure that would reform the practice of mass government surveillance, but privacy-minded state legislators have a back-up plan for shutting down alleged violations of their constituents' constitutional rights.¶ In eight **states**, legislators **are pushing bills they hope will either boot National Security Agency facilities or ban the agency from setting up shop**. **The bills would prohibit state and local governments from offering material support to the agency**, **including use of public utilities that carry water and electricity**. Two of the bills would criminalize official cooperation with the NSA and several seek to squeeze contractors out of work with the electronic spy agency.¶ The state-level push began months after whistleblower Edward Snowden revealed in June 2013 the NSA's bulk collection of U.S. phone records and Internet-mining programs. ¶ Last year, bills in Utah - home of the NSA's massive Utah Data Center - and Maryland - host of the agency's Fort Meade headquarters - sought to shut down those operations, winning broad media coverage.¶ The Utah bill remains active and its sponsor, Republican state Rep. Marc Roberts, is cautiously optimistic about its chances, particularly after a seemingly receptive committee hearing in November.¶ Roberts says colleagues he's spoken with "have concerns with the NSA programs and violations of the Fourth Amendment." But, he says, "when it comes down to a big vote on it like this I'm not sure [what] they will do."¶ Roberts is waiting to learn which legislative committee this year will hear his bill, which seeks to shut off the water supply to the NSA's vast Utah Data Center that's currently provided through a sweatheart deal with the city of Bluffdale.¶ **Legislators in Alaska, Indiana, Mississippi, Missouri, Oklahoma, South Carolina and Washington**, meanwhile, **introduced similar bills** this month, **many called Fourth Amendment protection acts,** based on model legislation from the OffNow coalition. More are likely to be introduced as the legislative season unfolds.¶ **The bills generally say states and their political subdivisions cannot supply material support to federal agencies that collect citizens' metadata without individualized warrants**, **and they intend to bar NSA-derived evidence from state courts and block the agency from research partnerships with state schools**.

Solvency – Federal Follow-On

The counterplan spurs federal action in the future – that solves the aff

Josh **Harkinson**, 6/21/**2014**, Mother Jones, "legislators in 6 states want to pull the plug on NSA spying - some literally," http://www.motherjones.com/politics/2014/01/state-legislators-offnow-nsa-spying, mm

Frustrated with the limited scope of the reforms to the National Security Agency detailed by President Obama on Friday, and the slow pace of Congress in addressing the issue, **civil liberties advocates are increasingly taking the privacy fight to state capitols**. This month, lawmakers in **six states introduced** versions of model **legislation** designed **to deny the NSA state resources** or cooperation from state officials. The bills cover everything from banning evidence collected by the NSA from being introduced in state courts to shutting off the supply of water and electricity to the agency's in-state data centers. ¶ "**If the feds aren't going to address the issue, then it's up to the states to do it**," says David Taylor, a GOP member of the Washington state House of Representatives whose Yakima Valley district hosts an NSA listening post. **Taylor's** bipartisan **bill**, introduced last week, **would cut off "material support, participation or assistance**" from the state and its contractors to any federal agency that collects data or metadata on people without a warrant. Practically speaking, it would mean severing ties between the NSA and state law enforcement, blocking state universities from serving as NSA research facilities and recruiting grounds, and cutting off the water and power to the agency's Yakima facility.¶ Similar bills, some of them less broad, have been floated in California, Oklahoma, Indiana, Missouri and Kansas. Others are expected in coming months in Michigan, Arizona, and Utah. Unlike the symbolic resolutions that oppose the NSA's warrantless spying, which have passed the Pennsylvania House and the California Senate, few, if any, of the more consequential anti-NSA bills are likely to become law. But their existence underscores the depth of grassroots opposition to the agency's dragnet surveillance programs, and the willingness of lawmakers from both parties to take a stand.¶ **"I think there is a value in the message that it sends to DC, which** is, 'We're not gonna put up with it,'" says Hanni Fakhoury, a staff attorney for the Electronic Frontier Foundation. "**It encourages lawmakers in DC to actually do something about the problem**."

Solvency – AT Supremacy Clause

The federal government can't force the states to provide access to public utilities – hundreds of years of Supreme Court precedent proves

Mike **Maharrey**, 3/16/**2015**, Tenth Amendment Center, "texas bill would turn off power to massive nsa surveillance facility," http://blog.tenthamendmentcenter.com/2015/03/texas-bill-would-turn-off-power-to-massive-nsa-surveillance-facility/, mm

HB3916 rests on a rock-solid legal doctrine. **The Supreme Court has repeatedly upheld the principle that the states cannot be required to supply resources or manpower to help the federal government carry out its acts or programs**.¶ **Known as the anti-commandeering doctrine, the legal principle rests primarily on four Supreme Court opinions dating back to 1842**. In Prigg v. Pennsylvania(1842), Justice Joseph Story held that the federal government could not force states to implement or carry out the Fugitive Slave Act of 1793. He said that it was a federal law, and the federal government ultimately had to enforce it.¶ The fundamental principle applicable to all cases of this sort, would seem to be, that where the end is required, the means are given; and where the duty is enjoined, the ability to perform it is contemplated to exist on the part of the functionaries to whom it is entrusted. The clause is found in the national Constitution, and not in that of any state. It does not point out any state functionaries, or any state action to carry its provisions into effect**. The states cannot**, therefore, **be compelled to enforce them**; and it might well be deemed an unconstitutional exercise of the power of interpretation, to insist that the states are bound to provide means to carry into effect the duties of the national government, nowhere delegated or instrusted to them by the Constitution.¶ Other key cases include New York v. United States (1992), Printz v. United States (1997), and Independent Business v. Sebelius (2012).¶ **"State governments are free to refrain from cooperating with federal authorities if they so choose**. In general, states cannot attack federal operations, but that's not the same as refusing to help," Noted Constitutional scholar Randy Barnett of Georgetown Law said.

The counterplan is legal – the anti-commandeering doctrine means that states can't be forced to comply

Shane **Trejo**, 1/15/**2015**, Tenth Amendment Center, "Indiana vs NSA: new bill would ban material support or resources," http://blog.tenthamendmentcenter.com/2015/01/indiana-vs-nsa-new-bill-would-ban-material-support-or-resources/, mm

There is little to no concrete debate about the Constitutionality of Delph's bill, as **the Supreme Court has repeatedly upheld the principle that the states cannot be required to expend resources** or manpower to **help the federal government carry out its acts or programs**.¶ **Known as the anti-commandeering doctrine, the legal principle rests primarily on four Supreme Court opinions dating back to 1842.** In Prigg v. Pennsylvania (1842), Justice Joseph Story held that the federal government could not force states to implement or carry out the Fugitive Slave Act of 1793. He said that it was a federal law, and the federal government ultimately had to enforce it.¶ The fundamental principle applicable to all cases of this sort, would seem to be, that where the end is required, the means are given; and where the duty is enjoined, the ability to perform it is contemplated to exist on the part of the functionaries to whom it is entrusted. The clause is found in the national Constitution, and not in that of any state. It does not point out any state functionaries, or any state action to carry its provisions into effect. **The states cannot**, therefore, **be compelled to enforce them**; **and it might well be deemed an unconstitutional exercise of the power of interpretation, to insist that the states are bound to provide means to carry into effect the duties of the national governmen**t, nowhere delegated or instrusted to them by the Constitution.¶ Other notable cases include New York v. United States (1992), Printz v. United States (1997), and Independent Business v. Sebelius (2012). Noted Constitutional scholar Randy Barnett of Georgetown Law said, "**State governments are free to refrain from cooperating with federal authorities if they so choose. In general, states cannot attack federal operations, but that's not the same as refusing to help.**"

Solvency – AT Supply Their Own Resources

States can shut down the NSA by cutting off resources – no chance that they could supply their own resources

Lily **Dane**, 1/24/**2015**, Freedom Outpost, "Fighting back against the surveillance state: turn off the NSA's resources," http://freedomoutpost.com/2015/01/fighting-back-surveillance-state-turn-off-nsas-resources/, mm

The Federal government is notorious for being unable (or unwilling) **to regulate** itself or make reforms. OffNow seeks to work at the state level to make it impossible for **the NSA** and other agencies that illegally spy on us to run their facilities.¶ OffNow's website says¶ We intend to pull the rug out from under them, box them in and shut them down. ¶ **As a legal matter, contracts for water, electricity and other resources and services are simply voluntary agreements made between the federal government** (or its agents) **and the state or local government. States legitimately can and should decide whether to honor the request based on the state's own set of priorities.¶ Of course, the federal government can bring in its own resources and supplies, but history shows they would likely struggle to do so.¶** Legislators in several states have already introduced bills to ban material support or resources to any federal agency engaged in warrantless spying, as the Tenth Amendment Center reports.

AT Nuclear Power Turn – Can't Solve

Nuclear power can't solve warming – plus wind and solar are solving in the status quo

Alan **Robock**, 5/12/**2014**, The Huffington Post, "nuclear energy is not a solution for global warming," http://www.huffingtonpost.com/alan-robock/nuclear-energy-is-not-a-solution_b_5305594.html, mm

There have been several recent **calls** from people and organizations concerned **about global warming to use nuclear electricity generation as part of the solution**. This includes The New York Times, the Center for Climate and Energy Solutions (formerly the Pew Center on Global Climate Change), and a group of leading climate scientists, James Hansen, Tom Wigley, Ken Caldeira, and Kerry Emanuel.¶ Don't get me wrong. Global warming is real, it is caused by human emissions of greenhouse gases, it is bad (as described in detail by the new National Climate Assessment), and we have to do something about it. **But solar and wind power**, combined with increased efficiency and conservation, **can do the trick**. Elimination of exorbitant government subsidies to the nuclear and fossil fuel industries, and a gradually increasing carbon tax, fee and dividend, or a cap and trade system like the one that worked to tame acid rain, will push us to do the right thing.¶ More than 99 percent of the current 437 nuclear power systems in the world use highly enriched uranium to produce heat and boil water, which drives turbines. Plutonium and many other highly radioactive elements are waste products. The benefits of nuclear power include minimal emissions of greenhouse gases that cause global warming, and a fairly reliable continuous source of electricity.¶ But **nuclear power presents many downsides**. **These include**:¶ Nuclear weapons proliferation. A plant for processing fuel for a typical nuclear reactor could produce enough highly enriched uranium for 10-30 nuclear weapons per year. Waste reprocessing could produce 30 plutonium weapons per year. Nuclear power, partly due to the ill-conceived Atoms for Peace program, preceded the spread of nuclear weapons to India, Pakistan, Israel, and North Korea, and Iran appears to be trying the same route. While additional nuclear reactors in existing nuclear states would not be a problem, proliferation of nuclear power around the world would only exacerbate the problem of nuclear weapons, and this is the greatest danger the world faces.¶ **Possibility of catastrophic accident**. **Based on the 20 core melt events that have occurred** in military and commercial reactors worldwide since the early 1950s, including Three Mile Island, Chernobyl, and Fukushima, Lelieveld, Kunkel, and Lawrence showed that **the risk of catastrophic nuclear accidents has been drastically underestimated**. They showed that the risk of human exposure to dangerous radiation from nuclear accidents in eastern United States, virtually all of Western Europe, and East Asia is higher than once every 50 years. Nuclear reactors are built, operated, and regulated by humans, and humans make mistakes. Accidents can happen not just from meltdowns, but from earthquakes, tsunamis, and aircraft accidents.¶ **Possibility of terrorist attack and radioactive release**. **None of the nuclear reactors in the United States are guarded against terrorist attacks**. The spent fuel, now being stored outside the containment vessels, would be an easy target, and sophisticated terrorists could also cause a meltdown.¶ Unsafe operation. In the United States, the Nuclear Regulatory Commission has a cozy relationship with the nuclear industry, resulting in poor oversight and enforcement of rules. The industry has a for-profit culture that emphasizes profit over safety. There are planned and unplanned radioactive releases during routine operation. There is lax enforcement of fire protection rules at nuclear plants. And there are no viable evacuation plans should accidents happen.¶ **Not economically viable**. **Nuclear power is incredibly expensive**. **It could not even exist in the U.S. without huge government subsidies,** including insurance against accidents. Too cheap to meter, a claim when nuclear power was first being developed, was a fantasy.¶ Waste disposal problem not solvable in near future. For political reasons, there is no repository for the spent fuel, which accumulates at each nuclear power plant, just waiting for an accident to happen.¶ Extraction of uranium very damaging. Uranium mining exposes workers to lung cancer and the surrounding areas to contamination. In the U.S., it is Native Americans who suffer disproportionately.¶ **Nuclear power emits 10-20 times the carbon dioxide as wind power**. Mining, processing, and transportation of nuclear fuel is energy intensive.¶ Proponents of nuclear power, recognizing these dangers, propose new "safe" future generation technology (which does not now exist), assembly line production of standard designs, and continued operation of existing plants that are already beyond their 40-year design lifetime in the United States. I certainly agree we need research into new nuclear technologies, to see if they are a real potential solution sometime in the future. But **solar and wind energy is here now**. In the meantime **we need a rapid move away from coal and into solar and wind sources of green energy**.¶ **Proponents assert that wind and solar are not viable because of cost, but with the plummeting price of solar panels, and the global potential of wind power to provide all the energy needed on the planet, they are wrong**. We will need electrical grids that will combine wind and solar over large areas to compensate for local intermittency, along with other backup sources and new electricity storage options. The planet has safer, cheaper options for energy that do not emit greenhouse gases and do not present the same dangers as nuclear power.

Nuclear power can't solve warming fast enough – it takes too long to construct reactors

Linda **Gunter and** Kevin **Kamps**, 11/7/**2013**, CNN, "Don't trade global warming for nuclear meltdowns," http://www.cnn.com/2013/11/07/opinion/pandora-nuclear-gunter-kamps/

The **climate change** crisis **is upon us**. The world's leading climate scientists agree that time is rapidly running out and that urgent steps are needed in the next 10 years to dramatically reduce our carbon emissions. **But exchanging global warming for nuclear meltdown is not the answer**.¶ **From a purely practical standpoint** — and ignoring for a moment nuclear power's other showstoppers such as cost, unmanaged nuclear waste, atomic weapons proliferation and catastrophic accident — **there** simply **isn't time to choose nuclear power**. There are faster, affordable alternatives, including energy efficiency and renewable energy installations such as wind farms and solar arrays that can be completed in months to a few years.¶ **The average construction time for a new nuclear power reactor is close to 10 years. A 2003 Massachusetts Institute of Technology study concluded that more than two new reactors would have to start operating somewhere in the world every month over the next 50 years to displace a significant amount of carbon-emitting fossil-fuel generation**.¶ Such a fantasy does not pass the reality check in corporate boardrooms or on Wall Street where nuclear power has been soundly rejected. The exorbitant costs and unpredictably long completion time -- a reactor at Watts Bar in Tennessee, for example, was "under construction" for 23 years and may be connected to the grid by 2015 -- make nuclear power an unappealing, even reckless, business choice for corporations and shareholders.¶ ¶ Construction costs for a new reactor are predicted to top at least $15 billion, assuming the project remains on budget, which those under way in France and Finland have demonstrably failed to do. Meanwhile, since 2008, the world market cost of solar photovoltaic modules has fallen by 80%.¶ In the U.S., the four reactors currently under already-behind-schedule construction in Georgia and South Carolina would never have begun without fleecing ratepayers in advance through a surcharge on their electricity bills. This cost is shouldered by ratepayers even if the reactor they are paying for is never completed.¶ **Government support does not sweeten the pill**. Constellation Energy abandoned its application for a new reactor in Maryland after being offered a federal loan of just under $8 billion, a burden that would likely have been shouldered at least in part by taxpayers. Constellation pulled out because it was unwilling to risk $880 million of its own money in federal financing charges.¶ Advocates of allegedly "new" designs such as the sodium-cooled integral fast reactor (IFR) touted in "Pandora's Promise" are reaching back into the atomic dark ages. Previous incarnations of this design have suffered fires, leaks and disastrous economics. For example, Monju in Japan, cost $10.11 billion and generated just one hour of electricity before closing. The "new" IFR design is decades away, economically unappealing, proliferation risky, and its safety claims are unproven.¶ The IFR cannot magically eat nuclear waste for lunch as some claim. Theoretically, it can gradually reduce the amount of the more dangerous isotopes in the waste, but the process comes at very high costs with marginal benefits and would take hundreds of years.¶ Energy efficiency measures and renewable energy, which have been marginalized by decades of disproportionate federal handouts to the nuclear sector, are the real answer. They can be deployed fast, far more cheaply and safely, are more practical in rural, developing countries, and are more effective in displacing carbon than nuclear power.¶ Germany has stepped in where the United States failed to lead, well on the way to a 100% renewable energy economy by 2050, with a revitalized supply chain and 380,000 jobs in the renewable energy sector compared with 30,000 in nuclear. Nuclear France, meanwhile, must import electricity in winter and during summer droughts and heat waves.¶ The ongoing nuclear crisis in Japan in the aftermath of the triple reactor meltdowns at the **Fukushima** Daiichi nuclear complex **serves as a permanent reminder of the unacceptable risks posed by the current fleet of nuclear plants**.¶ Given the latency period between exposure even to "low" doses of radiation and the manifestation of disease, we may not know the true health effects of the Fukushima nuclear disaster for decades. The experience of the 1986 Chernobyl reactor accident demonstrates that negative health effects can last generations, cause immense suffering and trigger other fatal and non-fatal illnesses as well as birth defects.¶ Even the routine radioactive releases from nuclear power plants can prove fatal. Studies in Germany and France found elevated rates of leukemia among children living near nuclear power plants.¶ The situation at Fukushima remains perilous and could still become orders of magnitude worse. A technology that has the capacity to poison human resources and render vast areas unfit for habitation for decades, even centuries, cannot be endorsed by environmentalists and runs contrary to the best interests of humanity.

AT Nuclear Power – Warming Impact Defense

Warming will be slow and the impact will be small

Ridley 6/19/14, (Matt Ridley is the author of The Rational Optimist, a columnist for the Times (London) and a member of the House of Lords. He spoke at Ideacity in Toronto on June 18., "PCC commissioned models to see if global warming would reach dangerous levels this century. Consensus is 'no'" , [http://tinyurl.com/mgyn8ln] , //hss-RJ)

The debate over climate change is horribly polarized. From the way it is conducted, you would think that only two positions are possible: that the whole thing is a hoax or that catastrophe is inevitable. In fact there is room for lots of intermediate positions, including the view I hold, which is that man-made climate change is real but not likely to do much harm, let alone prove to be the greatest crisis facing humankind this century. After more than 25 years reporting and commenting on this topic for various media organizations, and having started out alarmed, that's where I have ended up. But it is not just I that hold this view. I share it with a very large international organization, sponsored by the United Nations and supported by virtually all the world's governments: the Intergovernmental Panel on Climate Change (IPCC) itself. The IPCC commissioned four different models of what might happen to the world economy, society and technology in the 21st century and what each would mean for the climate, given a certain assumption about the atmosphere's "sensitivity" to carbon dioxide. Three of the models show a moderate, slow and mild warming, the hottest of which leaves the planet just 2 degrees Centigrade warmer than today in 2081-2100. The coolest comes out just 0.8 degrees warmer. Now two degrees is the threshold at which warming starts to turn dangerous, according to the scientific consensus. That is to say, in three of the four scenarios considered by the IPCC, by the time my children's children are elderly, the earth will still not have experienced any harmful warming, let alone catastrophe. But what about the fourth scenario? This is known as RCP8.5, and it produces 3.5 degrees of warming in 2081-2100. Curious to know what assumptions lay behind this model, I decided to look up the original papers describing the creation of this scenario. Frankly, I was gobsmacked. It is a world that is very, very implausible. For a start, this is a world of "continuously increasing global population" so that there are 12 billion on the planet. This is more than a billion more than the United Nations expects, and flies in the face of the fact that the world population growth rate has been falling for 50 years and is on course to reach zero – i.e., stable population – in around 2070. More people mean more emissions. Second, the world is assumed in the RCP8.5 scenario to be burning an astonishing 10 times as much coal as today, producing 50% of its primary energy from coal, compared with about 30% today. Indeed, because oil is assumed to have become scarce, a lot of liquid fuel would then be derived from coal. Nuclear and renewable technologies contribute little, because of a "slow pace of innovation" and hence "fossil fuel technologies continue to dominate the primary energy portfolio over the entire time horizon of the RCP8.5 scenario." Energy efficiency has improved very little. These are highly unlikely assumptions. With abundant natural gas displacing coal on a huge scale in the United States today, with the price of solar power plummeting, with nuclear power experiencing a revival, with gigantic methane-hydrate gas resources being discovered on the seabed, with energy efficiency rocketing upwards, and with population growth rates continuing to fall fast in virtually every country in the world, the one thing we can say about RCP8.5 is that it is very, very implausible. Notice, however, that even so, it is not a world of catastrophic pain. The per capita income of the average human being in 2100 is three times what it is now. Poverty would be history. So it's hardly Armageddon. But there's an even more startling fact. We now have many different studies of climate sensitivity based on observational data and they all converge on the conclusion that it is much lower than assumed by the IPCC in these models. It has to be, otherwise global temperatures would have risen much faster than they have over the past 50 years. As Ross McKitrick noted on this page earlier this week, temperatures have not risen at all now for more than 17 years. With these much more realistic estimates of sensitivity (known as "transient climate response"), even RCP8.5 cannot produce dangerous warming. It manages just 2.1C of warming by 2081-2100. That is to say, even if you pile crazy assumption upon crazy assumption

till you have an edifice of vanishingly small probability, you cannot even manage to make climate change cause minor damage in the time of our grandchildren, let alone catastrophe. That's not me saying this – it's the IPCC itself. But what strikes me as truly fascinating about these scenarios is that they tell us that globalization, innovation and economic growth are unambiguously good for the environment. At the other end of the scale from RCP8.5 is a much more cheerful scenario called RCP2.6. In this happy world, climate change is not a problem at all in 2100, because carbon dioxide emissions have plummeted thanks to the rapid development of cheap nuclear and solar, plus a surge in energy efficiency. The RCP2.6 world is much, much richer. The average person has an income about 15 times today's in real terms, so that most people are far richer than Americans are today. And it achieves this by free trade, massive globalization, and lots of investment in new technology. All the things the green movement keeps saying it opposes because they will wreck the planet. The answer to climate change is, and always has been, innovation. To worry now in 2014 about a very small, highly implausible set of circumstances in 2100 that just might, if climate sensitivity is much higher than the evidence suggests, produce a marginal damage to the world economy, makes no sense. Think of all the innovation that happened between 1914 and 2000. Do we really think there will be less in this century? As for how to deal with that small risk, well there are several possible options. You could encourage innovation and trade. You could put a modest but growing tax on carbon to nudge innovators in the right direction. You could offer prizes for low-carbon technologies. All of these might make a little sense. But the one thing you should not do is pour public subsidy into supporting old-fashioned existing technologies that produce more carbon dioxide per unit of energy even than coal (bio-energy), or into ones that produce expensive energy (existing solar), or that have very low energy density and so require huge areas of land (wind). The IPCC produced two reports last year. One said that the cost of climate change is likely to be less than 2% of GDP by the end of this century. The other said that the cost of decarbonizing the world economy with renewable energy is likely to be 4% of GDP. Why do something that you know will do more harm than good?

Warming is slow – no risk of an impact

Michaels and Knappenberger 11/19/13, (*Chip Knappenberger is the assistant director of the Center for the Study of Science at the Cato Institute, and coordinates the scientific and outreach activities for the Center. He has over 20 years of experience in climate research and public outreach, including 10 years with the Virginia State Climatology Office and 15 years as the Research Coordinator for New Hope Environmental Services, Inc, **Patrick J. Michaels is the director of the Center for the Study of Science at the Cato Institute. Michaels is a past president of the American Association of State Climatologists and was program chair for the Committee on Applied Climatology of the American Meteorological Society. He was a research professor of Environmental Sciences at University of Virginia for thirty years. Michaels was a contributing author and is a reviewer of the United Nations Intergovernmental Panel on Climate Chanage, which was awarded the Nobel Peace Prize in 2007, "With or Without a "Pause" Climate Models Still Project Too Much Warming", [http://www.cato.org/blog/or-without-pause-climate-models-still-project-too-much-warming] //hss-RJ)

A new paper just hit the scientific literature that argues that the apparent pause in the rise in global average surface temperatures during the past 16 years was really just a slowdown. As you may imagine, this paper, by Kevin Cowtan and Robert Way is being hotly discussed in the global warming blogs, with reaction ranging from a warm embrace by the global-warming-is-going-to-be-bad-for-us crowd to revulsion from the human-activities-have-no-effect-on-the-climate claque. The lukewarmers (a school we take some credit for establishing) seem to be taking the results in stride. After all, the "pause" as curious as it is/was, is not central to the primary argument that, yes, human activities are pressuring the planet to warm, but that the rate of warming is going to be much slower than is being projected by the collection of global climate models (upon which mainstream projections of future climate change—and the resulting climate alarm (i.e., calls for emission regulations, etc.)—are based). Under the adjustments to the observed global temperature history put together by Cowtan and Way, the models fare a bit better than they do with the unadjusted temperature record. That is, the observed temperature trend over the past 34 years (the period of record analyzed by Cowtan and Way) is a tiny bit closer to the average trend from the collection of climate models used in the new report from the U.N.'s Intergovernmental Panel on Climate Change (IPCC) than is the old temperature record. Specifically, while the trend in observed global temperatures from 1979-2012 as calculated by Cowtan and Way is 0.17°C/decade, it is 0.16°C/decade in the temperature record compiled by the U.K. Hadley Center (the record that Cowtan and Way adjusted). Because of the sampling errors associated with trend estimation, these values are not significantly different from one another. Whether the 0.17°C/decade is significantly different from the climate model average simulated trend during that period of 0.23°C/decade is discussed extensively below. But, suffice it to say that an insignificant difference of 0.01°C/decade in the global trend measured over more than 30 years is pretty small beer and doesn't give model apologists very much to get happy over. Instead, the attention is being deflected to "The Pause"—the leveling off of global surface temperatures during the past 16 years (give or take). Here, the new results from Cowtan and Way show that during the period 1997-2012, instead of a statistically insignificant rise at a rate of 0.05°C/decade as is contained in the "old" temperature record, the rise becomes a statistically significant 0.12°C/decade. "The Pause" is transformed into "The Slowdown" and alarmists rejoice because global warming hasn't stopped after all. (If the logic sounds backwards, it does to us as well, if you were worried about catastrophic global warming, wouldn't you rejoice at findings that indicate that future climate change was going to be only modest, more so than results to the

contrary?) The science behind the new Cowtan and Way research is still being digested by the community of climate scientists and other interested parties alike. The main idea is that the existing compilations of the global average temperature are very data-sparse in the high latitudes. And since the Arctic (more so than the Antarctic) is warming faster than the global average, the lack of data there may mean that the global average temperature trend may be underestimated. Cowtan and Way developed a methodology which relied on other limited sources of temperature information from the Arctic (such as floating buoys and satellite observations) to try to make an estimate of how the surface temperature was behaving in regions lacking more traditional temperature observations (the authors released an informative video explaining their research which may better help you understand what they did). They found that the warming in the data-sparse regions was progressing faster than the global average (especially during the past couple of years) and that when they included the data that they derived for these regions in the computation of the global average temperature, they found the global trend was higher than previously reported—just how much higher depended on the period over which the trend was calculated. As we showed, the trend more than doubled over the period from 1997-2012, but barely increased at all over the longer period 1979-2012. Figure 1 shows the impact on the global average temperature trend for all trend lengths between 10 and 35 years (incorporating our educated guess as to what the 2013 temperature anomaly will be), and compares that to the distribution of climate model simulations of the same period. Statistically speaking, instead of there being a clear inconsistency (i.e., the observed trend value falls outside of the range which encompasses 95% of all modeled trends) between the observations and the climate mode simulations for lengths ranging generally from 11 to 28 years and a marginal inconsistency (i.e., the observed trend value falls outside of the range which encompasses 90% of all modeled trends) for most of the other lengths, now the observations track closely the marginal inconsistency line, although trends of length 17, 19, 20, 21 remain clearly inconsistent with the collection of modeled trends. Still, throughout the entirely of the 35-yr period (ending in 2013), the observed trend lies far below the model average simulated trend (additional information on the impact of the new Cowtan and Way adjustments on modeled/observed temperature comparison can be found here). The Cowtan and Way analysis is an attempt at using additional types of temperature information, or extracting "information" from records that have already told their stories, to fill in the missing data in the Arctic. There are concerns about the appropriateness of both the data sources and the methodologies applied to them. A major one is in the applicability of satellite data at such high latitudes. The nature of the satellite's orbit forces it to look "sideways" in order to sample polar regions. In fact, the orbit is such that the highest latitude areas cannot be seen at all. This is compounded by the fact that cold regions can develop substantial "inversions" of near-ground temperature, in which temperature actually rises with height such that there is not a straightforward relationship between the surface temperature and the temperature of the lower atmosphere where the satellites measure the temperature. If the nature of this complex relationship is not constant in time, an error is introduced into the Cowtan and Way analysis. Another unresolved problem comes up when extrapolating land-based weather station data far into the Arctic Ocean. While land temperatures can bounce around a lot, the fact that much of the ocean is partially ice-covered for many months. Under "well-mixed" conditions, this forces the near-surface temperature to be constrained to values near the freezing point of salt water, whether or not the associated land station is much warmer or colder. You can run this experiment yourself by filling a glass with a mix of ice and water and then making sure it is well mixed. The water surface temperature must hover around 33°F until all the ice melts. Given that the near-surface temperature is close to the water temperature, the limitations of land data become obvious. Considering all of the above, we advise caution with regard to Cowtan and Way's findings. While adding high arctic data should increase the observed trend, the nature of the data means that the amount of additional rise is subject to further revision. As they themselves note, there's quite a bit more work to be done this area. In the meantime, their results have tentatively breathed a small hint of life back into the climate models, basically buying them a bit more time—time for either the observed temperatures to start rising rapidly as current models expect, or, time for the modelers to try to fix/improve cloud processes, oceanic processes, and other process of variability (both natural and anthropogenic) that lie behind what would be the clearly overheated projections. We've also taken a look at how "sensitive" the results are to the length of the ongoing pause/slowdown. Our educated guess is that the "bit" of time that the Cowtan and Way findings bought the models is only a few years long, and it is a fact, not a guess, that each additional year at the current rate of lukewarming increases the disconnection between the models and reality.

AT Cybersecurity Turn - NSA Can't Solve Cybersecurity

The NSA doesn't enhance cybersecurity – if anything, it makes us more vulnerable

Danielle **Kehl et al., 2014**, New America's Open Technology Institute, "Surveillance Costs: The NSA's Impact on the Economy, Internet Freedom & Cybersecurity," https://www.newamerica.org/downloads/Surveilance_Costs_Final.pdf, mm

We have previously focused on the economic¶ and political repercussions of the NSA¶ disclosures both in the United States and abroad.¶ In this section, we consider the impact on the¶ Internet itself and the ways in which **the NSA has**¶ both weakened overall trust in the network and¶ directly **harmed the security of the Internet**.¶ Certainly, the actions of the NSA have created¶ a serious trust and credibility problem for¶ the United States and its Internet industry. "All of¶ this denying and lying results in us not trusting¶ anything the NSA says, anything the president¶ says about the NSA, or anything companies say¶ about their involvement with the NSA," wrote¶ security expert Bruce Schneier in September¶ 2013.225 However, beyond undermining faith in¶ American government and business, a variety of¶ the NSA's efforts have undermined trust in the¶ security of the Internet itself. When Internet¶ users transmit or store their information using¶ the Internet, they believe—at least to a certain¶ degree—that the information will be protected¶ from unwanted third-party access. Indeed, the¶ continued growth of the Internet as both an¶ economic engine and an as avenue for private¶ communication and free expression relies on¶ that trust. Yet, **as the scope of the NSA's surveillance¶ dragnet and its negative impact on cybersecurity¶ comes into greater focus,** that **trust in¶ the Internet is eroding**.226¶ Trust is essential for a healthy functioning¶ society. As economist Joseph Stiglitz explains,¶ "Trust is what makes contracts, plans and¶ everyday transactions possible; it facilitates¶ the democratic process, from voting to law¶ creation, and is necessary for social stability."227¶ Individuals rely on online systems and services¶ for a growing number of sensitive activities,¶ including online banking and social services,¶ and they must be able to trust that the data they¶ are transmitting is safe. In particular, trust and¶ authentication are essential components of the¶ protocols and standards engineers develop to¶ create a safer and more secure Internet, including¶ encryption.228 The NSA's work to undermine¶ the tools and standards that help ensure cybersecurity—especially¶ its work to thwart encryption—also¶ undermines trust in the safety of the¶ overall network. Moreover, it reduces trust in the¶ United States itself, which many now perceive as¶ a nation that exploits vulnerabilities in the interest¶ of its own security.220 This loss of trust can¶ have a chilling effect on the behavior of Internet¶ users worldwide.230 Unfortunately, as we detail¶ below, the growing loss of trust in the security¶ of Internet as a result of the latest disclosures¶ is largely warranted. Based on the news stories¶ of the past year, **it appears that the Internet is¶ far less secure than people thought—a direct¶ result of the NSA's actions**. **These actions can be¶ traced to a core contradiction in NSA's two key¶ missions: information assurance**—protecting¶ America's and Americans' sensitive data—**and¶ signals intelligence**—spying on telephone and¶ electronic communications for foreign intelligence¶ purposes.¶ In the Internet era, these two missions of¶ the NSA are in obvious tension. The widespread¶ adoption of encryption technology to secure¶ Internet communications is considered one of¶ the largest threats to the NSA's ability to carry¶ out the goals of its signals intelligence mission.¶ As the National Journal explained, "strong¶ Internet security actually makes the NSA's job¶ harder."231 In the 1990s, the NSA lost the public¶ policy battle to mandate that U.S. technology¶ companies adopt a technology called the¶ "Clipper Chip" that would give the government¶ the ability to decrypt private communications,232¶ and since then strong encryption technology¶ has become a bedrock technology when it¶ comes to the security of the Internet. The¶ NSA lost that early battle against encryption,¶ sometimes called the "Crypto War,"233 not only¶ due to vocal opposition from privacy and civil¶ liberties stakeholders, but also because the¶ private sector convinced policymakers that¶ subverting the security of American communications¶ technology products would undermine¶ the U.S. technology industry and the growth of the Internet economy as a whole.234 However, as¶ an explosive New York Times story first revealed¶ in September 2013, **the NSA has apparently¶ continued to fight the "Crypto War" in secret**,¶ clandestinely inserting backdoors into secure¶ products and working to weaken key encryption¶ standards.235 "For the past decade, **N.S.A.¶ has led an aggressive, multipronged effort to¶ break widely used Internet encryption technologies**,"¶ said a 2010 memo from the Government¶ Communications Headquarters (GCHQ), the¶ NSA's British counterpart. "Cryptanalytic capabilities¶ are now coming online. Vast amounts of¶ encrypted Internet data which have up till now¶ been discarded are now exploitable."236¶ **Given the amount of information the NSA¶ is collecting, it is not surprising that the agency¶ would also take aggressive steps to improve its¶ ability to read that information**. According to the¶ "black budget" released by The Washington Post¶ in August 2013, 21 percent of the intelligence¶ budget (roughly $11 billion) goes toward the¶ Consolidated Cryptologic Program, with a staff¶ of 35,000 in the NSA and the armed forces'¶ surveillance and code breaking units.237 "The¶ resources devoted to signals intercepts are¶ extraordinary," wrote Barton Gellman and Greg¶ Miller.238 However, **the agency has employed¶ a variety of methods to achieve this goal far¶ beyond simple code-breaking—methods that¶ directly undermine U.S. cybersecurity**, not just¶ against the NSA, but also **against foreign governments,¶ organized crime, and other malicious¶ actors.** In this section, we consider four different¶ ways that the NSA has damaged cybersecurity in pursuit of its signals intelligence goals: (1) by¶ deliberately engineering weaknesses into widely-used¶ encryption standards; (2) by inserting¶ surveillance backdoors in widely-used software¶ and hardware products; (3) by stockpiling information¶ about security vulnerabilities for its own¶ use rather than disclosing those vulnerabilities so¶ that they can be remedied; and (4) by engaging¶ in a wide variety of offensive hacking techniques¶ to

compromise the integrity of computer systems¶ and networks around the world, including¶ impersonating the web sites of major American¶ companies like Facebook and LinkedIn.

AT Cybersecurity Turn – Impact Defense

Zero Threat of Cyber Attack – their ev is hype

Singer, 12 (Peter – Director 21st Century Defense Initiative, November, "The Cyber Terror Bogeyman" Armed Forces Journal, http://www.brookings.edu/research/articles/2012/11/cyber-terror-singer)

About 31,300. That is roughly the number of magazine and journal articles written so far that discuss the phenomenon of cyber terrorism. Zero. That is the number of people that who been hurt or killed by cyber terrorism at the time this went to press. In many ways, cyber terrorism is like the Discovery Channel's "Shark Week," when we obsess about shark attacks despite the fact that you are roughly 15,000 times more likely to be hurt or killed in an accident involving a toilet. But by looking at how terror groups actually use the Internet, rather than fixating on nightmare scenarios, we can properly prioritize and focus our efforts. Part of the problem is the way we talk about the issue. The FBI defines cyber terrorism as a "premeditated, politically motivated attack against information, computer systems, computer programs and data which results in violence against non-combatant targets by subnational groups or clandestine agents." A key word there is "violence," yet many discussions sweep all sorts of nonviolent online mischief into the "terror" bin. Various reports lump together everything from Defense Secretary Leon Panetta's recent statements that a terror group might launch a "digital Pearl Harbor" to Stuxnet-like sabotage (ahem, committed by state forces) to hacktivism, WikiLeaks and credit card fraud. As one congressional staffer put it, the way we use a term like cyber terrorism "has as much clarity as cybersecurity — that is, none at all." Another part of the problem is that we often mix up our fears with the actual state of affairs. Last year, Deputy Defense Secretary William Lynn, the Pentagon's lead official for cybersecurity, spoke to the top experts in the field at the RSA Conference in San Francisco. "It is possible for a terrorist group to develop cyber-attack tools on their own or to buy them on the black market," Lynn warned. "A couple dozen talented programmers wearing flip-flops and drinking Red Bull can do a lot of damage." The deputy defense secretary was conflating fear and reality, not just about what stimulant-drinking programmers are actually hired to do, but also what is needed to pull off an attack that causes meaningful violence. The requirements go well beyond finding top cyber experts. Taking down hydroelectric generators, or designing malware like Stuxnet that causes nuclear centrifuges to spin out of sequence doesn't just require the skills and means to get into a computer system. It's also knowing what to do once you are in. To cause true damage requires an understanding of the devices themselves and how they run, the engineering and physics behind the target. The Stuxnet case, for example, involved not just cyber experts well beyond a few wearing flip-flops, but also experts in areas that ranged from intelligence and surveillance to nuclear physics to the engineering of a specific kind of Siemens-brand industrial equipment. It also required expensive tests, not only of the software, but on working versions of the target hardware as well. As George R. Lucas Jr., a professor at the U.S. Naval Academy, put it, conducting a truly mass-scale action using cyber means "simply outstrips the intellectual, organizational and personnel capacities of even the most well-funded and well-organized terrorist organization, as well as those of even the most sophisticated international criminal enterprises." Lucas said **the threat of cyber terrorism has been vastly overblown.**

AT 50 State Fiat Illegitimate

50 state fiat for this specific counterplan is especially legitimate – action in the status quo proves multiple states are considering this idea

Anthony **Zurcher**, 4/27/**2015**, BBC, "US states take aim at NSA over warrantless surveillance," http://www.bbc.com/news/world-us-canada-32487971, mm

The Texas bill is just one of the most recent examples of a growing movement among states - both liberal and conservative - to end government support for NSA facilities.¶ Last year **California became the first to pass** what's been called **a Fourth Amendment Protection Act.** Its law prohibited the state from providing support to a federal agency "to collect electronically stored information or metadata of any person if the state has actual knowledge that the request constitutes an illegal or unconstitutional collection".¶ **This year 15 other states have introduced some kind of anti-NSA legislation**, including politically diverse locations like liberal Washington and Maryland and conservative Oklahoma and Mississippi.¶ **The movement has been championed by the Tenth Amendment Center** and its OffNow coalition, **which provides support and model legislation to politicians** like Stickland interested in **challenging the NSA**.

States CP

1NC

The 50 states, Washington D.C., and relevant territories should prohibit the use of unpiloted aerial vehicles for domestic surveillance without a warrant

States solves drone surveillance restrictions

David L. **Hudson** Jr., **2-1-2015**, How should states regulate drones and aerial surveillance?," No Publication, http://www.abajournal.com/mobile/mag_article/how_should_states_regulate_drones_and_aerial_surveillance, Accessed: 5-24-2015, /Bingham-MB

While the federal government uses these unmanned aerial vehicles for military purposes, **states are increasingly turning to drones for law enforcement as a means of enhancing surveillance and gathering data**. However, many worry that the increased use of drones domestically portends poorly for those who care about privacy and the Fourth Amendment freedom from search and seizure. "**Domestic drones will devastate the Fourth Amendment unless there are some really strict guidelines**," warns John Whitehead, president of the Rutherford Institute, a Charlottesville, Virginia-based nonprofit legal group. "Information collected by a drone should not be used as evidence by a court of law," adds Whitehead, who wrote about the technology in his 2013 book, A Government of Wolves: The Emerging American Police State. **States are taking notice and considering regulation**. According to the National Conference of State Legislators, **more than 20 states have passed laws related to drones. Some limit law enforcement's use of drones or other unmanned aircraft**. **For example**, in **Idaho**, a law signed in 2013 provides that, except for emergencies "for safety, search-and-rescue or controlled substance investigations," no person or agency may use a drone to conduct surveillance of private property without a warrant. **Tennessee** has a similar law known as the Freedom from Unwarranted Surveillance Act. The law allows aggrieved individuals the right to sue law enforcement agencies in civil court for violations. It also provides that "no data collected on an individual, home or areas other than the target that justified deployment may be used, copied or disclosed for any purpose," and that such data must be deleted within 24 hours of collection. "The legislation doesn't eliminate the use of drones," says Austin, Texas-based attorney Gerry Morris, co-chair of the National Association of Criminal Defense Attorneys' Fourth Amendment Committee. **They "require some sort of showing of probable cause. This is something that is constantly overlooked. Just because government officials are required to go get a warrant doesn't mean they won't be able to use the drones**. **It just means that they are required to follow the Constitution when they use them**." However, in California, Gov. Jerry Brown vetoed a measure in September that would have required law enforcement to obtain a warrant for the vast majority of uses of drones. Brown claimed the bill, AB 1327, would put greater standards on law enforcement than those required by the U.S. and state constitutions. "AB 1327 would have been the first law in California to regulate drones," says constitutional law expert Erwin Chemerinsky, dean of the University of California at Irvine School of Law. "Drones may be a very valuable tool for investigation in some cases. Under AB 1327, **the police still could use drones if they demonstrated to a judge that there was probable cause.** I strongly favored AB 1327 and was very disappointed when Gov. Brown vetoed it." On the other hand, states have passed laws related to drones that fund the technology or encourage the development of testing sites. For example, the North Dakota legislature passed a law funding a drone test site. Legal experts believe that at some point courts will need to address the constitutionality of these measures and of law enforcement's use of the technology. "I do think more legislation is needed," Morris says. "I don't think the court opinions at this point have caught up with the technology. Legislators have to address the issue and get out in front of it." On the federal level, the 2012 Federal Aviation Administration Modernization and Reform Act governs the rules regulating drones' domestic use. "The FAA has the responsibility of drafting a set of rules for integrating unmanned aircraft systems into the airspace," **says** Joseph **Vacek, a lawyer and aviation professor at the University of North Dakota.** "It has taken more time than expected because there has been no industry consensus. I predict that by 2016 we will have the rules in place." **One question that may arise from drone regulation is the difference between state and federal privacy protection**. For example, the New Mexico Court of Appeals interpreted the state constitution as more protective of privacy than the U.S. Constitution. "**It would be better for states to legislate in this area,**" **says Vacek**. "Perhaps we will have a conflict that could eventually wind up before the U.S. Supreme Court. Current Supreme Court law says surveillance from the public airspace is OK. But the court could provide a different answer with respect to drones."

2NC – Solvency

1NC evidence is comparative—states are a superior actor to legislate on drone surveillance—20 states have passed laws now, proves state action is durable and effective—that's Hudson

Empirically states can regulate drone use and privacy issues—multiple states prove

Michael **Berry, 9-25-2014**, State legislation governing private drone use," Washington Post, http://www.washingtonpost.com/news/volokh-conspiracy/wp/2014/09/25/state-legislation-governing-private-drone-use/, Accessed: 5-25-2015, /Bingham-MB

With many people, including journalists, photographers and filmmakers, **clamoring to fly drones**, and in the absence of FAA regulations, **states have begun to address the issue**. **Nearly all states have considered drone legislation over the past few years. More than a dozen states have passed laws substantively regulating drones, with most of these laws addressing the use of drones by government agencies and focusing primarily on law enforcement use**. **Several states also have enacted laws regulating** private **drone use**. Theses states have taken varying approaches, have articulated permissible uses, created new causes of action and established new crimes. Two states have sought to regulate private use of drones by addressing where they can fly. Last year, Oregon enacted a law that allows property owners to sue a drone operator if (1) a drone has flown less than 400 feet above the owner's property at least once, (2) the property owner has told the drone operator that he/she does not consent to the drone flying over his/her property, and (3) the operator then flies the drone less than 400 feet above the property again. If these three conditions are met, the property owner can seek injunctive relief, "treble damages for any injury to the person or the property," and attorney fees if the amount of damages is under $10,000. **Tennessee** also seeks to restrict drones from flying over private property, but has done so in a different way. It has amended its criminal trespass statute to make it a crime for drones to fly over private property below navigable airspace. In contrast to these two states' focus on drone flight, most states that have enacted laws on private drone use have sought to limit who, when and where drones film and photograph. **Texas** has enacted the most detailed of these laws. Its drone law — called the Texas Privacy Act— explicitly authorizes drones to capture images in certain circumstances. For instance, it permits owners and operators of pipelines to use drones for inspections and university professors to use them for "scholarly research." The Texas law also allows drones to capture images of people on "public real property," of people "on real property that is within 25 miles of the United States border," and "with the consent of the individual who owns or lawfully occupies the real property captured in the image." In addition to these permissible uses, the law prohibits certain conduct — specifically, using a drone to capture images of people or privately owned property "with the intent to conduct surveillance on the individual or property." The law, however, does not define "surveillance." Texas deems this conduct a misdemeanor and provides a defense if the alleged offender destroyed the image as soon as he or she realizes it was captured and has not disclosed it to anyone else. The law also makes it a misdemeanor to possess, disclose, distribute, or otherwise use an image after capturing it in violation of the law. In addition, Texas law gives owners and tenants of private property the right to file suit to enjoin an "imminent violation" of the criminal provisions and to seek civil penalties and attorney's fees. The civil penalties include statutory damages of up to $5,000 for "all images captured in a single episode" and up to $10,000 for the disclosure or "use" of "any images captured in a single episode." An owner and tenant also can recover actual damages if he or she can show that the images were disclosed or distributed with "malice." Tennessee has enacted a statute that follows the Texas model. It also has enacted a statute that prohibits the use of drones to conduct surveillance of people hunting or fishing without their consent. Illinois has passed a similar law, making it a crime to use a drone to interfere with hunting and fishing. **Idaho's** law sweeps more broadly. It bars people from using drones "to photograph or otherwise record an individual, without such individual's written consent, for the purpose of publishing or otherwise publicly disseminating such photograph or recording." The law, which would undoubtedly face constitutional challenges if enforced, allows a person to file suit and recover either $1,000 in statutory damages or "actual and general damages," whichever is greater, plus attorney fees and "other litigation costs reasonably incurred." **North Carolina**, likewise, prohibits using a drone to "photograph an individual, without the individual's consent, for the purpose of publishing or otherwise publicly disseminating the photograph." But, unlike Idaho, the Tar Heel state provides an exception for "newsgathering, newsworthy events, or events or places to which the general public is invited." North Carolina, taking a page from Texas's statute, also prohibits people from using drones to "conduct surveillance" of people, dwelling, and private property without the person or property owner's consent. If any of these provisions are violated, the person or property owner can sue, seeking actual damages, statutory damages ($5,000 per photograph or video disseminated), costs and fees, as well as injunctive relief. Finally, **Wisconsin** has passed a criminal law to deal with private drone use. Its law would punish anyone who uses a drone "with the intent to photograph, record, or otherwise observe another individual in a place or location where the person has a reasonable expectation of privacy." In Wisconsin, that crime is a misdemeanor. With many people, including journalists, photographers and filmmakers, clamoring to fly drones, and in the absence of FAA regulations, states have begun to address the issue. Nearly all states have considered drone legislation over the past few years. More than a dozen states have passed laws substantively regulating drones, with most of these laws addressing the use of drones by government agencies and focusing primarily on law enforcement use.

States can restrict federal drone use

Mike **Maharrey, 4-6-2013**, The War on Freedom," Tenth Amendment Center, http://tenthamendmentcenter.com/2013/04/16/the-war-on-freedom/, Accessed: 5-27-2015, /Bingham-MB

Work through our state and local governments to block these Constitution violating acts. Simply **getting state and local government to refuse cooperation with federal overreaches of power will go a long way toward neutering the feds**. Fact: feds **rely on state and local cooperation**. Imagine if the FBI shows up to indefinitely detain somebody in your town and nobody at the state or local level lifts a finger. No local law enforcement support. No use of state or local jails, or other facilities. No use of state and local resources at all. Zero cooperation. **We're beginning to see this movement developing across America. Virginia led the way, passing a bill refusing compliance with NDAA detention in 2012. This year, nearly two dozen states have similar bills pending, and several will likely become law**. Countless counties and municipalities have passed resolutions condemning federal kidnapping. **More than half of the states in the Union have bills pending that would place restrictions on drone use**. **If states refuse to deploy drones, the DHS will have no information to share.** States lawmakers are also looking at legislation that would stop the most intrusive TSA pat-downs. James Madison laid out the blueprint in Federalist 46, before the Constitution was ever ratified. **The states must check federal power**.

States can regulate drone surveillance without a warrant

Robert **Holly**, **3-21-2014**, States restrict drone use because of privacy concerns," Investigate Midwest, http://investigatemidwest.org/2014/03/21/states-restrict-drone-use-because-of-privacy-concerns/, Accessed: 5-27-2015, /Bingham-MB

Citing privacy concerns, **legislators throughout the country are increasingly passing laws to restrict the use of domestic drones over private land.** For more information on drone use, see the series: "Sunshine Week" **At least nine states have officially enacted some form of legislation that bans nonconsensual domestic drone use over private property**, found an analysis by the American Civil Liberties Union, a network of more than 500,000 members who monitor First Amendment and privacy rights. "We believe that we need a system of rules to ensure that we can enjoy the benefits of drones and technology without becoming a surveillance society in which everyone's movements are monitored, tracked, recorded and scrutinized by the authorities," said Allie Bohm, an advocacy and policy strategist for the American Civil Liberties Union. "We believe that **drones should be prohibited from indiscriminate mass surveillance." In the states with drone-restriction policies in place**, **drone pilots surveying land and capturing images need to first gain consent from the owners of the land they are flying over**. Likewise, **law enforcement authorities need to first secure a warrant**.. This year, at least **34 additional states have also introduced similar policies that aim to limit domestic drone use**.

Solvency – Commercial Use

States can solve commercial use---already have a fabric for safeguards

Bennett, 14

(Wells Bennett is a Fellow in the Brookings Institution's Governance Studies program, and Managing Editor of Lawfare, a leading web resource for rigorous, non-ideological analysis of "Hard National Security Choices." He concentrates on issues at the intersection of law and national security, including the detention and trial of suspected terrorists, targeted killing, privacy, domestic drones, Big Data, and surveillance. "Civilian Drones, Privacy, and the Federal-State Balance" http://www.brookings.edu/~/media/Research/Files/Reports/2014/09/civilian-drones-privacy/civilian_drones_privacy_bennett_NEW.pdf?la=en) Henge

But that's just the thing: **private aircraft matter, too**. These days **individuals, private universities and companies can** and do **fly surveillance-capable aircraft**, both with and without the specific blessing that the FAA requires.9 As unmanned flight technology matures and grows ever cheaper, it will find its way into more private hands. The already swift clip will quicken, once the FAA writes rules for wider domestic drone flight. Suffice it to say **private actors will soon operate drones in equal** if not greater **numbers than the government** does—and also acquire the potential to undertake just as much surveillance. **As pressing as the question of how best to safeguard "public" privacy, is the question of how best to safeguard its understudied counterpart, "private" privacy**. The urgency is reflected in a handful of legislative proposals concerning drone surveillance, and in a decision reportedly forthcoming from the Obama Administration. Though details remain sketchy, the White House is set to order the National Telecommunications and Information Administration ("NTIA") to develop, in consultation with various stakeholders, voluntary privacy guidelines for commercial drone use.10 This essay examines the current division of labor between state and federal governments, with respect to civilian drones and privacy. It proceeds in three parts, the first of which recognizes the most compelling reason, put forward by advocates of a state-based regime, for the states' primacy in shielding "private" privacy rights. **There's already a state law fabric meant to safeguard those very rights**, **one woven of common law doctrines, statutes, and laws meant to account for drone surveillance in particular. This body of law will be increasingly relevant as more private drones fly**, and civilian drone surveillance becomes more common. And, as the drone federalists rightly point out, **currently there is no firm consensus about how best to safeguard privacy rights from non-governmental drone surveillance**—**something a top-down, federal approach would require.**

Solvency – Clarity

State precedent is there to inform drone legislation---lack of uniform clarity means states are better than federal drone law

Bennett, 14

(Wells Bennett is a Fellow in the Brookings Institution's Governance Studies program, and Managing Editor of Lawfare, a leading web resource for rigorous, non-ideological analysis of "Hard National Security Choices." He concentrates on issues at the intersection of law and national security, including the detention and trial of suspected terrorists, targeted killing, privacy, domestic drones, Big Data, and surveillance. "Civilian Drones, Privacy, and the Federal-State Balance" http://www.brookings.edu/~/media/Research/Files/Reports/2014/09/civilian-drones-privacy/civilian_drones_privacy_bennett_NEW.pdf?la=en) Henge

The States' Primacy Opponents of a federal statutory scheme for civilian drones and privacy have broadly raised two claims, both of them valid. First, with some important federal-level exceptions, **the law of "private" privacy and aerial surveillance largely is state law**.11 **It** is mostly tech-neutral, and accordingly **has protected privacy from varied forms of surveillance by nongovernmental actors over time**. When the drones take to the skies in greater numbers, a body of varied state rules will be waiting for them. And it will do much of the work in addressing civilian drone surveillance—though how well remains to be seen. State privacy laws generally fit into one of three categories. In the first are longstanding statutory and common-law protections against nongovernmental intrusions. Often it is both a crime and a tort to trespass on another's property, for example by walking on it without permission.12 That is arguably just as true of low-level overflight. Thus an unannounced Quadcopter hover, inside a neighbor's back yard barbecue and at hair-parting altitude, could theoretically put a drone operator on the hook for trespassing. This depends on how a state trespassing statute has been written and how far a court is willing to go in interpreting it.13 Also in play are the classic statelaw "privacy" offenses, which largely "cover what most people think of when they think of personal privacy and social privacy norms."14 The prohibitions against invading privacy, intruding upon seclusion, publishing private facts, and stalking all might be implicated when a drone, heavily sensored up, hears or sees somebody who doesn't wish to be heard or seen.15 Again, outcomes will depend on the fit between a case's facts and criteria set by law. Simply filming a private conversation from a drone probably won't tee up a publication of private facts claim, absent some effort on the snooper's part to disseminate the conversation's contents; a quick fly-by, even when paired with video filming, probably won't rise to the level of an intrusion upon seclusion, either. A more sustained look might be a different story. More specialized rules make up the second group of state privacy laws. These include state wiretap laws, which preclude the recording of images or conversations without both parties' consent. Also, the somewhat rare "Peeping Tom" and anti-voyeurism laws, which bar peeking into the home under certain circumstances; and equally rare paparazzi statutes, which "ban paparazzi from using special technologies to intrude on the personal life and personal spaces of celebrities."16 Here too it is easy to imagine how drone surveillance might trigger one or more of the foregoing. An industrious Peeping Tom, for example, might acquire a Parrot Drone, and fly it close enough to an unsuspecting neighbor's bathroom window to snap a photo. It also goes without saying that paparazzi most assuredly will make ample use of surveillance technology—drones included—in their relentless and unending quest to keep up with the Kardashians.17 To the foregoing **we can add a** third and **growing category**: civil and criminal **laws designed** specifically **to block unwanted aerial surveillance** from privately owned, unmanned aircraft. So far, **thirteen states have enacted these**, either standing alone or coupled with statutes meant to account for surveillance from public aircraft. By way of examples, **Tennessee handed down two "private" privacy statutes in 2014**. One makes it a misdemeanor to conduct drone based video surveillance of citizens who are hunting or fishing in accordance with state law.18 Another precludes, with exceptions, the use of an "unmanned aircraft to capture an image of an individual or privately owned real property … with the intent to conduct surveillance on the individual or property captured in the image," when a snooper retains or publicizes the images. (There's an odd and possibly rule-eating catch: one can escape liability by showing that, upon learning the images were obtained unlawfully, the drone operator promptly destroyed or stopped publicizing them.19) Wisconsin's new drone law suggests a narrower scope of geographic application than Tennessee's. Under the former, a private individual commits a misdemeanor by using a drone to "photograph, record, or otherwise observe another individual in a place where the individual has a reasonable expectation of privacy."20 Two things stand out about this tripartite array. First, **there's a good-sized body of general privacy law out there, waiting to absorb the coming influx of domestic drones and associated surveillance**. The second is diversity. **Not all states define trespassing or drone surveillance in the same way**, or apply identical privacy protections to identical places. Between its statutes and court-crafted doctrines, this jurisdiction might take a relatively stringent approach to the safeguarding of "private" privacy, while that one might take a relatively permissive approach. The phenomenon is most vividly on display with regard to drone-specific statutes; many states don't have one to begin with, and thus accordingly handle nongovernmental privacy intrusions through a mix of laws in categories one and two. In this way, the law of "private" privacy is something of a hodgepodge. Its coverage can be expansive or porous or even nonexistent, depending on where you are, and what sort of technology is deployed. That registers a second, related point in the drone federalists' favor. **We don't quite yet know how effective any one's state law will be, as the domestic drone population grows denser** and private surveillance more pervasive; or which states' laws will withstand court challenges. And we won't have a better sense on either score for a while, either. The **uncertainty will frustrate consensus** about how best to regulate drones, snooping, and nongovernmental actors—**and thus bolster states' prerogatives** in the short run.21 **So far as "effectiveness" goes**, **we really don't have enough in the way of data just yet.** Though unmanned aircraft are increasingly visible, they also are not yet an everyday feature of American life in the same way that manned craft very much are. This is not to suggest that domestic drone flight lies far off in some wild future or that it is weird or unprecedented. In fact, odds are pretty good you've seen a YouTube video of footage taken from a Quadcopter, or maybe even fiddled with making such a recording yourself. Or perhaps you've read about a safety incident involving a slightly larger but still small drone, or even operated one pursuant to the FAA's licensing scheme. (So far, the FAA says it has authorized only three commercial drone operations, two over water and another over land.) Yet the odds are just as good that John Q. Citizen can go weeks, maybe even months, without laying eyes on a drone—or, more to the

point, without a drone laying its eyes on him. The rough probabilities naturally vary from one place to the next. There is plenty of unmanned flight ongoing at test ranges, to name one obvious example; and camera-carrying model aircraft likewise probably are thicker in the air above North Dakota than above Washington, D.C. Still, this fact remains. **The American drone era is in its adolescent phase, with the machines' numbers steadily increasing**, though still remaining small enough to keep civilian drone snooping out of most peoples' lives, most of the time.

Solvency – Privacy

States have lots of precedents for privacy law

Kaminski, 13

(Margot Kaminski, Executive Director of the Information Society Project, Research Scholar, and Lecturer in Law at Yale Law School. "Drone Federalism: Civilian Drones and the Things They Carry" http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1007&context=clrcircuit) Henge

V. WHY STATES ARE BETTER Assuming these conditions are met, **Congress should defer to states on** privacy **regulations governing** civilian **drone use for** video and audio **surveillance**.54 States **have experience regulating many** of the **kinds of privacy violations** contemplated by those who fear drones, and state legislation permits experimentation with these regulations, subject to crucial feedback from courts on First-Amendment boundaries. Congress should therefore wait to enact regulation of civilian use of drones for information-gathering until more data emerges out of state experimentation. At the least, **Congress should avoid preempting state regulation** in any drone privacy statute it does enact. A number of state laws raise questions similar to those likely to be raised by drone regulation. **State wiretapping laws, Peeping Tom laws, video voyeurism laws, and paparazzi laws all currently regulate privacy-intrusive photography, videography, and sound recordings**.55 These laws vary in how they handle the scope of privacy protection against video and photographic intrusion. **State wiretap laws**, for example, **vary** in whether they require the consent of one party, or the consent of all parties. They vary in whether there must be a reasonable expectation of privacy in the conversation for a privacy violation to occur, and they vary in whether the act of recording must be surreptitious to bjje banned.564 Peeping Tom **statutes criminalize peeping through a hole or other aperture** into a person's home. They are sparsely enacted, and relatively ineffective, because they require catching the Tom in the act.57 Video voyeurism **statutes criminalize the viewing, videotaping, or photographing of another without knowledge or consent**, when done for the purpose of sexual arousal.58 Some of these statutes require establishing a reasonable expectation of privacy, and some require that the criminalized image be of a nude or partially nude subject. Paparazzi **statutes ban paparazzi from using special technologies to intrude on the personal life and personal spaces of celebrities**.59 In handling these state statutes, many courts have shown a reluctance to find a reasonable expectation of privacy in public places.60 However, **states could** conceivably **get around** this **reluctance** if desired, **through legislation**. Presumably, states will also try to regulate the taking of photographs, video, or audio recordings from drones, as Texas H.B. 912 currently proposes. **Drone anti-surveillance laws thus resemble these state privacy statutes** that have led courts to grapple with the appropriate balance between privacy and free speech. The state wiretap law cases discussed above demonstrate that a wholesale ban on drone-based recordings would implicate a substantial First Amendment interest. A wholesale ban of drone videography would thus likely not be found constitutional, because it would ban an entire medium of expression.61 But as current state laws demonstrate that a number of narrower privacy protections may be societally acceptable and even necessary, these types of **restrictions may be imported into state anti-drone-surveillance legislation.** In the next section, I explore the various ways in which states might legislate to protect privacy implicated by drone use.

Solvency – Follow On

Fed will follow states

Kaminski, 13

(Margot Kaminski, Executive Director of the Information Society Project, Research Scholar, and Lecturer in Law at Yale Law School. "Drone Federalism: Civilian Drones and the Things They Carry" http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1007&context=clrcircuit) Henge

Thus **states have been the historical locus of governance of personal privacy, and**, as discussed, **have also been the locus of recent tensions between privacy and the First Amendment. This makes them the historical site of experimentation with privacy law that collides with the First Amendment**. It is appropriate for state laws to continue to serve that function with respect to civilian drone use. **Each state will be able to express privacy values reflective of its own citizens' differing principles and needs**, and courts can determine whether these values collide with the First Amendment. **Eventually, state civilian drone laws may converge into a floor that other states can each build on**, with the more successful statutes—the ones that survive First Amendment scrutiny in courts— **serving as the blueprint for eventual federal legislation**. **For now, however, we truly do not have a uniform idea of how to balance privacy against speech rights in gathering information**. If we federally legislate civilian drone surveillance, we risk creating a Congressional floor that collides with the First Amendment.

Solvency – AT: FAA

FAA isn't key---no federal preemption

Kaminski, 13

(Margot Kaminski, Executive Director of the Information Society Project, Research Scholar, and Lecturer in Law at Yale Law School. "Drone Federalism: Civilian Drones and the Things They Carry" http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1007&context=clrcircuit) Henge

VIII. PREEMPTION All **discussions of federalism must** eventually **address the possibility of federal preemption**. While this Essay is by no means an exhaustive exploration of this topic, it is worth at least cursorily addressing whether preemption already exists. **State privacy regulation of drones does not appear to be currently preempted by federal law**, insofar as it does not interfere with how or where flight occurs.75 One of the proposed federal drone bills, however, does attempt to preempt at least some state regulation.76 The location of the drone—that is, whether it flies particularly close to the ground—does not determine who regulates them. Historically, the FAA has regulated (although minimally) low-flying hobbyist aircraft, and now contemplates putting in place more stringent regulations to govern such aircraft when they are used for commercial purposes. Since 1981, the FAA has permitted hobbyists to fly remote-controlled aircraft without FAA licensing, as long as the flight is under 400 feet and within their line of sight.77 The FAA recently clarified, however, that when such aircraft are used for business purposes, they may require "compliance with applicable FAA regulations and guidance developed for this category." The FAA also plans to host rulemaking specifically directed at drones under 55 pounds.78 Thus there will be overlap of FAA regulatory authority with state regulation even of small, low-flying drones. However, **FAA regulation of small, low-flying drones does not preclude all state regulation**. Congress has not created express statutory preemption of laws governing aerial surveillance, and has even expressly nodded to exceptions to federal preemption in the field of aviation. **The original Federal Aviation Act had a** savings **clause explaining** that "[**n]othing contained in this Act shall** in any way abridge or **alter** the **remedies now existing** at common law or **by statute**."79 In 1994, Congress amended this clause to explain that a "remedy under this part is in addition to any other remedies provided by law."80 Presumably, **the 1994 revision still intends to exempt state** tort **laws**, for example, **from federal preemption**. A number of courts have found federal preemption of state attempts to impose curfews on airports or enjoin flight patterns over certain areas.81 But federal aviation law does not preempt state common law tort claims for injuries suffered during crashes.82 Additionally, federal aviation law does not preempt a city's zoning power on land, because that power does not conflict with air use. 83 However, aviation safety law impliedly preempts state schemes for regulating alcoholic beverages on board an aircraft.84 One interesting question will be whether the use of cameras on a drone is considered to fall under the regulatory power of the government in federal airspace, or under the state power to protect its citizens from privacy injuries on land.85 While to my knowledge **there is no extensive system of privacy regulation on airplanes**, courts might find that airplane safety regulations impliedly preempt state regulation of cameras on planes, as they did the regulation of alcoholic beverages. CONCLUSION In its haste to address the specter of a civilian drone invasion, **Congress should not preempt states from enacting privacy laws governing** civilian **drone use. States have served as laboratories for experimentation** in achieving a balance between First Amendment rights and privacy protection. **Congress should permit them to continue doing just that, until an appropriate balance is struck** and federal regulation of civilian drone use might again be considered.

2NC – AT: Perm Do Both

Obviously links to the net benefit

(____) Links to politics—states avoid the need for congressional debates that cost political capital

(____) Links to flex—doesn't tied down the executive with federal restrictions

2NC – AT: Perm Do the Counterplan

This is severance and a voting issue:

Ground—destroys the foundation of debate if the affirmative can sever choices they made in their plan text

Education—debate becomes meaningless if we allow severance, no incentive to research strategies because the aff will always avoid them

Voting issue for fairness—preserve the opportunity for both sides to compete

2NC – AT: Fifty State Fiat Bad

It is legitimate in this context—1NC Hudson evidence says the most relevant policy question for surveillance drones is whether the restrictions should be at the state or federal level

And you should default to specific solvency questions to determine counterplan legitimacy, because the literature should determine the shape of debates over the course of the season, incentivizes in depth research

And 50 state fiat is legitimate

-**Negative ground**: key test of federal key warrant on domestic topics and check affirmative innovations and topic explosion.

-**Protecting neg ground outweighs**: Huge affirmative flexibility and directionality on this topic plus no coherent negative ground. Flexible and bidirectional energy sources and mechanism means we should err on the side of protecting negative ground.

- **Best policy option**: debate should be a policy analyst not decision maker, means best policy witin reasonable constraints should guide division of ground.

- **Real world**: policy experts consider the counterplan, it's in the literature, its arbitrary and unpredictable to exclude it from the negative arsenal.

- **Solvency advocate checks**: 1NC solvency evidence says that collective state action is superior to federal action, prefer a literature – based interpretation of theory –it's in the context of energy policy and it describes collective state action.

-**Aff ground**: leadership, effectiveness, and signaling arguments, disads to states or impact turn all have a literature base to defend federal energy policy.

2NC – Net Benefit – Pres Powers

States solve the flex DA---ensures flexibility for immanent threats

Zoldi, 14

(Col. Dawn M.K. Zoldi, USAF, is Chief of Operations Law at Headquarters Air Combat Command. "On the Front Lines of the Home Front: The Intersection of Domestic Counterterrorism Operations and Drone Legislation" http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2379143) Henge

I. Introduction Find. Fix. Finish. Doctrinally, the targeting cycle remains the same, whether the target is located abroad or at home.1 Yet **operations to prevent**, counter, or respond to **domestic terrorism are different from those overseas** in many respects. State and federal law enforcement agencies, not the Department of Defense (DoD), will be the country's first line of defense for domestic counterterrorism (CT) operations.2 Even so, **the DoD may** be called upon to **support law enforcement agencies**. What if any one of these agencies planned to use a drone in support of its CT efforts at home?3 For some, this very idea raises the specter of illicit government surveillance—or even more controversial, the extrajudicial killing— of Americans on United States soil. To allay fears related to privacy and due process, 43 **states have proposed** 86 **drone bills to "protect citizens' privacy" or free them from "unwarranted" surveillance**.4 Eight states have already passed such legislation.5 Of these state proposals, 90% apply to state and local government actors, primarily to law enforcement agencies.6 Forty-one percent also extend their applicability to U.S. or federal government employe**e**s.7 Twelve percent of state bills directly address the U.S. military, but many more could also apply.8 Federal drone legislation has also been introduced.9 These proposals largely track state initiatives and apply to both state and federal actors. In addition, while DoD drone policies apply directly to DoD personnel, they also have indirect effects on the civilian agencies they support. Thus, drone legislation and policies will impact conduct across the range of governmental actors during all operations, but in particular domestic CT operations. The underlying assumption of this chapter is that states and the Congress will continue to revisit the subject of domestic drone use in relation to privacy and due process until laws are passed. The purpose of this article is to review these legislative drone proposals and policies, explore their potential impact on domestic CT operations and identify best practices that allow drones to be used to their full operational potential in CT operations, while protecting privacy and liberty. II. Find and Fix Finding a target means detecting it.10 Fixing the target means determining its positional location.11 Drones perform both of these functions well.12 To the extent that proposed drone laws and existing drone policies address using these assets to collect information or evidence about a person, they have implications for "finding and fixing" terrorists domestically. Below is an overview of state and federal drone bills and DoD policies relevant to the "find and fix" aspects of domestic CT operations. A. State Legislation—Information Collection Almost universally, state drone legislation prohibits the use of drones to collect information or evidence.13 There are, however, exceptions, the most common being where law enforcement obtains a judicial warrant or court order.14 Highly **relevant to a domestic CT scenario**, 22% of proposed **state drone bills permit drone use without a warrant in relation to a terrorist attack**. All the state bills that contain a "terrorist attack" exception use similar language: "**To counter a high risk of a terrorist attack by a specific individual or organization if the United States Secretary of Homeland Security . . . determines that credible intelligence indicates that there is such a risk**."15 Although the bills do not define "counter," the language appears to be preventive in nature, to thwart a likely future or imminent terror attack. The bills also do not define "terrorist attack." A scan of publicly available DHS documents does not provide an obvious definition of "terrorist attack."16 Because the exception always requires a predicate determination by the Secretary of Homeland Security that a high risk of a terrorist attack exists before it can be invoked, the secretary's interpretation as to what acts rise to the level of a domestic terror attack would be determinative. Along similar lines, Arkansas, Hawaii, Maine, and Michigan would allow state or federal agencies to use drones for emergencies involving "conspiratorial activities threatening the national security interest."17 Like the terror attack exception, the national security interest conspiracy exception contains significant terms that remain undefined, such as "conspiratorial activity" and "national security interest." As such, these state provisions would be subject to individual interpretation.18 **Most terror attack scenarios would invoke the potential of immediate danger of death, serious physical injury, or significant property damage**. All but 14 states have proposed drone bills to permit their use in a proactive manner to save lives in emergency situations.19 **These provisions are most commonly styled as an "imminent danger to life" exception**.20 Most of these same provisions also permit drone use to prevent property damage.21 Other CT-relevant exceptions include provisions that would permit drone use on or over public lands or to monitor borders.22 **Depending on the facts of a particular CT event**, **state drone legislative exceptions**, such as those permitting drones to pursue fleeing suspects, to prevent the destruction of evidence, or to be used in situations tantamount to "judicially recognized exceptions to the warrant requirement," **might also apply**.23 Less relevant in the CT arena, but worth mentioning, fewer than a quarter of drone bills surveyed permit their use where the target or property owner has consented.24 Some state drone bills also contain exceptions that would allow drones to be used to mitigate the effects of a domestic terrorist event, including provisions for disaster response and search and rescue (SAR).25 Other provisions that might be employed after a terror attack include those from Illinois, Oregon, and Texas, which allow drones to assess crime scenes.26

2NC – Net Benefit – Politics

States don't link

[ ] There's no reason Obama would be blamed or get credit for state policies.

[ ] Avoids conflict

States avoid politics

Rabe, 7

(Prof of Public Policy-Ford School at Michigan, "Beyond Kyoto: Climate Change Policy in Multilevel Governance Systems," Governance, Vol. 20, Issue 3, July)

Those more active states include many that have conventionally been among the most innovative in environmental and energy policy, particularly those lodged along the respective national coasts, but they increasingly include a diverse set from other regions such as the Southwest and Midwest (Rabe 2006). Most of the initiatives have been enacted with **minimal partisan rancor** and have not been dominated by a single political party. Most of these also appear quite **capable of enduring once partisan control of a state government**, including the governorship, **changes hands, and have not proven very controversial to enact** or implement. Clearly, state agencies have played a central role in policy development, building coalitions rather quietly around policies that are tailored around relatively inexpensive reduction opportunities. This is entirely consistent with a pattern of "bureaucratic autonomy" and agency-based entrepreneurship that has been established in other American policy contexts (Carpenter 2001; Mintrom 2002).

These steps have often been linked to early signs of climate change as manifest in a particular state, thereby framed as a response to a specific environmental problem facing the state. A further source of bipartisan appeal for these initiatives has been the promise of multiple benefits, whereby agency advocates demonstrate the potential of a program not only to reduce greenhouse gases but also to achieve other goals, such as reduction of conventional air pollutants, reduced reliance on imported fossil fuels, and longer term regulatory predictability to electrical utilities and other regulated entities, as well as economic development opportunities (Rabe 2004). Hence, a considerable part of the appeal of state-based climate policy initiatives has been the simultaneous pursuit of environmental protection and potential contribution to economic growth or stability. Indeed, much of this comports with Eugene Bardach's definition of smart practice: "What makes a practice smart is that the method also involves taking advantage of some latent opportunity for creating value on the cheap" (Bardach 1998, 36). In contrast, climate policy initiatives, whether or not they meet the definition of smart practices, are simply much harder to find at the Canadian provincial level. Only one of the 10 provinces, Manitoba, begins to approach the 15 most active American states in terms of the breadth and rigor of its greenhouse gas reduction strategy. Instead, most provinces remain focused on preliminary study of the issue and consideration of alternative policies that might be established at some future point. Among the three or four more active provinces, climate policy is almost exclusively confined to nonbinding "goals" and voluntary efforts. Any regulatory provisions, or exact rules to guide reduction, are focused narrowly on provincially funded activity, such as a mandate in Alberta to purchase a set of hybrid vehicles for government use. Fifteen years after Rio and nearly a decade after the signing of Kyoto, it remains very difficult to discern much of a pulse on serious climate policy development in most provinces, quite contrary to the experience of a growing and diverse set of American states. American state engagement on climate policy may be every bit as surprising as Canadian provincial disengagement. Given conventional depictions of the United States as a North American climate policy laggard and Canada as a

devoted adherent to Kyoto, why are so many—and such diverse—states apparently taking the lead in devising policies to reduce greenhouse gases? Why do the American states offer an increasingly large and robust set of policy initiatives where there is no evidence of a comparable trend in Canada? Subsequent discussion will explore three distinct factors that emerged through the comparative case analysis to explain this variability. Differing Intergovernmental Context The divergent paths of the respective federal governments on Kyoto served to create very distinct contexts for states and provinces to consider their own policy development options. These differing contexts were clearly unintended by-products of the very different ways in which the debate over Kyoto, involving both those steps leading toward final negotiations and consideration of possible ratification, played out in Washington and Ottawa. In turn, they illustrate the very differing roles that subnational units—states and provinces—played in these processes, with attendant impacts on their own involvement in climate policy development. A hallmark of the American federal government through the two Clinton administrations and the second Bush presidency has been **a consistent inability to reach agreement** on legislation related to environmental protection, energy, and other areas vitally important to climate change. During this period, every possible partisan configuration within the American two-party system has existed for at least some period of time and yet a consistent outcome has been lack of domestic policy consensus, even in terms of needed updating of established legislation such as air quality (Binder 2003). This divide is equally evident in the international climate realm, as the Clinton administration agreed to Kyoto in December 1997 even though a number of its key provisions directly contradicted a Senate resolution that passed by a 95–0 vote six months earlier. A few states sent representatives to Kyoto and earlier rounds of negotiation but they were not formally consulted either in developing the treaty or in examining ways in which the Senate might be persuaded to ratify it. Instead, Kyoto was widely recognized through the remaining three years of the Clinton administration as doomed politically, so much so that the administration never submitted it to the Senate for ratification nor actively developed a strategy seeking ratification. In many respects, the 2001 actions by the Bush administration were anticlimactic and neither the 2000 nor 2004 Democratic presidential nominees offered any blueprint for jump-starting Kyoto. In many respects, Kyoto was politically "dead on arrival" but nonetheless attracted tremendous division and controversy in Washington during subsequent years. As states were essentially excluded from this process, they had a relatively quiet decade in which to think about climate change, in terms of both how it might affect them in distinct ways and how they might fashion their own policies to reduce greenhouse gases and simultaneously promote economic development. In some instances, states have clearly responded to a perception that climate change poses serious threats to their residents—such as sea-level rise in coastal states and severe droughts in agricultural states—and that there is a significant environmental need to craft responsive policies as soon as possible. But these responses have also been coupled with efforts to design policy that "fits" the economic and political realities of a particular state. These are intended to minimize any economic disruptions that might occur during implementation and to take maximum advantage of economic development opportunities that may stem from early action on climate change. What has been missing in these state policy processes is the kind of anguished, often moralistic, rhetoric that has polarized national debate and made any semblance of consensus at that level so elusive. Instead, state policy deliberations over climate change have benefited from a kind of **"political cover"** provided by the widely held presumption that states lacked the incentives, resources, or authority necessary to play any serious role. Many states used this extended period to reflect seriously about the issue of climate change and how they might begin to respond to it. Many began with symbolic initiatives and analytical exercises, gradually moving toward policy development as ideas converged and opportunities arose. At various points, these efforts took institutional form, such as creation of a cross-agency task force or designation of a unit with a lead role in policy development. All of this continued apace, receiving surprisingly little attention from environmental groups, the media, or federal policymakers, while the latter continued to dominate

public attention by thrashing over the details of Kyoto and its aftermath. This served to give state officials considerable time to contemplate climate policy options, including the forging of policies that made considerable political, economic, and environmental sense for them to pursue unilaterally, with the reasonable expectation that no federal action of any consequence was in the offing.

Insulated from political fights

Rabe (Prof Public Policy @ U. of Michigan) **2004**

[Barry, Statehouse and Greenhouse: The Emerging Politics of American Climate Change Policy //mac-tjc]

But this is not what occurred in the **states** examined in this study. Instead, a much **quieter process of policy formation has emerged**, even during more recent years, when the pace of innovation has accelerated and the intent of many policies has been more far-reaching. This is not to suggesst that climate-related episodes have been irrelevant or that leading environmental groups have played no role in state policy development. **Contrary to the** kinds of **political brawls** so **common in debate about climate** change **policy at national** and international venues, however, **state-based policymaking has been far less visible and contentious, other cutting across traditional partisan and interest group fissures. It has**, moreover, **been far more productive in terms of generating actual policies** with the potential to reduce greenhouse gas releases.[p. 22]

Transparency CP

Shells

1NC

The United States federal government should:

Adopt a new public communication strategy regarding surveillance activities that at least emphasizes the strength of existing oversight and the limitations of transparency.

Codify in statute existing procedures, standards and minimization procedures governing NSA surveillance

Require both regular public reporting of aggregate data concerning the use of surveillance authorities and regular public disclosure of compliance and non-compliance reporting.

The CP's reforms restore public and foreign trust while maintaining NSA flexibility. Wittes, Brooking senior governance fellow, 2013

(Benjamin, "Legislative Changes to the Foreign Intelligence Surveillance Act", 9-26, http://www.brookings.edu/~/media/Research/Files/Testimony/2013/09/26-fisa-nsa-wittes/Wittes-SSCI-Hearing-StatementFinal-Draft92613.pdf?la=en)

To the extent that members of this committee continue to believe, as I do, in the essential integrity of the post-Watergate mechanisms of intelligence oversight, the first task in the current political environment is to defend those mechanisms— **publicly and energetically**—rather than race to correct imagined structural deficiencies, or even real structural imperfections that, however real they may be, bear little relation to the outcomes that disquiet us. And critically, **the defense of these mechanisms necessarily involves a defense of significant limitations on transparency**—just as the defense of the core operations of this committee involves a defense of significant limitations on transparency. This committee, and Congress more generally, ought therefore to make quick work of radical proposals that seek to, for example, abolish the FISA court system entirely in the name of transparency.5 Nor should members detain themselves long over the proliferating proposals to impose a strong norm of transparency on a system designed to avoid the consequences of transparency.6 Rather, the challenge when we speak of adding transparency to the FISA is a subtler one: it is to inject transparency within the basic confines of an oversight system designed to protect secrets. True opportunities for new transparency within this system are relatively limited, though some significant ones do exist, particularly now that major programs are compromised anyway. **The opportunities for transparency are limited because the price of transparency, at least while programs remain secret, is unacceptably high in operational terms**. Until someone like Snowden blows a particular program, the costs of having an open discussion about that program involves a damaging initial disclosure. Only after the fact of the program becomes public can one discuss even its broadest contours without doing the leaker's work for him. But ironically, the involuntary transparency foisted on the intelligence community by someone like Snowden will tend to create opportunities for official transparency. Snowden, for example, disclosed information revealing the fact of the Section 215 metadata collection program.7 Members of this committee know better than I do the operational consequences of those disclosures. But that damage's having been done, the executive branch suddenly faced an entirely different set of calculations regarding the costs and benefits of further disclosures. And it responded with significant document releases and public statements about the program,8 disclosures it never could have made before it had absorbed the initial damage. Something similar happened with respect to collection under Section 702. The result is that we now have declassified minimization procedures for collection under Section 7029 and primary orders10 for bulk metadata collection. **The fact that this information is now public offers Congress a significant opportunity to codify existing legal standards in statute—standards that, until this summer, Congress could not have written into law without revealing the fact of the program itself.** There is much to be said for codifying in statute the law developed in the iterative back-and-forth between the Executive Branch and the FISC in 2009 and now reflected both in FISC orders and the extant minimization procedures governing the metadata program. There is a perception, based on the text of 50 USC § 1861,11 that the FISC is ordering metadata production based on simple relevance—much as courts uphold grand jury subpoenas based on a showing of relevance. But as the recently-revealed primary order and other declassified documents show, there's actually much more going on in the way of standards and restrictions than merely a showing of the production's relevance. These rules, restrictions, and standards include, for example, the requirement that the sole purpose of the production be to support authorized investigations to protect against terrorism; the most recent primary order expressly forbids any other use.12 More importantly, the order also includes the requirement that the metadata database only be queried when there is a "reasonable, articulable suspicion" (RAS) that the telephone identifier is associated with terrorist activity. It also includes various restrictions designed to ensure that only RAS-approved identifiers are queried.13 Congress could craft out of the primary orders and the attendant minimization procedures a far more comprehensive statutory scheme to govern the production, maintenance and use of metadata under FISA. While this process would not add information to the public's understanding of the program, it would have the salutary dual benefits of ratifying existing practice and clarifying for the public in law the precise circumstances—now spelled out in an interlocking fabric of statute, executive procedure, and court order—under which the government can acquire and use bulk telephony metadata. The transparency benefit here is admittedly modest, since following the declassification of the orders and the procedures, the standards in question are already public. But there is at least a marginal transparency benefit to writing the rules into **law, and there is a significant benefit on their own terms in codification and congressional ratification.** In addition, Congress should consider requiring both regular public reporting of aggregate data concerning the use of 215 and 702 authorities and regular **public disclosure of compliance and non-compliance reporting.** The Director of National Intelligence recently announced that the Executive Branch would be releasing annually data describing the number of orders issued and the number of people targeted under the following authorities: ● FISA orders based on probable cause ● Section 702 of FISA ● FISA Business Records ● FISA Pen Register/Trap and Trace ● National Security Letters issued pursuant to 12 U.S.C. § 3414(a)(5), 15 U.S.C. §§ 1681u(a) and (b), 15 U.S.C. § 1681v, and 18 U.S.C. § 2709.14 Similarly,

the government has declassified a significant body of material related to compliance issues.15 There is little reason, particularly prospectively, why such compliance reporting could not be made public on a more routine basis—or at least summarized for the public. Similarly, there's no reason why the law should not codify and require public release of the sort of regular data streams the government is creating. Senator Feinstein has proposed other reporting mechanisms as well, suggesting annual disclosure of "the number of Americans' phone numbers submitted as queries of the NSA database," "the number of referrals made to the FBI each year based on those queries," and "the number of times in a year that any company is required to provide data pursuant to FISA's business records provision."16 **I do not purport to know which of these data streams can be safely released, but as a general matter, making such data public is critical to establishing long-term public understanding of what these programs are—and what they are not. That is, such disclosures are key to establishing and maintaining public legitimacy.**

Solvency

Communication – 2NC

Developing a better communication strategy restores public confidence.
Cordero, Georgetown National Security Studies director, 2013

(Carrie, "Thoughts on the Proposals to Make FISA More Friendly", 8-12, http://www.lawfareblog.com/2013/08/thoughts-on-the-proposals-to-make-fisa-more-friendly/)

There may be meaningful steps that are worth exploring that would foster public confidence. For example, it might help if there were a more consistent framework for declassifying information related to these activities. The drip, drip, drip of declassifying certain orders is, in my view, not helping. The orders on their own do not provide the full context of the activities, and it is likely that releasing the underlying documents would expose too many sources and methods. Similarly, selected examples of operational successes are both complicated to accurately extract, and turn attention away from the broader goals of the activities. **Developing a better method of communicating the value of national security surveillance activities to Congress and the public could help**. Finally, protecting foreign intelligence operational, analytic and oversight personnel from the budget mess might be a good idea. Wouldn't it be rich if personnel involved in the national security surveillance activities, and oversight activities in particular, were subject to furlough or other budget cuts even as the president embraces calls for a new layer of oversight bureaucracy?

More transparency while justifying secrecy is the best middle ground.
Foust, Foreign Policy Research Institute national security fellow, 2013

(Joshua, "Managing NSA's Public Image", 7-9, https://medium.com/state-of-play/managing-nsas-public-image-a706d6411558)

It is a difficult balancing act. The U.S. intelligence community is subjected to far more public scrutiny than any other intelligence service on the planet—and even then it operates largely in secret. **Congress has a unique opportunity to step in and shed some light on the nature of intelligence operations.** The circular legal structures that allow for secret interpretations of secret laws need to be made open. It won't be easy: Senators Ron Wyden and Jeff Merkley have tried to change laws to require more open legal reasoning for intelligence operations but both were voted down by their fellow Senators. The House of Representatives seems even less amenable to scaling back secret intelligence activities in the name of counterterrorism. The intelligence community also needs to be more upfront about the tradeoffs inherent to this discussion. Most members of the public are not trained in counterintelligence: They do not understand the damage or lost opportunities that come from certain kinds of openness. **Public education about how those tradeoffs will play out in real life—even if it results in some lost effectiveness in some quarters—is a vital step toward rebuilding trust that intel operations are in the public interest.**

Direct communication restores trust—the alternative is people assuming the worst case.
Corrin, Federal Times senior staff writer, 2014

(Amber, "Can the intelligence community win back public trust?", 9-19, http://archive.c4isrnet.com/article/20140919/C4ISRNET07/309190004/Can-intelligence-community-win-back-public-trust-)

"I want to bring in an outside perspective and take a look at how effective we are in our current communications strategy. I don't think we are where we need to be," Rogers, who also is commander of the U.S. Cyber Command, said at the INSA Intelligence and National Security Summit in Washington. "Secondly, I've said I want to engender a broader dialogue about what we do and why we do it, and why I as a citizen should feel comfortable that that capability we have is not going to misused or will be used against us." **Part of the problem is the public no longer trusts conventional watchdog models, such as congressional oversight and legal authorities**, Rogers said. "How you achieve a level of trust in a nation when those very mechanisms no longer enjoy a high confidence that they perhaps had previously or historically in our society?" Rogers said. "If those are going to be the venues that we traditionally had counted on to ensure that the American populace was comfortable with what we're doing — because the elected representatives had specific details on what we do and how, a court oversaw it and gave us legal authority in many cases specifically — how do you create an environment of trust and confidence in those mechanisms if they don't enjoy a level of trust they have historically?" The answer, Rogers said, is that the government needs to go beyond traditional mechanisms while also still ensuring compliance in existing laws and requirements. At **least part of that requires a direct conversation between the intelligence community and constituents, as well as with international partners, he noted.** "We've had what I think is a very incomplete dialogue to date. I would argue it's not even a dialogue," Rogers said. "We've heard details about amazing technical capabilities that people then assume we must be using indiscriminately. What we haven't talked about is the legal framework in place that drives what [we] do. What are the controls and compliance mechanisms that [we] have in place to make sure these technical

capabilities are not misused? Why should [the public] comfortable with these capabilities? That's the dialogue I'm interested in having over time."

Details will reduce NSA backlash.
Schindler, US Naval War College national security affairs professor, 2013

(John, "An Open Letter to the NSA", 10-30, http://foreignpolicy.com/2013/10/30/an-open-letter-to-the-nsa/)

The NSA does foreign intelligence. Tell the American people a bit more about that. It's overdue. Better to tell the story yourselves than to let your enemies do it. I'm not saying you need to let MTV film a reality show at agency headquarters — though I've heard worse ideas — but you need to level with the American people about what it is the NSA does and how it does it. It's 2013, and because of the Internet and the spread of smartphones, practically all Americans rely on information technology to function on a daily basis. So you can't blame people who until recently had never heard of SIGINT when they get a tad freaked out by the leaks they've heard so much about in recent months. **But the truth is far less scary than the lies being told about the agency**. If the agency's current leaders can't find a way to convincingly tell the American people what it does — including the indelible and truthful message that unless you're in bed with foreign spies or terrorists the NSA has less than zero interest in you — then it's time for new leadership. With NSA Director Keith Alexander likely to step down by next spring, that's coming soon anyway, but there's not much time to waste. By their nature, the agency's leadership and public affairs units are reactive and unaccustomed to being in the public eye. **But that era has ended — and it's not coming back. Deal with it. Rebrand now while you still can and regain the public's trust. I'm confident that once they understand what the NSA really does the vast majority of Americans will be glad the agency is on watch.**

Data Publishing – 2NC

Publishing data would boost trust-studies prove
Sternstein, Nextgov senior correspondent, 2010

(Aliya, "Study Links Online Transparency Efforts, Trust In Government", 2-16, http://www.nextgov.com/health/2010/02/study-links-online-transparency-efforts-trust-in-government/45965/)

The first-ever quantitative assessment of online open government efforts has concluded that the perceived transparency of federal Web sites drives trust in government. ForeSee Results, a market research firm, conducted the study, which was slated to be released publicly on Tuesday. Nextgov was briefed on the results by ForeSee Results. Over the past year, many organizations have tracked the amount of previously undisclosed information that agencies are posting online. Earlier this month, the White House began tracking compliance with the president's open government directive. But no one has measured the effects of Web-based disclosure on American public opinion. The longstanding approach to quantifying transparency has been, "well let's measure how much data they put out there," said Larry Freed, ForeSee Results' president and chief executive officer. "To me, that's not measuring transparency. That may be measuring confusion." Freed opted instead to survey citizens on their reactions to government Web sites, using the model of the American Customer Satisfaction Index, for which ForeSee Results also collects data. Researchers asked users questions related to how thoroughly the sites disclosed information about what the agency is doing, how quickly information was made available online and how accessible that information was on the sites. The answers were then run through the ACSI statistical engine to generate a score on transparency. Many agencies already measure satisfaction with their sites using the ACSI e-government index. The transparency project surveyed more than 36,000 citizens who visited 14 federal sites during the fourth quarter of 2009. The aggregate transparency score was 75 on a 100-point scale. The authors acknowledged that there are thousands of federal sites beyond the 14 that volunteered to participate. "Even those that appear to have lower scores in this short list of 14 would certainly be nowhere near the bottom of the pack in a comprehensive index of federal government online transparency," the report states. Agency sites that scored the highest included the Agriculture Department's Center for Nutrition Policy and Promotion (83), the Health and Human Services Department's National Mental Health Information Center (81), the State Department's Bureau of Consular Affairs (79) and the main site of the General Services Administration (78). **"If citizens find e-government transparent, they are more likely to return to the site, recommend it, and use it instead of a more costly channel," the study found. "They even express more trust in the government agency."** Citizens who believe a site is highly transparent are 46 percent more likely to trust the overall government, 49 percent more likely to use the site as a primary resource and 37 percent more likely to return to the site, according to the study. "We have always assumed that greater transparency [and] more openness in government would link to greater satisfaction and higher trust in government," said Dave McClure, GSA's associate administrator for its Office of Citizen Services and Communications, who also was briefed on the results. "What this study does is help confirm that."

Regular displays of openness is the only politically sustainable strategy that maintains the tools necessary to protect national security.
Goldsmith, Harvard law professor, 2015

(Jack, "My Speech at ODNI Legal Conference: "Toward Greater Transparency of National Security Legal Work"", 5-12, http://www.lawfareblog.com/2015/05/my-speech-at-odni-legal-conference-toward-greater-transparency-of-national-security-legal-work/)

The third and related principle is to rethink, really rethink, the pervasive resistance to public disclosure of any aspect of any intelligence operation, including the legal rationale for such operations. Director Clapper explained the basis for this resistance when he said: "Before the unauthorized [Snowden] disclosures, we were always conservative about discussing specifics of our collection programs, based on the truism that the more adversaries know about what we're doing**, the more they can avoid our surveillance."** Clapper added: "But the disclosures, for better or worse, have lowered the threshold for discussing these matters in public." Despite this ambiguous statement, and despite many voluntary ODNI disclosures related to the Snowden leaks, the intelligence community and many of its lawyers still appear to embrace an absolute presumption of secrecy when possible, and still see the costs of disclosure about secret operations in all-or-nothing terms. This attitude might have made sense in a world in which you could keep secrets. But in a world in which secret operations often become public, it doesn't make sense. It doesn't make sense because you are damaged much more by leaks and disclosures under pressure from leaks than you are by voluntary self-disclosure prior to leaks. Leaks and disclosure under pressure are reactive and invariably seem defensive and self-impeaching. When you disclose before leaks, by contrast, you can better control what is disclosed and the narrative about what is disclosed. Y**ou are also much more likely to get credit and gain legitimacy from self-disclosure,** especially compared to disclosure via or in response to a leak. The main counterargument to this point, and the sentiment that still dominates in your world, is that, as CIA Director Allen Dulles once put it, "what a government, or the press, tells the people it also automatically tells its foes." This argument has special salience in the surveillance context because any disclosure about collection techniques heightens the enemy's communications operational security and causes it to shift to other forms of communication less subject to

detection by the government. And I know it has super-special salience when you are on the inside watching the bad guys up close, and are loathe to give them any tactical advantage. But this argument proves too much as a basis for blanket secrecy. The same argument applies to fingerprint identification and most other investigative or surveillance tool in your toolkit. Secrecy about means and methods is an important value, but is not the only value. **Other values include the medium-term legitimacy and support for your programs that I just discussed, and the notion that the governed should know at least the basic outlines of what its government is entitled to do, especially vis a vis its citizens. These and other values must be weighed in the balance.** A related point is that not all voluntary revelations about an intelligence operation are equally harmful. Disclosure that the government has interpreted Section 215 to authorize bulk metadata collection is less damaging to the intelligence-collection mission than disclosure of the fine-grained details about how NSA collects and analyzes that metadata. Similarly, you can disclose large elements of the legal rationale and processes supporting targeted killing without exposing intelligence or the diplomatic deals associated with the program. I know that partial voluntary disclosures often lead to larger involuntary disclosures through subsequent unauthorized leaks, FOIA, and the like. But that risk must be balanced by the risk that **the absence of any disclosure might undermine the legitimacy of the entire program if it leaks.** Early openness about what the NSA was doing inside the United States might have diminished the effectiveness of the collection programs at a tactical level, but also would have given the government a better chance of securing longer-term strategic legitimacy for the programs. I am not denying that secrecy is vital to intelligence operations or to your legal work in support of those operations, even in operations in the domestic sphere. In the past at this Conference you heard from a CIA official who discussed the long-term operation to discover and take down the network of Russian sleeper agents living in the United States under non-official cover, and the vital need for secrecy in that operation. This shows clearly that the optimal mix of secrecy and openness is context-dependent even for domestic operations. My point is simply that the still-pervasive inclination toward absolute secrecy sometimes makes no sense and is often self-defeating.

Moves toward openness sufficient-don’t need to curtail.

Edgar, Watson Institute for International Affairs visiting fellow, 2013

(Timothy, “Timothy Edgar: Big Transparency for the NSA”, 8-1, http://www.wsj.com/articles/SB10001424127887323309404578617463152440542)

I am a civil-liberties lawyer who has worked both for Mr. Clapper and for the American Civil Liberties Union. I have a unique perspective on the vast gulf between the way the public views spy agencies and the way the intelligence community views itself. The intelligence community believes that it protects the public from dire threats, subject to strict oversight. Indeed, it was career national-security lawyers who were most disturbed by President George W. Bush's detour into executive unilateralism and warrantless wiretapping. They breathed a sigh of relief when that era came to an end. Following an intense and highly classified dialogue in which I participated during the latter half of the Bush administration, the intelligence community persuaded the Foreign Intelligence Surveillance Court to authorize bulk collection of phone records while putting these activities under a robust and highly detailed set of privacy and civil-liberties constraints. Queries of telephone-call records require that the targeted number is connected to an international terrorist organization. The targeted numbers must meet a well-defined legal standard—that of reasonable, articulable suspicion—and may only then be used to uncover, through sophisticated data analysis, the network of numbers with which the target has been in contact over time. Privacy safeguards are administered by teams of national-security lawyers in multiple agencies, and the entire process is subject to both congressional oversight and review by the FISA court. When the court and Congress identified compliance issues, the NSA took them seriously, overhauling their systems and creating a new office of compliance to address them. What, then, accounts for the public mistrust? Intelligence officials forget that the public sees none of this. Where the government sees three branches of government working together in harmony, the public sees a disturbing pattern of secret law and secret government accompanied by demands to "trust us, we are keeping you safe." Secret checks and balances appear to be nothing more than a pale shadow of our constitutional design. The FISA court may have reviewed the programs, but the public never got its day in court. The ACLU has challenged the constitutionality of NSA surveillance programs for years, but that case never got to the issue of constitutional rights. The intelligence community argued, and the Supreme Court agreed, that the civil-liberties groups couldn't maintain their lawsuit. Civil-liberties advocates represented a variety of people with entirely reasonable fears of monitoring. Whether they were actually under surveillance was a secret (and properly so). The government argued vigorously that this secrecy meant the case could not go forward, and the court agreed. Sens. Ron Wyden and Mark Udall encountered a similar Catch-22 in 2011 when trying to raise questions about the NSA call-records program, when the Patriot Act was up for review. Although they were briefed on the program behind closed doors, they made no headway in arguing for greater transparency with the public. The resulting debate was highly skewed. Administration officials were free to make misleading arguments that the Patriot Act was just like an ordinary subpoena. Any member of Congress willing to spend a few hours in a small room in the Capitol knew that secret court opinions had approved collection that reached far wider than any subpoena. Those who did know about the opinions could not express any concerns in open debate. Secrecy prevented the Congress, like the Supreme Court, from having a real argument over surveillance powers. Despite the Obama administration's best efforts, transparency is now on the rise. Mr. Clapper has chosen greater openness in reacting to the leak of the call-records program. Instead of providing the terse "no comment" that would have allowed the government to argue that legal challenges must be thrown out on secrecy grounds, in June Mr. Clapper confirmed the leaked program and provided details on its safeguards. The ACLU, seeing a stronger argument, promptly refiled its suit. Mr. Clapper made the right call—the government should welcome, not sidestep, debate on whether its programs are constitutional. **President Obama should go further, wresting control from the leakers and restoring trust with the publ**ic. He should ask Mr. Clapper to look across the intelligence community and disclose to the public the types of large databases it collects in bulk, under what legal powers or interpretations, and pursuant to what safeguards to protect Americans' privacy—while keeping necessary details secret. Many aspects of surveillance must remain secret. For example, the government should never provide a list of companies from which it acquires big data sets. Despite what Americans see in the movies, the NSA doesn't actually collect everything. Knowing which companies are included and which are not would tip off terrorists about how to avoid detection—telling them which providers to use and which to avoid. Likewise, the government will never be able to confirm or deny whether particular people are under surveillance, but it should avoid the temptation to use this necessary secrecy to avoid

meeting legal challenges to its activities. **The government has good arguments for why its programs are both vital for national security and perfectly constitutional. It should make them**.

Codify Statute – 2NC

Statutes are key to solvency—gives everyone a perception of legal certainty.
Sales, Syracuse law professor, 2014
(Nathan, "NSA SURVEILLANCE: ISSUES OF SECURITY, PRIVACY AND CIVIL LIBERTY: ARTICLE: Domesticating Programmatic Surveillance: Some Thoughts on the NSA Controversy", I/S: A Journal of Law and Policy for the Information Society, Summer, lexis)

A second principle follows from the first: Programmatic surveillance should, wherever possible, have explicit statutory authorization. Congress does not "hide elephants in mouseholes," n50 the saying goes, and we should not presume that Congress meant to conceal its approval of a potentially controversial programmatic surveillance system in the penumbrae and interstices of obscure federal statutes. Instead, Congress normally should use express and specific legislation when it wants to okay bulk data collection. **Clear laws will help remove any doubt about the authorized scope of the approved surveillance, thereby promoting legal certainty**. Express congressional backing also helps give the monitoring an air of legitimacy. **And, a requirement that programmatic surveillance usually should be approved by clear legislation helps promote accountability by minimizing the risk of congressional shirking.** n51 If the political winds shift, and a legislatively approved program becomes unpopular, Congress will not be able to hide behind an ambiguous statutory grant of power and deflect responsibility to the President.

Net Benefit

2NC

The CP's balancing of secrecy and transparency is necessary for the sustainability of NSA programs—the plan's curtailment goes too far and renders the NSA powers inoperative. Goldsmith, Harvard law professor, 2013

(Jack, "Reflections on NSA Oversight, and a Prediction That NSA Authorities (and Oversight, and Transparency) Will Expand", 8-9, http://www.lawfareblog.com/2013/08/reflections-on-nsa-oversight-and-a-prediction-that-nsa-authorities-and-oversight-and-transparency-will-expand/)

Second. I also have a different view of the relationship between NSA oversight and the NSA's national security mission (as opposed to its internal security mission – I know they are related, but Stewart separates them and speaks of the former at the end of his post). I agree with Stewart that NSA is subject to rigorous and intense oversight that can affect its national security mission by preventing NSA operators from collecting intelligence in certain contexts (for example, inside the United States, or against American citizens), and more generally by chilling NSA initiatives for collection and analysis at the margin (though the flip side of this "chill" is called prudence). **But whether the oversight and regulations are in these senses harmful, they are still necessary.** Here's why. Even after the Snowden revelations, few Americans know what the NSA does because so much of what it does remains secret. The public has hints – confirmed by Snowden, and others – that NSA's technical collection, storage, and analysis capabilities have grown enormously since 9/11. Even these few hints show that, like no other American institution, the NSA represents power, scale, technology secrecy, and intrusiveness – a combination that understandably causes skepticism and concern. Presumptively in our democracy, important national policies are vetted in public, subject to criticism and analysis in the press and by elected representatives and civil society and courts, and ultimately approved, or not, by the People in elections. The accountability system forces public officials to justify their actions, to address criticisms, to confront new and critical information and arguments, to consider new approaches, and to correct mistakes. This messy process does not always produce optimal policies. But it produces pretty good policies on the whole, allows for pretty robust policy change in light of new information, and in any event is a more legitimate system for executing public policy than one that takes place in secret. Few of the traditional elements of democratic scrutiny and deliberation apply to the NSA. Even after the Snowden affair, NSA and its oversight bodies remain extraordinarily secretive. Occasionally General Alexander or another top NSA official testifies before Congress. But these officials rarely face tough questions in public and do not reveal more than they want to – that happens, if at all, in classified settings. NSA is governed by publicly enacted laws. But many of the laws are obscure, esoteric, or outdated. The actual governing regime for NSA results from mostly secret interpretations of these laws by executive branch lawyers and judges on the FISC; and the governing regime seems more extensive and more complex – in its authorizations and its restrictions – than the law on the books. This is not unusual, of course. In other contexts law accretes in many directions through interpretation and practice. But when this happens with regard to NSA, citizens and the press and civil society and ordinary federal courts cannot (except to the extent of leaks like Snowden's) assess these accretions to determine whether they approve of them. There are good reasons why normal public lawmaking, law interpretation, and review practices do not apply to the NSA. **Surveillance techniques are fragile. Full public scrutiny of NSA operations would reveal those operations to our adversaries in ways that would seriously undermine, if not destroy, their effectiveness**. We need not be embarrassed about this need for secrecy (though the degree of secrecy almost certainly relates to the abundance of leaks, including those by Snowden). But we should also not deny that the nature, scale, and scope of secret NSA activities are a departure from normal operating procedure in a democracy, a compromise needed to meet modern national security threats that is fraught with the possibility (or appearance) of error, abuse, overreach, non-accountability, closed-mindedness, resistance to change, and other evils that democratic deliberation and review are designed to avoid. This is the background against which to understand and assess NSA oversight. NSA's robust oversight system is a substitute for traditional public checks and balances. But it is a dim substitute. The government ramp ups scrutiny behind the wall of secrecy as a replacement for the impossibility of normal public scrutiny**. Such secret scrutiny, however robust it may seem to those subject to it, and even accounting for Snowden's leaks, is less demanding and overall less robust than its normal public counterpart.** Which brings me to the relationship between oversight of NSA and NSA's national security mission. The right way to think about this relationship at the most general level is that scrupulous oversight and regulation of NSA empowers and enhances its mission. **Intensive scrutiny of NSA activities is a vital prerequisite to its political sustainability before Congress and the public, and thus to NSA receiving the authorities it needs to do its job**. This was true of the original creation of the FISC (in the 1970s) and the congressional intelligence committees (also in the 1970s), and of the 2008 amendments to FISA, which expanded NSA's authorities but also significantly ramped up NSA checks and oversight. These constraints are also key to NSA surviving the spate of Snowden revelations – the main reason there has not been a much greater outcry in the United States about the scope of NSA's surveillance activities is that they are subject to and have been approved by so many adversarial institutions, albeit in secret. (Imagine the reaction to Snowden if the Attorney General and FISC had not approved of its activities, and if the intelligence committees had not been fully informed.) Stewart thinks that the painful and sometimes politically opportunistic checks on the NSA threaten to defeat its security mission. Even with their warts, I think they are necessary to the security mission. Privacy regulation of NSA is not just about protecting privacy. **It is also about enhancing the NSA's public credibility for acting responsibly and in the public interest – a credibility that is crucial for the NSA to be able to exercise its scary powers in secret.** In some instances, of course, regulation and oversight can slow or restrict NSA activities in ways that affect the national security mission. (This was true of the pre-9/11 "wall," and it is almost certainly true of the geographical and citizenship limits on NSA's surveillance powers.) The proper balance between NSA oversight and transparency, and NSA's authorities, must constantly be assessed and updated, in every direction. But it is unrealistic to think that NSA could carry on its current mission, which involves extraordinary and unprecedented surveillance in secret, without extraordinary and unprecedented checks on its activities. The two go hand in hand. Sometimes, probably often, regulation and oversight that seem to lead to less than optimal security is actually optimal, because the alternative to the oversight and regulation is not more NSA discretion to surveil, but rather less discretion because the authorities will not be granted in the first place without the intrusive oversight.

(Again, enhanced restrictions on surveillance of U.S. persons is an example.) **The challenge for the NSA and for the country is to find the level of scrutiny and transparency that allows NSA the greatest freedom to do its security mission that is consistent with the effectiveness of its surveillance methods and public confidence that NSA is acting properly and in the public interest.** Many people have different views about how this complex balance should be struck, especially in light of Snowden's revelations. But here is a prediction. Whatever happens in the short term, in five years the NSA will have much broader authority than today to surveil in the U.S. homeland, not just for counterterrorism purposes, but also (and especially) in order to provide national cybersecurity. It will have broader authority because increasingly diffuse and powerful national security and cybersecurity threats will require it. And that broader authority will be accompanied by greater oversight, review, and auditing than at present, and greater NSA transparency as well – not because this scrutiny will (necessarily) better protect privacy, and not without potential costs to security, but because it will enhance trust in NSA. Two important lessons of the last dozen years are (1) the government will increase its powers to meet the national security threat fully (because the People demand it), and (2) the enhanced powers will be accompanied by novel systems of review and transparency that seem to those in the Executive branch to be intrusive and antagonistic to the traditional national security mission, but that in the end are key legitimating factors for the expanded authorities. This was true, I argued in Power and Constraint, about habeas review of GTMO detentions, enhanced congressional and judicial oversight of military commissions, the 2008 amendments to FISA, and greater public transparency and congressional oversight of targeted killing by UAV (a process still in flux). And it will be true of expanded NSA authorities as the NSA's vital capabilities become even more important to our security. In this sense, the Snowden revelations – to the extent that they force NSA to open up, and to get used to greater public scrutiny, and to avoid excesses, and to recalibrate its understanding of the tradeoffs between openness and security – might one day be seen to have paved the way to broader NSA powers.

A2: Transparency Links

The CP's managed transparency reduces secrecy in productive ways without disarming intelligence agencies like the AFF.

German, Brennan Center for Justice fellow, 2011

(Mike, " Congress Needs To Overhaul U.S. Secrecy Laws And Increase Oversight Of The Secret Security Establishment", July, https://www.aclu.org/files/assets/secrecyreport_20110727.pdf)

3. Secrecy undermines security The whole purpose and justification of laws permitting the U.S. government to hide information from the people they are working for—the American people—is national security. Yet, when secrecy is imposed beyond the very narrow circumstances where it is truly justified, it tends to diminish, not increase, the security of the American people. • Secrecy prevents effective information sharing. State and local law enforcement, emergency response personnel, other government and private sector entities, and the general public all need access to timely and accurate information about realistic threats to their communities and the appropriate methods for effectively addressing such threats. Excessive classification forces federal government officials to withhold crucial information not only from each other, but also from these other stakeholders. Rather than reducing the classification of terrorism-related intelligence that might affect our local communities so that it can more easily be shared with state and local law enforcement and first responders, the federal government has instead developed programs to increase the number of state and local officials that receive federal security clearances. But receipt of information by a cleared officer does not solve the problem because the information still cannot be shared with other stakeholders inside and outside government. Washington, D.C. Metropolitan Police Chief Cathy Lanier explained, "[i]t does a local police chief little good to receive information—including classified information—about a threat if she cannot use it to help prevent an attack."107 Simply increasing the number of cleared officers, though expensive, does little to remedy the problem of over-classification of terrorism intelligence. • Secrecy produces flawed intelligence and undermines effective policy. Excessive secrecy means that policymakers are often not fully informed of important developments or key pieces of information implicating the reliability of official intelligence estimates.108 Investigations into the intelligence failures regarding the presence of weapons of mass destruction (WMD) in Iraq prior to the U.S. invasion, for example, found the intelligence community made significant efforts to validate the separate pieces of information it received, but in the end its "finished" intelligence was wrong.109 This failure was not the result of a lack of information; rather it was the natural product of a fatally flawed analytic process. The intelligence process is flawed because it relies on a closed analytical system that compartmentalizes information, strips it of key details regarding the sources and methods by which it is obtained (which often provide the best clues as to its reliability) and then limits its distribution, preventing scrutiny from outside experts. When the Iraq WMD intelligence estimates were finally made public, they revealed that the intelligence community had relied on an untrustworthy source named "Curveball" despite ample warnings that he was a fabricator.110 Likewise, policymakers failed to heed dissenting opinions within the intelligence community about whether aluminum tubes Iraq purchased were designed for use in a nuclear centrifuge.111 Vigorous and open debate tends to uncover such critical errors in fact or analysis before poor decisions are made. A secret analytic system that obscures critical facts and opinions will inevitably produce unreliable information. An informed public enhances security. Reducing the secrecy surrounding terrorist threats and counterterrorism efforts will provide the public with the information necessary to quell inappropriate bias, put threats into proper perspective and respond appropriately. Widespread knowledge and a prepared citizenry are two of our greatest strengths—and they are both stymied by the excessive classification and compartmentalization of national security information. Eleanor Hill, Staff Director of Congress's investigation into 9/11, called "an alert and informed American public" the intelligence community's "most potent weapon,"113 and the 9/11 Commission concluded that publicity about the increased terrorism threat reporting during the summer of 2001 might have actually derailed the 9/11 plot.114 Yet too often the government's public information campaigns mislead more than they enlighten, spreading fear and sowing suspicion rather than providing timely, accurate and reliable information the public can use.115

Focusing too much on secrecy actually undermines counter terrorism.

Strossen, NYU law professor, 2014

(Nadine, "Reducing Secrecy: Balancing Legitimate Government Interests with Public Accountability", Harvard Journal of Law and Public Policy http://www.harvard-jlpp.com/wp-content/uploads/2015/02/Strossen_Final.pdf)

Now let me state a few factual premises on which I hope we can all agree.14 First, our classification system is dysfunctional, hugely bloated, and covers material that poses no genuine security risk.15 Second, and relatedly, our system is flooded with leaks16—as an inevitable counter to this excessive secrecy and essential for government accountability to We the People, the ultimate governors.17 Third, excessive secrecy is a huge waste of our precious security resources.18 All of you fiscal conservatives out there should balk at the huge cost of the counterproductive classification system—almost $10 billion in 2012.19 And that doesn't include classification expenses incurred by the security agencies themselves20 because, ironically, those numbers are classified!21 **Fourth, excessive secrecy actually undermines national security by preventing effective information sharing, thus leading to flawed**

intelligence.22 This point was underscored by none other than a former head of the whole classification system, J. William Leonard, who was a former Director of the Information Security Oversight Office. As he said: "Government secrecy just about guarantees the absence of an optimal decision on the part of our nation's leaders, oftentimes with tragic consequences for our nation."23 Additionally, the Bipartisan 9/11 Commission actually concluded that excessive secrecy could well have contributed to the 9/11 attacks.24 Given the Federalist Society's commitment to empowering state and local governments,25 I should stress state and local officials' complaints that undue secrecy has hampered their ability to fight terrorism,26 thus endangering all of us.27 For example, let me quote Commander Michael Dowling of the LAPD's Counterterrorism Bureau: "[The federal government's] classification process has been a substantial roadblock to [local law enforcement's] capacity to investigate terrorism cases and work hand-in-hand with these federal agencies."28

Competition

A2: PDCP

1. Curtail means to "Reduce in extent or quantity; impose a restriction on:"
Oxford Dictionaies-----http://www.oxforddictionaries.com/us/definition/american_english/curtail

The CP does not limit or restrict any surveillance that occurs in the status quo----it codifies rules as they exist and discloses data after the surveillance occurs

This permutation is severance which should be rejected to preserve stable negative ground requiring the AFF to reduce surveillance and prevents 2AC clarification which obviate negative strategy after the fact creating too large an advantage for the AFF.

A2: PDB

The permutation still contains the AFF limitations on surveillance which is what all our DA links are about---the CP doesn't help to resolve these links because they are all about operational flexibility and the CP only increases public acceptance while maintaining that flexibility.

The permutation injects predefined legislative criterion into surveillance authorities which renders them ineffective during an emergency.

Posner, Chicago law professor, 2012

(Eric, "Reflections On The Law Of September 11: A Ten-Year Retrospective: Deference To The Executive In The United States After September 11: Congress, The Courts, And The Office Of Legal Counsel," 35 Harv. J.L. & Pub. Pol'y 213, Lexis)

THE DEFERENCE THESIS The deference thesis states that during emergencies the legislature and judiciary should **defer to** the executive. n8 It assumes that the executive is controlled by **the President**, but to the extent that the President could be bound by agents within the executive, the deference thesis also holds that those agents should follow the President's orders, not the other way around. In normal times, the three branches of government share power. For example, if the executive believes that a new, dangerous drug has become available, but possession of the drug is not yet illegal, the executive may not act on its own to detain and prosecute those who deal and use the drug. The legislature must first enact a statute that outlaws the drug. The executive also depends on the legislature for financial appropriations and other forms of support. The executive also faces constraints from the courts. If the executive arrests drug dealers and seeks to imprison them, it must first obtain the approval of courts. The courts ensure that the executive does not go beyond the bounds of the new law, does not violate earlier-enacted laws [*215] that have not been superseded by the new law, and does not violate the Constitution. In emergencies, the executive often will contemplate actions that do not have clear legislative authority and might be constitutionally dubious. For example, after September 11, the U.S. government engaged in immigration sweeps, detained people without charges, used coercive interrogation, and engaged in warrantless wiretapping of American citizens. n9 Many, if not all, of these actions would have been considered violations of the law and the U.S. Constitution if they had been undertaken against normal criminal suspects the day before the attacks. After September 11, both the legislature and the courts gave the executive some deference. The legislature gave explicit authorities to the executive that it had initially lacked; n10 the courts did not block actions that they would have blocked during normal times. n11 But neither body was entirely passive. Congress objected to coercive interrogation and did not give the executive all the authorities that it requested. n12 After a slow start, the courts also resisted some of the assertions the executive made. There is some dispute about whether this resistance was meaningful and caused the executive to change policy or merely reacted to the same stimuli that caused the executive to moderate certain policies independently. n13 In any event, no one disputes that the courts gave the executive a nearly free pass over at least the first five to seven years of the conflict with al Qaeda. The deference thesis, then, can be strong-form or weak-form. This ambiguity has had unfortunate consequences for debates about post-September 11 legal policies. Few people believe that the courts should impose exactly the same restrictions on the [*216] executive during an emergency as during normal times. Indeed, doctrine itself instructs courts to balance the security value of a course of action and its cost to civil liberties, implying that certain actions might be legally justified to counter high-stakes threats but not to counter low-stakes threats. n14 Nor does anyone believe that the executive should be completely unconstrained. The debate is best understood in the context of the U.S. government's post-September 11 policies. Defenders of these policies frequently invoked the deference thesis--not so much as a way of justifying any particular policy, but as a way of insisting that **the executive should be given the benefit of the doubt**, at least in the short term. n15 The deference thesis rests on basic intuitions about institutional competence: that the executive can act more **decisively** and with **greater secrecy** than Congress or the courts because it is a hierarchical body and commands forces that are trained and **experienced** in countering security threats. **The other branches lack expertise.** Although they may have good ideas from time to time, and are free to volunteer them, the ability of the **exec**utive to respond to security threats would be **unacceptably hampered** if Congress and the courts had the power to block it to **any significant degree**. Secrecy is an important part of the argument. Policymaking depends on information, and information during emergencies often **must be kept secret.** Congress and the courts are by nature and tradition **open bodies**; if they were to act in secret, their value would be diminished. Meanwhile, the argument continues, the fear of an out-of-control executive who would engage in abuses unless it was constrained by the other branches is exaggerated. The President has strong electoral and other political incentives to act in the public interest (at least, in the United States). Even if the executive can conceal various "inputs" into counterterrorism policy, it cannot conceal the "output"--the existence, or not, of terrorist attacks that kill civilians. Thus, it was possible for defenders of the Bush Administration's counterterrorism policies to express discomfort with certain policy choices, while arguing nonetheless that Congress and the courts should not try to block executive policymaking [*217] for the duration of the emergency--at least not as a matter of presumption. Critics of the Bush Administration argued that deference was not warranted--or at least not more than a limited amount of deference was warranted, although again these subtleties often were lost in the debate--for a variety of reasons. I now turn to these arguments. II. EXTERNAL CONSTRAINTS: THE PROTOCOL ANALOGY A. Medical Protocols In an article published a few years ago, Professor Holmes uses the arresting image of the medical protocol as a device for criticizing the deference thesis--or, more broadly, the thesis that the executive should be "unconstrained" during emergencies. Holmes describes his own experience in an emergency room, where his daughter had been brought with a serious injury: At a crucial moment, two nurses rushed into her hospital room to prepare for a transfusion. One clutched a plastic pouch of blood and the other held aloft my daughter's medical chart. The first recited the words on the bag, "Type A blood," and the other read aloud from the file, "Alexa Holmes, Type A blood." They then proceeded, following a prepared and carefully rehearsed script to switch props and roles, the first nurse reading from the dossier, "Alexa Holmes, Type A blood," and the second reading from the bag, "Type A blood." n16 To the layman, the repetitive actions of the nurses seem senseless. Why are they repeating themselves when the patient might die unless she receives the blood transfusion immediately? Surely, the nurses should depart from the script rather than follow it in a time of extreme medical urgency. Yet the protocol makes good sense. Experience has taught medical personnel that basic errors--the transfusion of the wrong blood--occur frequently, and that they can be avoided through the use of simple protocols. Although following the protocol uses valuable time, in practice the increased risk to the patient as a result [*218] of the loss of time is less than the risk caused by the errors that protocols are designed to prevent. n17 The larger and more striking point of the example is that, even during emergencies, when the stakes are high and time is of the essence, agents should follow rules rather than improvise. In this way, agents should be constrained. n18 This argument has potentially radical implications. Recall that the conventional objection to deference is that the risk of executive abuse exceeds the benefits of giving the executive a free hand to counter al Qaeda. Professor Holmes argues--although at times he hedges--that in fact the benefits of giving the President a free hand are zero: A constrained executive, like a constrained medical technician, is more effective than an unconstrained executive. If the benefits of lack of constraint are zero, then the deference thesis is clearly wrong. Constraints both prevent executive abuses such as violations of civil liberties and ensure that counterterrorism policy is most effective. B. Rules and Standards The arresting medical protocol example helps clarify the tradeoffs involved, but it remains merely an illustration of the familiar rules versus standards tradeoff that has been a staple of the legal literature since time immemorial. n19 A rule is a norm that directs the decisionmaker to ignore some relevant policy considerations when deciding on a course of action; a standard is a norm that directs the decisionmaker to take into account all relevant policy considerations when deciding on a course of action. The familiar example is the speed limit. A sixty-mile-per-hour speed limit tells the driver that she does not face a legal sanction if she drives below sixty miles per hour, and that she does face a legal sanction if she exceeds that speed. A standard--for example, "drive carefully"--tells the driver that she does not face a legal sanction if she drives carefully, but that she does if she drives carelessly. The standard, unlike the rule, directs the driver to take into account all relevant considerations--the weather, traffic congestion, her own skill and [*219] experience, the responsiveness of her car, and so on--when deciding how to drive. A skilled and experienced driver who drives at sixty-five miles per hour on a clear day on an empty, straight road poses little threat to anyone, and most people would regard her driving as careful. Thus, under the standard she could not be held liable, although under a rule she would be. Meanwhile, an inexperienced driver who drives sixty miles per hour on a congested, dangerous road, at night, in bad weather, would probably be regarded as careless. He would be held liable under a standard but not under the rule. It is in the nature of standards that we cannot be sure that he would be held liable; it depends on the biases, intuitions, and experiences of the legal decisionmaker. n20 Thus, we say that applying standards involves high decision costs. It is in the nature of rules that we can easily tell whether the driver would be held liable or not, but only because the legal decisionmaker is forced to ignore relevant moral and policy considerations that otherwise complicate evaluation. Rules are under-and over-inclusive; **by design, they cause error**. These considerations lead to a basic prescription. n21 Rules should be used to govern recurrent behavior, and standards to govern unusual

behavior. Experience teaches us that if drivers obey certain rules (such as speed limits), the risk of accidents is greatly reduced, although judicious choice of (sometimes complex) rules ensures that error costs are low. When legislatures enact new rules, they can invest a great deal of time and effort determining the optimal rules, because the cost of the rules are then spread out over many instances of the behavior that the legislatures seek to regulate. Yet rules frustrate us because there always seems to be some **new, unanticipated case** where the application of rules leads to an injustice. The speed limit rule should not apply to the parent who rushes a badly injured child to the hospital. And there are many cases where rules can too easily be gamed. Tax rules, no matter how intricate, can be exploited: Lawyers set up tax shelters that evade the purpose of the rules. Congress reacted to this problem initially by creating ever more complex rules, but eventually trumped them [*220] with a standard that prohibited bad faith evasion of the tax laws. n22 The legal landscape is a complex mix of rules and standards, which often overlap. Drivers must obey both traffic rules like the speed limit and traffic standards like laws against reckless driving and tort norms against negligent driving. Indeed, one can think of traffic norms as complex rules with standards--where there are apparently bright-line rules (drive under sixty miles per hour) that are subject to muddy standards (unless there is an emergency). Medical protocols are just one more example of a choice along the rules-standards continuum. The nurses Professor Holmes describes follow a protocol that ensures that they do not use the wrong blood in a transfusion. Likewise, doctors are instructed to clear the windpipe before staunching the wound. n23 These protocols, like the speed limit, reflect generalizations from past medical experience. Delaying the blood transfusion is less risky than permitting only one nurse to check the blood type. Letting the blood flow from the wound is less risky than leaving the windpipe blocked. In the absence of protocols, medical practitioners may misjudge the situation, or panic, or allow themselves to be distracted by irrelevant factors (the goriness of the wound calls out for attention while the blocked windpipe is hidden). It is important to see that these rules, like the speed limit, are mere generalizations, and in individual cases the generalizations might be wrong. The patient dies because of the delay before the transfusion, yet we instruct medical practitioners to follow the rules because otherwise they are likely to make worse or more frequent errors. That uncompromising rules produce **high error costs** supports adopting sensible exceptions to rules. Indeed, medical practitioners may violate protocols. The reasons are obvious. Consider Professor Holmes's insistence that the rule "always wash your hands" is unalterable and written in stone. n24 This clearly cannot be the case. Suppose that, in the midst of an emergency involving a patient with a serious trauma, the staff [*221] is informed that the tap water is tainted, it is discovered that a patient has a rare allergy to the only soap available in the emergency room; or, for that matter, the emergency room runs out of soap. Common sense (which is just the application of the standard, "help the patient at minimal risk to him and oneself") will tell the doctors and nurses to deviate from the protocols when they clearly interfere with medical necessity. If they did not, they would be sued, and rightly so. The protocols, like many rules, turn out to be presumptions, which may be overcome by the press of events. That is why medical professionals are so highly trained; if one could really treat patients by following algorithms, one would not need doctors who have vast training and experience that supplies them with judgment and the ability to improvise. n25 In sum, medical protocols, like rules, provide a valuable service by simplifying the decision-making process at times of high stress, but, like rules, they unavoidably produce wrong results if they are not applied sensitively. Usually, when the stakes are high, rules and protocols create presumptions, but the decisionmaker is free to violate the presumption if circumstances suggest that that the presumption is based on factual assumptions that turn out not to be true in the particular setting in which the decisionmaker finds himself. C. Rules and Standards During Emergencies I now turn to the bulk of Professor Holmes's argument. Professor Holmes is right to identify confusion about the nature of emergency, and it is useful to distinguish a rule-development stage--which often but not always takes place before the emergency--and a rule-application stage--which takes place during the emergency. Holmes argues that during the emergency, rule application should be controlled by protocol, so the executive does not need (much) discretion; while pre-emergency, rule development does not need to be rushed and secret, so the executive can collaborate with Congress. The first problem with [*222] this argument is that during the emergency one can follow protocols rather than exercise discretion only if the emergency is the same as earlier emergencies. This was not the case for September 11, though it may be the case for other security threats. The second problem is that the rule-development stage cannot always take place during normal times. For example, September 11 required not only an **immediate response** to the newly discovered threat but also the development of new rules under the shadow of that threat. Those rules needed to be developed quickly and (for the most part) secretly, and these exigencies limited the ability of Congress to contribute. A final point is that Holmes ignores an important dimension of the problem: the difference between agents, who in theory can merely follow rules and protocols, and principals, who cannot. The Bush Administration did in fact recognize the value of protocols and used them frequently; it just did not apply them to itself. 1. Two Concepts of Emergency Professor Holmes makes a valuable point, often neglected in the literature, that there are two distinct phases for addressing emergencies n26 --what I will call the stage of rule development and the stage of rule application. As we will see, the two stages can run together, but conceptually they are distinct. The rule-application stage comes when the patient is on the gurney. The doctors follow the protocols in the course of helping the patient. The rule development stage occurs earlier. Someone must decide what the protocols should be. Someone had to invent the rule that two nurses must check the blood type and that doctors should unblock the windpipe before staunching wounds--just as the legislature must determine the speed limit before drivers comply with it and police enforce it. We might use the word "emergency" to refer to the time of rule application. As Professor Holmes points out, however, for the medical professionals, what seems like an emergency to a layperson is not an emergency at all. n27 They just apply the protocols that have been drilled into them, no different from assembly-line workers. Under this definition of "emergency," it is hard to support the deference thesis and those who argue that the executive [*223] must be unconstrained during emergencies. If doctors are constrained during emergencies, why not executives? If we refer instead to the time of rule-development, reliance on the idea of emergency seems even less appropriate. The doctors who develop emergency room protocols do not do so under time pressure but at their leisure. They also can do so in a large body, so as to take advantage of the perspectives of many different people, and in public, so that all stakeholders have a say. The executive can as well, the argument goes. When the executive determines the rules that will govern the response during a terrorist attack, it does so in advance, and it can, indeed should, do so in consultation with Congress and subject to judicial constraint. Thus, executive deference is unnecessary. During rule development, there is no emergency, and so the executive, Congress, and the courts can collaborate in developing appropriate rules that will govern during emergencies. They can do so openly, deliberately, and slowly, with full respect for constitutional norms. During rule application, there is an emergency, but the executive can merely follow the rules or protocols that were developed during the rule-development stage. Thus, in the rule-application phase, executive discretion is unnecessary. It follows that deference to the executive is also unnecessary. During rule development, Congress has no reason to defer to the executive. During rule application, courts also have no reason to defer to the executive, but should instead insist that the executive comply with the rules. 2. Rule Application Let us consider the stages in reverse order. We already have addressed some of the problems with Professor Holmes's argument from protocols. Rules are seldom as bright-line as they first appear. They often turn out to be presumptions which are themselves subject to standards (drive under the speed limit unless there is an emergency). It is true that security threats, like medical emergencies, often fall into patterns and can be addressed in partially rule-governed fashion. Thus, when a gunman takes a hostage, the police follow certain rules: first clearing the area, then making contact with the gunman, and so on. Some officers will be given very simple rule-governed tasks ("don't let anyone cross this line"). But the rules quickly give out. **Every hostage-taker is different**, and the most highly [*224] trained police officers will be given a great deal of discretion to deal with him and to make the crucial decision to use force. But even these types of threats are simple compared with the scenario that opened up on September 11. The government knew virtually nothing about the nature of the threat. It did not know how many more members of al Qaeda were in the United States, what their plans were, what resources were at their disposal, what their motives were, or how much support they had among American Muslims. n28 Protocols were worthless because nothing like the attack had ever happened before. (The closest analogy seemed to be the absurdly irrelevant example of Pearl Harbor.) The government could not follow rules; it had to improvise subject to a vague standard--protect the public while maintaining civil liberties to the extent possible. Improvise it did--instituting detentions, sweeps, profiling, surveillance, and many other policies on an unprecedented (in peacetime, if that was what it was) scale. n29 For the rule-application stage, the deference thesis counsels Congress and the judiciary to (presumptively) defer. Congress simply cannot set about holding hearings, debat[e]ing policy, and vot[e]ing on laws in the midst of emergency. Either **the problem will not be addressed**, or Congress will end up voting on a bill that it has not written, debated, or even read. n30 For courts, too, the alternatives are unrealistic. If courts enforce rules developed for normal times, then they will interfere with the proper response to the terrorist threat, just as they would if they required the U.S. military to comply with the Fourth Amendment on the battlefield. Alternatively, the courts could insist on applying a standard and halt executive actions that, in the courts' view, violated the standard described above--protect the nation while maintaining civil liberties to the extent possible. But here the courts are at a significant disadvantage. They do not have information [*225] about the nature of the threat. n31 Courts can demand this information from the government, but the government will not give it to them because the government fears leaks (to say nothing of recalcitrance caused by rivalries among intelligence agencies). Moreover, judges are inexperienced in national security unlike the specialists in the executive branch.

Restrictions allow for enemy adaptation.

Etzioni, George Washington IR professor, 2013

(Amitai, “The Danger of Overcorrecting on Terror”, 5-29, http://nationalinterest.org/commentary/the-danger-overcorrecting-terror-8525?page=1)

Each one of these “corrective” measures ought to be evaluated in its own right. It is fine to ask Congress to issue a new authorization of the use of military force overseas, but it makes no sense to go after only card-carrying members of Al Qaeda while tying our hands when it comes to other terrorist groups that are out to harm the United States. Carefully reviewing drone strikes to ensure civilians are not nearby is a sound idea though hardly a new one. And limiting the targets to only high-ranking members of Al Qaeda ignores the fact that those who brought down the World Trade Center and attacked the Pentagon were low-ranking ones. Similarly, ensuring that no civilians are nearby so as to minimize collateral damage is

morally sound and may help in curbing anti-American sentiment (though resentment towards the United States has numerous other sources). However, announcing this restraint publicly, in the name of transparency and to please critics, ensures that, from now on, Al Qaeda meetings will include at least some of the spouses of the terrorists. This is no exaggeration. There is considerable evidence that **the Taliban adapts its tactics to exploit our self-imposed restrictions based upon the information it receives about the orders given to our forces.** For example, when Taliban fighters learned that the United States will not fire on mosques, it used these to store ammunition and place snipers. Any suggestion that Al Qaeda and other terrorist groups are being defeated is not in line with recent reports. Indeed, Al Qaeda membership in Yemen has quadrupled in recent years, while terrorist groups have been progressively establishing themselves in countries such as Mali. It is true that, over the last decade, attacks on U.S. soil either failed or were carried out by "lone wolves." Yet the resulting complacency tends to lead to the kind of inattention that culminated in the FBI not sharing information with the Boston Police regarding the bombers there. Officials paid no mind to Tamerlan Tsarnaev's two violent outbursts during sermons in mosques in Boston, wherein he decried the celebration of U.S. holidays and praise for Martin Luther King Jr.—radicalism that should serve as a strong indication of a person who should be watched. (As it turns out, closer scrutiny would have revealed that Tsarnaev studied bomb making in Al Qaeda's online magazine, Inspire). Eight years passed between the first attack on the World Trade Center and the second one, in which a thousand times more people were killed. Ten years of no major attacks is not a long time when it comes to campaigns against terrorists. As one terrorist put it, U.S. agencies have to be lucky all of the time while we (the terrorists) only have to get lucky once. Washington should constantly review security measures, but such a review should include a caution against the tendency to oversteer—as we appear to be doing now, this time to the left.

UN UPR Counterplan – HJPV

1nc – shell

The United States Federal Government should submit <the plan> to a binding United Nations Human Rights Council Universal Periodic Review.

The counterplan solves the aff and ensures U.S. human rights compliance within UN institutions– the process of the counterplan shapes implementation

St. Vincent 5/7/15 – CDT's Human Rights and Surveillance Fellow, J.D. at the University of Michigan Law School (Sarah, US to Answer for Surveillance Practices on Global Stage, CDT, https://cdt.org/blog/us-to-answer-for-surveillance-practices-on-global-stage/)//JJ

It only happens once every four and a half years, but it's about to happen this month: the United States will appear before the assembled United Nations Member States to listen and respond to critiques of its human rights record. CDT has been working hard to ensure that the US' surveillance practices are at the **top of the agenda** for this process, which is known as the Universal Periodic Review ("UPR"). We hope the official comments aired during the session will help to **reinforce strong human rights** standards around government surveillance and hold the US to account for its abuses. The UPR is conducted by the UN Human Rights Council, which is tasked with reviewing every UN Member State's compliance with its obligations under the human rights treaties it has ratified. The process is mandatory for all countries: the May session, for example, will see the US examined just after Bulgaria and Honduras and shortly before Jamaica and Libya. (The US will be in the hot seat on Monday, May 11 from 9:00 am to 12:30 pm Geneva time, so if you live in North America, set your alarm clock early.) If a country recommends that the US discontinue any indiscriminate interception of private communications, the Obama administration will be required to take a public position as to whether it accepts this recommendation. The US has **committed to upholding human rights** under several treaties, including the International Covenant on Civil and Political Rights ("ICCPR"), the Convention against Torture, and the International Convention on the Elimination of All Forms of Racial Discrimination. The ICCPR, in particular, contains rights to privacy and free expression. During the session, every other UN Member State will have the right to ask the US questions about its respect for the human rights enshrined in these treaties and **make recommendations** as to what the country should do differently in order to **comply with its obligations**. The US (represented by its Geneva diplomatic mission and other members of the executive branch) will have the opportunity to respond to these points during the session, and will also need to declare shortly afterward whether it accepts each of the recommendations. In other words, if (for example) a country recommends that the US discontinue any indiscriminate interception of private communications, the Obama administration will be required to take a public position as to whether it accepts this recommendation. The UPR is a relatively recent creation—it was established via a UN General Assembly resolution in 2006—and it continues to evolve as the UN institutions, the Member States, and NGOs such as CDT, decide how it can best be used. For example, unlike during its first review in 2010, the United States will now be encouraged to submit an official "midterm" follow-up report to the Human Rights Council some time after the review session to explain what the government is **doing to implement** the **human rights recommendations** that were made. (We expect that the government will indeed engage in such reporting.) Meanwhile, for an organization such as CDT, the review of the US represents a chance to remind the public and the global diplomatic community about **serious NSA surveillance abuses**, and to **strengthen the human rights** laws and standards that apply to government intrusions on privacy and free speech. The latter opportunity arises because countries frame their recommendations using careful legal language that reflects what they believe human rights law actually requires in practice; these **formal**

articulations can shape the **relevant legal tests** and ultimately have a **long-term impact** on what the US and other governments believe they must do in order to **fulfill their international commitments.** As part of the UPR process, CDT (along with the ACLU) submitted a joint expert report to the Human Rights Council on five particularly egregious global NSA surveillance programs, including MUSCULAR and QUANTUM, and we also contributed to a second expert report on US surveillance led by our colleagues at the Brennan Center. Additionally, we have been urging the other UN Member States to make **surveillance** one of their priority issues during the review session.

U.S. compliance within UN institutions bolsters UN legitimacy

Thakur 9 – director, Balsillie School of International Affairs, Distinguished Fellow, Centre for International Governance Innovation and Professor of Political Science, University of Waterloo (Ramesh, LAW, LEGITIMACY AND UNITED NATIONS, Melbourne Journal of International Law Volume 11, 12/7/9, p. 10-21)//JJ

All of these elements might be enough to put the ball back in the UN's court. But its authority, too, has been diminished by the Iraq War. As I have put it elsewhere: '[w]hat is to stop other leaders from mimicking the bumper sticker argument about not needing a permission slip from the UN to defend one's country?' In other words, **repeated US assaults on UN-centered law** governing the international use of force have undermined the norm of a world of laws, the efficacy of international law and the **legitimacy of the UN** as the authoritative validator of international behaviour. A norm cannot control the behaviour of those who reject its legitimacy. Norm compliance by those who reject the legitimacy of the existing order will be a function of their incapacity to break out, not of voluntary obedience. The de facto position of 'nuclear might equals right' is an inducement to join the club of nuclear enforcers. It is curious, to say the least, th at those who worship at the altar of nuclear weapons are the fiercest in denouncing as heretics anyone else wishing to join their sect. In order to enhance their credentials as critics and enforcers of the norm, the N5 need to move more rapidly from deterrence to disarmament. There have been signs that the Obama Administration might well take a lead on this. 43 The logic of non-proliferation is inseparable from that of disarmament. Hence, the axiom of non-prol iferation: as long as any one country has them, others, including terrorist groups, will try their best (or worst) to get them. If they did not exist, nuclear wea pons could not proliferate. Because they do, they will. The pursuit of nuclear non-proliferation is doomed without an accompanying duty to disarm. Paradoxically, counter-proliferation effo rts may well be legitimate even if illegal. The reality of contemporary threat s means that significant gaps exist in the legal and institutional framework to combat them. Within the constraints of the NPT , a non-nuclear country can build the ne cessary infrastructure to be but a screwdriver away from acquiring nuclea r weapons. Non-state actors are outside the jurisdiction and contro l of multilateral agreements. Recognising this, a US-led group of like-minded countries launched the Prolif eration Security Initiative to interdict illi cit air, sea and land cargo li nked to WMDs. Its premise is that the proliferation of such weapons dese rves to be criminalised by the civilised community of nations. The In itiative signals a new determination to overcome an unsatisfactory state of affairs through a br oad partnership of countries that, using their own national laws and resources, will coordinate actions to halt shipments of dangerous technologies and material. V A TROCITY C RIMES AND I NTERNATIONAL I NTERVENTIONS The Proliferation Security Initiative involves a limited use of force by groups of countries acting outside the UN fram ework. The law–legitimacy distinction arose with particular cogency with resp ect to the legal system promulgated and enforced by the apartheid regime in South Africa. If the constitutional system itself was essentially a criminal regime, then could not opposition to it be held up as legitimate even if illegal? That debate had barely faded when the same dilemma flared up in the 1990s with the sp ate of humanitarian atrocities and the role of international indifference, inaction or intervention with respect to these atrocities. Except, this time, the role s of the global North and South were reversed. When NATO launched a 'human itarian war' without UN authorisation in Kosovo, it raised a triple policy dilemma: 1 To respect sovereignty all the time is sometimes to be complicit in humanitarian tragedies; 2 To argue that the Secur ity Council must give its consent to international intervention for humanitarian purposes is to risk policy paralysis by handing over the agenda either to th e passivity and apathy of the Council as a whole, or to the mo st obstructionist member of the Council, including any one of the P5 determined to use the veto clause; 3 To use force without UN authorisation is to violate international law and undermine world order. The three propositions together high light a critical law–legitimacy gap between the needs and distress felt in th e real world and the codified instruments and modalities for managing world order. Faced with another Holocaust or Rwanda-type genocide on the one hand and a Security Council veto on the other, what would we do? Doing nothing would progressively de-legitimise the role and undermine the auth ority of the Security Council as the cornerstone of the international law enforcement system . But action without UN authorisation would be illegal and also undermine the la wful authority of th e Security Council. The law–legitimacy distinction was to resu rface four years later over Iraq and leave many Westerners rather less co mfortable than the Kosovo precedent. In making up the rules of intervention 'on the fly' in Kosovo, 45 NATO countries put at peril the requirement for a lasting system of world order grounded in the rule of international law. The attempt 'to limit the reach of the Kosovo precedent did not prevent the advo cates of the Iraq War from invoking it to justify toppling Saddam.' 46 The Iraq War's legality and legitimacy will be debated for years to come. The belligerent countries insisted that the war was both legal and legitimate, based on a series of prior UN resolutions and the long and frustrating history of combative-cum-deceitful defiance of the UN by Saddam Hussein. Others conceded that it may have been illegal but, like Kosovo in 1999, it was nevertheless legitimate in its largely humanitarian outcome. For a third group, the war was both illegal and illegitimate. Similarly, there were three views on the significance of the war for the UN–US relationship: that it demonstrated the irrelevance, centrality or potential complicity of the UN. 48 First, for the neo-conservatives, because it exists, the UN should be uninvented and there was therefore no reason to seek UN approval. 49 Under the second view, it was recognized that there was a need 'to confront Saddam Hussein but [it] ruled out acting without UN authorization.' 50 Third, UN authorization of the war was 'necessary but not sufficient' with irrelevance preferred to complicity. 51 In the opinion of some, the UN is '**now more than ever** reduced to the **servile function** of **after-sales service provider** for the United States, on permanent call as the **mop-up brigade**.' Humanitarianism provides us with a vocabulary and institutional machinery of emancipation. But '[f]ar from being a defense of the individual against the state, human rights has become a standard pa rt of the justification for the external use of force by the state against other states and individuals.' 53 The use of force may be lawful or unlawful; the decision to use force is a political act; and almost the only channel between legal authority and political legitimacy with regard to the international use of force is the UN. Conceding to any regional organisation the authority to decide when political legitimacy may override legal technicality would make a mockery of the entire basis of strictly limited, and in recent times increasingly constricted, recourse to force for settling international disputes. Conversely, restricting the right solely to NATO is 'an open argument for law-making by an elite group of Western powers sitting in judgment over their own actions' 54 — as well as that of all others. In effect, the West's position vis-a-vis the rest is: we shall hold you to account for your use of force domestically while exempting our internat ional use of force from any external accountability. While the West wants to proscribe the unconstrained use of force to maintain domestic order, developing countries wa nt to proscribe the use of force by outsiders to enforce justice within errant member states. There is also the moral hazard that outside intervention on behalf of groups resisting state authority by force encourages other recalcitrant groups in other places to resort to ever more violent challenges, since that is the trigger to internationalising their power struggle. The tension is both powerful and poignant with respect to moving the globally endorsed responsibility to protect from norm to action (or words to deeds, principle to practice). Here we enter the realm both of normative inconsistency — selective application and enfo rcement of global norms against friends and adversaries, for example dow nplaying the human rights abuses of Central Asian states and Israel while hi ghlighting those of Iraq and Iran — and normative incoherence — when different norms clash with each other — as between human rights requirements and prohi bitions against the use of force. Is it permissible (or legitimate) to violate some aspects of international law in order to enforce respect for human rights laws? Is it still legitimate if some states are more equal than others in facing intern ational pressure and sanctions, including military intervention as the ultimate sanction? Bernard Kouchner, the French Foreign Minister, advocated invoking the responsibility to pr otect in order to override the junta's recalcitrance about accepting international assistance after Cyclone Nargis in Myanmar in 2008, 55 but was notably silent about possible Israeli war crimes in Gaza in 2009. Such selectivity will quickly de-legitimise the new norm whose path to global endorsement was quite contentious. 56 In a Security Council debate on the prot ection of civilians in armed conflict on 4 December 2006, Chinese ambassador Liu Zhenmin warned that the 2005 World Summit Outcome 57 was a 'very cautious representation of the responsibility to protect popul ations from genocide, war crimes, ethnic cleansing 54 David Chandler, From Kosovo to Kabul: Human Rights and International Intervention (Pluto Press, 2002) 135. 55 See Seth Mydans, 'Myanmar Junta, Wary of Outsiders, Is Accused of Delaying Storm Aid', The New York Times (New York), 8 May 2008, A22. 56 That story is told in three books by three people closely associated with it: Gareth Evans, The Responsibility to Protect: Ending Mass Atrocity Crimes Once and for All (Brookings Institution Press, 2008); Ramesh Thakur, The United Nations, Peace and Security: From Collective Security to the Responsibility to Protect (Cambridge University Press, 2006); Thomas G Weiss, Humanitarian Intervention (Polity, 2007). 57 2005 World Summit Outcome , GA Res 60/1, UN GAOR, 60 th sess, Agenda Items 46 and 120, UN Doc A/RES/60/1 (24 October 2005). 2010] Law, Legitimacy and United Nations 17 The philosophical antecedents of such beliefs lie in the 18 th –19 th century theory of evolutionary progress through diffusion and acculturation from the West to the rest. The implicit but clear assumption is that when Western and non-Western values diverge, the latter are in the wrong and it is only a matter of working on them with persuasion and pre ssure for the problem to be resolved and progress achieved. 77 The cognitive rigidity is s hown again in the phrase that '[p]ressure by Western states and intern ational organizations can greatly increase the vulnerability of norm -violating governments to external influences.' 78 Self-evidently, only non-Western governme nts can be norm vi olators; Western governments can only be norm-setters and enforcers. The rejection of the ICC by Washington highlights the irony that the US 'is prepared to bomb in the name of human rights but not to join institutions to enforce them.' 79 Even if we agree on universal huma n rights, they still have to be constructed, articulated and embedded in international conve ntions. The question remains of the agency and procedure for determining what they are, how they apply in specific circumstances and cases, what the proper remedies might be to breaches, who decides on these breaches and what rules of procedure and evidence they should follow. Under presen t conditions of world realities, the political calculus — relations based on military might, economic power and media and NGO dominance — cannot be taken out. The resilience of the opposition to the internationalis ation of the human conscien ce lies in the fear that the lofty rhetoric of universal human rights claims merely masks the more mundane and familiar pursuit of nati onal interests by different means. VII T HE U NITED N ATIONS S ECURITY C OUNCIL Almost all the above examples relate to the Security Council as the core of the international law enforcement system. General Rupert Smith argues that in Bosnia, '[t]he existence and actions of the Security Council negatively affected events ... The consequence of this failing was the destruction of the credibility of the UN.' 80 He concludes that '[i]f the Security Council ... is to change so as to wield force for good, then structural a nd organizational chan ges are necessary.' 81 An unreformed Security Council has been experiencing a steady erosion of international legitimacy, which helps to explain the growing willingness of many state and non-state actors to defy its edicts openly. That is, the increasing 77 Many in developing countries watched bemusedly from the sidelines when the same attitudinal divide opened up across the Atlantic in 2003 with respect to the US threat of war on Iraq and the stiff resistan ce from European citizens. Th e dominant view in Washington seemed once again to be that the European people could not possibly be right. The task was to show them the error of their ways or, fa iling that, to make sure that the European governments listened to the US Administration rather than to their own people. That the Administration could be wrong was a priori beyond the realm of possibility. 78 Thomas Risse and Stephen C Ropp, 'International Human Rights Norms and Domestic Change: Conclusions' in Thomas Risse, Stephen C Ropp and Kathryn Sikkink (eds), The Power of Human Rights (Cambridge University Press, 1999) 234, 277. 79 Christine Chinkin, 'Kosovo: A "Good" or "Bad" War?' (1999) 93 American Journal of International Law 841, 846. 80 Rupert Smith, 'The Security Council and the Bosnian Conflict: A Practitioner's View' in Vaughan Lowe et al (eds), The United Nations Security Council and War: The Evolution of Thought and Practice since 1945 (Oxford University Press, 2008) 442, 451. 81 Ibid. 18 Melbourne Journal of International Law [Vol 11 divergence of Security C ouncil-sourced law from le gitimacy dramatically reduces the efficacy of the UN in regula ting the international behaviour of a growing number of actors. For legality a nd legitimacy to come together again in the Security Council, its composition and procedures must be changed urgently to reflect today's military and ideational realities. The legitimacy of the Security Counc il as the authorita tive validator of international security action suffers from a quadruple legitimacy deficit: performance, representati onal, procedural and account ability. Its performance legitimacy suffers from two strikes: an uneven and a selective record. It is unrepresentative from almost any point of view. 82 Its procedural legitimacy is suspect on grounds of a lack of democratisati on and transparency in decision-making. And it is not answerable to the General Assembly, the World Court, the nations or the peoples of the world. Western countries often fret at the in effectual performance legitimacy of the Council. Their desire to resist the Counc il's role as the sole validator of the international use of force is the product of this dissa tisfaction at its perceived sorry record. But the moral authority of collective judgments does depend in part on the moral quality of the process of making those judgments. 83 Michael Ignatieff writes that '[w]hen democrats di sagree on substance, they need to agree on process.' 84 The collective nature of the decision-making process of the Security Council is suspect because of the skewed dist ribution of political power and resources among its members. If th e Security Council were to become increasingly activist, interventionist and effective, the erosion of representational and procedural legitimacy and the abse nce of any accountability mechanisms would lead many countries to question th e authority of the Council even more forcefully. There is a logical slippage between normative idealism and Realpolitik in picking and choosing which elements of th e existing order are to be challenged and which retained. If ethical imperati ves and calculations of justice are to inform, underpin and justify international interventions, then there is a powerful case for reforming the composition of the Security Council a nd eliminating the veto clause with respect to humanitarian operations. To self-censor such calls for major reform on the grounds that they are unacceptable to the major powers and therefore unrealistic, is to argue in e ffect that the motive for intervention is humanitarian, not strategic; yet, the agency and procedure for deciding on intervention must remain locked in the strategic logic of Realpolitik. The UN is usually attacked for doing t oo little, too late. Has the Security Council been doing too much and too soon? In recent times the Council has been coopting functions that belong properly to legislative and judicial spheres. It has taken on a legislative role in resolutions on terrorism and non-proliferation. This is intruding into the realm of state prerogatives as negotiated in international conferences and conventions . Security Council deci sions are binding, so 192 82 See Ramesh Thakur, 'UN Electoral Grou pings Reform' in Ramesh Thakur (ed), What is Equitable Geographic Representation in the Twenty-First Century? (United Nations University Press, 1999) 2–3. 83 Amy Gutmann and Dennis Thompson, Democracy and Disagreement (Belknap Press, 1996) 4. 84 Michael Ignatieff, The Lesser Evil: Political Ethics in an Age of Terror (Edinburgh University Press, 2004) viii. 2010] Law, Legitimacy and United Nations 19 legislatures are denied their right of review over international treaties. The Security Council imposed sanctions on Li bya for its failure to extradite two citizens accused of being the brains behind the Lockerbie bombing. That is, without a trial and conviction, the Secu rity Council was bent on compelling one sovereign state to hand over it s citizens to another sove reign state on the basis of allegations from the latter — which had itself, just a few years earlier, defied the World Court's verdict in a case brought against it by Nicaragua. In September 2004, the Council approved a US-backed resolution 85 demanding the immediate withdrawal of a ll foreign forces from Lebanon — at a time when more than 100 000 US troops were occupying Iraq. No-one held their breath over any possible UN i nvestigation of the tens — or is it hundreds — of thousands killed in Iraq since 2003. On 31 May 2007, a sharply divided Security Council voted 10:0:5 to estab lish an internati onal criminal tribunal to prosecute the perpetrators of the suicide-assassin ation of Lebanon's Prime Minister, Rafiq Hariri, and 22 others in February 2005, which put the organisation 'in the business of stigmatizing and punishing individuals for a political crime'. 86 The five abstainers — China, Indonesia, Qata r, Russia and South Africa — explained that the resolution 'bypassed the Lebanese parliament's constitutional role in approving international agreements'. 87 Hezbollah issued a statement denouncing the Security Council resolution as 'illegal and illegitimate at the national and international level'. 88 It is easy to understand why Iranians might have come to the same conclusion about the Security Council afte r their bitter war with Iraq. For eight long years, despite clear evidence of aggression by Saddam Hussein (who during this time was the West's useful idiot) and his use of chemical weapons, the Council's standard response was to suggest that 'bot h belligerents were equally at fault'. 89 If and when the UN Charter is reformed, one item on the agenda should be the introduction of curbs on untrammelled authority in the Security Council, which is presently subject to no count ervailing political check or judicial review. 90 The idea that the P5 should fuse legislative, executive and judicial 85 SC Res 1559, UN SCOR, 59 th sess, 5028 th mtg, UN Doc S/RES/1559 (2 September 2004). 86 Gary J Bass, 'Does the UN Understand What It's Getting Itself Into?', The Washington Post (Washington DC), 30 October 2005, B03. 87 Colum Lynch and Ellen Knickmeyer, 'UN Council Backs Tribunal for Lebanon: Beirut Braces for Unrest after Vote to Purs ue Assassins of Former Premier', The Washington Post (Washington DC), 31 May 2007, A01. 88 Hezbollah Condemns Hariri Court (31 May 2007) BBC News <http://news.bbc.co.uk>. 89 Charles Tripp, 'The Security Council and the Iran–Iraq War,' in Vaughan Lowe et al (eds), The United Nations Security Council and War: The Evolution of Thought and Practice since 1945 (Oxford University Press, 2008) 368, 374. 90 In Legal Consequences for States of the Continued Presence of South Africa in Namibia (South West Africa) Notwithstanding Security Council Resolution 276 (1970) (Advisory Opinion) [1971] ICJ Rep 16; Questions of Interpretation and Application of the 1971 Montreal Convention Arising from the Aeri al Incident at Lockerbie (Libya v UK) (Preliminary Objections) [1998] ICJ Rep 9; and Questions of Interpretation and Application of the 1971 Montreal Convention Arising from the Aerial Incident at Lockerbie (Libya v US) (Preliminary Objections) [1998] ICJ Rep 115, the ICJ cast doubts on the blanket immunity of the Security Council from judicial scrutiny but did not go so far as to enunciate a doctrine of judicial review. See Jose E Alvarez, 'Judging the Security Council' (1996) 90 American Journal of International Law 1; Thomas M Franck, 'The "Powers of Appreciation": Who Is the Ultimate Guardian of UN Legality?' (1992) 86 American Journal of International Law 519. 20 Melbourne Journal of International Law [Vol 11 powers to themselves violates elementary notions of due process. Imagine if abuser regimes, and only they, had perm anent membership and veto powers in the new Human Rights Council. Western commentators seem to point r outinely to China and Russia as the veto-wielding problem members of the P 5. In fact, since the end of the Cold War, the country to have cast the veto mo st frequently is the US. The UK and the US have been among the most heavily i nvolved in warfare and armed conflict over the last century, and if we limit the period to that starti ng after the Second World War, a third country in the list would be Israel. Not the least, because of the veto power in the Security Council, there is no prospect of anyone from any of these three countries being placed in the ICC dock in the foreseeable future. Little wonder that the precedent-setting in dictment of the President of Sudan by the ICC in March 2009 drew protests fr om the majority of the African Union, 91 the Arab League 92 and the Non-Aligned Movement 93 (the world's most representative general pur pose body after the UN itself) about the selective justice being meted out by the ICC. Until such time as Washington (and London) are prepared to lead the campaign for th e abolition of the veto clause, it is difficult to see how the expect ation, threat or use of ve to by others can legitimise any US or UK action that circumvents the veto. Those who live by the veto cannot rightfully complain about having to die by the veto. VIII **THE UNITED NATIONS –UNITED STATES DUALISM** The push for democratization in the world has been led by the three Western members of the P5 (UK, France and the US). Yet the three have been the most fiercely resistant to bringing democracy and transparency to the workings of the Council itself. In some respects, it is more accurate to speak these days of the '**P1' rather than the 'P5'**. Authority is the right to make policy and rules, while power is the capacity to implement the policy and enforce the rules. The UN has global reach and authority but **no power**. It symbolizes global governance but lacks the attributes of international government.

While lawful authority remains vested in the UN, power has become **increasingly concentrated in the US** which has **global grasp and power** but not international authority. The exercise of power is **rendered less effective** and generates its own resistance if divorced from authority. The latter in turn is **corroded** when challenges to it **go unanswered** by the necessary force. Lack of capacity to be the chief enforcer acting under Chapter VII of the UN Charter means that the **UN remains an incomplete organization**, one that practices only part s of its Charter. That being the case, Edward Luck asks, '[i]s it tenable for the UN to say that it only wants to walk on the soft side of the street but nevertheless wants to have some degree of control over what happens on the other side as well?' Until the First World War, war was an accepted and normal part of the state system with distinctive rules, norms and etiquette. In that Hobbesian world, the only protection against aggression was countervailing power, which increased both the cost of victory and the risk of failure. Since 1945, the UN has spawned a corpus of law to stigmatize aggression and create a robust norm against it. The UN exists to check the predatory instincts of the powerful towards the weak – one of the most enduring but not endearing lessons of history. Since 11 September 2001, a US that was already over-armed has **militarized** its foreign policy still more. Might the US irritation at the UN owe as much to its effectiveness in constraining imperial US behavior as alleged UN ineffectiveness against others? The Bush Administration rejected Harry Truman's counsel that the US must deny itself the license to do as it pleases, ignored John F Kennedy's wisdom that the US is neither omnipotent nor omniscient, and rode roughshod over four decades of tradition of en lightened self-interest and liberal internationalism as the guiding normative template of US foreign policy. Paul Heinbecker, Canada's former UN ambassador, comments that '[t]he distance between delusion and hubris is short and the Bush Administration covered it in a sprint.'

UN legitimacy solves extinction

Goldberg 13 – citing Chuck Hagel, former U.S. Secretary of Defense and Senator from Nebraska (Mark Leon, Why Chuck Hagel Supports the United Nations, UN Dispatch, 1/7/13, http://www.undispatch.com/why-chuck-hagel-supports-the-united-nations/)//JJ

The United Nations can play a **central and critical role** in forging connections. The **global challenges** of **terrorism**, **proliferation** of **weapons of mass destruction**, **hunger**, **disease**, and **poverty** **require multilateral responses and initiatives**. The United States should therefore take **every opportunity** to help **strengthen global institutions** and alliances, including **the UN**. Like all institutions, the United Nations has its limitations and problems. It needs reform. Too often, the UN, especially the General Assembly, succumbs to the worst forms of political posturing. Nevertheless, the United Nations has played an **essential role** **throughout the world** in postconflict transitions, supervising elections, providing humanitarian programs and assistance, 22 peacekeeping, and offering international legitimacy and expertise of the kind that have **helped stabilize** Korea, Haiti, Liberia, East Timor, the Balkans, Afghanistan, and a number of other regions. Helping bring security to those troubled areas required an immense international effort. Although many of these hot spots are still troubled today, **each is more stable** than it was, reducing the risk of further violence and regional escalation. More importantly, each has some hope for a peaceful future—although it may take years before that hope is realized. No international conflict is simple or easy to deal with, but each requires attention and the United Nations is the **only international organization** that can help bring the consensus that is **indispensable** in finding solutions and resolving crises. Critics have suggested that McCain's League of Democracies could diminish the role of the United Nations. When I mentioned this to Hagel, he said, "What is the point of the United Nations? The whole point, as anyone who has taken any history knows, was to bring all nations of the world **together** in some kind of imperfect body, a forum that allows all governments of the world, regardless of what kinds of government, to **work through their problems**–versus attacking each other and going to war. Now, in John's League of Democracies, does that mean Saudi Arabia is out? Does that mean our friend King Abdullah in Jordan is out? It would be only democracies. Well, we've got a lot of allies and relationships that are pretty important to us, and to our interests, who would be out of that club. And the

way John would probably see China and Russia, they wouldn't be in it, either. So it would be an interesting Book-of-the-Month Club. "But in order to solve problems you've got to have all the players at the table," Hagel went on, his voice rising. "How are you going to fix the problems in **Pakistan**, **Afghanistan**–the problems we've got with **poverty, proliferation, terrorism, wars**–when the largest segments of society in the world today are not at the table?" He paused, then added, more calmly, "The United Nations, as I've said many times, is imperfect. We've got NATO, multilateral institutions, multilateral-development banks, the World Trade Organization–all have flaws, that's true. But if you didn't have them what would you have? A world **completely out of control**, with **no structure**, **no order**, **no boundaries**."

Universal Periodic Review solves the aff and ensures human right compliance

CDT 5/11/15 – global non-profit organization championing global online civil liberties and human rights, driving policy outcomes that keep the Internet open, innovative, and free, *citing Sarah Vincent; J.D. at the University of Michigan Law School (Center for Democracy and Technology, UN Human Rights Council Highlights US Surveillance Abuses, https://cdt.org/press/un-human-rights-council-highlights-us-surveillance-abuses/)//JJ

Today, the United Nations Human Rights Council conducted its second **Universal Periodic Review of the United States' human rights practices**. During this process, UN Members States have the opportunity to **raise concerns** about a country's human rights record, highlighting particular concerns or areas for clarification. The human rights implications of **large-scale government surveillance** were a prominent topic of criticism by more than a dozen countries. The Center for Democracy & Technology (CDT) and the ACLU submitted a shadow report on five particularly egregious US surveillance programs in advance of the review, and CDT previewed the process last week. "The global community has said firmly that the **US must address** its **surveillance-related human rights abuses**. The US cannot continue to ignore these calls for action," said Sarah St. Vincent, Human Rights and Surveillance Legal fellow at CDT. The UN Human Rights Council review comes just **days before surveillance reform legislation** is to be taken up in Congress and follows last week's ruling by the Second Circuit Court of Appeals that the NSA bulk collection is not legal under Section 215 of the PATRIOT Act. "The Council's proceedings have put additional pressure on the US to **reform its surveillance practices** not just in the US, but around the world," St. Vincent added. "They've highlighted the need to ensure that **all surveillance programs** respect the rights to privacy and free expression for everyone, at all times." At least 17 nations questioned the US on its surveillance practices, raising issues related to the interception of private data, transparency, redress for violations, and the rights of individuals being monitored outside of the US' borders. CDT will provide additional analysis of the proceedings later this week.

Solves the aff

St. Vincent 5/15/15 – CDT's Human Rights and Surveillance Fellow, J.D. at the University of Michigan Law School (Sarah, UN Member States Call for US Surveillance Reforms, CDT, https://cdt.org/blog/un-member-states-call-for-us-surveillance-reforms/)//JJ

On Monday, US officials went before the gathered United Nations Member States in Geneva and were greeted with a message that was loud and clear: all surveillance, no matter where it takes place or whose data it involves, must comply with human rights law. As Congress and the Executive Branch continue to face urgent demands from the American public to reform surveillance, they would do well to heed this global call for change as well. In particular, the Administration should give immediate and serious consideration to **countries' recommendations** to recognize that **human rights apply** to all surveillance; that any surveillance program must be subject to adequate judicial, congressional, and independent oversight; and that anyone whose fundamental rights

are violated by surveillance activities must have access to effective redress. NSA surveillance remains a matter of strong and detailed concern to the global community. As CDT explained last week, the UN Human Rights Council conducted the Universal Periodic Review ("UPR") of the United States, which occurs once every four and a half years and entails a public review of the country's compliance with all of its obligations under human rights law. Every UN Member State had the right to participate in the US' review, and Monday's session demonstrated a remarkable cohesiveness among the serious issues that were raised—and showed that NSA surveillance remains a matter of strong and detailed concern to the global community. Among the 17 countries that commented on US surveillance (or privacy rights more broadly), several emphasized something the Administration has thus far refused to acknowledge: namely, that the US must respect human rights whenever it conducts surveillance operations, including surveillance of people who are outside the United States and are not Americans. As CDT and the ACLU observed in a report to the Human Rights Council prior to the session, the Snowden documents indicate that the NSA has been intercepting the private data of hundreds of millions of people around the world every day, and the Administration's failure to recognize that these activities give rise to human rights obligations remains a conspicuous and grave one. In addition to this general critique, several countries specifically indicated that the US must adopt better judicial, legislative, and independent oversight of its surveillance programs. Such oversight is an essential element of the right to privacy, and is a basic safeguard that CDT has been working hard to promote both within the US and internationally. A number of countries also highlighted the fact that US surveillance places a burden on individual rights from the moment the NSA acquires private data, regardless of whether analysts later view or use it—a point that echoes a similar finding by a US Second Circuit Court of Appeals last week in a case concerning the agency's bulk collection of records of phone calls to, from, and within the US. Next month, the US is expected to state publicly whether it accepts these and other surveillance-related recommendations. We believe the Administration should accept the following obligations, among others, as a matter of official policy: Respect and protect the human rights of all people when conducting surveillance: "**Ensure** that **all surveillance policies** and **measures comply** with **international human rights** law, particularly the right to privacy, regardless of the nationality or location of those affected, including through the development of effective safeguards against abuses" (recommendation made by Brazil). Do the same when requiring companies to disclose users' data: "Respect international human rights obligations regarding the right to privacy when intercepting digital communications of individuals, collecting personal data or requiring disclosure of personal data from third parties" (recommendation made by Germany). Conduct surveillance only on the **basis of clear, comprehensive,** non-discriminatory laws, and review existing laws accordingly: Review US federal laws and policies "in order to ensure that all surveillance of digital communications is consistent with its international human rights obligations and is conducted on the basis of a legal framework which is publicly accessible, clear, precise, comprehensive and non-discriminatory" (recommendation made by Liechtenstein). Restrict large-scale global surveillance, ensure sufficient oversight, and provide redress for violations: "Take all necessary measures to ensure an independent and effective oversight by all Government branches of the overseas surveillance operations of the National Security Agency, especially those carried out under Executive Order 12333, and guarantee access to effective judicial and other remedies for people whose right to privacy would have been violated by the surveillance activities of the United States" (recommendation made by Switzerland; similar recommendation made by Hungary). Take proactive measure to prevent abuses: "Take adequate and effective steps to guarantee against arbitrary and unlawful acquisition of [private] data" (recommendation made by Kenya; similar recommendation made by Costa Rica). It is to the Administration's credit that (as several participating countries noted) it has taken the Human Rights Council's review of its human rights record with evident seriousness thus far. US Ambassador Keith Harper remarked before the assembled delegates that "every nation benefits from having a mirror held before it," and the US' decision to send a high-level delegation representing a range of federal agencies reflects the sincerity of that view. In the case of surveillance, however, there's no escaping the fact that the mirror has revealed profound flaws. It is imperative for the Executive Branch to take action accordingly by **formally declaring** that it **will accept and uphold** the positions described above.

2nc – at: U.S. says no

U.S. will implement the recommendations – council and member state's authority

St. Vincent 5/7/15 – CDT's Human Rights and Surveillance Fellow, J.D. at the University of Michigan Law School (Sarah, US to Answer for Surveillance Practices on Global Stage, CDT, https://cdt.org/blog/us-to-answer-for-surveillance-practices-on-global-stage/)//JJ

During the UPR session, we will be on the lookout for whether: Countries with which the US has a positive relationship—particularly those that co-sponsored the recent groundbreaking resolution creating a new UN Special Rapporteur on the right to privacy—publicly remind the US government that many of the NSA surveillance programs revealed in the Snowden documents **violate human rights** and make recommendations as to **how those programs should be changed**; Countries state that the **US must comply** with **its human rights obligations** when **conducting surveillance** outside its own borders—an assertion that would **carry significant weight** in a major ongoing legal debate; Emphasis is placed upon the fact that even the initial interception or acquisition of private data interferes with the rights to privacy and free expression; There is a significant embrace of the UN Office of the High Commissioner for Human Rights' conclusion that any interferences with the right to privacy must be necessary and proportionate in order to comply with human rights (again, such statements by countries would help to strengthen a good global legal standard—one the US currently resists); The burden surveillance places on free expression is explicitly highlighted; and Countries address specific human rights issues such as meaningful oversight of surveillance programs (for example, by courts or independent bodies) and the need to ensure that anyone who experiences a violation of his/her rights due to surveillance has access to an effective remedy. The Universal Periodic Review is the **world's biggest stage** for highlighting human rights violations and working for clearer, stronger standards to protect the rights and freedoms of individuals everywhere. As the US steps into the spotlight, the world will be watching, and so will CDT.

U.S. will implement – empirics flow neg

DS 2/6/15 – U.S. Department of State (UPR Report of the United States of America, Department of State Diplomacy in Action, http://www.state.gov/j/drl/upr/2015/237250.htm)//JJ

In our first UPR in 2010, the United States supported in whole or in part **173 of 228** recommendations. We have divided these recommendations into ten thematic areas and have structured Section III of this report accordingly. Working groups comprising experts from relevant federal agencies **addressed each** of the thematic areas, **meeting periodically**, **assessing progress** on the recommendations, and consulting with civil society to share updates and receive feedback.

Here's specific ev to surveillance

ISHR 5/18/15 – independent, non-governmental organization dedicated to promoting and protecting human rights, developed the UN Declaration on Human Rights

Defenders (International Service For Human Rights, United States: **Implement UPR recommendations to establish national human rights institution** and review national security laws, http://www.ishr.ch/news/united-states-implement-upr-recommendations-establish-national-human-rights-institution-and)//JJ

The United States of America (US) was reviewed last week on Monday, 11 May for the second time, as part of the 22nd session of the Universal Periodic Review (UPR). Late last year, ISHR prepared a Briefing Paper on the Situation of Human Rights Defenders in the US to assist States and other stakeholders to formulate questions and recommendations regarding the protection of human rights defenders (HRDs) during the US' second UPR. In the briefing paper, ISHR called on the US Congress to reform national security legislation and ensure accountability surrounding the unwarranted surveillance of human rights defenders and journalists; enact specific legislation that protects HRDs from reprisals and intimidation; and to build and endorse human rights mechanisms necessary for consistent and effective oversight of human rights in the US. Encouragingly, many of these recommendations were taken up by States in last week's review.

OHCHR 15 – Office of the High Commissioner for Human Rights (Basic facts about the UPR, United Nations Human Rights, 2015, http://www.ohchr.org/EN/HRBodies/UPR/Pages/BasicFacts.aspx)//JJ

During the Working Group session **half an hour** is allocated to adopt each of the "outcome reports" for the States reviewed that session. These take place **no sooner than 48 hours** after the country review. The reviewed State has the opportunity to make preliminary comments on the recommendations choosing to either accept or note them. Both accepted and noted recommendations are included in the report. After the report has been adopted, editorial modifications can be made to the report by States on their own statements within the **following two weeks**. The report then has to be adopted at a plenary session of the Human Rights Council. During the plenary session, the State under review can reply to questions and issues that were not sufficiently addressed during the Working Group and respond to recommendations that were raised by States during the review. Time is also allotted to member and observer States who may wish to express their opinion on the outcome of the review and for NHRIs, NGOs and other stakeholders to make general comments.

Documents leaked to journalists by former National Security Agency (NSA) contractor Edward Snowden continued to reveal new details about US surveillance programs. In the last year, reports based on the Snowden documents show that the US may be collecting millions of text messages worldwide each day and intercepting all phone calls and metadata in the Bahamas and Afghanistan, and gathering all phone metadata in Mexico, Kenya, and the Philippines. A July news story said several prominent American Muslim leaders, including the head of a Muslim civil liberties group, were targeted with electronic surveillance. On January 17, 2014, President Obama announced additional measures to restrict the use, retention, and dissemination of personal data gathered by intelligence services in Presidential Policy Directive 28. However, these measures fell short of ensuring that interference with privacy was limited to what was necessary and proportionate, and they left open the possibility of large-scale collection. Also, while the measures purported to bring rules on surveillance of non-US persons (foreigners abroad) closer to those governing data collected on US persons, the rules are vague and **create no justiciable rights**. In March, the **UN Human Rights Committee** called on the US to ensure that its surveillance activities **respect privacy rights** under the International Covenant on Civil and Political Rights, regardless of the nationality or location of individuals being monitored. It also expressed concern over the **lack of transparency** in US laws and court rulings governing surveillance. In July, Human Rights Watch released a report documenting how large-scale US surveillance is hampering journalists and lawyers in their work, making it more difficult to protect sources, and leading journalists to go to extreme lengths to avoid detection: from using encryption to burner phones, to ceasing all electronic communication. As a result, far less information about matters of public concern may be seeing the light of day. Also in July, Senator Patrick Leahy introduced a new version of the USA Freedom Act that would have limited some forms of domestic surveillance, while doing almost **nothing to safeguard the privacy** of foreigners abroad. However, it failed to move forward in the Senate.

2nc – cdt prodict

CDT is baller – here's the quals of the editor

CDT 15 – global non-profit organization championing global online civil liberties and human rights, driving policy outcomes that keep the Internet open, innovative, and free (Center for Democracy and Technology, Nuala O'Connor, 2015, https://cdt.org/staff/nuala-o%E2%80%99connor/)//JJ

Nuala O'Connor is the President & CEO of the Center for Democracy & Technology. She is an internationally recognized expert in Internet and technology policy, particularly in the areas of privacy and information governance. Nuala is passionate about the ways technology and the Internet can be instruments of global free expression and individual freedom, and is committed to finding policy solutions that affect real people. Nuala has experience in both the public and private sectors. She was the Global Privacy Leader at General Electric (GE), where she was responsible for privacy policy and practices across GE's numerous divisions. Prior to joining CDT, she worked at Amazon.com as Vice President of Compliance & Consumer Trust and Associate General Counsel for Data & Privacy Protection. Nuala's time in the technology sector began at DoubleClick, where she was part of a team of professionals brought in to address public outcry over the advertising giant's proposal to merge on- and offline data sets. She managed numerous class actions, a multistate settlement with state attorneys general, and an FTC investigation before going on to help found the privacy compliance department, which served as an influential model for companies in the technology sector and beyond. Later, Nuala served as Deputy Director of the Office of Policy & Strategic Planning, Chief Privacy Officer and as the Chief Counsel for Technology at the US Department of Commerce, where she worked on global technology policy including Internet governance and industry best practices. She became the first statutorily appointed Chief Privacy Officer in federal service when she was named as the first Chief Privacy Officer at the Department of Homeland Security. At DHS she was responsible for groundbreaking policy creation and implementation regarding the use of personal information in national security and law enforcement. Under her leadership, the DHS Privacy Office issued a seminal report criticizing the use of private-sector data in national security efforts. She serves on numerous nonprofit boards, and is the recipient of the International Association of Privacy Professionals (IAPP) Vanguard Award, the Executive Women's Forum's Woman of Influence award, and was named to the Federal 100, and "Geek of the Week" by the Minority Media & Telecom Council in May 2013. She also served as the Chairman of the Board of IAPP. Born in Belfast, Northern Ireland, Nuala grew up in and around New York City. She holds an **AB from Princeton**, an **M.Ed. from Harvard**, and a **JD from Georgetown University Law Center**. She lives in the Washington, DC, area with her three school-aged children.

2nc – health aff

Solvency advocate against Health Surveillance affs

Dixon 14 – executive director of the World Privacy Forum, formerly a research fellow with the Privacy Foundation at Denver University's Sturm School of Law, former author (Pam, WPF Universal Periodic Review Comments — The Right to Health Privacy: Human Rights and the Surveillance and Interception of Medical and Health Records by Security Agencies, World Privacy Forum, 10/7/14, https://www.worldprivacyforum.org/2014/10/wpf-universal-periodic-review-comments-the-right-to-health-privacy-human-rights-and-the-surveillance-and-interception-of-medical-and-health-records-by-security-agencies/)//JJ

The World Privacy Forum respectfully submits these comments to the Civil Society Consultation on the Universal Periodic Review Recommendations on National Security supported in whole or in part by the U.S. The World Privacy Forum is a 501 (c)(3) non-profit public interest research group based in the United States. We focus exclusively on privacy and security issues and have substantive expertise in health privacy. 1. Our comments focus on the issue of the U.S. National Security Agency's (NSA) interception of, acquisition of, and access to the health (including physical and mental health) records held by health care providers, health insurers, and health care clearinghouses located in the United States or otherwise subject to U.S. health privacy law. 2. The Universal Declaration of Human Rights, in Article 12 and 25, provides that individuals should be free to seek health care without intrusion by their government. The United Nations General Assembly adopted resolution 68/167 in December 2013, which expresses concern regarding the negative impact that surveillance and interception of communications may have on human rights. The United States in the 2010 UPR supported the right to privacy, and the goal of legislation or regulations that would work to prevent the violations of individual privacy, including "constant intrusion," by its intelligence and security organizations. Specifically, the U.S. supported in part: § 59: Legislate appropriate regulations to prevent the violations of individual privacy, constant intrusion in and control of cyberspace as well as eavesdropping of communications, by its intelligence and security organizations. §187: Guarantee the right to privacy and stop spying on its citizens without judicial authorization. 3. The World Privacy Forum acknowledges that there are lawful reasons for access to health records for investigations. 4. We are, however, most concerned that non-transparent access to patient health files by national security agencies occurs in two circumstances: 1.) When the files are held by health care providers, and 2.) When the files are in transmission between providers, insurers, and other lawful users. In these comments, we discuss the issue of a lack of transparency and oversight regarding the acquisition and use of health records by federal agencies with national security functions and, in particular, by the NSA. I. The lack of transparency regarding U.S. security agency acquisition of health records when held by health care providers and other entities covered under health privacy legislation. 5. There are no meaningful procedures or protections established by federal law governing the the acquisition or interception of patient health records by national security agencies from a health care provider, insurer, or clearinghouse. 6. U.S. health care providers are regulated under the federal health privacy rule. Federal law includes a broad national security exemption that offers no effective restrictions on the disclosure of health records by health care providers for national security and intelligence activities. The exemption [45 CFR 164.512(k)(2)] states: (2) National security and intelligence activities.A covered entity may disclose protected health information to authorized federal officials for the conduct of lawful intelligence, counter-intelligence, and other national security activities authorized by the National Security Act (50 U.S.C. 401, et seq.) and implementing authority (e.g., Executive Order 12333). [45 CFR 164.512(k)(2)]. 7. Because of the breadth of this exemption, it is lawful for health care providers and other entities covered by the law to disclose health records to national security agencies without any procedural standards, any formal judicial request, any showing of relevance or importance, any probable cause, or any reasonable cause. The law does not require a written — or indeed any — request for it to be lawful for a covered entity to hand over patient health files. Further, there are no adequate procedures under which a record keeper or record subject can challenge a request for the records as unlawful, inappropriate, or as not in accordance with statutory procedures. II. The lack of transparency regarding the U.S. security agency acquisition of health records in transmission outside of the health care provider context 8. Events since 2010 have better informed the public and the world about health record privacy and national security investigation activities, including interception of health records in bulk collections. We are most concerned about examples regarding the NSA's activities. The NSA has broken the encryption that in the past has protected health records. (NewYork Times, Top Secret NSA Program Cracks Most Internet Encryption Tools, Sept. 05, 2013.) While this does not prove that the NSA is deliberately intercepting health records, it does indicate that traditional means of making health files private are no longer reliable against intrusion, particularly during transmission, even when the security meets the requirements set out in the federal health security rule. We certainly have no confidence that standard encryption protocols protect health records against NSA capabilities. 10. Health records of individuals, including non-targeted individuals, have been routinely intercepted by the

NSA. A reporter at the Washington Post who received copies of intercepted files from former NSA contractor Edward Snowden documented this issue, noting the presence of health files. He wrote: "About 16,000 of the data files contained the text of intercepted conversations. The rest were photographs or documents such as medical records, travel vouchers, school transcripts and marriage contracts." (Barton Gellman, The Washington Post, How 160,000 intercepted communications led to our latest NSA story, July 11, 2014. <http://www.washingtonpost.com/world/national-security/your-questions-answered-about-the-posts-recent-investigation-of-nsa-surveillance/2014/07/11/43d743e6-0908-11e4-8a6a-19355c7e870a_story.html>. 11. The U.S. Executive Branch acknowledged in 2013 that the business records provision of the USA PATRIOT ACT had been re-interpreted to allow the U.S. government to collect the private records of large numbers of ordinary Americans via bulk collection. A bi-partisan group of U.S. Senators wrote to the Director of National Intelligence on June 27, 2013 requesting answers to issues regarding interception of health records: "We are troubled by the possibility of this bulk collection authority being applied to other categories of records. The bulk collection authority could potentially be used to supersede bans on maintaining gun owner databases, or laws protecting the privacy of medical records, financial records, and records of book and movie purchases. These other types of bulk collection could clearly have a significant impact on Americans' privacy and civil liberties as well." <http://www.wyden.senate.gov/download/?id=87b45794-0fa4-4b1a-b3a6-e659a91a5042&download=1>. 12. No existing legal mechanisms provide appropriate standards, transparency, or oversight in the use of health records for national security investigations. III. The importance of health privacy as a human right and value worth protecting 13. We are concerned that individuals may be chilled from seeking necessary and even life-saving health treatment due to legitimate privacy concerns regarding their health records. As health records become increasingly digitized, routine access to patients' electronic health records by U.S. intelligence and security agencies becomes more likely. We include remote electronic access to this assessment. 14. The goals of UPR § 59 are that countries "Legislate appropriate regulations to prevent the violations of individual privacy, constant intrusion in and control of cyberspace as well as eavesdropping of communications, by its intelligence and security organizations. These goals are not being met in the United States with respect to disclosure and interception of health records by national security agencies. IV. Recommendations The World Privacy Forum recommends the following steps be taken: Recommendation 1. Change U.S. law so there are more accountability and better procedures for national security requests, demands, and interceptions. Specifically, we recommend the following changes to U.S. law with respect to access by or disclosure of health records to U.S. national security agencies: Health information should only be disclosed for national security purposes pursuant to a judicial warrant. There must be procedures under which record keepers can challenge national security demands for health records that are unlawful or inappropriate. If there is no requirement for a judicial warrant, then we offer these further recommendations: Requests for health information by all national security agencies must meet standards of reasonable or probable cause. Formal requests by all national security agencies for health records should be subject to the supervision of the federal courts. Recommendation 2. The U.S. should accept the letter and spirit of §59 and §187 and should take immediate corrective action. The **lack of sufficient human rights protections** for **health privacy and health records** in the U.S. **erodes the values** expressed in the Universal Declaration of Human Rights, in Article 12 and 25.

***theory/perms

2nc – theory – top-level

It's a core topic question –
St. Vincent and Hall 14 – CDT's Human Rights and Surveillance Fellow, J.D. at the University of Michigan Law School AND **Chief Technologist for CDT, Ph.D. in information systems from UC Berkley (Sarah and Joseph Lorenzo, Five US Surveillance Programs Undermining Global Human Rights, CDT, 9/18/14, https://cdt.org/blog/five-us-surveillance-programs-undermining-global-human-rights/)//JJ

Those of us in the United States often like to think—rightly or wrongly—that our overall human-rights record is in pretty good order. However, even those who view the US as a global human-rights leader have had to **take a deep breath** when **considering the past year** of **Big Brother-like surveillance revelations**. A major UN body highlighted these revelations—along with a decidedly sobering array of other US human-rights issues—in a set of recommendations back in April. In order to keep drawing attention to these surveillance-related problems, CDT and the ACLU submitted comments this past Monday to the United Nations describing five particularly egregious **surveillance programs** that have had a **grievous impact** on human rights around the world. Every four years, the UN Human Rights Council (HRC) evaluates all of a country's human-rights commitments during a process called the Universal Periodic Review (UPR). During the UPR, the UN HRC examines the promises a country has made—i.e., in human rights treaties such as the International Covenant on Civil and Political Rights and the Universal Declaration of Human Rights—and evaluates to what extent that country is living up to its obligations. We make it crystal clear that on a daily basis, US authorities are intercepting the private communications and other personal electronic data of hundreds of millions of people across the globe, the vast majority of whom are not suspected of any wrongdoing. In anticipation of next year's UPR of the United States, CDT and the ACLU sought to do something unique: after wading into the sea of NSA-related surveillance revelations that have emerged during this past year, we highlighted (and used our technical expertise to explain) five specific surveillance programs that have a particularly outrageous and broad impact on the human rights—including privacy, freedom of expression, and freedom of assembly—of people around the world. We aimed to provide an accessible technical description of the five programs and explain the impact these programs have on millions of people throughout the world, regardless of any suspicion of wrongdoing and without any judicial oversight. The five programs we analyzed include: **DISHFIRE,** an initiative through which the US collects hundreds of millions of private text messages worldwide every day; **CO-TRAVELER,** through which the US captures billions of location updates daily from mobile phones around the world; **MUSCULAR**, which entails the US' interception of all data transmitted between certain data centers operated by Yahoo! and Google outside of US territory; **MYSTIC**, a US program that collects all telephone call details in five sovereign countries other than the US, as well as the full content of all phone calls in two of those countries; and **QUANTUM,** a US program that listens in real-time to traffic on the Internet's most fundamental infrastructure and can respond based on certain triggering information with active attacks, including the delivery of malicious software to the end-user's device. In our submission we make it crystal clear that on a daily basis, US authorities are intercepting the private communications and other personal electronic data of hundreds of millions of people across the globe, the vast majority of whom are not suspected of any wrongdoing. The intercepted data includes information about where those hundreds of millions of people are, with whom they correspond, and what they say in their correspondence. At the end of our submission, we make a number of recommendations to the US about how it can improve its respect for human rights in this context. The recommendations focus on halting the US' indiscriminate interception of individuals' private communications data, getting greater (or, to be more accurate, any) Congressional and judicial oversight for these programs, stopping the attacks under QUANTUM, and ensuring that the relevant orders and regulations are brought into line with human-rights law.

b) fairness – there is no neg ground on this topic – process counterplans are necessary to make up for the atrocity of DA ground

c) research – voting us down on theory <u>discourages</u> good research practices – process counterplans <u>fosters in-depth</u> and <u>analytical</u> research for <u>tricky mechanisms</u>

d) reciprocal – the aff can get advantages based on the <u>process</u> of implementation

Reject the argument not the team

2nc – at: perm do both

Links to the net-benefit – unilateral U.S. action is perceived as bypassing the UPR recommendations

UN legitimacy is uniquely key to binding human rights compliance – U.S. involvement in the process tarnishes credibility –
Tasioulas 13 – inaugural Yeoh Professor of Politics, Philosophy and Law at The Dickson Poon School of Law, King's College London, doctorate from philosophy at Oxford (John, Human Rights, Legitimacy, and International Law, American Journal of Jurisprudence, 2013m http://ajj.oxfordjournals.org/content/58/1/1.full#sec-2)//JJ
That, of course, is a very general objection to any attempt to render the concept of a human right parasitic on the concept of a particular kind of institutional structure or geopolitical configuration. But let me proceed now to one broad manifestation of the political view of human rights, that according to which human rights are essentially benchmarks of **political legitimacy**. By the legitimacy of a political institution, I mean the right of a political institution, such as the state, to rule over its purported subjects. And by ruling, I mean the issuing of directives that purport to be **morally binding**—that purport to **impose obligations** of obedience—on those subjects. Moreover, these are obligations that are claimed to exist independently of the content of any particular directive, simply in **virtue of the institution's say-so**. It follows from this that a law may be **morally binding**, because enacted by a body that **enjoys legitimacy**, while being in some sense **unjust in terms** of its content or **the process** whereby it was enacted.

^The permutation is driven by national security interests and won't receive UN recommendations

Tharoor 3 – UN Undersecretary-General for Communications and Public Information and the author of eight books (Shashi, Why America Still Needs the United Nations, Foreign Affairs, September 2003, https://www.foreignaffairs.org/articles/2003-09-01/why-america-still-needs-united-nations)//JJ
That Washington has often used force on behalf of such principles makes good political sense. After all, acting in the name of international law is **always preferable** to acting in the name of national security. Everyone has a stake in the former, and so couching U.S. action in terms of international law universalizes American interests and comforts potential allies. When **American actions** seem **driven by U.S. national security** imperatives **alone**, partners can **prove hard to find** -- as became clear when, in marked contrast to the first Gulf War, only a small "coalition of the willing" joined Washington the second time around in Iraq. Working within the UN allows the United States to **maximize** what Joseph Nye calls its "soft power" -- the ability to **attract and persuade** others to adopt the American agenda -- rather than relying purely on the dissuasive or coercive "hard power" of military force.

Legitimacy key to binding precedent – the permutation rubber stamps the UN

Tharoor 3 – UN Undersecretary-General for Communications and Public Information and the author of eight books (Shashi, Why America Still Needs the United Nations, Foreign Affairs, September 2003, https://www.foreignaffairs.org/articles/2003-09-01/why-america-still-needs-united-nations)//JJ

Equally important, however, is the **need for legitimacy**, and here again the UN has proven **invaluable**. The organization's role in legitimizing state action has been both its **most cherished function** and, in the United States, its most controversial. As the world's preeminent international organization, the UN embodies world opinion, or at least the opinion of the world's legally constituted states. When the UN Security Council passes a resolution, it is seen as speaking for (and in the interests of) humanity as a whole, and in so doing it confers a legitimacy that is respected by the world's governments, and usually by their publics. When the resolution in question is passed under Chapter VII of the charter -- that document's enforcement provisions -- it becomes **legally binding** on all member states. The composition of the council that passes a particular resolution is no more relevant to its legitimacy than that of a national parliament that passes a law; congressional legislation, by the same logic, is not less binding on Americans if the majority that votes for it comes overwhelmingly from small states. The legitimacy of the UN inheres in its universality and not in its structural details, which have long been subject to the clamor for reform. Some Americans have scorned the status and conduct of many of the Security Council members that failed to support the United States on Iraq. But this unseemly sneering over the right of Angola, Cameroon, or Guinea to pass judgment in the council overlooks the valuable contribution their presence makes. The election of small countries to the council bolsters its legitimacy by enhancing its role as a repository of world opinion. Universality of membership also allows the world to view the UN as something more than the sum of its parts, as an entity that transcends the interests of any one member state. The UN guards the vital principles entrenched in its charter, notably the sovereign equality of states and the inadmissibility of interference in their internal affairs. It is precisely because the UN is the chief guardian of both these sacrosanct principles that it alone is allowed to approve derogations from them. Thus when the UN, in particular the Security Council, legislates an intervention in a sovereign state, it is still seen as upholding the basic principles even while approving a departure from them. When an individual state acts in defiance of the UN, on the other hand, it merely violates these principles. This is why so many countries, including the most powerful ones, take care to embed their actions within the framework of the principles and purposes of the UN Charter. For examples of this, one need only peruse a random selection of speeches by countries explaining their votes on the Security Council, especially those concerning military action. The value of internationally recognized principles resonates across the globe and has been reified through 58 years of repetition -- including last March, when the council debated Iraq. To suggest -- as did some critics of the UN during the Iraq crisis -- that the organization has become irrelevant overlooks the message President George W. Bush himself sent when he appeared before the General Assembly in September 2002. In calling on the Security Council to take action, Bush framed the problem of Iraq as a question not of what the United States (unilaterally) wanted, but of how to implement Security Council resolutions. Indeed, these resolutions were at the heart of the U.S. case. Had the Security Council been able to agree that force was warranted, it would have provided unique (and incontestable) legitimacy for U.S. military action. The fact that the council did not ultimately agree, however, strengthens, rather than dilutes, the rationale for approaching it in such situations. The **council's refusal** to serve as a **rubber stamp** for Washington will give any future support it lends to the United States greater credibility.

Independent UN action is key to credibility – the perm positions the UN on the sideline

Shariati 9 – PhD, Professor of Economics and Sociology and KCKCC (Medhi, UNITED NATIONS AND THE CRISIS OF LEGITIMACY: The Anatomy of One of the Organs of Hegemonic Powers, Payvand Iran News, 2/23/09, http://www.payvand.com/news/09/feb/1277.html)//JJ

The world is desperately in need of a solution to the crises of socio-economic and political violence, lack of direction, and utter disregard for the declining moral and ethical standards. The reality points to a very frightening prospect and to a world that is not governed by any moral codes, ethical values, international law and the absence of **credible enforcing institutions**. As the behavior of certain permanent members even in the formative years of the United Nations reveals, the current dysfunctionality of the UN is neither a recent problem nor it is a matter of

bureaucratic inefficiency. Rather it is built into the hegemonic structure itself and the need for an alternative system with a philosophy and mission statement suitable for a sustainable global social, political and economic system is becoming increasingly urgent. As long as the world is managed by those **very few** so called "fit" who pursue their own selfish interest at the expense of the great majority, they are **given the right** to codify rules, regulations, morality and ethics and to write history. Are we to assume that the world is ruled by the fittest of the human species? If so then the results suggest that there is a cancer on the body of humanity and unless the world reverses its course and changes the culture of violence, the cancer will destroy it. Recently at Davos we heard calls for more deregulation, more free market, more capital inflow/outflow, more speculations, more free trade and much more free this and free that. Angela Merkel of Germany and Gordon Brown of Britain suggested the creation of a Security Council Economic Commission for more policing of the World economy. This however is not in opposition to the neoliberalism that Davos has been promoting. It simply means for control of the World economy by a few-a few that control Security Council itself. There is a hopeful sign that there is a growing awareness regarding the **very oligarchic structure** of global institutions and the various mechanisms of transfer of wealth from the poorest to richest. The developing world is displaying an advanced degree of awareness that often dwarfs that of their counterparts in the advanced industrial and capitalist countries. As their awareness advances inexorably, the hope for a better world must be sustained. It is not the hoarding and the wasteful consumption of resources --the foundation of uni-polar and bi-polar hegemonic system that has ruled the world. It is a world free of hegemonic tendencies, respect for the rules that everyone can live by. As long as **hegemonic powers control** the structure and **set policies**, the **structure will remain detrimental** to the health of the "real" international community. No one should believe that United Nations ought to solve the World's pressing problems, but no one expects the United Nations to be one of the causes of the problems. It is time for the United Nations and all of its agencies to renounce past practices on the part of some of its agencies, adopt a new paradigm, and join the voices speaking on behalf of the under-privilege at the World Social forum rather than as a **cheer leader on the sideline** for the voices of greed and failure at the World Economic Forum at Davos.

The margin for error is tiny

Thakur 9 – director, Balsillie School of International Affairs, Distinguished Fellow, Centre for International Governance Innovation and Professor of Political Science, University of Waterloo (Ramesh, LAW, LEGITIMACY AND UNITED NATIONS, Melbourne Journal of International Law Volume 11, 12/7/9, p. 12)//JJ

Similarly, there were three views on the significance of the war for the UN–US relationship: that it demonstrated the irrelevance, centrality or potential complicity of the UN. 48 First, for the neo-conservatives, because it exists, the UN should be uninvented and there was therefore no reason to seek UN approval. 49 Under the second view, it was recognized that there was a need 'to confront Saddam Hussein but [it] ruled out acting without UN authorization.' 50 Third, UN authorization of the war was 'necessary but not sufficient' with irrelevance preferred to complicity. 51 In the opinion of some, the UN is '**now more than ever** reduced to the **servile function** of **after-sales service provider** for the United States, on permanent call as the **mop-up brigade**.'

2nc – at: perm do the cp

Makes the plan extra-topical – the UPR recommendations are not limited to surveillance and are international actions

OHCHR 15 – Office of the High Commissioner for Human Rights (Basic facts about the UPR, United Nations Human Rights, 2015, http://www.ohchr.org/EN/HRBodies/UPR/Pages/BasicFacts.aspx)//JJ

The ultimate goal of UPR is the improvement of the human rights situation in every country with significant consequences for people around the globe. The UPR is designed to prompt, support, and expand the promotion and protection of human rights on the ground. To achieve this, the UPR involves **assessing** States' human rights records and **addressing** human rights violations **wherever they occur**. The UPR also aims to **provide technical assistance** to States and **enhance their capacity** to deal effectively with human rights challenges and to **share best practices** in the field of human rights among States and other stakeholders.

Voter for jursidiciton –

Severs the plan – no portion mentions the UN or the UPR – 5 programs prove the counterplan is a distinct form of action

St. Vincent and Hall 14 – CDT's Human Rights and Surveillance Fellow, J.D. at the University of Michigan Law School AND **Chief Technologist for CDT, Ph.D. in information systems from UC Berkley (Sarah and Joseph Lorenzo, Five US Surveillance Programs Undermining Global Human Rights, CDT, 9/18/14, https://cdt.org/blog/five-us-surveillance-programs-undermining-global-human-rights/)//JJ

Those of us in the United States often like to think—rightly or wrongly—that our overall human-rights record is in pretty good order. However, even those who view the US as a global human-rights leader have had to take a deep breath when considering the past year of Big Brother-like surveillance revelations. A major UN body highlighted these revelations—along with a decidedly sobering array of other US human-rights issues—in a set of recommendations back in April. In order to keep drawing attention to these surveillance-related problems, CDT and the ACLU submitted comments this past Monday to the United Nations describing five particularly egregious surveillance programs that have had a grievous impact on human rights around the world. Every four years, the UN Human Rights Council (HRC) evaluates all of a country's human-rights commitments during a process called the Universal Periodic Review (UPR). During the UPR, the UN HRC examines the promises a country has made—i.e., in human rights treaties such as the International Covenant on Civil and Political Rights and the Universal Declaration of Human Rights—and evaluates to what extent that country is living up to its obligations. We make it crystal clear that on a daily basis, US authorities are intercepting the private communications and other personal electronic data of hundreds of millions of people across the globe, the vast majority of whom are not suspected of any wrongdoing. In anticipation of next year's UPR of the United States, CDT and the ACLU sought to do something unique: after wading into the sea of NSA-related surveillance revelations that have emerged during this past year, we highlighted (and used our technical expertise to explain) five specific surveillance programs that have a particularly outrageous and broad impact on the human rights—including privacy, freedom of expression, and freedom of assembly—of people around the world. We aimed to provide an accessible technical description of the five programs and explain the impact these programs have on millions of people throughout the world, regardless of any suspicion of wrongdoing and without any judicial oversight. The five programs we analyzed include: DISHFIRE, an initiative through which the US collects hundreds of millions of private text messages worldwide every day; CO-TRAVELER, through which the US captures billions of location updates daily from mobile phones around the world; MUSCULAR, which entails the US' interception of all data transmitted between certain data centers operated by Yahoo! and Google outside of US territory; MYSTIC, a US program that collects all telephone call details in five sovereign countries other than the US, as well as the full content of all phone calls in two of those countries; and QUANTUM, a US program that listens in real-time to traffic on the Internet's most fundamental

infrastructure and can respond based on certain triggering information with active attacks, including the delivery of malicious software to the end-user's device. In our submission we make it crystal clear that on a daily basis, US authorities are intercepting the private communications and other personal electronic data of hundreds of millions of people across the globe, the vast majority of whom are not suspected of any wrongdoing. The intercepted data includes information about where those hundreds of millions of people are, with whom they correspond, and what they say in their correspondence. At the end of our submission, we make a number of recommendations to the US about how it can improve its respect for human rights in this context. The recommendations focus on halting the US' indiscriminate interception of individuals' private communications data, getting greater (or, to be more accurate, any) Congressional and judicial oversight for these programs, stopping the attacks under QUANTUM, and ensuring that the relevant orders and regulations are brought into line with human-rights law.

Should is certain and immediate

Nieto 9 – Judge Henry Nieto, Colorado Court of Appeals, 8-20-2009 People v. Munoz, 240 P.3d 311 (Colo. Ct. App. 2009)
"Should" is "used . . . to express duty, obligation, propriety, or expediency." Webster's Third New International Dictionary 2104 (2002). Courts [**15] interpreting the word in various contexts have drawn conflicting conclusions, although the **weight of authority** appears to favor interpreting "should" in an **imperative, obligatory sense**. HN7A number of courts, confronted with the question of whether using the word "should" in jury instructions conforms with the Fifth and Sixth Amendment protections governing the reasonable doubt standard, have upheld instructions using the word. In the courts of other states in which a defendant has argued that the word "should" in the reasonable doubt instruction does not sufficiently inform the jury that it is bound to find the defendant not guilty if insufficient proof is submitted at trial, the courts have squarely rejected the argument. They reasoned that the word "conveys a sense of duty and obligation and **could not be misunderstood** by a jury." See State v. McCloud, 257 Kan. 1, 891 P.2d 324, 335 (Kan. 1995); see also Tyson v. State, 217 Ga. App. 428, 457 S.E.2d 690, 691-92 (Ga. Ct. App. 1995) (finding argument that "should" is directional but not instructional to be without merit); Commonwealth v. Hammond, 350 Pa. Super. 477, 504 A.2d 940, 941-42 (Pa. Super. Ct. 1986). Notably, courts interpreting the word "should" in other types of jury instructions [**16] have also found that the word conveys to the jury a sense of duty or obligation and **not discretion**. In Little v. State, 261 Ark. 859, 554 S.W.2d 312, 324 (Ark. 1977), the Arkansas Supreme Court interpreted the word "should" in an instruction on circumstantial evidence as **synonymous with the word "must"** and rejected the defendant's argument that the jury may have been misled by the court's use of the word in the instruction. Similarly, the Missouri Supreme Court rejected a defendant's argument that the court erred by not using the word "should" in an instruction on witness credibility which used the word "must" because the two words have the **same meaning**. State v. Rack, 318 S.W.2d 211, 215 (Mo. 1958). [*318] In applying a child support statute, the Arizona Court of Appeals concluded that a legislature's or commission's use of the word "should" is meant to convey **duty** or **obligation**. McNutt v. McNutt, 203 Ariz. 28, 49 P.3d 300, 306 (Ariz. Ct. App. 2002) (finding a statute stating that child support expenditures "should" be allocated for the purpose of parents' federal tax exemption to be mandatory).

Severance – the counterplan's recommendations and *method of implementation* are uncertain and occur later

'Resolved' denotes legislation

Words and Phrases 64 Permanent Edition
Definition of the word "resolve," given by Webster is "to express an opinion or determination by resolution or vote; as 'it was resolved by the legislature;" It is of similar force to the word "enact," which is defined by Bouvier as meaning "to establish by law".

Severance – the recommendations are not implemented through legislative means, but rather internal reforms, etc.

Severance is a voter – allows the aff to spike out of all links and makes it a moving target – wrecks neg ground

2nc – at: perm lie

U.S. binding commitment is key – genuine or not, the perm will be perceived as a form of American exceptionalism

Morrison 6 – Director of Communications for the United Nations Development Program (Dave, The U.S. Relationship with the United Nations, Yale Journal of International Affairs, spring 2006, http://www.yale.edu/yjia/articles/Vol_1_Iss_2_Spring2006/unroundtable223.pdf)//JJ

So at its core, the UN is deeply tied to this country and to American values. But there is another strand in American foreign policy, which is **American "exceptionalism**." The most well-known example of this is the United States' position on the International Criminal Court, where the United States is really way out on its own. I think we have to accept that there are issues where the U.S. simply sees itself as **different from the rest** of the world and that in such cases the U.S. position is likely to **diverge** from that of the wider UN.

***net-benefit

2nc – at: case solves

Only UN legitimacy can solve

Sachs and Jeremic 14 – UN Secretary-General's Special Advisor on the Millennium Development Goals, is the director of The Earth Institute, Quetelet professor of sustainable development, and professor of health policy and management at Columbia University AND ** president of the Center for International Relations and Sustainable Development (CIRSD), former Serbia's foreign minister, former president of the 67th Session of the United Nations General Assembly (Jeffrey and Vuk, Global Cooperation in the Age of Sustainable Development, Huffington post, 3/7/14, http://www.huffingtonpost.com/vuk-jeremic/global-cooperation_b_4890371.html)//JJ

Achieving sustainable development will be the overriding strategic challenge of this generation. Throughout most of history, the tasks of integrating economic development, social inclusion, and environmental sustainability were local or regional. In the 21st century, however, they are indisputably global. Only through global cooperation can individual nations overcome the interconnected global-scale crises of extreme poverty, economic instability, social inequality, and environmental degradation. The crises of sustainable development have already become crises of national and global security. Every country faces increasingly complex challenges of energy, food, and water security. Every country faces the crisis of rising frequency and intensity of natural disasters, with a soaring number of floods, droughts, heat waves, extreme storms, and forest fires. Many countries face the unsolved problem of creating jobs for their young people, and many poor countries have populations growing too fast to meet their respective education and employment needs. Many of the today's conflicts -- in the Sahel, the Horn of Africa, Syria, and Western Asia -- are being stoked by droughts, famines, mass migration, and other manifestations of economic, social, and environmental unsustainability. This is no time for despair, but for resolve. The United Nations must become the functional center of the global sustainable development effort, one that draws on every stakeholder through the UN's unique convening power and universally-recognized legitimacy. Sustainable development must become the daily work of UN Member States, private businesses, non-governmental organizations, universities and research centers, international financial institutions, and the UN organs themselves.

2nc – at: U.S. commitment now

It's on the brink – any support is mere rhetoric
McDonald and Patrick 10 – former international affairs fellow in residence at the Council on Foreign Relations and a Foreign Service officer with the U.S. Department of State, fromer director for United Nations and international operations at the National Security Council, AND **Senior Fellow and Director of the International Institutions and Global Governance Program at the Council on Foreign Relations (Kara and Stewart, UN Security Council Enlargement and U.S. Interests, Council on Foreign Relations, December 2010, p. 13-14)//JJ

CURRENT U.S. POLICY **Despite its rhetorical commitment** to updating international institutions, the Obama administration, like administrations before it, has **shied from leadership** on UNSC reform. Rather than advance a particular proposal, U.S. officials have offered broad statements in support of a limited expansion of both permanent and nonpermanent members within five parameters. These statements include: — enlargement cannot diminish the UNSC's effectiveness or efficiency; — any proposal to expand permanent membership must name specific countries (ruling out so-called framework proposals); 21 — candidates for permanent membership must be judged on their ability to contribute to the maintenance of international peace and security; there should be no changes to the current veto structure; and — expansion proposals must accommodate charter requirements for ratification, including approval by two-thirds of the U S. Senate. The Obama administration's stance presents **only two modest changes** to that of its predecessor. First, it no longer conditions movement on UNSC expansion to progress on broader UN management and budgetary reform. Second, whereas the Bush administration supported only Japan's candidacy, the Obama administration has announced sup- port for India as an additional permanent member, leaving other potetial configurations open for discussion. Beyond these parameters, the Obama administration has not pro- posed any specific reforms, clarified the acceptable limits of any expansion, or endorsed any candidates.24 President Obama has not launched an interagency review ofthe matter, and aspirant countries have not yet pressed him vigorously on it. Whether the time has come to alter the UNSC's composition—and, if so, how it should be altered—remain subjects of fierce debate.

2nc – xt: HR cred

The counterplan is the last chance to maintain U.S. global human rights commitment

Sanchez-Moreno 5/11/15 – co-director of the U.S program at Human Rights Watch, J.D. from NYU Law School (Maria McFarland, Hold the US accountable on human rights, Aljazeera America, http://america.aljazeera.com/opinions/2015/5/holding-the-us-accountable-on-human-rights.html)//JJ

The U.S. has put a lot of effort into **strengthening** the U.N. Human Rights Council and making the UPR a useful process when it comes to dealing with other countries. It has also made a point of **setting a good example**, by engaging in extensive consultation with nongovernmental organizations and other stakeholders in the run-up to its review. But the U.S. will **risk undermining** these efforts if it **fails to fulfill its own** human rights commitments.

UPR solves human rights implementation – global reach

OHCHR 15 – United Nations Office of the High Commissioner for Human Rights, citing Ban Ki-moon, the UN Secretary-General (Universal Periodic Review, 2015, http://www.ohchr.org/EN/HRBodies/UPR/Pages/UPRMain.aspx)//JJ

The Universal Periodic Review "has **great potential** to promote and protect human rights in the **darkest corners** of the world." – Ban Ki-moon, UN Secretary-General

The Universal Periodic Review (UPR) is a unique process which involves a review of the human rights records of all UN Member States. The UPR is a State-driven process, under the auspices of the Human Rights Council, which provides the opportunity for each State to declare what actions they have taken to improve the human rights situations in their countries and to **fulfil their human rights obligations**. As one of the main features of the Council, the UPR is designed to ensure equal treatment for every country when their human rights situations are assessed.

The UPR was created through the UN General Assembly on 15 March 2006 by resolution 60/251, which established the Human Rights Council itself. It is a cooperative process which, by October 2011, has reviewed the human rights records of all 193 UN Member States. Currently, no other universal mechanism of this kind exists. The UPR is one of the key elements of the Council which reminds States of their responsibility to fully respect and **implement all human rights** and fundamental freedoms. The ultimate aim of this mechanism is to improve the human rights situation **in all countries** and address human rights violations wherever they occur.

2nc – terrorism

U.S. HR leadership solves the root cause of terrorism

Duffy 6/26/15 – Senior Media Relations Associate for Human Rights First, former intern for or Senators Schumer, Gillibrand, and Clinton (Corrine, U.S. Government Should Promote Global Counterterrorism Strategy Rooted in Human Rights, Human Rights First, http://www.humanrightsfirst.org/press-release/us-government-should-promote-global-counterterrorism-strategy-rooted-human-rights)//JJ

Today, in response to terrorist attacks in Kuwait and Tunisia, Human Rights First urged the U.S. government to redouble its efforts to combat terrorism and counter violent extremism by tackling the **underlying drivers** of violent extremism. "It is clear that there is a need for a concerted, sustained international effort to combat and prevent terrorist violence such as the horrific attacks in Sousse and Kuwait today," said Human Rights First's Neil Hicks. "Violent extremists and repressive authoritarian governments are **mutually reinforcing**. To break this destructive cycle, governments that wish to be effective partners in the struggle against violent extremism must **extend human rights protections** to all members of their communities, make independent civil society a partner, **protect religious freedom** and **denounce sectarian incitement**." In February, President Obama outlined a preventive strategy at the White House Summit on Countering Violent Extremism, and this week a regional conference in Kenya focuses on similar issues. As Under Secretary of State Sarah Sewall reiterated in her opening remarks in Kenya yesterday, the international community must commit itself to a renewed focus on protecting the rights of religious and ethnic minorities, an end to the incitement of sectarian violence, which leads to atrocities such as the **suicide bombing** of a Shi'ite mosque in Kuwait today, and for empowering independent civil society organizations as **core partners** in the struggle against violent extremism. "Tunisia represents a hopeful alternative to endless conflict between repressive authoritarianism and violent extremism. The United States has a vital interest in ensuring the success of Tunisia's fragile transition towards democracy," noted Hicks. "Tunisia has become a target for terrorist violence in recent months because of the progress it has made in transitioning away from decades of authoritarian rule towards democratic government grounded in the rule of law. With its international partners, the United States should make clear that it will not let terrorism win a victory in Tunisia, and that it will stand behind the Tunisian economy and help the Tunisian security forces to secure further progress towards a peaceful democratic future for Tunisia." The Islamic State of Iraq and the Levant (**ISIL**) has claimed responsibility for the suicide bombing of a Shi'ite mosque in Kuwait, further spreading its sectarian violence in the Gulf region. The global struggle against ISIL requires cooperation from key Arab partners, especially among the Gulf Cooperation Council (GCC) states. Since the Arab Spring protests of 2011 Saudi Arabia and the GCC states have been leading a region-wide pushback against popular demands for more representative, more responsive government. This has included a Saudi-led, GCC supported, military incursion into Bahrain to put down a peaceful protest movement and ample financial and political support for President Abdel Fattah al-Sisi's authoritarian rule in Egypt. The repressive policies of such governments **undermine global efforts** to counter violent extremism and combat terrorism.

Specifically nuclear terror

Weiss and Burroughs 4 – President of the New York-based Lawyers' Committee on Nuclear Policy and Vice President of the Paris-based International Federation of Human Rights Leagues, AND ** Executive Director of the Lawyers' Committee on Nuclear Policy and Adjunct Professor of International Law at Rutgers Law School (Peter and John, Weapons of mass destruction and human rights, HUMAN RIGHTS, HUMAN SECURITY AND DISARMAMENT, 2004, p. 33)//JJ

There can be no doubt that a world rife with weapons of mass destruction is less safe a place than a world without them, a point only reinforced by the rise of catastrophic terrorism. The elimination of WMD is a matter of political will. It can be achieved through full implementation of the Chemical Weapons Convention and the Biological Weapons Convention and the negotiation of measures to eliminate nuclear arms within the overarching framework of a convention. The nuclear weapons states are pledged to negotiate in good faith toward this end, but so far have refused to honour their pledge. When they do, they will also be acting to uphold the human rights to life and peace. The elimination of terrorism may be a more

difficult goal to reach. When leaders speak of waging the war against terrorism to its final victory, one can only wince and wonder what they have in mind. What war? Where fought? Against whom? With what weapons? The last question is probably the crucial one. Yes, competent intelligence and brute force can reduce the danger of terrorist attacks. But if there is one lesson that history teaches it is that social, economic, ethnic and religious differences can translate into feelings of powerlessness and give rise to violence—which the powerless call the search for justice and those at whom the violence is directed call terrorism. **This is where human rights come in**. There may never be a world without terrorism. But it is reasonable to expect that the closer the world comes to realizing the full panoply of human rights enshrined in the Universal Declaration and the International Covenants, the closer it will be to freedom from terrorism, **not least WMD terrorism**. It is a goal worth striving for.

2nc – middle east instability

U.S. human rights leadership solves Middle East instability –
Duffy 6/25/15 – Senior Media Relations Associate for Human Rights First, former intern for or Senators Schumer, Gillibrand, and Clinton (Corrine, State Department Country Reports Highlight **Need for U.S. Leadership on Human Rights**, Human Rights First, http://www.humanrightsfirst.org/press-release/state-department-country-reports-highlight-need-us-leadership-human-rights)//JJ

Human Rights First today welcomed the release of the State Department's 2015 Country Reports on Human Rights Practices, noting that the widespread violations of human rights detailed underscore the urgent need for the United States to press foreign governments to protect the basic rights and freedoms of their citizens. The Country Reports, which have been delayed for months, are released and submitted to Congress annually, and highlight human rights violations perpetuated during the past year in all countries that receive U.S. assistance as well as all United Nations member states. "This year's State Department Country Reports highlight key human rights concerns throughout the world, including abuses perpetrated by U.S. allies **in the Middle East** and elsewhere, the spread of discriminatory anti-LGBT legislation in central Asia, and the growth of antisemitic and racist violence in Europe," said Human Rights First's Tad Stahnke. "The reports give prominence to the terrible human rights violations committed by non-state actors, including terrorist groups like ISIL and Boko Haram, but they also emphasize the responsibilities of governments whose violations of human rights have **created the conditions exploited by violent extremists.** These reports should prompt further action by the U.S. government in pressing for human rights, including a strategy to ensure that the **fight against terrorism** and **extremism** is **enhanced by freedom and human rights protections**." In response to today's reports Human Rights First urges the Obama Administration to: Make clear at the highest levels its opposition to human rights violations by U.S. partners in the multilateral initiative to combat violent extremism and terrorism, including Bahrain, Saudi Arabia, and Egypt, which undermine this vital global effort. Press Saudi Arabia to end practices that fuel violent extremism, including the targeting non-violent human rights activists and inciting sectarian **tensions between Sunni and Shi'ite Muslims.** Urge Bahraini authorities to release non-violent political prisoners and human rights defenders, and to implement political reforms that would meet the legitimate demands of the majority of the population for more representative governance. Raise concerns about the misuse of counterterrorism laws to crackdown on peaceful dissent. Press the government of Kyrgyzstan to reject the passage of the proposed propaganda law, which, if passed, would violate the human rights of lesbian, gay, bisexual, and transgender (LGBT) persons and contribute to a climate of violence and discrimination against them. Adopt a strategy to reverse Hungary's backsliding on democracy and rule of law by supporting human rights, good governance and independent media organizations. As he did during his recent trip to Jamaica, President Obama should continue to champion those voices calling for positive change for LGBT people in the Caribbean. In line with his public comments at the Countering Violent Extremism Summit in February, President Obama should publicly oppose the targeting of legitimate human rights NGOs by the Kenyan government during his visit to Nairobi next month. "The Country Reports make clear that several U.S. allies are using counterterrorism and national security justifications to crack down on civil society groups, peaceful expression, and legitimate dissent," added Stahnke. "As President Obama prepares for his trip to Kenya, he should use these Country Reports to highlight that the **global struggle against terrorism** and violent extremism is **undermined** when **human rights are denied** and civil society oppressed."

2nc – at: last upr

Past UPR is our brink not their thumper – last chance to save U.S. human rights cred

Larson 5/10/15 – AFP journalist, citing Jamil Dakwar, head of human rights at the American Civil Liberties Union (Nina, The UN is about to put the United States under the microscope, Business Insider, http://www.businessinsider.com/afp-us-rights-record-in-un-spotlight-2015-5)//JJ

Hard questions

"The world will be asking hard questions of a country that considers itself a human rights champion," Jamil Dakwar, head of human rights at the American Civil Liberties Union (ACLU), told AFP.

How the US delegation responds to questions on a multitude of issues Monday could mark "the **last opportunity** for the Obama administration to **shape the human rights legacy** of the president," he warned.

Diplomats from around the world are expected to raise questions about widespread incarceration in the United States of illegal immigrants, including children.

Conditions inside US prisons, including the use of long-term solitary confinement and continued use of the death penalty, were also among the issues raised in reports and questions filed in advance of Monday's hearing.

The United States has seen its execution numbers drop in recent years to 35 in 2014, but still ranks fifth in the world after China, Iran, Saudi Arabia, and Iraq, according to Amnesty International.

The issue of mass surveillance systems brought to light in documents leaked by former NSA contractor Edward Snowden will also certainly be raised, as will US counterterrorism operations and targeted drone killings.

Also on the agenda is the US record on addressing its "war on terror" legacy, including alleged CIA torture, and Washington's failure to close the Guantanamo Bay detention centre in Cuba.

The United States underwent its first UPR in November 2010, but activists say it has done little to implement many of the 171 recommendations it accepted out of the 240 made by other countries that time around.

"The US has **little progress** to show for the many commitments it made during its first Universal Periodic Review," Antonio Ginatta, US advocacy director at Human Rights Watch, said in a statement.

He said he hoped diplomats this time would "press the US on mass surveillance, police violence and detention of migrant families," stressing that "the US should **take the opportunity** to make a **serious commitment to roll back** these abusive practices."

Dakwar agreed that after the last UPR, the US government "failed to deliver".

Now, he said, the administration had the **opportunity to show** what values it stands for.

"Will President Obama be remembered as the president who approved secret kill-lists, instituted indefinite detention, and failed to end unlawful surveillance practices?" he asked.

"Or will the president be on the right side of history by endorsing accountability for torture (and providing) an apology and reparations for victims?"

2nc – at: alt causes

Fiat solves – the recommendations would encompass more than surveillance policy

Past UPR is our brink not their thumper – last chance to save U.S. human rights cred

Larson 5/10/15 – AFP journalist, citing Jamil Dakwar, head of human rights at the American Civil Liberties Union (Nina, The UN is about to put the United States under the microscope, Business Insider, http://www.businessinsider.com/afp-us-rights-record-in-un-spotlight-2015-5)//JJ

Hard questions "The world will be asking hard questions of a country that considers itself a human rights champion," Jamil Dakwar, head of human rights at the American Civil Liberties Union (ACLU), told AFP. How the US delegation responds to questions on a multitude of issues Monday could mark "the **last opportunity** for the Obama administration to **shape the human rights legacy** of the president," he warned. Diplomats from around the world are expected to raise questions about widespread incarceration in the United States of illegal immigrants, including children. Conditions inside US prisons, including the use of long-term solitary confinement and continued use of the death penalty, were also among the issues raised in reports and questions filed in advance of Monday's hearing. HR thumpers are nill –

AFP 5/11/15 – international news agency headquartered in Paris, third largest news agency in the world (Agence France-Presse, US wants to improve police practices, enca, http://www.enca.com/world/us-wants-improve-police-practices)//JJ

GENEVA - The United States **acknowledged** Monday more needed to be done to **uphold its civil rights laws** following a string of recent killings of unarmed black men by police. Speaking before the United Nations Human Rights Council, a US representative stressed the advances his country had made in establishing a range of civil rights laws over the past half century. But referring to a long line of recent cases of alleged abuse of African Americans by police, James Cadogan, a senior counsellor in the justice department's civil rights division, admitted that "we must rededicate ourselves to ensuring that our civil rights laws live up to their promise." "The tragic deaths of Freddie Gray in Baltimore, Michael Brown in Missouri, Eric Garner in New York, Tamir Rice in Ohio, and Walter Scott in South Carolina have... challenged us to do better and to work harder for progress," he said. The United States was undergoing a so-called Universal Periodic Review of its rights record -- which all 193 UN countries must undergo every four years. The US delegation, headed by US ambassador to the council Keith Harper and acting US legal advisor Mary McLeod, faced a range of questions from diplomats about law enforcement tactics, police brutality and the disproportionate impact on African Americans and other minorities. The half-day review in Geneva came after the US justice department on Friday launched a federal civil rights investigation into whether police in Baltimore have systematically discriminated against residents, following the death of 25-year-old Freddie Gray in police custody last month. Six police officers have been charged in connection with Gray's arrest and death. One faces a second-degree murder charge. Cadogan insisted Washington was **intent** on bringing abusive police officers to justice. "When federal, state, local or tribal officials willfully use excessive force that violates the US Constitution or federal law, we have authority to prosecute them," he said, pointing to criminal charges brought against **more than 400** law

enforcement officials over the past six years. Also on the agenda during Monday's review was the continued use of the death penalty, and the US record on addressing its "war on terror" legacy, including Washington's failure to close the Guantanamo Bay detention centre in Cuba and CIA torture revelations. "As President (Barack) Obama has acknowledged, we crossed the line, we did not live up to our values, and **we take responsibility** for that," McLeod said of the past cases of CIA torture, detailed in an explosive Senate report last December. "We have since taken **steps to clarify** that the legal prohibition on torture applies everywhere and in all circumstances, and to ensure that the United States **never resorts** to the use of those harsh interrogation techniques again," she said.

2nc – at: treaties

Recent policy solves – this also proves recommendation implementation
Smith 15 – Project Attorney with the Human Rights in the U.S. Project at the Human Rights Institute, JD from Columbia Law School (Erin, Federal Outreach and Mechanisms to Ensure Human Rights Implementation and the Federal, State and Local Levels, Columbia Law School Human Rights Institute & The International Association of Official Human Rights Agencies, April 2015, https://web.law.columbia.edu/sites/default/files/microsites/human-rights-institute/images/state_and_local_upr_report.pdf)//JJ

In recent years, the Obama Administration has taken a **number of important steps** to improve federal coordination around **treaty reporting and implementation**: a. The United States has created a federal level interagency Equality Working Group to coordinate federal agencies around human rights. 28 b. The U.S. has stepped up efforts to inform state and local actors about **treaty review processes**. In 2014, the State Department's Office of the Legal Adviser sent letters to state and local governments, emphasizing the U.S. "commitment to protecting human rights domestically through the operation of our comprehensive system of laws, policies, and programs at all levels of government – federal, state, local, insular, and tribal," and noting that the U.S. is "proud of this shared role in upholding and protecting human rights." 29 The 2014 letter followed up on earlier communications to state and local actors **seeking input** into U.S. treaty reports. 30 c. In 2014, the U.S. included a mayor and a state attorney general in its delegations for the **ICCPR** and **CERD** reviews. d. During the interactive dialogue with the Human Rights Committee, the Obama Administration committed to disseminate the Human Rights Committee's Concluding Observations to state and local actors. e. The State Department made a presentation on **human rights treaties** at **IAOHRA conferences** in **2010**, **2011** and **2012** , and at the **2014 Equal Employment Opportunity Commission conference** for state and local agencies.

No impact to treaties
Groves and Schaefer 10 – Bernard and Barbara Lomas Senior Research Fellow, The Davis Institute for National Security and Foreign Policy at The Heritage Foundation, AND ** Jay Kingham Senior Research Fellow in International Regulatory Affairs, The Davis Institute for National Security and Foreign Policy at The Heritage Foundation (Steven and Brett, United Nations Human Rights Council: Universal Periodic Review for the United States of America, Heritage Foundation, 4/20/10, http://www.heritage.org/research/testimony/united-nations-human-rights-council-universal-periodic-review-for-the-united-states-of-america)//JJ

The United States is not party to all of the core human rights treaties, but ratification of treaties is **not the indispensable condition** of the observation and protection of human rights. Many governments boast that they have ratified a treaty, or that human rights are enshrined in their constitutions and laws, yet **routinely and flagrantly** violate those rights. The evidence indicates that without an independent judiciary and an ability to enforce civil and political rights, such rights are under constant threat **regardless** of the number of treaties a state has ratified or the rights provided for under their laws. The United States' system of representative government, its independent judiciary, its robust civil society, and the principles enshrined in its Constitution represent best practices that all states and stakeholders should emulate in observing and protecting human rights and fundamental freedoms.

Empirics prove – massive impact on the most nefarious abusers
Diop 14 – Advocacy Advisor of Child Rights at Save the Children, has a Master's of Science in Human Rights from the University College Dublin and a Master's in Politics and International Relations from the Institute of Political Studies, Toulous (Diarra, Universal Periodic Review: Successful examples of child rights advocacy, Save The Children, 2014, http://resourcecentre.savethechildren.se/library/universal-periodic-review-successful-examples-child-rights-advocacy)//JJ

The Universal Periodic Review (UPR) is an inter-governmental human rights review within the Human Rights Council in Geneva. The **UPR assesses** the extent to which governments are meeting their obligations to **protect**, **respect** and **fulfil human rights**, including child rights, in their countries. Save the Children has seized the opportunity of the UPR from the outset (2008) to raise the profile of children's rights, by engaging directly in reporting and advocacy or supporting child rights coalitions. "Universal Periodic Review: Successful examples of child rights advocacy" provides **valuable insights** for future child rights advocates wanting to engage in the UPR process and more generally in child rights monitoring and advocacy. This document includes eight case studes (Nepal, Philippines, Pakistan, Republic of Korea, Peru, Zambia, Bangladesh and Mali,) which give good practices examples of Save the Children's **engagement in UPR reporting and advocacy**. It sheds light on the different strategies used to push forward child rights priorities to influence UPR recommendations. It also provides some pointers on how the UPR recommendations can **reinforce existing advocacy efforts** and be integrated into follow-up plans to **track their implementation**. Key success factors and lessons learned were drawn to capitalize on the experience from these countries over the last 6 years, and **inspire others** to **replicate these approaches** in order to **maximize advocacy outcomes** and impact for children.

Even if it's not perfect – it's the best option available
OHCHR 15 – Office of the High Commissioner for Human Rights (Basic facts about the UPR, United Nations Human Rights, 2015, http://www.ohchr.org/EN/HRBodies/UPR/Pages/BasicFacts.aspx)//JJ

The Universal Periodic Review (**UPR**) is a **unique process** which involves a periodic review of the human rights records of **all** 193 UN Member States. The UPR is a **significant innovation** of the Human Rights Council which is based on equal treatment for all countries. It provides an opportunity for all States to declare what actions they have taken to improve the human rights situations in their countries and to overcome challenges to the enjoyment of human rights. The UPR also includes a sharing of **best human rights practices around the globe**. Currently, **no other mechanism** of this kind exists.

CDT 14 – global non-profit organization championing global online civil liberties and human rights, driving policy outcomes that keep the Internet open, innovative, and free (Center for Democracy and Technology, Protecting Human Rights in the Age of Surveillance, 4/8/14, https://cdt.org/insight/protecting-human-rights-in-the-age-of-surveillance/)//JJ

Leveraging United Nations Mechanisms

Participants agreed that it is important to **take advantage** of **UN human rights bodies and processes** in 2014 and beyond. Discussants raised the importance of the Human Rights Committee review of **United States compliance** with the ICCPR. They also talked about strategic contributions to the anticipated report from the High Commissioner for Human Rights on the right to privacy in the digital age, and the possibility of pushing the Human Rights Committee for a General Comment on privacy. In addition, discussants addressed the possibility of creating a UN Special Rapporteur on Privacy, and **considered processes in Human Rights Council**, including the upcoming **Universal Periodic Review** of the United States.

2nc – at: noko da

This isn't an argument – empirically denied by 2010 and 2015 U.S. UPRs and every other UPR ever

No war – deterrence and zero capabilities
Kimball 14 – executive director of the Arms Control Association (Daryl, Will North Korea ever use its nuclear weapons?, The Guardian, 10/31/14, http://www.theguardian.com/world/2014/oct/31/sp-north-korea-nuclear-weapons)//JJ

As president Ronald Reagan once said, "a nuclear war can never be won and must never be fought". North Korea does not have, and **will not have for many years**, the **means to strike** with nuclear weapons beyond the peninsula – that would be **suicide**. Combined US and South Korean forces would **end the Kim dynasty** and **destroy much of the country**. Therefore, there is a near **zero chance** of a premeditated North Korean nuclear attack.

All rhetoric – assumes all the warrants
Redhead 14 – Metro News Reporter (Harry lol, North Korea defends human rights record – then threatens 'nuclear war', Metro, 11/26/14, http://metro.co.uk/2014/11/26/north-korea-defends-human-rights-record-then-threatens-nuclear-war-4963760/)//JJ

A week after a U.N. resolution condemned **North Korea's human rights record**, the country has shown its commitment to preserving basic individual dignities by threatening the U.S. and Japan with nuclear war. North Korea reacted angrily after the U.N. General Assembly's Third Committee urged the Security Council to consider referring the country's human rights abuses to the International Criminal Court in a damning resolution last Tuesday. And the Democratic People's Republic of Korea's National Defence Commission (NDC) accused Japan and the U.S. of 'violating their dignity' and promised payback. 'Time will prove what high price those who unreasonably violated the dignity of the Demoratic People's Republic of Korea, despite its repeated warnings, will have to pay,' the NDC said. 'The US and its followers are now unable to escape merciless punishment for daring impair the prestige of the DPRK and foolishly trying to bring down the socialist system.' One of those perceived followers, **Japan** – who North Korea said would 'disappear from the world map' – were **completely unconcerned** the comments. 'It's **not the first time** that they've threatened us over nuclear issues,' Taro Tsutsumi, counsellor at Japan's mission to the United Nations, told VICE. 'It's actually a **usual**, **daily matter**.' In September, North Korea released a report declaring its human rights record as excellent.

White Terrorism CP

1NC — White Terrorism PIC

[Insert Text — see notes]

The counterplan solves the case because Islamophobic surveillance is targeted at religion, ethnicity, and national origin—*not* race. This is net-beneficial because it avoids our White Terrorism Critique. Surveillance based on race is *good*. It should be directed at white people who perpetrate *white terrorism*.

1NC — White Terrorism Critique

First, white terrorism against Black Americans is ubiquitous. White supremacy is maintained through a campaign of terror. Future attacks are inevitable.

Higgins 15 – Eoin Higgins, Reporter for the *Berkshire Courier*, Contributor to *The Huffington Post* and *Counterpunch*, holds an M.A. in History from Fordham University, 2015 ("White Terrorism in Charleston," *Counterpunch*, June 19th, Available Online at http://www.counterpunch.org/2015/06/19/white-terrorism-in-charleston/, Accessed 07-16-2015)

A white man guns down nine black people in a church in South Carolina. The state's Confederate battle flag stays waving in the wind the next day. The white man is arrested. He is given a Kevlar jacket.

Welcome to the United States of America in 2015.

The atrocity in Charleston on June 17, 2015, exemplifies the value of black life in America today. Dylann Roof's crime was **an abomination**. He slaughtered nine people in cold blood. But in the broader context of the American reality of black people and black lives, Roof's attack is **just another instance of white terrorism**.

Even in light of the violence black Americans experience daily, the attack in South Carolina was shocking. Gunning down nine innocent people in a church is beyond the pale. It's important to remember, though, that although this crime is notable for the callousness and coldness of the perpetrator – leaving people alive for the express purpose of sharing the story is some wannabe supervillain shit – the taking of black life by a white man in America is **not an aberration**.

The Black Lives Matter movement is **a direct response** to the carelessness with which white America treats the mortality of citizens of African descent. The name of the movement is a reaction to the reality. Black Americans are treated as if their lives were **disposable**. It is necessary to have a movement calling for the recognition that the America's black population's lives matter because at every turn we are shown they don't.

Blacks are criminalized in the news media, treated as less desirable than whites in the popular culture, and presented overwhelmingly as threatening criminal elements in film and television. Americans of all colors are inculcated to see blacks as threatening, alien, dangerous.

This is **terrorism**.

Black Americans are **killed** for eating skittles. Playing with toy guns as children. Listening to loud music. Selling cigarettes on the street. Running away from police officers. Hanging out at a pool party. Attending prayer meetings. There doesn't seem to be a way for black Americans to just **be** that doesn't involve **the threat of death or violence** at the hands of whites.

This is **terrorism**.

White Americans can drive without fear of being pulled over for the color of their skin and walk down the street without fear of being stopped and frisked. Black Americans **cannot**. White Americans can walk up to a police officer looking for help or directions. Black Americans face **the chance of death** if they do the same.

This is **terrorism**.

Terrorism is political and social violence and coercion that has the effect of changing the standard operating procedure of the societies it affects and striking fear into the communities it assaults. Blacks in America have no static standard operating procedure. Their behavior has to change constantly to reflect the threats and intimidation. For the black community in America, even the church is a place where one cannot feel safe. Not in 1963, not in the 90s, not in 2015.

The reason for white terrorism has one simple underlying explanation. There is a sociopathic part of the national white American subconscious that refuses to allow the black community to ever rise to an equal footing, and will use **whatever means necessary to maintain white supremacy**. In the wake of the conclusion of the Civil War, the KKK was formed in reaction to the freeing of the slaves. The terrorizing of blacks that began after the end of slavery has **continued to today**.

Whether we acknowledge it or not, the position of the white American must be **maintained through terror**. Thus the spectacle of Dylann Roof, sociopathic mass murderer of innocent black Americans, steered gently to a waiting police car, wearing a Kevlar vest. His crime has shocked the country, but only because of its flamboyancy. After the news cycle has run through, the nation will again ignore the Black Lives Matter movement, the issue of race relations in America, and white terrorism. Until, of course, it **inevitably happens again**.

Second, the affirmative wrongly presumes that surveillance authorities can *only* be used to target minority groups. On the contrary, surveillance is needed to target *white Americans* on the basis of their race and color.

Barry 15 – Dante Barry, grassroots organizer, digital campaigner, and Executive Director of Million Hoodies Movement for Justice—a national racial justice network of 50,000 members founded to protect and empower young people of color from mass criminalization and gun violence, 2015 ("Surviving White Terrorism: Next Steps in the Struggle for Black Lives," *Truthout*, June 21st, Available Online at http://www.truth-out.org/opinion/item/31480-surviving-white-terrorism-next-steps-in-the-struggle-for-black-lives, Accessed 07-16-2015)

This past week, we have been reminded yet again that state violence against Black people and racist vigilante attacks are a part of this country's legacy and foundation. Whether it's the murder of four school girls in a Birmingham church, cops attacking young Black children in McKinney, Texas, or the suicide of Kalief Browder after years of being jailed and tortured as a young person at Rikers Island - Black communities continue to suffer through **anti-Black violence**, **domestic terrorism** and **anti-Black racism**.

On Thursday, I woke up just as I normally do and caught a subway train uptown. As I sat, I watched a group of little Black girls and boys do what I also did when I was little: gossip, play around, laugh and smile. As they laughed and smiled with joy, I couldn't help thinking about how I just wanted to say sorry. I wanted to say sorry to all the young Black children who have to wake up each and every day and suffer through ongoing trauma and anti-Black violence in their communities, in their country and in their world.

I wanted to tell them sorry - for America failing all the Black little girls and boys who enter classrooms, put their hands on their chests and pledge allegiance. I wanted to tell them sorry because we have failed to protect them. Even in some of the "safest" spaces, our Black children are told that they cannot breathe, pray, eat skittles, wear a hoodie, play loud music or even exist as a Black child. I'm sorry that Black families must frame their conversations with their children around survival.

Black people have always had a complicated and violent relationship with citizenship in this country. There has been **a monopoly on who has the right to feel and be safe** - a monopoly that is often regulated and enforced by cops and corporations. This week's attack at Charleston's Emanuel A.M.E. Church was an undeniable act of terrorism to incite fear into Black communities where we have bravely declared that Black lives matter.

Over the past year, in response to a series of high-profile police killings, communities across the country have erupted in massive protests, sustained acts of civil disobedience, and militant and unapologetically Black direct actions. Born in Ferguson, this movement spread like wildfire to New York City and South Carolina, to Baltimore and Oakland.

Many conversations about policing, state power and anti-Black racism focus exclusively on **tweaks** to existing policing and incarceration practices. (For example, some cities have funded taskforces and police body cameras.) Meanwhile, **the state spies on Black communities rather than using its surveillance mechanisms to prevent racist vigilante attacks**.

Cops and corporations have teamed up to further **criminalize Black folks.** Predictive policing and "broken windows" tactics rely on the criminalization of Black bodies and the idea that more police in more places - armed with guns and body cameras, Stingray cell phone interceptors and license-plate readers - will make Black communities safer. These "community policing" strategies are ineffective, discriminatory and reliant on the criminalization of young, poor Black people. The traditional media narrative becomes one about a law enforcement or vigilante "hero" and a "criminal" Black person. Mass media images perpetuate this sense of criminalization through television shows like "Cops" and "Law and Order."

Third, collecting tangible evidence of racism via widespread surveillance is crucial to confront white terrorism.

Brown 15 – Tony Brown, Associate Professor of Sociology at Vanderbilt University, Associate Director of the Center for Research on Health Disparities and Health Policy Associate in the Center for Health Policy at Meharry Medical College, holds a Ph.D. in Sociology from the University of Michigan, 2015 ("Racism, white privilege still exist, and riots prove it," *The Tennessean*, April 30th, Available Online at http://www.tennessean.com/story/opinion/contributors/2015/04/28/capturing-racism-high-definition/26515991/, Accessed 07-16-2015)

Evidence proving that race and racism are meaningful is **increasingly easy to find**. We see it right here and right now. There is no need to recall Whites Only signage or sheet-clad KKK members. The facts show white people acting routinely to **harm, demean,** and **damage** black and brown people. The facts explain the lofty levels of frustration and despair among black and brown youth.

Evidence consists of protests and riots, such as what happened last night in Baltimore in response to the mysterious death of Freddie Gray while he was in police custody. Something is awry—people of color don't protest and riot out of boredom. Martin Luther King, Jr. said that "a riot is the language of the unheard."

Evidence consists of Oklahoma University fraternity and sorority members singing joyfully about the exclusion and lynching of black bodies. Supposedly, the song was taught to them and may connect back to the Confederate-identified white men who founded the fraternity.

Evidence consists of text and email messages exchanged between corporate executives, among police officers sworn to serve and protect the public, and by public servants and elected officials.

Evidence consists of graphic videos showing the willful killings (assassinations?) of unarmed black men in non-felonious interactions with police officers.

Litigation and Intent

Considering the white Oklahoma University fraternity and sorority members, the accused have retained an attorney. They are upset about being labeled racists. I imagine the defense's arguments will mirror comments made by the youth's parents (to paraphrase): Johnny is a good boy. There is no hate in his heart. He made a horrible (but not that horrible) mistake. He is young and didn't know any better.

To those specific parents and others like them, consider the following a public service announcement:

Your child's behavior is racist and it's your fault (mostly).

You never intentionally read children's books with main characters of color, but you raised Sarah to appreciate diversity.

You lived in a residentially segregated neighborhood, and thought that fact sent no implicit messages to Evan.

You chose to worship in a church or synagogue where Katey was surrounded by white people, and she understood that way of life to be normal.

You choose the best schools for Chase, but never considered the fact that those schools were racially homogenous.

You talked to Isabelle about poverty but implied that all poor people are black and it's their own fault.

You let grandma say n***** at Thanksgiving in front of Elizabeth because grandma is old and doesn't know any better.

You told a racially insensitive joke in front of Liam, condoning symbolic violence.

The take-home message here applies to every person exposed to the disturbing videos, and text and emails showing the significance of race and racism. The issue is not about any white person's heart or motivations or intent. Those things are hidden from sight. It's about their actions—which let me remind you—speak louder than their words.

The bottom line is that it's **everyday whites** making **everyday choices** that **lock in and protect white privilege** [https://www.isr.umich.edu/home/diversity/resources/white-privilege.pdf].

The New Paparazzi

This piece should be read as a call to action. Black and brown (and empathetic or doubting) whites—grab your cell phones. Turn on the video camera. Or grab your GoPro.

For people of color, record the discourteous way co-workers or service industry workers or police officers treat you. Record your friends talking about the indignities and micro-aggressions you as a person of color, for example, face in all- or mostly-white spaces. If you happen to identify as white, then record Uncle Roy talking at a private family gathering about the good old days when blacks knew their place (what sociologists call backstage racism). Record how pleasant your interactions are with police officers doing routine traffic stops. Record whether and how the conversation changes when people of color enter the room.

Then let's all post our videos. We can add our videos to the growing archive.

Posting our videos, among other things, will **confirm** that race and racism still matter. It will demonstrate that white privilege is **real** (and real in its consequences). It will provide evidence that black and brown people **do not experience the everyday world** in ways similar to whites.

Revelation

Despite stories that people of color tell repeatedly about institutional inequality, recent evidence of police brutality shocked many people. Those shocked individuals had minimized the contemporary significance of race and racism in U.S. society.

Just imagine if the only evidence of race and racism's impact was the stories that people of color tell—few whites would be moved to action. But we can now capture racist behavior and its impact on society **in high definition**. As such, it's been a revelation to many whites. And that is a good thing because **there can be no revolution without revelation**.

We must **document the significance of race and racism** before we can address it. Make it **routine** to **collect evidence** that allows us to address it. Otherwise, we are bound to **run in circles** debating whether a problem exists, while **things get worse**.

Fourth, reprioritizing surveillance targets is key to prevent white terrorism. There is one person currently assigned to white terrorism.

Nevins 15 – Sean Nevins, Staff Writer for *Mint Press*, holds a Master's in Asian Studies from Lund University in Sweden, 2015 ("White Supremacy And Homegrown Terrorism Pose A Growing Threat In The US," *Mint Press News*, January 16th, Available Online at http://www.mintpressnews.com/white-supremacy-homegrown-terrorism-pose-growing-threat-us/201258/, Accessed 07-16-2015)

The government's non-response

In response to the rising number of hate groups in the country, the U.S. Department of Homeland Security (DHS) commissioned an intelligence assessment of the situation in 2009. It was dispersed to federal, local, and tribal counterterrorism and law enforcement agencies across the country. That assessment did not find "specific information" about right-wing groups planning acts of violence, but it noted that right-wing extremists "may be gaining new recruits by playing on their fears about

several emergent issues. The economic downturn and the election of the first African American president present unique drivers for rightwing radicalization and recruitment."

The government defined right-wing extremism as "groups, movements, and adherents that are primarily hate-oriented (based on hatred of particular religious, racial or ethnic groups), and those that are mainly antigovernment, rejecting federal authority in favor of state or local authority, or rejecting government authority entirely. It may include groups and individuals that are dedicated to a single issue, such as opposition to abortion or immigration."

The assessment also determined that the rise of extremism may be the result of the economic and political atmosphere, which included the recession, outsourcing of jobs and a "perceived threat" to U.S. power. It said that "possible passage" of firearms restrictions and challenges faced by returning military veterans integrating back into society "could lead to the potential emergence of terrorist groups or lone wolf extremists capable of carrying out violent attacks."

"We're currently in one of **the hottest periods** of extremist activity in the United States that I've seen in my 20-year career. This blows what we saw pre-Oklahoma City out of the water and makes it look like **a kindergarten picnic**," Daryl Johnson, a domestic terrorism expert and founder of DT Analytics, a private consulting firm for law enforcement and Homeland Security professionals, says during an interview for the recent Vice News documentary. Johnson was also the main author of the intelligence assessment issued by DHS in 2009.

Yet, rather than **acting on** the information gathered in the assessment, the government **cancelled all of its domestic terrorism reporting** and law enforcement training after the report was leaked and politicized by conservative media outlets and politicians.

One such publication described "the piece of crap report" as "a sweeping indictment of conservatives." It continues, "In Obama land, there are no coincidences. It is no coincidence that this report echoes Tea Party-bashing left-wing blogs … and demonizes the very Americans who will be protesting in the thousands on Wednesday for the nationwide Tax Day Tea Party."

Conservative news organizations interpreted the publication of the report as a political power play by Obama to demonize the right, rather than an impartial analysis of domestic terrorism that could help law enforcement.

In 2011, two years after the report was released, Johnson said he was deeply disheartened by how the report was characterized. Johnson told Joe Hamilton at the Muskegon Chronicle that he was "a former intelligence analyst and counterterrorism expert for the U.S. Army, an Eagle Scout, Mormon, one-time church missionary, an anti-abortion gun owner, and third-generation lifetime registered Republican." In short, he said he is a conservative. Johnson added that the report could not have been a political move on the part of Obama, since he was hired in 2004 by the George W. Bush administration.

Following Hamilton's opinion piece, Johnson penned his own article for Salon, "Daryl Johnson: I tried to warn them." In it, he makes a damning indictment of the DHS decision not to follow through on recommendations made in his report.

He wrote:

> "Since the DHS warning concerning the resurgence of right-wing extremism, 27 law enforcement officers have been shot (16 killed) by right-wing extremists. Over a dozen mosques have been burned with firebombs – likely attributed to individuals embracing Islamaphobic (sic) beliefs. In May 2009, an abortion doctor was murdered while attending church, two other assassination plots against abortion providers were thwarted during 2011 and a half-dozen women's health clinics were attacked with explosive and incendiary devices over the past two years.
>
> In January 2010, a tax resister deliberately crashed his small plane filled with a 50-gallon drum of gasoline into an IRS processing center in Austin, Texas; in January 2011, three incendiary bombs were mailed to government officials in Annapolis, Md., and Washington, D.C.; also, in January 2011, a backpack bomb was placed along a Martin Luther King Day parade route in Spokane, Wash.; and, during 2010-2012, there have been multiple plots to kill ethnic minorities, police and other government officials by **militia extremists** and **white supremacists**.
>
> The Sikh temple shooting in Oak Creek, Wis., and the shooting of four sheriff's deputies in St. Johns Parish, La., in August are only the latest manifestations of right-

wing extremist violence in the U.S. Yet, there have been no hearings on Capitol Hill about this issue. DHS still has **only one analyst** monitoring domestic terrorism. The federal government's failure to recognize the domestic terrorism threat tells me **there will assuredly be more attacks to come**."

Finally, the alternative is to demand surveillance of white people—*because they are white*. This rejects the erasure of whiteness and confronts the reality of white terrorism in America.

Bennett 15 – Brit Bennett, Writer whose work has appeared in *The New York Times Magazine*, *The New York Times*, *Paris Review*, and *Jezebel*, 2015 ("White Terrorism Is as Old as America," *The New York Times Magazine*, June 19th, Available Online at http://www.nytimes.com/2015/06/19/magazine/white-terrorism-is-as-old-as-america.html, Accessed 07-16-2015)

My grandmother used to speak of Klansmen riding through Louisiana at night, how she could see their white robes shimmering in the dark, how black people hid in bayous to escape them. Before her time, during Reconstruction, Ku Klux Klan members believed they could scare superstitious black people out of their newly won freedom. They wore terrifying costumes but were not exactly hiding — many former slaves recognized bosses and neighbors under their white sheets. They were haunting in masks, a seen yet unseen terror. In addition to killing and beating black people, they often claimed to be the ghosts of dead Confederate soldiers.

You could argue, of course, that there are no ghosts of the Confederacy, because the Confederacy is not yet dead. The stars and bars live on, proudly emblazoned on T-shirts and license plates; the pre-eminent symbol of slavery, the flag itself, still flies on the grounds of South Carolina's Capitol. The killing has not stopped either, as shown by the deaths of nine black people in a church in Charleston this week. The suspected gunman, who is white and was charged with nine counts of murder on Friday, is said to have told their Bible-study group: "You rape our women, and you are taking over our country. And you have to go."

Media outlets have been reluctant to classify the Charleston shooting as terrorism, despite how eerily it echoes our country's history of terrorism. American-bred terrorism originated in order to restrict the movement and freedom of newly liberated black Americans who, for the first time, began to gain an element of political power. The Ku Klux Klan Act, which would in part, lawmakers hoped, suppress the Klan through the use of military force, was one of America's **first pieces of antiterrorism legislation**. When it became federal law in 1871, nine South Carolina counties were placed under martial law, and scores of people were arrested. The Charleston gunman's fears — of black men raping white women, of black people taking over the country — are the same fears that were felt by Klansmen, who used violence and intimidation to control communities of freed blacks.

Even with these parallels, we still hear endless speculation about the Charleston shooter's motives. Gov. Nikki Haley of South Carolina wrote in a Facebook post that "while we do not yet know all of the details, we do know that we'll never understand what motivates anyone to enter one of our places of worship and take the life of another." Despite reports of the killer declaring his racial hatred before shooting members of the prayer group, his motives are inscrutable. Even after photos surfaced of the suspected shooter wearing a jacket decorated with the flags of Rhodesia and apartheid-era South Africa and leaning against a car with Confederate-flag plates, tangible proof of his alignment with violent, segregationist ideology, his actions remained supposedly indecipherable. A Seattle Times tweet (now deleted) asked if the gunman was "concentrated evil or a sweet kid," The Wall Street Journal termed him a "loner" and Charleston's mayor called him a "scoundrel," yet the seemingly obvious designations — murderer, thug, terrorist, killer, racist — are nowhere to be found.

This is **the privilege of whiteness**: While a terrorist may be white, his violence is **never based in his whiteness**. A white terrorist has unique, complicated motives that we will never comprehend. He can be a disturbed loner or a monster. He is either mentally ill or pure evil. The white terrorist exists solely as a dyad of extremes: Either he is humanized to the point of sympathy or he is so monstrous that he almost becomes mythological.

Either way, he is never indicative of anything larger about whiteness, nor is he ever a garden-variety racist. He represents nothing but himself. A white terrorist is anything that frames him as an anomaly and separates him from the long, storied history of white terrorism.

I'm always struck by this hesitance not only to name white terrorism but to name **whiteness itself** during acts of racial violence. In a recent New York Times article on the history of lynching, the victims are repeatedly described as black. Not once, however, are the violent actors described as they are: white. Instead, the white lynch mobs are simply described as "a group of men" or "a mob." In an article about racial violence, this **erasure of whiteness** is absurd. The race of the victims is relevant, but somehow the race of the killers is incidental. If we're willing to admit that race is a reason blacks were lynched, why are we **unwilling to admit** that race is a reason whites lynched them? In his remarks following the Charleston shooting, President Obama mentioned whiteness only once – in a quotation from the Rev. Dr. Martin Luther King Jr. intended to encourage interracial harmony. Obama vaguely acknowledged that "this is not the first time that black churches have been attacked" but declined to state who has attacked these churches. His passive language echoes this strange vagueness, a reluctance to even name white terrorism, as if black churches have been attacked by some disembodied force, not real people motivated by a racist ideology whose roots stretch past the founding of this country.

I understand the comfort of this silence. If white violence is unspoken and unacknowledged, if white terrorists are either saints or demons, we don't have to grapple with the much more **complicated reality** of racial violence. In our time, racialized terror no longer announces itself in white hoods and robes. You can be a 21-year-old who has many black Facebook friends and tells harmless racist jokes and still commit an act of horrifying racial violence. We cannot separate ourselves from the monsters because the monsters don't exist. **The monsters have been human all along**. In America's contemporary imagination, terrorism is **foreign and brown**. Those terrorists do not have complex motivations. We do not urge one another to reserve judgment until we search through their Facebook histories or interview their friends. We do not trot out psychologists to analyze their mental states. We know immediately why they kill. But a white terrorist is **an enigma**. A white terrorist has **no history, no context, no origin**. He is **forever unknowable**. His very existence is unspeakable. We see him, but we pretend we cannot. He is **a ghost floating in the night**.

They Say: "Permute"

( ) The permutation severs "race" or doesn't solve. Because the plan prohibits surveillance based on race, it prohibits surveillance based on *whiteness*. This prevents effective reprioritization of surveillance targets to prevent white terrorism — that's Barry, Brown, and Nevins.

( ) Reject severance perms. They undermine clash and discourage in-depth preparation, weakening rejoinder and scholarly engagement. Both teams learn more when the aff stakes out a clear position and consistently defends it. Backtracking isn't *fair*.

( ) White Erasure DA. The perm erases the role of whiteness in white terrorism. Right wing racist attacks *aren't* inexplicable; they are manifestations of whiteness — that's Bennett."

( ) Focus on *white terrorism* is key. It is more than "terrorism by white people." It is terrorism *by whiteness*.

Armah 15 – Esther Armah, radio host, playwright, award-winning international journalist, and national best-selling author, 2015 ("Black Bodies, White Terrorism: A Global Reimagining of Forgiveness," *Gawker*, July 4th, Available Online at http://gawker.com/black-bodies-white-terrorism-a-global-reimagining-of-1715637306, Accessed 07-16-2015)

Charleston, Ghana, South Africa, Kenya: we have **a global black inheritance of white supremacist terrorism**. It has left a legacy of **untreated trauma**. That inheritance has trained us to pour our pain into our own bodies. And then turn away when that pain manifests. Particularly when it comes to black girls and women. Our bodies are vehicles for rage, rejection, resentment, and denial to acknowledge the depth of our hurt. Instead, we are judgmental of each other in our pain. We are unkind, we replace empathy with analysis and invite an audience to engage the strength of our intellect. Our pain goes unheard and so instead it finds sanctuary in the intimate violence we subject ourselves and our bodies to. What, now, can we do with our pain? What forgiveness process might we create for ourselves, for all the ways we hurt and harm each other? Will we ever be able to trust each other with our pain?

Black folk are globally committed to notions of justice, due to our intimate relationships with injustice. Our emotionality must be part of that justice project. Emotional justice is crucial to our collective and individual healing. How is our emotionality not profoundly fucked up when every part of our history, the pain inflicted on us still requires that you centralize whiteness? How do we heal when there is no respite from the violence? Who do we become when white supremacy's manufactured fear matters more than our bruised, battered, and bloodied black bodies?

Apartheid was **white terrorism**. What the British did during the Kenyan Mau Mau was **white terrorism**. Dylann Roof was a **white terrorist**, supported by state sanctioned institutions of **white terrorism**. We do not negotiate with terrorists. That's what America teaches. **Except white terrorism**. Then we don't negotiate; we **privilege**; we **prioritize**; we **centralize**. Then we **spit up that privilege** via white Jesus, heart disease, fibroids, violence, obesity and a **soft, slow, sure killing**. White supremacy does not worship our God. It prays at the altar of **coffins filled with black bodies**. It tithes in **the blood of black folks**. Its hymn is the sound of **our tears and screams**. Its amen is **the stillness of our stolen breath**.

Wyden Committee CP

Explanation for Negative

This is a generic counterplan that can be read against any intelligence agency affirmative. Instead of enacting the plan, it proposes creating a new Church Committee to conduct a full, public investigation into the domestic surveillance of Americans by United States intelligence agencies. This investigation will result in a report to Congress outlining the committee's recommendations for legislative and regulatory reform. The negative argues that the result of this report will be the implementation of the plan (along with other beneficial reforms, perhaps).

There are several net-benefits, but the "do both" permutation beats many of them.

1. Terrorism — the negative argues that the committee will be in the best position to determine whether the program or authority curtailed by the plan is necessary for effective counter-terrorism. If the committee determines that the program or authority is not necessary, it will propose curtailing it. If the committee determines that the program or authority *is* necessary, it will propose maintaining it. This allows the negative to argue that the counterplan results in the plan *only if the plan does not link to the terrorism DA*. The permutation arguably still links to this net-benefit.

2. Politics — the negative argues that the committee shifts political responsibility for surveillance reform away from the President, saving his political capital. The negative can argue that the process of creating a new Church Committee will be bipartisan and relatively insulated from typical Congressional politics. The permutation arguably still links to this net-benefit.

3. Circumvention — the negative argues that investigation must precede legislation to ensure that policy reforms aren't circumvented by the intelligence agencies. The permutation resolves most of this, but the negative can argue that circumvention applies more to the permutation than to the counterplan alone.

4. Trust — the negative argues that the counterplan restores public trust in the federal government, something that is necessary to address a host of important policy challenges. Again, the permutation resolves most of this net-benefit. However, the negative can argue that the permutation sends mixed messages to the public while the counterplan stays consistent.

5. Secrecy — the negative argues that the counterplan provides oversight review of the intelligence agencies, lessening the risk of groupthink and its associated dangers. In this way, the counterplan allows Congress to check overreach by the executive branch. The permutation resolves most of this net-benefit.

When crafting a counterplan text, the negative should consider customizing it to use the language of the plan. A version could be written which fiats that the plan be recommended as part of the committee's report, but this carries a lot of theoretical baggage. The blocks in this file assume that the negative has read the counterplan text in the 1NC, not a version that fiats recommendation of the plan.

Explanation for Affirmative

In response to this counterplan, the affirmative should argue that the plan is necessary to solve the advantages. If the counterplan might not result in the plan, it might not solve the advantages. To win that the counterplan wouldn't result in the plan, the affirmative should argue that the committee's recommendations won't be adopted by Congress or that intelligence agencies will attempt to stall the committee's investigation.

The "do both" permutation is a powerful affirmative option. The affirmative can argue that this permutation avoids the link to the net-benefits. If there is a chance that the counterplan doesn't result in the plan, the affirmative can argue that the risk of a solvency deficit outweighs the risk of the net-benefits.

Negative

1NC

1NC — Wyden Committee CP

The United States federal government should conduct a full, public investigation into the domestic surveillance of Americans by United States intelligence agencies. This investigation should be modeled after the Church Committee, headed by Senator Ron Wyden, and tasked with producing a report to Congress outlining recommendations for appropriate legislative and regulatory reforms.

The counterplan solves the case and is net-beneficial.

First, it results in sustainable reforms and rebuilds public trust in government.
Church Committee Alums 14 – Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2014 (Open Letter to Congress and the President, March 17th, Available Online at https://www.eff.org/files/2014/03/16/church_committee_-_march_17_2014__0.pdf, Accessed 07-08-2015, p. 1-2)
In 1975, the public learned that the National Security Agency (NSA) had been collecting and analyzing international telegrams of American citizens since the 1940s under secret agreements with all the major telegram companies. Years later, the NSA instituted another "Watch List" program to intercept the international communications of key figures in the civil rights and anti-Vietnam War movements among other prominent citizens. Innocent Americans were targeted by their government. These actions were only uncovered—and stopped—because of a special Senate investigative committee known as the United States Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities, commonly known as the Church Committee. We are former members and staff of the committee and write today as witnesses to history and as citizens with decades of collective experience in Congress, the federal courts, the executive branch, and the intelligence community. We write today to encourage Congress to create a Church Committee for the 21st Century—a special investigatory committee to undertake a thorough, and public, examination of current intelligence community practices affecting the rights of Americans and to make **specific recommendations for future oversight and reform**. Such a committee would work in good faith with the president, hold public and private hearings, and be empowered to obtain documents. Such congressional action is urgently needed to **restore the faith of citizens** in the intelligence community and, indeed, in our federal government.
The actions uncovered by the Church Committee in the 1970s bear striking similarities to the actions we've learned about over the past year. In the early 1970s, allegations of impropriety and illegal activity concerning the intelligence community spurred Congress to create committees to investigate those allegations. Our committee, chaired by Senator Frank Church, was charged with investigating illegal and unethical conduct of the intelligence community and with making legislative recommendations to govern the intelligence community's conduct. The bipartisan committee's reports remain one of the most searching reviews of intelligence agency practices in our nation's history.
Our findings were startling. Broadly speaking, we determined that sweeping domestic surveillance programs, conducted under the guise of foreign intelligence collection, had repeatedly undermined the privacy rights of US citizens. A number of reforms were implemented as a result, including the creation of permanent intelligence oversight committees in Congress and the passage of the Foreign Intelligence Surveillance Act.

Even though our work was over 30 years ago, our conclusions seem eerily prescient today. For example, our final report noted:

> We have seen a consistent pattern in which programs initiated with limited goals, such as preventing criminal violence or identifying foreign spies, were expanded to what witnesses characterized as "vacuum cleaners," [end page 1] sweeping in information about lawful activities of American citizens. The tendency of intelligence activities to expand beyond their initial scope is a theme, which runs through every aspect of our investigative findings.

The need for another thorough, independent, and public congressional investigation of intelligence activity practices that affect the rights of Americans is apparent. There is **a crisis of public confidence**. Misleading statements by agency officials to Congress, the courts, and the public have undermined public trust in the intelligence community and in the capacity for the branches of government to provide meaningful oversight.

The scale of domestic communications surveillance the NSA engages in today dwarfs the programs revealed by the Church Committee. Indeed, 30 years ago, the NSA's surveillance practices raised similar concerns as those today. For instance, Senator Church explained:

> In the case of the NSA, which is of particular concern to us today, the rapid development of technology in this area of electronic surveillance has seriously aggravated present ambiguities in the law. The broad sweep of communications interception by NSA takes us far beyond the previous Fourth Amendment controversies where particular individuals and specific telephone lines were the target.

As former members and staff of the Church Committee we can authoritatively say: the erosion of public trust currently facing our intelligence community is not novel, nor is its solution. A Church Committee for the 21st Century—a special congressional investigatory committee that undertakes a significant and public reexamination of intelligence community practices that affect the rights of Americans and the laws governing those actions—is **urgently needed**. Nothing less than the confidence of the American public in our intelligence agencies and, indeed, the federal government, is at stake.

Second, investigation *before* legislation is the only way to avoid circumvention. The counterplan solves; the plan doesn't.

Bump 13 – Philip Bump, Staff Writer at the *Wire*—an *Atlantic* publication, former Writer for *Grist*, former Senior Designer at Adobe Systems, 2013 ("How Do You Solve a Problem Like NSA?," *The Wire*—an *Atlantic* publication, November 1st, Available Online at http://www.thewire.com/politics/2013/11/how-do-you-solve-problem-nsa/71154/, Accessed 07-08-2015)

Legal roadblocks

Advocates of the NSA's surveillance, like Feinstein, are quick to point out that what the NSA is doing is legal. It is overseen by (largely acquiescent) intelligence committees in the House and Senate. It is approved by the Department of Justice and White House. It is given a stamp of approval by the Foreign Intelligence Surveillance Court in a purposefully one-sided process. But, as American history has repeatedly shown, "legal" doesn't always correlate to "appropriate." And in this case, the assessment that the tools fall within the boundaries of the Fourth Amendment essentially hasn't been challenged before the Supreme Court.

The NSA says it wants to collect metadata on every phone call in the United States, and that the Patriot Act's Section 215 lets it do so. The FISC agrees. Therefore, these activities are legal — despite the author of the Patriot Act asserting that the data collection exceeds the boundaries of the law. Doesn't matter. The NSA and a secret court interpret the law to allow the NSA to conduct all of the activity that's mentioned in this article. A majority of members of Congress are not disposed to **challenge this interpretation**. There exist proposals that, unlike Feinstein's, would actually block certain NSA behavior, but they aren't likely to be make it into law without being watered down by amendments.

We reached out to staff attorneys from two of the organizations that have been most fervent in their critiques of the NSA's surveillance tools, asking them how, given the power, they'd revise the government's surveillance tools to ensure that public privacy was maintained. The question we posed: Knowing that the NSA is experienced at **massaging laws to meet their needs**, what legislation might prevent that?

Alex Abdo, staff attorney at the American Civil Liberties Union, advocated **transparency above all else**. "Our country's founders believed that tyranny could be prevented through checks and balances. I think the same holds true today." For that to happen, though, **people need to know what's happening**.

> [I]t should mean that the public has access to significant or novel legal interpretations issued by the FISC. That would have gone a long way toward preventing the 215 program, because Congress and the public would have been able to judge the lawfulness and necessity of the government's programs for themselves.

"In short," Abdo said, "our privacy rights shouldn't be interpreted away in secret. … Secrecy has its place, but it should not be used as an excuse to keep any branch of government or the public out of the debate entirely. This type of solution is also key to **long-term legitimacy**."

In the 1970s, following revelations of domestic surveillance by the NSA — and rampant abuses by other intelligence services – the Church Committee was formed in the Senate in an effort to better determine the guidelines under which the agencies should operate. There were eventually other steps: the 1978 Foreign Intelligence Surveillance Act itself, which codified some of the committee's findings, and President Ronald Reagan's 1981 executive order extending the agencies' power while adding some new boundaries. (The vast majority of the NSA violations revealed in the Snowden leaks were violations of this order.)

Kurt Opsahl, senior staff attorney at the Electronic Frontier Foundation, suggested revisiting the idea of forming a new Congressional commission to tackle these issues. "If Congress has the political will," he told us, "it can easily write language to stop bulk collection." **But:**

> [T]o really be sure that Congress can legislate well, we really need a new Church Commission. … The key idea behind a new Church Committee would be to **investigate first, and then legislate later with a better understanding**. It may not result in restrictions that will be effective for all time, in light of technologies not dreamed about now, but it's the right thing to do now.

Neither Opsahl nor Abdo, you'll notice, are advocating **specific proposals** since **without further exploration of what's actually happening, it's difficult to draw policy**. The most important part of Opsahl's statement, though, is the first part. "If Congress has the political will." The Senate Intelligence Committee, in passing the tweaks encompassed in the FISA Improvements Act has shown a lack of will to try and figure out how to create new limits on the NSA's activity. But perhaps the most obvious example of a lack of will comes from Feinstein's House counterpart, Rep. Mike Rogers of Michigan. In a hearing this week, he confronted American University law professor Steve Vladeck, as reported by MSNBC.

> Rogers: I would argue the fact that we haven't had any complaints come forward with any specificity arguing that their privacy has been violated, clearly indicates, in 10 years, clearly indicates that something must be doing right. Somebody must be doing something exactly right.
> Vladeck: But who would be complaining?
> Rogers: Somebody who's privacy was violated. You can't have your privacy violated if you don't know your privacy is violated.

This is a corollary to the Supreme Court's rejection, earlier this year, of a lawsuit targeting the NSA. The Court ruled that the plaintiffs weren't affected by the surveillance and therefore couldn't sue; assured by the government that those being watched

would be told — and so could knowingly bring a suit — the Court threw out the case. It then turned out that the government wasn't informing people that NSA surveillance generated the evidence against them.

Rogers lacks the political will to figure out how to rein in the NSA so that the privacy of Americans using email or Google or Tor is ensured. The will to study the problem may emerge as leaks continue and political pressure builds. As Rogers might note, **you can't fix your surveillance system until you know that your surveillance system needs to be fixed**. Assuming it can be fixed at all.

2NC/1NR — Net-Benefits

Circumvention Net-Benefit

To avoid circumvention, *investigation* must precede *legislation*. NSA relies on secret interpretations of statutory authority to justify their activities. Unless these secret interpretations are scrutinized by Congress, it is impossible to craft effective policy language — that's Bump.

Prefer our evidence: it quotes the ACLU's Abdo and the EFF's Opsahl, two leading civil liberties attorneys. Both agree that a new Church Committee—*not a specific policy reform*—is the best option for reigning in NSA. Here's more evidence.

Cohn and Jaycox 13 – Cindy Cohn, Executive Director and former Legal Director and General Counsel of the Electronic Frontier Foundation, holds a J.D. from the University of Michigan Law School, and Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("Why A Special Congressional Committee Must Be Created To Investigate NSA's Unconstitutional Domestic Spying," Electronic Frontier Foundation, June 19th, Available Online at https://www.eff.org/deeplinks/2013/06/why-special-congressional-committee-must-be-created-investigate-nsas, Accessed 07-09-2015)

In the past couple of weeks, the NSA has, unsurprisingly, responded with a series of secret briefings to Congress that have left the public in the dark and vulnerable to misstatements and word games. Congress has many options at its disposal, but for **true accountability** any response must start with a special investigative committee. A coalition of **over 100 civil liberties groups** agrees. Such a committee is the right way the American people can **make informed decisions about the level of transparency and the reform needed**.

A Special Investigatory Committee is the Right Way to Shine the Light and Create True Accountability

A special investigatory committee should be bipartisan, consist of selected Intelligence and Judiciary committee members on both sides of the issue, and have full subpoena powers. After Watergate, Congress created the Church Committee to investigate domestic spying and other illegal actions committed by the intelligence community. What it found was staggering: in one example of abuse, the NSA was reading and copying all telegrams entering and exiting the country. In another, NSA had intercepted, opened and photographed more than 215,000 pieces of mail—mass surveillance circa 1970. The Church Committee brought these revelations to light, informed the American people, and took steps to limit the broad nature of the surveillance.

The contemporary Congress must create a similar, **independent**, and **empowered** committee. The President and some members of Congress prefer an investigation by the President's appointed Privacy and Civil Liberties Oversight Board (PCLOB), but the Board is not even empowered to issue subpoenas. And the two key committees that rubber-stamped the expansion of the NSA spying from foreigners-only to ordinary Americans have proven themselves unable to rein in the spying.

President Obama says he welcomes a public debate on the programs. If he's serious, he and Congress need to take the path of **a modern day Church Committee**.

The PCLOB

Last week, Senators called for an investigation by the PCLOB. The PCLOB was one of the recommendations of the 9/11 Commission and was set up to try to ensure that privacy and civil liberties played a role in the enormous expansion of surveillance laws like the PATRIOT Act and Foreign Intelligence Surveillance Amendments Act. Yet it has not. Instead, the PCLOB has lingered without a chairman—making it inoperable—for almost five years. It was only until this spring that the Senate finally confirmed David Medine as the chair, however the PCLOB has done little, if anything, since then. That's because it has no real power. If the PCLOB asked the NSA for certain documents related to the spying, for instance, the NSA would not have to hand the documents over or present testimony under oath. In a hearing this week, General Alexander, the Director of the National Security Agency, committed to cooperating with any investigation by the PCLOB. But given the NSA's history of gross misdirection, word games and limited answers to direct questions—including General Alexander's own falsehoods in Congressional testimony—this investigation should not rely on the good will of the NSA. Yet, that's exactly what the PCLOB would have to rely upon.

Hearings in Front of the Judiciary or Intelligence Committees

Nor do the Judiciary or Intelligence committees hold great promise. These committees should serve as the American people's robust window into—and constitutional check on—intelligence operations. For instance, in 2005, when the New York Times first reported on the warrantless wiretapping, many hearings took place in front of both the Senate and House Judiciary and Intelligence committees. The Committees certainly did not reveal the full extent of the spying, even though they had the opportunity. Instead, politicians were stonewalled, swallowed grossly misleading answers, and revealed few details.
Currently, the Senate Intelligence committee has met publicly only 2 times this year; from 2011 to 2012 it only met 8 times. The House of Representatives is no different. The House Intelligence committee's Subcommittee on Oversight has not met once this year. Yes, not once. And the full House Intelligence committee has only met four times. History tells us a similar story about the Judiciary Committees.
The public demands for a robust debate require more transparency and tenacity than these committees seem able to provide.
The Secret Veil Must Be Lifted
In short, the lessons of 2005 is that the standing Congressional committees are unable to get at the bottom of the NSA spying and the PCLOB does not have sufficient power to do so either. A special investigative committee with **full subpoena powers**, the ability to **force testimony under oath**, and the ability to **issue sanctions for failure to cooperate** is **the best hope** that the American people have to ensure the NSA's domestic spying isn't swept under the NSA's **giant secrecy cloak** once again. Tell Congress now to act.

Only **the counterplan results in a** ***complete audit*** **of domestic surveillance. Without it, circumvention is inevitable.**

Friedersdorf 13 – Conor Friedersdorf, Staff Writer for *The Atlantic*, 2013 ("Lawbreaking at the NSA: Bring On a New Church Committee," *The Atlantic*, August 16th, Available Online at http://www.theatlantic.com/politics/archive/2013/08/lawbreaking-at-the-nsa-bring-on-a-new-church-committee/278750/, Accessed 07-08-2015)

The time is ripe for a new Church Committee, the surveillance oversight effort named for Senator Frank Church, who oversaw a mid-1970s investigation into decades of jaw-dropping abuses by U.S. intelligence agencies. If recent stories about the NSA don't alarm you, odds are that you've never read the Church Committee findings, which ought to be part of the standard high-school curriculum. Their lesson is clear: Under cover of secrecy, government agents will commit abuses with impunity for years on end, and only intrusive Congressional snooping can stop them.
Why is another Church Committee needed now? For **more than a decade**, the NSA has repeatedly engaged in activity that violated the law and the Constitutional rights of many thousands or perhaps millions of Americans.
Let's review the NSA's recent history of serial illegality. President George W. Bush presided over the first wave. After the September 11 terrorist attacks, he signed a secret order that triggered a massive program of warrantless wiretapping. NSA analysts believed they possessed the authority to spy on the phone calls and emails of American citizens without a judge's permission. Circa October 2001, 90 NSA employees knew about the illegal program, but the public didn't. Later that month, four members of Congress, including Nancy Pelosi, were told of its existence, and subsequently discredited White House lawyer John Yoo wrote the first analysis of its legality. By 2002, 500 people knew about it, at which point telecom providers were participating.
The public didn't find out about warrantless wiretapping until December 2005, more than four years after it started, when the New York Times published a story that they'd long been holding.
How effective was the illegal spying?
"In the anxious months after the Sept. 11 attacks, the National Security Agency began sending a steady stream of telephone numbers, e-mail addresses and names to the FBI in search of terrorists. The stream soon became a flood, requiring hundreds of agents to check out thousands of tips a month," The New York Times reported in a January 2006 followup article. "But virtually all of them, current and former officials say, led to dead ends or innocent Americans. FBI officials repeatedly complained to the spy agency, which was collecting much of the data by eavesdropping on some Americans' international communications and conducting computer searches of foreign-related phone and Internet traffic, that the unfiltered information was swamping investigators. Some FBI officials and prosecutors also thought the checks, which sometimes involved interviews by agents, were pointless intrusions on Americans' privacy."
On July 9, 2008, telecom companies that participated in illegal warrantless wiretapping were granted retroactive immunity in a bill that Senator Barack Obama supported, despite a promise to oppose it.
Soon after, the Obama Administration took power.
On April 15, 2009, The New York Times reported on abuses in the NSA's surveillance activities (emphasis added):

> The National Security Agency intercepted private e-mail messages and phone calls of Americans in recent months on a scale that went beyond the broad legal limits established by Congress last year, government officials said in recent interviews. Several intelligence officials... said the N.S.A. had been engaged in "overcollection" of domestic communications of Americans. They described the practice as significant and systemic, although one official said it was

> believed to have been unintentional... The Justice Department, in response to inquiries from The New York Times, acknowledged Wednesday night that there had been problems with the N.S.A. surveillance operation, but said they had been resolved.

That July, an unclassified report produced by the inspectors general of five federal agencies "had difficulty citing specific instances when the National Security Agency's wiretapping program contributed to successes against terrorists," and "found that other intelligence tools used in assessing security threats posed by terrorists provided more timely and detailed information." The CIA found it "a useful tool but could not link it directly to counterterrorism successes."

Team Obama pressed on anyway.

Skip ahead to Edward Snowden's revelations, which began earlier this summer. The Obama Administration has insisted all along that Snowden wasn't able to document abuses because there aren't any. That claim was always dubious. As I noted earlier this week, the Obama Administration itself had already admitted that legal violations occurred, though it did so in the most vague terms. As of Monday, when I published my article, there was already enough documented bad behavior and official dissembling about surveillance to justify a sweeping investigation.

Now any member of Congress who doesn't press for an investigation is behaving indefensibly, for the Washington Post has just reported that the NSA violated the law on a much larger scale than anyone admitted. Its report shows that current oversight is laughably inadequate, and includes enough details to suggest that multiple NSA defenders have been lying in their public statements.

What would justify a Congressional investigation if not all that? If you're still not persuaded, recall the claims made by the Obama Administration alongside the latest scoops by Barton Gellman and Carol Leonnig. Team Obama's case has been straightforward: there are not NSA abuses, and adequate oversight is being conducted by all three branches of the U.S. government.

Now look at the facts reported Thursday evening:

* "The National Security Agency has broken privacy rules or overstepped its legal authority thousands of times each year since Congress granted the agency broad new powers in 2008."
* "Most of the infractions involve unauthorized surveillance of Americans or foreign intelligence targets in the United States, both of which are restricted by statute and executive order."
* "In one instance, the NSA decided that it need not report the unintended surveillance of Americans."
* "In another case, the Foreign Intelligence Surveillance Court, which has authority over some NSA operations, did not learn about a new collection method until it had been in operation for many months. The court ruled it unconstitutional."
* "The NSA audit obtained by The Post, dated May 2012, counted 2,776 incidents in the preceding 12 months of unauthorized collection, storage, access to or distribution of legally protected communications. Most were unintended. Many involved failures of due diligence or violations of standard operating procedure. The most serious incidents included a violation of a court order and unauthorized use of data about more than 3,000 Americans and green-card holders."

This is a good place to pause. Note that the 2,776 incidents of illegal surveillance don't mean that just 2,766 people had their rights violated -- in just a single one of those 2,776 incidents, 3,000 people had their rights violated. As the story notes, "There is no reliable way to calculate from the number of recorded compliance issues how many Americans have had their communications improperly collected, stored or distributed by the NSA." And that is another reason an intrusive Congressional investigation into these practices is **urgently necessary**.

What possible objection could there be to nailing down the number of Americans whose rights were violated? I'd like someone to explain how that could possibly make us less safe from al-Qaeda.

Here's something else I'd like to see investigated:

> The causes and severity of NSA infractions vary widely. One in 10 incidents is attributed to a typographical error in which an analyst enters an incorrect query and retrieves data about U.S phone calls or e-mails.

Does anyone else find it implausible that 10 percent of errors are due to typos? And even if that's true, are you telling me there's no way to eliminate typos when the consequences are intrusive spying in violation of the law and the Constitution? I find it hard to imagine how anyone isn't on board for a Congressional investigation at this point, but just in case, get this next part (emphasis added):

> The May 2012 audit, intended for the agency's top leaders, counts only incidents at the NSA's Fort Meade headquarters and other facilities in the Washington area. Three government officials, speaking on the condition of anonymity to discuss classified matters, said the number would be substantially higher if it included other NSA operating units and regional collection centers.

That brings us to the head of the Senate intelligence committee, who has sworn all along that she engages in thorough oversight of NSA surveillance, and that large-scale abuses just don't happen:

> Senate Intelligence Committee Chairman Dianne Feinstein (D-Calif.), who did not receive a copy of the 2012 audit until The Post asked her staff about it, said in a statement late Thursday that the committee "can and should do more to independently verify that NSA's operations are appropriate, and its reports of compliance incidents are accurate."

The newspaper got its hands on the audit -- more than a year after the fact -- before she did! And the trend? "Despite the quadrupling of the NSA's oversight staff after a series of significant violations in 2009," Gellman reports, "the rate of infractions increased throughout 2011 and early 2012."

There is a lot more to his article, which everyone should read in full. I'll excerpt just one more passage:

> The NSA uses the term "incidental" when it sweeps up the records of an American while targeting a foreigner or a U.S. person who is believed to be involved in terrorism. Official guidelines for NSA personnel say that kind of incident, pervasive under current practices, "does not constitute a ... violation" and "does not have to be reported" to the NSA inspector general for inclusion in quarterly reports to Congress. Once added to its databases, absent other restrictions, the communications of Americans may be searched freely.

Suffice it to say that the scale of actual NSA abuses is **substantially hidden**. An alarming number of communications are being illegally collected. But the truth could turn out to be shocking even to people who've been following this story closely. An investigation is **the only way to find out**.

The average member of Congress knows far less than Feinstein, and the only other check on the NSA, the FISA court, also provides **inadequate oversight**, according to the man in charge of it:

> The leader of the secret court that is supposed to provide critical oversight of the government's vast spying programs said that its ability do so is limited and that it must trust the government to report when it improperly spies on Americans.
>
> The chief judge of the Foreign Intelligence Surveillance Court said the court lacks the tools to independently verify how often the government's surveillance breaks the court's rules that aim to protect Americans' privacy. Without taking drastic steps, it also cannot check the veracity of the government's assertions that the violations its staff members report are unintentional mistakes.

All told, it's an airtight case for dramatically more oversight. Senator Ron Wyden has long led the lonely effort in his body to expose NSA abuses, and he is the natural choice to lead both an investigation and a Wyden Committee Report to Study Intelligence Activities in the War on Terror. Were there any justice in the world, Feinstein would be kept far away from the effort.

Trust Net-Benefit

The counterplan rebuilds trust in government. Revelations of illegal NSA spying has decimated *overall* public confidence in the federal government. Only a comprehensive Congressional investigation can rebuild trust — that's the Church Committee Alums.

Public trust in government is a prerequisite to solving all global problems. It's an existential risk.

Small 6 – Jonathan Small, former Americorps VISTA for the Human Services Coalition, 2006 ("Moving Forward," *The Journal for Civic Commitment*, Available Online via the Internet Archive's Wayback Machine at http://web.archive.org/web/20060711184600/http://www.mc.maricopa.edu/other/engagement/Journal/Issue7/Small.jsp, Accessed 09-22-2009)

What will be the challenges of the new millennium? And how should we equip young people to face these challenges? While we cannot be sure of the exact nature of the challenges, we can say unequivocally that humankind will face them together. If the end of the twentieth century marked the triumph of the capitalists, individualism, and personal responsibility, the new century will present challenges that require **collective action, unity, and enlightened self-interest**. Confronting **global warming, depleted natural resources, global super viruses, global crime syndicates**, and **multinational corporations** with no conscience and no accountability will require **cooperation, openness, honesty, compromise**, and most of all **solidarity** – ideals not exactly cultivated in the twentieth century. We can no longer suffer to see life through the tiny lens of our own existence. Never in the history of the world has our collective fate been so intricately interwoven. **Our very existence depends upon our ability to adapt to this new paradigm**, to envision a more cohesive society.

With humankind's next great challenge comes also great opportunity. Ironically, modern individualism backed us into a corner. We have two choices, **work together in solidarity or perish together in alienation**. Unlike any other crisis before, the noose is **truly around the neck of the whole world at once**. Global super viruses will ravage rich and poor alike, developed and developing nations, white and black, woman, man, and child. Global warming and damage to the environment will affect climate change and destroy ecosystems across the globe. Air pollution will force gas masks on our faces, our depleted atmosphere will make a predator of the sun, and chemicals will invade and corrupt our water supplies. Every single day we are presented the opportunity to change our current course, to survive modernity in a manner befitting our better nature. Through zealous cooperation and radical solidarity we can alter the course of human events.

Regarding the practical matter of equipping young people to face the challenges of a global, interconnected world, we need to teach cooperation, community, solidarity, balance and tolerance in schools. We need to take a holistic approach to education. Standardized test scores alone will not begin to prepare young people for the world they will inherit. The three staples of traditional education (reading, writing, and arithmetic) need to be supplemented by three cornerstones of a modern education, exposure, exposure, and more exposure. How can we teach solidarity? How can we teach community in the age of rugged individualism? How can we counterbalance crass commercialism and materialism? How can we impart the true meaning of power? These are the educational challenges we face in the new century. It will require a radical transformation of our conception of education. We'll need to trust a bit more, control a bit less, and put our faith in the potential of youth to make sense of their world.

In addition to a declaration of the gauntlet set before educators in the twenty-first century, this paper is a proposal and a case study of sorts toward a new paradigm of social justice and civic engagement education. Unfortunately, the current pedagogical climate of public K-12 education does not lend itself well to an exploratory study and trial of holistic education. Consequently, this proposal and case study targets a higher education model. Specifically, we will look at some possibilities for a large community college in an urban setting with a diverse student body.

Our guides through this process are specifically identified by the journal Equity and Excellence in Education. The dynamic interplay between ideas of social justice, civic engagement, and service learning in education will be the lantern in the dark cave of uncertainty. As such, a simple and straightforward explanation of the three terms is helpful to direct this inquiry. Before we look at a proposal and case study and the possible consequences contained therein, this paper will draw out a clear understanding of how we should characterize these ubiquitous terms and how their relationship to each other affects our study.

Social Justice, Civic Engagement, Service Learning and Other Commie Crap

Social justice is often ascribed long, complicated, and convoluted definitions. In fact, one could fill a good-sized library with treatises on this subject alone. Here we do not wish to belabor the issue or argue over fine points. For our purposes, it will suffice to have a general characterization of the term, focusing instead on the dynamics of its interaction with civic engagement and service learning. Social justice refers quite simply to a community vision and a community conscience that values inclusion, fairness, tolerance, and equality. The idea of social justice in America has been around since the Revolution and is intimately linked to the idea of a social contract. The Declaration of Independence is the best example of the prominence of social contract theory in the US. It states quite emphatically that the government has a contract with its citizens, from which we get the famous lines about life, liberty and the pursuit of happiness. Social contract theory and specifically the Declaration of Independence are concrete expressions of the spirit of social justice.

Similar clamor has been made over the appropriate definitions of civic engagement and service learning, respectively. Once again, let's not get bogged down on subtleties. Civic engagement is a measure or degree of the interest and/or involvement an individual and a community demonstrate around community issues. There is a longstanding dispute over how to properly quantify civic engagement. Some will say that today's youth are less involved politically and hence demonstrate a lower degree of civic engagement. Others cite high volunteer rates among the youth and claim it demonstrates a high exhibition of civic engagement. And there are about a hundred other theories put forward on the subject of civic engagement and today's youth. But one thing is for sure; today's youth **no longer see government and politics as an effective or valuable tool for affecting positive change in the world**. Instead of criticizing this judgment, perhaps we should come to sympathize and even admire it. Author Kurt Vonnegut said, "There is a tragic flaw in our precious Constitution, and I don't know what can be done to fix it. This is it: only nut cases want to be president." Maybe the youth's rejection of American politics isn't a shortcoming but rather a rational and appropriate response to their experience. Consequently, the term civic engagement takes on new meaning for us today. In order to foster fundamental change on the systemic level, which we have already said is **necessary for our survival in the twenty-first century**, we need to **fundamentally change our systems**. Therefore, part of our challenge becomes convincing the youth that these systems, and by systems we mean government and commerce, have the potential for positive change. Civic engagement consequently takes on a more specific and political meaning in this context.

***Independently*, public trust in government is key to progressive public policies that address poverty and racism.**

Hetherington 6 – Marc J. Hetherington, Associate Professor of Political Science at Vanderbilt University, 2006 ("Why Political Trust Matters," *Why Trust Matters: Declining Political Trust and the Demise of American Liberalism*, Published by Princeton University Press, ISBN, Available Online at http://press.princeton.edu/chapters/s7877.html, Accessed 04-30-2012)

Even more importantly, **declining political trust has played the central role in the demise of progressive public policy** in the United States over the last several decades. My claim defies the conventional wisdom. In explaining why public policy has grown more conservative since the 1960s, pundits and political scientists alike tend to identify a conservative turn in public opinion as the cause. However, **little evidence exists to support this explanation**. There remains **constant and widespread support for big government** in areas where most Americans benefit. For example, almost everyone wants to maintain or increase investment in the vast majority of federal programs, such as Medicare, Social Security, education, highways, environmental protection, and the like. Had public opinion truly grown more conservative, support for these initiatives would have decreased because conservatives have a philosophical aversion to government.

Contemporary political rhetoric fuels this misunderstanding. By railing against "big government" in general, conservative and moderate politicians imply that people want less government across the board. However, public opposition to government is **focused entirely on programs that require political majorities to make sacrifices for political minorities**, such as **antipoverty** and **race-targeted initiatives**. In short, Americans continue to support big government **when they benefit from it**, but they want limited government when they are asked to make sacrifices.

The massive deterioration in political trust that has occurred since the 1960s **explains this disjuncture**. Declining trust should not affect support for all things that government does. Indeed, people do not need to trust the government much when they benefit from it. Instead, **people need to trust the government when they pay the costs but do not receive the benefits**, which is **exactly what antipoverty and race-targeted programs require** of most Americans. When government programs require people to make sacrifices, **they need to trust that the result will be a better future for everyone**. Absent that trust, people will deem such sacrifices as unfair, even punitive, and, thus, **will not support the programs that require them**.

Progressive policies are vital to reduce widespread suffering and inequality. We have a moral obligation to collectively address these injustices through state action.

West 99 – Robin West, Professor of Law at the Georgetown University Law Center, holds a J.D. from the University of Maryland Law School and a J.S.M. from Stanford Law School, 1999 ("Is American Progressive Constitutionalism Dead?: I. Conceptual And Critical Themes In Normative Progressive Constitutionalism: Is Progressive Constitutionalism Possible?," *Widener Law Symposium* (4 Wid. L. Symp. J. 1), Spring, Available Online to Subscribing Institutions via Lexis-Nexis)

Progressivism is in part a particular moral and political response to the sadness of lesser lives, lives unnecessarily diminished by economic, psychic and physical insecurity in the midst of a society or world that offers plenty. This insecurity is **unjust** and should end; the suffering should be **alleviated**, and those lives should be enriched. **To do so must be one of the goals of a morally just** or justifiable **state**. Not all suffering and not all lesser lives, of course, give rise to such a response. The suffering attendant to accident, disease, war and happenstance is neither entirely chargeable to our societal account, nor is it within our control. A "lesser life" marred by the early loss of a parent, a parent's mourning occasioned by the accidental death of a child, or an adult's ongoing trauma set off by a childhood disease, although cosmically unjust, is neither unjust in the ordinary sense, nor is it easily ameliorated through politics. In contrast, the suffering attendant to poverty or stunted opportunities for growth, the suffering attendant to the absence of supportive communities, or the suffering attendant to the desperate attempt to nurture children while unsure of one's own physical or economic safety is largely chargeable to our moral account and may be ameliorated through politics--at least in a social world like our own, marked by abundant natural resources, vast economic opportunity, thriving neighborhoods, and competent police and security forces. That such suffering exists on **a shockingly widespread scale** in our world is a product of two states of affairs. First, it is the consequence of the decision to allow not simply "property," but vast quantities of wealth to accumulate in a few private hands, and social and sexual esteem as well as physical security and well-being to reside in one race and sex. Second, the suffering is a product of our **collective, political and legal inattention to the suffering those distributions leave in their wake**. Progressivism, I will assume, is marked by a distinctive moral response to that suffering. When brought on by collective inattention to private maldistributions of wealth, security or privilege, that suffering is **unjust**, and for that reason gives rise to a **moral and political imperative**: the conditions which give rise to the [*2] suffering **must be changed**, and changed through some form of **collective action**, which in turn may (although often times may not) require **the coercive power of the state**.

Secrecy Net-Benefit

Only the counterplan solves openness, preventing intelligence community groupthink.

Benkler 13 – Yochai Benkler, Berkman Professor of Entrepreneurial Legal Studies at Harvard Law School, Faculty Co-Director of the Berkman Center for Internet and Society at Harvard University, former Professor at New York University School of Law, recipient of the Electronic Frontier Foundation's Pioneer Award and the Ford Foundation Visionaries Award, holds an LL.B. from Tel-Aviv University and a J.D. from Harvard Law School, 2013 ("We Need a New Church Committee," *The New Republic*, June 11th, Available Online at http://www.newrepublic.com/article/113433/nsa-scandal-requires-new-church-committee, Accessed 07-08-2015)

Last week's groundbreaking reporting by The Guardian and The Washington Post exposed an NSA surveillance system of breathtaking scale, breadth, and depth. Even if legal under some tortured interpretation of the law, this system leaves the Fourth Amendment an empty vessel. The sheer audacity of the NSA surveillance and the complicity of segments of all three branches of government and the private sector suggest that we need a basic re-evaluation of intelligence operations on the scale of the Church Committee in the post-Watergate era. On Sunday, The Guardian disclosed—at his request—that the source of the leak was Edward Snowden, a 29-year-old former technical assistant at the CIA and current employee of a defense contractor. The president's defense of the surveillance programs last Friday depended on our trust in congressional oversight and judicial process. These made the program legitimate, he argued, as he doubled down on his aggressive denunciation of the whistle-blowing that exposed the abuses. The president's defense, however, merely underscores the subversion of checks and balances by the post-September 11 constitution. It is precisely when traditional checks and balances fail that the fourth estate is so crucial.

Secrecy breeds error

Secrecy undermines the foundation of learning: **criticism**. People on the inside of the national security establishment cannot be trusted to make **reasonable judgments**—not because they are bad people (one assumes that, for the most part, they are deeply committed and well-intentioned)—but because they inhabit **a deeply error-prone system** that lacks the basic elements of self-correction. Saddam Hussein is dead today because he created a system in which no one could tell him that if he kept obscuring the fact that he had no WMD, he would die.

Open societies thrive not because they have smarter people, or better armies, or perfect markets. They thrive because, in their very imperfection, they enable **continuous learning**. Open societies can't always act as effectively as non-open societies. For a while, planned economies looked like they were better at putting Sputnik in orbit, and spy agencies unfettered by democratic qualms, we feared, could foment revolution from Korea to Cuba. But in the long run, openness made us learn, adapt, and become better. That is why, eventually, either China will open up or America will continue to lead into the twenty-first century. But only if we stay an open society.

Secrecy has been allowed to metastasize under the Bush-Obama national security system. As the FISA Court order to Verizon showed, even the operation of the law is secret. The Department of Justice issues secret memos; these become unchallenged interpretations of law that FISA Court judges are asked to endorse without the benefit of an opponent's criticism. Any good lawyer knows that if you read the briefs of one side only, they seem overwhelmingly persuasive—until you read the other side's brief. These decisions, in turn, remain secret, and thus immune to criticism even after they have been issued. And that complete immunity from criticism insulates them from good reason. They are, **by design**, hobbled, **incapable of embodying good judgment**.

Congressional oversight suffers from similar information imbalances. When Senators Feinstein and Chambliss tell us that the intelligence gathered is invaluable and the civil rights

violations minimal, we cannot trust their judgment: Their honest judgments reflect information that is one side's brief for its own perspective. Legislators can work their way out of this dynamic in extraordinary cases, but such divergence is not the normal course. Congressional overseers who come with a critical frame of reference and interpret the information skeptically—like Senators Wyden and Udall, who obliquely raised the alarm for years—are **caught in a Catch-22**: They can only learn enough to criticize knowledgeably by signing away their freedom to criticize publicly.

We're told to trust the government's surveillance package as a whole, as a black box. But when we see two products of that opaque system that are so totally out of whack with the proper balance between national security and constitutional rights, we can have no confidence in the system. Asking us to simply trust the black box is **a completely inadequate response**.

The torture program was enabled by spooks cooperating with national security types in the executive manipulating the information available to the select few who participated in congressional oversight and wildly overstating the value of their work. The Senate Select Committee on Intelligence report on the incompetence, dissimulation, and sheer futility of that program remains a national security secret. But we know the basic storyline. And there is absolutely no reason to believe that the system of checks and balances that failed so spectacularly there has performed impeccably here, or that the self-affirming assertions of the spies about the critical value of their work are systematically more credible.

Only a **genuine**, **aggressive**, **independent**, and **transparent** review process can **restore the confidence necessary to maintain security** under the American Constitution. We need a new Church Committee to assess the NSA's work in this post-September 11, big data moment.

Groupthink risks extinction. Decentralized, open decision-making is key.

Adler 96 – David Gray Adler, Professor of Political Science at Idaho State University, 1996 ("The Judiciary and Presidential Power In Foreign Affairs: A Critique," *Perspectives on Law and the Public Interest* (1 Persp. on L. & Pub. Int. 1), Fall, Available Online to Subscribing Institutions via Hein Online, p. 1-9)

{4} The Constitution envisions the conduct of foreign policy as a partnership between the President and Congress. Perhaps surprisingly, the Constitution assigns Congress the role of **senior partner**. This assignment reflects, first, the **overwhelming preference** of both the framers at the Constitutional Convention and the ratifiers in state conventions for collective decision-making in both foreign and domestic affairs. Second, this assignment of powers reflects their equally **adamant opposition** to unilateral executive control of U.S. foreign policy. This constitutional arrangement is evidenced by specific, unambiguous textual language, almost undisputed arguments by framers and ratifiers, and by logical-structural inferences from the doctrine of separation of powers.[5]

{5} The constitutional assignment of powers, moreover, is **compelling** and **relevant** for twentieth century America for at least three reasons. First, separation of powers issues are perennial, for they require consideration of the proper repository of power. Contemporary questions about the allocation of power between the President and Congress in foreign affairs are largely the same as those addressed two centuries ago. Second, the logic of collective decisionmaking in the realm of foreign relations is **as sound today** as it was in the founding period. Third, although the world and the role of the United States in international relations have changed considerably over the past 200 years, most questions of foreign affairs still involve routine policy formulation and do not place a premium on immediate responsive action.

{6} The preference for collective, rather than individual, decisionmaking runs throughout those provisions of the Constitution that govern the conduct of foreign policy. Congress, as a collective governing body, derives broad and exclusive powers from Article I to regulate foreign commerce and to initiate all hostilities on behalf of the United States, including war. As Article II indicates, the President shares with the Senate the treaty-making power and the power to appoint ambassadors. Only two powers in foreign relations are assigned exclusively to the President. First, he is commander-in-chief, but he acts in this capacity **by** and **under** the authority of Congress. As Alexander Hamilton and James Iredell argued, the President, in this capacity, is merely first admiral or general of the armed forces, after war has been authorized by Congress or in the event of a sudden attack against the United States.[6] Secondly, the President has the power to receive ambassadors. Hamilton, James Madison, and Thomas Jefferson agreed that this clerk-like function was purely ceremonial in character. Although this function has come to entail recognition of states at international law, which carries with it certain legal implications, this founding trio contended that the duty of recognizing states was more conveniently placed in the hands of the executive than in the legislature.[7] These two powers exhaust the textual grant of authority to the President regarding foreign affairs jurisdiction. The President's constitutional authority **pales in comparison** to the powers of Congress.

{7} This Constitutional preference for shared decisionmaking is emphasized again in the construction of the shared treaty power: "He shall have Power, by and with the Advice and consent of the Senate, to make Treaties, provided two-thirds of the Senators present concur."[8] The compelling simplicity and clarity of the plain words of this clause leave no room to doubt its meaning.[9] There is no other clause that even intimates a presidential power to make agreements with foreign nations. Therefore, as Hamilton argued, the treaty power constitutes the principal vehicle for conducting U.S. foreign relations.[10] In fact, there was no hint at the Constitutional Convention of an exclusive Presidential power to make foreign policy. To the contrary, all the arguments of the framers and ratifiers were to the effect that the Senate and President, which Hamilton and Madison described as a "fourth branch of government" in their capacity as treaty maker,[11] are to manage concerns with foreign nations.[12] While a number of factors contributed to this decision,[13] the pervasive fear of unbridled executive power loomed largest.[14] Hamilton's statement fairly represents these sentiments:

The history of human conduct does not warrant that exalted opinion of human nature which would make it wise in a nation to commit interests of so delicate and momentous a kind, as those which concern its intercourse with the rest of the world, to the sole disposal of a magistrate created and circumstanced as would be a President of the United States.[15]

{8} The widespread fear of executive power that precluded presidential control of foreign policy also greatly influenced the Convention's design of the War Clause. Article I, section 8, paragraph 11 states: "The Congress shall have Power . . . To declare War."[16] The plain meaning of the clause is buttressed by the unanimous agreement among both framers and ratifiers that Congress was granted the sole and exclusive authority to initiate war. The warmaking power, which was viewed as a legislative power by Madison and Wilson, among others, was specifically withheld from the President.[17] James Wilson, second only to Madison as an architect of the Constitution, summed up the values and concerns underlying the war clause for the Pennsylvania Ratifying Convention:

This system will not hurry us into war; it is calculated to guard against it. It will not be in the power of a single body of men, to involve us in such distress; for the important power of declaring war is vested in the legislature at large. This declaration must be made with the concurrence of the House of Representatives; from this circumstance we may draw a certain conclusion that nothing but our national interest can draw us into war.[18]

No member of the Constitutional Convention and no member of any state ratifying convention ever attributed a different meaning to the War Clause.[19]

{9} This undisputed interpretation draws further support from early judicial decisions, the views of eminent treatise writers, and from nineteenth-century practice. I have discussed these factors elsewhere; here the barest review must suffice.[20] The meaning of the War Clause was put beyond doubt by several early judicial decisions. No court since has departed from this early view. In 1800, in Bas v. Tingy, the Supreme Court held that it is for Congress alone to declare either an "imperfect" (limited) war or a "perfect" (general) war.[21] In 1801, in Talbot v. Seeman, Chief Justice John Marshall, a member of the Virginia Ratifying Convention, stated that the "whole powers of war [are], by the Constitution of the United States, vested in [C]ongress. . . ."[22] In Little v. Barreme, decided in 1804, Marshall concluded that President John Adams' instructions to seize ships were in conflict with an act of Congress and were therefore illegal.[23] In 1806, in United States v. Smith, the question of whether the President may initiate hostilities was decided by Justice William Paterson, riding circuit, who wrote for himself and District Judge Tallmadge: "Does he [the President] possess the power of making war? That power is exclusively vested in Congress . . . It is the exclusive province of Congress to change a state of peace into a state of war."[24] In 1863, the Prize Cases presented the Court with its first opportunity to consider the power of the President to respond to sudden attacks.[25] Justice Robert C. Grier delivered the opinion of the Court:

By the Constitution, Congress alone has the power to declare a natural or foreign war . . . If a war be made by invasion of a foreign nation, the President is not only authorized but bound to resist force, by force. He does not initiate the war, but is bound to accept the challenge without waiting for any special legislative authority. And whether the hostile party be a foreign invader, or States organized in rebellion, it is none the less a war, although the declaration of it be "unilateral."[26]

These judicial decisions established the constitutional fact that it is for Congress alone to initiate hostilities, whether in the form of general or limited war; the President, in his capacity as commander-in-chief, is granted only the power to repel sudden attacks against the United States.[27]

{10} The Convention's attachment to collective judgment and its decision to create a structure of shared power in foreign affairs provided, in the words of Wilson, "a security to the people," for it was a cardinal tenet of republican ideology that the conjoined wisdom of many is superior to that of one.[28] The emphasis on group decisionmaking came, of course, at the expense of unilateral executive authority. This hardly posed a difficult choice, however; for the framers and ratifiers held a pervasive distrust of executive power, a deeply held suspicion that dated to colonial times.[29] As a result of this aversion to executive authority, the Convention placed control of foreign policy beyond the unilateral capacity of the President. Furthermore, as Madison said, the Convention "defined and confined" the authority of the President so that a power not granted could not be assumed.[30]

{11} The structure of shared powers in foreign relations serves to **deter abuse of power, misguided policies, irrational action**, and **unaccountable behavior**.[31] As a fundamental matter, emphasis on joint policymaking permits the airing of sundry political, social, and economic values and concerns. Such a structure wisely ensures that the ultimate policies will not merely reflect **the private preferences** or **the short-term political interests** of the President.[32]

{12} Of course, this arrangement has come under fire in the postwar period on a number of policy grounds. Some have argued, for example, that fundamental political and technological changes in the character of international relations and the position of the United States in the world have rendered obsolete an eighteenth century document designed for a peripheral, small state in the European system of diplomatic relations. Moreover, it has been asserted that quick action and a single, authoritative voice are necessary to deal with an increasingly complex, interdependent, and technologically linked world capable of almost instantaneous massive destruction. Extollers of presidential dominance also have contended that only the President has the qualitative information, the expertise, and the capacity to act with the necessary dispatch to conduct U.S. foreign policy.[33]

{13} These policy arguments have been reviewed, and discredited, elsewhere; space limitations here permit only a brief commentary.[34] Above all else, the implications of U.S. power and action in the twentieth century have brought about **an even greater need** for **institutional accountability** and **collective judgment** than existed two hundred years ago. The **devastating, incomprehensible destruction of nuclear war and the possible extermination of the human race** demonstrate the need for **joint participation** in any decision to initiate war. Moreover, most of the disputes at stake between the executive and legislative branches in foreign affairs have **virtually nothing to do with** the need for rapid response to crisis. Rather, they are concerned only with **routine policy formulation and execution**, a classic example of the authority exercised under the separation of powers doctrine.[35]

{14} Nevertheless, these joint functions have been fused by the executive branch and have become increasingly **unilateral**, **secretive**, **insulated from public debate**, and hence **unaccountable**.[36] In the wake of Vietnam, Watergate, and the Iran-contra scandal, unilateral executive behavior has become **ever more difficult to defend**. Scholarly appraisals have **destroyed** arguments about intrinsic executive expertise and wisdom in foreign affairs and the alleged superiority of information available to the President.[37] Moreover, the inattentiveness of presidents to important details and the effects of **"groupthink"** that have dramatized and exacerbated the relative inexperience of various presidents in international relations have also devalued the extollers' arguments. Finally, foreign policies, like domestic policies, are reflections of values. Against **the strength of democratic principles**, recent occupants of the White House have **failed to demonstrate** the superiority of their values in comparison to those of the American people and their representatives in Congress.

{15} The assumption of foreign affairs powers by recent presidents represents a fundamental alteration of the Constitution that is both **imprudent** and **dangerous**. We turn now to an examination of the judiciary's contribution to executive hegemony in foreign affairs.

The counterplan solves this impact — it checks executive overreach.

German et al. 15 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, et al., co-authored and endorsed by Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2015 ("Strengthening Intelligence Oversight," Report by the Brennan Center for Justice at the New York University School of Law, Available Online at https://www.brennancenter.org/sites/default/files/publications/Church_Committee_Web_REVISED.pdf, Accessed 07-09-2015, p. 4)

Moreover, as important as the Privacy and Civil Liberties Oversight Board and President's Review Group investigations are, it is the constitutional responsibility of **Congress**, as a co-equal branch of government and the direct representatives of the people, to restore the public trust in U.S. intelligence programs. The Senate Intelligence Committee's five-year inquiry into the CIA's abusive detention and interrogation practices provides a striking example of the diligence Congress can apply in meticulously scrutinizing covert government activities, and preparing a report suitable for public release. But it also exposes its limits. The summarized report details how the CIA successfully frustrated oversight of its torture program for several years by refusing, delaying, or inappropriately limiting congressional briefings, and providing incomplete, inaccurate, and misleading information to its overseers. The resources necessary to conduct such an investigation of one program within one agency reveal the depth of the challenge Congress faces in fulfilling its intelligence oversight responsibilities.

Congress needs to demonstrate its ability to **check executive branch overreach** across the multiple programs and agencies, re-establish democratic controls over intelligence policies, and ensure public accountability of intelligence practices. As part of a comprehensive review of the intelligence enterprise, Congress must examine its own performance in overseeing all 17 intelligence community member agencies, including the Federal Bureau of Investigation, the Central Intelligence Agency, the Drug Enforcement Administration, intelligence components of the Departments of Defense (including the National Security Agency), State, Treasury, Energy, and particularly the more recently established Department of Homeland Security.3 The purpose of such a review should be to evaluate whether current legal controls and congressional oversight structures and practices are **effective in allocating intelligence resources properly and efficiently**; to check agency abuses; and to adequately inform all members of Congress and the American public about the scope, necessity, and effectiveness of all authorized intelligence activities, to the greatest extent possible.

To their credit, both the House and Senate have periodically reviewed various aspects of their oversight operations to assess how to improve them. But their day-to-day duties of monitoring burgeoning, complex intelligence collection, counterintelligence, and covert action is extremely time consuming for committee members, even apart from their other congressional responsibilities. It would not be realistic for them to also undertake the kind of comprehensive and integrated review of the myriad intelligence oversight issues we raise below.

The Church Committee's work is perhaps best remembered for exposing significant wrongdoing by the intelligence agencies, often secretly authorized by presidents of both political parties, which undermined American freedoms and democratic values. But its lasting legacy was providing Congress with the **factual foundation and legal framework** for crafting appropriate organizational structures and constitutional controls to ensure that intelligence operations remain effective, lawful, and consistent with our national interests. Examining whether the controls and structures created four decades ago remain an effective bulwark against error and abuse is necessary and appropriate. And the growing mistrust of U.S. intelligence activities at home and abroad make it essential.

Terrorism Net-Benefit

The terrorism DA is a net-benefit. If particular intelligence programs are necessary to prevent terrorism, the committee will recommend they be continued. Only programs that *aren't* necessary for counter-terrorism will be on the chopping block — figuring out which is which is the committee's job.

The counterplan best protects national security — a comprehensive review of intelligence operations is vital.

German et al. 15 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, et al., co-authored and endorsed by Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2015 ("Strengthening Intelligence Oversight," Report by the Brennan Center for Justice at the New York University School of Law, Available Online at https://www.brennancenter.org/sites/default/files/publications/Church_Committee_Web_REVISED.pdf, Accessed 07-09-2015, p. 3-4)

Lawful, properly controlled intelligence activities are **critical to our national security**. But they require **public support**, which can **only** be achieved through sound governance, independent oversight, and public accountability. To this end, several former Church Committee staff members signed a letter last year requesting that Congress establish **a new special investigative committee** to conduct a thorough public re-examination of intelligence community authorities and practices, and their impact on privacy and civil liberties. While recent investigations by the Privacy and Civil Liberties Oversight Board and the President's Review Group on Intelligence and Communications Technologies are extraordinarily helpful and will undoubtedly inform this new committee's work, they focused on just a few intelligence collection programs.2 Only **a comprehensive examination** of how the multitude of intelligence [end page 3] programs, agencies, and authorities work in combination can measure the **cumulative effect** on privacy and civil liberties, ensure **compliance** with the law, and **identify waste and redundancy that undermines performance**.

We don't need to win a decisive link. If there's *any* chance that the plan imperils important counter-terrorism programs, the counterplan is a better option: it results in effective reform and oversight *without* jeopardizing national security.

Jaycox and Tien 14 – Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, and Lee Tien, Senior Staff Attorney and Adams Chair for Internet Rights at the Electronic Frontier Foundation, holds a J.D. from the University of California-Berkeley School of Law, 2014 ("Three Hearings, Nine Hours, and One Accurate Statement: Why Congress Must Begin a Full Investigation into NSA Spying," Electronic Frontier Foundation, January 7th, Available Online at https://www.eff.org/deeplinks/2013/12/three-hearings-nine-hours-and-one-accurate-statement-why-congress-must-begin-full, Accessed 07-09-2015)

Regaining Congressional Oversight

Something is very wrong when Congress and the public learn more about the NSA's activities from newspaper leaks than from the Senate and House intelligence committees. The

committees are supposed to oversee the intelligence community activities on behalf of the public, but more often—as the New Yorker describes it—"treat[] senior intelligence officials like **matinée idols**."

It's time for Congress to **reassert its oversight role** and **begin a full-scale investigation** into the NSA's surveillance and analytic activities. The current investigations—which **aren't led by Congress**—are **unable to fully investigate the revelations**. Congressional committees' hearings have added little, and Congress cannot rely solely on mandating more reports from the NSA as a solution.

Hearings Inside Congress

So far, Senate Judiciary Committee Chair Patrick Leahy is valiantly attempting to shine more light on the NSA's activities, but the hearings have only served as venues for administration officials to parrot talking points and provide non-answers to important questions. This is very similar to what happened after the New York Times released the first reports of warrantless wiretapping in December 2005.

The hearings' ineffectiveness are shown by the fact that it took three hearings—nine hours—for Senator Leahy to clarify just how many terrorist attacks the collection of all Americans' calling records stopped. In the first hearing (July), government witnesses said the program stopped "54 terrorist attacks." By the third hearing (October)—and after much pressure by Senator Leahy—General Alexander corrected his statement: it turns out the program had only stopped "one, perhaps two" terror plots, one of which involved "material support." Aside from this, there are still two sets of questions from the hearings by Senator Richard Blumenthal and Senator Ron Wyden that the intelligence community has still left unanswered.

It shouldn't take three hearings over several months for a member of Congress to obtain accurate and understandable information from the Director of the NSA.

A Congressional Investigation is Needed

Congress must initiate a **full-scale, targeted, investigation** outside of its regular committees. Such an investigation would normally fall under Congress' intelligence or other oversight committees. But any investigation into the NSA's activities must include a review of the current Congressional oversight regime. Since the creation of the intelligence committees in 1978, there has been no external audit or examination of how the system has performed.

A review is needed when the Senate intelligence committee's own chair, Senator Dianne Feinstein, admits how extraordinary difficult it is to obtain information from the intelligence community. Members of Congress have complained that briefings are like "playing a game of 20 questions" and other members have even noted how the House intelligence committee may have neglected to pass information to members before a key vote.

Current members of Congress aren't the only ones complaining: former Vice President Walter Mondale and Senator Gary Hart—two former members of Congress who were instrumental in creating the Senate intelligence committee—have also said that the intelligence committees are not operating as they were originally intended.

Increasing Reports is a Start

So far, Congress favors increasing reporting requirements or asking for an investigation by an Inspector General (IG). Transparency bills—like bills brought by both Senator Al Franken and Representative Zoe Lofgren—are a fantastic start. But such reports won't uncover the secret law the NSA is using or the secret collection of ordinary people's information. It also won't tell us about the use of Executive Order 12333. The bills will only provide a numerical range regarding the orders the government sends, companies receive, and the number of users or accounts the orders impact.

What's worse, the Inspector General of the Intelligence Community—who reports directly to the very officials who authorized the spying—told Senators he is unable to carry out a review of the programs due to a lack of resources. And even if such an investigation were to occur, the IG is unable to even request documents without the approval of the Director of National Intelligence.

Time for a New Investigation

The NSA leaks are ushering in a new day regarding Congressional oversight of the intelligence community. And it's why Congress must dedicate the resources to **a full-scale investigation by a special committee**. Such a committee will allow Congress to delve into what other data the NSA may be collecting en masse about Americans, to learn about how the surveillance laws it passed are being used, and to inform the American public—**all while protecting national security**. It's a **tough balancing act**, but Congress

was **able to do it in the 1970s** with the Church and Pike Committees. And it should have the courage to **do it again today**.

Politics Net-Benefit

The counterplan avoids politics — it is insulated from partisanship.

German et al. 15 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, et al., co-authored and endorsed by Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2015 ("Strengthening Intelligence Oversight," Report by the Brennan Center for Justice at the New York University School of Law, Available Online at https://www.brennancenter.org/sites/default/files/publications/Church_Committee_Web_REVISED.pdf, Accessed 07-09-2015, p. 14)

The success of the Church Committee holds many lessons for those that would attempt a similar undertaking today. It conducted a thorough public examination of secret intelligence operations that revealed unnecessary, flawed, and abusive activities. At the same time, it **won public support for reform** while **still protecting properly classified information** and **retaining the trust of the intelligence community**.

Certainly, many of the Committee's achievements can be attributed to the leadership of Sens. Frank Church and John Tower, who ran the investigation in a strictly bipartisan manner. Defining the scope of the investigation to include intelligence activities undertaken under the authority of presidents of both parties helped to **alleviate any claims the Committee's criticisms were partisan**.

Since the intelligence activities now under public scrutiny have spanned the terms of **two presidents of different parties**, conducting a rigorous examination **unaffected by party politics** should be **similarly achievable**.

The counterplan removes Obama from the equation — the Committee will push the plan, not the President.

There is bipartisan support for a new Church Committee. It avoids partisan fights.

German et al. 15 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, et al., co-authored and endorsed by Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2015 ("Strengthening Intelligence Oversight," Report by the Brennan Center for Justice at the New York University School of Law, Available Online at https://www.brennancenter.org/sites/default/files/publications/Church_Committee_Web_REVISED.pdf, Accessed 07-09-2015, p. 20-21)

A comprehensive evaluation of U.S. intelligence activities and the effectiveness of congressional oversight is necessary to ensure compliance with law and American values. **This is not a partisan matter**. Members of **both parties** have expressed **deep concerns** about recent revelations and **joined to propose legislative controls**. Nor is it a matter of inevitable legislative-executive conflict. Over the long term, the executive branch has a great interest in having Congress, and, to the extent possible, the public,

understand what intelligence is all about — and how it may affect Americans' private lives as well as our national security.
The Church Committee was formed by a newly elected Congress at a moment when the public demanded answers. Four decades later, **2015 offers a similar opportunity** for Congress to engage seriously with the intelligence challenges of the 21st century.

This is empirically proven by the Church Committee.

German 14 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, 2014 ("The US Needs a New Church Committee," *Defense One*, December 11th, Available Online at http://www.defenseone.com/ideas/2014/12/us-needs-new-church-committee/101046/, Accessed 07-08-2015)

The Church Committee protected legitimate secrets while exposing the abusive intelligence activities that had taken place under the orders of sequential presidential administrations. The committee's caution engendered **cooperation with the agencies** amid an already **bi-partisan consensus for reform**.
In the years that followed, Congress established permanent select intelligence committees to oversee intelligence activities and passed the Foreign Intelligence Surveillance Act, which placed domestic electronic surveillance for national security purposes under judicial supervision for the first time. A legislative charter limiting the investigative powers of the FBI failed, however, after Attorney General Edward Levi issued Justice Department guidelines serving that same purpose.
While these reforms certainly didn't prevent every future intelligence abuse and overreach, there can be no doubt that they made the intelligence agencies more deliberative and accountable. The Church Committee report warned that a new national security crisis would test its recommended reforms, and the terrorist attacks of September 11, 2001 have done just that. The 2013 leaks by National Security Agency contractor Edward Snowden revealed that the intelligence committees and the FISA Court had been complicit in expanding the intelligence agencies' power to collect excessive amounts of information about Americans not suspected of any wrongdoing, shocking even members of Congress who voted on these authorities. New questions are now being asked not only about the conduct of the intelligence agencies, but the competence of the post-Church Committee oversight structures to identify and curb abuses.

2NC/1NR – Solvency

They Say: "No Solvency — CP Doesn't Pass Plan"

1. Yes, Results In Plan: if the plan is a good idea, the committee will recommend it as part of its report. This will result in a short delay, but the net-benefits outweigh.

2. Plan Doesn't Solve: investigation is needed *before* legislation to avoid circumvention. Otherwise, policy language will be lawyered — that's Bump.

3. Counterplan Deters NSA: "*anticipated reaction*" prevents future abuse even if the counterplan doesn't pass the plan.

German 14 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, 2014 ("The US Needs a New Church Committee," *Defense One*, December 11th, Available Online at http://www.defenseone.com/ideas/2014/12/us-needs-new-church-committee/101046/, Accessed 07-08-2015)

Dr. John Elliff, the Church Committee's domestic intelligence task force leader, argued that while oversight doesn't prevent errant intelligence activities — it exposes them after the fact — the resulting criticism creates **a lasting bureaucratic chilling effect that inhibits abuse**. In short, this phenomena, called "anticipated reaction" means that an agency that gets in trouble will seek to **avoid that trouble in the future**.

Elliff, who went on to serve on the Senate Intelligence and Judiciary Committees as well as in intelligence positions within the FBI, CIA and Defense Department, describes the current oversight system as "inadequate."

4. Process Trumps Policy: investigation is *more important* than the policy outcome.

German 14 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, 2014 ("The US Needs a New Church Committee," *Defense One*, December 11th, Available Online at http://www.defenseone.com/ideas/2014/12/us-needs-new-church-committee/101046/, Accessed 07-08-2015)

However, because so little is publicly known about how oversight by intelligence committees and the FISA Court work **in practice**, it is difficult to know whether fixing problems that lead to weaker congressional oversight **would really improve the results** we receive from our intelligence agencies. **Asking the questions**, then, **becomes just as important as finding solutions**. It is **more important than ever** to start evaluating what is needed to create meaningful and lasting intelligence oversight.

The U.S. has reinitiated military engagement in Iraq, and started a new one in Syria. The president and intelligence officials have acknowledged this military intervention was necessary because the intelligence agencies were slow to recognize the growing threat the Islamic State posed to the U.S. **Rigorous oversight** is essential to ensuring our intelligence agencies **operate at peak efficiency and effectiveness**.

Last year, Schwarz and Elliff joined 13 other former Church Committee staff members in calling for a new comprehensive examination of the intelligence agencies. This examination must certainly include an evaluation of how we can existing strengthen oversight structures or whether new mechanisms need to be created.

They Say: "No Solvency — CP Doesn't Pass Legislation"

1. Committee Mandate: the counterplan results in specific recommendations for legislative and regulatory changes — this is part of its mandate.

Cohn and Jaycox 13 – Cindy Cohn, Executive Director and former Legal Director and General Counsel of the Electronic Frontier Foundation, holds a J.D. from the University of Michigan Law School, and Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("NSA Spying: The Three Pillars of Government Trust Have Fallen," Electronic Frontier Foundation, August 15th, Available Online at https://www.eff.org/deeplinks/2013/08/nsa-spying-three-pillars-government-trust-have-fallen, Accessed 07-09-2015)

The pattern is now clear and it's getting old. With each new revelation the government comes out with a new story for why things are really just fine, only to have that assertion demolished by the next revelation. It's time for those in government who want to rebuild the trust of the American people and others all over the world to come clean and take some **actual steps** to rein in the NSA. And if they don't, the American people and the public, adversarial courts, must force change upon it.

We still think the first step ought to be **a truly independent investigatory body** that is assigned to look into the unconstitutional spying. It must be empowered to search, read and compel documents and testimony, must be required to give a public report that only redacts sensitive operational details, and must **suggest specific legislation and regulatory changes to fix the problem**—something like the Church Committee or maybe even the 9/11 Commission. The President made a mockery of this idea recently, by initially handing control of the "independent" investigation he announced in his press conference to the man who most famously lied to Congress and the American people about the spying, the Director of National Intelligence James Clapper.

The three pillars of American trust have fallen. It's time to get a full reckoning and build a new house from the wreckage, but it has to start with some honesty.

2. Church Committee Proves: it recommended a series of reforms that Congress then implemented.

3. Trust Wyden: he will push through *meaningful reforms*. His record of challenging the intelligence agencies is unmatched.

Peterson 13 – Andrea Peterson, Technology Policy Reporter for the *Washington Post* covering cybersecurity, consumer privacy, transparency, surveillance, and open government, 2013 ("Wyden is trying to tell us something about the opinion justifying the phone records program," *The Switch*—a *Washington Post* blog, October 14th, Available Online at https://www.washingtonpost.com/blogs/the-switch/wp/2013/10/14/wyden-is-trying-to-tell-us-something-about-the-opinion-justifying-the-phone-records-program/, Accessed 07-09-2015)

As a member of the Senate Intelligence Committee, Wyden has access to more details about intelligence community activities than almost anyone not part of them carrying them out. And for years he has asked very pointed questions in public hearings, argued for declassification of significant FISA Court opinions, and introduced legislation aimed at curbing spying programs. You might remember that time just months before the NSA documents came out that one of Wyden's questions caught Director of National Intelligence James Clapper in what sounded an awful lot like a lie about if the U.S. collected any sort of data on U.S. persons. If not, we've helpfully included the video below.

[Video of James Clapper lying omitted]

Rep. Justin Amash (R-Mich.) recently called him a sort of "**congressional whistleblower**." But because of the classified nature of many of the things he is objecting to, often Wyden

has been forced to keep his warnings vague. For instance, he warned that "when the American people find out how their government has secretly interpreted the Patriot Act, they will be stunned and they will be angry," on the Senate floor in May 2011.

But there are other times his efforts have been more explicit – for instance, his repeated suggestions that Americans should be worried about the privacy of their geolocation data. Not only did he bring it up during speeches and hearings, he's introduced legislation addressing the topic for the past several years.

Wyden has been so dogged about geolocation that the NSA did finally give him some sort of on-the-record response, admitting that they ran a test program a few years ago. But he has implied that that's not a full answer, saying their response still leaves "most of the real story secret."

Considering Wyden's history of nudging the conversation toward meaningful disclosure, I'd be willing to bet there's more for us to learn about geolocation programs. Just like I'm willing to bet there's something interesting in the original FISA Court justification for the bulk collection of domestic phone records. Because if the ongoing surveillance debate is a coal mine, Wyden is **the canary for privacy issues**.

4. Yes, Votes: Democrats will line up behind Wyden — he'll get the votes.

Clift 14 – Eleanor Clift, Political Correspondent for *The Daily Beast*, 2014 ("Ron Wyden and Rand Paul, the Senate's NSA-Busting 'Ben Franklin Caucus'," *The Daily Beast*, June 14th, Available Online at http://www.thedailybeast.com/articles/2014/06/14/ron-wyden-and-rand-paul-the-senate-s-nsa-busting-ben-franklin-caucus.html, Accessed 07-09-2015)

Just as Paul's apostasy on some issues irks Republicans, Wyden's assertiveness on the NSA hasn't always been welcomed by fellow Democrats, notably Intelligence Committee Chair Dianne Feinstein. The Snowden disclosures have **moved more colleagues into his camp**.

"If Democrats could choose between Wyden and Feinstein by a secret ballot, **he would win a substantial number of votes, maybe even a majority**," says William Galston with the Brookings Institution. That's not true of Paul, who represents more of a dissident voice within Republican ranks. That could change after November if the GOP gains control of the senate.

5. Meaningful Reform: the counterplan is the only way to push through serious legislation.

Fenn 15 – Peter Fenn, Democratic Political Strategist and Head of Fenn Communications—a leading political and public affairs media firm, Adjunct Professor in the Graduate School of Political Management at George Washington University, holds an M.A. in International Relations from the University of Southern California, 2015 ("'No Place to Hide'," *U.S. News & World Report*, June 3rd, Available Online at http://www.usnews.com/opinion/blogs/peter-fenn/2015/06/03/nsa-fbi-spying-excesses-underscore-need-for-a-new-church-committee, Accessed 07-08-2015)

The Electronic Frontier Foundation and the Brennan Center for Justice at New York University School of Law are both calling for increased oversight, reform of the Foreign Intelligence Surveillance Act legislation and serious examination of the impact of the new technology on Americans' basic privacy. Section 702 of the FISA Amendments Act allows for mass surveillance of online communications, and the Electronic Frontier Foundation believes it should be curtailed.

The House and the Senate passed the new USA Freedom Act and the president signed it, but that is **only a first step**. If we are truly going to get a handle on everything from drones to detention camps to torture, as well as NSA surveillance, we need **a full investigation of our intelligence agencies** similar to the Church Committee and **serious legal and executive remedies**.

They Say: "No Solvency — CP Doesn't Solve Privacy"

1. Yes, Privacy: the counterplan results in sustainable reform that protects individual rights.

Ellsberg 13 – Daniel Ellsberg, Whistleblower who leaked the Pentagon Papers in 1971, Co-Founder of the Freedom of the Press Foundation, served as a Strategic Analyst for the RAND Corporation, holds a Ph.D. in Economics from Harvard University, 2013 ("Tell Congress: Investigate Nsa Abuses And Protect Our Constitutional Rights," Petition to Congress, Available Online at https://www.credomobilize.com/petitions/tell-congress-investigate-nsa-abuses-and-protect-our-constitutional-rights, Accessed 07-09-2015)

We need a new Church Committee that is fully empowered to investigate the abuses of the NSA and make public its findings, and that is charged with recommending new laws to ensure the U.S. government does not violate our constitutional rights.

Why is this important?

In 1975, Senator Frank Church, who led a committee charged with investigating and making public the abuses of American intelligence agencies, spoke of the National Security Agency in these terms: "I know the capacity that is there to make tyranny total in America, and we must see to it that this agency and all agencies that possess this technology operate within the law and under proper supervision, so that we never cross over that abyss. That is the abyss from which there is no return."

The dangerous prospect of which he warned was that America's intelligence-gathering capability – which is today beyond any comparison with what existed in his pre-digital era – "at any time could be turned around on the American people and no American would have any privacy left."

That has now happened. And so we need a new congressional committee like the one Senator Church led to investigate the revelations by Edward Snowden. The existing Intelligence Committees in House and Senate, gagged by secrecy and co-opted by the intelligence community they supposedly oversee, have failed to check dangerously excessive surveillance of Americans' communications.

Pressure by an informed public on Congress to form a select committee to investigate these revelations might lead us to bring the NSA and the rest of the intelligence community under real supervision and restraint and restore the protections of the Bill of Rights.

2. Wyden Proves: he's the biggest privacy defender in Congress. He'll steer the recommendations to protect civil liberties.

3. Best Balancing Act: the counterplan results in effective cost-benefit analysis that balances privacy and security. It solve the case but avoids the DA.

German et al. 15 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, et al., co-authored and endorsed by Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2015 ("Strengthening Intelligence Oversight," Report by the Brennan Center for Justice at the New York University School of Law, Available Online at https://www.brennancenter.org/sites/default/files/publications/Church_Committee_Web_REVISED.pdf, Accessed 07-09-2015, p. 20-21)

The Privacy and Civil Liberties Board's report on the government's intelligence activities under the FISA Amendments Act included a recommendation that the government "should develop a comprehensive methodology for assessing the efficacy and relative value of counterterrorism programs."60 It would be improper for any government agency to operate major programs without evaluating their effectiveness, much less agencies with such important security missions. Congress must fill the void and, in consultation with the agencies, develop metrics to measure the performance of all intelligence, law enforcement, and homeland security programs. In conducting such an evaluation it is important to recognize, as the President's Review Group suggested, that **all risks** must be considered and addressed.

a. Impact on individual rights

As the Church Committee reported, most intelligence activities take place in secret, and the victim of abusive government activity may never know the source of his misfortune.61 The scope of today's mass surveillance programs threaten everyone's privacy rights by their mere existence, and potentially chill free speech and association, particularly over the Internet. The President's Review Group highlighted these concerns, identifying privacy as a "central aspect of liberty" that must be protected.62 Legislators with responsibility over intelligence, law enforcement, and homeland security programs owe a special obligation to ensure these activities do not infringe on individual rights.

b. Impact on other interests

Other important interests to protect include our relations with foreign nations. Treating allies with respect is essential, of course, but the rule of law should be our guide even when dealing with adversaries. American values should not just be something we talk about. Our actions in the international arena will set an example for other nations, so we must ensure that our actions match our words.

Congress is also responsible to ensure the taxpayers' money is spent wisely, so the financial costs of the programs must be weighed against their effectiveness. Waste, fraud, and abuse in these programs does **real harm to our security**, not just the bottom line. And spending government resources on security measures means other priorities cannot be addressed. There are also other ancillary economic consequences of intelligence activities, which U.S. tech companies are currently experiencing as a result of the global response to NSA surveillance activities.63

Government officials working in the national security field have a natural tendency to overestimate near-term threats and favor quick and decisive action to address them. As policymakers responsible for a broad range of national interests, Congress must be **more deliberative** and compel these agencies to consider the **long-term impacts** of their activities. [end page 20]

C. Cost-benefit analysis

Finally, these costs must be measured against the benefits, which are often much harder to evaluate. If an agency overestimates a potential threat, then employs expensive and intrusive means to deter it, does the fact that the threat did not materialize mean the methods were effective? After more than a dozen years of war, pervasive surveillance, infringements on liberty, as well as trillions of dollars spent and thousands of soldiers lost, can we tell if Americans are any safer or more prosperous? Congress must develop its own ability to **independently evaluate** the threats we face and the proper means to address them to ensure all the interests of the American people are being served, including the right to be free from unwarranted government interference.

They Say: "No Solvency — CP Doesn't Solve X"

* This is a blueprint for how to answer solvency deficit arguments about advantages other than privacy/civil liberties. It requires editing to apply it to particular advantages.

1. Yes, [Advantage]: the committee will take into account the importance of [the advantage] and propose recommendations based on it in their report.

2. Best Cost-Benefit Analysis: the counterplan results in more effective cost-benefit analysis that balances short- and long-term interests.

German et al. 15 – Michael German, Fellow in the Liberty and National Security Program at the Brennan Center for Justice at the New York University School of Law, former Policy Counsel for National Security and Privacy for the American Civil Liberties Union Washington Legislative Office, former Adjunct Professor for Law Enforcement and Terrorism at the National Defense University, former Special Agent with the Federal Bureau of Investigation specializing in domestic terrorism and covert operations, served as a Counterterrorism Instructor at the FBI National Academy, et al., co-authored and endorsed by Counsel, Advisers, and Professional Staff Members of the Church Committee including Chief Counsel Frederick A.O. Schwarz Jr., Loch Johnson, John T. Elliff, Burt Wides, Jim Dick, Frederick Baron, Joseph Dennin, Peter Fenn, Anne Karalekas, Michael Madigan, Elliot Maxwell, Gordon Rhea, Eric Richard, Athan Theoharis, and Christopher Pyle, 2015 ("Strengthening Intelligence Oversight," Report by the Brennan Center for Justice at the New York University School of Law, Available Online at https://www.brennancenter.org/sites/default/files/publications/Church_Committee_Web_REVISED.pdf, Accessed 07-09-2015, p. 8)

Part of Congress's oversight responsibility includes assisting the intelligence agencies in conducting this type of **pre-operational cost-benefit analysis**. Members of Congress often have **a much greater awareness of and appreciation for** the breadth of U.S. interests involved in international relations, and the patience for taking **a long-term approach** that many working in the national security and intelligence professions do **not**. Not surprisingly, given the nature of their jobs, national security officials have a tendency to view potential threats as imminent and favor action over deliberation, which is what leads to a focus on resolving **short-term problems** without appropriately considering **the long-term impact**.

They Say: "No Solvency — Delays"

1. Plan Gets Delayed, Too: even if it isn't outright circumvented, agencies will push back and delay reforms. Section 215 proves — despite the Freedom Act, NSA got a six-month extension from the FISC.

2. No Significant Delay: it won't take long to produce a report — the Church Committee proves.

Hartmann 14 – The Thom Hartmann Program—a progressive radio program, 2014 ("Is It Time for a New Church Committee?," *Truthout*, February 25th, Available Online at http://www.truth-out.org/opinion/item/22103-is-it-time-for-a-new-church-committee, Accessed 07-09-2015)

Once the Watergate scandal broke open and news of illegal intelligence gathering by government agencies began to spread, Senator Frank Church, a Democrat from Idaho, formed the Church Committee, which was tasked with investigating illegal intelligence gathering activities by the FBI, NSA, and CIA.

Between 1975 and 1976, the Church Committee published fourteen reports on intelligence gathering abuses by U.S. intelligence agencies.

In August of 1975, the Church Committee released its findings.

They Say: "No Solvency — Church Committee Failed"

The Church Committee didn't fail — FISA worked until it was gutted in 2008.

Cohn and Timm 13 – Cindy Cohn, Executive Director and former Legal Director and General Counsel of the Electronic Frontier Foundation, holds a J.D. from the University of Michigan Law School, and Trevor Timm, Activist at the Electronic Frontier Foundation, holds a J.D. from New York Law School, 2013 ("In Response to the NSA, We Need A New Church Committee and We Need It Now," Electronic Frontier Foundation, June 7th, Available Online at https://www.eff.org/deeplinks/2013/06/response-nsa-we-need-new-church-commission-and-we-need-it-now, Accessed 07-09-2015)

Following on the heels of the Guardian reporting that the NSA is collecting all US call data records of Verizon customers, the Guardian and Washington Post yesterday reported that nine of the biggest Internet companies, including Facebook, Google, Yahoo, and Microsoft, are also working with the government in a vast spying program, where a massive amount of online data flows to the NSA, all in secret.

The revelations not only confirmed what EFF has long alleged, they went even further and honestly, we're still reeling. EFF will, of course, be continuing its efforts to get this egregious situation addressed by the courts.

But one thing is clear. Congress now has a responsibility to the American people to conduct a **full, public investigation** into the domestic surveillance of Americans by the intelligence communities, whether done directly or in concert with the FBI. And it **then** has a duty to make changes in the law to stop the spying and ensure that it does not happen again.

In short, we need **a new Church Committee**.

In the mid-70s, in response to revelation that the government was engaging in systematic domestic surveillance on domestic targets—including anti-war activists, academics, and government critics like Martin Luther King Jr., John Lennon and Daniel Ellsberg—the distinguished Senator from Idaho, Frank Church, convened a Senate investigative committee that ultimately put a stop to large scale domestic spying for decades.

The Church Committee report, which can be read in full here, led to the passage of the Foreign Intelligence Surveillance Act (FISA), setting up the secret FISA court that put strict procedures in place for conducting surveillance for intelligence activities. Most importantly, following a Supreme Court ruling in 1973, FISA required an individualized, probable cause warrant for national security spying, just as the Fourth Amendment requires.

While there is much to criticize in the original FISA, it did rein in the government, and its system of checks and balances remained largely in place until shortly after September 11, 2001, when President George W. Bush first authorized a broad warrantless wiretapping program. The government decided to illegally bypass the FISA court and started warrantlessly wiretapping the communications, as well as collecting and data-mining the communications records of innocent Americans.

When a portion of the NSA warrantless surveillance was revealed by the New York Times in 2005, there was widespread outrage among the American people. Unfortunately, Congress reacted in the opposite way as the Church Committee once did. Instead of fixing the problems, they institutionalized most of them and swept the rest under the rug.

In 2008, Congress gutted the original balance of FISA with the FISA Amendments Act, which allowed the government to get court orders with less than probable cause that would target groups of people—instead of individuals, like the Constitution requires. The law also allowed the NSA to collect information on innocent Americans when they are talking to people outside the US who are targeted by the government.

But it gets worse. EFF and others had long alleged that, despite the rhetoric surrounding the Patriot Act and the FISA Amendments Act, the government was still vacuuming up the records of the purely domestic communications of millions of Americans. And yesterday, of course, with the Verizon order, we got solid proof.. And it appears that the reach of this vacuum goes much further, into the records of our Internet service providers as well.

Now it's not as if these efforts haven't been challenged. EFF has been seeking judicial review of the dragnet surveillance, both wiretapping and records collection, since 2006, facing one procedural maneuver after another by the government. The ACLU brought a strong constitutional challenge to the FISA Amendments Act that was dismissed by the Supreme Court only two months

ago for lack of "standing." The court ruled in a contentious 5-4 decision that because the ACLU couldn't prove for a "certainty" that their clients were being surveilled, they couldn't challenge the law.

Well, it turns out, the new revelations prove everything the ACLU was arguing, in addition to confirming all of the allegations in EFF's warrantless wiretapping case, Jewel v. NSA.

Of course, the evidence has been there all along. Even after the FISA Amendments Act passed, the New York Times reported in 2009 the NSA was still collecting purely domestic communications in a "significant and systematic" way after the original bill passed in 2008. And just last year, the government admitted, the secret FISA court has ruled "on at least one occasion" that the government's surveillance under the law had violated the Fourth Amendment.

That secret FISA court ruling is still classified, as are the OLC memos that supposedly give the government's best case that all this purely domestic surveillance is legal. But one has to wonder, if the FISA court "routinely" authorizes the collection of all US call data, what kind of surveillance was the NSA conducting that they couldn't approve?

Shamefully, Congress has had a chance to add provisions to both the Patriot Act and FISA Amendments Act in the last two years. In 2011, the Obama administration opposed all transparency and accountability amendments to the Patriot Act when key provisions were renewed for another five years. Just six months ago in December 2012, the administration again opposed all oversight amendments, even those more moderate than the ones he voted for as Senator in 2008.

So here's your wake up call Congress, and an opportunity to be a hero. We need a Church Committee for a new era. It could be headed by Ron Wyden and Mark Udall, the two Senators who have been trying to warn the American people about the government dangerous interpretation of the Patriot Act for years. Udall said today, he "did everything short of leaking classified information" to stop it.

But someone in Congress needs to step up and fill Frank Church's shoes. They are big ones, but EFF stands willing to help. And so, we suspect, will millions of innocent Americans whose privacy has been violated and who are ready to have their constitutional rights back.

They Say: "SQ Solves — General"

1. They can't make this argument. If oversight is effective, there shouldn't be an inherent advantage.

2. Status Quo Oversight Fails: investigations are worthless.

Jaycox 13 – Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("Three Illusory 'Investigations' of the NSA Spying Are Unable to Succeed," Electronic Frontier Foundation, August 23rd, Available Online at https://www.eff.org/deeplinks/2013/08/three-illusory-investigations-nsa-spying-are-unable-succeed, Accessed 07-08-2015)

Since the revelations of confirmed National Security Agency spying in June, three different "investigations" have been announced. One by the Privacy and Civil Liberties Oversight Board (PCLOB), another by the Director of National Intelligence, Gen. James Clapper, and the third by the Senate Intelligence Committee, formally called the Senate Select Committee on Intelligence (SSCI).

All three investigations are insufficient, because they are unable to find out the full details needed to stop the government's abuse of Section 215 of the PATRIOT Act and Section 702 of the Foreign Intelligence Surveillance Act. The PCLOB can only request—not require—documents from the NSA and must rely on its goodwill, while the investigation led by Gen. Clapper is led by a man who not only lied to Congress, but also oversees the spying. And the Senate Intelligence Committee—which was originally designed to effectively oversee the intelligence community—has failed time and time again. What's needed is a **new, independent, Congressional committee** to fully delve into the spying.

3. Counterplan Key: *only* the counterplan provides effective oversight.

Jaycox 13 – Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("Three Illusory 'Investigations' of the NSA Spying Are Unable to Succeed," Electronic Frontier Foundation, August 23rd, Available Online at https://www.eff.org/deeplinks/2013/08/three-illusory-investigations-nsa-spying-are-unable-succeed, Accessed 07-08-2015)

A New Church Committee

All three of these investigations are destined to fail. What's needed is a **new, special, investigatory committee** to look into the abuses of by the NSA, its use of spying powers, its legal justifications, and why the intelligence committees were unable to rein in the spying. In short, we need **a contemporary Church Committee**. It's time for Congress to reassert its oversight capacity. The American public must be provided more information about the NSA's unconstitutional actions and the NSA must be held accountable. Tell your Congressperson now to join the effort.

They Say: "SQ Solves —PCLOB"

The PCLOB can't compel disclosure — it's toothless.

Jaycox 13 – Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("Three Illusory 'Investigations' of the NSA Spying Are Unable to Succeed," Electronic Frontier Foundation, August 23rd, Available Online at https://www.eff.org/deeplinks/2013/08/three-illusory-investigations-nsa-spying-are-unable-succeed, Accessed 07-08-2015)

The PCLOB: Powerless to Obtain Documents

The PCLOB was created after a recommendation from the 9/11 Commission to ensure civil liberties and privacy were included in the government's surveillance and spying policies and practices.

But it languished. From 2008 until May of this year, the board was without a Chair and unable to hire staff or perform any work. It was only after the June revelations that the President asked the board to begin an investigation into the unconstitutional NSA spying. Yet even with the full board constituted, it is unable to fulfill its mission as it has no choice but to base its analysis on a steady diet of carefully crafted statements from the intelligence community.

As we explained, the board must rely on the goodwill of the NSA's director, Gen. Keith Alexander, and Gen. Clapper—two men who have repeatedly said the NSA doesn't collect information on Americans.

In order to conduct a full investigation, the PCLOB will need access to all relevant NSA, FBI, and DOJ files. But the PCLOB is unable to compel testimony or documents because Congress did not give it the same powers as a Congressional committee or independent agency. This is a major problem. If the NSA won't hand over documents to Congress, then it will certainly not give them to the PCLOB.

They Say: "SQ Solves —Clapper Task Force"

The Clapper investigation is obviously a joke.

Jaycox 13 – Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("Three Illusory 'Investigations' of the NSA Spying Are Unable to Succeed," Electronic Frontier Foundation, August 23rd, Available Online at https://www.eff.org/deeplinks/2013/08/three-illusory-investigations-nsa-spying-are-unable-succeed, Accessed 07-08-2015)
The Clapper Investigation: Overseen by a Man Accused of Lying to Congress

The second investigation was announced by President Obama in a Friday afternoon news conference. The President called for the creation of an "independent" task force with "outside experts" to make sure "there absolutely is no abuse in terms of how these surveillance technologies are used." Less than two days later, the White House followed up with a press release announcing the task force would be led by Gen. Clapper and would also report to him. What's even worse: the task force was not tasked with looking at any abuse. It was told to focus on how to "protect our national security and advance our foreign policy." And just this week, ABC News reported the task force will be full of Washington insiders—not "outside experts." For instance, one has advocated the Department of Homeland Security be allowed to scan all Internet traffic going in and out of the US. And another, while a noted legal scholar on regulatory issues, has written a paper about government campaigns to infiltrate online groups and activists. In one good act, the White House selected Peter Swire to be on the task force. Swire is a professor at Georgia Tech and has served as the White House's first ever Chief Privacy Officer. Recently, he signed an amicus brief in a case against the NSA spying by the Electronic Privacy Information Center arguing that the NSA's telephony metadata program is illegal under Section 215 of the PATRIOT Act. Despite this, and at the end of the day, a task force led by General Clapper full of insiders—and not directed to look at the extensive abuse—will never get at the bottom of the unconstitutional spying.

They Say: "SQ Solves —Intelligence Committees"

Oversight by the Senate Intelligence Committee has failed — the counterplan is needed.

Jaycox 13 – Mark Jaycox, Legislative Analyst at the Electronic Frontier Foundation, former Contributor to *ArsTechnica*, former Legislative Research Assistant for LexisNexis, holds a B.A. in Political History from Reed College, 2013 ("Three Illusory 'Investigations' of the NSA Spying Are Unable to Succeed," Electronic Frontier Foundation, August 23rd, Available Online at https://www.eff.org/deeplinks/2013/08/three-illusory-investigations-nsa-spying-are-unable-succeed, Accessed 07-08-2015)

The Senate Intelligence Committee Has Already Failed

The last "investigation" occurring is a "review" led by the Senate Intelligence Committee overseeing the intelligence community. But time and time again the committee has failed at providing any semblance of oversight. First, the chair and ranking member of the committee, Senators Dianne Feinstein (CA) and Saxby Chambliss (GA), respectively, are stalwart defenders of the NSA and its spying activities. They have both justified the spying, brushed aside any complaints, and denied any ideas of abuse by the NSA.

Besides defending the intelligence community, the committee leadership have utterly failed in oversight – the reason why the Senate Intelligence Committee was originally created by the Church Committee. As was revealed last week, Senator Feinstein was not shown or even told about the thousands of violations of the spying programs in NSA audits of the programs. This is in direct contradiction to her statements touting the "robust" oversight of the Intelligence Committee. Lastly, the committee is prone to secrets and hiding behind closed doors: this year, the Senate Intelligence Committee has met publicly only twice. What's clear is that the Intelligence Committee has been unable to carry out its oversight role and fresh eyes are needed to protect the American people from the abuses of the NSA.

2NC/1NR – Theory/Competition

They Say: "Permute — Do CP"

1. This severs the whole plan. The counterplan establishes a committee and tasks it with producing a report; it doesn't implement the plan. The counterplan might *eventually result in* the plan, but that's an *effect*—not a *mandate*.

2. Reject severance permutations — they evade clash and undermine comparative policy analysis. Requiring a stable advocacy protects neg ground and creates more productive debates.

They Say: "Permute — Do Both"

( ) Links to Politics: the immediate fight over the plan drains Obama's political capital. The Committee Report can't shield the link before it exists.

( ) Links to Terrorism: immediate passage of the plan before the Wyden Committee's review jeopardizes national security. Only comprehensive review of intelligence programs enables holistic, informed legislative action. Even if they're right that the plan isn't key to counter-terrorism, don't take the risk: waiting for the Committee's report is a small price to pay for national security.

( ) Doesn't Restore Trust: the counterplan *alone* is key to rebuild public trust because it reassures the public that Congress has the intelligence agencies under control. The permutation creates the perception of confusion and chaos: passing the plan *before* the Wyden Committee has a chance to investigate doesn't make sense.

( ) Sequencing DA: investigation *before* legislation is crucial to effective implementation of surveillance reforms. The plan and permutation will be circumvented; the counterplan *alone* is the only way to write policy language that sticks — that's Bump. A consensus of experts agrees.

Marczak 13 – Trisha Marczak, Reporter for *Mint Press News*, 2013 ("New Petition Website Calls For Congressional Investigation Of NSA Surveillance Program," *Mint Press News*, June 11th, Available Online at http://www.mintpressnews.com/petition-website-launches-calling-for-congressional-investigation-of-nsa-surveillance-program/, Accessed 07-09-2015)

A coalition of **85 technology companies, organizations and privacy advocates** — including the American Civil Liberties Union and the Electronic Frontier Foundation — is launching a website Tuesday calling for a special congressional committee to investigate the National Security Agency's secret surveillance program.

Sina Khanifar, participating advocate and founder of FixtheDMCA.org, told Mint Press News in a statement that the "Stop Watching Us" movement is intended to push the government to create **an investigative Congressional body** similar to the Church Committee, which was formed to investigate the Watergate scandal in the 1970s.

"As it stands, **we simply don't know the scope** of the NSA's surveillance programs," he said. "Greater transparency is **critical**."

( ) No Net-Benefit: singular reforms like the plan don't solve without a comprehensive overhaul.

Rumold 13 – Mark Rumold, Staff Attorney at the Electronic Frontier Foundation, quoted in an article by Rainey Reitman, 2013 ("86 Civil Liberties Groups and Internet Companies Demand an End to NSA Spying," Electronic Frontier Foundation, June 10th, Available Online at https://www.eff.org/deeplinks/2013/06/86-civil-liberties-groups-and-internet-companies-demand-end-nsa-spying, Accessed 07-09-2015)

As Mark Rumold, a staff attorney at the Electronic Frontier Foundation who focuses on government transparency and national security, says, "Now is the time for Congress to act. **We don't need a narrow fix to one part of the PATRIOT Act**; we need **a full public accounting** of how the United States is turning sophisticated spying technology on its own citizens, we need accountability from public

officials, and we need **an overhaul of the laws** to ensure these abuses **can never happen again**."

( ) Credibility DA: the permutation makes the Committee look like a puppet by spoiling its report with preemptive legislation.

Westby 12 – Jody Westby, Chief Executive Officer of Global Cyber Risk—a consulting firm specializing in privacy, security, cybercrime, and IT governance, Adjunct Professor in the School of Computer Science at the Georgia Institute of Technology, Distinguished Fellow for Carnegie Mellon University's CyLab, Chair of the American Bar Association's Privacy & Computer Crime Committee, former Co-Chair of the World Federation of Scientists' Permanent Monitoring Panel on Information Security, holds a J.D. from Georgetown University Law School, 2012 ("The Sheep Stop Here: Another Church Committee or Full Review of Privacy Laws Needed?," *Forbes*, September 20th, Available Online at http://www.forbes.com/sites/jodywestby/2012/09/20/the-sheep-stop-here-another-church-committee-or-full-review-of-privacy-laws-needed/2/, Accessed 07-09-2015)

A **full Congressional review** of privacy laws and intelligence community practices is needed so **informed decisions** can be made going forward and any violations of rights or laws can be addressed. Steven Aftergood, head of the Federation of American Scientists' Project on Government Secrecy notes that, "Mr. Binney and his colleagues raise compelling questions that deserve an answer; it is up to Congress to assert itself and represent the public interest in getting to the bottom of these tough questions. This is what we have oversight for." Of course, the process by which such a review is conducted — whether by Congressional Committee or another less formal means of review — is critical. Lee Tien, Senior Staff Attorney for EFF, noted that, "Such a review **could not be a whitewash**; it **cannot be conducted by puppets** or **so redacted that it is meaningless**."

Those who protest against such a review have a hard climb. If all is proceeding according to law, then **there is nothing to hide** and **prior justifications will be vindicated**. And we will not need to count sheep to get to sleep.

They Say: "CP Theoretically Illegitimate"

( ) Not Plan-Inclusive: even if could result in the plan, the counterplan doesn't "steal the aff." Our evidence proves that implementing the plan as a standalone policy and recommending the plan as part of a Committee Report are distinct policy options. The counterplan never "fiats" the plan.

( ) Core Neg Ground: it's a core reform proposal with several qualified solvency advocates. Even if *some* commission counterplans are illegitimate, *this* one boosts topic knowledge, tests the desirability of the plan, and is crucial to neg ground.
